THE ECONOMIST

"Were all nations to follow the liberal system of free exportation and free importation, the different States into which a great continent was divided would so far resemble the different provinces of a great Empire. As among the different provinces of a great Empire the freedom of the inland trade appears, both from reason and experience, not only the best palliative of a dearth, but the most effectual preventative of a famine, so would the freedom of the exportation and importation trade be among the different States into which a great continent was divided."—ADAM SMITH.

Europe's Poker Game

THE international situation has become alarmingly worse in the course of the past week. The Italians and Germans, followed by the Portuguese, have withdrawn from participation in the control of Spanish coasts and frontiers; and the two former are intending to veto the Anglo-French proposals for filling the gap.

The proposals of England and France were that these two countries should themselves patrol the Spanish coasts hitherto patrolled by Germany and Italy, but with independent observers on board their ships. It seems fair and obvious, if Germany and Italy abandon the patrol but remain in the London Committee to exercise a veto on all other proposals, that the other non-intervention Powers should be able to go ahead, in any way they see fit, to ensure the observance of non-intervention to which all the Powers are still committed. If, now, the British and French Governments give in once more, they will end non-intervention itself. And that will force them to take some important decisions. For they will either have to protect their citizens who may be engaged in supporting the Spanish Government, or retreat into inglorious isolation and hand Spain over to GENERAL FRANCO, the bailiff of Germany and Italy. This week even high Tory circles have perceived the peril in allowing matters to drift to this conclusion.

Something, however, has been gained; for it is an advantage that some of the cards in the European poker game have at last been displayed to public view. MR CHAMBERLAIN has admitted we are on the brink of war. SIGNOR MUSSOLINI has admitted that Italy is at war already. And HERR HITLER has admitted that Spain's iron ore resources are one of the prizes that Germany hopes to win.

MR CHAMBERLAIN, speaking in the House of Commons on Friday of last week, compared the present conditions in Europe to those in the high mountains "when an incautious move or even a sudden loud exclamation may start an avalanche"; and, at this altitude of discourse, he offered his hearers cold comfort by asking them to keep cool heads. In the same speech he put his finger on the conflict of ideologies as the deadliest threat to the peace of Europe now latent in the war in Spain. In an article, commenting on MR CHAMBERLAIN'S speech and reputed to be from SIGNOR MUSSOLINI'S pen, which was published in the *Popolo d'Italia* next day, the head of the Italian State enthusiastically pleaded guilty to the charge which had been made in general terms by the PRIME MINISTER of the United Kingdom.

> In this great fight which has brought face to face two types of civilisation and two conceptions of the world. Fascist Italy (declared her Duce) has not been neutral but has fought; and victory will also be hers.

In another paragraph he told his readers that the crisis would be definitely solved when the crushing of the last resistance of the Basques had been followed by the capture of Madrid; and on Thursday he categorically declared that Italy would withdraw no "volunteers" from Spain. This statement was accompanied by the staggering allegation that British succour of Spanish women and children was the equivalent of military aid to the "Reds," whereas Germany and Italy had all along been seeking to isolate the contest.

As for HERR HITLER, he told his followers, in a speech delivered at Würzburg last Sunday, that he had now finished once and for all with the system of collective international action since Britain and France would not join Germany in a naval demonstration.

> The experience we had in London taught us a lesson which we shall not forget. . . . We have given collective methods a fair chance. . . . Only a fool makes the same mistake twice. . . . We shall look after our own safety, and thank God we are strong enough to do so.

Thus also did the FÜHRER'S predecessor twenty-five years ago delude himself that an armed Germany could disregard the rest of the world. The really revealing sentence, however, of the Würzburg speech was one in which HITLER declared that Germany was trying to buy iron-ore all over the world and that she would welcome a Nationalist regime in Spain in order to be able to trade " normally " with that country.

