With a view to meeting all possible demands for fine chemicals, such as Potassium Permanganate, and special medical products, such as Insulin, we have again extended our Fine Chemical factory and equipped it with the most modern plant.

On the veterinary and horticultural sides, also—comparatively recent developments of our activities that are becoming more and more highly appreciated by the public—our chemists are breaking new ground. In particular, we are collaborating with veterinary surgeons in an endeavour to determine the extent to which

some recently discovered human medicines are suitable for the treatment of diseases in animals.

EMPLOYEES' NUTRITION

The subject of nutrition is attracting wide attention at the present time, and we have considered this question very carefully in its bearing on the physical condition and general health of our employees. Our medical officers have now taken steps to secure that the meals in our various canteens shall be designed on a scientific nutritional basis.

With a view to assisting the Government in its defence plans, we have appointed a full-time Gas Officer who, under the guidance of the relevant department of the Home Office, is taking steps to show the public what could be done in the event of an air raid to avert the danger from gas.

TOO MUCH LEGISLATION

I may refer in passing to the possibility of an amendment of the Medicine Stamp Duty. The Report presented by the House of Commons Select Committee on this question contained so many drastic and ill-considered proposals that the Chancellor of the Exchequer wisely deferred taking action upon it. But it stands on record as a warning of the harm that may be done by people possessing the best of intentions and yet lacking the necessary knowledge. In this case one of the immediate effects of the new measure that was proposed would have been to raise the prices of the medicines of the poor.

A RECORD OF PROGRESS

We are proud of the results that we have been able to place before you during the past few years. During that period the company has made steady and continuous progress, and when I say progress I do not mean only that our sales and our profits have increased year by year. Our progress has meant a steady expansion of a vital service to the public, an extension of employment—more than 3,000 additional employees in the past three years, not to mention the large number of workers engaged upon new construction for us. And, lastly, it has meant better and happier conditions of work which it is no exaggeration to say are helping to set a new standard of employment conditions, not in this country alone. A well-known architectural authority, writing of the Beeston factory recently in *The Radio Times*, said:—"It is stupendous, glistening, clean, airy. . . . To look down from the upper gallery that circles the main packing hall on the overalled girls far below is an unforgettable experience."

N. D. C.

In what was written and spoken in support of the now happily extinct National Defence Contribution it was apparently assumed that commercial success during the past few years has been merely a matter of good luck or the result of extraneous conditions. Progress in our case—and we do not pretend to be unique—is the result of hard thinking, hard planning, hard work, the taking of risks and a constant reaching out after new developments at home and abroad.

I would venture to suggest that there is nothing unworthy, nothing that requires to be discouraged, about enterprise which results in the creation of employment for thousands, the raising of the standard of life of working people and the provision of better health services to the public. Within our own company we have always acted on the principle that increased effort and good results should be rewarded and not penalised. That is why your directors were strongly opposed to the new principle contained in Mr Chamberlain's taxation proposals. And that is why we welcome the courageous and statesmanlike step he has taken in bowing to the storm of informed public opinion.

FUTURE PROSPECTS

It is customary for me to say a few words as to future prospects. In previous years I have spoken of the company's future in a spirit of confidence and optimism, tempered only by a note of caution concerning the possible influence of external conditions. That is the note I would again strike this year. Our prospects may be viewed with confidence, subject to the general economic conditions in this country remaining stable and to the dispersal of the clouds that still hang over Europe.

The report and accounts were adopted.

SENA SUGAR ESTATES, LIMITED

LARGE INCREASE IN NET PROFIT

SUCCESS OF REORGANISATION

MR A. N. LUBBOCK'S ADDRESS

The seventeenth ordinary general meeting of Sena Sugar Estates, Limited, was held, on the 31st ultimo, at Southern House, Cannon Street, London, E.C.

Mr A. N. Lubbock, who presided, said:—At the date of our meeting last year we had just completed the reorganisation of the business on the basis of only two factories operating instead of four. We made certain estimates of the probable result of this reorganisation, which, I believe, appeared to some shareholders to be optimistic; consequently, it is gratifying to your board to be able to present an account showing a result substantially better than the estimate published 12 months ago. This, I think you will agree, affords a complete justification of our policy.

The gross profit, after providing for all expenses of management, amounts to £186,316 9s. 10d., while the net profit, after providing for the debenture service, amounts to £133,008 15s. This figure compares with a net profit of £49,032 0s. 3d. in the previous year.

ALLOCATION OF PROFITS

With the sum brought forward from 1935, the total amount to be appropriated is £149,073 14s. 2d. Of this sum, your board have decided that it was desirable to allocate £36,000 for the creation of a general stock reserve account. We are proposing to allocate £20,000 to depreciation, which, in the view of your directors, is adequate, having regard to the fact that the factories are kept up to a high state of efficiency out of revenue and that large sums were written off the properties under the reconstruction scheme.

We are further proposing to write off the whole of the reconstruction expenses and a large part of the debenture conversion expenses. After payment of the preference dividend for the year 1936, we are left with a balance of £50,605 19s. 10d., and we are recommending that a dividend of 6 per cent. on the ordinary capital be paid and the balance of £8,605 19s. 10d. be carried forward.

CAUSE OF REDUCED OUTPUT

The total crop of sugar made was rather less than we expected, and this fall in output was due to the cane juices being unexpectedly poor, which we must attribute to the unsatisfactory climatic season which we experienced. In spite of this reduction in output, we still found ourselves with nearly 3,000 tons which had to be marketed in the open free market at unsatisfactory prices. At the same time, it always pays to continue crushing at the factories which are operating until all cane has been harvested.

Sugar values on the free market improved during the year, but are still at a low level. However, it must be remembered that the price of sugar which we sell in Portugal and certain Colonial markets is fixed and does not vary with movements in the free market. Seventy-five per cent. of our crop is sold under these conditions, consequently the rise in free market values, though welcome, did not affect our results to any substantial extent.

INTERNATIONAL SUGAR CONFERENCE

The prospects of a further rise in prices in the free market are brighter owing to the successful outcome of the International Sugar Conference, which has succeeded in fixing export quotas for all the important sugar-producing countries.

Although the total of these quotas is in excess of the estimated consumption, the latter is increasing very satisfactorily and it is hoped that, before long, it will be found that these quotas are not excessive. World production is now under control for a period of five years.

One of your directors, Colonel Hornung, was invited by the Portuguese Government to assist on their behalf at the discussions of the conference, and I am pleased to say that the quota for the free market allotted to Portuguese Colonies amounts to 30,000 tons, which allows for an expansion of our own production when prices become remunerative.

I reported at our meeting last year that we had just succeeded in converting our old debenture issues into a new issue, carrying

interest at 5½ per cent. The annual saving to the company is considerable and amounts to approximately £23,000.

I also informed you that we had purchased the whole of the ordinary share capital of a sugar refinery in course of erection at Bulawayo, Southern Rhodesia. This refinery has since come into operation, purchasing its requirements of raw sugar from us. The refining industry in Rhodesia is working behind a protective tariff, which we hope the Rhodesian Government will see fit to increase, in view of the severe competition which is being experienced from dumped foreign refined sugar and the extent of which competition was not anticipated when the tariff scale was fixed. Consumption in Rhodesia continues to increase in a very satisfactory manner.

COTTON

Ever since we decided to cease sugar production on two of our estates we have been considering what use, if any, could be made of the factories and abandoned plantations. We came to the conclusion that advantage should be taken of the legislation in force in Portuguese colonies which encourages the growing of cotton by natives. With this in view, we obtained from the Government free of cost two large land concessions adjoining the Mopeia factory. Within these concessions we have been given the exclusive right to purchase cotton from natives at a price fixed by the Government.

We have installed a small ginning and baling plant at Mopeia to deal with this cotton, which is then shipped to Portugal, where there is no difficulty in selling it, the Government guaranteeing that the price will not be less than the equivalent of 8d. per pound. Preliminary results are distinctly promising and during the past season we shipped a quantity equal to 1,268 standard bales of cotton, which was reported as being of eminently desirable character, both as regards the grade and the staple, and which realised over 1d. per pound more than the value of American middling. The cultivation of cotton is always considered to be highly speculative, as the crop is prone to suffer from various pests and climatic influences but, in our case, the risk we run is trifling and only amounts to the value of the seed which we distribute to natives. We are looking to an increase in output this year.

NATIONAL DEFENCE CONTRIBUTION

You will expect me to say something with regard to the new tax called National Defence Contribution. The final draft is not yet settled and we shall not know for some time how we stand. There are certain matters in the application of this tax to the particular circumstances of this company which are not free from doubt. We have been given to understand that the tax is not intended to hit companies such as ours which are just emerging from years of great depression, but, taking the most unfavourable view and based on our estimate of profits, the amount payable by this company would be comparatively small.

I have to report that Major Pam tendered his resignation from the board owing to increasing pressure of other business. We have accepted this resignation with great regret. I am pleased to report that Mr Neil Adshead, of Messrs J. Henry Schroder and Company, our bankers, accepted our invitation to join the board in place of Major Pam.

FUTURE PROSPECTS

Turning to the future and our prospects during the current year, I have nothing but good news to give you. We estimate a further reduction in costs now that we have settled down on our reorganised basis. The factories have started crushing most satisfactorily and the juice is better than normally. We have hope of an increased quota for Portugal, owing to an indicated rise in consumption. Values on the free market should tend to improve and the cotton business looks like contributing a welcome addition to our profits. For all these reasons we look forward to the year with confidence.

The Chairman concluded by moving the adoption of the report and accounts, and the declaration of the dividend as recommended.

The resolution was carried and the retiring directors and auditors were re-elected.

UNION CORPORATION, LIMITED

CONTINUED ACTIVITY ON RAND

YEAR'S PROFIT HIGHER

MR P. M. ANDERSON ON FUTURE OF GOLD

The ordinary general meeting of shareholders of the Union Corporation, Limited, was held in Johannesburg on May 21st, Mr P. M. Anderson presiding.

The Chairman, in the course of his remarks, said:—For the fourth year in succession we have earned increasing profits. Thus, the net profit for the year under review at £685,044 is £80,124 higher than for 1935. Out of the net profit £40,000 has again been set aside to reserve account, which, as a consequence, now amounts to £1,320,000, and your directors have appropriated a further £50,000 to open an exploration reserve account. Dividends have been declared of 8s. 6d. per share for the year, which is 6d. more than was distributed for 1935.

The book value of our holdings—after providing for contingencies by reducing the book value of certain holdings below cost and market price—show but little change. Our financial position is strong. The cash and cash assets aggregated at December 31st last £5,343,244. Sundry creditors totalled £4,911,602, and thus we had an excess of cash and cash assets over all liabilities of £431,642.

POSITION UNDER N.D.C.

You are aware that the whole of our profits are subject to United Kingdom taxation, and therefore also to the new National Defence Contribution which is to be introduced in the United Kingdom shortly. The underlying idea of this tax is not dissimilar to the defunct Excess Profits Duty. As originally presented, the new tax was unfair in its incidence to many enterprises, and especially to those which had suffered most in the depression and had since made the best recoveries, such as base-metal mining, shipping and plantation companies.

You will be interested to know that, in view of the steady profits earned by the corporation, it is likely to suffer but little from this new taxation. As Rand gold-mining companies, almost without exception, are registered and carry on their business outside the United Kingdom, they do not suffer at all. On the other hand, companies such as Selection Trust, Rhodesian Selection Trust, Roan Antelope and San Francisco Mines of Mexico, in all of which we are interested, may be called upon to make fairly heavy contributions in good years. Even so, I am confident there is no cause for concern, for the modifications the Chancellor is likely to introduce will, I hope, eliminate the harsh features which his first announcement of the new measure suggested.

FUTURE OF GOLD

You will no doubt expect me to say something regarding the rumours which were in circulation not long ago suggesting as a possibility that the principal Governments intended reducing the currency price of gold. This action it was suggested had for its object to stem the rise in commodity prices, to dam back the flow of gold into the United States and to curb the world production of gold. Our chairman and managing director, Sir Henry Strakosch, made a statement less than a fortnight ago which appeared in the London Times, in which he deals with these rumours and the consequences which would follow from a reduction in the price of gold. I do not think I can do better than read that statement to you. (The Chairman then read the statement.)

I fully concur with the views which Sir Henry Strakosch has expressed, and I might add that, quite apart from the severe fall in share prices of gold-mining companies, the effect of the rumours on prices in general, and particularly on commodity prices, has given us a foretaste of what would happen if the currency price of gold were reduced. It requires very little imagination to appreciate that such a reduction would produce deflationary conditions which would drastically affect all prices, whether of securities, raw materials, manufactured goods or services. In turn, the fall of prices would be bound to affect adversely not merely South Africa's economy but the economy of every other country on the globe, just as the 1929 crisis did. One shudders to think of a recurrence of such a catastrophe, with its breakdown of credit, of industrial activity and the vast measure of unemployment which ensued.

EXPANSION OF RAND MINING

Turning now to the Witwatersrand gold-mining industry, the great expansion which has been the outstanding feature of the

industry since the abandonment of the gold standard by the Union of South Africa in 1932 still continues. The quantity of ore crushed during the past year amounted to approximately 48 million tons. The quantity of gold produced during the year totalled 11 million ozs., which is an increase of some half-million ozs. on the 1935 figure and not far short of the record output of 11½ million ozs. in 1932. The gross profit of £32,000,000 was nearly £500,000 lower than in 1935. Out of this profit, however, the record amount of over £17,000,000 was distributed in dividends, while nearly £14,000,000 went into the coffers of the Government.

During the year over 60,000 feet of shaft sinking and about 2,000,000 feet of development was accomplished. The payable ore reserves have increased from 190 million tons with an average value of 5.3 dwts. to 203 million tons with an average value of 5.2 dwts.

The number of natives employed at the year-end was some 300,000, and showed an increase of about 25,000 on the 1935 figure.

"CLOSED SHOP" PRINCIPLE

The number of Europeans employed at the end of 1936 was nearly 37,000, or 3,000 more than at the end of 1935. The good relations between employees and employers were maintained throughout the year. Improvement of working and living conditions continued and following on a request for a 10 per cent. increase in the wages of all European employees, which was refused, certain additional concessions were granted in the form of a medical benefit allowance and an increased cash allowance for holidays.

The industry has in the past maintained the principle of the "open shop" and the majority of its employees have been organised under a number of trade unions, each catering for a particular group. Since the close of the year, however, grave unrest has been occasioned among miners by the emergence of a new organisation not primarily concerned with strictly trade union matters and subject to guidance and finance from extraneous sources which sought to undermine the position of one of the existing trade unions. This created an upheaval among mine employees and a serious situation seemed likely to develop. The employers decided to support the existing organisations of employees and to make such support effective by introducing the "closed shop" principle, under which all employees will be required to join one or other of the registered and recognised unions. This arrangement has been embodied in an agreement with the Mining Unions Joint Committee. It is anticipated that the new arrangement will be accepted by all in the spirit of helpful co-operation which has characterised the negotiations with the unions.

(The Chairman then dealt with the affairs of Geduld Proprietary Mines, Limited, East Geduld Mines, Limited, the Grootvlei Proprietary Mines, Limited, Van Dyk Consolidated Mines, Limited, Marievale Consolidated Mines, Limited, and the Withok Proprietary Company, Limited.)

Boring operations to locate reef near the contact of the Ventersdorp lavas with the underlying Elsburg sediments are being carried out on one of the blocks of farms under option to the corporation in the Bothaville district, Orange Free State. The information obtained to date is insufficient to determine the economic possibilities. Two of the boreholes put down have disclosed payable values, while nine others either revealed poor values or did not intersect reef.

The theory that the Witwatersrand series may occur in Western Transvaal under a covering of younger geological formations led the corporation to carry out a geophysical survey over a large area of ground. As a result of this work and in order to conduct further investigations, options over certain farms were secured. A drilling programme has been initiated, and a borehole which is located on a farm north of Lichtenburg was commenced early this month.

BASE METAL AND INDUSTRIAL INTERESTS

San Francisco Mines of Mexico earned the satisfactory operating profit of £224,322 for the year to September 30th last. After meeting expenses in connection with a one month's strike and the usual charges, sufficient remained to enable the company to pay a dividend of 9d. per share. Since the end of the year base-metal prices have risen very substantially. If metal prices continue at anything like their present levels, the company should be in a position to pay gratifying dividends henceforth.

The Rhodesian copper producers in which the corporation is interested benefited substantially during the year from the increased price of copper. Since the close of the year the price has

risen further, and the former restrictions on production have been removed.

During the year the corporation converted Unicorpora Investment Trust into a public company and changed its name to Bay Hall Trust. Full particulars are given in the directors' report, to which I do not think I can usefully add.

As you will have seen from the directors' report, South African Pulp and Paper Industries, Limited, was incorporated in December last. Its business will be to manufacture pulp, paper and similar products from South African raw materials under exclusive licence. The directors of the company have, after full investigation of a number of sites, decided to erect the factory on the farm Geduld, on the Witwatersrand. The production stage is expected to be reached towards the end of next year.

The Chairman then moved the adoption of the report and accounts, which was duly seconded and carried unanimously.

BOULDER PERSEVERANCE, LIMITED

PROMISING NEW INTEREST ACQUIRED

The thirteenth ordinary general meeting of Boulder Perseverance, Limited, was held, on the 28th ultimo, in London.

Mr C. F. Bell (chairman and managing director), who presided, said that the accounts were very satisfactory and required little comment; 17,000 tons more had been mined and treated than in the previous year and expenditure on development had been increased by £8,213, with excellent results. Bullion receipts were £40,000 higher than in 1935. An increase of £4,700 in taxation reserve had been made, leaving a balance available for distribution of £55,241, or £8,000 more than last year.

Things were going extremely well at the mine and the mine profits as shown by cabled returns for the first four months, January to April, showed a total of £43,992 sterling, which, if continued, would permit of an interim dividend later on. Development continued to show that the mine still contained untapped resources of payable ore. Although one of the factors which had caused the old company to go into liquidation was the belief that the ore remaining in the mine was only 5 dwt. value, yet, thirteen years after the reconstructed company had been brought into existence, the ore sent to the mill was still 8 dwt., with enrichments up to 20 dwt. That has been made possible by the directors taking advantage of all possible expert knowledge and by insisting that the mine staff should be up to date in their knowledge, that they might study the difficult formations in the mine to the advantage of the company. Costs of working continued to rise, and the recent arbitration award granting the underground workers a 40-hour week was bound to increase costs, but it was hoped that that would be counter-balanced by economies elsewhere.

THE ENTERPRISE LEASES

Passing to the future, the company had acquired the controlling interest in the Enterprise Leases, which it was anticipated would prove a very satisfactory extra source of revenue. The manager and his staff reported that their original views had been confirmed by the thorough examination and resampling they had been able to carry out since taking over at the end of March. Work was put in hand at once and was progressing satisfactorily; plant had been ordered and compressed air supplied to the mine from the Perseverance installation. The main shaft was being retimbered and sunk and the opening up of the mine would proceed at top speed through the main shaft and also through the Hainault shaft on the South Kalgurli lease, facilities for which had been kindly granted by that company. There were 180,000 tons of proved ore and over 450,000 tons of probable ore already opened up, and, at the rate of 5,000 tons per month, that should, under present conditions, yield a profit of £48,000 sterling per annum. It was not the intention of the management to stop at that figure, but they anticipated being able to increase that very materially with the most up-to-date and economical mining and treatment methods, as the mine was to all intents and purposes a virgin property. Shareholders might rest assured that everything was being done to expedite matters, and, in the absence of labour difficulties and a more or less static price of gold, the directors felt that the company had a very bright prospect for many years to come.

He could not close his remarks without tendering the thanks of the directors, in which they felt sure shareholders would join, to the manager and staff, and also to the London staff for their co-operation in faithful services to the company.

The report was unanimously adopted, and the dividend of 25 per cent. was approved.

STEPHANY (FURNITURE TRADES), LIMITED

RECORD SALES

The first annual general meeting of Stephany (Furniture Trades), Ltd., was held, on the 1st instant, at Winchester House, London.

Brig.-Gen. the Hon. Alexander, V. F. V. Russell, C.M.G., M.V.O. (the chairman), said that at the statutory meeting he was able to report a very satisfactory increase in the company's business, and he was glad to say that that increase had continued throughout the year; in fact, the sales constituted a record in the history of the amalgamated businesses. Had it not been for an all-round increase in the cost of raw materials during the last few months, they would have shown still higher profits, but, even so, he thought it would be agreed that the balance-sheet was eminently satisfactory.

Actually they had earned sufficient profit for the period to pay a dividend of 25 per cent. on the ordinary shares. The board, however, felt that it was desirable to conserve the resources of the company by limiting the dividend to 15 per cent., and he felt certain that that policy would meet with the fullest approval of the shareholders. Profits from subsidiary companies amounted to £28,321, and the net profit carried to the balance-sheet was £27,126. The current assets of the group amounted to £167,561, against total liabilities, including the proposed dividend, of £76,922. The greater part of the current assets consisted of trade debtors, and the total charge for bad debts last year was less than one-tenth of one per cent. on the turnover and the average length of credit was two months. Much of the stock had been bought at prices considerably below its present market value, and the benefits of that should be felt during the coming year. There was a substantial balance of cash in hand, a matter of great importance to the business.

As to the N.D.C. tax, from details so far available it would appear that it would not press unduly heavily upon the company, whose profits had not been affected to any extent by rearmament but had expanded naturally with the restoration of a normal standard of living.

The report was unanimously adopted.

DALKEITH (CEYLON) RUBBER ESTATES, LIMITED

SATISFACTORY FINANCIAL POSITION

The twenty-seventh ordinary general meeting of Dalkeith (Ceylon) Rubber Estates, Limited, was held on the 3rd instant, at 19 Fenchurch Street, London.

Sir Delves Broughton, Bt. (the chairman), said: I am pleased to be able to report to you a recovery in profits during 1936 to £7,616 as against £1,331 in 1935 and £9,040 in 1934 respectively. After payment of the dividend now recommended by your board at the rate of 4 per cent., less income tax, £9,902 will remain to be carried forward to 1937. Owing to the recovery of certain Dominion income tax, shareholders will receive their dividend for 1936 subject only to a deduction at the rate of 2s. in £.

Forward contracts for 1937 to date total 495,000 lbs. of mixed grades at an average price of 11½d. per lb., London equivalent, as compared with 340,000 lbs. at prices averaging 8½d. per lb. at this time last year, so that the company has already sold forward 60 per cent. of its estimated exportable crop of 825,000 lbs. for 1937 at prices showing an increase of about 31½ per cent. over 1936, which can, I think, be regarded as satisfactory.

I find difficulty in referring at this stage to the future prospects of your company until the forthcoming additional taxation for the purpose of National Defence expenditure is determined, and also bearing in mind the present excessive local export deduction obtaining in Ceylon of 15½ per cent. additional to the International percentage deduction of 16½ per cent. as compared with the minor local export deductions in Malaya and the Dutch East Indies.

As the estate this year will reach the maximum replanting acreage of 743 acres permitted under the present international scheme, a revised survey has been made of the replanted and bud-grafted areas since 1931, the result of which is shown in the annual report before you.

The financial position of the company continues to be satisfactory, the current assets, aggregating £29,447, of which sum £23,657 is represented by cash and Government securities, as against liabilities, including income tax reserves, amounting to £3,944.

The report and accounts were adopted.

MANUFACTURERS OF BATTERIES

DRY CELLS · ACCUMULATORS · RADIO EQUIPMENT
MOTOR CAR ACCESSORIES · PORTABLE ELECTRIC LAMPS

Net Trading Profit for year to 31st March, 1937	£527,333
Increase over last year	£44,553
Balance carried forward to next year	£63,417
Dividends on Ordinary Stock	45%

POINTS from the Speech of MR MAGNUS GOODFELLOW (Chairman) at the Annual General Meeting of THE EVER READY COMPANY (GREAT BRITAIN) LIMITED, on June 3rd, 1937

EXPANSION OF BUSINESS.

The expansion of our business during the past year has fully kept pace with the improvement we have so fortunately experienced throughout the past eighteen years. The public demand continues to increase—fostered by the good quality of our goods and the reasonable prices which the high mechanisation of our plant and processes has enabled us to establish. There are few businesses to-day that have found it possible (in the face of rising costs) to make increased profits, while maintaining consumer prices at the low levels of recent years—years of cheap money and low commodity prices.

TRADE CO-OPERATION.

We have been consistently and loyally supported by our Retail and Wholesale friends throughout the country, who realise the importance of establishing and maintaining a reasonably low price level to the consumer. For our part we seek to maintain for the distributing trade a fair margin of profit, and we can only continue to succeed in this endeavour while they continue to support us.

CAPITAL STRUCTURE.

The proposed National Defence Contribution, so happily withdrawn—at the twelfth hour—by His Majesty's Government, made it necessary for us particularly to examine our Capital structure; while our nominal Issued Capital is at the low figure of £1,144,765, we have for many years ploughed back into the business roughly 25 per cent. of the yearly profits earned, and in addition we have from time to time obtained considerable sums from premiums on Shares issued.

I have caused our Accountants to make a careful examination into the position, and you will be interested to know that the real Capital employed in the business to-day amounts to approximately £4,000,000.

INTANGIBLE ASSETS WRITTEN OFF.

One important step we have taken is to eliminate all goodwill and other intangible assets from the Balance Sheet. This writing off amounts to the large sum of £1,111,368. It will be appreciated by you that the many acquisitions we have made during the past eighteen years have contributed considerably to the successful trading position we occupy to-day, and I feel sure you will support us in the decision we have come to.

LIQUID ASSETS HIGHER.

Our net liquid assets show a marked improvement. If you compare the last four items—Stocks, Debtors, Government Securities, and Cash—with the previous year you will see that they have risen from £827,000 to £1,034,000.

MAINTENANCE OF EXISTING RETAIL PRICES ANTICIPATED.

Our Stock has risen nearly £90,000 to £340,000. Broadly, the whole of this stock was purchased and is valued at prices ruling before the advances of the last six months. Our forward arrangements are also advantageous, and furthermore, we shall obtain in the present year the full results of the great savings in production costs brought about by the plant and process mechanisation of the past five years. I am therefore of opinion that it will not be necessary to increase our prices to the consumer during this year.

DIVIDENDS AMOUNTING TO 45% ON THE ORDINARY STOCK.

Before leaving the Report and Accounts I must refer to the proposed increase in Dividend, which must have pleased you all. You will understand that, although we describe the last 10 per cent. of this dividend as Bonus, we should not have recommended it to you unless we thought there was a reasonable prospect of continuing the higher distribution on the increased Capital. Calculations show that, if our Profits are no more than maintained in the coming year, we shall have over £100,000 available for Reserves after paying 45 per cent. on the Increased Capital.

PROMISING OPENING TO PRESENT YEAR'S TRADING.

This year's trading has opened very promisingly and I am hopeful that we shall again meet you next year with the progressive results to which we are accustomed.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended May 29, 1937, amounted to £7,765,000, against ordinary expenditure of £10,429,000. After allowing for an increase in Exchequer Balances of £30,266, the operations for the week, as shown below, increased the gross National Debt by £2,924,000, to approximately £7,932 millions.†

CENTRAL AND SOUTH AMERICAN EXCHANGE RATES

THE BANK OF LONDON AND SOUTH AMERICA, LTD., issues the following details relative to quotations for certain of the South and Central American exchanges. All these exchanges, with the exception of that of Bolivia, are related to the United States dollar, and the approximate sterling rates may be obtained by applying the dollar-sterling exchange rate:—

Bolivia.*	Commercial Banks' "free" selling rate was 120 bolivianos per £ on April 23rd.
Colombia.*	Sight selling rate 175-80 pesos per 100 United States dollars on May 7th. This rate applies to holders of permits buying in the "open" market.
Ecuador.*	Official sight selling rate on New York was maintained up to May 7th at 10.50 sucres per United States dollar.
Guatemala.	Sight rate on New York is maintained at 1 quetzal per United States dollar, but a commission of 1 per cent. is charged by the Banco Central for the sale of drafts.
Nicaragua.*	Sight selling rate on New York was fixed at 2 cordobas per United States dollar on March 19th.
Salvador.	Sight rate on May 8th was 2.51 colones per United States dollar.
Venezuela.	Sight rate on New York was 3.19 bolivares per United States dollar on April 27th.

* Exchange controls are operative in these countries.

† Free of income tax. (a) Free of South African normal income tax. (c) Paid on a larger capital. (d) Also tax free bonus of 50 per cent. out of reserves.

ANGLO-EGYPTIAN OILFIELDS.—Dividend on "B" shares for 1936 of 12½ per cent., against 10 per cent. for each of the preceding five years.

ARGENTINE GREAT WESTERN RAILWAY.—Arrears of 2½ per cent. on 5 per cent. debenture stock to October 1, 1933, are to be paid.

BANK OF NEW ZEALAND.—Profits for year to March 31, 1937, £600,008, against £565,181. Ordinary dividend 10 per cent. as before. Carry forward increased from £339,100 to £364,889.

BARCLAYS BANK (DOMINION COLONIAL AND OVERSEAS).—Interim dividend on "A" and "B" shares raised from 5 to 5½ per cent. per annum.

BRITISH NORTH BORNEO COMPANY.—Divid

CARDIFF.—Active conditions have prevailed in all branches of the South Wales iron and steel industry. All available blast furnaces are in operation; the steel furnaces are also working under pressure to meet the inland and export trades, and the output of tinplate has rapidly recovered from the relatively low percentage of 69 to which it fell during Whit week. There is no change in prices, which are now under effective regulation. Shipments of tinplates at Swansea last week totalled 8,193 tons, compared with 7,630 tons the previous week, and 3,411 tons in the corresponding period of 1936.

OTHER METALS

COPPER.—Movements have been rather wide this week, but price closed a little down. Sales on the London Metal Exchange: 1,900 tons on Monday, against 2,500 tons last week; 1,250 tons on Tuesday, against 3,100 tons last week; 2,900 tons on Wednesday, against 2,200 tons last week. Domestic spot was quoted at 14.05 cents per lb. in New York on Wednesday, against 14.15 cents a week ago and 14.02½ cents a month ago. Wednesday's official closing price for standard cash in London was £61 2s. 6d. to £61 5s. per ton, compared with £61 10s. to £61 12s. 6d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 10,726 tons, showed a decrease of 1,355 tons, while stocks of rough copper, at 5,402 tons, were 1,297 tons larger.

LEAD AND SPELTER.—Business has been small and prices are more or less unchanged. Sales of lead on the London Metal Exchange: 700 tons on Monday, against 2,250 tons last week; 1,050 tons on Tuesday, against 1,650 tons last week; 850 tons on Wednesday against 1,700 tons last week. The New York quotation on Wednesday was 6.00 cents per lb., against 6.00 cents a week ago and 6.00 cents a month ago. Wednesday's official closing quotation in London for soft foreign for shipment during the current month was £24 8s. 9d. per ton, compared with £24 7s. 6d. last week.

Sales of spelter on the London Metal Exchange: 1,800 tons on Monday, against 1,850 tons last week; 1,200 tons on Tuesday, against 1,400 tons last week; 1,750 tons on Wednesday, against 1,200 tons last week. Wednesday's quotation in East St. Louis was 6.75 cents per lb., against 6.75 cents the week before and 6.75 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipment during the current month was £23 10s. per ton, against £23 7s. 6d. last week.

TIN.—Little of note has occurred in the past week. Sales of tin on the London Metal Exchange: 325 tons on Monday, against 225 tons last week; 65 tons on Tuesday, against 330 tons last week; 450 tons on Wednesday, against 300 tons last week. The New York quotation on Wednesday was 56.12½ cents per lb., against 56.00 cents a week ago and 55.37½ cents a month ago. Wednesday's official closing quotation in London for standard cash was £255 to £255 5s. per ton, compared with £252 to £252 5s. a week ago. Stocks of tin in London and Liverpool at the end of last week totalled 2,459 tons, an increase of 522 tons on the week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted on Wednesday at £100 per ton, and rolling billets at £102 per ton. Nickel, for home and export, was maintained at £180 to £185 per ton. Quicksilver, on the spot, was quoted at £14 18s. to £14 18s. 6d., as against £15 12s. to £15 12s. 6d. last week per flask of 76 lbs. Chinese antimony was quoted at £70 per ton, ex warehouse, as against £72 to £73 last week. Chinese wolfram for "June-July" shipment was quoted at 58s. to 60s. per unit, c.i.f., compared with 57s. to 58s. for "May-June" shipment last week. Refined platinum was quoted on Wednesday at £11 5s. an ounce, the same as last week.

TEXTILES

COTTON.—Manchester.—The past week has not brought any increased activity. Spinners and manufacturers have dealt with a fair amount of inquiry and numerous quotations have been given out, but on the whole the response from buyers has been rather poor. Traders in some quarters have been rather uneasy, owing to the rumours concerning the future price of gold. Much satisfaction has been expressed at the abandonment of the N.D.C. proposals in the Budget.

THE FINANCIAL NEWS

Special articles due to appear next week on the Leader Page of THE FINANCIAL NEWS are as follows:

MONDAY AND TUESDAY, JUNE 7 AND 8.—THE GOVERNMENT'S ELECTRICITY SUPPLY REORGANISATION SCHEME. Proposals for the reorganisation of the Electricity Distribution Industry, as embodied in the memorandum sent to certain people in the industry, are causing much consternation both within the industry and in political circles. It has been discovered, with surprise, that the proposals depart fundamentally from the recommendations of the McGowan Report, and the Supply Companies feel that their legitimate interests and those of their shareholders are gravely endangered.

MONDAY'S ARTICLE will deal with the general provisions for amalgamation and regrouping of the industry.

TUESDAY'S ARTICLE will deal with the provisions for the buying out of existing undertakings and the position of the regrouped undertakings under the proposals as they stand.

WEDNESDAY AND THURSDAY, JUNE 9 AND 10.—CHINESE BONDS. Continuing our series of articles on the Foreign Bond Market, we turn this week to a country which, at present, is making as much progress, both economically and politically, as perhaps any other country in the world.

WEDNESDAY'S ARTICLE will deal with China's position generally and with the Customs and Salt issues.

THURSDAY'S ARTICLE will discuss the many and varied investment opportunities amongst the Chinese Railway Bonds.

FRIDAY, JUNE 11.—COMPANIES AND THEIR PROFIT-EARNING CAPACITY—NO. 45. This week we celebrate the death of N.D.C. by including in this series a company which was due for earlier inclusion, but which was unavoidably postponed by the Finance Act: RHOKANA.

THE FINANCIAL NEWS

(Twopence Daily)

On sale at all railway bookstalls and good newsagents everywhere

There has not been any distinct change in the level of raw cotton prices. Fluctuations in prices during the next month or two will depend on the progress of the crop in the United States. On the whole, the outlook is favourable, as during the last few days beneficial rains have fallen where wanted. The Government forecast of the acreage will not be published until early in July.

Quotations throughout the yarn market have been firmly held. New business, however, has again been on a limited scale. Considerable attention has been centred on deliveries against old contracts. American twists are as scarce as ever. Egyptian descriptions have been purchased rather sparingly. A rather featureless state of affairs has prevailed in the cloth market. Inquiry has not been absent by any means, but the turnover has consisted of retail lots to meet urgent wants, bulk lines being unknown. Operations for India have been of a restricted character and buyers seem to be of opinion that if a waiting policy is adopted, more favourable opportunities of purchasing will exist in the near future. A mixed business has been done in fancies for China and Java, and useful orders have been secured in sheetings, printers and satens for South America. Occasional lines have been booked in heavy finishing styles for Scandinavia. Home trade purchases have not been at all important.

JUTE.—Dundee.—Raw jute prices are still displaying some irregularity, due to the operations of speculators in Calcutta, but there is a gradually declining tendency. Consumers at all centres are showing very little interest yet, as it is generally anticipated that quotations will be lower owing to the favourable statistical position. The present crop will yield about sufficient to meet the requirements of the world without consumers having to fall back upon their stocks, while everything points to a big crop of jute for next season. There have been reports of too much rain having fallen in some districts in India, causing damage, but these are not being taken seriously here, as jute is a plant which can do with much moisture. The Indian jute mills have purchased approximately six million bales during the present season and the quantity exported will probably be over 4,500,000 bales by the end of this month, when the season ends. New crop is being more or less neglected at present high prices, which are about ½ per ton dearer than they were last year at this period, when the full group of Daisee-2/3 was sold down to £15 17s. 6d. Sellers here are asking £21 2s. 6d. for the full group of old crop and would do business at £21 for new, but buyers are indicating at least £2 less. The full group of Tossa-2/3 is quoted at £21 15s. and four at £21 5s., June/July, with new crop assortment available at £22, October/November. Old crop white jute is offered at £23 2s. 6d. for Green Circle Ram Lightnings and £22 2s. 6d. for Heart Ram-D/E, June/July, while new crop is available at £23 for Lightnings in a short group and £22 for Hearts, August/September.

Jute yarns are very quiet, but spinners continue busy with orders in hand, and prices are steady enough all round. Common 8 lb. cops are still at 2s. 4d. and 8 lb. spools at 2s. 5d., while twist is obtainable at 4½d. to 4½d. for 3-ply 8 lb., and sacking yarns are unchanged at 2½d. for 24 lb. weight and 3½d. for 8 lb. chains. Rove is slow but unaltered at £22 lowest for 48 lb. and £17 10s. for 200 lb., while carpet yarns are quiet but firm at 3½d. for 14 lb. warp. Orders for jute cloth are few and far between, and prices rule more or less nominally unchanged. Manufacturers might shade their terms if decent business were offered, but they are still quoting 2½d. for 10 oz. 40 in. and 2½d. for 8 oz. Calcutta goods have declined a little, but there is a steady undertone because of labour troubles at some of the Indian mills, where the workers are on strike, thus affecting production to some extent.

WORLD TRADE IN RAYON FABRICS.—World trade in rayon fabrics showed marked expansion in the first quarter of 1937, demand being particularly strong in the Asiatic markets, a feature which is very much to the advantage of Japan, now the greatest exporter in this class. From returns available, imports into Asiatic countries from all sources (but mainly Japan) showed an increase over the corresponding period in 1936 of 24 million yards, or nearly 50 per cent. India accounted for 6 millions, Manchukuo for 7 millions, Hongkong for 5 millions, and Malaya and the Dutch East Indies for 2 millions each. In the aggregate there was little change in Europe. African demand was reduced by the restrictions on Japanese goods in Egypt, whilst a similar cause resulted in lower shipments to Australia.

GRAIN MARKETS

WHEAT.—Following improved weather and the growing optimism of crop estimates, prices have been a little easier this week. Continental buying continues since crops may be delayed, but Danubian shipments are surprisingly large.

On Wednesday last, "July" futures were quoted in Chicago at 110½ cents per bushel, against 118 cents the week before and 119½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern, Manitoba ex ship, not quoted; last week 51s. 6d. per 496 lbs.; No. 2 Northern Manitoba, ex ship, 49s. 6d., as against 51s. a week ago. According to the *Corn Trade News*, total shipments of wheat and flour last week amounted to 1,495,000 quarters, against 1,617,000 quarters in the previous week and 1,091,000 quarters in the corresponding week a year ago.

FLOUR.—Business is still extremely small for both home milled and imported flour, and prices have moved down once again. Wednesday's London quotations (excluding quota payments) were: Straight run, delivered Home Counties, 40s. per 280 lbs., as against 52s. a week ago; delivered inner London, 39s. 6d., as against 41s. 6d. a week ago. Manitoba patents, ex stores, 37s. to 38s. 6d., as against 37s. 6d. to 39s. a week ago. Australian, ex store, 33s. to 34s., as against 33s. to 34s. a week ago.

BARLEY.—Business remains on a small scale. Spot supplies are scarce, but buyers are awaiting the new crop. "July" futures were quoted at 63½ cents per bushel in Winnipeg on Wednesday, as against 66½ cents last week. Quotations per 448 lbs. in London on Wednesday were: "English feed" at farm, 35s. to 36s., as against 35s. to 36s. a week ago; "English malting" at farm, 36s. to 42s., against 38s. to 45s. last week. "English malting," ex ship, 50s. 6d. to 53s., as against 53s. 6d. a week ago. Chilean, California, ex ship, 44s. 9d. to 50s., as against 44s. 9d. to 50s. a week ago.

OATS.—On Wednesday, "July" futures were quoted at 43½ cents a bushel in Chicago, against 43½ cents a week ago and 44½ cents last month. Quotations in London, Wednesday: "English black," at farm, 26s. to 27s. per 336 lbs. a week ago, as against 26s. to 27s. a week ago; "English White," at farm, 26s. to 27s., as against 26s. to 27s. a week ago; mixed Canadian feed (Vancouver), landed, 26s. 3d. per 320 lbs., as against 26s. a week ago.

MAIZE.—There has been much more activity in this market during the past week. Continental and United States buyers have been active, and quotations generally have risen. "July" futures were quoted on Wednesday at 122½ cents per bushel in Chicago, against 121½ cents a week ago and 119½ cents last month. Quotations in London, Wednesday: "Plate," landed, 29s. 3d. per 480 lbs., as against 28s. 9d. a week ago; "Plate," ex ship, 28s. 3d., as against 27s. 8d. a week ago; "Plate," May, 28s. 3d., as against 27s. 8d. a week ago; yellow maize meal, ex wharf, was quoted at £7 7s. 6d. to £7 8s. 9d. per ton, as against £7 2s. 6d. to £7 5s. last week.

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations for selected weeks in 1935-37:—

NEAREST FUTURE	Jan. 2, 1935	Dec. 31, 1935	June 3, 1936	Dec. 30, 1936	May 26, 1937	June 2, 1937
Winnipeg (No. 1, Manitoba) —Cents per 60 lb.	82½	84½	77½	129	130½	119½
Chicago (No. 2, Winter) —Cents per 60 lb.	98½	101½	84½	135½	120	110½

The visible supply of wheat in Canada amounts to 58,880,000 bushels, against 60,689,000 bushels last week, and 93,884,000 bushels in the corresponding week last year.

SALES AND PRICES OF BRITISH CEREALS.—The following table gives the estimated sale of home-grown wheat during the harvest years 1933-34 to 1936-37.

	1933-1934	1934-1935	1935-1936	1936-1937
Estimated sales of home-grown wheat—	Cwts.	Cwts.	Cwts.	Cwts.
1 week to May 29	148,673	169,755	168,252	164,010
39 weeks to May 29	9,883,408	12,454,531	12,472,292	9,825,808
Average price of English wheat per cwt.	s. d. 4 11	s. d. 5 6	s. d. 6 10	s. d. 9 11

The following is a statement showing the quantities sold and the average price of British cereals in the past two weeks, and for the corresponding weeks in each of the years from 1933 to 1936:—

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
May 27, 1933	Cwts. 104,826	Cwts. 55,177	Cwt. 22,172	s. d. 5 11	s. d. 6 8	s. d. 5 8
May 26, 1934	148,673	13,710	27,728	4 11	7 5	6 2
June 1, 1935	169,755	29,045	19,134	5 6	7 0	7 3
May 30, 1936	108,252	13,460	18,393	6 10	8 11	6 2
May 22, 1937	143,967	14,960	36,817	9 9	9 11	9 1
May 29, 1937	164,010	11,115	21,420	9 11	10 0	8 11

OTHER FOODS

BACON.—As during last week business remains small, and prices have been weak in several sections of the market. The official quotations (per cwt. for No. 1 Sizable) which formed the basis for dealings on the London Provision Exchange this week were: English, 86s. to 90s.; Canadian, 82s.; Danish 92s.; against 88s. to 92s., 82s., and 95s. last week. Arrivals in London last week included: Danish, 13,952 bales; Canadian, 9,211; Dutch, 2,857; Lithuanian, 1,389; and Polish, 2,332; as against 13,802, 7,933, 2,436, 1,467 and 3,346 bales, respectively, in the previous week.

BUTTER.—Prices continue to rise gradually. Quotations (per cwt.) on the London Provision Exchange on Monday were: New Zealand, finest salted, 110s.; Australian, choicest salted, 109s.; Danish, 114s.; compared with 109s., 108s. and 114s. to 115s., respectively, a week ago.

CHEESE.—In this market, quotations have been firm for all imported brands, and several rises have taken place. Quotations (per cwt.) on the London Provision Exchange on Wednesday were as follows: Canadian, finest coloured, 77s. to 78s.; and New Zealand, finest coloured, 74s.; against 76s. to 78s. and 74s., respectively, a week ago.

COCOA.—The spot quotation in New York on Wednesday was 7½ cents per lb., as against 7½ cents per lb. last week. In London, on Wednesday last, good fermented new crop, Accra, "October-December," was quoted at 36s. per 50 kilos., c.i.f. Continent, against 36s. a week ago. Last week's movements of cocoa in London were as follows: Landed, 5,505 bags; delivered, for home consumption, 10,366 bags; exported, 914 bags; stocks, 293,992 bags, against 175,574 bags a year ago.

COFFEE.—On Wednesday, Rio No. 7 (cash) was quoted at 9½ cents per lb. in New York, as compared with 9½ cents per lb. last week and 9 cents per lb. a month ago. Movements of coffee in London last week were as follows: Brazilian, landed, nil; delivered, for home consumption, 56 cwt.; exports, 31 cwt.; stocks, 2,053 cwt., against 10,499 a year ago. Central and other South American: Landed, 4,573 cwt.; delivered, for home consumption, 2,562 cwt.; exported, 626 cwt.; stocks, 115,968 cwt., against 125,767 last year. Other kinds: Landed, 4,608 cwt.; delivered, for home consumption, 3,690 cwt.; exported, 216 cwt.; stocks, 121,994 cwt., against 178,078 last year.

EGGS.—The prices remain steady for English and for imported eggs. At Smithfield, on Wednesday, English (ordinary packing, Grade I, about

15-15½ lb.) realised 10s. 3d. to 10s. 6d. per 120, against 10s. 3d. to 10s. 6d. last week; while Danish (15½ lb.) made 8s. 6d. to 8s. 9d., as against 8s. 6d. to 8s. 9d. last week.

FRUIT.—The turnover at Covent Garden has been considerable, but prices remain fairly satisfactory. Very large foreign arrivals have depressed most apple prices, but English Bramleys are doing well at anything up to 12s. per box. New Zealand boxes are unchanged at 14s. to 18s., but Australian Granny Smith and Tasmanian Coxes have fallen. The price of pears is steady, but peaches, nectarines, strawberries and green figs are in considerable request. Oranges and lemons of good quality are scarce and very expensive. French and Italian cherries and Spanish apricots are getting good prices.

MEAT.—At Smithfield Market on Wednesday last, Argentine chilled hindquarters were quoted at 4s. 10d. to 5s. per 8 lbs., as compared with 4s. to 4s. 4d. a week ago. New Zealand frozen mutton was 3s. 4d. to 4s. per 8 lbs., against 3s. 4d. to 4s. a week ago. According to the Smithfield Market official report, supplies during last week amounted to 8,147 tons, a decrease of 1,553 tons on the corresponding week last year. Beef and veal accounted for 4,453 tons, mutton and lamb 2,594, and pork and bacon 681, as compared with 5,274, 3005 and 848 tons, respectively, in the same week of 1936.

PEPPER.—On Wednesday, Singapore white Muntok, spot, was quoted at 6d. per lb. in bond, against 6d. per lb. a week earlier. Black Lampung, spot, in bond, was quoted at 3d. per lb. sellers, compared with 3d. per lb. last week. Movements of pepper in London last week were as follows: Black, landed, 30 tons; delivered, 2 tons; stocks, 1,938, against 1,759 last year. White, landed, 16 tons; delivered, 50 tons; stocks, 11,929 tons, compared with 12,181 a year ago.

RICE.—The spot price of Burma No. 2, cleaned, was 10s. per cwt. ex warehouse, on Wednesday, as compared with 10s. per cwt. a week ago. "June-July," in singles to Continent and U.K., was quoted at 9s. per cwt., against 9s. for "May-June" last week. Movements in London last week were as follows: Landed, 153 tons; delivered, 73 tons; stocks, 1,078 tons, against 1,282 a year ago.

SUGAR.—The New York spot quotation was 3.35 cents on Wednesday, as compared with 3.35 cents per lb. last week and 3.45 cents per lb. a month ago. Wednesday's sales of raw sugar in London included "August" delivery at 6s. 6½d. to 6s. 7½d., against 6s. 5½d. to 6s. 6d. a week ago. Movements of raw sugar in public warehouses in London and Liverpool last week were as follows: Imports, 25,748 tons, against 42,362 in the previous week and 18,355 in the same week of 1936; deliveries, 20,654 tons, against 23,867 and 19,455 tons, respectively; stocks, 205,432 tons, against 200,338 and 170,010 tons, respectively.

TEA.—The following table shows the average price (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account in recent weeks:—

Week ended	Northern India	Southern India	Ceylon	Java	Sumatra	Africa	Total
May 21, 1936	d. 12.41	d. 13.00	d. 14.21	d. 10.81	d. 10.21	d. 11.75	d. 12.81
Apr. 22, 1937	14.79	16.38	17.36	14.81	13.08	13.98	15.68
Apr. 29, "	15.04	16.37	17.35	13.68	12.73	14.18	15.68
May 6, "	15.26	16.15	17.28	14.52	13.23	14.31	15.80
May 11, "	15.58	16.58	17.15	Nil	Nil	14.83	16.23
May 27, "	14.76	15.25	16.11	13.24	12.17	14.03	15.10

At this week's public auctions in Mincing Lane, 35,865 packages of Indian and 26,838 packages of Ceylon tea came up for disposal.

VEGETABLES.—According to *The Fruitgrower*, prices have tended to rise in the vegetable market, demand being considerable and supplies none too large. Cucumber prices are firm at 4s. to 5s. per dozen. Asparagus, despite larger arrivals, is selling well, and forced marrows fetch 6d. to 1s. each. Tomatoes realise 9s. 6d. to 10s. per dozen lbs. for pink and white and crosses, while Dutch imported earn 8s. to 8s. 6d. Jersey new potatoes fetch 28s. to 29s. per cwt., and Spanish Mataro 22s. to 22s. 6d. The demand for old potatoes is declining, but the best siltand King Edwards went at 9s. 6d. to 10s. 6d. per cwt. at the Borough on Tuesday, as against 10s. to 11s. last week.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OILSEEDS.—Very quiet conditions continue, and only a small business is reported in any direction. A little Calcutta linseed has been taken by British crushers at full prices, and Plate seed has been in some demand on the Continent, but no substantial quantity has changed hands. In the present state of the oil market, crushers are far from eager buyers, and shippers, on their part, with a comparatively small unsold balance, are not pressing sales, and apparently are content to await developments of the situation in America. Great uncertainty still persists concerning the ultimate size of the new crop in the United States and the effect of weather conditions upon it. Shipments from the river Plate have fallen off considerably in recent weeks. According to the Argentine Ministry of Agriculture, the balance unsold on May 29th was 631,000 tons. Indian new crop appears to be moving off better, but shippers with a good home market are only inclined to sell for export if and when prices are satisfactory to them. Over 300,000 tons may be available for shipment, but the price obtainable is likely to be a strongly deciding factor. At present linseed is fairly steady and day-to-day fluctuations only slight. The quantity afloat for Europe has dropped to 89,300 tons (including 29,900 tons from India) and for America to 51,900 tons. Linseed oil remains steady at around £29 10s. per ton, naked, ex Hull delivery to the end of the year. Cottonseed has declined further to £8 and the trade in oil continues poor, Egyptian crude offering freely at £28 per ton ex Hull. Oilcakes are in fair demand for the time of year and prices are maintained.

RUBBER.—Prices have again fallen slightly on the week as a whole, but there have been considerable fluctuations. The Spanish crisis caused a sharp break on Monday, but the withdrawal of N.D.C. was followed by an equally sharp recovery. But the outlook as a whole remains uncertain, and consumers are only buying very cautiously. The spot price in New York on Wednesday was 20½ cents per lb., compared with 20½ cents per lb. a week ago and 21½ cents a month ago. Wednesday's official buyers' price for standard ribbed smoked sheet on the spot in London was 10d. per lb., as against 10½d. on the corresponding day last week. In forward positions, business has been done at 10½d. to 10½d. for "July" shipment, as against 10½d. a week ago. Stocks in London and Liverpool at the end of last week totalled 46,687 tons, against 46,935 tons a week earlier. A year ago stocks amounted to 130,560 tons.

WHOLESALE COMMODITY PRICES

UNITED KINGDOM: LONDON, June 2nd

stratively linked with health, the MINISTER mentioned the inquiries being pursued by the Registrar-General and the Population Investigation Committee and foreshadowed their extension. It is reassuring to know that population is now officially recognised as a problem; and that the necessary preliminary investigations by a private body have received such encouragement.

In Housing, the extraordinary activity of the last few years continues. In the MINISTER'S words "if there is a house building boom, it dies hard." In the last year the number of houses built was the record figure of 346,000. It is still true that far too few of these houses are built to be let at low rents to the poor; but it is less true than it was, since 142,000 of the total were built to let, most of them presumably in the cheapest class. In large part this result is due to the rapid progress now being made with the slum clearance programme. Four years out of the five allowed for this programme have now expired. The MINISTER announced that the period will be extended by nine months, but at the end of that time the full programme will have been accomplished. Indeed it has grown in execution, for the original total of 207,000 houses has now been increased to 265,000. This activity is encouraging, but there is a danger signal to be found in the rise of building costs. The average price of houses included in contracts let by local authorities has risen in one year from £311 to £338 or even higher. Moreover, only £11 of this increase can be ascribed to the higher costs of labour and materials. The remainder is due to "the excessive pressure on the industry and the uncertainty of the ready availability of skilled labour and certain kinds of material." This sounds suspiciously like a circumlocution for boom finance.

All this, and many other matters mentioned by SIR KINGSLEY WOOD in a lengthy speech, make a creditable administrative achievement. But it is impossible to be complacent about the state of affairs as they are in any of the departments of the Ministry's work. There have been advances in the treatment of diabetes and some

other diseases, but influenza and the common cold remain responsible for a disturbingly large proportion of illness and deaths. While old scourges decline, cancer and neuroses increase in effect. While children become less prone to severe attacks of infectious diseases, the diseases of old people grow in virulence. The Ministry of Health can hardly be blamed for the remaining imperfections of medical science; but too much of our national ill-health is institutional in character. Rheumatism and tuberculosis, for example, are very largely the result of bad housing and bad nutrition. It is true, as the MINISTER claimed, that the existing health services are not used to the full; but it is also true that they leave many lacunae unfilled. Some districts are a long way below the average standard; and all over the country some classes of people are insufficiently provided for.

The same general comment can be made on housing. The present programmes for the clearance of the slums and the abatement of overcrowding are little more than a small beginning compared with the magnitude of the task. It is still a fair criticism that housing activity does not chiefly help those who need it most. It has never been satisfactorily demonstrated that unassisted private enterprise can provide houses that the poor can afford. And even if it is true to-day, it may not be true to-morrow, when rising costs, and possibly rising interest rates, have raised the cost of houses, while rising food prices reduce the fraction of income available for rent. The truth of the matter is that our present standard of living, though it has risen fast in the present century, still leaves only the most precarious margin for the full health and true welfare of the majority. So long as that is true, the Ministry of Health will perforce have to concentrate on the palliation of distress rather than the nurture of positive welfare. The Ministry more nearly touches the real springs of human happiness than possibly any other. That fact in itself imposes on the MINISTER an especial responsibility for seeing that there is no pause in the steady unfolding of the nation's welfare services.

Europe Breathes Again

LAST Saturday, exactly a week after the bombs fell on the "Deutschland" at Iviz, the British Foreign Office received from our Ambassadors in Berlin and Rome the German and Italian Governments' replies to the British proposals for preventing the recurrence of such incidents.

Little is known of the precise wording of these replies; but the chief concern of the British Government is well known. It is to prevent, on the one hand, attacks by either side in Spain on the patrolling forces of the Non-interventionist Powers; and we should do well to remember that warships are not alone engaged on this work. There are French, British, Scandinavian, Belgian, Dutch and other countries' patrols of observers along the land frontiers of Spain; and they are liable to accidents of war. On the other hand, the British Government's right and proper concern is to prevent indiscriminate reprisals for attacks on a Non-interventionist country's patrols, such as the German warships' bombardment of the unfortified town of Almeria.

To these ends, the British Government suggested two sets of measures. First, extensive safety zones should be established by agreement with both sides in Spain; secondly, if events like the bombing of the "Deutschland" recur in spite of these safety zones, the Non-interventionist Powers should agree to take no individual action—except, of course, legitimate self-defence during

the actual time of the attack—until after general consultation with the other Non-interventionist Powers. These proposals take their origin in the very core of the new international concept of Non-intervention. They were devised to uphold the collective nature of that concept, as well as of the supervision scheme to which it gave rise. They imply, as the concept of Non-intervention by agreement implies, an agreed measure of limitation upon the legal right of any sovereign State to do as it likes. If, therefore, the principle of Non-intervention is conceded, the requests which the British Government have made to Germany and Italy are natural and right.

The German and Italian Governments, in association, are reported to have replied by urging their right to take immediate action in self-defence—which none disputes—and, further, to take any punitive measures *ex post facto* which, in default of a decision by the Non-interventionist consultants satisfactory to Germany and Italy, they consider warranted. This second point is theoretically nothing but an extension of the first, an insistence upon the very letter of the law of State sovereignty. Every State, having incurred consultative obligations, has the right, if dissatisfied, to quit the common council and proceed to sovereign acts. In the present instance, however, Non-intervention is being tried out as a precedent in international law and

behaviour; and the participants have, from the outset, agreed to make it work. To that extent the recourse of any single participating State to sovereign acts because it is dissatisfied with the way Non-intervention works, or because one of the Spanish contestants (they are not parties to the Non-intervention agreement) behaves badly, must tear up Non-intervention itself, and plunge every State back into the maelstrom of conflicting power-policies.

Happily, there is good evidence that the German Government have realised the risks to which Europe would be subjected if such a course were pursued. HERR VON RIBBENTROP arrived back in London from two days of consultation with HERR HITLER and his officials on Wednesday; and it is understood that both Germany and her *alter ego* in European diplomacy, Italy, have only asked that their legitimate sovereign rights should be recognised in the final formula. Naturally, they are not enamoured of the British proposals, which draw no distinction between the Spanish contestants, and uphold the collective nature of the Non-intervention scheme. But they infinitely prefer them to the proposals of France, which, in reply to the British suggestions, went so far as to declare that events like the bombing of the "Deutschland" were really due to the organisation of national patrol fleets in separate sectors, that the fleets should be mixed, and that other warships than those of the four Western Great Powers should be included. Both the French and Russians, and some of the smaller Powers, feel strongly that division of the task of supervision between the two democratic Great Powers and the two Fascist Great Powers, along separate sectors of Spanish coast, savours too much of public recognition of the ideological division of Europe. It looks to them like the dubious Four-Power-Pact in action; and it seems to invite the recurrence of such incidents as that of last week. Indeed, the SPANISH AMBASSADOR in London and the RUSSIAN AMBASSADOR

have this week pointed out the dangerous possibilities inherent in the scheme as at present organised, and the latter has reminded the Non-intervention Committee that the insurgents have attacked British and French ships and French aircraft without incurring reprisals or even discussion in the Committee itself.

Nevertheless, even the ability to breathe again is to be welcomed. By next week the agreed proposals are expected to be placed before both Spanish contestants, and Germany and Italy are expected back in the Non-intervention Committee and the supervisory scheme. Meanwhile, we turn once more to the course of the conflict in Spain itself. There we find little evidence of a speedy end. GENERAL FRANCO is massing troops for a final assault on Bilbao, which still defies his efforts; and—a more disturbing report—it is said that between 40,000 and 100,000 new troops for his army are coming from Spanish Morocco. Whether they are all black Moors, or whether some may be white and hail originally from European territory, are questions that are being asked but not answered, in other European capitals. But the sorry campaign goes on; the capital of Spain and other cities are being reduced to ruins by the indefatigable assiduity of foreign aircraft and artillery; and, though both sides are tiring, the one thing that does not diminish is the intensity of the hatred of each side for the other. Over the whole Iberian peninsula, and even beyond it in Africa and the Western Mediterranean, hangs the cloud of foreign intervention. By this time open or indirect support for one or other of the contestants can scarcely be abandoned by any one Power for fear of loss of prestige. Is it too much to hope that, as soon as the Non-intervention Committee holds its next plenary sessions, it may intervene to save both the combatants and the interveners and give to all of them a line of retreat? There is now more than a slight indication that such a move might be successful.

Patent Medicines—I

Æsculapius in Bottle

OF all the evils that have plagued mankind since publicity invaded Eden none has been more widespread, or more costly in its consequences, than human credulity. In the twentieth century men and women who no longer seek to propitiate or to stone magicians and witches, can still be persuaded that fortune hides in a wild-cat company prospectus and health in a quack's potion. Bitter experience may reiterate the lesson that what is most precious must be dearly bought. But our legislature is still occupied with the consequences of the obstinate belief of many of the King's subjects that the makers of patent remedies have discovered an elixir for every human ill.

A few weeks ago a Select Committee on Medicine Stamp Duties presented a brief report* proposing drastic changes in the existing law on proprietary medicines. The Committee's inquiries revealed such an unsatisfactory state of affairs that it is scarcely conceivable that new legislation will not eventually be introduced. Indeed, in his Budget Speech MR CHAMBERLAIN only excused his present inaction on the grounds of the pressure on Parliamentary time—an excuse which may not unreasonably be interpreted as half a promise. It may be appropriate,

* "Report of the Select Committee on Medicine Stamp Duties, 1937." H.M. Stationery Office. 3d.

therefore, to review the present situation of the patent medicine trade and discuss in brief outline the future.

The duties on medicine now in force derive from three Acts of 1802, 1804 and 1812, which superseded the original Acts of 1783 and 1785. Apart from a change in the scale of duties made in 1915 and the indirect effects of the Drug Acts and Acts dealing with indecent advertisement, those Acts of GEORGE III still control the industry in 1937. They provide two duties, one on persons who sell medicines without being "regularly bred to the profession of doctors, apothecaries, etc.," and one on the medicines themselves. Though there are anomalies connected with the first of these duties, the second mainly claims our attention here. It applies to all medicines claiming to prevent, cure or relieve human disorders or complaints except, first, pure single drugs sold by qualified chemists; secondly, known, admitted and approved remedies; and, thirdly, artificial waters. To put the same thing in another way, all medicines are dutiable which are secret, or proprietary, or are claimed to be such, or are recommended for any ailment.

Under cover of these apparently simple phrases there has grown up a mass of fantastic anomalies. Many articles advertised to cure, prevent or relieve ailments are not medicines. Obvious examples are tonic foods,

appliances, meat extracts and the like. Beverages are another group of non-medicinal products. They may be highly alcoholic, but they may nevertheless be advertised as curative because they contain a little quinine or meat extract. Again, a preparation may not *claim* to be any form of cure. For that reason back and kidney pills are not liable, though backache pills are. Cough mixture is dutiable, but chest mixture is not. Corn paint is dutiable, but toe paint is not; and so on.

The list of anomalies, indeed, is almost endless. Well-known single drugs can be sold by chemists without a stamp under fancy names. They may be backed up by immense advertisement and sold at ten times the cost of the material. They may claim to be a cure for almost anything under the sun, provided the claim is not obviously fraudulent. The same applies to any preparation of "known, admitted and approved remedies." Anyone who so desires can produce a medicine which, while not claiming to cure anything, is labelled "to compete with" or "equivalent to" a well-known product which does—and he is not liable to stamp duty. Finally, the exception of mineral waters has exempted from duty almost any powder which fizzes in water.

The results of these modes of legalised evasion are clearly revealed in the following table, which shows the number of excise licences granted, and the yield of the duties on the medicines themselves:—

MEDICINE STAMP DUTIES			
Year	Licences for Makers or Vendors of Stamped Medicines		Medicine Stamp Duties Net Receipts
	Number	Receipts	
1913-14	43,156	£ 10,791	£ 360,377
1921-22	45,804	11,453	1,328,448
1927-28	76,429	19,102	1,249,445
1929-30	105,603	26,391	1,234,199
1931-32	121,117	30,271	974,955
1932-33	131,475	32,863	882,006
1933-34	139,933	34,976	777,131
1934-35	147,173	36,778	709,046
1935-36	154,578	38,647	747,930

In drawing any conclusion from these figures, allowance must be made for the considerable growth in the number of separate pharmacies, which has been associated with the rise of the great chain shops. Nevertheless, it is highly probable that the number of manufac-

turers has increased; and at all events it is quite certain that the decline in yield of the duties is not caused by any reduction in the consumption of patent medicines of one kind or another.

What is actually spent annually upon patent medicines in this country is impossible to estimate with anything like accuracy.

The next table, drawn from recent reports of the Import Duties Act Inquiries gives some indication, but many of the products tabulated are far from being patent medicines within the meaning of the law, and many which are have not been included:—

PRODUCTION OF DRUGS, MEDICINES AND MEDICINAL PREPARATIONS			
	(£'000)	1933	1934
Glycero-phosphates		8	9
Quinine and quinine salts		181	253
Acetyl salicylic acid (aspirin).....		152	152
Salvarsan, neo-salvarsan, etc.		93	93
Novocain, Eucain, etc.....		56	65
Ointments and liniments		606	653
Infants and invalids foods:—			
Malted, including malt extracts		1,937	2,063
Other, including medicated wines		1,144	1,133
Proprietary medicines*		4,341	4,226
Pills, medicated lozenges, capsules and tablets, not included above		3,135	3,189
Medical plasters		268	316
Medicinal oils*		4,575	43
Other drugs and preparations*			4,742
Total		16,496	16,937

* Not elsewhere stated.

The Committee's own estimate, which they considered to be conservative, put the sum spent on proprietary medicines as a whole at £20 millions. Another figure given by the Committee was £28 millions. The present yield of the duties altogether is 4 per cent. of the more modest estimate. The scale of duties in force is not equi-proportional but on an average it is probably about 20 per cent. On this computation, it would appear that, roughly speaking, about four-fifths of the trade escapes tax.

It was this strange jumble of chaos and evasion which led to the appointment of the latest committee. In a subsequent article we propose to consider what changes in the law are required in the light of the Committee's report and of earlier inquiries.

Electricity Reform

THE Government's proposals for the reform of the electricity distribution industry, which are fully summarised on page 611, have not made their *début* under very favourable circumstances. They were circulated, in confidential form, to the representatives of the industry some two months ago. Knowledge of their general tenor, however, inevitably leaked out, and Members of Parliament were justifiably irritated to receive representations from their constituents on a matter of which they themselves knew nothing. As a result, the proposals earned an unenviable notoriety as the "Secret White Paper," and it is not unlikely that annoyance at the manner of their presentation may have been transmuted into dislike of their actual content. The representatives of the industry, who had no reason to share this objection to the procedure adopted, have taken a violent dislike to the actual proposals. Quite a violent campaign of opposition has consequently sprung

up before the public has had time to inform itself of the subject of dispute.

A brief glance at the proposals is sufficient to indicate why they are not popular with the large electric supply companies, for they envisage quite a substantial reduction of the scope and freedom, and even of the number, of these companies. But the companies themselves would not claim that their own interests are either identical with, or superior to, those of the community at large. There are wider considerations to be borne in mind, and it may be said at the outset that the proposals do not seem to merit the full violence of the criticism that has been directed against them.

The main lines on which the further reorganisation of the electricity industry should proceed, as laid down in the Report of the McGowan Committee last year, are fairly widely accepted. The argument for the concentration of the generation of electricity in units large enough

for maximum efficiency met with some opposition ten years ago; but it has been proved up to the hilt. The case for a similar concentration in the distributing end of the industry is not so overwhelming on technical grounds; but it is none the less conclusive.

It is agreed that the country should be divided into a number of areas, each large enough for efficiency and sufficiently varied in its geographical and industrial composition to secure the full benefits of a diversified load. Within each of these areas there should be only one electricity distributing undertaking. Diversification is required not merely between an industrial and a residential load in different quarters of the same town, but also between urban and rural areas. A thinly-populated rural area, if it were compelled to stand on its own feet, could have electricity only at prohibitively expensive rates. If it is allied with a densely-populated urban area there are considerable commercial economies to be reaped (apart from the technical economies of centralised generation, which are already secured through the "grid"). There is the further possibility of a definite subsidy being paid to the rural districts at the expense of the urban consumer by the equalisation of charges. To do this would be to follow the example of the railways and the Post Office. If this element enters at all, it clearly reinforces the case for large unified districts, so that the burden of the subsidy can be distributed as evenly as possible throughout the country. The ultimate aim of all reorganisation should be, first, to secure the greatest possible efficiency, and, second, to provide a substantial degree of uniformity of charges, if not throughout the country, at least as between similar areas in different parts of the country.

Disagreements begin when the attempt is made to translate these general principles into a detailed scheme, and the clamour against the Government's proposals is in part the reflection of the extent to which they have had the courage to be specific. The McGowan Committee recommended that separate district investigations should precede the drafting of schemes, and great objection has been taken to the fact that the Government's proposals intend to entrust this function to the Electricity Commissioners. The Government proposal, however, seems the more likely to prove effective, as there is a definite shortage of persons with the necessary technical qualifications but without a stake in the industry as it is. District investigations would involve either the Commissioners going on circuit or else the appointment of insufficiently qualified persons.

Discussion will naturally turn very largely on the actual areas chosen to serve as districts. The Government proposals list seventy-six proposed districts, but they suggest that many of these might be further subdivided. This seems to be making the average district unduly small in size, thus defeating one of the aims of the scheme. But on examination it appears that many of the larger municipal undertakings have been constituted districts in their own right, leaving the surrounding rural and semi-rural areas to form distinct districts—the reason being, presumably, political rather than economic. The effect of this tenderness to the town councils is definitely to reduce the economic justification for the grouping and to constitute perhaps the most serious blemish on the proposals as a whole. If the municipalities are not prepared to contemplate the amalgamation of their undertakings with the surrounding areas, any real reorganisation of electricity distribution will be impossible. To secure the assent of the municipalities is, admittedly, a political problem; but it cannot be solved by running away from it.

Once the districts have been delineated, the next problem will be to determine the methods by which the numerous undertakings now operating in a district can be amalgamated into one. The McGowan Committee recommended, broadly speaking, that the privately-owned power companies should serve as the nuclei. The Government proposals envisage a more elastic method, which would provide for four types of undertaking—private companies, Government-appointed distribution authorities, joint boards of local authorities, and single municipal undertakings. In so far as there is

any bias in the proposals it is towards distribution authorities. Here, again, the balance of preference appears to be on the side of the Government proposals. The distribution of electricity, being an industry of vital importance, a natural monopoly, and one in which routine necessarily plays a very large part, seems to be naturally marked out for public ownership, in one form or other. This general presumption has for many years been enshrined in legislation in the shape of the provisions for eventual purchase of undertakings by local authorities. The time is perhaps not yet ripe for nation-wide public ownership, but there is a great deal to be said for public boards in those districts where amalgamation can best be effected in this form.

The encouragement of public boards (a better solution than municipal ownership) involves, as has been pointed out, no new departure in principle. In practice the desirability of its application depends largely on the methods adopted for compensating the existing undertakings. If the compensation is too generous, the new public boards will be saddled with unduly heavy charges, and the ideal of cheaper electricity will be greatly deferred. On the other hand, fair compensation must be paid. The crux of the matter lies in the compensation to be paid to private owners for the loss of future profits. Some payment can fairly be made under this head, but it would be unreasonable to capitalise excessive monopoly profits. The solution proposed is to assume that monopoly exploitation would be made impossible in the future by suitable methods of control of the companies by the Electricity Commissioners, and to assess the compensation on the basis of the profits which would then be earned. In general and without regard to details, this seems to be a fair basis.

These measures of control for private companies are not intended to be merely an element in a calculation. They are to be imposed on all private companies remaining in existence. As will be seen from the summary of the proposals on page 611, they cover a wide field. Whether they are, in detail, too strict will be a matter for discussion. But that some element of control is necessary and desirable can hardly be denied. The desirability arises out of precisely the same sort of considerations as make the industry a good case for public ownership. Control undoubtedly and necessarily involves an element of bureaucracy, but that is a fact which has to be faced. Indeed, it has already been faced in the gas industry and the railways. In the case of the electricity industry there is the further problem of holding companies. In view of the abuses which have attended utility holding companies in other countries, and the suspicion that these abuses are not entirely unknown here, it can hardly be argued that no element of control is needed. The institution of a sliding scale, by which charges have to be reduced concurrently with any increase of dividends above a specified "standard revenue," is another principle which is not new even in its application to the electricity industry, since the Act of 1925 applied it in London. Whether the scale suggested, which would allow only one-sixth of any increase in profits to go to dividends, provides sufficient incentive to maximum efficiency is debatable, but the principle is eminently reasonable.

The Government's proposals, in short, though far from perfect and open to severe criticism in at least one major particular, should serve adequately as a basis of discussion. The defects seem to be more mistakes of detail than errors of principle, and can thus be removed in the course of discussion without overturning the whole basis of the scheme. We confess to some astonishment at the virulence of the attacks which have been made on the proposals—a virulence which is entirely out of proportion to their merits or demerits. An attempt has been made to suggest that the Government have already been frightened into disavowing the proposals. There is no case whatever for any such precipitate withdrawal, although detailed amendment will obviously be needed. Propaganda of the type which has been organised against these proposals usually finishes by defeating its own objects, and deserves to do so.

A New Chapter in Burma

ON April 1st last Burma was "separated" from India and began her independent existence. Geologically, Burma forms part of Indo-China and the Malayan Archipelago. Geographically, the Arakan Yoma ranges of Alpine age form a formidable land barrier between Burma and India proper. Ethically, her peoples belong to the Mongoloid stock. Culturally, two streams are found side by side in that charming country. The "backward" peoples, especially those inhabiting the eastern portions of the Province, are linked to the Indonesians, while amongst the Burmese themselves, Indian influence holds an abiding place. The Simon Commission urged the separation of Burma from India, to satisfy Burman sentiment and to overcome the constitutional difficulty of conceding Burma a satisfactory place in any scheme designed to advance the realisation of responsible government in British India.

Burma has an area of 234,000 square miles and a population of 14,700,000, according to the 1931 Census. Thus she has an area approximately equal to that of France, has one-third of France's population and she is wedged between two of the most densely populated countries in the world—India and China.

There are, in fact, two Burmas—the "Modernised" Burma, open to outside influences, and the "Backward" Burma, which occupies the remote, inaccessible interior parts, covers 45 per cent. of the total area and contains over 2,500,000 inhabitants. The "Burma of the Reforms" is a picturesque country, with monasteries and monks, dignified men and dainty, independent ladies. The colourful costumes of both men and women proudly proclaim the "silken East." The Burmese are an artistic, generous and impulsive people, who consider the Government an earthly nuisance, whereas the Indian *ryot* looks upon the *Sircar* as an earthly providence. The Burmese are Buddhists. Communal differences and caste distinctions are alien to the country, and the proportion of literacy among both the sexes is high. The Burman lacks, however, political experience.

"Backward" Burma generally fringes the land frontiers and covers the plateau region. It is the home of some seventy different tribes, many of whom are quaint, picturesque, manly and virile, and occupy different cultural levels in the ladder of civilisation. The Naga tribes, on the Burma side of the Patkoi range to the west, and the Wild Was, inhabiting the extreme east, practised head-hunting and human sacrifice till the Burma Government put an end to these practices. The Chins and Kachins from the Hills are short, stocky little men, like the Gurkhas, and form an appreciable part of the fighting force of the Burma Rifles and the Frontier Battalions. Karens from the Karenni State also supply a large part of the Burma Rifles. The Shans of the Shan States are a gentle and courteous people, resembling their Siamese neighbours, and they have already established their place in the Frontier Battalions of the Military Police. Immigrant Indians number over a million, and Chinese and Indo-Burmans are found mostly in the coastal tracts, plains and towns.

Burma is endowed with rich natural resources—agricultural, sylvicultural, plantation and mineral, but its economic development in the past has been greatly neglected. The area under the plough has increased from 7.2 million acres in 1900 to 19 million acres in 1930, but, even so, only 27 per cent. of the cultivatable area is under cultivation. Burma's chief crops are paddy, oil-seeds, maize, *jowar* and wheat, while rubber and tea are important plantation products. Nearly half the total area, however, is under forests yielding teak, whose hardness and durability are world famous. After Trinidad, Burma is the leading producer of petroleum in the British Empire. The Bawdwin mines in the Northern Shan States yield lead, zinc, silver and copper. Cassiterite and wolfram, the important ores of tin and

tungsten, come from the Tavoy and Mergui districts. Burma supplied the bulk of the Allied tungsten requirements during the Great War. The country is rich in precious stones like ruby, sapphire, jade and gem tourmaline, and other minerals, like marble, lignite and oil shale, await development.

Burma's transport facilities are decidedly backward. Even to-day the Irrawaddy and its tributaries form the principal highways of the country. There are 2,000 miles of metre-gauge railways, which generally supplement riverine transport, and the same length of metalled road. The main industries are based on the working up of primary products. Rice mills, saw mills, petroleum refining and mines and quarries employ over 80,000 persons. In the slack agricultural season the rural population take to rice husking, silk-weaving and dyeing. Lacquer working and the manufacture of cheroots are other important industries.

Though Burma is no longer associated with India politically, that great semi-continent has played, and must continue to play, an important part in her material development. Indians numbering over a million are concentrated in the Coastal, Delta and Central divisions. They form nearly half the total population in the larger industrial towns and more than one-fifth in the remaining towns. Well over one-third of Burma's export trade is with India, more than a third with other parts of the Empire and one-fifth with foreign countries. Two-thirds of Burma's rice, all her oil, and 80 per cent. of her teak go to India. Every year India sends 300,000 agricultural labourers to harvest Burma's rice crop. One-half of Burma's import trade is with India, and only one-fifth with countries outside the Empire.

The future prosperity of Burma depends on her successfully solving the problems arising out of her separation from India; and this, in turn, postulates more vigorous internal economic development. She will now receive an estimated £1,340,000 a year from Customs, Excise, salt duty and income tax, which formerly went to the Government of India. Against this, she incurs new obligations. Defence services will now cost her £950,000 and the Frontier Force another £405,000 annually. She will remain provisionally within the Indian currency system. The Indian Reserve Bank will manage her currency and carry on banking business in Burma. In order that the free flow of trade between the two countries shall not be disturbed during the early years of Burma's independent existence, it has been decided that free trade shall continue between Burma and India, her best customer, for three years after separation. For imports from other countries the Indian tariff will remain in force. There is to be no restriction on Indian immigration into Burma for at least three years, and the new Constitution provides that no Bill affecting immigration into Burma shall be introduced in the Legislature without the previous sanction of the Governor.

Under the Reforms scheme, the Burmese Legislature is to be bicameral, consisting of the House of Representatives and the Senate. There are seven separate political parties, which centre round personalities rather than clear-cut political principles. In the recent elections no single party secured a working majority, but the Pro-Constitution Party, led by Mr U. Ba Pe, has the largest number of adherents—some 43 members. Although Mr U. Ba Pe has failed to obtain sufficient support from the Independents (numbering 33), the Indians (13) and the Europeans (9) to create a Coalition with a clear majority, the All-Burma Coalition Party has secured enough support to form the Ministry under the new Constitution. The task of guiding the destinies of Burma at the outset of her independent career will be a severe test of goodwill and statesmanship, but there is no reason to believe that these indispensable qualities will be lacking. Britain and India alike wish her good fortune and success in her new rôle.

The Government's Electricity Proposals

A SUMMARY

THE following is a summary of draft proposals circulated by the Government for legislation to implement the recommendations of the McGowan Committee on Electricity Distribution which reported a year ago. The proposals are discussed in a Leading Article on page 608. At present there are in Great Britain 626 bodies with power to supply electricity, excluding the Central Electricity Board: 247 companies, 371 local authorities and 8 joint authorities or public boards. These bodies vary widely in the size and type of area served, in output, tariffs, voltage and conditions of supply. The McGowan Committee accordingly recommended that the number of undertakings should be substantially reduced by their consolidation into larger groups.

The effect of the draft proposals will be to reduce the existing 626 undertakings to 123; and the Government's memorandum outlines the proposed principles and conditions of amalgamation. Thirty distribution districts are suggested by the Electricity Commissioners to supersede the various electricity districts determined or projected under the Electricity Act of 1919. In each district the Electricity Commissioners will prepare schemes to consolidate existing undertakings by compulsory amalgamation in one or more groups.

Three alternative bases of grouping in the area covered by a scheme are proposed. One undertaker may acquire the other undertakings in the area (*Basis A*). All the undertakings in the area may be transferred to a newly-constituted Distribution Authority to consist of members appointed by the Minister of Transport after consultation with local organisations (*Basis B*). Finally, the undertakings of a number of local authorities may be transferred to a newly constituted Joint Board (*Basis C*).

The principles according to which such schemes should be prepared are laid down. The reduction in the number of undertakings should be effected by the substitution of larger and more economic units. Wherever possible the new areas of supply should embrace a reasonable diversity of demand; should include both rural and urban areas; and should be constituted by the retention of the larger and more efficient of the existing undertakings. The Electricity Commissioners should facilitate as far as possible the formulation of voluntary and agreed schemes; and local authority undertakings should, for preference, be transferred only to other local or public authorities.

No scheme should be approved by the Electricity Commissioners unless it is likely to result in greater efficiency, economy or convenience, and lead ultimately to lower charges to consumers. Only in exceptional cases should the proposed amalgamations be allowed to involve higher charges; and provisions will be made to afford interested parties the opportunity of making representations regarding schemes. Agreed schemes will become operative when approved by the Electricity Commissioners; but in cases of disagreement the schemes will not take effect until confirmed by the Minister of Transport and authorised by each House of Parliament.

Unless the purchase price is agreed at an approved figure between the purchaser and the vendor, the price to be paid for the acquisition or transfer of an existing undertaking will be determined according to specified terms set out in *Schedule B* of the memorandum.* An Arbitration Tribunal will approve agreed prices; and determine purchase prices where not agreed. It is further proposed that company undertakings which are retained should not hold their franchise for longer than fifty years at the most; and should be purchasable at the end of their tenure by an existing or new public body.

Moreover, the company undertakings retained under area schemes will be subject during their tenure to various conditions and controls to be exercised by the Electricity Commissioners. A sliding scale provisionally set out in *Schedule C* of the memorandum† prescribes a *standard rate of dividend* on ordinary share capital and the basis, on which any *surplus* profits should be allocated between consumers and ordinary shareholders. The approval of the Electricity Commissioners will be necessary for the distribution of surplus profits, the terms and form of any new issue of capital, and the terms of any temporary borrowing between companies. Authorised undertakings

will also be required to offer approved charges, equipment and facilities and to carry out approved extensions in undeveloped areas. At the same time provision will be made to ensure that the revenues of the Central Electricity Board, guaranteed for an approved period of years by the Electricity Act of 1926, will not be adversely affected. The revenue received by the Board from the amalgamated undertakings will be approximately the same under the proposed Act as the revenue which would have been received had the undertakings not been amalgamated.

Thus the body of the memorandum gives in outline the preparation, bases, principles and conditions of amalgamation schemes; the terms of purchase; and the conditions of tenure. Three *Schedules, A, B and C*, add more specific details about district and area groupings, terms of purchase, and the proposed sliding scale to relate profits to prices.

Schedule A, which enumerates the 30 suggested Distribution Districts and the 123 proposed amalgamated undertakings, is a blue-print of the new plan in its geographical application. It is provisional, since the area schemes finally prepared and approved by the Electricity Commissioners may differ from these suggestions which are no more than a basis for consideration. It is incomplete, since it is only possible to guess, from an examination of output statistics, etc., on what *basis (A, B or C)* amalgamation within the proposed groups would be effected. One or two implications, however, are reasonably certain. Just short of 30 of the 123 undertakings under the proposed reorganisation will be companies. The remainder will be municipalities or public bodies. In brief, *Schedule A* maps out the scope of the scheme and enumerates 76 possible groups of undertakings within the Distribution Districts; and indicates a further 47 individual undertakings or sub-groups within the proposed groups as being possibly convenient units of independent administration.

Schedule B states in detail the items which will be included in the purchase price of undertakings transferred or acquired compulsorily under schemes: the amount properly expended by the vendor for capital purposes and attributable to the physical assets used for the purposes of the undertaking at the date of transfer, together with capitalisation of interest, less depreciation calculated according to the Scale of Depreciation (Purchase of Electricity Undertakings) Special Order made by the Electricity Commissioners in March, 1937; the valuation of stocks and stores; the outstanding liability in the case of local authorities for expenses properly being liquidated over a period of years; and compensation in the case of companies for loss of future profits. Future profits will be calculated by first fixing the annual profit on physical assets, adjusted for over- or under-charges for maintenance, and assessed to take into account the effect on profits of present statutory provisions regarding prices and dividends and of such future provisions as the Government may embody in legislation. The result of this calculation is defined as the *net maintainable income*. To arrive at the compensation for future profits, from the *net maintainable income* will be subtracted the income which would be derived from the investment of the cost of assets in electricity company stocks.

Schedule C outlines the sliding scale relating prices and profits to which retained company undertakings will be made statutorily subject. If in any accounting year, the total revenue of a company exceeds working, establishment and maintenance charges, depreciation according to the approved scale, contributions to contingency or special purposes not exceeding one per cent. on capital expenditure, interest on consumers' deposits, debentures and loans, and dividends on preference shares and on ordinary shares at the standard rate, then five-sixths of the surplus will be allocated to an income-suspense account and one-sixth to a dividend-suspense account. The income-suspense account will be applied to reduce charges and tariffs or to grant rebates to consumers. The dividend-suspense account will be available for additional dividend payments to ordinary shareholders. The *standard rate of dividend* to ordinary shareholders will be determined by the Electricity Commissioners after consideration of the capital structure of the company undertakings concerned and their average rate of profits during the previous three years, of the existence of free reserves, and of the operation of existing powers and additional powers imposed by Parliament to control retained companies in the issue of capital and the fixing of maximum prices.

Notes of the Week

Earl Baldwin and Viscount Samuel.—No conquering king ever chose his titles more aptly than have the ex-Prime Minister and his Liberal companion in honour, Sir Herbert Samuel. The former, fleetingly Sir Stanley, has gone for his title to the quiet Worcestershire scene of his books, his pipes and his pigs, and has become Earl Baldwin of Bewdley. The latter has spanned two continents in his choice. He is Viscount Samuel of Mount Carmel because in Palestine he left the mark of a notable High Commissionership and the signs of a generous faith in the Jewish national home; and Viscount Samuel of Toxteth because in the city of Liverpool where he was born his family have worked for two centuries. Meanwhile there comes to Mr Oliver Baldwin the derived title of Viscount Corvedale, perhaps an embarrassing gift for the prospective Labour candidate at Paisley. The House of Lords was unwontedly crowded on Wednesday with visitors and peers when these two commoners laid aside their sombre garb and low estate and, clad in scarlet and ermine, answered their writs of summons. They successively swore anew their allegiance to King George and, in the rich company of the Earl Marshal, the Lord Great Chamberlain, Garter King of Arms and their noble sponsors passed in turn to their seats. It was a curiously emotional scene of hail and farewell; but the rôles of Earl Baldwin and Viscount Samuel do not end with their entry into the serene air of the Lords. The one, indeed, may only have laid down the cares of office and the leadership of the Conservative party to assume the wider task of Imperial adviser—if Mr Walter Elliot's forecast of an Empire tour is correct. The other has still a part to play in politics in refashioning Liberalism nearer to the heart of the electorate.

The Week in Parliament.—The past week has been remarkable in the House of Commons for two ministerial surveys, by Mr W. S. Morrison recording a year's progress in agriculture, and Sir Kingsley Wood covering the health services from mortality to hop-pickers. These were statistical *tour de force*. Less exacting on the House were the new Chancellor's cautious pronouncement on Tuesday that no change was intended in the Government's monetary policy, and a series of cut and thrust discussions on Imperial trade on Wednesday. One of the ministerial feats of endurance, the Minister of Health's annual review of the work of his department, is discussed in a leading article on page 605. The other pointed to the improved consumption of butter (noted in a different vein by our Danish correspondent on page 620), the improved production of bacon, and the setback in poultry farming due to disease and the high price of feed. The debate ranged even more widely: much was made of the very low wages of agricultural labourers and even more of the chronic indebtedness of farmers. The cap was appropriately set on the discussions by Mr Lloyd George who stated again with vigour his policy for the land—reorganisation, reclamation, reconditioning and rebuilding. To the end, however, the voice of the Government still remained the voice of Mr Elliot. Wednesday's debate on Empire trade had been ominously heralded on Tuesday when the Parliamentary Committee of the Empire Industries Association warned the Prime Minister not to tamper with the production and tariffs of the Empire. Their memorandum discussed the proposed Anglo-American trade agreement as "an illusory project to revive internationalism"; and it was upon this "illusory project" that Wednesday's discussions turned. The task of the Government was to prove that the retention of Imperial Preference was compatible with an American trade agreement. Mr Oliver Stanley refused to abate the extent or duration of existing preferences, or to surrender the prospect of an agreement with the United States. On the one hand he was told that Ottawa and Imperial Preference must give way to freer trade. On

the other, and notably by Mr Amery, he was told that the pursuit of American wild geese must not be allowed to leave unprotected our Empire trade. Auguries for an effective Anglo-American trade agreement were not very propitious when all had been said.

The Imperial Conference.—The Imperial Conference has passed with remarkable rapidity from its initial to its final stages. Already it has received and adopted a number of reports from Committees, including those on the work of the Imperial Economic Committee and on constitutional questions. A final decision will doubtless be taken very soon on the problems of air and shipping communications that have been before the Conference, especially the problem of enabling British ships to compete on something approaching level terms with subsidised American and other foreign lines on the Pacific and elsewhere. Sir Edward Beatty, president of the Canadian Pacific Railway, stated this week that if the necessary financial guarantees were forthcoming from the Imperial and Dominion Governments, the Canadian-Australasian Line would place immediate orders for two fast ships of about 22,000 tons each. This is an important cross-wind in the discussions upon the proposed Anglo-American economic pact. The attitude of the Dominions chiefly concerned—Canada, Australia and New Zealand—towards the American proposals has become fairly clear as a result of the Imperial Conference discussions. The United Kingdom will therefore be in a position to embark on detailed negotiations with Washington knowing the terms on which the Dominions would agree to give up some of their relative privileges in this market in order to be able to trade on more favourable conditions with the United States. No decisive statement on these issues is expected from the Conference, and it appears equally unlikely that any published resolution on foreign affairs or defence will reveal the substance of the deliberations that have been taking place in Whitehall and St. James's. The somewhat vague formula that allows for all susceptibilities is familiar in British Commonwealth relations, and this Imperial Conference may prove more forcibly than ever the handicaps of preserving a facade of uniformity.

Labour's Path.—That the leaders of organised labour have made up their minds to pursue a constitutional course in political and industrial affairs has been shown in many ways during the past few weeks. The repudiation of Marxist allegiances and the outlawing of the Socialist League by the Labour Party have been paralleled in the trade unions by the abrupt termination of the London bus-strike over the heads of its extremist leaders and the repudiation by the Amalgamated Engineering Union of militant strike action in the aircraft industry. Recent events have emphasised this policy still more strongly. A national campaign to popularise Socialism and to win a million new votes for Labour has been planned by the National Executive of the Labour Party, and its organisation has been placed in the capable and essentially constitutional hands of Mr Herbert Morrison. The need for determined action in the constituencies has perhaps been learned from the militant example of the Left extremists; but the gospel which will be carried to the millions is one of progressive reform repudiating revolutionary creeds and class doctrines. Indeed, in the words of Mr Morrison, "our campaign will invite not only manual workers but the professional and middle classes as well." Almost identical steps have been taken in the trade unions, which will co-operate with the Parliamentary Labour Party in the national campaign. The Central Bus Committee in London has been suspended by the Executive of the Transport and General Workers' Union pending an inquiry into their relations with Communist organisa-

tions during the strike. The National Executive of the A.E.U. has repudiated the Aircraft Shop Stewards' National Council, and the general secretary has denounced its militant proposals for strike action as "shameless advocacy" and a "blustering challenge" fundamentally opposed to democracy. Here again, however, the need for alternative action has been realised. Both the Engineering Union and the Labour Party have outlined a programme of industrial amelioration and "holidays with pay."

This attempt by a progressive policy to steal the thunder of the extremists, stimulated perhaps by the intransigent reconstitution of the forbidden Unity Campaign within the Labour Party, may chime in well with the recent recrudescence of Liberal sentiment, with the sage pronouncements of Viscount Samuel on the bases of democracy, and Mr Lloyd George's appeal for the Empire to lead the pacification of the world. Official co-operation between Liberal and Labour parties has been ruled out, but in the constituencies common support for progressive candidates becomes increasingly practicable. In most of the eleven by-elections now pending, the return of the Government nominee is almost certain; but in a few a decided increase in the Left vote is likely, and at Chertsey the Liberal candidate is fighting on a Popular Front platform with support from Labour organisations.

Prison Reform.—Sir Samuel Hoare's first speech on prison administration last week contained some admirable truths and some encouraging facts which might have been more encouraging still if they had been rather more detailed. It is profoundly true, as Sir Samuel said, that one of the greatest enemies of reform is the ignorance of the general public. Nothing could be more desirable than to spread the knowledge of what goes on inside prison walls, and those who have tried to make speeches on prison life know that there is no subject on which people are more attentive, on which it is easier to interest an audience. But it is very exceptional for anyone either in the Government or the Civil Service to stimulate public interest in the subject and it is to be hoped that this early hint of Sir Samuel's may point to an alteration in the official attitude towards a reasonable publicity. Of the reforms he mentioned the most concrete is the introduction into other convict prisons of the wages system which has for some years been in force at Maidstone—an admirable step in the humanisation of prisons and the restoration of a prisoner's self-respect. But why not introduce it in "star prisons" like Wormwood Scrubs? One important matter on which Sir Samuel was unfortunately vague was the change of policy he mentioned in dealing with privileges. The Commissioners have come to the conclusion, he said, that it is wiser to start a man from the moment he comes into prison "with a share of certain privileges." It has

taken them a long time to discover this obvious fact and even now we should like to know what "a share of certain privileges" means. Is the solitary confinement of the week-end to be abolished as the first step? Is the plank bed to be done away with for the hard labour prisoner? Is a prisoner to be allowed a reasonable supply of books at once? Is he at stated times to mix with his fellow-prisoners from the start? We hope he is, and that Sir Samuel really means to introduce these urgently needed reforms remembering (if we may misapply Disraeli's dictum on protection) that the repression theory of imprisonment has for years been damned but not dead. If Sir Samuel wills it, he will have justified his pious reference to his great great-aunt Elizabeth Fry.

Air Crashes.—Public opinion has been gravely disturbed after the last two week-ends by the appearance of two formidable lists of air crashes, in which the toll was 13 dead in eight crashes on "Air Day," May 29th, and 8 dead last week-end. On May 29th, during nation-wide displays, four R.A.F. machines crashed, two in separate aerobatic evolutions and two in formation evolutions. The remaining two crashes were by civil planes, and in both cases errors of judgment were probably made. As to aerobatic displays and formation-flying by the R.A.F., none of these accidents, so far as the evidence goes, was due to collision in the air. The machines which crashed in separate evolutions provide one hint of a possible cause. They both crashed from a fairly low altitude. A pilot needs four times the height normally required to come out of a spin in order to be really safe; for the controls may develop a defect which, with still thousands of feet to fall, may be righted or offset. If not, he may be able to use his parachute. "Stunts" and manœuvres—safe under Service conditions—should not be permitted at aerial displays below a certain altitude. The public at the Hendon R.A.F. air pageant on June 26th will be disappointed if they have to peer at marvellous evolutions between two and four thousand feet above them. The risks of Service training are great enough. They need not be enhanced merely to make the public catch its breath.

Last week-end there were two "solo" crashes. But by far the most disquieting of all recent crashes were those of three R.A.F. machines, each of which was wrecked, killing its two occupants, in thick mist. Two were in a batch of 10 machines flying from Stranraer to Hucknall, Notts. One crashed while still in Scotland, the other 1,500 feet up a Pike in the Lake District. By a strange mischance, the third of the ill-fated trio left Bristol to fly to Scotland; and that, too, crashed against the crags of a Lakeland Pike. It has been suggested that, as Commanding Officers are overborne by responsibility for their men in the R.A.F., they do not give them adequate experience of flying in

mist over their home stations. Consequently, on a long flight, if they encounter mist they are unused to flying in it. But this is scarcely convincing. Flying in mist is not really dangerous, as long as the pilot maintains height sufficient to take him clear of all possible obstacles, and as long as he does not get over the sea. This is difficult to do when one actually flies into mist, for the normal instinct is to come down and "nose about" for an opening. And that is precisely when the machine "hits the deck." If (as the Maybury Committee recommended for all commercial aircraft) every route or flight is undertaken in constant contact with directional wireless stations, mist would be less dangerous. More and more does the provision of complete national wireless equipment for commercial and R.A.F. flying become necessary. It is the logical solution. We shall go on paying for it in lives if we attempt to postpone paying for it in cash.

Holland Leads the Way.—When Belgium-Luxemburg and Holland wanted to realise in practice the Ouchy Convention of 1932 for mutual lowering of tariffs, the British Government, about to conclude its own Ottawa agreements, objected to any mutual Belgio-Dutch concessions which were not automatically accorded to the United Kingdom under the most-favoured-nation clause in its commercial treaties with those countries. That promptly stopped a move, during the depression, for freer trade. Now, after the Oslo Powers' agreement noted in these columns last week, Holland has immediately extended the concessions which she extends to her Oslo associates to Great Britain and Germany. We obtain these concessions, small but beneficial, without lifting a finger or giving anything to the Oslo Powers in return. No more can we hold with Canning, that "In matters of commerce the fault of the Dutch, is giving too little and asking too much." The Dutch to-day are confident in the mutual benefits of any actions, anywhere, to render trade less constricted and hampered by regulations. So are the French, the Americans, and most other democratic States; and M. van Zeeland sails for Washington next week to discuss possibilities of a general lowering of trade barriers with President Roosevelt and his far-sighted advisers. The movement for freer commerce is growing in strength; but it needs to be realised on as wide, not as narrow, a scale as possible. For that reason, the attitudes of the United Kingdom and Dominion Governments may well be decisive.

New Moves in South-East Europe.—The Central and South-East European stage has been dramatically filled during the last week or two. The urge of Austria, Hungary, Roumania and Bulgaria to turn more towards the Western democratic Great Powers, so noticeably disconcerting to Germany and Italy, is the result of economic pressure; for these primary-producing debtor States find it more and more profitable to sell their surpluses for free foreign exchange proceeds, or in expanding markets. Roumania had an export surplus of 5,000 million lei in the first five months of this year—not all of which is in free foreign exchange. But the improvement is striking. Czechoslovakia is negotiating for a short-term loan in Amsterdam against increased imports from Holland. And the export figures of Austria, Hungary and Bulgaria show a considerable improvement. The rise in prices is weighing heavier and heavier upon the rigid economies of Italy and Germany; and they are hard put to it to contrive acceptable exports to their smaller neighbours in payment for the imports required. Moreover, the blocked balances belonging to Hungary, Bulgaria and Yugoslavia in Germany and Italy are still nowhere near unfrozen. Thus, Baron von Neurath's tour this week to Belgrade (where anti-Nazi demonstrations greeted him), Sofia and Budapest is almost certainly more with the aim of arresting the obvious drift away from Italy and Germany in these three countries than, as has been suggested, of riveting these States on to the Rome-Berlin axis.

Signor Mussolini's hurried pact with Yugoslavia three months ago, and the earlier Yugoslav-Bulgarian pact, show that the Rome-Berlin axis is not intended to guarantee territorial revision for Hungary or Bulgaria. The Quai d'Orsay has allowed it to be reported that France will only envisage a Western Locarno pact and an understanding with Germany if it is linked with a Central and South-East European pact duly guaranteed. Such is said to have been the gist of M. Blum's recent talk with Dr Schacht. If France's declaration of solidarity with her friends in outer Europe holds good, recent developments in that region of the Continent promise well for the general security. For example, this week the President of Poland and Colonel Beck are repaying a visit to Bucharest. The recent defeat of the Roumanian Iron Guard in local elections, and the firmer tone of King Carol and his Prime Minister, M. Tatarescu, indicate that Roumania will not budge from her alliances in order to make a Polish-Roumanian neutral bloc. The improved trading opportunities of Austria and Hungary are continuing to drive them to closer economic collaboration with Czechoslovakia, France and this country. And the solidarity of Germany and Italy over the bombing of the "Deutschland" and the reprisals against Almeria have, strangely enough but understandably, led to heartsearchings in Austria, Hungary and Yugoslavia. That unhappy event emphasised the risks which close allies of Germany and Italy may be called upon to incur in future. In Czechoslovakia, the extreme Right-wing Agrarians seem to be overreaching themselves in their demands on the Coalition Government and its moderate Agrarian Prime Minister, Dr Hodza, for a more uncompromising home policy; and the recovery in business is strengthening moderate political counsels. The ability of Central and South-East European countries to secure their share of continuously expanding trade is the touchstone of appeasement in that vexed area of the Continent. And the countries with the freest trading and currency systems naturally profit most at such a time.

Industrial Violence in America.—The intensive labour campaigns waged by the Committee for Industrial Organisation, after the surprising ease of its earlier victories, is now resulting in the violence which the more pessimistic predicted from the first. The struggle is concentrated for the moment on the three large "independent" steel companies in the State of Ohio. Steel strikes have always had an unenviable reputation for bloodshed, even in comparison with the violence which seems to be inseparable from labour disputes in any American industry. The steel towns have always been the centre of the vicious "company police" system, and strikers have had to meet repression with force. What with intimidation and the importation of strike-breakers on the one side, and the employment of far from peaceful picketing on the other, it is quite impossible to ascertain what would seem to the outside observer to be the essential fact—whether or not the majority of the workers voluntarily support the strike. The workers, in fact, tend to become the *corpus vile* over which the employers and the union officials fight—and, with both sides armed, the metaphor is only too often literally accurate. This is not the only element of confusion, because it becomes increasingly difficult to know who is fighting whom and for what object. The American Federation of Labour is fighting the Committee for Industrial Organisation; the rank and file are fighting their officials; and it is far from easy to tell why a strike is called—to coerce the employer, to repudiate the union, or merely to show that a rival union is not the only one that can strike. Sooner or later, determined action by the public authorities will be needed to canalise all this energy within the more orthodox channels of labour dispute. But hitherto public officials have been very chary of taking sides.

Much the same confusion is apparent at Washington, though in this case it is little more than is normal at this time of the year. Congress has spent most of the

present session over the President's plan for Court reform, without either side securing an advantage. Mr Roosevelt refuses to compromise, but it begins to look as if he will not get his way at this session, and the Bill may have to stand over. Meanwhile he is plying Congress with legislation in the hope that pressure and haste will give him more of what he wants—on matters other than the Court—than leisurely debate. Not content with the Bill setting up a Labour Standards Board—himself a major measure—he has now proposed the creation in each of seven large regions of a body similar to the Tennessee Valley Authority, charged primarily with control of the rivers, soil erosion, fertility, etc., but also with the public generation and sale of electric power. This again is an enormous proposal, which Congress is expected to pass in a few weeks. Beside these two proposals, such matters as the prevention of tax evasion or the voting of \$1,500 millions for relief seem to be trifles.

Armistice on the North-West Frontier.—The campaign against the disaffected tribes of the Indian North-West Frontier seems to be drawing to its close. The Faqir of Ipi, though still at large, has been dislodged from his lair, and is reported to have lost prestige and following after the recent military reverses of the tribesmen. The Tori Khel area, the main seat of disaffection, has been occupied by troops, a tribal jirga has accepted terms of armistice, and the Mahsuds in the neighbouring country have been effectively warned. Though doubtless further precautions will be taken, and some time will be allowed to elapse before the troops are withdrawn, barring accidents the latest of "Britain's little wars" seems to be in its last phases. The future, however, must be giving the authorities in Whitehall and Simla much anxiety. The possible repetition of such a frontier campaign, which has cost the Indian budget a large sum of money, and India and Britain scores of brave and valued lives, is not a prospect to be accepted with complacency. Economic, administrative and military issues are inextricably intertwined in the problem of the North-West Frontier, and it is to be hoped that the present opportunity will be taken to initiate the most complete and expert examination of the principles of frontier control.

Liberal Split in Canada.—In part, no doubt, the divorce between the Liberal party in Ontario and the Dominion Liberal organisation reflects a sharp difference in temperament and character between the provincial and federal leaders of the party. There could scarcely be a greater contrast than that between the sharp-tongued, unpredictable Mitchell Hepburn, Premier of Ontario, and Mr Mackenzie King, whose even-keeled steering between political Scylla and Charybdis has kept him in office at Ottawa, with one break of a few months and another of five years, ever since the war. But the conflict goes much deeper than personalities. The party labels tend to wrap very different parcels in the various provinces of Canada, and at different periods of Canadian political history. The forces that brought the Liberals into power in Ontario in 1934, after thirty years in the wilderness, had virtually nothing in common with the forces that sustained the Liberal Government of M. Taschereau in almost permanent power in the next-door province of Quebec, and not much in common with those that have given Mr Mackenzie King his long leases of the Prime Ministry. They were, indeed, much more akin to the forces that in 1936 deposed the Quebec Liberals in favour of a new Opposition, of nationalistic and almost Fascist colour, under M. Duplessis. Mr Hepburn, like M. Duplessis, has campaigned against Big Business—his treatment of the hydro-electric power companies brought him his chief notoriety outside Canada. But, again like M. Duplessis, he has almost as violently attacked Labour radicalism, with which the Canadian federal Liberals have been ready to compromise much as President Roosevelt has compromised in the United States. The Ontario Premier's bitter hostility, provoked by Canadian motor strikes, to the

extension of the methods and organisation of Mr John Lewis's C.I.O. into Canadian industry was the immediate cause of his split with Ottawa. Neither this divorce nor his open admiration for the Quebec regime is therefore surprising in itself. But it opens up an era of Canadian politics which will be full of interest and even excitement, not only for Canadians but also for a great many people beyond the borders of the Dominion. Fascism, localism, racialism are disturbing ingredients in Canada's present-day political broth.

Rise in Employment Checked.—For various reasons the usual expansion of employment between April and May has failed to take place this year. According to the Ministry of Labour's estimates, on May 24th the number of insured persons in employment (aged 16-64) was about 11,387,000. Though this was 460,000 more than a year ago it was 7,000 less than on April 19th. But the number of unemployed also fell, by 3,113 in the month, and by 253,712 since a year ago, to 1,451,330. Some of the changes in particular industries are shown in the following table:—

Industrial Groups	UNEMPLOYMENT, BY INDUSTRIES			
	May 25, 1936	April 19, 1937	May 24, 1937	1937
Coal mining.....	216,676	124,051	156,065	
Iron and steel	30,244	21,544	23,184	
Engineering	60,508	41,316	39,257	
Metal goods manufactures.....	39,804	28,495	28,648	
Shipbuilding and repairing.....	49,460	36,591	39,017	
Building.....	103,297	113,997	110,408	
Public works contracting	110,169	107,759	103,762	
Cotton	70,930	43,380	46,319	
Woollen and worsted	21,828	15,500	22,387	
Tailoring	12,485	12,349	14,241	
Boot and shoe	15,165	13,151	22,207	
Hotel boarding house, etc., service	60,003	63,566	54,011	
Road transport services	39,199	34,668	31,346	
Distributive trades	194,834	179,229	169,317	
All persons registered (including other trades)	1,705,042	1,454,443	1,451,330	

Part of the decline in employment is due to the conclusion of Coronation festivities, which had been the explanation of the very sharp rise in the earlier month. And in part holiday stoppages, especially in the coal-mining and woollen industries, have affected the figures. The busmen on strike in London enter neither into the totals of employed nor unemployed persons. Nevertheless, it would seem that industrial expansion has been checked for the time being. Among heavy industries, only in engineering has there been any significant increase in employment; all the other increases have taken place in distributive trades and services. But the complete totals mark a fall of 80,844 in the category of wholly unemployed and a rise of 78,573 in the number temporarily stopped. There has also been a welcome fall of 7,000 in the number of persons unemployed for over twelve months.

Shipping Rates Still Rising.—Owing to the limited volume of shipping tonnage available freight rates continued to advance during the past month. The significance and extent of the advance in freight rates is revealed by the chart overleaf which shows the trend of *The Economist* index during the past ten years. Current rates, it will be seen, are substantially higher than in the years before the depression. The rapidity of

the advance during the past twelve months is the result of the coincidence of a reduction in idle tonnage with a marked revival of international trade and rising prices for primary products. The index for May shows a rise of no less than 74½ per cent. over the corresponding month a year ago:—

	(1898-1913 = 100)				
	Average, 1913	May, 1936	March, 1937	April, 1937	May, 1937

Australia	127.9	92.6	145.1	167.7	169.7
Total	116.3	88.8	137.8	150.3	154.9
1913 = 100	100.0	76.3	118.4	129.1	133.1

Advances were again substantial except on the Far Eastern trade routes:—

	Index No.	Inc. or dec. Points		Index No.	Inc. or dec. Points
Home trade	137.1	+ 9.3	South America:—	98.3	+ 6.0
Outwards	220.2	+ 51.4	Outwards	200.5	+ 2.6
Homewards	235.5	+ 3.2	Homewards	138.9	+ 12.6
Mediterranean:—			India:—		
Outwards	161.6	+ 27.3	Outwards	166.6	+ 2.5
Homewards	157.2	+ 0.4	Homewards	159.1	+ 2.9
North America	123.1	+ 2.1	Far East, etc.	169.7	+ 2.0

There are no indications of an early change in the trend of freight rates.

Cotton Trade Reorganisation.—A pamphlet just published by the Joint Committee of Cotton Trade Organisations surveys the present position of the industry and discusses the measures needed for further recovery. It is a most interesting document for several reasons, and not least because of its defects. The analytical sections are excellently presented and include some very valuable statistics of post-war developments. The plight of the industry is ascribed mainly to the meteoric growth of the Indian cotton industry, which has meant the loss to Lancashire of no less than 85 per cent. of that market. The growth of such local industries accounts, according to this report, for about two-thirds of the total loss of exports, the remaining third being due to Japanese competition. All this, however, is common knowledge, and one would have thought that an authoritative body would have used it merely as a preface to detached proposals. But the Committee contents itself by expressing the pious wishes that overseas markets should be preserved by the aid where necessary of the British Government, and that facilities should be given for internal reorgan-

isation with a view to strengthening the competitive position in export trade. Legislative assistance may be needed to enforce industrial agreements in Lancashire. But the industry will have to produce something more like a plan before it can be considered.

Industrial News.—This week's industrial news suggests that activity is maintaining an even tenor. Supplies of coal are becoming less scarce, and output in the last week of May showed an increase of 17 per cent. over the corresponding week a year ago. Electricity generated by authorised undertakings in May was 11.3 per cent. higher than a year ago. New business in iron and steel remains limited by the inability of manufacturers to add to their commitments, but pressure for delivery under contracts is as strong as ever. The stringency in materials has been somewhat relieved by heavier imports. As our Cardiff correspondent points out on page 657, exports of tinplates are twice as heavy as a year ago. Business in cotton and wool textiles remains small, partly owing to the sagging tendency of raw material prices. In other sections of industry the fall in the prices of imported raw materials has had little effect on new business. The general outlook remains promising, though a seasonal lull in business activity is imminent.

A Census of Distribution.—The need for an official Census of Distribution has been urged on the Government by statisticians and business men for some time past. To reinforce an already strong case, five firms, acting under the auspices of the British National Committee of the International Chamber of Commerce, have conducted an experimental census in six towns. These towns—Jarrow, Chorley, Kidderminster, Stafford, Wycombe and Weymouth—were selected as having almost identical populations but a wide variety of other circumstances. Quite substantial differences were found between their distributive equipment. Jarrow, as might have been expected, shows the smallest number of shops. But the largest number is to be found in Chorley, the second most depressed of the six towns. Prosperous Wycombe, in an agricultural and residential area, has the fewest greengrocers but the most dairies. Chemists are thickest on the ground at Weymouth—a health resort—and sparsest at Stafford. Unfortunately, an unofficial enquiry such as this could not secure what would be the most valuable figures of all—those of turnover—and rateable value figures are a very imperfect substitute. But the information contained in the report is amply sufficient to clinch the case for an official and universal census.

SHIPPING FREIGHT RATES SINCE 1927

The President and Congress

WASHINGTON, June 1.—The magic spell of President Roosevelt over Congress is pretty well ended. The Supreme Court fight was the means by which it came to an end, but not the cause, for the cause was the too great victory of the Democrats at the polls last November. Overwhelming majorities are beyond discipline, as every democracy knows; and the one formula for maintaining leadership over them—to undertake as little as possible—works only for a time. Mr Roosevelt has not aimed at being inactive. He has not even kept to the middle of the road, the natural impulse in leading a party with Right and Left wings. He has led the Left, in his attack on the Supreme Court, in his proposal for the reorganisation of Government, and in his sympathy for the Lewis movement in organised labour. This has not, however, been Liberalism as his Liberal followers understand it. In each instance, the President was reaching out for more personal or executive power. In attacking the Supreme Court this feature estranged many liberal Democrats. They are nonplussed, too, by the reorganisation plans for the same reason. And the harmony between the Administration and the Committee for Industrial Organisation is giving rise to suspicions that the President is playing with the idea of a third term.

The suspicion is based on nothing tangible, but whispers of it go through the cloakrooms at the Capitol. The President authorised Mr Arthur Krock, of *The New York Times*, to deny that he would accept another term, but the rumours will not die down. What is more likely is that the President may be weighing the wisdom of letting his party split, to make of 1940 a rallying of Liberal forces on the Democratic side, the Conservatives being left to coalesce with the Republicans. This is no new idea in Washington, and Europeans will not understand the hesitancy of Americans to shape party politics on a clean division between Conservatism and Liberalism. That there would be advantages is undoubted. But there are also disadvantages. Theoretically ruled by a two-party system, America actually divides its Government among four groups. Both the Republican and Democratic Parties consist of Right and Left wings. And as the mood of the nation changes from Conservatism to Liberalism each Party can come forward with the leadership appropriate to the occasion. Thus the Democrats are now ruling with the Left wing, the conservative Right remaining in the background and maintaining a reserved loyalty for Party reasons. The Republicans, sensing the trend, nominated a Liberal last year in Governor Landon, and his poor showing was not so much due to his Liberalism as to the inconsistencies in it, which became more glaring as the campaign proceeded. This four-group system does not operate consciously or clearly, but it is a characteristic of American political life. For a nation as large and as decentralised politically as the United States it may be more workable than the ever-recurrent clash between abstract issues. It makes elections, fought usually around personalities, more manageable in so large an area than if fought primarily about ideas.

The Next Election

The President now is beginning to feel the brakes put on by the Conservatives in his own party. Though in the main they are unvociferous, they constitute his real opposition. It is natural that he should think in terms of a party purge, and be ready to see the next campaign

raise the issue of continuing the New Deal rather than centre on the person of the new leader. It is too early to predict that he will encourage a party split, or to name the leader he has in mind for a campaign for liberal ideas. Gossip, however, is active with this theme, and Secretary Wallace of Iowa is often mentioned. Since Mr Wallace was not a Democrat before he entered the first New Deal cabinet, he would appeal to Liberals in both parties. He would also estrange conservative Democrats, particularly in the South. Gossipers credit Mr Wallace with enjoying already the favour of Mr John L. Lewis. In backing him Mr Lewis might feel that he was moving in the direction of a farmer-labour party, which is commonly accepted as the destiny of radicalism in this country.

Mr Roosevelt's handicap at present is that the inherent tendency of his large majority to divide is accelerated by his reaching out for power. The newspapers already write about a revolt in Congress. But the word should not be understood as meaning that Congress is taking the leadership away from the President, or is determined to establish something like congressional government in the United States. Congress simply does not enjoy being led, and does not relish pressure or discipline. It has recurrent seasons of disaffection, and is in the midst of one to-day. It is preparing to offer resistance to the plan for the reorganisation of government, which will enormously reduce the patronage of congressmen. It already has shown its intractability in the Supreme Court fight. In the question of money it shows signs of withholding delegated authority from the President. The conservative Democrats have been pressing for a 10 per cent. cut in all appropriations, to bring the Budget nearer to balance, and offer an effective gesture against inflation. But the Administration asks for a 15 per cent. discretionary cut, the discretion to rest with the President. The President's critics say that he is merely asking for a billion dollars with which to influence members of Congress. His supporters answer that the problems of government spending, particularly on relief, are much too delicate to be dealt with by an automatic formula.

What Congress does not appreciate is that the country as a whole is not following its humours closely, and does not care much about them. The President has lost his hold at the Capitol, but not in the country at large. Even the President's followers who did not like the method of his dealing with the Supreme Court have not, on the whole, turned from him for that reason.

Federal Control of Hours and Wages

NEW YORK, June 1.—The wage-hours proposal submitted to Congress by the President is described as a variation of the 30-hour Bill which has been before Congress a long time, or the National Recovery Administra-

in the U.S.A.

tion revived. In its present amorphous form it is actually neither. The N.R.A. was a broad concept along the lines of the Corporative State; while the present Bill is concerned solely with labour relationships. The Bill does not prescribe a minimum working week or a minimum wage, although the 40-hour week and a 40-cent an hour minimum wage have been suggested. As the Bill stands the hour and wage provisions are left blank, to be filled in either by Congress or by the Board of five members. The essence of the Bill is the creation of this Board endowed with broad discretionary powers over hours and wages. In conjunction with the Labour Relations Board, which is in being under the Wagner Act, the proposed hours-wages Board would put almost the entire field of labour relations under Federal control. Indeed, so complete would be the control that it is doubtful if it would leave any room for collective bargaining, as the term has been understood. The child labour provision is hardly more than nominal, since there is practically no industrial child labour in the United States; there is child labour in agriculture, which presumably will be exempted from the operation of the Bill. Because the Bill is drawn in blank, discussion cannot be very concrete. The prevailing rate of operation in industry at present is about 41 hours, and the prevailing minimum hourly wages in large industries, at least in the northern industrial areas, is well above 40 cents. On the face of it, therefore, the Bill if enacted would have little effect on the larger firms of manufacturing; yet the sponsors of the Bill claim that some 4,000,000 persons would benefit from it.

There are two basic ideas in the Bill: the spread-the-work idea, which was responsible for the 40-hour provision in the N.R.A., and has been the primary purpose of the 30-hour proposals; and the equalisation of regional competition. Just how important this latter factor is would be hard to say; but it is a frequent topic of complaint among manufacturers. There can be no doubt that costs of production are materially higher in some sections of the United States than in others; but it is never entirely clear that this is mainly a difference of labour costs, although there is wide variation in wage rates between different parts of the country.

Business Lacks Confidence

Between the third quarter of 1934 and the fourth quarter of 1936, there was a period of exactly two years without any labour disturbance of note. Beginning with the maritime strike in the fourth quarter of 1936, there has been a continuous succession of important strikes. For the most part they have been free from violence, at least on any large scale. The steel strike, however, developed a violent phase almost immediately. It is an open question whether or not the unsettled condition of labour relations has cut or is cutting into the profit margin or earning capacity of corporations. Industrial production is now close to the 1929 rate, while earnings appear to be lower than at that time. However, the recovery both in volume and earnings has been so rapid that one cannot say that the profitability of our economy has had a free chance to express itself. The enigma of Wall Street still exists. Not for many years have current earnings been capitalised so cheaply as in our present equity prices; and when these returns are set against the so-called long-term rate of interest, the disparity is equally striking. It is quite clear that the market has no confidence in the maintenance even of the current rate of profit on industrial undertakings. The paradox, far from being resolved, has become more striking as the second quarter has developed.

Indices of Recovery

The level of production which was recorded in April was scarcely changed from March; for six months the index adjusted for seasonal variation has not exceeded 121 (in December) or fallen below 114 (in November and January). The unadjusted index is used in the following table, and shows the sweep of the recovery movement more vividly than the corrected index.

FEDERAL RESERVE BOARD INDEX OF PRODUCTION
(1923-25 = 100)

	1934	1935	1936	1937
January	83	88	96	112
February	83	91	95	117
March	87	91	96	122
April	88	89	104	121
May	89	87	105	
June	84	86	104	
July	73	83	105	
August	73	87	106	
September	73	90	108	
October	75	97	111	
November	74	98	115	
December	78	96	114	

In 1935, except in July, the so-called seasonal recession was only nominal, while in 1936 the summer period showed no recession whatever. On the other hand, in both of the last two years the autumn has brought a steep upturn, which in 1936 continued into the first quarter of 1937.

FEDERAL RESERVE BOARD INDICES
1923-25 = 100 (Adjusted for Seasonal)

	April, 1936	March, 1937	April, 1937
Industrial production (total) ...	101	118	118
Manufactures	100	117	118
Minerals	106	128	114
Construction contracts (total)...	47	56	56
Residential	30	45	48
All other	60	64	62
Factory employment	88.6	100.9	101.7
Factory payrolls	79.3	101.1	104.8
Freight car loadings	69	83	82
Department store sales	84	93	93

Of these series the one showing the largest gain over last year is residential building, which has risen more than 50 per cent. The next largest gain is in factory payrolls, which are over 25 per cent. higher. On the other hand, residential building, which spurred sharply in the first half of 1936 from 25 in January to 44 in July, has since that time done little more than hold that level. While the index of 48 in April is the highest yet reached, the developments of the spring have so far been rather disappointing. The reason generally given is increased costs. Although unemployment data are withheld there is no doubt that there is now little industrial unemployment.

France

Crisis Ahead?

PARIS, June 10.—Politically and socially the country remains calm. The situation is apparently more favourable than at the time of the stay-in strikes a year ago. There is a certain revival of business, unemployment is declining, and debtors have derived advantages from a number of circumstances of which the devaluation and the consequent rise in prices was not the least important. But everyone now knows that this relative improvement is principally due either to monetary depreciation, which cannot be repeated, or to the rearmament programme and great public works, that is, to expenditure covered by loans. The present level of public funds—the 4½ per cents. are quoted at 66—suggests that since more than 100,000 million francs have been borrowed in five years, public credit does not stand very high.

The Government's policy will be known in a few days. Its objective is to obtain from taxation the sums necessary to cover the estimated deficit on the ordinary Budget, which may reach 4,000 million francs. This could be done by an increase in income tax, in the succession duties, in the duties on tobacco and matches, in the indirect taxes on alcohol, petrol, coffee, chicory, and sugar, or in the charges for transport by rail and road, or for posts, gas, and electricity. All these devices would still further increase the cost of living, and the Radical Socialists, it is rumoured, are opposed to such a solution. Moreover these measures would hardly provoke the revival of confidence which in the past made new loans possible, and it is probable that the

Government will still propose an increased issue of Treasury Bonds to be rediscounted by the Bank of France or other public savings banks.

The Dilemma of Democracy

By this new inflation the Government would gain time once more, but what will happen in the autumn when the Exhibition is over, still remains uncertain. The full difficulty of the situation can be seen if one adds that the trade unions will in the near future have to support further claims for increased wages, and that certain industries like textiles are asking for new protectionist measures, a vicious spiral which bids fair to become rapidly contradictory to the policy of the Tripartite Agreement and to the efforts to lower trade obstacles and to revive international business.

The present financial difficulties will not prevent the Government from laying before the Chamber a Bill for old age pensions, which will cost between 2,000 and 5,000 million francs, and a Bill to relieve agricultural distress. It is improbable that Parliament, or at least the Chamber, will refuse to vote these new expenditures. M. Blum has said: "If we must fail, I do not believe that the responsibility would be ours personally: it will be due to the inability of democratic institutions to give to the workers the reforms of progress and justice which they expect." And M. L. Jouhaux has declared that "if the Government is thrown down the trade unions will not accept the verdict. . . ."

Germany

The Penalties of Intervention

BERLIN, June 9.—The Bourse, which was firmish in late May, suffered a sharp setback on the news of the Iviza-Almeria affair. It was no doubt inevitable that this affair should make a great stir internationally, but in reality it was only one more incident in the "sorts of wars" that have been going on between different European countries and the Spanish factions for nearly a year; and as Berlin and Valencia have not yet declared real war on one another the formal position has presumably not been changed. Many persons will see in the incident new proof of the wisdom of those governments which have maintained strict neutrality. From the first, neutrality appeared to many competent Germans to be the Reich's right policy; and as the Spanish civil war went on it even seemed that all the intervening countries themselves were realising the risks and unprofitability of intervention. The recent episode shows, however, that it is easier to get into complications than to get out of them; and this will probably be shown again if, as is unluckily more likely than not, similar incidents occur again. Should Germany be the Power concerned, she may ultimately be pushed into formal, systematic, and large scale operations against Valencia. That would involve formal co-operation with General Franco, and the taking of responsibility for his success and for his maintenance in power after he succeeded. Such a task would probably be beyond the Reich's military power, even if other countries tolerated the attempt. The obvious remedy is for Germany, Russia, and Italy to observe strict neutrality in word and deed. The German public cannot indeed be expected to realise that; for they do not admit that other European Great Powers are neutral. Not only Russia but also France and even Great Britain are presented to them as partisans and active helpers of Valencia. As regards Great Britain this view appears with great emphasis in the Reich Press, and it must therefore be considered the official view.

After suffering its brief setback in consequence of the Iviza-Almeria affair the Bourse has been firm. Nearly all the companies whose business year terminated in December 1936 have by now issued their annual reports. According to a bank analysis, 84 companies out of 180 maintained their dividends unchanged, 60 increased their dividends, 20 remained dividendless,

and only 8 (of which three were leading potash companies) reduced their dividends. Seventy-five per cent. of all listed shares are now quoted at over 100. The number of industrial shares now quoted in Berlin is only 385 against 933 at the end of 1934.

Centralisation of Taxation

The Reich Loan of Rm. 800 millions is reported to have been fully subscribed, and the total of Reich consolidation loans issued since early 1935 (including Rm. 500 millions by the Reich Railways Co.) has now reached Rm. 5,700 millions. The Finance Minister has again repudiated inflation, pointing out that against a 36 per cent. increase in national income since 1932 the currency circulation has risen by only 21 per cent. About the movement of total public taxation and its distribution the following statement has been published:

	Reich	States	Municipalities	Hanse Cities	Total
	Millions of Marks				
1933-34	5,038.5	2,090.3	3,229.3	242.1	10,600.2
In %	47.5	19.7	30.5	2.3	100.0
1936-37	9,000.0	2,060.0	4,000.0	260.0	15,340.0
In %	60.0	13.0	26.0	1.6	100.0

The figures for 1936-37 are estimates, but official. Whereas tax revenue as a whole has increased some 45 per cent., the sum raised by the Reich has risen nearly 80 per cent. The yield of the Reich Flight Tax is now becoming important owing to the expatriation of Jews and of politically depressed persons. This tax, which is 25 per cent. of the entire property of persons leaving Germany for good, and which is imposed equally on property taken away or left behind, yielded less than Rm. 2 millions in 1931-32, Rm. 45 millions in 1935-36, and Rm. 70 millions in 1936-37. The Government announce new tax concessions of a very comprehensive kind for large families.

The *Reichspost* reports favourably on the development of business in the first quarter year. The debts of all the German States at the end of 1936 were Rm. 2,441 millions, of which Rm. 218 millions were due abroad. The debts of the Hanse cities were Rm. 655 millions, of which Rm. 82 millions were due abroad.

The index of wholesale prices on June 2nd reached a new high level of 106.1, against 105.9 on May 26th. Agricultural prices have risen sharply. Drastic new regulations to control crops are semi-officially forecast, including long terms of imprisonment for purchasing without the prescribed delivery certificate. On the subject of foodstuffs consumption the Reich Statistical Bureau has issued new data, adopting as the unit the "full person," whereby changes due merely to shifts in the age of the population are eliminated. The per capita consumption of meat is shown to be lower than before the War, to have recovered in 1934, and since then to have again declined. Fish consumption has

lately risen, and is much higher than before the War. The consumption of butter has risen since the depression, and is higher now than before the War. The consumption of eggs is slightly higher than before the War, but has fallen enormously compared with 1932. Sugar consumption has steadily risen, and is above pre-war level. Per capita consumption in 1936 was (in kilograms): meat 50.4, fish 13.7, butter 9.6, margarine 8.4, and sugar 26.0. The consumption of milk per head in 1935 was 121 litres, and in 1936 132 eggs per head were consumed.

Machine Trades Fully Employed

Industry is very active. The number of persons employed in April was 7.5 per cent. higher than in April, 1936. It is officially stated that in the past twelve months orders for armament and for the Four Year Plan, as well as foreign orders, have increased the intensity of employment in the important investment-goods industries more than 20 per cent. Building is being hampered by shortage of steel. Ingot-steel output in April was 1,644,530 tons; in the first four months of 1937 it was 6,279,700 tons, against 6,107,600 tons in the same months of 1936. The new signs of inactivity in the world steel market are much commented on, the surmise being that too high steel prices have begun to check enterprise. The value of machinery exported in January-April was Rm. 250 millions, which is 31 per cent. more than in the same months of 1936. The weight of machinery exported was 137,900 tons, against 336,000 tons in the whole of 1936. As a whole machine manufacturing is occupied to 94 per cent. of capacity; but if certain branches which are hampered by vetoes on investment are eliminated, the industry may be said to have more orders than it can execute. The export of automobiles continues to rise; some 19,200 private and commercial cars were exported in January-April, against 10,500 in the same months of last year. The trade balance in rayon has greatly improved; there was an export surplus of Rm. 3 millions in the first four months of 1937, against an import surplus of 6.5 millions in 1935.

The following figures of wool imports show the extent to which Australia and New Zealand have been ousted as deliverers by South Africa, and, relatively, by Argentina:

	1933	1936
	(In 1,000 tons)	
Total imports.....	166	103
From Australia.....	63	17
From New Zealand.....	21	3
From South Africa.....	25	20
From Argentina.....	21	16

In 1935 imports from South Africa were actually double those from Australia.

Denmark

The Silver Jubilee

COPENHAGEN, June 5.—On May 15 King Christian X celebrated the silver jubilee of his reign. The importance of this anniversary was accentuated by the visits of the King of Sweden and the King of Norway to Copenhagen. King Christian's political flair and sense of realities are appreciated by all parties, and within the narrow limits left to the initiative of a constitutional monarch the King has in critical moments given admirable proofs of his character and ability of judgment. It is now openly admitted that it was due to King

Christian that Denmark was saved on August 5, 1914, from being dragged into the Great War. The King's judgment of what was politically sound in the Slesvig question is also universally appreciated. The united homage paid to King Christian on his 25th anniversary was an overwhelming proof of his popularity. He has lived up to the pledge he made at his accession: "I have dedicated my life to the furtherance of the well-being of my country."

The future of Danish agriculture is again under discussion. The poor harvest of 1936 and the rising prices of imported feeding stuffs, coupled with the falling trend in the prices of butter, bacon, and eggs, have reduced the profitability of farming, and the forthcoming payments of half-yearly interest dues will not be easy. Various measures were discussed before the Rigsdag session ended, but a decision was postponed until the new session commences in October.

In the money market a certain stringency is apparent. The Nationalbank has for months carried out a policy of moderate credit restriction, partly from sheer necessity to economise the scanty foreign exchange resources, and partly to prevent the upward trend of business from developing into an uncontrollable boom. A striking effect of this policy was to bring to a halt the boom in steamship shares, in which the whole country was speculating. At present it is hoped that the forthcoming harvest will be better than last year, and this, together with the much increased earnings of Danish shipping, is expected to ease the foreign exchange situation. The earnings of the Danish mercantile fleet employed abroad was 201 million kroner in 1935 and 215 million kroner in 1936; and at present the freight index is about 30 points higher than the average for 1936, which was 127.8.

New World Situation

The Association to further Danish Industry and Trade held its general meeting on May 20th. In his report the chairman emphasized that facts had to be faced, and in spite of the talk in many countries of freer trade the statistics told a different tale. The British bacon industry had grown by 15 per cent., and although British butter imports had risen since 1929 from 325 million kilogrammes to 500 million kilogrammes Danish butter exports to Great Britain had fallen. A similar trend was evident in our trade with Germany. Denmark's business had to be adjusted to these changes, and it would be a forlorn hope to expect the return of former times.

In a recent publication the Department of Statistics prepared various tables to illustrate the economic development of Denmark during the last decade. An extract from these tables is given below:—

	1927	1932	1937
	(average)	(average)	(Jan.-March average)
Note circulation (in million kroner).....	354.2	322.2	375.6
Yield on capital invested in farms.....	1.1%	+0.4%	3.5% (1936)
Sterling rate (kroner to pound).....	18.18	18.64	22.40
Wholesale price index (1931=100).....	134	103	140
Market quotations—			
Butter, kroner per 100 kgs.....	301.13	178.35	206.03
Bacon, kroner per kg.....	1.35	0.82	1.62
Eggs, kroner per kg.....	1.62	1.01	0.86
Foreign trade (monthly average in million kroner)—			
Total imports.....	138.5	95.2	135.3
Total exports.....	129.3	94.7	119.3
Import surplus.....	9.2	0.5	16.0
Index of industrial production (1931=100).....	86	91	134
Unemployment (percentage).....	22.5	31.7	31
Mercantile fleet employed (in thousands of gross reg. tons).....	946	822	1,030
Freight index (1931=100).....	128.2	102.4	158.2
Consumption of electricity (in million kwh).....	28.3	41.8	68.6

The improvement since the crisis year of 1932 has in most respects been remarkable, though unemployment has scarcely moved at all, and the import surplus has risen considerably.

Chile

Business Active

SANTIAGO, May 18.—Business during the first quarter of the year was generally satisfactory. Mining production advanced 47 per cent. compared with the output for the first quarter of last year. This increase was chiefly due to the production of bar copper, which rose 78 per cent., from 59,000 to 105,000 metric tons. The output of iron and coal also rose 21 and 15 per cent., respectively, while the total production of gold fell 18 per cent. The activities of the principal manufacturing industries were maintained at the level of the past year; the general index of production, comprising fourteen of the most important commodities, only shows an insignificant increase of 4 per cent. House building and construction activities have continued to decline appreciably. The projects presented during the first quarter of the year, compared with the same period of last year, disclose a drop of 45 per cent. in area and of more than 50 per cent. in cost.

The cereal harvest was somewhat smaller than last year. Only 7.8 million metric quintals of wheat were harvested, against 8.7 quintals in the first quarter of last year. The yield of the barley crop was 984,000 quintals, compared with a little over 1 million quintals in the first quarter of last year. Only the harvest of oats increased slightly to 1 million quintals, compared with 987,000 quintals. On the other hand, the harvest of lentils was 358,000 quintals, the largest ever obtained.

Exports increased by 70 per cent., the total turnover for the first quarter of the year being 285.3 million gold pesos, against 167.6 million gold pesos in 1936. This increase was due principally to larger exports of copper. Imports, on the other hand, showed an increase of barely 9 per cent., being 86.1 million gold pesos, against 79.3 million gold pesos in the first quarter of 1936. Germany is still the most important exporter to Chile, with 25.3 million gold pesos, against 23.5 million gold pesos in the first quarter of 1936; the United States comes second with 24.8 million gold pesos, compared with 18.5 million gold pesos in 1936; and Great Britain third, with 10.4 million gold pesos, compared with 12.9 million gold pesos.

Rising Prices and the Peso

The continued rise in prices is a serious problem. Between March of last year and March of this year the general index of wholesale prices increased 27 per cent. and the index of the cost of living rose over 10 per cent. The Monthly Bulletin of the Banco Central attributes these rises to two factors: first, to a certain internal inflation which took place last year; and, secondly, to the international reaction in prices, especially of raw materials and agricultural products. The first of these factors no longer appears important, and the rise in prices during the current year is due principally to the international increase in prices. On the other hand, the Exchange Control Board continues to maintain a fixed rate for export exchange on the basis of 26 pesos to the U.S. dollar. In these circumstances, the rise in prices abroad must necessarily be directly reflected in the domestic price level. The Press has for some time past been publishing articles dealing with the question of the revaluation of the peso by means of a gradual drop in the rates for export exchange. The President of the Banco Central has admitted the possibility and convenience of adopting such a policy.

That the situation is favourable for a revaluation of the peso is also shown by the marked drop in the rates of the chief foreign exchanges ruling in the unofficial market, where the dollar is at present quoted at slightly over 26 pesos and the pound sterling at 128 pesos; that is, at rates almost equal to those of the Exchange Control Board for export exchange. In reply to various direct inquiries, the Minister of Finance has declared, however, that the Government has not thought of effecting a revaluation nor of introducing any change in the present system of exchange control.

The members who were elected to Congress at the elections held on March 7th, when the parties of the

Right obtained a slight majority over those of the Left combined in the Popular Front, will meet for the first time on May 21st. The chief problems with which Congress will be confronted will be the monetary situation and the state of the public finances. The Minister of Finance has announced that the financial results of this year will probably show a deficit of some importance.

Canada

Uncertain Wheat Prospects

OTTAWA, May 22.—The Federal Government lately offered to the public a conversion loan to liquidate an issue of 232 million dollars of 5½ per cent. tax free Victory bonds which matures on December 1st, no new money being asked for. It was offered in three denominations of two year, five year and twelve year bonds. Over 113½ million dollars' worth, or nearly half the outstanding total of the Victory bonds, were converted. The completion of the operation is planned for the autumn and will eliminate the last of Canada's tax-free bonds. The Treasury will save about \$3,400,000 per annum in interest charges.

In the prairie provinces the seeding of wheat is almost completed, considerably earlier than in any recent year, and the planting of coarse grains is well advanced. In Manitoba and the northern districts of Saskatchewan and Alberta warm weather accompanied by adequate rainfall has made seeding conditions very propitious, and with a good seedbed germination has been satisfactory. But in the southern areas of Saskatchewan and Alberta, which have suffered so severely from drought in recent years, the grain crops have again started badly through lack of moisture. Regular heavy rains within the next few weeks will be necessary to avert another crop failure. The problem of this drought-afflicted area occupied the attention of a conference recently held at Regina. It was attended by representatives of the Federal and Provincial Governments, of municipalities, of railways, of banks, and of mortgage and land companies. Eventually, it was recommended that some of the money voted for the salvaging of these areas should be spent on a series of small irrigation projects, the provision of better water supplies, and the establishment of community pastures. Another severe drought this year will undoubtedly face the authorities with the problem of transplanting thousands of farming families, who have been subsisting on relief, to more favoured districts.

The first crop survey of the Bureau of Statistics places the intended area of spring wheat, which is practically all grown in the West, at 24,367,000 acres, compared with 24,779,000 acres in 1936. There will be virtually no change in the acreage allocated to oats, barley and other coarse grains. In Eastern Canada the seeding season started early, but in the last fortnight there has been an abnormal rainfall and farmers have been greatly handicapped in their operations. With the reopening of navigation on the St. Lawrence the export of grain has increased; and on May 14th the visible stocks of Canadian wheat had been reduced to 64,150,238 bushels, little more than one-third of the 184½ million bushels recorded at the same date a year ago.

Steady Business Activity

The April record of general business was very satisfactory, and a provisional calculation of the Bureau of Statistics has placed the general economic index for the month at 123, the best figure since October last. Beginning with the week ended April 24th the Bureau's indices for successive weeks have been 112.8, 109.6, 110.9 and 108.0.

Week ended	Car Loadings	Wholesale Prices	Bank Clearings	General Index
May 16, 1936 ...	79.3	71.9	94.4	105.0
May 1, 1937 ...	80.9	85.1	106.5	109.6
" 8, 1937 ...	84.3	85.2	104.2	110.9
" 15, 1937 ...	85.9	84.7	87.2	108.0

At present the business community is more or less marking time while it waits for news about the success or failure of the western wheat crop and about the outcome of the moves for freer world trade.

The arrival of warmer weather has stimulated the sale of lighter clothing and footwear, of paints and different kinds of building supplies. In the manufacturing field most plants are well supplied with orders and the iron and steel firms are enjoying something like a boom. The textile companies profess to be making no profits, but the largest of them, the Dominion Textile Company, has lately announced plans for increasing its plant at Magog in Quebec, at a cost of half a million dollars. The mining interests have lost the buoyant optimism which prevailed two months ago and are still worried about the uncertainty surrounding the future price of gold; while the fall in the price of base metals has upset other calculations. The nickel industry still flourishes, however, and exports for April amounted to 131,533 cwts. compared with 109,665 cwts. in April, 1936. The newsprint industry maintains output at a high level. Perhaps the most encouraging feature of the April returns was a sharp advance in new construction; the value of contracts placed was 24½ million dollars, about 150 per cent. above the figure for April, 1936.

In April the automobile industry suffered from the strike at the plants of General Motors and only produced 17,081 vehicles compared with 24,901 in April, 1936. There is still a good deal of labour unrest, which takes the form of demands for higher wages and better conditions. There have been a series of strikes mainly settled by granting most of the workers' demands. Employers are still worried about the activities of the C.I.O., which seems to be gaining Canadian recruits steadily.

Foreign trade in April was, as usual, below the level of March, but it was well ahead of the total for April, 1936.

	April, 1936	April, 1937
Exports	\$ 57,974,176	\$ 66,907,258
Imports	42,217,004	58,000,000*

* Provisional.

The yield of Federal revenues in the first month of the new fiscal year was \$30,271,016, a gain of 8 millions over the yield for April, 1936, while expenditure was 26½ millions, a decline of a million.

Letters to the Editor

The Gold Problem

TO THE EDITOR OF THE ECONOMIST

SIR,—In your issue of May 29th you were good enough to publish my letter on this subject to which you attached a note wherein you state in terms that you disagree with my contentions. I say "in terms" because in fact you do agree that gold is the measure of value; true, you go on to say that this state of affairs will continue only "so long as we care to use it as such," and "if any other unit of account be adopted gold would cease to be the measure."

I was writing of affairs as they exist to-day when gold, as you admit, is the measure of value. The possibility of some other unit of account being adopted is inconceivable. You say there is "nothing inherent in gold which makes it the measure of value." A measure of value must be uniform throughout the world, and limited in supply, though adequate, i.e. not an article like silver which is a by-product nor a primary product the production of which can be increased at will and the quality of which varies. "Fine gold" has these characteristics; they are inherent in it and are not to be found elsewhere.

This is the reason why gold is and will continue to be the measure of value internationally.

Yours faithfully,

JOSEPH RICARDO.

Temple, E.C.

State Money and Bank Money

TO THE EDITOR OF THE ECONOMIST

SIR,—Sir Arthur Verdon-Roe's views concerning currency (on page 458 of your issue of May 22nd), seem very valuable—so far as they go; but I think he is for shutting the stable door too late. No doubt during the period between the drawing and payment of a cheque against State currency lying in a bank on deposit there is, in a way, a duplication of money—"temporary money"—though it is a fairly negligible one except, e.g. in the case of a cheque sent to Australia. But the real trouble is that much of the bank deposit itself may not be State currency, or ever have been, for it is bank credit. Only a portion of it is represented by State currency in the till, the rest being "temporary money" backed by some security pawned with the bank. But this security actually represents money which is already doing work elsewhere, and so not available, e.g. a 3-months' Treasury bill which is engaged in paying Government salaries. To say that it can be realised by the sale of the security to a third party is only very restrictedly true, for it leaves the total situation unchanged, and so only confuses the outlook.

In your analysis of the first chart on page 6 of your *Banking Supplement* you make no mention of the very remarkable parallelism between the movements of deposits and discounts—while that between deposits and discounts plus investments is even more close. It would be very interesting to learn the mechanism of this effect, for it seems, *a priori*, to suggest a distinction between deposits and State currency such as I have noted above.

Yours faithfully,

Kew.

L. WALLACE.

Shorter Notice

"Studies in the Theory of International Trade." By Jacob Viner. 650 pages. 18s.

This book is a remarkably lucid and comprehensive collation of theories about trade, currency and exchanges since the days of Hales and Gresham. Mun, Hume, Smith, Ricardo, Torrens, Mill, Taussig, Wicksell, Marshall, Pigou and Keynes are all expounded and discussed. The pattern of international trade is clearly drawn; relative price levels, the terms of trade, movements of goods and specie, exchange rates and comparative purchasing powers are given their proper place in the science of trade between nations. The conditions of trade are discussed, and the relative implications of a single specie standard and banking manipulation. The roots of trade theory are uncovered in two chapters on comparative costs and the maximisation of real income. The nature and purpose of trade are made abundantly clear. Professor Viner, an eminent successor to Taussig, has the expository gift of the great teacher, and his erudition is vast. It may be that the critical parts of the book are no more than the balancing of well-known views; that the author is too detached from the hold and the warehouse; that too little is said about the organisation of trade and the actual goods which are its objects; and that the modern regulative devices, quotas, exchange controls and clearing agreements, are inadequately surveyed. But this is an excellent book.

India's Balance of Indebtedness

by Y. S. PANDIT

A brilliant study of India's Balance of Payments similar in style and scope to Professor Viner's classic on Canada. It has a statistical analysis of trade between 1898 and 1913, and a careful appraisal of every item in the balance sheet. It is a book of paramount importance, not only for the expert economist, but for anyone wishing to understand the monetary basis of the problems affecting India to-day: the book is furnished with numerous tables and graphs.

George Allen & Unwin

what they understand by humanity and culture; and only if they feel that these things mean to the reporter more or less what they mean to them can they hope to learn what they really want to learn from a book like this. Gide is such a reporter; his book is such a book.

When, during the summer of last year, he visited Russia in order to represent France at the funeral of Maxim Gorki, Gide, who has spent his life "experiencing," submitted himself with characteristic openness to this new experience; but his eyes and ears were especially alert to perceive the progress of those ideals which had led him to announce his adherence to Communism three years before. Naturally, he found much to admire: the health and happiness of the children in all the pioneer camps, the Parks of Culture, and above all, the universal friendliness. "Nowhere, indeed, is contact with any and everyone so easily established, so immediately, so deeply, so warmly, as in the U.S.S.R. . . . Nowhere is the feeling of a common humanity so profoundly, so strongly felt. . . . In spite of the difference of language, I had never anywhere felt myself so fully a comrade, a brother."

At the same time, he was struck by the extreme indolence of the people, and, on being introduced to a Stakhanovite who had succeeded in doing the work of eight days in five hours, ventured to ask whether this didn't mean that to begin with he had spent eight days in doing the work of five hours?—a question that was "not very well received." He was depressed by the extreme depersonalisation of the model dwellings: "In each, the same ugly furniture, the same portrait of Stalin, and absolutely nothing else, not the smallest object, not the smallest personal souvenir." He noticed, and did not hesitate to describe, the entire shoddiness of the wares in all the shops, and quickly reached the conclusion that the people were contented with all this because they had no standard of comparison; and were assiduously taught to believe that all other nations were incomparably worse off. His remark that Paris, too, had its Metro, provoked a sceptical smile. What had once been temporary necessities were in danger of being accepted as established facts. The end seemed in danger of being subdued to the nature of the means it had been used to justify.

"We admire in the U.S.S.R. the extraordinary *élan* towards education and towards culture; but the only objects of this education are those which induce the mind to find satisfaction in its present circumstances and exclaim: *Oh! U.S.S.R. . . . Ave! Spes unica!* . . . I was soon obliged to realise that, apart from denunciations and complaints—the canteen soup is badly cooked or the club reading-room is badly swept—criticism merely consists in asking oneself if this, that or the other is in the right line. The line itself is never discussed. . . . The spirit which is to-day held to be counter-revolutionary is that same revolutionary spirit, that ferment which first broke through the half-rotten dam of the old Tsarist world. . . . What is wanted now is compliance, conformity. . . . The smallest protest, the least criticism, is liable to the severest penalties, and, in fact, is immediately stifled. And I doubt whether in any other country in the world, even Hitler's Germany, thought is less free, more bowed down, more fearful, more vassalised."

In conclusion, Gide insists on the distinction between "the U.S.S.R. itself and the cause it stands for." One is perhaps reminded of another age, of another revolution, of another great writer whose political allegiances changed as the expectations which accompanied them were disappointed, but whose fidelity to "the cause" remained unshaken: "What I have spoken, is the language of that which is not called amiss 'the good old Cause': if it seem strange to any, it will not seem more strange, I hope, than convincing to backsliders. Thus much I should perhaps have said, though I was sure I should have spoken only to trees and stones; and had none to cry to, but with the prophet, 'O earth, earth, earth!' to tell the very soil itself, what her perverse inhabitants are deaf to; nay, though what I have spoke should happen . . . to be the last words of our expiring liberty."

MONEY AND BANKING

What To Do About Gold

THE recent statements by President Roosevelt and Sir John Simon that no change in British or American monetary policy is contemplated have for the moment allayed the gold scare. In the London bullion market the discount below the dollar parity price has narrowed, and there has been some resumption of gold purchases for shipment to New York. Sir John Simon made it clear that official British purchases of gold were an integral part both of our general monetary policy and of the ways in which we are carrying out our responsibilities under the tripartite monetary agreement. He also attributed much of the recent offerings of gold in London to dishoarding. This view is supported both by City impressions and by the statistics of gold movements which we published last week. In any case, rapid dishoarding is a natural consequence of a general fear of an impending reduction in the price of gold.

It may be expedient, therefore, to view the gold problem once more in perspective. The question, clearly, has both a short-term and a long-term aspect. In Washington, President Roosevelt cannot at present reduce the dollar price of gold by more than a fractional amount without new legislation, which for various reasons is at present impracticable. If Great Britain reduced the sterling price of gold, it would be a unilateral act which would bring about an appreciation of sterling against the dollar. Such action would be contrary to the spirit of the tripartite agreement; it would also involve over-valuation of the pound against the franc as well as the dollar and the infliction of loss upon South Africa and the other gold-producing Dominions. In other words, such action would be a political impossibility.

Psychological considerations must also be taken into account. The past two months have proved only too clearly that a reduction in the price of gold would, rightly or wrongly, be interpreted as a deflationary measure by industry and the markets. Any attempt to wean the public from this belief might succeed only in teaching the public that gold no longer possessed a stable value, either in terms of money or commodities, and unless the present widespread belief in the value of gold is replaced by something equally assured, the undermining of this faith would inevitably lead to uncertainty and caution in business circles generally.

Moreover, there is as yet no imperative need of action. The recent flood of gold on the London market has been mainly due to dishoarding. This process cannot go on indefinitely, and we may soon be within measurable distance of its end. Again, it is reasonable that we in this country should accumulate considerable supplies, for part of the Exchange Fund gold is really earmarked against hot money, and in that sense it is not redundant. In fact, some statisticians claim that at present we have not a real surplus of gold at all. We must allow an adequate cover for our future note circulation. There may be future gold losses in respect of the Empire's balance of payments. Given further revival in world trade, the Empire central banks may need to replenish their gold reserves at home. India may resume hoarding and we ourselves may resume lending abroad. Mr Keynes, indeed, in *The Times* of June 10th, urges that we should accelerate and encourage some of these movements. If we also allow for the repatriation of hot money, these considerations suggest that there will be little margin left out of the gold held to-day by the Bank of England and the Exchange Equalisation Account.

From the British point of view, therefore, the short-term problem presents little difficulty. On the contrary,

there is a strong case for making no early change in our present policy.

The long-term problem, however, is more difficult to disentangle. The present price of gold is very profitable to producers, and, for the time being at all events, Russia has become a source of supply comparable in importance to the Rand itself. If equilibrium could only be restored by an increase in costs proportionate to the rise in the price of gold, it would mean an inflation of the price level far greater than is desirable. We must assume, therefore, that unless the price of gold is reduced we must be prepared to deal with a steadily increasing output, without allowing it to have its full effect upon prices. The present plan of purchase and segregation by the American and British authorities is not a permanent solution—for it cannot be contemplated that public resources will be used indefinitely in the purchase of unwanted gold.

If the price of gold is not to be lowered, there are two ways in which the long-term problem might be solved. One is that gold should be absorbed by more of the central banks, by Germany and by other countries that are not holding their normal proportion of the world's stock. This may come about with the further recovery of trade, and the increase in the world's gold supplies and the consequent rise in commodity prices should help to bring this about. Meanwhile, it would encourage the United States and Great Britain to continue their present policy if other countries which are in a position to do so would begin—even on a small scale—to take gold. The second method is an international agreement for the control of production. This is rejected by Professor Cassel in an article in *The Daily Mail* of June 9th; and while we do not accept his main arguments, we think that alone it would not solve the problem. Though new output from the mines is an important factor, the valuation of the world's huge stock is of far greater moment. The root of the trouble is that when the United States went off gold in 1933 it did not wait long enough for a new equilibrium to establish itself, but fixed a new price of gold which re-valued the reserves of the whole world at a level that the event has proved to be too high. The world's central banks are now counterbalancing this over-valuation by raising the percentage of reserves or setting gold aside in special funds. The difficulty would be more easily dealt with—though it would not be completely solved—if new production were under control.

It is thus possible—though by no means certain—that, if we play for time, we may be able—with the help of favourable trade developments—to avoid the drastic surgical remedy, advocated by Professor Cassel, of a reduction in the price of gold.

Meanwhile, there is a strong current of City opinion in favour of stabilisation. This, it is claimed, would stop dishoarding, remove the fear of deflation, settle the gold market and allow recovery to be resumed. But this is a short view. The present controversy on the price of gold shows that there is grave doubt whether the present is the right gold price at which to stabilise. If we fix at this figure with the intention of changing it if it proves an unsuitable level, confidence in the price will be lacking, and dishoarding will go on and production will continue to rise so long as the price remains high. If we contemplate lowering the price before stabilisation, we must immediately face a period of set-back and hesitation. In any case, the preliminary conditions so frequently laid down as necessary before Great

Britain can stabilise are not yet present. Having waited so long it would be a great mistake to take the plunge and risk the fixing of a new level while the French situation is still unresolved and Germany's intentions quite unknown.

Finally, as Mr Keynes points out, we need to know considerably more about the future supply and distribution of gold and also the future monetary demand for it. In the circumstances, the wise course would seem to be to make haste slowly and for the present to continue the existing policy without change, in the belief that some at all events of the immediate difficulties will thus solve themselves.

Financial Notes

The Foreign Exchanges.—Owing to official reassurances in London and Washington, arbitrageurs resumed gold dealings in London for shipment to New York, and the discount below the New York parity price for gold has shrunk from the wide margin of 7½d. to only 2½d. per ounce. It is thought, however, that the British Control continued to buy gold, though in smaller quantities. The New York exchange rate has been very steady. It eased from \$4.93 to \$4.93½ on the resumption of arbitrage gold dealings, but French buying of dollars against sterling has since brought it back to \$4.93½. Sales in London of dishoarded gold may not have much effect on the dollar even if the gold is resold to the United States, for there is a tendency on the part of the dishoarders to transfer the proceeds of their sales to New York; and the two operations neutralise each other, so far as the exchanges are concerned. Fresh nervousness has developed in Paris, with a further outflow of capital and a fall of rentes to the lowest price on record since the Poincaré stabilisation. It is thought in London that the French Exchange Account has had to sell sterling heavily this week, while the fall in rentes increases the French Government's borrowing difficulties. Incidentally, the French Control only sells francs against sterling, so that an outflow of French funds to New York leads to immediate offerings of sterling against dollars. Swiss francs were offered up to a few days ago. Much of the recent gold dishoarding emanated from Switzerland, and the Swiss francs obtained for gold were promptly sold for dollars. Dutch guilders are steady, with the Netherlands Bank continuing to buy dollars. Any Dutch gold dishoarding has not been followed by a transfer of the proceeds to New York.

The Money Market.—This week's Bank Return shows that the effects of the War Loan dividend payment have not yet worn off, and so money remains very plentiful and easy. Owing to the approach of the end of the half-year, the banks are not buying bills freely. They are naturally ready to take end-of-June maturities, but the market, of course, is not anxious to sell June bills. The banks, however, have bought some mixed parcels of June Treasuries at ½ per cent. and August Treasuries at ⅔ per cent. Hot Treasury bills are quoted at ⅙ per cent. or a fraction under.

	May 20, 1937	May 27, 1937	June 3, 1937	June 10, 1937
Bank rate	2	2	2	2
Clearing banks' deposit rate	1	1	1	1
Short loan rate:—				
Clearing banks	1½-1*	1½-1*	1½-1*	1½-1*
Others	1½	1½	1½	1½
Discount rates:—				
Treasury bills	1	1	1	1
Three months' bank bills	1½-1	1½-1	1½	1½-1

* Loans against Treasury bills and other approved bills and British Government securities within six months of maturity; 1 per cent. Treasury Bonds and other gilt-edged stocks within six months of maturity; and other collateral respectively.

The Treasury bill tender rate has hardened owing to the reluctance of the banks to buy bills. On June 4th, the syndicate secured 54 per cent. of the total allotment of

£45 millions, and the average tender rate was 14s. 1.02d. per cent. The total volume of tender Treasury bills which had remained unchanged during May is now rising again, and so discount rates are likely to remain a little firmer than usual until the end of the month.

The Bank Return.—There has been a further increase in the note circulation, and it is clear that the bulk of the currency withdrawn over the Coronation and Whitsun is not yet returning. In the absence of any further gold purchases, the Reserve is slightly lower than a week ago.

BANK OF ENGLAND					
	June 10, 1936	May 19, 1937	May 26, 1937	June 2, 1937	June 9, 1937
	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Issue Department:—					
Gold	208.5	321.3	321.3	321.3	321.3
Note circulation	433.0	481.4	475.2	475.6	476.5
Banking Department:—					
Reserve	36.4	40.7	46.9	46.5	45.6
Public deposits	13.5	19.2	24.9	10.2	10.7
Bankers' deposits	86.5	97.4	91.4	109.5	107.4
Other deposits	37.1	37.6	37.5	37.3	36.8
Government securities	97.8	103.3	99.5	102.8	101.2
Discounts and advances	6.2	6.6	4.9	4.7	4.8
Other securities	14.6	21.4	20.3	20.7	21.1
Proportion	26.5%	26.4%	30.5%	29.6%	29.4%

The floating debt return for June 5th shows that the Government borrowed £9.5 millions from the Bank to help cover the War Loan dividend. This week's small reduction in Government securities suggests that little has so far been repaid. For the same reason bankers' deposits remain on the high side, while public deposits are below their normal size.

May Clearing Bank Averages.—The May returns of the ten English clearing banks show an increase in cash of £3.4 millions. This is explained by a parallel increase in bankers' deposits at the Bank of England. Reference to recent Bank returns shows that the Coronation and Whitsun expansion in the note circulation was more than off-set by the Bank's acquisition of gold and Government securities; and this accounts for the expansion in bankers' deposits and clearing bank cash. In short, the declared official policy of maintaining cheap and plentiful credit continues to be carried into effect.

(In £ millions)						
	May, 1936	Jan., 1937	Feb., 1937	March, 1937	April, 1937	May, 1937
Capital and reserves	131.8	132.5	132.5	132.5	132.5	132.5
Acceptances, etc.	102.8	110.4	115.0	122.2	126.2	125.5

Total assets	2,382.6	2,512.4	2,483.7	2,461.3	2,472.3	2,475.7

The increase in the omnibus item "balances with other banks and cheques in course of collection" reflects increased spending during the Coronation. The drop in call and short loans, not fully off-set by the increase in the banks' discounts, appears surprising in view of the upward trend between April and May of the total amount of Treasury bills issued by tender. The reason is that early in May the market had little success at the weekly tenders, the bulk of the bills being allotted elsewhere. The upward trend of advances continues, though at a slightly diminished rate. Nevertheless the further expansion has had its counterpart in a fresh reduction in investments, in accordance with the general policy of the banks in keeping the total of advances and investments at not much over 70 per cent. of deposits.

THE STOCK EXCHANGE

Investment Trust Trends

DURING the past eighteen months higher dividends have been taken so much for granted that the ordinary shareholder allowed his objection to the now defunct National Defence Contribution to obscure his satisfaction that there was some growth of profits to tax. Investment trust stockholders, however, have the doubtful pleasure of feeling that it is not towards them that the former Chancellor cast envious eyes. Increases of 1 per cent. or 1½ per cent. in dividends are less significant than the fact that, among the larger companies in particular, present distributions are not very much higher than those of the worst slump year. At this stage of recovery the proverbial time-lag cannot wholly account for such a lack of buoyancy. The investor is asking himself whether it is a question only of time before earnings rise to their pre-depression level, or whether the forces at work are evolutionary rather than ephemeral.

Investment trust company reports as a whole are more informative to-day than ever before. Accordingly, we have been able to examine representative reports published this year, not only for changes in earnings, but also for variations in investment policy, as revealed by analyses of the portfolios by area and by class. The table at the foot of this page summarises, for twenty companies, the changes that have occurred between the worst and the latest year—the worst meaning in each case the year (since 1930) of lowest total revenue. This does not coincide, however, with the year of lowest security values. The contrast between the worst and the latest year for a company's valuation of investments is therefore probably greater than our table suggests. We have distinguished between trusts of pre- and post-war formation, as they present certain differences in their recovery prospects.

Inspection of the figures suggests that the comparative unresilience of dividends may give a misleading idea of the progress actually made by many trusts. In any case, a typical investment trust aims not so much at securing a maximum participation in prosperity, as at stability between the extremes of boom and depression. As far as debenture and preference holders are concerned, investment trusts have satisfied this criterion. Broadly

speaking, the fall in interest rates has reduced the income but not the fixed-interest obligations of the trusts, but those obligations continue, for the most part, to be met in full. The impact of depression has fallen upon ordinary shareholders, and with all the greater force because the capital of most trusts is highly geared. A company like the Debenture Corporation may earn for the equity in 1936 an amount only 1½ per cent. below the best earnings of the past decade. But such a record is unusual and latest net profits are in most instances well below the previous maximum. Will they return to their old levels?

The question brings us inevitably to consider the nature of investment trust portfolios. Even if the high yields of 1929 are ever obtained again, cheap money will have persisted long enough to have influenced fundamentally the medium-term prospects of trust ordinary shareholders. Conversions and repayments have been forced on unwilling recipients, and reinvestment at lower rates has been unavoidable. The hope of salvation for the holder of trust equities has lain in that part of the portfolio represented by ordinary shares. It has been a notable feature of recent reports that the proportion of ordinary shares to total holdings has consistently risen. The U.S. Debenture Corporation (whose analysis, being based on the cost of the securities, is a more reliable indicator than a comparison based on market values) had 19 per cent. of its portfolio in equities in the early part of 1932, and 43 per cent. at the end of the latest year.

Did trust managers endeavour to redirect their policy only after bitter experience, or is there evidence of a switch-over into equities before the worst year of the slump? A comparison of the percentage of equities to total holdings at the end of the year of lowest total revenue, with that of two years earlier, does not give uniform results for the different companies. It suggests, however, that some change in policy had already begun, much earlier in the depression. Trust directors, in fact, were in an unenviable dilemma. The sale of defaulted fixed-interest securities, for reinvestment in ordinary shares, involved the sacrifice of revenue that could not

be spared, while weeding out unremunerative investments meant the recording of a realised loss that could still less be afforded. For large investors, with a high-gear capitalisation, investment holdings tend in depression to become a species of Nessus' shirt, of which Hercules cannot easily divest himself, because it has become a part of his own skin.

So much for the distribution of investments between fixed interest and equities. In a world still distracted by currency restrictions and fluctuations, the geographical distribution of investments is a question of no less importance. It cannot be concluded from the total percentages of foreign holdings, shown in our table, that there has been a significant reorientation of policy. More detailed analysis, however, reveals a changed attitude towards individual countries—for example, there has been a move away from Europe towards, notably, the United States of America. It is doubtful whether the trusts could view with equanimity the threat of a permanent and effective embargo upon foreign investment. In the past, they have been accustomed to regard the risk of defaults or currency difficulties as being compensated by the higher interest rates prevailing in many foreign countries. Any trust with a highly-gear capitalisation (that is, a fairly typical trust) which hoped to earn a satisfactory rate on its ordinary capital could not afford, in the past, to ignore the more remunerative character of overseas investment. Some of these considerations have less relevance in the changed world of to-day, but it is difficult to say how far former policy is being continued deliberately, and how far the companies have found it necessary for the time being to maintain the *status quo* owing to the technical difficulty, or the inexpediency, of realising their interests in certain foreign countries.

Another question of considerable, if indirect, importance to the ordinary shareholder is the appreciation or depreciation of portfolio values compared with book values. Capital values, though admittedly less important than earning power, have a direct bearing on the need for appropriations from revenue for writing down securities, and therefore on ordinary dividends. Much also depends on the directors' attitude towards the creation of hidden reserves, since the appreciation of some securities above book values is not held to lessen the advisability of writing down other investments that have fallen in value.

On the whole, shareholders cannot complain that such recovery as has taken place already has not been passed on in higher dividends. It is clear from our table that in most cases the present margin between earnings and distribution is not extravagantly large. And immediate prospects of some increase in total income are as assured as any in the whole field of investment. Whatever happens in the latter part of 1937, the ordinary shareholder has only to wait patiently for the routine collection of profits that have already been earned. But over a period of say two or three years from now will he find that rising receipts are passed on as freely? Ten years ago many trusts were distributing to the holders of the equity only about two-thirds of available earnings—and it must be said that, in the absence of the writing-down of the book values of securities, thus made possible, the depreciation of portfolios during the ensuing depression would have been far more serious than was actually the case. Will earnings, in the immediate future, be buoyant enough for the stockholder to be at the same time rewarded for the lean years that have passed and protected against the lean years that are to come?

It would be optimistic, given the persistence of relatively low interest rates, to assume that he will have the best of both worlds. The post-war trusts, hit by a severe slump only a few years after formation and before there had been time for the accumulation of extensive reserves, secured no more than fractional earnings for the equity in many cases during their worst year. No less than seven of the ten post-war companies referred to in our table paid no ordinary dividend at that time. These newer trusts, it is true, which were severely hit in the depression, offer good recovery prospects; increases in dividends within a space of three years have already been substantial and are likely to go further.

But can these companies afford to pay higher dividends and also to accumulate reserves? Some instances of heavy depreciation in portfolios during the slump suggest at least a *prima facie* argument for a strengthening of future reserves. The older trusts, on the other hand, offer less exciting recovery prospects, but the book values of their investments have been at a more healthy level, and the maintenance of their earnings at or somewhat above current amounts may be better assured. There is nothing in the present situation to imply that former dividends can be both restored and maintained; it is not even certain that the old rates will again be reached. Only in two or three years' time, when trust directors will have had time to derive the maximum advantage from current conditions, can a final conclusion be reached. In the meantime, investors may, perhaps, be conservative in their expectations.

Investment Notes

Tails Down.—The stock markets still show constitutional inability to raise their tails from the ground. Last week's relief over the abandonment of the National Defence Contribution was entirely lost in a fresh outbreak of uncertainty over the status and prospects of gold. Kaffir shares, necessarily, were most affected, the market's indisposition being evident even more from its readiness to act, momentarily, on the most fantastic rumours than from the actual decline in share prices. The gilt-edged market took somewhat amiss the terms of Australia's conversion issued, referred to below. Industrial shares were hesitant and undecided, and another excellent batch of traffic figures had no perceptible effect on the home railway market. Incidentally, the combined receipts of the four companies for the last month show large increases over last year in passengers and coal, but a small decline in general merchandise. The Stock Exchange has, at least, been consistent in its recent inconsistency. The ostensible causes of its *malaise* have been various, but it has reacted to them all in the same way. Prices have fallen considerably in individual instances, but on the average they have not lost a great deal. The *Financial News*' index of thirty ordinary shares has declined from a high point of 124.9 last November only to 111.4 to-day. But reactions nowadays do not bring new buyers in, and dealers are chiefly anxious to even their books at the end of each day's business. The majority of investors are not yet apprehensive of an early recession in industry; but they are seeking increasingly to insure against a check to advancing earnings and a stiffening of general interest rates. To the question whether they were downhearted, they would give the usual reply. But they would give a good deal to know exactly who is sitting behind the equestrian figure of Prosperity.

★ ★ ★

The Australian Conversion.—This week the Commonwealth has launched her thirteenth conversion operation—a sequence which now enables her, in fact, to refund only a 15-year basis the 3½ per cent. registered stock and debentures which were issued as her first five-year conversion "short" in 1932. This week's operation, then, is a double conversion which has proved well worth while, for the stocks originally repaid by the £12,360,958 stock and debentures carried interest at 5½ per cent. The new stock now offered in conversion also carries interest at 3½ per cent., redeemable 1950-52, and is offered at £96 10s. per cent. In other words, the Commonwealth has not been tempted to replace a "short" by a "short," but has instead bitten the bullet of higher interest rates. Eighteen months ago she could still borrow on the basis of £3 6s. per cent. for a twenty-two year loan. To-day many observers regard the terms of this week's offer—yielding £3 16s. 3d. to redemption—as being cut a shade fine. The stock and debentures have been, almost from the first, a money-market security, and it is axiomatic that these institutions do not require a 15-year maximum stock. In

Year of worst total revenue was financial period ended on date nearest to end of (a) 1934; (b) 1933; (c) 1931.
 * Excludes British Empire. † 12½ month period, the first of the company's existence. ‡ Fully represented. § Amount of appreciation not disclosed. ¶ After various deductions. ** Excludes insurance. *** Applies to year preceding that of worst total revenue. **** Amount of appreciation not disclosed. ***** After various deductions. ***** per annum. * Year (since 1930) of lowest total revenue, not lowest portfolio values.

other words, the prospect of existing holders converting on any significant scale is so unlikely that an entirely new body of subscribers must be found to take up the loan. And recent experience suggests that lenders now have the initiative in the trustee market, and are inclined, where they can, to refrain from committing themselves far, even at the adjusted prices which now prevail. Nevertheless, Australia may congratulate herself (and her financial advisers) on having taken advantage of the heyday of low interest rates to convert £210,874,000 of debt. By the same token she may console herself that she has no appreciable conversion savings which are likely to miss the time-table over the next year or two.

Electricity Distribution Proposals.—While the electricity companies and the municipalities are keenly critical of the Government's now celebrated "secret memorandum" (which is discussed in a leading article on page 608 and summarised on page 611), the holder of electricity supply shares is chiefly conscious that uncertainty spells lower share prices. The shadow of the McGowan Report, however, had long been felt in the market. Any proposals for the improvement of electricity supply services, no matter how equitable or expedient, must inevitably cut across existing rights or into future prospects. But the basis of the present scheme appears to give some power companies (with perpetual rights) less prominence than the McGowan Report contemplated in the regional schemes. Some distribution companies would disappear, merging with local authorities' undertakings in a "Basis B" board. Such instances are the East Anglian groups and possibly Oxford. Others appear to be denied the opportunity of merger with a public undertaking, despite its proximity and technical similarity. In Northamptonshire, for example, the Northampton undertaking and its two subsidiaries are preserved, but the Kettering Urban District undertaking is to remain separate. Even more anomalous, from this aspect, is the exclusion of Darlington and Sunderland municipal undertakings from the North-Eastern group. On the other hand, the South Wales Power grouping with a large number of district council undertakings seems to have been contrived solely by excluding Cardiff, Newport and Swansea municipalities as separate undertakings.

Compromise and anomaly are perhaps inseparable from any scheme which attempts to reduce the number of undertakings from the present number of 635 to seventy-six major groups. The outlook for the holding companies, however, is considerably affected. The McGowan Report passed strictures upon certain practices of holding companies, such as charging construction work and repair work carried out for subsidiaries at non-competitive rates, and levying abnormal rates of interest on loans. Certain of these "empires" will be redistributed; and where such financial practices have been followed in the past loss of revenue must result. British Power and Light, whose interests are widely spread, will apparently be restricted to the North Wales Company, which is scheduled to absorb numerous small undertakings in its district. Similarly, the Edmundsons group will be restricted to Cornwall and the Cambridge, Wessex and "Three Counties" areas. Assuming, however, that the scheme met with general approval, future opportunities for equity investment in the industry would undoubtedly be limited by the restraint exercised by the Electricity Commissioners upon new capital issues and upon scales of charges and by the sliding-scale limitations upon the growth of dividends above the standard rate. Finally, the purchase terms are apparently to be drawn up, for companies, so that compensation for loss of future profits would be payable upon the difference between "net maintainable income" (subject to depreciation and to the effect of sliding-scale prices and dividends under the Bill) and the income which the vendor would receive if the amount expended upon capital account and stocks were invested in stocks

or shares "of a similar kind to those of the vendor company." These bases of compensation cannot be applied with any degree of certainty where existing companies are scheduled to be taken over; but they are complicated indeed, and do not appear in any sense generous to the companies. The upshot of the draft scheme is that investment interest in electricity undertakings would become largely of a fixed-interest character in the future.

Industrial Profits in May.—Reports published in May, still numerous and representative, showed an increase of 14.09 per cent in profits. The record of recent months is shown below:—

Reports published in 1936—	No. of Companies	Rise in Profits*	Reports published in 1937—	No. of Companies	Rise in Profits*
January	128	13.66	October ...	146	18.09
February ...	205	9.00	November...	177	13.49
March	236	17.39	December ...	175	15.49
April	254	9.66	1937—		
May	269	9.41	January ...	110	15.92
June	214	13.50	February ...	208	8.95
July	228	15.69	March	307	12.52
August	47	14.21	April	245	23.36
September ...	107	12.32	May	255	14.09

* After payment of debenture interest.

The total net profits covered by the May reports amounted to £25,053,946, compared with £21,958,530 for the preceding year. No single group contributed disproportionately towards the total increase of £3,095,416, though iron, coal and steel companies, including Stewarts and Lloyds, produced the best results among the larger sections, with a rise of 50 per cent. Breweries accounted for over 10 per cent. of the total profits, while forty-seven rubber companies contributed as much as £391,766 towards the month's increase.

Company Notes

Guest Keen and Nettlefolds Results.—The Guest Keen and Nettlefolds accounts show that the total profits of the company rose from £1,047,720 to £1,150,524 during the year to March last. The dividend has been raised from 5 per cent. tax free to 6 per cent. tax free, by the payment of a final dividend of 3½ per cent. tax free. Analysis of the accounts shows that ordinary earnings increased from £493,714 to £571,995, equivalent to 8.9 per cent. tax free, against 7.7 per cent.:—

	Years to March 31		
	1935	1936	1937
Total Profits.....	1,036,436	1,047,720	1,150,524

Carried Forward	459,568	100,000	150,000
	531,558	567,485	

* Includes three years' second preference dividend.
† Assuming normal preference dividend.

The directors' treatment of profits is again highly conservative. The company's position, indeed, differs from that of many steel companies in two ways. It is dependent, firstly, upon considerable outside supplies of materials, and therefore the recent increase in steel prices may be regarded as a relief from increasing costs, rather than as a positive pointer to a future profits

increase. Secondly, the reorganisation programme is not yet completed, and the directors have this year set aside £150,000 (against £100,000) towards the cost. Reorganisation implies a conservative distribution policy for some time to come. Meanwhile the Guest Keen Baldwins subsidiary resumed dividend payments with 2½ per cent. for 1936, and may be in a position to make a somewhat greater contribution during the current year. The directors comment that trading conditions have been good, despite difficulties in obtaining raw material supplies. The factors which at present make for hesitancy in the steel share market, however, apply with undiminished force to Guest Keen and Nettlefolds, whose £1 ordinary stock stands at 32s. 9d. to yield £5 19s. per cent. gross. The market, probably rightly, refuses to discount the possibility of a substantial increase in the dividend in the near future.

British Electric Traction.—It is wise to review the position of companies which distribute regular scrip bonuses with more than ordinary care, for a capital bonus is an attraction for which investors are invariably inclined to pay generously. For British Electric Traction, perhaps, this scrutiny seems superfluous, perhaps even ungenerous. There is nothing in the latest accounts which so much as hints at a change of trend in the geometric progress of recent years. The deferred capital is still low in relation to earnings; the 5 per cent. cash dividend and the 10 per cent. scrip bonus, indeed, are covered by earnings of nearly 50 per cent. While the regular march of profits continues on this scale, the surtax payer will still regard B.E.T. deferred as his strongest refuge. The following table illustrates the progress of the last three years:—

	Years to March 31		
	1935	1936	1937
Revenue from investments ...	411,385	447,449	528,833
Total income	465,514	505,245	585,673
Expenses, fees, and staff fund	55,719	56,442	56,109
Income tax	30,813	37,724	59,190
Debenture interest	79,479	79,479	79,479
Preference dividends	163,121	163,121	163,121
Deferred ordinary:—			
Earned	136,382	168,479	227,774
Paid	24,550	27,004	29,705
Earned %	34.4	39.4	49.6
Paid %	5	5	5
Deferred scrip bonus (10%)	49,100	54,010	59,411
Carried forward	1,309,831	1,397,296	1,535,954

It is not customary to regard B.E.T. as an investment trust in the accepted sense, but a majority of its investments are, in fact, of a general character. This part of the portfolio suggests further expansionary possibilities. On the precise position of the subsidiaries, perhaps, rather more information would be welcome. From the statement under Section 126, it appears that aggregate profits are brought in from the subsidiaries, although the note is not altogether clear. Certainly, investments are carried at conservative values, and the balance sheet, which includes well over £2 millions of free reserves, is of immense strength. For these advantages, it follows that the investor must pay the price. The deferred stock, which stood as high as 1760 last year, is now 1450. At this price, it offers a cash yield of 6s. 10½d. per cent., which must be the lowest return—above zero—in the Official List. For the plutocratic investor, however, its advantages have been well tried. They appear to be qualified by nothing more serious than the tendency of the road transport industry towards greater stability, and by the possible effects of the Government's electricity proposals upon the widely distributed interests of the B.E.T. Electricity Supply subsidiary.

Consett Iron Profits.—The latest accounts of this mixed steel, coal and chemical concern show that the reorganisation scheme last year was singularly well timed. Total profits, including rents, have jumped from £519,626 to £729,976. After this point, comparison with the 1935-36 results is hardly worth pursuing owing to

the capital re-arrangement. Some £636,762 remains net, after providing for debenture interest on the greatly reduced new scale, making £743,249 available for distribution and reserves. The directors commence with an appropriation of £125,000 for depreciation, in addition to maintaining the charge of £200,000 set up in the previous year for plant extensions and improvements. After providing for debenture redemption and preference dividend, the amount earned for the ordinary stock is £245,012, equivalent to 9.2 per cent. on the capital, which receives 7½ per cent. on the new 6s. 8d. units. Finally, £141,499 is carried forward, compared with £106,488 brought in. Investors who consented to the reorganisation scheme—and, indeed, those who were willing to subscribe for new shares at 8s. 6d. a year ago—have no reason to regret their decision. The units now stand at 12s. 7½d., yielding £3 19s. per cent. on dividend, and £4 17s. per cent. on the year's earnings. Even on the past year's results, however, it must be admitted that this level is somewhat forward-looking.

Distillers' Offer to Booth's.—Early in May, Booth's Distilleries £1 ordinary stock units stood at 34s. Then came an announcement from the board that negotiations likely to prove advantageous to the company were proceeding, and shareholders were advised not to sell their shares. Thereupon the price jumped to 45s. 6d., the market divining—correctly, as it transpires this week—that the second party in the negotiation was Distillers. The latter concern has now made an offer to purchase for cash part of Booth's Distilleries' capital, consisting of £200,000 6½ per cent. preferred ordinary and £600,000 ordinary stock. For each £1 of preferred ordinary, 28s. 6d. is offered, and for each £1 of ordinary stock 50s., with the proviso that the ordinary stock ranks for dividend to March last, at a rate not exceeding 8 per cent. The offer is conditional upon acceptance by 85 per cent. of each class of stocks, and the directors of Booth's Distilleries recommend its acceptance. These acquisitions would give Distillers full control of Booth's Distilleries, whose remaining capital consists of £195,250 5 per cent. and £500,000 6 per cent. preference stocks. Motives of strategy may, indeed, play a considerable part in the deal, which appears distinctly favourable to Booth's Distilleries. The last marking in the 6½ per cent. preferred ordinary was 26s., and the Distillers' offer corresponds to a yield basis of £4 11s. 3d. per cent.—not unreasonable for a well-covered third preference issue. A premium of 150 per cent. on the ordinary corresponds to a 3 per cent. dividend yield basis (slightly more if 8 per cent. is paid for 1936-37) and 6.9 per cent. on latest earnings. Such terms are bound to be attractive, despite the task of seeking alternative investments.

Great Universal Stores Questions.—The accounts of this concern show trading profits of £357,155, compared with £306,197 for the year to March, 1936. The amount earned for preference dividends has increased from £215,299 to £253,666, and the earnings for the ordinary shares from £190,960 to £220,237, equivalent to 76 per cent. after a full year's preference requirements. Ostensibly, therefore, the 50 per cent. cash distribution and the 10 per cent. scrip bonus, paid for the third year, are well covered, although even on these figures earnings have done little more than keep step with the increase in preference and ordinary capital during the year. When the trading profit is analysed more closely, however, certain adjustments appear to be called for to obtain a correct impression of true earnings. The

figures include, in the first place, a gross dividend of £84,895, approximately representing eighteen months' profits of the manufacturing subsidiary. On a proportionate basis some £28,000 of this dividend must therefore be reckoned as extraneous to the past year. During 1936, moreover, the stores were separated from the main undertaking in a new subsidiary company, which now reports a loss of £31,378 after providing for depreciation. This loss has been carried forward in its own books, and the parent company has made no provision for it. All told, the actual profits of the group appear to be reduced by nearly £60,000 gross, and after adjusting for income tax, the net earnings for the ordinary would amount to, say, £175,000, compared with the £220,237 shown in the accounts. The former sum, indeed, just covers the cash dividend and the scrip bonus, leaving nothing to spare. The 5s. shares, standing at 36s. 9d., show no disposition to discount the indefinite maintenance of scrip dividends.

J. Lyons and Rising Costs.—After perusing Sir Isidore Salmon's address, shareholders in J. Lyons and Company may wonder whether the adjustments "for contingencies" which are an annual feature of the profit and loss account may not be interpreted as "from contingencies" under present circumstances. The burden of the speeches made at this week's meeting was the difficulty of maintaining profit-margins during a period of rising costs. Last year the company took the first step to compensate rising costs by increasing its prices for tea, but the chairman gave no information this week regarding the consequences. Mr Harry Salmon, who added some more detailed remarks on the question of costs, stressed the lag between rising wholesale prices and wages. In such a business as that of J. Lyons the free adjustment of retail prices to costs is limited by considerations of "what the traffic will bear." Ultimately, however, the consumer must pay, but the company's policy avoids any precipitate adjustment of prices which might affect turnover. The past policy of providing contingency reserves, apparently, is now assisting the company to maintain its distributable profits until full adjustment to rising costs becomes practicable. Meanwhile, the news that the company increased its total cash turnover last year is welcome, although it is by no means incompatible with a reduction in actual profits. If rising costs absorbed £150,000 more in 1935-36, it is hardly likely that the past year saw any reduction of this burden, or that the increased prices already effected fully covered the increase. They do not appear, however, to have

affected the volume of turnover. In these circumstances, the company can only adjust prices as occasion permits, and seek out every possibility of increased efficiency. The chairman, indeed, mentioned one unusual economy—a decimal system—which has already been successfully employed in the company's inter-departmental accounting.

Wm. Cory Progress.—The accounts of Wm. Cory for the year to March, 1937, are distinctly good. Net profits have increased from £646,330 to £719,536, thus reaching a new high level since 1930. The raising of the dividend from 17½ per cent. to 20 per cent. was announced at the end of May, and the report shows that the dividend is comfortably covered by earnings of 23.9 per cent. Out of the surplus, the directors have resumed reserve allocations with a transfer of £200,000, and have reduced the amount carried forward from £952,921 to £839,939. Nor is the balance sheet less impressive. A highly liquid position is invariably disclosed and investments now stand at £3,638,639, currently valued at £4,220,097. Further, the general reserve is now increased to £2,000,000, and it seems highly probable that a considerable part of the item of £1,750,000 shown as "creditors and contingencies" may be regarded as a reserve. The report is silent regarding the year's trading, but the company's world-wide coal and bunkering business is now well on the way to prosperity. Since the ordinary stock units yield £4 17s. per cent. at the present price of 82s. 6d., they cannot be regarded as unreasonably valued. There are many shares on a lower yield basis which have neither the impressive record nor the present recovery possibilities of Wm. Cory.

J. and P. Coats Report.—The full report of this leading thread concern subtracts but little from the disappointing nature of the preliminary statement, discussed in *The Economist* of May 29th, page 522. Total income is reduced from £2,116,102 to £1,925,137, while net profits have again fallen, by £211,596 to £1,794,744. No provision is required for exchange differences reserve, which absorbed £250,000 in 1935. The directors' report—never an informative document—is silent upon the significance of this further fall in profits, which in fact leaves the 10 per cent. dividend slightly uncovered. The group, however, has been more closely consolidated during the year. Interests in subsidiaries appear to have been funded on a considerable scale, for amounts owing by subsidiaries on current account are reduced from £7,260,373 to £5,182,027, while shareholdings in subsidiaries are increased from £16,947,468 to £20,756,519. Coats' ordinary stock, despite its stable dividend character, has been singled out for attention as an international trade recovery counter. So far these hopes have been belied, for British exports and American labour problems appear alike to have been limiting factors to the company's profits during the past year. The chairman will doubtless provide the survey of prospects which many investors must be anxious to have.

Philip Hill First Report.—This "issuer's issue" appeared last October, when more than half of the company's financial year had elapsed. The first accounts as a public concern show that the directors' anticipation of expanding profits has been fully realised. The prospectus estimate of £313,615 for the earnings of a full year is comfortably exceeded by the results of the past half-year alone, which show a balance of profits from dividends, commissions, sales of investments, etc., of £376,222, apart from the (now irrelevant) profit of £161,076 earned in the first half of the year. A 12½ per cent. dividend, described as "interim," has already been announced on the ordinary capital, and is covered

three times by earnings. Of the balance, £150,000 is transferred to dividend equalisation account—a prudent and praiseworthy procedure—leaving £29,855 to be carried forward. The balance sheet, again, shows great liquid strength, and quoted securities are carried by the group some £907,351 below their current values. It would however, be illuminating to have some more detailed description of these holdings. Their distribution, it is stated, has not materially changed since the issue of the prospectus, which showed 45 per cent. in industrials, 17½ per cent. in electric supply, and 16½ per cent. in aircraft. Presumably this classification embraced a number of issues which the company has itself sponsored, in which market operations may be of considerable importance in determining prices. While the investment of £1¼ millions received by way of share premiums has broadened the base of the portfolio, publication of a detailed analysis would be valuable and helpful.

Burmah Oil Prospects.—Mr Robert Watson's speech to the members of Burmah Oil (in the regretted absence of Sir John Cargill through indisposition) struck an encouraging note. Conditions in the Eastern oil markets, and particularly India, have not been of the happiest, and even last year economic improvement failed to protect the Burmah Oil company against a fall in Indian petrol prices. Such is the nature of competition in the Indian market, and the chairman referred pointedly, at a later stage in his speech, to the possible impact of the Bahrein production upon the Indian market, making a justifiable plea for a cautious marketing policy. The impression, therefore, remains that the distinctly satisfactory increase in the company's profits for 1936 was attributable largely to reduced costs and increased sales. Provided that the competitive position in the Indian market is not intensified, the

current prospect appears good. As the chairman pointed out, the separation of Burma from India preserves existing fiscal conditions for a period of three years. One other feature in the Burmah oil situation is always present in the mind of the investor—its holdings in Anglo-Iranian and Shell. The company held, directly and indirectly, 3,561,990 Anglo-Iranian ordinary, valued at 11s. 8½d. per unit, but the figures have now been altered by the new capital bonus to 5,342,985 units, at an average of 8s. 10-66d. These interests, together with the Shell holdings, promise increased revenue for Burmah Oil this year. The prospect, indeed, suggests that a price of 118s. od. and yield of £4 13s. 3d. per cent. for Burmah Oil is not unreasonable if the Eastern market remains sound.

Other Oil News.—After a succession of unofficial reports, interspersed by official protestations of ignorance from Mexico, it appears that the strike on the Mexican Eagle oilfields is now over. A Federal Arbitration Board, it seems, is to study the men's demands, and the other points which are at issue with the company. The fruit of the 120 days' notice of strike and ten days' stoppage, therefore, is peculiarly Mexican, and the market, at any rate, was disinclined to count upon an immediately favourable outcome of the arbitration when a six-months' conference with the employers had already failed. Meanwhile, further oil results show a general improvement, but have left the market unmoved. The Venezuelan Oil Concessions report is distinctly favourable, in view of the labour troubles during the close of 1936. Oil sales and stocks rose from £2,723,821 to £3,338,281, and net profits amount to £1,074,068, compared with £708,620 (excluding £150,000 from investment profits and £54,398 from surplus reserves). The net profit, in fact, just fails to cover the dividend of 22½ per cent already announced

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields of fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are debentures redeemable at a certain date the yield includes any profit or loss on redemption, where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

COMPANY MEETINGS

SUEZ CANAL COMPANY

ANNUAL GENERAL MEETING, JUNE 7, 1937

EXTRACT FROM DIRECTORS' REPORT

The full report may be obtained upon application at the company's inquiry office, 6 Bishopsgate, London, E.C.2.

In 1936, shipping through the Canal was as a whole slightly less than during the preceding year; receipts would therefore have been reduced if, during the last quarter, the French Monetary Law of October 1, 1936, had not brought about an increase in the figures translating into francs the receipts actually collected in pounds. Accordingly, the total receipts of the year under review, as compared with 1935, show an increase of 58 million francs instead of the reduction of about 5 per cent., which would have been apparent if the franc had not been devalued.

For the same reason, the franc equivalent of the working expenses, nearly all in Egyptian currency, was itself also appreciably increased. Accordingly, before placing anything to reserves, the amount available for distribution, viz., 950 million francs, exceeds by about 25 million francs the corresponding sum for the year 1935.

We propose, in the circumstances, to increase to 600 francs, that is to say, 60 francs more than last year, the gross revenue of the "Action de Capital," whilst placing 10 million francs to the building sinking fund, and 10 millions to insurance and contingencies.

FURTHER REDUCTION IN TARIFF

If the total traffic of the year 1936 is inferior to that of 1935, a notable improvement, however, showed itself during the last months, and since then this improvement has been more marked. On the other hand, the effects of the devaluation of the franc, which will bear on the whole of the present financial year, will, in a greater proportion than last year, increase, in francs, the available profits. We have deemed these circumstances favourable for a fresh reduction of the transit tariff, and we have reduced it from 7s. to 6s. as from April 1st last. This reduction is in conformity with the traditional policy of your company, and cannot fail to exercise a favourable influence on the return to the Canal of ships which economic and political conditions had driven away.

The agreement concluded with the Egyptian Government, and which we reported to you last year, has not yet entered into force, the new Egyptian Cabinet, which came into power in June, 1936, having considered that they should submit to the approval of Parliament the agreement negotiated by their predecessors. Political events have not yet allowed the Parliament to examine this question.

CANAL TRAFFIC

Traffic through the Canal in 1936 reached 5,877 transits, representing 32,379,000 tons net register. Two years alone have given the Canal greater tonnages: 1929, a year of intense commercial activity, with 33,466,000 tons, and 1935 with 32,811,000 tons. In comparison with the latter year, traffic in 1936 shows a reduction of only 432,000 tons, or 1.3 per cent.

During the whole year, the special traffic due to the Italo-Abyssinian conflict, and which first appeared in 1935, has continued to exercise a considerable influence on the maritime movement through the Canal.

Putting aside this tonnage of an exceptional character, the portion of the traffic which can be called really commercial has been reduced by more than a million tons.

The weight of merchandise carried through the Canal was 25,556,000 tons, 2.9 per cent. less than in 1935. The reduction is of 3.9 per cent. in the homeward traffic, whilst for the North-South traffic it is only 1.1 per cent. In the latter direction, the weight of merchandise carried was 8,829,000 tons, a reduction of 95,000 tons on the figure of 1935.

In the South-North direction, the total weight of merchandise has decreased from 17,404,000 tons in 1935 to 16,727,000 tons, i.e. by 3.9 per cent., which reduction is to be added to that of 15 per cent. of 1935, as compared with 1934. In the homeward traffic, two groups show substantial increases, oil seeds and grain. Petroleum products, although reduced by 1.6 per cent., are still,

with a total of 4,216,000, the most important group in the South-North traffic.

A very marked opposition is to be found between the results of the traffic through the Canal during 1936 and the general indices of world economy.

COMPETITION OF CAPE ROUTES

Whilst traffic by the Suez route has fallen by 1.3 per cent. as regards tonnage, and by 2.9 per cent. as regards weight of cargo carried, world trade has improved by nearly 5 per cent., continuing the movement of recovery started in 1932. Furthermore, the index of industrial production in the world has increased by about 14 per cent. in comparison with 1935. But the Canal traffic has suffered from the competition of the Cape route, a great part of the trade between Europe and Australia, and an important proportion of the exports of rice and coal from Indo-China, having been sent via South Africa. However, the position shows a tendency towards a favourable evolution. With a greater trading activity, the saving in time given by the Canal is again becoming valuable, and induces owners to come back to the Suez route. Furthermore, the progress already made during the last few months of 1936 by the traffic of regions other than Australia has continued during the early part of the present financial year.

FAVOURABLE FACTORS

Various indications enable us to hope that this improvement will go on. On the one hand, the chief exports of countries East of Suez—grain, oil seeds or textiles—promise to be comparatively abundant, whilst world stocks are considerably reduced. One can also foresee that the requirements of Asiatic countries will be less important this year, leaving a greater exportable surplus for Europe.

On the other hand, rates of freights have increased by nearly one half during the year, making even less marked the incidence of transit dues already reduced since April 1st. Finally, laid-up tonnage was, at the end of the first quarter of 1937, 40 per cent. less than at the end of the corresponding period of 1936.

One can only wish that the factors of economic recovery, which have shown themselves in nearly all countries, shall not once more be set back by political or currency disorders, and that trade activity shall not be restricted by the excesses of self-sufficiency tendencies, thus permitting the progress of world economic activity in the indispensable atmosphere of security.

The meeting unanimously approved all the resolutions presented by the board.

SUEZ CANAL COMPANY

ANNUAL GENERAL MEETING, JUNE 7, 1937

ABRIDGED SPEECH OF M. LE MARQUIS DE VOGÜÉ, CHAIRMAN OF THE BOARD OF DIRECTORS

Ladies and Gentlemen,—

I should like, first of all, to welcome His Excellency Aly Chamsi Pasha, member of the Egyptian Parliament, former Minister, who has been appointed as Egyptian Government Representative to your company.

His Excellency Ismail Sirry Pasha, who occupied this position since 1919, died at the beginning of this year; we always found him full of understanding and kindness.

We are convinced that his successor will be for our company a wise counsellor and a friend. (Applause.)

The year 1936 has been marked by two great events in the history of modern Egypt.

One, extremely sad, is the passing of King Fouad, who died in the prime of life, at a critical moment when his country more than ever needed his experience and foresight. Nothing that took place in his kingdom was unknown to him, and our company prides itself on the fact that it has always been honoured by his favour. It will always gratefully recall the memory of King Fouad, and it addresses its most respectful and loyal homage to the young sovereign, heir to his father's ideals, and in whom Egypt to-day places her hopes.

TREATY OF ALLIANCE WITH GREAT BRITAIN

The other event of great political importance is the conclusion of a treaty of alliance and friendship with Great Britain. This first success in the march towards the independence so ardently desired had come as the reward of a long and patient effort. The final success was soon reached at the recent conference of Montreux, and the admission of Egypt to the League of Nations was its culminating point.

Free in her decisions and her actions, Egypt may henceforth, in the fullness of her natural rights, live her national life. Everything leads us to believe that in the exercise of her re-established sovereignty she will conciliate the inspirations of her own genius with the duties which the moral solidarity of civilised nations imposes. She has already given a proof of wisdom by accepting for a few more years the maintenance of the existing judicial organisation. It is a suitable occasion here to pay homage to the personal action of the head of the Government, His Excellency Moustapha el Nahas Pasha, who conducted the negotiations with such authority and ability.

Like all the friends of Egypt, the Suez Canal Company rejoices in these brilliant results. The cordial relations which it has maintained from the start with her Government are ample reasons for it to hail the future with confidence, at the beginning of a new reign.

COMPANY'S CO-OPERATION WITH GOVERNMENT

The task which now reveals itself, and which is not without difficulties and obligations, is the building of this future. In saying that our company is willing to play its part, I think, ladies and gentlemen, that I am expressing your thoughts.

By the treaty concluded with Great Britain, Egypt has undertaken to build barracks and roads in the Isthmus of Suez for the requirements of the British Army. In answer to a request made by the Egyptian Government, and to show the company's desire to be associated with the organisation of the country, your board have decided to make a large contribution towards the building of the road which is to join Port Said and Suez.

Furthermore, before the submission to Parliament for ratification of the agreement which was concluded last year between the Government and your company, agreement which you approved with the report to the annual general meeting of 1936, your board have accepted to modify two clauses. These modifications consist, on the one hand, of an increase in the proportion of Egyptian employees to be taken on by the company, and, on the other hand, of the increase to £300,000 of the annual payment to Egypt stipulated in the agreement. These measures are, naturally, subject to the ratification of the engagements entered into on their side by the Egyptian Government.

It was in a specially cordial atmosphere that these arrangements were negotiated and concluded between the representatives of Egypt and those of your company. In this we see, at the present juncture, a hopeful sign for the future.

FAVOURABLE PROSPECTS

It is, furthermore, not the only one we have to note. The report of your board has mentioned the favourable symptoms which are shown by the examination of our activities. The end of the year 1936 has been marked by a revival of the commercial traffic, which revival has been still more evident at the beginning of this year. Nevertheless, it is not to the rise in the transit receipts that the increase in dividend is due; for in spite of the improvement noted in the last months of 1936, the total results of the year would not have warranted it if there had not occurred in France one of those monetary incidents, the too frequent recurrence of which hardly does honour to the financial systems of modern States.

However, your board deemed the moment opportune to make a new gesture in favour of shipowners using the Canal. The substantial reduction in transit dues which came into effect on April 1 is in conformity with their traditional policy.

TRADE RETURNING TO SUEZ ROUTE

When commercial activity is slowed down, speed is a luxury which many prefer to dispense with; it becomes a necessity as soon as economic life has regained its momentum. Certain currents of trade which, during the depression, had abandoned the Suez route, are returning to it now, and that all the more easily, as to a saving of time is added a reduction in costs.

We cannot, of course, taking these facts as a basis, forecast far ahead. The general situation is, in spite of the improvements noted, still too unstable to enable one to judge the future. Wisdom, careful consideration of facts, sense of perspective and of conciliation, these essential qualities so necessary to the conduct of human affairs, seem to have lost their sway.

Our company, founded for a mission of peace, endeavours to continue the work of universal collaboration which, by the will of Ferdinand de Lesseps, is already attained in its very constitution. Your board do not forget that they are the expression of this will. With eyes turned towards the requirements of international trade, they realise the obligations which arise therefrom, also those which your confidence entails. They believe that they have faithfully met both. (Unanimous approval.)

APPEAL TO SHAREHOLDERS

Now we have 34,000 shareholders. If everyone would send me a subscription we should soon have the required £50,000. This is not an appeal for charity. I am asking you to do something which will help your company—and every other company in which you may be interested—to attain a more efficient working system. That means more business. It is a step of great value to every shareholder and to every workman, since it must mean more employment. Will you help in these efforts?

I hope that I may not be alone in making this appeal, but that chairmen of other companies who are interested and there are many—will make similar appeals to their shareholders.

THE RESOLUTIONS

Now, ladies and gentlemen, to return to the immediate business of the meeting, I propose the resolutions which the secretary will read, and shall ask my brother, Mr Harry Salmon, to second them. (Applause.)

The secretary then read the resolutions as follows:—"That the report of the directors and the balance sheet submitted to this meeting be and are hereby adopted; that the payment of interim dividends of 1s. 8d. per share on the issued ordinary and 'A' ordinary share capital of the company and 4d. per share on the proportional profit and 'B' proportional profit share capital of the company be and are hereby confirmed; and that a final dividend be paid for the year ended March 31, 1937, of 2s. 10d. per share to the holders of ordinary and 'A' ordinary shares of the company and 6.8d. per share to the holders of proportional profit and 'B' proportional profit shares of the company who were on the registers on May 14, 1937."

MR HARRY SALMON ON RISING COSTS

Mr Harry Salmon, J.P. (one of the managing directors), said:—"Mr Chairman, ladies and gentlemen, I second the resolutions the chairman has proposed to you and, in doing so, should like to add something on the subject of rising prices and their effect upon our business in the immediate future. Costs are rising in every direction, and unless we are to trade at a loss the consumer must pay more for the goods he buys. But, just as there is always a lag in the rise of wages in times of rising prices, so there is in the transferring of increased raw material prices to the consumer, and if, as may happen, prices continue to rise there is a further lag; in other words, the manufacturer has difficulty in passing on increasing costs as quickly as they occur, and profits, therefore, decline. It is at such a time that our contingency reserves, which are the surplus profits of previous years, can be brought in to help, for this is one of the contingencies for which they are provided.

It must be remembered that we have three responsibilities when dealing with the distribution of earnings: (1) to the consumer, without whom there would be no business, (2) to the worker, whose labour utilises the capital, and (3) to the shareholder, who provides the capital; and it must be further remembered that the consumer is often both worker and shareholder—a point that I am afraid is often overlooked.

Now, if we had not set aside some of the profits of previous years, it is obvious we could have paid more dividend; but then there would be no reserves, and we should be without the means to deal with the period of lag, with the consequences of fluctuating dividends, which it is our ambition to avoid. As the chairman has said, we have again used some of our reserves to write down further our plant machinery—already conservatively valued. We have, in fact, written off entirely from our books certain categories of it. This, obviously, will substantially reduce the annual amount set aside for depreciation, and that saving will be available if we find it necessary in helping to offset the possible diminution of profit to which I have referred. Thus, while the profit may be diminished by the extra cost of material during the time this cost cannot be transferred to the consumer, it can be increased by the reduction of depreciation charges.

RETAINING CUSTOMERS' CONFIDENCE

I cannot make it too clear that our selling prices are rising and must rise—it is, of course, the consumer who must meet the bill for increased cost of raw material and the expenses which have also a tendency to rise. That, as I have said before at the meetings, is not a prospect which pleases us. On the contrary, it gives cause for anxiety as to the possible effect upon the volume of business.

I noticed recently that a newspaper writer used the phrase "consumer reluctance to price changes," but that does not, to my mind, quite describe the attitude. I should say it is a matter of "inability" rather than of "reluctance." The almost inevitable loss of a certain amount of business when prices are raised is due more to the fact that the customer cannot afford to pay and so must be satisfied to curtail his consumption, than to the fact that he thinks he is not getting value for his money. Of this I am sure—we shall get our full share of the business in our particular spheres, for we have always given and shall continue to give our customers the best possible value at the prices charged. That is the policy on which this business has been built to its present proportions; that policy ensures the retention of our customers' confidence. (Applause.)

The Chairman: Before putting the resolutions to the meeting, I shall be pleased to answer any questions.

No questions being asked, the resolutions were put to the meeting and carried unanimously.

RE-ELECTION OF DIRECTORS

Mr George W. Booth proposed the re-election of the retiring directors, Mr B. S. Gluckstein and Mr B. A. Salmon.

This resolution was seconded by Mr Stanley Taylor and unanimously approved.

Mr B. S. Gluckstein, on behalf of Mr B. A. Salmon and himself, thanked the meeting for their re-election.

The Chairman next proposed the re-election of Mr H. H. G. Bennett and Dr L. H. Lampitt as employees directors of the company.

Mr Taylor seconded the resolution and it was passed unanimously.

On behalf of Mr Bennett and himself, Dr Lampitt thanked the meeting for their re-election.

On the motion of Mr S. Tonkin, seconded by Mr Taylor, the auditors, Messrs Turquand Youngs and Company, were re-appointed.

Mr A. J. Wood proposed a hearty vote of thanks to the directors and staff for their work during the past year.

This was seconded by Mr C. W. Knighton and unanimously accorded, and the chairman's acknowledgment brought the proceedings to a close.

MARSTON VALLEY BRICK COMPANY, LIMITED

DEMAND EXCEEDS OUTPUT

The eighth annual ordinary general meeting of the Marston Valley Brick Company, Limited, was held, on the 9th instant, at the Institute of Chartered Accountants, Moorgate Place, London, E.C., Mr A. W. Allard presiding.

The chairman, in the course of his speech, said: If you refer to the profit and loss account and balance-sheet you will notice that the trading profit is £182,000, against £135,000 for last year. This shows an increase of £47,000, which I think you will agree is very satisfactory, having in view the fact that the full output of the Ridgmont Works was not available for sale during the year. You will notice that we have carried a further £30,000 to general depreciation reserve, making this £155,000, and we propose to carry £10,000 to general reserve, increasing that account to £55,000. The amount of depreciation on electric navvies, excavators and lorries has been increased this year to £17,000.

The Ridgmont Works, taken over by your company early last year, have proved highly satisfactory, and all bricks manufactured have been sold at remunerative prices. The demand is still in excess of our output, and the popularity of the company's products is increasing. Your directors view with confidence prospects for the future.

The increase of £12,000 shown under the heading Electric Navvies, Excavators, Lorries, etc., is largely explained by additional transport and very liberal depreciation has been provided for.

Your company is now a very large employer of labour, and the houses erected by your subsidiary company, the Marston-Ridgmont Properties, Limited, and the other amenities provided, are appreciated and add to the welfare of the employees.

I should like again to place on record the board's appreciation of the work done by the managing director, staff and employees of the company and their contribution to the company's success.

The report and accounts were unanimously adopted, and a final dividend of 12½ per cent., less tax, making, with the interim dividend already paid, 20 per cent. for the year, was approved.

ASSOCIATED NEWSPAPERS LIMITED

THE HON. ESMOND HARMSWORTH ON THE YEAR'S RESULTS

The thirty-second annual ordinary general meeting of Associated Newspapers, Limited (proprietors of *The Daily Mail*, the London *Evening News*, and the *Sunday Dispatch*), was held, on the 10th instant, in the Memorial Hall, Farringdon Street.

The Hon. Esmond C. Harmsworth, the chairman, presided.

The secretary (Mr J. P. Hobbs, F.C.I.S.) read the notice convening the meeting and the report of the auditors.

The chairman, in moving the adoption of the annual report and balance sheet, said:—

Ladies and gentlemen,—In the balance sheet and directors' report for the year ended March 31st last, which has been circulated to all shareholders, you will have seen that the profit of the company after providing for depreciation and interest on registered notes amounted to £931,821 12s. 2d.

EXCELLENT FIGURES

These excellent figures have been arrived at in spite of the heavy expenditure which intense competition entails and the fluctuation in the amount of advertising space sold when two Easter periods occur in one financial year.

During the year the directors took advantage of favourable financial conditions and, in accordance with the terms of the issue, redeemed the whole of the company's 4½ per cent. ten-year notes outstanding and issued in substitution a corresponding amount of 3½ per cent. fifteen-year notes. Most of the holders of ten-year notes accepted the offer to convert their holdings to the new notes. The premium payable on the redemption of the ten-year notes and the discount on the issue of the new fifteen-year notes have been charged against the balance of profits brought forward on the appropriation account. The directors are satisfied that the course taken in funding this loan at the lower interest rate for an extended period is one that will commend itself to shareholders.

The holders of the 5 per cent. preference shares and the 7 per cent. ordinary shares received their dividends on the due dates and quarterly interim dividends making a total of 26½ per cent. for the year have been paid to the holders of the deferred shares, making a dividend distribution of £804,423 6s. 8d. gross, the same as for the previous year.

Following the custom adopted during recent years your directors are transferring a sum from surplus profits to reserves this year adding £100,000 to the investments' reserve. The balance of profit to be carried forward is £548,429 18s. 11d. compared with £601,031 13s. 5d. last year.

Looking at the balance sheet you will notice there is very little difference in the items on the liabilities side from those of the previous year. The share capital remains the same, also the amount of loan capital except that it is on better terms.

Reserve account and pension fund amounts are unchanged. The item representing the dividends outstanding at March 31 calls for no explanation. Amounts owing to subsidiary companies correspond with a similar item last year, and as I then explained, is chiefly for newspaper purchased from the Anglo-Newfoundland Development Company, which was in stock at the end of the year. The amount of £1,025,492 17s. 4d. for creditors and reserves is practically the same, made up with normal balances of trade creditors and ample provision for contingencies.

EXTENSION OF CARMELITE HOUSE

In regard to the assets side of the balance sheet, the absence of any book value for the goodwill of our business is an obvious strong point. Freehold and leasehold properties, machinery, plant, etc., total £1,831,627 8s., and the increase of £233,339 9s. 8d. is accounted for chiefly by the inclusion of the cost of New Carmelite House and its equipment of new presses. This extension of the original Carmelite House to the Victoria Embankment provides the company with the most up-to-date newspaper printing and publishing office.

Stocks of paper, etc., are less, but these are bound to vary from time to time and call for no special comment.

You will have noticed that the item loan to liquidators of Northcliffe Newspapers, Limited which was shown on the balance

sheet last year, has disappeared. Since that company went into voluntary liquidation, the development of certain of its provincial newspapers has been continued with our approval. The company has now been wound up, and the whole of the remaining assets have been taken over by your company, which, as you are aware, was the sole contributory, at figures estimated far below their potential value, and these are now included with freehold properties, investments and amounts owing by subsidiary companies.

I think I might here mention that since last year there has been a very considerable appreciation in the quoted investments which is not reflected in these accounts.

The amount of outstanding debtors compares with that of previous years, and the cash balance, although considerably reduced by reason of our Note conversion scheme, stands at the very satisfactory figure of £480,437 8s. 9d.

The provincial newspapers owned by your company have had another record year.

The steady increase in sales and advertising revenue which they are enjoying will, it is hoped, partially offset the increased costs which they, in common with national newspapers, must face next year.

One of our provincial newspapers is still in course of development, but your directors believe it will prove a valuable asset to the company when the programme we have laid down for it has been completed.

ANGLO-NEWFOUNDLAND COMPANY, LIMITED

The report of the Anglo-Newfoundland Development Company, Limited, for 1936 has recently been issued, and no doubt many of you have seen it. We regard our investment in this company as a highly satisfactory one. The Newfoundland company's profit for last year includes a first dividend from its subsidiary Terra Nova Properties, Limited, resulting from its participation in the profits of the Buchans Mine. The price of lead and zinc, which are the principal products of the Buchans Mine, has so far been on a substantially higher level this year than last, and if these prices are maintained the Newfoundland Company should receive very much larger profits from its mining interests in the current year. There is another reason, however, why we regard this investment with every satisfaction, and that is that there has been for some time past, and particularly more recently, a very marked and increasing growth in the consumption of paper and pulp products of all kinds all over the world, which is resulting, and must result still further, in a rise in the price of these products. This matter I shall refer to again later. Our contract with and interest in the Newfoundland company ensures us the continuity of our newspaper supplies, coupled with the prospects of an increasingly valuable investment.

One significant feature of the recent upswing in the pulp and paper market is the very pronounced rise which has taken place in the cost of the pulp wood from which paper is made. In this connection I might remind you that the Anglo-Newfoundland Company has a very large area of pulp wood forests amply sufficient to ensure it against any shortage of raw material.

IDEAL HOME EXHIBITION

The *Daily Mail* Ideal Home Exhibition this year celebrated its coming-of-age.

The exhibition enjoyed the privilege of an opening by Their Royal Highnesses the Duke and Duchess of Gloucester.

Once again the exhibition made its never-failing appeal to all classes of the community and attracted a total of more than 625,000 visitors.

Exhibitors' reports show considerable increases on the volume of business transacted at and through the exhibition, and the general public's verdict was that it was the most interesting and attractive yet presented.

As to the advertisement position, despite twelve months of the keenest competition ever experienced, your journals have more than held their own in this sphere.

These are not days for spectacular new records in revenue and much has happened to disturb the even tenor of business.

Nevertheless, the advertisement revenue of *The Daily Mail*, *The Evening News* and *The Sunday Dispatch* remains highly satisfactory.

"DAILY MAIL" FRONT PAGE

The Daily Mail, which has by far the largest sale of any newspaper among families of the better class is living up to its international reputation as the world's greatest advertising medium. In our national market its position is, of course, unique and unassailable. It is still the keystone of most of our big advertising campaigns; indeed, it is the ambition of every progressive business to use *The Daily Mail* front page, by general consent the finest advertising space in the world. *The Daily Mail* is the most profitable medium to use and figures automatically in the advertising schedules of all national campaigns.

For the last financial year the sum total of display trade advertising in *The Daily Mail* was once again considerably in excess of that carried by any of its competitors. The lead of *The Daily Mail* amounts to no less than 15 per cent., and this, I suggest, is tangible acknowledgment of supremacy.

This greater volume of display advertising enables us to publish enlarged 24 and 32 page issues with a correspondingly greater proportion of editorial matter.

The unshakable loyalty of our readers in the face of intensive competitive attacks has considerably increased the prestige of *The Daily Mail* in the estimation of advertisers.

Amongst the retail traders its influence was to be seen in the success of *The Daily Mail's* Coronation national window display contest. In all, well over 11,000 separate shop window displays were entered and no less than 46 local Chambers of Trade and other traders' associations extended their co-operation by organising local supporting events.

The bulk of advertisement revenue is, of course, from display advertising, but it is significant to note the high proportion of financial publicity, especially prospectus advertising, placed with *The Daily Mail* in comparison with its competitors.

"THE EVENING NEWS"

To refer to *The Evening News*, the continuous advance of this newspaper is one of the most notable features of evening journalism. The net sale of *The Evening News* is the world's record for evening newspapers, and its lead over its nearest rivals has again appreciably increased.

The Evening News is regarded as the key to the great market of London and the Home Counties, and there is a growing tendency to use it exclusively as a sales campaign within this area. Current display advertisement revenue continues to show a substantial increase, and there is a healthy increase in entertainment and other classified advertisements.

The store and drapery establishments allocate practically twice as much keyed advertising to *The Evening News* as they do to any other London evening newspaper, and this is the sure sign of selling power.

In the Sunday newspaper field the *Sunday Dispatch* has the solid support of the best type of British family. Its advertisement columns influence the purchase of every type of commodity within the home circle.

That advertisers are fully alive to the increasing importance of the *Sunday Dispatch* is shown in the consistent and extensive use of its columns in national selling campaigns and for financial publicity.

Progress is again to be noted for the *Overseas Daily Mail*, which is of worldwide appeal to the Briton abroad. Demands for advertising space have necessitated the production of larger issues, including special colour numbers, with gratifying frequency.

With all our publications, therefore, we can look back at another highly successful year, and as the signs are promising I see no reason why progress should not continue and we hope at an accelerated rate.

The current financial year has opened up in a most satisfactory manner and advance reservations of space indicate the increasing confidence of advertisers in improving trade conditions and in the selling power of our newspapers.

PRICE OF NEWSPRINT

I have already referred to the increased cost of the raw materials used in the production of newsprint, which has already led to an increase in prices of newspapers in France and other countries. In this matter your Company is in an unassailable position, and we need have no apprehension on the score of supplies. With the exception of one other newspaper company we are the only newspaper organisation thoroughly protected in

the matter of its own raw materials, which in our case are, I might say, unlimited, so that although we shall certainly be faced with a higher charge for newsprint we shall have some compensatory advantage as I have already pointed out in your Anglo-Newfoundland investment.

The price of newsprint is lower to-day than it has been for many years; indeed, it is practically the only commodity which has not increased in value in spite of an increasing demand the world over. It could not be expected to continue at the present figure.

Newspapers have in the past faced high prices for newsprint and it is not many years since that the price of newsprint was very much higher than it is to-day.

The heavy costs of competition continue and there has been little if any relief in this respect during the past year, but it seems fairly obvious that with the increasing cost of newsprint, the expensive kind of competition we have suffered during the past few years is unlikely to continue on the same colossal scale; indeed with the coming increased cost of newsprint it could not well do so because the service given to our readers in our newspapers must be maintained. But *The Daily Mail* and associated journals have in the past experienced periods of low priced newsprint and high priced newsprint without curtailing its service to its readers which is of paramount importance.

I should like to close with a word of appreciation to the wholesale and retail newsagents, also to our advertisers and advertising agents for their support during the year; and I know you will wish to join with me in thanking the members of our staff in all branches and all sections of the business for their loyalty and good work this past year. (Applause.)

Sir George A. Sutton, Bart. (vice-chairman), seconded the resolution, which was carried.

The retiring directors: Hon. Esmond C. Harmsworth, Mr. G. Ward Price, Mr. H. W. Wilson, Mr. F. L. FitzHugh, Mr. W. A. McWhirter, Mr. W. L. Warden, Mr. William Graham, Mr. Stanley J. Bell, Mr. A. L. Cranfield, Mr. H. Morison and Mr. R. T. Lewis, were re-elected, and the auditors, Messrs. Lever, Honeyman and Co., were reappointed.

The proceedings terminated with a vote of thanks to the chairman and directors and staff.

EX-LANDS NIGERIA, LIMITED

SATISFACTORY RESULTS

The twenty-fifth ordinary general meeting of the Ex-Lands Nigeria, Ltd., was held, on the 9th instant, at the Institute of Chartered Accountants, Moorgate Place, London, Mr. H. G. Latilla (Chairman and Managing Director) presiding.

The Chairman, in the course of his speech, said:—Total expenditure in Nigeria for the year, of £53,631, is practically double that for the year 1935, and is accounted for solely by the increase in production for the year, which amounted to 832 tons, as compared with 473 tons for 1935. In the same way the amount realised for the sale of our tin, £119,971, is, of course, very much in excess of the corresponding figure for 1935.

The average price per ton realised for our concentrates during the year was £144 3s. 11d., which was practically the same as for the year 1935.

The profit of £53,581 added to the balance brought forward from last year of £6,250 made a total sum of £59,831 available for distribution.

We have declared, subject to your confirmation, a final dividend for the year of 15 per cent., less tax, making a total of 25 per cent. for the year. This, together with the directors' additional remuneration amounting to £750, will absorb £30,750, leaving a balance of £8,081 6s. 3d. to carry forward.

I think you will agree with me that these results are very satisfactory, particularly in view of the fact that the average cash price of tin for the year was only £204 as against £225 for 1935. Prices, however, commenced to show an upward tendency during the last two months of the year, the average cash price for December being £232. Since the end of the year this upward trend has continued until at the present time the price is standing in the region of £250.

We are thus, at the end of our twenty-five years' existence, in as strong a position as ever and have every prospect, I hope, of many years' continued prosperity. To in some measure mark this occasion we have decided to declare an interim dividend of 10 per cent., less tax, on account of the current year now, instead of waiting until later on in the year. This will be payable to all shareholders registered on the books as at the close of business on the 10th July and paid on the 29th July.

The report and accounts were unanimously adopted.

MILK MARKETING BOARD

INCREASING SALES OF LIQUID MILK

EXTENSION OF OPERATIONS

The fourth annual general meeting of the Milk Marketing Board was held on the 10th instant, at Central Hall, Westminster.

Mr T. Baxter, the chairman, in the course of his address, said: Ladies and gentlemen, this year the quantity of milk sold through the Scheme was 1,011,882,112 gallons, an increase of 20,569,203 gallons.

The Milk Scheme has been called upon again to carry the depression in agriculture, and during the past year over 99,000,000 gallons more milk were marketed through the Board than in the year ending March, 1935.

The next feature of the report is the increase in the financial turnover of the Board last year of £621,373, which means that the value of milk sold under wholesale contracts has increased from £43,561,000 in 1935-36 to £44,182,471 in 1936-37.

The average of the pool prices this year is 11·91d., against 11·98d. in the previous year. The accredited producers receive 1d. per gallon additional to that received by non-accredited producers, which therefore made it 12·91d. per gallon, against the latter's 11·91d. per gallon. Approximately one-third of our registered producers are receiving this quality bonus of 1d. per gallon.

I would refer to the position of the producer-retailer under the scheme. The average gross declared levy this year was 2·93d. per gallon, as compared with 2·97d. per gallon in the previous year. For producer-retailers who sell milk on level delivery contracts, which is shown in the case of 87 per cent. of milk sold by producer-retailers, the gross levy of 2·93d. was reduced by 1d. per gallon, which made it 1·93d., and in the case of those producer-retailers who are also accredited producers, this was again reduced by a further 1d. per gallon, making the levy paid by producer-retailers who have level delivery contracts and are also accredited producers only 0·93d. per gallon.

The farmhouse cheese-makers' industry has grown during the year by the addition of 107 makers, the total now being 1,070.

LIQUID MILK SALES

Taking the whole year there is an increase of 12,500,000 gallons, which is nearly double the increase in the previous year. This is of great benefit to producers, and the only effective way which we have at the moment of improving pool prices.

We intend to pursue in the future the same policy which is directed to expand the liquid milk market. As you know, the consumption of milk in liquid form in this country is low compared with some other countries, and it is well established by the nutrition experts that it is vitally important to have this consumption per head of liquid milk increased. We are most anxious to proceed on these lines, because the liquid milk market is the only profitable market which home producers have. The publicity and sales campaign, the school milk experiment, which has been maintained without any serious fall in the actual quantity of milk consumed under the Scheme, and the Accredited Scheme form part of this programme of directing the flow of liquid milk into consumption in liquid form.

There are more than 3,000 factories, offices, warehouses and mines at which milk is supplied daily to about 400,000 employees.

The schemes for the supply of milk to nursing and expectant mothers and children under 5 years of age have also been most successful. We have established these schemes in 3 places in the course of the year under review, and are now considering their extension to other places. There are nearly 1,700 mothers and 7,500 children participating in these schemes in the 3 places in which we are operating, Rhondda, Jarrow and the Walker District of Newcastle-on-Tyne. The cost of administration of the scheme was under one-tenth of a penny per gallon of milk sold, less than 1 per cent. of the turnover of sales during the year.

Another important feature is the development of manufacture on your behalf. The Board has operated 10 creameries, whereas, this time last year we had only five in operation, and we have handled five times as many gallons of milk through the creameries this year than in the previous year.

GENERAL POLICY

The first difficulty which we have experienced is the delay in the passing of our amendments to the scheme. It is now 13 months

since we submitted our amendments to registered producers. We have not yet received authority from the Minister of Agriculture to put these amendments into effect. I cannot too strongly urge upon the Minister of Agriculture the supreme necessity of passing these amendments before Parliament rises at the end of next month.

Another feature which was under constant consideration was the decline in production of milk last winter and the increase in demand for the liquid market. Supplies were not available in sufficient quantity to meet the demand of the higher category manufacturing markets, and in some cases there was difficulty in meeting the demand for liquid milk. Every effort was made to obtain from the buyers the transfer of supplies available for butter and cheese, but we have been unable to market the milk as effectively as we would have liked.

It is a severe criticism of a milk marketing scheme when the markets paying the best prices are short, whilst other markets paying lower prices have adequate supplies. This is a position which I am satisfied the board will not tolerate, and we have decided to allocate supplies from producer to buyer in the next contract period in order to satisfy ourselves that all the best markets are met adequately and only supplies remaining shall be made available for butter and cheese manufacture.

GOVERNMENT POLICY

I look forward, before the end of the present session of Parliament, to some pronouncement from the Minister of Agriculture upon the Government's long-term policy for the milk industry. When such a policy has been decided upon, I hope that our repeated requests for the principle of the levy-subsidy on imported dairy products will have been incorporated in the permanent policy of the Government towards milk producers.

The provisions of the Milk Act, 1934, as extended in 1936, will cease to operate at the end of next September. I expect that the Government will introduce a further extension of this Act to cover the period up to the commencement of their new 'permanent long-term milk policy. The Act was designed to assist producers to carry the burden of loss on manufactured milk over a temporary period by means of repayable loans from the Treasury to bring the price of milk for manufacture up to 5d. per gallon in the summer and 6d. per gallon in the winter. Unfortunately, the intentions of the Act, as we understood them, have not been fulfilled, and you will have already seen the amount of advances from the Government was only £278,564, compared with £998,871 in the previous year. It is a paradox that at a time when milk producers were undergoing a period of rising costs in production, and when more money was needed, we in fact received less money from the Government. This is due to the cheese milk price formula in the Act upon which the Government advances are made being higher than the actual market price for milk manufactured into butter and cheese.

I suggest that the standard prices of 5d. and 6d. which are now guaranteed should be increased to 6d. and 7d., and that the existing differences of construction in the cheese milk formula should end in such a way that the advance be calculated from the net price received by the Board from manufacturers in respect of any milk sold which returns less than these standard prices.

REORGANISATION COMMISSION

I should like also to refer to the report by the Reorganisation Commission for Milk for Great Britain. We have indicated to the Minister that we see no reason why the control of the industry should be taken out of the hands of the producers. We have put forward proposals to the Minister of Agriculture indicating how, by close co-operation between the Government and the Board, the whole industry, including both producers and consumers could be benefited.

So much for the outstanding features of the report and accounts and other principal events of the year. Within the limit of our powers we have endeavoured to put the industry on its feet. Your market is assured; every gallon of milk is sold; you are provided with facilities for improving production; your liquid milk sales are rising; you have new markets and regular payments; you possess your own factories and conduct research work of a most valuable nature.

NORTH EASTERN TRADING ESTATES, LIMITED

ENCOURAGING RESULTS

COLONEL K. C. APPELYARD'S ADDRESS

The second annual general meeting of the North Eastern Trading Estates, Limited, was held at Metrovick House, Northumberland Road, Newcastle-upon-Tyne, on Monday, June 7, 1937.

Colonel K. C. Appleyard, O.B.E., J.P. (the chairman), in the course of his speech, said:—Our first big task, when North Eastern Trading Estates, Limited, was incorporated on May 18, 1936, was to select a site for the estate, which, after careful examination and deliberation, fell on the Team Valley at Gateshead-on-Tyne. This decision was announced in August, 1936, and a detailed survey of the whole 700-acre site was carried out in record time by the consulting engineers, Sir Alexander Gibb and Partners.

In addition to the economic advantages offered by the chosen site, it was necessary that the estate should offer some special inducement in order to reverse the trend of light industry to the South. The best inducement would be a model estate, properly planned and laid out on the most modern lines, complete with all amenities, and with working conditions as nearly perfect as possible. With the help of the R.I.B.A., we secured the services of Professor W. G. Holford, of Liverpool University, to supervise this plan, and I should like to acknowledge the hard work and vision he has shown in grappling with it.

LOCAL MATERIAL AND LABOUR

On the completion of the survey, the first contract was let to George Wimpey and Company, Limited, of London, and work commenced on the estate in October, 1936. Some criticism was directed towards us at that time for having let this contract to a London firm, but the magnitude of the work necessitated the appointment of a firm equipped to cope with it in a comparatively short time. On the other hand, they and all contractors are bound to use local materials throughout, all things being equal, and also to draw all their labour requirements from the North-East Special Area, with the exception of a small percentage of keymen.

The progress made with the development of the estate is well demonstrated by the following figures, taken out at May 26th. Work done on roads, drainage, and general engineering comprises 170,000 cubic yards of excavation, 34,500 square yards of concrete, 140,000 cubic yards of fill, 21,000 feet of pipes and ducts, 10,500 feet of kerbs.

Sixteen factories are now in course of construction. By May 31st premises were ready for the first tenant, and three others had started to erect their machinery. Work is proceeding on the laying of services to all of these premises. Work has started on the central administrative block, and the central garage will follow at an early date.

ENCOURAGING LETTING EXPERIENCE

On the letting side, our experience has been most encouraging. I stated in our early days that I should be satisfied if we had let six factories during our first year's existence. Actually we have received 320 enquiries, and have let 34 factories, an average of approximately one per week. This remarkable result has been achieved not only by our own efforts, but with the help of all with whom we have come in contact, including Government Departments and local government units, numbers of companies, associations and individuals, the London and North Eastern Railway Company, and, above all, by the Press, both national and local, the value of whose co-operation it is impossible to estimate.

The total sum actually expended to March 31st last on estate development was £58,491 13s. 8d. Our future progress should be such that the monthly expenditure under this heading should exceed the whole expenditure up to March 31st last. Some idea of our commitments may be gleaned from the figure of £370,000, representing a contingent liability in respect of contracts in progress.

CONFIDENCE IN THE FUTURE

The directors look forward to the future with confidence, and if our first year is any guide, the success of this experiment by the Commissioner for the Special Areas with the active encouragement of the Government seems to be assured. Already the company itself has made a distinct inroad into the unemployment figures, and this time next year I hope to be able to report large numbers employed by tenants on the estate.

The report and accounts were adopted.

WELWYN GARDEN CITY, LIMITED

INCREASED DIVIDEND

RECORD INDUSTRIAL DEVELOPMENT

The seventeenth annual general meeting of Welwyn Garden City, Limited, was held, on the 9th instant, at the Holborn Restaurant, W.C. Sir Theodore G. Chambers, K.B.E. (the chairman), said:—

I am pleased to be able to present to the shareholders a profit and loss account for the year which shows a reasonable improvement on that of last year. The increased profit (£20,137, compared with £16,038 last year) has enabled the directors to recommend that the dividend for the year should be raised to 3 per cent. There is reason to believe that the profits of the company will gradually rise in the future and thus provide the means of increasing the dividend by stages. The total assets have increased by approximately £100,000, the greater part of which represents expenditure on additional land and buildings, including the Lockleys Estate. The additional acreage brings the total area of the company's estate up to a figure of approximately 3,150 acres.

In my speech last year I referred to the growing importance of the industrial area of the town and foreshadowed an acceleration in the development of this side of our activities. The report now before you shows that our expectations were more than realised during the year.

Not only was our industrial development greater than during any similar period in the past, but it included the completion of two transactions of exceptional importance. It is a matter of great satisfaction to the directors that after prolonged investigation of sites elsewhere Imperial Chemical Industries, Limited, have decided to associate one of their rapidly expanding businesses with Welwyn. I should particularly like to pay tribute to the Welwyn Garden City Urban District Council for the very helpful manner in which they co-operated in the negotiations. Almost equally important was the completion of the negotiations with Roche Products, Limited. This company, part of the well-known international Hoffmann-La Roche group of companies, has already begun to build a new factory which, when completed, will form a conspicuous feature of the industrial area. Other important industrial developments during the year are set out in detail in the report.

The acceleration in industrial development and the need for providing for housing workpeople to be employed in the large factories now being erected, has naturally led to a more rapid provision of weekly rented houses. The company is building one large group whilst the Council are actively engaged upon a building scheme and are about to commence a second. Negotiations are also proceeding with the Council for the acquisition by them of additional land which, when completed, will enable the Council to provide houses for operatives as and when they are required.

PURCHASE OF LOCKLEYS ESTATE

The beauty of the residential areas is apparent to everyone who visits the town. Visitors from abroad in particular express their pleasure at the charm and character of these districts. During the past year Welwyn has received the compliment of many visits from prominent citizens of the United States of America, and a number of new forms of development in that country, some having the support of the Government, are being based in many respects upon the type of residential development adopted at Welwyn. Despite the activity of the other sides of our business we are not losing sight of the exceptional attractiveness of the town as a place of residence. In this connection the purchase of Lockleys Estate is important as it is an exceptionally beautiful piece of country, and if developed with taste and care should prove to be a very attractive residential district on the outskirts of the town. There seems no doubt that the development of our residential areas will continue steadily.

The past twelve months have seen unusual activity in the provision of educational and recreational facilities. The local Council, for example, having made arrangements for the purchase of additional land, are proposing shortly to lay out an area of about 24 acres as new public playing fields. It also has under consideration plans for the erection of a new public hall in the south-eastern area. These premises, which will be designed as a "Community Centre," will probably be commenced during this summer. The Council has also taken preliminary steps towards the establishment in the town of a permanent hospital for which the company has agreed to make a grant of about five acres.

The report and accounts were unanimously adopted.

GENERAL MINING AND FINANCE CORPORATION, LIMITED

FRESH RECORD ESTABLISHED

STRONG RESERVE POSITION

SIR GEORGE W. ALBU'S REVIEW

The annual general meeting of the General Mining and Finance Corporation, Limited, was held, on the 8th instant, in Johannesburg.

Sir George W. Albu, Bt. (the chairman), in dealing with the report and accounts, stated that the results for 1936 and the financial position at the end of that year showed a still further improvement as compared with the figures for the previous year, and, generally speaking, established a record in the history of the corporation.

The considerable increase, amounting to £180,815, in the year's profit—namely, £599,006, as compared with £418,991—was mainly due to the dividends received from the corporation's holding of West Rand Deferred shares. Two dividends totalling 25 per cent. for the year had been paid—an increase of 5 per cent. as compared with 1935—while £200,000 had been placed to general reserve (against £100,000), increasing the total standing to the credit of that account to the record figure of £600,000. The revenue of the corporation was again chiefly derived from dividends and interest from investments.

VALUATION OF HOLDINGS

Referring to the balance sheet, the Chairman pointed out that current liabilities showed an aggregate of £638,615, as against which liquid assets amounted to £878,107. The increase in the principal items on the assets side of the balance sheet—namely, at stocks and shares, Government and municipal securities, etc.—at £1,894,725 showed an increase of £184,031, representing additional investments made during the year, mainly in dividend-producing securities. The usual custom had been followed of valuing these assets at cost, where such cost was below market prices, but in no case had any stocks been valued above the market prices ruling at the end of the year. In consequence the present market value of the corporation's holdings continued to be very largely in excess of the valuation shown in the balance sheet.

Sir George then proceeded to deal briefly with the corporation's principal interests—namely, Van Ryn Gold Mines Estate, Limited; West Rand Consolidated Mines, Limited; East Rand Proprietary Mines, Limited; Durban Roodepoort Deep, Limited; Phoenix Oil and Transport Company, Limited; and Metal Traders, Limited.

LABOUR SITUATION

Referring to white labour, he stated that the adoption of the "closed shop" principle, which became operative from the first of this month, had been greeted most favourably, and it was to be hoped that through this important step peace and co-operation between the employers and their European employees would be assured for many years to come.

The number of their European employees was still increasing and at the end of April last totalled 38,110, as compared with an average of 23,542 employed during 1932. While there were distinct possibilities of a shortage of native labour arising in the near future, the experiments with tropical natives had been continued with eminent success, and it was to be hoped that their future shortage would, to a large extent, be made up by supplies of natives recruited from sources hitherto not open to the industry.

GOLD AND COMMODITY PRICES

The gold-mining industry, stated the Chairman, was emerging from one of the most unpleasant shocks it had received since the introduction, by the Union Government in 1933, of the heavy scale of taxation at present in force. He was referring to the recent fear that the United States of America was contemplating certain measures tending to devalue gold, though this intention had since been denied.

A good deal had been said recently by various authorities on this intricate subject of gold, but in his view one feature of the whole position stood out very clearly. The main object of the departure from the gold standard by Great Britain, to be followed later by South Africa, the United States, and other countries, was to raise commodity prices and assist in a world recovery from the

depression which followed the boom in 1926 and 1927. This recovery had perhaps recently attained too great a momentum, with the inevitable result of a setback, which might have been confined to narrow proportions had it not been for the unfounded rumours concerning the value of gold. These had had such a startling effect on the prices of metals and commodities, and on the market value of the shares of all classes of mining and industrial concerns, that had they been true a veritable world catastrophe might have ensued.

In his opinion, concluded Sir George, the lessons of the past few weeks had tended to show the basic influence of gold and the necessity of its maintenance as the stabilising element upon which the important currencies of the world were based, and, for these reasons, he continued to be optimistic with regard to the value of that metal.

HENDERSON'S TRANSVAAL ESTATES, LIMITED

IMPROVED RESULTS—RECORD DIVIDEND

The twenty-fifth ordinary general meeting of Henderson's Transvaal Estates, Ltd., was held, on the 9th instant, at River Plate House, London, Sir Joseph Ball, K.B.E., presiding.

The Chairman, in the course of his speech, said:—The profit for the year carried to the balance sheet is £84,573, as against £55,227 last year, an increase of £29,346. The balance of £59,437 brought into the accounts made the credit to profit and loss up to £144,010.

Out of this your directors have considered it prudent to set aside the sum of £23,105, and by incorporating this amount with the existing reserve for equalisation of dividends they have created a reserve for contingencies and equalisation of dividends amounting to £30,000.

In the opinion of your directors the prevailing uncertainty with regard to taxation, when taken in conjunction with the disturbed international situation and the doubts regarding the future of gold, render this provision imperative.

From the balance we recommend the payment of a first and final dividend of 12½ per cent. for the year, less tax, leaving £50,475 8s. 6d. to be carried forward, subject to the directors' additional remuneration. I should perhaps mention here that, under the articles of association, the directors are entitled—subject to the shareholders approving the recommendation as to the dividend—to additional remuneration amounting to £2,114 15s. 10d.

The outstanding feature of the revenue account is, of course, the very substantial increase of £26,520 from dividends and interest. It is satisfactory that, in addition, we are able to record an increase in the profit on share transactions amounting to £2,506, although I must point out that this is not a source of profit that can be counted upon with any degree of certainty.

I referred last year to the strong position of the Company. This year it is, I am glad to say, even stronger; indeed we have achieved several records. Our investments now stand at the record figure of £356,159, as against £310,689 last year. The value of both our quoted and our unquoted securities is in excess of book values, and our reserves have reached the new high record of £130,000. We have earned a record profit, and we are able to distribute a record dividend of 12½ per cent. I would also like to remind shareholders that ever since 1926—even during the world economic crisis of 1931, 1932, and 1933—they have never received a dividend below 5 per cent., and that the average rate of dividend paid during the last ten years works out at just over 7 per cent.

Our interests are, of course, mainly centred in the Union of South Africa, and that dominion, since leaving the gold standard at the end of 1932 and placing its destinies in the hands of a strong National Government, has never looked back. The feeling of confidence in the future to which I referred in my speech last year has been justified by results. All branches of industry in the Union have made, and are still making, remarkable progress, and to-day, among all the dominions, the Union has now become the United Kingdom's best customer.

South Africa is to some extent insulated from the effects of the disturbed conditions which prevail in many other parts of the world, but it is nevertheless possible that some unforeseen international complication might occur which would cause a setback to her economic progress. In the absence of such a catastrophe, however, there seems to be no reason why she should not continue on her course of solid progress and expansion and why Henderson's should not continue to enjoy a proportionate share of her increasing prosperity.

The report and accounts were unanimously adopted.

BURMAH OIL COMPANY, LIMITED

SUBSTANTIALLY IMPROVED RESULTS

The thirty-fifth annual general meeting of the Burmah Oil Company, Limited, was held, on the 4th instant, within the Merchants' Hall, 30 George Square, Glasgow. In the absence of Sir John T. Cargill, Bart., chairman of the company, Mr Robert I. Watson, the managing director, presided.

The Chairman, in the course of his speech, said:—A word on the separation of Burma from India. The previously existing fiscal conditions governing trade between India and Burma have been continued for at least three years from April 1st last, and for this space at any rate Burma petroleum products on import into India will enjoy such preferences over imports from other countries as they had in the past.

As indicated in the report, that post-depression re-expansion of demand for petroleum products, which had already been experienced elsewhere, became manifest in India also last year. That it is still continuing fully up to the average level of expansion in other parts of the world would seem to confirm that it is not merely a backwash but a definite turn in the economic tide.

Then, again, greater confidence in the better balance of supply and demand for oil products and of tanker tonnage brought about generally higher and firmer world quotations permitting some easing up, particularly in the case of kerosene, of the measures we had been finding necessary to protect our outlet for that product in the Indian market.

The greater gallage of all products sold together with lower costs, partly following on that increase and partly due to further direct economies, are the two factors mainly responsible for the net improvement, after depreciation, of £452,378 in our trading results for the year. An increase of £98,918 in interest and in dividends from investments and a small increase in transfer fees raised the aggregate improvement on the credit side of profit and loss account proper by £551,453 at £3,229,614. The savings mainly in subscriptions, were short of the increased income tax liability by £7,178, thus reducing that increased credit to £544,275. But out of the 1935 profits we had to make good £260,234 to fields expenditure equalisation reserve which we had raided to that extent in 1934. Nothing is required in that way in respect of last year, and there is thus this £260,234, together with a saving of £10,625 in the cost of the preference stock dividends and £23,477 by which the balance from 1935 exceeded that from 1934 to be added, giving us £838,611 more to dispose of than we had last year.

The increase in the interim dividend on the ordinary stock has taken £83,946 more than last year and £300,000 more has been placed to general reserve, making that appropriation £500,000 and bringing that reserve up to £1,400,000. This leaves £454,665 of the increase still to dispose of, and this will be absorbed as to £419,250 by the extra cost of the final dividend of 17½ per cent. and of the bonus of 5 per cent. on the ordinary stock, as to £23,254 by the consequential increase in the cost of the further contributions to the company's provident funds, and as to £12,161 in an increase in the balance carried forward over the balance brought in.

SATISFACTORY TRADING CONDITIONS IN INDIA AND BURMA

Trading conditions in our markets in Burma and India up to date this year have been satisfactory, with the volume of demand well maintained and values somewhat better in line, if anything, with the higher world costs ruling. Demand for paraffin wax has also recently been greater, and much potential production of that commodity, which in the recent years of depression had to be degraded to other and less profitable outlets is once more being absorbed as wax. World demand and supply in the case of petroleum is undoubtedly in better equilibrium, partly as a result of the closer control in that direction in the United States, partly in consequence of reduced volumes available for export from Russia, and to a similar development recently in the case of Roumania, and partly because of the continuing expansion in world demand itself. The frank admission by Lord McGowan on the economics of hydrogenation notwithstanding, synthetic substitutes for natural petroleum continue to be sought both here and elsewhere for reasons which the Governments and peoples concerned apparently consider justify, or may justify, the bill which they have to foot for them. In aggregate, however, the results are not in themselves sufficient to cause more than a ripple, if even that, on the much improved waters in which the petroleum industry finds itself at the moment.

The report was adopted and the dividend and cash bonus were confirmed.

DENNY, MOTT AND DICKSON, LIMITED

SUCCESSFUL RESULTS

The ordinary general meeting of Denny, Mott and Dickson, Limited, was held on the 7th instant, at Southern House, Cannon Street, London, E.C. The Rt. Hon. Lord Kennet, P.C., G.B.E., D.S.O., D.S.C. (chairman of the company), presiding.

The Chairman, in the course of his speech, said: The year has been a good one for our trade, and we have, as you see, made a very good profit. The softwood market has been a good one for importers almost all the year. Prices have been rising in that steady way which helps us to earn a fair return upon our capital. The state of supply and the state of demand have both kept prices moving up.

Basic factors of supply and demand seem of a sort to produce another year of firm markets. What of the future of demand? Prophecy is the most gratuitous form of folly; but it may be said that the current year has opened without any falling off in basic demand.

Speaking to you last year I said that our investment in the Alberni Pacific Lumber Company, of which we owned all the shares, had not justified all the expectations formed of it at the outset, and we have sold the whole of this interest to the British Columbian timber interests with which Mr H. MacMillan is particularly associated, at a price a little larger than the valuation of those assets in our balance sheet.

I have a word or two to say about our profit and its distribution. The profit for the year of £155,985 is arrived at after the usual conservative valuation of assets.

Part of the distribution recommended this year is in the form of a dividend, and part in the form of cash bonus. We think the right policy for this company is to try and stabilise the ordinary dividend, if circumstances in the future are so favourable as to make it possible.

You will now, I think, understand the form in which we have recommended the distribution this year. The 6 per cent. dividend is in accordance with the policy of stabilisation. The bonus I would invite you to look upon as something to reckon against the deficiency below 6 per cent. in recent years.

The report and accounts were unanimously adopted.

RIO DE JANEIRO CITY IMPROVEMENTS COMPANY, LIMITED

IMPROVED POSITION

The seventy-fifth ordinary general meeting of the Rio de Janeiro City Improvements Company, Limited, was held, on the 9th instant, at Winchester House, Old Broad Street, London.

Mr Francis M. G. Glyn, the chairman, who presided, said that the balance sheet naturally did not reflect the provisions of the new agreement which had been signed after the end of 1936. The financial position of the company was strong and healthy, and the customary allocations to sinking and reserve funds had been made in accordance with the amortisation scheme. The securities held were almost entirely of a short- and medium-dated character. Although payment was received from the Government at the same rate as in 1935, the net result was better by some £22,000. This was due firstly to the fact that they had added 3,152 rents to the books during the year, which was an increase even on last year's record figure and was a striking proof of the expansion and growth of the city of Rio, and secondly, to the improvement in the sterling value of the milreis.

He was happy to say that since the end of the year the agreement with the Government had been finally signed, approved of by the Congress and registered, and he thought he could safely say it should prove satisfactory, both for the company and for the inhabitants of Rio de Janeiro.

Maintenance costs would rise and it was the board's policy to keep the system in a highly efficient state and thus render the best possible service to the city of Rio. That would entail certain annual expenditure, but, despite this, he hoped that under the new scale of payment they would be in a position to give shareholders that "reasonable return" upon their capital for which they had waited so patiently.

He hoped, however, that their company might under the new agreement look forward to a period of peace and progress, and be given the opportunity of developing and increasing the efficiency of the service it gave to the inhabitants of Rio de Janeiro.

The reports and accounts were unanimously adopted.

GOLDEN HOPE RUBBER ESTATE, LIMITED

INCREASING CONSUMPTION

The thirty-first annual general meeting of the Golden Hope Rubber Estate, Limited, was held, on the 9th instant, at 19 Fenchurch Street, London.

Mr Eric MacFadyen (the chairman), in the course of his speech, said: The year's profit was £35,333. After transferring £5,000 to property depreciation account we have charged against it the cost of replanting. In the last four years we have replanted 406 acres, of replanting. In the last four years we have replanted 406 acres, and this is now being brought up to 690 acres; we shall probably not add more in the immediate future. We recommend transferring £3,500 to general reserve. Planted area is 9,655 acres, and the book cost, after deducting surplus liquid assets from the issued capital at par, is £32 16s. 9d. per acre. If the 90 per cent. rate of exports remains throughout the present financial year we may expect to harvest about 3,400,000 lb. at much the same cost per pound as last year. For the year we have sold forward 1,180,480 lb. at 9.3d., London equivalent, and for next financial year 358,400 lb. at 10.9d.

World absorption of rubber continues to rise and may be 1,250,000 tons in the company's financial year ending February. Stocks have continued to decline and were probably about 400,000 tons last February. With larger releases they should be replenished later this year by, say, 50,000 to 70,000 tons, and next year by some further moderate amount.

Synthetic rubber has taken fifty years to become a commercial article and its development is still very gradual owing to the high cost of its manufacture. The types which are in themselves valuable are not identical with natural rubber but are specially suited for special uses. Those which are competing with natural rubber are doing so only where national self-sufficiency altogether outweighs cost. In the long run the problem is likely to be to give the world enough rubber, not to prevent its having too much.

Mr J. Mitchell, who had recently visited the estates, spoke highly of those bought in 1934-35 and of the young replanted areas: he found the older properties also in good order and condition.

The report was unanimously adopted, and the dividend of 6 per cent. was approved.

UNITED SUMATRA RUBBER ESTATES, LIMITED

IMPROVED YEAR'S RESULTS

The twenty-eighth annual ordinary general meeting of the United Sumatra Rubber Estates, Limited, was held, on the 4th instant, at 30 Mincing Lane, E.C., Mr H. A. Barrett (the chairman) presiding.

The Chairman said it was with pleasure he was able to propose a final dividend of 3½ per cent., making 5 per cent. for the year. The improvement in their affairs was due to the increased consumption of rubber and the higher prices realised. The permissibility of export quota of 413,289 lbs. for 1936 was sold at an increased price of 2d. per pound, giving them a gross profit on rubber of £5,077, as against £2,140 for the preceding year. Their coconut areas had also been remunerative, greater consumption having resulted in an increase of £2 12s. 9d. per ton in the price realised for their copra, the gross profit on which was £494, as compared with a loss of £1,976 for the year before. The net result of their operations was a profit of £5,738. As to the current year, rubber was reasonably remunerative at current prices, and further, they were permitted to export a considerably larger quantity. Their copra also was selling well, the sale forward of 300 tons at £19 10s. per ton ensuring them a profit for that product.