But in each player's hand there is still a card which has not yet been revealed. That card is the policy of each of the Governments of the four Great Powers of Western and Central Europe about the European balance of power. In the House of Commons last week MR CHAMBERLAIN said that the Spanish policy of His Majesty's Government in the United Kingdom had " been consistently directed to one aim and one aim only—namely, to maintain the peace of Europe by confining war to Spain." And he added that it was for this purpose that, in conjunction with France, we had worked to set up and since then to maintain the Non-intervention Committee. This explicit admission that the primary purpose of the so-called Non-intervention Committee is not to secure non-intervention, but to prevent a clash of arms between other Powers anywhere except in the Spanish arena, does make it rather clearer where the British Government stands. Yet one capital point is still obscure. When the PRIME MINISTER tells us that our only aim is to maintain the peace of Europe by confining war to Spain, does he mean that the Government are indifferent to the effect of the outcome of the European war in Spain upon the European balance of power?

That question is crucial. During the last few days it has become distinctly more likely that GENERAL FRANCO may be carried to victory by German and Italian arms. And while it is one thing for GENERAL FRANCO to defeat the legitimate Government of his country in an exclusively Spanish war, it is quite another thing for Germany and Italy effectively to conquer Spain by means of their military aid to the insurgents. If GENERAL FRANCO wins the war in this second sense—and there is no other way in which his victory is now conceivable—then what we have to expect is a permanent Italo-German occupation and control of the Peninsula. It is wilful blindness to go on deluding ourselves with the notion that GENERAL FRANCO will have to pay off his foreign mercenaries as a condition precedent to an application for a loan from the City of London, GENERAL FRANCO will not particularly want to have recourse to the London money market, and will not be free to gratify his wish even if he were to harbour it. By the time they have made him win, his German and Italian victory-makers will have GENERAL FRANCO very firmly pinioned. It is idle to argue that, when the war is over, GENERAL FRANCO will not much want to keep his foreign guests and that the " volunteers " themselves will not much want to stay. It is neither FRANCO nor the " volunteers," but the DUCE and the FÜHRER, who will have the last word. The German and Italian dictators will not be willing to bring their young men home because they will not be able to offer them there " a land fit for heroes." And FRANCO will not be able to dismiss them—partly because he will simply not be allowed, and partly because, if he could and did, he would immediately forfeit the fruits of victory.

What we have to face, then, is the prospect of an outcome of the war in Spain which will leave the Peninsula under the permanent military, political and economic control of Germany and Italy. Is it really no aim of His Majesty's Government to try to prevent this? Is that the meaning of the remark with which MR EDEN wound up the debate on June 25th?

> I do not say peace at any price; but if Mr Lloyd George says peace at *almost* any price, I shall scarcely quarrel with him.

Is this as much as to say that France and Belgium are the only foreign countries on whose account we are prepared to take up arms? Germany and Italy, then, may conquer and hold Spain—and after Spain, all Europe save France and Belgium—with the foreknowledge that we shall not resist. Where—if at all—does this British retreat stop? Are we to stand by with our arms folded until Germany has seized the Faroes, Japan the Dutch East Indies, and Italy, say, the Channel Islands? Germany and Italy have put their cards on the table. It is high time that we too showed our hand.

British Agriculture

COMPARED with MR WALTER ELLIOT'S hectic heyday at the Ministry of Agriculture, there has been a lull during the past year or eighteen months in Parliamentary or public discussions of the agricultural problem. In part, this has no doubt been a reflection of the restored solvency of the farmer. Recently, however, there has been a revival of interest. Within a few weeks, the House of Commons has had two full-dress debates on agriculture, and more are promised before the end of the session.

From the speeches made and the proposals put forward on these occasions it is clear that the Ministry of Agriculture under MR MORRISON is a rather different place from what it was under MR ELLIOT three years ago, though the change is due to circumstances rather than to personalities. Three years ago MR ELLIOT'S favourite instruments were the quota on imports and the Marketing Board, elected by and responsible to the producers alone. Both these methods appear to have fallen into disuse, at least so far as new departures of policy are concerned, though the old quotas are not abandoned nor the existing Marketing Boards dissolved.

The change in attitude to the quota can be clearly seen in the virtual refusal of the Government to apply it to eggs, in spite of the serious plight of the poultry keeper and the heavy political pressure he can exert. It seems that in the Ministry's opinion experience of the existing quotas has not been such as to encourage the belief that they are a universal remedy. The eclipse of the Marketing Board device is similarly to be attributed to the lessons of recent years. The bacon scheme has broken down, and though the Milk Board, the other large scheme, is still functioning an authoritative Commission has severely criticised its composition and working and proposed the transfer of its major functions to a new body which is not to be elected by the producers. This same device of an independent, rather than a producer-elected, controlling body has been adopted for the more recent schemes of re-organisation, and the opinion clearly seems to have been formed in authoritative circles that the principles of the Agricultural Marketing Acts have not been an unqualified success.

The lessons thus drawn from experience are, without doubt, salutary. Judged by any test save only that narrow and temporary interests of the farmers themselves, neither the import quota nor the producer-elected Marketing Board is a suitable solution for the peculiar problems of British agriculture. The broad criticism that can be urged against the policy which seemed to be developing three or four years ago is that it ignores the central fact of British agriculture—that in this island there are thirteen consumers of food for every one producer. This does not, of course, mean that the British farmer must at all times be left without any assistance to face the full force of foreign competition. There are good reasons of self-interest, as well as more purely eleemosynary motives, which justify an industrial community in paying a stiff price to maintain a healthy domestic agriculture. Moreover there is the factor that a large domestic food supply buttresses security in time of war. For all these reasons the taxpayer, ratepayer and consumer of Britain have for many years been contributing to the support of domestic agriculture.

In arranging this support, however, two principles ought to be observed. Nothing should be done to raise the price of food to the urban masses. And nothing should be done so to impoverish our foreign customers that they will retaliate on our export trades, which employ more people than our home agriculture. It is when they are judged by these tests that the quota and the producer-controlled Marketing Board display their weaknesses. If direct assistance to the farmers is to be given without infringing the two imperatives, experience has proved that the guaranteed price, implemented by public money, is the best device. This is the method of the Wheat Act of 1932 (though the funds are raised by an inequitable levy on consumers) which has worked better than any of the schemes of the last few years, and it is the method to which the Government appear to be returning. This does not, of course, mean that measures of organisation are not desirable in production or in marketing. Indeed, there is the strongest case for Marketing Boards, provided only that they are not first handed over entirely to the producers and then given powers of dictation over prices. Even more can be done indirectly for the farmer by helping him to increase his technical efficiency.

Judged by these criteria, the new policy which is taking shape shows up favourably. Additional assistance is to be given by guaranteed prices at the cost of the Exchequer; the Government are believed to be on the point of deciding that the producer-controlled Milk Board shall be substantially replaced by an independent body; and subsidies are to be given to improve fertilisation, drainage and the health of livestock.

It is difficult, however, to convert approval of technical devices into praise for the objectives of the new policy. There is the confusing factor of preparation for war. The Government have rightly refused to place agriculture at once upon a war basis; but there is a strong war bias in their programme. In peacetime no branch of agriculture is more worthy of encouragement than stockbreeding. This island is economically and climatically suited to it and it has the advantage of encouraging a substantial import trade in feeding stuffs. But in wartime the advantage becomes a disadvantage, since the feeding stuffs, though of less value, are of greater bulk than the meat. Conversely with cereals; they are not the best crop for peacetime; but for war purposes a large home production is desirable. The emphasis of policy is therefore visibly shifting from livestock to cereals and grass. It may be essential on strategic grounds; but it is retrograde if judged from the economic, or even the technical, angle.

We are thus, in our agricultural policy, paying some tribute to the danger of war, though not sufficient tribute to ensure our safety. To go the whole way would involve a very costly revolution in agricultural practice; to go no way at all is dangerous. The dilemma suggests the enquiry whether sufficient attention has been paid to the more direct method of meeting the danger, by the storage of food supplies and feeding stuffs. That would enable British agriculture to follow its peacetime bent while insuring a certain minimum of safety. That it is technically feasible can be confidently asserted. That it has been insufficiently considered is, in view of the fact that it falls clearly within the competence of no Department of State, only too likely. It is a matter which should receive the renewed and most urgent consideration of the Government, lest, by our present course, strategy should defy economics, and economics weaken strategy.