Mr A. P. Hadow, in referring to his visit to the estates, said the rubber areas showed a decided improvement since his previous visit just under two years ago, and he hoped as regarded coconuts that the current year would show better results.

The report and accounts were unanimously agreed to.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8 Bouverie Street, Fleet Street, London, E.C.4.

TRONOH MINES, LIMITED

EXTENSION OF ACTIVITIES

The thirty-fifth annual general meeting of Tronoh Mines, Limited, was held, on the 10th instant, at the Institute of Chartered Accountants, London.

Mr C. V. Thomas (the chairman), said that the output of the company's dredges was 1,200 tons of tin ore, including 65 tons of quota purchased. The profit for the year was £137,771. At the previous day's prices the total value of the company's investments was £1,074,000. If to that was added the cash now in London and at the mine, they had a total of approximately £1,189,000 in cash and stocks and shares. Dividends totalling 40 per cent. were paid during the year.

The report spoke of five dredges, which was what the company had at the end of last year. Since the close of the year No. 2 dredge had been sold at a satisfactory price. The new No. 1 dredge, which would have a capacity of 300,000 cubic yards per month, would, in due course, operate on the 750 acres area adjoining the Tronoh section, which was estimated to contain 32 million cubic yards averaging .31 catty with an average depth of 45 feet, an estimate which it was anticipated would be exceeded in actual working. It would take the place of Nos. 2 and 4, and No. 4 would eventually go to a new property in Siam which the company had recently acquired. That new property so far represented an area of about 29 million cubic yards with an average value of .35 catty and a depth of 49 feet. There was good ground for believing that that area would be subsequently increased.

An interim dividend of 12½ per cent. was paid in March last, and at a board meeting that morning a further interim dividend of 12½ per cent. was declared.

The report was unanimously adopted.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended June 5, 1937, amounted to £8,053,000, against ordinary expenditure of £43,225,000. After allowing for a decrease in Exchequer Balances of £97,557, the operations for the week, as shown below, increased the gross National Debt by £35,074,000, to approximately £7,967 millions.†

(000's omitted)			
Advances by Bank of England	+ 9,500	Treasury Bills	11,065
Public Department Advances	+ 11,910	National Savings Certificates	200
National Defence Bonds	+ 24,840		
Land Sett. (Fac.) Acts	+ 14		
Title Act, 1936	+ 75		
	+ 46,339		— 11,265
† Including £375 millions on Account of Exchange Equalisation Fund.			

An analysis of the approximate position of the National Debt, as at March 31, 1937, appeared on page 47 of *The Economist* of April 3, 1937.

SILVER MARKET

Prices again showed only small movements and, although conditions were quiet, the market maintained a steady tone during most of the week. China sales and speculative re-sales provided the bulk of the supplies, and the main support came from the Indian Bazaars, who made some purchases for early shipment. On June 8th, however, Indian buyers became hesitant, and there was an easier tendency in consequence. Prices on June 9th were fixed at 20½d. for cash and 20¾d. for two months' delivery, which compare with 20½d. and 20¾d. for the respective deliveries quoted a week ago. The June 9th level may not be attractive to sellers, but increased interest on the part of the Indian Bazaars would seem necessary to any advance.

Quotations for gold and silver are shown below:—

1937	Price of Gold per Fine Ounce	Equivalent Value of £ sterling	Price of Bar Silver in London per ounce standard		Price of Silver New York per ounce .999 fine
			Cash	Two Months	
June 3	140 9	12 0-86	20½	20¾	June 2
" 4	140 5	12 1-20	20½	20¾	June 8

* Free of Income Tax. (b) Also capital bonus of 10 per cent. (c) Also capital bonus of 10 per cent. (d) Equal to 22 1/2 per cent on old capital.

CROSSLEY MOTORS.—Ordinary dividend of 74 per cent. for the year to March 31, 1937. First payment since 1926.

HUNDRED SECURITIES TRUST.—Third distribution of 5 1/2d. net, for income of preceding six months.

METALS AND MINERALS TRUST.—Distribution of 3 1/2d. tax free for income of four months from January 4th.

NORTH'S NAVIGATION COLLIERIES.—Payment is proposed of eight years' preference dividend to end of 1936, requiring £30,000.

SECOND BRITISH STEAMSHIP TRUST.—Interim dividend raised from 2 to 2 1/2 per cent.

SECOND COVENT GARDEN PROPERTY COMPANY.—A first interim dividend of 3 per cent. on ordinary shares.

THE JOHNNIES GROUP.—The following table shows the last four distributions of the Johnnies group:

	Per share			
	Dec., 1935	June, 1936	Dec., 1936	June, 1937
Government Areas	2 1/2	2 9/16	2 9/16	2 3/4
New State Areas	2 6	3/-	3/-	3/-
Langkat Estate	2/-	1/6	1/6	1/6
Randfontein	2/-	2/6	2/6	2/3
Van Ryn Deep	3/-	2/6	2/6	2/3
Witwatersrand (Knights)	2/-	2/6	2/6	2/6

SHIPLEY COLLIERIES.—Final ordinary dividend of 6 1/2 per cent. plus 2 per cent. bonus, making 12 per cent. for year, against 8 per cent. for year.

SMITHWICK DROP FORGINGS.—Final ordinary dividend of 22 per cent. making 30 per cent. for first year to March 31st.

STANTON IRONWORKS.—Final ordinary dividend 6 per cent., making 10 per cent., as before.

THIRD PROTECTED FIXED TRUST.—Half-yearly distribution of 4.614297d. net. Bonus shares, etc., added to capital of unit represent further 3.447d. net per sub-unit.

LONDON TIN CORPORATION.—Ordinary dividend 7 per cent. for year to April 30, 1937, the first to follow the amalgamation. The last cash distribution on the original ordinary shares was 20 per cent. for 1928-29.

HAWKER SIDDELEY AIRCRAFT.—Interim ordinary dividend 15 per cent. against nil.

BUTTERLEY COMPANY.—Final ordinary dividend 6 per cent., making for year to March 31, 1937, 8 per cent. tax free, against 6 1/2 per cent. tax free.

SOUTH AFRICAN BREWERIES.—Final ordinary dividend 15 per cent. and bonus 2 1/2 per cent., making 22 1/2 per cent. for year to March 31, 1937, tax free, against 20 per cent., tax free.

SHORTER COMPANY COMMENTS

(Continued from page 637)

MISCELLANEOUS

CHLORIDE ELECTRICAL STORAGE COMPANY.—Trading profit for year to March 31, 1937, £432,442, against £426,825. Ordinary dividend and bonus, 15 per cent., as before. To special charges, £25,000, against £75,000; general reserve £150,000, against £125,000. Carry forward increased from £72,020 to £84,580. Further businesses have been acquired, but holdings in subsidiaries now stand at £101,172 less by reason of application of special dividend of £380,804 and of £175,000 from general reserve.

METAL TRADERS.—Net profits for the year to March 31, 1937, expanded by £46,831, to £129,449. Dividend 12 1/2 per cent. and bonus of 1 1/2 per cent., comparing with 12 1/2 per cent. dividend and bonus of 10 per cent. in 1935-36. Reserve receives £50,000, against £25,000. Carry forward up from £56,626 to £65,916.

BRITISH NORTH BORNEO (CHARTERED) COMPANY.—Revenue in North Borneo during 1936 increased by £14,164 to £341,586. Total revenue rose from £348,935 to £358,821, but expenses fell from £252,799 to £250,327. Ordinary share dividend resumed at 2 per cent., after a lapse of seven years. Carry forward £36,553.

MANCHESTER COLLIERIES.—An advance in profits of £37,190, to £299,994, is announced for the year to March 31, 1937. Transfer to amortisation reserve increased from £29,192 to £30,062 and £29,564 again written off goodwill. Depreciation of wagons £14,504, against £15,905, and mine rents reserve receives £4,630 against £10,682. Ordinary dividend raised from 4 per cent. to 4 1/2 per cent.

EDMUNDSONS ELECTRICITY CORPORATION, LTD.—The results of the operations of the Edmundsons group of companies during the month of May, 1937, as compared with the corresponding month of 1936, show an increase of 13 per cent. of units sold.

BRUCE PEEBLES AND COMPANY, LTD., EDINBURGH.—The Shareholders' Protection Association has examined the proposed scheme of capital reconstruction and advises members to vote against the scheme as it appears to be inequitable to preference shareholders.

THE LIMITED INVESTMENT FUND.—The third progress report states that the distribution payable on July 15, 1937, in respect of the half year ended June 4th is 4d. per unit free of tax, equivalent to £4 9s. gross per cent. per annum on the initial price of £1. This compares with payments at rate of £4 1s. 9d. on coupon No. 1 and £4 3s. on coupon No. 2. The managers consider it desirable to begin to increase the percentage held in fixed-interest stocks. Ordinary shares sold in past half year have realised a profit of 25 per cent. The proportion invested in fixed interest securities has been raised from 10 per cent. to 14.6 per cent.

NORTH-EASTERN TRADING ESTATES, LTD.—The accounts for the period from May 18, 1936, to March 31, 1937, show an excess of expenditure over income of £6,709. The report states that until the development stage has been passed, the company will continue to show an excess of expenditure. Its aim, however, is to become self-supporting, and to pay in due course a reasonable rate of interest. The directors report that the demand for factories on the estate has exceeded expectations.

DENNY, MOTT AND DICKSON, LTD.—Profit for year to March 31, 1937, amounted to £155,985, compared with £65,598. Ordinary dividend raised from 3 per cent. to 10 per cent. To taxation reserve £25,000, against nil; staff bonus £5,700. Carry forward increased from £10,001 to £34,887.

RUSTON AND HORNSBY.—Trading balance, after depreciation provision, exchange losses and other contingencies and including dividends from subsidiaries, £134,056, against £109,369. Dividend from Associated Company, £30,000, against £24,400. Dividend on ordinary stock raised from 5 per cent. to 6 1/2 per cent. To general reserve £50,000, against £25,000. Carry forward £50,125.

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

WITH very few exceptions prices have fallen in the course of the past week. Various special explanations may be offered in the case of particular commodities, but the main reasons have been the continuance of political tension and the recurrence on a grand scale of the gold scare.

The decline in the base metals has been unanimous and on a fairly large scale. Buyers are apparently all holding their hands, but dealers are doing so also to some extent and business has not been large. Among the vegetable oils, there has also been little business, but prices have been fairly steady, linseed and palm oil showing on balance a small rise. Even in the coal and iron and steel markets there has been a lull, though, of course, the congestion remains very serious. There are possibilities of an upward revision of prices for some types of coal. Cotton, jute and wool prices have all fallen, quite considerably in the case of the former.

Among foods and provisions, all grain prices have been marked down, partly for psychological reasons, but mainly because of steadily rising crop estimates. Lamb and ham prices have risen, but beef and bacon have fallen fairly sharply. Coffee prices are unchanged, but tea prices have moved a little and in diverse ways. Most Indian grades are up a little, but Ceylon have fallen for the most part. Cocoa has declined, and sugar has risen fractionally, but among the rest of the food-stuffs there has been little change of any note.

In the United States Moody's daily index of staple commodity prices (December 31, 1931 = 100) reflects the same trend. It stood at 198.5 on June 9th, compared with 204.2 a week ago, 208.2 a month ago, and 163.6 on June 9th last year.

COAL

SHEFFIELD.—Both home and foreign demand for coal continues strong. In spite of increased allocations and full working at the collieries, there is relatively little fuel available except under contract. Best hards are in short supply for export, demand coming chiefly from the Baltic and the Mediterranean. On the inland market industry is taking heavy supplies, but for household fuel there is a quieter demand. Coke is a very strong market with all supplies of furnace qualities instantly taken up. It is stated that higher prices may be shortly decided upon. Furnace and foundry coke cost 35s. to 36s. per ton and gas coke, 37s. to 38s. The greatly increased manufacture of coke is causing a scarcity of small coal and demand is at present on a bigger scale than ever before.

NEWCASTLE-ON-TYNE.—Whilst there may be a little temporary weakness in the demand for certain classes of Durham unscreened coal, the position of the industry in the North-East as a whole continues firm. Northumberland steam collieries are fully stemmed, and have a good book for the summer months, there being little change in prices despite the seasonal fall in domestic demand. Durham coking coal is as firm as ever, but certain gas and bunker collieries have a little more coal available for the next few weeks. Patent oven coke is very steady under a good home demand.

GLASGOW.—The main development this week has been the decision to reduce prices for house coal. In Lanarkshire the reduction is 2s. per ton. Absence of the seasonal movement, usually noted at the beginning of May, has recently held up buying, but in view of expectation that a still higher level of prices may be seen next winter, stocking by the depots is higher likely to proceed on steady lines, otherwise the market is firm. Industrial and public utility needs remain brisk, so that after meeting export business for prompt delivery. Difficulty is experienced in finding contract quantities for vessels as they arrive, and complaints about drainage charges are not infrequent.

CARDIFF.—It is announced that the supplementary allocations granted by the Central Council to South Wales for the current quarter were 1,300,000 tons for output, 400,000 tons for export supply and 800,000 tons for inland supply. Demand continues active, and, in spite of the new allocations, supplies of certain qualities, particularly of smalls, are scarce. Deliveries, however, have been speeded up, and complaints of long loading hours are not so general as they were before the Whitsun holidays. During the past week there have been very few instances of unavailable berths, but this is partly due to a relatively unsatisfactory tonnage position. Prices show no further change, but they are very firm.

for all classes of coal, coke and patent fuel. There have been one or two stoppages in the coalfield owing to differences of interpretation in the application of the new wages agreement, and a special delegate conference has been convened by the South Wales Miners' Federation to consider the workmen's complaints.

IRON AND STEEL

LONDON.—The weekly report of the London Iron and Steel Exchange indicates that the lull in new business continues, but that this has brought no relief from the insistent pressure of consumers to obtain deliveries from works against existing contracts. In practically all departments requirements are well in excess of production which remains at a record rate. The raw materials position is easier owing to extensive purchases abroad of pig iron and scrap, but the future is not free from anxiety.

New business in pig iron has been confined to transactions for delivery in the third and fourth quarters, but makers are pursuing a conservative policy in accepting orders for far forward dates.

Great stringency prevails in the semi-finished steel department, although heavy deliveries are being made by the producing works. Arrivals of Continental steel have been on a larger scale of late, but operations at many consuming works are still restricted by the difficulty of obtaining full supplies.

In finished steel, the volume of business transacted has been limited by the practical impossibility of placing orders for near delivery. Many consumers would buy far forward, but the steelworks show no disposition to sell beyond the end of the year. Although the export demand has declined somewhat of late, a considerable volume of inquiry continues to reach British steelmakers.

SHEFFIELD.—With producers committed to the hilt under contract there is virtually no pig iron for disposal on current account, and business relates mainly to forward delivery. Derbyshire makers are accepting contracts for the final quarter on a rationed basis. The maintenance of consumption at the present level will by no means meet users' requirements, and falling considerable expansion of production there will necessarily be greater dependence on imported material. The present shortage of foundry iron is causing a good deal of inconvenience, and forge is becoming more difficult to obtain. Lincolnshire makers remain off the local market, the whole of the make being taken up at source. The position in regard to hematites is slightly easier, and supplies are coming forward somewhat more freely. Finished iron prices are expected to be revised at any moment, following the revision of forge quotations, and in the meanwhile bar makers are not inclined to book new business of any weight. The pressure for billets is as great as ever, and it is impossible fully to satisfy demand. Wire rods are another important feature, while makers of stainless steel sheets are replete with orders. All prices are firmly maintained.

There is much activity in the iron and steel scrap market, and material not subject to the system of control encounters sharp competition. Heavy foundry cast iron sells at 90s. per ton, as a minimum price, and for steelworks cast iron at least 67s. 6d. is demanded. Heavy wrought shearing iron is changing hands at 80s. per ton or a little more. With the exception of special steel, all steel scrap prices are fixed.

MIDDLESBROUGH.—The pressure for all classes of pig iron and steel continues, the requirements being much greater than the supplies. Although the new price of 101s. per ton for No. 3 Cleveland foundry pig iron becomes operative on July 1st, it is not affecting the present position as the small output is unequal to demand and consumers are being rationed. East Coast hematite is in such strong demand by home users that merchants are unable to obtain deliveries of iron against contracts for export. Steel manufacturers are keeping their plant running at top pressure in an endeavour to satisfy the requirements of both semi-manufactured and finished materials. Larger supplies of foreign semi-manufactured steel have arrived recently, but this still does not satisfy the demands of re-rollers. Good Durham blast-furnace coke is easily saleable at 38s. to 40s. per ton, delivered works. No prices are mentioned for foreign ore, but as demand remains strong, the market is firm. Heavy steel melting scrap of No. 2 grade is quoted at 67s. per ton in quantities of not less than 500 tons. It is understood that one or two large shipments are on the way to this coast from the United States.

GLASGOW.—The raw materials position is somewhat easier and steel makers are maintaining a very high output; nevertheless, the deliveries they are able to give against contracts already on books are not equal to the demands of consumers. Little new business is being accepted as makers cannot give early delivery. Demand for semis seems to be growing and, while supplies from home and continental makers have been rather better just recently, they are not equal to the requirements of the re-rollers, many of whom have difficulty in maintaining regular production. All branches of the manufacturing industries in the West of Scotland are very busy, and they, too, are pressing for supplies of finished steel.

CARDIFF.—The various branches of the iron and steel trade continue very active, and last

On sale at all railway bookstalls and good newsagents everywhere

FRUIT.—Activity remains fairly considerable at Covent Garden and prices for the most part are satisfactory. Apples, however, have fallen, since stocks are large, arrivals from abroad have been on a grand scale,

national reconciliation in lieu of the "Versailles Diktat." Despite the repugnance that has been implanted in British minds by many features of the Nazi regime, the Government of the United Kingdom have nevertheless invited the German Minister for Foreign Affairs, BARON VON NEURATH, to pay a visit to London for a general discussion of the international situation. This was exactly what the Nazis had always been asking for, and it was in fact a most promising overture to a general European *détente*.

Is retaliation for a non-proven attack really so overwhelmingly important an object of German foreign policy that the prospects of an understanding with England and appeasement in Europe must be sacrificed to it? Was HERR HITLER persuaded that France and Russia were so paralysed by internal crises that Germany was now free to take with a high hand whatever she might covet? Fortunately, the decision to refrain from immediate retaliatory measures shows that more moderate counsels have had some influence in Berlin. If events confirm this hope, it may be possible—with care—to bind together the broken threads again.

Before this can be done, however, two things must be made plain about the attitude of this country. In the first place, an understanding with Germany implies some common ground. An agreement between this country and a dictatorship requires the assurance that neither political influence, economic pressure, arms nor official propaganda shall be used to influence or control the internal affairs of other countries. Great Britain cannot be a party either directly or indirectly to a crusade for or against Communism, any more than it could lend its support to the establishment of Fascism in any foreign country. Insofar as its influence counts, it is for freedom. We cannot, therefore, collaborate genuinely with HERR HITLER in the policy of non-intervention if he has mental reservations which, in fact, mean "I will be neutral provided my man wins"—or still more blatantly, if he and his Italian henchman really mean "We will not intervene except to the extent that is necessary to ensure that our man does not lose." In LORD PLYMOUTH'S statement on Monday the British Government, in effect, said this out loud.

They made it clear that continued collaboration on such terms is a farce. If it continues, collaboration in any other field is utterly impossible.

There is, however, a second consideration. The attitude of this country to Spain is not purely negative. The British public is partly divided in its sympathies, partly unable to make up its mind about the contesting Spanish parties. Extreme bitterness, fanaticism and cruelty have been displayed on both sides, and the only universal opinion is that we should like to see the establishment of a truly democratic regime. If the Spaniards had been left to fight it out and FRANCO had won, Britain would certainly not have intervened against him.

But that would have been a very different thing from a FRANCO victory brought about by Italian or German intervention. That is what is happening now. If this Italo-German war in Spain against the Government of that country is now to be carried through to the bitter end, then the masters of Spain, when the destruction of the legitimate Government is complete, will not be the Spanish insurgents. They will be the two Powers of the Rome-Berlin axis. If and when this happens, the balance of power in Europe, the Mediterranean and the North Atlantic will be upset to an extent that will place Great Britain and France at the mercy of Germany and Italy.

This means that, if Italy and Germany now openly take a free hand to conquer Spain, it is impossible for us to keep our own hands tied. The French have at least as good a right—not to speak of a vital national interest—to help Valencia and Barcelona as the Germans and Italians have to help Burgos. If Germany persists in her intention of making open war on the Spanish Government, we ought to let Berlin know at once that we shall give our consent to any countervailing action that the French may choose to take. More than that, we should make it clear—much clearer than it was made in July of 1914—that the French can count on our support, and in the last resort our armed support, if the Germans and Italians attack them for retorting in kind to German and Italian actions.

Safeguarding Our Prosperity

IT is perhaps not surprising—at a time when the volume of business activity in this country, as measured by our Index in the Monthly Trade Supplement accompanying this issue of *The Economist*, has reached a high record—that the business world should now be canvassing the probabilities of a slump. The whispering campaign about an early recession in business which is ruffling the temples of finance has begun for other reasons than the impending and foreseen decline of the building boom. They are: the quick turnover in our fast-recovering economic system from a surplus of labour and capital to a deficiency in many branches; the consequent and accompanying rise in prices, wage-rates and earnings; the uncertainty in the securities market, caused by the extent to which discounting of future earnings had been carried, and by the publication of the Government's loan requirements for re-armament finance; and, finally, the unnerving effects of the so-called gold scare and the original National Defence Contribution. Bankers, business men, and investors, with this array of economic evidence before them, might well discern signs of an approaching peak to the curve of British recovery. After all, rising costs and prices, together with a sagging tendency in the security markets, have generally been evidence that

investment in certain branches of industry, which turn out the capital equipment of the community, is approaching the limit of profitability.

There is no doubt that, for the first time since recovery began, the general level of costs in all branches of industry is moving upwards—rapidly in those sections most closely connected with re-armament and heavy industry, less so in those sections of industry whose labour and material costs are not so dependent on the iron and steel, engineering and constructional trades. When steel prices, even under standing contracts, are soaring by increments of 25 per cent. and more; when building costs rise by 15 per cent. in a few months; when there is a shortage of skilled labour and overtime becomes almost general over a wide range of industry; when fuel prices and railway rates threaten to rise; and finally, when the Government imposes new taxation to defray part of a vast expenditure concentrated on a few key industries, it is obvious that the economic danger-signals are up. The current reports on industrial conditions in our Trade Supplement and in Notes on pages 728 and 769 show that severe distortions are occurring in many parts of the national economy. A chart on page 728 shows that the curve of wholesale prices has now risen above the curve of business

activity, an occurrence which has nearly always given warning of a recession.

In these circumstances, several economists—notably a group of Oxford economists who recently subscribed a letter to *The Times*, MR J. M. KEYNES in his three articles early in the year in the same journal, and MR COLIN CLARK in his article "National Income at its Climax" in the current *Economic Journal*—have urged upon the Government the need to prepare at once to prevent a slump. MR COLIN CLARK concludes

We are approaching the period which Mr Harrod describes as the "breathing-space" which continues for a little while before uncontrollable slump begins—though one need not commit oneself to the view that the decline in investment, likely to begin in 1938, need necessarily be deep, long-lived, or uncontrollable. But if the (author's) analysis of the situation is correct the Government ought now to be preparing plans for public works of all kinds (including perhaps an acceleration of the armaments programme), and for the stimulation of private investment and consumption, as soon as the total of investment activity begins to decline in 1938.

The same considerations form the burden of the Oxford economists' recommendations.

Now to a certain extent, the prevailing hesitancy in the stock markets, and the rise in the rate of interest, are automatically working to damp down new "civil" investment, and thus to favour the capital construction which the Government's re-armament programme necessitates. As MR KEYNES pointed out, if we are to avoid an inflationary boom and crash we must expand the total national income to offset the expenditure on unproductive "capital goods" like battleships, tanks, aerodromes and armament factory extensions. The Government's every aim should be to maintain or even increase the national income without causing armament producers to bid against producers of consumption goods for available supplies of labour, equipment and material. In this context, an expansion of foreign trade, as MR KEYNES advocated, would be most advantageous.

This means that to have "a shot in our locker" for a decline in the total of net new investment, we should evolve, here and now, a series of capital-construction schemes which can be begun as soon as the recession begins. These schemes, moreover, should comprise many which may otherwise be begun before the recession, and

may therefore compete in a time of rising costs with the re-armament construction. The nature and extent of the information required make it necessary for a special and competent body of experts to be established with this end in view. Such, indeed, was the recommendation of SIR WILLIAM BEVERIDGE on June 18th, when, in a public address, he pointed out that the only eventuality which was planned for ahead was war. He suggested that such a body should be authorised to prepare for economic dangers. Two economic eventualities were likely: an impending slump, and a more remote decline in population. We still needed to know more about the causes of these phenomena, and therefore should have an "organ of forethought." The International Labour Conference last week also said "the advance planning of public works is a useful method of preventing unemployment and counteracting economic fluctuations," but that "action for this purpose can only be effective if it is based on adequate information and international co-operation." The Conference, therefore, called for annual statistical reports from each member about public works introduced or planned, including orders for equipment, supplies, etc.

The history of the Great Depression and the not-so-great Recovery has surely taught us that Governments must accept responsibility for deciding the main direction of national economic development. It would be calamitous if, during the best of the fat years, the Government, for want of forethought and active preparation, allowed lean years to come upon us again. We can, no doubt, stand minor recessions in the curve of business activity. We can certainly not stand—nor, perhaps, will our familiar social institutions stand—anything like another Great Depression. Happily, there is no evidence that anything like a calamity of those dimensions can occur within any foreseeable time. Gold scares and N.D.C.s do not alter the basic conditions of the world's trade and commodity markets; and the economic barometer is still rising, as our Supplement shows, in this and other countries. But fair weather is the time to prepare for the rainy day; and when most of the leading economists are of one mind on the need to safeguard prosperity, the Government would only be prudent to take them into consultation.

The Condition of the People

ONE of the unmistakable signs of comparative prosperity is that discussions of the problem of poverty have changed from the general to the particular. The flood of books propounding large-scale cures for the ills of the body economic has been brought within manageable dimensions, though it has far from ceased, and in its place there is a fashion for books on the more particular and personal variations of poverty and the methods adopted to alleviate them. The change of tone is all to the good. The various messianic gospels are leading their devotees only to disillusion and much more can be done to cure poverty by unspectacular clinical work than by the concoction of universal panaceas. In recent months four books* meriting review have been published which exemplify this return to the old Liberal tradition of the Social Services.

* "Metropolitan Man." By Robert Sinclair. Allen & Unwin. 365 pages. 10s. 6d.
 "The Condition of Britain." By G. D. H. and M. I. Cole. Gollancz. 471 pages. 7s. 6d.
 "Report on The British Social Services." Published by P.E.P. (Political and Economic Planning). 206 pages. 10s. 6d. cloth bound; 7s. 6d. paper boards.
 "The Human Needs of Labour." By B. Seebom Rowntree. Longmans. 162 pages. 2s. 6d. net.

Even the most hardened cynic, in contemplating the Social Services, must admit that their achievements have been immense. As the P.E.P. Report says, they "are bound to figure largely in, if not to dominate, the social history of our time." In the year 1934-35 the total expenditure on Social Services (including such doubtful items as Housing and War Pensions) came to £426,800,000. It does not, of course, follow that these sums are net additions to the income of the working class, whose burden of taxation has increased heavily since the Social Services were started a generation ago. Furthermore, neither taxes nor benefits are equally spread. Though the Social Services effect some transfer of income from those with a surplus to those with a shortage, both within the working class, and also between the rich as a class and the poor as a class, they leave all too much inequality untouched.

What good has all this expenditure, with its vast administrative machinery, accomplished? Precious little, if we are to believe MR SINCLAIR. His book, it is true, is confined to London, but in the majority of aspects, the condition of Londoners is similar to that of the rest of the people of the country. "Metropolitan Man," it

it were taken literally, would be a most depressing book. But it is really impossible to take MR SINCLAIR literally. He has been most amazingly painstaking in the accumulation of facts and figures, and his exposition of the facts they tell (or the facts he makes them tell) is nothing short of brilliant. Most readers will be equally surprised to discover that there are so many statistics about the people of London and that they can be made so vividly alive. But in his interpretations, MR SINCLAIR shows a most unobjective savagery. On his third page, he begins a paragraph with the words "There is much that is good in so vast a city. London, like a dying bandit, is not without nobility." But apart from these words there is hardly a comment in the book that is not vituperative, or an adjective that is not a denunciation. What, for example, are we to think when he declares that "fewer than one in six of London children appear to be adequately nourished" on the strength of a report that only 17.3 per cent. of London children have "exceedingly good nutrition"? Or when he dismisses the much-reduced figures of arrests for drunkenness on the ground that the drunkenness is still there, but it is no longer fashionable to make it noisy? (Has MR SINCLAIR ever seen the figures of alcohol consumption?) Or, finally, what is to be said about the statement, repeated a score of times throughout the book, that one Londoner in three dies in the workhouse, which turns out on inspection to mean little more than that one Londoner in three dies in hospital?

Let it be admitted that there is much in London at which the conscientious citizen may well be enraged. But to write in a furious passion is hardly the best way to carry conviction. MR SINCLAIR'S book will be a quarry for facts on the condition of the Londoner, and, in particular, his twenty-seven pages of references will be invaluable. But the reader will be wiser to draw his own conclusions.

MR and MRS COLE, as befits good Socialists, are also predisposed to believe the worst about the present state of society. But they at least make it possible (as MR SINCLAIR hardly does) to disentangle the subjective passages of the book. What remains is a very valuable compendium of facts and figures bearing upon the incomes, expenditure and social well-being of the people. Hardly any of the facts are new, but they have hitherto been scattered in a score of different places and only the expert can have been familiar with all of them. If MR and MRS COLE'S book did no more than collect all these figures within one pair of covers it would have served a useful purpose.

MR and MRS COLE rightly start with the facts about the inequality of incomes—facts staggering enough to challenge any conscience—and continue by taking up in succeeding chapters topics such as nutrition, education, housing, unemployment and so forth. Under every head the reader is struck by two reflections of a strangely opposite character. The first is the surprising amount of progress that has been made if we look only at the averages. The second is the depressing amount of real poverty that remains after so much expenditure of money and effort. The national consumption of food, for example, has been increasing rapidly; but there is evidence of widespread malnutrition. Three million houses have been built since the war, but the problems of the slums and of overcrowding still remain. Even under the head of unemployment it can be shown that the purchasing power of the standard benefit has almost doubled since the war. But the "irreducible minimum" of unemployment has also shown a steady increase.

This widening disparity between the average and the exceptional case is the most striking observation to be made about the state of the British people to-day. During the depression the disparity has widened; there

is an increasing inequality of welfare within the working class. The aim of social policy must therefore be to bring the worst cases up into closer approximation with the average. This is precisely the justification for social services. The P.E.P. Report approaches the problem from the angle of the social services themselves; it is frankly directed to their technical efficiency as administrative devices. It could be described as a civil servant's view of the social services, were it not for the fact, pointed out by the Report, that no civil servant is competent to look at the social services as a whole.

The Report divides the services into three divisions; the Constructive Community Services (education, medical services, etc.); the Social Insurance Services (health, unemployment, pensions); and the Social Assistance Services (non-contributory pensions, unemployment assistance and the poor law). The analysis and discussion under each head show the expert thoroughness and moderation for which P.E.P. has acquired a reputation and in each case useful detailed recommendations for improvement are made. It is a little disappointing to find few suggestions with a broader view. The Report recommends a permanent Statutory Committee to co-ordinate and supervise the present services. It goes further and states the need for a fresh advance. But the task of indicating the most urgent needs is declined.

A strong hint can, however, be found in the statement that "the failure of the wage-system to take any account of the disparities in family responsibility is one of the greatest obstacles to further extensions of social provision." This is most strikingly confirmed by MR SEEBOHM ROWNTREE. His book, which is a re-written edition of a work which was originally issued in 1918, brings up to date the well-known calculations of minimum wages necessary for subsistence. MR ROWNTREE lays particular emphasis upon the difficulty of relating minimum wages to the varying size of the family. The average worker has only two dependent children; but if minimum wages were based on the human needs of a family with two children only, "63.6 per cent. of the children of fathers receiving the bare minimum wage would for a shorter or longer period be inadequately provided for, and 58.8 per cent. of them would be in this condition for five years or more." His solution is to take the family with three children as the standard for the fixation of minimum wages and to provide extra subsistence allowances for every child after the third. At 5s. a week, this works out at the surprisingly low cost of less than £6,000,000 a year. The minimum wage, based on a stringently economical diet (allowing, for example, only tinned milk) is set at 53s. od. a week for male town workers, 41s. od. in the country and 30s. 9d. for women. MR ROWNTREE would have these wages enforced by Trade Boards, and his record as an employer and member of Trade Boards lends weight to his opinion that this method is both just and effective.

These four books provide ample material for formulating a policy of advance in the social services, though none of them draws up the actual programme. It might be a useful endeavour if the leaders of public opinion were to address themselves to the construction of a list of priorities. Individual preferences will differ. But the establishment of some minimum wage level on the ROWNTREE lines would probably come high on every list. It might well be coupled with an upper limit to hours for women and children whose employment is not covered by the new Factories Bill—such, for example, as the 5,634 boys under the age of 16 found in London by a Departmental Committee which reported this year to be working more than seventy-two hours a week. And finally, some provision for the large family would go further than any other single measure to bring the worst cases of poverty up to the general average of comfortable subsistence.

The American Steel Industry

THE pre-war history of the American steel industry contains many colourful episodes in the fierce struggle for pre-eminence between the steel "kings." In many respects, the story of steel epitomises the rapid rise of the United States to the rank of the world's chief industrial country. The industry was moulded before the war, when the big combines in the industry took shape. Since then it has been engaged in a process of financial and technical consolidation which has not yet come to an end.

The American steel industry is now passing through a revolutionary transformation of the relationship between the representatives of capital and labour. Armed with their newly-gained right to collective bargaining, Mr Lewis's Committee of Industrial Organisation is engaged in an attempt to organise the steelworkers, in order to gain a measure of control over the conduct of the industry and over the division of its product between shareholders and labour. The leading producer, the United States Steel Corporation, has given in without a struggle; but four other concerns—Bethlehem Steel, Republic Steel, Youngstown Steel and Tube, and Inland Steel—are at present engaged in measuring their combined strength against the C.I.O. Both sides have shown themselves adamant, and last week President Roosevelt felt constrained to appoint a Mediation Board to try to end the deadlock. Prolonged deadlock might seriously hamper recovery. These events have brought the industry into the limelight; and it is of interest to sketch its setting in America's economic life, and its recent evolution.

The steel industry's position in the United States differs, in many respects, from its economic background in this country. The industry across the Atlantic is almost self-contained, both for markets and raw materials, except for certain ingredients of special steels. American imports and exports of iron and steel form a comparatively small proportion of home production. In contrast, the British industry has for many years exported a substantial proportion of its output. For example, its products furnished the means of large capital investments in Empire and Latin American railways. Moreover, owing to the paucity of high grade domestic iron ore, the industry in this country is dependent, in a large measure, on foreign supplies. It has tended, moreover, to concentrate on the finishing processes, purchasing abroad substantial quantities of semi-finished steel.

In contrast to the geographical distribution of the industry in this country, iron and steel manufacture in the United States is concentrated in relatively few areas. The output of pig iron, steel ingots and castings, and hot rolled products in the principal centres of the industry in 1929 and 1936 is shown below:—

GEOGRAPHICAL DISTRIBUTION OF AMERICAN STEEL PRODUCTION
(In thousands of tons)

	Pig Iron		Steel Ingots and Castings		Hot Rolled Products	
	1929	1936	1929	1936	1929	1936

Alabama.....	2,705	1,998	1,740†	1,595†	1,216	1,087
Total, including other districts.....	41,757	30,217	56,433	47,768	41,069	33,801

* Including New Jersey.

† Including Georgia, Florida, Louisiana and Texas.

In the main, the location of blast furnaces has been determined by the accessibility to coal and iron ore, or, more precisely, by the relative cost of assembling the two materials in various areas. Again, the economies obtained in the conversion of molten iron into steel led to the integration of combined blast furnace plant and steelworks. Since the war, however, when the growing use of scrap—produced largely in the manufacture of

steel—reduced the importance of pig iron as an ingredient of steel, the distance of steelworks from the market, as shown by transport costs, has assumed increasing significance in the location of the industry. Thus Dr S. Stratton, in one of his chapters in a recent study of the American iron and steel industry under N.R.A.,* attributed the westward migration of the industry, measured by the relative growth of capacity in the leading districts, mainly to the increasingly favourable situation of Chicago, Gary, Cleveland and Detroit as consuming centres accessible to iron ore supplies. Compared with Pittsburgh, these districts' advantages more than offset the disadvantages of the high cost of transporting coking coal from West Virginia and Pennsylvania.

AMERICAN STEEL PRODUCTION AND PRICES

Output of pig iron and steel ingots and castings represent annual output from 1900 to 1936 and annual rate of production in January–May, 1937, as given by the American Iron and Steel Institute. The index of iron and steel prices is that calculated by the U.S. Department of Labour. Annual indices from 1913–36; latest figure relates to March, 1937.

In structure, the industry in the United States also differs from the British iron and steel trade in that the bulk of capacity is concentrated in the hands of relatively few concerns. The crude steel capacity of the leading concern—the United States Steel Corporation—was no less than 25,770,000 tons per annum at the end of 1936, or approximately double that of the entire British steel industry. The industry may be classified under four heads. First, there are the fully integrated concerns operating blast furnaces, steel furnaces and rolling mills. Secondly, there are semi-integrated concerns, purchasing pig iron and operating steel furnaces and rolling mills. Thirdly, a number of concerns purchase steel and operate only rolling mills. Fourthly, there are merchant blast-furnace concerns, which produce pig iron for sale to the non-integrated steel producers and foundries.

The industry can also be classified into concerns producing (a) heavy or tonnage steels, such as rails, plates and structural shapes, and (b) light materials, such as

* "The Economics of the Iron and Steel Industry." By Drs C. R. Daugherty, M. G. De Chazeau and S. S. Stratton. (London McGraw-Hill Publishing Co. Ltd. 2 vols. 1,188 pages. £3 10s.

heets, strip and wire rods. This distinction is one of importance in so far as the demand for light steels, which is widely diffused and shows a strong secular upward trend, varies less than that for heavy steels, which is subject to cyclical fluctuations in expenditure on capital equipment, e.g. railway construction and building. The proportion of the total output of hot rolled iron and steel products represented by light materials, after averaging slightly above 30 per cent. in the years before 1929, rose to 54 per cent. in 1933 and was still 47 per cent. in 1936, when the cyclical recovery of the demand for heavy materials had made substantial headway. The two biggest concerns, United States Steel and Bethlehem Corporation, manufacture practically the whole range of steel products. Republic Steel, American Rolling Mill and National Steel are mainly light-steel producers. According to Dr Stratton, ten integrated concerns were responsible, in 1934, for no less than 79.2 per cent. of total American pig-iron capacity, 81.0 per cent. of steel-making capacity and 76.6 per cent. of finished rolled products capacity.

The growth of the industry since the beginning of the century has been very rapid, partly owing to the enormous requirements of steel in the construction of railways, buildings and, more recently, automobiles, the principal outlets for its products. As long ago as 1890, the output of steel in the United States for the first time exceeded British production, amounting then to 3.6 million tons. Since then, as the accompanying chart shows, American steel production has risen steeply, reaching its highest level in 1929, when the output of ingots and castings was 56.4 million tons, equivalent to 47½ per cent. of world production and nearly six times the British output in that year. During the depression the output of crude steel fell catastrophically to the lowest level since 1901. Recovery, however, has been equally rapid and output during the first five months of the

current year was actually above the pre-depression levels.

The industry is severely handicapped by the violence of the changes in the demand for its products, especially for heavy steels; for technical considerations render rapid adjustment of capacity impossible. This tendency makes for instability of prices, revealed in price-cutting during periods of declining demand and in the attempt to charge what the traffic will bear during periods of expanding business. For example, during the period of rapidly increasing business early this year prices for many products were pushed above the 1929 level. Moreover, in view of the continuous changes in the relative demand for the industry's different products, the difficulty of achieving a balanced utilisation of capacity constitutes a further problem. Individual concerns, therefore, are subject to wide fluctuations in their earnings which, as has been shown by Dr Stratton, have been lower during 1924-1934, on the average, than those of a sample of fifty large corporations in various industries. Unlike the British Iron and Steel Federation which has set out to control capacity and prices in the interest of stability (with what success it is still too early to judge), no such co-ordinated attempt has as yet been made in America.

At the moment the outlook for the American iron and steel industry, representing a capital investment in excess of \$4,000 millions and employing more than 600,000 persons, is obscured by labour difficulties and by general uncertainty about the future of American recovery. It must be remembered, however, that the population of the United States has increased by seven millions during the past eight years, while the current volume of business activity is no higher than in 1929. Moreover, the constructional trades have as yet been scarcely touched by recovery. Consequently, the industry's setting during the next few years is likely to be a favourable one, unless recovery is deflected from its course.

Enterprise, Employment and Theft

A correspondent, lately engaged in an empirical appreciation of theft as an influence on enterprise and interest, has communicated to us the following essay. Five years' hard concentration upon the material consequences of theft have, not unnaturally, caused him to adopt a confined—indeed, isolated—attitude to its ethical and social consequences; an attitude no pure economist could hope to share. Nevertheless, while dissociating ourselves from his thesis, we believe it not dissimilar in principle to certain recent actions by the State in the economic sphere. Things practised on a communal scale become criminal when reduced to the personal scale. As Cavour said: "If we had done for ourselves what we have done for our country, what scoundrels we should be!"

THIS world has an ingenuous way of valuing things in inverse ratio to their usefulness. In a rather less ingenuous way it makes good use of some things, while denying their utility. Thieves suffer much from these two traits. Despised and rejected of men, they tread their lonely path doing great good in a small way. Yet never a voice is lifted in their praise or defence. Like the dragon of the fairy-tale, they must hold their loathed form, until one of purer vision steps forth to discern in them the Prince Charming hid beneath their scales.

With the thief as an individual I am not here concerned. Thieves, and their position as an infra-marginal class in a class-civilization, are my proper subject. My long practical appreciation of theft, and my recent five years in close and continuous contact with thieves in a certain State institution, have led me to form a judgment on the economic function of theft. So far from being an evil, the predatory class is an economic necessity and an agent of enlightenment. History corroborates me in all particulars; and the paradoxical development of the economic function of the State, which is to secure a State monopoly of the right to make involuntary transfers of wealth *inter vivos*, while clapping individuals who practise it into jug, confirms my thesis.

In the field of economics, the thief has not been allowed the scant courtesy of even prejudiced attention. Yet it is as a functionary in the economic life of the community that he first manifests himself. When the totality of his influences and effects is weighed it is in the economic world that they loom largest and most to his

credit. Thoroughly to appreciate these influences it is necessary to follow an average representative of this class, a house-breaker of ordinary merit, through part of his career.

Under the stress of various impulses he breaks into a house during the absence of its owners, picks up all the silver-plate and portable valuables he finds therein, and decamps. Then, with his booty, he calls upon a "fence," and sells it for about a third of its value; let us say, £50. We suppose him to be an average member of his class. This means he has an immoderate inferiority complex urging him to self-display—especially among women—and to the frivolities. The consequence is that he spends his £50 in a fortnight and begins to look out for another temporarily unoccupied house.

Meanwhile, the owner of the stolen property has informed the police and an insurance company of his loss. The police get on the track of the criminal. The insurance company restores the value of the property. If we suppose that the house-breaker has an average "run," he will commit half-a-dozen such crimes before he is caught and sent back to prison for another two years or so.

The activities of the thief influence the economic life of the community in two ways. Directly, he sets in motion £50 of currency, giving to it by his spendthrift habits a greater velocity of circulation than is customary. His far-flung liberality, his splendid lavishness, are not without their influence on the people with whom he mixes. In their efforts to reflect a little of his brief glory

people are induced to spend a shilling or two more than they would in other circumstances. That is, the Multiplier works here, too. Then, again, a momentary swish of currency activity is caused in higher circles. The sum of £150 in bank deposits (credit) is passed by the insurance company from its bank to the house-holder—i.e. from an unspent margin to active circulation—and from the house-holder to the silversmiths and other tradesmen engaged to replace the stolen property. Thus the theft involves no loss of wealth to the community at all. It only effects a transfer of property rights from effective hoards to active circulation and consumption. It even reinstates the original hoarded wealth.

Yet another financial repercussion of the theft is to be found in the profit made by the "fence." This profit is invariably large, seldom less than 100 per cent. One may safely say, therefore, that £50 of formerly idle bank deposits move from the tradesmen to whom the booty is re-sold by the "fence." Nor must we neglect the maintenance costs of the systems—preventive, detective, and punitive—erected to combat the thief. Large sums are annually diverted from middle-class pockets through rates and taxes for this purpose. Purchasing power is thus transferred from the property-owning strata to the lower strata, paradoxically enough simply to make the property of the former class more secure. The marginal utility of the units of purchasing power so redistributed automatically rises, for it leaves those to whom it is small for those to whom it is much higher.

The effect of these diverse transactions is an accelera-

tion of the velocity of circulation of the currency. Now, an increase in the velocity of circulation has as considerable an effect on the price and production side of the equation as an increase in the total amount of money in circulation. The thief, then, functions in the private capitalistic system as an automatically controlled currency system would function in a more rational world. He is inflationary; mildly purgative; playing a part in the body politic curiously analogous to the part played by the suprarenal glands in the human body, stimulating a vigorous circulation of money as these glands stimulate a vigorous circulation of the blood.

Thus the thief is no mere parasite upon the social body. He performs a service, whether he is aware of it or not. The service is indispensable in the system as at present constituted. Certainly he produces nothing tangible; but then nor does the lawyer, the economist, the M.P., the doctor, the taxi-driver. Were all men to practise Christian ethics as well as preach them; were all men to keep themselves fit; were all men to drive their own cars; then the lawyer, politician, economist, doctor and taxi-driver would be superfluous. So, too, were society ordered on a rational basis the thief would be supererogatory. But until he is, he should receive his meed of recognition for the part he plays. He can be regarded as one whose lot is cast in unpleasant ways, as that of the road-sweeper. A poor burglar, as at present recognised by the State, cannot be expected to do his best. His most imaginative efforts only evoke greater retribution by the State.

Notes of the Week

The New French Government.—Within the last week France has suddenly fallen into, and no less swiftly emerged from, a first-class dramatic political crisis. The storm blew up over the attempted passage through the Senate of M. Blum's financial proposals. (We examine the technical side of these on p. 738.) On Sunday the Blum Government met with a hostile vote on this subject, while on the same day they obtained from the Chamber a reaffirmation of its support. Thereupon, M. Blum put forward a compromise proposal; but this did not mollify the Senate Finance Committee. They retorted with counter-proposals which were only slightly less unfriendly to the Blum Government than their previous draft, and which would in any case have denied M. Blum the substance of the powers for which he was asking. The climax came in the Senate itself on Sunday evening, when a bitter attack on M. Blum was delivered by M. Caillaux. Thereafter, M. Blum resigned at 2.30 on Monday morning; and the storm subsided. At about 5 the same morning the President of the Republic asked the Radical-Socialist statesman, M. Chautemps, to form a Cabinet. By 7.30 a.m. M. Chautemps had undertaken the task; and by Tuesday evening he had accomplished it. During the short but awkward interregnum, everybody in France remained calm.

The Parliamentary Socialist Party provisionally accorded M. Chautemps their support on Monday afternoon, and on Tuesday this vital decision was confirmed at a special meeting of the National Council of the Socialist Party—at the instance of M. Blum, and in spite of the opposition of M. Zyromski, the intransigent spokesman of the Socialist Federation of the Seine. M. Blum's statesmanlike and constructive policy was quickly justified by the event; for, in the Cabinet which M. Chautemps was able to form as soon as the decision of the Socialist National Council was known, the Socialists have been given eleven out of nineteen places—M. Blum himself reassuming office as Vice-President of the Cabinet without portfolio. The leading Radical Ministers in the last Cabinet have retained their posts. M. Delbos, for instance, retains the portfolio for Foreign Affairs (he never ceased, *de facto*, to carry on at the Quai d'Orsay); M. Daladier retains the portfolio for

War. The most important change, apart from the premiership, is, of course, the appointment of M. Bonnet, now on his way home from the French Embassy in the United States, to the Ministry of Finance. M. Chautemps will probably be able to command a wider range of support than M. Blum. The Communists, who declined to take office in the Blum Government, actually asked to serve under M. Chautemps; and though their offer was declined, they may be counted on to back the new Government in all the Leftward side of its policy; while in his more conservative measures (and perhaps, first and foremost, in those relating to finance) M. Chautemps will be able to count on the friendship, or at any rate the protection, of the Right Centre, where M. Blum could not look for any help. In short, France has been through an ordinary parliamentary crisis—of a kind that has been common form since the establishment of the Third Republic—and has emerged with what promises to be a distinctly stronger and more stable "Popular Front" Ministry than the last. From first to last there was never a question of the country dissolving into that Red Revolution over which the Nazis have so long been weeping anticipatory crocodile tears.

The Viceroy Speaks.—Events will show whether the Viceroy's statement of Monday last on the constitutional position in the Indian provinces has been timed with great political skill—as seems probable on one view—or, like too many other incidents in the progressive grant of self-government to the countries of the Empire, has come too late to secure the psychological effect at which it aims. The statement was couched in cordial and conciliatory language. A Governor, said Lord Linlithgow, was not entitled under the Act to interfere at random in the administration of his province. His special responsibilities were restricted in scope to the narrowest limits possible. Even so, a Governor would at all times be concerned to carry his Ministers with him. If he thought a certain action necessary in the field of his special responsibilities, he would attempt to persuade his Ministers of its necessity, giving all heed to arguments they might advance against it. The subsequent course of

action would naturally depend on the kind and importance of the issue. The Viceroy welcomed Mr Gandhi's "helpful suggestion" that only in the event of "serious disagreement" between Governor and Ministers need any question of severing their relationship arise. The issue, he would say, must be of such a character that Ministers would feel their position hopelessly compromised by the Governor's acting contrary to their advice. As between resignation and dismissal, constitutional practice leant very heavily indeed on the side of resignation. It was more consistent with the self-respect of the Ministry, and was an effective public indication of their attitude. Dismissal might carry a suggestion of inferiority, a suggestion the Government were concerned at any cost to eliminate from the new constitutional arrangements.

* * *

Lord Linlithgow concluded by pledging his support for all efforts towards the establishment of parliamentary government in India. This sentiment, and the whole conciliatory tone of his statement, are to be welcomed. But it leaves unsettled the issue which has become the kernel of the dispute—the choice between resignation and dismissal. This is not a mere matter of punctilio. An obligation on the Governor to dismiss Ministers when he could no longer approve their policy on matters which fell within his special responsibilities would place upon him the burden of deciding at what point disagreement had reached such a pitch that Ministers and Governor must part company and provincial autonomy, in effect, be suspended. Conversely, if resignation were the accepted method, the responsibility for taking this fateful step would be on Ministers, who, Congress fears, would in consequence find their nominal responsibility for these subjects frittered away by a series of minor interventions by the Governor, none of which would be sufficient in itself to justify the provocation of a crisis. It remains to be seen from the meeting of the Congress Working Committee on July 5th whether the gap has been closed sufficiently to make possible the assumption of office by Congress.

* * *

The New Profits Tax.—Sir John Simon's speech in the House of Commons on Tuesday and the issue on Wednesday of the new clauses to be added to the Finance Bill in the place of those withdrawn, have given definite and, in all probability, final shape to the much-discussed National Defence Contribution. The details are discussed in an Investment Note on page 741; here it may be said that some of the questions raised by the first announcement of the revised version have been satisfactorily answered; others have not. Sir John Simon made it clear, for example, that although holding companies, investment trusts and other such companies will be taxed on their investment income, there will be no double taxation, and dividends received from companies already subject to N.D.C. will not be taxed again. This is not a perfect solution, since trusts which hold preference shares will *pro tanto* escape the tax. On the other hand, the Chancellor refused to concede the principle incorporated in the old Corporations Profits Tax of a limit on the burden that can be imposed on the equity shareholders. To concede such a limit would, as he argued, create certain anomalies, but it is arguable that they would be less objectionable than the inequities of a tax not limited in its incidence. On the whole, the new tax has had a very favourable reception—far more favourable than it would have had if it had not been preceded by the ill-fated earlier version. But there was also general agreement in the House of Commons with the view put forward in *The Economist* last week that the tax should not be regarded as a permanent addition to the armoury of the Inland Revenue. Sir Alan Anderson aptly summarised this opinion when he said: "I think the view of most of us is that this tax is reasonable as an emergency and temporary measure. It is rough justice; it will probably work for five years; but in my view it certainly would not work and would not give satisfaction if continued beyond that. I think the tax carries within itself its temporary character."

Higher Salaries for Members.—A motion by the Prime Minister to increase the annual remuneration of Members of Parliament from £400 to £600 was passed on Tuesday in the House of Commons by 325 votes to 17. Treading most decidedly in the footsteps of Earl Baldwin, to whom this welcome measure owes its Parliamentary origin, Mr Neville Chamberlain made out an effective case for the increase. He showed that many members were in fact unable to live decently or to work efficiently for sheer lack of financial means. They were consuming their savings, stinting their families, or going short of food. While by no means a majority of members are so unfortunately placed, the higher salary was amply justified by the facts which Mr Chamberlain adduced; not least important being his reminder that since 1911, when the present scale was fixed, the cost of living had risen 50 per cent. and the duties of members had become much more exacting. There was little direct opposition to the proposal, which was welcomed by Mr Lees-Smith on behalf of the Labour Party. An amendment to postpone the concession until after the next general election received only 31 votes; and Sir Francis Acland's personal view that some sort of means test might be appropriate was no more popular. There was a general feeling that the reform might in time go farther to include the establishment of a pensions scheme, which the Prime Minister had mentioned as meriting inquiry. The increase in salaries will cost £112,000 a year. On the whole it will be money well spent.

* * *

The State of Labour.—Recent rumblings of thunder on the Left in this country have given rise to an erroneous belief that a major *crise de confiance* was imminent in the Labour movement. There was a thunder-clap last week when a group of Labour M.P.s drew up a memorandum calling for a more decisive policy in opposing Government measures. It is difficult to see what other line the Labour front bench could recently have taken than to accept the abdication, re-armament, and the withdrawal of N.D.C.—the only major issues which the unprovocative policy of Earl Baldwin has offered. The Government's social and foreign policies have been vigorously, if not ably, opposed. On the other hand, ever since the followers of Fox, wearied of futile struggle, absented themselves from Pitt's House of Commons, there has been a tendency for Opposition parties to lose heart when faced with a large and seemingly unassailable majority. On this occasion, Mr Shinwell and his followers, voicing the opinion of restless and discontented back benchers, have issued a warning against apathy. Their energies may indeed be misdirected, and it is certain that merely factious opposition would be foolish. Nevertheless, in view of the dead weight of the Government majority and the proved inability of the Labour party to maintain their poll in by-elections, Mr Shinwell's suggestion that Labour M.P.s, organised in special committees to survey the work of Government departments, should undertake the duty of expert opposition is on the face of it a reasonable proposal. There is no overt hint of any revolt against Mr Attlee; and it is significant that, in addition to the launching of a national campaign to secure more votes for Labour, the Leader of the Opposition has chosen this moment to restate the programme of his party. In office he will seek to organise national resources to maximise the standard of life. Although he will support compensation for disturbed property owners and maintain and coordinate the defence services, he will proceed to control trade, transport, the coal industry and the manufacture of armaments. The implications of the recent by-elections are presumably as apparent to the Labour front bench as to the rank and file.

* * *

Busmen's Politics.—More serious perhaps for the Labour movement than Mr Shinwell's manoeuvres have been recent developments in the Transport and General Workers' Union. While the suspended Central Committee of the London busmen were still awaiting the

Executive's inquiry into their relations with outlawed bodies, Mr W. J. Brown, general secretary of the Civil Service Clerical Association and notoriously a stormy petrel, offered his services to organise an independent organisation outside the Transport Union. He pointed out that, by driving out the more energetic elements for associating with rank and file or Communist movements, the leaders were splitting the trade unions; and that in the case of the London busmen their democratically chosen leaders had been overridden and were now liable to be expelled. The most important point about Mr Brown's surprising and dangerous offer was that it was rejected by those to whom it was sent. The problem of the London busmen remains by mutual agreement a domestic question of organisation and discipline. Although the position of the minority movement among the rank and file which favours direct action in industrial matters is again becoming important, as it did in the boom years after the war, there is no likelihood at present that the trade union movement will either split or depart from the constitutional policy which it still professes. The future of the London busmen's leaders will depend upon the findings of the Executive inquiry and, more remotely, upon the way in which the Executive's agreement with the London Transport Board works out in practice. As Sir Walter Citrine pointed out on Tuesday, a struggle for power has indeed been going on in the trade unions for some years. The method of the minority, he said, was to usurp the power of elected executives by fomenting unofficial strikes. Even so, the minority has so far failed to make any serious impression on the Labour movement. Unrest among workmen is usual in times of boom and war preparation, and there is no reason to forecast in present circumstances any alteration in Union tactics.

* * *

A Steelworks for Jarrow.—The proposal to erect a large integrated steel works at Jarrow, first adumbrated in 1935, was rejected a year ago after considerable discussion and controversy. But Jarrow is not after all to go empty away. The President of the Board of Trade announced on Tuesday that a smaller scheme had been made possible by the co-operation of the Government, through the loan fund set up by the recent Special Areas Act, the Bankers' Industrial Development Company, the Nuffield Trustees, and the Consett Iron Company. The new company will have a capital of £1,000,000 and will manufacture and roll steel at Jarrow. The original scheme, which was finally scotched last July by the jealous exclusiveness of the Iron and Steel Federation's Tees-side members and one or two other firms, was more ambitious. The proposal then was to lay down in Jarrow, the most depressed of towns, a complete basic Bessemer steel plant to produce an annual output of 500,000 tons. But, unwilling to see an increase of competition in the North-East area, "a number of important steel firms" were "forced reluctantly to the conclusion" that the

project was not a commercial proposition, despite expert opinion to the contrary and the manifest shortage of our steel supplies. Asked to co-operate in the scheme, other steelmakers declined, preferring to concentrate on their own extensions. Some firms, however, at one time declared themselves ready to participate in a modified scheme. The original project was thus killed without any adequate reason—other than the opposition of established interests—and despite the Government's expressed view that the establishment of a new plant at Jarrow was of national importance. Mr Oliver Stanley's announcement in the House of Commons on Tuesday contained few details of the new scheme. It is clearly a much smaller affair than the original proposal for a completely integrated plant. Whether it is also smaller than the "modified scheme" which featured in last year's negotiations, and how the Federation have been induced to withdraw their opposition, we do not know. But it is only logical to assume that if a truncated scheme is now found to be economic, when costs of construction have increased and the end of the large demand for steel is two years nearer, the full scheme would have been even better two years ago. There is, accordingly, still ample reason to await with interest the report shortly to be issued by the Import Duties Advisory Committee on the circumstances in which the earlier scheme was killed by the Federation.

* * *

Railway Rates Evidence.—During the past two weeks the Railway Rates Tribunal have heard the evidence in support of the four main line railways' demand to be allowed to increase their fares and freight charges by 5 per cent. It was argued that in each of the last three years revenue had been more than £15 millions below the "standard revenue" laid down in 1921; and that it was still over 13 per cent. less than in 1929. This deficiency was likely to be further swollen by the increasing cost of fuel and materials, which had not yet been fully felt. To this steady rise in costs of material, likely to be £5 millions more in 1937 than in 1936, should be added the pending claim for higher wages recently made by the railway unions. If the new charges were sanctioned, net revenue would still be considerably below the standard of the 1921 Act. It would be £41,064,154 compared with £51,359,905 under the Act, making no allowance for any further rise in the cost of labour and materials. Net receipts in 1936 were £162,384,907. In 1937 they were estimated to be £169,109,000; and under the new charges they would be £174,718,000. Assuming that there would be no loss of traffic, and excluding receipts from the London Transport pool as the Tribunal's decision would not be operative for the Passenger Transport Board, the railways stated that the new charges would raise gross receipts by £7½ millions annually. (An Investment Note on page 743 discusses railway receipts.) In detail the 5 per cent. increase would involve raising fares up to 11½d.

by ½d., fares between 1s. and 2s. 5d. by 1d. and so on. This, it was argued, would not affect passenger traffic because of general prosperity. Similarly it was maintained that an increase of 1d. per ton on coal would not affect its production or distribution. This was important because 7½ per cent. of railway receipts in 1936 was derived from the carriage of coal and coke. In the case of agricultural products a losing battle was already being waged. A large tonnage had been lost to the roads in the last two years, and there was little prospect, whether rates were raised or not, of improving this position. Thus, the railway case rested on increased costs and the increased ability of prosperous consumers to meet higher charges.

Various objecting bodies were represented: the National Farmers' Union, the Mining Association, the British Iron and Steel Federation, the British Coal Exporters' Association, the National Gas Council and the London County Council. It was alleged that the farmers' margin of profit was too small for their business to be further penalised by higher freight charges; that to estimate the 1937 revenue without revealing the actual revenue to date was unfair and misleading; that the costs of the railways' clients were increasing, just like those of the railways; and that working people, already faced with a rise in the cost of living, could ill afford to pay 5 per cent. more for their season and workmen's tickets. Nevertheless it seems probable that, under the terms of the 1921 Act, which sanctions such applications so long as standard revenues are not attained, the increases will be granted. The effect on wage negotiations remains to be seen. It has been supposed that the unions were likely to obtain the restoration of the last 1¼ per cent. of the cut made in 1931, but not their further claims for new overtime rates, paid holidays, etc. It was pointed out in evidence, however, that wages were 100 per cent. higher than before the war; and while revenues are still considerably below the level of 1929, the companies are likely to continue their opposition to the restoration of the 1929 rates of wages—and still more to further concessions.

The American Steel Strikes.—The temperature of American politics is still rising. The great dispute over the Supreme Court is no nearer settlement than ever; and the Chief Justice himself has now taken a hand by the public declaration that American democracy is in danger if the interpretation of the law is placed at the mercy of the President, allied with a temporary majority in Congress. To those who recollect that the law and constitution of Great Britain can at any time be changed by the Executive and the Legislature (who are, always, by definition, in agreement), such arguments may seem to be foolishly exaggerated. But they carry great weight in the United States and the tide is running with some strength against the President's proposals. He has also been forced to incur the political disadvantages of intervening in the steel strike which is raging in the Middle West. In an American strike, especially a steel strike, both sides use illegitimate weapons and attempt to gain their ends by violence. The law, or at least the Courts, can usually be found on the side of the employers. But the Wagner Act, which is interpreted not by the Courts (in the first instance), but by the National Labour Relations Board, is, both in drafting and even more in administration, favourable to the unions. There is, accordingly, a conflict of jurisdictions between judicial or semi-judicial bodies, each of which, in practice, takes sides. In these circumstances the Government, when it intervenes, is almost forced to be, or to seem, prejudiced on one side or the other. It cannot, at least, take its stand on respect for an impartial law. In the present instance, both the local Governors and the President have sided with labour. The steel companies wished to open their plants, by force if need be, but they have been prevented from doing so by the request of the President and by the proclamation of martial law by the Governors of Ohio and Pennsylvania. The announced, and doubtless sincere, motive of these interventions was to avoid

violence. But the strikers received the news with shouts of "We have won the strike!" and all those who are suspicious of militant labour are correspondingly embittered against the President.

The Religious Conflict in Germany.—The struggle between Nazidom and the churches has never ceased since Herr Hitler came into power. For weeks past Dr Goebbels' indefatigable Propaganda Ministry has now been engaged on a vast campaign of calumny against individual members of the Catholic clergy. They are accused, for the most part, either of sexual immorality or of financial corruption. Their calumniators' notion seems to be that it does not much matter how many of these lies are disproved so long as enough of them are launched for a certain number of false charges to stick. It is by no means certain that they do stick. The effect may rather be to make the German public uncritically incredulous of any and every imputation on the clergy's virtue. This drum-fire of defamatory propaganda is believed to portend some new series of positive acts; and this seems to be the expectation of the Vatican, to judge by the terms of a recent address by the Pope to a party of pilgrims from Germany. The Nazis are also palpably aimed at in the strictures—nominally directed against the Bolsheviks—that are contained in a recent Apostolic Letter from the Pope to the Cardinal-Archbishop of Poznan, an ex-Prussian province of Poland. And Germany, as well as Spain, is reported to have been on the agenda of a meeting of the Congregation of Extraordinary Ecclesiastical Affairs which was held at Castel Gandolfo last Sunday. Meanwhile, some fresh blows have been struck against the Confessional Movement among the German Protestants. In Berlin, Dr Jakoby and other prominent Confessional pastors were arrested on the 15th; and next day the Ministers for the Interior and for Church Affairs issued jointly a decree which may have the effect of depriving the Confessional Movement of the funds which it has been raising by subscription among its supporters for the training of candidates for ordination. "We imitate Italy and the result is Russia." This German dictum on National Socialism is true—in the religious sphere, as well as in others.

The Little Entente Conference.—The periodical conference of the statesmen of the three states members of the Little Entente was held last week on board ship in the Danube, where the river runs between Roumania and Yugoslavia. This time all three Prime Ministers were present. The original purpose of the Little Entente was the maintenance of a united front *vis-à-vis* Hungary; and the solidarity of the three countries in this respect has been expressly re-affirmed. In particular, they have agreed to deal only jointly, and not separately, with Hungary over Hungary's claim to be entitled to re-arm on the precedent of her ex-allies, Germany and Austria. In itself, this policy of solidarity in face of Hungary is neither unnatural nor illegitimate. It is only to be hoped that, in the compromise between the respective policies of the three Governments towards Hungary, the most and not the least liberal of them will prevail. It is also to be hoped that the spectre of a continued encirclement will not deter Hungary from pursuing the new course of reconciliation, and even understanding, with the successor-states. Towards this, indeed, she has latterly been inclining, under the influence of a well-grounded fear that a hegemony of the Third Reich in the Danube Basin might spell the end of the independence of all the Danubian countries, not excluding Hungary herself.

The three Prime Ministers are reported also to have discussed Czechoslovakia's relations with Russia and Yugoslavia's relations with Germany. M. Hodza, for Czechoslovakia, reiterated the non-aggressive nature of the former pact; and M. Stoyadinovitch, for Yugoslavia, affirmed that his government had refused to conclude

a special treaty with Germany, on Herr von Neurath's request when in Belgrade, on the same lines as the Yugoslav-Italian pact of last April. The Roumanian government has authorised an extraordinary 430 million lei credit to begin work on the new Salva-Vizen line to the Czech frontier. This credit is to come from a loan of Kc. 95 millions for that purpose from a semi-state Czech bank, and is in accordance with the terms of the special agreement between the two governments on July 14 of last year. The reorganisation of the Roumanian army is also now rapidly and efficiently progressing, especially in mechanisation and speedy transport. M. Hodza took occasion in Bucharest to make contact with the leaders of the Roumanian Peasant Party; and it seems that the Roumanian government is now firmly set against the Iron Guard. The main effect of the Little Entente statesmen's visits and meetings seems to be an encouragement of the general move towards an understanding between their countries, Hungary and Bulgaria.

A Rising in Turkey.—Last week it was revealed at Angora that within the last three months a successful campaign, on a considerable scale, has been conducted by the Turkish Government against the Kurdish tribesmen in the Dersim district. These Dersim highlands, which lie between the two branches of the Upper Euphrates, are exceptionally trackless and inaccessible. The Kurdish inhabitants are correspondingly backward; and it was the resistance of these antediluvians to President Kemal Atatürk's reforms that was the cause of a conflict which has engaged 30,000 Turkish troops as well as a detachment of the Turkish air force. What has happened is not surprising. The post-war reforms in Turkey have been so rapid and so sweeping that the Turkish peasantry of Anatolia, west of Euphrates, have been left gasping; and the Kurdish tribesman to-day is still about as far behind the Turkish peasant as the Scottish highlander was behind the English yokel down to 1745. The writer can remember vividly the spectacle of the Kurdish deputies in the Turkish Parliament at Angora in the spring of 1923. Wearing their national dress, unmistakably bewildered by the parliamentary business in which they were deemed to be taking part, and with their legs curling up, unconsciously, till they were sitting cross-legged on their chairs (a most unparliamentary posture), the poor Kurds were then already obvious fish out of water in a Turkey which had elected to go modern overnight. Trouble was almost bound to follow, and the first Kurdish revolt—half tribal and half religious—broke out and was suppressed in 1925. In the circumstances, the Turkish Government is probably bound to use the strong hand. But this can hardly be the end of the story; for the Kurdish districts cover not much less than one-third of the present territories of the Turkish Republic; and as law and order prevail there these will bring in their train an increase of Kurdish prosperity, Kurdish population and Kurdish nationalism. It is to be hoped that the Turkish Government will be content with reducing the Kurds to obedience without attempting to use the same high-handed methods for the more dubious purpose of denationalising them.

Labour Standards.—The Government was attacked by both the Labour and Liberal Opposition in the debate on the Ministry of Labour Vote on Wednesday for having failed to support the International Labour Office and to ratify its conventions for the improvement of working conditions. The debate which ensued was unworthy of the subject. Mr Herbert Morrison, moving the reduction of the Ministry of Labour Vote by £100, alleged that the Government's attitude to the I.L.O. and its recommendations had been backward and obstructive. Since 1932 they had failed to ratify conventions about hours in mines and glass factories, holidays with pay and minimum wages. In particular they had recently led the opposition to the general introduction of the forty-hour week by international agreement.

Mr Morrison's charges were made with much rhetoric and little sense of the economic difficulties and problems involved; while Mr Ernest Brown's reply was lame, evasive and unconvincing. He cited an unimpressive list of cases in which conventions had been ratified; pointed out that British ratifications were always operative; and dismissed the forty-hour week as a slogan and "almost a theological faith." Apart from some cogent and opportune words by Miss Cazalet about the shabby treatment of unprotected domestic servants, the debate was useful only because it uncovered a dilemma which still underlies our national policy of industrial regulation. If the Government opposes further improvements in hours, wages and working conditions because they would leave our industries open to severe international competition, would not the obvious mode of procedure seem to be by international agreement at Geneva? Is it that the Government, bearing in mind that to date Spain has recorded the highest number of ratified conventions, cannot trust other countries to keep their promises? Or have the Government real and cogent economic reasons? If so, they should adduce them.

Current Monetary Policy.—A memorandum prepared by Professor T. E. Gregory for the Berlin Congress of the International Chamber of Commerce examines the provisional character of monetary thought since 1929. For a time, he points out, there was an exaggerated belief in the virtues of exchange depreciation, and a consequent intensification of protectionism and autarky. Practice, however, outran confused theory, and a move to stabilise the chief exchanges began. The dollar price of gold was fixed in 1934, and in September, 1936, the Tripartite Agreement embodied the intention of Great Britain, the United States and France to maintain the greatest possible equilibrium of the international exchanges. Professor Gregory suggests, however, that a number of theoretical and practical difficulties still remain in this provisional period of flexible parities. Some people wish to preserve purely provisional currency parities indefinitely because they believe that the equilibrium of the balance of payments is always liable to be upset by "economic weaknesses"; cash reserves are low, borrowed reserves are at dangerously short-term, and export surpluses are hard to establish and maintain. Moreover, some countries have fixed a rigid price and production structure by autarkic planning, and their currency policies must be subordinated to their political pre-occupations. Consequently, all we can say is that "until the limits to which self-sufficiency and planning will be carried can be determined, the task of deciding what form of currency organisation can be finally adopted cannot be undertaken." We must wait and see; and meanwhile we are encouraged by the fact that the cessa-

tion of competitive exchange depreciation has modified the urge towards protectionism and autarky.

Having lucidly stated the implications and difficulties of the present situation, Professor Gregory goes on to discuss the special problems of gold, exchange equalisation and exchange control. The world has not in any sense "abandoned" gold, and the special task of adjusting price levels to the increase in the value and volume of gold supplies since devaluation still remains. He argues that the ruling flexible parities impose a special obligation on governments to conduct their gold policy to cause the minimum of disturbance. The United States, in his view, should preferably pursue a policy of sterilisation, tariff reduction and increased foreign lending. Professor Gregory deprecates the division of function between Exchange Equalisation Accounts and Central Banks; and suggests that the problem of exchange controls which threaten to destroy the elasticity of international trade can only be solved by currency devaluation—since they owe their origin to an unsuitable relationship between local and world price levels. The outlook is uncertain, and this survey is excellent; but Professor Gregory sees rays of hope. There is a common interest in the expansion of world trade; and co-operation between central banks is more active now than it has ever been before.

Trend of Prices and Production.—A period of expansion in business activity is often, but not invariably, accompanied by rising costs and wholesale prices, but a downward trend of activity is always associated with falling prices. During 1928-29, when industrial production was rising, wholesale prices were falling. In 1930-32, both production and prices were falling. The diagram below shows changes in *The Economist's* indices of wholesale prices and business activity since January, 1932. Changes in the component series of the

WHOLESALE PRICES AND BUSINESS ACTIVITY
Based on *The Economist* indices of wholesale prices (complete index) and Business Activity

two indices are shown on pages 19 and 21 respectively of the Trade Supplement to this week's issue of *The Economist*. Between 1932 and the middle of 1936, business activity rose faster than wholesale prices. But as industrial production approached the current capacity of British industry, and as recovery gained ground abroad, especially in the United States, the prices of internationally traded primary products and British internal costs showed a pronounced upward trend. Since March, however, the prices of primary products have shown a marked decline, reflected in the fall in *The Economist* index of wholesale prices. This decline in raw material quotations is, as yet, no more than a

corrective to the previous upward rush and has not been accompanied by a fall in the industrial costs of converting primary products into finished goods.

Industrial News.—The latest reports from the principal industrial centres on pages 769-772 are still fairly encouraging. The scarcity of iron and steel continues to hamper progress and, as our Glasgow correspondent points out, the position in that centre is serious. Capacity is being increased, one of the latest schemes being that for Jarrow discussed on page 725. The Government's iron and steel import policy was severely criticised this week by Mr. H. Donald Hope, Chairman of Henry Hope and Sons, a company engaged in the manufacture of metal windows. Mr. Hope pointed out that his company is unable to obtain sufficient supplies of rolled steel sections—the principal raw material—from English rolling mills and from the Continental cartel. As a precaution against a partial closing of the factories, his company had been obliged to place considerable orders with mills in the United States. But as American steel is subject to a duty of 33½ per cent., against 10 per cent. payable on imports from the cartel under quota certificates, Mr. Hope rightly declared that "there is something wrong in these arrangements for the protection of steel in Great Britain which compels a firm . . . to pay so heavy a duty as 33½ per cent. on the only material available." Meanwhile Mr. Stanley, in answer to a question by Miss Wilkinson in the House of Commons last Tuesday, pointed out that he was arranging to publish the report of the steel inquiry "as soon as possible." Activity in most branches of the engineering industry continues to expand, but the industry is faced with a demand for an increase of wages by twopence per hour. Coal production is well above the level of a year ago, output during the week ending June 12th amounting to 4,807,000 tons, against 4,521,000 tons. New business in cotton and wool textiles remains limited, but owing to the firmer tendency of raw wool prices, orders are expected to increase during the next few weeks.

The Australian Basic Wage.—The Arbitration Court of the Commonwealth of Australia has this week given a unanimous award, affecting fifty-three unions and involving an average increase of 5s. a week in the basic wage. The annual gain to the body of Australian wage-earners is estimated at £6,250,000, of which perhaps one-third will be payable by the Commonwealth and State Governments. But the importance of the award does not lie only in its amount and in the burden it imposes on industry and on Budgets which can with difficulty be balanced. In effect, a new principle has found its way into the basic wage system. The original meaning of the basic wage was a minimum living standard—the lowest wage payable to an unskilled labourer on the basis of the normal needs of "a human being living in a civilised community." This definition has no relation to the capacity of industry to pay. In 1931, however, an all-round cut of 10 per cent. was made, for no other reason than the inability of industry to pay more; and in 1934 a new consolidated basic wage scale was awarded, avowedly founded on the condition of Australian industry at that time. The present award goes still further in the same direction. In the first place, the additions of 4s. to 6s. to the weekly wage (according to location) are not variable with the cost of living, as a minimum living wage must logically be, and as the whole basic wage has been hitherto. In the second place, the wage is now effectively varied according to the differing circumstances of the States, not according to the differing needs of their citizens or the differing degrees of "civilisation" they have attained. The whole award is based on an optimistic view of the economic condition and capacity of Australia, which, in the Court's opinion, had reached pre-depression standards, with the extra advantage that the country no longer relied on external borrowing.

United States

Strikes and the Boom

NEW YORK, June 15.—Emphasis upon the significance of the current strikes is fully justified; but there is some danger of exaggerating their immediate economic significance. After two years of general tranquillity, we have for six months experienced an almost continuous succession of major strikes. Beginning with the maritime strike, the movement passed to the motor industry and its branches, and now into the steel industry. There have been plenty of scattered strikes in other industries, small and large; but they were on the fringes of the main movement. The maritime strike almost completely suspended sailings of American salt-water shipping—but not quite. The motor industry was not completely shut down at any one time—the Chrysler strike came after the General Motors strike. In the same way, currently, a large part of the steel industry continues uninterrupted operation although important units are partly or completely closed.

While the movement as a whole takes on some of the aspects of a general strike, it has so far not produced any such synchronous suspension of operations as occurred in France in June 1936, and is even less like the British general strike of 1926. Whether the method is the consequence of strategy or accident must be left to conjecture, but the consequence is that we have had something in the nature of a general strike, over a period of about six months to date, and during that time industry has maintained a very high level of activity, by any standard of comparison. It is only in the last few days that any statistical evidence of recession could be cited, and even this cannot with any certainty be attributed to strikes. It is true that the decline in steel output is a direct reflection of "the shut-downs"; but seasonal influences are adverse, and it must be remembered that the fading out of our mid-winter seller's market might of itself be expected to account for some slackening toward mid-year.

Violence in Michigan

While minor strikes have occurred everywhere, the focus of the spring strike disturbance has been in the industrial middle-west, and conspicuously in the state of Michigan. The industrialist elsewhere has had troubles of his own, but they have not been nearly so acute; and he reads of the siege of Monroe, Michigan, with something of the sense of remoteness with which the British industrialist reads of the siege of Bilbao, Spain. The distance between Maine and Michigan is comparable to that between, let us say, Lancashire and Catalonia.

At the moment the siege of Monroe, Michigan, occupies the headlines. Monroe is a small city of perhaps 20,000, with paper making as its principal industry. There is also a small steel mill, employing something over 1,000 persons. The employees of the mill took a strike vote under the auspices of the local clergy, and by an overwhelming majority decided not to strike. The strike was called, however, and the mill picketed. The picket line was rushed in a fracas in which gas was apparently used on both sides, and the mill re-opened. The Committee for Industrial Organisation then called for volunteers in nearby cities to move on Monroe; and, according to the press, intended to mobilize 10,000 men. At this, the Mayor of Monroe armed a number of deputies, and out-posted his town. A prospective battle was averted when the Governor of Michigan dispatched several companies of the National Guard to the scene and the prospect of an armed encounter receded. This episode has

filled the papers for several days without ever seeming to become quite real, at least to persons living so far from the front as New York. It illustrates, however, the trend in the direction of increased violence.

Huge Gold Imports

The foreign trade figures for April showed a moderate decline in imports, suggestive of less intense demand in our economy. Exports, however, increased, but not sufficiently to balance imports; gold imports rose, to the almost incredible figure of \$216 million, but silver imports were again relatively negligible.

FOREIGN TRADE OF THE U.S.
(\$000,000)

	Merchandise Imports	
	1936	1937
March	199	308
April	201	287
Four months ended April	782	1,122
	Merchandise Exports	
	1936	1937
March	195	256
April	193	269
Four months ended April	768	980
	Net Gold Imports	
	1936	1937
March	— 16	154
April	28	216
Four months ended April	53	613

The magnitude of the visible adverse balance is apparently increasing. Furthermore, during two months of the period, our security market was not conspicuously attractive, and there were rumours of foreign liquidation, and even of repatriation. One might infer, however, that foreign balances continue to accumulate. It occasioned no surprise when, in his recent tax message, the President dwelt at some length on the old theme of "hot money," although the emphasis was new. No new tax legislation has yet been introduced but the hearings will open presently, and it is considered likely that taxation of non-resident alien security holders will be increased, with 20 or 25 per cent. as a likely figure. Apparently the 10 per cent. tax is proving fairly easy to collect and is yielding a satisfactory return. From the message it would appear that the hope of devising a tax on capital gains has not been entirely abandoned; but practical methods of collection are not easily suggested.

France

Prospects for the New Cabinet

PARIS, June 24.—M. Blum was not thrown down by the Senate. He resigned at the eleventh hour before the opening of the Stock Exchange, which otherwise would have condemned him. But the Government of the Popular Front, which had already obtained plenary powers from the Chamber, was not disrupted. There are still unsolved conflicts: liberty against autarky, Senate against Chamber, and capital against labour. If capital or labour now strike, the matter will have to be dealt with by a second Cabinet of the Popular Front, which will try to practise an effective "pause" in reform and expenditure. This Cabinet will be presided over by a Radical-Socialist, M. Chautemps, with M. Blum as Vice-President. The resignation of M. Blum and the arrival of his successor have taken place amid the greatest calm. M. Doriot, the leader of the anti-Communist group, was beaten in the St. Denis election, on the same day as M. Blum was defeated in the Senate.

The difficulties are just beginning. The actual distribution of the Budget shows the gravity of these difficulties: some 21.30 per cent. of the total goes to debt charges, 20.32 per cent. to pensions, 26.95 per cent. to re-armament and 31.43 per cent. to administration. The Treasury has been spending at the rate of 80,000 million francs a year, while it receives only 40,000 millions. Two years ago, Parliament, faced with a similar disequilibrium, voted against the abandonment of the gold bloc, just as yesterday it voted against measures of coercion. To-day the Equalisation Fund has lost its gold, and the Treasury needs nearly 20,000 million francs before the end of the year. A vast programme for financial and economic recovery must be begun, which will entail new sacrifices from labour and capital. Economies and increased taxes and tariffs are not improbable, but the immediate sums must be still obtained from loans, with perhaps a new monetary operation which must, however, respect the Tripartite Agreement. Will the exported capital now return? The new Cabinet offers investors the caution of a Liberal, M. Georges Bonnet, as Minister of Finance; and he will be assisted by M. Brunet, who has been recently charged with the preparation of the Bill to reorganise public credit.

But, in any case, it appears that plenary powers will be necessary. On the other hand, business activity is greater than a year ago. And if some revision of the social reforms were accepted, now that unemployment has fallen to 330,000, the lowest since 1934, the yield of production could be improved. If French prices could be lowered and if the present business activity could be maintained, new opportunities of putting matters right might be open to the new Cabinet. If not, then the extremists will consider that it has been proved that no constructive policy is feasible within the present framework of liberty; and it will be impossible to oppose measures of coercion. This is the lesson of the recent crisis, and opponents of any slackening of social reform may be ready to make concessions lest worse befall. The Socialists have already shown their realisation of this by deciding upon loyal co-operation with the new Cabinet.

The Course of Foreign Trade

Imports in May were valued at 3,050 million francs, and exports at 1,758 million francs, so that the import surplus was 1,292 million francs.

	FOREIGN TRADE			
	In Francs (000,000 omitted)	In Tons (000 omitted)		
	April, 1937	May, 1937	April, 1937	May, 1937
Imports:—				
Foodstuffs	830	759	515	412
Raw materials	1,986	1,839	4,215	3,974
Manufactured goods	481	452	223	165
Total	3,297	3,050	4,953	4,551
Exports:—				
Foodstuffs	277	255	89	73
Raw materials	735	621	2,257	2,166
Manufactured goods	961	882	255	219
Total	1,973	1,758	2,601	2,458
Import Surplus	1,334	1,292	...	...

Imports and exports were lower in value than in April. Compared with May of last year, the volume of imports has increased, but the volume of exports has fallen. The volume of manufactured goods exported has increased from 167,930 tons to 219,187 tons. The import surplus has fallen from 1,546 million francs in January to 1,390 million francs in March, 1,324 million francs in April, and 1,292 million francs in May.

Compared with the figures of 1936, imports for the first five months of the year have increased in volume from 19,632 tons to 24,214 tons, while the volume of exports has fallen from 12,289 tons to 12,114 tons. The increase in imports of raw materials was particularly important; imports of coal were 15,700,000 tons against 11,842,000 tons a year ago. In value imports rose from

10,118 million francs to 16,575 million francs, and exports from 6,049 million francs to 9,038 million francs. Imports in the first five months of 1937 from the colonies rose from 2,769 million francs in value to 3,838 million francs, while exports to them have increased from 2,027 million francs to 2,690 million francs.

Germany

"Tu l'as voulu, Georges Dandin!"

BERLIN, June 22.—Official investigations recently revealed that 80 per cent. of textile shopkeepers in a West German province were violating the rules for calculating prices. There is no ground to think, comments an authoritative financial journal, that the number of offenders in this particular province is abnormally high. "A comprehensive test in other districts would yield the same result." The journal cited is usually regarded as a mouthpiece of Dr Schacht; and it is not more outspoken than Dr Schacht himself, who described "the bureaucratisation of our economy" as "hideous" (*scheusslich*). The case in question, it is implied by his journal, is merely one more confirmation of the proverb "the more laws, the more lawbreakers"—and the more punishments. The 80 per cent. of shopkeepers, adds the journal, had of course to be punished. For legal reasons punishment is inevitable even when "from the economic viewpoint many of the acts and omissions of much-occupied business men are innocuous."

It is now virtually impossible for a German business man, or indeed for any German, to perform any economic act, without risking punishment. The trouble lies not merely in the universal permit system, which at least requires initiative or activity in the offender, but equally in the universal obligation to register, or report (*anmelden*) which a citizen may violate even when he lies in bed reading detective stories. The condition not merely of active but also of passive existence is the *Wenn Ihr mir die Erlaubnis gebt* of Goethe's Devil. This is a consequence of what Dr Schacht's organ calls "the daily paper war, the accumulation of ministerial decrees, ordinances, and rulings." That the meaning of these is unclear "even to the professionally expert officials of the departments," is proved by proceedings before the highest courts.

The rich business concerns, which like the government can employ professional experts, themselves unwittingly violate the laws and regulations. It has been stated that one great bank, which pays several hundred foreign-exchange experts for this branch of work alone, almost daily to its surprise discovers that it has broken the law, and has duly to confess to the Reichsbank; and that the Reichsbank, being itself only professionally expert, often cannot determine in what way the law has been broken. In such conditions the small man has no chance at all. In the case above mentioned "the trapped merchants mostly affirmed that they did not know the regulations exactly." How could they know them, asks Dr Schacht's organ, when the regulations about shop competition, which are merely one branch of much wider retail-trade regulation, fill 700 pages?

To the critic who asks why such "hideous bureaucratisation" so far from being abolished, daily waxes in enormity, Dr Schacht's organ makes the crushing retort, "Tu l'as voulu, Georges Dandin!" The 700 pages of regulation, it remarks, were compiled at the wish of the shopkeepers themselves, in their "aspiration to prevent even the smallest injustice or inequality." It would seem that this aspiration will be fulfilled when one hundred per cent. of the shopkeepers instead of a mere 80 per cent. are justly and equally in gaol.

Disappointing Trade Returns

The foreign trade report for May is disappointing. True, the very sharp decline in exports by Rm. 36 millions compared with an increase of Rm. 6 millions in May, 1936, was in part a reaction after the abnormally large advances in exports last March and April; and in some respects the movement of trade in May

was seasonal. But since the era of passive balances terminated in the middle of 1935, every month the export surplus has been greater than that of the corresponding month of the preceding year. And now to this rule May is an exception, the export surplus being only Rm. 9 millions compared with Rm. 35 millions in May, 1936. Despite heavy deliveries of cereals, imports as a whole fell very sharply, but still remained one-third larger than last year. Exports, which in April were valued at Rm. 492 millions, against Rm. 366 millions in April, 1936, fell to Rm. 456 millions.

Imports in all the chief groups of commodities, and from most countries, declined. The fall in imports from Great Britain and from the South-East European countries was particularly sharp. The decline in exports was also spread over all the chief groups, but was greatest in industrial finished articles; and here also deliveries to Great Britain show the greatest decline. In the first five months, the trade balance with the United States was almost in equilibrium, whereas exports to Russia exceeded imports by 350 per cent. In May iron and steel exports increased despite the domestic shortage. The export surplus for the first five months of 1937 was Rm. 215 millions, against Rm. 121 millions in the same months of 1936.

Imports	Millions of Marks		
	April	May	Jan.-May
I. Foodstuffs	181.3	169.4	745.7
(a) Livestock	7.1	6.3	39.9
(b) Animal foodstuffs	41.1	37.0	188.5
(c) Vegetable foodstuffs	105.0	99.2	387.7
II. Industrial goods	291.2	273.7	1,250.1
(a) Raw materials	173.3	164.9	752.5
(b) Semi-manufactured	84.3	79.5	350.1
(c) Manufactured	33.6	29.3	147.5
Total	476.7	447.3	2,015.6
Exports	Millions of Marks		
	April	May	Jan.-May
I. Foodstuffs	8.3	6.3	37.6
(a) Livestock	0.4	0.2	1.5
(b) Animal foodstuffs	0.6	0.6	3.2
(c) Vegetable foodstuffs	4.6	3.2	19.5
II. Industrial goods	483.3	449.4	2,192.4
(a) Raw materials	48.5	45.0	213.3
(b) Semi-manufactured	44.5	42.1	208.4
(c) Manufactured	390.3	362.3	1,770.7
Total	491.8	455.8	2,230.6

The Customs report for 1936 shows that 56 per cent. (by value) of all imports was duty-free, this consisting almost entirely of raw and semi-finished materials. In consequence of declining dependence on foreign foodstuffs, an ever greater proportion of the Customs yield comes from industrial materials and products.

The Reich Debt on March 31st is returned at Rm. 16,058 millions compared with Rm. 14,372 millions in March, 1936. Foreign indebtedness declined in the twelve months from Rm. 1,678 millions to Rm. 1,442 millions, partly because of the gold-bloc devaluations. The home long- and medium-term debt (other than valorised pre-stabilisation liabilities) rose from Rm. 6,030 to Rm. 8,611 millions; this was due to new consolidation loans. The short-term debt declined only from Rm. 2,899 to Rm. 2,383 millions. Tax-credit certificates and other divulged debts not in the above grand total amount to Rm. 937 millions against Rm. 1,366 millions in March, 1936. No new information has appeared as to the special-bill debt for re-armament and the financing of work-creation.

Austria

The Recovery of the Credit-Anstalt

VIENNA, June 20.—Six years ago the collapse of the mighty Credit-Anstalt initiated a disastrous period in the financial organisation of the world. For Austria, it meant the collapse of her financial position in Central and South-Eastern Europe and a cruel awakening to the sober fact that she had been deprived of capital and

credit and reduced to poverty by the last war and its sequels. In its wake followed the decadence and disappearance of the powerful democratic parties, the Social Democrats and the Social Catholics, and the establishment of a special and unique form of government in which dictatorial authority maintains the principle of democracy.

The economic effects of the failure of the Austrian Rothschild-bank were not limited to the circle of its shareholders and creditors. The Credit-Anstalt had previously amalgamated a great number of big Austrian banks, the Anglo-Austrian Bank, the Union Bank and the Boden Creditanstalt, partly overestimating her own strength and, in the case of the last named institution, under official pressure. The whole economic system of Austria, financially and socially, was dependent on the maintenance of the Credit-Anstalt. Thus the problem of the Credit-Anstalt has ever since been rightly regarded as a political matter of the first importance, justifying heavy sacrifices of public funds, official guarantees, exceptional claims on the Nationalbank and also the concessions repeatedly made by the creditors.

Even in Austria the trade cycle is now moving upwards and it seems that the lean years are over for the Credit-Anstalt, too. The balance sheet for 1936, just published, reflects the great progress the bank has already made. Internal financial adjustments have been made, a profit has been earned, and the bank can now expect to pay dividends and to regain her position on the international credit market.

Reducing Liabilities

Through the swallowing of many other banks, the Credit-Anstalt not only accumulated debts, which remained long after her own debtors had become insolvent, but also a heavy charge for pensions. Even the reconstructed bank, after drastically reducing the rights of her pensioners, was saddled with a yearly payment of more than 11 million schillings for pensions. The first step to reduce that charge was taken in 1935. In the agreement of the Credit-Anstalt with the foreign creditors the Government had undertaken to indemnify the foreign creditors for the so-called "live claims." The management of the Credit-Anstalt redeemed the Government's promise by paying 60 million schillings cash to the foreign creditors, taking in exchange the same amount in 4 per cent. Government bonds, which the Credit-Anstalt deposited in her pension fund.

But the management was still faced with the task of covering the extraordinary expenditure of 60 million schillings. They could bring it forward as a fictitious asset, they could choose to amortize it out of their annual profits, which would have taken ten or fifteen prosperous years, or they could eliminate the liability by reducing the share capital. The management has chosen the last way. They have approached the Austrian Credit-Anstalt International Committee in London which represents the holders of the preference shares, and have arranged to

Family provision scheme

A scheme to secure a Capital Sum payable at death and a regular income over a period of years for dependants in the event of early death, at a cost which is little more than that of ordinary life assurance. It is readily adaptable, and rates will be quoted on application for policies to suit the needs of each individual.

Write for prospectus to the Manager

EQUITY & LAW
LIFE ASSURANCE SOCIETY
18 Lincoln's Inn Fields, W. C. 2
Established 1844 Funds exceed £25,000,000

reduce the share capital from 167 million schillings to 101 million schillings, by reducing the ordinary shares by 50 per cent. and the preference shares by 25 per cent. The holders of preference shares are to be indemnified with sinking certificates yielding 5 per cent. annually. The interest on the sinking certificates (*Tilgungsschein*) is payable only after a dividend of 5 per cent. has been paid on the reduced preference capital, if any profit then remains. The certificates are redeemable by a yearly payment up to 2.5 million schillings after a dividend of 5 per cent has been paid on the preference shares, the certificates and the ordinary shares, if any profit still remains. Should it be possible to pay 5 per cent. dividend on both categories of shares and on the certificates for three years in succession and to redeem 50 per cent. of the certificates, then all shares are to be unified. By reducing the share capital in this way the liabilities are lessened by 66 million schillings, which together with another 30 million schillings brought into the account of the pensions fund, will build up a capital to cover the total pensions of the Credit-Anstalt, without further claims on the profits.

Writing down the whole loss of 4.9 million schillings caused by the devaluation of foreign currencies in 1936, the net profit of 1936 amounts to 4,664,000 schillings. Nevertheless, the management do not propose to pay a dividend for 1936. They expect that the economic situation of Austria and the changes in the share capital of the bank will make a dividend possible for 1937, the first year whose profits will not be earmarked for the burden of pensions. It is a good omen that the Credit-Anstalt was able to grant about 1,000 new credits in 1936 amounting to a total of nearly 70 million schillings.

Italy

Prices and Wages

TURIN, June 9.—The new monthly bulletins of the Central Statistical Bureau provide some valuable information, although, unlike the previous series which ended in October, 1935, the new one for May, 1937, includes no figures for banks of issue or about public finance. In general the indices point to rising activity. The index of raw material imports, which fell as low as 33 in 1936 (1928 = 100), stood in May at 67.3. The index of manufactured exports, which declined to 30.6 in 1936 (1928 = 100), stood in May at 60.2. There has, of course, been a considerable rise in wholesale prices which must be taken into account.

INDEX OF WHOLESALE PRICES (1928 = 100)

	1934	1936	September, 1936	April, 1937
Raw materials:—				
Food.....	58.8	77.7	79.8	86.7
Others.....	47.5	65.4	64.1	88.7
Semi-finished goods.....	66.6	89.7	86	99.1
Finished goods:—				
Food.....	64.9	73.5	74.8	79.9
Others.....	57.2	71.3	71.5	82.7
General Index.....	62.0	76.4	76.9	86.1

Prices had already risen above the lowest point reached in 1934 before the alignment of the lira in September 1936. The rise was absolutely and relatively more marked in the price index for production goods (from 79.7 in 1934 to 114.2 in April 1937, or 43 per cent.) than in the index for consumption goods (from 60.4 to 82.6, or 36 per cent.).

A comparison between the cost of living, according to the general national index, and industrial and agricultural wages is as follows:—

(AUGUST, 1934 = 100)

	1935	1936	Dec., 1936	Feb., 1937	April, 1937
Cost of living index.....	104.2	112.1	116.0	117.2	118.4
Hourly wages:—					
Agriculture.....	101.8	101.8	105.4	...	...
Industry.....	102.3	107.0	105.8	104.1	...
Number of workers employed.....	115.5	113.9	111.1	111.2	...

The index of wages does not yet include the eight to ten per cent. rise given in April. Moreover the increase in the number employed should counterbalance the rise in the cost of living, so far as family budgets are concerned.

Heavy Import Surplus

While the index of import values has risen from 38.9 to 61.2 (1925 = 100), the index of export values has only risen from 33.2 to 45.4. The import surplus in the first four months of 1937 was valued at 910.6 million lire against 659.2 million in the same period of 1936. The 1936 harvest was poor, and wheat imports in the first four months of this year were 779,868 tons, against 104,598 in the same months of 1936. The value rose from 45.4 million lire to 620.2 million lire.

Under the present conditions of compensated exchanges, quotas, clearings, etc., foreign trade is governed by peculiar rules. It may be useful to give a few representative figures of Italy's trade with different countries:

	1935		1936		First four months 1937	
	Im-ports	Ex-ports	Im-ports	Ex-ports	Im-ports	Ex-ports
<i>Europe</i>						
(In million lire)						
Albania.....	18.2	22.1	28.3	29.8	18.5	10.6
Austria.....	272.2	134.2	368.8	191.3	223.6	82.2
Czechoslovakia.....	105.3	77.8	49.4	58.4	72.3	43.5
France.....	470.8	305.0	127.6	194.2	123.8	163.9
Germany.....	1,427.2	850.6	1,584.1	1,061.0	740.9	455.0
Great Britain.....	568.1	430.7	51.5	155.4	98.8	197.0
Greece.....	30.9	37.8	6.6	12.3	16.4	23.3
Jugoslavia.....	197.0	101.0	68.3	45.0	70.7	77.7
Roumania.....	241.0	67.0	220.9	20.4	124.9	29.7
Spain.....	111.1	93.4	44.4	12.9	41.8	14.1
Switzerland.....	246.5	337.6	231.4	340.5	81.8	154.2
U.S.S.R.....	184.3	55.9	154.8	91.9	35.6	7.3
Hungary.....	154.3	80.2	219.6	112.4	138.3	62.4
<i>Mediterranean Basin</i>						
Egypt.....	137.1	96.8	85.8	93.8	80.1	79.7
Tunis.....	74.4	19.7	34.0	12.9	22.1	7.3
<i>America</i>						
United States.....	879.1	422.0	892.4	546.9	465.9	265.1
Canada.....	28.4	20.1	33.1	14.2	19.2	10.9
Argentina.....	295.0	162.0	178.5	158.2	344.9	86.3
Brazil.....	105.6	62.6	136.3	62.1	57.2	19.2
<i>Asia and Africa</i>						
British India.....	230.2	92.3	136.9	49.7	117.4	33.6
Union of South Africa.....	76.4	41.3	27.9	17.5	29.8	29.4

Except for France, Great Britain, Greece, Yugoslavia and Switzerland, there was a surplus of imports from all the principal countries in the first four months of 1937. As the gold reserve of the Bank of Italy increased in the same period by 1.2 million lire, we must conclude that the tourist expenditure and shipping revenue were sufficient to counterbalance the surplus. Indeed it was officially stated in the Senate that it was even possible to liquidate past commercial debts, such as, for instance, the 150 million lire due to Great Britain.

Financing War

The report of the Governor of the Bank of Italy and the speeches of the Finance Minister have gone far, in spite of the non-publication of the usual figures, to explain how the Treasury managed to surmount the financial problem of the Ethiopian war, and of other exceptional expenditure. Extraordinary revenue, floating debts and other Exchequer means yielded during the thirty-four months from July 1, 1934 to April 30, 1937 a total of 25,288 million lire, which sufficed to meet the excess of total expenditure over ordinary revenue.

The principal items included in the total were:—

	Million lire
(1) Cash premium paid by holders of 3½ per cent. redeemable for conversion into 5 per cent. (included the subscription price for about 1,087 millions new 5 per cent.).....	6,804.6
(2) Sums paid on account of the compulsory real estate 5 per cent. loan.....	5,376.4
(3) Treasury bonds and bills and other advances (exclusive of 1,087 millions new 5 per cent., as above).....	6,807.0
(4) State notes issued.....	1,350.0
	20,388.0

Greece

Agricultural Debt Relief

ATHENS, June 10.—The law promulgated recently to regulate agrarian loans was the last in a series of steps which had been taken since 1917 to relieve indebted farmers. The total amount of these debts is estimated at Drs. 10,000 millions in round figures, divided as follows: Drs. 1,150 millions due to the now dissolved Refugee Settlement Commission; Drs. 1,250 millions due to the Greek State; Drs. 158 millions due to agricultural co-operatives and other corporate bodies; Drs. 165 millions due to the National Bank of Greece; Drs. 4,830 millions due to various individuals; and Drs. 2,084 owed to the Agricultural Bank. The law stipulates that all farmers' debts in drachmas, or converted into drachmas, incurred or contracted before January 1, 1935, are subject to regulation. Debts due to the State, to the late Refugee Settlement Commission, to the Special Colonisation Fund, to the Agricultural Bank of Greece, and fully secured debts are exempted from regulation.

All overdue interest on the regulated debts is cancelled, and the net capital amount due, plus expenses, is payable in twelve annual instalments, at 3 per cent. compound interest, calculated from January 1, 1937. The first instalment is payable on October 1, 1938. Debtors paying off their debts by September 30, 1938, are entitled to a 30 per cent. reduction. To those discharging them after that date and by September 30, 1939, a reduction of 25 per cent. is accorded. Half of these reductions is allowed to those paying off half of their debts in the stated periods. The debtors are entitled to pay off their debts at any time after October 1, 1939, without reductions.

Apart from the cancellation of overdue interest, the lowering of the interest rate to 3 per cent. (the official discount rate is at present 6 per cent., and the market discount and loan rate 8 to 9 per cent.), and the extension of the period of payment, it is further stipulated that where the total sum of debts of all sorts, including those not subject to regulation, owed by a farmer exceeds 60 per cent. of the value of his revenue-producing movable and immovable property, he is to be considered as "over-indebted." In such a case the excess indebtedness is cancelled, and the loss is sustained proportionately by the creditors whose claims are subject to regulation. Overdue interest on debts due by farmers to the State is cancelled, and the capital is repayable in twenty-five years at 3 per cent. compound interest.

General Regulation of Debt

Another important provision of the law enforces a reduction to 8 per cent. of the interest on all debts—not subject to the present regulation—existing in Greece and contracted before December 31, 1934. If a lower interest rate was agreed upon between creditor and debtor it prevails. This measure, which takes effect retrospectively, was intended to favour those creditors of farmers who are in their turn debtor to other people, to compensate for the sacrifices involved in the regulation of the agricultural debts. In view of the general character of this concession, however, many people will benefit who are not the creditors of farmers.

On the other hand, the commercial banks are called upon to make a double sacrifice, one to the farmers, another to their other debtors. This is particularly true of the agrarian loans of the National Bank, which has organised and developed rural credit in this country, and had been until a few years ago—when, in co-operation with the State, it created the Agricultural Bank—of great assistance to the agricultural classes. With the exception of the reduction of the nominal amount of the debts in case of over-indebtedness, the relief provided by the law is granted without distinction to all indebted farmers, irrespective of whether they are really in need or not. It is, however, true that the majority of peasants are in straitened financial circumstances.

Norway

Freer Trade

OSLO, June 15.—One of the few outstanding events of last month was the renewal of the trade agreement known as the Oslo Convention, according to which the signatories agree to give due notification, not only of forthcoming customs increases but also of trade restrictions of any nature whatsoever which may be contemplated. Positive steps have already been taken by members of the Convention to remove, or at any rate reduce, prohibitive duties on goods exchanged between them. It is an interesting coincidence that this agreement has been effected on the very eve of Anglo-American discussions about a new trade agreement on the same lines.

Our foreign trade continues to expand notably. Imports during April amounted to 131 million kroner against 67.5 million kroner in April 1936, and exports rose from 45 million to 69 million kroner. Compared with March of this year the figures represent increases of 31 million kroner and 7 million respectively. Although the sharp rise in prices is to some extent responsible for these unusually high figures, there has also been an appreciable increase in the volume of trade in a number of articles; in some cases the increase in volume has amounted to about 40 per cent. compared with the same month last year. This is partly because of purchases in anticipation of the trend of prices, but partly also to actually increased demand. About 65 per cent. of imports are articles of production, such as raw and semi-manufactured minerals and metals, machines and ships. This fact corroborates the impression that trade and industry are still expanding. The number of unemployed registered at the public labour exchanges on May 15th was 26,300 against 31,800 a month earlier. The peaceful solution of a number of labour disputes about wages during April and May should ensure stability and give fresh impetus to the favourable development of our trade and industry.

The rapid rise in prices in domestic markets now seems to have been checked to some extent; the wholesale price index of the *Ökonimsk Revue* on May 31st showed a rise of 1.2 points on the month, while the rise from February to March was 5 points. The Government recently gave notice of the redemption of the 5 per cent. Internal Loan of 1922 of which about 86 million kroner are outstanding. Subscriptions were invited for a new 4½ per cent. conversion loan of 87 million kroner. The loan, which is free of redemption for one year and thereafter repayable in the course of 29 years, was over-subscribed by about 4 million kroner. In view of this success, further conversion operations may be expected in the course of the next few months.

The results of the first three quarters of the present Budget year have recently been published, and indicate a surplus over the Budget estimate of 25.5 million kroner for the period. The corresponding figure in the preceding financial year was 21 million kroner. Unlike the active business of the preceding two months, operations on the Bourse during May were only on a limited scale, and there was a considerable set back in the rates for nearly all categories of shares, especially tankers. There was a better tone for bonds, but the amount of business was rather negligible. During the last few days the markets improved considerably, and shipping and whaling shares again attracted interest.

Canada

A New Party in Ontario

OTTAWA, June 8. —The calm which has prevailed in Canadian politics for the past year has been broken by Mr Hepburn, the Liberal Premier of Ontario, who has suddenly renounced allegiance to the Federal Liberal Ministry. The avowed reason is the unwillingness of the King Ministry, which Mr Hepburn derides as a vacillating administration, to support him in his crusade against Mr John Lewis and the Committee for Industrial Organisation; but relations between the two Governments have been notoriously strained for some time past. Mr Hepburn has managed to carry with him the Ontario Liberal Association, and the suspicion prevails that he is involved in an ambitious adventure with the backing of influential business and mining interests, who dislike what they regard as the King Ministry's deplorable apathy about the C.I.O. and the railway problem. It was considered very significant that in the same speech in which Mr Hepburn announced his secession he indulged in a eulogy of Mr Duplessis, the Union-Nationale Premier of Quebec, as a great national figure who should play a larger part in the affairs of the Dominion. Mr Duplessis, who shares Mr Hepburn's views about the C.I.O. and other matters, has apparently made his peace with big business in Montreal. Some people allege that these are the opening moves in a plan to form a new party, led by Messrs Hepburn and Duplessis and backed by big business in Eastern Canada under the label "National." Such a party would pursue very conservative policies, deal sternly with the C.I.O., and if possible amalgamate the two railway systems under the Canadian Pacific Railway management.

The success of such a move is doubtful, because it would be solidly opposed by organised labour; but the King Ministry is now faced with hostile governments in the two central provinces which contain two-thirds of the population. The Federal Government will have to create for itself a new organisation in Ontario, and it will have to meet boldly the challenge now offered by the reactionary courses of Messrs Hepburn and Duplessis and their backers.

In Alberta there have been some interesting developments. The provincial Court of Appeal has upheld the judgment of a lower court which declared that the Alberta Reduction and Settlement of Debts Act was *ultra vires*, and that "interest" was a field into which the Alberta Legislature had no right to enter. In addition, the Alberta Government, having been refused financial aid by both the Federal Ministry and the Bank of Canada, has defaulted on a bond issue of \$1,650,000 which matured on June 1. Furthermore, Major Douglas has declined the invitation to proceed once more to Alberta and assist in working out a scheme of Social Credit, but he has sent one of his chief lieutenants, Mr G. F. Powell, who will arrive this week. To give the Aberhart Ministry

and the Social Credit Board time to confer with him the Legislature was again adjourned till June 14. The situation remains tense; the insurgents in the Social Credit party have not abated their hostility to Premier Aberhart, and the Liberals, who have just elected a new leader, are making preparations for an early general election.

Better Harvest Prospects

The farmers of Eastern Canada have been handicapped by an excess of moisture which has delayed cultivation and seeding. In the prairie provinces the planting of the grain crop is practically completed. The latest crop surveys report that favourable conditions and good growth for the young grain prevail over all Manitoba, northern Saskatchewan, and north-central and northern Alberta, where there have been generous rains; that there has been considerable improvement lately in the situation in southern Alberta; but that the plight of the territory in Saskatchewan south of the C.P.R. main line is again serious through lack of moisture. Taken all round, however, prospects are materially better than they were a year ago; and estimates by American experts forecast the western wheat crop at between 315 and 345 million bushels, which would be at least 100 million bushels more than the yield of 1936.

General Business Conditions

Summerlike conditions now prevail throughout Canada, and business is just about holding its own without registering any advance. The general economic index of the Bureau of Statistics continues to fluctuate within a narrow range, but still remains about 7 per cent. or 8 per cent. above the level at the corresponding date of 1936. Given below are the data of three major components of the index:—

Week ending	Car Loadings	Wholesale Prices	Bank Clearings	Economic Index
May 30, 1936 ...	73.2	71.8	85.4	102.5
May 22, 1937 ...	86.2	85.4	103.9	111.1
May 29, 1937 ...	81.8	85.1	97.4	110.0

There is a good demand for groceries, hardware, and building supplies, and preparations are being made to cater for the largest tourist traffic on record. Iron and steel plants are working close to capacity and textile mills are also busy. Courtauld's Canadian subsidiary have just announced a large addition to their plant at Cornwall, Ontario. The mining interests have been in a depressed mood, but their spirits have now been raised by Britain's decision to fix a price for gold and Mr Roosevelt's reassurances. The newsprint industry continues its progress towards prosperity with rising prices, and firms shipping to the East Indian market have just marked up their prices by some 25 per cent. from September 1st onwards. The Federal revenues are very buoyant, and in the first two months of this fiscal year the yield of income tax was 17 million dollars above last year's figures, and that of customs and excise taxes was up 11½ millions.

Letters to the Editor

N.D.C.: New and Old

TO THE EDITOR OF THE ECONOMIST

SIR,—In your article on the passing of the old N.D.C. you say "we confess to some regret that the principle of taxing high profits as such has vanished"; you have more than once expressed the same view recently. I may, of course, have not interpreted correctly what you have in mind, but if it is that a company's capital is first of all assessed and that then profits over a certain percentage are automatically to attract extra taxation, it seems to me to be open to objection.

A difficulty arises at the start in assessing the capital. "Goodwill" plays a widely differing part in different industries; in some, where open tender to closely defined specifications is general practice, it may be small. In others market connections may be most important, or

where goods have to be taken partly on trust a reputation for a high standard of quality is a valuable attribute. In so far as it exists, "goodwill" clearly has to figure among and be valued with the other assets. But how is this to be done? Much has been written about the valuation of "goodwill," and I will not attempt to discuss it in detail. Mr A. E. Cutforth, for instance, deals with it in his "Methods of Amalgamation." Broadly, the general procedure is to value the tangible assets, assume a 6 to 8 per cent. return on them, and subtract this figure from the average profits actually earned if they are higher. The remaining profits are then capitalised at so many years' purchase (there are many theories affecting the number) and the figure thus capitalised is assumed to be the value of the "goodwill."

From the above it will be clear that it is merely going round in a circle to value a company in accordance with ordinary practice and then to put a special tax on high profits. It may, of course, be argued that "goodwill"

should not be regarded as an asset. It is difficult, however, to see how such an attitude could be justified when it is recollected that large sums of money may have been expended either in a lump sum or over a series of years in developing "goodwill"; that where a company has been sold a considerable figure may have been placed on the "goodwill" asset; and that the ordinary investor in buying shares has taken into account earning power which, in turn, may be partly dependent on "goodwill."

Not only are there objections such as this of a practical nature to the proposed high profits tax, but it would involve some of the objectionable features associated with the first edition of N.D.C. High profits usually arise in one of two ways, either through a whole industry being unusually profitable, or through individual firms earning higher profits than most of their competitors.

As far as industries are concerned, high profits usually occur after a slump and rarely last for a very prolonged period. A high rate of profit in any industry rapidly attracts new entrants who quickly cut into fat margins, as is shown by the recent history of companies manufacturing artificial silk and wireless instruments.

If averaging over a period of years is allowed, few if any high profit industries will be found.

If averaging is not allowed, then one of the chief objections to the original N.D.C. is created.

The second condition under which high profits are earned is when one firm in an industry where profits are normal is earning more than its competitors. It is true that such instances may occur, though whether the period of exceptional prosperity is ever of long duration is doubtful. While it lasts, is there any other explanation than that the management of the concern has been more efficient and enterprising than that of its competitors (e.g. devising new products or patented processes)? Or, it may be that its judgment of the market and of the trend of events has been more shrewd. In any case, it is difficult to see why, if there are two competitive firms each with £100,000 worth of assets one making £5,000 profit and the other £10,000, the second firm, contributing *pro rata* to the finances of the nation, should, in addition, pay a further supplementary tax.

In conclusion, may I suggest that both through the impracticable nature of its calculation and on account of its inequity, a tax on high profits is not a sound method of raising revenue.

L. J. CADBURY.

Northfield,
Birmingham.

[A tax on high profits can be much more easily justified than most of our existing taxes. The ability to pay is unquestioned. As for equity, it is true that continued high profits may be due to superior management. But they may equally be due to good fortune or lack of scruple. In any case, high individual earnings, due to the same causes, are already taxed at a differential rate. Is that inequitable? Finally, there would be little effect on enterprise, since the profits to be taxed, by definition, would be those in excess of the rate to be expected normally. It would be, in general, a tax on windfalls—the fairest of all taxes.]

There would undoubtedly be practical difficulties. If Mr. Cadbury will re-read our article, he will find that we emphasised them, concluding, however, that "the difficulties are more an argument for tackling the job gradually and deliberately than for abandoning it altogether." The treatment of goodwill would be one of these practical difficulties. Where existing companies are concerned, the assessment would be complex, though by no means impossible if the distinction be borne in mind that goodwill which represents development expenditure incurred in the past is legitimately included in capital, while goodwill which is merely the capitalisation of the expectation of excessive profits in the future is not. Difficulties such as Mr. Cadbury mentions confirm us in the belief, expressed in the same article, that "there are many purposes for which it would be an advantage to have a statutory definition and assessment of capital" so that, in future, access to a fruitful source of revenue should not be impeded by difficulties of accountancy.—ED., *Econ.*]

What to do about Gold

TO THE EDITOR OF THE ECONOMIST

SIR,—Your plea for time to allow trade to develop before altering the existing exchange policy will be endorsed by those who remember that a notable feature of the boom that ended in 1929 was the comparative steadiness of the prices

of raw materials and other standardised products. A tendency for wholesale prices to fall with the cumulative realisation of technical economies is likely to be a distinguishing characteristic of the expansion of which we have recently seen the initial phase. The necessity for sterilising gold will then, presumably, disappear, and it will again be allowed to flow freely into the channels of international trade—raising wages and profits throughout the world.

But will the long-term problem even then be solved unless the world uses its recovered prosperity to pay off its debts instead of increasing them?

Yours faithfully,

Co. Dublin.

A. C. DOBBS.

State Money and Bank Money

TO THE EDITOR OF THE ECONOMIST

SIR,—As the views expressed by Sir A. Verdon-Roe in the letter on "State and Bank Money" in *The Economist* of May 22, appear to be increasingly popular, some criticism of them may be desirable. The belief that bank creation of credit is a dangerous fraud, and that the beneficial method of augmenting its volume is through the State prerogative of issuing inconvertible currency, are based upon jejune historical generalisations and an improper analogy with war-time conditions. Today, the expansion of credit is normally confined to the increase on working capital, a purpose for which an equivalent increase in currency is certainly not required. Traders generally use bank credit not because there is any shortage of "genuine money," but because it is more convenient or profitable to borrow for temporary finance than to keep their own funds idle for relatively long periods as liquid capital. This "increase of debt" is harmless so long as it is not artificially inflated by falling prices. But for the State to "issue notes" for its own expenditure, as opposed to having to buy them with services like everyone else, is contrary to every proper principle of money.

The theory that issue of money was originally a State prerogative, and was impudently usurped by bankers, is contrary to both history and reason. Credit originated in the inability of buyers to give immediate equivalent for goods received. They incurred debts, and gave notes or bills as evidence of obligation to pay. The lack of negotiability of such instruments, and the need for a means of payment which as legal tender for settling debts would be generally acceptable (with the realisation of the profits to be gained from debts bearing no interest) gave local tyrants and their overlords the opportunity to provide currencies for their subjects. It was abuse of this privilege by extravagant rulers, combined with the need of money of intrinsic value for foreign payments, that ended the reign of inconvertible currency.

Since currency circulates, the quantity required in any community amounts to the sum needed to be held for cash transactions and emergencies, and has only an indirect relation to the supply of goods produced or consumed over any period. Similarly, the volume of money, "the unspent margin" in Mr. Hawtrey's words, as distinct from income, has to be limited not to any increase in output of goods and services, but to what the public, banks and traders will hold. Let it exceed such a maximum, and the excess will be thrown on the markets least prepared to absorb it, with consequent disorganisation and rising prices—the very evils ascribed by the currency cranks to bank credit which is only created in response to demand. Finally, there is an insuperable objection to the heretical proposal to stabilise prices by "issuing more or less currency," instead of acting on credit in the ordinary way. For though the banks' holdings of currency have some conventional relation to their active credits, it would be impossible to control income with any precision by this means, and the flow of currency into circulation is one of the last factors affected in the credit cycle.

The Problem of Lending Abroad

INTERNATIONAL investment is a subject which has received insufficient attention from economists and students of international politics; and it will require much intensive study before the subject is put on a sound statistical basis and a comprehensive grasp of the situation is made possible. Still more remote is the prospect of reasonably accurate forecasting of future movements of capital between countries. Changes in methods of international lending since the war have rapidly been rendering obsolete the established technique of study in the lists of public new issues, and it is now necessary to devise some alternative approach. In future full account must be taken of the increasing proportion of overseas investment which is done through the purchase of securities on foreign stock exchanges, medium-term credits, and "direct" investments, such as the export of capital by corporations rather than private individuals and the ploughing back of reserves. Even apart from these technical difficulties, the subject is full of unsolved questions of political and economic policy and even of historical fact.

It is the principal merit of the excellent volume now published by the Royal Institute of International Affairs* that it draws attention to the magnitude of the problem and to the urgent necessity for investigation and criticism of post-war trends in overseas lending. Only by basing our policy on the results of such study can we lessen the possibility of a recurrence of the chronic maladjustments which delayed, and through delaying accentuated, the crisis of 1929-33. Part One of the book approaches the problem through an examination of the international balance of payments, and the transfer whereby import and export surpluses are offset. The general conclusion is, like that of Mr Hobson's shorter memorandum,† that, on the whole, too critical and pessimistic a view has been taken of the main movements of international lending since the war; and that given a sufficient measure of enterprise and adaptability in financial technique there is still an attractive field for overseas investment.

On the other hand, the reversal of the trend of increasing populations in Western Europe and North America, the increased efficiency of agricultural production, and the growth of economic nationalism are all tending to limit the volume and alter the direction of international lending in the future. Great Britain, it is argued, has ignored the logic of the facts on several occasions since the war and shown a tendency to over-extend. The United States, on the other hand, with a large and fairly well maintained export surplus on current account, is still sucking burnt fingers after the post-war experiments in financing an insolvent Europe, and hesitating to accept payments in goods and services, which alone could ensure repayment of some of its outstanding loans and at the same time bring a measure of revival to European export industries.

The second part of the book consists of a reconsideration of the post-war situation from the points of view of the chief creditor and debtor countries and a study of international investments in the depression period. Not least interesting in this section is a preliminary survey of international investment before the war in which the collected and often sadly inadequate data are brought together for the first time.

The book might have served rather better its purpose of attracting widespread attention to an important

and complicated question had it been considerably shorter. But it is an interesting and stimulating volume based on sound and solid work, and it is undoubtedly the best existing summary of lending abroad since the war.

Mr Hobson, in his memorandum for the International Chamber of Commerce, treads a similar but shorter path. He glances at the rôle of overseas investment in the past and sets out to refute the arguments of those who believe that the function of foreign lending has now largely been accomplished. Populations may threaten to decline, but they are by no means fully supplied even with elementary foodstuffs and materials. He urges that it is not true that world communications have been completed, or even that major developments in the near future requiring large capital outlay, akin to the railways a century ago, are unlikely. The argument that capital is better used at home because it increases the employment of labour he dismisses as special pleading and fallacious.

The pessimists have misunderstood the nature of lending and borrowing. The first requisite for foreign investment is adequate savings, and not even a favourable balance of payments is strictly necessary. Only in conditions of under-employment, when savings are needed at home, should foreign lending be restricted. Otherwise, foreign investment stimulates exports and, given normally healthy exchanges, should itself create the conditions for the transfer of the loans.

Unfortunately, as Mr Hobson admits, there are in fact barriers to lending, such as the "restrictionist mentality of officials and politicians" and the desire of Governments to borrow cheaply for armaments. The basis of foreign investment is world trade, and since commerce is restricted by customs, tariffs and other devices, lending is correspondingly curtailed. Foreign lending is simply "a function of the general economic and political state of the world."

Mr Hobson is an optimist. It is true that the scope for further fruitful international investment is potentially "immense," but he almost certainly under-estimates the duration of that "economic and political state of the world" which to-day curtails trade and lending. Economic nationalism may even have come to stay, and the ability or inability of borrowers to pay cannot be lightly dismissed. Nevertheless, this memorandum is an encouraging and lucid document, ably compiled and amply illustrated with well-chosen statistical data.

Shorter Notices

Government of Palestine. Annual Report by the Director of the Department of Migration.

This report for 1936 is of exceptional interest because of the controversy which has been raging about Jewish immigration into Palestine. The outstanding feature of immigration last year was that it was just under half that of 1935, the peak year. The total number of registered immigrants was 31,671, of whom 29,727 were Jews. The Jewish figure in 1935 was 61,854. In view of the recent disturbances, however, the entry of just on 30,000 is a remarkable indication of the unabated will to build up the National Home. Poland, as always, was the principal reservoir; over 40 per cent. of those who entered hailed from that country. The most striking change was that the Jews from Germany rose from 12 to 30 per cent.; and Germany has now replaced Russia as the second land in importance. An interesting change in occupational distribution was that the percentage of those who had been engaged in agriculture was doubled from five to ten, while the percentage of those engaged in industry fell from twelve to seven.

The Director suggests that the disturbances since 1920 have shown that the economic structure is both plastic and resilient—"plastic because the Jews decline to permit economic catastrophe in the country which is their national

home, and resilient because both Arabs and Jews insist on continuing to live as such." The Director urges that the best test of the success of immigration is to be found in the movement of real income. Examination of the standard of living by analysing the consumption of staple foods, clothing, and luxury commodities, goes to show that during the last ten years the average standard of living in Palestine has, at least, not deteriorated.