The Franc Crisis

FRANCE has been suffering two distinct crises during the last three weeks: one political and one financial. Of the two, the former has been more frequent in French history and is easier to circumvent, as it was on this occasion. The latter has steadily become more and more familiar in French public life during the last five years; and it has proved more difficult to evade or solve.

When little more than a year ago M. BLUM formed his Popular Front Government with the support of the Radicals, Socialists and Communists, it was hoped that it would be a more stable Government than any of those quick-come and quick-go Cabinets between 1932 and 1936, whose expectation of life varied with the variations in their composition from among the manifold Parliamentary groups. But two forces were working against M. BLUM. First, his overdue but ambitious social reform programme raised costs and prices, and thus, even before the devaluation last September, made the employers and rentiers remove their disposable capital abroad. Secondly, his programme, and the devaluation which it rendered inevitable, was conducted with a badly unbalanced Budget, a mounting mass of Government short-term borrowing, and a sagging revenue. During the last year prices and profitability in France have alike risen; but the stay-out strike of the capitalists, perturbed by the social reforms and the mounting Budgetary deficits, instead of diminishing has intensified. French capital abroad is said to have increased by about £1,000 millions, most of it at short term, during the last two years; and much of this has emigrated during the last twelve months.

Thus, despite devaluation last autumn, which carried the franc from about Frs. 75 to the £1 to about Frs. 110, the Budget deficit has continued; the annual service of the National Debt has increased, because no fall in the rate of interest could occur after devaluation, since instead of repatriation of capital the capital flight persisted; and, finally costs have steeply risen. This awkward and paradoxical situation faced M. BLUM with a quandary. Either he had to risk a split in the Popular Front by reversing part of the social reform programme; or he had to tread the path of autarky towards a completely socialised French State, with economic and currency controls like those of DR SCHACHT. That is why he demanded the now famous " pause " from his supporters, and, at the same time, urgently advocated freer international trade. For he hoped to give the capitalists confidence, hold his Popular Front together in the meantime and, finally, increase trade and turnover sufficiently to offset the higher costs, enlarge public revenue, and expand industrial profitability. Then, with this prospect in sight, the entrepreneurs and smaller capitalists, and the bankers who had advised them to withdraw their funds from the country, would repatriate their " panic money " from abroad; and this, in turn, would lower interest-rates, reduce the annual service of the Debt, which now absorbs half the ordinary

Budget receipts, and enable the Government to balance the Budget.

In the event, M. BLUM and M. VINCENT-AURIOL ignored one vital consideration. They thought balancing the Budget could safely be left to the last, while the Treasury simply met its needs out of short-term borrowing. In fact, the French rentiers would not repatriate their capital as long as they saw the Budget unbalanced, the Treasury borrowing from the Bank of France or the public every few months, and both the Debt and its annual cost mounting up—even if they had liked the political and social complexion of M. BLUM'S Government, which they did not. From such circumstances to more gold exports, more purchases of foreign currencies and securities, and more forward sales of francs, was a short step. The French Exchange Fund, furnished with Frs.10,000 millions out of the writing-up profit on the gold stock at the Bank last September, had to look for new resources; two of its three controllers resigned just before the fall of M. BLUM'S Government; and the red light was as plain to small capitalists as to professional bear speculators. Frs.7,800 millions worth of gold left the Bank of France during the crisis of the last few weeks alone. The gold reserve fell to the minimum regarded as safe for a war-chest; and the Bank of France could not lend any more to the Government without a new convention. The Treasury's cash was down to Frs.20 millions at the end of last week.

M. CHAUTEMPS has fortunately been able to form a Government which contains most of the former Ministers, includes M. BLUM as Vice-Premier, and replaces M. VINCENT-AURIOL by M. BONNET, who arrived back last Monday from his six-months' special mission in Washington. On Tuesday, the Bourse was officially closed, dealings in francs suspended both in Paris and London, and a moratorium for commercial debts declared. These measures enabled M. BONNET and the Cabinet to work out the necessary decrees and the Emergency Powers Bill without a raging, tearing financial panic at their doors. In the early hours of Wednesday the new Government obtained a vote of 374 to 206 in favour of a one-clause Bill empowering the Government to rule by decree until the end of August, provided only that they do not institute exchange-control. On Wednesday afternoon, the Senate—having extracted, in addition, an undertaking not to raise compulsory loans or make forced conversions of rentes—passed the Bill by 167 to 82. That same evening it was decided to abrogate the law fixing a gold content to the franc, and to let its exchange value slide. A new convention was at the same time made with the Bank of France for an immediate advance of Frs.15,000 millions to the Treasury. On Thursday, therefore, the markets reopened in a better mood than for some time past. The franc immediately fell to 119-129 to the £1.