"Sugar: A Case Study of Government Control." By John E. Dalton. (New York) The Macmillan Company. 311 pages. 12s. 6d.

The United States has recently witnessed the rapid extension of Federal control in business life and the merits and demerits of this development have become the subject of acute controversy. Mr Dalton, who was chief of the Sugar Section of the Agricultural Adjustment Administration in 1934 and 1935, believes that it is futile to argue in general terms about this extension of Federal control. "What is sorely needed is specific inquiry into a long list of cases where government and business have come into contact. A thorough knowledge of what is happening is necessary before any conclusion can be reached as to what should be done." This study is objective and thorough. He examines the development of the problem since the Civil War; describes the background against which the Sugar Act was passed; and considers some of its effects. He provides an abundance of data from which the reader can draw his own conclusions.

"The Electrification of Agriculture and Rural Districts." By E. W. Golding, M.Sc. English Universities Press. 244 pages. 16s.

Although Mr Golding is himself in academic life, his book is essentially practical. The main part describes a host of ways in which electricity has been applied to multifarious activities of agricultural life and is designed for the non-technical reader. There is also an opening section dealing with rural electrification from the economic and social point of view, while the last two chapters are designed to give advice about farm wiring and electricity supply. The mechanisation of farming is proceeding fairly rapidly in this country; and here as elsewhere electricity is playing an increasingly important rôle. The farmer who has studied Mr Golding's book will be well equipped to take advantage of the latest aids that science has to offer.

"Stock Exchanges Ten-Year Record." Fredc. C. Mathieson and Sons. 584 pages. 20s. 6d.

This is the twenty-ninth edition of a work which has proved invaluable to investors and their advisers. It supplies a record of quotations and dividends for securities dealt in on the London and provincial Stock Exchanges. The dividends are set out most conveniently for income-tax purposes, and the price records are of particular interest to the student who likes to dwell on the mutability of investment affairs. Messrs Mathieson are justly famed for their publications of Stock Exchange movements within convenient compass, and this annual work is uniform in format with the monthly record of prices which is available to subscribers.

MONEY AND BANKING

France's Financial Dilemma

THE financial crisis which led to the downfall of M. Blum's Government could long have been foreseen. Nevertheless, it developed with unexpected rapidity and had unexpected results. Essentially it was the latest of a succession of fiscal crises which have occurred regularly during recent years whenever the French Treasury found itself short of funds. It is not easy for the English observer to appreciate this particular difficulty of a French Government; for it is almost unthinkable that a British Government should be unable to place sufficient bills at any time in the London market to satisfy its immediate needs. A French Government, however, cannot rely in the same way upon the Paris market, especially at a time when large quantities of French liquid capital have fled the country.

It was generally supposed that the eight milliards of francs obtained from the Defence Loans last March would see the Treasury through for a time; and early in May M. Vincent Auriol, the Finance Minister, apparently let it be known that the Treasury was comfortably placed for cash. There is, however, a suspicion that part of the Defence Loan money was needed to defray indebtedness outstanding at the time the loans were issued; so that the whole of the eight milliards was not available for future needs. There is little doubt that a fortnight ago the Treasury found itself again approaching the end of its tether; and the realisation that the margin was narrowing came as a new shock to the country. It is true that the Treasury still had certain borrowing powers in hand. Theoretically it could issue the remaining Frs. 2½ milliards of the Defence Loan, though the state of the rentes market made that course somewhat illusory. It also had borrowing powers of Frs. 2 milliards at the Banque de France not yet utilised. Still, these would not go very far to meet the growing deficit. Thus, a fortnight ago the French Government had to seek further resources.

Two new proposals were apparently put forward. The first was a fresh revaluation of the Banque de France's gold at the lower statutory limit of 43 milligrammes of gold to the franc, in substitution for the upper limit of 49 milligrammes at which the Bank's gold is now valued. Omitting from the revaluation the Frs. 4 milliards of gold (at the present value of 49) earmarked for the repayment of the London credit, the revaluation of the remainder would yield a profit of about seven milliards. Next, it was proposed to proclaim a "nominal stabilisation" of the franc, which in simple language meant the winding-up of the French Exchange Fund, which today consists entirely of francs, having been denuded of its original stock of gold. This would yield about another Frs. 10 milliards; and if the Treasury took over the proceeds of both these operations it would have a new amount of Frs. 17 milliards.

Substance for these rumours was provided when two members of the new Exchange Control Committee appointed last March resigned only last week. Their recently published letter of resignation shows that their reasons were actually that they considered the Government's proposals inadequate. However, the effect of their move was to give a fresh shock to public opinion, and M. Blum's attempt to secure plenary financial powers had to be made in an unfavourable atmosphere. This may help to explain why the Senate, possibly influenced by expressions of opinion from the Provinces, rejected his plenary request and were only willing to grant him strictly circumscribed powers.

It is now necessary to disentangle the financial problems of France, for it is important to remember that

a change of Government in itself provides no solution. There are two chief problems, which though inter-related are essentially distinct. They have already given rise to confusion of thought in the French Chamber and elsewhere. They are the fiscal problem and the exchange problem.

The fiscal problem consists of the chronic deficits of the Government. A few months ago, M. Vincent Auriol estimated the Budget deficit at Frs. 4 milliards a year; but unofficial estimates now place it at nearer Frs. 9 milliards. This is comprehensible in view of the general increase in French internal prices and costs, from which Government expenditure cannot hope to remain immune. Next there is the extraordinary expenditure upon re-armament, the railway deficits and the losses on the French *collectivités publiques*, or public utilities such as gas and electricity undertakings, all of which are guaranteed by the State. The sum total of these deficits is formidable; and the Treasury also has to provide next October for Frs. 8 milliards of maturing Treasury bonds, while the date for repayment of the sterling credit will also be looming up.

There are only two remedies: heavier taxation or new borrowing. Probably there is now more room for increased taxation and for the prevention of tax evasion; but there is an obvious upper limit, determined by the size of the French national income. Sooner or later this limit will be reached, and then any further increase in Budget revenue must be dependent upon an expansion in the national income. This implies either a new increase in the volume of business or else a further rise in French internal prices. The bearing of these upon both the French social reform programme, with its influence upon production costs, and the future exchange value of the franc, needs little elaboration.

New borrowing immediately introduces the exchange problem; for this arises largely from the flight of capital. French opinion is greatly exercised by what it terms the capital strike; and here the opponents of the late Government cannot escape their share of responsibility for France's present plight. A repatriation of the huge quantities of French capital now abroad would not by itself solve the fiscal problem. It would not add to Budget revenue nor reduce Budget expenditure. It is here that the critics of the Government went wrong when they declaimed against the depletion of the Exchange Fund's gold resources. This was not wasteful Government expenditure, as they suggested, but the inevitable consequence of the flight of French capital abroad.

On the other hand, the repatriation of this capital would relieve the position in several important respects. It would replenish the Exchange Fund and ease the condition of the Banque de France. Next, it would provide France with the capital she badly needs at home. It would restore the rentes market, lower interest rates and render possible fresh Government long-term borrowing. Equally it would make new capital available for French commerce and industry, and this would facilitate a new expansion in French production and so in the national income. Thus, indirectly, the repatriation of French capital would ease the fiscal problem as well as solving the exchange problem.

What is now the outlook before the new Government? For the moment nothing seems possible but palliatives; and it is doubtful if they can do more than carry the Treasury up to the October date of the Treasury bill maturities. Nor can the repatriation of French capital be enforced beyond a point; for while it may be possible to make French companies disclose their foreign assets,

it is quite impossible to force foreign banks to do so. Even when the French Government has tried to make disclosure one of the terms of her foreign commercial treaties, the foreign Governments have either refused altogether, or have called attention to the absence of any compulsory powers which would enable them to obtain this information from the banks. Hence the question becomes whether the French Government can restore confidence at home before the palliatives still at its disposal have exhausted their potency.

Here the Government is on the horns of a dilemma. The Radicals claim the right to follow a policy of "sound finance," while the Socialists claim the right to complete the social reform programme. Too much social reform will raise production costs too high, will discourage the repatriation of capital, and will check recovery; while too little will plunge the country into a maelstrom of strikes—and equally check recovery. In short, France may be driven back upon a new devaluation of the franc, to offset the cost of social reform and stimulate a new increase in her national income. Equally she may be driven back upon exchange restrictions, to prevent the flight of fresh capital, even though they cannot bring home the capital now abroad. These still remain only possibilities, but they can no longer be called remote. The change of Government by itself has solved, and can solve, none of France's financial and economic problems.

Financial Notes

A Conference of Bank Economists.—A small but valuable informal conference has recently been held in England. Some fifteen economists employed by commercial banks in Great Britain, the U.S.A., Canada, Australia, France and seven other European countries met under the chairmanship of Mr W. F. Crick, of the Midland Bank to discuss matters of common interest to people working in very different circumstances. The main topics dealt with were the relations of government with banking policy, of the central banks with the commercial banks and money markets, and of the commercial banks and their customers and their influence upon economic conditions. But the general discussion resolved itself into an examination of changes and potentialities that have emerged in the last year or so, the exact effects of which are as yet not fully known or fully examined. The assembled experts discussed such questions as the decline in commercial short-term credit and the rise in holdings of government bonds, the possibilities of adding the qualitative control of credit to the already exercised controls over its quantity and its price as a further weapon of monetary management, and the precise rôle of the banks in the capital market. Fixed conclusions and a row of resolutions were very sensibly not an object of the conference and each participant was left to apply the general consensus of agreement upon principle to the particular conditions prevailing in his own country. But a final exchange of views upon the contemporary economic and financial situation made it possible for the conference as a whole to come to a common viewpoint upon future trends. There is a very welcome possibility that some form of permanent association will be born of this meeting, the members of which will exchange information, discuss policy, and perhaps hold further conferences of the same sort. One may even, perhaps a little fancifully, hope that such contacts may eventually lead, when acute problems next come up for urgent decision, to a greater consistency of banking policies in different countries.

The Foreign Exchanges.—The foreign exchange market continues to be dominated by the French crisis. Funds continued to flow from Paris in considerable quantities over the week-end, and the uncertainty immediately following the fall of M. Blum accentuated the pressure. The formation of M. Chautemps' Cabinet caused a sharp rally, the one month's forward discount narrowing to Frs. 2½ and the three months' to Frs. 4½, but when the market realised the continued

preponderance of Socialists in the Cabinet rates relapsed once more. On Thursday, on renewed rumours of an impending devaluation, the discounts fell right back to Frs. 5½ and Frs. 8½ to Frs. 9 respectively, but there was a recovery in rentes. Meanwhile the spot rate has been maintained assiduously at Frs. 110.90, save for a short period on Thursday morning when it fell to 110.95. It was generally believed that M. Bonnet's first move would be to stabilise the exchange at 124 francs to the £, the rate of M. Poincaré's stabilisation, and for that reason very acceptable to the general public. The other main development of the week has been the weakness of the dollar exchange, which moved on June 18th from \$4.938 to \$4.94. It then remained unaltered until, on June 24th, dollars were bid for again. The explanation appears to have been a renewal of direct French dollar purchases, when a rumour early in the week that the American authorities would assist the French to trace the movement of French funds had by then become discounted.

The Bank Return.—As was predicted in the issue of *The Economist* last week, the Bank has purchased gold from the Exchange Account to relieve the stringency caused by the Account's large gold purchases. The new purchase of £5,145,259 raised the total of new gold bought this year to £12,745,963. It offsets French hoarding of notes, and should relieve any stringency that might be caused in the coming holiday season.

BANK OF ENGLAND					
	June 24, 1936	June 2, 1937	June 9, 1937	June 16, 1937	June 23, 1937
	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Issue Department:—					
Gold	216.3	321.3	321.3	321.3	326.4
Note circulation	434.8	475.6	476.5	479.8	483.7
Banking Department:—					
Reserve	42.5	46.5	45.6	42.4	43.6
Public deposits	20.0	10.2	10.7	10.0	15.5
Bankers' deposits	90.8	109.5	107.4	102.3	95.0
Other deposits	37.4	37.3	36.8	37.1	37.2
Government securities	99.6	102.8	101.2	101.3	98.0
Discounts and advances	7.6	4.7	4.8	3.7	3.8
Other securities	16.5	20.7	21.1	19.9	20.2
Proportion	28.6%	29.6%	29.4%	28.3%	29.5%

The rise of £3.9 millions in the note circulation to a new record suggests that hoarding is still continuing. The decline of £3.3 millions in Government securities is probably to be accounted for by the further repayment of the Ways and Means Advances made to cover the June 1st War Loan dividend. The decline in bankers' and the rise in public deposits are probably to be explained by differences in the dates of Treasury Bill maturities and payments. Had it not been for the Bank's gold purchases there would have been a still greater drop in bankers' deposits.

The Money Market.—The money market this week has experienced the usual half-year changes. The banks have been limited and reluctant buyers of bills, and in consequence money has been in good demand by the brokers. The ordinary rate for outside money remains unchanged at ½ per cent., but some money is being borrowed into July at 1½ per cent. to 1½ per cent. —

	June 3, 1937	June 10, 1937	June 17, 1937	June 24, 1937
Bank rate	2%	2%	2%	2%
Clearing banks' deposit rate	1	1	1	1
Short loan rate:—				
Clearing banks	1½-1*	1½-1*	1½-1*	1½-1*
Others	1½-1	1½-1	1½-1	1½-1
Discount rates:—				
Treasury bills	1	1	1	1
Three months' bank bills	1	1	1	1

* Loans against Treasury bills and other approved bills and British Government securities within six months of maturity; 1 per cent. Treasury Bonds and other gilt-edged stocks within six months of maturity; and other collateral respectively.

It is not believed that there is any likelihood of anyone being forced into the Bank over the end of the half-year.

THE STOCK EXCHANGE

Outlook for Kaffirs

To her one principal export South Africa has recently added another, unknown to her trade returns, but familiar across the Atlantic as "sunshine talk." The full weight of political and mining authority has been given to confident statements regarding the future of gold. Even within the past few days Sir Ernest Oppenheimer and Mr Havenga have reaffirmed this confidence. But, as Johannesburg's behaviour has since proved, the sunshine has shed but watery gleams; the prize which the industry seeks is not optimism, but *de jure* stabilisation with gold at 140s. an ounce.

Repeated gold scares have uncovered a weak speculative position, particularly at the Cape. The minor boom at the end of last year raised representative gold shares to their highest level since 1932; prices have since fallen by more than 4 per cent. The speculative issues—particularly those in the Anglo-American group—have proved wholly incapable of withstanding the shock. West Wits., which were bought up to 19½ this year, were as low as 7½ on Tuesday. This fall was perhaps the most severe blow that the speculative movement has suffered. No exact process of valuation can be applied to such favoured infants of the boom. At such times appetites thrive on wishful thinking and painful indigestion inevitably follows. Although it cannot be said that there has been over-speculation in established mining shares, their falls have nevertheless been severe, and many of them now offer gross yields of 10 per cent. or more. The mining investor may well ask where the process of readjustment is likely to stop.

In conditions like the present, cold analysis may not be a safe guide to market behaviour; but there are three principal points from which an investigation of Kaffir prospects must begin. Has the industry an adequate defence against a fall in gold or a rise in costs? What part does the incidence of taxation play? And what scope exists for richer mining, if it should prove necessary?

We may examine the first problem as a converse to the history of the industry since 1932. The rise in gold from 85s. to 140s. permitted the Rand mines to reduce their pay limits—the average grade milled fell from 6.339 dwts. at the end of 1932 to 4.476 for April last—and to increase their reserves. To some extent

the reduction in grade was encouraged by the excess profits tax, under which some concerns profited by putting waste rock through the mill. These trends are illustrated since 1934 in the first three sections of the table which appears below. Next, working cost conditions are shown for certain important producers, at different stages of development, over the same period. Costs have remained so stable that the average for all Rand undertakings in April 1935, 1d., was only one penny below that for December, 1932. The most impressive reductions have been achieved by Consolidated Main Reef and Randfontein, through a vast increase in the scale of operations since 1933.

A fall in the price of gold would reverse the trend since 1932 and necessitate a downward revision of payable reserves. But this revision would not cancel all the progress which has been made. Development work under the stimulus of gold at 140s. has often opened up ore which would, in fact, have been payable before 1931. Secondly, unless the gloomiest assumptions regarding the future of gold are contemplated, an upward grading would not have serious effects save for the low-grade properties. For the latter, a relatively small fall in gold might seriously prejudice future life and expected profits. But for the richer properties, with lives of anything up to forty years, the appropriate effect upon share values would not be considerable.

The calculation of payable grade, indeed, is the main determinant of prospective life. At this point, the problem must be translated into current mining policy. It is commonly stated that any moderate fall in gold could be offset if the mines worked a slightly higher grade of ore. If we take a hypothetical mine milling 5 dwt. ore, its revenue per ton, with gold at 140s., will be 35s. If we assume costs at 20s., the profit per ton will be 15s. Suppose that gold falls to 130s. Then, without changing the scale of mining or working costs per ton, profits could be maintained by milling 5.38 dwt. ore. Whether the maintenance of current profits would be given precedence over the maintenance of life is a problem which the Rand mining authorities would have to decide in the interests of the industry and its shareholders. But the effect of overhead costs is important for mines which have increased their treatment plant.

It pays to run a mill to full capacity. Hence an increase in grade necessitated by a fall in gold might have the paradoxical effect of increasing the Rand's gold output.

Our calculations, however, tell less than the full story, for taxation plays a decisive part in mining policy. It would, in fact, be unnecessary to increase the grade to the full extent described above. The South African Treasury bears up to half the burden of a fall in profits under the present taxation system. Since the companies could pass on about half their reduction in profits (in the present example, 43½ per cent.), the grade necessary to maintain current profits would lie between the two limits. It is, however, important to distinguish between properties which could increase their grade appreciably, if such action became necessary, and those which could only increase their grade at the expense of future production. For this reason, we show the margin between the grade of ore milled in the latest year and the average quality of the ore reserves, which constitutes the "buffer" for richer mining.

The same figures, associated with the latest costs, indicate the margin by which increased costs could be compensated by an adjustment of grade. Taking gold at 7s. per dwt., it will be seen that this margin varies widely between 10s. per ton for City Deep and little more than a shilling for Nourse—subject again to the effect of the taxation formula. In the two right-hand columns, the effect upon earnings per share of an increase of 0.5 dwt. in grade, with gold at 140s., and of a 5s. movement in the price of gold is shown. These calculations, which are extracted from a recent brochure on Kaffir shares issued by a well-known firm of brokers, take into account the adjustment of tax liability between the companies and the Government.

What general conclusions emerge from this detailed study? First, if there were general confidence in the maintenance of the gold price, Kaffir shares could undoubtedly be regarded as bargains. But without this assurance it is necessary to provide against the future contingencies of a fall in gold or a rise in costs. The developed mines now offer little scope for the speculator, although their present yield basis would attract a rush of buyers in normal circumstances. Yet even here it is necessary to concentrate upon mines with an appreciable margin between their average grade of reserves and the grade at present milled. And since a change of grade is most easily effected by a mine in the earlier stages of maturity, credit may be given to properties which still have some development work to carry out.

The position of established properties which are at present expanding their operations, and consequently their profits, is worth noting. Durban Deep, to select only one example, has achieved a new lease of life and is rapidly increasing its capacity. Consequently, this share offers the lowest mining yield in the accompanying list. The company has financed its expansion in part by a new share issue and in part from profits. In such cases, where the peak of capital expenditure has been reached, the scope for increased dividend distributions is enhanced. The position of the developing concerns, however, is more difficult to assess. It is still too early to gauge their prospects with gold at 140s. This price has overcome the risk factor which prevented earlier development at both extremities of the Rand. If the properties develop rich ore, the risk factor will have proved an illusory barrier, and a lower gold price would still permit profitable operation. But the significant point affecting these concerns is the rapid rise in the cost of mining equipment and development work. To open up a mine is the work of years, and at present some fairly considerable increase of capital expenditure must inevitably be faced. In the present temper of the market the developing shares must still be regarded as the most uncertain group.

Finally, we may briefly consider the position of the leading finance houses. To them are entrusted decisions of broad mining policy, and history suggests that they would be unlikely to increase the grade of mining to an extent likely to prejudice the future working life of the Rand. If the gold bears prove wrong, the Rand's only obstacle will be the increase in costs which accompanies rising prices. So far as dividend income is con-

cerned, the finance houses would then remain in their present comfortable position. But in the present state of the Kaffir market, jobbing opportunities are less remunerative, while the hidden reserves represented by conservatively valued portfolios have been reduced. In these circumstances, yields of 6 to 7 per cent. on the leading shares must be accepted as reasonable.

Broadly, the Kaffir share market, despite the ostensible attractiveness of current share yields, can hardly expect a rapid recovery. On the basis of the present analysis, it is possible to find high-yielding shares which are protected from the worst effects of a possible fall in gold. But while the world's markets remain a prey to successive gold scares, the lore of nicely calculated less or more must take second place.

Investment Notes

The New N.D.C.—The draft clauses of the Finance Bill dealing with the new N.D.C. are decidedly more complicated than "a simple tax upon the profits of industry" might lead investors to expect. The new clauses follow the outline given in the last issue of *The Economist* (pages 669 and 688), and several doubtful points which we raised are clarified. The utility undertakings to be exempted are explicitly stated. Water, gas, electricity and hydraulic power undertakings, railways and road passenger transport (though not goods), canals, harbours, docks, etc., and river conservancies are specifically exempted, if their charges or dividends are subject to statutory limitations—even, apparently, if the statutory limitations are higher than current charges. This list covers a wide range of companies, and holding companies with a controlling interest—either financial or management—in exempted undertakings will not be liable for income received from statutory undertakings. This provision appears to cover the Tilling group, but presumably investment trusts with a non-controlling interest would be liable for dividends received from ordinary shares in statutory undertakings. Provision has been made, as we anticipated, for the avoidance of double taxation, although the rules in turn appear to have introduced a further anomaly. Income received by invest-

§ On

ment companies "by way of dividend or distribution of profits" from companies which have already borne N.D.C. are excluded from the investment company's assessment. This rule, of course, does not cover interest receipts from gilt-edged securities, bonds or debentures. But it does apply to preference dividends, on the ground that profits from which such dividends are distributed have been reduced by the payment of N.D.C. Here is a somewhat striking anomaly, arising from the distinction between the legal character of preference dividends, (which represent a division of, and not a charge upon, profits) and the effective incidence of N.D.C., which falls entirely on equity capital, save in the cases where the preference dividend is uncovered by payment of the tax. Sound preference shares, it appears, will rank as N.D.C.-free investments for investment trust purposes.

A notable omission from the draft clauses is the absence of any limitation on the proportion of ordinary share earnings absorbed by the tax. The Chancellor of the Exchequer justified this omission in Monday's debate on the Financial Resolution, on the ground that the provision could not be applied to firms, and on the further argument that inequity would arise between companies making the same total profits but having different capital structures. Sir John Simon's examples were more convincing in their arithmetic than in their general application to companies whose preference dividends are well covered, but whose gearing differs. Since N.D.C. in such cases is a tax on equity earnings, differences in capitalisation do exert an arbitrary influence on its incidence. The 10 per cent. limit under C.P.T. may have produced anomalies such as the Chancellor mentioned, but no objection was taken to them at the time and the principle of the limitation appears sound. And if the Chancellor's argument applies to the case of a high-g geared preference *cum* ordinary capitalisation, its applies in practice, if not in law, to high-g geared debenture *cum* ordinary capitalisations. Ordinary shareholders, therefore, will follow the fate of the amendment proposing the 10 per cent. limitation with close interest. Finally, while the income of companies registered in this country but operating abroad will be liable for the tax, the clauses leave it to be inferred that the profits of an overseas subsidiary of a British company will be taxed only to the extent of the dividends declared. If this interpretation is correct, the separate formation of overseas operating subsidiaries would enable the holding companies to avoid tax on undistributed profits. Other avenues of escape, such as the issue of an overwhelming debenture capital, appear to be estopped not only by prudence but also by the clauses preventing "artificial" limitation of profits.

The L.C.C. Loan.—Few loans have been accorded so blank a reception as this week's London County Council issue. The gilt-edged market reacted with acute dismay at the deposit of another unwelcome foundling on its doorstep. The market already has one failure to nurse in the 53 per cent. under-subscription of the latest Australian conversion. Under prevailing conditions, indeed, it seems impossible to find terms which have any attraction for buyers and yet leave existing gilt-edged and corporation loan levels unscathed. The contrast between the latest terms for L.C.C. borrowing and the historic issue at 2½ per cent. early in 1935 provides a text for an instructive sermon on interest rates and cheap money. This week's offer is for the same amount of stock—£10 millions—but whereas in 1935 the L.C.C. dashed away with a 2½ per cent. loan with an average life of 25 years, on this occasion County Hall must be content with a 3½ per cent. issue, half a point above par, with an average life of 20 years. The authorities, indeed, appear to have made special efforts to encourage success (as they did, of course, for the Australian issue), for the price is half a point lower than the Leeds issue in May, while the

redemption dates, though widened, are slightly earlier on the average. Moreover, a full coupon will be paid next January, although the loan is not fully payable until August 6th.

The contemporary difficulties of the authorities in maintaining the *morale* of the corporation loan market are illustrated by the following table, which gives a selection of typical corporation issues since 1935, and shows their subsequent market fate:—

Date of Issue	Borrower	Amount (£)	Rate (%)	Re-demption	Issue Price	Present Price
1935						
Jan.	L.C.C.	10,000,000	2½	1960 70	Par	87
June	Manchester	4,000,000	3	1952 55	99	96
June	Liverpool	3,000,000	3	1955 58	99½	95
1936						
April	Birmingham	4,882,700	3	1956 58	99	95½
Sept.	L.C.C.	10,000,000	3	1956 61	99	94
Oct.	Aberdeen	1,500,000	3	1953 63	99½	95
1937						
May	Leeds	4,000,000	3½	1957 60	101	½ dis.
June	West Riding C.C.	1,000,000	3½	1957	100½	½ premium
June	L.C.C.	10,000,000	3½	1952 62	100½	...

The first L.C.C. loan now stands 13 points below the issue price, while subsequent issues on the 3 per cent. interest basis which prevailed during 1935 and 1936 are now standing at discounts of as much as 5 points on their respective issue prices. With the fixed-interest lender "on strike," it may well be that the authorities will find it difficult to maintain the present 3½ per cent. basis for very long. At the beginning of 1935, corporation issues were still a "seller's market." But now the lender has the whip hand, and he is proving difficult to tempt.

The Investment Outlook.—Perhaps the choice of this innocuous title will convey an impression of objectivity in discussing the market prospects. Discussion is now focussed upon the future of prosperity—a word which may be employed, perhaps, without introducing the vaguely opprobrious terms "boom" and "slump." Sir William Beveridge, in a speech last week, forecast a double slump—the first of the cyclical character experienced in the past, and the second resulting from the falling trend of population. A well-known firm of dealers in the industrial market has issued a striking counterblast to those views, examined in our article on page 718. Their brochure—headed "The Slump Obsession: a Prevalent Delusion"—spares no force in attacking "boom and slump mentality," which is the product of "disordered imaginations." It points out that the late depression did not follow a real trade boom in America, and still less in this country, despite the hectic Wall Street boom and general activity on the London market. Distinction should be made, according to this argument, between exuberant expansion of trade activity which leads to recession, and gambling in securities, the reaction to which does not "normally" affect the progress and profits of industry. Finally, there is no boom in trade at present, and although securities have risen far since 1932, stock market activity in Wall Street and London has not approached the level of 1929. These propositions are argued at some length in the pamphlet, but it is interesting to note that the authors base their hopes of future prosperity on a revival of overseas trade, as earlier commentators have done. Re-armament is admitted to be a hindrance to many industries "rather than a stimulus," but it is somewhat remarkable that the brochure should make no attempt to assess the effects of the building boom upon recovery, and should omit to consider its future possibilities. Although investors are invited to back their belief in the future of industry, in terms more optimistic than most market commentators have recently adopted, the upward revision of yields both on gilt-edged and industrials is one limiting factor to any market recovery. It would have been instructive to have an expression of opinion on this point, and on the effects of rising costs in industry.

Railway Rates and Dividends.—The evidence given by Sir Ralph Wedgwood and Sir William Wood in putting the railway companies' claims for a general 5 per cent. increase of charges before the Railway Rates Tribunal contains a number of interesting points for stockholders. No direct pointer to the prospective earnings and dividends for 1937 is disclosed; upon that question both witnesses were silent. But, for the first time, official estimates have been presented of the full incidence of rising costs and of the extent to which these costs will be offset by increasing receipts. Sir Ralph and Sir William presented a table which makes an "instructed guess" at the prospective net revenue in a notional year, which would in fact resemble the year commencing in October next, when the proposed increase in charges would take effect. The general principles which underlie the estimate are simple. To the net revenue for 1936 (£35,731,000) is added the prospective 1937 increase of £6,724,000 in gross receipts—the result of applying a 4.7 per cent. increase to the railway receipts for 1936. This total is then reduced by £7,000,000, representing the increase in expenditure on revenue account, assuming 1936 quantities of materials and 1937 prices. The calculation shows that if no increase in charges were granted, the net revenue for the notional year would actually be below that of 1936. The increase of 5 per cent. in charges is then added—account being taken of possible loss of traffic to the roads as a result of increased charges—giving a final net revenue result of £41,064,000. This is rather surprisingly equivalent to earnings of 3.2 per cent. on L.M.S. Ordinary, 3.6 per cent. on L.N.E.R. 2nd Preference, 5.9 per cent. on Great Western Ordinary and 1 per cent. on Southern Deferred. If dividends of this order can be expected in February, 1939, the stocks are evidently undervalued. The witnesses, however, entered one important *caveat*. The expenditure figures assume no further increase in costs, and they are based on the same volume of materials as that required in 1936—an obvious under-estimate in view of increasing traffics. Moreover, the unions have lodged wage claims to a total cost of £2,500,000 in a full year, which if completely satisfied in the "notional" year would reduce the earnings on the four stocks above to 2.1 per cent., 2.4 per cent., 4.9 per cent. and *nil* respectively.

For the current year, as we have seen, the position is less clearly defined. The present trend of traffics is highly satisfactory, and the assumption underlying the estimates—that the 4.7 per cent. increase over 1936 will be maintained—seems amply justified. Regarding expenditure, Sir William Wood declared that the wage-bill would be £2,500,000 higher in 1937 than in 1936, but he did not give a figure of the actual extra cost of materials in 1937. At current prices, 1936 requirements would cost £5,000,000 more, but part of the current year's needs is covered by forward contracts at appreciably lower prices. The conclusion would seem to be, therefore, that if there is no increase in charges, the companies will do a little better in 1937 than in 1936, but that net revenues will fall again in 1938. If railway charges are increased, dividends next February should be higher than those for 1936, and the declarations in February, 1939, should be higher still—until the obverse side of the medal is seen in an intensified fall in traffics, should business begin gradually to decline.

Wall Street's Worries.—The last six weeks have produced stock market uneasiness which has left no single centre unaffected. Yet Wall Street has seemed determined to make a burden of its troubles. It has shown a complete lack of spirit or resistance, yielding instead to a slow process of petrification which has ended recently in the lowest prices and the lowest turnover of the year. Since the market peak was reached early in March, share prices have fallen relentlessly, and gains made earlier in the year have been completely lost. The "Standard Statistics" index of common stocks, for

Short Particulars.

UNION CINEMAS SUBSIDIARY PROPERTIES LIMITED.

(Incorporated under the Companies Act, 1929)

SHARE CAPITAL - £500,000

Authorised :	Issued or to be issued :
£300,000 in 300,000 6 per cent. Cumulative Participating Preference shares of £1 each	£300,000
£200,000 in 1,000,000 Ordinary shares of 4s. each	£200,000
£500,000	£500,000

The List of Applications will Open and Close on Tuesday, the 29th June, for an

ISSUE AT PAR
of

300,000 6 Per Cent. CUMULATIVE
PARTICIPATING PREFERENCE SHARES OF £1 EACH.

The 1,000,000 Ordinary Shares of 4s. each have been subscribed for by Union Cinemas Limited at 4/7½d. per share.

The Prospectus shows *inter alia* that:—

1. The 6 per cent. Cumulative Participating Preference shares will carry the right to a fixed cumulative preferential dividend at the rate of 6 per cent. and, after Ordinary shareholders have received 6 per cent., to a further cumulative 2 per cent. per annum, making 8 per cent. in all.

2. The Company owns 17 Cinemas which have been leased for 99 years from the 25th March, 1937, at a rental of £89,262 per annum to Union Cinemas Limited, which also guarantees the Mortgage below mentioned. Union Cinemas Ltd. has a paid-up share capital of £3,265,025, and its earnings available to pay the above rent are estimated at £220,000 per annum for the current financial year, increasing to £270,000 when additional cinemas now in course of completion have been in full operation for a year.

3. The balance of the above rental, after meeting Mortgage Interest and all other outgoings, subject to taxation and allocations to reserves, will cover the fixed 6 per cent. dividend on the Preference shares more than 2½ times and, after provision for a like dividend on the Ordinary shares, will leave a surplus of £19,110 available for a further dividend of 2 per cent. (requiring £6,000) on the Preference shares.

4. The Cinemas which are practically all of recent construction, are situated in carefully selected positions in various Provincial towns, all being freehold with one exception which is partly freehold and partly long leasehold. They have been valued by Messrs. Leopold Farmer & Sons at £1,105,440, and on this basis the balance of assets available as cover for the £300,000 of preference shares (after provision for Mortgage) will be £504,648.

Copies of the Prospectus (upon the terms of which alone applications will be considered) and Forms of Application can be obtained from the

instance, reached 170.5 at its highest point, fell to around 155 by the middle of May, stayed at about that level for some five weeks, and then collapsed to 147.4 in mid-June. It is true that the market has had plenty of preoccupations. The threat of a reduced gold price has set a gloomy background to the whole course of events, and official reassurances have done little to remove uneasiness. Again, the labour situation which, until the recent outburst of strikes, was accepted with unconcern, has lately been causing the anxiety it merits. In the political field, hostile forces are no less in evidence. Plans for dealing with flood and drought problems carry a significant hint for utilities, attacks upon tax evasion and the possibility of new taxation are mooted, and Wall Street has taken to heart the President's intentions of proceeding with proposals for reform of the Supreme Court. More recently, normal seasonal influences have reduced industrial activity and have thus depressed stock prices. But when all is taken into account, it appears that, except for the steel strikes, markets are making the most of their maladies. Doubtless, industrial recovery has made more rapid progress than is often imagined (particularly in steel), but it is surely far from exhausted. Even building activity, which has hitherto lagged behind, is now expanding considerably, though stock prices have been depressed by fears of rising costs. If business activity continues to mend, Wall Street's gloom cannot last for ever.

Company Notes

General Electric Progress.—An increase of £19,359 in the G.E.C. total profits represents in itself a satisfactory rate of improvement, though it is appreciably smaller than in the two previous years. Owing to higher depreciation and tax provisions, the amount earned for the equity, as shown in the following table, is slightly smaller:—

	Years ended March 31		
	1935	1936	1937
	£	£	£
Profit	1,184,483	1,485,153	1,604,512
Depreciation	259,293	298,813	343,248
Taxation reserve	142,576	194,245	275,000
Other expenses	149,056†	48,357	50,405
Preference dividends	195,300	193,725	190,569
Ordinary stock :—			
<i>Earned</i>	<i>438,258</i>	<i>750,013</i>	<i>745,290</i>
Paid	295,795	436,536	551,036
<i>Earned (%)</i>	<i>14·8</i>	<i>25·8</i>	<i>23·7</i>
Paid (%)	10	15	17½*
Reserve	98,883	100,000	125,455
Carry-forward	467,018	680,495	749,294

* On £4,198,372 ordinary stock, against £3,816,702. † Includes £103,930 debenture interest.

The margin of earnings over the 17½ per cent. distribution is thus somewhat reduced. Yet the more generous distribution policy does not affect the general reserve allocation—£125,455 against £100,000. This amount, together with a direct transfer of £774,545 from share premiums, increases the reserve to no less than £4,400,000, or over one-quarter of total assets. The general expansion of the business is illustrated by the rise in stocks and work in progress from £2,268,451 to £3,037,617. The prospects of a further advance in profits are good, subject to the company's ability to withstand increasing costs. The "Beama" index of new orders for heavy electrical machinery has risen from an average of 167 for 1936 to 180 for the first five months of 1937, the advance being particularly marked for export orders. General Electric should obtain its share of this further improvement, and should have an equity in such ultimate possibilities as railway electrification. Earlier this year the £1 units touched 94s. 9d., but the market has since adjusted the quotation to more sober estimates. The current yield of £4 8s. per cent. at 79s. 3d. seems roughly appropriate to a company with

moderately expansive dividend prospects and an exceptionally strong reserve position. The ordinary capital will not be vitally affected by the incidence of N.D.C., which, on the latest profits, would not amount to more than $1\frac{1}{2}$ per cent. on the ordinary stock.

Lancashire Cotton Profits.—For the six months to April 30, 1937, the Lancashire Cotton Corporation announces a net trading profit, before debenture interest and depreciation, of £176,052. This compares with £63,287 for the previous six months and £127,899 for the year to October 31, 1936. It is interesting to observe that the indicated annual rate of profits is just over £350,000 (making no allowance for the possibility of more remunerative contracts during the current half-year), a figure which closely corresponds with the estimate of the Corporation's 1936-37 profits given in our article of December 19, 1936 (page 590). At that time this estimate of the improvement on the 1936 earnings caused comment in the trade and was pronounced excessive. It would now appear that the estimate was justified but that the excesses lay in speculators' anticipations of the dividends which would flow from such earnings. The chairman's speech of last April made it clear that the directors will be guided by the most conservative principles in their dividend policy. The only charge against profits which can be calculated with certainty at present is £75,000 for interest on the new debentures—the £15,000 sinking fund does not begin till 1942. On the balance of £275,000 which would remain from annual net profits of £350,000, depreciation must be the first charge. No depreciation has yet been provided and there is no clue to what the directors will consider a proper allocation. The assets are modestly valued after the capital reconstruction of last year, but cash must be set aside for replacement and probably for modernisation. In the *pro forma* balance sheet for October 31st last, cash amounted to £511,000 and total surplus liquid assets to £1,356,000. That is not a weak position, but it might with advantage be stronger. It would not be surprising to find the directors placing as much as £175,000 to depreciation, leaving £100,000 to cover the preference dividend of £68,875, with just over £30,000 earned on the ordinary—too small a sum to suggest any distribution for this year. A "windfall" benefit to profits will accrue from the income tax set-off for accumulated losses and wear and tear allowances for past years. In effect, preference (and ordinary) payments will only cost the company the net, not the gross, amount. But in their present mood the directors may well retain that benefit for the Corporation. At 15s. 9d. the ordinary stock units appear fairly valued for the present. The preference, with their par for par conversion option, seem a better holding at 20s. 7½d.

Imperial Airways Position.—Commenting upon Imperial Airways ordinary shares, which stood at 51s. last November, we observed that the price appeared to value Treasury support and prospective rights to new capital on a generous basis. The shares have fallen sharply this week, to 38s. 9d., losing as much as 6s. 3d. on Wednesday, but they have since recovered to around 40s. 7½d. The proximate cause of the fall was the report—as yet unconfirmed—that one million £1 ordinary shares are to be issued shortly at 30s. per share. This report (coupled with the death of the chairman, Sir Eric Geddes) came as a blow to the market. It appears that the issue, whose terms are subject to Treasury approval, will not be made as of right to existing ordinary shareholders, but rather that preferential allotment will be given to them. In these circumstances, it would be instructive to know why the authorities decided on an issue price as low as 30s.—if, indeed, such a decision has been reached. Conversely, the value of rights to a new issue at 30s. at the rate of three new for two shares held, would clearly have called for a reduction in earlier share levels. After the proposed offer, the company have some £3,350,000

of share capital unissued, and Sir George Beharrell, speaking at last Friday's meeting, mentioned the possibility that preference shares might be issued for part of the company's requirements. The effect of the new subsidy and postal arrangements upon the ordinary share prospects cannot be assessed even roughly at present, for the company is engaged on a vast expansion of its operations which rules out any comparison with its previous cost conditions. After the ordinary shares have received 10 per cent., one-half of the balance of profits is due to the deferred capital held by the Government. Within what period such allocations may be made, the investor cannot possibly judge at present.

Royal Mail Lines. — The report that Furness Withy has purchased 750,000 Royal Mail Lines shares is hailed as a bull point for the latter for two reasons. Firstly, it removes one of the two remaining possible sources of supply for the market and secondly, it is taken as an indication of Lord Essendon's view of the prospects for the company. This block of shares is understood to comprise the remaining lots held by R.M. Realisation, D. McIver (whose share capital is owned by the Realisation Company) and the Nelson Company, which is in voluntary liquidation. As the holdings of the first two concerns may be ascertained from the Realisation Company's report, it may be assumed that the number of shares from the Nelson holding is 210,000. In effect the proceeds of this block of 210,000 shares represent the equity of the Realisation Company in the Nelson liquidation. On the basis of the present market price the sum represented is presumably of the order of £250,000, a figure closely approximating to the estimate given in these columns on March 25th. The only remaining block of Royal Mail Lines consists of 1,200,000 shares held by R.M.S.P. Meat Transports but charged to the creditors, whose total claims, with accrued interest, exceed £3,000,000. They are, therefore, dead from the point of view of R.M. Realisation and there is no news yet of any intention to deal with this holding, either by sale *en bloc* or by a market deal.

“Shell” Transport Meeting.—Lord Bearsted was unusually expansive on the subject of American oil control in his speech to the shareholders of “Shell” Transport this week. In his opinion the problem of wasteful over-production had not been solved; so long as California remained outside the Inter-State compact for output control, some uncertainty would exist. Nevertheless, the end of 1936 found the industry in a greatly improved statistical position, and the immediate outlook, he said, was favourable. He was frankly sceptical of the competition of petroleum substitutes. Ample supplies of natural petroleum products were available to meet the growing world demand, and at prices which would make the cost of substitutes (without heavy protective duties) thoroughly uneconomic and unprofitable. Lord Bearsted then reviewed the Company’s interests in Mexico and Venezuela, remarking that the Mexican Government appeared sincerely desirous of reaching an agreement on outstanding questions. It was disclosed that the group is now actively prospecting in Colombia. As chairman of a large distributing company in this country, Lord Bearsted referred to the change in the composition of the company’s motor spirit to meet modern engine design, and complained of inadequacy in the present road system in Great Britain. As chairman of an international trading company Lord Bearsted was naturally critical of economic rationalism. Self-sufficiency, he said, could only result in the lowering of the standard of living throughout the world. Happily the company had reached an agreement in principle with the Japanese Government, whose new petroleum law had threatened the foreign oil companies with eviction.

Anglo-Iranian Review. — Anglo-Iranian shareholders could not fail to be gratified by Lord Cadman's speech. The remarkable increase of 38 per cent. in the net trading profit (£9,443,950) was due almost entirely to the growth in oil revenues, and 60 per cent. of this growth was attributable to larger turnover, the net price realised having advanced by only $7\frac{1}{2}$ per cent. The year's production amounted to $9\frac{1}{2}$ million tons, of which 8,198,000 tons were obtained from the fields in Iran and 1,219,000 tons from the Iraq Petroleum Company in which the Company holds a 25 per cent. interest. It is probably true to say that the Anglo-Iranian is the cheapest crude oil producer in the world. In the absence of all competitive drilling it has been able from the outset to apply scientific principles to the control of production. The life of its two main producing fields (Haft Kel and Masjid-i-Sulaiman) had been greatly extended by the employment of gas conservation measures, and Lord Cadman stated with confidence that both fields should continue to produce by natural flow for many years to come. Shareholders will be gratified to hear that a new oilfield has been discovered at Gach Qaraghuli, which lies 125 miles south of Haft Kel and 155 miles east of the Abadan Refinery. This field is expected to be as large as Masjid-i-Sulaiman. Two other areas are being explored which should yield promising results. It is unfortunate that the drilling operations in Great Britain have so far been as barren as those in Iran have been productive, Lord Cadman referred to the improvements which had been effected in refinery technique and to the enlargement of the tanker fleet, which now consists of 84 vessels with an aggregate dead-weight tonnage of 843,000 tons. During the last 20 years the company has been spending on new tonnage approximately £1,000,000 a year. Lord Cadman was optimistic of the future, in view of the steady increase in world consumption, and he reminded shareholders that the retail price of first-grade motor spirit in Great Britain, after deduction of the duty, was still only 11 $\frac{1}{4}$ d. per gallon, compared with 1s. 6d. before the War, while the quality has been vastly improved.

Recent Tea Results.—In general, tea company reports for 1936 make somewhat uninspiring reading. A fair measure of prosperity was enjoyed by most companies but, with average tea prices virtually unchanged from their 1935 levels, alterations in profits have been mainly due to more or less fortuitous individual variations in costs, on the one hand, and output on the other. When translated in terms of percentage profits, however, these changes are by no means negligible. Most tea companies possess highly geared capital structures, and even small changes in earnings are usually substantially reflected in dividends. This lesson is illustrated in the accompanying table, which summarises the record of a representative selection of tea companies, whose reports have recently appeared:—

Company (and Share denomination)	1935		1936		Current Price of Ord.	Yield on 1935 dividends
	Earned	Paid	Earned	Paid		
	%	%	%	%		%
Borhat (f1)	5.6	6.0	6.1	5.0	18½-x	5.6
Darjeeling (f1)	8.1	7.5	8.6	6.0	26/3	4.6
Deamoolie (f1)	20.6	20.0	14.6	12.5	2½	4.5
Doom Dooma (f1)	16.3	15.0	13.7	12.5	46/3	5.4
Galaha Ceylon (f1)	9.5	7.5	7.4	6.5	28/9	5.0
Imperial Tea (f1)	2.9(a)	Nil	11.4	6.0	23/9	4.6
Kanan Devan (f10).....	11.6	12.5	14.5	12.5	23½	5.4

Borhat, a medium-grade Assam producer, suffered a sharp reduction in gross receipts as a consequence of smaller output. Costs, however, were commensurately reduced, so that net income was somewhat higher than a year ago. Nevertheless, the dividend is reduced to 5 per cent. against 6 per cent., as provision is being made for reserves. The company has a high capitalisation, so that gains this year from higher tea prices will probably be moderate. The Darjeeling Company shows earnings almost equal to those of 1935, despite a small reduction in the average realised price of tea. Output was larger in consequence of purchased export rights, but plantation costs rose by the exceptionally large amount of over 2d. a lb. Economies in other directions, however, appear to have counterbalanced this increase. Deamoolie has suffered the largest reduction in net profits of any company in the group. Prices were almost unchanged, but costs are up by over 1d. a lb. and output shows a substantial fall. The company produces over 14 lbs. of tea for every £1 of capital, so that profits are highly responsive. Doom Dooma, another fairly high-grade Assam producer, owes its smaller earnings more to decreased output than to any other factor. Prices, indeed, were somewhat better (16.32d. per lb., against 16.11d.), and costs somewhat lower (11.65d., against 11.70d.). Prices of Assam tea have not benefited strikingly from the general advance this year, but on the whole a better average should be enjoyed than in 1936.

In the case of Galaha Ceylon, such favourable factors as increased output were more than offset by adverse developments, including slightly lower prices and somewhat higher costs. The company's debenture stock and preference capital increases the leverage on the ordinary shares, but the comparatively low yield on the latter at current prices suggests that future prospects are optimistically viewed. Auction prices this year to date are almost 2d. a lb. in excess of last year. Imperial Tea produces comparatively low-grade tea and enjoyed better prices in 1936. Net profits show a very striking recovery, due in part to higher returns, but mainly to a very substantial decline in costs. The great efforts made to restore the company's fortunes are thus meeting with success. Finally, Kanan Devan, another producer of fairly low-grade teas, has also enjoyed larger prices with a lower crop. Costs were materially reduced, but £12,000 has been put to replacement reserve, so that, despite larger earnings, dividends are unchanged.

London Tin Corporation.—During the past year the capital of London Tin was drastically reorganised and the associated Anglo-Oriental Mining undertaking was absorbed. As a result, the issued capital now stands at £3,618,240 in 4s. shares, compared with £3,158,350 partly in preference and partly in ordinary shares of 10s. each. The balance brought in from the Anglo-Oriental is £3,940 and the net profit amounts to £313,080. The 7 per cent. dividend absorbs £253,280 of this sum, leaving £83,370 to be carried forward, against £13,840 brought in. Following the acquisition of shares from other undertakings in the group, investments have been increased by £435,700 to £3,357,380. Of this total, quoted shares—which form the great bulk of the portfolio—showed an appreciation of over £1½ millions on April 30th above the book figure. Since then, of course, a setback in prices has occurred. The particulars given regarding the various interests, which are accompanied by a useful map, suggest that London Tin shares at the current price of 4s. 10½d. have long-run possibilities.

Siamese and Bangrin.—These two far-Eastern dredging concerns derived a disappointingly small benefit last year from the substantial increase in the production quota. The mining revenue of Siamese Tin Dredging amounted to £205,650 as against £163,120, but owing to increased expenditure the profit was no higher than £46,610, compared with £31,890. The dividend was,

however, raised by 5 per cent. to 25 per cent. For Bangrin, mining revenue totalled £88,370 as compared with £68,620, but the operating surplus was only £7,000, higher at £20,890. The repetition of the previous year's dividend of 5 per cent. leaves a slightly increased balance of £9,300 to go forward. Siamese 5s. shares are quoted in the market at about 26s. 3d., and Bangrin £1 shares at 19s. 4½d. The financial position of both companies is good, and better results may be secured during the current year.

Other Company Results.—About 70 further reports are contained in our usual analysis of profit and loss accounts appearing on page 767, including a number of interesting iron, coal and steel results, besides those of the Elder Dempster companies. A discussion of the results appears on page 766 under the heading "Shorter Company Comments."

Company Meetings of the Week.—Reports of company meetings begin on page 753 of this issue. In reviewing the events of 1936 in countries in which the *Ottoman Bank* was interested, General Sir Herbert Lawrence stressed the unusual nature of the present recovery, in that it consists of an irregular series of national internal recoveries with only slow revival in international trade. Mr L. D. Whitehead, addressing *Whitehead Iron and Steel* shareholders, discussed the company's policy of declaring capital bonuses, and pointed out that in view of the completion of capital expenditure, the directors intended to begin investing a good part of the reserve in securities. The purchase of additional land was being negotiated to safeguard future requirements. At the first annual meeting of *Philip Hill and Partners*, Mr Philip E. Hill explained the company's policy in connection with new issues. Exhaustive investigations were always made, and the company did not consider that its responsibility ended with the allotment of shares. In commenting on the recent phase of depression in the stock markets, he declared that there was no real justification for current market conditions. Viscount Bearsted's address at the "Shell" *Transport and Trading* meeting, and Lord Cadman's speech to *Anglo-Iranian Oil Company* shareholders are both discussed on page 745. After explaining to *Venezuelan Oil Concession* members the effects of the strike, Viscount Bearsted declared that costs remained relatively low, and the scope for further economies could hardly be extended. At the *Gordon Hotels* meeting, Major-General Guy Dawnay referred with satisfaction to the better trading profits, although revenue was no longer derived from the Hotel Metropole. Colonel Fenwick, in his speech to *Willoughby's Consolidated* members, remarked that their cattle ranching business in Rhodesia was becoming firmly established. At the *British Electric Traction* meeting, the chairman criticised the Government's electricity proposals, but hoped the present year was likely to show a further advance. Sir Archibald Mitchelson, at the *Great Universal Stores* meeting, outlined the developments of their mail order business and the stores transaction. Mr Eugene Serre, at the *Advance Laundries* meeting, explained that the proposed new issue of capital was necessary to provide plant sufficient to meet requirements within the limits of an ordinary working day. Mr Harold W. Batty showed that the revenue of *Selected Land and Property Company* was being broadened, so that a greater proportion of income would arise from rentals as distinct from profits on sales. Mr K. O. Hunter, at the *Bangrin Tin Dredging* meeting, discussed the acquisition of an option to purchase an adjoining tin-bearing area. At the *Siamese Tin Syndicate* meeting, he referred to the satisfactory results so far obtained in the current year. Colonel Charles Ponsonby, at the *Forster's Glass Company* meeting, reminded his hearers that the improvement in results would have been greater but for the effect of poor weather last summer on mineral water bottle sales.

THE WEEK IN THE MARKETS

THE STOCK EXCHANGE

SETTLING DAYS

TICKET: JULY 6

ACCOUNT: JULY 8

THE market has passed through some bad patches this week, but it can fairly claim to have survived its many ordeals with credit. The opening was overshadowed by the French crisis, and before Monday had passed a black cloud had blown up from beyond the Rhine, fanned by the gusty winds of the German Press. On Tuesday, the blow came from the Cape, where extensive liquidation of Kaffir shares—established producers and developing counters together—depressed prices to new low levels. Yet in the face of these recurrent blows, the industrial market kept its head, and mining shares, thanks to London's ability to absorb shares, recovered a good deal of their losses.

None the less, investors with profits to record for the last week of a miserable account will certainly congratulate themselves. The gilt-edged market opened with the uncomfortable news that 53 per cent. of the Australian issue had been left with the underwriters, and prices declined all round. The fall was accentuated on the following day by the underwriting of the L.C.C. loan (discussed on page 742). The size of the issue worried the market more than its terms, which had been favourably pitched, like those of the Australian operation, in hope of success. War Loan reached a low record since 1933, and fell further to 100½ on Thursday, together with the National Defence Bonds to 3½ discount. The Australian scrip opened at ½ discount, and rapidly declined to 1½ discount in mid-week. Dominion issues were generally affected, while home corporation stocks were lowered on the L.C.C. issue.

In the foreign bond market, European issues were markedly depressed. French rentes were at first sold, although they found support on the formation of the Chautemps government. German bonds, which had received attention last week in anticipation of Baron von Neurath's visit, were depressed by its cancellation, and the explosive atmosphere created out of the "Leipzig" incident affected a far wider range of securities.

Little business was reported in the home rail market, and prices drifted lower. Prior charges were affected by the

malaise of the gilt-edged market, while the ordinary stocks found no support even after the publication of excellent traffics. The proceedings at the Railway Rates Tribunal (discussed on page 743) also attracted no interest, despite their revealing nature. Argentine rails remained in a state of depression, fractional movements being the rule.

After two uncertain days, the industrial market became steadier in mid-week, although there was no expansion in the low level of business. International counters fluctuated widely, but showed a decided improvement in mid-week. Intermittent support for coal shares (stimulated by the increased Powell Duffryn dividend) kept the group firm, but steel shares showed no decided trend. Most of the general industrial groups ruled dull to steady. Electrical equipment shares found little support, and one of the few features in the motor group was the fall and subsequent rally in Standard. Imperial Airways fell at one time to 38s. 9d. on the report of the new issue (see page 744) while the stores group was steady in mid-week after an early setback.

Textile shares opened firm, but uncertainty developed later. The Patons and Baldwins results were succeeded by fluctuation which left the shares lower on balance. Tobacco shares were not impressive, but the shipping group shook off its troubles and made a further mid-week improvement. The leading miscellaneous shares drifted to lower levels, despite the canvassing of their cheapness.

Buyers were scarce in the oil share market. The French crisis and Wall Street's uncertainty killed any interest in the shares at first, and the strike news from Trinidad was a further retarding factor. The Shell Union announcement pulled the market together, but despite the absence of selling, small declines were again registered on Tuesday. A slightly better tone prevailed in mid-week, assisted to some extent by Lord Bearsted's remarks at the "Shell" meeting (discussed on page 745). A little public attention was reported in the rubber market at first, but the disappointing trend of the commodity reduced interest, although the shares kept steady. Tea shares remained idle.

Kaffir shares opened with the usual pre-occupation on the future of gold, but the dullness of Monday was as nothing to the heavy declines which Tuesday's selling from the Cape produced. The market fastened on the report that the banks had imposed heavy cuts on carried accounts, and the general nature of the falls tended to support that view. West Wits. fell at one

time to 7½, although they recovered to 8½ following some "shop" support. Most of the new concerns were seriously affected, although London's absorptive power enabled the whole market to recover from mid-week. It is now thought that the Johannesburg weakness has been cleared up, although earlier reports before Tuesday's collapse told the same story. Rhodesian copper shares improved with the metal, and some of the base metal shares recovered a few pence.

NEW YORK STOCK EXCHANGE

CONDITIONS recently have been dull rather than depressing, and it is reassuring to find a stability during the last few days which has not been evident for some weeks. The interest of Wall Street has been so much concentrated on the labour situation, that other news, in particular of the change of government in France, met with a surprising indifference. On Monday, trifling declines and a narrow range of quotations were accompanied by some support for steel shares on the news that Republic Steel would re-open some of its plants to non-strikers the next day. Eventually the Corporation acceded to official requests not to re-open, but little change resulted in the market. A report that progress was being made by the Steel Mediation Board acted as a stimulus in mid-week, the tone being noticeably better and small advances widespread under the lead of steel and copper issues. Steel production is estimated by *Iron Age* at 75 per cent. of capacity against 77 per cent. Seasonal influences are considered partly responsible for a declining volume of business going to companies not affected by strikes, who would normally be expected to report greater activity.

CAPITAL ISSUES

APART from the *London County Council* issue (discussed in a Note on page 742), new issue activity this week has been at low ebb. The only prospectus is that of *B. Finch and Company, Ltd.*, a concern which amalgamates two sanitary and heating engineers' businesses, and issues 100,000 6 per cent. 10s. preference and 700,000 2s. ordinary shares at par. The three years' combined average covers the preference dividend four times and leaves, according to the prospectus, £13 16s. 4-8d. per cent. for the ordinary. Stocks represent just under half the net assets of £51,521, which, together with profits from January 1st of an undisclosed amount, are acquired for £69,500, all in cash. The total goodwill of £18,729 represents a considerable proportion of the purchase price. The yield offered on both classes of shares seems appropriate in relation to the company's size. A statement for

information only has been published by the *Beehive Spinning Company*, which shows an estimated profit of £27,500 on the basis of full capacity. Compared with a profit of £2,542 for the latest year, this estimate illustrates the high expectations from the spinning agreement.

TOTALS OF CAPITAL ISSUES DURING WEEK

Net Sales of National Savings Certificates, week ended June 19, 1937. Dr. £200,000.

PUBLIC OFFERS

London County Council.—Issue of £10,000,000 3½ per cent. stock at 100½. A trustee stock, redeemable at par 1962, or from 1952 on notice. Proceeds to redeem £1,250,000 housing bonds, and for expenditure on re-housing, open spaces, etc. Area, 117 square miles; estimated population, 4,141,000; rateable value £60,000,000. Net debt £80,522,000 (£47,000,000 revenue producing). Rate of 7s. 3d. produces £22,000,000; government grants, £8,500,000; rents £2,800,000.

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields of fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

OIL OUTPUTS

APEX (TRINIDAD) OILFIELDS, LTD.—The results for the month of May are as follows: Production of oil 48,990 tons; deliveries, 48,970 tons.

THE ATTACK OIL COMPANY, LTD.—Production for May, 16,056 barrels.

THE BRITISH BURMAH PETROLEUM COMPANY, LTD.—A cablegram has been received from Burma reporting the production of crude oil by this company as 43,218 barrels for May, 1937.

BRITISH CONTROLLED OILFIELDS, LTD.—Production for the week ended May 15th, 13,367 barrels. Production for the week ended May 22nd: 13,818 barrels. Production for the week ended May 29th: 13,732 barrels. Production for week ended May 5th, 13,297 barrels. Production for the week ended June 12th was 14,254 barrels.

THE KERN RIVER OILFIELDS OF CALIFORNIA, LTD.—The total production during May was 156,229 barrels, or approximately 22,318 tons.

THE MEXICAN EAGLE OIL COMPANY, LTD.—Production for the week ended May 8, 1937, was 661,000 barrels. Production for the week ended May 22, 1937, was 666,000 barrels. Production for the week ended May 29, 1937, is not available owing to the strike.

PHOENIX OIL AND TRANSPORT COMPANY, LTD.—The gross production of crude oil of the Phoenix Group for May was 57,815 tons.

TAMPICO OIL, LTD.—The total production from the company's properties in Mexico during April was 13,568 barrels, in respect of which the royalty due to Tampico Oil, Ltd., amounted to 1,018 barrels. Production from the Company's properties in Mexico during May was 12,753 barrels, in respect of which Royalty due to Tampico Oil, Ltd., amounted to 956 barrels.

COMPANY MEETINGS

OTTOMAN BANK

EFFECT OF CURRENCY DIFFICULTIES

IMPROVED CONDITIONS IN THE BALKANS AND NEAR EAST

RISE IN AGRICULTURAL PRODUCTS AND METAL ORES

FURTHER COMMERCIAL PROGRESS IN TURKEY

SIR HERBERT LAWRENCE'S ADDRESS

The annual general meeting of shareholders of the Ottoman Bank was held, on the 22nd instant, at Winchester House, Old Broad Street, London, E.C.

General the Hon. Sir Herbert A. Lawrence, G.C.B., presided. Mr W. Stewart McKim (secretary to the committee) having read the notice convening the meeting.

The Chairman said:—Ladies and gentlemen,—I have been informed that this meeting is properly constituted, and I presume it is your pleasure that the report and balance-sheet circulated among you should be taken as read. (Agreed.)

After the report and balance sheet were printed your committee received the resignation of one of its members, Monsieur Horace Finally. We wish to express our real regret that this collaboration should come to an end. For more than 16 years our eminent colleague has placed without reserve at the service of the bank his experience and the weight of his authority.

RECOVERY CONTINUED

In spite of the threat of political complications, which continued to prevail in the world at large—more especially so with the outbreak of civil war in Spain—the recovery, which began in 1935, was continued during the year under review.

However, the character of this movement is peculiar, in that it consists essentially in an irregular series of purely national internal recoveries. Hence its irregular pulse and the slow rate of revival in international trade.

In the total of world commerce Europe itself, handicapped by the abuse of quota systems and by the general adoption of compensation agreements, benefited only to a small degree in the general improvement.

However, all things considered, the new and rapid rise in agricultural products and in metal ores has had the effect, not perhaps of restoring a wholesome and durable prosperity, but at least of improving very considerably the economic position of the various countries in the Balkans and in the Near East in which we work.

Almost every one of our groups of branches and of our subsidiaries has felt the beneficial effect of this development.

CURRENCY DIFFICULTIES

If the general results submitted to you do not entirely reflect the situation, the fact is to be imputed to currency difficulties, and more precisely to the currency crisis in the Gold Bloc, latent throughout the year, which came to a head in the month of September last, as you are well aware.

The event did not find us unprepared. Your committee had not been indifferent to the attacks on these currencies in May and November, 1935, and had already envisaged the precautions to be taken in order to reduce to the strict minimum the effect of an eventual devaluation on a portion of the funds of the bank.

In fact, when this devaluation occurred, simultaneously in France, Switzerland, and Holland, and shortly afterwards in Italy and several other countries whose currency was of less international importance, we had already taken precautionary measures with the object of limiting the loss to a figure which could be covered by provisions previously constituted to meet eventualities of this kind.

Nevertheless, such a concentration of our funds in the currency of the balance sheet was bound to have an inevitable reaction on their productiveness.

FAVOURABLE YEAR IN TURKEY

The year 1936 was, on the whole, favourable to the economic welfare of Turkey.

In spite of a rainy summer, the crops were good, both in quantity and in value. Most of the products, notably wheat and tobacco, gave a higher yield than in 1935, and prices, apart from rare exceptions, were on a higher level than in the preceding campaign.

But agricultural production is not alone in feeding the Turkish exports. Minerals contribute to them in a steadily increasing measure. In a desire to derive advantage from this tendency, the Government decided to nationalise the mines. The decision was preceded by friendly negotiations for the repurchase of the concession of the "Société d'Héraclée," in which we own an interest. The repurchase price is to be paid by deliveries of coal to France, since almost all the invested capital is of French origin.

Industrial production remains a matter of paramount interest. Numerous factories were provided for by the first Five-Year Plan, soon to be followed by a second plan which is in course of elaboration. By the end of 1936 most of these factories were already installed. In this connection the chief event of the year was the signature of a contract with the firm of Brassert in London, for the erection at Karabuk of a heavy industry, including steelworks and blast furnaces.

1933, is now bearing fruit. Under an energetic and competent management, our staff has realised the possibilities provided by the credit of our establishment. For three years current accounts creditor have shown sustained progress. Accordingly we are taking year by year a greater part in the financing of trade, and especially of export trade.

The number of branches showing a profit has consequently risen from 11 in 1934 to 17 in 1935 and 23 in 1936, while that of branches showing a loss has dropped from 19 to 13 and to 7. The most profitable branches are those of Yenigami (formerly Stamboul), Izmir, and Ankara. The office at Galata, whose activity is important, is also giving results of a satisfactory nature.

Our relations continue to be most cordial with the Ministry of Finance as with the general management of the Central Bank of the Republic and the other State Administrations. The "Société Commerciale Franco-Turque," the foundation of which I mentioned last year, is fulfilling its task under the best of conditions, and its operations made it possible on May 25th for the bondholders of the debt, as well as for the other foreign creditors who benefit from the agreement, to receive almost the total amount of their coupons.

TREATY BETWEEN GREAT BRITAIN AND EGYPT

The year 1936 will be remembered for the signature of the Treaty of Friendship and Alliance between Egypt and Great Britain. By the terms of this treaty Great Britain recognises Egypt as an independent Sovereign State. The system of Capitulations, which was plainly inconsistent with the new regime, has recently been abolished by an agreement between the Egyptian Government and the Capitulatory Powers. After a transitional period the Mixed Tribunal will disappear, and foreigners in Egypt will be subject to the national jurisdiction.

The Budget figures for 1936-37 provide for total receipts of £E37.7 millions and expenditure of £E35.1 millions. Of that expenditure the following items are worthy of notice: The public debt requires £E4.1 millions; war and marine, £E2 millions only; while the Ministry of Public Works receives £E7 millions (including £E4.2 millions for the Irrigation Department), and the Ministry of Agriculture £E1 million.

The public debt amounts approximately to £E90 millions, while the reserve is valued at about £E20 millions. These figures are impressive and are perhaps unique among countries of this size with similar natural resources.

For 1937-38 the Budget is based on an estimate £E36 millions on both sides of the account.

TRADE FIGURES

The movement of foreign trade continued to be satisfactory during the year and the cotton situation has been good. In 1936 imports into Egypt totalled £E31,515,816 and exports £E32,979,204, of which cotton exports represented £E25,019,561. The 1936-37 cotton crop has been estimated at 9,500,000 cantars, which is a record figure. I think it may safely be said that the general economic condition of the country has improved.

Our branches in Egypt continued during 1936 to feel the effect of the very keen competition between the banks, but it is hoped that the increasing prosperity of Egypt will provide better results in 1937.

POSITION IN PALESTINE

In Palestine during the first three months of 1936 things continued to be prosperous. From April to October business was paralysed by the general political strike of the Arab population and the ensuing disturbances.

Imports during 1936 totalled £P13,979,023—or a fall of about £P4,000,000 as compared with 1935—and exports of domestic produce £P3,625,000, as compared with £P4,700,000 in the preceding years.

Our Palestine branches were obliged to exercise the utmost caution and reserve during most of the year and losses have been avoided. Considering the circumstances, the results have been satisfactory.

In Cyprus the improvement in general conditions was maintained during 1936. Though climatic conditions were unfavourable during May and June and the yield on crops was accordingly disappointing, cultivators found compensation in the higher prices obtained for their produce.

The activity of our branches in the island continued to show satisfactory results.

IRAQ AND IRAN

The year under review has been prosperous in Iraq owing to the exceptionally good cereal crops with a large exportable

surplus and rising prices abroad. Nearly 300 million kilos. of wheat and barley were exported during 1936. In consequence, the purchasing power of the peasantry and of the lower classes generally was greater, although the cost of living also rose.

Notes and coins in circulation increased from 3,760,213 Iraq dinars at March 31, 1936, to 4,701,312 at January 31, 1937, and the figures are expected to be considerably higher in the near future.

During the year it was decided to construct two steel bridges across the Tigris at Bagdad. The contract has been placed with a British firm. It was also decided to prolong the railway line from Bagdad to Haiji on the right bank of the Tigris, in order to join the line from Istanbul to Tel Kocheh on the Northern Iraq-Syrian frontier. Work has been started on this extension, and Iraq will eventually be connected with Europe by rail.

Marked improvement has been made in health conditions, housing facilities, and in education. Many new dispensaries and schools have been opened throughout the country, and slums are being replaced by modern houses and model villages.

Our branches have benefited by the improved conditions and have handled a large share of the commercial business of the country.

During 1936 the outstanding event in Iran was the reintroduction on March 1st of a strict control of foreign exchange. The control is still in force.

The policy of monopolisation of commerce through companies controlled by the Government is being pursued, and the amount of "free" business becomes steadily less.

The branches of the Ottoman Bank have taken a good share in such local business as was available, but results have naturally been less favourable than they would have been had it been possible to operate in foreign exchange.

There remain some words to be said concerning the countries in which we are interested through our subsidiaries.

SYRIA AND THE LEBANON

In Syria and the Lebanon the year was marked by the signature with the Mandatory Power of two treaties of friendship and alliance which provided for their status as independent sovereign States.

From the economic point of view the situation continued to develop favourably, thanks to good harvests and to the completion of the new industries. Unusual factors also contributed: thus, Libanese oranges profited by a momentary disappearance of Spanish competition, and, speaking generally, the foreign trade of the country was stimulated by the devaluation of the Libano-Syrian pound, so that the deficit in the commercial balance, which in 1933 had reached 28,130,000 Libano-Syrian pounds, was only 12,360,000 in 1936.

In view of the increased need for currency, the Banque de Syrie et du Grand Liban saw the circulation of its notes advance from 300,800,000 francs on December 31, 1935, to 423,300,000 francs on December 31, 1936. Though our subsidiary has not yet held its annual general meeting, I am in a position to inform you that the results of the year will be very good, and that it will be able to distribute a dividend of 11.4 per cent., as against 9.8.

IMPROVED CONDITIONS IN YUGOSLAVIA

Yugoslavia benefited by an exceptionally abundant cereal crop, higher than that of 1935 by 50 per cent., and exporters were able to realise the crop at advantageous prices. Though it remains essentially an agricultural country, its natural resources in copper, lead, zinc, and even in gold, have caused it to share no less happily in the recent upward movement of metals. Enterprises for the extraction and smelting of these have for this reason during the last year entered on a period of prosperity which is of benefit to the national economy. The increase in the number of trucks loaded, as also of deposits in the banks and savings banks, a surplus of 12 per cent. in the yield of direct taxes, and of 8½ per cent. in the yield of indirect taxes, are all favourable symptoms. Since the raising of sanctions against Italy, the commercial balance has become favourable, and, according to the report of the National Bank, the balance of payments, which has been relieved by the moratorium agreements reached with foreign bondholders, is also balanced.

In any case, when we compare the monetary and banking crisis which descended on Yugoslavia when the pound sterling left gold in 1931, and the calm with which the dinar in 1936 supported the devaluation of the French franc, the Swiss franc, the lira, and the Czechoslovak crown, we can get some idea of the power of resistance which this country has acquired in the interval.

The Banque Franco-Serbe, in the capital of which, as you know, we have an absolute majority, has presented a satisfactory balance sheet to its shareholders. In spite of the competition of the Institutions of Public Credit, our subsidiary has developed both its resources and its activities. It may be said in particular that there is practically no great foreign enterprise working in Yugoslavia which does not make use of its banking services. For the year 1936 it has just distributed a dividend of 5 per cent., while allocating a further amount to its reserves.

ECONOMIC POSITION IN GREECE

In Greece, on the contrary, the economic position last year showed a certain weakness. Climatic conditions were partly the cause. To these, and not to any reduction of the surface cultivated, must be attributed the deficit in the wheat crop and the fact that it only covered 58 per cent. of consumption instead of 62 per cent. during the previous year. The result was a charge on the balance of external payments which was all the heavier in that the prices of imported grain and flour were 30 per cent. higher than those of 1935.

The trade balance showed the most important deficit which has been registered since 1932. It has only been compensated in part by the great activity of the mercantile marine.

In order to protect the national currency, the Greek Government reattached the drachma to the pound sterling at a lower level, and took severe measures against the export of capital, which went so far as the censorship of correspondence and the refusal of passports. Respect for the laws and regulations in each of the countries where we are directly or indirectly represented is one of our principles, and we should have no objection to raise to these measures if the authority given to the banks to carry on exchange operations under the control of the Bank of Greece had not been unjustly denied to the offices of the British-French Discount Bank, Limited, in Athens and the Piraeus as well as to our own branch in Salonica. Subsequently the policy of exclusion was largely modified, but we still await full equality of treatment.

Our subsidiary has, notwithstanding, maintained its previous activity, but its profits cannot be transferred.

In Roumania trading conditions have been more favourable during the past year, principally owing to the rise in world prices of cereals. The business of our subsidiary, the Bank of Roumania, however, although improving, is still hampered by exchange restrictions.

Our offices in London and Paris have used their endeavours under the circumstances, and in the absence of remunerative employment, to make the best possible use of the large liquid means at their disposal.

FAVOURABLE OUTLOOK FOR CURRENT YEAR

After this detailed review of our activity during the past year, the figures of the balance sheet call for no special remark on my part. Before submitting them to your approval, I should like, however—subject to the reserve imposed by the monetary and political conditions of the world to-day—to make a few favourable forecasts with regard to the present year. Our own readjustment is practically complete, or is on the way to being completed, and we expect to profit therefrom sooner or later, hoping, as we do, that we shall not be deprived of its advantages by a continuance of the present monetary instability.

The balance sheet at December 31, 1936, shows, after deduction of all charges and the amortisation of doubtful debts, a net balance of £78,365, which, together with the amount previously carried forward of £29,782, leaves a total of £108,149 at our disposal.

Your committee propose to you to distribute the same dividend of 38. as during the last six years. If you are so good as to follow our recommendations, this dividend will be payable on June 28th in Istanbul, London, and Paris, free of all tax in Paris. The amount again carried forward will be £33,149.

I should not like to end this speech without thanking the staff of the bank, in your name and in ours, for the zeal and devotion shown by all ranks.

I now beg to move, ladies and gentlemen, "That the report and accounts now read be received and adopted; that the dividend for the year ended December 31, 1936, be fixed at the rate of 38. per share, and that this dividend be payable in Istanbul, London, and Paris on June 28, 1937."

Before I put this resolution I shall be happy to answer any questions.

Monsieur A. Roudy: I have pleasure in seconding the resolution. No questions being asked, the chairman put the resolution to the meeting, and it was carried unanimously.

The Chairman: I have also to move "That Monsieur Jacques de Neufville and Monsieur Anathase Roudy be and they are hereby re-elected members of the general committee."

Sir John P. Hewett, G.C.S.I., K.B.E., C.I.E.: I have much pleasure in seconding the resolution.

The motion was carried unanimously.

VOTE OF THANKS TO CHAIRMAN, DIRECTORS AND MANAGEMENT

Mr Gordon L. Jacobs: I am sure shareholders would wish to join me in thanking the chairman for his admirable speech. I was glad to hear the note on which he ended it, because naturally as shareholders we always hopefully look forward to an increase in the rate of dividend if the directors feel justified in paying it. The chairman has made it quite clear that the difficulties of international banking still exist. I would like to propose that the thanks of the meeting be given to the chairman and the board and the management.

Mr. A. Bradbery: I have very much pleasure in seconding that. The vote was unanimously accorded.

The Chairman: I beg to thank you on behalf of the management and my colleagues for the vote of thanks you have been good enough to propose and carry. I think it is well that everybody should remember that while the bank is able under present conditions, and in the future it looks to be more able, to make profits in foreign currencies, they are in foreign currencies, and the great difficulty is in getting those currencies transferred to this country without loss.

The proceedings then terminated.

"SHELL" TRANSPORT AND TRADING COMPANY, LIMITED

SUBSTANTIALLY BETTER RESULTS

PRE-EMINENCE OF SHELL MOTOR SPIRIT

The annual general meeting of the "Shell" Transport and Trading Company, Limited, was held, on the 22nd instant, in London.

The Right Hon. Viscount Bearsted, M.C. (chairman, and one of the managing directors), in the course of his speech, said the reserve account now stands at the sum of £10,709,312, which will be reduced by the amount appropriated for the issue of the new ordinary stock in March of this year. After giving effect to this there will remain a balance of £5,865,040 standing to the credit of this account. Your properties, as in previous years, stand in the balance sheet at well below their replacement cost. I would draw your attention once again to the soundness of your company's financial position and would point out that while the assets are upwards of £52,800,000, your creditors amount to only £66,000. The balance of profit and loss account is upwards of £964,000 greater than in 1935, and enables us to recommend a dividend of 2s. 6d. per £1 of stock on the increased capital of the company free of tax. Your company was once more in the position of being able to pay an interim dividend in January, and I may state that it is not proposed to consider the matter again before January of next year. At the present minute it would be safe to say that there is practically no tanker tonnage laid up in the world. We ourselves added eighteen new tankers with a dead-weight capacity of approximately 180,000 tons to our fleet, which is probably to-day the most up to date in the world.

GROWING WORLD DEMAND

Since I last addressed you no discovery has been made which would permit the economic production of substitutes in competition with petroleum products. I remain firmly of the opinion that not only are there ample supplies of petroleum products available to meet the growing world demand, but that they will be made available at prices which will make the cost of substitutes without heavy protective duties thoroughly uneconomic and unprofitable. During the year the production of your group increased from 26,620,019 tons to 28,172,570 tons. Coincident with this general increase in the consumption of our products throughout the world there has been a somewhat easier currency position generally, and I am hopeful that this is a clear indication of some return to prosperity.

You have heard a good deal about the accumulation of emergency stocks by various Governments. As far as I can judge, only a small part of the increased consumption for the period under review is due to the laying down of such emergency stocks.

IMPROVED POSITION IN U.S.A.

In the United States the year 1936 saw a continuation of the improved conditions which as a result of strenuous efforts on the part of leading oil companies had set in during the latter part of the previous year. It still cannot be said that the problem of wasteful overproduction has been entirely solved, and so long as Californian production is not properly regulated a state of uncertainty exists. The end of 1936 found the industry in an improved statistical position. The result of the improvement in crude and product prices is seen in the recovery of United States oil companies generally, in which your associated companies participated, so that the Shell Union Company was not only able to pay off the preferred dividend arrears amounting to \$26,125 per share, but in addition to pay a dividend on the common stock. In general the immediate outlook for the petroleum industry in the United States appears more favourable, although due consideration must be given to the factors of rising taxes and labour costs, which are imposing a constantly increasing burden on corporation earnings.

MEXICAN SITUATION

The Mexican situation has been dealt with in detail in the reports of the Mexican and Canadian Eagle Companies. Progress in the discussion with the Government has been slow and during the year under review the Mexican Eagle Company has suffered by recurring labour difficulties. We continue to believe, however, that a sincere desire exists on the part of the Mexican Government to reach agreement on the questions outstanding between them and the company. The production of the companies in Venezuela in which our group is interested showed a slight increase in 1936 as compared with 1935. During the latter part of the year under review we have extended our interests to Colombia with the idea of securing Government concessions in that country. With the formation of Mosul Holdings, Limited, which took place in October, 1936, we now have an interest in the concession area of the British Oil Development, Limited, whose concessions are situated to the west of the River Euphrates.

NEW QUALITIES OF SHELL MOTOR SPIRIT

The development of the Shell aviation organisation continues. You will all have seen our recent announcements in the press and elsewhere drawing attention to the new qualities of Shell motor spirit. I am sure that those of you who are motorists have already noticed these qualities yourselves. Over a long series of years Shell motor spirit has maintained a pre-eminent position in public favour. But during all these years it must not be thought that the quality or composition of the petrol remained the same. As the design of motor-car engines developed so in corresponding measure did Shell develop too. We have always aimed at producing a motor spirit suitable for the greatest number of cars on the road.

BOLD ROAD POLICY NEEDED

On similar occasions in the past I have referred to general problems of the road. There is no gainsaying that our present road system is inadequate on many accounts. Not only is the time fast approaching when its inadequacy threatens to throttle road transport, but it is clear that at this very moment that same inadequacy is a menace to the life and safety of the community.

There is no question but that there is urgent need for a bold policy of road construction and improvement. I am not going to suggest that at the present moment, when the country is largely engaged in meeting an urgent requirement in another direction, it would be opportune to embark upon such a programme. Sooner or later, however, the time will arrive when the present activity, some of which is of a non-recurrent nature, is bound to decline, and all the hardships and difficulties which will result from that decline can be largely alleviated if the country's energies are immediately transferred to a national scheme of road construction. It is most necessary, however, that the plans for such a scheme should be made in advance.

I would commend this task of their preparation to the urgent attention of all who are concerned with maintaining the adequacy of the country's transport system.

The report and accounts were unanimously adopted.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8 Bouverie Street, Fleet Street, London, E.C.4

ANGLO-IRANIAN OIL COMPANY,
LIMITED

PROFITS UP £3,464,741

The twenty-eighth ordinary general meeting of this company was held, on the 21st instant, at 20 Abbermarbury, London.

The Rt. Hon. Lord Cadman, of Silverdale, G.C.M.G., D.Sc., the chairman of the company, presided, and in moving the adoption of the report and accounts, said that the most striking figure in the profit and loss account was the trading profit of £9,443,950, showing the remarkable increase of £3,464,741. The increase was almost entirely due to the growth of net proceeds from the sale of oil, and the most satisfactory feature was that nearly 60 per cent. of the increase was attributable to expansion in sales tonnage, the net price realised having advanced by less than 7½ per cent.

The first figure on the assets side of the balance sheet—£3,877,228, represented the written down value of the refinery at Abadan with all the plant necessary for the multitude of their processes, the tankage, the housing accommodation for staff and workmen, the pipe-lines for transport, and the equipment for the distribution organisation in Iran. As the tonnage handled had been just over 8,000,000 tons the present book value of the above assets was under 10s. per ton—a truly remarkable figure.

Their total production of crude oil for the year amounted to 9,517,000 tons, of which 8,108,000 tons had been obtained from their fields in Iran, and 1,210,000 tons from the Iraq Petroleum Company.

EXPLORATORY DRILLING IN IRAN

In the search for further producing areas they had been successful in proving oil at Gach Qaraghuli, some 125 miles south-east of Haft Kel and 155 miles east of Abadan. The first well to prove important production entered the Asmari limestone at 3,364 ft., giving about 400 tons a day. Another well on the opposite flank of the structure had been drilled into the limestone, and on test had produced oil at a rate equivalent to a daily output of over 4,000 tons.

The demand for what was termed "high octane" spirit had made great calls on the research development and refining sides of the company's operations. Motor spirit which would have been a first-class product a few years ago had now to be "reformed" to meet current standards of quality. Plant was now being installed in their refineries to operate processes only recently developed to utilise certain constituents of the gas evolved in reforming, as a raw material for the production of fuels of even higher octane rating than was normally required for motor-car use. From that source they would have ideal blending materials for aviation spirit.

The petroleum industry in the United States, which was still the pivotal factor in the industry generally, enjoyed a welcome return to prosperity during 1936. Consumption of petroleum products in that country increased to a remarkable extent, and, supervening upon a sounder crude position, the increase of consumption stimulated markets in the States and elsewhere. In consequence, prices of crude and products had gradually increased. World consumption of petroleum products continued to advance and the company had been able to obtain its share of the increase.

In Great Britain sales were being aided by the high quality of their reformed spirit.

PROSPECTS

In many respects the prosperity of the petroleum industry, and consequently of their company, was largely determined by external conditions. Internationally, however, the industry seemed to the board to be healthier than it had been for a long time past, and signs were not wanting that the prosperity of the company would continue. The board had therefore formed the opinion that the time had now come when the issued capital of the company should be brought into closer relationship with the capital employed in the business. In an undertaking such as theirs it was quite impracticable to say what would be its earning capacity for any great length of time ahead, but so far as the year had gone results were favourable; sales tonnage continued to expand, sales prices had further increased, and they were most comfortably placed as regarded the adequacy of their fields to meet demands.

The report and accounts were unanimously adopted and resolutions were passed increasing the capital of the company by the creation of 6,500,000 new ordinary shares of £1 each, capitalising the sum of £6,712,500 out of the reserves and authorising the distribution thereof among the ordinary stockholders.

VENEZUELAN OIL CONCESSIONS,
LIMITEDINCREASED PRODUCTION AND SALES
VISCOUNT BEARSTED'S ADDRESS

The twenty-first ordinary annual general meeting of the Venezuelan Oil Concessions, Limited, was held, on the 18th instant, in the Merchants' Hall, 24 St. Mary Axe, London.

The Right Hon. Viscount Bearsted, M.C. (chairman of the company), in the course of his speech, said: If you turn to the profit and loss account you will see that the first item on the credit side—oil proceeds and value of oil stock—amounts to £3,338,000, as compared with £2,723,000 for 1935. This increase of over £600,000 arises partly from our increased production in 1936 as compared with 1935 and partly from the more favourable prices ruling during last year.

A new item in the profit and loss account is the provision of £250,000, which your directors propose to transfer to an exploration reserve. This company, of course, is one of the pioneers of the oil industry in Venezuela, and, contrary to the apparent beliefs held by many whose knowledge might easily be more accurate, oil fields do not last for ever. We must therefore look to the future and whilst I would emphasise most strongly that shareholders need not be apprehensive as to our ability to maintain production over a considerable number of years, I am sure you will all agree that provision should be made which will enable this company to obtain additional reserves.

EFFECTS OF THE STRIKE

Three asset items in our balance sheet have been considerably affected by the strike which, as you know, commenced towards the end of the year. The interruption of all construction and drilling during the last few weeks of the year arrested the regular consumption of materials for these purposes, while materials already ordered for our increasing activities continued to be shipped. Material in stock and in transit at the end of the year thus amounted to £594,000 compared with £406,000 at the end of 1935.

Oil in stock and in transit at £11,000 as compared with £31,000 at the end of 1935 is low, as our stocks of crude oil in the fields and shipping terminals were naturally depleted during the strike. The strike also accounts for the reduction in debtors from £142,000 a year ago to £35,000 in this balance sheet, the quantity of oil delivered but not paid for at the end of the year being greatly reduced.

The strike, was terminated on January 23 by Presidential Decree. The terms of this decree awarded an increase of Bs.1 per day to the lowest grades of worker and an allowance of Bs.1 per day to all staff not provided with housing by the companies. One of the results of the strike, however, was to make it clear that Communist activities are unlikely to succeed under the present regime, or for that matter in a country such as Venezuela where freedom of thought and individual effort are still characteristic of the great majority of the people. This is always been the case, is taking its full share in the improvement of conditions in Venezuela, which the Government so earnestly desires.

DEVELOPMENT OPERATIONS

Turning now to our normal field development operations, a number of exploratory wells have been drilled at Tia Juana, approximately midway between Lagunillas and La Rosa, and at Bachaquero, some 20 kilometres south-east of Lagunillas. In both these regions the existence of productive levels over a comparatively wide area has been proved, but unfortunately the oil is of even heavier grade than our Lagunillas production.

An exploration well is in progress at Pueblo Viejo between Lagunillas and Bachaquero, while the exploration drilling at Bachaquero is being continued, with the object of delineating the prospective area. At Tia Juana, owing to the commencement of regular development by our competitors operating in the Lake, we have been forced to institute a rather intensive programme of offset drilling along the shoreline. This development was commenced in February and is now employing six strings out of our total programme of 13 strings of tools.

AN IMPORTANT DECISION

A decision of considerable importance which we have taken recently is to utilise electrical energy in the majority of new installations in the Bolivar district. It is not our intention to scrap any of our existing gas engine-driven pumps which are still capable of economic service, but the logical expectation is that

electrically driven equipment will gradually replace other prime movers throughout our principal fields.

Our general activities to-day are probably on a larger scale than ever before. Due, however, to the results of a policy of comprehensive economy and simplification of organisation, on which we have been concentrating for several years past and which we are being careful not to relax, our costs remain relatively low. I must warn you, however, that the scope for bringing about economies in our operations can hardly be further extended, while various factors, such as the increased proportion of our oil which has to be produced by artificial means, the growth of our operations over wider areas, the unfavourable Bolivar rate of exchange, and the important constructional programme which is in hand and in prospect, must add materially to our expenditure.

GROWTH OF SALES

Fortunately, it has been found possible to add appreciably to the volume of our production and oil sales, and there is every reason to anticipate further increases. Our production last year, which totalled over 38,500,000 barrels, was the third highest of any year in the history of the company, and in the absence of any unforeseen development, I expect the 1937 total will constitute a record. Our production this year up to June 12th has been approximately 18,727,000 barrels, which represents a rate some 9 per cent. higher than the average rate maintaining last year.

We have not made any sale of oil contract with the Canadian Eagle Oil Company, Limited, in respect of 1937, as that company's supplies from elsewhere enabled it to dispense with such purchases. Fortunately, however, we have been able to dispose of the quantity previously sold to the Canadian Eagle, and an additional amount besides, under our existing contract with the Asiatic Petroleum Company, Limited. This contract came into effect as from July 1, 1936, as I informed you at our last meeting; it originally provided for deliveries at the rate of 100,000 barrels daily, and has now been increased to cover approximately 125,000 barrels daily. I feel sure that you will appreciate the advantages of the unique position in which this company is placed, having an outlet, on acceptable terms, for its large production.

The report and accounts with the recommendation of a final dividend of 2s. per share, making a total of 3s. per share for the year, were unanimously adopted, and a hearty vote of thanks to the chairman, directors and staff terminated the proceedings.

SELECTED LAND AND PROPERTY
COMPANY, LIMITED

RECORD PROFITS

The ninth ordinary general meeting of this company was held, on the 23rd instant, in London.

Mr Harold W. Batty, F.S.A.A., F.C.I.S. (the chairman), presided, and in the course of his speech said: It is with much pleasure that the directors are able to place before you to-day accounts showing a further increase in the profit made by the company of £4,695 over last year's profit, which was itself a record.

While we are again recommending the payment of a satisfactory rate of dividend to the shareholders, making 8 per cent. for the year on the ordinary shares and 28 per cent. on the deferred shares, this distribution is quite conservative, being considerably less than half the total profit for the year.

The basis of the company's revenue is being broadened, so that in future a larger proportion of the income is likely to accrue from the rentals of properties and the company be less dependent upon profit from sales.

The company is in a reasonably liquid position, while the large amount of profit retained in hand in the reserves and carry-forward (amounting to over 50 per cent. of the issued share capital) places the company in a strong position.

Walpole Court, on the Strawberry Hill Estate, is now largely let up, and no doubt during the coming months the board will decide whether it would be better to dispose of the property, or whether it would be preferable to retain it as a permanent investment.

The company's profits were materially helped during the year by the sale of the greater part of the land at Whitton zoned for shops. This land was only dealt with by the company slowly, as it was felt that it was better to hold the greater part of this land until the district had developed. This policy undoubtedly proved the right one, and during the past year the company received an offer for practically the whole of this land reserved for shops at a price which the board decided to accept. It would consequently be hardly reasonable to expect that the company will be able every year to show such a high earnings yield on its capital.

The report and accounts were unanimously adopted.

PHILIP HILL AND PARTNERS, LIMITED

PROSPECTUS ESTIMATES LARGELY EXCEEDED

FINANCIAL ISSUE SUCCESSES

MR PHILIP E. HILL ON THE BOARD'S POLICY

The annual meeting of Philip Hill and Partners, Limited, was held, on the 23rd instant, at the Hotel Victoria, Northumberland Avenue, London, W.C.

Mr Philip E. Hill (chairman of the company) presided.

The Chairman said: Ladies and gentlemen,—You will have seen from the accounts that the results of the year have been divided into two parts. The first covers the period from March 31 to September 30, 1936, when the business was a private company. The second covers the six months from October 1st last to March 31st, and represents the results achieved since we became a public company, and this, of course, is the portion which interests present shareholders. If you deduct from the profit figures of the past six months the amount required to pay the directors' fees and preference dividend, a balance of £356,058 is left as profit for the six months before deducting income-tax, which compares with the prospectus estimate of £313,615 for a whole year.

You will see that your directors have adopted a conservative dividend policy. A dividend of 12½ per cent. actual has been paid for this period, which, after allowing for income tax, is approximately about one-third of the amount available. We recommend placing the sum of £150,000 to equalisation of dividend account and carrying forward £29,855, a result which is gratifying to your board and we hope pleasing to you, particularly having regard to the change in the tendency of markets which became pronounced in the last month or so of our financial year.

SAFEGUARDING OF SHAREHOLDERS' INTERESTS

As this is our first opportunity of meeting, you would no doubt like me to tell you something more about our business than you have been able to gather from the prospectus and the report and accounts. We have in the past year aimed at linking up finance with trade and industry over a widespread field, but particularly in connection with the businesses which your directors have established and developed, and for which they remain largely responsible, and secondly in carrying out selective financial issues of proved undertakings.

At this juncture I should like to express my thanks and appreciation to the thousands of the British investing public who have never failed to support what is known, I believe, as a "Philip Hill" issue, frequently to the point of embarrassment by subscribing vast sums which we could not possibly utilise. (As an example, when this company's issue of under £2,000,000 was made in October last, over £40,000,000 of shares were applied for.) This support has given us a unique record in the City of London as far as successful issues are concerned.

We are fully conscious of our responsibility not merely to you, our shareholders, but to that great body of public investors who accept our invitations to subscribe for new issues, relying on our judgment. I would assure you that this house will never make a public issue unless beforehand we have satisfied ourselves not merely that as an issue it should prove a success, but that the undertaking for which capital is being raised, as far as it is humanly possible to see, will be properly managed. Every transaction of this nature that we entertain is exhaustively investigated, its management is carefully considered, and, if we decide to transact the business, we are prepared to live with it and do our utmost to see that the shareholders and ourselves obtain a satisfactory investment. We do not consider that our responsibility ends when the allotment has been made; on the contrary, we feel we represent those who have subscribed and that it is our duty to safeguard as far as possible their interests by seeing that the business is permanently conducted on sound lines.

ODEON THEATRE ISSUE

I am glad to be able to tell you that we have a number of attractive financial proposals before us. After the very closest examination, we have decided to sponsor the issue of £1,800,000 debenture stock and 180,000 ordinary shares of Odeon Theatres, Limited, on terms which ensure its success. A formal announcement with regard to this issue will be made in the course of a few days. Applications by shareholders of this company will receive special consideration.

Turning back to our other sources of income, a considerable part of our revenue will always be obtained from general financial

business and from our investments. These cover a wide field and are very carefully selected and are constantly reviewed. Despite the setback which has occurred in the Stock Exchange since the termination of the financial year, I am glad to be able to inform you that the market value of our investments to-day, as compared with that ruling at March 31st, shows a difference of about 2 per cent. only.

And now a word with regard to our current position and future outlook.

Our new financial year opened in April, since which the City has been in a depressed mood. The gold scare and Budget uncertainties, coupled with the Coronation period, were not very conducive to profitable financial operations, and even now that details of the new taxation are known, markets continue apathetic. Let me hasten to dispel any fears you may have as to your next dividend. Your directors propose to pay a dividend of 12½ per cent. actual for the period to end on September 30th next on that date, and I am already in a position to state that after providing for this and all current expenses, there will be a large surplus on our revenue for the six months, March 31st to September 30th.

ENCOURAGING OUTLOOK

As regards the general outlook, I can see no justification for the present pessimism. In his Budget speech the late Chancellor of the Exchequer gave a very clear lead when he suggested raising £25 millions annually for the next five years by taking 25 per cent.—that is, 33 per cent. less income-tax—of the increased profits of industry, leaving it with an estimated increased balance of profit of £75 millions annually. I feel sure his estimate was arrived at on a most conservative basis.

Although the method of taxation has been changed, the Chancellor's estimate of £75 millions annually of increased profits for the next five years remains and provides an outlook of such prosperity which the most optimistic of us have never before in our lives thought possible. Having regard to the views expressed, we surely must all agree that there is no shred of valid reason for the depressed market conditions existing to-day. Our Defence programme has so recently been started that the increased velocity of money which the expenditure entails is only beginning to be appreciated.

From the returns I am receiving from the various industrial companies with which I am connected, and from the information I am receiving from those in a position to judge, it is obvious that money is circulating more freely in all parts of the country. This general increase in turnover, in my opinion, will continue and must mean a further increase in industrial activity. I shall be more than agreeably surprised if our defence programme is completed within the estimated period of five years. Who can say what the conditions will then be? Fat years are, however, sometimes followed by lean years, and that is why we propose to continue the policy of placing substantial sums to the equalisation of dividend account until we have built up an impregnable position—and at the same time to distribute satisfactory dividends.

The export managers of some of our businesses have visited many parts of the world during the past year and I myself have visited a number of British possessions, and we at any rate have come to the unanimous conclusion that there are unmistakable signs of extensive trade recovery.

In my opinion, Stock Market recovery is certain, but I anticipate that investors will be more selective than in the past. Meanwhile, the great prosperity of our industrial undertakings, coupled with a material set-back in share values, offers to-day unique opportunities for the discriminating investor. Generally, I look forward with every confidence to our meeting next year in the belief that we shall produce results which will give you every satisfaction.

The Chairman concluded by moving the adoption of the report and accounts.

Mr Hubert A. Meredith (assistant managing director) seconded the resolution, and it was carried unanimously.

The dividend as proposed was approved; the retiring directors, Sir Edward M. Mountain, Bt., J.P., and Sir Percy C. Simmons, K.C.V.O., D.L., were re-elected; the auditors, Messrs Price, Waterhouse and Company, were reappointed; and the proceedings terminated with a hearty vote of thanks to the chairman, directors and staff.

WHITEHEAD IRON AND STEEL COMPANY, LIMITED

LARGE INCREASE IN OUTPUT AND EARNINGS

DIVIDEND AND CASH BONUS OF 35 PER CENT.

MR L. D. WHITEHEAD'S ADDRESS

The thirtieth annual ordinary general meeting of the Whitehead Iron and Steel Company, Limited, was held, on the 22nd instant, at Westgate Hotel, Newport, Mon.

Mr L. D. Whitehead, D.L., J.P. (chairman and managing director), presided.

The secretary (Mr John Lewis) read the notice convening the meeting and the report of the auditors.

The Chairman said: Ladies and gentlemen,—The results for the year ended March 31st last again show a new high level record in the profits of the company.

The expansion of the net profit from £250,564 to £302,285 enables the directors to repeat the previous year's dividend and cash bonus of 35 per cent., and at the same time increase the allocation to general reserve from £70,161 to £126,000. Prior to 1935 our allocations to general reserve had been for many years less than £20,000 per annum, which was considered to be sufficient. Having regard, however, to the remarkable improvement in results, mainly due to the reconstruction of our works and plant carried out in recent years, these increased allocations of profits to reserve were desirable, as I pointed out in my speech last year, in order to build up our capital gradually by way of further capital bonus issues, and so make it commensurate with our assets and earning capacity.

FURTHER CAPITAL BONUS

In pursuance of this policy, your directors now recommend a further capital bonus of 25 per cent. This recommendation will be the subject of a resolution to be submitted to you at an extraordinary general meeting following this meeting.

It is satisfactory to observe that this bonus issue is more than covered by the profits of the year now under review, even after paying the dividend.

One of the great advantages of this policy is that the face value of these capital bonuses is retained in the business, and has therefore been the means of strengthening our financial resources in recent years and so protecting the future of our company.

I stated last year that in view of the completion of our capital expenditure it was the intention of your directors to commence investing a substantial proportion of the general reserve in first-class securities. With this object in mind we have during the last year accelerated the redemption of our 5½ per cent. first mortgage debenture stock from £7,500 per annum provided for under the trust deed to £31,500, and we have also invested up to date £100,000 in gilt-edged and other securities.

PLANT AT FULL PRESSURE

While no new hot rolling plant has come into production during the past year, our output shows a satisfactory expansion from 206,000 tons to 240,000 tons, thus indicating a still higher standard of efficiency, which is most creditable to our staff and workmen.

Our cold rolling department has given most satisfactory results, largely due to the American four-high reversing mill which came into commission early in the past year, and there are distinct prospects of even better results in this direction.

Trade conditions have enabled us to work at full pressure throughout the year, and there is every indication of this continuing as the demand is considerably in excess of the supply. It is to be hoped that this prosperous state of affairs will not be jeopardised by any undue advance in prices. While the recent substantial increase in price was to a great extent justified by the increased cost of wages and materials, we should have felt far happier in regard to the future had the advance been a more moderate one.

I only hope those in control will keep the brakes hard on and stabilise prices at about the present level. Nothing is more destructive of the confidence of buyers than wide fluctuations in prices.

SAFEGUARDING FUTURE REQUIREMENTS

Your directors have thought it desirable to negotiate for the purchase of an additional area of land, in order to safeguard the future requirements of your company.

With regard to our subsidiary—Whitehead, Hill and Company, Limited—the directors took steps during the year to convert the 10 per cent. preferred ordinary shares and deferred ordinary shares

into ordinary shares, so as to bring the share capital of the parent company, our subsidiary company and our associated company all on to one basis—namely ordinary shares.

On this new basis I am glad to say our subsidiary company has contributed 30 per cent. in dividends on its capital, which is highly satisfactory.

The demand for wire has, in common with the rest of the iron and steel trade, been in excess of supplies, but here again only moderation in prices can maintain this level of business. Our subsidiary's new brick works came into operation last November, and I am glad to report that their products are of the highest standard and command a ready sale in the market for the better class bricks. We anticipate this department will give an equally satisfactory return on its capital expenditure. It has certainly made a good start in this direction.

Our associated company—the Whitehead Thomas Bar and Strip Company, Limited—has had a most successful year.

THE ACCOUNTS

With regard to the accounts, I will first deal with the profit and loss account:—

(1) It will be observed that the trading profits have increased from £286,267 to £334,511.

(2) Thanks to the successful trading of our subsidiary and associated companies the income from investments has risen very substantially from £19,198 to £48,518.

(3) An additional £20,500 is provided for income tax.

(4) Depreciation has been raised from £20,000 to £25,000 to cover additional plant which has come into commission.

Now, turning to the balance sheet, and dealing with the liabilities side:—

(1) There is no change in the share capital.

(2) The first debentures are reduced by £31,500, and we have since withdrawn and cancelled £50,000 debentures which were lodged with the bank as collateral security.

(3) Creditors and debtors maintain a satisfactory relation and reflect the increase of business.

(4) I have already dealt with the reasons for the substantial increase in the allocation to general reserve.

(5) The carry-forward is slightly increased from £23,743 to £24,448.

On the assets side of the balance sheet:—

(1) Freehold and leasehold works and plant are up £30,905. Other than the construction of new central stores and the purchase of additional freehold land there is no further expenditure in view for the current year.

(2) Stocks are slightly up, but are lower than we like to see them.

(3) The bank balance is up from £89,833 to £98,768. This is satisfactory after meeting the year's capital expenditure at Newport; financing the cost of the new brick works at Cwmbran; the additional redemption of debentures and the purchase of investments.

As you will have seen from the report, it is proposed to convert the shares into stock, and so considerably reduce the work of our share transfer department. I need hardly say that this change will in no way affect the standing or value of your holdings. Resolutions to give effect to this will be submitted to you at the extraordinary general meeting following this meeting.

EFFECT OF NEW N.D.C.

I think perhaps you would like to know our views in regard to the new National Defence Contribution tax, and how it will affect this company. As its name denotes, it is one of national necessity, and so, obviously, its principle is above challenge.

The Government were, however, ill-advised in submitting this measure to Parliament in its original very complicated and inequitable form, which in consequence caused considerable disturbance to the Stock Markets and trade generally. This would have been avoided had the present very simple and much more equitable provisions been adopted in the first place.

On the basis of our present profits, this new tax will presumably cost us about £13,000 after allowing for income tax, and as this only amounts to 4½ per cent. of our net profits, we

have really no grounds for complaint, especially having regard to its national necessity.

I am glad to say our co-operative scheme has again proved a great success, as is evidenced by the substantial increase in outputs and earnings. The greatest credit is due to our staff and employees for the results we are able to put before you to-day, and they certainly deserve our warmest thanks.

The report and accounts were unanimously adopted and the resolutions on the agenda duly passed.

Messrs A. O. Whitehead and R. Booth—the retiring directors—were re-elected, and Messrs Deloitte Plender Griffiths and Company were reappointed auditors.

The meeting closed with a hearty vote of thanks to the directors, staff and employees, whose co-operation during the past year had produced such excellent results.

At the extraordinary general meeting which followed, resolutions were passed authorising the issue of 125,413 shares by way of a capital bonus and converting the issued share capital into stock.

BRITISH ELECTRIC TRACTION, COMPANY, LIMITED

INCREASED PROFITS

The forty-first ordinary general meeting of this company was held, on the 18th instant, in London.

Mr J. S. Austen (the chairman) said that last year he had told stockholders that in the two previous years they had increased their income by £70,000, or an average of £35,000 a year, and that they could not keep up that rate of increase, but he found that in the year under review they had increased it by £60,000.

Some time ago, when the price of the B.E.T. deferred stock was somewhere about 1,400, which it was at the present moment, he had asked himself whether he thought the stock was worth its present price. He had gone into it very carefully, had made the necessary calculations and had come to the conclusion that their stock was worth a great deal more than 1,400.

Dealing with the McGowan Report, the chairman said that with the main purport of that report, which was the unification of electric supply, he had nothing to say, but he had something to say about the proposals, because, if they were carried out, many thousand pounds' worth of assets would meet with confiscation.

They owned a number of electrical undertakings and they had constructed them under the protection of an Act of Parliament which had said that, in the event of their being bought up, they would be bought up on certain terms. They regarded that Act of Parliament as an agreement. It came as a shock to them when they found that that Act of Parliament, which embodied an agreement, was going to be torn up as if it were a scrap of paper. It was true they were to get some compensation for it, but that compensation was, in effect, to be fixed by the Electricity Commissioners who were, to all intents and purposes, responsible for the scheme.

However, they were not downhearted, and in these times it did not do to look too far forward, so, taking only the present year, they felt satisfied that they would have an increase and that that increase would be large enough to cover what they had to pay under the new duty.

The report was unanimously adopted.

GORDON HOTELS, LIMITED

IMPROVED POSITION AND PROSPECTS

The forty-seventh ordinary general meeting of The Gordon Hotels, Limited, was held, on the 22nd instant, at the May Fair Hotel, Berkeley Square, London, Major-General Guy Dawnay, C.B., C.M.G., D.S.O. (the chairman), presiding.

The Chairman, in moving the adoption of the report and accounts, said:—If you will turn to the trading and profit and loss account you will see that, although the business done for the year under review was £39,500 less than in the previous year, the trading profit shows an increase of £9,400. The figures are not, however, comparable, owing to the fact that previous accounts have included the Hotel Metropole, in Northumberland Avenue, while the accounts now before you reflect the elimination of that property owing to its sale. Actually, making the necessary adjustments for the sale of the Hotel Metropole, the business done in the English hotels for the year covered by the accounts shows an increase of £70,500.

INCREASED TRADING PROFIT

The profit on the year's trading shows an improvement, as I have said, in spite of the fact that the Hotel Metropole was not there to earn any profits. This is particularly satisfactory to your board in view of certain increases in expenditure which we have inevitably had to face.

The profit and loss account requires little comment. The debenture items are not comparable owing to the issue of the new debentures under the scheme of arrangement; but the present account sets out the position, I think, quite clearly.

The balance of profit and loss carried down, subject to provision for interest on the new 7 per cent. income debenture stock, is £19,000, as compared with £5,300 in the previous year. After providing for one half-year's interest on the 7 per cent. income debenture stock, the balance carried to the balance sheet is £6,292 17s. 10d.

I will now turn to certain items of the directors' report, which will bring me to the matters which have caused our meeting to be held in June for the second time consecutively. As we have told you in our report, we succeeded in obtaining £250,000 in cash for the company's interest in the Dorchester, and we accepted that sum with the sanction of the trustees for the debenture stockholders. It has been the question of the disposal of that cash fund which has protracted our negotiations with regard to the company's capital reorganisation.

A number of schemes have been drawn up, considered, and discussed at length with the representatives of the debenture stockholders, aiming at reducing our debenture indebtedness on something better than a 4 per cent. basis. These various negotiations proceeded during the period of changing and uncertain conditions which have prevailed for the last 2½ months. We thought it worth while to continue to explore the possibilities until it became clear, only in the last ten days or so, that the definite formulation of a scheme must, in existing conditions, take longer than we had hoped.

At the point finally reached in these negotiations there appeared in the proposals which were tentatively under discussion a gap which it would be necessary to bridge. If circumstances should arise enabling us to bridge this not very large gap we shall hope to be able to resume the negotiations at the point at which we have had to leave them, in which case we shall not delay in putting proposals before you. You will realise, I know, that any such proposals must inevitably involve a large writing-down in order to bring the share capital into relation with the reduced assets of the company.

CURRENT YEAR'S PROSPECTS

One final word about the prospects for the current year. It is gratifying to be able to report that business in all the company's hotels shows a considerable improvement over that of last year. The improvement on the Riviera has been particularly favourable, and the two foreign hotels will make a satisfactory contribution to the profits of the current year.

During the first four months of the current year, that is, up to the end of April, and before we had felt the influence of such improved business as was due to the Coronation of his Majesty, the English hotels in the aggregate showed an encouraging increase in profit as compared with the corresponding period in 1936, although 1936 included profits from the Hotel Metropole, London, which, of course, were absent this year. I prefer to say nothing about the later results, since the period of the Coronation resulted in a non-recurring increase in revenue, which was, however, gained at not inconsiderable expense.

The report and accounts were adopted.

ADVANCE LAUNDRIES, LIMITED

RECORD PROFITS—INCREASE IN CAPITAL APPROVED

The annual general meeting of Advance Laundries, Limited, was held, on the 18th instant, in London.

Mr Eugene A. Serre (the chairman) presided, and in moving the adoption of the report and accounts said that they had had a successful year, the trading profit being increased by over £11,000. They had charged £2,000 more this year than last year for depreciation, obsolescence of plant, etc., but owing to economies in other directions practically the whole of the increased trading profit was available as net profit, which showed the record figure of £57,017.

In the past, owing to the appreciation by the public of their services, they had had to work very long hours in some of their plants, and it was with a view to abolishing overtime wherever possible and shortening the working hours of their staff that the possible and shortening the working hours of their staff that the managing director had put forward the policy of having plants capable of dealing with future requirements within an ordinary working day. Besides the humanitarian point of view that was economically sound and would materially help in the cost of production. At the extra general meeting which would follow they would ask for powers to increase the capital from £520,000 to £1,000,000. It was proposed to issue at an early date such an amount as the board considered would meet their capital requirements for the next two years and any issue would in the first instance be offered to both the preference and ordinary shareholders.

Mr A. J. Hall (managing director), seconding the resolution, said that the proposed additions and extensions to their laundries should place them in a good position to meet the requirements of the new Factory Act and for further expansion.

In a progressive company such as theirs they were never making their maximum profit, as there is always expenditure which is not immediately productive.

They could look forward to the future with confidence, as their objects had always been active development combined with improved conditions for their employees, reasonable charges to the public, and a fair return to their shareholders.

The report was adopted and the increase of capital approved.

GREAT UNIVERSAL STORES, LIMITED

DIVIDEND OF 50 PER CENT. AND 10 PER CENT. SHARE BONUS

The nineteenth ordinary general meeting of the Great Universal Stores, Limited, was held, on the 18th instant, in London.

Sir Archibald Mitchelson, Bart. (the chairman), said that the results enabled them to distribute, for the third year in succession, a cash dividend of 50 per cent. and a 10 per cent. bonus in shares and, in addition, to strengthen further the financial position. After providing for the 10 per cent. share bonus the general reserve would stand at £300,000, an increase of £55,000, and their total reserves would amount to just over £800,000.

During the year the retail stores business of their subsidiary, New Universal Stores, Limited, had been engaged in establishing and expanding its business, and six additional stores had been opened.

Their furniture manufacturing subsidiary continued its progressive career. The turnover during the year substantially increased, and sales for the current year showed material increase.

As to their mail order business—the predominant source of their revenues—the position to-day was far more favourable than he had ever known it. As compared with last year, the aggregate sales showed a very substantial increase, whilst for the current year to date there was a further considerable increase over those for the corresponding period of the year under review. The outlook for the corresponding period of the year under review, and large as further large expansion was exceedingly promising, and large as this business had already become, they felt that they were still only at the beginning of its progress. In pursuance of this plan of expansion they had acquired a controlling interest in an old-established and successful mail order business, and they were fully satisfied that the acquisition would prove very valuable.

As to their prospects in general for the current year, the directors and management were never more confident of the outlook for the business than they were to-day, and their estimates in regard to the present year were such that they definitely looked forward to a further substantial increase in earnings.

The report was unanimously adopted; the dividend and share bonus were approved, and a resolution amalgamating the ordinary and "A" ordinary shares into one class of ordinary shares without distinction of any kind was adopted.

FORSTER'S GLASS COMPANY, LIMITED

FURTHER INCREASE IN PROFITS

The eighteenth annual general meeting of Forster's Glass Company, Limited, was held, on the 24th instant, in London.

Colonel Charles E. Ponsonby, T.D., M.P. (the chairman), said that the profit for the year, £46,072, which had been arrived at after charging all trading and managerial expenses, and after making an increased provision for income tax, showed an increase of £4,230 over last year. The year's results might have been even better if the disappointing weather conditions during last summer had not affected the sales of mineral water bottles. The net liquid assets showed an increase over last year of almost £12,000. This illustrated the increasing financial strength of the company, which had only been made possible by following a conservative dividend policy.

The directors had given a great deal of consideration to the question of the distribution for this year, and were of the opinion that a distribution of bonus shares would be preferable to an increase in the cash distribution. They had decided to recommend that £29,375 of the reserve account be capitalised and that a bonus of one ordinary share (fully paid) be given for every four ordinary shares held.

Notwithstanding the bad weather last year, which had serious reactions on their business, the improvement of the last two years had continued. This was partly due to expansion of the business, but perhaps more to the general conditions of prosperity which prevailed in this country. He would say, however, that the retention of old customers and the obtaining of new customers was due to the continued efficiency of the company's plant and to the keenness of all connected with the manufacturing and sales sides of the business. It must be borne in mind that various factors played their part in the results of a business of this nature. The weather he had already referred to. The price of raw materials, especially of coal, and the cost of transport, tended to rise, and these factors must affect the company. However, at the moment he could only say that their sales since the end of the financial year showed a satisfactory increase over the same period last year.

The report and accounts were adopted, and at a subsequent extraordinary general meeting the bonus issue was approved.

BANGRIN TIN DREDGING COMPANY, LIMITED

IMPORTANT OPTION ACQUIRED

The seventeenth ordinary general meeting of this Company was held, on the 23rd instant, in London.

Mr Kenneth O. Hunter (the chairman of the company) presided, and in the course of his speech said:—There is a final balance on profit and loss account of £24,295 3s. 11d., out of which the directors recommend the payment of a dividend of 5 per cent. for the year 1936, leaving a balance to be carried forward to the 1937 accounts of £9,295 3s. 11d.

You will remember that reference was made to a large tin-bearing area adjoining our own, the owners of which had approached us with a view to negotiating a sale. After protracted negotiations we have acquired a four months' option to purchase that area; this option expires at the end of August. Check-boring is in progress and, so far, the results lead us to believe that our option will be worth exercising.

You will easily appreciate that the attraction in this particular area is twofold. First, our existing plant and power house are sufficient to work it, and a glance at our balance sheet shows that we have ample financial resources to provide the purchase price without increasing our capital. Second, if we acquire the area we shall also obtain the assessment which it carries and be able to transfer the latter to our present areas, thereby keeping our dredges more fully employed.

This area is approximately 1,000 acres, covering 60 million cubic yards, reputed to carry 7 lb. of tin ore per cubic yard, and is somewhat larger than the whole of our original areas. Should we exercise this option, the working life of our company will be greatly lengthened.

We have every reason to hope that, in due course, the applications for an increased assessment, which we have repeatedly made to the Siamese Government, will result in our obtaining a more satisfactory figure, for hitherto our output has been very far short of what we are capable of producing.

Our output for the first five months of this year is 323 tons, and the profit figure £31,000, as compared with 254 tons and £18,528 for the corresponding period in 1936.

The report and accounts were unanimously adopted.

SIAMESE TIN SYNDICATE, LIMITED

INCREASED REVENUE—STRONG POSITION

The thirtieth ordinary general meeting of Siamese Tin Syndicate, Limited, was held, on the 23rd instant, at Winchester House, London.

Mr Kenneth O. Hunter (chairman) presided, and, in the course of his address, said: There is a balance of net mining revenue amounting to £58,052 transferred to general revenue account. It is proposed to pay a final dividend of 5 per cent., which requires £7,500, and makes 25 per cent. for the year 1936.

A year ago you were told that the total yardage of payable ground at present held by the company in the East, including the unworked remainder of the original areas, plus additions thereto, amounted to approximately 154,000,000 cubic yards, the average value of which was fully .50 lb. of tin ore per cubic yard. About 6,000,000 cubic yards have been worked during the year 1936, but of this a considerable proportion, probably about one-third, is ground which had been previously worked by our dredges and which paid to dredge, so that our total remaining yardage is now in the neighbourhood of 150,000,000 cubic yards.

It is satisfactory to be able again to refer to the favourable position regarding the company's liquid resources which will assist materially in the profitable development of our present areas and the acquisition of additional tin-bearing areas as and when opportunity is presented.

With regard to the current year, up to the end of May our output in the East amounted to 1,018 tons with an estimated mining profit of £110,840, the figures for the corresponding period in 1936 being 562 tons with a profit of £32,663. These satisfactory results have been obtained not only owing to our increased output, but also to the much higher price of tin, and to the fact that some of our dredges have been working richer ground. Without venturing to predict what may be forthcoming during the remainder of the year, your directors see no reason why the present satisfactory rate of output should not continue.

We should have been fully justified in paying a second interim dividend of 15 per cent. in respect of the current year had it not been for the uncertainty then created by the Chancellor's new tax, which to our great relief has now been dropped.

The report was unanimously adopted.

WILLOUGHBY'S CONSOLIDATED COMPANY, LIMITED

SATISFACTORY INCREASE IN REVENUE

The ordinary general meeting of Willoughby's Consolidated Company, Limited, was held, on the 21st instant, at Winchester House, Old Broad Street, London, Colonel H. T. Fenwick, C.M.G., M.V.O., D.S.O. (chairman of the company), presiding.

The Chairman, in the course of his speech, said: Turning to the profit and loss account for the year under review, you will observe that London and Bulawayo expenses are £350 higher. The amount written off mining claims abandoned and prospecting expenses was £16,221 3s., against £3,370 9s. 2d. in 1935, and the debit for income tax stands at £4,384 8s. 2d., which is some £3,000 less than the previous year.

Now, to come to the credit side of the profit and loss account, the total gross revenue is £85,387 16s. 9d., as compared with £66,911 18s. 11d. in 1935, each source of revenue showing a satisfactory increase. The items which go to make up this revenue are first of all our business out in Rhodesia, which shows a profit of £24,004, against £17,710 12s. 4d. for the previous year, and this without any special windfall in the shape of a large sale of land. In this item is included our cattle ranching business, which, after many years of ups and downs, is, I think, becoming firmly established. This is due to several causes, of which the most important is probably the rise in prices of primary commodities, and that both the producers of cattle and those who handle them have learnt their business better. Personally, I have always been of opinion that Southern Rhodesia would become in time a considerable meat exporting country, and that bids fair to come to fruition.

The next item I would draw your attention to is the amount of revenue we received in 1936 for dividends and interest. This at £28,795 6s. 2d. compares with the previous year, £26,281 10s. 8d., an increase of roughly £2,500. The third item of importance is profit on realisation of shares amounting to £30,827 14s. 1d. This item must, of course, be a fluctuating one, dependent on the markets. With this in view we have used the profit on the realisa-

tion of shares in writing down certain assets, namely, £16,000 in respect of mining claims abandoned, and in placing £18,000 to reserve, and are then able to pay our dividend of 5 per cent. and carry forward £1,500 more than last year. I think I can safely say that we have had a fairly satisfactory year.

As regards mining, I regret to say that this industry has done but little for Willoughby's in 1936. A large number of claims and prospects were inspected during the year on behalf of the company and the Rhodesia Premier Syndicate, of which the company holds one-third. For the most part these were not of sufficient promise to be worth acquiring, and for those which showed sufficient promise to be worth pursuing the purchase price asked by the owners was prohibitively high.

In conclusion, I should like to say a few words on the general trend of affairs in Southern Rhodesia. During 1936 business generally in the colony has continued to increase, helped, of course, by the activity of the mining interests. Both imports and exports showed an increase, and the railway traffics have been well maintained. At the other end of the country, namely, in Mashonaland, the farmers who grow tobacco have done very much better than they have done in previous years. Anything that helps the general prosperity of Southern Rhodesia will help Willoughby's company, and I can only say in conclusion that I think the stars in their course are favourable.

The report and accounts were unanimously adopted.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended June 19, 1937, amounted to £13,589,000, against ordinary expenditure of £17,004,000. After allowing for a decrease in Exchequer Balances of £180,185, the operations for the week, as shown below, increased the gross National Debt by £3,235,000, to approximately £7,972 millions.†

GOLD MARKET

Messrs Samuel Montagu and Company write on June 23, 1937:—
The Bank of England gold reserve against notes amounted to £321,261,366 on June 16th, showing no change as compared with June 9th. On June 23rd, the Bank announced the purchase of £5,145,259 in bar gold. During the past week conditions in the open market were more settled and offerings were on a smaller scale, the amount disposed of at the daily fixing being about £2,100,000. Prices were fixed at a discount on dollar parity of between 2 1/4 and 3 1/4, and most of the gold offered was taken for shipment to New York. The s.s. "Mooltan," which sailed from Bombay on June 19th, carries gold to the value of about £300,000.

SILVER MARKET

There has been further re-selling by the Indian Bazaars during the week and moderate sales have been made on China account, whilst the lower prices attracted some bear covering and speculative purchases and also some support from America. Fluctuations in prices have been small, and June 23rd quotations of 19 1/4 d. for cash and 19 1/4 d. for two months' delivery, compare with 19 1/4 d. for both deliveries quoted a week ago.
On June 23rd Indian buying imparted a slightly better tone and the market should be fairly steady at about the present level of prices.
Quotations for gold and silver are shown below:—

1937	Price of Gold per Fine Ounce	Equivalent Value of £ sterling	Price of Bar Silver in London per ounce standard		Price of Silver New York per ounce fine

The highest rate of exchange on New York recorded during the period from the 17th to the 23rd June was \$4.95, and the lowest \$4.93 1/2.

OTHER STATISTICS

SHORTER COMPANY COMMENTS

COMPANY RESULTS OF THE WEEK.—The improvement in BARCLAY PERKINS AND COMPANY profits of £247,534 is rather better than is indicated by the net earnings, as the increase of £12,000 in trading profits is absorbed by income tax provision. Excellent progress £188,978 are £50,000 higher. ELDER DEMPSTER LINES, with net earnings of £494,537, are paying 6 per cent., against 5 per cent.; the directors refer to the greater movement of cargo in the West African trade in 1936, though freights did not alter till late in the year. Presenting their first accounts, ELDER DEMPSTER LINES HOLDINGS report net profits of £99,081, total income of £122,478 including £114,375 in dividends earned from Elder Dempster Lines. EDGAR ALLEN AND COMPANY have the dividend is increased from 5 to 7 1/2 per cent. More moderate progress is shown by ALLIED IRONFOUNDERS, with an increase of £19,300 in profits of £276,791. FAIRBAIRN LAWSON COMBE BARBOUR, whose balance sheet now shows the effect of last year's capital reorganisation, have made a trading profit of £31,937, against £22,080; substantial improvement in 1937 is reported. MIRRELS BICKERTON AND DAY are able to maintain their 2 1/2 per cent. dividend without taking any credit with a loss of £8,867. GREENWOOD AND BATLEY, LTD., though earning only some £4,600 more, are raising the dividend from 4 1/2 to 7 per cent. Rubber company reports continue to be impressive, CICELY and CALE-previous year's earnings. Twelve tea company results, including the further setback experienced by BROCKLEHURST, WHISTON AMAL, largely to dislocation of the producing departments caused by the indicated in recent trust reports, GLOBE TELEGRAPH AND TRUST, for example, earning £219,557, against £195,450. A rise of 27 per cent. in net profits is recorded by AUSTINS OF EAST HAM. Though their profits dividend at 20 per cent., owing to increased tax charges. The same distribution of 45 per cent. is made by JOHN ISMAY AND SONS, though published net profits are a trifle lower. Published profits of GEORGE NEWNES, LTD., and G. ARTHUR PEARSON, LTD., are practically unchanged at £145,854 and £34,775 respectively, but changes in the real earnings position are not revealed by the accounts, as profits include dividends, and are stated after depreciation.

APPOINTMENTS AND PERSONAL

After 48 years' service, Mr Thomas Ormrod Hope, London manager of the District Bank, will retire at the end of this month. Mr Edgar Ralph Capsy, London foreign manager, and Mr Arthur Reginald Sidebottom will succeed to the position of London foreign manager. Mr John Consolidated Gold Fields of South Africa, Ltd., and New Consolidated Gold Fields, Ltd., announce that Sir Cecil Rodwell, G.C.M.G., has been appointed a director of both companies.

Mr J. Coventry has been appointed secretary of The Rugby Portland Cement Company, Ltd.

Mr A. P. Good has been appointed a director of the Guardian Assurance Co., Ltd.

Mr Carl Bendix has been elected a director of The Indian Iron and Steel Company, Ltd., in place of Mr F. G. Roberts.

Mr J. L. Collyer and Mr H. L. Kenward have joined the board of the India Tyre and Rubber Company, Ltd., Inchinnan.

(a) Paid on a larger capital. (c) First and final liquidation distribution.
 † Free of income tax. (f) Paid on a larger capital absorbing £239,894 against £199,911.

POWELL DUFFRYN STEAM COAL.—Final ordinary dividend, 5½ per cent., making 7 per cent. for year, against 6 per cent.

WELSH ASSOCIATED COLLIERIES.—A first ordinary dividend of 1 per cent. is payable for the year to March 31, 1937.

DE BEERS CONSOLIDATED MINES.—Dividend of £2 per preference shares for two years from July 1, 1935.

LOBITOS OILFIELDS.—Ordinary dividend 10 per cent., and 2½ per cent. cash bonus, making 12½ per cent., against 7½ per cent.

SHELL UNION.—Dividend of 50 cents per common share for half-year to June 30th, requiring about \$6,500,000 gross. Net earnings for first quarter of 1937 were \$3,674,479, against \$1,681,984 in the same period of 1936.

PATONS AND BALDWIN, LTD.—Preliminary statement for year to May 1, 1937, shows profit of £463,782, against £417,997. A 10 per cent. dividend and 2½ per cent. bonus, both tax free, absorbed £239,894, against a similar distribution absorbing £199,911. To reserves £125,000, as before; pensions £20,000, as before. Carry forward raised from £59,909 to £73,208.

SHORTER COMPANY COMMENTS

(Continued from page 766).

MISCELLANEOUS

BLEACHERS' ASSOCIATION, LTD.—After £157,811, against £150,961, to maintenance and repairs, trading profit for year to March 31, 1937, was £320,748, compared with £280,051. After fees, debenture interest and a further £140,000 depreciation, net profit was £77,149, against £36,452. For the first time since 1934 a 2½ per cent. dividend is to be paid on the preference capital, bringing the dividend up to end of 1933. Carry forward £183,411, against £174,669 brought in.

PROVINCE OF ALBERTA STOCKS.—The courts of Alberta have declared the Act of the Province reducing interest on stocks by one half to be *ultra vires*. The Government of Alberta appealed, but have since withdrawn the appeal and have passed further legislation with a view to nullifying the adverse ruling of their own court. The Canadian and London Committees advise holders not to sign any assents accepting reduced interest but to await the return by the Province to a course of legal and proper procedure.

STEPHENSON CLARKE AND ASSOCIATED COMPANIES, LTD.—Trading profits for year to March 31, 1937, £528,613, compared with £514,826. To depreciation £162,168, against £162,669. Tax £80,000, against £72,000; debenture charges £73,735, against £74,850. Preference dividend £51,509, against £62,522. Ordinary dividend 10 per cent., as before. To general reserve £50,000, as before. Carry forward increased from £61,118 to £67,022.

SPIERS AND POND, LTD.—Gross profit for year to March 31, 1937, was £94,600, against £76,997. Ordinary dividend is raised from 5 to 7 per cent. To reserve, £5,000. Carry forward, £12,513.

CABLE AND WIRELESS, LTD. (Index Numbers).—Monthly figures reduced to working day average. Working day average of comparable receipts, year 1929 = 100. Index number, May, 1937, 78.6 (lowest figure this year), compared with 83.7 for April, 1937, and 67.6 for May, 1936. For table showing monthly index since beginning of 1930, see *The Economist*, January 23, 1937, page 214.

UNITED NEWSPAPERS SCHEME.—The reorganisation scheme (see page 600 of *The Economist* of June 5th), was passed at meetings on June 22nd, by 294,212 votes in favour to 6,010 votes against.

OHLSOHN'S CAPE BREWERIES, LTD.—Net profits have advanced by £53,843 to £264,495. Ordinary dividend and bonus 17½ against 12½ per cent. To contingencies reserve £70,000, against £55,000. Carry forward raised from £72,172 to £87,775.

MEXICAN RAILWAY.—Results for half year ended December 31, 1936, show a deficit of \$107,180, against a credit balance of \$47,193 for the second half of 1935. Gross receipts increased by 7 per cent. to \$7,048,747, but working expenses rose by 9.4 per cent. to \$7,155,928. After crediting interest, etc., net deficiency is £80,647, increasing debit balance forward to £707,139.

BARCLAY, PERKINS AND COMPANY, LTD.—Net profit for year to March 31, 1937, declined by £1,575 to £247,534 after £12,590 contingencies £20,000, against £15,000. Carry forward raised from £61,752 to £64,979.

EAST RAND CONSOLIDATED, LTD.—Accounts for 1936 show a loss of £2,573, against a profit of £16,686. A loss of £1,020 on an investment realised compared with a profit of £27,007 from this source in 1935. A new subsidiary company is to be formed.

ELDER DEMPSTER LINES HOLDINGS, LTD.—First report for period ended June 15, 1937, shows £119,319 available for distribution. Ordinary dividend 5.9 per cent., absorbing £97,974. Debenture interest £20,239. Carry forward £1,106. Formation expenses of £80,734 met by transfer from share premium account.

ELDER DEMPSTER LINES, LTD.—Net profit for 1936, £184,926; an increase of £19,423. Ordinary dividend raised from 5 to 6 per cent. To general reserve £50,000, against £75,000. Carry forward increased from £113,322 to £133,873.

ASSOCIATED WEAVERS.—Report for period from September 15, 1936, to April 30, 1937, shows net profit £38,905. Ordinary dividend 12½ per cent. actual. To tax reserve, £9,600. Carry forward, £3,841.

YORKSHIRE BRICK COMPANY, LTD.—Net profits rose by £7,782 to £37,862, after £5,928, against £455 for income tax. Ordinary dividend raised from 5 to 6 per cent. To investment reserve, £5,000.

GLOBE TELEGRAPH AND TRUST COMPANY.—Net revenue for year to May 31, 1937, £219,557, against £195,449. Tax free ordinary dividend raised from 4½ to 5½ per cent. Carry forward increased from £121,770 to £128,538.

CARLTON MAIN COLLIERY COMPANY, LTD.—Net profit for year to March 31, 1937, £93,799, against £75,176 after £20,000 had been transferred to reserve for contingencies. Ordinary dividend raised from 4 to 5 per cent. Carry forward increased from £46,464 to £52,827.

ALLIED IRONFOUNDERS.—Trading revenue for year to March 31, 1937, £275,179, against £259,730. To reserves: tax £10,000, against £7,500; obsolescence, etc., £30,902, against £15,000; research £12,361, against £10,000; general £24,309, against £25,000. Ordinary dividend 10 per cent., plus cash bonus 1½ per cent., making 11½ against 10 per cent. Carry forward increased from £146,410 to £150,871.

BLACKBURN AIRCRAFT.—Profit for period April 2, 1936, to March 31, 1937, was £120,480. Ordinary dividend 12½ per cent.

GEORGE NEWNES, LTD.—Profit for year to March 31, 1937, £145,854, against £142,666. Ordinary dividend maintained at 15 per cent. To general reserve £22,760. Carry forward increased from £46,605 to £48,426.

YORK STREET FLAX SPINNING SCHEME.—The proposals are: 7 per cent. second preference arrears to be divided into five £1 ordinary shares of this stock to be converted into £1 ordinary shares; half arrears on the 6 per cent. preference shares up to June 30, 1937, to be cancelled. The reconstructed capital of £670,000 will be 25,000 6 per cent. cumulative £10 preference shares and 420,000 £1 ordinary shares.

GAUMONT-BRITISH PICTURE CORPORATION.—Shareholders are asked to fill in a form from the shareholders' committee, approving the appointment of the committee, volunteering service on the committee, and approving the proposal to apply for a Board of Trade inspector. Shareholders are also asked to subscribe funds for expenses.

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

THE trend of prices on the principal commodity markets was irregular this week, some quotations having risen and others fallen. Indeed, there are indications that the sharp reaction following the upward rush during the first three months of this year has almost exhausted itself. Consumers generally still purchase very cautiously. But some of them have allowed their stocks to run down to comparatively low levels and may soon be compelled to cover their requirements over the autumn and early winter. Consequently, any further declines may meet with more resistance in so far as they invite purchases.

Most non-ferrous metals, including copper, lead and spelter, staged a sizable recovery after last week's fall. Rubber prices varied within narrow limits, while world stocks, as estimated by Messrs Symington and Wilson, continued their downward trend during May. American raw cotton showed a further fall on reports indicating satisfactory crop conditions in the United States. This year's crop, however, has not yet passed through its critical period, and any adverse news, such as the spread of the boll weevil, might easily reverse the trend of prices rather sharply. The latest cable from Australasia indicates a firmer tone on the wool markets, but jute prices continued to decline on forecasts of a heavy crop.

Wheat prices recovered sharply on unfavourable crop reports from Canada. Raw sugar was also slightly dearer. Bacon, beef and mutton are practically unchanged in price, but eggs were marked up and Australasian butter was cheaper.

In the United States primary products showed a rising tendency. On Wednesday, Moody's index of staple commodity prices (December 31, 1931 = 100) stood at 201.7, against 198.3 a week ago, 209.5 a month ago and 168.2 last year.

COAL

SHEFFIELD.—Business in the coal market continues brisk, and the heavy pressure on inland account shows little sign of slackening. Collieries are working full time in most cases. There still remains a scarcity of graded steam and small coal for the manufacture of coke and for electricity works. On the export market, business is rather quieter, due partly to the fixing up of contracts for some little time ahead. An increase of a quarter of a million tons shipped from Humber ports for the first five months of the year is reported. The lack of suitable tonnage at the ports is said to be responsible for the falling off in business with Mediterranean countries. Prices remain firm.

WORKINGTON.—Local coke makers and Irish merchants want far more coal than is available. Landsale is dull, but what was formerly diverted to this market does not suffice materially to relieve coke makers and the Irish market. Prices are firm. Best round is 23s. 6d.; washed doubles, 22s.; washed singles, 21s., all per ton, f.o.b. Smalls, 15s. 6d.; best house coal, 35s. 8d.; house nuts, 34s. at station. Gas coal, 27s.; peal coal, 15s. 6d. to 16s. 6d.

NEWCASTLE-ON-TYNE.—The general tone of the North-East coal market is strong, the only difficulty which faces collieries being the inability of exporters to secure prompt tonnage to carry out their contract quantities. Despite the seasonal fall in trade, the Northumberland steam collieries are fully employed and have no coal for sale until the spring of next year. In the Durham section all collieries are working regularly under a steady export and home trade. Patent oven coke is a steady market, the feature still being the increasing demand from the iron and steel trade.

GLASGOW.—The mild weather has further restricted the demand for household coal, and although stocking by the depots has been encouraged by the recent price concessions, supplies are in excess of needs. As a result the wagon position has been adversely affected, and short-time adopted by several collieries in Lanarkshire. Otherwise production is very well taken up. Home industrial requirements remain on a large scale, and coastwise and Irish business is steady. Foreign inquiry is slow, but this is giving little concern to producers, who are well booked for some time ahead, and for prompt delivery have only occasional odd parcels available.

CARDIFF.—There has been a lull in the pressure of current inquiries on the Cardiff coal market this week, but collieries have been working practically up to the limits of their recent supplementary allocations,

and shipments at the South Wales ports last week totalled 431,800 tons, compared with 413,400 tons in the previous week and 312,968 tons in the corresponding period last year. The increase in the foreign and coastwise trades for the year to date exceeds 1,700,000 tons. Italy is reported to have placed further orders for delivery over 1938. Prices are very firm at recent levels, but the arrangements for co-ordinating local quotations with those of some of the other districts are not working entirely satisfactorily, and proposals are under consideration with a view of making them more effective. There is a scarcity of prompt suitable tonnage, and for the time being this disability is reacting unfavourably on exports.

IRON AND STEEL

LONDON.—The weekly report of the London Iron and Steel Exchange indicates continuous pressure for deliveries against existing contracts and difficulties in placing new business. Many producers have sold their output until the end of the year and are unable to accept orders for any definite delivery.

Pig iron consumers are being carefully rationed, but in many cases they have arranged for limited supplies over the remainder of the year. A certain amount of foreign iron has been offered recently at high prices. Heavy imports of steel-making pig iron have relieved the steel works, but foundries, which are experiencing a heavy demand for their products, are handicapped by the prevailing stringency.

In the semi-finished steel section of the market, the scarcity of steel is severely felt. Arrangements have been made, however, under which it is hoped that all the consuming works will receive more regular supplies from British producers.

Home demand for finished steel is strong, but comparatively little new business is passing. Steelmakers have sold so far ahead that they are reluctant to accept fresh commitments although production appears to be expanding. There is an active export demand, but in view of the heavy home requirements only a portion of this can be satisfied.

MIDDLESBROUGH.—Very little new business is passing in Cleveland foundry pig iron. Although buyers would be willing to pay the new price which is applicable to deliveries after July 1st, makers are very heavily sold, and are not increasing their commitments for early delivery. A few orders have been placed for delivery later in the year at the new price of 101s. per ton for No. 3 Cleveland foundry pig iron. The situation regarding East Coast hematite pig iron has been relieved to some extent by the blowing-in of an additional furnace on this quality at a Cleveland works; the price is 122s. 6d. for mixed numbers East Coast hematite delivered locally, less 5s. per ton rebate. The increase in the quantity of semi-manufactured steel which has been imported, together with the local production, is not sufficient to meet the demands of re-rollers.

Specifications for manufactured steel on order are much in excess of production, although manufacturers are doing everything possible to increase supplies. Quotations are unchanged for finished steel. Local steel makers have received orders for 37,250 tons of steel rails for the London and North Eastern Railway.

Good Durham blast-furnace coke is now quoted at 40s. per ton delivered at the furnaces. Another steamer has arrived from Bilbao with a cargo of iron ore, and news regarding the possibility of further shipments is now awaited. Several small cargoes of iron and steel scrap have arrived in the river recently from the Continent. Prices for home supplies are based on heavy melting steel scrap No. 2 quality—67s. per ton for not less than 500 tons.

SHEFFIELD.—There is not much alteration in the state of the iron and steel market. With producers in all classes of pig iron fully sold under contract there is nothing for disposal in the way of small lots for immediate delivery. Some contracts are being arranged to the end of the year, but in virtually all cases the shortage of supplies, actual and prospective, makes scaling down, or rationing on the basis of preceding contracts, imperative. Foundry business is especially difficult to arrange, and forge is less easy to procure either for immediate delivery or under contract. The scarcity of East Coast hematite is less pronounced, and makers show greater readiness to enter into contracts. West Coast hematite business is still difficult to transact. There is a heavy shortage of basic steel billets, and producers are compelled to turn down valuable orders owing to their inability to accept further commitments. Acid billets, stainless steel in all its forms, bars, strip and wire rods are being called for in ever larger quantities. Prices are very firm but without change.

WORKINGTON.—The shortage of local coke is preventing the furnaces on North-West Coast hematite pig iron from yielding their maximum outputs. Short of 1,500 tons weekly, the additional quantity which the furnaces are capable of smelting, makers are quite unable to overtake the arrears into which deliveries have fallen. In three months' time it is hoped that the position will improve. Even then, however, makers will be compelled to exercise as much caution as is now being observed in increasing their commitments. Demand is substantially in excess of the output of the seven furnaces on hematite pig iron, and of the other three furnaces on basic iron and manganese alloys. There is

little movement in the market, and an early quickening is not to be expected. Prices are steady. Bessemer mixed numbers are at the fixed minimum level for users in the Midlands, South Wales and Scotland, but are considerably higher for any parcels sold to the Continent. They are £6 3s. per ton at Glasgow, £6 6s. at Sheffield, £6 8s. 6d. at Manchester, and £6 11s. at Birmingham, with 5s. 6d. to 16s. 6d. extra for special brands. Malleable iron is in keen demand at £6 15s. delivered at Birmingham, as is ferro-manganese, standing at £16 15s. home. The steel trade is strong. Fresh business is being pressed on makers already sure of a run of another twelve months. Barrow is on rails, hoops and strip, and Workington on rails, billets, bars and slabs. Last week's shipments from Workington included 260 tons of sleepers and 960 tons of billets coastwise. Native ore, at 24s. 6d. per ton f.o.t., is in adequate output for local consumers. There have been heavy imports of foreign iron ore at Workington.

GLASGOW.—Users of semi-finished steel in the West of Scotland are finding it exceedingly difficult to keep plants in operation. Stocks are practically exhausted and the supplies which are coming forward are quite inadequate for the business which has already been undertaken and for the requirements of consumers of the re-rolled products. Negotiations are in progress, which it is hoped will result in increased supplies of both Continental and British material, but in the meantime the shortage is causing considerable anxiety at many plants. Steelmakers are fully employed and output for many months ahead is already booked up. Great activity is maintained in all the manufacturing industries in this district and it is practically impossible to place business for early delivery with any of the iron and steel concerns.

CARDIFF.—Conditions in all branches of the iron and steel trade continue satisfactory with all the furnaces and mills working at their recently increased allotted capacity. Galvanised sheets are exceptionally firm, principally for the home market. Prices, however, are unaltered. Shipments of tinplates at Swansea last week slumped heavily compared with the previous week, but at 5,762 tons they were about 570 tons more than in the corresponding week last year. It is announced that further extensions are contemplated at the Cardiff works of the Guest Keen-Baldwins Iron and Steel Company.

OTHER METALS

COPPER.—The indications are that the fall in prices has been checked, at any rate for the time being. After fluctuating from day to day, the cash quotation showed a net gain of £1 15s. per ton in the week ended Wednesday. Meanwhile, production is on the increase. On the other hand, consumption is also gaining ground and the possibility that output restriction may be re-imposed must not be excluded. In the circumstances a further price advance would be likely if consumers re-entered the market with considerable buying orders.

Sales on the London Metal Exchange: 1,650 tons on Monday, against 3,250 tons last week; 950 tons on Tuesday, against 3,100 tons last week; 2,300 tons on Wednesday, against 3,100 tons last week. Domestic spot was quoted at 13-57½ cents per lb. in New York on Wednesday, against 13-22½ cents a week ago and 14-45 cents a month ago. Wednesday's official closing price for standard cash in London was £55 7s. 6d. to £55 10s. per ton, compared with £53 10s. to £53 15s. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 10,767 tons, showed a decrease of 339 tons, while stocks of rough copper, at 9,487 tons, were 2,120 tons larger.

LEAD AND SPELTER.—Although business has been on a quiet scale, the undertone of the market has improved and both metals show a net advance of about £1 per ton on the week. Both remain sensitive to general psychological factors and might be expected to respond favourably to any improvement in market sentiment.

Sales of lead on the London Metal Exchange: 1,300 tons on Monday, against 3,250 tons last week; 900 tons on Tuesday, against 2,450 tons last week; 1,050 tons on Wednesday, against 2,150 tons last week. The New York quotation on Wednesday was 6-00 cents per lb., against 6-00 cents a week ago and 6-00 cents a month ago. Wednesday's official closing quotation in London for soft foreign for shipment during the current month was £22 18s. 9d. per ton, compared with £21 18s. 9d. last week.

Sales of spelter on the London Metal Exchange: 1,350 tons on Monday, against 2,900 tons last week; 350 tons on Tuesday, against 4,750 tons last week; 1,250 tons on Wednesday, against 2,600 tons last week. Wednesday's quotation in East St. Louis was 6-75 cents per lb., against 6-75 cents the week before and 6-75 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipment during the current month was £21 per ton, against £20 5s. last week.

TIN.—The market has been adversely affected by the strike situation in the United States and by the general political tension. The tone has been irregular, while turnovers have been small. After fluctuating to lower levels in the early part of the period under review, the market rallied on Tuesday and Wednesday, quotations on the latter day showing little net change on the week. The recovery was not unconnected with the publication of the June issue of the Tin Research and Development Council's Bulletin, which discloses a strong statistical position.

World production during the first four months of 1937 totalled some 60,646 tons, whereas consumption amounted to 65,636 tons. In the year ended April, 1937, apparent consumption advanced by 11 per cent. to 173,683 long tons. That invisible stocks in the U.K. are being depleted is shown by the drop of 14-7 per cent. in British apparent consumption over this period. Meanwhile, during May 1937, world visible stocks fell by 786 to 23,027 tons—equivalent to only 13 per cent. of current annual consumption. The strength of the statistical position suggests that prices are unlikely to weaken in the immediate future.

Sales of tin on the London Metal Exchange: 305 tons on Monday, against 450 tons last week; 175 tons on Tuesday, against 300 tons last week; 245 tons on Wednesday, against 325 tons last week. The New York quotation on Wednesday was 55-85 cents per lb., against 55-12½ cents a week ago and 56-00 cents a month ago. Wednesday's official closing quotation in London for standard cash was £247 15s. to £248 per ton, compared with £247 15s. to £248 a week ago. Stocks of tin in London and Liverpool at the end of last week totalled 3,190 tons, a decrease of 22 tons on the week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted on Wednesday at £100 per ton, and rolling billets at £102 per ton. Nickel, for home and export, was maintained at £180 to £185 per ton. Quicksilver, on the spot, was quoted at £15 5s. to £15 5s. 6d. per flask of 76 lbs., the same as last week. Chinese antimony was quoted at £68 per ton, ex warehouse, the same as last week. Chinese wolfram for "June-July" shipment was quoted at 63s. to 64s. per unit, c.i.f., compared with 62s. 6d. to 64s. 6d. last week. Refined platinum was quoted on Wednesday at £10 15s. per ounce, the same as last week.

TEXTILES

COTTON.—Manchester.—Fluctuations in raw cotton prices and uncertainty concerning the political situation abroad have had a restraining influence upon traders during the week, and only in isolated instances have

contracts been arranged for more than retail lots. Many ups and downs have occurred in raw cotton prices in Liverpool. It is not unusual for fluctuations to take place at this time of the year, when prices are influenced by weather reports from the United States cotton belt. Although favourable crop reports have been received, the weather news has been somewhat mixed, there being more reference to the possibility of the plants being damaged by boll weevil infestation.

Yarn prices have fluctuated according to the change in raw cotton quotations. Nearly all spinners are now protected by price agreements. In the American section fair weights have been booked in coarse and medium counts. Certain Egyptian spinners have sold rather more freely, not only in weaving qualities for Lancashire, but in descriptions suitable for Germany. In the cloth section, buyers have continued to display more interest in prices, and the opinion is gaining ground that if steadier conditions prevailed another buying movement might be experienced. A slightly improved inquiry has again been met with for India and scattered sales have been arranged, without individual contracts being at all important. Our exports to India for the five months ended May were the same period of 1936. It is hoped that some good will come from the pressure which is now being put upon the Government by the Joint Committee of Cotton Trade Organisations with regard to Indian trade. Fancies have attracted some attention for China, Java and the Straits Settlements. Some makers have done fairly well in printing and finishing styles for South America. Only necessary buying has taken place for the Dominions and the home trade.

Although spinners and manufacturers in Lancashire have not sold current production for several weeks, order lists remain healthy and there are no signs of price cutting.

Cotton Reorganisation.—The importance of dealing immediately with the internal reorganisation of the Lancashire cotton industry and the preservation of export markets was stressed in the annual report of the Joint Committee of Cotton Trade Organisations, adopted at the annual meeting in Manchester this week. After pointing out that for several months conditions in the Lancashire textile trade had been better than at any time during the last few years, the report stated that there was no general disposition to take an over-optimistic view of the future. Unless the opportunity was taken now to strengthen the industry's internal organisation and to secure more reasonable conditions of access to overseas markets, states the Joint Committee, it would have gained little and might even be worse off when it had to face the next depression. There was increasing anxiety in Lancashire to see the industry placed on a firmer basis of confidence which would enable it to undertake constructive measures of reform with a view to permanent recovery and fresh growth. A plea is made to the Government to give statutory authority to the reorganisation schemes in the manufacturing and finishing sections of the industry, so that they would apply equitably to all firms concerned.

WOOL.—Bradford.—There is a fair measure of interest in Colonial wools, and the market is rather firmer than a fortnight ago. New clip wools have met with a good reception at Brisbane during the past two weeks, the current level of prices being above quotations for tops in Bradford. The firm tendency of wool prices abroad is having a reassuring effect on Yorkshire, and expectations for lower prices, which have tended to hold up business, are waning.

The increased combing charges originally announced by the Commission Woolcombers' Association to come into force on July 5th is not altogether welcome news to the trade, but its postponement to August 30th shows that the combers are willing to meet a reasonable request on the part of topmakers. The increased combing charges average about ½d. per lb.

Active preparations are now being made by spinners and manufacturers for the spring and summer seasons of 1938, and it is expected that the opening of a new selling season next month will coincide with a fillip in wholesale purchases of men's and women's clothes and fabrics.

GRAIN MARKETS

WHEAT.—Business is rather limited and prices remain largely under the influence of crop reports. The market has shown a firmer tendency this week on reports of crop deterioration in Canada, fears of the spread of rust in the U.S. spring wheat belt and reports of rust damage in parts of the winter wheat belt. Crop news from Canada will be watched with close attention during the next few weeks.

On Wednesday last, "July" futures were quoted in Chicago at 11½ cents per bushel, against 110½ cents the week before and 118 cents a month ago. Quotations in London, Wednesday: No. 1 and No. 2, Northern Manitoba, ex ship, not quoted; No. 3, 46s. per 496 lbs., as against 47s. 6d. last week. According to the *Corn Trade News*, total shipments of wheat and flour last week amounted to 1,331,000 quarters, against 1,267,000 quarters in the previous week and 951,000 quarters in the corresponding week a year ago.

FLOUR.—The market remains quiet, with prices showing little alteration. Wednesday's London quotations (excluding quota payments) were: Straight run, delivered Home Counties, 40s. per 280 lbs., as against 40s. a week ago; delivered inner London, 39s. 6d., as against 39s. 6d. a week ago. Manitoba patents, ex store, 37s. 6d. to 39s., as against 37s. 3d. to 38s. 9d. a week ago. Australian, ex store, 32s. 6d. to 33s. 6d., as against 33s. a week ago.

BARLEY.—Business in imported feeding barley remains quiet. "July" futures were quoted at 65½ cents per bushel in Winnipeg on Wednesday, against 66½ cents last week. Quotations per 448 lbs. in London on Wednesday were: "English feed" at farm, 35s. to 36s., as against 35s. to 36s. a week ago; "English malting," at farm, 36s. to 42s., against 36s. to 42s. last week. California, ex ship, 50s. 6d. to 55s., as against 50s. 6d. to 53s. a week ago. Chilean, brewing, ex ship, 44s. 9d. to 50s., as against 44s. 9d. to 50s. a week ago.

OATS.—On Wednesday, "July" futures were quoted at 40½ cents a bushel in Chicago, against 39½ cents a week ago and 43½ cents last month. Quotations in London, Wednesday: "English black," at farm, 27s. to 28s., per 336 lbs., as against 27s. 6d. to 28s. 6d. a week ago; "English White," at farm, 27s. to 28s., as against 27s. 6d. to 28s. 6d. a week ago; mixed Canadian feed (Vancouver), landed, 25s. 6d. per 320 lbs., as against 25s. 9d. a week ago.

MAIZE.—Despite an improvement in prices on American markets, London quotations have again moved to a lower level. Present indications suggest that the United States maize crop will be a good one—with a consequent weakening of American demand for Plate maize. "July" futures were quoted on Wednesday at 117½ cents per bushel in Chicago, against 112 cents a week ago and 112½ cents last month. Quotations in London, Wednesday: "Plate," landed, 26s. 6d. per 480 lbs., as against 27s. 3d. a week ago; "Plate," ex ship, 25s. 6d., as against 26s. 3d. a week ago; "Plate," 25s. 6d., as against 26s. 3d. a week ago; yellow maize meal, ex wharf, was quoted at £6 15s. to £6 17s. 6d. per ton, as against £6 17s. 6d. to £7 last week.

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations for selected weeks in 1935-1937:—

NEAREST FUTURE	Jan. 2, 1935	Dec. 31, 1935	June 24, 1936	Dec. 30, 1936	June 16, 1937	June 23, 1937
Winnipeg (No. 1, Manitoba) Cents per 60 lb.	82½	84½	83½	129	123	126½
Chicago (No. 2, Winter) Cents per 60 lb.	98½	101½	95½	135½	110½	113½

SALES AND PRICES OF BRITISH CEREALS.—The following table gives the estimated sale of home-grown wheat during the harvest years 1933-34 to 1936-37.

	1933-1934	1934-1935	1935-1936	1936-1937
Estimated sales of home-grown wheat—				
1 week to June 19	94,928	116,452	81,355	135,717
42 weeks to June 19	9,720,177	12,873,947	12,799,402	10,324,974
Average price of English wheat per cwt.	s. d. 5 5	s. d. 5 6	s. d. 6 8	s. d. 9 9

The following is a statement showing the quantities sold and the average price of British cereals in the past two weeks, and for the corresponding weeks in each of the years from 1933 to 1936:—

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
June 17, 1933.....	Cwts. 49,891	Cwts. 19,588	Cwts. 9,807	s. d. 6 5	s. d. 7 0	s. d. 5 10
June 16, 1934.....	94,928	5,636	18,904	5 5	7 2	6 2
June 22, 1935.....	116,452	18,432	11,719	5 6	7 0	5 2
June 20, 1936.....	81,355	6,541	23,268	6 8	7 7	6 3
June 12, 1937.....	163,791	6,712	32,662	9 10	9 9	9 2
June 18, 1937.....	135,717	6,496	18,135	9 9	9 6	9 1

OTHER FOODS

BACON.—With a sustained demand for all descriptions, the market has continued firm. The official quotations (per cwt. for No. 1 Sizable) which formed the basis for dealings on the London Provision Exchange this week were: English, 86s.; Canadian, 79s.; Danish, 87s.; against 86s., 77s., and 87s. last week. Arrivals in London last week included: Danish, 14,124 bales; Canadian, 7,216; Dutch, 2,430; Lithuanian, 1,038; and Polish, 3,324; as against 13,548, 7,628, 2,270, 1,230 and 2,602 bales, respectively, in the previous week.

BUTTER.—After a steady opening, the market developed a slow tone, and prices of Colonial makes were a shade easier. Quotations (per cwt.) on the London Provision Exchange on Monday were: New Zealand, finest salted, 110s.; Australian, choicest salted, 108s.; Danish, 115s.; compared with 111s., 110s., and 114s. to 115s., respectively, a week ago.

CHEESE.—Prices show little alteration. English and Colonial makes have been in steady demand, with Dutch showing a rather firmer tone. No English Cheddar is quoted on the London market. Quotations (per cwt.) on the London Provision Exchange on Wednesday were as follows: Canadian, finest coloured, 78s. to 80s.; and New Zealand, finest coloured, 73s. to 73s. 6d.; against 78s. to 80s. to 73s. 6d., respectively, a week ago.

COCOA.—Quotations are about unchanged on the week. The spot quotation in New York on Wednesday was 7½ cents per lb., as against 7½ cents per lb. last week. In London, on Wednesday last, good fermented new crop, Accra, "October-December," was quoted at 34s. 3d. per 50 kilos, c.i.f. Continent, against 34s. 6d. a week ago. Last week's movements of cocoa in London were as follows: Landed, 5,169 bags; delivered, for home consumption, 6,712 bags; exported, 560 bags; stocks, 286,970 bags, against 171,234 bags a year ago.

COFFEE.—The London spot market ruled quietly steady. The New York market has had a quiet tone. On Wednesday, Rio No. 7 (cash) was quoted at 9½ cents per lb. in New York, as compared with 9½ cents per lb. last week and 9½ cents per lb. a month ago. Movements of coffee in London last week were as follows: Brazilian, landed, 182 cwt.; delivered for home consumption, 215 cwt.; exports, nil; stocks, 1,983 cwt., against 10,363 a year ago. Central and other South American: Landed, 1,164 cwt.; delivered for home consumption, 2,093 cwt.; exported, 501 cwt.; stocks, 116,782 cwt., against 121,542 last year. Other kinds: Landed, 922 cwt.; delivered, for home consumption, 2,620 cwt.; exported, 475 cwt.; stocks, 116,273 cwt., against 168,814 last year.

EGGS.—Demand has been more active and prices are showing a seasonal improvement. At Smithfield, on Wednesday, English (ordinary packing, Grade 1, about 15-15½ lb.) realised 11s. 9d. to 12s. 3d. per 120, against 11s. to 11s. 3d. last week; while Danish (15½ lb.) made 8s. 6d. to 9s., as against 8s. to 8s. 6d. last week.

FRUIT.—With supplies somewhat short and demand active, business at Covent Garden has remained good, states *The Fruitgrower*. Good supplies of strawberries have improved in quality and have sold well. Cherries also made a good show, prices ranging from 8d. to 10d. per lb. for Rivers and from 5d. to 7d. for Whiteheart. Apples held the slight improvement shown last week and have been a consistent trade, notwithstanding the competition of soft fruit. Pears are steady. French black and red currants sold well, and green gooseberries have been an active item. Hothouse grapes have eased with increasing supplies, but smaller arrivals of South African cleared steadily. Melons sold well, but peaches and

nectarines declined on heavier supplies. Grapefruit rose in price, and lemons remained short and dear. New season South African oranges met a good reception and are showing excellent quality.

MEAT.—Business at Smithfield has been patchy, with prices about unchanged. On Wednesday last, Argentine chilled hindquarters were quoted at 4s. 2d. to 4s. 6d. per 8 lbs., as compared with 4s. 2d. to 4s. 10d. a week ago. New Zealand frozen mutton was 3s. 4d. to 4s. per 8 lbs., against 3s. 4d. to 4s. a week ago. According to the Smithfield Market official report, supplies during last week amounted to 8,232 tons, a decrease of 266 tons on the corresponding week last year. Beef and veal accounted for 4,595 tons, mutton and lamb 2,653, and pork and bacon 561, as compared with 4,885, 2,526 and 640 tons, respectively, in the same week of 1936.

PEPPER.—On Wednesday, Singapore white Muntok, spot, was quoted at 6d. per lb. in bond, against 6d. per lb. a week earlier. Black Lampung, spot, in bond, was quoted at 3d. per lb. sellers, compared with 2½d. per lb. last week. Movements of pepper in London last week were as follows: Black, landed, 15 tons; delivered, 5 tons; stocks, 1,997 against 1,756 last year. White, landed, 8 tons; delivered, 22 tons; stocks, 11,847 tons, compared with 12,076 a year ago.

RICE.—The spot price of Burma No. 2, cleaned, was 10s. per cwt., ex warehouse, on Wednesday, as compared with 10s. per cwt. a week ago. "June-July," in singles to Continent and U.K., was quoted at 9s. per cwt., against 9s. last week. Movements in London last week were as follows: Landed, 211 tons; delivered, 45 tons; stocks, 1,654 tons, against 1,668 a year ago.

SUGAR.—The London market in raw sugar was steady, with prices a shade higher on the week. In New York, similar conditions prevailed. The New York spot quotation was 3-45 cents on Wednesday, as compared with 3-40 cents per lb. last week and 3-35 cents per lb. a month ago. Wednesday's sales of raw sugar in London included "August" delivery at 6s. 7½d. to 6s. 8½d., against 6s. 6½d. to 6s. 7½d. a week ago. Movements of raw sugar in public warehouses in London and Liverpool last week were as follows: Imports, 3,537 tons, against 24,752 in the previous week and 11,832 in the same week of 1936; deliveries, 16,153 tons, against 13,941 and 21,976 tons, respectively; stocks, 194,920 tons, against 207,536 and 140,705 tons, respectively.

TEA.—The following table shows the average price (compiled by the Tea Brokers' Association) of tea sold in Mining Lane on Garden Account in recent weeks:—

Week ended	Northern India	Southern India	Ceylon	Java	Sumatra	Africa	Total
June 18, 1936	d.	d.	d.	d.	d.	d.	d.
May 11, 1937	12-20	12-26	13-13	10-17	9-95	11-44	12-25
" 27, "	15-58	16-58	17-15	Nil	Nil	14-83	16-23
" 27, "	14-76	15-25	16-11	13-24	12-17	14-03	15-10
June 3, "	14-26	14-42	15-25	12-63	11-99	13-56	14-48
" 10, "	14-57	14-61	15-12	13-73	12-15	13-94	14-67
" 17, "	14-67	14-62	15-06	13-11	12-45	13-70	14-51

At this week's public auctions in Mincing Lane, 22,157 packages of Indian and 25,759 packages of Ceylon tea came up for disposal. The Indian grades met a good general demand. Early Dooras teas were well competed for at prices about 2d. per lb. higher than opening rates at the corresponding sale a year ago. Travancore sold readily, the leaf grades being a little dearer and others showing some irregularity. Southern Indian teas were steady. In response to an active demand, all Ceylon teas realised rather higher prices—particularly Fannings.

VEGETABLES.—Although demand at Covent Garden remains good, tomato prices have fallen in consequence of rapidly increasing supplies, states *The Fruitgrower*. Cucumbers have sold well but, here again, prices weakened on heavier arrivals. Lettuce, radishes and spring onions all sold well, and forced marrows held their price. New carrots are an active item. Decreasing supplies of asparagus sold well at higher rates. Green peas, in moderate supply, realised 8s. to 12s. per half bag. Meanwhile, at the Borough Market, old crop potatoes attracted a moderate business at generally steady prices, best siltland King Edward making from 9s. 6d. to 10s. 6d. per cwt. on Tuesday, the same as a week ago. New potatoes were in brisk demand, with Cornish quoted at 12s. to 14s., Lincolnshire at 13s. to 14s., Bedford at 13s. to 14s., and Jersey at 11s. to 13s. per cwt., ex market.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OILSEEDS.—Most sections are quiet and conditions generally are easier. This is the "off" season, and the unsettled political outlook in Europe and labour troubles in America are not conducive to an improvement on the market. Linseed has been in some demand on the Continent, chiefly for Plate, but trade here has been confined to Calcutta afloat to Hull, for which £14 has been paid. Crushers' requirements just now are restricted owing to the poor demand for oil and cake. Shipments from Argentina continue at a moderate level and the quantity afloat is maintained, that destined for Europe being 99,900 tons (including 31,300 tons from India), and for the United States 57,000 tons. Argentina has exported over 1,100,000 tons this year, of which over 450,000 tons has been for the United States and Canada. Crop news from America continues favourable, and in Argentina conditions for ploughing and sowing are satisfactory. The balance of the old Egyptian cottonseed is moving off slowly, and comparatively poor prices are being obtained by shippers. Business in black on passage to Hull has been done down to £7 and remains steady at that figure. New crop for September loading is offered at £7 5s. per ton, but little inquiry is reported. In the oil market linseed oil has further declined by about 15s. per ton, but demand is very disappointing. Large quantities of foreign linseed oil have been imported recently. Cotton oil is slow and has further declined in price. Crude Egyptian ex Hull is offered freely at £26 10s. per ton. Oilcakes are in restricted demand, deliveries being about normal for the season of the year.

RUBBER.—Last week's advance was not held and prices, both in London and New York are a shade lower. American labour troubles and political uncertainty in France find their reflection in the rubber market. Meanwhile, the decline in United Kingdom stocks continues. In the absence of any important business, the meeting of the Rubber Regulation Committee arranged for June 29th has been carried forward to Tuesday, July 20th. The spot price in New York on Wednesday was 19½ cents per lb., compared with 19½ cents per lb. a week ago and 20½ cents a month ago. Wednesday's official buyers' price for standard ribbed smoked sheet on the spot in London was 9½d. per lb., as against 9½d. on the corresponding 9½d. for "August" shipments, as against 9½d. to 9½d. a week ago. Stocks in London and Liverpool at the end of last week totalled 43,653 tons, against 44,564 tons a week earlier. A year ago stocks amounted to 124,261 tons.

WHOLESALE COMMODITY PRICES

THE NATIONAL DEBT	8	THE GENERAL OUTLOOK	11

THE NATIONAL ACCOUNTS 1936-37

THE financial year 1936-37 closed with a small deficit of £5½ millions. This result is largely due to a remarkable speed-up during March in expenditure on defence. Expenditure on the Supply Services in that month was more than 45 per cent. higher than the average of the preceding eleven months.

The exact total of the deficit is £5,597,191. As in every one of recent years, however, it is necessary to explain that surpluses and deficits are defined, in British Treasury practice, on somewhat peculiar lines. The year's expenditure includes £13,127,270 of debt redemption, for which no provision was made in the Budget. If ordinary revenue be compared with ordinary expenditure, there is, in fact, a surplus of £7,530,079. Even this, however, is not a true surplus in any ultimate sense. At least one of the items on the revenue side (the "raided" balance of the Road Fund) should not strictly be regarded as current revenue, while the expenditure on interest on the National Debt does not include any provision for the interest on Savings Certificates which accrued, but was not paid, during the year. In the year 1935-36 this item amounted to £9,000,000 and was probably no less in the year just ended. In the strict sense there was a deficit in the year 1936-37.

The deficit was due in minor degree to a failure of the revenue to come up to the estimates. The figures are as follows:—

REVENUE, 1936-37			
(000's omitted)			
	Actual Receipts	Larger (+) or Smaller (—) than Budget Estimate, 1936-37	Actual Receipts, 1935-36
Income Tax	257,237	+ 1,763	+ 19,163
Sur-tax	53,540	+ 2,960	+ 2,520
Estate, etc., Duties	87,990	+ 1,010	+ 70
Stamps	29,140	+ 2,140	+ 3,340
Other Inland Revenue	1,730	+ 230	+ 355
Total Inland Revenue	429,637	+ 3,363	+ 25,093
Customs	211,282	+ 3,757	+ 14,640
Excise	109,500	+ 500	+ 2,800
Total Customs and Excise	320,782	+ 3,257	+ 17,440
Motor Vehicle Duties (Exchequer share)	5,300	+ 300	+ 323
Total Tax Revenue	755,719	+ 406	+ 42,856
Post Office (net receipt)	10,970	+ 286	+ 700
Post Office Fund	100	+ 100	+ 100
Crown Lands	1,350	—	+ 10
Sundry Loans	4,550	+ 450	+ 384
Miscellaneous Receipts	24,601	+ 649	+ 2,862
Total Ordinary Revenue	797,289	+ 1,092	+ 44,369

All three of the main direct taxes fell short of the estimate—a fact which tends to show that the estimating in the last Budget was less conservative than usual, as was

suspected at the time. Sur-tax, in particular, seems to have been the subject of a somewhat optimistic expectation. Customs revenue is well above the estimate, assisted both by the expanding volume of imports and also, so far as *ad valorem* duties are concerned, by the rise in prices. Stamps also show a very healthy increase.

The major responsibility for the deficit is to be sought in the excess of expenditure over the estimates:—

EXPENDITURE, 1936-37				
(000's omitted)				
	Actual Issues	Budget Estimates, 1936-37	Larger (+) or Smaller (—) than Final Estimates, 1936-37	Actual Issues, 1935-36
Interest and Management of National Debt	210,873	+ 13,127	+ 13,127	+ 661
Payments to N. Ireland	7,996	+ 496	+ 496	+ 792
Other Consolidated Fund Services	3,240	+ 40	+ 40	+ 2,409

Civil and Revenue Votes (exc. Post Office)	381,158	+ 3,188	+ 8,726	+ 6,107
Total Supply Services (exc. Post Office)	567,230	+ 4,633	+ 10,858	+ 55,230
Total Ordinary Expenditure	789,759	+ 8,138	+ 23,629	+ 52,246
New Sinking Fund	13,127	+ 13,127	+ 13,127	+ 661
Total Expenditure	802,886	+ 4,969	+ 10,502	+ 52,907
SELF-BALANCING REVENUE AND EXPENDITURE, 1935-36				
(000's omitted)				
	Actual Revenue or Expenditure	Budget Estimate, 1936-37	Larger (+) or Smaller (—) than	Actual Figures, 1935-36
Post Office	71,880	+ 64	+ 5,800	
Road Fund	27,427	+ 927	+ 1,652	
Total	99,307	+ 893	+ 7,452	

It is obvious at a glance that the explanation lies in the heavy defence expenditure. In his Budget last April, Mr Chamberlain allowed £20 millions for Defence Supplementary Services, but even this amount proved to be nearly £8,000,000 too small. The expenditure on the Civil Services, on the other hand, was more than £3,000,000 below the Budget estimate.

The deficit is not particularly encouraging to the taxpayer. On the assumption that the provision for the National Debt will remain unchanged, the Chancellor will have to find at least £36.2 millions more revenue in 1937-38.

than in the year that has just expired. This figure will be increased in so far as he thinks it advisable to make provision for Supplementary Estimates. Probably the closest approximation that the layman can make, after allowing for the natural buoyancy of the revenue in a period of expanding trade, is that the Budget of 1937 will balance if there is no provision for Supplementaries. But the Chancellor will have to impose fresh taxation if he anticipates over-spending in any Department in the course of the year.

The final table shows the aggregate receipts and outgoings during the last six years and also in 1929-30 and 1913-14. These figures include the self-balancing items:—

	Revenue (£000)	Expenditure* (£000)	Surplus (£000)	Deficit (£000)

* Includes allocations to Sinking Fund.

† Excluding war debt payment to America, and the deficiency of £15.3 millions in the allocation originally made for sinking fund.

‡ Disregarding war debt payments of £3.3 millions to America.

REVENUE

BEFORE proceeding to examine the salient features of the trend of revenue under the various heads, we show below a comparison of Exchequer receipts during the past four years with those of 1929-30 and 1913-14:—

REVENUE (£ millions)						
	1913-14	1929-30	1933-34	1934-35	1935-36	1936-37
Customs.....	35.5	119.9	179.2	185.1	198.6	211.3
Excise.....	39.5	127.5	107.0	104.6	106.7	109.5

Tax Revenue.....	183.0	655.1	683.5	683.4	713.2	755.7
Crown Lands.....	0.5	1.3	1.2	1.3	1.4	1.3
Sundry Loans.....	1.6	32.6	4.7	4.4	4.9	4.6
Miscellaneous.....	2.3	38.4	22.1	15.1	21.7	24.6
Post Office, Net Receipt, & Fund.....	6.2	9.0	13.1	12.3	11.7	11.1
Non-Tax Revenue.....	10.6	79.3	41.1	33.1	39.7	41.6
Total Ordinary Revenue.....	173.6	734.4	724.6	716.5	752.9	797.3
Self-balancing Revenue:						
Post Office.....	24.6	58.9	59.3	61.8	66.1	71.9
Road Fund.....	...	21.9	25.5	26.4	25.8	27.4
Total Revenue.....	198.2	815.2	809.4	804.7	844.8	896.6

Inland Revenue collected in 1936-37 has risen by the appreciable amount of £24.7 millions, or 6 per cent., and has practically reached the 1930-31 level. But there is still some way to go before the £449.5 millions of 1931-32, the peak year, is approached. This class of revenue, moreover, fell short of estimates by £3.4 millions. Income Tax rose fairly sharply, but although surtax turned upwards (as was expected, owing to the time-lag) for the first time since the depression, it was £3 millions below the 1936 Budget estimate. De... Duties were virtually unchanged, but Stamps rose by 11 per cent., and apart from Customs, were the only important revenue item to exceed estimates.

Receipts from Customs again rose sharply, by 7½ per cent., and were no less than £75 millions above receipts in 1931-32. Excise revenue has varied little in the past four years, Customs being responsible for the recent changes shown below:—

DIRECT AND INDIRECT TAXES			
	Direct £ million	% of Total	Indirect £ million
1913-14	78.0	47.8	85.0
1929-30	376.9	58.0	273.3
1932-33	392.3	56.1	307.3
1933-34	369.4	54.3	308.9
1934-35	364.5	53.7	313.8
1935-36	379.1	53.5	329.1
1936-37	400.5	53.4	349.9

Direct taxes have been taken to include all Inland Revenue duties except Stamps, while indirect taxes cover Customs, Excise and Stamps. Motor vehicle duties have been ignored, though in future years they may have to be taken into account.

Customs and Excise.—These receipts have again reflected the general expansion of trade and of purchasing

power, the increase being rather more than was expected. Actual receipts in recent years are shown in the following table:—

	1929-30	1933-34	1934-35	1935-36	1936-37
Customs.....	£m. 119.9	£m. 179.2	£m. 185.1	£m. 198.6	£m. 211.3
Excise.....	£m. 127.5	£m. 107.0	£m. 104.6	£m. 106.7	£m. 109.5

Estimates of revenue from Customs were £207.5 millions for 1936-37, or £4.3 millions below actual receipts, but the 1935-36 estimate of £188.6 millions had been exceeded in that year by as much as £8.1 millions. Excise receipts have again shown a want of buoyancy; in 1935-36 the estimate was just exceeded, while the latest year's receipts are £500,000 below the £110 millions expected. The Customs receipts will have been influenced by the only important change in duty under the 1936 Budget, which was the imposition of a further 2d. per lb. on tea—estimated to provide an additional £3½ millions. A surtax of £1 per 36 gallons on beer from non-Empire sources was levied, and minor Key Industry duties were added, but the effect of these was estimated to be inappreciable.

Details of net receipts from selected items in 1935-36 and earlier years appear below:—

CUSTOMS AND EXCISE DUTIES—NET RECEIPTS (000's omitted)						
	1913-14	1929-30	1932-33	1933-34	1934-35	1935-36

Grand total.....	75,227	247,983	287,756	286,455	289,893	303,821

* In 1913-14 the motor spirit duty (repealed 1921) yielded £841,000, and is included with "Other revenue duties."

† Including British wine, table waters, cider and perry, cocoa, coffee, chicory and substitutes, dried or preserved fruits, betting duty, railway passenger duty, patent medicines, other licences, and miscellaneous.

Under the 1935 Finance Act, the principal changes were a reduction of entertainments tax on certain classes of performances (abolition of duty on prices up to 6d. and a reduction thereafter), and an increase of 1d. to 8d. per gallon in the duty on heavy oil used in road transport. This latter duty, which brought in roughly a further £1 million, was required less for additional revenue than to protect the Exchequer from loss arising from the growing use of heavy oil (then enjoying a much lower duty) in the place of petrol. Minor revisions of duty were made during the year, but though unimportant they were nearly all reductions. The chief increase in actual net receipts was that yielded by tobacco, receipts from which exceeded the previous year by £4.3 millions and estimates by £2.7 millions. Petrol and oil duties provided nearly £3 millions more, and were about £1 million over the Budget estimate. The next largest rise was shown by spirits. The proceed-

of entertainments duty fell below both the previous year and the 1935-36 estimate, but the fall is attributable to the lower scale and not to a decline in attendances. Sugar duties surprisingly yielded slightly less, for although the expected increase was only small owing to the growing cost of preferences, refined sugar retained for consumption was about the same. The following table shows the consumption in the past two years of this and the other main dutiable articles:—

(In millions)			
	1929-30	1934-35	1935-36
Spirits..... proof galls.	12.2	9.4	10.2
Beer..... standard barrels	20.7	16.7	17.3
Tea..... lbs.	401.7*	431.4	446.0
Sugar: refined equivalent cwt.	35.7	39.7	39.7
Tobacco..... lbs.	151.5	159.0	168.8
Artificial silk—home-made lbs.	56.0	97.5	117.2
Light hydrocarbon oil ... galls.	903.0	1,192.0	1,246.1

* 1928-29.

The most striking increase is that of tobacco, while consumption of spirits shows a rise for the first time since 1927-28. The annual Customs and Excise Report for 1935-36 points out that the total revenue of nearly £304 millions was the highest since 1921-22, at which period, however, beer and spirits, tea, sugar, cocoa and coffee duties contributed 90 per cent. of the total, against less than two-thirds of the latest figure.

Inland Revenue.—In 1936-37, Inland Revenue taxes yielded £429.6 millions, against an estimate of £433 millions, and receipts in the previous year of £404.9 millions. Within the past eleven years, this total has only once been exceeded, with £449½ millions in 1931-32. The rise of £41 millions in two financial years is proof of notable buoyancy, but the 1936-37 receipts fell short of the estimate of £433 millions by as much as the Customs exceeded expectations.

Income Tax.—Receipts of £257.2 millions are £1.8 millions below estimate, and are thus in contrast with the surpluses under this head of £5½ and £9½ millions in 1935-36 and 1934-35 respectively. Compared with the 1935-36 receipts of £238 millions, it was estimated in the 1936 Budget that in the 1936-37 financial year a further £10 millions would be received on the then basis of taxation, that the increase of 3d. in the standard rate would produce £12 millions, while £1 million could be saved on income tax avoidance (mostly in the form of educational trusts). The additional personal and children's allowances, on the other hand, were expected to cost £2 millions in that period. The net gain in a full year was put at £12½ millions, or £14 millions from the higher rate, £2½ millions from tax avoidance, and a cost of £4 millions for allowances. Income tax receipts in 1913-14, and in and since 1929-30, together with the standard rate, are shown below:—

INCOME TAX*						
Year	Exchequer Receipts	Standard Rate of Tax in the £	Net Yield† per Penny	Year	Exchequer Receipts	Standard Rate of Tax in the £
1913-14	£ Mn. 43.9	s. d. 1 2	£ Mn. 3.11	1932-33	£ Mn. 251.5	s. d. 5 0
1929-30	237.4	4 0	4.87	1933-34	228.9	5 0
1930-31	256.0	4 6	4.58	1934-35	228.9	4 6
1931-32	287.4	5 0	4.58	1935-36	238.1	4 6
				1936-37	257.2	4 9

* For 1913-14, the United Kingdom; from 1929-30 onwards, Great Britain and Northern Ireland only.

† Calculated on basis of net produce of tax. ‡ Estimate.

The rise in Exchequer receipts between 1934-35 and 1935-36 of £9.2 millions resulted from an increase from £2,616 millions to £2,740 millions in actual income (i.e. gross income less exemptions and deductions for depreciation, etc., but before subtracting earned and personal allowances). The latter amount exceeds the 1931-2 actual income of £2,725 millions (the previous highest), but whereas in 1935-36 income under Schedule E (salaries and wages) was £46 millions more, that under Schedule D (profits from businesses and professions) was still £42 millions below the 1931-2 level. The following table analyses for recent

years the actual income coming under the review of the Inland Revenue:—

ANALYSIS OF ACTUAL INCOME					
Schedule	Income from	1913-14	1933-34	1934-35	1935-36 Estimates
		(£000)	(£000)	(£000)	(£000)
A	Land, house, etc., ownership	175,662	297,844	304,119	312,500
B	Occupation of lands, etc.	5,373	28,441	29,318	29,500
C	British, Dominion and Foreign Govt. securities	47,776	151,865	148,277	148,000
D	Business, Professions, etc.	584,346	756,405	828,954	880,000
E	Salaries of Government, Corporation and Public Company Officials and Employments,*	...	766,402	786,640	820,000
	Ditto, weekly wage-earners	...	504,116	518,329	550,000
Total		951,041	2,505,073	2,615,638	2,740,000

* Prior to 1923-24, employments (including weekly wage-earners) were assessed under Schedule D.

From the total 1935-6 actual income, there were deducted earned income and personal allowances of £1,440 millions, or about £59 millions more. Through the operation of allowances, 4½ million persons out of the estimated 8.1 million persons receiving income above the effective exemption limit of £125 a year, were entirely relieved from tax.

Surtax.—Last year's Exchequer receipts amounted to £53½ millions, against a Budget estimate of £56½ millions, and receipts in 1935-6 of £51.02 millions. It was estimated in the Budget that the year 1936-37 would show a higher yield of £3½ millions arising from the normal increase and £2 millions (or £4 millions in a full year) from saving on tax avoidance. We show below the total number of persons (as revised September 30, 1936) assessed to surtax, the total chargeable income (which includes the first portion not liable to surtax), and the Exchequer receipts in 1913-14 recently.

SURTAX (1913-14 United Kingdom; thereafter Great Britain and Northern Ireland)				
Year	Income Limit	Number Chargeable	Total Income Chargeable	Exchequer Receipt
1913-14†	£ 5,000	14,008	£ Mn. 176	£ Mn. 3.32
1929-30	2,000	108,891	593	56.39
1931-32	2,000	93,361	467	76.70
1932-33	2,000	86,712	424	60.65
1933-34	2,000	83,419	407	52.59
1934-35	2,000	85,449	424	51.17
1935-36	2,000	*	*	51.02
1936-37	2,000	*	*	53.54

* Not available.

† Super-tax.

Thus the number assessed for 1934-35 was 2,030 higher, but the average chargeable income per person only very slightly larger. The number chargeable was still below the 1929-30 level, whereas in the same period the number of individuals whose income was above the income tax exemption limit rose by over 50 per cent. (the earned income exemption limit, however, has been lowered by £37 in the interval).

Income Tax and Surtax Combined.—There has been a continuance of the tendency to grant relief from tax to small incomes, changes in this direction having started in the 1931 Budget, lapsed in 1932 and 1933, and been resumed from 1934. In 1930-31 four-ninths the standard rate was payable on the first £250 of taxable income; this was altered to half on the first £175 for 1931-32, and in the two latest years became one-third on the first £135. The proportion of earned income deducted was one-sixth (maximum £250) in 1930-31, but for the following year, and subsequently, became one-fifth (maximum £300). The fixed allowances are, however, still below the pre-depression level for all except families including six or more children. For 1930-31, the married allowance was £225; the next year it was reduced to £150, then raised to £170 in 1935-36, and again to £180 last year. Children's allowances, which in 1930-31 were £60 for the first and £50 for each other child, were reduced the following year by £10 in each case, in 1935-36 raised to £50 for each child, and last year to £60. The personal allowance for a single person was reduced in 1931-32 from £135 to £100, and has remained

unchanged. The incidence of present taxation can be studied from the following table, in which there is also given 1929-30 as a pre-depression year, and 1933-34 as typical of crisis taxation, when the rate was 5s.

INCOME TAX AND SURTAX									
Total Actual Income	Married Couples with Three Children								
	Earned Income			Investment Income					
	1929-30	1933-34	1936-37	1929-30	1933-34	1936-37	1929-30	1933-34	1936-37
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
300	...	...	...	...	...	...	...	...	...
400	...	...	...	...	...	...	...	...	...
500	3 3 4	5 0 0	...	...	...	...	...	...	...
1,000	67 3 4	108 2 6	83 3 4	11 10 0	33 2 6	11 17 6	...	...	...
2,000	250 10 0	333 2 6	296 17 6	300 10 0	408 2 6	368 2 6	...	...	...
5,000	1,081 15 0	1,420 0 0	1,348 5 0	1,131 15 0	1,495 0 0	1,417 10 0	...	...	...
10,000	2,981 15 0	3,852 10 0	3,716 5 0	3,031 15 0	3,927 10 0	3,787 10 0	...	...	...
50,000	22,106 15 0	28,290 0 0	27,654 0 0	22,156 15 0	28,365 0 0	27,725 0 0	...	...	...

Surtax has been unchanged since 1931. Although taxation increased under the 1936 Budget, the actual amount payable on small incomes declined. A married man with two children earns £375 before being liable for tax.

Death Duties.—These yielded £88 millions against an estimate of £89 millions, and receipts in 1935-36 of £87.9 millions. Exchequer receipts in 1913-14, and since 1929-30, are shown below:—

ESTATE, ETC., DUTIES (In Million £'s)			
	Exchequer Receipts		Exchequer Receipts
1913-14	27.36	1932-33	77.14
		1933-34	85.27
1929-30	79.77	1934-35	81.36
1930-31	82.61	1935-36	87.92
1931-32	65.00	1936-37	87.99

Variations in receipts under this head from one year to another are particularly liable to chance, so that although in 1935-36 the number of estates exceeding £500,000 was 50 against 35, receipts increased by only £2½ millions. An analysis of the different sizes of estates follows.

ESTATE DUTY, 1935-36						
	Numbers		Net Capital Value		Net Receipts	
	Actual	Per cent. of Total	Thous. £	Per cent. of Total	Thous. £	Per cent. of Total
Small Estates	54,199	38.03	15,356	2.69	106	0.13
Exceeding Net Value						
£ 100	70,772	49.68	109,062	19.11	2,974	3.80
5,000	8,032	5.63	60,257	10.55	2,385	3.05
10,000	5,990	4.20	99,160	17.38	6,767	8.87
25,000	2,033	1.42	71,816	12.57	8,245	10.55
50,000	944	0.66	67,002	11.74	11,335	14.51
100,000	349	0.24	48,490	8.50	10,608	13.68
200,000	147	0.10	43,820	7.67	12,384	15.85
500,000	36	0.03	23,823	4.18	8,392	10.74
1,000,000	12	0.01	18,742	3.29	8,358	10.70
3,000,000	2	0.00	13,263	2.32	6,595	8.44
Settlement Estate Duty	...	...	...	...	14	0.02
Total	142,516	100.00	570,790	100.00	78,137	100.00

Of the 1935-36 net capital value, £477.8 millions consisted of personality, and £93.0 millions of realty (including leasehold property). The gross capital value of personality of £504.3 millions included £137 millions from Government and municipal, and £204 millions from joint-stock, securities. Legacy Duty, which in 1934-35 yielded a net receipt of £8½ millions on a capital of £227.9 millions, produced in 1935-36 £8.6 millions on a capital of £238.2 millions. Succession Duty brought in £1,161,000 on a capital of £41,439,000, against £1,106,000 on £38,795,000.

Stamps.—Exchequer receipts from Stamp Duties amounted for 1936-37 to £29.1 millions, against £25.8 millions a year ago, and a Budget estimate of £27 millions. The following table gives receipts under the main heads for 1913-14, and for more recent years.

STAMP DUTIES: NET RECEIPTS (In Thousand £'s)				
	1913-14	1929-30	1934-35	1935-36
Land and property	1,879	4,774	5,101	5,526
Stocks and shares, etc.	3,125	7,270	9,221	9,876
Company capital duty	698	3,771	1,140	1,097
Cheques and bills	2,322	4,837	4,384	4,482
Receipts	669	2,686	2,547	2,855
Other	955	1,915	1,851	1,969
Total	9,648	25,253	24,244	25,805

It will be noticed that the increase between 1929-30 and 1935-36 was in total little over £½ million, but in that period Stock Exchange transfer and contract stamps, etc.,

increased by £2.6 millions. On the other hand, capital duty yielded less than one-third of the 1929-30 amount, though new issue activity since the latter part of 1936 may be expected to have caused an appreciable revival in 1936-37.

Motor Vehicle Duties.—Receipts amounted for 1936-37 to £32,727,000, against a Budget estimate of £31,500,000, and receipts of £30,752,000, for 1935-36. Changes in recent years in receipts from these duties and in payments to the Road Fund appear below, but the latest increase arises only from the growing volume of new registrations, since taxation was unchanged for 1936-37.

MOTOR VEHICLE DUTIES (000's omitted)			
Year	Exchequer Receipts	Payments to Road Fund	Exchequer Appropriations
1929-30	26,802	21,882	4,920
1933-34	30,712	25,512	5,200
1934-35	31,538	26,438	5,100
1935-36	30,752	25,775	4,977
1936-37	32,727	27,427	5,300

Receipts into the Road Fund in 1935-36 were £26,266,000, a decrease of £709,000. Expenditure was £20,934,000, or £976,000 more, but except for Grants for Major Improvements, which were £3,914,000, against £2,541,000, there were no substantial changes in the larger items. Out of the excess of receipts over payments of £5,332,000, £4,470,000 was paid to the Exchequer under the 1935 Finance Act, and the remainder of £862,169 raised the Fund's balance to £5,795,445, but £5½ millions of this will have been taken by the Exchequer. Commitments at that date amounted to nearly £30 millions, of which half had been estimated to be in respect of the Five-Year programme. Beginning with the coming 1937-38 financial year, the procedure for the Fund is to be completely changed: the Exchequer will retain the whole of the duties, road expenditure being financed from annual votes. Our discussion of the Civil Estimates gives more details of the change.

Receipts from Sundry Loans.—Receipts for 1936-37 under this category were £4,550,000, against a Budget estimate of £5 millions, and receipts in 1935-36 of £4.9 millions. The following table shows the chief items:—

RECEIPTS FROM SUNDRY LOANS (000's omitted)					
	1929-30	1933-34	1934-35	1935-36	
Interest, etc., on war loans*	10,921	...	...	...	£
Dominions and Colonies	9,813	771	253	...	£
France	10,921	...	...	...	£
Other Allied Powers	5,050	...	56	...	£
Suez Canal shares	1,834	2,079	2,395	2,449	£
Anglo-Iranian shares	1,088	567	567	1,313	£
Other receipts	3,934	1,238	1,101	1,172	£
Total	32,640	4,655	4,372	4,934	£

* Payments in respect of War Debts suspended from July 1, 1932. Repayments of War Loans have now disappeared entirely, according to arrangements made by the Lausanne Conference, but Poland contributed £56,000 in 1935-36 in respect of Relief Loans, and £32,000 was received as interest on the Cunard advances.

Other Non-Tax Revenue.—This section, apart from motor duties and Receipts from Sundry Loans already dealt with, comprises Post Office net profits, Crown Lands net receipts, and Miscellaneous receipts, including appropriations from the Road Fund balances. Although under the 1933 Finance Act the fixed annual payment of the Post Office of £10,750,000 was to apply for three years, the same contribution will have been made for 1936-37. The actual net profit accruing to the Exchequer was £10,970,000, against an estimate of £11,256,000, and receipts in the previous year of £11,670,000. The net receipts from Crown Lands were £1,350,000, and thus close both to estimates and the previous year's figure. Miscellaneous Receipts contributed £24,600,000, against an estimated £25½ millions. Revenue under this heading for 1935-36 was £21,738,000. Of this the Road Fund provided £2½ millions by repaying advances and £4½ millions of its previous year's balance. Surplus of interest on Savings Bank funds again provided £4.2 millions, and £3½ millions were received from the Board of Trade as surplus on Clearing Office Enemy Debts. Note issue profits were lower at £1.4 millions.

EXPENDITURE

ANOTHER sharp rise of about 7 per cent. in expenditure has occurred, the increase in ordinary expenditure being £52.9 millions. The £800 millions level has been broken through, expenditure in 1936-37 being roughly the same as in 1930-31. In that year, however, the National Debt services cost £360 millions, or £136 millions more. In the interval, about £62 millions of that saving has been offset by increases in the Civil and Revenue Departments, and about £75 millions (or 68 per cent. of the amount spent in 1930-31) by the Defence services. In the following table expenditure for the last three years is compared with 1913-14 and 1929-30, and estimates for 1937-38 are summarised. Where the latter figures are not available, 1936-37 expenditure is shown in brackets:—

EXPENDITURE (£ millions)						
	1913-14	1929-30	1934-35	1935-36	1936-37	1937-38 (Est.)
National Debt services	24.5	355.0	224.0	224.0	224.0	(224.0)
Other Consolidated Fund services	12.8	22.2	12.7	14.0	11.6	(11.6)
Total Consolidated Fund services	37.3	377.2	236.7	238.0	235.6	(235.6)
Navy, Army, Ordnance, Air Civil services	77.2	113.0	113.9	136.9	186.1	198.3†
Customs and Excise and inland Revenue	53.9	246.5	358.3	375.1	381.1	408.0
	4.5	12.0				13.9
Total supply services (excluding P.O.)	135.6	371.5	472.2	512.0	567.2	620.2*
Total ordinary	172.9	748.7	708.9	750.0	802.9	855.8

Road Fund	...	21.9	26.4	25.8	27.4	...
Total self-balancing	24.6	80.8	88.2	91.9	99.3	72.3
Grand total	197.5	829.5	797.1	841.9	902.2	928.1*

* Without provision for eventual Supplementary Estimates.
† Excluding £80 millions from Consolidated Fund. ‡ Included in Civil Estimates.

Consolidated Fund Services.—The cost of the National Debt, analysed on page 8 of this Supplement, is the main item under this head. Other issues from the Fund for 1936-37 amounted to £11.7 millions, against an estimate of £11.3 millions, or £14 millions for 1935-36. Payments to the Northern Ireland Exchequer amounted to £7,996,000, compared with an estimated £7½ millions, and the Post Office Fund received £420,500 gross or £320,500 net. The Fund in the past has comprised the Civil List, certain pensions and salaries, and miscellaneous services. The latter took £4.2 millions in 1935-36, the largest item by far being £2.8 millions issued under the Trade Facilities Act.

Defence Services.—Apart from the actual increase of expenditure in accordance with the re-armament policy, the cost of defence is of unusual interest in view of the inclusion in the 1937-38 estimates of £80,000,000 from Defence Loans. Including the Ordnance Factories, expenditure on the three services in 1935-36 was £136,949,000. The original 1936-37 estimates required in all £158,251,000, but the Budget made provision for a further £20,000,000 for Supplementaries, making a Budget total of

DEFENCE SERVICES EXPENDITURE (EXCHEQUER ISSUES) (000's omitted)				
	Navy	Army	Air Force	Total
1913-14	48,833	28,346	...	77,179
1932-33	50,010	35,880	17,100	102,990

1937-38†	105,065	90,702†	82,500	278,267

* 1936-7 final, 1937-8 Budget estimate. † Including Ordnance
† Same after addition of proportion of Defence Loans.

£178,251,000. Actual expenditure in 1936-37 amounted to £186,072,000, or £7,821,000 more than the Budget estimates. The 1937-38 estimates require votes of £198,267,600, but although only £12,000,000 further will thus be needed from taxation, £80,000,000 is to be taken in addition from the Defence Loans. Of this £80,000,000, £27,000,000 is for the Navy, £19,054,000 for the Army, £7,946,000 for the Ordnance Factories, and £26,000,000 for the Air Force.

The importance of mechanisation is, however, illustrated by the following table of the number of effectives, in which the increase between 1913-14 and 1937-38 of only 22,300 (or 7 per cent.) in the personnel is in contrast with the increase of 250 per cent. in cost.

	Navy (a)	Army (b)	Air Force (b)
1913-14	142,960	185,600	...
1932-33	89,667	148,700	29,520
1933-34	89,863	148,700	28,470
1934-35	91,351	149,500	28,780
1935-36	94,259	152,200	35,942
1936-37 (estimate) (c)	102,154	158,400	55,000
1937-38 (estimate) (c)	112,000	168,900	70,000

(a) Exclusive of Royal Marine Police. (b) Establishment exclusive of India. (c) Maximum for year.

NAVY.—The final estimates for 1936-37 were £81.3 millions, against an original estimate of £69.9 millions plus a share of the £20 millions provision for Defence Supplementaries. The first Supplementary for £10.3 millions included £3 millions for the new construction programme, £2 millions to continue special measures in connection with the Italo-Ethiopian war, and about £2 millions further for works at Singapore.

* Including supplementary estimates of £11,359,100.
† After deduction of £29,951,287 Appropriations-in-Aid.

The 1937-38 estimates total £105,065,000 if £27 millions from Defence Loans is included. Because of the allocation of the latter sum, comparison in the accompanying table of estimates, which are net, is affected by the Loan. Comparing gross estimates, the new figures include an increase in shipbuilding, repairs and maintenance of £16 millions, in naval armaments of £3½ millions, and in works, buildings, etc., of £2 millions. The appropriations-in-aid for contract work alone amount to £17.4 millions.

ARMY AND ORDNANCE FACTORIES.—Including the £27 millions from Defence Loans, the new Estimates under these heads amount to more than twice the actual expenditure in 1935-36. An original Budget estimate of £49.3 millions was followed in July last by Supplementaries of £6.9 millions. The total estimates for 1937-38 are £90.7 millions, including £27 millions from Defence Loans. To the amounts shown in the accompanying table of net estimates (excluding the Ordnance Factories) there should be added about £14 million from appropriations-in-aid for warlike stores (the gross estimate for which exceeds that for 1936-37 by £18 millions, including an increase of £4 millions

for gun ammunition alone) and £6 millions for works, buildings, etc.

(000's omitted)

* Including Supplementary Estimates of £8,600,100.
† After deduction of £25,891,000 Appropriations-in-Aid.

The vote for the Ordnance Factories is £582,600, but £7,946,000 is to come from loans. Of this figure, £2½ millions is wanted towards a new filling factory at Chorley to cost £6 millions in all, £1.1 million for the whole cost of a similar factory at Bridgend, while £1.4 million is required for the Nottingham factory.

AIR FORCE.—Expenditure in 1935-6 was £27.5 millions (or 20 per cent. of the total for the defence services), but the 1937-8 estimates require over double that amount from votes alone, or three times the sum if the Defence Loan allocation is included. The original 1936-7 estimates were for £39 millions, but a Supplementary of £11.7 millions (to further the general policy of air defence) was required in July. The new estimates require £56½ millions from votes and £26 millions from Defence loans, so that in all the Air Force will take 30 per cent. of the total of £278.3 millions for all the Services. Thus for the first time the proposed expenditure slightly exceeds that for the Army (excluding the Ordnance factories).

* Includes Supplementary Estimate of £11,700,100.
† After deduction of £32,088,600 Appropriations in Aid.

To the net estimates shown in the accompanying table must be added £16.6 millions from appropriations in aid (including £3.9 millions grant for the Fleet Air Arm) for technical and warlike stores (the total of £48.1 millions under this head including £29 millions for aeroplanes and £7½ millions for armament and ammunition), and £14½ millions for works, buildings, etc. An increase of 27 per cent. in the number of effectives is provided for in the new estimates, the strength of the Force as at April 1, 1937, being stated as 55,850 men.

Civil Estimates.—In relation to the charge imposed by the defence programme, the 1937-8 estimates for the Civil Departments (excluding Revenue Departments and the Post Office) represent only a modest increase. They amount to £408,054,000, but for the first time include road expenditure of £22,500,000 hitherto met from the Road Fund. Deducting this sum for roads, the remaining £385,554,000 is an increase of £6½ millions over final, or £20½ millions over original, estimates for 1936-37, and is £23½ millions above actual expenditure in 1935-36.

The course of expenditure is summarised below under its main heads:—

CIVIL SERVICE EXPENDITURE							
	Education	Health	Pensions		Labour	Other Heads	Total
			War	Others			
	£ Mn.	£ Mn.	£ Mn.	£ Mn.	£ Mn.	£ Mn.	£ Mn.
1931-32	53.0	22.0	49.6	47.9	47.7	99.9	320.1
1932-33	49.4	22.1	46.9	50.7	77.9	95.9	342.9
1933-34	51.1	21.6	45.2	55.7	71.8	93.3	338.7
1934-35	52.9	22.4	43.5	58.0	66.5	102.3	345.6
1935-36	55.8	23.4	42.7	60.4	76.3	103.2	361.8
1936-37*	61.5	25.1	41.7	62.6	76.0	112.4	379.3
1937-38†	62.8	25.7	40.6	64.7	75.4	138.9	408.1

* Final estimates.

† Budget estimates.

The separate items are discussed later in more detail. The £14 millions required by Supplementaries in 1936-7 included in particular £5½ millions for grants to public assistance authorities in respect of unemployment, a further £3 millions for the cattle subsidy, and £3 millions for broadcasting transferred from the Post Office vote. In the new estimates, £15,500,000 of the road expenditure falls upon Class VI (Trade and Industry) and £6,458,000 upon Exchequer grants to local authorities. Apart from this, the only other large increase over 1936-7 final estimates for any one item is a further £4.7 millions for the Home Office, etc.—so that the increase in total estimated expenditure entirely unconnected with defence is comparatively trifling. But it is expected that further provision will have to be made by Supplementary Estimates for "certain services," including in particular the Special Areas.

CENTRAL GOVERNMENT (Classes I, II and III).—The following table shows expenditure in the first three classes of the estimates:—

	1934-35 Actual	1935-36 Actual	1936-37 Estimate	1937-38 Estimate
I. Central Government and Finance	£'000 1,922	£'000 1,987	£'000 2,437	£'000 2,549
II. Foreign and Imperial—of which:	8,044	8,573	9,506	8,988
F.O., Diplomatic and Consular Services....	1,398	1,431	1,426	1,445
League of Nations	157	223	271	144
Irish Free State Services	2,294	2,293	3,043	2,893
Dominion and Colonial Services	1,565	2,059	2,247	2,389
Colonial Development Fund	500	900	900	500
India Services	1,614	1,666	1,619	1,607
III. Home Department—of which:	16,234	17,239	19,249	23,940
Home Office	467	548	1,876	5,777
Police	11,706	12,521	12,996	13,656
Prisons	1,123	1,171	1,292	1,366
Total	26,200	27,799	31,192	35,477

Under Class I, the small increase is due mainly to expenses for the Coronation, while the Foreign and Imperial group actually provides for a decrease. In Class III, however, the Home Office will require nearly £4 millions more on account of air-raid precautions. The estimate for these services is £4.6 millions against £1.4 millions, with a further £600,000 for the new fire brigade organisation. Respirators alone will absorb £4 millions for materials and equipment, and another £191,000 for manufacture, storage, etc.

EDUCATION.—The estimated expenditure for 1937-8 is £62,801,000 compared with final estimates for 1936-7 of £61,489,000, with a Budget estimate of £58,045,000, and actual expenditure of £55,875,000 in 1935-6. The final 1936-37 estimates include, however, nearly £3 millions for the usual grant to the B.B.C. transferred from Post Office expenditure. The increase for 1937-8 over the estimated expenditure for 1936-7 is, therefore, inconsiderable: a further £570,000 is required for elementary, and £348,000 for higher education, £294,000 for pensions, and £213,000 for education in Scotland. A new item is £61,000 for physical training. Details for the Board of Education (this Department requiring in 1937-8 £49.4 millions against a final estimate for 1936-7 of £48.1 millions, and actual

expenditure in 1935-6 of £46.1 millions) are given in the following table:—

ENGLAND AND WALES					
	Board of Education Estimates		Total Expenditure by L.E.A.'s†		Cost per Elementary Pupil
	Total Vote	Grants to L.E.A.'s	Elementary Education	Higher Education	
	£ Mn.	£ Mn.	£ Mn.	£ Mn.	s. d.
1913-14	14.7	12.8	25.6	4.4	95 2
1931-32	48.4	45.2	63.2	16.4	252 5
1932-33	42.9	39.0	61.2	15.8	242 7
1933-34	42.1	37.8	61.9	16.0	244 6
1934-35	43.6	39.5	64.6	16.8	263 5
1935-36	46.1	42.1	68.2	18.1	287 3
1936-37	48.1‡	43.9	69.7*	19.0*	300 0*
1937-38	49.4‡	44.8	70.8*	19.8*	311 1*

* Provisional.

† Including proportion borne by the rates.
‡ Budget estimates.

The increase in total expenditure upon education has been due in part to the restoration as from July 1, 1935, of the second half of teachers' salary cuts. The full effect of this increase has, however, been mitigated by the decline in the average attendance in elementary schools. This figure, which in 1913-14 was 5,381,000, was 4,748,000 in 1935-36, and for the Board's estimates has been taken at 4,646,000 in 1936-37, and 4,553,000 for the coming year. The sharp increase in the cost per pupil will be noted. Of this cost, there will have been, as between 1935-36 and 1937-38, a rise from £9 1s. 10d. to £9 12s. 5d. in teachers' salaries.

Attendance at secondary schools, on the other hand, continues to rise, and on October 1, 1936, the total number of pupils was 481,766, of whom 226,083 were paying no fees. The expenditure of L.E.A.'s. for secondary education is estimated for 1935 at about £28 13s. per registered pupil.

HEALTH, LABOUR AND INSURANCE (Class V).—The 1937-38 estimates are for £170,167,000 against an original estimate for the previous year of £162,725,000 (increased later by £5,294,000) and against actual expenditure in 1935-36 of £161,861,000. The supplementary estimate for 1936-37, £5,294,000, was required for grants to public assistance authorities to compensate for the postponement of the Second Appointed Day fixed under the 1934 Unemployment Act, since the necessary legislation had not been passed at the time of the Budget. Only balances of £356,000 (representing adjustments not fully ascertainable at the time of the Supplementary estimate) are provided for under this head in the 1937-38 estimates, the charge falling instead upon the Unemployment Assistance Board, which will absorb £51.3 millions instead of £47 millions. The net decrease in respect of unemployment assistance is therefore some £678,000. On the other hand, the new estimates do not allow for full expenditure on the Special Areas, £3½ millions (against £3 millions) having so far been taken into account. Details of expenditure are shown in the following table:—

HEALTH, LABOUR AND INSURANCE						
	Ministry of Health*	Pensions		Ministry of Labour	Other Items	Total
		Old Age	Widows', Orphans', etc.			
	£ Mn.	£ Mn.	£ Mn.	£ Mn.	£ Mn.	£ Mn.
1931-32...	22.0	37.9	10.0	47.7	3.7	121.3
1932-33...	22.1	39.7	11.0	77.9	4.0	154.7
1933-34...	21.6	40.4	12.0	71.8	7.0	150.7
1934-35...	22.4	41.8	13.0	66.5‡	7.1	150.8

1936-37†	25.1	44.3	15.0	76.0‡	7.6	168.0
1937-38‡	25.7	45.3	16.0	75.4‡	7.8	170.2

* Including Scottish Department of Health.

† Final Estimate.

‡ Including Unemployment Assistance, and, since 1935-36, grants to public assistance authorities.

§ Budget Estimate.

Health.—Expenditure to be undertaken by the Ministry and Department of Health, though still rising, represents a smaller increase than for some years. These departments

will need just over £600,000 more, and of this amount housing accounts for £360,000. Grants for this purpose are to be £17.3 millions in all. A new item is £207,000 under the 1936 Midwives Act.

Labour and Pensions.—Since the Unemployment Assistance Board will be in full operation for 1937-38, the grants to public assistance authorities in the interim period will, as explained above, no longer be required. The main charge falls upon the Board, which will require £51,260,000, but the total expenditure in connection with unemployment and allied problems remains divided under a number of different heads. The total vote for the Ministry of Labour is £23,838,000 against £23,719,000. Of the total, £21,900,000, an increase of £650,000, represents the usual insurance contribution to the Unemployment Fund. The Ministry will also spend £2.2 millions against £2.5 millions on employment and training. As regards assistance, the Board and the small grants to public assistance authorities will require between them £51,616,000, against £52,294,000. The Special Areas, receiving £3 millions in 1936-37, are to have £3½ millions spent on them in 1937-38, but this is subject to increase, while the last main item is an expenditure on grants for loan charges for unemployment schemes of £3.7 millions, against £4.1 millions.

The cost of Old Age pensions continues to rise, the increase in 1937-38 being nearly £1 million. Widows', Orphans' and Old Age Contributory Pensions cost a further £1 million annually, the increase being fixed by statute.

TRADE AND INDUSTRY (Class VI).—Estimates for 1937-8 of £31,383,000 compare with final estimates for 1936-37 of £18,903,000, original estimates of £15,837,000, and actual expenditure in 1935-36 of £16,967,000. The new treatment of road expenditure (of which £15,500,000 is included in votes for this Class) accounts for the net increase, though there has been some re-arrangement of other items. The difference between the Budget and final estimates for 1936-37 was due almost entirely to a Supplementary of £2,931,000 for the cattle subsidy. In the new estimates, the beet sugar subsidy will require £2.2 millions against £3.3 millions, another substantial decrease being in the milk subsidy (from £1,545,000 to £610,000). The tramp shipping subsidy has dropped from £2,000,000 to a mere £8,000 for administrative costs, since it is expected that rising freights will render the subsidy inoperative. The cattle subsidy will require more: £4.7 millions against £4.1 millions.

WORKS, STATIONERY, ETC. (Class VII).—This section absorbs under 3 per cent. of the total civil estimates for 1937-38. It will require £9,899,000 against a final estimate for 1936-37 of £9,508,000, an original figure of £8,552,000, and a cost in 1935-36 of £8,226,000.

PENSIONS (Class VIII).—The gradual reduction in the numbers entitled to war pensions has brought the new estimates down to £43,934,000 from £45,917,000 spent in 1935-36 and estimates of some £44,990,000 for 1936-37. The Ministry of Pensions will require £40.3 millions against £41.4 millions, the cost of the actual pensions being £38.6 millions, or about £1.1 million less.

EXCHEQUER CONTRIBUTIONS TO LOCAL REVENUES (Class IX).—Actual expenditure in 1935-36 was £45,278,000, with a 1936-37 estimate of £45,199,000, but the increase to £54,392,000 for 1937-38 is due mainly to £6,458,000 in respect of road expenditure hitherto met from the Road Fund. The actual increase in grants to authorities in England and Wales is from £45.3 millions to £47.6 millions, but the fixed contribution of £5.8 millions from the Road Fund made in previous years will not recur in 1937-38, so that the net total will be £8 millions higher.

Revenue Departments.—The cost of the Revenue departments (excluding the Post Office) is given below:—

(£000's omitted)					
	1913-14	1934-35	1935-36	1936-37 Estimates	1937-38 Estimates
Customs & Excise	2,431	5,490	5,628	5,837	5,973
Inland Revenue	2,052	7,160	7,500	7,651	7,923
Total	4,483	12,650	13,128	13,488	13,896

Again in 1935-36 the cost of collection of inland revenue duties rose, being 1.93 per cent. of the gross sums collected, against 1.89 per cent. The lowest proportion in recent years was 1.55 per cent. in 1927-28. The tendency for the relative cost of Customs and Excise to decline appears to continue, although only slightly.

Post Office.—The benefits of the new progressive policy operating during the last three or four years have continued to be reflected in rising receipts. There were, however, few important changes during the past year, development continuing along lines already indicated, so that the growing volume of traffic was due to general causes, rather than to any stimulus from lower charges.

Operating expenditure for 1935-36 was £3½ millions higher at £62,140,000, but after allowing for interest on capital, etc., there was a surplus of £12,539,000 against £11,945,000. The Postal Service's surplus of £11.2 millions against £10.9 millions arose in spite of the restoration in July, 1935, of the second half of the pay cuts and the increase in certain salaries, which accounted for 1.79 per cent. out of the 5.63 per cent. increase in expenditure. Letter traffic grew at a faster rate, and the traffic in inland parcels recovered in response to the lower rates introduced in July, 1935. The Telegraph Service likewise responded to the lower tariff (a 34 per cent. increase in messages resulting), but in neither telegraph nor parcels has the higher traffic made good the initial loss of revenue

due to the lower charges. The telegraph deficit was in fact £798,000 against £651,000. Telephone traffic expanded considerably; the net addition to the number of stations, 191,204, was the largest recorded, and there was an 8 per cent. increase in the number of calls. The rapid development of the air mails is shown by an increase from £306,000 to £602,000 in expenditure for conveyance.

In 1936-37, expenditure (excluding work done by or for other departments) was £71,880,000, an increase of £5,800,000. According to estimates for that year, the principal items making up the increase over the 1935-36 estimates will have been:—£1.8 millions for salaries (the staff of 243,000 employed on January 1, 1936, was nearly 10,000 higher), about £205,000 for air mail conveyance, £140,000 for motor vehicles and supplies, and £250,000 for engineering materials. Payments to the B.B.C. have now been transferred to the vote for Class IV, which becomes Education and Broadcasting, but the 1936-37 expenditure of £71,880,000 (against an estimate of £71.9 millions) apparently includes £2.9 millions due to the B.B.C.

The 1937-38 estimates, excluding broadcasting, require £72.3, against £69 millions, some 40 per cent. of this increase being for salaries. The staff employed as at January 1st last numbered 258,043 persons, or about 15,600 more than a year previously. Engineering and building will require £11.7 millions from Votes, with a further £19½ millions of capital expenditure.

THE NATIONAL DEBT

A POINT of interest in the coming year is the impending issue of a part of the £400 millions authorised to be raised by loans within the next five years for defence purposes, since the defence estimates for 1937-38 allow for an expenditure of £80 millions to be met from loans. The prospect of an increase over a space of five years of about 5 per cent. in the nominal amount of the National Debt is, however, of less concern to the taxpayer than the general effects of an important Government loan or than changes in interest rates. Though money may still be cheap, the pendulum has begun to swing back. A modest concession to changing conditions was in fact made in the issue in November last of £100 millions of 2½ per cent. Funding Loan. This loan, redeemable between 1952 and 1957, yields £2 16s. 11d. per cent. to the latest redemption date on the issue price of 98½, against a similar yield of £2 13s. 10d. per cent. on the £200 millions of 2½ per cent. Funding Loan, 1956-61, issued at 96½ in December, 1935.

Compared with the present and the future, the past (as shown by details for 1935-36) is of relatively less interest. That financial period saw less change either in the nominal amount of debt or in the annual charge than any other recent year, since the effects of conversions made in the past had in the main been fully experienced.

We analyse below the composition of the National Debt, the changes in its cost, and also give particulars of nominal and actual debt redemption.

Nominal Value.—The following table divides the Debt into internal and external debt, and subdivides the former into categories according to dates of maturity. Funded debt includes all loans with no redemption dates or callable at the Treasury's option only. Unfunded debt comprises all loans with definite dates of maturity, and the subdivision of Floating Debt includes liabilities falling due within a few months. The year 1922-23, when the post-war peak was reached, is retained for comparison.

Although the net total fell by only £4.6 millions, there were some important changes in the composition of the unfunded debt. The amount received on account of the 2½ per cent. Funding Loan was £126 millions. Against this there must be offset a reduction in the Floating Debt of £51.2 millions, Treasury Bonds accounting in the main for the balance. An issue of £100 millions 1 per cent. bonds, 1939-41, was made, but £150 millions of 2 per cent. bonds matured in March, 1936, and about £10 millions of 3 per cent. bonds in April, 1935. The £25.5 millions of National Savings Certificates created for cash was appreciably lower

† Includes National Savings Bonds.

than the £31.8 millions for 1934-35, while repayments, amounting to £27 millions, were only £1 million less.

The above table does not give a complete picture of the State's net liabilities, since it takes no account, on the one hand of assets acquired against the debt, nor on the other of interest accrued on Savings Certificates. These items are taken into account in the following table:—

DEADWEIGHT DEBT, OTHER LIABILITIES AND ASSETS (£ millions)

	Mar. 31, 1923	Mar. 31, 1933	Mar. 31, 1934	Mar. 31, 1935	Mar. 31, 1936
Net total deadweight debt (as above)	7,742.2	7,643.8	7,822.3	7,800.4	7,795.8
Accrued interest on savings certificates	85.0	90.5	98.5	107.3	116.8
Other liabilities	70.3	215.9	208.1	102.0	...
Total	7,877.5	7,950.2	8,127.7	8,009.7	8,017.9
Estimated assets	121.0	419.1	620.7	517.1	512.8
Net total	7,756.5	7,531.1	7,507.0	7,492.6	7,505.1

The increase in "Other Liabilities" is mainly for expenditure on behalf of the Post Office, the creation exceeding the redemption of debt by £4.2 millions. The estimated assets are financial assets only—that is, they exclude the value of buildings, etc.; the chief items are the Exchange Equalisation Account, standing at £375 millions, and £88 millions being the estimated market value of Suez Canal shares. In addition, there are various liabilities which are purely contingent, and which cannot be estimated.

Changes in the National Debt, 1936-37.—The chief changes in the National Debt in the past year were as follows:—

(000's omitted)		(000's omitted)	
RECEIPTS	£	ISSUES	£
2½% Funding Loan, 1956-61	71,700	Treasury Bills (net reduction)	88,529
2½% Funding Loan, 1952-57	99,100	National Savings Certificates (net reduction)	1,500
Ways and Means Advances (net increase)	4,480	National Savings Bonds repaid	117
Repayments of Land Settlement issues	138	Treasury Bonds repaid	69,288
Exchequer Balances decreased	30	Other debt under War Loan Acts, repaid	3,976
		Issues under North Atlantic Shipping Act	371
		Issues under British Shipping Act	3,012
		Issues under Tithe Act	118
		Old Sinking Fund	2,940
		Deficit	5,597
	175,448		175,448

Actual issues, other than the new Sinking Fund, for debt reduction in 1936-37 were some £52 millions less than in the previous year. In that year, however, the substantial amount of £160 millions of Treasury Bonds had been repaid, against £69 millions in the latest period. A new item, though of inconsiderable amount, consists of issues under the 1936 Tithe Act. Other Debt under the War Loan Acts is, of course, not a new class of repayment, but no debt redemption was effected under this head in 1935-36. On the other side of the account, the £71.7 millions received from the 2½ per cent. Funding Loan represents the balance of the total nominal issue of £200 millions in December, 1935, whereas receipts in respect of the more recent 2½ per cent. Loan cover roughly the whole nominal amount.

The position of the floating debt at the end of the year is shown below:—

FLOATING DEBT (000's omitted)		Mar. 31, 1936	Mar. 31, 1937	Change
Ways and Means Advances outstanding:—		£	£	£
By Bank of England	Nil	Nil	Nil	...
By Public Departments	19,055	23,535	+	4,480
Treasury Bills Outstanding	763,115*	674,595*	—	88,520

Total Floating Debt outstanding ... 782,170 698,130 — 84,040

* Includes £40,000 in 1936 and £49,000 in 1937, the proceeds of which were not carried to the Exchequer during the period of the account.

The Government's refunding operations have resulted in a reduction of £84 millions in the floating debt, whereas the fall in 1935-36 was only £51 millions. But of the Treasury Bills outstanding, tender issues of £500 millions were practically unchanged, the total fall being attributable to the decline in "tap" issues from £265.1 to £174.6 millions. It is clear that the Department's support of the two Funding Loan issues must have been substantial, though the change may also be in part accounted for by net purchases of gold during the year by the Exchange Equalisation Account.

The Debt Charge.—In his Budget of 1928 Mr Churchill introduced the principle of a fixed debt charge, which should include both interest and sinking funds. This charge he put at £355 millions. In the second Budget of 1931 this principle was abandoned and separate provision was made for interest and sinking funds. For the last four years no provision has been made in the Budget for sinking funds, but in fact the sum provided for interest and management has in every year been sufficiently in excess of the actual requirement to provide for at least the Statutory Sinking Funds. The reduction of the Budgetary provision for the Debt from £355 to £224 millions, however, is not entirely due to the omission of a sinking fund. Over

£50 millions of the reduction is due to the fall in the interest charge, which is shown in the following table:—

NATIONAL DEBT INTEREST (£ millions)					
	Treasury Bills	Savings Certificates	Total of (1) & (2)	Other Interest Charges	Management and Expenses
1931-32	(1) 20.7	(2) 15.3†	(3) 36.0†	(4) 251.6	(5) 1.9
1932-33	20.7	15.0†	20.9†	259.2	2.1
1933-34	4.1	11.1	15.2	200.0	1.1
1934-35	3.5	9.0	12.5	198.1	1.0
1935-36	3.5	8.9	12.4	198.1	1.0

† In 1931-32 these figures were exclusive of £8,430,922 and in 1932-33 of £2,655,995, paid as interest on Savings Certificates in excess of provision in the Permanent Debt Charge.

The reduction in the cost of Treasury Bills in recent years is due to a fall in the average rate, which has been maintained this year. The cost of interest and management of the Debt in 1936-37 has shown a further slight fall to £210.9 millions, leaving £13.1 millions from the fixed debt charge for Sinking Fund.

Debt Redemption.—The composition of the nominal sinking fund during the six years 1930-36 is shown in the following table:—

	1930-31	1931-32	1932-33	1933-34	1934-35	1935-36
Specific Sinking Funds						
Principal of Terminable Annuities	£ 939	£ 932	£ 909	£ 920	£ 928	£ 922
Sinking Fund for:—						
3½% Conversion Loan	15,692	15,302	7,503	...	...	...
4% Consolidated Loan	10,000	10,000	2,910	...	...	...
4% Funding Loan	3,308	3,451	3,581	3,726	3,868	4,002
4% Victory Bonds	2,714	2,823	2,936	3,053	3,175	3,302
U.S.A. Government Loan	5,753	...	9,091*	...	...	...
Deficiency on Funding Loan and Victory Bonds surrendered for Death Duties	12,084	...	...	...	...	...
Total of above	50,490	32,508	26,330	7,699	9,106	9,865
Balance	16,340	...	...	51	3,237	2,601
Nominal Sinking Fund	66,830	32,508	26,330	7,750	12,343	12,466

* This represents proportion of total payment made on December 15, 1932, which would normally count as repayment of capital, although the right was reserved to treat the whole sum on this occasion as a capital payment.

The total of the Sinking Fund, however, does not necessarily indicate the actual debt redemption in any year. Budget surpluses or deficits have to be added or subtracted, as the case may be, and in addition there are borrowings and repayments for special purposes. In 1936-37 the Budget deficit of £5,597,000 must be subtracted from the Nominal Sinking Fund of £13,127,000, making a net sum available for debt redemption of £7,530,000. The following table shows the adjustments to be made in each of the years 1931-32 to 1935-36:—

ACTUAL DEBT REDEMPTION (£000 omitted)					
	1931-32	1932-33	1933-34	1934-35	1935-36
Nominal Sinking Fund	23,508	26,330	7,750	12,343	12,466
Budget Surplus	364	...	31,148(e)	7,562	2,941
Total	32,872	26,330	38,898	19,905	15,407
Deduct:—					
Budget deficit	...	23,188(c)	...	...	...
Borrowing by Unemployment Fund	39,610	...	8,310(f)	910(f)	5,000(f)
Borrowing for interest on Savings Certificates	8,431	2,656	...	...	...
Capital funds brought into the Revenue	8,750(a)	...	10,000(g)	...	...
Conversion Loan expenses	...	23,232	...	...	...
Total deductions	56,791	49,076	1,690	910(f)	5,000(f)
Net redemption of debt	23,919(b)	22,746(d)	37,208(e)	20,815	20,407

(a) Dollar reserve fund. (b) Net increase of debt; but owing to conversions, the accrued interest on savings certificates was reduced by £28.5 millions. (c) Including as interest the sum of £19.9 millions paid to the United States. The British Government reserved the right to regard this as a repayment of principal. (d) Net increase of debt, but see Note (e). (e) Treating as interest the sum of £3.8 millions paid to the United States. See Note (c). (f) Repayment of borrowing. (g) War Loan depreciation fund.

To the figure for 1934-35 should be added a further £7,500,000 representing repayment of war debt by South Africa. This payment, however, also entails a corresponding reduction of assets, so that it implies no change in the net position of the National Debt.

One further item still requires special mention—the treatment of National Savings Certificates. Interest on these certificates is only paid on maturity and is therefore included in the capital item. If encashments of certificates exceed sales in any year, the Treasury has to borrow for these interest payments, as is shown in the above table. But in other years the proceeds of sales are used for the payment of interest, which should be a separate transaction. This is tantamount to a loan for this purpose, and should strictly be deducted from debt redemption. Moreover, the increase in the outstanding accrued interest during the year, which is shown in the second table on page 8, should also properly be set against the figure of net debt redemption. This would reduce the redemption of debt in 1935-36 to £11.4 millions.

The final table summarises the above figures, showing the nominal value of the National Debt, the net redemption of debt and the interest charge in 1913-14 and in recent years:—

THE NATIONAL DEBT, 1913-1936
(£ millions)

Financial Year	Net nominal total Deadweight Debt outstanding at end of Financial Year	Interest, Management, etc.	Net Redemption of Debt§
1913-14	649.8*	19.3	5.2
1931-32	7,433.9	289.5	23.9¶
1932-33	7,643.8	282.2	22.7¶
1933-34	7,822.3	216.3	37.2
1934-35	7,800.4	211.7	20.8
1935-36	7,795.8	211.6	15.4
1936-37	7,910.0†	210.9	7.5

* Debt at beginning of year. † Gross estimate. § The discrepancies between the figures in this column and the movement of the figures in the first column is explainable chiefly on the ground that the first column takes no account of movements in net assets. But see also qualifications to the figure for net redemption in the preceding paragraph. ¶ Net increase of debt.

LOCAL AUTHORITIES

We have estimated that the combined expenditure incurred on revenue account by the Government and Local Authorities of the United Kingdom was roughly £1,050 millions in 1933-34. The information that follows applies to expenditure by Local Authorities in England and Wales, the table below giving the amounts spent on income and on capital account for the latest years for which figures are available:—

	(£ millions)	1932-33	1933-34
Revenue account	1931-32	435.0	433.2
Capital account.....	116.8	84.8	89.3
Total expenditure.....	551.8	515.1	522.5

Rate fund services for 1933-34 involved an expenditure of £326.5 millions on revenue account, an increase of under 2 per cent. Under this head education cost £82.3 millions—a small decline; housing was £1 million more at £42.6 millions; the various health services, of which roughly one-third is for sewers and for refuse disposal, were £59.3 against £56.9 millions; while poor relief absorbed £33.9 millions, or £1.2 million more. Highways and bridges were about £500,000 less at £46.3 millions. Expenditure on police of £21.5 millions was practically unchanged. The income on revenue account to meet this expenditure was £325.6 millions, of which £148.5 millions (or 46 per cent.) was met by rates, £120.9 millions (37 per cent.) by Government grants, including £45.4 millions general grant under the 1929 Local Government Act, while rents contributed £26.8 millions, and fees and other specific income £27.4 millions. Trading services spent £116.9 millions, of which £73.2 millions was for working expenses and £35.4 millions loan charges. They produced an income of £115.0 millions, while approximately 17 per cent. of the income and expenditure for these services was for water, 14 per cent. for gas, 32 per cent. for electricity supply, 19 per cent. for transport, and 11 per cent. for harbours and docks. In addition to the rate fund and trading services, £26.3 millions was allocated to sinking funds—£5.8 millions more than in 1932-33.

In 1933-34 expenditure on capital account rose from £84.8 to £89.3 millions, of which £59.3 millions net was in respect of rate fund and the balance for the trading services. But, as explained below, the apparent increase is due to a single transaction. About one-half of the total of £62.5 millions under the rate fund services was for housing, a capital expenditure of £30.8 millions comparing with £28.6 for 1932-33. Highways and bridges accounted for £9.5 against £11.1 millions, and education £4.2 against £6.0 millions. Loans provided £44.7 of the £60.8 millions received on capital account, a proportion of 74 per cent., against 78 per cent. previously. Of the £12.8 millions received as grants, etc., £5.7 millions (out of a total spent of £9.7 millions) was for small dwellings acquisition and £4.1 for roads. Capital expenditure on the trading services was, in contrast, proportionately much higher, being £32.3 against £22.8 millions. The increase was, however, almost entirely due to the taking over of tramways by the L.P.T.B. The London and Middlesex County Councils received about £9½ millions of stock, and most of this was repaid to lenders or allocated to sinking funds, being entered on both sides of the account as receipts and expenditure.

The net loan debt of local authorities in England and Wales at March 31, 1934, was £1,306 millions, an increase of £5.7 millions only. Of the gross debt of £1,404 millions, £926 millions was for rate fund services (an increase of £15 millions) and £478 millions (or £4 millions less) for trading services. Sinking funds for the two classes of service stood at £60.8 and £37.6 millions respectively. Gross debt outstanding (before allowance for sinking fund provision) on various accounts is shown below:—

LOAN DEBT OF LOCAL AUTHORITIES IN ENGLAND AND WALES
AT MARCH 31ST (£ millions)

	1914	1931	1932	1933	1934
Education (elementary and higher)	52.1	65.4	71.4	75.0	75.6
Sewers and sewage disposal	44.1	65.2	70.2	74.8	78.1
Housing	12.5	423.1	448.5	466.7	480.8
Trading services.....	363.4	462.7	471.5	475.6	470.7
Other undertakings ...	90.5	287.4	295.2	301.5	299.2
Total	562.6	1,303.8	1,356.8	1,393.6	1,404.4

Although more recent complete figures for local finance are not available, it has been estimated that rates in England and Wales in 1935-36 brought in £163½ millions, an increase of £10.6 millions. The average rate in the £ was estimated at 5d. more, or 11s. 1½d. Loans sanctioned were for a considerably higher amount—£36 against £26 millions. Nearly £10 millions of the total was for public health purposes (against £8.2 millions), £7 millions for education, £5.6 millions for roads, and £5.8 millions for trading undertakings. Issues of stock amounting to £16.1 millions (an increase of £1.9 millions) were sanctioned, the rate of dividend being 3 per cent., and in most cases the issue price was par. Unfavourable market conditions early in the 1935-36 financial year led to a suspension of several projected issues, but between September and February advantage was taken of a better situation to fund short-term debt. Under the 1929 Act, general grants by the Exchequer amounted to £45.3 millions in 1935-36. At the beginning of April, 1935, the rateable value of England and Wales as a whole was £293.6 millions, an increase of 2.9 per cent. compared with a year previously—or 0.8 per cent. for London and 3.5 per cent. for the rest of the country. For Scotland, the 1935-36 estimate of rates collected was £19.2 millions, making the total for Great Britain £182.7 millions.

SOCIAL SERVICES

We now analyse the total sums spent upon the various social services, 1934-35 being, however, the latest year for which details are available. The cost of these services, as described below, excludes capital expenditure out of loans, and is stated gross in the sense that it is incurred against revenue from all sources, comprising chiefly rates, grants, insurance contributions and rents. In 1931-32 and 1932-33, this expenditure was about the same, fell in the following year, but for the latest period has risen considerably towards the old level. As before, a decline of £2.4 millions in the cost of unemployment benefit and assistance was more than offset by a rise of £3.1 millions in poor relief, since the Unemployment Assistance Board eventually took

over its full duties only on the "Second Appointed Day," April 1, 1937. An acceleration in housing expenditure is

	(£ millions)				
	Year ending March 31,				
	1924	1932	1933	1934	1935

* Includes widows', orphans' and old age contributory pensions under the Act of 1926.

† Including expenditure on hospitals, maternity and lunacy.

§ Year ended March 31, 1933, for England and Wales.

|| Calendar years 1924, 1932, 1933, 1934 and 1935.

shown by the rise of £1.3 millions in that item. The increase in contributory and old age pensions of £2.4 millions is substantial, but in the former case it is purely automatic, and in the latter only normal. Public health expenditure on hospitals and the treatment of disease was nearly £800,000 more, but the largest additional charge was the £4 millions for education. War pensions showed a decrease, likewise of a normal character, of about £1,650,000.

The various sources of revenue for the different services in 1934-35 are shown below:—

	Million £'s					Number of persons (a) benefiting directly (Millns.)
	Expenditure	Receipts from			Total Receipts	
		Local Rates	Parliamentary Votes or Grants	Other Sources (Fees, etc.)		
Unemployment : Insurance benefit.....	52.9	...	21.1	42.1	63.3	} 12.5

Other.....	23.8	20.8	0.4	2.8	23.8	...
Total	488.0	117.5	223.0	141.9	482.5	...

* Exchequer contribution of additional £13,000,000 to Treasury Pensions Account.

(a) Unemployment and Health insurance: insured persons.

The proportion of the total expenditure on the Social Services borne by local rates is little changed at 24 per cent. The

extra cost of education fell equally upon rates and Parliamentary grants, but an additional £3.1 millions for poor relief was borne almost entirely by the rates. Figures for later years should, however, show a considerably heavier proportion of grants for poor relief, on account of the different method of providing for unemployment assistance.

INFORMATION ON PUBLIC FINANCE

THE figures of the national accounts are to be found in a variety of official publications. Taking the series chronologically, the first to appear are the *Estimates*, which are published from two to five weeks before the financial year begins on April 1st, and contain a detailed review of estimated expenditure on the Supply Services during the coming year. The Estimates are published under five heads—Army, Navy, Air, Civil Services and Revenue Departments; and the Civil Estimates are further sub-divided into nine classes. The Civil and Revenue Department Estimates, before their publication in detail, are summarised in a paper entitled *Vote on Account*.

The estimated expenditure on the Consolidated Fund Services is revealed by the Chancellor of the Exchequer in his Budget Speech in April, and the *Financial Statement* which is issued at the same time contains complete estimates of total revenue and expenditure, as well as the results of the previous year's working.

Returns of Revenue and Expenditure are published weekly throughout the year and appear in every Wednesday's newspapers. Returns are also published at the end of each quarter. *Supplementary Estimates* for expenditure not included in the original Estimates are issued as White Papers as occasion requires in the course of the year.

After the financial year is concluded, the Chancellor of the Exchequer usually reviews its main features in his Budget Speech. In the following September the *Finance Accounts* are published, giving more detailed summaries of expenditure and revenue and of transactions relating to the National Debt and to the position of Sinking Funds. Finally, detailed accounts of expenditure, audited and commented upon by the Comptroller and Auditor-General, appear in the *Appropriation Accounts* and in the *Abstract Account of the Consolidated Fund*. Full details of revenue can be found in the *Annual Reports* of the Commissioners of Inland Revenue and of the Commissioners of Customs and Excise. Details regarding the National Debt over a series of years appear in two returns giving *Aggregate Liabilities and Cash Transactions of the State and Dead Weight Debt*, respectively. Other information is to be found in the *Post Office Commercial Accounts*, *Road Fund Accounts* and *Trading Accounts and Balance Sheets* (which refers to Trading and Commercial services of the Government).

Certain special aspects of public finances are to be found in a return entitled *Public Social Services* and in an annual report on *Public Departments, Gross and Net Cost*. Details of local authorities' finance may be found in the annual reports of the Ministry of Health and the Department of Health for Scotland.

THE GENERAL OUTLOOK

THE reader who has made his way through the mass of figures contained in the preceding articles will not need any prompting to come to the conclusion that the present state of British public finances is profoundly unsatisfactory. We are now at, or near, the top of the current trade cycle—at a period, that is to say, when the burden of taxation on the National Income should be falling, when taxation should be well in the process of remission, when the National Debt should be undergoing rapid reduction. The Chancellor of the Exchequer should now be enjoying to the full the ability to pursue sound finance and court popularity at one and the same time.

Were it not for re-armament, Mr Neville Chamberlain and the taxpayer could join in anticipating a most enjoyable Budget. If expenditure on the defence forces in 1937-38 were to be no more than in 1932-33, there would be a

margin of more than £100 millions to distribute on Budget Day. It would be possible to reduce the income tax to 4s. in the £, to abolish the tea duty, take 2d. off the petrol duty, to remove the 10 per cent. added to the surtax in 1931, and still have enough left over to provide a Sinking Fund of £50 or £60 millions. Contrast with this almost golden dream the grim reality: a prospective deficit of £80 millions and the probability of higher taxes to boot. This is the tragedy of re-armament in its fiscal aspect.

The deterioration of British finances can be traced in the language used in the final article of the Budget Supplement year by year. Two years ago, in an article which attempted to look both backwards and forwards over a period of ten years, the conclusion was reached that "buoyancy of the revenue is clearly not going to leave any very large margin over a rising total of expenditure for reductions of

taxation. . . . So far as we can foresee the next decade, the fiscal barometer points to 'No change.' Last year even this cautious forecast already seemed too optimistic, and the article concluded that "the indications are that we shall soon have to choose between increased taxation or deliberate deficits." This year, only twelve months later, we have already chosen both the unpleasant alternatives together—unless the Chancellor, by fiscal sleight of hand, confounds the prophets and avoids any increases in taxation.

At a time such as this, it is as well to consider the whole relationship of the State's finances to the resources of the community as a whole. This is too wide a task to be essayed in this concluding article, but it is well within the function of the Budget Supplement to provide the foundation of fact upon which controversy can build. An attempt has been made in the following table to compare the growth of State expenditure with the parallel expansion in the National Income. The National Income is susceptible of many definitions and, even when precisely defined, is subject to a margin of error in estimation. The estimates in the table, however, are all based on the same assumptions, and their proportionate variations are more reliable than their absolute amounts. It should be added that each of the earlier periods (except 1911-13) includes the whole of a trade cycle:—

Period*	National Income†	Total Expenditure‡		National Debt§		Defence		All Other	
		£ mn.	%	£ mn.	%	£ mn.	%	£ mn.	%
1860-69§	899	66	7.3	26	2.9	27	3.0	13	1.4
1870-79§	1,177	70	5.9	27	2.3	26	2.2	17	1.4
1877-85§	1,242	79	6.4	29	2.3	30	2.4	20	1.7
1886-93§	1,410	80	5.7	26	1.8	32	2.3	22	1.6
1894-1903§	1,666	130	7.8	24	1.4	69	4.1	37	2.3
1904-1910§	1,940	138	7.1	27	1.4	62	3.2	49	2.5
1911-13§	2,241	165	7.4	24	1.1	73	3.3	68	3.0
1924	4,035	745	18.5	357	8.8	115	2.9	273	6.8
1929	4,384	771	17.6	355	8.1	113	2.6	303	6.9
1932	3,844	800	20.8	309	8.0	103	2.7	398	10.1
1935	4,530	776	17.1	224	4.9	137	3.0	415	9.2
1936	(4,830)	830	17.1	224	4.6	186	3.8	420	8.7
1937	(5,170)	936†	18.1†	224†	4.3†	278†	5.4†	434†	8.4†

* Including Road Fund expenditure, but not Post Office. † Figures of National Income refer to calendar years, figures of expenditure to financial years ended March 31st of following calendar year. ‡ Annual average. § Estimate. || Figures are taken from "National Income and Outlay," by Colin Clark (Macmillan, 1937), pages 88, 90 and 232; they represent net National Income, as defined by Mr. Clark. The figures for 1936 and 1937 are very tentative guesses for which Mr. Clark is not responsible; the 1937 figure in particular is necessarily very approximate. ¶ Inc. Sinking Fund.

The main lessons to be derived from this table are easily detected. Over the period of the Great War, the total expenditure of the State, regarded as a proportion of the National Income, rather more than doubled. Much the largest part of this increase was due to the greatly enhanced burden of the National Debt, although there was also a substantial increase in the "All Other" category. This category is, of course, largely influenced by the various forms of expenditure on social services, especially on the relief of unemployment; but it also contains a "war" element in the shape of war pensions. As for expenditure on the defence forces, there is considerable stability throughout the period, except for the rise in the Boer War period and the much sharper increase in the last two years. One other conclusion can be drawn from the table. The estimated total expenditure for 1937-38, including the proceeds of the Defence Loan to be issued, represents a proportion of the National Income almost as large as that of the slump years. Re-armament has thus cancelled almost all the advantages won by the last four years of recovery. On the other hand, the figures also show that the whole of this expenditure could have been met out of current revenue without imposing any unprecedented burden of taxation upon the National Income.

It is unlikely that we are yet at the end of the increases in expenditure. Defence expenditure has not yet reached the average of £300 millions forecast in the White Paper; and even that figure may prove to be an underestimate if prices rise further or the international outlook worsens. The borrowing of £400 millions will cost at least £12 millions a year for interest alone. Rising interest rates may well increase the burden of the remainder of the National Debt. If short-term rates rose to 3 per cent. (a comparatively low figure in the light of history), the immediate extra cost

would be in the neighbourhood of £20 millions per annum. Lastly, it would be rash in the extreme to assume no future increase in the cost of unemployment assistance. For all these reasons, we may well have to contemplate an annual expenditure of £1,000 millions before very long.

Sooner or later the State's expenditure will have to be met out of revenue, and though the present rate of expenditure on the defence forces may not continue for ever, there ought some day to be a Sinking Fund nearly as large as the present annual borrowings. Allowing, on the one hand, for a decline in defence expenditure to a "maintenance level" of about half the present expenditure, and, on the other hand, for the inevitable increase in expenditure other than for debt and defence, it looks as if revenue of at least £920 millions will be needed if we are to return in five years' time to a sound basis.

That this is no light task can be seen from the following table:—

TAX REVENUE, 1925-26 TO 1936-37
(£ millions)

	1925-26	1929-30	1931-32	1934-35	1935-36	1936-37
Inland Revenue:						
Income Tax	258	238	288	229	238	257
Surtax	68	57	77	51	51	54
Death Duties	61	79	65	81	88	88
Stamps	25	25	17	24	26	29
Other Inland Revenue	15	3	3	3	2	2
Total Inland Revenue	427	402	450	388	405	430
Customs and Excise:						
Customs	103	120	136	185	197	211
Excise	134	128	120	105	107	110
Total	237	248	256	290	303	321
Of these:						
Sugar	19	14	16	12	12	
Tobacco	53	63	63	71	75	
Alcohol	135	124	113	96	101	
Entertainment	6	7	8	10	8	
Petrol	15	29	42	45	45	
All other duties	24	25	27	61	62	
Motor Vehicle Duties (Exchequer share)	4	5	5	5	5	5
Total tax revenue	668	655	711	683	713	756

* Details of Customs and Excise for 1936-37 are not yet available.

It should be explained that the sources of revenue other than taxes at present bring in about £40 millions, and that about £28 millions of additional revenue will be available in 1937-38 from the motor vehicle duties to meet the expenditure on roads included in the estimate above. These additions would raise the total revenue of 1936-37 to £824 millions. There is, then, a gap of approximately £100 millions which must some day be bridged.

Some increase can be expected from the natural growth of the National Income. In 1937-38, for example, this may produce about £30 millions. But this is entirely due to the present upward swing of the trade cycle. Unless all past experience is to be disregarded, we shall have to allow for a natural decline of the revenue in the next five years; it may be nearly ten years hence before we shall see a natural increase (i.e. one produced without any alteration of the rates of taxation) to higher figures than the present. It is unlikely that the solution lies simply in an increase of direct taxation. For, apart from the extreme unpopularity of such a move, these taxes do not show very much buoyancy of yield. The National Income in 1936 was about 10 per cent. higher than 1929, but the combined yield of income tax, surtax and death duties was only about 1 per cent. larger, in spite of the higher rates of taxation. Nor is this entirely explainable by the time-lag in tax collection. There has been a substantial redistribution of income in the last eight years to the disadvantage of the richer, and direct tax-paying, sections of the community. Gratifying though this is on social grounds, it makes the task of the tax collector considerably more difficult.

There is, however, one favourable circumstance in the position. The policy of borrowing for re-armament may succeed in giving us five years to think the problem out. It would be a prudent move to appoint a strong Commission, charged with the task of finding new sources of revenue calculated to bring in £100 millions a year with the minimum of injustice or of disturbance to legitimate enterprise.

THE ECONOMIST UNIT TRUST SURVEY

The Management Factor in Unit Trusts

is all-important from the standpoint alike of the investor and of the banker or stockbroker who recommends an investment in unit trusts. "What will have happened to the portfolio five, ten, or fifteen years from to-day?" is a question that occurs to every thinking investor and every conscientious investment adviser.

The Management of Fifteen Moorgate Unit Trusts Ltd., the company responsible for the administration of the "15 Moorgate" Group of unit trusts, gives to these unit trusts a background of experience and information which will be of especial value over a long-term period.

Some £10,000,000 has already been invested by the public in the eight unit trusts sponsored by the Company, and a commensurate statistical and investment organisation is maintained for the administration of these very large investment funds. Closely associated with Dawney, Day & Co., Ltd., Merchant Bankers, Fifteen Moorgate Unit Trusts Ltd. has pursued a conservative financial policy. With a paid-up capital of £100,000, the Company has reserve funds of over £200,000 established to meet future operating expenses.

Each trust in the Group provides a carefully planned and widely spread investment suitable for large or small investors. The results of each trust have exceeded original estimates and have more than justified the wide popularity which the Group enjoys with the investing public.

TRUSTS OPERATED: Investors Flexible Trust, Investors Second General Trust, Provident Investors Trust, Security First Trust, Hundred Securities Trust, Investors General Fixed Trust, Investors Gas and Electric Trust, Investors Gold Share Trust.

Consult your stockbroker or bank manager or write for descriptive Booklet, EC, the basis of all transactions, to the Managers.

The Movement and its Background

THE unit trust, in Great Britain, has been a precocious child of its time. Although it was seen in embryo as far back as 1871-72, it was not until April, 1931, that the first all-British unit trust on approved modern lines made its *début*, in an England which was then approaching the severest financial and economic crisis within living memory. To-day, though the unit trust is still four years from the tin jubilee with which monarchs, marriages and movements usually commemorate their tenth anniversaries, it is already showing recognisable signs of maturity. It began by being fixed and has become flexible. It started with no clearly defined legal status, apart from the general law relating to trusts; but it has already achieved (or, rather, had thrust upon it by a Government-appointed body) the outline of its own Magna Carta, which the Government of the day is expected eventually to embody in legislation. Popular opinion regarded the movement, in its youth, mainly as a selling proposition, designed to exploit a prevailing fashion. Within a period of six years it has succeeded in vindicating its *raison d'être* as a new investment medium, with a useful present function and the prospect of a reasonably profitable future.

If fecundity and successful adaptation to environment are sound tests of the virility of any organism, the record of the unit trust movement in Great Britain is profoundly impressive. Like many other ideas, financial, artistic and intellectual, it returned to Britain, its country of origin, after migrating for a spell to the United States of America. Actually, both the fixed and the flexible trust were foreshadowed when the Submarine Cables' Trust was formed in England in 1871 with a specialised portfolio of telegraph shares, and the Government and Guaranteed Permanent Trust in 1872, with power to vary its investments in foreign bonds.

Thereafter, the idea lay dormant until the late 'twenties of the present century, when the dissatisfaction of many Americans with the records of some of the "managed" investment trusts—which had been formed in large numbers during the preceding decade—inspired an effort to popularise the idea of spreading investment risks over a number of securities without the disadvantages of human frailty. The earliest American fixed trusts, in fact, were founded on a dual contradiction. They controverted the laws of logic because, at one and the same time, they

postulated human skill in the choice of an original portfolio of securities but denied it any part in the trust's subsequent history. They controverted established principles of investment by suggesting that a mixed bag of securities might be held for anything up to twenty or twenty-five years with no intervening changes—except by purely automatic elimination of certain securities on the happening of specified contingencies—however profoundly the economic background might be modified.

The First Phase

In 1930, when the units of American fixed trusts began tentatively to be marketed on this side, these inherent contradictions were, naturally, responsible for the decidedly lukewarm welcome which the movement evoked. *The Economist* was by no means alone in roundly declaring that, with its then limitations, the unit trust might score a temporary success, but had nothing material to add to the body of investment knowledge and experience. Actually, the first trust formed with an all-British portfolio began the process of breaking away from the rigidity of the original conception. Its "unit" included 24 different ordinary stocks and shares; it was divided for selling purposes into 2,000 sub-units, each having an original selling price in the neighbourhood of 30s.; and it had a maximum life of 20 years—all on the American model. But its promoters had discretion to sell the trust's holdings of any constituent stock or not to sell them, as they chose, on the occurrence of any of the contingencies specified in the trust deed.

The earlier American examples had flaunted the fact that managers were denied all discretion. If a dividend were passed, for example, a stock had necessarily to be disposed of within a given number of days, whatever its prospects of eventual recovery and however certain might be the prospect of selling on a bad market. As if unconsciously to emphasise the importance of their departure from precedent, the founders of the First British Fixed Trust included in their portfolio a stock which, at the time of its inclusion, would have qualified for immediate elimination, under one of the clauses in the trust deed, had the managers so desired. Thus, most significantly, there was inserted in the structure of the unit trust movement in

Great Britain the thin end of a wedge which, within a few years, was to permit the insertion of increasing rights of management, and to facilitate the development of unit trusts whose controllers had powers to vary investment holdings with few restrictions beyond the general interest of the beneficiaries.