M. BONNET, on assuming office, exposed the full nakedness of the financial land. The future of the Exchange Fund is discussed in a Financial Note on page 23. The Treasury cash position and outlook is roughly as follows. The ordinary budget deficit for the year to December 31, 1937, may be estimated at 8-9,000 millions, though by new taxation and other means it may be possible to reduce it to 6,000 millions. Extraordinary expenditure, including the railway deficit, public works, re-armament, etc., may be placed at 16-17,000 millions by December 31st, but there may be some duplication between these and the previous figures. Maturities during the next six months, including the sterling credit of 4,000 millions, may be about 7,000 millions. All said and done, at least 25,000 millions of cash may be required.

The Bank of France is to lend a further 15,000 millions, though as this sum can only be repaid out of the profit on the revaluation of the Bank's gold, the operation implies a permanent depreciation of the franc to at least Frs. 128.50 to the pound, in order to yield this profit. The remaining 10,000 millions will have to come from additional revenue and internal issues of Treasury bills. Thus the French fiscal outlook remains clouded; and the value of the franc is dependent entirely upon the fiscal outlook, the restoration of confidence and the return of French capital from abroad.

In default of repatriation of French capital—and this can scarcely be expected while the franc has no gold bottom set to it—the process of clearing France's financial stable is likely to take some months, during which co-operation between the Central Bank and Treasury authorities in London, Paris and Washington will certainly be imperative. In this connection, SIR JOHN SIMON announced in the Commons on Wednesday that the French Government had informed him that the decision to allow the franc to slide was not taken to secure competitive exchange advantage, and that they would co-operate to the full with the British and American authorities in still rendering the Tripartite Agreement of last September effective. In order to prevent a chaotic demoralisation of the exchanges, SIR JOHN SIMON announced on Thursday that the British and American authorities have agreed to aid the French authorities.

M. CHAUTEMPS has been lucky enough to be able to form a Government which is still Left-inclined, but has to its own Left the Communists, and to its immediate Right, the moderates of the Centre and Left Centre. He can count on all the Radicals and Socialists, the Communists (who must support this Government in case one farther to the Right is formed), and—what M. BLUM lacked, and what caused the fall of his Government—the support of the overwhelmingly Radical Senate. He can bargain to Left and to Right of his Radical and Socialist phalanx, and can play off one extreme against the other; but he cannot exactly reverse the social reforms. He must now impose economy decrees, new indirect taxes, higher railway fares (to reduce the subsidy from the State Budget), and measures to secure payment of direct taxes and to prevent speculation.

Two questions remain: At what level, no gold content being now set to it, is the franc likely to settle down? And, secondly, to what extent is the financial redressment in France likely to provoke disturbances in domestic or foreign politics? As to the first, it is to be expected that, as there is no exchange control, the British and American authorities, as much in their own interest as in that of France, will keep movements in the franc exchange as regular as possible. And as there is not likely now to be a persistent capital flight, the rate being free to go to lower levels and most of the disposable liquid capital being outside France already, it is scarcely likely that the franc will fall in value below 150 to the £1, or rise above 125. To this extent, the redressment may follow the lines it took in 1926-27, when it fell to a low point of 190 and then steadily recovered, regularly, month by month, to 124.

As to the second question, M. BONNET has declared that neither France's defences, nor the working-class people's standards of living, must be compromised. He has obtained the right to draw up his economic decrees and rule by them. And, despite fears to the contrary, the French people and Parties have seen two sudden devaluations inside nine months without going into a panic. In the light of these events, we think that France may now be in sight of a healthier economic and financial redressment than she has been able to envisage at any time in the last six years. All depends on the men she can find to carry the task through to completion. Those who have, at long last, begun it are an impressive team; and, for the sake of ourselves and Europe as much as of France, we wish them well.