The first all-British trust was born into a period of Stock Exchange depression, and it was only after fourteen months that a second trust appeared, in June, 1932. The sponsors of the original trust also formed a second in that year, but it was not until the middle of 1933 that the popularity of the new movement became definitely established. By that time Britain had left the gold standard, the first beginnings of industrial recovery had been in evidence for nearly a year, the *Financial News* ordinary share index had risen (on June 30, 1933) by 48 per cent. from the lowest point of depression, and, finally, South Africa had devalued her currency and projected a Kaffir share boom. Five new unit trusts were formed in 1933, twenty-four in 1934, and twenty-one in 1935, bringing the total at the end of that year to fifty-three. The majority held a portfolio of a general character, representing, for the most part, a cross-section of the more active equity securities dealt in on the Stock Exchange—frequently with one or two high-yielding gold mining shares thrown in as a sweetening element. A minority—but an interesting minority—had a more specialised portfolio, limited to such groups of securities as foreign bonds, gilt-edged stocks, insurance and bank shares, gold mines and various branches of British industry. At the end of 1935 there were extant some 36 general and 17 specialised unit trusts. At the end of 1934 the "net sales" of units and sub-units totalled £20,750,000. By the end of 1935 this figure had risen to £45,800,000. The present total is the subject of a special chapter on page 5 of this Review. To-day, there are 72 unit trusts extant. Some 51 are mainly "fixed," in the sense that their managers have no powers, or only limited powers, of substituting new stocks for old in their portfolio; while 21 are "flexible" since their managers have powers to switch among a lengthy panel of companies or into a wide range of securities in general. Within our knowledge, some 48 trusts are still "open" while some 24 are "closed." An explanation of these terms is given in the text below.

Reasons for Progress

By the end of 1935 the movement had thus established itself. In the face of a good deal of criticism, it had proved that nothing really succeeds like success. The reasons for its progress are readily discernible. It made little headway so long as stock market sentiment was depressed, but in the great bull market from 1933 onwards it had an ideal background. It offered the relatively small investor something which, psychologically and economically, was highly desirable—namely, a spread of his investment risk over a moderately extensive range of different securities, although the cash value of his holding might be less than three figures. Investors obtained this facility in return for a "loading charge" usually equivalent to around 6 or 7 per cent. of the value of the constituent securities. This charge was usually paid, cash down, to cover the expenses and profits of the promoters and the clerical and managerial charges of the trust during the whole of its anticipated lifetime.

The application to investment of the law of averages was no new expedient. The British investment trusts had been applying it for more than half a century, but the early 'thirties found them tactically at a disadvantage. Their portfolios were heavily weighted with foreign as distinct from British domestic securities, and with fixed interest as distinct from equity stocks. Their own issued capital, moreover, had never had a really wide or free market on the Stock Exchange. The small investor wished, primarily, to share on an equity basis in the fruits of a predominantly domestic industrial recovery. But he required, above all, an assurance that he could reconvert his holding into cash at short notice. To him, therefore, these shortcomings of the orthodox investment trusts were more than disadvantages—they were positive disabilities.

The unit trusts enjoyed a further advantage. They took pains to advertise their wares in a world which was used to publicity but not to its application to the business of

investment. Undoubtedly the trusts, in the process of describing and praising their own goods, did much to popularise the laudable conception of a well-tempered portfolio. And it is no conclusive objection to this favourable comment that the campaign funds were provided by the investor himself. The proceeds of sales of trust units, again (apart from the loading charge), were invested mainly in the ordinary shares of sound and reputable British companies, which were among the leaders of their market. So far, therefore, as resources which would otherwise have gone to the bucket shop and the ultra-speculative new company were diverted to the unit trust movement, the latter became, in effect, an instrument for the placing of funds in good instead of bad securities.

New Developments

There were, in short, weighty factors making for the popularity of the trusts. It was well that they were substantial, for they stood the movement in good stead in the second phase of its development, when it was engaged in the difficult task of revolutionising its original conception and endeavouring to rid itself of certain abuses which had been the subject of legitimate criticism. It was quickly found that a trust whose portfolio was wholly or mainly "fixed" incurred the wrath of critics, who maintained that to stereotype any series of holdings, however diversified, for ten to twenty years, was repugnant to sound investment canons. What was even more to the immediate point, experience showed that such a trust tended to lose its selling appeal after a few months. It was then usually deemed advisable to "close" it, by ceasing to create further units; and as soon as it was closed it began to "unwind." In other words, every closed trust became a slowly dying trust.

The discretionary powers of the managements, accordingly, began to be progressively extended. The right to eliminate unwanted constituents in a portfolio was enlarged, as new trusts were formed, to embrace the right of substitution of one security for another. By a process of trial and error, this right was extended from re-investment in trustee securities to re-investment in a limited panel of specified alternative stocks and, finally, to more or less free re-investment (with a few general limitations) over a specified range of Stock Exchange securities. The wheel by this time had gone full circle. With the emergence of the fully flexible trust, the movement made the despised management factor a corner-stone.

When our last Review was published, in March, 1936, the movement had arrived at a point when almost all new unit trusts adopted a flexible form. In the meantime, those interested in its progress, both from within and without, had become keenly aware of certain defects in its organisation. Some of these defects were largely the result of inexperience in its early days. It was recognised, for example, that too large a part of a trust's loading charge might be used for initial expenditure, and too little be reserved for future managerial and clerical expenses. To obviate this, many groups had already initiated the practice of earmarking part of their receipts under an escrow provision permitting their release only in regular instalments, spread over future years. Other blemishes were due, in certain cases, to mistaken ideas of salesmanship. Examples were the focussing of advertising appeal on immediate income yield, the unsoundness of all investment criteria; and the dilution of portfolios by an admixture of high-yielding shares of second- and third-rate quality, like short-life gold mines. Another objectionable trait was the practice of some trusts—not all—of including capital receipts, from the sale of "rights" accruing on underlying securities, in their regular cash distributions. A third undesirable feature was a tendency to seek spurious differences in selling appeal, between one portfolio and another, which might impress the ignorant but had little economic relevance.

Other dangers besetting the movement's progress were, possibly, potential rather than actual. The number of securities really popular with the public at any given time is much more limited than is generally imagined. Consequently, there was always a danger that too many trusts might hold the same stocks, and thus provoke undesirable present or future market repercussions. Another potential

danger was that, in a large portfolio, second- and third-rate stocks might be introduced and pass largely unnoticed. The greater the movement's success, the greater was the danger that its name and fame might be taken in vain by unscrupulous persons (in whose hands unlimited advertising powers might, in particular, be a dangerous weapon) or by interests having insufficient financial backing or inadequate technical experience. The further the movement gravitated away from the fixed towards the flexible trust, the more relevant became the question: *Quis custodiet ipsos custodes?*

Official Inquiries

Every new development, in finance as elsewhere, which achieves rapid success from small beginnings, must expect to attract official curiosity. As far back as May, 1934, the Committee for General Purposes of the London Stock Exchange had appointed a Sub-Committee to go into the question of facilities for dealing in the certificates of certain fixed trusts on the Floor of the "House." In December, 1935, the Sub-Committee issued a report recognising the existence of "a genuine public demand" for facilities such as the trusts provided, and appending a series of draft regulations for Stock Exchange dealings, but declaring that "the protection of the public" could be secured only by State legislation. The sequel was the appointment, in February, 1936, of a Departmental Committee of the Board of Trade to inquire into the subject "in all its aspects." The Committee had a strong and thoroughly representative personnel. It was conspicuously expeditious in its deliberations, and its Report, completed in July, was made available to the public last August. In the meantime, certain management companies had taken the initiative of forming a Standing Joint Advisory Committee as far back as April, 1935, and early in 1936 it had been announced that negotiations were in progress for an Association of Managers. This body was duly formed, and now functions as the Unit Trusts Association. Its constitution and objects are the subject of a separate chapter in the present Review.

The findings of the Board of Trade Committee, similarly, are dealt with in detail below. Broadly, the Committee blessed the basic ideas of the movement, but criticised certain aspects, actual and potential, of its development. They recommended that the State should afford facilities for its continuance, its development and even its possible application to new fields of investment. This vindication of the movement's status was accompanied, however, by financial and other conditions which left the movement's satisfaction distinctly qualified. The Committee insisted, for example, on the advisability of a substantial financial deposit in the case of every trust; the payment of a charge approximating to a species of capital duty; the application to the movement, *mutatis mutandis*, of certain provisions corresponding to those laid on limited companies by the

law; restrictions on unit trust advertising; and, finally, publication of detailed facts concerning their operations.

Though it is practically certain that the Government will introduce legislation on the lines of the Committee's Report, the date of its introduction is at present uncertain. Meanwhile, the movement remains in the uncomfortable position of Mahomet's coffin, suspended between one state and another and firmly anchored to neither. Actually, during the past twelve months, only 16 new unit trusts have been formed (bringing the total extant to 72), against 22 in the preceding twelve months. The figures given in the next section of this Survey show that the total amount of unit trust certificates held by the public has increased by approximately £21 millions, against something like £25 millions in the preceding twelve months. The total year's turnover in trust certificates has been appreciably greater, but the material for an estimate of its dimensions is unavailable. Trust dealings have now become two-way and not merely one-way.

Though sales to the public still comfortably exceed encashment orders, the fact remains that "net sales" in the last twelve months have been less than in the immediately preceding period. In the first three months of 1937 this phenomenon may be correlated with the declining trend in security values on the Stock Exchange as a whole, particularly those of so-called gilt-edged industrials, which suffered in common with gilt-edged stocks proper. For the preceding nine months, however, the trend of the equity share market was as strongly upward as in any period since the rise in values began. Undoubtedly, the appointment of the Board of Trade Committee and the publicity given to its findings were not helpful selling points. The fact, again, that certain new trusts formed during the period have admittedly had a diverse individual experience suggests that public demand may be becoming more fickle—or, what is the same thing, somewhat more discriminating without a clear basis of discrimination. On the whole, the public reception of the concept of flexibility has been somewhat disappointing. The idea has certainly not "gone over" with quite the same *élan* as the earlier concept of quasi-fixity.

It is too early, as yet, to draw any far-reaching conclusions from the experience of a period which has been, to some extent, abnormal. Possibly part of the initial appeal of the movement may have been due to its novelty. Possibly the desire of the investor to know exactly what he is buying counts for more than the movement, in its latter-day phase, had assumed. It may be that investors will buy stocks but not brains, unless they know whose brains they are. Or, again, the movement may be on the eve of some development of profound evolutionary importance. In subsequent sections of our Review, accordingly, we propose to analyse its present organisation, structure and aims, to assist our readers in reaching their own conclusions on these all-important questions.

Total Unit Trust Sales

In the first supplement dealing with fixed trusts, dated April 6, 1935, *The Economist* published the first accurate estimate of fixed trust sales. With one exception, the trust managers furnished us with confidential particulars of the value of their outstanding sub-units for calculating a total figure for the whole movement.

We have again asked the managements to supply us with confidential information of the *net* value of outstanding sales at the end of February. The response has been willing, and we have again been compelled to rely on estimates for only one group. In this case we have adopted a figure which appears reasonable in relation to the information readily supplied by other groups.

In most cases, this information has been supplied to the nearest £100. Our estimate of the small investor's interest in unit trusts can therefore be given to a closer degree of accuracy than before. We are, of course, unable to furnish any particulars regarding the sales of any particular trust or group of trusts.

At the end of February, the value of outstanding sales of the seventy-two unit trusts, formed in this country since 1921, amounted to £71,025,000.

This total compares with our estimate of "nearly £50 millions" at the beginning of March last year. At the end of 1935 we computed the total at £45,800,000, and at the end of 1934 at £20,750,000. The Board of Trade Committee, reporting last July, confirmed that the movement's sales amounted to about £50 millions.

At first sight the present total looks somewhat higher than *a priori* considerations might have suggested. No secrets are betrayed by the statement that the movement is not wholly satisfied by the recent trend of sales. The summer months of 1936 were unfavourable, owing to the appointment of the Board of Trade Committee, and market conditions this year have not been propitious. To account for an increase in the volume of outstanding sales of £20 millions, therefore, a somewhat special explanation appears called for. The market boom, which

reached its peak last November, may have attracted an appreciable volume of supporting orders. Again, while the volume of advertising appears to have fallen off in certain directions, those groups which have continued to put their wares before the public have apparently received a ready response. A third factor may be the natural growth of the movement through re-investment by existing holders.

The figure, nevertheless, may cause some surprise even in some quarters in the movement itself. How does it compare with the progress of other popular savings media? The following table suggests an answer:—

	1934	End Year 1935	1936
Unit Trust Sales	20,750,000	45,800,000	71,025,000*
Building Societies' shares and deposits	528,367,000	571,057,000	620,000,000†
P.O. and Trustee Savings Banks deposits	573,529,000	623,593,000	679,961,000
Savings Certificates	389,559,000	391,092,000	390,102,000
* February 28, 1937. † Estimated.			

Both in absolute size and in expansion, it will be seen, the unit trust movement is small compared with the older media available for the small saver. The threat to building societies' deposits which the unit trusts were alleged to introduce cannot be detected in the figures.

Advertising and Sales Methods

In our unit trust supplement published last April, an estimate was given, by the courtesy of the London Press Exchange, of the volume of press display advertising by the trusts, which we are now able to extend for 1936. The estimates are based on a wide survey of the press, but exclude certain specialised publications. They may, however, be taken to cover some 80 per cent. of the total. The total estimate for press advertising expenditure of the trusts during 1936 amounts to £215,615, which compares with £184,047 for 1935. The Board of Trade Committee, in referring to the part which extensive advertising had played in the growth of the movement, estimated that the sums spent upon advertising by the different trusts had been large, "amounting probably to £250,000, and possibly to twice that figure."

Press advertising, of course, is but part of the total expenditure on publicity. Indirect methods, which include lectures reported in news columns of the press, are common. The Unit Trusts Association, again, has organised a publicity department. Personal contacts are important, particularly in the North and in Scotland. And certain groups publish monthly magazines—some of definite economic interest, and others of more propagandist character—which are issued to their clients.

Flexible Trust Management Described

WHEN the Departmental Committee of the Board of Trade reported last July on the unit trust movement, there were 51 fixed trusts and 16 flexible trusts in existence. Since that date, only 5 trusts (all of the flexible type) have been formed. The creative growth of the movement has obviously slowed down considerably, owing partly to the activities of the Board of Trade Committee itself, and partly to a certain exhaustion of new promotion features, which the fixed trusts and the early flexible trusts were able to turn to good account.

For a fairer comparison of the growth of flexible trusts, however, figures may be based on the position when our second unit trust supplement was published in March last year. At that date 56 trusts were in existence, and of these 50 were of the fixed type and 6 of flexible type. Fifteen of the 16 trusts formed during the past thirteen months have been of flexible type. Fixity is now eschewed and flexibility openly embraced. It is, perhaps, no secret that the management groups, having experienced but small difficulty in convincing the investor of the merits of a fixed portfolio of familiar industrial shares, have not wholly repeated their success with the flexible form of trust.

Equal importance, however, attaches to the selling methods still pursued by the trusts. Some carry out all their business through brokers; even independent purchases are put through a broker's name. Others seek orders wherever they are to be found, accepting business direct, and accompanying it with suitable inducements in commissions. One group has approached estate agents in this way, offering the usual rate of commission paid to brokers on new orders.

Again, the co-operation of brokers through the offer of reciprocal business is generally invited. By this method brokers are led to expect business in underlying securities proportionate to the volume of new unit orders which they introduce. In some cases this procedure can hardly work to the best advantage of the trusts, for small provincial brokers cannot be expected to do business at the finely shaded prices which could be obtained in London or on a leading provincial exchange.

The Board of Trade Committee did not feel that the question of excessive commission to brokers was a matter for legislation, but recorded the view that remuneration on the sale of units at a level which induced the recommendation of this class of security for any reasons apart from intrinsic merit was undesirable. The general practice among the trusts is that the managers pay brokerage, when the investor buys his units, out of the loading charge which is included in the purchase price. In many cases, this brokerage appears to be paid at the rate of 1½ per cent., which is higher than the Stock Exchange scale for shares between 16s. 8d. and 30s. On the re-sale of the units to the managers the seller usually pays brokerage.

Certain trusts, however, have modified this arrangement. The Municipal and General group, for example, has reduced its loading charge to an ex commission basis, and brokerage now falls to be paid by the client both on purchase and on sales. This practice is also adopted by the British Empire First Unit. In the case of the Trust of Insurance group, the managers undertake to pay brokerage both on the original sale and upon the re-purchase of units from the investor.

The problem of stamp duty, to which the Board of Trade Report drew attention, remains unchanged. Settlement duty is payable on the constitution of initial units, but is not automatically required in the case of subsequently formed units. The unit certificates or bearer warrants issued by the managers attract no stamp duty, but on being re-sold to the managers the release of the certificate attracts stamp duty (although if it is subsequently re-issued no further stamp is payable). If units are transferred by deed between two members of the public, stamp duty is payable. Bearer warrants, however, escape all stamp duty, both on issue and on transfer.

It is, in fact, a method in which the public has required instruction. A score or more familiar names in the fixed trust are replaced by a panel of securities—or rather the securities of a panel of companies—which may include two hundred concerns and more. At any point of time, the investor does not know exactly what he is buying. He is invited to subscribe to the X.Y.Z. Flexible Investment Fund; but however euphonious the name and however well he may regard the capabilities of the management company, neither seems to rival the list of securities which was invariably a feature of fixed trust advertising. Half a dozen market leaders in a portfolio apparently possess more sales appeal than a widely diversified flexible fund, although the latter may be a sounder investment.

Although in certain specialised instances the flexible trust has been successful from the first—the Foreign Government Bond and Trust of Insurance Shares issues are obvious examples—the reception of the flexible trusts generally suggests that, apart from the special factors which appear to have handicapped the movement during the past year, the public is not fully acquainted with their nature.

INCREASING INCOME YIELD ... SUBSTANTIAL CAPITAL APPRECIATION ...

Both types of Investment are available in

THE BRITISH GENERAL GROUP OF FIXED TRUSTS THE BRITISH GENERAL FIXED TRUST

(Series A and C) concentrates on Income Yield.

Series A (Commodity Series) consists of the stocks and shares of 23 leading companies identified with the following essential commodities: Iron, Steel, Coal, Oil, Wool, Cotton, Grain, Gold, Tin, Sugar, Tea and Rubber. The rising price-trend of practically all basic commodities will bring especial benefit to holders of this portfolio. By applying the principle of spreading the investment over a representative group of primary and general utility producers, the Commodity Series combines the basic advantages of safety and good income, while there are substantial prospects for those to whom increased capital is of importance. The yield at 23/9 is estimated at not less than £4 18s. 0d. per annum, exclusive of capital bonuses.

Series C (Industrial Series) consists of the shares of 27 industrial companies, whose names, products or services are household words throughout the country. They represent such vital industries as Railways and Transport, Gas and Electricity, Motor Manufacturing, Mines, Tobacco, Steel, Department Stores and other important branches of British trade and industry.

Without exception, the companies on this Portfolio enjoy the strongest possible positions in their respective industries and have been among the first to benefit from industrial recovery! The yield at 20/7½ is estimated at not less than £4 15s. 7d. per annum, exclusive of capital bonuses. The Trustees are The General Accident Fire and Life Insurance Corporation Limited.

British General Fixed Trusts are described in our booklet entitled "Why I believe in Fixed Trusts." This booklet, the basis of all transactions, will be sent on application to the management or your bank or stockbroker.

MANAGERS: BRITISH GENERAL FIXED TRUST LTD.

KING'S HOUSE, 36-37 KING STREET, LONDON, E.C.2.

Telephone: METropolitan 6531

THE CAPITAL SECURITIES TRUST is planned for maximum capital appreciation.

This trust, as distinct from the British General Trust, is planned for capital appreciation rather than for income yield. The portfolio has been particularly designed to appeal to those who are not primarily dependent upon income from their investments, but are finding difficulty at the present time in deciding on shares which have the best prospects for capital appreciation. The list of securities embraces shares of British, North and South American industrial, commercial and public utility undertakings, and are specially selected with a view to their future potentialities.

Striking evidence of the wisdom of the choice of the portfolio and of the efficient management is seen in the fact that the original purchase price of sub-units in May, 1936, was 8/6.

To-day the price is 12/3,* an appreciation of nearly 50 per cent. in a single year—and this increase may be confidently expected to continue.

Capital Securities Trust is a trust of the Unit Type and the managers have full power to select and vary the composition of the Trust within the permitted list of securities. The Trustees are Martins Bank Ltd.

Booklet containing full details of this trust may be obtained from the manager, or from your bank or stockbroker.

9

Deduction of the preliminary charge from the gross sales proceeds gives the net proceeds available as deposited property for the fund which shows an assumed net total of £1,044,060. How is this sum represented? Mainly, of course, by the cost of investments held in the fund. This is shown at £1,040,588, excluding commissions, and is reduced to the extent that profits have been realised on the sale of

investments, giving a net figure of £1,025,330. There remains to be added the amounts paid in respect of stamp duty and brokerage on the securities, the amount of cash held by the fund, and an account of dividends received and distributions made by the fund.

Problems arising from the distribution of available income are discussed in detail below. But in order to balance the position of the fund, it is necessary to deduct from the existing capital assets any excess of dividends received (or calculated to be receivable) over the distributions made to unit holders and the payment of trustee's and managers' remuneration. Such sums which arise since the previous distribution date are, of course, available towards the payment of the next coupon.

The second tabular statement, headed "Deposited Property Value," compares the current value of the deposited property with the gross amount paid by investors in subscriptions for the units. The market value of the securities is calculated, excluding all Stock Exchange charges, and to this sum is added the cash held by the fund as shown in the first schedule. The difference between this total and the total sums paid by the public shows the net appreciation of their investments, after writing off, in effect, all Stock Exchange charges, the cost of the manager's preliminary service charge and management's half-yearly percentage charge to date. The gross appreciation shown by the offered price of the units is 27½ per cent.

This statement forms the basis for the calculation of the current price of the units shown in detail in the third schedule. There are assumed to be one million units in issue. The market value of the deposited property of the fund, together with the balance of cash, amounts to £1,210,692. This sum, divided by the number of units in issue, gives a net value of the deposited property (exclusive of commissions and fees) per unit of £1 4s. 2.566d. The charges for

brokerage and fees must now be added. A detailed computation is short-circuited by basing the charge on the average brokerage, per cent., paid in the past. The manager's preliminary charge is based on the gross cost of the securities, together with commissions, and a price adjustment to the next highest threepenny multiple. It represents, in fact, 5/195ths of this total, or 2½ per cent. of the offered price. At this price, the managers are prepared to sell their units, quoting a bid price for repurchase 6d. below the offered price.

Two final schedules are added to complete the record of the manager's control of the fund, which show calculations of gross yields and particulars of the "spread" of securities. This information, however, does not affect the detailed working of the fund, although it closely concerns the problem of administration in the broader sense.

A Technical Problem

The search for a conclusion in this problem of method resembles the profitless quest for the Golden Rule. Our own function has been largely one of simple exposition and description. The very technicality of this section of our present survey—so far removed from the sweet simplicity of the fixed trust era—itself suggests one major fact. The trend towards flexibility has thrown up new problems of the utmost technical difficulty. And the movement itself may be far from reaching finality in its methods of operation. Even the disinterested expert (if such exists) might find it difficult to choose finally and irrevocably between the two methods which now hold the field. But this dilemma, which may be left to the expert and to the unenviable legal draftsman, contains a valuable lesson. The merits of any system are governed entirely by the competence and honesty of the managers which operate it.

Unit Trust Distributions

THIS exegesis leads us to the consideration of unit trust distributions, with special reference to the flexible trusts. The first essential point is: What is cash produce? In other words, what sums may be properly regarded as distributable by a unit trust?

For the fixed trusts, there is no difficulty in answering this question. The trust will pay out dividends received, together with capital rights encashed if it is of the "distributive" type. The securities in the fund are constant, and their dividends are always known.

The problem, however, is not so simple for the flexible trust. The managers could, if they wished, operate in all of their permitted investments during one distribution period. It is theoretically conceivable that they might not receive one penny in cash dividends. Conversely, they are free, if they wish to avail themselves of the opportunity, to purchase securities cum dividend and to sell again ex dividend. By this method the yield on a flexible fund could be arbitrarily increased. In addition to dividends actually received, dealings on a cum and ex dividend basis may conceal the "stripping" of dividends from the securities concerned, unless these transactions are suitably adjusted as between capital and income. In many cases, the trust deeds appear to give the managers power to determine what constitutes cash produce available for distribution. In the case of the Municipal and General Investment funds, and other funds operated along similar lines, precautions have been introduced to prevent the managers from decumulating the assets of the trust by paying out the full cash dividends on securities purchased cum dividend. Similarly the trust deed of Investment Trust Units contains suitable provisions of this nature. In order, moreover, to make all true income available, provisions have been taken to estimate accrued dividends, although cash dividends may not have been paid. In the case of Investment Trust Units, the anticipated rate of dividend may be distributed according to the certificate of a member of the London Stock Exchange. For the Municipal and General group the responsibility falls upon the auditors.

Comparatively few flexible funds appear to have made provisions for these adjustments between capital and revenue. The loopholes which exist in their absence would doubtless not be put to grievous misuse, particularly when a large and fairly stable portfolio is managed. In this case, the law of averages is likely to minimise any grave possibility of decumulating the assets of the fund in the guise of income. But to the majority of the trusts, at any rate, they are at least open to exploitation as a yield-raising device.

The Dividend Equalisation Account

The problem for all trusts, whether fixed or flexible, is to determine the most convenient and equitable method of distributing the income which accrues to the trust in each successive distribution period. The fixed trusts solve the problem by operating a dividend equalisation account. At the beginning of a distribution period, no income will be held by the managers for the benefit of the unit holders, apart from any small undistributed balance from the previous period. As each Stock Exchange account passes, however, the managers will receive dividends on the underlying securities, and the shares concerned will be dealt in ex dividend. A buyer halfway through a distribution period will, therefore, be required to pay a capital sum, in addition to the cost of the underlying securities and expenses, representing the accrued income per unit which the managers have received upon the underlying securities. From the date of purchase, the new buyer ranks equally with existing unit holders for subsequent distributions, and there stands to his credit a sum, returnable at the end of the distribution period, exactly equivalent to the accumulated income of the trust per unit. Detailed figures showing the effect of this method on the costing of a fixed trust sub-unit were given on page 20 of our last Supplement on the movement.

FOR JUDICIOUS INVESTORS

ELECTRICAL INDUSTRIES TRUST

We are on the threshold of an electrical age and a great development lies before us. The Ninth Annual Report of the Central Electricity Board shows that electrical progress is proceeding in this country much faster than in the world as a whole. The Government's declared intention to adopt the main provisions of the McGowan Report will quicken this growth. It will be of special benefit to engineering and equipment undertakings in which more than 80 per cent. of the funds of the Trust are invested.

In the meantime—of twenty dividend announcements declared by the Companies in the Trust since January 1st, 1937, twelve were on a higher scale.

Trustees: GENERAL ACCIDENT FIRE & LIFE ASSURANCE CORPORATION LTD.

METALS AND MINERALS TRUST

Re-armament means demand for materials. If, as some hope, the armaments race stops and we get real peace and security, a great expansion of world trade will maintain this demand. Growing prosperity promotes sales of diamonds. Discredited paper quickens the craving of man for gold. This Trust, with its reserve fund provision, provides real investment in this varied field.

Since the Trust was established on January 4th, 1937, all the dividends, with one exception, declared by Companies in which it has invested have shown increases.

Trustees: MIDLAND BANK EXECUTOR & TRUSTEE COMPANY, LIMITED

BRITISH INDUSTRIES FIXED TRUSTS

Reorganised and reconstructed, and with sound finance and a new confidence behind it, British industry is in finer shape than ever in its history. The four Portfolios of this Trust give their certificate holders a wide-spread interest in the equity of our country's future.

"Evidence of home expansion continues day by day to be impressive. Good statements of Company earnings and dividends are accompanied by cheerful forecasts by almost every Company Chairman who addressed his shareholders." —"Daily Telegraph" April 2nd 1937.

Trustees: MIDLAND BANK EXECUTOR & TRUSTEE COMPANY, LIMITED

These Trusts are managed by:

Units or sub-units may be bought through any stockbroker or bank. Explanatory booklets (on which transactions are based) may be obtained on request

The dividend equalisation method is equally applicable to the flexible trust, provided that it is operated by the appropriation method. The income of the trust is maintained in a separate fund, and the due proportion of accrued income is included in the offered price of the units. This price, consequently, includes two elements: the appropriate cost of participating in the capital assets of the fund; and a payment equal to the accumulated dividends per unit. Subsequently to the date of purchase the new buyer ranks, in the same way, for his share of dividends received. At the end of the period, he receives an identical distribution, per unit, in cash, as the investor who had held his units throughout the distribution period. Part of the cash, as before, represents his original capital payment, and part his share of dividends received by the fund since his date of purchase.

Cash Fund Complications

Where all assets of the fund are maintained in one pool (as in the "Cash Fund" method of operation) complications arise. The buyer pays a price for his units which includes an amount analogous to a dividend equalisation payment, but for the purposes of price calculation, capital and accrued income are not distinguished. Both form part of the deposited property of the fund. The actual amount of this equalisation payment, which will be distributable to unit holders as a capital repayment, will not be known until the end of the half-year, when the amount of income available for distribution is computed. This involves highly intricate calculations, which may be examined in closer detail.

For the three investment funds in the Municipal and General Securities group, the auditor is charged with the duty of allowing, as far as possible, for the effect of purchases cum dividend. In computing the amount available for distribution, the auditors are therefore not bound by the actual amounts of dividends received in cash by the trustee. The dividends received may be less than the amounts estimated to be due for distribution, where dividends are presumed to accrue during the period, but have not actually been paid. In other cases, the auditors may be unwilling to allow the full distribution of the amounts received in dividends during the period, on the ground that the securities had been held for only part of the time, and that the purchase price therefore included a significant amount of accrued dividend. The difference between the amount received in cash dividend and the amount computed as available for distribution in such cases accrues to the fund as capital.

The Auditor's Responsibility

The determination of available cash produce for distribution is thus primarily the responsibility of the auditor, whose task it is, according to the best of his information, so to adjust the cash dividend receipts of the fund during the half-yearly periods to take account of dividend accruals and

the purchase of securities with dividends in the price. After estimating the net amount deemed to be distributable in respect of each security in the trust a further point arises. The income-tax authorities may be called upon to refund tax, to the appropriate extent, to holders of units who are not liable for tax at the standard rate. In this respect no difficulty arises regarding claims from holders throughout the period. The income received during a given period is payable to all holders existing during that period. But for the new purchaser the authorities lay down the principle that rebate of tax cannot be claimed in respect of dividends received by the trust before he became a participant. For trusts which operate a dividend equalisation account, the point does not arise in the same form, for the dividend equalisation payment is not subject to tax. But under the Municipal and General Securities method no dividend equalisation account is maintained separately from the funds, and adjustments are therefore necessary.

The following procedure, therefore, is adopted. After the net amounts due to be distributed have been calculated for each security, they are apportioned over the trust according to the number of units outstanding at the respective account days, preceding the ex dividend date of the security. In the case of a security which does not become ex dividend, the dividend accrued is apportioned over the whole period. This procedure is followed for each company and dividend. Finally, a summary is prepared showing the amount of distributable income arising in respect of the units outstanding at the end of each fortnightly account.

We have seen, however, that in the calculation of the price which was paid for the units, the total value of the fund, including all accumulated dividends received by the fund, has been used. The buyer, therefore, has in effect paid a definite price for accumulations. How is this sum returned to him?

The dividends to be distributed must next be allocated per unit. For this purpose, the average number of units in issue during the entire period (on which the distributions have, on the average, been earned) is divided into the total sum available. The resulting average rate will then be payable on all the units outstanding at the end of the period. The total sum required will be higher than the amount actually computed by the auditors as distributable from income. The difference corresponds to the amounts which have been included in the price of units in respect of the accumulated income of the trust.

Since all the units in this particular group are in bearer form, the managers prepare a certificate for each bearer warrant outstanding, stating the proportion of the distribution which is income earned (whether received or not) since the units were purchased, and the amount arising from the dividend equalisation sums included in the price. It will be evident from the foregoing description that in order to operate their funds as completely water-tight trusts, both for capital and income, the Municipal and General group have been compelled to adopt a system of considerable intricacy, in order that the claims of any unit holder who is not liable to the full standard rate of tax may be satisfied.

The Effective Cost of Unit Trust Management

In our previous surveys of the unit trust movement, we gave estimates of the effective cost which the purchaser of a fixed trust sub-unit pays to the managers. Reference to the directory tables on pages 16 to 21 of this Supplement shows the loading charges for all fixed trusts and the preliminary service charge and regular management fees which apply to the flexible trusts.

The advertised loading charge, as we have previously explained, somewhat understates the total effective costs included in the price of a fixed trust sub-unit. In the first place, it is frequently calculated on the inclusive price of

the unit; a 5 per cent. nominal loading charge thus becomes an effective 5½ per cent. charge on the cost of underlying securities and expenses. Secondly, there are extraneous sources of income available to the managers from purchases of underlying securities slightly below the prices at which they are costed into the units, from the jobbing turn on re-sales of units to the managers and again on their subsequent re-issue to new purchasers, and from the adjustment of the dealing quotations to the nearest 3d. or 1½d. above and below the exact offered and bid prices.

It has been suggested in our discussion of managers'

Investments for the Prudent: Investors Second General Trust

By investing in sub-units of Investors Second General Trust you become a part owner of 27 of the strongest and most famous companies in British industry. All the securities included in the Trust are quoted on the London Stock Exchange, are steady dividend payers and, as a group, represent a true cross-section of the strongest elements in Britain's economic life. The income for the year ended 1st February, 1937, showed a yield equal at the current price of sub-units to £5 : 4 : 0 per cent. gross, from cash dividends only. The Trustees are Royal Exchange Assurance.

Provident Investors Trust

Nationally known goods and services, purchased by every household, are manufactured or distributed by the 30 immensely strong companies whose securities form the portfolio of Provident Investors Trust. No armament, brewery, tobacco or gold mining securities are included. To the investor who believes that essential goods and services, which form the backbone of the nation's economic life, are the soundest and surest investment, sub-units in this Trust offer the advantages of convenience, security, and a yield of over 4½ per cent. (The actual return which investors have received from cash dividends only, for the year ended 15th March, 1937, was equal to a yield of £4 : 10 : 9 per cent. gross, at the current price of sub-units.) Trustee : Martins Bank Limited.

Investors Flexible Trust

This Trust is a managed investment fund of flexible character with a portfolio embracing a very extensive list of first-class Stock Exchange securities. The policy of the Managers is to secure the best possible income yield and prospect of capital appreciation consistent with a high degree of safety. An investment and statistical organisation commensurate with the very large funds administered by the Managers is maintained for the constant supervision of the Trust's portfolio. A yield, from cash dividends only, at the rate of £5 : 7 : 4 per cent. gross per annum at the current price of sub-units is the actual return investors have received for the first half-year (ended 1st March, 1937) of the Trust's existence. Trustees : Midland Bank Executor and Trustee Company, Limited.

profits that while such adjustments are uncovenanted, and while it is arguable that they should be subjected to close scrutiny, they may provide an additional source of income to the loading charge which is necessary for profitable operation. The replacement of these "sweepings" by a somewhat larger but completely disclosed loading charge may be desirable. But as matters now stand, it is evident that some trusts have no considerable margin of profits, after making proper reserves for future management. Additional point is lent to this question of adequate reserves from profits by the suggested requirement of a deposit of £20,000 from each trust (not from each group) which the Board of Trade Report suggested.

Our latest estimate of the total sales of the movement, which appears on page 5, shows that the current value of outstanding units of the 72 fixed and flexible trusts in existence is now £71,025,000. The average value of outstanding units per trust is therefore of the order of £985,000. While some managements can claim higher gross sales than the amounts now outstanding (they may have been reduced to some extent by resales), it is probable that this average level of sales does not afford opportunities for inordinate profits in itself. And if it is assumed that a

* Preliminary charge calculated on price of unit.
† Preliminary charge calculated on price of unit less price adjustment.
‡ Preliminary charge calculated on value of deposited property plus brokerage and stamps ("basic price").
§ Annual charge out of capital.
|| Annual charge out of income.
¶ Excluding brokerage. Brokerage at 3d. per unit has been added in the computation of the total charge.
** Price adjustment becomes part of fund; in other cases this amount is taken by the managers.
†† Maximum life.

certain number of the existing trusts have been highly successful, while others have sold only moderately well, the argument is even stronger. It has been stated that £20 millions of outstanding units are represented by the sales of ten trusts. We have no means of verifying this assertion from our own information regarding unit sales, but it probably understates the position of the leading trusts at present. Ten trusts, on this assumption, would each have £2,000,000 units outstanding, while the remaining trusts

would show an average of £820,000 each. If our previous estimate that sales of £500,000 must be effected before the managers cover their initial charges and begin to earn small positive profits, it would appear that, for some managements, the unit trust movement is not the happy gold mine which might have been imagined from its phenomenally rapid growth eighteen months ago. Even when allowance is made for economies resulting from group management, this conclusion appears broadly to hold.

For the calculations of the effective loading charge on fixed trust units, the reader is referred to page 20 of our Supplement last year. With the growth of the flexible units, the calculation of management charges has become more complicated. The managers take a preliminary service charge, and in most cases a half-yearly management percentage based on the value of the fund. Differences of practice arise regarding the treatment of price adjustments, and the payment of brokerage. And finally differences in the length of the trust period have to be taken into account in making any estimate of the annual rate of management remuneration.

There are thus four variables for each flexible trust charge (apart from any scope for profits on underlying securities in some cases) which must be reduced to a common basis before a comparable statement of average annual charges can be made. A well-informed writer in the *Financial News* (September 24, 1936) gave computations of the total charges, expressed as an annual percentage of the initial price of sixteen flexible trust units. We have added our calculations, on a similar basis, for the five flexible trusts which have since been formed. The method consists in taking the effective total sum accruing to the managers out of the initial price (including the average amount of the price adjustment where necessary) and expressing it as an annual figure over the life of the fund (in other words, as an annuity during the life of the fund which could be purchased with the capital sum) allowing for interest at 4 per cent. To this figure is added the annual percentage charged for management.

The table opposite sets out the life of the trusts, the preliminary and annual charges, the total price adjustment, and the annual equivalent of the total charge, on this basis of calculation.

Computed on an annual basis, it will be seen that the effective charges for management show a wide range from 0.3775 per cent. per annum for the British Empire First Unit to 1.4607 per cent. for Capital Securities. Trusts with shorter lives, from five to ten years, show a correspondingly higher annual charge. Much of the preliminary charge, of course, represents fixed costs, independent of the life of the fund, to meet formation expenses. The lower charges shown by the 20-year trusts are due in part to the fact that this cost is amortised over a longer period.

If the groups are examined in turn, it will be seen that the Municipal and General group shows higher annual figures among the long-life trusts (after reckoning in brokerage in its charges and for British Empire First Unit in order to give comparability with the other trusts). British Empire First Unit couples the "cash fund" method of operation with markedly low costs. There is, however, a datum line in trust charges, and it seems probable that few managements (if they deny themselves all opportunity of making profits in the underlying securities) could operate at a much lower cost per annum.

The Trust of Insurance groups costs work out slightly over the ½ per cent. mark for its three principal trusts, and under that datum for the recently-formed Investment Trust Units and (significantly) lower still for the Scottish Bank Insurance and Trust units. Compared with these figures, the short-life trusts cost appreciably more for annual management. The highest is Capital Securities, whose annual charges, based on the initial price, are as high as 1.4607 per cent. per annum, over the five-year life of the trust. The remaining trusts whose charges work out to more than 1 per cent. per annum are all of ten-year life—First Recovery, Aviation and Universal, and Domestic.

These rates, as we have seen, do not necessarily cover the entire sources of income which are available to the managers. Jobbing in the underlying securities, and profits from the purchase and resale of their own units (which are likely to be small in practice) must also be taken into account for many of the trusts.

CENTURY

FIXED TRUST CERTIFICATES

offer to Investors the opportunity to spread sums from approximately £20 upwards over a selected list of

100 FIRST-CLASS SECURITIES

DISTRIBUTION OF THE INVESTMENT:

Oil	Gold Mines
Insurance	Commodities
Gas and Electricity	Miscellaneous
Iron, Coal and Steel	Stores and Catering
Tobacco and Breweries	Mining and Finance
Transport and Communications	Textiles and Artificial Silks
Property, Building and Allied Trades	Newspapers and Paper Manufacturers
	Cinemas and Cinematograph

At 21/- per sub-unit (the price current on 14th April, 1937), and based upon income distributions declared for the twelve months ended 15th March, 1937, the yield was as follows:—

From dividends..... **£4.18.5 %** gross
and
From sale of bonuses and rights... **£1.19.2 %** net

Certificates are issued by the Trustees,
MIDLAND BANK EXECUTOR & TRUSTEE CO., LTD.

who hold the underlying securities on behalf of Investors, collect all dividends, etc., and distribute the proceeds by warrant to Certificate Holders, without any deduction for expenses, on 1st May and 1st November in each year.

Over £20,000,000

has been invested in the Unit Trusts
of National Fixed Investment Trust,
Ltd., and its Associated Companies.

Free booklet "Century," which is the basis of all transactions, may be obtained from any branch of the Midland Bank, from any Stockbroker, or direct from the Managers,

Investment Policy of Flexible Trusts

THE essence of management lies in the power to change. The essence of the fixed trusts was the denial of this power, except in the event or expectation of some adversity. In fact, eliminations among the fixed trusts have not been carried out on any noticeable scale. In one outstanding case during the past year a share fell within the field of elimination, but our records show that it has been discarded by only one of the trusts which originally chose it.

An attempt to measure the positive effect of management upon the flexible unit trusts is not easy. The information provided shows the percentage distribution of investments at regular distribution dates. But if the actual size of the fund is growing, differences in percentages may not be incompatible with an increase in the holding of each security without a single switching operation. Conversely, the managers might present identical percentage distributions on two given dates, although in the meantime the investments of the fund could have been turned completely over.

The extent to which switching occurs probably varies widely among the trusts. In the case of the Trust of Insurance group, for example, it seems likely that the comparative stability exhibited in the percentage figures shows that the funds are regularly augmented by roughly similar proportions of the underlying securities, and that the need for switching is not great. For a trust like Capital Securities, however, where the managers have profitable recovery holdings as their main objective, the extent of switching may well be considerable.

In the two tables which follow, the percentage distribution particulars issued by the flexible trusts concerned have been summarised into groups, according to the nature of the investments in each particular case. Such summaries do not give a precise idea of changes in management policy with regard to individual investments, but they give a better impression, perhaps, of the general tendency of management over a period.

We may begin with the *doyen* of flexible trusts—Foreign Government Bond Trust. Here the opportunities for switching have probably been considerable during the past two years. The table below shows the effect on the composition of the trust:—

FOREIGN GOVERNMENT BOND TRUST
Geographical Distribution of Investments

	Sept. 25, 1934	Mar. 8, 1935	Sept. 6, 1935	Feb. 28, 1936	Sept. 4, 1936	Feb. 26, 1937
Central and S. America	50.6	29.3	31.8	46.4	46.1	48.2
Far East	12.4	33.8	23.2	22.8	25.1	27.4
Near East	8.0	9.3	8.6	7.6	6.6	5.0
Europe	29.0	27.6	36.4	23.2	22.2	18.9
Cash	...	...	...	...	...	0.5
	100	100	100	100	100	100

Movements during 1936 do not rival the swing between South American and Far Eastern bonds which was shown during the trust's first year of operation, but the preference for recovery stocks in the South American and Far Eastern markets (Chinese holdings, for example, have risen from 14.1 per cent. of the fund to 20.4 per cent. over the past year) is still noticeable.

The Trust of Insurance Shares has issued five distribution statements since the end of 1934. In this case, an analysis may be given of the principal holdings of individual shares, both fully and partly paid, at the respective dates, together with the holdings of cash and trustee securities. These particulars are set out at the head of the following column.

The distribution shows a greater element of stability, both in the typical individual holdings and also in the general disposition of the trust holdings between fully and partly paid shares. During 1935 the proportion of fully-paid shares fell to a little over 30 per cent., where it has since remained.

TRUST OF INSURANCE SHARES
Percentage Distribution of Investments by Companies

	Dec. 31, 1934	June 30, 1935	Dec. 31, 1935	June 30, 1936	Dec. 31, 1936
Fully Paid Shares	%	%	%	%	%
Britannic	4.06	4.50	3.91	4.60	4.17
Com. Union	5.99	3.34	2.16	0.48	0.40
Lon. and Man.	7.67	6.45	5.17	3.64	3.39
Pearl	6.29	7.35	5.50	4.71	4.53
Phoenix	4.83	4.42	3.94	4.23	3.94
Prudential	3.15	3.62	5.38	4.36	4.35
Yorkshire	3.74	2.86	0.87	0.67	0.59
Other fully-paid shares	5.33	6.87	4.63	7.41	10.85
Total fully paid	41.06	39.41	31.56	30.10	32.22
Partly Paid Shares					
Atlas	3.94	4.82	3.36	3.26	3.64
Economic	5.38	2.21	2.39	2.18	2.22
Legal and Gen.	3.66	3.16	5.83	6.54	6.63
London	3.87	4.33	4.29	4.81	4.30
Lon. and Lan.	3.64	3.39	4.34	4.07	3.40
N. Brit. and Merc.	4.39	4.31	3.85	1.50	1.55
Royal	3.45	4.49	4.82	5.87	5.55
R. Exchange	3.44	2.32	2.08	0.78	0.81
Sun Fire	3.10	1.31	3.49	5.66	5.49
Other partly paid shares	13.47	18.13	19.50	20.32	20.46
Total partly paid	48.34	48.47	53.95	54.99	54.05
Trustee securities and cash	10.60	12.12	14.49	14.91	13.73
	100	100	100	100	100

Under the special arrangements which this trust employs for covering the uncalled liability on any partly-paid holdings, a due proportion of trustee securities and cash is kept, and at the end of 1936 this represented 13.73 per cent. of the fund.

For no other flexible trust are the results of more than three distributions yet available. We may, briefly, compare the results which have been issued by other trusts. Between March, 1936, and September, 1936, the Trust of Bank and Insurance Shares increased its holding of bank shares from 44.64 per cent. to 54.09 per cent. of the fund. Of this increase, home banks accounted for about half (29.40 per cent. against 24.77 per cent.), while overseas banks rose from 19.87 per cent. to 24.69 per cent. Participation in insurance shares fell from 38.15 per cent. to 35.30 per cent. and in trustee securities from 12.75 per cent. to 5.88 per cent.

The Trust of Bank shares, under the same management, also increased its proportionate interest in overseas banks considerably between August, 1936, and February last. Home banks now represented 39.35 per cent. of the trust's portfolio, against 44.08 per cent. at the earlier date, while the following increases are shown in overseas banks holdings:—

	August 27, 1936	February 18, 1937
Canadian banks	11.4	16.2
Australian and N. Zealand	8.4	12.45
Indian and Eastern	8.2	12.38

These percentage changes reflect the quest for recovery investments among dominion bank shares.

It will be possible to analyse the holdings of other flexible trusts in greater detail as further time elapses. Where comparisons between two dates are only available (as in the majority of instances at present), movements cannot be exalted to the status of a trend. For the most part, flexible trust portfolios show greatest emphasis on industrial recovery holdings in the heavy industries, textiles and shipping groups, and on commodity shares, such as base metals and oil.

Judging from the particulars available, managers can in most cases claim a successful record, but it is still early to appraise their precise degree of success. The proof of this particular pudding has not yet experienced the full test of the investor's palate.

UNIVERSAL FIXED TRUST CERTIFICATES

PROGRESS

Certificate holders who purchased Universal Fixed Trust sub-units in July, 1934, at the original issue price of 19/9 per sub-unit will note with interest that the total distributions since that date amount to 3s. 5.72d. gross per sub-unit. Of this sum 2s. 7.14d. was received from Dividends, 8.34d. from the sale of Bonuses and Rights, and 2.24d. was in respect of capital repayments on two of the Unit securities. At the original issue price, the average annual yield over the period of 2½ years has therefore been:

From Dividends	...	...	...	£5.5.2% gross.
From sale of Bonuses and Rights	...	...	...	£1.8.2% net.

Based upon the two last half-yearly distributions on 1st October, 1936, and 1st April, 1937, and at 22s. 3d. per sub-unit (the price ruling on 14/4/37), the annual yield obtained was:

From Dividends	...	...	...	£4.15.3% gross.
From sale of Bonuses and Rights	...	...	...	£1.19.6% net.

By a single purchase of Universal Fixed Trust Certificates, the investor's capital is distributed over 74 first-class securities. Sums from approximately £20 upwards may be invested.

The Function of the Trustee

In their report last July, the Board of Trade Committee drew special attention to the position of the trustees in the unit trust movement. The strict limit of their responsibility, it was shown, could only be ascertained by careful scrutiny of each trust deed, and this was hardly possible for the average small investor. Undoubtedly the manner in which the trustees' names had been given undue prominence in some forms of advertisement had given rise to some measure of misconception regarding their actual powers and duties.

The trustee's function, in the case of fixed trusts, is to act as a depository and general supervisor only. He must ensure that no sub-unit certificate is issued unless it is backed by the deposit of the requisite amount of underlying securities in his strong room, and he receives all income for the benefit of the trust, which is subsequently distributed to the sub-unit holders at the end of the proper period. In certain cases trustees may have the power to determine the size of fixed trusts. In almost every case, the trustees have the right of advice or the power of veto when the managers propose to eliminate any security and substitute another in the later type of fixed trust.

In order to correct the surprisingly widespread impression that the trustees, with their millions of resources, are in some sense "guarantors" of the capital and income of the trusts, it has become more usual to describe them as "Custodian Trustees." The term emphasises the essentially formal supervision which they exercise over the fixed trusts. In advertising booklets explaining the operations of the flexible trusts, again, the attention of readers has usually been directed to the fact that the trustees are not responsible for the original choice of investments, and that they disclaim any duty to supervise the investment policy of the managers.

Trustees and Flexibility

Examination of the trust deeds of recently formed flexible trusts, however, suggests that the trustees, in fact, accept certain responsibilities, though usually of a negative character, with regard to investment policy. In some funds the trustee has absolutely no responsibility. This applies, for example, to the Municipal and General Funds, in which the managers are free to dispose of their funds (subject only to the provisions of the trust deed) and to hold cash if they deem it wise. In other cases, trustees may be obliged to consider all proposed alterations in the portfolio and to give or withhold their consent as they, in their sole discretion, think proper. The Trust of Bank Shares and Trust of Bank and Insurance Shares are cases in point. Between these two extremes, cases may be found in which the manager has power to initiate investment policy, while the trustee may have power to order the time or method of selling.

Detailed examination of the individual differences of trustees' duties and rights would be an unduly lengthy process. The trust deeds show no uniformity of practice, although it appears that some trustees assume a fairly considerable private responsibility for the flexible trusts which are under their guardianship. In the case of the Investors Flexible, the trustee has power of veto in investment policy; in other cases, positive consent of the trustees is required. In certain trusts, the managers may take a decision to sell a given share, but the trustees reserve the power to decide when and how to sell. This power, presumably taken in order to safeguard the unit holders against any dereliction of duty on the manager's part, suggests that in marginal

cases flexibility might not be fully achieved. If the manager decides to sell on the basis of a given price, and the trustee has power to wait for another price according to his own ideas, full flexibility and management discretion is not achieved. The fixed trusts, evidently, have left their legacy in these trust deeds, and the fact that the trustees' consent is required in many cases where the managers propose to keep a balance of cash in the fund further suggests this historical line of development.

Instances of almost complete control over investment and switching by the managers are to be found in the trust deed of Bank Insurance and Financial Shares, which indemnifies the trustee "on account of anything done or omitted by the trustee in good faith in accordance with or in pursuance of any request or instructions of the managers." The deeds of British Transport and Capital Securities give the managers uncontrolled discretion as to investment, including sales and exchanges, and declare that "the Custodian Trustee shall not in any circumstances be responsible for the selection, exchange or alteration of any investment."

From Acquiescence to Veto

In certain trusts the trustee may be required to approve the method of purchase and sale of securities, while disclaiming any responsibility for the trust's investment policy. This applies, for example, to Metals and Minerals. Separation of the decision to sell and the method of sale—the latter falling under the trustee's discretion—is to be found in the deed of First Recovery, which declares that the trustee shall enjoy the fullest discretion as to the time or mode of the sale, including the right to postpone such sale for as long as in his discretion he shall think fit, except in the case of the unwinding of the trust.

The wording of the Investors Flexible deed shows that the manager's investment policy is subject to the veto of the trustee, both as to new investment and switching or sales. But here, again, the trustee disclaims responsibility for investment policy, although his powers in this instance are probably at a maximum. The trustee's power is sometimes expressed in modified form, such as the absence of objection in the Keystone Flexible and the positive act of consent in the Trust of Insurance group.

The conclusion from this analysis appears to be that, while the trustees are unwilling to assume positive responsibility for unit trust investment policy, they are concerned to preserve power in order to prevent the managers from pursuing palpably incorrect policies. Yet the trustees are almost unanimous in disclaiming any measure of responsibility for investment policy in general. The particular stress upon the method of selling is somewhat difficult to understand; like the moderating counsels of a Second House, it may prevent a headstrong manager from damaging the interests of his unit holders. Yet the same objective is open to the trustee by taking power to superintend the original and subsequent purchases of securities. The emphasis upon control of selling policy—designedly to prevent a manager from throwing out good securities at the wrong time—might, in fact, introduce an element of inflexibility into flexible unit trust practice. The same objection, in principle, appears to apply in the case of veto. The investment functions of the trustees may, in general, be regarded as negative safeguards, rather than a positive contribution to the management of a well-diversified investment portfolio.

The Trend of Quotations

WITH the passage of time, the closing of trusts becomes more evident. Of the 56 trusts in existence when our last survey of the unit trust movement was published, only 7 were stated to be closed. Of the 72 trusts of which particulars are shown in our directory on pages 16 to 21, no fewer than 24 are now closed.

In the majority of cases, the managers of a closed fixed trust are willing to do business only one way—quoting "bid" prices at which they are prepared to buy back their sub-units. Some managers, however, continue to offer sub-units of closed trusts to would-be purchasers at a turn above the bid price. The decision to close a trust involves detailed calculation by the manager. After the first flush of sales, when the trust obviously shows itself to be a success or not, the rate of increase begins to fall off; after a time the managers may begin to receive resales from the public; at a later stage the resales may balance the volume of new buying, and eventually the total size of the trust begins to fall.

Such is the ordinary evolution of a trust. As soon as it is established beyond question that the rate of resales is approaching the volume of new orders, the managers need seriously to consider whether to close the trust. Their reasons will be clear if we consider how a sub-unit is costed. Included in the price of the unit is the preliminary service charge, together with such adjustments as the raising of the price to the nearest three-penny multiple, and any differences arising from pricing the underlying securities fractionally higher than the actual dealing prices. If the effective loading charge, plus all adjustments, amounts to, say, $7\frac{1}{2}$ per cent., the actual cost of an 18s. 6d. unit will total about 20s. It is customary, however, for the managers to quote a repurchase price, when the trust is open, 6d. or 1s. below the offered price for new units. The 20s. units, that is, will be repurchased by the managers at, say, 19s. 6d. or 19s.

Price Calculations for Closed Trusts

Suppose, however, that orders for new units suddenly dried up, and the public were "sellers only." The manager could not afford to quote 19s. 6d. for repurchase. That is a price based on the "offered" market prices of the underlying securities, plus expenses, and less a turn which covers the manager's expenses of registration, and may give him a small margin. But if sellers prevail, he will have to "unwind" the trust, or "break down" some of the units. He will only be prepared to bid a price based on the selling values of the underlying securities in the unit, less all expenses for commissions and fees, and less an adjustment to the next lowest three-penny multiple.

If this metamorphosis from open prices to closed prices were carried out overnight, holders of sub-units would find an utterly inexplicable fall of 2s. 6d. to 3s. in the price of their holdings. In fact, the managers usually perform the levering down of prices, as the trust nears the stage of closure, without attracting undue attention. They may maintain stable prices for sub-units when the underlying securities have gone higher—that has undoubtedly been the favourite method employed. When the new equilibrium "bid" price has been reached, the managers announce that they are prepared to repurchase, but do not offer any new units for sale. In comparing prices, therefore, allowance must be made, when the trust is closed, for a fall in price by this method of adjustment which may amount to 3s. per sub-unit.

In certain respects it is not only discreet but also advantageous for the managers to unwind a fixed trust as soon as its natural growth has come to an end. The original purchaser paid a loading charge which was to cover the cost of management for anything up to twenty years. If the managers close the trust after a year or two, and deal on the basis of "ex all" prices, they receive the full loading charge, in respect of any repurchases which they make, over a much shorter period. Those managers who are prepared to offer sub-units, even of closed trusts, base the price on the break-up value of the trust (the "bid" price) plus a turn to cover expenses. Such offered prices thus include a charge which is rather less than the original

loading charge, and, other things being equal, they represent a favourable buying opportunity for the investor, so far as expenses are concerned. He has, however, still to judge the trust in relation to the present position of its portfolio, its yield, and potential scope for further appreciation.

Comparative Index Numbers

The actual prices of fixed and flexible trust units are recorded each week in *The Economist*, under the heading "Active Security Prices." A record of prices, when there were fewer trusts in issue, appeared in our last Survey of the movement. On this occasion we present a comparison between the movements of unit trust quotations over the past fifteen months and the movements of *The Financial News* ordinary share index (as a sensitive market indicator) and the Actuaries' Investment Index (whose movements are less volatile). The results have been prepared in the form of index numbers, the first of which relates to the prices of 35 fixed and flexible trust units since December, 1935, while the second is an index of flexible unit prices, covering seventeen trusts, and based on quotations at the end of July last year. The comparisons of the two series are set out below:—

	35 fixed and flexible trusts	'Financial News' Index	Actuaries' Index	17 flexible trusts	'Financial News' Index	Actuaries' Index
December, 1935	100	100	100	...	...	...
February 29, 1936	103.0	105.1	104.7	...	...	...
March 31	102.0	104.0	102.5	...	...	...
June 30	102.2	104.7	102.8	...	...	...
July 31	...	...	...	100	100	100
August 29	...	...	...	101.7	101.7	102.4
September 30	104.2	111.1	109.2	102.6	103.8	103.8
October 31	...	...	...	105.5	107.5	106.4
November 30	...	...	...	106.3	106.9	106.6
December 31	107.3	116.6	112.4	107.8	108.8	108.8
January 31, 1937	106.0	114.1	112.0	108.1	106.6	106.5
February 27	103.2	112.7	109.5	105.8	105.2	104.1
March 31	101.4	110.1	107.1	104.7	102.8	101.8

It will be seen that the general index of 35 fixed and flexible trusts has fallen since the end of February, 1936, by approximately $1\frac{1}{2}$ per cent. This fall cannot be attributed to the downward adjustment of quotations to a closed basis, since no trusts which have quoted "bid" prices during the year are included. All trusts which have maintained double prices over the period, however, have been included. Although the index numbers are not statistically perfect, owing to their narrow base, the composite trust movement during the past year shows smaller variation than *The Financial News* and Actuaries' indices.

For the seventeen flexible trusts, however, the index (based on quotations at the end of July last year) shows a greater advance, compared with *The Financial News* and Actuaries' indices. In part this is due to the inclusion of a greater number of speculative securities in the flexible trusts' portfolios for appreciation, which do not appear to have suffered in the recent market reaction to the same extent as some of the market leaders.

A few individual movements may be given in detail. The record appreciation over the year to March 31st is shown by Oil Certificates with a rise from 23s. $7\frac{1}{2}$ d. to 31s. 3d. bid. The Limited Investment Fund shows 17 per cent. appreciation at 25s., while Scottish and North Country Fund and Aviation and Universal tie with 14 $\frac{1}{2}$ per cent. appreciation. Capital Securities' Trust's record extends over eleven months but shows appreciation at the rate of 46 per cent. over the period, the units having risen from 8s. $4\frac{1}{2}$ d. at the end of April last to 12s. 3d. at the end of last month.

Although fourteen trusts have appreciated by more than 5 per cent. during the past year, thirteen trusts show a fall of 5 per cent. or more, the majority being fixed trusts whose portfolios give some evidence of "dating." In part, however, such falls represent the downward adjustment of prices on the closure of certain trusts. Finally, detailed examination of price movements reveals that certain flexible trusts have not succeeded in showing any capital appreciation, although this is usually stressed as one objective of flexible trust management.

Particulars of Management Companies

Management Companies: The Year's Changes

IN our previous Unit Trust Supplements we have given particulars, based on the annual returns lodged at Bush House, of the companies responsible for the management of unit trusts. The particulars are necessarily limited to capitalisation, directors and the principal shareholders, and the real identity of the latter is frequently masked by nominee holders. And since all the companies concerned are private registrations, information regarding profits is completely withheld.

With the growth of the flexible trust, the matter of management personnel has assumed increased importance. For this reason alone the table which begins on the preceding page deserves careful study. Official returns are, of course, out of date in varying extent, but they have been supplemented as far as possible by later information. Comparison of the table with the directory of management companies given in our previous Supplement reveals certain important changes during the year. Only one new group has been formed—F. T. M., Limited, which was known for a time as Aviation Trust Managers, Limited. This company has an issued capital of £19,000, and has floated two trusts—Aviation and Universal, and Domestic. All other flotations during the year have been associated with previously existing groups.

The latter have, in several cases, undergone important changes in structure and capitalisation. The tendency during the year has been towards simplification of management group structures through holding companies (such as the new National Group of Fixed Trusts concern) or through the absorption of existing companies under a single company (such as Fifteen Moorgate Unit Trusts). Increases of capital by existing companies, which receive detailed comment below, are common; they appear to arise, in many cases, from the capitalisation of profits rather than the issue of new shares for cash.

A number of groups, meanwhile, have rearranged their holding arrangements or have created further subsidiaries or associated companies. Fixed Trust Investments has registered Unit Trusts with a capital of £25,000, held by the parent company, which manages the first flexible trust in the group, the British Empire First Unit Trust. Two new companies have appeared in the Selective group—Trust of Transport Shares (capital £10,000) and Proved Securities (capital £20,000), which manage the Trust of British Transport and the Bank Insurance and Financial Shares Trust, respectively. These companies have certain directors in common, and Selective Fixed Investments has a large holding in the latter company. Scottish Bank Insurance and Trust Shares is an associate of Trust of Insurance Shares, and has several directors in common.

Improving Securities Trust, Limited, is a new concern associated with British General Fixed Trust, Limited.

Investors Specialised Fixed Trusts (the "Dawnay Day" group) has changed its name to Fifteen Moorgate Unit Trust, and has acquired all the capital of Security Trust Managers, a company formerly controlled directly by Dawnay Day. The greatest changes have occurred in the "National" group. The parent company—formerly United Fixed Trusts—has changed its name to The National Group of Fixed Trusts. It is now entirely a holding company, and under its new articles of association the company itself is not empowered to constitute fixed trusts or issue units. The direct managing companies in the group are subsidiaries of this concern. United Fixed Trusts, Limited, is now registered with a nominal capital of £100.

Among the companies which have altered their capital, Allied Investors have redeemed their preference shares and have issued £40,000 of registered notes—the only instance where a management company has prior charges in issue. A capital redemption fund of £20,000 is also shown. British Industrial Corporation, Ltd., has made an allotment of ordinary shares to West Nominees, which has increased the issued capital by £22,880. Of its subsidiaries, Gold Producers Fixed Trust, Ltd., Rand Fixed Trust, Ltd., and Group Units Investment Trust, Ltd., have all increased their capitals from £100 to £10,000. Fifteen Moorgate Unit Trusts has increased its capital by £60,000, and The National Group of Fixed Trusts by £18,259. Trust of Insurance Shares has issued a further £100,000 of capital, bringing the total to £110,000, instead of £10,000 as formerly. The Selective group has made a further allotment of £4,843.

Changes in directorate have not been extensive. Mr E. S. Baring-Gould has resigned from the board of Allied Investors. Mr S. I. Fairbairn has joined Municipal and General. Mr P. N. L. Nicholson is managing director of Fifteen Moorgate and Mr D. Boyle has left the board, which now includes Sir C. Headlam, Mr E. G. Underwood—already on the board of Allied Investors—has replaced Sir P. A. M. Nash on the board of Selective. Sir B. E. Halsey Bircham has joined the board of Trust of Insurance. Mr L. S. Redman has been elected to the board of Protected Fixed Trusts, Mr A. E. Pollard having resigned.

No extensive changes in shareholdings are revealed in the table. Selective's increased capital has resulted in a certain change in the size of holdings; and following the large increase of capital by Trust of Insurance, a controlling interest in the company is now held by Equity Law Investment Trust, Ltd.

The Unit Trusts Association

THE movement has its own representative body, the Unit Trusts Association. Its embryo was a Fixed Trusts Standing Joint Advisory Committee, formed by certain management groups in April, 1935. Within the next year the Association of Fixed (subsequently Fixed and Flexible) Trust Managers had been formed. The first signatories of the Association's constitution comprised seven groups. In April, 1936, the following ten groups became members:—

National, Keystone, British Empire, Provincial, Protected, Allied Investors, British General, Selective, 15 Moorgate and Transport.

Later, the Selective and Transport groups were merged, and a new group, F.T.M., joined the Association. Thus, at present, all but two of the existing groups in the movement are members of the Association. The name was changed to Unit Trusts Association, after the issue of the Board of Trade Committee's Report criticising the potentially misleading implications of the term "fixed trust."

The most important of the Association's aims is "the protection of the interests of the investing public and the members of the Association by prescribing from time to time a standard of conduct for members." The Association is a non-profit making body. According to its constitution, as approved on April 22, 1936, a condition precedent to membership is the deposit by each management group of a sum of £20,000, exclusively applicable to the performance of the group's obligations. The constitution also provides that each member shall pay an entrance fee of £25, an annual subscription of £20, and a further sum to be based on the sale value of units sold, in respect of every trust which he manages. The constitution also provides for a president, with no official connection with any member of the Association, an elected chairman and deputy chairman and a representative council to manage its affairs, subject to the decision of general meetings at which each member of the Association has one vote.

Representative bodies can obviously perform many useful functions, even in an inherently competitive branch of business. Where a movement is comparatively new, and competition which hits below the belt is deprecated, it is important to know where the belt is. At the beginning of last year, it was obvious that the process of solving the movement's problems *ambulando* had become inexpedient. Apart from the need of preserving its credit from the dubious financier who might prostitute its objects, some of its existing members were ready to welcome authoritative corporate guidance on the problems which experience had thrown up. The number of groups in the movement was small enough to make effective joint action possible; for when self-denying ordinances depend on gentlemen's agreements, the fewer the number to agree the better. The difficulty experienced by the building society movement in securing adherence to a code enunciated on the initiative of some of the largest societies, emphasises the advantages of the unit trust movement's compactness. Presumably, membership of the Unit Trusts Association implies a certain solidarity, which may, in practice, extend even to the financial sphere—though this point is not, of course, mentioned in the Association's constitution. Ultimately, the movement's most valuable asset is its credit with the public. To that extent, at least, its position resembles that of the banks, and its members have a common interest in maintaining unimpaired an asset from which they draw a common benefit. Additionally, at the time of the Association's formation, the recent appointment of the Board of Trade Committee of Inquiry suggested the advisability of a body which could speak with its friends or critics in the gate.

The Association's Constitution

It is instructive to compare the "Rules of Management to be Observed by Members," drawn up before the issue of the Board of Trade Committee's Report, with the provisions

of that Report. The Committee stipulated for a £20,000 deposit for every individual trust; the Association provided for a single deposit of £20,000 per member, without reference to the number of trusts which such a member might administer. The Association's deposit, but not the Committee's, could be reduced, in certain circumstances and in proportion to the financial arrangements made for unit and sub-unit holders elsewhere, during the period in which a given trust had direct relations with the public.

The Association's code followed, in some ways, the draft regulations drawn up by the Sub-Committee of the Stock Exchange (outlined in our last Supplement), which the Board of Trade Committee described as "representing the highest common factor of agreement." The constitution provided that trustees must be insurance companies or banks, and that no security should be included which was not dealt in on a recognised Stock Exchange. It laid down the way in which purchase prices of units or sub-units should be calculated, and provided for an undertaking by managers to repurchase sub-units on definite terms. In this connection the establishment of a reserve fund was postulated, but its amount was left to be agreed by the managers' own auditors, and it was not required to be segregated from the general assets of the managers. No restriction was laid on the scope of advertisements, but in cases where reference was made to the income yield on a unit or sub-unit, it was laid down that the yield from cash and other than cash sources must be separately specified. Provision was made, in the case of trusts of a flexible character, for notification to registered unit or sub-unit holders of all portfolio changes at the time of every income distribution. Where the remuneration of the managers, etc., was provided out of an initial loading charge, the Association's constitution stipulated for an escrow fund to cover future expenses on a basis to be laid down by the Association; or for the making of such other arrangement as would be acceptable to the trustee. Provision was also made for the retirement of managers on the happening of certain contingencies, and the limitation of the life of trusts to a maximum of twenty-five years. Other clauses related to the make-up of trust accounts, and particulars to be included in published circulars. As regards "wasting" investments, the constitution placed no limit on their inclusion, but stipulated for the publication of information showing the percentage of the unit represented by each wasting investment and the nature of any provision for amortisation. Finally, every member of the Association was required to engage to abide by any decision of the Council prohibiting the inclusion of any given security in any future trust.

A Code in Outline

The Association's code was thus, in some respects, a code in outline, whose details were left to be filled in as experience should decide. Generally, its terms were less stringent than those subsequently recommended by the Board of Trade Committee. Like the Committee's Report, it was drawn up before the flexible trusts had fully attained their present importance in the movement, and consequently it contains no comprehensive provisions covering their special problems of management and accounting. The Association's future policy must necessarily be subject, in many ways, to fuller knowledge of the eventual provisions of any unit trust legislation which may be passed by Parliament. Inside the movement itself, the Association's power, as a regulatory force, will be contingent on the support obtained from its own members, and here again the past year's events suggest that a policy of *festina lente* may be deemed advisable for some time. Although the groups remaining outside the Association are small in number, their influence, financially and otherwise, is far from negligible, and their adherence would further strengthen the Association.

The Board of Trade Committee's Report

THE opinion of some representatives of the unit trust movement is that the Report of the Board of Trade Committee on Fixed Trusts went far to kill them with kindness. In one sense, the Report was a victory for the movement. Before its issue, there was a fear in some quarters that the Committee might recommend statutory limitation on the creation of new trusts. In fact, the Committee decided that the trusts ought to have freedom to be fruitful and multiply. They even envisaged the extension of unit trust principles to assets as diverse as blocks of flats and apple orchards. Before the issue of the Report, again, the social and financial status of the movement as a whole was undefined. But the main tenor of the Report was a vindication of the movement's main principles. The Committee were not exactly enthusiastic, it is true; but their Report left unit trust management open as a career which even a Cabinet Minister's son might adopt if he wished. All this was great gain. But from the viewpoint of the movement, it was purchased at appreciable cost. We propose, in the following paragraphs, to discuss the price of vindication.

The Committee's Personnel and Recommendations

The Committee included no representative of the management side of the movement. It was, however, strong and adequately representative of finance, the law, public administration and economics. Sir Alan G. Anderson, G.B.E., M.P., was appointed chairman. Finance was represented by Mr E. H. Lever (joint secretary of the Prudential Assurance Company); by Mr R. P. Wilkinson (chairman of the Stock Exchange Sub-Committee on Fixed Trusts), and by Mr C. U. Peat (of Peat, Marwick, Mitchell and Company). The Treasury Solicitor, Sir Thomas Barnes and the Public Trustee, Sir H. Ernest Fass, represented two departments closely interested. The personnel also included Mr F. W. Pethick-Lawrence, formerly Financial Secretary to the Treasury, who had a wide experience of financial problems. The legal profession was represented by Mr H. G. Brown and Mr Gavin T. Simonds, K.C., and the science of economics by Mr H. D. Henderson. The Committee which was appointed by a Board of Trade Minute of March 9, 1936, worked expeditiously and cheaply; for its Report (Cmd. 5259) was made available to the public in the middle of August, 1936, and cost the nation only £99, including £61 for printing and publishing.

The following is an official summary of the Committee's recommendations:—

- (i) Every Unit Trust to be registered.
- (ii) Various particulars to be filed with the Registrar and to be open to public inspection.
- (iii) Management of Unit Trusts to be undertaken only by bodies incorporated in the United Kingdom.
- (iv) Deposit to be made with the Paymaster General by the Managers in respect of each Trust managed by them with conditional exemption for existing Trusts.
- (v) Certificate of Registrar to be necessary before units (or sub-units) are offered for sale.
- (vi) Trustees to be of a specified status.
- (vii) Full Trust Accounts and Accounts of Management Company to be filed and to be available to unit holders.
- (viii) Full disclosure of indemnities to Trustees which are additional to those accorded by law.
- (ix) Managers not to assume any indemnity which frees them from liability for negligence, default, breach of duty or breach of trust.
- (x) Trust deeds to incorporate certain compulsory provisions including provision as to transferability of units (and sub-units).
- (xi) The Court to have the power to wind up a Unit Trust as if it were an unregistered company.
- (xii) Any community of interest or connection between Managers and Trustees to be disclosed.
- (xiii) Offers for sale to be accompanied by full particulars of constitution and operation of Trust.
- (xiv) Advertisement with certain minimum particulars to be permitted, without being regarded as offer for sale.
- (xv) (a) On all transactions with the Management Company a member of the public to be given a contract note giving specified

particulars and (b) buyers from the Management Company to be given full particulars of constitution and operation of the Trust.

(xvi) Copy of all circulars or other documents to be filed with the Registrar.

(xvii) Settlement duty to be exigible on the initial settlement of the Trust and as it subsequently expands.

(xviii) Stamp duty to be payable on transfers of units (and sub-units) except on original creation and sale of units (and sub-units) and except on sale of units (and sub-units) to the Managers for extinction; and transfers to be by written instrument.

(xix) Bearer certificates to be dutiable.

(xx) Contract notes to be liable for stamp duty.

(xxi) Restrictions to be placed on names of new Unit Trusts corresponding to those imposed on the names of companies registered under the Companies Acts and no names to include "Fixed" and "Trust" in conjunction.

(xxii) Directors of the Management Company and other interested persons and corporations not to be qualified to act as Auditors.

(xxiii) Appointment of Auditor to be subject to approval of Trustee, and Trustee and majority of holders of units (or sub-units) to have power to remove Auditor.

(xxiv) A meeting of unit (or sub-unit) holders to have power to appoint Auditors.

(xxv) Income distribution warrants to show clearly how the income distribution is calculated.

(xxvi) Directors of Management Company and anyone authorising the advertisement to be liable for loss sustained by purchaser arising from a false statement in an advertisement, circular, booklet, etc.

(xxvii) Trustee or given proportion of unit (or sub-unit) holders to have power to call a meeting of unit (or sub-unit) holders; list of unit (or sub-unit) holders to be obtainable.

(xxviii) Meeting of unit (and sub-unit) holders to have powers to remove or appoint Trustees, Managers and Auditors; to give directions as to voting on underlying security; and to initiate investigation into conduct of Trust.

(xxix) Voting rights, if any, of unit (or sub-unit) holders arising from trust property to be specified in summary of information (Appendix II) and in the Trust Deed (Appendix IV).

(xxx) Machinery to be provided for investigation by an Inspector appointed by the Board of Trade into conduct of Trust.

(xxxi) The Court to have power to sanction alterations in constitution of Unit Trusts on similar lines to the Court's powers with regard to compromises or arrangements between a company and the members or creditors under Section 153 of the Companies Act, 1929.

(xxxii) Hawking of units (or sub-units) to be prohibited.

(xxxiii) Copy of the Trust Deed to be obtainable by prospective buyers of units (or sub-units) at a reasonable cost.

(xxxiv) Foreign and dominion organisations of the unit trust type and sales of units (or sub-units) by them to be subject to the general regulations.

(xxxv) Penalties recommended.

Its Findings Considered

Consideration of these provisions suggests that the Committee based its findings on two far-reaching canons. The first was that there should be a financial bar to the entrance of men or companies of straw to the movement; and the second was that unit holders and the public generally should have access to the fullest possible information concerning every unit trust. The chief instrument for achieving both these ends was to be, *mutatis mutandis*, that already adopted for British limited companies—namely, the registration and regular filing of documents with an officer of the Board of Trade. The Committee proceeded to fill in this outline with a number of detailed requirements, both on the financial and the publicity side, which in stringency went far beyond those laid down, for example, in the constitution of the Unit Trusts Association.

On the financial side, the Committee recommended the closing of a loop-hole under which settlement duty might be payable only on a small original part of the trust settlement by insisting that duty should be paid as and when all further property was brought in. The transfer of units or sub-units from one owner to another was to be made liable to stamp duty; and contract notes, in respect of the purchase or sale of units, were to be brought, for taxation purposes,

within the meaning of the Finance (1909-10) Act, 1910. From the viewpoint of the movement itself, however, these requirements were insignificant beside the recommendation that it should be obligatory on the management companies to deposit a substantial sum of money (the Committee suggested £20,000) with the Paymaster-General *in respect of each unit trust which they managed*. Exemption from this requirement, it was suggested, should apply only to trusts which closed within three months of the publication of the Report and remained closed. Only when the deposit had been made (and other particulars suggested in the Report had been filed) should the Board of Trade's Registrar issue a certificate of registration which would allow the management to offer any units or sub-units for sale.

The particulars given on pages 16 to 21 of this Review show that, at present, some 12 groups manage as many as 72 trusts, and the average number of trusts per group is 6. So far as we are able to ascertain, the number of closed trusts at present is 24. Insistence on the Committee's requirement, would therefore, it may be computed, involve the putting up, and subsequent immobilisation, in round figures, of £960,000 by the movement as a whole. The deposit in each case would be invested by the Paymaster-General and earmarked for the protection of the unit holders of the single trust in respect of which it had been deposited. It would be allowed to form part of the general assets of the management company only when the Court had been satisfied that all liabilities of the management company to unit holders had been discharged—including the provision of a sufficient sum to cover expenses of management up to the expiration of the trust.

It would appear, in fact, that the money would not be released until (a) the trust had been closed and (b) the management company had made escrow provision for future management expenses *out of funds other than the deposit*. Clearly, the making of the deposit would not directly affect the ability of the management company to earn a satisfactory profit on its operations in connection with any single trust. Whether the trust were "successful" or not, from a selling point of view, the deposit money would be returnable when the management company had written *finis* to their venture, under the conditions mentioned above. But the requirement would certainly tend to limit large-scale participation in unit trust promotion and management to interests already possessing substantial capital resources. Responsible observers outside the movement will criticise it the more favourably on that account.

Unit Trust Publicity

So much for the first of the Committee's main principles, which may be termed the principle of substantial status. The second principle which finds expression in the Committee's recommendations is that of adequate publicity. To all dealings in unit trust certificates the maxim *caveat emptor* must needs apply; but the Committee was clearly determined that the buyer should have adequate data on which to base a sound judgment. In translating this principle into practice, the Committee appears to have been desirous, wherever possible, of assimilating its proposed code to provisions applied by the Companies Act to limited companies. Its recommendation debarring interested persons, and all corporations, from acting as auditors to unit trusts, for example, was based on Section 133 of the Companies Act. Its suggestion that any party who authorises a unit trust advertisement to be liable to compensate persons who suffer damage after purchasing on faith of the advertisement was derived from Section 37 of the Act. Numerous other provisions—such as those covering meetings of unit holders, Board of Trade investigations, the prohibition of hawking of units or sub-units, alterations in trust deeds by the Court and penalties for non-compliance with statutory requirements were all derived, directly or indirectly, from consideration of the Companies Act of 1929.

The most significant sections of the Committee's Report, however, were those dealing with publicity in matters which were, necessarily, peculiar to the unit trust movement. The Report recommended that the functions of management and trusteeship should both be limited to incorporated bodies in

the United Kingdom and that trustee companies should have at least £250,000 of their capital paid up in cash. It then proceeded to lay on each of them certain requirements, by way of disclosure, of a searching character. Managers were to be required to file with the Registrar (and thereby to render accessible to the public for a small fee), not only copies of trust deeds and particulars of management companies and their promoters and directors, but also copies of all agreements between management companies and trustees and copies of a statement of information covering a wide range of particulars. Any member of the public who inspected the last-mentioned statement (which, as we show below, was also to be an integral part of all advertisements offering units or sub-units for sale) could be presumed to have full cognisance of certain all-important matters. These included the paid-up capital of management companies; the responsibility of trustees; the selection of auditors; the exercise of voting rights; the sources of trustee remuneration; the provision of costs and management; the way unit prices were calculated; the obligation of managers to repurchase units and sub-units; the make-up of figures of income and yield; the amounts paid to promoters, etc.

The Committee next laid down various accounting provisions. Management companies, it was suggested, should prepare balance sheets, profit and loss accounts and separate accounts showing unit or sub-unit dealings for each trust. Among a large number of items to be shown separately were reserves for remuneration and expenses during unexpired trust periods; expenses for advertising and publicity (as distinct from management expenses); the amounts of agents' commissions on sales and repurchases; the amounts realised by sales of units or sub-units; and the amounts separately added to prices of underlying securities on account of accrued dividends, service charges, adjustment to next highest multiple of 3d., and various other particulars. Trustee companies, it was suggested, should prepare statements showing separately the constituent items in the amounts distributable each half-year, distinguishing amounts in respect of capital; statements showing the composition of the funds held on behalf of unit or sub-unit holders (a) as regards capital and (b) as regards income, and figures relating to transactions in investments and other assets and the income therefrom. Finally, the Committee made provision for the accessibility of these documents to interested members of the public.

Recommendations on Advertising

Having thus provided for financial publicity, the Committee recommended drastic regulations governing propagandist publicity. Broadly, all advertisements, circulars or pamphlets, with two exceptions, were to be regarded as of the nature of offers for sale. They were to include all the information mentioned above as being contained in the statement of information deposited with the Registrar (relating to management and trustee companies, costs of management, repurchase of units, income and yield, etc.). The only exceptions to this rule were to be: first, circulars of an informative character to existing unit or sub-unit holders; and, secondly, advertisements intended merely to "call the attention of the public to the existence" of a trust. These advertisements were to be confined to exceedingly brief particulars relating to the name, type, scope and auspices of the trust, the address at which full information could be obtained, and (as a sole concession to the seller's desire to praise his goods) a section "describing and commending the class of investment authorised." What such an advertisement was *not* to include was a form to be used by the public "to facilitate the application" for a unit or sub-unit. Any document which contained such a form was to be accompanied by all the particulars required of an offer for sale. One effect of this stipulation would seem to be that no Press advertisement could include a form of application unless it were accompanied by particulars on the grand scale; and this would apparently preclude the attachment of application forms to "running" advertisements by the trusts in the Press.

All the regulations in the world will not avail to save a unit trust holder from depreciation of capital and income if dividends and security values fall in any future depres-

Investments for the Prudent:

Security First Trust

This Trust spreads its funds over 23 first-class companies representing some of the strongest and soundest elements in British industry. The return which investors have received from cash dividends alone for the year ended 6th January, 1937, was equivalent to a yield of £5 6s. 8d. per cent. gross per annum, at the current price of sub-units. This yield does not include an additional return of some 10s. per cent. from the sale of rights, etc. Lloyds Bank Limited are Custodian Trustees of the underlying securities.

THESE ARE THE COMPANIES:

L. M. & S. Railway Co.
L. & N.E. Railway Co.
Allied Ironfounders, Ltd.
Powell Duffryn Steam Coal Co., Ltd.
Richard Thomas & Co., Ltd.
City of London Real Property Co., Ltd.
London Brick Company, Ltd.
Metropolitan Housing Corporation, Ltd.
Imperial Chemical Industries, Ltd.

Imperial Continental Gas Assoc.
"Shell" Transport & Trading Co., Ltd.
Bass, Ratcliff & Gretton, Ltd.

Imperial Tobacco Co. (G. B. & I.), Ltd.
Geduld Proprietary Mines, Ltd.
Government Gold Mining Areas (Modder) Consolidated, Ltd.

Van Ryn Deep, Ltd.
J. & P. Coats, Ltd.
International Tea Company's Stores, Ltd.
Scribbans & Co., Ltd.
Tate & Lyle, Ltd.
Amalgamated Press, Ltd.
Daily Mirror Newspapers, Ltd.

Hundred Securities Trust

By investing in sub-units of this Trust you spread your capital over as many as 100 first-class dividend-paying securities, covering Government funds, and banking, insurance, property, mining, industrial and commercial securities.

To every investor who seeks a reasonably good income yield coupled with a high margin of safety, this Trust offers special attractions.

Based on the cash distributions from the Investments during the past year, the yield at the present price is approximately £4 14s. 7d. per cent. In this computation of income proceeds of the sale of bonuses, new issue rights, etc., are not taken into account. Large capital bonuses are added to the capital of the Trust; fractions of bonus shares and new issue rights are sold and distributed as capital. As the underlying securities are with few exceptions ordinary shares, the distributions are not fixed but are subject to variation. Lloyds Bank Limited are the Custodian Trustees of the underlying securities.

Consult your stockbroker or bank manager or write for free descriptive Booklet EC, the basis of all transactions, to the Managers:

MEMBERS OF THE UNIT TRUSTS ASSOCIATION

sion. But at least, if the Committee's recommendations pass substantially into law, holders will assume their inevitable investment risks in the daylight and not in the dark. It is probable, however, that if the Committee had been reporting to-day, instead of last year, they would have accorded more detailed treatment in their Report to the special problems arising from the recent development of the flexible trusts, which are described in detail in earlier sections of our Survey. Legislation on the basis of the Report alone would leave many of these problems out of account.

This may well be one of the matters which has so far prevented the Government from committing itself to any date for the introduction of a Unit Trusts Bill, explicitly declared to be in preparation. It is understood, indeed, that the draughtsmen of the Bill have encountered many latent difficulties in their detailed work. The possible association of the subject with a projected measure to curb bucket-shop

operations (which is now being considered by a special body) may also have a delaying effect. The Government, again, may be anxious to find practical means of precluding any possible misuse of facilities under industrial and provident society legislation by parties of doubtful status and intentions who may wish to evade future unit trust law.

If such difficulties as these can be overcome within a reasonably short period the time involved in finding a solution will have been well spent. But the movement and informed outside opinion alike would welcome a decision, at the earliest possible moment, which would tell them exactly where they stood. It is time an end were put to an uncomfortable transition period. The quest of those who seek perfection is apt to be of indefinite duration. Even an Act with some inevitable shortcomings, which would be capable of being adjusted in the light of future experience, would be preferable to prolonged postponement of action in a vain attempt to satisfy everybody.

At the Crossroads?

WHAT tentative conclusions may be drawn from our present Survey? The unit trust movement, we have seen, has embraced flexibility with both hands, whereas at first it could hardly be persuaded to touch it. From all the portents, however, the flexible trust has not been a signal selling success, in contrast to the fixed trust with its message of 99 per cent. immunity from human frailty and its freely advertised panel of investments. Secondly, the present temper in the movement is not one of marked optimism over immediate prospects of a recovery in sales. Advertising is now less widespread, and the volume of resales from the public (by all accounts) is tending to increase. Our calculation of the value of outstanding sales to the end of February (which is based upon information supplied by the majority of groups) is larger than some observers might have estimated. But the rate of growth of unit trust business, overshadowed last year by the deliberations of the Board of Trade Committee, may continue under the cloud of legislative discussion (although the introduction of the Bill is perhaps not imminent), while—more important from the investor's point of view—the movement may in due course be reminded that the course of ordinary shares and dividends is not eternally upward.

A fixed trust unit, based on the market and selling appeal of three or more years ago, is likely, therefore, to become increasingly an investment anachronism. Even those who argue that a selection of ten leading industrials, through good years and bad, may yield results comparable with the most carefully diversified portfolio, would hardly be prepared to extend that type of advocacy to all and sundry among the fixed trusts as we know them.

It is becoming apparent that the problem of administering the fixed trusts during coming years is giving the movement some concern. There is a natural "wastage" in fixed trusts through the resale of units to the managers, and the size of most fixed trusts at the end of their allotted life of twenty years or more may not be large. But two problems arise, one during the life of the trust and one at its end. If the trust is of the distributive type, and recurrent share bonuses and capital rights are regularly sold, the naturally progressive holdings of the unit are steadily diluted, at the expense of current distributions, and the balance is shifted towards the more inert holdings. Moreover, if market difficulty one day arrives and holders of sub-units hasten to

sell, the old difficulty of automatic selling will be seen at its worst.

At the end of the trust period, secondly, the managers of the earliest fixed trusts are committed to distribute the underlying securities within a given period. The fact that this might fall at an unfavourable juncture from the holders' point of view has been recognised in later fixed trusts, which allow for the free vote of unit holders whether to continue the trust or to exchange their sub-units for shares of a management company.

The proposal (which is published as this Survey goes to press) by the managers of the British Empire "A" Fixed Trust to invite the holders to indicate whether they wish to consider a scheme of this kind appears to be highly significant. The trust was formed in November, 1933, with a life of twenty years.

The holders are not asked to vote on a scheme of exchange at this stage, but to express a view whether such a scheme would be considered by them at all. The managers have in mind a proposal to permit an existing group in the management trust field to take over the fixed trust and operate it in the normal manner as an investment trust. There are, of course, various technical questions which need careful consideration, such as the terms of transfer, the personnel of the management group concerned, and the treatment of the proportion of the existing managers' loading charge which is in escrow to cover future management expenses. And there could clearly be no question of compulsion upon any sub-unit holder who preferred to stand outside the scheme.

If this proposal may be regarded as a test case, it suggests that sub-unit holders as a class may now be convinced that flexibility is to be preferred to fixity. If so, it may well be a precedent of the utmost importance. Since there are 51 fixed trusts in existence, and only 21 flexible trusts, the possibilities arising from transfer are evidently considerable. If a *mariage de convenance* is to be arranged between the fixed trusts (or some of them) and the investment trust movement proper, will one be arranged, some day or other, for certain flexible trusts also? Potentialities for grouping the existing unit trusts under closer control already exist; if grouping were achieved with the co-operation of the best investment trust ability, its fruits might well be blessed.

WHEN you see the "KEYSTONE" SIGN you will know that the investment referred to is offered by the well-known:—

KEYSTONE GROUP of UNIT TRUSTS

THOUSANDS of investors all over the world have collectively invested **MILLIONS OF POUNDS** (in individual sums ranging from £5 to £45,000) in "KEYSTONE UNIT TRUSTS," satisfied in the knowledge that these Trusts are under the best possible management, and are backed by large capital resources.

INVESTORS are invited to send without obligation to the Controlling Corporation at the address given below for Handbooks (on the basis of which all sub-units are sold) which clearly show current prices and the approximate yields on the Investments offered, and what is of equal importance, the Keystone Groups' undertaking to realise when a holder wishes to sell.

"KEYSTONE MAGAZINE," a monthly free issue by the Keystone Group dealing with Unit Trust Investment matters, is the only publication of its character, and contains a wealth of information for investors (whether holders of Keystone Investments or not). A copy will be sent post-free on receipt of a postcard.

SHARE markets are active and it is possible to select one or two shares which will show capital appreciation or reasonable yield, but the reverse may happen! If an investor buys a Unit Trust Investment he has the benefit of a wide-spread interest in a large number of Companies selected by experts.

"KEYSTONE CERTIFICATES" (Two Series)

Twin Profit-Sharing Fixed Trust Investments, each having for Underlying Security shares of over 50 British Dividend-paying Industrial Companies.

"KEYSTONE FLEXIBLE CERTIFICATES"

embody all the desirable features of "Flexibility" and yet provide the necessary safeguard for the investor by vesting in the Trustee the power to veto any proposed changes which are not in the Certificate Holders' interest.

"KEYSTONE GOLD DEPOSIT RECEIPTS" (Two Series)

The investments "par excellence" on Fixed Trust principles in South African Gold Shares; specially suitable for the ultra-cautious Investor.

THE ECONOMIST

TRADE SUPPLEMENT

New Series

SATURDAY, APRIL 24, 1937

No. 4

The Trend of Business

BUSINESS activity continued its vigorous upward trend during the past month. The improvement was more marked than usual at this time of the year, for *The Economist* index of activity, adjusted for seasonal variations, rose from 110 (1935 = 100) in February to the record level of 112 in March. Of the fourteen component series of the index shown on page 31, only three—employment, postal receipts and Town clearings—showed a decline, while one—consumption of coal—remained unchanged. All the other series registered an advance over February.

Industrial expansion, moreover, continued on a wide front. Of the 103 trades separately listed in the *Ministry of Labour Gazette*, for example, only nineteen showed a slight increase in unemployment between February and March, and the figures of only four branches of activity compare unfavourably with the position a year ago.

A significant change in the incidence of recovery is the tardy revival of those export trades which, like the coal, cotton and other textile trades, are physically still able to increase their output. The value of our exports of coal, cotton and other textile manufactures in March was substantially higher than during the corresponding month last year. This improvement is the direct consequence of the increase in the sales and prices of raw materials and crude foodstuffs by primary producing countries. And, as prospects of an expansion in international trade are fairly good, the upward trend of exports may be expected to continue in the case of many trades which have something to spare after satisfying home requirements.

Elsewhere there is little change since last month in the tendencies at work. Many sections of the metal industries are offered more orders than they can undertake to complete within the time specified. Moreover, the rising tide of armament contracts is increasing the pressure on manufacturers. Although Government departments may not insist on priority, the volume of civil work which can be carried out must needs decline, especially in industries which are already working at capacity and which can only expand total output as new plant comes into operation. But the scope for civil work is not only reduced by the increase in armament orders, but also by the rise in prices which is being accelerated by heavier expenditure on defence.

In fact the relations between producers and consumers have been completely changed in recent months. Not very long ago the problem of maintaining orders has been uppermost in the mind of the executives of concerns engaged in the manufacture of capital equipment; now they are unable to accept all the orders on offer and their problem is the difficulty of increasing output proportionately to the expansion of demand. Lack of capacity and the shortage of skilled labour, however, are not the only

factors hampering progress; in many cases the problem is rendered more acute by the shortage of raw materials. The iron and steel industry is hampered by the difficulties of obtaining sufficient coke, scrap and iron ore. The consuming industries, in their turn, are hampered by the inability to secure all their requirements of steel, and the rate at which Britain's industrial capacity can be extended is thus slowed down.

In emphasising these difficulties, current reports and discussions tend to overlook the rapid expansion which is still taking place. The output of crude steel during the first three months of this year, for example, showed an increase of 10 per cent. over the corresponding period a year ago. Similarly, output in the engineering, shipbuilding and constructional industries is still increasing, though residential

building appears now to be declining gradually, not so much as a result of the rise in costs as of the approach of saturation in the demand for new houses. In engineering, again, part of the additional machinery required is being satisfied by increasing imports, largely under licence.

There are many branches of activity, especially those engaged in the production of consumers' goods, such as textiles, footwear, foodstuffs, automobiles, wireless sets, etc., which are physically able to increase their output, and, despite the rising trend of prices, the demand for these commodities is still on the up-grade.

In general, present indications point to a further expansion of business activity during the next few months, though Mr Chamberlain's new levy on the growth of profits, which penalises the companies which suffered most in depression, may tend to discourage new enterprise.

The latest reports from overseas point to sustained recovery in most countries. The increase in the demand and in the prices of primary products since the beginning of the year has given a fresh stimulus to expansion in numerous countries, including Canada, Australia, India, South Africa, South America, China and Scandinavia.

Most industrial countries continue to make headway. Despite labour difficulties the volume of industrial production in the United States remains on the up-grade. In Japan the current level of activity is appreciably higher than a year ago. Improvement is noticeable in the majority of European countries where armament work is an important factor. France is gradually emerging from depression, but recovery since the suspension of the gold standard has been much more marked in Holland and Switzerland, whose revival has not been hampered, as in France, by costly social legislation. Business activity is expanding in Belgium, Poland, Czechoslovakia, Hungary, France, Roumania and Austria, though the latter country has gained comparatively little ground since last year. Industrial activity is maintained at a high level in Germany.

British Industrial Developments

The following reports on British industry cover, in most cases, the period to the middle of April. In the remainder they relate to the month of March.

COAL

The continued improvement in the coal-mining industry is reflected in the statistics of production, employment and exports for the month of March. Output restrictions are being removed and prices are tending to higher levels. Production of saleable coal last month was 20,897,000 tons, against 19,797,000 tons in the previous month and 19,982,000 tons in March, 1936. Employment showed an improvement in most districts and was substantially better than at the same time last year. Meanwhile, exports in March, although still below the 1935 level, were well above the comparable figure for last year. France was again the industry's best overseas customer, while business with Italy showed an improvement. Despite the continuance of the civil war, Spanish purchases absorbed larger quantities than in March, 1936, and shipments to most of the Empire countries were also heavier. In recent weeks export inquiries have been heavy, but order books are now often filled to capacity and new business is hampered by lack of supplies. Meanwhile the home market in industrial fuels shows few new features, deliveries against contracts remaining heavy. Business in house coal was active prior to the Easter holidays, but has since begun to show a normal seasonal decline.

IRON AND STEEL

Current reports on the iron and steel industry continue to stress the inability of this branch of activity to meet the requirements of all consumers. It should be pointed out, however, that the supply position is not equally stringent in all sections of the industry. Nevertheless, as the pressure on deliveries indicates, the consuming trades could absorb considerably larger quantities than those which the industry is at present able to supply. To some extent, however, the pressure on supplies appears to have been accentuated by the desire of consumers to increase the ratio of stocks to production. Moreover, the emphasis on the shortage of supplies tends to overshadow the steady increase in production which is taking place. Actually, the output of crude steel during the first quarter of the current year was nearly 10 per cent. higher than a year ago. If this rate of increase is maintained the current year's output should exceed last year's production of 11.7 million tons by about 1.1 million tons. Quotations for coke, iron ore and scrap, meanwhile, continue to rise, and there is a possibility that steel prices may be increased before the end of May, the date originally contemplated for their revision.

GENERAL ENGINEERING

Activity in the engineering industry continues on the up-grade. The volume of orders is still expanding and Government contracts are increasing. The satisfaction of all requirements within the time specified is beyond the capacity of certain sections of the industry. Fortunately there is a safety-valve in that part of the expanding demand can be satisfied by additional imports. Actually import licences appear to be granted freely. But while the stringency is alleviated to some extent by heavier imports, certain kinds of machinery appear to be in short supply. Moreover, the rate at which home production can be expanded has slowed down, for most sections of the industry are working at capacity, and the proportion of unemployed workers in general engineering has fallen to 6 per cent. In addition, there is some anxiety concerning the supply of materials and the possibility of a deterioration in industrial relations. Exports showed an improvement in March, when 35,723 tons of machinery were shipped abroad, against 32,834 tons during the corresponding month last year. The increase in imports from 8,061 tons to 12,136 tons during this period was even more marked. Imports of machine tools were again more than twice as heavy as a year ago.

SHIPBUILDING

The shipbuilding and marine engineering industries continue to make headway; in April the proportion of unemployed workers in these two related branches of activity was 6.7 per cent. and 8.8 per cent., respectively, lower than a year ago. The tonnage of merchant vessels under construction at the end of March was 1,014,454 tons gross, an increase of 50,812 tons since the end of December and of 172,093 tons since the end of March last year. Moreover, the volume of naval work is also steadily increasing under the re-armament programme.

ELECTRICAL EQUIPMENT

Production of electrical machinery and appliances is at a higher level than ever before. The proportion of unemployed workers in electrical engineering, for example, was only 3.4 per cent. last month. The volume of new orders for heavy electrical machinery remained at a high level in March, and the value of exports of electrical goods and apparatus rose from £827,737 in March, 1936, to £979,816 last month.

AUTOMOBILES

Despite the difficulty experienced in some quarters of obtaining supplies of raw materials, the automobile industry continues to forge ahead. The output of private cars in February was 28,449,

compared with 25,769 in the same month of last year. Registrations reflect a similar tendency, February's total being 22,891 against 21,345 a year earlier. The export position also gives ground for satisfaction; for overseas sales of private cars rose from 4,839 units in March, 1936, to 7,440 units last month. Meanwhile, foreign cars remain in demand on the British market, though imports last month were rather smaller than in March, 1936—1,631 units against 1,677. Hence the industry has made rapid progress since the beginning of the present season, and, in the absence of untoward developments, there is little doubt that 1937 will establish new records.

BUILDING

Activity in the building industry remains on a high level. The employment position showed little change between February and March; adverse weather affected outdoor work—especially in Scotland and the North of England—but this was partially offset by an improvement in the decorating branch of the industry. On the other hand, the weather factor makes comparability with the position ruling a year ago unreliable. Meanwhile, building plans approved during the first quarter of 1937 were slightly larger in value than the comparable figure for 1936, but—since costs have risen sharply during this period—represent a smaller volume of actual construction. The indications are that the question of costs is likely to assume increasing importance in coming months. Thus it is reported in the *Building Industries Survey* that several local authorities have recently rejected certain tenders which were held to be too high. This factor may be partly responsible for the decline in the value of plans approved for residential building from £18,439,000 in the first quarter of 1936 to £15,484,000 in the same period of 1937. It appears, in fact, that the decline in house-building by private enterprise is no longer being offset by municipal house-building. On the other hand, plans approved this year for non-residential purposes, at £13,218,000, are some 13 per cent. above the previous year's level. Commercial construction may therefore do much to fill the gap left by the decline in residential building.

CHEMICALS

A steady business has been transacted in most sections of the home chemical market during the past month. Sales of industrial chemicals and dyestuffs have increased and the good demand for wood distillation products has been maintained. In the coal tar products market considerable interest has been shown in all products except pitch and refined tar. Trade in pharmaceutical and fine chemicals has been rather quiet, but showed some expansion towards the end of the month. There was a considerable improvement in overseas trade in March as compared with March, 1936, the value of exports of chemicals, drugs, dyes and colours increasing by £334,926. The total increase for the first three months of the year amounts to £794,140. Imports registered a decrease in value of £29,287 as compared with March of last year, but the total for the first three months of the year is £133,905 higher than during the same period of 1936.

POTTERY

Employment in North Staffordshire last month showed further improvement and was much better than a year earlier. The position at Derby remained good, and at Worcester very good, with Bristol making a very fair showing. Exports of general earthenware were smaller than in March, 1936, but an improvement occurred in overseas sales of tiles, china, sanitary and electrical ware.

FOOTWEAR

A further slight improvement in employment occurred last month and activity was well in excess of last year's corresponding figure. Exports, on the other hand, were rather smaller than in March, 1936—35,628 dozen pairs, against 36,803 dozen pairs. This reduction may, however, be accounted for by the earlier incidence of Easter this year.

COTTON

The cotton textile industry has made considerable progress since last autumn and a further improvement was recorded in recent weeks. Contracts are now on a more profitable basis than for a long time past. Mainly in consequence of President Roosevelt's contention that commodity prices are in many instances too high, raw cotton prices have recently displayed an easier tendency. The movement has, however, had no adverse effect on the attitude of buyers of cotton manufactures. Meanwhile, world consumption of the fibre remains on the up-grade, but preparations are being made to grow a larger crop next season. British exports of yarns and piece-goods continue to give satisfaction, the outstanding feature in recent weeks being the improvement in business with India. On the other hand, support from China, Egypt and the Near East has not been good. Business with the Dominions and numerous Continental countries has, however, been encouraging, and activity in home trade fabrics has been well maintained. Spinners have also been active, and margins are now more remunerative. At the end of March 92 per cent. of the spindles were estimated to be in full production, the same as a month earlier, against 79 per cent. at the same time last year.

JUTE

The raw material has been firm in price in recent weeks owing to a strong demand from consumers and bullish reports of the new crop. The continuance of the strike in the Calcutta jute mills has held production in check and has thus been responsible for the strength of prices on Indian markets. This, in turn, has assisted the industry in Dundee, which has recently taken a turn for the better. Sales on the home market are expanding, while the export position is more encouraging. Despite acute competition, overseas sales of piece-goods and other jute manufactures were higher last month than in March, 1936, though exports of yarn showed a decline. Meanwhile, it is reported that Dundee interests have asked the Government for protection against imports of cheap Indian manufactures, which have shown a large increase in the last two years.

LINEN

The small quantities of flax on offer have risen in price. The Germans are expected at any time to open negotiations with Soviet Russia for the supply of further lots of the raw material. Meanwhile, the Courtrai market remains unchanged, lots being small and the selection poor. The yarn market is particularly firm, but without any important sales. Spinners are well booked ahead. Weavers also have good order books, and for cambric and sheers it is difficult to obtain the promise of delivery before 1938. The general position is reported to be better than at any time since the war.

RAYON

There is a fairly satisfactory turnover in rayon yarns for both weaving and hosiery, and considerable quantities of staple fibre and spun rayon yarns are being absorbed by various sections of the trade. The only depressing spot is reported to be the dress goods trade, the quietude of which is generally explained by the shortage of new buying from merchant and wholesale houses. The latter have large stocks carried forward from last year, in consequence of the poor weather then experienced.

WOOL

Raw wool has recently been firm in price on an active demand and a limited supply; thus the Southern Hemisphere selling season is closing on a firm note. Bradford topmakers are reported to be finding it difficult to pass on the increased price to their consumers, and the same problem is presenting itself to the spinner and the manufacturer. Rather than sacrifice their

profit margins, certain retail clothiers are now showing a preference for lower quality goods. Meanwhile, the industry remains active, the majority of the mills now working full time. A further improvement in employment occurred between February and March, when the unemployment percentage for the industry as a whole dropped from 7.4 to 6.8, against 8.6 in March, 1936. Exports also made a satisfactory showing last month, being well in excess of the March total for recent years. Canada was Britain's best customer, with Germany a lagging second. Larger quantities were taken by a long list of importing countries.

AGRICULTURE AND FISHERIES

Sowing of wheat has been seriously delayed and few plants are yet showing, states an official report. Some barley and oats are reported to have been sown towards the end of March. Autumn-sown crops made varying progress and are relatively promising except on heavy and waterlogged land. Potato planting has been carried out in isolated instances, but work on heavy land had not commenced at the end of March. Sugar-beet drilling has only been tried in a few places. The fall of lambs among lowland flocks appears to be up to average, but prospects for lambing among hill flocks are not favourable. Pastures generally are showing little sign of growth. Owing to the indifferent quality of last season's hay, it has only been possible to maintain milk yields by the extensive use of artificial feeding stuffs. Meanwhile, the fishing industry of England and Wales has so far had a more profitable business this year than last. The catch of wet fish in the first quarter of 1937 amounted to 3,552,393 cwt., against 3,457,263 cwt. in the same period of 1936. This year's takings were valued at £2,807,104 compared with £2,685,077 in the three months ended March, 1936.

SHIPPING

As was foreshadowed here last month, February's slight setback on the freight markets was short-lived, the upward trend being resumed in March. The improvement is reflected in *The Economist* index of whole cargo shipping freights, which rose from 134.3 in February (1898-1913 = 100) to 137.8 last month, the latter figure comparing with 89.8 in March, 1936. A pause in the demand for tonnage was witnessed at Eastertide, but business has since broadened out once again, and all the homeward markets have a strong and active appearance. The heavy demand for cereals and the rise in the price of primary products have greatly assisted the freight markets recently. The outlook remains favourable.

† Annual indices represent averages of monthly figures.

Business Developments Overseas

BRITISH EMPIRE

AUSTRALIA.—A cable from the National Bank of Australasia states that the economic position of the Commonwealth has strengthened. The outlook, it is said, has been improved by the continued high price level of basic commodities and by the improved prospects of rural production, particularly in the Eastern States. As far as the Stock Exchange is concerned, Government loans are strong, but other sections have failed to maintain peak levels. Both imports and exports have recently been running above last year's level.

SOUTH AFRICA.—The rumour that the United States Government was contemplating adjusting its buying price of gold, although unfounded, has served to emphasise the dependence of the gold mining industry upon the policy of the Central Banks. Since South Africa's prosperity is largely based upon the increased profitability of gold-mining, it is clear that the Union would be hard hit if the price of gold should fall. For the present, however, the boom continues and business activity shows a steadily rising trend. Total imports were £8,126,000 in March, against £6,911,000 in the same month of last year, while exports amounted to £9,754,000, compared with £10,089,000. The slight decline was in exports of gold bullion and specie.

CANADA.—In recent weeks business has been "marking time" and the Bureau of Statistics general economic index has shown a tendency to sag. Conditions are considerably better than at this time last year, but business is awaiting the stimulus which usually comes with the advent of Spring and the renewal of outdoor activities. The advance in wheat prices has stimulated the growers to make provision for increasing the acreage under this cereal. The newspaper industry has benefited from the announcement that prices would be raised by \$7.50 per ton for the first half of 1938. On the other hand, many manufacturers are apprehensive at the rise in costs and the possibility of labour troubles.

INDIA.—Imports in February, at 9.36 lakhs of rupees, showed a reduction of 3.23 lakhs compared with the previous month and one of 111 lakhs compared with February, 1936. At 19.06 lakhs, exports were smaller by 301 lakhs than in January, but were 366 lakhs in excess of last year's corresponding figure. Rainfall has been light in most parts of the country, and the condition of the crops is generally good. Meanwhile, the Calcutta wholesale price index shows a slowly rising tendency.

EUROPE

FRANCE.—France is slowly emerging from depression, but so far recovery has not gone very far. The official index of production (1929 = 100) has risen from 66.7 in August, 1936, to 73.8 last February, against 71.0 in the corresponding month a year ago. The improvement continued during March, and the number of persons in receipt of unemployment benefit declined from 410,219 to 388,920 during that month. At the end of March, 1936, the number in receipt of benefit was 465,127. The social legislation passed last summer is being applied over a steadily widening field of enterprise and appears to be hampering recovery. Interest rates remain high and new investment remains at a relatively low level. The official index of quotations for industrial securities fell from 273 (1913 = 100) on March 13th to 246 on April 17th, an indication of the prevailing uncertainty about the future. The upward trend of wholesale prices has been arrested, but this is due to the decline in quotations for imported materials, for domestic products continue to advance in price.

GERMANY.—Industrial activity showed a seasonal increase during the past month. The number of unemployed, as officially recorded, declined from 1,610,900 to 1,245,000 during March; a year ago the number of unemployed was 1,937,100. The metal industries continue to work at high pressure. Railway car loadings averaged 144,300 per day during the week ended April 3rd, against 131,500 during the corresponding week last year. Over the same period the output of coal in the Ruhr district rose from 336,600 tons per day to 411,700 tons, comparing the same two weeks. Money in circulation increased from Rm. 6,266 millions to Rm. 6,838 millions. Quotations for industrial securities and wholesale prices are scarcely changed on the month. There was a further improvement in foreign trade in March, when imports, at Rm. 408.5 millions, showed an increase of Rm. 61.5 millions, and exports, at Rm. 462.1 millions, one of Rm. 56.3 millions, over the previous month.

HOLLAND.—In contrast to France, Holland, which suspended the gold standard at the same time as the former country, is making rapid progress. Voluntary unemployment insurance statistics show a decline in the number without work, from 193,987 at the end of February, 1936, to 169,806 at the end of January and 151,606 at the end of February, 1937. Moreover, the index of industrial activity, based on the import surplus of raw materials, rose from 67.9 (1929 = 100) in February, 1936, to 93.8 in the corresponding month this year.

SWEDEN.—Industrial activity remains well above the level of a year ago. The index of production for February (1929 = 100) was 136, compared with 135 in January and 124 in February, 1936. Unemployment is substantially lower than a year ago. The value of imports rose from Kr. 115 millions in February, 1936, to Kr. 133 millions in February this year, while exports increased from Kr. 91 millions to Kr. 115 millions during this period.

DENMARK.—Business activity has continued to expand since the beginning of this year. The index of industrial production rose from 121 (1929 = 100) in February last year to 132 in January and 134 in February, 1937. The number of applicants for work declined from 145,627 at the end of February to 131,335 at the end of the past month, compared with 125,607 a year ago. The value of imports and exports in February was substantially higher than a year ago, the increase being most marked in the case of imports.

UNITED STATES OF AMERICA

Following a setback early this year, business activity continued to expand vigorously in February and March, despite labour difficulties. The Federal Reserve Board's index of industrial activity for February was only 2.5 per cent. below the average for 1929. Industrial production has thus practically recovered to the pre-depression level, a point passed by this country about eighteen months ago. A feature of recent developments is the rapid recovery of the capital equipment industries. The output of steel in March, at 5.3 million tons, compares with 3.4 millions a year ago and an average of 4.6 millions in 1929. Demand for steel has risen to such an extent that deliveries are falling behind-hand as in this country. The building industry is steadily gaining ground despite rising costs. The value of building contracts awarded in February, for example, was 22 per cent. higher than a year ago, residential contracts alone showing an increase of 91 per cent. Nevertheless, building activity is still considerably below the pre-depression level. Consumers' goods trades are also expanding. In foreign trade the upward trend continues; exports rose from \$179 millions in February, 1936, to \$229 millions in the corresponding month this year, and imports advanced from \$190 millions to \$260 millions during this period. Present indications point to a further increase in general business activity, but the rate of expansion may be expected to decline as an increasing number of industries are reaching the limit of capacity.

LATIN AMERICA

ARGENTINA.—Exports remain buoyant. Shipments of wheat in March, at 885,700 tons, broke all records. It is probable that the National Grain Board, in accordance with their warning of March 19th, may decide to recommend to the Government the restriction of wheat exports from May onwards in order to safeguard requirements for seed and home consumption. However, the new maize crop is now coming on the market and should help to make up for any restrictions in wheat shipments during the next few months. The ample supply of export bills has again brought the rate for "free" pesos down to the same level as the official selling rate, so that there are fresh rumours of a possible further lowering of the latter rate. The effect of the high level of exports is being felt increasingly in all parts of Argentina's economy, there having been a large increase in cheque clearings and a marked decline in liabilities in commercial failures. Retail and import trading is increasingly active.

URUGUAY.—The unqualified success of the conversion to a lower interest basis of the Internal Public Debt is regarded as an index of the improvement in Uruguay's economic position. Prices of pastoral and agricultural produce are remunerative, and foreign trade figures for 1936 showed a substantial balance in favour of the Republic.

BRAZIL.—The trade returns for January continued the improvement recorded in the latter part of 1936, and the coming cotton crop—which largely makes up for the steady decline in coffee exports—is expected to be favourable and above that of last season.

CHILE.—Continuation of the recovery in Chile is expected through the victory of the Right parties at the recent General Election, and foreign trade continues to show expansion, with increased shipments of copper and nitrate, so that the "export" exchange market for sterling and dollars is somewhat easier.

PARAGUAY.—Business shows expansion, with prospects favourable for the coming cotton crop, the latter being also the case in Peru.

THE FAR EAST

In Japan business remains on the up grade and overseas trade is steadily expanding. As in the United Kingdom, however, imports are tending to increase faster than exports. Thus, during the first quarter of the present year, the excess of imports, at 323 million yen, was 5 per cent. more than in the same period of 1936. Heavy imports of industrial raw materials were a feature of the March trade returns. The short loan market was very active in March, and a sudden increase in the movement of funds at the end of the month caused a sharp rise in short-term interest rates. The dissolution of the Diet at the end of March had little effect on the stock markets, as the Budget had already been passed. Commodity prices are rising. Meantime recovery in China is reflected in that country's foreign trade statistics. Imports into China were 109 million dollars last month, against 79 millions a year earlier. Exports totalled 73 million dollars, compared with 48 millions in March, 1936.

UNITED KINGDOM

(Population, mid 1935, 46,886,000; Area 95,030 sq. miles; 244,000 sq. kms.)

LONDON

THE ECONOMIST

Letter from the Right Honourable Sir George T. Broadbridge, Lord Mayor of London

THE MANSION HOUSE,
LONDON, E.C.4

March 10th, 1937.

I understand that "The Economist" will publish a special number to commemorate the Coronation of His Majesty King George VI, and that this will include a special survey of London, the heart of the Empire. For nearly a century, "The Economist" has been closely identified with the growth of the City of London. When "The Economist" first appeared in 1843, London was on the threshold of the period of the most rapid growth in its history. Today, it has far overspread the boundaries of a century ago, and Greater London of 1937, with its population of eight-and-a-half millions, is the largest and most influential of all the world's urban areas.

Within the famous square mile of the City itself, the changes of the last century have been profound and progressive. In 1843, the great joint stock banking institutions had yet to make their appearance. The modern company had still more than twenty years to wait before receiving the first of its great legal charters. Insurance, as we know it today, was still in its infancy. Nevertheless, the foundations of our modern commercial, industrial, and financial organisations were being well and truly laid. In the deliberations of the time, "The Economist" played a constructive and helpful part. By its critical yet constructive analysis of the forces which were shaping London's future, it may claim to have played no unworthy part in shaping the events of a crowded century.

The present review will, I am sure, be an authentic and valuable record of what London is and stands for in our present-day world.

Lord Mayor.

London Through the Ages

WHAT do we visualise when we speak of London? A vast agglomeration of human beings and their habitations? A great blotch on the map? An amorphous, characterless, mindless growth? Or an entity, immensely great, rich and powerful, tirelessly active, absorbing, distributing, controlling and directing currents of activity throughout the world?

Undoubtedly the vast bulk of London makes the first and overwhelming impression on any provincial and foreign visitor. Eight and a half million souls dwell in close juxtaposition, within a radius of fifteen miles from Charing Cross, in contact with another million, more loosely distributed but within the bounds of "Transport London." This spread of nine and a half million people is itself of enormous import, a fact which becomes even more significant when we envisage what such a figure represents in housing, food, clothing, recreation, and transport. London, however, implies much more than all this. It is a living entity, not merely an accumulation. The movement of London is the second most striking fact that impresses our visitors. We may obtain some conception of dynamic London by visualising the network of roads, rail and tubes along which the lifeblood of the city surges, in daily ebb and flow, from a centre which is the goal for the breadwinner and the focussing point of all cultural and educational interest.

How can we account for modern London? Its immense expansion and relative prosperity may be accredited first to favourable geographical circumstances, varying in their influence with the various stages in the city's development. Three major factors have remained dominant, however, throughout the 2,000 years of its history: the jutting promontory of Kent, almost joined to the Continent; the Thames estuary opening wide to the Rhine and Elbe mouths, to the Baltic and Scandinavia; the sudden narrowing of the estuary above the Woolwich marshes to make the crossing place which brought land and sea traffic together at the bridge and created the port and market. Historical events have been affected by geographical circumstances during many centuries. The site of the Roman settlement was fixed by the Thames crossing, at a point where the gravel terraces, remnants of a pre-Thames alluvial plain, first approach the river. The fifty-foot terrace, to which most of the early expansion of London was confined—and which still carries all the more eligible parts of central London—is cut into the impervious blue London Clay, which forms a firm foundation for great modern buildings and is the medium in which the underground railways burrow. Covered with varying depths of drift

gravels and blanketed by a few feet of fertile brick earth, this terrace overhanging the Thames was divided into small hills by streams descending from the Northern Heights of Hampstead and Highgate, or generating in the multitudinous springs of the covering gravels. It offered firm ground, a defensible and habitable site above the "fishful river," with cultivable soil, plentiful water and building and pottery material to hand. To north and south, limiting the Thames valley and avoiding the marshes and the forests of Middlesex and the Weald, ran the dry and more open ways across the Chalk Downs and the Chilterns. Land and water communications, linking the Kentish and Hampshire ports with Camolodunum and Verulamium and the frontier beyond, met at the crossing. Here, at the point of route control, rose market and port. The natural tidal creeks of Walbrook and Fleet carried small craft in the heart of London.

After the departure of the Romans, the history of London for 200 years is a blank. But London re-emerges with sufficient life and energy to make one sceptical of the possibility that it lay completely derelict and dead during the early Saxon occupation. Port and mart were once more established at the crossing. Throughout the Middle Ages and beyond, the small havens of Queenhithe and Billingsgate, supplemented later by suffrage wharves, catered with increasing difficulty for the rapidly growing trade, which developed in the hands of foreign merchants—Florentines, Lombards, and Hansards. In the mid-sixteenth century, the English merchants, converted to the idea of joint-stock trading, assumed control. The Cheap, or market, was in close contact with the port. It is recalled by many street-names to-day—Fish Street and Bread Street, Friday Street and Poultry. Around and about it lay the houses of the craftsmen and merchants.

Nothing is more striking in the life of the Port of London than its vitality, stability and recuperative power. These characteristics it owes in part to its unique natural facilities, particularly that of deep-water tidal transport to the heart of the city, and to the wealth, experience and prestige of its merchants. At a later stage of British development, neither the concentration of industry on the coalfields, nor the increase in size of vessels resulting from the enlarged capacity of the Suez Canal, was able to deprive the port of its premier position. Competition played its part in a period of rising prosperity, and at the beginning of the nineteenth century London carried two-thirds of the trade of the country. That century was a period of extensive and expensive dock construction, and of confusion between different authorities, to which, early in the twentieth century,

the establishment of the Port of London Authority put an end. To-day, the tidal Thames is the longest deep-water channel in the world, and London has more traffic than the next two ports of Britain together.

As a Mart, London combines the innumerable activities associated with entrepôt trade with those of an immense local market. And alone of all the great metropolitan cities, London combines, with Port and Mart, the seat of the Court and of the Government. Edward the Confessor selected Westminster for the site of his great Abbey "for that it was near unto the famous and wealthy City of London . . . with the principal river running hard by, bringing in from all parts of the world great variety of wares; and merchandise of all sorts to the City adjoining." So at Westminster arose, in succession, an Abbey in the marshes, the Court of Whitehall, the Houses of Parliament, and, particularly in the last thirty years, the offices of a great bureaucracy. And as the line between politics and economics has tended increasingly to merge, the commercial interests of the City have come nearer to Westminster, to maintain vital contact with Parliament, Whitehall and the Dominion Offices.

All this great expansion is a measure of London's prosperity and of her capacity to order her life. The history of the undertakings necessitated by London's domestic economy—lighting, feeding, sewerage, water-supply, transport and education—is of epic dimensions. The smoothness with which the gigantic machinery runs, and the enterprise and integrity of the various bodies who are responsible for its operations, are matters for legitimate civic pride. But there is another side to the picture. As we show in a later article, Greater London has had an unprecedented post-War growth, due partly to natural increase of population, partly to influx from less prosperous areas outside, and partly to migration from the inner to the outer areas of Greater London. Nearly a million persons have been added to the outer zone, even since 1931. This expansion has secured the more convenient housing of "young" families, moving from the overcrowded interior. It has also made possible the setting up of factories constructed on modern and hygienic principles and situated on convenient lines of communication. It has meant also a rapid expansion and improvement of transport facilities, by road, rail and water. But where will it all end? Will flat building check the outward movement? Is it too late to preserve London's once beautiful country-side from the builder? And if the tide ebbs, what will be the fate of the spawn of small houses that is spreading along London's outer lines of communication?

The Growth of Population

THE streets of London, though never paved with gold, have always been crowded with people. Within the City boundaries set up by the Roman walls there were in Saxon times perhaps 10,000 people; and when "the best men of London" went to swear fealty to William the Conqueror at Berkhamstead they represented some 20,000 souls.

William and his successors brought order, trade and Continental connections; and within the City walls the population rose in three centuries to about 40,000. In 1400, London's population was three times as large as those of York and Bristol, and four times those of Plymouth and Coventry. When Henry VII began the work of Tudor reconstruction, London still lay within its city walls, and housed some 50,000 people. In the England of the enclosures, the Reformation and expanding industry and commerce, London, already the focus of law and culture, became the centre of business life. Men and materials, food, clothing and fuel were drawn from as far afield as the Dee, the Severn, the Great Ouse and the Tyne; the population grew apace; and the City began to burst its bounds.

A seventeenth-century writer protested "how happy were cities if they had no suburbs." Elizabeth and James I unsuccessfully endeavoured by proclamation simultaneously to prevent

overcrowding inside the walls and new building outside. St. Giles ceased to be a village in open fields; Holborn and Bloomsbury were no longer distant resorts for convalescents; London sprawled out over the open spaces of Moorfields, Finsbury and Mile End. The population, which exceeded 100,000 before the Spanish Armada sailed, by 1660 was nearing the half-million mark. After the Plague and the Fire the "best people" moved through the fields to the West End, and London, for the first time, began to leave the river.

These figures of early population are, of course, little more than well-intentioned guesses, based on returns to poll tax and on bills of mortality. The new London without the City, a chaos of sprawling parishes, was even more difficult to enumerate, and the task defied even the wit of Sir William Petty and Gregory King. In the days of Swift, Defoe, Addison and Steele there were probably close upon 700,000 people in and around the capital. In 1821, when the Industrial Revolution and the march of medicine had doubled the population of Britain in a hundred years, and raised it by over 33 per cent. in twenty, the people of London numbered nearly a million and a half, and only 124,000 still lived in the City. The Outer Ring which had begun to spread round Tudor London was now

being swollen by a further march outwards, into Essex, Hertfordshire, Kent, Middlesex and Surrey. By 1901, over 6½ million people were living in London. The population of the City itself had fallen to 26,923; but the population of the County area (marked out in 1888) had risen from 831,181 in 1801 to 4,509,618, and that of the outer suburbs from 155,334 to 2,044,864. Each successive incursion of new inhabitants, in fact, has been accompanied by depopulation of the immediate urban centre. As the present County grew in the 19th century, the City declined in numbers; as the Outer Ring has grown since 1901, so the population of the County itself has fallen.

Between 1901 and 1935, the population of Greater London rose from 6,581,402 to 8,203,942. The total now represents one-fifth of Britain's population, compared with one-sixth in 1901, one-tenth in 1801, and probably the same proportion in 1701. During the years between 1901 and 1925, however, the number in the City fell from 26,923 to 9,760; and in the County area (from Hampstead and Hackney to Wandsworth and Lewisham, and from Hammersmith to Woolwich) declined from 4,536,267 to 4,185,200. The population of Outer London was nearly doubled in the same period; for it increased from 2,045,135 to 3,806,939.

The local government areas of Greater London, showing decreases (black) and increases (hatched) of population between 1921 and 1931.

The local government areas of Greater London, showing relative density of population in 1931.

Some of London's "gainfully occupied" crossing London Bridge.

Outer London, indeed, is now growing at a rate unparalleled in the rest of Britain. In a single decade, between 1921 and 1931, its population increased by 27.1 per cent. A chart on page 3, reproduced from the Second Report of the Greater London Regional Planning Committee, shows the extent and effect of the movement of population during those eventful ten years. In the two years 1932 to 1934, Outer London increased by 226,000; in the same period the increase in the rest of England and Wales was only 40,000. The greater part of the increase has been due to immigration outwards from the County, where the exodus considerably outweighs the declining rate of natural increase. Of the 28 Metropolitan Boroughs, 19 declined in population between 1901 and 1931. In the decade 1921 to 1931 only Greenwich, Woolwich, Lewisham, Wandsworth, Hammersmith, Kensington, Paddington and Hampstead showed slight increases in numbers; and decreases, due to migration, of over 10 per cent. occurred in Poplar, Stepney, Finsbury, Shoreditch, Bethnal Green, Bermondsey, Southwark, Camberwell and Deptford—the innermost boroughs. Between 1921 and 1933 the density of population in the County fell from 50.9 persons per acre to 58.7. In the Outer Ring it rose from 8.1 to 10.3.

Not all the increase in Outer London, however, has been due to immigration from the congested county, which still has between 100 and 150 persons per acre in seven boroughs. London has always been a great centre of commerce and the professions; but now, as another article on page 41 of this Supplement

shows, it is becoming a centre of manufacturing industry, and workers are flowing in from the provinces at an ever increasing rate. Between 1929 and 1935 the number of insured workers in Greater London rose from 2,214,430 to 2,466,310, an increase of 11.4 per cent.; while reliable estimates suggest that the number of insured persons residing in the County actually fell during that period.

Two population movements, one outwards and one inwards, meet in Outer London. The City has been deserted except for the transaction of business. The outer rings of Stuart and Victorian times are uneasily congested. Workers brought to London by the new industries in the west and north-west meet those moving out from central London. Between 1921 and 1931 increases of over 100 per cent. were recorded in the populations of Hayes, Harrow, Wembley, Dagenham and Romford.

For all this growth, industry is not yet all-important to London; but London is important to industry. Of our 25 aircraft manufacturing firms, 12 are in or near London; many of the most important electrical firms are in the London area; and the only factories making large-scale cold storage equipment are situated in London. Outer London is sprinkled with a wide range of light luxury industries, including motor cars, gramophones and wireless sets. The most notable change in British factory and non-factory trades alike, between 1924 and 1930, was the increased importance of London. During these same years, Electrical Engineering, Motor

and Cycle Manufacture, the Furniture and Hardware Trades, and the Glass and Building Materials Trades—all expanded in employment by more than 20 per cent. in London, and Aircraft Manufacture by more than 100 per cent.

Nevertheless, London still lives largely by trade and distribution. In 1931 the number employed in the distributive trades was 1,169,700, against 1,176,910 in production—this latter figure, however, including non-factory trade, such as building and public utility undertakings. Nearly equal numbers of London's 2,346,610 insured workers were thus engaged in these two great branches of work. The proportion was very different in the rest of Great Britain, where *two-thirds* of the insured were occupied in productive enterprise. The high share of distribution in London, of transport, Government, hotels, commerce and finance, is thus outstanding. But industry is growing fast. Will this go on? Will the inward and outward flow of population continue to congest Outer London? Or will migration be checked by a falling rate of natural increase, both within and without? Will industrialisation continue to lure men and women to the enlarged metropolis, or will a national policy of industrial location seek to stem the tide? It seems certain that, in the absence of any form of Governmental responsibility, the problem of catering for 10 million people will tax even the greatest transport organisation in the world. But time brings its own revenges; and a future fall in national population, if it did not solve London's greatest problem, might at least prevent it from becoming wholly insoluble.

BACK TO WORK:

The Londoner in History

PARIS has its *apache*, Madrid its *chulo* and London its Cockney. In each term there is some depreciatory element. In Paris there is the rival claim of the *boulevardier*, and the more generic *Parisien*, each with its different connotation. The problem is even less simple in London. London and Cockney are not synonymous; "Piccadilly Lounger" is an ancient insult for lack of an English equivalent of *flâneur*; clubman, though in the running, is too restricted. We must work by exploration. "Born within sound of Bow Bells" is the certificate of the true Cockney; or alternatively "one who has never lived out of London and who has got all his ideas from it," as Hazlitt put it.

But merely "born in London" confers no psychological formula. The world of literature is pleased to divide the history of London into sovereign territories: Chaucer's London, Shakespeare's London, Milton's London, Dryden's London, Johnson's London, Dickens's London, Oscar Wilde's London. And yet how remarkably few of these literary sovereigns were London Born. Of this galaxy only Chaucer and Milton; Chaucer, of whom legend says that he was fined for beating a Franciscan friar in Fleet Street, and truthful fact records that he lived in the house over Aldgate near that "well of English undefiled," as a poet waggishly called it, Aldgate Pump. Milton was born in Bread Street, Cheapside, where legend has again been busy with a vision of Shakespeare staggering from the Mermaid Tavern to transfer his genius to the beautiful golden-haired child.

In visual record London has been luckier. Three great artists, three great perpetrators of the London scene, have been Londoners: Hogarth, keen-eyed observer and moralist, fixing for ever Covent Garden in the morning, Gin Lane, the stews and taverns; Rowlandson, the Rabelaisian recorder of men and women, horses, dogs and drabs; and Cruickshank, the myriad-fingered social chronicler, temperance reformer, embodiment of the world of Dickens, as Rowlandson was of the world of Fielding and Smollett. Turner, dreamer of Venetian sunset glories, he too was a Londoner.

There are some strange anomalies in the records of London. Shakespeare was no Londoner; Ben Jonson was. Spenser was a true son of London, "that to me gave this life's first native source." He called in memorable music on London's river, "Sweet Thames, run softly, till I end my song," but brought his magic of "The Faerie Queen" from the bogs of Ireland. Milton was a Londoner, making his "gaudy day" the supreme delight of wandering in the London bookshops. Dryden, the god of Wills's Coffee House and ruler of Grub Street, was

from Northampton. Keats was a Londoner, Shelley was not. Browning was; Tennyson was not. It is not sufficient to have loved London to be a Londoner. Dr Johnson, patron saint of Fleet Street, was from Lichfield; Dickens, immortal author of "Sketches by Boz," was from Plymouth; and from far Cockermouth came Wordsworth, supreme certifier of London's beauty seen from Westminster Bridge.

This city now doth, like a garment, wear The beauty of the morning; silent, bare, Ships, towers, domes, theatres, and temples lie Open unto the fields, and to the sky.

No Londoner born has ever sung with so much fervour a tune so acceptable to London pride.

No tourist, illustrious though he may be, can be called Londoner, by any stretch of politeness. There is, nevertheless, a hierarchy of Londoners. There is the Londoner of birthright. Supreme among them is Charles Lamb, soaking himself in the world of London, proudly signing himself, as few have dared to do, "A Londoner." "I was born under the shadow of St. Dunstan's steeple, just where the conflux of the eastern and western inhabitants of this twofold city meet and jostle in friendly opposition at Temple Bar"; so he writes to that country bumpkin Wordsworth. He praises his own milieu, "the crowds, the very dirt and mud, the sun shining upon houses and pavements, the fruit shops, the old book-stalls, parsons cheapening books, coffee houses, steams of soups from kitchens, the pantomimes. . . . Have I not enough, without your mountains?"

And Lamb could bring a catch to the throat with a city image, "Mixed among her noise, her crowds, her beloved smoke, what have I been doing all my life if I have not lent out my heart with usury to such scenes?" There is the Londoner by immigration: Charles Dickens, with his vast tribute to London, his evocation of the Hackney Cab, the London Fog, Seven Dials, Night Walks in London. There are Honorary Cockneys: Leigh Hunt and Hazlitt, accepting the insults of Scotland against the Cockney school of poetry. There is the Honorary Londoner superlative, never a Cockney, but a true Londoner—Dr Johnson—who felt that "No place cured a man's vanity or arrogance so well as London." Did not Hazlitt say "Your true Cockney is your only true leveller"? The Doctor declared that "The full tide of human life was to be seen at Charing Cross"; and paid her the highest tribute of all, "Sir, when a man is tired of London, he is tired of life; for there is in London all that life can afford."

The Londoner as an individual is a selfish man, a Haroun al Raschid, moving in the great city as if in his private harem. The Londoner in the mass, the London crowd, the London mob watching, at Coronation or at cricket, is part of the vast panorama and pageant of London history. He watched, in Elizabeth's time, the shoals of litigants streaming from the country to swell the purgatory of the Law Courts. On an earlier Shrove Tuesday he sacked, in a band of apprentices, the stews run by Bishops of Winchester, or owned

QUEEN ANNE'S GATE

by Sir William Walworth, London's Lord Mayor and slayer of Watt Tyler. He lounged in Duke Humphrey's Walk in old St. Paul's, picking his teeth to pretend that he had dined. He listened at Blackfriars to the watermen's witty cursing, as he listened later to the hackney coachman, to the cabby, to the taxi-driver. He joined the crowds at Bartholomew Fair: thronged old London Bridge: filled the galleries of Queen Anne's theatres, after being the butt and cuckold of Restoration comedy. He bought cow-heel and tripe, sausages, puddings, eels, baked potatoes, ice cream, chestnuts, hot drinks, brooms, cherries, lavender and a thousand objects from street vendors. He reeled and stank in Gin Alley; ate his cut from the joint in "ordinaries"; took his meals in horse-boxes of coffee-shops or, as navvy, carved his bread and cheese in an excavation in the road; or he made holiday with tea, shrimps and watercresses at Greenwich.

There has always been a world in London for the Londoner to enjoy, and happily this world has been preserved for us by pious and witty pens. Dekker, who built up the world of 'prentices in "The Shoemakers Holiday," gave, in his "Gull's Hornbook," a satirical handbook for the Elizabethan fop and loungee in tavern and theatre, telling us more of the Elizabethan stage than we learn from any other single source. The comedy of the Restoration, with Etherege, Wycherley, Sedley and Congreve, revealed the pleasure gardens. Hyde Park, Spring Gardens, St. James's Park, where young men and women lost themselves in the mazy paths till midnight; and Mulberry Gardens, which Evelyn in 1654

described as "now ye only place of refreshment about ye towne for persons of ye best quality to be exceedingly cheated at." The "Tatler" and "Spectator" of Addison and Steele give us the taverns, the coffee-houses, the chocolate houses, where from the middle of the seventeenth century good London company would meet to take coffee, read the newspapers and talk wit, morality, poetry, politics, scholarship or commerce, in anticipation of the later clubs, the Calf's Head, the Kit-Cat, White's, and finally the august Athenaeum. The Mermaid Tavern and The Devil were Shakespeare's and Ben Jonson's haunts; Wills's Coffee House

was Dryden's (where a pinch from his snuff-box conferred wit on a dullard). Button's was Addison's, and the Cheshire Cheese Dr Johnson's reputed home.

These were all intellectual gatherings. But the Londoner takes his ease less strenuously, and London has had an unbroken succession of pleasure spots, sometimes indistinguishable from plague spots: the gaiety of Paris Garden, Vauxhall and Cremorne Gardens, the plebeian Bull and Bush, the hearty Eel Pie House in Highbury with its wrestling, dog-fighting and rat-killing, the floating "Folly" or gambling hell outside Somerset House. It had its early night clubs in Mrs Cornelys' eighteenth century assemblies, its Almack's, its Pantheon, Egyptian Halls, panoramas and circuses, its bagnios, its brothels—the "White House" in Soho Square in the eighteenth century, whose "Painted Chamber," "Grotto," "Coal Hole" and "Skeleton Room" rivalled the most lavish of Parisian palaces of lechery. There must not be forgotten the forerunners of the music-hall, where Londoners assembled to eat, to drink and to listen to song, in the "Cider Cellar" in Maiden Lane (the "Back Kitchen" of "Pendennis") or "Evans's" in Covent Garden (the original of Thackeray's "Cave of Harmony").

In all these the Londoner, from the fourteenth century to the twentieth, from Chaucer's time to Max Beerbohm's, from Lydgate's to W. W. Jacobs's, the Londoner, indefinable but recognisable, has disported himself, silently and vociferously endorsing the great poem written by no Londoner, but by Boswell's countryman, William Dunbar:

London; thou art of townes *A per se*.
Sovereign of Cities, semel' est in sight.
Emperesse of townes, exalt in honour,
Sweet paradise, precelling in pleasure,
London, thou art the Flower of Cities all.

Londoners—
familiar to all
Londoners

Government by Anomaly

"NOBODY," said Mr Britling, "planned the confounded constitution; it came about." In 1885, the English system of local government was described as "a chaos of areas, a chaos of franchises, a chaos of authorities and a chaos of rates." This is an apt description of London's government in 1937.

What do we mean when we speak of London? Do we refer to the square mile represented by the Mayor and Commonalty and Citizens of the City of London? Or to the 117 square miles of the County of London administered by the London County Council? Or the area known as Greater London, made up of the City and Metropolitan Police Districts, which covers 693 square miles and stretches from Cheshunt in the North to Coulsdon in the South, and from Dagenham in the East to the western boundaries of Middlesex? This is the area included in the Registrar-General's returns. But it is dwarfed in turn (as can be seen by a glance at the map printed on p. 3 of the cover) by the gargantuan area of the London Passenger Transport Board, with its 1,986 square miles. It is small, also, by comparison with the 1,841 square miles of the London and Home Counties Joint Electricity Authority.

In all, from 15 to 25 different "Londons," with varying areas, may be enumerated. If, however, we confine our inquiries to Greater London, as defined above, we discover, at the outset, that it is governed not by a single local authority but by the councils of six counties, three county boroughs, 28 metropolitan boroughs, 28 municipal boroughs, 39 urban districts, 4 rural districts, 6 parishes and the City Corporation—that is, by 116 local authorities altogether. In no sense are their boundaries "natural"; not one elector in a thousand knows when he passes from one borough into another. County review orders, which were originally intended to simplify local areas and adapt them for more economic administration, have made confusion worse confounded, because their provisions do not apply to other statutory areas. Thus the boundaries of Greater London, originally drawn to include the whole of every parish within 15 miles of Charing Cross, now cross 14 local government areas.

Similar anomalies arise in connection with other services. The borough of Beckenham, for example, was authorised by Act of Parliament to supply electricity in the borough as it existed before 1934. In that year part of its area was transferred to Bromley, but it continues to supply electricity to consumers who now reside in another local government district. Postal boundaries, again, do not follow those of local government. Not even all the County of London is in the London Postal Area. Residents in Lewisham vote for the L.C.C. and have

LONDON'S OWN PARLIAMENT:

The County Hall

"Bromley, Kent," as their postal address.

The County Council stands as the natural head of the 116 London authorities. Its area, which it inherited from the Metropolitan Board of Works on the L.C.C.'s foundation in 1888, dates back to 1855. Its resident population is actually smaller than that of the surrounding area of Greater London. For the last thirty or forty years the central government has not, apparently, been friendly to the principle of extension of the L.C.C.'s *imperium in imperio*. The setting up of the Metropolitan Borough Councils in 1899, and the policy of granting charters to outlying districts rather than extending the L.C.C.'s area, seem to support this construction.

Residents in other large cities such as Birmingham and Manchester (and also in Croydon and East and West Ham) have only one local authority which is responsible for public services. The resident in the London County area has both county and borough council to vote and pay for; and he may be quite justifiably at a loss to explain the division of duties between them. The Council administers hospitals, nursery schools and education generally, but the borough councils are notified of births, deaths and marriages and maintain maternity and child welfare clinics, day nurseries, dispensaries and mortuaries. Both authorities alike can clear slums, provide housing, museums, parks, swimming baths, bridges and street improvements. Both make by-laws. Not merely is there no attempt at centralised planning, as provided in the New York constitution, but day-to-day duties are not adequately co-ordinated. Neither the Council nor the standing committee of the Metropolitan Borough Councils has powers of compulsion or co-ordination.

Outside the County area, in the

portions of the five counties of Surrey, Kent, Essex, Middlesex and Hertfordshire within the Greater London area, confusion is even worse. Each is an education authority—as is every county and municipal borough and every urban district with a population over 20,000, which cared to exercise its power before the number was stabilised in 1931. Thus there are some 33 education authorities in the area. Each county council is a drainage authority. A Greater London Drainage Scheme has been planned by the Minister of Health with the co-operation of the L.C.C. The separate county councils, however, have preferred either to remain inactive or to proceed with schemes suitable for their own areas rather than for the needs of London as a whole.

The Local Government Act, 1929, provided that county councils should review their local government boundaries and make such suggestions to the Ministry of Health, for the adjustment and amalgamation of districts, as they considered desirable in the interests of local government. Far-reaching reforms, however, have not yet been attempted under this measure. On the other hand, the creation of special boards, with special duties and special areas, has proceeded apace. Five such boards existed before the war: the Metropolitan Water Board, the Port of London Authority, the Thames Conservancy Board, the Lee Conservancy Board—each with a different area, extending beyond the County of London—and the Insurance Committee for the County of London, which administers part of the national health insurance scheme. Since the war six more authorities of this type have been created. The London and Home Counties Joint Electricity Authority exercises a co-ordinating influence over London's 76 electricity distributors.

WESTMINSTER

The Abbey and the Mother of Parliaments.

The London and Home Counties Traffic Advisory Committee is equipped only with advisory powers. The Greater London Regional Planning Committee has become largely defunct, after the withdrawal of L.C.C. support. The Lee Conservancy Catchment Board supervises surface drainage in the Lee Valley. The London Passenger Transport Board provides the services which its name implies; and the Metropolitan Traffic Commissioner regulates both passenger and goods transit.

The tale of London's governing authorities is even yet incomplete. Mention must be made of certain special committees, which advise on subjects ranging from atmospheric pollution to parks and gardens, and from the education and employment of children to old-age pensions. Again, the Rating and Valuation Act, 1925, does not apply to London, which has 29 unco-ordinated assessment committees. Owing to peculiarities in the London Building

Acts, London's 44 district surveyors are not local government employees; they support themselves and their offices from fees received. Consequently, no building statistics can be obtained from the London area. Finally, there are 870 justices of the peace who, through a standing joint committee, still exercise various duties.

That the public services suffer from this confusion can hardly be denied. A resident in any one of many lesser cities of Great Britain, who has become accustomed to the idea that water, transport, gas and electricity supplies are proper fields for municipal enterprise, will find, on moving to London, that only in the case of water is there any semblance of municipal control. Even so, two boroughs and several companies supply water in the Greater London Area, in addition to the Metropolitan Water Board. Gas is provided by five companies. Electricity is supplied by 38 local authorities and the same number of companies. There are

a dozen or more different methods of charging; prices vary widely in adjacent areas. Direct current is supplied in some and alternating current in other areas, and there is no uniform voltage.

Obviously, the counterpart of these anomalies in areas, authorities and charges is a chaotic body of legislation regulating London's Government. The Manchester Municipal Code and the New York Charter have no parallel in Greater London. The L.C.C. has started to codify its powers and consolidate its private legislation. For the rest, the law is scattered in general and private acts, charters and governmental orders. Water and transport boards, gas and electricity companies, each have their own series of acts. There are something like two hundred separate authorities with powers to make by-laws. Truly, we live in no mean city. Visitors from abroad find much to admire in Britain's metropolis, but it were well that they should not imitate our anomalies.

Public Finance

LOCAL electors are proverbially accused of apathy towards the government of their town, but if any interest will draw them to the polling booths, it is local finance. "It's your money we want," placarded over London in 1907, drew the unusually high proportion of 55.5 per cent. of the electors to the poll. In those days rates still inherited opprobrium from their association with the Poor Law. The connection was not unnatural, for it was the Poor Relief Act, frequently referred to as the Statute of Elizabeth, which in 1601 founded the system of imposing a tax on local property, deemed to be the best index of ability to pay. To-day, the electorate will no longer respond to an appeal to keep down the rates; for property owners increasingly realise that in a well-ordered area rates give good value for money, and that by judicious expenditure a progressive council attracts more money to its town.

But it is not improbable that local monetary problems, in a new form, will soon again excite the passion of electors.

A glance at the back of the demand note suffices to show the variety of London's public services. The Londoner has an infinite supply of water on tap for 4½d. in the £ of rateable value, per week; the weekly cost of removing drainage and refuse is 2½d. and the charge for the use of municipal parks, libraries, museums and art galleries is less than 1d. The total annual outlay of the London County Council, the City and 28 Metropolitan Boroughs, the Metropolitan Police and Water Board, amounts to £61 millions in the County of London alone, which contains only 4,185,200 of the 8,474,900 inhabitants of Greater London. To this figure of gross expenditure must be added the capital outlay of these various authorities which at March 31, 1935, had a total net debt of £152,945,007 (equal to 257 per cent.

of the rateable value) on which interest amounts to £5,375,961 and repayment to £4,163,136 a year. The table on p. 9 shows how the expenditure and debt of London local authorities—unfortunately information is only collected for the County area—have increased. Owing to the difficulty, if not impossibility, of devising an index to allow for alterations in the cost of local government, the figures have not been corrected to allow for price changes.

How is this enormous bill met? Capital outlay is largely met by borrowing; some 71.1 per cent. of the debt of the London County Council, and 94.1 per cent. of that of the Metropolitan Water Board, is in stocks and bonds. No attempt has been made to meet housing expenditure from revenue as did the Vienna City Council. Revenue is derived from three sources: payments for services rendered, such as rents, hospital and fire brigade charges, and licence fees; grants from the

National Exchequer; and rates, which still bear the brunt (about 47 per cent.) of local expenditure.

For several reasons, rates may be destined again to become an arena of local controversy. Originally imposed as a tax with the intention of making people contribute according to their means, they were transformed (in the opinion of Victorian politicians) into a tax according to benefit received. But by the de-rating provisions of the local

ADMINISTRATIVE COUNTY OF LONDON EXPENDITURE AND DEBT OF LOCAL AUTHORITIES.

Latest figures	4,185,200 (1935)	161,044,294 (1933-34)	152,945,007 (1935)	160,456,011 (1936)

* Not available. † After de-rating. ‡ This reduction is more than accounted for by the transfer of tramways to the London Passenger Transport Board.

Government Act, 1929, agriculture was excluded from all local taxation and property used for industrial or transport purposes paid at a quarter rate: it was hoped thereby to reduce manufacturing and transport costs and improve our position in international markets. From the point of view of local taxation, the result is unsatisfactory. The burden of financing public services falls more heavily on residences and on business premises, particularly shops, which probably receive less benefit from local services than any other section of the community. Such property in highly-assessed districts tends more readily to become unoccupied. There is consequently an agitation both to make empty premises pay a share of rates and to raise an additional rate from site values, irrespective of the use to which the sites are put.

Exchequer grants, despite the consolidation under the Local Government Act, 1929, remain of two kinds, the *ad hoc* grants for special services such as education, police and roads, and the general exchequer grant, originally equivalent to losses through de-rating and the discontinued grants, plus an additional sum to provide for expansion of local services. This latter grant is becoming increasingly distributed according to a weighted population formula, which makes special allowance for unemployment, sparsity of population and number of children. It is unlikely, therefore, to be generous to London, which may be compelled to raise an increasing proportion of its expenditure locally. Meanwhile, the need for reform of the rating system is becoming progressively more acute.

Financial policy and the disbursement of public funds are controlled by the finance committees of the various London authorities. This is an excellent system so long as the ratepayer has a measure of control. Although borrowing requires the sanction of a superior authority, the only organ controlling the major London authorities is Parlia-

ment itself. But Parliament is quite unsuited for the task of deciding, for example, whether London's underground transport facilities ought to be extended in preference to improvements of roads and bridges. Although a finance committee may be sufficient to control the expenditure of a single authority, its policy must be co-ordinated with that of others. What London needs possibly even more than a reform of the rating system is a city planning commission such as New York has provided in its new charter. The

duty of such a commission would be to co-ordinate capital expenditure and obviate competition between various authorities for the available labour and capital resources. It might achieve this end, to the common good, by spreading over a longer period the large programmes of public works which are now being simultaneously undertaken by the London and Middlesex County Councils, by the Water Board and by the Passenger Transport Board. Such a reform is long overdue, but it is as yet, unfortunately, hardly on the horizon.

A Century of Built-up London

These six maps illustrate the growth of the built-up area and the magnitude of London's housing and transport problems.

London's Housing Problem

LONDON, like all Britain's large towns, has a serious housing problem. This problem lies chiefly in the Administrative County—that is, the inner area administered by the London County Council—for the surrounding districts of Greater London have, generally speaking, been built at a more recent date, when by-law regulations had become sufficient to prevent the slum type of house from being erected. Both the number of bad houses and the amount of overcrowding are very much less in these outer districts than in the County itself, and their problems are of manageable dimensions. Our attention may, therefore, be concentrated on the position in the Administrative County, for it is here that the heart of the problem lies.

The L.C.C. area contains a resident population of approximately 4,300,000, and 1,190,000 families. The population is gradually falling, on account of migration to the outer districts, but the number of families, which is important from the point of view of housing requirements, is still increasing slightly, because of the tendency of the average family to become smaller in size. In a programme of slum clearance recently adopted by the London County Council, it was stated that there are 250,000 persons living in houses which are condemned as unfit for human habitation and which await demolition. Most of these slum houses are in the East End, but there are slum areas—often quite extensive—in nearly all districts, espe-

cially in South London and in the North-West. Many slum houses are overcrowded, and overcrowding exists also in many other houses which are not slums, especially in former middle-class houses which have lost status and are now occupied by several families. Houses of this type have as a rule never been converted into flats for multiple-family occupation, and are often quite unsuitable for conversion. Conditions in them are frequently worse than in the slums; London has still over 20,000 basement dwellings, in which whole families are living below the street level, largely in houses of this type. In the national overcrowding survey held in 1935, London was found to have 70,000 overcrowded families. The worst borough was Shoreditch, with 17 per cent. of its houses overcrowded, while eight other boroughs had over 10 per cent. of overcrowding. The standard adopted in this survey was a low one, and a more adequate standard would have probably doubled the number of overcrowded houses.

What steps are being taken to deal with London's housing problems? Neither slum-clearance nor the building of working-class houses or flats in the London area is an economic proposition for private enterprise, and whatever has been or is being done is the work of public or philanthropic bodies. London has a long tradition of housing reform, but until quite recently the amount of work actually carried out has been quite inadequate by comparison with the size of the problem. The

bodies responsible have been the London County Council, the City Corporation, various Metropolitan Borough Councils (the Borough Councils have equal housing powers with the L.C.C.), and a number of housing trusts and associations, private bodies raising funds by subscription or possessing endowments, which have done some useful work. The L.C.C.'s activities—which have naturally been the most important—began as long ago as the 'nineties of last century, and up to the war about 10,000 dwellings had been built by them, about one-third of which were in cottage estates, the remainder consisting of flats. There was also some building by the City Corporation and certain Borough Councils, and by housing trusts, of which the Peabody Trust, the Guinness Trust, and the Sutton Trust are perhaps the chief. The beginnings of housing reform in London make a fascinating story, linked with the names of many far-seeing and devoted philanthropists, among them Miss Octavia Hill, whose system of property management has become widely adopted in recent years.

Very much more has been done since the war. In accordance with the general Government policy of encouraging municipal building, a great deal of work has been undertaken by the L.C.C. Until the last year or two the Council's activities consisted chiefly of building large cottage estates, and altogether 51,000 cottage houses have been built. Some of the new estates are within the L.C.C. area, but on account

New Works on Economics and Finance

PROFESSOR LIONEL ROBBINS

Economic Planning and International Order

This essay attempts to break somewhat new ground in the discussion both of economic planning and international economic relations. It analyses the various types of economic planning which have international aspects. But instead of enquiring directly concerning their effects on the various national groups taken separately, it enquires concerning their effects upon the world considered as one community. Each type of policy, whatever the organ of administration, is tested for its capacity to satisfy the requirements of a rational international order—the maintenance of peace and the satisfaction of the demands of the citizens. 8s. 6d.

National Income and Outlay

By COLIN CLARK, M.A.

University Lecturer in Statistics, Cambridge

"Mr Clark is indisputably the leading authority on the economic and statistical problems concerning the calculations of the British national income. . . . This book contains an immense volume of original statistical material, the perusal of which is essential not only to the economist but also to the banker desirous of acquiring a good knowledge of the economic and financial resources of his country."—*The Banker*. 12s. 6d.

The Theory of Forward Exchange

By DR PAUL EINZIG

"One can only admire the industry and ingenuity that has gone to the tackling of such a complex and uncharted theme. . . . Dr Einzig's is the first work that has gone at all deeply into the subject. . . . a genuine contribution to economic science. . . . Will inevitably be the standard work on the subject. . . . Students will be particularly grateful to Dr Einzig for the admirable tables and charts of forward rates and interest parities, which present in compact form a wealth of information not hitherto available."—*The Financial Times*. 21s.

By SIR JOSIAH STAMP

The Science of Social Adjustment

"This volume brings together, with some revisions and additions, several provocative addresses analysing from various angles the evident disparity which we see around us to-day between scientific and social advancement. Sir Josiah Stamp shows very plainly many of the inherent difficulties which must confront society in its effort to absorb the fruits of rapid technical innovation."—*Morning Post*. 7s. 6d.

Fundamental Principles of Taxation

Essays in The Theory of Employment

By JOAN ROBINSON, M.A.

Author of "The Economics of Imperfect Competition"

"This distinguished collection of essays, like her previous publications, displays all the marks of independent and original thought."—*The Times Literary Supplement*. 8s. 6d.

The Economic System in a Socialist State

By R. L. HALL

Lecturer in Economics, Trinity College, Oxford

"He presents his case temperately, and must not be classed with the fanatical *laissez-faire* socialists. He sketches the competitive system, shows how modern capitalism fails to resemble its flattering portrait, and then proceeds to discuss what devices a socialist system could use to remove the blemishes from capitalism, and model itself upon the text-book plan."—JOAN ROBINSON, *Cambridge Review*. 7s. 6d.

An Essay on Economy and Value Being an Inquiry into the Real Nature of Economy

By ALEC L. MACFIE

Lecturer in Political Economy, Glasgow University

"Mr Macfie's brilliant essay is to be welcomed for this reason: he seeks to give to economics that philosophical grounding without which any science is built on sand. . . . Mr Macfie excites comment at every turn."—*Yorkshire Post*. 7s. 6d.

OVER 700% INCREASE IN 10 YEARS. The annual number of borrowers who have bought their houses with the help of the Abbey Road has increased from 9,364 in 1926 to 82,000 in 1936. This is partly the result of promises which are never in excess of performance, and partly a tribute to a method which is prompt in decision and courteous in action. Generous dealing and sound finance together account for the popularity of the Abbey Road with all classes of discriminating house purchasers.

THE HALIFAX BUILDING SOCIETY

LARGEST IN THE WORLD

The pre-eminent position of the "Halifax" in the Building Society movement is a significant fact.

Its services and facilities have attracted over 680,000 Members and Depositors.

By their appreciation and the progressive and prudent policy of the Society, its well secured Assets now exceed £114,000,000, including Reserve Funds of £4,600,000. Its Investments are spread over 226,000 separate properties.

The Society's organisation is Nation-wide and its officials have qualifications and experience of the highest value.

They are always ready to give the fullest information and the greatest help to prospective Investors and Home buyers at any of its 390 Offices, or by post.

METHUEN

of the lack of unbuilt-on land it has been necessary to do a good deal of building outside it. The largest estate of all—Becontree, the largest housing estate in Great Britain—is more than 12 miles from the centre of London, and there are others as far distant. Becontree contains over 25,000 houses, and has a population of no fewer than 113,000. A certain amount of slum-clearance has also been carried out, and about 11,000 flats have been built to replace slums in the post-war period. A good deal of this building has, however, taken place in the last year or two; slum clearance has recently been speeded-up and has now largely replaced building on cottage estates, though some cottage building is still going on, chiefly in districts well outside London, such as Hanwell in Middlesex, and Chigwell in Essex. There has also been a certain amount of building by Borough Councils and the City Corporation, and by housing trusts, often in connection with slum-clearance. Nearly 18,000 houses have been built by the Borough Councils since the war.

At present, an extremely vigorous effort is being made to clear the slums; a building programme of 10,000 flats a year for rehousing purposes is being aimed at, and seems likely to be achieved very shortly. This is far in excess of anything previously attempted. Flats for rehousing are generally being built on the cleared sites after the slums have been demolished, as there is now little or no vacant land elsewhere in the County area. Subsidies are given, both by the Government and the L.C.C., to enable the new flats to be let at rents within the means of those who are to occupy them, and the poorer

families receive specially advantageous treatment.

Many of London's slum areas are comparatively small in extent, and this adds to the difficulties of rehousing, as the cleared sites are not large enough for redevelopment. In the East End, where the slum problem is greatest, it is proposed now in some cases to acquire whole areas, including some property which may not be slum, for redevelopment. This will offer greater opportunities for replanning, and there are possibilities of very noteworthy improvements being made in redeveloped areas, which may entirely change their character.

The overcrowding problem may prove the hardest of all. Not merely is there a lack of land on which to build additional accommodation within the County, but Greater London is becoming built-up to such an extent that it is increasingly difficult to find sites except by going very far outside, as is shown by the location of the newest L.C.C. estates. The enormous size of the London area is responsible for many problems which would otherwise be avoidable. Unless the workers who live in these outlying estates happen to be employed on the edge of the County area or even outside it, they have a long journey to and from work and high travelling expenses, both of which are great disadvantages. The alternative to building outside is redevelopment within the County, by clearing away existing property and building new flats, the density of which is greater. The suggestion has been made that very high blocks of working-class flats should be built, up to ten storeys, as a means of housing a larger population

on a given area; but this suggestion has not so far found much favour with the responsible authorities. There are a good many disadvantages to very high buildings. For example, lifts are necessary and add to costs, which in any case are greater, and these buildings are unsuitable for children. Existing L.C.C. flats do not as a rule exceed six storeys in height, and many are not more than four storeys. Another alternative, which has the support of many housing and town-planning experts, is decentralisation—the creation of new "satellite" towns, with their own industries and largely self-contained, at some distance—perhaps twenty miles or so—from London itself. This policy could probably be carried out by the L.C.C. if necessary, and it may eventually make a decisive contribution to the final solution of the London housing problem.

In the meantime, slum-clearance is going steadily forward. The face of London is being changed by new blocks of working-class flats springing up in what were formerly drab and depressing districts. Always pleasing and workmanlike in appearance, and sometimes architecturally distinguished, these schemes are a witness to municipal enterprise and social progress. All the new flats and cottage estates, whether built by the L.C.C., the City Corporation, Borough Councils, or housing trusts, provide good and healthy accommodation at reasonable rents, and contribute to the first necessity of citizenship—satisfactory living conditions. But, even with a continuance of the present energetic policy, it is likely to take many years of work before London's housing problems can be solved.

"RIBBON
DEVELOPMENT"

A classic example of the town's sprawl into the country.

London's Architecture

TO conjure up London before the mind's eye is to evoke a patternless maze of rather drab and nondescript streets, limitless in its extent. Seen from the air, however, this desert of chimney-pots has its oases. There are those essentially rural parks, and the many gracious little squares—often gracious as gardens and architecture alike. Scant architectural respect is paid to London's famous buildings, which are mostly without any worthy approach, or any attempt at effective grouping. At once the largest and smallest of European capitals, London has neither scale nor style, formal unity, civic coherence, nor the ghost of a plan—only overwhelming size. Even her wealth is not particularly obvious. Architectural character, taken as a whole, London has none. Even her greatest glory, Wren's City churches, which girdle his own crowning monument, St. Paul's, are all but submerged by the chaos of banks and offices which hedge in and brow-beat them. Yet, paradoxically enough, London is architecturally the friendliest,

most human of cities, because, being a city of small houses, she so seldom seeks to be impressive. Thus, her best and most typical architecture is domestic, plain, and Georgian.

Many parts have undeniable character, like Belgravia or Bloomsbury; others undeniable charm, like the nuclei of old Chelsea or old Hampstead (which is all many people mean of either when naming these boroughs). But such character or charm is severely local, and only contributes the contrast of an isolated exception or two, the better to prove that the rule governing "the Great Wen's" immensity is featurelessness. For London remains an agglomeration of overgrown, half-urbanised villages, sprawling into each other without beginning or end. Each new suburb expands the ever-spreading circumference, without any sort of assimilation to its neighbours or co-ordination to the central area. This is why, unlike Paris or Vienna, London architecturally defies "a general impression." Year by year the few streets

that had individuality lose more and more of it. None had so much as Nash's Regent Street; none has less than the "palatial" new thoroughfare which has succeeded it.

Most of London's architectural heritage from the remoter past is to be found scattered about the City and what is now less than ever the West End. The grim square Norman fortress of the Tower, its turrets oddly prettified with Jacobean belfries, lies furthest east; the circular Temple Church, which is wholly Norman, is in a by-way off the Strand. Half-timbered Staple Inn, a solitary reminder of what the City's streets looked like before the Great Fire, stands on the busiest part of Holborn, opposite Gray's Inn Road. Enclosed, but not quite overwhelmed, by the luxuriant Gothic Revival of Barry's Houses of Parliament is the stern true Gothic of Westminster Hall, England's Holy of Holies. Opposite is the delicate stone lacework of Henry VII's Chapel, a perfect apse, and yet somehow more separate from the

THE OLD ORDER—

Nash's Regent Street as it was just after the war. The porticos and arcades had already disappeared.

Abbey than St. Margaret's Church nestling alongside it like a fawn by its doe. The brick battlements of St. James's Palace are Elizabethan decorations, but its twin-towered gateway has the same mediæval solidity as that of Trinity College, Cambridge. Far westwards, in the Kensington enclave of primæval forest at the top of Earl's Court Road, is Holland House, with its pure Early Tudor north front, so screened by trees and a golf school that few suspect the presence of what, thirty miles further out, would be one of England's great country seats.

Little else older than the eighteenth century survives in any semblance of its original guise. True, there is Inigo Jones's superb Banqueting Hall for a Whitehall Palace which never grew out of it. But this, the most memorable building in London in point of world history—and the best example of the lovely chiaroscuro effects which London grime gradually imparts to Portland stone—belongs to the classic revival which the interregnum of the Civil War makes us identify with the eighteenth, rather than the seventeenth, century.

Once we reach that age of disciplined taste and civic order, London can offer

a wealth of good architecture. There is hardly any Baroque. Even St. Paul's is only, as it were, faintly flushed with that dramatic manner. Perhaps the nearest approach to it is the curious four-towered church in Smith Square, Westminster. The transition phase at the beginning of the eighteenth century, when Dutch influence was paramount, is exemplified by the dreamy little College of Arms in Queen Victoria Street and the richly carved door-hoods and narrow keystone windows of Queen Anne's Gate. Kensington Palace is a humbler Hampton Court. But Wren left its south front as he found it; and nothing is more beautiful in all London than the way its delicately silvered slates harmonise with the all but black brick of its plain walls and white-painted window-surrounds. Carlyle described Chelsea Hospital as "obviously the work of a gentleman." No higher or juster praise could be bestowed on it. Less known are the round-arched stables added by Sir John Soane—his finest work after the Bank of England—now in process of being more opulently than reverently refurbished. Somerset House is London's most august building. None has finer

scale or dignity. Nor must the Custom House be overlooked, or that exquisite little pavilion, the Mint. All these we owe to the eighteenth century.

Regency stucco, which, about 1820, succeeded the standardised Georgian façades of red or yellow brick that are now recognised as England's supreme contribution to the evolution of the New Architecture, gave London a gayer and more smiling countenance. There is grandeur enough and to spare for even a world capital in the great terraces of Regent's Park and those flanking the Duke of York's column. But more typical of the style, because so much more intimate, are the discreet villas of St. John's Wood. These are now falling right and left under the housebreakers' pickaxes, and the huge blocks of flats arising on their gardens threaten us with a "residential district" that will have all the deadly dullness of South Kensington.

From Early Victorian days up to only a few years ago, all London buildings had to wear the threadbare fancy dress of various period revivals, or the clumsy motley of those so-called "eclectic" graftings of one dead style on another. The Gothic used by Street

The Carrier Weathermakers,
27, Conduit Street,
W.1.

Dear Sir,

I thought you might like to know that the Air-Conditioning Unit which you supplied to me some time ago is working quite satisfactorily, and is indeed proving a boon, and the faulty fan of which I had occasion to complain at the start is now giving no trouble at all.

I like the Unit, and much prefer working in an Office with closed windows, and thanks to your installation the air is comfortable and clear.

A few days ago when the weather was hot, I had the radiators in my office left on and tried out the cooling part of the Unit, and found the effect really delightful.

I wish your Company every success, and certainly intend to recommend your Unit to my friends.

Yours faithfully,
D. GESTETNER LTD.

for that singularly frigid pile, the Law Courts, has been called scholarly. Even more still-born is Waterhouse's Natural History Museum, with its dreary Siennese bandings of yellow and grey terracotta. Its next-door neighbour, the Victoria and Albert, is a jumble of so many styles that it is difficult to say which, if any, predominates. Most Government departments, as exemplified by the Foreign Office and War Office, are of a ponderously official classicism the banks continue to emulate. Nor, with one exception, are London's main-line stations any more inviting. Hardwick's Arch is really all there is to Euston, St. Pancras is a spiky nightmare, but King's Cross is undeniably imposing in spite of its ugly yellow brick. We can be grateful, too, for the plume-like Byzantine campanile of Westminster Cathedral, which is such a graceful landmark on the skyline seen from the Green Park. There is also something to be said for the tubby old Albert Hall: an absolutely circular building is always comforting to the eye. Paxton's Crystal Palace, that first harbinger of the New Architecture, which was only a few years older, is now debris—more's the pity.

The last decade has been one of almost feverish rebuilding. External appearances are changing; but hardly as fast as the technical equipment of modern buildings. What was a framework is becoming something more—a chassis. "All-electric" planning is hardly a novelty any longer. But in the large blocks of flats, telephones, radio, heating and refrigeration, sometimes also vacuum ducts for cleaning and provisions for the disposal of garbage, are supplied as part of the building. Another modern invention, now appearing on the horizon, promises to exert a powerful influence on the

"L.P.T.B."

The headquarters of the London Passenger Transport Board, over St. James's Park Underground Station.

domestic arts. This is air conditioning, or the artificial supply of air controlled to the required temperature, humidity and cleanliness. There is no city in the world which needs more urgently to wash its atmosphere, and even the equable London climate can be controlled with advantage.

This latest period has not yet found its architectural feet. For all its classi-

cism, Bush House, which commands the axis of Kingsway, is as purely American as the pre-war Ritz Hotel is French; the headquarters of the Port of London Authority behind Tower Hill are apparently Babylonian. Far more typical of to-day are the great cliff Shell-Mex House rears above the Embankment and the nautical-looking B.B.C. building in Portland Place.

CLASSICAL AND MODERN:

An interesting example of the way in which the Continental developments of steel, glass and concrete have been adapted to traditional English brick architecture. The frieze, like a vestigial craft-guild's sign, is a return, on classic lines, to the seventeenth-century house sign—in this case, that of a hospital.

Higher up that same broad road, still London's proudest, the new R.I.B.A. seems to have been transported from Sweden. Mount Royal, that oddly named block of flats on the most level part of Oxford Street, is a nearly perfect model of what London's new flats ought to look like and so seldom do. All fine structural engineering is at the same time the best sort of architecture, because good architecture is the result, not of putting in something extra, but of leaving out all that can be spared. This is why the ornamentation of Battersea Power Station makes it look like an athlete wearing a necklace. Newest of London's public buildings, and as yet no more than a fragment, is London University behind the British Museum. The same architect gave us the cruciform baby skyscraper over St. James's Park Station, magnificent when flood-lit, which houses the activities of London Transport. To that body London owes nine-tenths of her best in modern design; and more particularly her new Underground stations. Some people notice them, some do not. But even to use them without being aware of them is an unconscious compliment. It proves how supremely well they fulfil their purpose—which is, after all, architecture's primary function.

HYDE PARK CORNER

The Iron Duke's London residence — "No. 1 London"—looks down on the busiest traffic centre.

London's Transport Problems

IF there were no transport, there would be no cities. This is a truism of the second degree; for it is true in two quite distinct ways. In the first place, if there were no movement of goods and people, cities would never come into existence, for they grow round the nodular points of trade routes, they depend on transport to and from their walls for their wealth, and even for their food. And secondly, when cities have grown as large as London (or even one-hundredth part as large as London), they cannot survive without a free circulation of internal transport. The ship that comes from the ends of the earth and the penny bus are alike essential elements of metropolitan existence.

London, of all cities, has thriven on transport. The fundamental justification for her location lies in the geography of transport; for a trading city was inevitable at the head of the lowest bridge on the largest British river opening on to the Narrow Seas. London is the natural quayside for England, and with England's wealth she has grown. The river is her backbone and the ribs are the great roads converging at London Bridge—the Great North Road, the Holyhead Road, the Great West Road, the Portsmouth Road, the Dover Road and the rest. Nor did the railways, when they came on the scene, greatly alter the channels of transport, though they swelled its burden. For London was already large enough to

serve as an incomparable magnet for the iron road; and the new railways were laid down roughly parallel with the old roads. Its size, its technique, and its content are all different; but the main directions of London's external transport are to-day much the same as they always have been.

The internal transport of London, on the other hand, is a comparatively new thing, and its influence on the form of London's growth has been profound. Public transport—in the form of vehicles plying regularly for hire on a predetermined route—is little more than a century old. The rich, of course, had their carriages; there were sedan chairs for hire; and a boat could always be taken to go up the river to Westminster or downstream to Greenwich. But the mass of the people had little need for transport, and none was accordingly provided until George Shillibeer ran his omnibus from the "Yorkshire Stingo" to the Bank just less than 108 years ago.

Since then, London life has been transformed by transport. The omnibus did not, however, at first play the commanding rôle. It was too expensive (Shillibeer's minimum fare was sixpence) and too slow. It was the railway which first made it possible for the Londoner to live away from his work, and it was the institution of workmen's trains and workmen's fares which drew the poor Londoner—or at least the next-to-poorest Londoner—away from the

crowded city and started him on that hectic handicap race, in which transport costs are continually being matched against land values. The effect of this was to change the whole shape of London. Hitherto it had spread along the river, venturing north and south not even as far as the opposing heights of Hampstead and Sydenham. But the railways came in, in the main, from north and south, and for the last century London has grown fastest in these directions. The area of the London Passenger Transport Board to-day is half as wide again from north to south as from east to west. This is a peculiar development in a district where not only the chief river, but the hills, run in the main from east to west.

The internal transport of London grew up in the heyday of unregulated free competition. In transport (whatever may have been the consequences in other fields) the result was an inglorious muddle. The engineers who laid out the main-line railways had their eyes on distant destinations, and not on the proper lay-out of London, but the suburbs, nevertheless, grew along their lines. The omnibus could not go far afield until the advent of the petrol engine. But before that time the tram had its brief day—and the tram routes of London still clearly demarcate the built-up area in the early electrical age. The tram was succeeded by the "tube"—made possible in London, almost alone of metropolitan cities, because of the

clay soil. The tubes were built in an access of enthusiasm: except for the City and South London, all the tubes in Central London were opened within seven years. Had the promoters waited for experience, the tubes might never have been built, for though London invented the tube, it has never made it pay. Underground transport is recognised as a necessity for moving quickly the great crowds of a modern city. But if it is to charge the same fares as surface transport it must be subsidised.

This was one of the compelling arguments for unification, for in free competition the petrol bus can drive every other form of transport (save, perhaps, the suburban services of main-line railways) into bankruptcy. The other compelling argument is that even within each section of transport, the fat must pay for the lean. Profitable though the motor-bus is, a quarter of the route miles do not earn their keep, and if free competition is to be allowed, every competitor will be compelled to concentrate on the routes which do pay and to neglect the routes which do not.

For nearly four years now, the London Passenger Transport Board has been entrusted with a complete monopoly of all transport services within the area. The only exceptions to its monopoly are the services of the main-line railways, but though these are still owned and operated separately, their

receipts are pooled with those of the Board, so that there is a complete community of financial interest between all forms of passenger transport. The Board is interesting as an experiment in Socialism, carried through by a predominantly Conservative administration. But it is infinitely more interesting as an experiment in the economics of transport. It is clearly the logical conclusion of something; but the chain of logic does not originate in Karl Marx and pass through the theories of Fabianism, it originates in the hard facts of getting 10 million people to and from their homes, and it passes through the Common Fund, which, by permission of Parliament, was set up in 1915 between the tubes and the buses.

Like nearly all forms of planning in London, the L.P.T.B. comes too late. It has inherited a muddle of a century. The roads are frequently in the wrong places, but they cannot be altered, they can only be extended into virgin country in the effort to get traffic for their central tunnels. Even bus routes cannot be altered without an outcry. Most fundamental of all, the houses are in the wrong places. Though transport has grown up with housing and housing with transport, their marriage is one of uneasy incompatibility, and their progeny is not lovely.

In all probability, London is almost at the end of its period of expansion.

The future population of the country as a whole is known within limits of time and degree. For more than a century, London has been growing faster than Great Britain as a whole, and this tendency will probably continue. But a rising proportion of a falling population may mean stability in absolute numbers, and the indications are that the population of the Transport Area, now about 9,500,000, will never rise above 10,000,000. This does not mean that transport will not expand, for the Londoner will increase his average number of journeys per annum. Moreover, as he continues to move from the centre to the periphery, the length of his average journey will increase. Thus, passenger-journeys will increase faster than population, and passenger-miles faster than either. That this is happening can be shown by the following figures for the first three years of the Board's existence:—

12 months to June 30	Journeys per head of population	Receipts per head of population
1934 ...	430 ...	991d. ...
1935 ...	436 ...	1006d. ...
1936 ...	440 ...	1017d. ...
Increase since 1934 ...	0.3% ...	2.6% ...

Passenger-miles probably increased even more than receipts, since there was some reduction of fares. London Transport is thus still an expanding concern, which means that there will be funds for development. But the rate of expansion is extremely slow, and it must necessarily be mainly on the periphery, where the extra traffic can be obtained. And that, in turn, means that any radical reorganisation of passenger transport in the centre can be postponed to the Greek Kalends. To that statement there is one proviso. The transport of London is peculiar, not only for its planlessness, nor only for the fact that London, which of all the world's capitals has the narrowest streets, is also the most dependent upon omnibuses, but also for the fact that alone of all metropolitan transport systems it pays its way. Not only does it pay its way, it pays all the customary taxes and will shortly have to provide for the redemption of its capital. And if it fails for three consecutive years to pay a specified minimum dividend on its junior capital, it is liable to an application for receivership. If either the national or the local governments should ever decide that the social interest of London transport justified a subsidy, the outlook would be transformed. But without a subsidy, the Londoner will continue to spend a greater proportion both of his time and of his income on involuntary travel than any other of the world's workers.

Travel in bus or tram, or tube or train, is not, however, the only form of transport open to the Londoner. There are nearly half-a-million private cars in the London area, and perhaps two million bicycles. The enormous post-war increase in traffic on the roads found London completely unprepared. It is still unprepared. Much road con-

struction has been undertaken since 1918, but, as can be seen from the accompanying diagram, it has stopped short of the central area. In the inner County of London there has been less construction of new streets in the past two decades than in previous periods. One generation of Londoners could drive King William Street and Queen Victoria Street through the most congested and expensive areas of the City; a second generation could build the great Victoria Embankment; a third could plan Kingsway and Aldwych. But our own generation, with far greater need for broad boulevards, apparently finds the problem insoluble within five miles of Charing Cross. A plan is now in preparation; but there is no whisper of the finance for it.

The main-line railways contribute more than their suburban traffics to London. Every day they pour a stream of visitors and an unimaginable mountain of goods into the metropolis. But they too are still running on a century-old plan, which was far from perfect when it was first evolved. There are only four railway companies now, but there are still fourteen termini. Nor are passengers the worst case: the chaos of London's goods transport is under the eye of all beholders in any street on any weekday.

For all this muddle it is difficult to ascribe blame. Even the Early Victorians, who had the greatest chance since the contemporaries of Wren to make a fine city of London, cannot be too severely chided for failing to

envisage the ten-million monster of to-day. But it is not merely unavoidable hardening of the arteries that is wrong to-day; for in the new dimension of the air there was a chance in our own generation to make an intelligent start. It can hardly be said to have been taken. Croydon, hitherto the main airport of London, is too far out to be convenient for passengers, and too close in to be convenient for pilots. Faced with the choice between nearer in or farther out, Imperial Airways are deliberately planning to go farther out to Lullingstone, in Kent, and to bring their passengers in by train. But it is not an ideal solution that the aeroplane of the twentieth century should be held at bay by the bricks and mortar of the nineteenth.

In every form of transport upon which we have touched in this brief review, we have found the same planlessness and the same costly muddle. In every form London has to go without the perfect for no better reason than that the imperfect came first and remains as a gigantic vested interest in the path of reconstruction.

Blackfriars Bridge—
and a transport problem.

Serving the Public

LONDON has grown too large—in the sense that local loyalty has almost died. Metropolitan Boroughs, to-day, do not stimulate local patriotism. The County Council is sometimes accused of sacrificing local needs to County welfare—and, even so, it represents only half London's residents. There is only a moderate exaggeration in the statement that neither Mansion House nor County Hall means more to the Londoner than an annual Lord Mayor's Show or a motor licence. True the Public Services Exhibition drew 140,000 visitors to London's County Hall during the nine days on which it was open in 1935; but the majority of Londoners remain ignorant of the measures which are being taken to protect and improve their life.

There are other reasons for this lack of interest. The Englishman's traditional love of liberty revolts against

government, so far as it means interference. Oliver Twist and Mr Pickwick in the debtors' prison live on in his mind as an indictment of official Bumbledom, which made a pauper's lot so tragic a century ago. Local government was founded to administer the poor law, and although the old system has been broken up and bereft of its workhouse taint, the public still associate the two.

Public services, too, have grown slowly and not spectacularly, especially in London, where, despite seven Royal Commissions in a century, a multitude of authorities continues to exist; public health and other powers have evolved mainly from the poor law only as they became essential. If victories are measured by the number slain, then Waterloo and Trafalgar are insignificant beside the passing of the public health legislation to reform the water and drainage systems, after the ravages

of cholera and other epidemics. Many battles have been fought to provide London with those services which are now accepted as a matter of course by the citizens they benefit.

What does the Londoner obtain, in public services, for his money? Where does the money go? In the chart on page 8, accompanying the article on "Public Finance," the answers are given in pictorial fashion. Here, we shall only describe some of London's public services.

One in every four Londoners begins his or her life in a municipal hospital; and here the results of the Local Government Act of 1929 have been almost revolutionary. Where there was formerly an institution, administered under the Poor Law Acts by the Board of Guardians, where pockets were emptied on entry and voting rights lost, there is now a municipal hospital—one of 33, totalling 19,037 beds,

BATTERSEA POWER STATION:

Supplied from railway and river, and housed in a striking example of the new architecture, one of London's public undertakings looks on the city it serves.

THE CHEAPEST FOOD

on sale in Great Britain today

Consider the care that goes to that half-pint of milk of yours. Human ingenuity could not make a food more wholesome. Consider, too, what you *get* in each half-pint of the food of foods. Proteins for muscle and energy. Vitamins for warding off infections. Mineral salts for sturdy bones and teeth. Everything that your brain and body need for utmost well-being, and not one particle that is waste or unwanted . . . All this for 1½d.! Fortunate indeed are we all, that the finest food that nature makes for us should be the one that costs us least.

... and all for

1½^d

AT YOUR SERVICE

THE ENTIRE UNDERTAKING of the Port of London Authority—docks, quays, warehouses, equipment, trained staff—exists to serve the needs of shipowners and merchants who use the Port of London.

THE P.L.A. SERVES no vested interests. A big preponderance of the Members of the Board are elected by those whose business depends upon an efficient Port. Although a Statutory Undertaking, the Port Authority is not comparable to a "holding company" or a mere consultative or supervisory Body. Nor should the idea persist that the P.L.A. is in any sense a "Government Department". The P.L.A. is a non-political independent Public Body and receives no subsidy either from the Government or any Municipal Authority.

How GAS is saving labour costs in Industry

In the area of The Gas Light and Coke Company alone, 22,500,000 therms of gas are sold annually to industry, and industry is increasing its order at the rate of 8% each year. Some 22,000 factories in this area, representing 1,000 trades, use gas for about 6,000 processes. Biscuits, gramophones, potato crisps, paint, swiss rolls, newspapers, radio sets—the range of products in the making of which gas plays a part is endless.

What are the reasons for this tremendous swing-over to gas? Perhaps the most important is its complete reliability—*Gas never lets the manufacturer down.* The reliability of a fuel is important enough in any industry: in an industry like newspaper production it is vital. And gas can be controlled automatically to give the exact amount of heat required at any given spot at any given moment.

Secondly, gas reduces labour costs by abolishing stoking and fuel- and ash-handling operations. And it saves the capital cost of storing fuel and ash.

Special Tariffs for Industry

An equally important reason for the rapid increase in industrial gas consumption lies in the special 'block' rates offered to manufacturers, by which the cost of gas decreases as consumption increases. More and more customers are transferred to 'block' rates each year.

This silent industrial revolution is causing a no less great social revolution. The atmosphere of manufacturing districts is clearing, thanks to the smokelessness of gas. If the change-over continues at its present rate, the towns and cities will soon be working in practically country conditions.

THE GAS LIGHT & COKE COMPANY
never lets London down
 HEAD OFFICE: HORSEFERRY ROAD, WESTMINSTER, S.W.1

centrally controlled by the London County Council. A municipal hospital service has been created, which dwarfs the 105 voluntary hospitals with their 15,312 beds; for in addition to the general hospitals of the Council are special hospitals for infectious diseases, tuberculosis, mental disorder and defect, children's hospitals and homes, and institutions for the aged and chronic sick. These house a total of no less than 92,000 persons. Only seven years have elapsed since the transformation. But centralisation, standardisation and specialisation have already made great economies possible. The average weekly cost per person in the municipal hospitals is £3 10s., compared with £4 10s. in the voluntary hospitals. It has also brought about far-reaching improvements in medical treatment and staff conditions. Lambeth Hospital contains deep X-ray and radium treatment apparatus unsurpassed in the country.

After birth, the infant Londoner and his mother may attend, if they wish, a maternity and child welfare clinic or a day nursery. The effect of the establishment of these services, after 1918, can be read in the infant mortality rate, which fell from 108 per thousand births in 1918 to 58 in 1935. Nursery schools also date from 1918, and the generation which has so far benefited from them has yet to reach manhood.

Education, administered by the County Council—which aids financially and supervises schools provided by voluntary organisations—takes children on journeys abroad and on visits to places of importance. It awakens their interest by wireless, gramophone and cinema performances. Organised games, on green grass, are replacing the shouting horde on the tar-paved playground. As a result of the institution of medical inspections and treatment centres, health and hygiene have enormously improved. Since 1921, milk, cod-liver oil and meals have been

provided for London's schoolchildren. In March, 1935, 28,898 children were receiving these free, and 17,859 obtained them for full or part payment. Care committees have been established, with the help of over 5,000 voluntary members. All these measures ensure that every child, whatever its home conditions may be, is given an opportunity to derive the best advantage from education, both during and after school days. Few cities have such fine facilities as London for continued education. Polytechnics, schools of art, literary and technical institutes attract young and old of every class.

The borough authorities help the Londoner to spend his leisure hours pleasantly and profitably. They have provided him with 102 free libraries (having a stock of 2½ million books) and 53 swimming baths, attended by over 7,000,000 bathers a year. They lighten his rates by making a profit from markets; but they run their burial grounds at a loss. Sixteen of the twenty-eight boroughs also distribute electricity, and obtain therefrom a surplus of over £200,000 a year. In the main, however, electricity is supplied by companies—fourteen in number. One of these has the lease of nine others. It generated, in 1934, 1,582 million units—nearly three times the combined output of the boroughs. Profits, however, are limited by law, and a proportion of annual surplus must be remitted to consumers by way of lower prices. This applies both to electricity and to gas companies. London's gas supply is not under municipal control, as in the majority of northern cities, but is provided by five companies, two north and three south of the river. Water is paid for, not according to consumption—except in the case of certain large metered supplies—but by a tax on the value of property. It is the only supply service completely under municipal control. The Water Board bought out eight

companies in 1902, at a price greater than the cost of all subsequent capital expenditure. The magnitude of the price, indeed, remains one of the reasons for the fact that to-day 4d. in every 1s. of water rate represents debt charges. But, for all that, the charge is not excessive.

London's drainage is hardly a romantic subject. It functions without either breakdown or publicity, and few Londoners know that 400 miles of mains, sufficient to reach from London to Glasgow, lie beneath their streets. Some of these are large enough to take a horse-cart, and in rainy weather more than 400 million gallons a day pass through the two main outfalls into the Thames. The County Council administers the main drainage for an area extending beyond the county.

It also undertakes many other protective services. It tests the petrol pumps, weights and measures in shops and on stalls, and bags of coal in the street. Its Fire Brigade and Ambulance service are at everyone's beck and call. Entertainments are licensed and inspected, not only by the Council but also by the police. This latter service is not municipal—as it is in the rest of England—but is under the control of the Home Office, except in the square mile of the City of London.

Londoners may grumble at their rates, but they provide all these services and many more, such as roads (with pedestrian crossings), bridges, ferries, street lighting and housing. On fields of activity formerly left to private enterprise and charity, like midwifery and the care of the blind, new municipal services are being built. The County Council has planned parks, golf courses, tennis lawns, sports tracks and open-air swimming baths. The day may be at hand when it will organise the Londoner's leisure, and care for him, working and playing, as it now cares for the suffering and the unfortunate.

The Port of London

THE port of London, for more than a century the largest in the world, is the traditional source of the riches which distinguish the City: those of the merchants, bankers, guilds and companies whose activities centred upon the Royal Exchange. Once, London river was as much the City's highway as it was that of the country's trade. To-day, though the Londoner seldom looks at his river—except perhaps when passing over London Bridge to or from work—it is still the greatest commercial fairway in the Western world; and the volume and value of the merchandise it bears is greater than at any other time. The port of London is still making new records; for it remains the largest transshipment port in the world, and it supplies and provisions one of the densest populations of any industrial area in the world. Within a radius of

one hundred miles around London are more than a half of the population in the United Kingdom, together with the industrial undertakings that employ them.

A century ago, the few docks, built by individual companies, were being rapidly extended. But, owing to the liberties of lightermen to ply freely in all docks, and to the coming of the railways, the dock companies in the second half of the century began to lose their remunerative warehousing business; nor could they recoup themselves by increasing their dock dues accordingly, for that would have meant inviting shippers to unload into lighters, and the wharfingers would have waxed fat at the dock companies' expense. Between 1850 and 1900 every dock company borrowed money and built new docks, e.g. the Royal Victoria and

Albert docks; but they simply cut each other's throats. In 1900 they applied for powers to levy a toll on Thames barges. Parliament set up a Royal Commission to examine both the complaints and the countercharges that the docks were ill-equipped. The Commission's recommendations raised a storm; but finally, in 1907-08, Mr Lloyd George, then President of the Board of Trade, set up the Port of London Authority, and the dock companies were merged in one of the first of Britain's great public corporations, at a cost of about £23 millions. The P.L.A. promptly set to work to dredge, extend, and construct; and to-day, after a generation, the port of London is managed as one concern, with the most up-to-date facilities, with 46 miles of quayage, 60 per cent. more shipping capacity than in 1909, over 1,500 cranes compared with 970, and a

total area in its possession of some seven square miles compared with only 4½ in 1909. The P.L.A. spends about £4,000,000 every year on running expenses, improvements, etc., in addition to about £1.6 millions which it must pay as interest and sinking fund charges. Its total revenue of about the same total figure is composed of about £1.5 millions from charges on ships, £3.1 millions from charges upon goods, and £1.1 millions of "other revenue." It has no shareholders; has only to cover costs and interest; and its efficiency is therefore reflected in lower charges.

The following figures show how the volume of shipping using the port has increased since 1909:—

Year	No. of Ships	Net Registered Tons (millions)		
		From and to other Countries	Coastwise	Total
1909	53,306	23.6	14.9	38.5
1913	50,941	25.1	15.0	40.1
1924	46,957	32.6	12.8	45.4
1929	55,820	41.5	14.9	56.4
1932	51,209	38.0	15.9	53.9
1934	60,057	41.0	17.9	58.9
1935	59,175	41.3	18.5	59.8
1936	61,141	42.5	19.7	62.2

If the values of imports into and exports from London are corrected for changes in the price level—a necessary corrective over so varied a period—it will be discovered that, with the exception only of the war years, the value and volume of imports rose steadily. The corrected value of imports rose from a base of 100 in 1870 to 440 in 1930; thereafter it declined, but has since risen to almost that peak figure. The absolute values of imports in sterling reached a peak in 1920 (£640 millions), fell just short of £500 millions in 1925,

fell below £300 millions in 1932, and are now running at about £370 millions. On the export side, the corrected index of exports rises much more slowly since 1870; it reached 185 in 1913, fell below 100 in 1918, rose to just below 200 in 1929, and then fell to 140. It is now climbing back to the 175 mark. In absolute values, exports from London reached their peak in 1925 at just under £250 millions, from which they fell to £120 millions in 1932, and are now running at about £150 millions.

One of the most interesting developments in London's port is the great and growing increase during the post-war years of coastwise traffic. From the days—six centuries ago—when the "Newcastle Vend" used to ship London's coal down the coast, the coastwise trade has had peculiar importance for London. But with the development of railways and road transport, it is interesting to observe that this trade has increased, and is still increasing, faster than the ocean-borne commerce. It may indicate once more the truth that, for many purposes, water-borne cargo is the cheapest form of transport. The advent of the small, efficient, and cheaply run coastal ship—motor or steam—may explain the increase in coastal tonnage, filching freight from the larger vessels. As this coastal trade continues to expand, it argues that both road and rail transport charges, at least to and from the metropolis, are so high as to encourage traffic by the oldest and cheapest route of all.

But London's dock and harbour facilities extend far beyond mere shipping. The P.L.A. has giant warehouses capable of storing over 1,000,000 tons of produce, some of which form rail-heads for goods trains. The Authority's

cold-storage warehouse at Royal Albert Dock cost over £500,000—all for the chilled and frozen meat of millions of people in the South of England. In the warehouses near the West and East India Docks, St. Katharine's, London, and Surrey docks—the oldest of all, haunted by ghosts of highwaymen and eighteenth-century "mudlarks"—are to be found England's tea, spices, spirits, cigars, and tobacco, fine timber, carpets, coffee, rum. Round the newer docks downstream—the Royal Victoria and Albert, and King George V (shown below)—are the big grain and flour stores, meat warehouses, etc.

By value, tea is the chief item of import, at about £35 millions in 1929 and £30 millions to-day. Next come butter (£24 millions in 1929, £17 millions in 1934); chilled beef (£21-£13 millions); frozen mutton and lamb (£14-£13 millions); bacon (£12-£10 millions); wool (£28-£18 millions); timber (£15-£13 millions); fruit, fresh and dried (£17 millions); wheat and corn (£19-£11 millions); sugar (£10-£7 millions); rubber (£13-£9 millions); and a host of lesser commodities such as cheese, leather, oils, tobacco (most goes to other English ports), toys, machinery, metals, skins and furs, paper, wines, etc. From the docks and their ancillary warehouses, these goods find their way, by road and rail and even by barges, to the trades which improve them for retail distribution, or to the big wholesale marketers in the Borough, Smithfield, Mincing Lane, Covent Garden, Basinghall Street, etc. Through the market operations, they are hauled to places even hundreds of miles from the metropolis—naturally, the more centralised the national market in London (as, e.g.

the wool market) the greater the transport and handling operations through London.

On the export side, London sends abroad mainly cotton and woollen textiles, automobiles and motor cycles (the greatest item of export by value!), machinery of all kinds, paper, and a vast number of specialised manufactured articles. Britain's very important re-export trade, amounting to some

£60 millions in a year, must not be forgotten. It brings in a considerable income to the merchants, bankers, shippers, insurers and warehousemen of London, including the P.L.A.; and, especially in this context, the huge bonded warehouses play an important part.

The port of London has grown from a few tiny dock-quays under the shadow of the Tower to vast basins which inter-

lace every bend in the river, from the Pool below Tower Bridge, as far as Tilbury. Despite railway, motor lorry, and aeroplane, the largest capital in the world and its densely crowded hinterland depend for the bulk of their work and sustenance upon the goods which British ships bring up the narrow seas and the Thames. As the new record figures of the port show, that dependence is still growing.

GRESHAM'S ROYAL EXCHANGE

After a contemporary engraving by Wenceslas Hollar.

Exchanges and Markets

IN one sense—and a very true sense—London is one vast market. It has never, until very recent years, been an industrial centre, and the Government, even of an Empire, absorbs relatively few of the eight or ten million Londoners. London lives or dies by trade. Nor is it merely her own trade. London has always been the entry-port—and the exit-port—for England. But nowadays she is much more than that; she is a counting-house for the whole world. The share of world trade that is financed and ordered from London has shrunk. But in many commodities the island market of Great Britain is the only free market still remaining, and world prices are still determined in the markets and exchanges of the City.

There is a distinction between a market and an exchange, though it is neither very easy nor very profitable to

draw it. A market, by definition, is an open and visible place for trade, where goods can be seen and handled, bought and sold, where the seller sets up his booth and waits for the buyers to resort to him. An exchange is closed and formalised; goods are bought on sample, or sight unseen; there are no rigidly-distinguished buyers and sellers, but only traders who may buy one minute and sell the next; trading is frequently formalised within rules; and much of the trading is speculative. These are the definitions; but they are not very dogmatically applied. Markets can be as formalised as the Money Market, as invisible as the market in foreign currency, as speculative as the new issue market. Some of the Exchanges, on the other hand, such as the Corn Exchange, are merely markets under cover. There is, in short, an

infinite gradation from the ecclesiastical ritualism of the Metal Exchange to the informality of Petticoat Lane.

From the earliest times it was doubtless convenient for the sellers of one commodity to congregate together, and many of the old street names (Cornhill or Bread Street) suggest this habit. The custom lingers, for without any formal initiative being taken, trades tend to cluster together, like the diamond merchants in Hatton Garden, the book-sellers in Charing Cross Road, and the furniture stores in Tottenham Court Road. Even the newer trades exhibit the same gregariousness, for the motor-car showrooms are thickest in Great Portland Street, the dealers in electrical appliances in Newman Street, or the cinema firms in Wardour Street. The birth of a market is merely the provision of a permanent location for one of

these spontaneous trading congregations and as often as not the impetus is nothing more than the congestion of street-trading.

Naturally enough, the main markets of London are concerned with food. Some of these markets are familiar by name to all men. Billingsgate, for example, has been a fish market for a thousand years. Smithfield used to be even better known than it is, for it used to be the site of the great Bartholomew Fair. Covent Garden is perhaps the best-known of all (what other city would litter cabbage-stalks on the steps of its Royal Opera House?). But these are only the most famous of a long list. These three, in particular, are the centres of wholesale distribution of perishable foodstuffs. Every day, the retail fishmongers, butchers and green-grocers of the whole vast London area come to them to buy and take away their purchases. Their location is purely traditional; it is certainly not dictated by considerations of convenience. Of the three, only Smithfield is on the railway. All three are in crowded areas, and though the fact that their heaviest trade is done in the small hours of the morning lessens the transport inconveniences, it does not by any means remove them. Smithfield used to be a cattle market as well as a meat market; but the inconvenience of cattle in the streets led the City Corporation to provide the new Metropolitan Cattle Market (known to many in another connection as the Caledonian Market) at Islington in 1868.

The City Corporation owns other markets, notably Leadenhall Market, which is the centre for poultry, and Spitalfields Market (where the London Fruit Exchange, built for the sale by auction of large supplies of imported fruit, was opened in 1929). Other

markets, formal and informal, have grown up round the railway termini, and of these the King's Cross market—the chief centre for potatoes, celery, green peas and rhubarb—is perhaps the most important. The list could be extended indefinitely. Almost every foodstuff that is consumed in London has its local market, even the new and growing markets in canned goods centred in Tooley Street and Eastcheap. There is, indeed, one important foodstuff which does not have a market in this sense—namely, milk. London is incomparably the largest consuming centre for milk in the country, and the attraction its purchasing power exerted on the dairy-farming industry was not the least of the reasons that called the Milk Marketing Board into existence. The ten milk carts entering a single street used to be the stock Socialist example of the wastes of competition. Their place has been taken, so far as London is concerned, by the laundry vans; but though a large part of London's milk supply is in the hands of a few large concerns, the small independent still survives vigorously, and the organisation by which milk appears on the doorstep twice a day is no less admirable a piece of commercial machinery because it is not accompanied by the bustle of a great public market.

Compared with Billingsgate or Covent Garden, the Exchanges of the City are dignified and lordly places. Most of them are the children of the Royal Exchange. The founding of the Royal Exchange was Sir Thomas Gresham's doing; it is his concrete monument as Gresham's Law is his contribution to the science of monetary economics. He had seen the continental Bourses, especially that at Antwerp, and his design betrayed its Flemish parent in

every dormer window of the high-pitched roof. It was in 1571 that Queen Elizabeth visited the new building and "caused the same bourse by an herald and a trumpet to be proclaimed the Royal Exchange, and so to be called from thenceforth and not otherwise." The Royal Exchange has been twice burnt down and twice rebuilt, and it now bears on its pediment the name of Victoria as well as of Elizabeth. But it has never changed its location, and though its usefulness is now symbolic rather than practical, it is still the centre of commercial London.

The Exchange, at first, was merely a meeting place for merchants, a glorified Market Hall, and in its different "Walks" all manner of trades were pursued and bargains driven. As the volume of business grew, however, and as each trade crystallised into its own formal Exchange, the children of the Royal Exchange left home and set up houses of their own. The boisterous stockholders were expelled; but the others left voluntarily. Lloyd's, which is only a step-child, since it was born in Lloyd's coffee-house in Tower Street and migrated to the Royal Exchange only in 1774, was the last to leave in 1928. Lloyd's is the link between the Exchanges of the Greshamian tradition and those even more spontaneous bodies, such as the Baltic or the Corn Exchange, which grew out of some coffee-house or tavern patronised by members of a single trade. It is doubtful whether the adventurer knights of Queen Elizabeth or the humble coffee-housekeepers of the Restoration performed the larger service for London's greatness.

The Exchanges of the City differ widely in their methods. The Metal Exchange is an almost perfect example of the formal market. It deals in four metals only—copper, tin, spelter and lead. Its membership is limited to forty Ring Members, who may deal in only one metal at a time and then only for a limited number of minutes. No metal is ever seen, in its precincts; the great majority of transactions are for future delivery and many of them are speculative in the sense that actual delivery is not expected to be taken. The Rubber Exchange is another example of highly formalised organisation, the members being arranged in three categories according as they are Importers, Brokers or Dealers. As a contrast, the Coal or Corn Exchanges can be cited. The Coal Exchange is little more than a convenient meeting-place for the merchants; the Corn Exchange displays the samples of its stallholders' wares.

The Baltic is in a class by itself. To the laymen it is the least known of all the Exchanges, since its title conveys little or nothing of its business. Within the last few weeks its Chairman was listed, at a dinner intended to be representative of all phases of British industry and commerce, under the rubric "Stock Exchanges." The Baltic deals in many things, but stocks and shares are not among them. Its main business is in the chartering of ships, though it

has an extensive business in grain besides. Its name is reminiscent of one of the taverns frequented by seagoing folk. The "Virginia and Maryland" was originally in Leadenhall Street, but it changed its name to the "Virginia and Baltick," when it removed to Threadneedle Street in 1744. As recently as 1900 the Baltic amalgamated with the London Shipping Exchange, itself descended from the Jerusalem coffee-house, whose name it had kept until 1891. To-day, the Baltic has no more to do with the Baltic Sea than with any other stretch of salt water, but the retention of the name is one of those happy conceits with which mercantile London delights to honour its origins.

Finally, no review of the Exchanges of London would be complete without a mention of the London Commercial Sale Rooms in Mincing Lane. There is no restriction here to one commodity, or one group of related commodities; Mincing Lane embraces commodities as various as rice and ivory, hemp and pepper, shellac and mother-of-pearl. The most important markets, however, are in tea, coffee, cocoa and sugar; each has its own rules and methods of sale.

There are many markets in London other than those here mentioned. It has been impossible even to list such important centres as the Wool Exchange, the Iron and Steel Exchange, or the fur auctions of the Hudson's Bay Company. There is, in fact, no end to the list of London's markets, as new ones are rising year by year. Few of them are rising year by year. Few of them out to the passer-by. Many of the most important Exchanges, indeed, seem deliberately to shrink from the public eye. But in these obscure chambers of specialised trade the enquiring visitor can observe the pulse-beats of London.

The New Lady of Threadneedle Street.

Caledonian Market, where one can buy junk, curios—or furnish a home

Banking and Finance

WITHIN a circle, about a quarter of a mile in radius, round the Mansion House, the central part of the City of London is largely given over to banking and its kindred activities. Here the visitor will see the palatial head offices of the leading British banks towering to the sky, and giving a vivid impression of wealth, stability and security. For other phases of banking he will search in vain. He will find no building housing the money or discount market, none housing the foreign exchange market. Even the Bankers' Clearing House, focus of the circulation of money all over the country, will remain undiscovered by him unless he knows just where to search for it.

Security, stability, conservatism. These are the attributes which most people would attach to British banking to-day, and in many ways they would

be right. Yet there is one attribute which is even more important, though it largely escapes notice—like many of the market's own institutions. That attribute is evolution. Ever since the days of the gold-smiths, the first of the British bankers, the industry has been steadily developing. Contrast the modern bank building with the dark, noisome cubby-holes described by Dickens in *The Tale of Two Cities*, or even with the Victorian rabbit-warrens of barely a generation ago. Mingle with the staff and see how the ledger-clerk with his quill pen has given place to the typist and the calculating machine. Contrast, as some people are doing to-day, the old hand-written pass-book with the modern machine-typed statement, which automatically relapses into red ink so soon as one's account becomes overdrawn! All these are the

outward signs of the evolution of British banking.

The structure and conduct of banking have undergone even more fundamental changes. The early part of last century was the hey-day of the private banker, both in town and in the country; with his right of note issue, with his few accounts kept only by the wealthy, and with his portfolio stuffed with bills financing home trade. In those days, the Bank of England was mainly a commercial bank, *primus inter pares*. Then came the growth of the joint-stock bank and, equally important, the substitution of cheques for notes and gold as the main medium of currency. The inland bill gradually dropped out of use as bank deposits grew, and with them the power of the bankers to finance trade by loans. Simultaneously, international trade and

Guaranty Trust Company of New York

Incorporated with limited liability in the State of New York, U.S.A.

SINCE the establishment of its London Office forty years ago the Guaranty Trust Company of New York has aimed at the constant development of its services in order to render its customers the greatest assistance possible in their commercial and financial transactions both in and between Europe and America.

Every phase of modern banking business is undertaken and the management at any of the offices will be glad to explain the Bank's facilities in detail.

finance were growing, with London as their centre, and the London banker and bill-broker came to deal in bills financing trade all over the world; while the London accepting house gave its own name as guarantor that the bill would be met.

Another generation passed, and the day of the small independent bank passed also. One by one, the small banks, both London and country, joint-stock and private, either coalesced or were absorbed. To-day there are only five very large banks, and only eleven members of the bankers' clearing house. Gradually the Bank of England has changed into a central or bankers' bank. Meanwhile, as the British banks grew in size and diminished in number, London was enriched by the establishment of offices of the leading Empire and foreign banks. The war, and the troubled years that followed, brought a fresh set of changes. Gold disappeared; paper took its place, was abused and was finally brought under control. International trade dwindled in volume, and the commercial bill gave way to the Treasury bill. Currencies lost their stability, and so British bankers had to enter the foreign exchange market and take their place with the accepting houses and foreign bankers. The pound itself left gold, and British Ministers and the British nation learned that money and banking had become a matter of public concern. And so we reach the present day.

Let us look at some of the less familiar branches of the banking industry. Walk one hundred yards from the Mansion House into the head office of one of the "big five" British banks. If he is allowed to penetrate so far, the visitor may find a whole floor of the

"A.I.
AT LLOYD'S"

The imposing entrance to the new home of the Lloyd's underwriter.

enormous building given over to a mysterious process known as "country clearing." On that floor, payments are transmitted from bank to bank on behalf of customers scattered all over the country. Another block of rooms is given over to the Advance Department. Here the applications for loans too large to be dealt with on the spot come up for examination and approval from all over the country. Let us go over the road to the Foreign Branch. Here, we

find men apparently speaking on several telephones at once, and playing with a complicated keyboard of press-buttons. They are buying and selling money all over the world. Others—the foreign exchange brokers—are playing the same game in offices in back streets and remote courts, all linked together by telephone; for the foreign exchange market is now a telephone market. The visitor who looks for the money market will not find it, but may light upon a room in a bank head office in which two men lend thousands of pounds at a time with little more than a nod of the head, or a word on the telephone. He will also find the Discount Houses, where bills are bought and sold, and he may find the bill-brokers (if they are at home) in their offices tucked away all over the City. London banking, in short, is the machine for causing money to circulate, and for mobilising and supplying credit all over the country and, indeed, over a large part of the world. The surplus credit it undertakes to employ itself—to-day largely in taking up the Government's Treasury bills. Banking, however, is not only a City of London institution. In the City it is the focus of a national and world-wide service, and it draws on the nation and the world for its income and its support.

For many years bankers worked unchecked. The public saw that the system worked well and were content not to penetrate its mysteries. Imperceptibly, however, during the last five years, the centre of control has moved from the City towards Whitehall. The Bank of England no longer dominates the Government and the Treasury in monetary affairs, but while co-operation between the Bank and Treasury is as close and cordial as ever, control has passed to Westminster and White-

hall. The Government defines the policy of the Exchange Equalisation Account, which now holds much of the country's gold, and controls both the foreign exchanges and, indirectly, credit conditions at home. Public Departments with their big holdings of Government stock exercise a profound effect on the gilt-edged market. Foreign lending, the former main-spring of British finance, is now controlled by a Government committee. Last, but not least, the supply of bank cash, the ultimate determinant of the supply of credit, is no longer automatically determined by the size of our gold supplies. Instead, it

is largely what monetary policy likes to make it. Bankers can still decide how and when to lend, but monetary policy ultimately fixes the amount they can lend in the aggregate.

And so the evolution of British banking continues. The system itself remains strong. Perhaps it is stronger than ever before, for bankers have learned to take a less specialised view of their duties. The reign of King George V saw great changes. We do not know what the new reign holds for British banking, but we can at least be assured that it will maintain its strength and power to serve the nation.

**The Joint-Stock
Company**

WHENEVER one is asked to complete the attached proposal form, or to send 6d. for a trial bottle, or to forward 20 per cent. on application and the remainder on allotment, it is all Lombard Street to a china orange that the address is in London, in the East Central postal district. To thread the maze of floors and passages in any one of the many "Houses," within a half-mile radius of the Bank of England, which borrow their names from peers and famous statesmen—Winchester, Salisbury, Palmerston *et al.*—is to feel that almost every company in England might well have an office there.

Many factors have combined to make London the headquarters of British company promotion, organisation and administration, and the creator of a body of company law which has served as a model for most other countries. The first of these is undoubtedly the fact that London, as a capital city and a port, has always been primarily interested in commerce rather than in industry; for the peculiar services which company administration demands are those pertaining to trade rather than to production. The birth of even the smallest company is a complex process,

and its midwifery calls for precisely the type of team collected by the Bellman, which

... included a Boots,

A maker of Bonnets and Hoods;

A Barrister brought to decide their disputes,

And a Broker to value their goods."

If we add to the list bankers, solicitors, consulting engineers, valuers, accountants, stockbrokers, printers, advertising agents, issuing houses, insurers, Board of Trade officials and others, it will be apparent why London, which was a capital city for centuries before joint-stock companies emerged, remains the clearing house of all the talents on which a company must continually draw.

Long before the functions of this modern cloud of witnesses had been clearly differentiated, however, joint-stock enterprise was drawn to London by two even more indispensable institutions—the Court and the Courts. The earliest joint-stock ventures were all chartered companies, and the grant of a charter is the exclusive privilege of the Crown. Royal favour established the Merchant Adventurers of England at the end of the fourteenth century, the East India Company at the end of the

sixteenth, the Company of Adventurers of England Trading into Hudson's Bay (over which, for a time, the great Marlborough successfully presided) and the Bank of England, in the seventeenth. The notorious South Sea Company was a chartered concern. Before the foundation, however, of the more modern companies of this type, the entire outlook had been changed by the Industrial Revolution and the triumph of the democratic principle in Britain. The one demanded the aggregation of immense sums of capital and the other decreed the manner of its accumulation. If the entire country were to become a catchment area, draining innumerable small springs and rivulets into capital reservoirs, it was essential first that the small investor should be able to limit his risk. The impressive body of legislation passed in three decades after the Reform Act of 1832, secured this *desideratum*. The vast amounts expended on the construction of British railways were secured by granting the benefits of limited liability—under which a shareholder could lose the amount of his shares, and no more—to companies established under special Acts of Parliament. Even to-day, companies organised to carry out certain public services whose provision involves quasi-monopoly and impinges on the rights of the King's subjects, are subject to special legislation. But to the great mass of ordinary trading companies the indispensable privilege of limited liability was secured blanketwise by the Companies Act of 1862. Subsequent Companies Acts, down to the extending and consolidating measure of 1929, have modified many details in the light of experience, but limited liability remains the foundation-stone of the law. Meanwhile, the aggregate number of companies registered in England alone has risen from 704 in 1863 to 128,737 in 1935, and their total paid-up capital in 1935 (excluding debentures) was £5,212,685,614.

The capital drainage system has clearly functioned with success. An institution which has played an indispensable part in this result has been the Stock Exchange, which has provided a ready market for capital ownership. The London Stock Exchange is a private club, which, in the eighteenth century, had a coffee-house embryo. Its control is divided between two bodies,

the Managers and the Committee, who do not always see eye to eye on all things. No one knows the value of the securities which change hands on the Stock Exchange, or even how many transactions are carried through in a single day. It is not obligatory on members to "mark" their "bargains," and no more than three "markings" at the same price are published in the Stock Exchange Official List on the same day. Members are not allowed to advertise, and a client who sought his stockbroker on the floor of the House would be expelled by a fifth-form mob. These conditions seem petty and unbusinesslike; but somehow it works. In times of trial the Stock Exchange's members develop decisive moral and financial solidarity. And, at all times, its guiding principle is the investor's cornerstone—the sanctity of contracts. A bargain, on the Stock Exchange, is a bargain.

Westminster, the Law Courts and the Stock Exchange together have undoubtedly succeeded in tapping the

springs of industrial capital. A recent investigation showed that a great company like Imperial Chemical Industries had its total ordinary capital, which stood (at the time of the investigation) at £43½ millions, divided among as many as 125,000 shareholders; and that 95 per cent. of the total shareholders held less than 1,000 shares each, while 64 per cent. of them actually had less than 200 shares. Another great company, Imperial Tobacco, had an ordinary capital of £37½ millions, divided among 95,000 shareholders, 96 per cent. of whom had less than 1,000 shares each, while 75 per cent. had less than 200 each. These figures are representative of the great majority of British joint-stock companies. But the ideal of a shareholders' democracy has never been reached; for the more widely diffused capital ownership has become, the less have shareholders been able and willing to mobilise their scattered powers of joint control. That the system, in other ways, is far from perfect is evi-

denced by the ability of the bucket-shop to secure the investor's money to a total which the Board of Trade has recently estimated at £5,000,000 a year. In a world of strident publicity, there are disadvantages in doing good by stealth, and the time may come when the London Stock Exchange may have to reconsider its policy of eschewing publicity. And, perhaps, a Stock Exchange Charter is not so far off as some imagine. It is time, too, that the lawyers were bestirring themselves over the question of a fresh amendment to the Companies Act, to cope with abuses which have increased with the recent rapid development of the holding company.

On the whole, the system which London has done so much to develop is soundly based, and works satisfactorily year in and year out. But the fact that its abuses cost industry and the investor very little in proportion to the total capital at stake is no argument for evading any effort to eliminate them. Much has been done, but much remains to do.

The Universal Insurer

FOR centuries the City of London has been closely connected with insurance. Two of the most active offices in the world began their great careers there in the hurly-burly of the South Sea Bubble and for many years the monopoly of marine underwriting, which belonged to Lloyd's and these two South Sea Bubble companies, tended to concentrate marine insurance in the City. But in fire and life insurance there has never been a monopoly, and the business has always been carried on in other parts of the country as well as in London. Edinburgh, with her distinguished output of actuaries, has kept for herself a leading place in life insurance; in fire and other types of business, Liverpool has long boasted itself the home of great institutions, and other smaller towns—Norwich, Kendal, Perth, Stratford-on-Avon—contain the head offices of progressive and flourishing companies, which have maintained the prestige of

the provinces in the face of what might appear to be considerable disadvantages.

But the pull of the City is unmistakable, and the tide is towards London. One amalgamation after another has increased the size of already great offices, and as funds and turnover have risen, the convenience of having the head office in the financial centre of the world has become more and more obvious. The presence of Lloyd's, with its centuries-old marine connection and its not over-popular inroads into other fields of insurance, international and domestic, has, perhaps, helped the movement on; and to-day, the City is unchallenged as the first insurance market of the world. All roads lead to London, E.C.

A British insurance office relies for its premium income on various sources and channels. In Great Britain it will have a number of direct clients who come to it for the sake of its name, for some

common directorship, or for a friendship that has lasted through generations. Such clients are the most highly valued part of the company's connection, but there are not many offices even among the greatest which obtain from such as these enough grist to keep the wheels running at capacity. Other sources must be tapped, and agents must be found to show the flag and collect business here, there and everywhere. In every town and village these local agencies are to be found in every street; and it would be interesting to have figures to indicate how much of the companies' premium income they supply. But there are no figures, and guesswork would be futile. Then there are foreign agencies—merchant firms which have their hands constantly on the trade pulse of some Dominion or foreign country, and by their weight and connection bring very valuable business to the managers in the City of London. From the United States,

THE NATIONAL DEFENCE CONTRIBUTION proposals of Mr. Chamberlain set in motion the most unexpected and drastic fall in Stock Exchange values which has been seen since 1931.

The extent of the fall is conveniently shown by *The Financial News* Index Number. Between the 20th and the 26th April, this Index Number fell from 118 to 111.7.

The total fall in the value of Stock Exchange securities for April is estimated to exceed £400,000,000.

In this state of affairs, the shares of British banks and insurance companies shewed remarkable stability. The daily valuations of the Trust funds managed by Trust of Insurance Shares Ltd., based as they are on certified day-to-day market prices of the underlying securities of the Trusts, reflect very accurately the current market movements of bank and insurance shares. In the case of the invested funds of Trust of Bank Shares, Trust of Bank & Insurance Shares and Trust of Insurance Shares, the daily valuations during the crisis shewed depreciations for the whole period ranging from 0.7% to 1%. As a result, the prices for buyers or sellers of the Units of the Trust of Bank Shares and the Trust of Bank & Insurance Shares have remained unchanged throughout the period. Only in the case of Insurance-Units was there a price reduction of 3d. on the 28th April from the level of 22s. 9d. at which they had stood unchanged since the 25th March. No class of securities except British Funds have shown such resistance to misfortune.

Throughout the period covered by this comparison one of the most notable features of the market has been the fact that apart from British Government stocks, bank shares, insurance shares and the Units of the Trusts managed by Trust of Insurance Shares, Ltd. have been almost the only securities to maintain a steady level.

For particulars of Unit Trust investments in bank and insurance shares and information as to the factors which make for stability in times of stress and gradual appreciation of capital in times of prosperity apply for a Bank and Insurance Shares Booklet to any Stockbroker or Bank or to the address below.

and
Agencies

South America, China, India, the West Indies and all the British Dominions, a stream of business flows towards London through the agency of powerful merchant firms and although the connection is believed not to be as profitable as it was a generation back, and is increasingly hampered by protective foreign legislation, this side of an insurance company's business is still of incalculable value. Then there are subsidiary companies which, in the United States especially, operate as feeders to the parent concern and are likely (if the current mode in economic nationalism continues) to become more and more important in the framework of the organisation.

Lastly—and this brings us to the City itself—there are the insurance brokers of the City of London. Most of these brokers are subscribers to Lloyd's, but their business is not confined to Lloyd's underwriters, and a considerable part of the business that they handle and place is done with the great British offices. They had their place in the City long before Lloyd's coffee-house was started, but the market which sprang from the coffee-house was a natural magnet to

them, and they are often loosely called Lloyd's brokers. Originally most of them were confined to marine insurance, and until recently it was the exception rather than the rule to find a broker in the City who depended for his livelihood mainly on non-marine business. But as the market widened, the insurance brokers of the City turned their attention more and more to fire and accident business. Having discovered that business in large volume could be obtained from the United States, many of them established connections in America and developed a thriving trade in almost every kind of insurance on the North American Continent. The firms which took advantage of that opening are now the largest and most powerful of the City insurance brokers.

Apart from life insurance, the annual premium income of British insurance companies and underwriters is probably between £135 millions and £160 millions. Of that total how much is placed by the insurance brokers of the City of London? Exact figures are not available, but there are certain lines of approach which would probably lead

to a fairly accurate estimate, and the premiums handled by them may on a conservative guess be put at nearly £40 millions per annum—say about a quarter of the whole premium income drawn by the British insurance market from all its world-wide connections.

This attempt to estimate the importance of the City of London as an insurance market would not be complete if it were confined to figures; for the market's value to the world's commerce cannot be expressed in statistics. The City is still the place to which traders from all over the world turn when they are faced with unexpected and incalculable risks. Recent agreements to restrict cover for war risks on land may prove to have changed the situation, but when war breaks out, the market will be free to adopt what policy it likes. Even now there is no restriction on war risks by sea or riot risks on land. Whenever trouble arises in any part of the world, correspondents of London firms and insurance companies send their enquiries immediately to the London market, which is always the first to get off the mark and the most enterprising in its handling of a new situation.

London's Industries

LONDON never has been, relative to its size, an industrial centre. Its history, and its wealth, are built on trade, finance and government rather than on manufacture. Even after the rapid industrial development of the last few decades in its area, London still stands outside the main stream of industry. The great aggregations of plant and labour have been built up elsewhere; London's industries are small and specialised. It was estimated in the "New Survey of London Life and Labour," published in 1931, that there were only seven industrial factories in the Greater London area employing more than 5,000 persons each, and less than a hundred employing more than 1,000.

London has, of course, always had its industries. At all ages there have been some inevitable industrial attendants upon a great city which was at once a commercial centre and a capital city. But these industries were in small units and, as London burst out of the walls of the City, scattered. There were some specialised local centres—the silk weavers at Spitalfields, the Huguenot cloth workers and metal traders at Wandsworth, shipwrights at Deptford—

but they were few. The Industrial Revolution passed by London; for the new industries had to seek either coal or their raw materials, and London has neither. Indeed, the birth of factory industry in the London area came only considerably later, when the growing size and developing technique of the trades which can always be found in a large city began to require power-driven factories in place of workshops. But the transition was gradual, and it is still possible, well within the boundaries of present-day Greater London, to find the pre-revolutionary domestic system, with work being put out to the inhabitants of villages now swamped by residential suburbs. It is thus only for the last 50 or 60 years that there has been any factory industry in the London area at all. It is only in the last 20 or 30 years that "non-local" industries (i.e. those which could equally well settle elsewhere) have been appearing in any number in the London area.

Most of London's industry, however, is still here only because it must be from its nature. This is evident from a list of the chief industries of the Greater London area as shown in the following figures taken from the Census of

Production of 1930:—

Industry	Average No. of employees, 1930
Building and contracting.....	144,488
Tailoring, dressmaking and millinery	106,789
Electrical engineering	76,554
Printing, bookbinding, stereo-typing	67,437
Mechanical engineering	55,170
Motors and cycles	51,853
Gas undertakings	40,421
Furniture and upholstery	38,277
Newspapers and periodicals	32,819
Bread and biscuits	32,054
Electricity undertakings	23,821
Brewing and malting.....	15,272
Sugar and glucose	6,186
Water undertakings	6,060

These fourteen industries include more than half of all the workers enumerated in the Census of Production in Greater London, but they employ in the aggregate less than 700,000 out of a population of more than 8,000,000. Moreover, there are very few of the fourteen that are "non-local," i.e. that could equally well be located in the provinces.

The extent of London's industrial development can thus easily be exaggerated. Industrial London, nevertheless, has been growing in recent years much more rapidly than the rest of

FROM STEEL TO TINPLATE

The tinplates manufactured by Richard Thomas & Co. Ltd. owe their widespread success to their consistent quality and accuracy, without which no can-making plant can enjoy rapid and uninterrupted production.

RICHARD THOMAS

AND COMPANY LIMITED, SHELL MEX HOUSE, LONDON, W.C.2

the country, and the social, economic and strategic dangers of this have been made familiar, not least by the authoritative voice of Sir Malcolm Stewart, lately Commissioner for the Special Areas. It is correct to use the word "immigration" of the people of London; but hardly of its industries, for there are very few instances of an industry, or even of a single firm, having definitely migrated into London from elsewhere. The differential growth of London industry has been due to two facts. First, a disproportionate share of the new industries and new factories have started in London. And second, London's industries have been among the most rapidly growing.

London has, indeed, been specially favoured in the present conjuncture of British industry. The nineteenth century was the great age of the heavy industries; but the modern trend is towards light industries which need not settle near their raw materials. The advent of electric power has provided a similar release from the coalfields. The result has been that industry now needs above all to get close to its market, especially since the most rapidly-growing industries are those which manufacture, not goods to be sold in the mass to producers, but goods to be sold at retail to consumers. Once the market becomes all-important, London is an incomparable magnet. It has its own eight or ten million consumers; it is the centre from which all the roads and railways of Great Britain radiate; and it is the greatest exporting port in the world. We must not, however, admit too much logic into the explanation of the growth of industrial London. Much of it is chance, or caprice, or just fashion. Nor is the tendency universal. For in some lines—boots and shoes for certain and some forms of clothing in all probability—industry has been moving out of London. Nor in finding rational explanations for the phenomenon must we imply that it should be allowed to proceed unchecked.

The location of this expanding industry within the London area is an interesting example of urban development. Clearly, factories will not be established in Central London if it can be avoided, for the cost of land would be prohibitive. Nor do factories cluster

in satellite towns. There are, of course, a few exceptions to this latter statement. The printing trade is strong in every town round the outer ring of the London area; but there is a special reason for this in the higher wage-rates that would have to be paid closer in. Special reasons have also created industrial communities at Slough and Welwyn Garden City. But, in the main, industrialists prefer to occupy the vacant land nearest to the centre, and to pay the higher land values of the inner ring of suburbs in return for being able to tap a far more extensive and varied labour supply than any satellite town could provide.

The development of the new factories has followed a clearly-marked radial plan along the main arteries of transport. Transport, indeed, seems to be, in most cases, the vital consideration—both transport inwards to the centre of London and outwards to the sources of raw materials and the provincial markets. Moreover, it appears to be transport which has made West Middlesex the favoured area for industrial development. Here, again, there are exceptions. The Lea Valley was the earliest industrial area of Greater London. It has obvious advantages, in that it provides room for expansion while retaining contact with the labour supply of East London. Some of the heavier industries are settling on the Medway, and small miscellaneous industries in southern London between Wimbledon and Croydon. But the largest developments have been in the triangle enclosed between lines drawn from London to Watford on the north-west and Slough on the west. The advantages of this area can be seen at its new industrial centre, Park Royal, which adjoins the main lines of the Great Western Railway to South Wales and Birmingham and of the L.M.S. Railway to the Midlands, Lancashire and Scotland. Park Royal also has the Grand Union Canal, two "Tube" railways to bring its labour, and a brand new arterial road. The arterial road is perhaps the greatest attraction, to judge by the factories that line the Great West Road, the Edgware Road and the North Circular Road.

The industries which are settling in these new factories are those which could be deduced from the facts of the

case. There are no really heavy industries, and even in engineering, which is well represented, it is the lighter branches which are to be found. Above all, they are consumers' goods industries. The chief are the motor industry, electrical engineering, the manufacture of foodstuffs, furniture making and the manufacture of stationery and office equipment.

In one important aspect of industrial expansion, however, no logic or pattern whatever can be found. There is very little co-ordination between the growth of industry and the provision of housing. It is perhaps not the business of the industrialists who build the new factories to concern themselves either about the chronically unemployed of the Special Areas (who might have been given employment if the interests of the commonwealth had been allowed a voice in the choice of location) or about the housing problems of their new employees. But it ought to have been the concern of the public authorities. As it is, the new factories are in few cases near the new houses. At Hendon, it is true, an industrial district and a residential suburb have grown up cheek by jowl. But the houses are beyond the reach of unskilled labour. The residents of Hendon crowd into London for their work, while the Hendon factories draw their labour from other districts. The same is, in the main, true of the L.C.C. Housing Estate at Becontree and the Ford factory next door at Dagenham. The dwellers at Becontree go off to London every morning, while Dagenham draws its labour from Ilford. Park Royal, the best example of industrial development, is the worst example of housing. There are more than a few workers on Western Avenue who travel backwards and forwards every day right across London to the East End.

As with so much that is muddled and chaotic in London, it is too late for a radical cure. We can only lament the missed opportunities of the past and do what is possible to prevent bad from becoming worse. Industry may never inflict on London the grimy squalor which makes so much of Northern England an eyesore; but its advent in the last two decades has greatly complicated the task of bringing some sort of social order out of metropolitan chaos.

London's Diversions

SINCE the war and its cosmopolitan effects, London has leapt into the front rank of cities given to diversion. The movement, which developed rapidly after the war, was damped down between 1925 and 1931; but after the depreciation of sterling in the autumn of the latter year, London became, almost at one bound, the gayest, most prosperous, most diverting capital of the Old World. Throughout economic depression it was the least affected area; and it contains the wealthiest class of all Europe.

The nation of shopkeepers has a metropolis of shops; for to London come

not only the ten millions who inhabit its centre and surroundings, but also—owing to the advent of motor cars, coaches, and faster trains with cheap day or week-end fares—a vast number of provincial people. All of them come to buy; to buy goods, or diversions; and both in winter and summer, save only for the dog days, London's shops, markets, fashionable streets, theatres, sports grounds, exhibitions, museums, historical places, hotels and restaurants are filled with comfortably-off people seeking diversion or interest.

But London's diversions are not the preserve only of the well-to-do; for per-

haps only New York among the other capitals provides so many and varied cheap diversions for the poorest members of the community. London's football grounds, cinemas, dog- and horse-race tracks, boxing rings, variety theatres (one or two Victorian and Edwardian music-halls still remain), swimming baths, parks, museums, and cheap transport by land and river right down to the sea, offer the poorer citizen very much for very little. Nor should one forget the ubiquitous "pub."—the once shoddy but improved and still improving English substitute for the bright Continental café. It remains

through wide areas of the widest city the principal focus of conviviality for the poor.

Continentalers always want to know why the inevitable gambit of English conversation is the weather: "Good morning, sir or madam! What an awful, terrible, wretched, dull, or—with the keen appreciation of rare delight—*fine* day!" says the young lady or gentleman in the shop, the doctor, the lawyer, the next-door neighbour in the train, the newspaper seller, and so on. This hypersensitiveness to the moods of the weather results in a greater dichotomy of diversions in London than in any other big capital; for when seven months of the year are almost certain to produce fog, snow, sleet, hail, rain, and frost, and three of the other five months may produce continuous rain, the predominance of covered-in places of sport and diversion in London is understandable. For the actual players and participants in out-of-door contests, rain is no great handicap. But London is a city of spectators, and one cannot spectate in the rain. Thus, London's diversionary life is led more under cover—in shops, covered stands, clubs, private houses (with larger rooms than on the Continent), theatres, dance-halls and night-

Brooks's—where both Pitt and Fox were members.

clubs, concert rooms and halls, and exhibitions. The latter are greatly loved by the Londoner, perhaps a tradition

founded by the Great Exhibition of 1851.

The diversions of high summer—up and down the river to country or sea, cricket, tennis, swimming, fairs, rambling, etc.—are very popular. Every week-end sees crowded stations at all departure points. "Rain stopped play" is always a frequent notice in summer; consequently, many of the normal winter diversions are pursued through the summer. It is a familiar joke that football ends in May and begins again in August; and the theatres, especially cinemas, night-clubs and dance-halls now draw full houses right up to the middle of July.

London's best, almost unique, features in the sphere of diversion are its shops, showplaces, and spectacles. In no other European capital city have the big shops so wide a range of goods, from high to low prices; such large staffs of able and indefatigable salesmen and saleswomen, with cultivated charm of manner; such imposing premises. You can buy, so it is said, an elephant or a steam yacht at one giant London store; and there are at least half-a-dozen stores, beside which those of Berlin, Paris, or Vienna—the three other great shopping centres in Europe—seem provincial. The Londoner who has an account with such a store need scarcely do more than telephone; for the store's valuable reputation is such that the slightest discourtesy or error makes much damage. Londoners of all classes are to be seen at the natural function of a nation of shopkeepers: shopping. Bond Street is to-day a cartel of shops where the most exquisite things are always open to inspection; but step into Woolworth's or Marks and Spencer's, or walk to the Caledonian Market or down to Petticoat Lane on a Sunday morning, and you will see the diversion of shopping as practised by rich and poor alike.

London's markets, from Roman

The Farnese Palace of Pall Mall—the Reform Club.

FACTIONS IN THE AMPHITHEATRE

arterial highways leading out of town; and they have done good business in their few years of experiment.

It would not be right to conclude this catalogue of only a few of London's diversions without mentioning two things: the home and the club. The Londoner, like other Englishmen, is at heart conservative in his individual life. He—and this is true, too, of his wife—makes much of home; and he also likes to be able to retire from public, as much as from familial, scrutiny into the confines of a club. London started clubs; and it is to-day the city of clubs. Their political significance—in all but one out-

standing case—has become blurred with the passage of Time; but their social significance is as big as ever. So is it, too, with the home, which is so often contrasted with the club. The Englishman's home life is very much like a smaller kind of club, into which, on given occasions, outsiders may be welcomed, and the honours done. Whether the new giant blocks of apartments will invade the tradition of the personal, detached or semi-detached, London home is an open question. The changing diversions of London since the war show that Londoners are living and pleasuring more in the public eye than before the war. In their golf clubs,

bridge clubs, cocktail parties, and titanic restaurants, they have begun to come farther out of their traditional shells. To that extent London to-day is a more cosmopolitan capital than it was before 1914. But it is none the less a metropolis which does not flaunt its wealth of diversions in the face of the first stranger.

Still secretive, retiring, private, individualistic, the Londoner and his city retain their unique appeal, their peculiar attractions. And to those, Londoners or strangers alike, who seek them out, London offers "infinite riches in a little room." He must be tired of life, indeed, who ever tires of London.

London's Lingo

LONDON, this "smoky and populous city," is the home of millions differing in class, race, wealth, creed and colour. It reveals in its many-sided "lingo" something of the magnificent variety of its citizens. Mayfair's easy slang—"My dear, I had a simply wizard time!"—"Darling, how utterly shamemaking!"; the suave phrases of Oxford and Cambridge men—"And then, of course, my dear fellow, we must remember . . ."; the foreign-sounding English of East End Jews, Italians and Chinese, the Americanisms of the cinema-loving suburbs—all are as truly the language of London as the Cockney's "Ta, mite!" or his "Coo, reelly?" Nevertheless, the speech of London's masses, of the bus drivers, porters, chauffeurs and grocers, of the butchers, bakers and candlestick makers, retains priority of interest.

Cockney English may instantly be recognised by its cheerful intonation and its peculiar syntax, in which

abound double negatives and "This here . . ." "That there . . ." But its real beauty lies in its vocabulary. Here the Londoner expresses his love of fun, his familiarity with the fortunes and misfortunes of life, his tolerance, homeliness and kindness. In his creation and application of words he reveals all those traditional qualities which distinguish him to-day as they did when he gave inspiration to Shakespeare and to Dickens.

With the exception of the universal "O.K." and its hideous variants such as "Okey doke," Cockney London avoids Americanisms. Its lingo is the product of its own fertile inventiveness and vivid imagination. The real Londoner's expressions are drawn from two main sources: his recreations—drinking, darts, cribbage, football, betting—and his work, which brings him into close (often painful) contact with the realities of living and leads him direct to concrete imagery.

The language of London's games is

in part general throughout England. "One for his nob," "Two for his heels" are phrases current wherever crib is played. But only in London will a barman pile four ham sandwiches one on another and exclaim: "There you are, sir. One, two, three and one fer 'is nob!" It is only in London, too, that darts and crib are played to a running commentary of rhyming slang. "Two Jews" (double two), "two Tom Mix's" (double six), "two fat hens" (two tens) are heard among dart players every day in London's four-ale bars. In the play at crib, where the object is to score exactly thirty-one, the man whose turn it is to put down a card will be told "Two's in time," "Four's heaven," "Five's a fix" or "Eight a spree" accordingly as he requires two, four, six or eight to complete the round. The rhyme is with the number already reached, as twenty-nine, twenty-seven, twenty-six or twenty-three.

Rhyming slang, apart from its humorous application to games, has its serious uses. Thieves, burglars and other criminals mix it up with back slang (in which "boy," for instance, is pronounced "yob") to form a jargon completely unintelligible to outsiders. It is significant that in this sphere the words for thieving, lying, cheating and similar rogueries carry no derogatory flavour. The police and their helpers—the flatties and the narks—get all the opprobrium here. Labouring London also puts rhyming slang to general use. As one drayman explained: "Woi, in moi wi o' loif, we uses it ivry di. Wen oi goes into a pub along the river, oi niver thinks o' arskin fer anyfink but a plite o' bees' knees (bread and cheese) and a glars o' pig's ear (bitter beer). They wouldn't unnerstand otherwois."

Nevertheless, it would be mistaken to conclude that London's lingo begins and ends with rhyming slang. The Londoner has too rich a mind for that. He may be feeling out of sorts with his wife and dig at her by referring to his "trouble and strife," but in another mood—after a pint or two of "wallop" or "ile" perhaps—he will joyfully announce: "Well, cheerio! chaps. Oi must be getting along to moi owld bunch o' cuddle nah! Abyssinia!" ("I'll be seein' yer"). And, jamming his tifter (tit-for-tat or hat) more firmly on his loaf (loaf of bread or head), off he goes to seek later his tit willow (pillow) or, alternatively, a spot of shut-eye.

It is when he speaks of drink that the Londoner best reveals his humour and his traditional irony. "Evenin' mite," he will greet a newcomer to the bar. "What's yer poisin?" More than one stranger has been startled at this piece of sarcasm. Or to a friend who has been drinking too freely he will say: "Come on, nah, Bill. It's 'bout tahm yer 'ad a bit o' blottin' piper," thus tactfully suggesting that Bill would benefit by some food to ballast his beer.

With a different pronunciation and set in more orthodox syntax some of these expressions are widely used by better educated, more self-conscious Londoners. They are adopted first in fun, to raise an easy laugh, though they often sound strange separated from their natural background of grammatical distortion. Some of them, as "raspberry," for instance, are general enough to creep into the dictionaries; others, as the cry of "Ripe strawberries!" on every man's lips a few months ago, become parrot cries and are soon forgotten.

London's slang is no doubt partly ephemeral and sometimes flippant, even ugly in sound and conception. This matters little. It is the power behind it that is significant, the ability it reveals for close observation and the genius to draw apt comparisons with a robust disregard of sense and convention. To this power, which continually provides and renews a vast reservoir of alternative words and idioms, the English language has always owed and always will owe its pre-eminence among the literary languages of the world.

Suburban London

THE decentralised and amorphous character of London makes it difficult to say exactly where the town ends and the suburbs begin—or, indeed, where the suburbs end. A practical definition would be places the greater part of whose breadwinners travel daily to London. This definition has the merit of emphasising at the outset the governing factor of transport. The average Londoner dislikes spending much more than thirty minutes or sixpence on his daily journey, and the suburbs he favours are governed by the speed and cost of travel.

This, however, is a twentieth-century definition. Other ages had other ideas of what constituted a suburb. At a very early date, London found its walls too narrow; but since it was not under the same necessity of continuing to confine itself within walls as were the Continental cities, it spread up and across the River Thames, the great highway of the time. On the south side of the river were the ancillaries, especially the pleasure centres, theatres, fairs and bear pits. It was in Queen Elizabeth's time that the word "suburb" began to be used in a disparaging sense as "a place of

inferior, debased and (especially) licentious habits of life"; and the stigma has only lately left the word. But after the expansion of London in mediæval times, and after the even more considerable growth which started under the Tudors and was accelerated by the use of wheeled vehicles, the Greater London of 100 years ago still comprised little more than the City of London itself, Westminster, the suburbs of Southwark and Lambeth, and the built-up areas north and east of the City in Holborn, Clerkenwell and Aldgate. Further out were a number of "suburban country seats surrounded by shrubberies and flower gardens," but these were suburban villas on the Roman model, playing but small parts in the life of London itself.

At this time Kentish Town was a village "in the vale between Hampstead and London." Hornsey was a small village "five miles from London." Hackney was a quiet township on its own. Dalston was a "pleasant village near Hackney to which it belongs." Sydenham was a "genteel hamlet of Lewisham." Beulah, with its mineral springs, was a notable watering place. Proposals for terminating the Great Western Railway

at Knightsbridge and South Kensington were successively rejected by Parliament owing to the opposition of the parish of Brompton, "the most famous of any place in the neighbourhood of London for the salubrity of its air and calculated for retired residents." Save perhaps the last, these places were villages apart and distinct from London. They were in no sense suburbs, "those residential parts belonging to a town or city that lie immediately outside or adjacent to its walls or boundaries."

By the end of the nineteenth century all the villages and hamlets within about a five-mile radius of Charing Cross (the centre of London had moved westwards) had become engulfed in a sea of houses; the country estates had gone and also the market gardens. The feverish first housing boom after the Industrial Revolution and the early railway age was satisfied. Stoke Newington, Plaistow, Peckham, Tooting, were laid out with rows of similar houses to accommodate the artisans and clerks who had been brought into being by the machine age and were forced to seek residence farther afield by the growth of the area of Central London required for business purposes.

Shortly after the birth of the London County Council in 1889 the outward growth of London received new stimulus from the development of electric traction and the internal combustion engine. At the same time a higher standard of education began to cause a demand for greater individuality and more amenity in suburban housing; and for a period this was satisfied in the bow windows and ornamentation of Victorian domestic architecture. An attempt was made to plan a suburban area as a whole. Bedford Park, Chiswick, which was laid out in the 'eighties, was the first fruits of planning applied to a suburb. It remains a satisfactory solution of suburban development, even if the architecture does not conform to modern standards. In 1907, the Hamp-

stead-Highgate tube railway was pushed through the hill to Golders Green and provided the opportunity, under Dame Henrietta Barnett's inspiration, for the development of a new pattern of suburb. The Hampstead Garden Suburb is known widely as "The Suburb." So fresh was it in conception, and so important in example, that it is not wrong to think of it as "The Suburb," the type and pattern of all suburbs, in the same sense as Rome was "Urbs," the type and pattern of all cities.

Other suburbs have been formed all round London. Some, like Catford, Coulsdon, Hounslow and Edgware, are the enlargement of existing towns or villages; others, like Brent, Roding Valley and Falconwood, are, for the greater part, entirely new developments around a new railway station provided to serve them. Mostly they have been developed by speculative builders buying a few fields at a time; and, in the lack of any co-ordination, forced or voluntary, with other development, they have generally been laid out as the builders pleased, to produce the maximum profit. London's housing needs have been met, but an irregular hotch-potch of unco-ordinated development and thousands of houses without architectural distinction has been the result, although increasing regard has been paid to planning and design, and the houses are better lighted and better ventilated than similar houses fifty years ago.

Life in the suburbs is becoming more defined. The new suburbs to the south of London are perhaps more self-contained than those to the north. The southern suburbs have mainly grown up round the stations of what is now the Southern Railway Suburban system. They are connected with London by a train service running every ten or twenty minutes. In North London the new suburbs have developed mainly round the extensions of the Underground system to Ealing and Uxbridge, to Harrow and Rick-

mansworth, to Hendon and Edgware, and to Cockfosters. Trains run every two or three minutes between these suburbs and the centre of London, conveying their passengers as they require to the City or West End of London, depositing them near shops, theatres and cinemas. As a result, the rides per head of population in public transport services in North London are considerably greater than in South London. The new South London suburbs are retaining or developing an individuality of their own more markedly than those of the north. There is variety and style in the shops in Powis Street, Woolwich, in Rye Lane, Peckham, in High Road, Brixton, in High Road, Wimbledon, and in Clarence Street, Kingston; and these are the goal of South London housewives. But from all the new suburbs, north as well as south, there is less movement to the centre than was the case in the older and nearer suburbs. Retail sales in suburban London rose by 12 per cent. between 1930 and 1936, while those in Central London fell by 2 per cent. during the same period in spite of the increase in the population of the area as a whole.

More than any other great Metropolis, London is not so much a single city as a great coalescing agglomeration of overgrown villages. This characteristic is the despair of the town planner and the administrator. But it has its compensations. For example, there is a sense of civic pride abroad in the new suburbs. They vie with each other for the privilege of receiving a Royal Charter of Incorporation, and the head of the largest joint-stock company in the country was proud to become first Mayor of the suburb where his home lies. More than a thousand local Ratepayers' and Residents' Associations compete with each other in their activity to further the interests of the local inhabitants. The suburbs may yet recapture the local patriotism which, in London as a whole, is dead.

THE BRITISH BANKING OUTLOOK

THE banking accounts for 1936 showed a further improvement in net profits. Dividends have remained unchanged, and the additional profits have been devoted to strengthening their inner reserves. Lloyds Bank have transferred a further £500,000 from internal funds to public reserve. This leaves only £1,000,000 to be restored out of the draft of £2,500,000 made on published reserves in 1931. The banks have had no difficulty in providing for such depreciation of their investments as may have occurred recently during the downward trend of the gilt-edged market; for they had kept intact in a separate reserve the fruits of the appreciation in Government securities since 1931.

The following table shows the English bank profits and dividends for 1929 and subsequent years. As we shall see, the 1936 expansion in banking profits was due not to higher money rates but to the increase in their resources and also in their earning assets.

ENGLISH BANK PROFITS AND DIVIDENDS

	1929	1931	1932	1933	1934	1935	1936

* Also special centenary bonus of 2 per cent. † After providing for the centenary bonus to staff, pensioners and widows. ‡ Prior to 1935 net profits were shown after deducting income tax other than income tax on dividend. The 1935 net profits are shown after making provision for all income tax, including that on dividends. In actual fact there has been an increase in net profits.

An absolute record of profits and dividends over a term of years does not by itself reveal very much. In this case it shows that profits fell between 1929 and 1933, and have since partially recovered. During the year of decline most of the banks made relatively small reductions in their dividends, and the recovery in profits since 1933 has not yet been great enough to be reflected in any increase in dividends.

This recovery in bank profits since 1933 raises several interesting questions. First and foremost, does it indicate that the banks are earning a higher return on their assets? *Prima facie* the answer would be in the negative, for it is notorious that money rates have remained unchanged since 1933. This, however, is not a complete reply, for even although the income derived from each class of asset may have remained unaltered, the banks may have been able to shift some of their resources over from the less to the more remunerative type of asset, for example, from bills to advances. The final question is whether this recent increase in bank profits may not merely arise from the expansion in bank resources—that is, the banks' income has simply kept pace with the increase in their assets, with the rate of return on their assets remaining unchanged.

Shareholders are faced with another question, the relation of the banks' net profits to their capital and reserves. This obviously has a direct bearing upon future

dividend prospects. Some of these questions are answered in this article, while they are also dealt with from different angles in subsequent pages of this supplement.

The following table shows the ratio of net profits to capital and resources and also to total liabilities:—

		PERCENTAGE RATIO OF NET PROFITS —(a) TO CAPITAL AND RESERVES. (b) TO TOTAL LIABILITIES						
		1929	1931	1932	1933	1934	1935	1936

* See footnotes to previous table.

While the ratio of net profits to capital and reserves has been steadily improving ever since 1933, it is still below the 1929 ratio. The ratio of net profits to total resources fell sharply between 1929 and 1932 with the change-over from dear to cheap money. Since then it has remained static. This confirms our previous suggestion that the recent improvement in the absolute size of net profits is due almost entirely to the expansion of the banks' resources. At the same time the following table indicates a shift in the composition of the banks' earning assets, which, in some respects, has operated to the banks' advantage.

(In £ millions)

	Jan., 1936	Mar., 1936	June, 1936	Sept., 1936	Jan., 1937	Mar., 1937
Capital and reserves	131.8	131.8	131.8	131.8	132.5	132.5
Acceptances, etc.	105.6	105.1	103.8	101.8	110.4	122.2
Deposits (including undivided profits, etc.)	2,127.1	2,071.6	2,191.4	2,219.7	2,269.5	2,206.6
Total liabilities	2,364.5	2,308.5	2,427.0	2,453.3	2,512.4	2,461.3
Cash	224.5	213.5	221.6	226.1	234.4	222.4
Cheques, balances and items in transit	53.9	58.1	66.6	56.9	64.0	67.3
Money at call	154.8	157.7	152.6	161.2	171.1	164.8
Discounts	344.4	250.4	327.5	342.1	343.6	246.2
Investments	614.6	619.8	626.2	632.7	653.9	651.9
Loans and Advances	796.8	834.0	858.8	862.5	864.6	918.8
Investments in affiliated banks	25.1	25.1	25.1	25.2	23.5	23.5
Cover for acceptances, premises, etc.	150.4	149.9	148.6	146.6	154.3	166.4
Total assets	2,364.5	2,308.5	2,427.0	2,453.3	2,512.4	2,461.3

Apart from the general expansion in cash, deposits, and in the total of earning assets, the first point which emerges is that discounts show little change, while call and short loans have increased. During 1936 there was a net reduction of £85 millions in the floating debt, but owing to the Exchange Equalisation Account's gold purchases, the floating assets of the public departments, etc., were reduced by £149 millions. Allowing, therefore, for ways and means advances by the Bank of England, tender issues of Treasury bills increased by £44 millions. It appears that these additional bills were taken up by the discount market and not by the banks themselves.