London's Capital Market

THIS week the long and gradual decline of 3½ per cent. War Loan has reached 100; and the 2½ per cent. Old Consols, which were 82¼ at their lowest last year and 84⅜ at the beginning of this, have now reached 74⅝. This marking-down process in the gilt-edged market has lasted for nine months; and it has raised the yield on medium- and long-term Government paper from just under 3 per cent. at the best to 3½ per cent. to-day. While the latter rate is still very low compared with the familiar post-war yield of 5 per cent. and more, the dullness in the gilt-edged market which began last year as an isolated phenomenon has now been communicated to the industrial debenture and equity market. Re-armament finance by borrowing, the gold scare, and the National Defence Contribution during the last three months have had an unsettling influence on the long-term capital market; and uncertainty has spread as the economists have canvassed the possibilities of a recession in business next year.

As we pointed out in the corresponding article at the end of the first quarter of the current year (April 3rd, page 5), the London long-term market is in an anomalous state. New issues of capital on foreign account can only be made after such close scrutiny by a special committee as to amount to an embargo on foreign lending. Home municipalities and public boards have to "queue up" at the Bank of England if they want new capital. Only domestic industrial borrowers of new capital can raise it as and when they choose. In the first six months of this year the Government have returned to the market with an issue of £100 millions, home corporations and public boards have only borrowed about a half of what they issued in the first half of 1936, but the other domestic borrowers of new long-term capital have carried their quota to a new "high," unsurpassed since 1929. Even so, if we exclude British Government borrowing, the total of new borrowings by public offer is fully 20 per cent. less than it was in the first half of 1936, while new issues by all methods, again exclusive of Government borrowing, are about equal, though this screens a fall in domestic borrowing and an increase in borrowing for the Empire.

The Government have not borrowed as much as the recent £100 millions of 2½ per cent. Defence Loan at 99½ in any first half-year since 1932; the extra £6½ millions shown in Table II below represents the outstanding balance of United Kingdom 2¾ per cent. Land Stock, permission to deal in which was granted during the last six months. Among home corporations and public boards appears the L.C.C. issue on June 26th of £10 millions 3½ per cent. Consolidated Stock at 100½; and the only other significant issues in this category during the three months since our last article on this subject appeared have been those of the Leeds Corporation (£4 millions 3½ per cent. at 101) and West Riding C.C. (£1 million 3½ per cent. at 100½).

New borrowing for the Empire included, during the quarter now ended, £1 million of 4½ per cent. debentures for the Steel Corporation of Bengal; £2 millions of 4 per cent. debentures for Sydney Metropolitan Water; and £1·1 millions for Lake George Gold Mines, £3 millions for West Rand Investment Trust, and £2·9 millions for N'changa Copper, all in ordinary shares and all by Stock Exchange introduction. There was no net new borrowing for foreign concerns. Thus, the British Government, a few large domestic and Imperial corporations or public utilities, and one or two large-scale industrial concerns make up virtually the total of £141.8 millions of new borrowing by direct public offer in the quarter just ended, or £173.7 millions including that raised by "permission to deal."

The process of conversion to lower rates of interest is still going on, but has greatly slowed down in the first half of 1937, as Table III shows. Of the £43·7 millions of capital issues purely for conversion purposes, £21·3 millions is accounted for by the Rhodesian Railways conversion of their 4½ per cent. debenture stock last February.

A table on page 50 shows the new borrowing by industrial categories, from which it appears that gold mines, breweries, investment trusts, iron, coal and steel

Total	120·3	123·3	155·1

companies, shipping concerns, and electric light and power undertakings accounted for increased borrowing compared with the first half of last year. "Manufacturing and miscellaneous," which took two-sevenths of all the new capital in the first half of 1936, took only one-ninth in the half-year just ended, and only a seventh if we exclude all the British Government's new borrowing. Thus, the new borrowing is tending to become less widespread over all industry, more institutional, more confined to a few basic industries or services. Some may see in this another sign that recovery of profitability is slowing down in the secondary industries and those dependent on the basic industries and services.

It is interesting to note in Table IV that the new issue boom in preference shares seems to have died out. In the total of £59·7 millions of new capital (calculated on our "old basis") raised for companies in the last half-year by prospectus, the proportions falling to debentures, preference and ordinary shares remain roughly what they were in the first half of last year, when the ordinary share made a remarkable re-entry into the lists. Again, the great bulk of new company issues is in ordinary shares. If we take the calculation on the "new basis" as in Table V, the amount of new company issues in preference shares has fallen absolutely and proportionately, while the ordinary share's come-back is even more striking. This may indicate a growing awareness of investment risks on the part of company-owners and promoters; it may also argue an unwillingness of investors to invest to-day without a bigger share of the issuing concern's equity; but a feature of our figures in recent months has also been the number of issues of new capital as bonus ordinary shares to existing shareholders. It is at any rate clear that British industry's equity cup is filling up.

It is impossible to deduce from our figures any great signs of encouragement for British business prospects. The London capital market has been dull in the first half of 1937, and most dull in the second quarter. The range of industrial newcomers has dwindled to a few big corporations, concerns, or services; and public endeavour has already largely usurped the sphere of private business men, despite the authorities' measures to restrict foreign lending and corporation issues.

Germany's Mineral Resources

Herr Hitler, in his address of September 9, 1936, declared that in four years Germany would be independent of foreign countries for all materials she could produce at home. How far this programme is realisable depends, very largely, on the extent of her mineral resources. This article accordingly reviews Germany's mineral and metal resources.

Under post-war territorial re-arrangements, Germany lost to Poland three-fifths of her Silesian lead and zinc deposits and four-fifths of her Silesian coal reserves; she ceded to France the potash mines of Alsace and the iron ores of Lorraine. Of the twenty minerals listed by the League of Nations as essential raw materials, Germany now produces only seven in any appreciable quantity from domestic sources. Her share in the world's output of these materials is shown below:—

GERMANY'S SHARE OF WORLD PRODUCTION

	1932–34 Per cent.	1935 Per cent.
Coal	20·30	22·13
Iron ore	2·86	4·31
Copper ore (metal content)	2·74	1·85
Lead ore (metal content)	4·38	4·34
Zinc ore (metal content)	8·63	9·00
Graphite	23·40	16·72
Potash salts (K_2O content)	61·79	65·46

Ever since 1933, Germany has been vigorously mobilising her mining and metallurgical industries. She has fostered high-cost mineral enterprises by subsidies, developed new mines, encouraged the extraction of low-grade domestic ores, enlarged her smelting facilities and carried out research into new methods of ore dressing and smelting.

The ultimate basis of Germany's activity is her vast coal resources. On an annual output of 150 million tons of coal and 150 million tons of lignite, her estimated coal reserves would last 500 years and her lignite reserves 400 years. But her production of crude petroleum and its related fuels falls far short of her domestic needs. The output capacity of all her coal-oil plants, completed and under construction, totals only 940,000 tons, and her production of synthetic petroleum will shortly reach one million metric tons. But her imports of mineral oils continue to rise:—

	(Metric tons)
1934	2,811,492
1935	3,461,658
1936	3,841,094

Another source of weakness, in Germany's present position, is her meagre supplies of iron-ore. Her probable reserves are about 721 million tons, while her proven reserves have been put at 346 million metric tons, with an average iron content of 34 per cent. Her *per capita* consumption of the metal—based on the weight of steel products concerned—has increased from 19.19 kg. in 1929 to 24.33 kg. in 1935, thanks to the rising output of armament, machinery and rolling stock industries. The shortage of iron ore supplies has lately become serious. Other countries are able to pay cash for their purchases, but Germany has to arrange complicated and cumbersome barter transactions. Her imports of Swedish ores declined from 666,649 tons last December to 549,777 tons in February rising again to 742,898 tons in March and 808,483 tons in April, while shipments from France in the latter months were 419,463 tons and 560,240 tons respectively. Imports from Spanish Morocco have greatly increased.