The next fact emerging from the table is that both investments and advances have increased considerably. The expansion in advances is a natural concomitant of this advanced stage of the trade revival, but it means that the banks have been able to switch into more remunerative assets. On the other hand the banks' ratio of advances to deposits is not much changed, for both have increased proportionately. Even so, it would have

been natural to expect some improvement in the ratio of net profits to total resources. The fact that this has not occurred may be partly due to operating costs, but it is also probable that last year the banks recovered fewer bad and doubtful debts than in the earlier years of the revival. It is correct to say that the initial stages of recovery benefit the banks mainly through writing-back and repayment of bad and doubtful debts, while the later stages benefit them through increased demand for new advances.

In any case there is no chance of 1929 profits and dividends being restored in present conditions, for a simple calculation points to one of two alternatives: either bank cash and resources must expand by 25 per cent., which would hold out an alarming prospect of credit inflation; or else there must be an equivalent increase in the ratio of profits to resources. Such an increase would bring this ratio half-way back towards the 1929 position, and to appreciate the significance of this it is only necessary to have regard to the following table:—

	1929	1936
Bank rate	5½	2
Discount rates	5½	½—¾
Call rate	4½	½
Yield on 2½% Consols	4½	3

This suggests that Bank rate would have to rise nearly to 4 per cent. and would also have to become effective at that level. The yield of Consols would also have to rise from 3 to 3½ per cent.; in other words, we would have

BRITISH BANKING TRENDS

In our previous examination of British banking trends we have been mainly concerned with the part played by the banks in the recovery from the depression of 1929-32. This year it is necessary to view the picture from a different angle, for recovery is passing into boom, and it is already time to begin thinking of preparations for the top of the boom and the subsequent decline. Thus the curves showing the trend of the British bank position must be considered from this new point of view.

In interpreting the curves there are, first, two seasonal factors to be taken into account. To begin with it must be realised that the banks' preparations for their half-yearly balance sheets mean that the banks are always well supplied with cash on December 31st and June 30th. In the past this cash was supplied by market borrowing from the Bank of England on these dates, but the substitution of Treasury bills for other bills as the market's chief stock in trade has led to the evolution of a different technique. To-day both the banks and the discount market arrange to have heavy maturities of Treasury bills immediately before December 31st and June 30th, and this means that they have heavy payments to make in the closing days of March and September. Conversely the banks and market take up few new Treasury bills during the closing days of December and June, and so have few maturities at the end of March and September. The result is that the Treasury is always short of funds on December 31st and June 30th, while the banks and the market tend to be short on March 31st and September 30th.

The second seasonal factor is that of the spring revenue collection. This causes a definite reduction in issues of Treasury bills and also in the banks' discounts. Deposits, however, are reduced in less degree, partly because many taxpayers require temporary accommodation from their banks at this time and partly because it is always open to the banks to acquire fresh earning assets. The supply of cash as a rule is well maintained, but the heavy transfers of money between the banking system and the Treasury mean that the immediate supply of money at any moment is a little uncertain. The spring is therefore a period of low discount rates

to pass from very cheap money to moderately dear money.

The public perhaps does not fully realise the reaction of very cheap money upon banking profits and costs, and so upon the multitudinous services performed by the banks for the public. The expense of clearing cheques in itself is enormous, in spite of the new economies effected by mechanisation. Recently the public have thrust new burdens upon the banks. Many customers lodge a number of bankers' orders for making periodical payments, while a new and complementary system of traders' credits has been devised, under which a customer supplies his banker with a list of his creditors showing the amount to be paid to each, and leaves the banker to make the payment. There is no suggestion that the banks should make any charge for clearing individual cheques, but there is a feeling that bankers might have to call a halt to this new practice of loading them with masses of bankers' orders and traders' credits. If this proves necessary, it will be one of the penalties which the country must pay for very cheap money.

Shareholders, however, must realise that they cannot expect any early improvement in their dividends. Instead, they must recognise the gilt-edged character of their holdings, with its implication of a relatively low yield. They can rely on the first-class security provided by the British Banking System to shareholders and customers alike, and they must expect that security to be reflected in their dividends and in the yield upon their shares.

(because of the heavy Treasury bill redemptions), coupled with periodical but transient shortages of money. Coming now to the past trend, the first chart brings out the broad rule that the supply of the joint-stock banks' cash, i.e. bankers' deposits, expands with any increase in either the Bank of England's gold or in the fiduciary note issue, plus Government securities already in the banking department. It contracts with any expansion in the note circulation.

The chart shows that, apart from seasonal fluctuations, bankers' deposits have been slowly rising, but that the main cause of the increase is the Bank's gold purchases. A large part of these gold purchases, however, has been absorbed by the expansion of the note circulation, and last summer the Bank had to buy gold in order to offset a further expansion in the note circulation, due to French hoarding. Last December's gold purchase was offset by a reduction in the fiduciary note issue, and as we explained at the time the object of this

operation was simply to relieve the Exchange Equalisation Account of surplus gold. The recent wide fluctuations in bankers' deposits are due to the first of the seasonal causes mentioned above.

The next chart shows the changes in the position of the clearing banks.

This chart illustrates the slow but steady expansion in bank cash, reflected in a proportionate expansion in deposits interrupted only by seasonal fluctuations. The slow fall in the discounts curve up to 1934, followed by the slow rise, reflects the Exchange Equalisation Account's operations. This movement is shown more clearly in the following chart.

As we explained a short time ago, during the past two years the Exchange Equalisation Account was a continual buyer of gold emanating from France. This led to a steady reduction in the issue of tap Treasury bills and also to an increase in the tender issue. The Exchange Account was buying gold and the Government had to issue fresh Treasury bills to the banks and the discount market in order to pay for it.

Reverting to the second chart, the big increase in investments occurred during the early stages of recovery and was a powerful factor in bringing about the 1932-34 reduction in the long-term rate of interest. As is usually the case, the new demand for advances only developed during the later stages of recovery, for the main tendency in the earlier stages was for frozen loans to be repaid. During the later stages, therefore, the banks have had to slow down their purchases of investments, and this is one explanation of the slow decline in the gilt-edged market which became evident more than a year ago.

This is the position to-day. The demand for credit is growing with the progress of recovery and rise in commodity prices. The banks are becoming less able to take up Government securities just at the time that the Government has announced a new borrowing programme. Bank cash and deposits are expanding, but there is a dubious prospect that the repatriation of French money and French gold may bring about a reduction in the banks' discounts. Finally, French dishoarding of British currency may replenish the banks' supply of cash.

The following chart shows the trend of long-term and short-term interest rates.

The slight rise in the long-term rate will be noticed, but, apart from seasonal movements, the short-term rates have remained as low as ever. Nor is there the smallest evidence that the authorities are bringing to an end the present regime of very cheap money. Even as recently as the end of last March, special assistance was given to the market to help it over the period of seasonal stringency described at the beginning of this article. The question to-day is whether or not the authorities ought to continue their policy of cheap money, and, if not, in what directions they should make the change. The case for continuing easy money is that there is a dangerous inconsistency between increasing the general activity of the country in order to carry through re-armament while at the same time restricting the supply of credit. The dividing line between conditions of great activity and a general collapse of trade is narrow, and abrupt action may easily bring about the collapse. On the other hand, the general level of prices is dangerously high, and early last March the rate of advance was dangerously rapid. The real problem is to maintain a steady tone in the commodity markets and to check an increase in the cost of living which could only lead to fresh wage demands. Our banking policy should be directed towards this end.

Any large repatriation of French funds and French dishoarding of British currency will create conditions of extreme ease in contrast to the extreme stringency which began to develop last summer during the influx of French funds into the country and French gold into the Exchange Equalisation Account. Last summer the Bank had to buy gold from the Exchange Equalisation Account in order to ease the stringency. At the moment, hopes of an early repatriation of French funds appear doomed to disappointment, but should it take place, the Bank of England may have to sell gold to the Exchange Equalisation Account, without increasing the fiduciary issue, in order to check excessive ease, and if this need arises it should do so without hesitation. Next, while there may be no case for a higher Bank rate, there is a case for making the present Bank rate effective, that is for bringing discount rates up to say 1½ or 2½ per cent. At present our whole mechanism of control needs tightening up before it can be used. There is also a case for a qualitative rationing of bank credit to check both such consumption and new capital expenditure which may compete with the re-armament programme in its demands upon our available factors of production. This would really be one of the means of postponing non-essential expenditure in order to smooth out both the crest of the present trade cycle and the next decline. Finally, it may be necessary to give a warning that if prices and costs go on rising and begin to get out of hand, more definite remedies will have to be applied. This warning is less necessary to-day than it was earlier

in the year, and the recent liquidations on both the Stock Exchange and certain produce markets have for the moment robbed it of much of its force. There is no doubt that a healthier level of prices exists to-day than earlier in the year. Yet it is still necessary to say that if a dangerous top-heavy position again develops, it may be best to meet it by an increase in money rates from their present very low level. The raising of Bank rate to an effective 3 per cent., coupled with the establishment of a

long-term interest rate of perhaps 3½ per cent., should be sufficient for this purpose, and these rates would not be high enough to justify any fear that we were passing into a period of dear money. In fact trade has previously prospered under similar conditions of a 3 per cent. Bank rate. All this shows that firmer rather than dearer money may eventually be the best remedy of the future, and that it need not and ought not to act as a deterrent to legitimate trade.

BANK ADVANCES

A BANK'S power to grant advances depends upon two main factors—the credit-worthiness of the potential borrower and the bank's own power to lend. The former can best be illustrated by the story of the Bradford banker who met one of his most important customers in their club one day at lunch. "Ever been in the wool business?" asked the customer. The banker shook his head. "Well, you will be to-morrow," came the reply. "I'm filing my petition."

Thus before a banker can grant a loan, he has to be reasonably certain both that the loan will be repaid, and also that the customer could repay, if desired, at the end of a relatively short time. "I don't want any Kathleen Mavourneen loans on my books," said another banker, "it's maybe for years and it's maybe for ever." Yet a banker must not always play for safety or weight the scales against the applicant. He must lend enough of his resources to cover his expenses and provide a reasonable profit on his capital; and he must have regard to the legitimate credit needs of the country.

On the other hand there is a limit to what a banker can safely lend, regardless of the credit-worthiness of his customers. He must maintain his liquidity and his power to meet the demands of his depositors, and so there must

be a definite upper limit to the ratio of loans to deposits. Eight years ago the general tendency was for the banks to lend up to about 55 per cent. of their deposits. Since then this rule has come to need qualification in one important respect. The big decline both in the absolute total of bank advances and also in their ratio to deposits, which occurred between 1929 and 1933, drove the banks into the gilt-edged market, and to a certain extent investments were substituted for advances. Hence to-day the banks could not restore the 55 per cent. advance ratio without either a substantial (and inflationary) expansion in their cash and deposits or heavy sales of securities to the detriment of the gilt-edged market and the remainder of the banks' holdings. In fact, the truer way to regard the banks' position to-day is to say that their ratio of investments plus advances ought not to exceed 75 per cent., leaving the remaining 25 or 30 per cent. for more liquid assets.* These ratios existed in 1929, and while the former ratio fell five points below 70 per cent. in 1933 it has since been restored.

This is a rough measure of a bank's ability to lend,

* The total of the two percentages slightly exceeds 100 per cent. owing to the surplus of capital and reserves over premises.

and to-day it is intimately connected with a bank's ability to buy securities. It is quite apart from the credit-worthiness of individual borrowers. This last needs little definition, for the standards applied by bankers are well known and each individual application is considered on its merits. There is, however, one general point to be made to-day. A banker should have regard not only to the wants of his customer but to the general state of trade and also to the objects of the loan. At times a banker must reflect that a top-heavy and speculative position may be developing, and that in the interests of himself, the borrower and the nation all applications for loans may require unusually careful scrutiny.

This means that a banker must have regard to the progress of the trade cycle, and here there is an intimate connection between the phase of the trade cycle and the supply of and demand for the kind of short-term credit which it is the banker's function to provide. The depths of depression are accompanied by a number of frozen bank loans and also by the closer consolidation of industrial and commercial units. For many the choice lies between bankruptcy and amalgamation, and the banker himself is eager to convince his debtors of the advantages of the latter course. The more solvent firms in their turn find liquid cash thrown back on their hands owing to fewer opportunities for trade. The immediate consequence of depression is a curious blend of insolvency and frozen loans with extreme liquidity.

Recovery in its early stages, therefore, brings with it a diminution in the total of bank loans, and if recovery is being fostered (as it was from 1932 onwards) by an expansion of bank cash and deposits, there is a still sharper drop in the ratio of advances to deposits. Frozen loans begin to be repaid, in many cases by borrowers whose debts had been written off as a total loss. Amalgamation brings with it the advantage of greater liquid resources, for a firm which used to borrow from its bankers now finds that it can obtain its needs from another member of its group. Cheap and plentiful money brings new classes of lenders into existence. To cite recent history, American banks found that their resources could earn more in Liverpool in financing the British cotton trade than they could in New York. British municipalities found that they had to float new loans at dates assigned to them by the new machinery of control, and so at times they had surplus funds on their hands pending the redemption of maturing loans. Insurance companies were induced by the decline in the long-term interest rate to lend as well as invest, while accepting houses and finance houses were driven into lending by the contraction in the supply of commercial bills. Meanwhile the new business of hire-purchase finance was rapidly developing. To a large extent this brought new grist to the bankers' mill, for a hire-purchase finance company borrows "short" from its bankers in order to lend at medium-term to its clients. Still this development has in some respects brought new competition as well as new business.

The upshot was that in 1933, in spite of heavy purchases of securities, the banks found themselves in an unusually liquid position. This is illustrated in the following table, which shows the position of the "Big

Five" in 1929 and subsequent years:

	Percentage Ratio to Deposits of			
	Cash, Call Loans and Bills	Investments	Advances	Investments, plus Advances
March, 1929	34.2	13.9	56.6	69.6
" 1932	33.2	15.5	54.5	70.0
" 1933	37.4	25.2	40.1	65.3
" 1934	32.6	28.7	41.4	70.1
" 1935	31.6	31.1	40.0	71.1
" 1936	33.1	28.9	40.6	69.5
" 1937	32.3	28.6	41.7	70.3

Whereas in 1929 the division was 34.2 per cent. of liquid assets to 69.6 per cent. of investments and advances, by 1933 the division was 37.4 to 65.3 per cent. The main ratio of 1929 has now been restored, but the subsidiary division between investments and advances still leans in favour of the former, though to a less extent than in March, 1935, when the investment percentage was at its peak.

This brings us to the subsequent stages of the trade recovery. The banks were deeply committed in securities, but meanwhile trade was expanding, prices were rising and the demand for credit was increasing. The repayment of frozen loans had also been completed. To-day therefore it is no longer germane to say that the banks cannot find full employment for their funds or to complain of the banks' new competitors. Instead, the slow rise in the advance ratio during the past two years suggests that we are getting near the point where one of several courses of action must be adopted. Either the banks must have new cash pumped into them, so that they can expand their deposits and assets all round, or alternatively, the banks will before long have to ration their loans either by calling in outstanding loans or refusing to grant new loans even to credit-worthy borrowers. As a final possibility the banks will have to begin to realise securities. The 1937 position shown in the table leaves, beyond a relatively narrow margin, little escape from this dilemma, and the prospect of short-term borrowing in connection with re-armament only emphasises it.

There is no need to feel undue perturbation. Some control of bank credit by the banks themselves would be an easy way of checking or postponing unnecessary expenditure, with a view to smoothing out the top of the trade cycle and preparing for its next trough. Nor would limited selling of securities by the banks, bringing about a slight rise in interest rates, be entirely a bad thing. It would be much preferable to a deliberate expansion of the credit base made at a time when prices and costs are already rising. Besides, it is wrong to say that the main dilemma has yet arrived. It is now approaching, and the banks are in a position vastly different from that of four years ago. Nevertheless they are still able to extend credit for legitimate purposes and at a reasonable cost. All they must do now is to interpret the term "legitimate" a little more carefully, having regard to the state of the trade cycle and the national interest.

THE BANKS AND GILT-EDGED

THE prophets of the fall in gilt-edged stocks closed their books on December 31st last with scant satisfaction. During 1936 the market had refused to heed their warnings of imminent falls, and quotations even for undated stocks were but $2\frac{1}{2}$ per cent. lower on the year. The opening months of 1937, however, have produced a different story. Since the turn of the year undated gilt-edged values have fallen by nearly 10 per cent. Old Consols are now 77 $\frac{1}{2}$, compared with 84 $\frac{1}{2}$ at the end of December, while War Loan has fallen from 105 $\frac{1}{2}$ to 103 $\frac{1}{2}$. The market has found its resistance point at a

yield level slightly below the $3\frac{1}{2}$ per cent. mark. War Loan, at the bottom of its fall, was still a fraction higher than a true $3\frac{1}{2}$ per cent. yield datum, after allowing for accrued interest.

This sudden collapse of the market could be attributed to no single reason. The fear that the recovery cycle had now reached a point at which there was serious danger of an inflationary rise in prices was undoubtedly a contributory factor. It was also emphasised that a sharp advance in the demand for bank advances would involve a consequent tendency for the banks to

reduce their gilt-edged portfolios. The new advocates of monetary management claimed, on the other hand, that if the authorities so wished, they had sufficient means to supply the joint-stock banks with a broader credit basis and thus could spare the latter from liquidating any serious proportion of their existing gilt-edged holdings.

This advocacy, however, carried rather less conviction than on other occasions since 1932. The admission that rather special measures were necessary to maintain the *mystique* of cheap money suggested that the authorities were facing a new problem of management and on a deteriorating wicket. Again, the announcement of borrowing for re-armament reinforced the investors' fears of inflation. The market, which had not recovered from the weak technical legacy of the $2\frac{1}{2}$ per cent. Funding Loan, which was issued last November at 98 $\frac{1}{2}$, and was largely taken up by the Departments, has thus felt the full force of a combination of adverse circumstances.

It would, however, be false to suppose that the fall was in any sense a direct consequence of a change in the banks' policy regarding their investment holdings. The volume of gilt-edged stocks which remain static in firm hands is very considerable, and the proportion of the total which is normally dealt in is correspondingly smaller than is generally imagined. In adverse circumstances comparatively small sales, therefore, can produce disproportionate effects, and there is no evidence that the banks have turned sellers. The March Clearing Bank returns showed, in fact, that their investments had increased by 1.2 per cent. since the end of December, and by no less than 5.2 per cent. during the past year. Despite the sharp increase in advances during the first quarter of 1937, therefore, investments have also increased during the same period. It may be speculative to base firm arguments upon the trend shown by one quarter alone, for the contraction in Treasury bills offered by tender produces a marked effect on banking statistics during the first quarter of each year. But the figures at least indicate that the fall in gilt-edged from January onwards was not associated with any change of policy on the part of the banks.

What, however, does the future hold? The banks are now "bulls" of the gilt-edged market to an extent hitherto unparalleled at a time when natural economic forces are making for a rise in interest rates, and consequent possibilities of further depreciation upon their holdings. The maintenance of inner reserves would, of course, provide substantial sums to meet any reasonable degree of depreciation. The rise in advances is undoubtedly the key factor on which the fate of the banks' gilt-edged holdings may ultimately depend. At the end

of 1929, the banks' ratio of investments to total deposits was of the order of 14 per cent. In the meantime, deposits have increased by 23 per cent., while investments have increased by 165 per cent., thus increasing their proportion to 29.6 per cent. of deposits.

If the ratio of advances to deposits were to return to the "normal" level of 1929 on the existing volume of deposits, while other quantities in the banking situation remained unchanged, the result would be a reduction in the existing volume of investments by nearly £300 millions in order to finance the new advances. This calculation gives an extreme view of the possible consequences upon the gilt-edged market, which could obviously not stand up to selling on this scale. In the first place, a return to the relation between deposits and advances which prevailed in 1929 is unlikely, while in the second place an expansion in bank cash by the Bank (which would raise no technical difficulty) of a moderate amount, would allow a sufficient expansion of joint-stock banks' deposits to enable them to carry an increased volume of advances and at least to maintain their present holdings of gilt-edged.

This conclusion may be of consolation to the banks, but all history suggests that, at this stage of the trade cycle, an expansion of bank credit of suitable dimensions to facilitate a further sharp increase in advances without disturbing existing holdings of gilt-edged would have inflationary consequences. These, in turn, could scarcely leave the private holder of gilt-edged unmoved. The market, indeed, is faced with a dilemma. Either a natural fall in gilt-edged prices must be allowed—we may say at once that it should be more gradual than the precipitate collapse of prices in the early weeks of this year—or the authorities may attempt to preserve an appearance of firmness by a policy which, in the end, defeats its own purpose by introducing inflationary consequences.

For the ordinary investor, indeed, the market is still little more than artificial. By control of new issues and bans upon foreign lending, savings have to some considerable extent been canalised into the gilt-edged market. And the authorities have attempted, as far as possible, to use their powers for the flotation of loans a point or so above the market level, including the first instalment of the Defence Loan issued a fortnight ago. The terms of the latter issue, however, suggest that the authorities are now conceding a larger part of the argument that gilt-edged have passed their peak than, say, last November, when they decided upon a thirty-year Funding issue at $2\frac{1}{2}$ per cent. There is, doubtless, a certain propriety about the terms of the loan for the special purpose of re-armament finance. But they also

contain significant confirmation of the argument which has been frequently put by *The Economist*—that the investor who is compelled to resort to the gilt-edged market for legal or psychological reasons is likely to serve his interests better by concentrating upon dated stocks with relatively short life (such as the new

Defence Loan or the 2½ per cent. Conversion), even at the expense of forgoing an extra 1 per cent. or so in income which may be obtained on long-dated securities. The latter are more likely to fall than rise; but the former, being repayable within a relatively short period, are not vulnerable to nearly the same extent.

THE EXCHANGE TRIANGLE

ON September 26th of last year the Treasury authorities of the United States, France and Great Britain issued an identic *communiqué*, declaring their intention to collaborate for the future in matters both of currency and exchange policy on the one hand, and of freeing international trade from its present restrictions on the other. This joint statement was evoked primarily as a gesture which might enable M. Blum's Government the more easily to effect the long-delayed but then inevitable devaluation of the franc. It also, however, put an end to a five-year period of maladjustment and unco-ordination between the three leading currencies of the trading world: pounds, dollars, and francs. Ever since September of 1931 these three chief currencies had been disconnected; first the pound had depreciated, taking the sterling area currencies with it; then the dollar was devalued in 1933 to 59.05 cents (gold) of former parity, at which it was re-attached to a modified form of gold standard; then, finally, after three-and-a-half years during which the capital flight from francs persisted and a drain to America from the Old World set in, the erstwhile gold *bloc* currencies were devalued or depreciated to lower "floating" parities. To-day, after five years, price-levels are fast rising in the leading countries; their currencies are all devalued from the pre-slump levels while prices and costs are approaching those levels; and, generally, something like a boom in production and national Stock Exchanges is well under way.

Nevertheless, the trading world is far from emerging from the wood of exchange and currency problems. Despite the tripartite exchange and currency agreement of last September, the trading world has scarcely yet even begun to repose its business confidence upon the expected firmness of the dollar-franc-pound triangle. Despite the declared intentions of the three Treasury authorities in that agreement, and despite the encouraging rises in national production indices, national price levels, and even in world trade, business and finance remain largely functions of purely national decisions—of tariff and quota policies, of re-armament, and of domestic economic policies. Accordingly, for example, the continuance and intensification of the French Government's social reforms, or the sudden acceleration and expansion of the British re-armament programme, or the unexpected American campaign against excess reserves and "hot money," have all acted, at various stages since last September, as disturbers of the currency and exchange peace there concluded. The weakest leg of the dollar-franc-pound triangle has certainly been the franc; but the other two legs have been none too reliable; and the present prospects for the stability of the world's chief currency tripod are such that it is necessary to examine the French, British and American legs more closely.

It is as well to begin with the franc. Its devaluation had been rendered inevitable by the Blum Government's ameliorative social measures, and the consequent sharp increases in costs. But this in itself could probably have been countered if the French *rentier* had not been made to feel that his woollen stocking was marked out for a raid. Not only did he put it in London as a British bank deposit, but he put a good deal of it in New York, thus swelling the volume of "hot money" there. An ill-timed threat to tax away from repatriated capital all its profit in devalued francs prevented its return; and despite assurances by M. Blum's Government two months ago that repatriation would not be penalised, it has not occurred on any adequate scale to cheapen money rates in Paris and lower, by conversions, the incidence of the National Debt service. Moreover, the

franc was devalued just as a sharp upward spurt in the world price-level was superimposed on the rise of French costs due to the social reforms. The devaluation to between 43 and 49 milligrammes of gold per franc was coupled with the institution of an Exchange Fund with Frs. 10,000 millions at its disposal; and the sterling rate was held for six months at about Frs. 105 to the £1, compared with Frs. 112 which the lower gold content would have permitted. In these six months, i.e. until March, the exchange dealers always knew that the French Exchange Fund could, and probably would, let the franc slip to the lower level allowed by the law and the tripartite agreement; consequently, while the rise in prices and costs continued and French capital fought shy of any significant return, the dealers were always able to bear the market with comparative safety. That they constantly did so, the persistent sagging of the franc's forward rates ever since September has shown. Meanwhile, the straitness to which the French Treasury was reduced so soon after devaluation, the "stay-out" strike of French capital abroad, and the recrudescence of industrial disputes in France combined to drive the French authorities to borrow in London again. Though the big Defence Loan was a success last March, it was costly; the interest rate was not lowered significantly; and virtually no capital returned to take it up. These factors account for the persistent weakness of the franc since last September's agreement, as well as for the break which began in March and finally took the franc down to practically its lower parity rate at the end of April: Frs. 111½ to the £1, against Frs. 112, which are equal to a gold content of the lower legal figure, 43 milligrammes. The following table shows the actual range of dealings in francs and dollars in London since last September:—

Date	Dollar Exchange	Franc Exchange	Date	Dollar Exchange	Franc Exchange
Sept. 24	5.05½-07	78 ¾-77 ½	Jan. 14	4.90½-01	105 ½-1
Oct. 1	4.93½-05½	Unquoted	Jan. 21	4.90½-00½	105 ½-1
Oct. 8	4.88½-90	104 ½-1	Jan. 28	4.89½-90½	105 ½-1
Oct. 15	4.89½-90½	105-105½	Feb. 4	4.89½-90	105-105½
Oct. 22	4.88½-89	105½-106	Feb. 11	4.89½-90	104½-105½
Oct. 29	4.89½-89½	105½-1	Feb. 18	4.89½-89½	105-105½
Nov. 5	4.88½-89	105½-1	Feb. 25	4.88½-89½	105-105½
Nov. 12	4.87½-88½	105½-1	Mar. 4	4.88½-89	105-105½
Nov. 19	4.88½-89	105½-1	Mar. 11	4.88½-88½	108½-107
Nov. 26	4.89½-89	105½-1	Mar. 18	4.88½-88½	108½-1
Dec. 3	4.90½-90	105½-1	Mar. 24	4.88½-88½	108½-1
Dec. 10	4.89½-90	105½-1	Mar. 31	4.88½-89	108½-1
Dec. 17	4.91½-91½	105½-1	Apr. 7	4.89½-90	108½-1
Dec. 23	4.91½-91½	105½-1	Apr. 14	4.90½-91	108½-110½
Dec. 31	4.90½-91½	105½-1	Apr. 21	4.92-93	110½-111½
Jan. 7	4.91-91½	105½-1			

The immediate effect of the tripartite agreement on the pound-dollar rate was to bring it sharply back from around \$5.00 to about \$4.86 to the £1 (the old parity) owing to the creation of a new cross-rate through the devalued franc's gold content and the \$35 per ounce buying price of gold in the United States. There were signs that the £1, which had long been over-valued at \$5.00, would fall well below the old parity of \$4.86 at the outset; and calculations of parities through price indices, for what these were worth, indicated a parity last September around \$4.75 to the £1. It was evident, however, that the British and American Exchange Fund authorities had agreed, in jointly facilitating devaluation of the franc, to hold the dollar-pound rate at the old \$4.86 parity. It slowly sagged below \$4.90 in the second week of October; remained relatively stable about that figure for six months; and then began to climb back towards the \$5.00 mark, as rumours of an onslaught on "hot money," of a steeper rise in American prices

than British, and of an unbalanced 1937-38 Budget again took the field. Strangely enough, the startling report early in April that the American Treasury's gold buying-price was to be *lowered*, failed to bring the sterling-dollar rate below \$4.90; and the strong denial of the rumour seems to have accelerated the downward slide in the dollar's exchange value. (The seasonal element of tourist traffic—especially for the British Coronation—should not be overlooked in the sterling-dollar rate's movements this spring and summer.) Comparison of the American and British price levels shows that, during the last twelve months, the dollar should—again, for what such calculations are worth—have appreciated against the pound; for British prices have risen considerably more than American; and certainly the wider range of industrial costs have risen more in Britain during the last six months than in America. It is this unpredictable factor of the inflationary spiral which is raising problems for the three Treasury authorities of the tripartite agreement to-day.

In Britain, prices, costs and wages—still more so, earnings—have been rising less rapidly than in France, but more rapidly than in the United States. From now onwards it looks as if they would rise more rapidly than those of France or America, owing to the increasing incidence on industrial capacity of the extended re-armament programme. French prices and costs have spent their devaluation rises, and are now rising less quickly than world prices in general. Accordingly, the mutual relations of francs, dollars and pounds in future are likely to be conditioned more by capital movements than by price-levels or interest-rates. Industrial unrest in France and Britain, the threatened National Defence Contribution in Britain, the increasing tendency of French and British industries to run to full capacity,

the increasing extent over all equity shares of the discounting of future profits—these factors must still reinforce the long-standing tendency in France and Britain to "go into Wall Street." Against them, there are now signs of possible discouraging actions by the American authorities; but it is too early to assess the likelihood of such action. Thus, the Exchange Fund authorities in London, Paris and New York—as well as their associates and followers in Amsterdam, Zurich, Prague and Brussels—have to reckon to-day with the possibility that capital movements from now onwards will become more irregular in volume and direction, that purely national price-levels will (failing really effective reductions in trade barriers) advance at unco-ordinated rates of increase, and that new major disequilibria may first make themselves apparent to the authorities necessitating agreed alterations of parities, or pegged rates. The only immediate likelihood of the latter action is over the French franc; though even here it depends on the volume and rate of repatriation of French capital now abroad, and not on movements of price-levels. Nevertheless, the general prospects before the authorities working the Exchange Funds of the three Powers that signed the tripartite agreement are scarcely unclouded at present. It was not for nothing that the agreement coupled the freeing of international trade with the maintenance of a just alignment between the exchange values of their currencies. Until this is to some extent achieved, the movements of national price-levels and the effects of national economic programmes are bound to result in minor disequilibria which, if not co-ordinated or damped down, are bound to become major ones. The tracing of different influences on the three different countries' economies of rising prices, extending industrial capacity, and expanding credit will indeed be interesting to observe.

FRENCH FINANCES—A PARIS VIEW

(BY A CORRESPONDENT)

DURING the last year, the French banking community has had to bear the effects of a number of factors which acted often in opposite directions. Three periods may easily be defined.

The first lasted until the devaluation of the franc. Immediately following the international political crisis of March 7, 1936, the coming into power of the Front Populaire Government, the wave of strikes and the monetary uncertainties which accompanied it, brought about a large exportation of capital, which continued

almost ceaselessly until the end of September. The deposits of the four largest Paris banks declined by nearly Frs. 2,500 millions; in appreciating the importance of this figure, as well as others cited below, it should not be forgotten that the resources of these four banks represent only from 40 to 50 per cent. of the total resources of the French banks, as the banking concentration is much less advanced in France than it is in Great Britain. It must also be noticed that deposits in foreign currencies are carried at their franc equivalent in the French

Erlangers Ltd.

Bankers,

4, Moorgate,
London,
E.C.2

banks' balance sheets, and that the reduction in gross deposit figures does not take account of the transfers from a franc into, say, a sterling account on the books of each particular institution.

The second period extends from October 1, 1936, to March 5, 1937. Devaluation had been expected to bring about a large repatriation of funds. This hope, however, was rapidly foiled. A certain amount of francs was in fact purchased on the exchange market during the first weeks of October and the drop of the excessive forward exchange rate to more normal rates, ranging from 1 to 4 per cent. per annum underlined this tendency. But this favourable movement did not last long. The increase in banking deposits was disappointing, although it reached Frs. 2,500 millions for the month of October for the larger Paris banks. Due to the above-mentioned accounting practice, foreign exchange deposits were immediately revalued in the balance sheets of the banks and it may be said that the major part of the increases reported in the banks' deposits in October was due to such revaluation. The repatriation movement ceased almost at once, and forward exchange premiums climbed again to abnormal figures. Deposits, however, continued to rise, the total increase from October to January reaching around Frs. 2,000 millions for the four larger Paris

immediately after the devaluation and has held it there for several months, in spite of the unbounded development of credit demands which accompanied the rise in commodity prices. As a matter of fact, it may be said that in keeping its rate so low the central bank has made itself partly responsible for the accumulation of stocks which took place in most trades and industries and which in turn unduly favoured the rise in prices, registered from October to January. This movement was eventually slowed down on January 25th, when the Bank rate was fixed at 4 per cent. The loans and discounts of the four Paris banks rose rapidly (by about 18 per cent. in four months) and the central bank's re-discounts followed the same course. Acceptance credits expanded similarly, both on account of rising raw material prices abroad and of the renewed anxiety as to the stability of the franc which was felt a few weeks after the devaluation. This pressure for additional credit resulted in a slight but noticeable reduction in the cash ratios of most institutions, which contrasts with the ample cash reserves previously held by the Paris banks. As a matter of fact, the rise in prices has considerably improved the credit position of most of the bank's customers, and a little more elasticity in their traditionally conservative policy appears well warranted.

banks; this was presumably due to the general revival of business activity and to the credit and monetary expansion favoured by the Bank of France after devaluation.

On March 5, 1937, the appointment of a new Stabilisation Fund Committee, together with the abrogation of the limitations imposed on gold transactions, removed fears of an exchange control policy, and this has entirely reversed the trend of exchanges. The avowed liberal tendency of the new policy was immediately rewarded and exported funds are flowing back slowly but steadily. The attractive terms of the Government Defence Loan issued at that time had no little influence in this respect. No statistics are, however, available as yet, to confirm this statement, which is based on partial information rather than official reports.

Deposits, however, have a long way to go before they again reach the 1931 record of Frs. 38,000 millions, all the more as the present figures include a not negligible amount of foreign exchange (which allows the French banks to be fairly active in foreign centres, especially London). Furthermore, a considerable growth of these deposits will be necessary before the banks can supply the market with the necessary credit at low rates. Not only is the Treasury demand for credit still very strong, but commercial demands have developed rapidly. The Bank of France forced its rates down to 2 per cent.

It is noteworthy that the profits of most of the commercial banks have suffered little change from 1935 to 1936, although after the general rise in salaries which took place in June and July it had been feared that the new charges imposed on the banks may prove too heavy for many of them. The explanation of this steadiness in earnings is to be found partly in the high money rates which prevailed during many months before October, partly to the increased collection, safekeeping and other charges which were adopted by all banking institutions, and finally to the development of their business during the latter part of the year. These various factors served to offset increased staff expenses, so that at the worst the larger commercial banks will only have to make slight reductions in their dividends. As to the banques d'affaires, their profit and loss statements evidenced large increases in earnings, although they do not take any account of book profits on their security holdings, which are likely to have been fairly large. The improvement of the credit position of many debtors which was mentioned above has also released important amounts which in previous years would have been necessary to write off doubtful debts.

If the economic improvement can continue in France, the French banking community will have emerged from the depression unimpaired. It is remarkable that during

this long period of dwindling deposits, which extends from 1932 to 1936, no important bank failures have taken place. The last date back to 1931. Two of the larger banks which failed at that time and were allowed to continue their operations, thanks to Government assistance and under a new name, merged early in 1937. These were the Banque Nationale pour le Commerce et l'Industrie and the Société Nouvelle de la Banque Adam, merged to form a single institution. Such consolidations are desirable, and the wish is often expressed that a more complete concentration of banking activities could be brought about. There is, however, no sign that this

process is continuing. Rumours are rampant that some sort of rationalisation may become necessary, which might for instance entail the suppression of competing branches of the larger banks, but such rumours have been frequent in the past and have never materialised. Whatever its future organisation will be, the French banking structure has remained sound throughout the depression, and it would be in an excellent position for assisting business recovery in France, if some of the funds which remain hoarded in the country or abroad found their way to the banks and were added to their deposit liabilities.

FRENCH FINANCES—A LONDON VIEW

(BY A CORRESPONDENT)

REVIEWING the financial position of France six months after the devaluation of September 30th it is difficult to stifle a sigh of disappointment. The results of that long deferred but momentous step have so far fallen sadly short of expectations. Its visible benefits in France hardly compare with those reaped by Holland and Switzerland, her fellow members of the former gold bloc—which but for seasonally obstinate unemployment would have rapidly emerged from the depression that up till last year weighed so heavily upon them.

The truth seems to be that France delayed all too long in taking the inevitable step. The malady was not truly diagnosed and no proper treatment was applied. Complications set in. Over-valuation and particularly perhaps its attempted cure by severe deflation caused such acute distress that evils which might have remained on an economic plane and proved susceptible to treatment by a purely economic remedy such as adjustment of exchange, have instead developed into widespread social unrest and bitter political strife. The major issue between capital and labour is rising to the surface and

recovery is complicated if not positively impeded at every turn by hasty and rather mistimed measures of social reform. Many of these were no doubt as long overdue as they are desirable in themselves. But others, such as the abrupt enactment of a forty-hour week and the increase of wages by political action rather than negotiation based on profits and prospects constitute a bold hazard for a country which has not yet emerged from depression or overcome financial mismanagement. And for the moment there is reason to fear that reform, under the Blum regime, may have outrun recovery to the point of imperilling its further progress.

Financial recovery, at any rate, has made very little headway. As for many years past, the Bank of France is in a strong technical position. Its gold reserve stands at 57.3 milliards (£516 millions), and bears a proportion of 55.64 per cent. to sight liabilities. But it has neither gained nor regained anything since the currency adjustment was made. At the above figure of Frs. 57,000 millions the stock of metal is lower than in October and but slightly larger in terms of the new and devalued

franc than it was in terms of former francs a year ago when the Blum Government came into power. It looks as though French investors had lost faith in the social system of their country at the very moment when as a result of devaluation they had no longer any ground to fear the instability of its monetary system. Certainly the repatriation of French funds has not occurred on the very considerable scale experienced by both Holland and Switzerland almost continuously since September 30th. The gold reserve of the Netherlands Bank has risen in the last six months from 570 million to the very high figure of 920 million (undepreciated) florins. The Swiss National Bank, which in contrast to Holland has revalued its gold in accordance with the newly established exchange parity, has seen its reserve mount in the last few months from 2,408 millions to 2,718 millions. It is in keeping with this inward movement of funds that the Dutch and Swiss currencies have for some months been quoted in European exchange markets at a premium for forward dealings, while simultaneously the French franc has remained throughout at a substantial forward discount representing at times an interest rate of 8½ per cent. and seldom falling below a discount equivalent to 4 per cent. per annum. The implication is obvious. The return of funds to France on a conspicuous scale has been discernible only for two brief periods, one immediately after the devaluation took place—which was very short-lived—and the second on the occasion of the recent issue of a National Defence Loan. On balance, however, it seems that gold has been exported during the last six months. The French Equalisation Fund has been obliged to support the franc against further depreciation rather than prevent its appreciation, as was the case with the florin, the Swiss franc as well as, a year earlier, the Belgian franc, to say nothing of sterling and dollars in 1931 and 1933, respectively.

The absence of the much-needed restoration of financial and fiscal confidence is perhaps most marked in the short and long term money and loan markets. A reflux of funds on anything like the scale rendered possible by the country's very great foreign assets would assuredly create a glut in the short money market and produce a rise in Rentes. Instead the financial difficulties of the French Government became so acute once more in February that recourse was had to a 40 million credit in London—surely a very depressing experience for a country that has just devalued. This served temporarily as a stopgap and provided support both fiscally and from an exchange point of view. But it left an unpleasant impression, particularly as it became known that one or two large potential participants in the credit had this time stood aside from it.

Bank rate has remained throughout at 4 per cent. and the carry-over rates on the Paris Bourse for the last three months were 6½ per cent., 7½ per cent. and 11 per cent. respectively. Small wonder that in these circumstances the Rentes Market has made no recovery; but it is regrettable indeed to find that it has fallen once more to the lowest depression levels recorded prior to the devaluation of the franc, in 1935 and 1936. The figures given in the following table tell their own tale.

AMERICAN BANKING

(BY A CORRESPONDENT)

THE past year has seen a material alteration in our credit policy. From early in 1932 to the end of 1935 the programme called for "reflation," but by the middle of 1936 the Board of Governors of the Reserve System deemed that the supply of money (currency and bank deposits) had been approximately reflatated, and since that time four measures have been taken looking toward a limitation of the rate of credit expansion. On August 15, 1936, member bank reserve requirements were raised 50 per cent.; in December, the Treasury announced that incoming gold would be absorbed in an "inactive fund," rather than monetised through

	3 per cent. Perp. Rentes	4 per cent. Rentes 1918	4½ per cent. Rentes "A"
February 1, 1935	80.15	85.95	92.95
February 1, 1936	73.30	75.10	83.25
September 15, 1936*	64.85	62.70	68.15
October 15, 1936†	80.10	81.15	84.70
December 31, 1936	75.40	74.00	79.42
April 26, 1937	64.20	63.70	69.15

* Approximate lowest level reached in 1935-36 before devaluation.

† Highest level reached since September 30, 1936.

In part the explanation must be sought in the fiscal position. This, in truth, remains as disquieting as ever. Ordinary revenue is improving noticeably; but if it is not one's fault, it is everyone's misfortune that at a moment when the restoration of equilibrium in the French Budget and confidence in its management are, socially and politically, as well as economically, of the greatest consequence, military requirements should once more increase expenditure and new borrowings. For some years past moreover the distinction between current and capital items of expenditure has become rather blurred in the Rue de Rivoli. Government borrowings have averaged nearly 20 milliards a year for about four years, adding Frs. 75,000 millions (approximately £1,000 millions at the then rates of exchange) to the deadweight debt. It is true that M. Blum recently agreed to postpone some public works expenditure—a decision which was strongly resented by some of his followers—pending the achievement of a better balance between ordinary revenue and expenditure in the National Accounts. But he has not seriously attempted, even after devaluation, to restore equilibrium to French public finances. M. Vincent Auriol when introducing his estimates in the Chamber, involving new borrowings for 1937 on the record scale of 36 milliards, could find nothing better to say than that the figure was manifestly a modest one compared with the extravagant forecast of 55 milliards maliciously circulated by the Press! Borrowings for current requirements of the Treasury would not be greater than during the last four years—which have virtually undermined the whole fiscal system!

It is hardly surprising, in these circumstances, that deposits in the joint-stock banks have hardly risen above the lowest levels, that the savings banks are once more losing instead of attracting deposits and that the country as a whole is exporting rather than importing its liquid funds. There is stated to have been some dishoarding of bank notes, but it is remarkable that the note circulation of the Bank of France has recently risen to a new high level at Frs. 87,535 millions.

These factors indicate the possibility of further serious difficulties ahead, or at best of slow and laborious progress towards recovery. But the overriding consideration is to-day a political one, and this M. Blum would be well-advised to take into account. Confidence is once more at a low ebb. M. Blum may find that he should either have gone much further in the direction of state-capitalism and control to make his Socialist programme a workable one; or else have stopped far short of what he has done, so as to use the existing system as a means to recovery. Too late, perhaps, he may discover that he cannot have the country's capital—and eat it.

the Reserve Banks in the form of gold certificates; and in February, it was announced that the reserve requirements would be raised another 50 per cent., in two equal stages, one taking effect on March 1st, and the second on May 1st. It is estimated that after May 1st excess reserves will still amount to \$500 millions. In addition to these administrative acts, the steady increase of currency in circulation during 1936 prevented the growth of reserves by the full amount of the increase in monetised gold.

The following table shows the trend of monetary and central bank items over the past year. The first inter-

mediate date was selected to show the position about the time last summer's increase in reserve requirements became known, rather than the date on which it took effect; the second was chosen to give the position at the time when the current Treasury gold regulation became operative.

	RESERVE BANK ITEMS			
	Mar. 4, 1936	July 1, 1936	Dec. 23, 1936	Mar. 3, 1937
	(\$ millions)			
Bills discounted	6	4	9	7
Bills bought	5	3	3	3
U.S. Govt. Securities	2,431	2,430	2,430	2,430
Industrial Advances	31	30	25	23
Member Bank Reserves	5,813	5,589	6,507	6,660
Treasury Deposits	379	731	251	216
Money in circulation	5,848	6,250	6,680	6,407
Treasury currency	2,506	2,498	2,531	2,535
Gold stock	10,167	10,612	11,229	11,443
Gold Cfs. in Res. Banks	7,669	8,107	8,852	8,847

From this table, it will be seen that the gold stock increased between March 4, 1936, and December 23, 1936, by \$1,162 millions, member bank reserves by about \$800 millions, and money in circulation by approximately an equal sum. This heavy demand fell mainly upon the Reserve Banks and checked the increase in reserves which would otherwise have been consequent upon the gold imports. With the new gold policy in December, member bank reserves ceased to be influenced by gold imports, but rose with the seasonal reflux of currency. Excess reserves, however, which had been counted as about \$2,100 millions just prior to March 1st, dropped to \$1,310 millions with the new regulation.

In sum, May 1st witnesses the completion of a defined programme. At the end of 1935 excess reserves exceeded \$3,000 millions, and subsequent gold and silver imports would normally have added more than \$1,500 millions to that figure—that is, had no active policy been undertaken, excess reserves on May 1, 1937, might have stood in the vicinity of \$4,000 millions. The combination of increased requirements, the creation of the "inactive gold fund," and the larger currency in circulation will reduce this figure to about \$500 millions; without having necessitated any open-market operations by the Reserve Banks. At this figure, the situation comes under ready quantitative control, as a variety of expedients are available for increasing or diminishing this sum.

Over the same period, the operations of the Reporting Member Banks were changing in two noteworthy respects. Up to mid-year, the total loans and investments were rising rather rapidly, although reserves were falling, partly under the currency increase, partly under the transfer of Treasury deposits to the Reserve Banks. The principal increase came in the holdings of Government and guaranteed securities, but for the first time in years there was a marked demand for commercial credit.

	REPORTING MEMBER BANK ITEMS			
	Mar. 4, 1936	July 1, 1936	Dec. 23, 1936	Mar. 3, 1937
	(\$ millions)			
Total Loans and Inv.	21,206	22,619	22,941	22,718
Loans to Brokers	1,198	1,226	1,272	1,263
Security Loans	2,060	2,093	2,042	2,017
Commercial Loans	4,908	5,141	5,856	5,841
U.S. and Guaranteed Secur.	9,858	10,799	10,530	10,275
Other Securities	3,182	3,360	3,241	3,322
Reserve with F.R. Banks	4,723	4,487	5,161	5,171
Demand Deposits	13,966	14,679	15,574	15,501
Time Deposits	4,911	5,011	5,043	5,167
Government Deposits	511	839	702	340

One result is that from July 1st to the present these banks have been reducing their holdings of Government securities. But the most conspicuous fact is that while total loans and investments increased by \$1,400 millions in the four months preceding July 1, 1936, in the eight months following they increased by only \$100 millions. One must go back a long way to find an eight-month period in which the total loans and investments of these banks increased by so small a figure. Demand deposits, however, increased, partly with the incoming

gold, partly by the drawing down of Treasury balances. Time deposits also rose—the first increase of magnitude in a very long time.

From the figures given above, which indicate an increased demand from commercial borrowers in competition with the anomalously low rates in the money market—that is, on short Treasuries, it is not surprising that the yields on the latter should have risen smartly. For the shorts maturities, the microscopic returns increased to about 0.4 per cent., and the market took on a more realistic appearance.

Up to the middle of March one could not say that the long-term rate had shown any sympathy with this tendency. Long-term 2½ per cent. Government securities were still quoted at a premium, and the Treasury on March 15th successfully converted a maturing note issue into 2½ per cent. bonds. But in view of the fact that in recent weeks gilt-edge corporate bonds have fallen by 5 or 10 per cent., the statement above requires some qualification.

In considering our general credit policy, there are two elementary premises. The presence of larger excess reserves, increasing under continuous gold imports, was an integral part of a "reflation programme"; but once the "reflation programme" was deemed complete, the primary consideration was (a) to reduce the redundant excess, and (b) to prevent or control further increments. The past year has seen policy working to that end. But to state that the problem of excess reserves has been brought under control is by no means equivalent to stating that the basic cheap-money policy has been abandoned. On the contrary, we are more heavily committed than a year ago to the idea of low long-term rates, for in that period the Treasury has issued several long-term bonds with a 2½ per cent. coupon.

In short, the programme of reflation completed, the immediate programme seems to be that of credit control,

but control of a qualitative rather than a quantitative nature, aimed at the retention of a low long-term rate of interest, but also aimed at preventing this monetary policy from nurturing an insecure economic development. As an instance of this qualitative control, the limitations placed upon the use of credit in security speculation may be cited. Admittedly, "reflation" was easier than "control," for "reflation" was essentially a quantitative concept. Furthermore, official utterances on the subject, while frequent, often bewilder

rather than enlighten the financial community—as the March flurry in the Government bond market demonstrated.

No one had any right to suppose that the transition from active reflation to managed control could occur without some creaking of the machinery. The important fact to note is that officially we have reached the stage of recognising certain dangers in our situation and of proposing devices to avert them. The next phase will develop a genuine test of currency management.

GERMAN BANKING

(BY A CORRESPONDENT)

THE upward trend in German banking profits, which had led to a resumption of dividend payments in 1935, continued during 1936. The Deutsche Bank, the Berliner Handelsgesellschaft, the Commerz und Privat Bank, and the Reichs Kreditgesellschaft increased their dividends, only the Dresdner Bank maintaining its previous rate.

All banks report an increasing demand for new credits and a further falling off in the total amount of bad debts. In the banking crisis of 1931 three out of five leading banks had to be supported by the Government, which also subscribed, or took over, through the Gold Discount Bank, important capital holdings in these institutions. Now the Deutsche Bank reports that all shares formerly held by the Gold Discount Bank have been sold to the public, and it is understood that the capital of the Commerz und Privat Bank is, to a large extent, again private property. Only the Dresdner Bank is still largely controlled by the Reich. The profit-sharing agreement between the Government and the Commerz Bank and Dresdner Bank, which also dates back to the emergency measures of 1931 and 1932, has been terminated in the case of the former, while the latter has repaid out of profits a further amount of Government advances.

has shown a further substantial reduction, and although the Security Index on the Berlin Stock Exchange has increased from 99 per cent. (1924/26 = 100) at the beginning of 1936 to 104 per cent. at the end of the year, business remained very small.

Despite the funding operations carried out by the Government in 1936, the total volume of short-term floating debts continued to rise. The note circulation of the Reichsbank expanded by more than Rm. 700 millions, and the total increase in the volume of Bills of Exchange and Treasury Bills is estimated at between Rm. 1,200 millions and Rm. 1,500 millions.

During 1936 this expansion of credit was again solely devoted to financing the Government's economic and armament programme. The production index for capital goods, which largely covers business and heavy industries—engineering, shipbuilding, electricity, motor-cars and building—rose by more than 24 per cent. The index of consumption goods improved by almost 11 per cent. The number of workers in employment reached a new peak, and for the first time since 1929 the number of unemployed fell to nearly one million. The average number of hours worked per day exceeded eight hours

The rise in banking profits is largely the result of an all-round increase in general banking business, with the exception, of course, of foreign exchange and foreign bond dealings, together with the revival of the capital market and the improvement in Stock Exchange conditions, particularly in the bond market. New issues increased from Rm. 2,811 millions to Rm. 3,909 millions. As in all years since the crisis, fixed interest bearing securities, and amongst those State bonds, represent by far the largest percentage of the total.

In 1936 new issues of bonds reached Rm. 3,595 millions, out of which the State accounted for Rm. 2,700 millions. Private enterprises, which in 1933 had only been able to place Rm. 2,000,000 of debentures and in 1935 Rm. 3,000,000, sold Rm. 47 millions during 1936. The increase in Government loans is the result of funding operations to consolidate Treasury Bills and Tax Remission Certificates. New issues of ordinary shares, which increased from Rm. 156 millions to Rm. 400 million issues, were made almost entirely on behalf of mortgage banks, while the new industrial debentures were placed on behalf of three of the most important industrial concerns of Germany to finance expansion which has become necessary under the Government's economic programme. The turnover in industrial shares

in engineering, and more than seven-and-a-half hours in almost all other industries. As far as can be judged from economic statistics, a state of "full" employment was reached during 1936.

To the old clearing banks, the clientele of which is chiefly amongst private enterprise, expansion in general business activity brought a further reduction in frozen debts and repayment of advances; and there was consequently a further increase in the item "loans and debtors." There are, however, other signs that the inflationary cycle in Germany has reached a point at which Government credit has exhausted its capacity to replace private borrowing, and industry, having repaid its advances and loans from banks out of Government money, is again compelled to borrow in order to finance further expansion. During 1934 nearly one-quarter of the total volume of bills outstanding, including Treasury bills, was held by the public—i.e. industrial and business concerns. In 1935 the proportion dropped to 20 per cent. At the close of 1936 less than 10 per cent. was held outside the Reichsbank and other credit institutions. In view of the fact that the total volume of bills rose by Rm. 5,000 millions, or 50 per cent., between 1933 and 1936, the percentage figure is somewhat misleading, but it proves that the increased supply of bills has had

to be absorbed by the credit institutions. The volume of rediscounts of the Berlin clearing banks with the Reichsbank, which dropped from Rm. 930 millions in 1933 to Rm. 609 millions in 1935, only decreased by Rm. 11 millions during 1936. In the case of other German banks, rediscounts with the Reichsbank actually increased, with the sole exception of those special banks founded some years ago for the purpose of financing the Government's economic programme. As a result of the funding operations which took place during 1936, the Government was able to repay some of the short-term advances made by these banks, and they in turn reduced their commitments with the Reichsbank. It is further reported by most of the banks that new industrial borrowing during 1936 considerably exceeded the figure for 1935. Borrowing on a big scale by the leading German concerns, which was practically non-existent during 1935, showed definite signs of revival during 1936.

The complete control enjoyed by the Reich over every form of German business activity, and the complete dependence of German business revival upon Government action, deprive the figures given in the above table of all their meaning. Towards the end of last year it was further announced that all prices existing on October 18, 1936, must be regarded as standard values, and nobody is permitted to demand a higher price, save under exceptional circumstances. If it is further borne in mind that as not less than 70 per cent. of all commercial bills and industrial advances are directly, or indirectly, the result of Government orders, any assessment of the quality of German banking assets becomes a matter of pure conjecture.

At the end of 1936 it was announced that the first Four-Year Plan, which had been inaugurated by Herr Hitler in his speech before the Reichstag in April, 1933, had been successfully terminated, and that future economic policy would be shaped in accordance with the second Four-Year Plan. This second plan is intended to maintain the present high level of economic activity in Germany, to overcome the raw material shortage, and to ensure the achievement of the re-armament policy. The capital necessary for this policy is no longer to be advanced by the State, but must be found by private enterprise. According to present laws the price of capital, labour, commodities and services, must remain constant. As far as can be judged from available statistics concerning investments of saving banks, and of the funds for unemployment, health insurance and private insurance companies, more than 60 per cent. of the assets are invested in Government paper, and of the remaining 40 per cent. a large proportion is represented by advances against mortgage. It would therefore appear that recourse to the private capital market would only be possible at the price of further credit expansion. It is impossible to assess at the present stage the combined effects of the fixed-price structure and the new Four-Year Plan upon German banking.

CHINESE BANKING

(BY A CORRESPONDENT)

ON paper, the whole Chinese monetary system was completely reformed during 1936. Resemblance between actual practice and paper plan is extremely hazy in many directions, but economic fortune is favouring the Chinese monetary experiment. The first milestone in the career of the new monetary system was the Emergency Decree of November, 1935, which gave official recognition to the then obvious fact that China was unable to maintain a silver standard either for internal or external use. China came rather late into the world depression, thanks to the depreciation of her silver standard in terms of gold which was the accepted monetary base of the outside world. But she was not able to stave off trouble for long. Agricultural depression started during

Wisdom of Making a Will

To all who have not yet made a will or desire to revise existing plans for the care of their estates the facilities of the Midland Bank Executor and Trustee Company, an affiliation of the Midland Bank, should strongly appeal.

The Company acts in the following or similar capacities:

Executor or trustee under a will solely or jointly with a private person; Trustee for debentures or debenture stock; Trustee under a marriage or other settlement; Trustee for a club, society, hospital or religious, charitable or other institution; Manager of an estate.

Use of its services ensures the following advantages:

CONTINUITY Appointment of new trustees is avoided.
SECURITY The Company is responsible for the acts of its officials.
EFFICIENCY All officers have been specially trained for their duties.
EASY ACCESS Co-trustees and beneficiaries may inspect their records.
LOW FEES The fees, fixed upon appointment, are exceptionally low.
SECRECY The staff are pledged to secrecy.

A 28-page book, fully describing the services and quoting fees, and of brochures entitled "THE WISDOM OF MAKING A WILL" and "GIFTS TO CHARITIES" may be obtained free on application to any branch of the Bank, the Head Office in Poultry, London, E.C. 2, the West End Branch at 16 Regent Street, London, S.W. 1, or the Company's own branches in various provincial centres.

1930. The abandonment of the gold standard by England and America turned loose the full blast of outside influences upon the unstable condition of the Chinese economy. From 1931 to 1935 China saw silver appreciating, mainly under the influence of the American silver purchase plan. Up to 1931 China was a net importer of silver; a small outward flow of gold in 1929 (\$3 millions) grew to \$212 millions in 1931; the inward flow of silver was reversed in 1932, and estimated net export reached \$290 millions in 1935. This ebbing tide of gold and silver was the counterpart in international balance of payments of a shrinkage in the remittances from Chinese investments and emigrants abroad, and a rapid reversal in the flow of capital, which was estimated at about \$200 millions inward in 1930 and \$250 millions outward in 1935. The import balance of merchandise trade grew from \$261 millions in 1929 to \$955 millions in 1932 (excluding Manchuria), since which year it has fallen steadily to \$343 millions in 1935 and \$236 millions in 1936. During the first two months of 1937 there was an export balance reported of about \$5 millions against an import balance of \$7 millions for the same period of 1936.

The steady drain of silver had its most drastic effects in the interior of China; Shanghai, the channel through which the stream went, accumulated silver and bank balances which, as the depression deepened, became less and less liquid. Trade between the different regions of China became as difficult as foreign trade, with the terms moving adversely to the agricultural regions. Prices of agricultural commodities fell more rapidly than prices of industrial goods, of raw materials faster than finished goods; wholesale prices faster than retail. China experienced the full effects of a long-sustained deflation.

In the banking system these economic effects were reflected in a declining ratio of capital and of cash to deposits; a freezing of credit, over-investment in real estate in Shanghai and in government obligations, rising interest rates. Foreign exchange rates fluctuated violently, and a wide discount developed on forward exchange. In October, 1934, an export duty and equalisation charge were levied on silver. This was followed by numerous attempts, of indifferent effectiveness, to limit internal movements or exports of silver. The wide difference between internal and external prices of silver encouraged widespread smuggling of silver out of the country, particularly in the North of China where Japanese influence was predominant. In North China and Amoy banknotes became practically inconvertible.

The Emergency Decree of November, 1935, severed even the theoretical connection between internal means of payment and silver. From then on China was on a managed monetary system, with its declared aim the maintenance of stable exchange rates. Notes of the three government banks were made full legal tender, the nationalisation of silver was to be completed within three months, note-issue and reserve were to be controlled by a Currency Reserve Board.

This experiment was the more audacious in that China was lacking in many of the instruments considered vital for effective operation of a managed monetary system. The more obvious handicaps were the political confusion, particularly in the North and South, and the lack of well centralised political and economic authority recognised by all the provinces. The foreign investor lacked confidence in the stability of China, and a steady flow of foreign investment is considered vitally important by all critics. The Nanking government was, and still is, running heavy deficits on its budget, with around 80 per cent. of expenditure devoted to military purposes and debt charges not easily reducible, and liable even to increase if Japan embarked on further military adventures. Smuggling was very serious.

But there were many purely financial difficulties. There was no strong independent Central Reserve Bank. There were innumerable note issues with greater or less adequacy of reserves. The possibility of using bank rate and open market policy for control of the credit system was severely limited by the weak structure of the money market. Before the Joint Reserve Board was instituted in 1932 modern banks kept a large part of their reserves with the native banks; and even after formation of the

Reserve Board, reserves were deposited with the Bank of China and Bank of Communications which, in turn, kept large deposits with the native banks, which applied them to purposes which were not strictly within the province of commercial banking. The year 1935 found the native banks in difficulties through the freezing of the mortgage position.

Open market policy and bank rate are ineffective weapons when there is only rudimentary development of commercial paper and bankers' acceptances. To remedy this deficiency commercial paper was introduced in April, 1935, and bankers' acceptances in March, 1936, through the establishment of the Acceptance House by the Joint Reserve Board of the Shanghai Bankers' Association. Until these instruments are well established the Chinese monetary system must hope for fair weather and an absence of drastic strains.

Still further limitations upon the development of the new monetary system were made by the highly inadequate supply of banking and economic statistics. There are enormous blank areas in the knowledge of Chinese economic affairs, and where information is available it is frequently contradictory. And there is a very great lack of knowledge of economic conditions and of monetary policy among those bankers and industrialists who must co-operate with the new central authorities if the system is to work.

The difficulties sound almost insuperable, but China had no alternative. Her previous condition was intolerable, and a managed monetary system offered the only way out. In the eighteen months which have passed since the new system was adopted considerable progress has been made. Perhaps most important has been the remarkable agricultural recovery (farm income in 1936 from principal crops was estimated at \$5,600 millions, against an average of \$3,900 millions for 1933-35), the growing world recovery, and the lessening of the political tension in the Far East. Foreign Exchange rates have been extremely stable. Considerable progress has been made in nationalising the silver reserves, although concessions have had to be made to provincial reluctance to hand over reserves to the National Government, and in North China the monetary situation is outside the control of Nanking and is completely unsatisfactory. As one measure of the success of the government in replacing local notes and silver by legal notes, the note circulation of the three government banks, the Farmers bank and eight commercial banks rose from \$845 millions at the end of December, 1935, to \$1,398 millions at the end of February, 1937. A satisfactory arrangement was made in May of last year to sell silver for foreign exchange to the United States, which has helped the authorities to build up a reserve of foreign exchange. And foreign countries, particularly Britain, have co-operated by making legal note issues acceptable in discharge of contracts which previously called for silver.

In February of 1936 the internal debt position was eased by consolidation of 33 different loans in a uniform series redeemable at intervals of three years from 12 to 24 years. There are signs that the balance of payments will be eased considerably by the falling balance of imports, by the renewed flow of remittances from Chinese interests abroad, and even by a revival of interest from foreign investors. The method favoured for the latter is joint investment in mixed concerns in which Chinese hold the controlling interest. There are signs of improving exports of Chinese goods to other countries. The price level inside China is improving rapidly. Wholesale prices in Shanghai (1926 as 100) rose from 94.1 in October, 1935, to 130 at the end of February, 1937; during the same interval the cost of living in Shanghai rose from 104 to 120.

Fortune has favoured the Chinese. But there remain many difficulties to be overcome before stability is assured. Even if she is left in peace and shares in rising world prosperity, China will still be left with her proverbial difficulties. Poverty, lack of co-operation, inadequate communications, local banditry, the political principle of extortion; without a solution to such problems, even a successful progress for the new monetary system will do little to improve the condition of the Chinese people.

Security
with Economy

The utmost safety is assured for valuables and documents placed in the Safe Deposit at the Head Office building of the Midland Bank in Poultry, London, E.C. 2.

Private persons and accredited officers of companies, corporations, firms and associations may become renters and derive the following advantages of this service:

SECURITY A specially constructed strong room, protected by a circular door and frame weighing 35 tons, contains many thousands of private safes fitted with deed boxes. Each renter is supplied with the only two keys of his safe, to which he thus has sole access as often as desired.

PRIVACY Renters may examine the contents of their boxes, deal with correspondence and conduct interviews in private rooms equipped with telephone and stationery.

LOW FEES The inclusive annual fee ranges from 10s. to 60s., according to the size of safe selected.

INSPECTION IS CORDIALLY INVITED.

A copy of

"SAFE DEPOSIT SERVICE"

containing full particulars and illustrations is obtainable upon personal or written application to the Head Office, Poultry, London, E.C. 2, or the following branches where similar facilities are available:

a Including balances with, and cheques in course of collection on, other banks in Great Britain and Ireland.

NATIONAL PROVINCIAL BANK LIMITED

(Member of London Clearing.)

Established in 1833 as the National Provincial Bank of England, and registered as limited in 1880; the Union of London and Smiths Bank was established in 1839, and registered as limited in 1882. Amalgamation took place under title of National Provincial and Union Bank of England, Limited, as from December 31, 1917, and on February 15, 1924, name changed as above. As from December 31, 1917, the Bradford District Bank, Limited, as from December 31, 1918, the Sheffield Banking Company, Limited, and as from December 31, 1919, the North-

amptonshire Union Bank, Limited, were acquired. From January 1, 1920, Messrs Coutts and Company became affiliated, December 31, 1919, Messrs Richards and Company, Llangollen, and June 30, 1920, Messrs Shilson, Coode and Company, St. Austell, and as from Aug. 23, 1922, Messrs Dingley and Company, of Launceston, and Messrs Dingley, Pearce and Company, of Okehampton, were acquired. December 31, 1923, the Guernsey Banking Company, Limited, and the business of Messrs Grindlay and Company were acquired, the latter undertaking being continued as a private limited company.

LATEST BALANCE SHEETS OF DOMINION BANKS HAVING LONDON OFFICES IRISH FREE STATE BANKS

BANK OF IRELAND

The governors and directors report that the net profits of the bank for the year ended December 31, 1936, after meeting all charges, and providing for bad and doubtful debts, interest due on deposits, rebate on bills not at maturity, pensions and other contingencies, amount to £378,927, to which must be added a sum of £86,775 brought forward from December, 1935, making a total of £465,701. Out of this total the proprietors declared an interim dividend of 6 per cent., less income tax, absorbing

£128,769. The governors and directors having transferred £75,000 to reserves for contingencies, now recommend that a final dividend of 7½ per cent., less income tax, be declared for the year ended December 31, 1936, which will absorb £160,961, making, together with the dividend paid on August 1, 1936, a distribution of 13½ per cent., less income tax, for the year, leaving a surplus of £100,871 to be carried forward.

BANK OF BRITISH WEST AFRICA, LIMITED

The directors' statement of accounts for the year ended March 31, 1936, states that after providing for current charges (including contributions to the staff profit sharing fund and the provident fund), rebate on bills and appropriations to contingency accounts, out of which accounts provision has been made for all bad and doubtful debts, there remains a balance of profit for the year of £85,298. To this must be added £54,674 brought forward from last year, making a total amount available of £139,972.

Of this sum £18,000, being an interim dividend of 1½ per cent., has already been distributed, less income tax, and the directors now recommend the payment of a final dividend of 3½ per cent. absorbing a further sum of £42,000, less income tax, making a total distribution for the year of 5 per cent., less income tax. The directors also recommend a transfer of £25,000 to premises and furniture account, leaving a balance of £54,972 to be carried forward.

BANK OF AUSTRALASIA

The directors state that, after providing for rebate on bills current, for British, Australian and New Zealand rates and taxes, and making a transfer to the credit of Contingencies Account, out of which account provision for all bad and doubtful debts has been made, the net profit for the year ended October 12th last amounted to £300,962. To this has to be added £182,266 brought forward from the previous year's account, making a total of £483,228. From this, £120,094 was paid as an interim dividend

on October 2nd last, and the directors have now appropriated a further sum of £169,805 to pay a final dividend of 4s. 6d. per share, less income tax at 3s. 2½d. in the £, making, in all, £289,898, equal to 8s. per share, less tax, and representing for the year a distribution at the rate of 8 per cent., less tax. There will remain £193,329 to be carried forward to the next account.

THE NATIONAL BANK OF NEW ZEALAND, LIMITED

The directors' statement of the bank's affairs as on March 31, 1936, states that the net profit for the year, after making full provision for bad and doubtful debts, exchange and other contingencies, amounts to £102,594, and to this amount has to be added £115,365 brought forward from the previous year, making an available total of £217,959. The interim dividend at the rate of 4 per cent. per annum, free of income tax, paid in January, 1936, absorbed £40,000, £14,000 has been placed to

pension and gratuity funds, and £10,000 has been transferred to premises account, leaving £153,959 available for distribution. The directors propose to allocate this amount as follows:—In payment of a dividend at the rate of 4 per cent. per annum for the half-year ended March 31, 1936, making 4 per cent. for the year, free of income tax, £40,000; balance to be carried forward, £113,959.

INDIAN BANKS

THE CHARTERED BANK OF INDIA, AUSTRALIA AND CHINA

The directors' report for the year ended December 31st last showed a net profit, after providing for all bad and doubtful debts, of £677,720, inclusive of £181,038 brought forward from the previous year. The interim dividend at the rate of 14 per cent. per annum paid in September last absorbed £210,000. The

amount now available is therefore £467,720, and the directors propose to pay a final dividend at the rate of 14 per cent. per annum, less income tax; to add £35,000 to the officers' pension fund; to set aside £40,000 on account of contingencies, and to carry forward the balance of £182,720.

THE EASTERN BANK, LIMITED

The directors state that the net profit to December 31, 1936, after providing for income tax, and after appropriations to the credit of contingency account, out of which account full provision for bad and doubtful debts has been made, and including the balance brought forward from the last account, amounts to £194,018. An interim dividend at the rate of 3s. a share

was paid in September, absorbing £30,000, and the directors now recommend a final dividend of 4s. a share, less income tax at the rate of 4s. 6-82d. (after allowing for relief in respect of Dominion income tax). They propose to set aside £40,000 on account of contingencies and write £10,000 off premises account, leaving a balance of £74,018 to be carried forward to the next account.

IMPERIAL BANK OF INDIA

The report shows that, after making the usual and necessary provisions, the net profit of the bank for the half-year ended December 31, 1936, amounted to Rs. 35,60,215 which, with Rs. 29,35,425 brought forward from the half-year ended June 30, 1936, makes a total of Rs. 64,95,641. This sum the directors

of the bank have disposed of as follows: In payment of a dividend to the shareholders at the rate of 12 per cent. per annum free of income tax, Rs. 33,75,000; transferred to premises account, Rs. 2,50,000; transferred to pension funds, Rs. 68,000; carried forward to the profit and loss account of the current half-year, Rs. 28,02,641—total, Rs. 64,95,641.

MERCANTILE BANK OF INDIA

The directors' report for the year ended December 31, 1936, shows that the balance of profit and loss account for the year amounts to £181,732, and the amount available, after adding £174,097 brought forward from last account, is £355,829. From this sum has to be deducted £63,000, being the interim dividend of 6 per cent., less income tax, on the "A," "B" and "C" shares paid in September last. The directors have added

£12,000 to the officers' pension fund, written £20,000 off freehold banking premises, and made an additional allocation of £25,000 to contingencies account. They now recommend a final dividend on the "A," "B" and "C" shares of 6 per cent., less income tax (making 12 per cent. for the year), leaving a balance of £172,829 to be carried forward.

P. & O. BANKING CORPORATION, LIMITED

The directors report that the net profits for the year ended March 31, 1936, after providing for taxation, bad and doubtful debts and valuing investments at or below market rates, amount to £111,610 which, with £55,143 brought forward from last year, gives an available balance for disposal of £166,753. The directors have written £5,608 off bank premises. Certain sums

have been transferred out of profits of previous years for the benefit of the staff, and out of this year's profits £4,500 has been set aside. Out of the balance of £156,646 they propose to pay a dividend of 5 per cent. less income tax at 4s. 5-8d., absorbing £100,632; carrying £56,014 to next account.

THE NATIONAL BANK OF INDIA, LIMITED

The directors' report for the year ended December 31, 1936, shows that the net profits, after providing for all bad and doubtful debts, amount to £703,955, inclusive of £247,669 brought forward from the previous year. An *ad interim* dividend at the rate of 18 per cent. per annum was paid on September

24th last, absorbing £180,000, and the directors now recommend a further dividend at the same rate less income tax. They propose to add £50,000 to the officers' pension fund and to transfer £50,000 to contingencies account, leaving a balance of £243,955 to be carried forward.

ANGLO-INTERNATIONAL BANK, LIMITED

The directors submit a report for the year ending December 31, 1936, which states that the net losses on the realisation of assets and sundry provisions amounted to £72,714, and expenses in connection with the liquidation of foreign branches amounted to £3,149, making a charge to profit and loss account of £75,863;

from this sum has been deducted the surplus of interest, dividends, commissions, etc., over general expenses and directors' fees, £10,646, leaving a debit balance for the year of £65,217, which, added to the balance brought forward from the previous year, £421,806, makes a total debit balance of £487,023.

ANGLO-PORTUGUESE COLONIAL AND OVERSEAS BANK, LIMITED

The report of the directors for the year ended January 31, 1937, states that the net profits, after making provision for bad and doubtful debts and income tax, amount to £17,223, which, with

the balance of £82,281 brought forward from last year, make a total of £99,504: of this it is proposed to place £50,000 to the credit of a reserve fund, and to carry forward the balance of £49,505.

BANK OF LONDON AND SOUTH AMERICA, LIMITED

The profit for the year ended September 30, 1936, after deducting all expenses and charges, and after providing for bad and doubtful debts and legal reserves in South America, amounts to £252,851. To this sum has to be added £167,274 brought forward from last year, making a total of £420,025. From this unappropriated balance the directors recommend the following

distribution:—To dividend of 3 per cent., payable December 22, 1936, subject to income tax, £106,200; to writing off special legal and other expenses incurred during the year £25,000; to contingency reserve, £120,000; to profit and loss carried forward, £168,925. During the year the bank has taken over the business of the Anglo-South American Bank. The issued capital has been increased to £4,040,000.

THE BANK OF ROUMANIA, LIMITED

The report for the year 1935 states that after meeting current expenses and depreciation of investments, there is a deficit of £5,857. This figure is arrived at before bringing in the balance

of the Bucharest profit and loss account of £6,715, which is not transferable under existing exchange regulations and has been passed to provision for bad and doubtful accounts in Roumania.

BANQUE COMMERCIALE DU CONGO

The report of the board of directors for the year 1935-36 announces a net profit of Frs. 2,391,297, out of which a dividend of 8 per cent. free of tax, has been paid. Frs. 250,000 have been allotted to the reserve, and Frs. 5,718 are carried forward.

Owing to a change in the presentation of the balance sheet, the figures for 1935-36, below, are only approximately comparable with those of previous years.

COMMERCIAL BANK OF THE NEAR EAST, LIMITED

The following is a statement of the results for the year 1936: Profit for the year, after making provision for bad and doubtful debts, rebate and directors' fees, £6,059; add balance brought forward from the year ended December 31, 1935, £2,976—£9,036. In view of the unsettled international conditions

which exist at present, the directors have decided not to declare a dividend, but to strengthen reserves, as follows: to reserve fund, including the 5 per cent. required by the articles of association, £3,000; to contingency account, £5,500, leaving to be carried forward £536.

HAMBROS BANK, LIMITED

The directors' report for the year ending March 31, 1936, shows that after payment of all expenses, making provision for rebate on bills discounted, bad and doubtful debts, and income tax, the accounts show a profit of £339,784. Deducting the directors' remuneration of £14,961, and adding the balance brought forward from last year of £94,192, there remains an available total of £419,014. After transferring £170,000 to contingency reserve account and allowing the sum of £50,375 for interim dividend

THE HONGKONG AND SHANGHAI

The directors report that the net profits for the year ending December 31, 1936, together with £3,327,060 balance brought forward from last account, after paying all charges, deducting interest paid and due, and making provision for bad and doubtful accounts and contingencies, amount to £18,434,235. They recommend writing off bank premises account the sum of £1,000,000. After deducting £1,000,000, the interim dividend of

BANKING CORPORATION, LIMITED

£2 10s. per share, paid on August 10th last, viz.: £400,000 at 1s. 3d.—£6,269,388, and remuneration to directors, they recommend the payment of a final dividend of £3 per share, viz.: £480,000 which, at 1s. 3d., the rate of the year, will absorb £7,444,538. The balance £3,340,790 to be carried to new profit and loss account.

THE IMPERIAL

The profits for the year ended March 20, 1936, after making provision for expenses of management, general charges in London and at chief office and branches, income tax, and bad and doubtful debts, amount to £75,786, to which has to be added £49,818 brought forward from last account, making a total of £125,604. The assets and liabilities of the branches in Iran have been converted at the rate of exchange of Rials 80 per £ sterling.

being the rate on March 20, 1936. The rate last year was Rials 66. The directors now recommend payment of a final dividend of 7s. per share, and a bonus of 2s. per share, making with the interim dividend of 4s. per share a total for the year of 13s., free of income tax. It is also proposed to add £10,000 to reserve, which is thereby increased to £740,000, and to carry forward £50,604.

THE NATIONAL BANK OF EGYPT

The report for the year ending December 31, 1936, shows the following statement: Gross profit for the year, after providing for depreciation on the bank's buildings and furniture, for rebate of discount, and for doubtful debts, amounts to £948,106. After deducting from this for directors' fees £16,729, and for current expenses £458,492, the remainder is divided between the statutory dividend of 4 per cent., amounting to £120,000, and an additional dividend of 11 per cent., amounting to £330,000. By adding the balance brought forward from last year, £206,984, there remains £229,870 to be carried forward.

SWISS BANK CORPORATION

After deduction of expenses and taxes, and making provision for bad and doubtful debts, etc., the net profit for the year ended December 31, 1936, amounts to S.Fcs. 8,242,828, which together with the amount carried forward from last year, viz., S.Fcs. 1,056,085, makes a total of S.Fcs. 9,298,913. The board propose to pay a dividend of 5 per cent. on the paid-up capital, which will absorb S.Fcs. 8,000,000, and to carry forward S.Fcs. 1,298,913.

SATURDAY, MAY 29, 1937

No. 5

The Trend of Business

THE seasonal improvement in business activity continued during the past month, when the proportion of insured workers aged 16 to 64 unemployed fell to 10.8 per cent., against 13.6 per cent. a year ago. But if allowance is made for the normal seasonal expansion of business in April, the past month appears to have experienced a lull in the long-term upward movement, reflected in a slight decline of our index of Business Activity. There are no indications, however, that the decline of the index portends a change of trend.

A significant feature of recent weeks, which is likely to exercise an increasing influence on the course of British business, is the marked revival of the export trade. During the first quarter of the current year, exports showed an increase of 14½ per cent. in value and one of 10 per cent. in volume over

the corresponding period last year. In April, when the value of manufactured exports was 28 per cent. higher than a year ago, our index of the volume of these shipments registered a rise of 14 per cent. The causes of this improvement were explained in *The Economist* of

Economist of May 22nd, page 441. Its implications are twofold. First, the revival of foreign demand for British manufactures tends to stimulate general business activity and to improve the balance of Britain's economy by increasing employment of human and material resources in the export industries. Secondly, the ability and willingness of our overseas customers to pay higher prices for British goods enables manufacturers to pass on the rise in costs.

Despite the recent decline in raw material prices, manufacturing costs are now rising more rapidly, but there are as yet few indications of resistance to higher prices, except in some of the consumption goods trades. Indeed, the expansionist monetary policy at home and the growing purchasing power of overseas countries are tending to sustain profit-margins and, therefore, the incentive to increased output, in so far as this is still possible with available resources.

In general, it seems that the potential output of many industries is somewhat greater than was anticipated and that the physical limit has not yet been reached. Extension of the productive capacity and more efficient utilisation of existing plant and labour resources have enabled many manufacturers to increase their output quite considerably. In current reports on the engineering industry, where some of the worst bottle-necks occurred, the shortage of labour finds less emphasis than a few months ago, although production both for the home and export markets is now substantially higher than earlier this year. The shortage of coal seems to be less serious, for the industry has recently been able to increase its output, which is now running about 10 per cent. above the level of a year ago. The stringency of iron and steel materials, on the other hand, is a more serious problem.

lem. The increase in prices early this month, averaging 20 per cent., appears to have made a very slight impression, if any, on demand. This does not mean that demand for steel normally does not respond to changes in prices, but merely indicates that supplies are still inadequate. Current production of crude steel is at the rate of nearly 12.6 million tons, compared with 11.7 millions produced in 1936 and 9.6 millions in 1929. While the industry may continue to increase output still further, given the shortage of coke, scrap and ore, it is difficult to envisage a continuance of the recent rate of expansion for any length of time. And the limits of the potential increase in iron and steel supplies are bound to find reflection, sooner or later, in the activity of the engineering, shipbuilding, building, automobile and other metal-using industries.

As will be seen from the more detailed surveys of developments in individual industries on subsequent pages, prospects remain generally promising. Exceptionally, the cotton, wool and jute textile trades have experienced a lull in new business, but orders on hand are sufficient to sustain output.

The increase in retail trade last month over the corresponding month last year was much smaller than in March, but this is due to the fact that Easter fell in March this year and in April in 1936. Building activity has shown an increase during the past month and is now higher than ever. The value of new plans passed by 146 Local Authorities in Great Britain last month showed an advance of 12.2 per cent. over April, 1936, dwelling-houses sharing in the improvement. The returns of building plans passed, moreover, underrate the extent of expansion, for they take no account of the increase in Government contracts, the Votes of the Defence Services for works, lands and buildings having risen from £17 millions in 1936-37 to £41 millions in 1937-38.

1937-38: World industrial activity and international trade continue to expand. The volume of world trade is now only about 7½ per cent. below the 1929 level and is still growing as a result of the increase in the exchange of commodities between raw-material producing and industrial countries, on the one hand, and between industrial nations (in partly-finished and finished goods), on the other hand. The raw-material producing countries continue to gain ground, reflected in generally favourable reports from the British Dominions, Latin America, Scandinavia, Eastern Europe and China. In the United States, business activity showed further expansion in recent weeks, in spite of labour difficulties. Industrial production is also expanding in Germany and Japan, though progress is hampered by the shortage of materials. Belgium, Holland and Switzerland are making headway fairly rapidly, but in France progress remains slow.

British Industrial Developments

The following reports on British industry cover, in most cases, the period to the middle of May. In the remainder they relate to the month of April.

COAL

Despite the recurrence of labour troubles, the industry continues to make progress. The output of saleable coal rose from 20,897,000 tons in March to 21,744,500 tons in April, the increase being common to all districts except Scotland and Derby, Notts and Leicester; in April, 1936, production was no more than 17,908,000 tons. Meanwhile, employment showed further improvement last month and was fairly good generally, except in Cumberland and South Wales, where it remained bad. Exports were well above the comparable figure for April, 1936, the improvement being well spread geographically. France, the industry's best overseas customer, took substantially more than in the previous year, and there was a welcome revival of business with Italy. The volume of export inquiry has shown no diminution in recent weeks, and in some cases a shortage of supplies has been experienced. Meanwhile, industrial sorts are still in heavy demand on contract account and there is little surplus for disposal on the open market. Business in house coal, which had been above normal for the time of year, has inevitably fallen off with the advent of warmer weather.

IRON AND STEEL

The supply-demand position of iron and steel has scarcely changed in recent weeks. The sharp increase in prices early this month, averaging about 20 per cent., has not checked demand, which remains as strong as ever. Calculated on a daily basis, the output of crude steel and pig iron in April was slightly lower than in March. Imports of iron and steel materials showed a decline, and exports a further increase, between March and April. There are indications, however, that supplies of steel-making materials will tend to increase, so that the industry should have no difficulty in producing about one million tons of crude steel more this year than in 1936. Consumers' requirements, meantime, show no indications of an early decline, for activity in the engineering, shipbuilding, construction and automobile industries remains on the up-grade. Export demand remains active, but it is difficult to see how the industry will be able to continue increasing its shipments abroad in the absence of a further marked expansion of output and/or an increase in imports of crude and semi-manufactured materials.

GENERAL ENGINEERING

Activity in the engineering industry showed further expansion. The proportion of insured workers unemployed in all sections of engineering on April 19th was only 5.8 per cent., a decline of 0.3 per cent. on the month and of 3.9 per cent. on the year. In general engineering, the proportion of unemployed workers in April was 5.7 per cent., against 9.8 per cent. a year ago. The difficulties in the way of increased production are being evened out gradually by a better utilisation of available labour and plant. New business is still expanding in volume and the indications point to a further increase in output. Both civil and Government orders are increasing. Since the Government does not insist on priority, the industry is satisfying civil and Government demand as best as it can with the human and material resources at its disposal. A feature is the marked improvement of exports, following a period of comparative stability last year. In April, for example, the volume and value of exports was higher than in any month since October, 1930. The volume of exports last month was 38,576 tons, against 30,807 tons in April, 1936, and 32,181 tons in 1935. Sales abroad of agricultural machinery, boilers and boiler-house equipment, and textile machinery were all appreciably higher. Imports, especially of machine tools, continued to advance, total purchases abroad last month amounting to 13,151 tons, compared with 10,211 tons in April, 1936, and 6,171 tons in 1935. Prospects remain encouraging.

ELECTRICAL EQUIPMENT

The electrical equipment industry is one of the most active branches of engineering, both home and export demand being buoyant. The proportion of insured workers unemployed in the electrical engineering section, for example, was only 3.2 per cent. last month, against 3.4 per cent. in March and 4.9 per cent. a year ago. The value of exports of electrical goods and apparatus rose from £763,162 in April, 1936, to £1,090,108 last month, but shipments of electrical machinery decreased from £277,674 to £236,352 during this period, partly owing to the heavy home demand. New orders for heavy electrical machinery declined last month, but the lull is expected to be temporary.

AUTOMOBILES

It appears on the basis of the latest available data that the private car section is doing better than the commercial vehicle branch. Thus, production of private cars amounted to 44,578

units in March, 1937, against 39,677 in the same month of last year; whereas the output of commercial vehicles showed a slight decline from 11,351 to 11,045 during this period. Again, 38,361 private cars were registered for the first time in March last, compared with 34,935 in March, 1936. New registrations of commercials, however, were 7,910, against 8,446 a year earlier. The export figures show a similar development. Sales of private cars overseas in April totalled 3,765, compared with 3,591 in the same month of 1936, the bulk of the business being with Empire countries. Shipments of commercial vehicles were slightly smaller than a year ago—262 units, against 266 units.

BUILDING

On the whole, activity in the building and public works contracting industries is on the up-grade. The proportion of insured workers engaged in the building industry declined by 0.9 per cent. to 11.9 per cent. during the past year, while unemployment in public works contracting fell by 4.7 per cent. to 38.9 per cent. during this period. There are no indications of an early and substantial decline in residential construction. Plans passed by 146 local authorities last month actually showed an increase of 12.2 per cent. over the corresponding month a year ago. Activity in industrial and commercial construction is expected to continue on the up-grade for some time to come, plans passed by 146 local authorities in April showing an increase of 20 per cent. over the corresponding month a year ago. Our own index of building activity, given in the table on the next page, has shown a downward tendency for some time. But the building plans passed by 146 local authorities, on which our index is based, take no account of the increase in Government contracts under the re-armament programme, which do not have to be passed in the usual way by local authorities. The total votes of the Defence Services for works, lands and buildings were increased from £17 millions in 1936-37 to £41 millions in 1941. While prospects for the building industry remain encouraging despite the rising trend of costs, activity in public works contracting may increase further in the absence of a change in policy. An expenditure of £140 millions has already been approved under the five-year programme of road and bridge construction, but, in view of the high level of general building activity, it is possible that these schemes, or at least some of them, may be held back for some time.

CHEMICALS

Most sections of the home chemical industry have been quite active during the past month. In the industrial chemicals market acetic and oxalic acids, acetone and formaldehyde have been in particularly active demand. Business in all wood distillation products has been good, and stocks of some products, particularly charcoal, are almost exhausted. There has been a steady business in coal-tar products. Large deliveries of refined coal-tar for road purposes have been made and tar acids have continued to receive considerable attention. Pharmaceutical and fine chemicals have been in moderate demand. The improvement in overseas trade in chemicals, drugs, dyes and colours, which has been shown for each month of this year, continued during April, when exports were £535,662 and imports £106,113 greater in value than during the corresponding month of 1936.

POTTERY

A further improvement was recorded in April. Employment was again rather better in North Staffordshire and continued good at Bristol and Derby and very good at Worcester. Short-time is, however, still being worked at some centres and overtime at others. Meanwhile, exports of general earthenware, tiles, sanitary ware and electrical ware were better last month than in April, 1936, but shipments of china showed a slight decline.

FOOTWEAR

The employment position in the boot and shoe industry showed a further slight improvement last month and was fairly good on the whole. Unemployment was well below the previous year's level. Exports, too, were better than in April, 1936, amounting to 30,829 dozen pairs, against 25,954 dozen pairs last year.

COTTON

Following the substantial improvement of the past few months, there has been a lull in new business in recent weeks. This depression is attributed to the easier tendency of raw cotton prices, uncertainty relating to the gold question, the slump on the Stock Exchange and the Chancellor's Budget proposals. Sales of yarn and cloth have consequently been smaller than for some time back, but order lists remain healthy and there is no pressure for fresh contracts. There is now a disposition to anticipate a minimum increase of 10 per cent. in the area under raw cotton in the United States, with a possible increase of 15 per cent. Buyers of piece-goods have tended to become more cautious and, demand from India has fallen off. The improved demand from the Continent has, however, been maintained and the heavier styles of finishing cloths have been sold rather more

freely for Scandinavia; but business with other outlets has been less active. Spinners have also had a quieter month. At the end of April 92 per cent. of the spindles were estimated to be in operation, against 79 per cent. a year ago.

JUTE

In recent weeks new business in yarns and cloth has been rather less active. Order books are, however, in a satisfactory condition and prices generally are well maintained. The quieter tendency on the home market is largely due to the settlement of the strikes at the Indian mills, which have been proceeding since early February. The workers have resumed work unconditionally and prices of Calcutta goods have consequently turned easier. Although buyers in this country are now not quite so keen to operate, the outlook remains promising.

LINEN

All classes of flax have risen in price on short supplies. After protracted negotiations, 1,000 tons of Russian flax has been sold to Germany at the highest prices of the season. Spinners and weavers are reported to be heavily booked, increased activity being reflected in last month's export returns. The home market also provides strong support.

RAYON

Unseasonable weather last year had an adverse effect on business in fashion goods; but the recent improvement in the weather has helped to clear stocks of these goods and thus to pave the way for new business in this section. Meanwhile, it is reported that the revision of yarn prices, which has brought about an advance in quotations for some of the lower-quality yarns, has helped to restore confidence. Business in furnishing fabrics and certain types of hosiery is exceedingly active, and the general outlook is encouraging.

WOOL

Activity in the wool textile industry remained on a high level last month, when the unemployment percentage was 7.0 per cent., against 9.7 a year earlier. More recently, however, the market has had a much quieter tone and new business has shown a notable decline. The industry is affected by factors similar to those which have reduced the demand for cotton goods, and prices of tops have consequently had an easier tendency. Export business in woollen and worsted yarns and tissues, however, remains well above the 1936 level. Shipments last month totalled £2,685,740, against £2,226,594 in April, 1936, Canada again heading the list of overseas customers. Sales to Germany, which still remains Bradford's second most important customer, were smaller than in

April, 1936, but larger quantities were taken by most of the other outlets. Meanwhile, the price of the raw material, which had been firm on short supplies at the opening of the third series of Colonial sales, now shows a rather easier tendency in consequence of the hesitancy of buyers.

AGRICULTURE AND FISHERIES

Autumn-sown corn improved towards the end of April, states an official report, but corn which was late sown on heavy soils is patchy and starved in appearance. Spring corn, where through, appears to be fairly satisfactory. The planting of early varieties of potatoes is not yet completed and a great part of the main crop has yet to be put in. The preparation of the land for root crops is very backward, and a smaller area than usual has so far been sown to mangold and sugar beet. Ewes amongst hill flocks have suffered from exposure, with adverse effects on lambs. Milk yields showed improvement in places where a good outside bite was available, but elsewhere had to be maintained by hand feeding. Cattle wintered indoors have been turned out to graze in lower condition than usual. Reports on the condition of grass sheep are favourable. Meanwhile, the improvement in the position of Britain's fishing industry was not maintained last month. The total catch of wet fish rose from 1,557,690 cwt. in April, 1936, to 1,590,210 cwt. in April, 1937, but the aggregate value fell from £1,259,984 to £1,055,385 over this period. Of last month's takings in England and Wales 9,850 cwt. (valued at £6,786) was accounted for by herrings, against only 2,943 cwt. (valued at £2,446) a year ago.

SHIPPING

A further advance in shipping freights is reflected in *The Economist* index (1898-1913 = 100), which rose from 137.8 in March to 150.3 in April, against only 89.9 in April, 1936. In recent weeks, however, the demand for tonnage has been much less active and freights have shown an easier tendency in sympathy with the decline in commodity prices. No serious setback is, however, expected.

RETAIL TRADE

The money value of retail sales in April, according to the *Board of Trade Journal*, was 1.5 per cent. above the level of April, 1936. This increase—which follows a gain of 15.2 per cent. in March—was much smaller than in any recent months, a fact which is probably accounted for by the different incidence of Easter in the two years. Increases ranged from 0.2 per cent. in the North-West and in the South of England to 8.0 per cent. in Central and West End London. Suburban London, on the other hand, showed a slight decline in the value of sales amounting to 0.7 per cent.

* For method of construction and earlier figures (1924-1936) see Supplement to *The Economist* of July 25, 1936. Revised. † Provisional. ‡ Annual indices based on averages of monthly figures. § Figures adjusted in accordance with revision of Board of Trade indices of import and export prices. For explanation of changes in Board of Trade indices see *The Economist* of May 8, page 382.

Business Developments Overseas

BRITISH EMPIRE

AUSTRALIA.—Internal trade and manufacturing activity are steady, according to a cable from the National Bank of Australasia. Although the building industry remains active, new permits are tending to decline—possibly owing to the upward trend of costs. General employment, however, shows further improvement. On the Stock Exchange, industrial and certain mining shares weakened during April, mainly owing to such external factors as the decline in metal prices. Banking averages indicate a strong and liquid position, associated with a large increase in deposits. Meanwhile, overseas trade continues to expand.

SOUTH AFRICA.—According to cabled information from the Standard Bank, a satisfactory volume of general business is reported at the large centres, except Johannesburg; in the latter city some recession is apparent owing to the fall in the value of gold shares. Meanwhile, activity in the building and allied industries is well maintained. Although prices of farm produce are slightly easier, the general agricultural outlook remains favourable. Railway earnings remain on the up-grade, but Union wool markets have been adversely affected by the current uncertainty regarding the future of gold.

CANADA.—After "marking time" for several months, business activity in Canada made good progress during March. The improvement was reflected in the growth of bank clearings, a substantial upturn in the index of industrial production and an increase in revenue car-loadings. Wholesale prices were also considerably higher than in February. More recently the threat of labour trouble and doubts regarding the future of gold prices have tended to check the upward movement, and the Bureau of Statistics Index of Business has reacted.

NEW ZEALAND.—The country is being assisted by the rise in the price of staple exports. For example, this season's wool sales have been the best since 1928, prices averaging £N.Z. 16 13s., against £N.Z. 13 9s. in the previous season. This improvement in prices is mainly responsible for the growth in exports. Meanwhile, the increased prosperity of the farming community, the rise in wages and Government public works schemes have resulted in larger bank clearings and an expansion of retail trade.

EUROPE

FRANCE.—The very gradual improvement in French economic life continues. The rise in prices has continued, though very much less rapidly than before. Employment and foreign trade have improved slightly, and industry appears to be better adjusted to last year's sweeping social reforms. But the financial situation remains precarious, and the Bourse has been weak for some time. The much needed return of *émigré* capital has not yet materialised on a significant scale, rates of interest remain astonishingly high for a developed industrial country, and new investment is still at a low level. If the budgetary difficulties of the summer are surmounted, and the labour situation continues to quieten, conditions should, however, improve. The Paris exhibition is now almost finished and the first of the great crowds of tourists are now arriving. Unemployment fell during April from 386,254 to 371,000. Wholesale prices rose from 87.7 to 88.0 (1929 = 100) during April, and the index of the cost of living in Paris advanced from 97.1 in 1933 to 99.3 between the last quarter of 1936 and the first quarter of 1937.

GERMANY.—There have been few developments of note in the German business situation in the last month. The index of industrial production (excluding foodstuffs) rose from 108.1 in February to 113.7 in March, the greater part of the rise being due to investment goods, which rose from 109.4 to 119.3. Between March and April the note circulation rose from Rm. 6,838 millions to Rm. 6,937 millions. The index of share prices rose in the same period from 109.3 to 110.6. The Government has successfully put through a Consolidation Loan of Rm. 600 millions at a slightly decreased yield compared with previous issues. Employment continues to increase. But behind the official statistics it is possible to see that the shortage of iron and steel and other raw materials and of some foodstuffs remains as acute as ever. A special inquiry of the Institute of Business Research reveals that the price of food has risen 11.5 per cent. since March, 1933, clothing has risen 17.5 per cent., and the whole index for the cost of living 7.7 per cent. It is, however, 20.0 per cent. lower than in March, 1929.

NORWAY.—Despite a difficult labour position, Norwegian industrial production has reached a record level in the first months of this year. Imports in value are running more than 40 per cent. above the figures for 1936, but exports have risen much less. Wholesale prices are back at their 1929 level and the cost of living is mounting steadily. The discount rate, raised to 4 per cent. last December, has remained unchanged since. The gold reserve at 215 million gold kroner and the note circulation are the highest on record. The level of employment is unchanged.

POLAND.—The index of production is rising steadily, but remains nearly 20 per cent. below the 1929 level. The output of coal and iron and steel, however, have recovered to pre-depression figures. Imports have risen about 20 per cent. since last year, and exports about 30 per cent. Wholesale prices and the cost of living, though they share in the general upward trend, remain the

lowest in Europe relatively to the 1929 parity. Unemployment on the whole appears to be increasing.

AUSTRIA.—Recovery proceeds slowly in Austria. Production is higher than at any time since 1930, and the Government have successfully floated an internal loan. Imports have risen, but exports have risen faster. The cost of living, however, is being kept down, but employment shows only a small and gradual improvement.

UNITED STATES OF AMERICA

Economic activity showed further expansion in April, when the volume of industrial production was probably as high as in 1929. The *New York Times* index of business activity rose from 106.3 during the week ended April 10th to 109.0 during the week ended May 15th, compared with 97.1 during the corresponding week a year ago. There has recently been some anxiety concerning the possibility of a setback to recovery this summer. As a result of the sharp rise of prices earlier this year the output of consumption goods is said to have run ahead of consumers' requirements. But a temporary decline in the cotton textile and a few other trades will not necessarily bring about a general decline in business activity, for the conditions for further expansion are still present. The rise in the prices of agricultural products has led to a remarkable increase in the income of the farming community. Inclusive of Government payments under the soil conservation programme, farm income in March was 37 per cent. higher than a year ago. Moreover, the increase in the prosperity of industry is being shared by labour, payrolls in manufacturing industries in March showing an increase of 30 per cent. over the corresponding month a year ago. Further, a substantial proportion of human and material resources remain unemployed, while many industries, including building, electrical power stations, shipbuilding and the railways, have much leeway still to make up. Moreover, credit remains cheap and plentiful, the long-term rate of interest (calculated on the yield on Government bonds) being only 2½ per cent. in spite of its recent advance. Thus, while progress may be hampered by labour difficulties here and there and by a temporary loss of confidence among business men due to industrial legislation, there are no indications pointing to a major recession in the near future.

LATIN AMERICA

ARGENTINA.—Export trade continues at record levels, a consequence of the increase in demand and prices for grain and linseed. The favourable balance of trade for the first quarter of 1937 was practically at the same level as for the whole of 1936. Total exports in January-April, 1937, were 107.7 per cent. higher in value and 98.2 per cent. in volume than in the same period of 1936. The high-interest Argentine dollar bonds have now been entirely converted or redeemed, with large savings in debt service. An internal Repatriation Loan for 200,000,000 pesos has been successfully issued, and every indication points to increased economic independence in Argentina. Further, for the first time in history, it is proposed to issue mortgage cedulas at as low a rate of interest as 4 per cent. Retail trade is increasingly active, and there are better prospects for high-class British textile goods. The United States, however, is pressing for relief from exchange restrictions in the Argentine market.

BRAZIL.—Official statistics show an improvement in foreign trade. Much depends, however, upon the decision shortly to be made concerning coffee valorisation policy during the year commencing July, 1937. Disequilibrium between supply and demand for coffee has now brought matters to a head. Exports of cotton and other products, however, show considerable increases.

COLOMBIA has accumulated stocks of coffee, but is expected to liquidate them due to better New York markets and an increase in the export tax.

OTHER COUNTRIES.—It is now between seasons for the other Central American coffee countries. The improved exchange conditions for sterling and dollars continue in the Chilean exchange markets. Produce prices, however, are high owing to drought in the farming regions. Economic improvement in Uruguay is reflected in the rising tendency of the exchange value of the peso.

THE FAR EAST

In Japan industrial activity is generally well maintained. The iron and steel industry is working to capacity, but output is nevertheless failing to keep pace with current demand, and makers are forced to ration their customers. The engineering industry is also experiencing difficulty in obtaining sufficient raw materials and skilled labour. Meanwhile, commodity markets have been easier on account of the Government's price-level adjustment policy, and in sympathy with the lower prices of commodities abroad. Stock markets have also been weaker. Foreign trade showed a decline in April, but remained above the previous year's level. Imports and exports totalled 350 and 277 million yen, respectively, against 261 and 213 million yen in April, 1936. China's foreign trade continues to expand. Her imports rose from 108.77 million dollars in March to 109.14 millions in April, against 86.81 millions in April, 1936; while her exports increased from 72.60 million dollars in March to 79.78 millions in April, compared with 54.85 millions in the same month last year.

THE ECONOMIST

TRADE SUPPLEMENT

New Series

SATURDAY, JUNE 26, 1937

No. 6

The Trend of Business

In contrast to the downward trend in security prices—due to pessimism over the future of recovery after the first version of the National Defence Contribution and the repeated gold scares—the expansion in business activity has been well sustained during the past month. Moreover, the latest reports of industrial concerns continue to show rising profits, despite the increase in costs.

The improvement in business activity last month is reflected in the rise of *The Economist* index from 110 (1935 = 100) in April to a record level of 112 in May. Of the component series shown on page 19, eight registered a rise and six showed a decline between April and May. As the indices relating to imports, exports and shipping movements represent daily averages of working days, and since the loss of time through holidays may have been made

good by a speeding-up of activity before and after the Coronation and Whitsun holidays, their sharp rise may somewhat exaggerate the improvement. The decline in the employment index, on the other hand, is largely due to the fact that a number of trades were affected by holiday stoppages on May 2

One of the most significant features during recent weeks has been the lack of confidence among business men, reflected in the downward trend of security and commodity prices. So far, however, this does not seem to have had much effect on the current volume of business activity, and the latest reports from individual industries, summarised on pages 18-19, are fairly encouraging. There are no indications of a general decline in new business, though orders appear to have declined in a number of industries. The iron and steel and metal-using trades are as active as ever, and building activity has been well maintained. But the figures of the value of building plans passed by 146 local authorities in May showed a decline of 23 per cent. from those relating to the corresponding month a year ago. The decline affected not only dwelling-houses, but also factories, commercial premises and public buildings. It is possible that the reduction in the value of plans passed for factories and commercial buildings is partly due to difficulties in obtaining delivery of materials and to the rise in costs; but there is a strong presumption that the loss of confidence contributed to the decline. Again, a number of consumption goods industries, e.g. cotton, wool and jute textiles, have experienced a decline in new business, a consequence of the falling trend of raw material prices.

The rapid improvement in British exports since the beginning of the year has given a marked fillip to many industries, including those which, like the coal, textiles, shipping and shipbuilding industries, have hitherto lagged behind in recovery. This improvement was mainly a consequence of the sharp rise in the volume of exports and in the prices of raw materials and crude foodstuffs. While the

prices of the majority of raw materials are still well above the level of a year ago, a prolonged decline in prices might well have unfavourable repercussions on British industry. While there are indications that the recession in the prices of internationally traded primary products has almost exhausted itself, a resumption of the upward movement may be delayed by the prevailing lack of confidence in this country and in the United States, reflected in the cautious attitude of consumers on the commodity markets.

As in home trade, the most encouraging feature abroad is the rapid expansion of the volume of international trade in recent months. In fact, there has been no evidence this year of the normal seasonal decline in the international exchange of commodities during the first few months of the year. The index of the volume of world trade calculated

as high as eight years ago. There can be little doubt, however, that a further prolonged reaction in commodity prices may tend to slow down the rate of expansion of international trade.

As far as individual countries are concerned, the volume of business activity in the United States has so far been well maintained, though progress is being hampered in certain industries by labour difficulties. As in this country, security and raw material prices have shown a downward tendency, reflecting uncertainty concerning the future of recovery. In France, the heavy industries have made some headway and unemployment is substantially lower than a year ago; but private enterprise still lacks the confidence necessary for an increase in investment. In contrast to France, most other European countries, including Belgium, Czechoslovakia, Holland and Switzerland, continue to make headway, while business activity in the Scandinavian countries is maintained at a high level. The latest indices for Germany indicate that industrial production is at a record level, though further expansion is hampered by shortages of materials, especially iron and steel.

The latest reports from South Africa indicate a lull in progress as a result of the gold scares and the subsequent heavy depreciation of security prices. Other Empire countries, as well as Latin America and China, on the other hand, have recorded further progress as a result of the increase in the prices of their principal export commodities earlier this year. In general, the future trend of activity in the United Kingdom, as well as in other countries, is somewhat uncertain at the moment, but the next few months should indicate whether or no previous upward trends are likely to continue.

British Industrial Developments

The following reports on British industry cover, in most cases, the period to the middle of June. In the remainder they relate to the month of May.

COAL

The recent improvement in the coal industry is being well maintained. The quantity of saleable coal raised in Great Britain fell from 21,744,500 tons in April to 18,715,300 tons in May, the reduction being common to all districts. This fall is, however, accounted for by holiday stoppages, production in May being slightly in excess of that for May, 1936, although the latter month contained two more working days. The occurrence of holidays is also reflected in an increase in the number of workpeople "temporarily stopped" last month. Business in industrial fuel is still mainly confined to contract deliveries, although the position on the open market is now a little less stringent. Meanwhile, it is reported that a fair tonnage of large coal is being broken down for industrial purposes. With the advent of warmer weather and the recession of labour troubles into the background, demand for house coal has fallen off; stocks are consequently accumulating. Export business last month again showed an increase compared with the same month of 1936, the advance being mainly due to the improvement of business with Italy. Collieries remain well booked with export orders.

IRON AND STEEL

Activity in the iron and steel industry, although affected during the past month by holiday stoppages, remains on a high level. The output of pig iron last month at 666,300 tons, was the largest recorded since the post-war peak of May, 1927. The output of crude steel, however, showed a further slight decline due to the holidays and to the temporary closing down for repairs of about one-third of the open-hearth and Bessemer furnaces. The market stringency is perhaps a shade less acute than recently, but makers are fully booked for months ahead. The consuming industries remain highly active and new business in iron and steel is only limited by manufacturers' inability to add to their commitments. Export business also remains good, and here again makers are not in a position to accept all inquiries. Mainly in consequence of heavier shipments to the Empire, exports were substantially heavier in May than in the same month of the two previous years. Meanwhile, an increase of 20s. per ton in the minimum scheduled quotations for foundry and forge iron takes effect after June 30th. The increase will remain in force until the end of the year, except in the Scottish zone, where prices will be reviewed at the end of September.

GENERAL ENGINEERING

The upward trend of activity in the engineering industry was maintained in the past month, when unemployment in all branches of the industry separately recorded in the *Ministry of Labour Gazette* showed a further decline. Exports in May, though slightly lower than in April, showed a considerable increase over the corresponding month last year. The loss of confidence, due to N.D.C. No. 1 and the repeated gold scares, reflected in a decline in new business in certain trades, scarcely affected the engineering industry. Indeed, demand continued to expand during the past month. Costs of production rose in May when quotations for iron and steel were raised by about 20 per cent. on the average. Moreover, a further increase in costs is expected owing to the demand for an increase in wages of twopence per hour which is now under discussion. But the pressure of demand is so strong that no early decline in business is expected. Most sections of the industry are as active as ever, but there has been a slight lull in the agricultural and mining machinery sections.

ELECTRICAL EQUIPMENT

The electrical equipment industry continues to work under pressure. The proportion of insured workers unemployed in electrical engineering, for example, fell to 3.1 per cent. last month. Exports of electrical goods and apparatus continue well above last year's level, but sales of machinery abroad last month were smaller than a year ago, possibly owing to the heavy demands of the home market.

AUTOMOBILES

The private car section remains active and the commercial section is now forging ahead once more. Thus in April 36,309 cars and 10,069 commercial vehicles were produced, against 29,052 and 7,280, respectively, in the same month of 1936. New

registrations in the same month totalled 31,121 private cars and 7,268 commercials, compared with 28,303 and 6,575 in April last year. Continued progress is also being made on the export markets. Sales of cars overseas totalled 6,049 last month, against 5,657 in May, 1936, while shipments of commercial vehicles aggregated 1,802, compared with 1,335 in the same month of last year. Imports of both cars and commercial vehicles also continue above the level of a year ago.

BUILDING

Activity in the building industry remains on a high level and there is little indication of any immediate alteration in the trend. The employment position showed little change last month and was about the same as in May last year. Meanwhile the aggregate value of building plans approved by 146 local authorities last month was only £9,193,800, against £12,773,000 in the same month of last year. May, 1936, was a particularly good month, but the decline was nevertheless considerable and was especially marked in respect of factories and workshops. This development is attributable to exaggerated fears of rising wages and other costs, to the difficulty of securing early delivery of certain essential materials (especially steel) and to the shock to confidence caused by the Chancellor's Budget proposals. With the withdrawal of the first N.D.C. proposals, one disturbing factor has been removed, and it seems likely that the plan figures, an important indicator of future activity, may reflect this improvement in the near future.

CHEMICALS

The home chemical market was fairly active during May, chief interest being shown in industrial chemicals and wood distillation products. Business in a number of coal tar products was restricted owing to a shortage of supplies, tar acids being particularly scarce. The pharmaceutical chemicals market was quiet at the beginning of the month, but there was rather more inquiry later. There was a further increase in overseas trade in May, the value of exports of chemicals, drugs, dyes and colours being £323,139 greater than in May, 1936, and the value of imports £81,829 greater. Items for which exports showed a very considerable increase as compared with last year were ammonium sulphate, fertilisers and painters' colours and materials. The only large decrease was recorded for sodium compounds.

POTTERY

Although activity has shown a decline since the Coronation, the position remains much better than at this time last year. Overtime is still being worked at some centres, but short time is more common. Exports of general earthenware, electrical ware and china were rather smaller last month than in May, 1936.

FOOTWEAR

The boot and shoe industry was active in early May on the completion of orders before the Whitsuntide holiday. Export business, too, was good. Thus exports of leather boots and shoes amounted to 29,529 dozen pairs, against 27,311 dozen pairs in May, 1936. Since the holidays, however, normal seasonal slackness has been experienced and employment has declined.

COTTON

Favourable crop reports from the United States, uncertainties regarding the future of gold and the political situation in France have given rise to anticipations of a fall in prices. In the circumstances, fresh business has been limited, although inquiry showed some improvement towards the close of the period under review. Makers of piece-goods remain busy on old contracts, but contract lists have tended to run down. Demand for India has been unsatisfactory, but a little more inquiry has been encountered for China and minor outlets of the Far East. Business for South America has continued healthy, but operations for the Continent have been irregular. Inquiry for the home trade has also been rather quiet. Spinners have had a disappointing month and the output of the mills has not been sold; but sellers have shown strong resistance against low offers. In the American section the outstanding factor has been the continued pressure for delivery of ring beams. Following a revision of the basis by the Price Agreement Committee, certain yarns have been slightly dearer in relation to raw cotton rates. Meanwhile spinning production remains at 92 per cent. of capacity, against 79 per cent. at the same time last year.

JUTE

Raw jute prices have been easier in recent weeks, mainly in response to favourable crop reports. The next crop is now expected to yield about 12 million bales, while probable world consumption is put at 11 million bales. In the circumstances, lower prices are anticipated. The yarn market is quiet, but spinners remain busy on existing contracts and prices are fairly steady. New business in cloth is also scarce, but nominal quotations show little alteration. Meanwhile, output in India continues to be hampered by labour difficulties.

LINEN

Raw material prices are firm on short supplies ; high-class flax is scarce, and buyers are consequently anxious to cover their requirements. The weather in most centres is favourable for new sowings. Meanwhile, demand for yarns is well maintained, producers being fully engaged. Weavers have difficulty in keeping abreast of demand for cloth, especially for fine goods. In view of their existing commitments, manufacturers have been obliged to refuse a considerable volume of new business offered for early delivery.

RAYON

Business is reasonably good for the time of year and the general outlook appears healthy. New business in yarns is not very active, but substantial deliveries are being made against old contracts. The dress goods trade shows a distinct improvement. Quotations for all qualities of viscose yarns are firm, and spinners are no longer prepared to sell below list prices.

WOOL

The woollen and worsted industry is passing through a quieter period, partly on account of seasonal factors. Holiday stoppages were responsible for an increase in unemployment last month, and, more recently, there has been a further decline in the volume of new business. There is a feeling in the market that a larger

AGRICULTURE AND FISHERIES

Some of the corn crops are still of patchy appearance, but there was some improvement during May, and growth was encouraged by warmth. Early potatoes are making favourable progress and planting of the main crop is nearing completion. Sowing of root crops is less forward than usual. Hop bines are rather backward, but there was some recovery at the end of May. Generally speaking, reports on hay are favourable and yields of both seeds and meadow hay will probably be above average. Pastures made rapid growth, and both cattle and sheep made progress. Milk became more plentiful with the outdoor keep; and a few districts reported yields above the seasonal average. Lambs in lowland flocks have thrived moderately well, and those in hill flocks are deriving benefit from the more clement weather. The average value of Britain's takings of wet fish again showed a decline in May, when compared with the same month of 1936. The total catch was 1,746,412 cwts., against 1,492,820 cwts., and the aggregate value was no more than £1,002,856, compared with £1,101,005 in May, 1936.

SHIPPING

The reduction in idle shipping tonnage and the gradual growth of international trade are reflected in a further advance in shipping freights. *The Economist* index (1898-1913 = 100) rose from 150.3 in April to 154.9 in May—a gain of no less than 74.5 per cent. over May, 1936. The freight markets have had a quiet tone in recent weeks, but owners have shown little disposition to make concessions, since the surplus cargo tonnage available is small. In the circumstances, no break in freight rates appears probable.

* For method of construction and earlier figures (1924-1936) see Supplement to *The Economist* of July 25, 1936. † Revised. ‡ Provisional. § Annual indices represent averages of monthly figures.

Business Developments Overseas

BRITISH EMPIRE

AUSTRALIA.—Although winter rain is needed for crops and pastures in some important districts, agricultural conditions are generally satisfactory, states a cable from the National Bank of Australasia. Meanwhile, trade and secondary industry maintain their recent improvement. Imports in April showed an advance of 26 per cent. and exports a gain of 50 per cent., compared with April, 1936. Quotations for industrial securities are well maintained, but mining stocks have weakened.

SOUTH AFRICA.—Retail business is quieter at the larger centres, states a cable from the Standard Bank, owing to the approach of the stocktaking period and the fall of Stock Exchange securities. The building and allied trades are well employed and prospects are still considered good. Railway earnings from May 9th to June 5th amounted to £2,412,618, or £27,382 below the Budget estimate. Meanwhile, harvesting conditions remain favourable, and good yields of maize are reported. The Union wool selling season is drawing to its close, and the market is quieter; but offerings of good average quality encounter fair competition. The general outlook is obscured by uncertainty concerning the future of gold.

CANADA.—According to the figures of the Dominion Bureau of Statistics, April was a better month than any since last October. At present, however, the business community again appears to be "marking time." Labour difficulties, the gold scare and the decline in metal prices have been adverse factors; news is awaited of the success or failure of the western wheat crop. Seeding conditions have been propitious in Manitoba and in the northern parts of Saskatchewan and Alberta, but in the southern part of the two latter States grain crops have again started badly through lack of moisture.

INDIA.—Rainfall has been light to moderate in most parts of India, and the condition of the crops is reported to be fair generally, except in parts of the Punjab where crops have been damaged by hailstorms. Latest crop estimates, with last year's corresponding figures in brackets, are as follows:—Wheat, 10,241,000 tons (9,700,000 tons); cotton, 6,307,000 bales (5,728,000 bales); sesamum, 482,000 tons (463,000 tons). In view of the separation of Burma from India, no comparison of the latter's trade with that of earlier periods is yet possible.

EUROPE

FRANCE.—June has seen a slight slowing up of French industrial expansion, and a severe financial crisis, the effects of which upon industry have not yet made themselves felt. The indices of production are not available beyond April, but until that date the general index has shown continuous expansion from an average of 98 in 1936 to 101 in January and 105 in April, due mainly to a sharp advance in the metal industries, which masked declines in building and automobiles. Wholesale prices are more or less stationary, though the separate indices of domestic and foreign goods are moving differently, the former rising and the latter falling. The only series that shows unequivocal improvement is that of the numbers of unemployed persons relieved, which fell from 355,792 on May 15th to 333,367 on June 12th. Broadly speaking it would seem that investment has failed to increase in the last few weeks, though consumption is rising and industry is still adjusting itself to the forty-hour week. But the lack of financial confidence has been shown in the fall of the official share index from 222 on May 22nd to 204 on June 19th, and the rise in the note circulation from 85.3 milliards to 86.5 milliards between the same dates. The exchanges are persistently weak and the outlook remains uncertain.

GERMANY.—Industrial activity continues to expand in Germany. The general index for industrial production rose from 107.0 in January to 118.5 in April, while that for investment goods rose in the same period from 112.0 to 126.4. The index of coal production has remained practically unchanged between 118 and 119. Unemployment has fallen between the end of April and the end of May from 960,800 to 776,000, just about one-half the figure given for the corresponding date last year: but it is of course impossible to draw any conclusion from these totals as long as no information about the exact numbers at work in labour camps, etc., is available. Figures for imports show a sharp rise from Rm. 409 millions in March to Rm. 477 millions in April, the rise being fairly equally distributed between food and raw materials. In the same month exports of finished products rose from Rm. 369 millions to Rm. 390 millions. The export surplus fell from Rm. 53 millions to Rm. 15 millions. Wholesale prices are practically unchanged.

ITALY.—The indices of the Central Statistical Bureau point to rising activity. The index of raw material imports, which fell to 33 in 1936 (1928 = 100) had risen to 67.3 last month. The index of manufactured exports, which fell to 30.6 last year, has now risen to 60.2; but these movements do not take account of the sharp rise in prices. The import surplus for the first four months of 1937 amounted to 910.6 million lire, against 659.2 million lire in the same period of 1936. But tourist expenditure and shipping revenue appear to have been a sufficient counter-balance.

BELGIUM.—The industrial position is favourable and, here as elsewhere, the metal industries are particularly active. Unemployment continues to fall, and in certain branches of activity

labour shortages are reported. Although the cost of living is rising, wages are also on the increase, and there have been no serious strikes since June, 1936. Meanwhile, the restoration of the country's finances is proceeding gradually and the private banks are much stronger than of late.

JUGOSLAVIA.—Industrial production continues to increase and overseas trade is improving. Exports during the first four months of 1937 were more than double last year's corresponding figure. Moreover, Yugoslavia is slowly reducing her outstanding claims against Italy and Germany on clearing account. In the national balance of payments, receipts from tourists constitute a growing asset. Despite damage by storms, the wheat harvest promises to be fair and should yield a substantial surplus for export.

UNITED STATES OF AMERICA

Business activity has been well maintained throughout April and May, and there are no indications of a general decline this month. Many industries still have well-filled order books which should ensure a high level of production for some time to come. The current volume of industrial production is practically as high as in 1929. Since then, however, the population has increased by seven millions. This suggests that there is still ample scope for further expansion, especially in the capital goods industries. In recent weeks, however, there has been a decline in the volume of new business, which is beginning to cause apprehension. In a large measure the slowing down of new business represents a corrective movement to the rush of new orders earlier this year. The autumn may, however, witness a period of further expansion, unless the course of recovery is deflected by serious labour difficulties or by new legislation hampering business. In the iron and steel industry production has fallen sharply in recent weeks, partly as a result of strikes. Moreover, there are at present four important bills before Congress which may have important repercussions on America's national economy, namely, those providing for the reorganisation of the Federal Courts and of the Executive Departments, for the regulation of agriculture, and of wages and hours in industry.

LATIN AMERICA

ARGENTINA.—Although grain shipments are now declining rapidly, the total for the first five months of the current year constituted a record. Not only have shipments of grain and linseed been heavy, but a substantial improvement in prices has also taken place. The Finance Minister in his report for 1936 referred to the close approximation between the "free" and official rates of exchange. Although in normal circumstances exchange control might now be abandoned, its maintenance is considered desirable in the present world situation, the control system "providing the country with a solid defence which it would be premature to abandon." It is now possible, however, to grant foreign exchange practically without restriction to those countries which have signed reciprocal trade agreements with Argentina. British circles in Buenos Aires are reported to appear satisfied with the new agreement with the United Kingdom.

BRAZIL.—Overseas trade in the first quarter was substantially above last year's level, a fall in coffee and sugar shipments being largely offset by the larger exports of cotton and other products. Impressed by her declining importance on world coffee markets, Brazil is calling an international conference to arrange a cartel. As much as 70 per cent. of the crop will be destroyed in 1937-38, to balance the statistical position.

OTHER COUNTRIES.—The foreign trade of Uruguay and Chile is expanding, copper shipments from the latter showing a marked revival. In Chile the foreign exchange position continues rather easier than recently. Colombia has signed a new compensation treaty with Germany, who will take coffee, petroleum, etc., against manufactures sent to Colombia. The Central American countries generally have disposed of their coffee crops and the season has been satisfactory.

THE FAR EAST

In Japan industrial production remains on a high level, stimulated by the re-armament boom. Wholesale and retail prices show an upward trend and there is considerable pressure for wage increases. Pending the declaration of the new Cabinet's policies, stock markets have remained inactive, and some new stimulus is awaited. Meanwhile, the trade returns continue to show a growing adverse balance. The total excess of imports over exports in the first five months of this year amounts to 538 million yen, which is 87 per cent. above last year's corresponding figure. The movement is attributed to the growing need of imported raw materials; but further exchange restrictions to control imports are envisaged. In China, too, imports have recently shown a tendency to outstrip exports. Thus imports rose from 85.09 million dollars in May, 1936, to 109.13 millions in April, 1937, and to 110.99 millions in the past month; while exports increased from 54.24 to 79.78 million dollars between May, 1936, and April, 1937, but declined to 78.34 millions last month.