Nevertheless shortage is holding back her armament programme, and her plans for the construction of the necessary machinery for producing synthetic rubber, artificial silk and plastics under the four-year plan. Partly for this reason Germany is using ever larger amounts of scrap in her steel production. Last year her consumption of steel scrap totalled 9,400,000 tons. A recent order of the Board of Control for Scrap Iron prohibits any increase in the price of scrap suitable for use in the Siemens-Martin electric and blast furnaces of Western Germany. The Eastern German market for scrap is virtually monopolised by the buying cartel of the Steel Industry in that region, and at the same time imports of scrap from Belgium and the Netherlands have increased considerably.

A third category of resources in which Germany is notably deficient is ferro-alloy minerals. She possesses only trifling deposits of high grade manganese ores though she has large reserves of manganiferous iron ores in Siegerland and of ferroginous-manganese ores in the Taunus area. In 1934, out of the 584,000 tons of manganese ores used in the production of 16 million tons of steel, some 359,000 tons came from domestic sources and 225,000 tons were imported. In 1935 her imports totalled 394,256 tons, but in 1936 they fell to only 229,634 tons, as a result of currency and other difficulties. Her imports of other ferro-alloy materials have greatly increased in recent years. She purchased 47,704 tons of chromite and 3,776 tons of wolfram ore in 1933, but in 1936 the corresponding figures were 123,375 tons and 8,726 tons. Imports of nickel increased from 1,968 tons in 1933 to 5,929 tons in 1935 and 3,392 tons in 1936, and those of antimony ore trebled between 1933 and 1936.

Finally, though it is doubtful whether, in any circumstances, Germany's domestic ores could satisfy more than a quarter of her requirements of copper or half of her requirements of lead, she is fast becoming self-sufficient in zinc and aluminium, and she leads the world in the production of metallic magnesium. The Vereinigte Aluminumwerke have evolved special processes for the production of aluminium from clay, in case Germany's bauxite imports are cut off. Furthermore, the existing aluminium plants could be used, without drastic alterations, for the production of magnesium from domestic carnallite and dolomite.

The extent of Germany's mineral and metal production in recent years is shown below:—

GERMANY'S MINERAL AND METAL PRODUCTION

	Unit	1929	1932	1935
Iron ore	(000 metric tons)	6,374	1,340	6,044
Pig iron	(000 metric tons)	13,239	3,932	12,846
Steel	(000 metric tons)	16,023	5,624	16,144
Copper ore (metal content)	(metric tons)	28,983	30,741	29,625
Zinc ore (metal content)	(metric tons)	142,467	75,275	140,922
Lead ore (metal content)	(metric tons)	60,464	50,950	60,659
Aluminium	(metric tons)	33,000	19,000	69,661
Potash (crude)	(000 metric tons)	13,316	6,416	11,673
Potash (K_2O content)	(000 metric tons)	1,788	871	1,597
Graphite	(metric tons)	21,349	20,808	21,663
Pyrites (sulphur content)	(metric tons)	149,983	77,259	108,543

In autarkic countries, the chemical industries are called upon to bear a double burden. They must share largely in the industrial effort for preparedness against war, and they must undertake the extensive production of domestic substitutes to replace foreign goods. The I. G. Farbenindustrie plays a major rôle in the execution of the four-year plan in Germany. This chemical combine employed 170,900 workers last year, an increase of 22,600 compared with 1935. The parent company alone employs 110,000 persons, against 63,600 four years ago, and its factories are valued at Rm. 432 millions. Germany's consumption of electric power for the manufacture of electrolytic and electrothermal products in 1934 was 5,000 million kilowatt hours, equivalent to nearly 25 per cent. of the total world consumption for that purpose. The value of the products manufactured totalled Rm. 400 millions.

Under almost every heading, a remarkable increase is shown since Germany began her re-armament. Her imports remain, in most cases, at a high level, but for the reasons discussed in this article, they have not uniformly increased in 1936. The following figures for a somewhat detailed list of products show that in some cases, imports were actually lower in 1936 than in 1935.

IMPORTS OF METALS, ORES, ETC., INTO GERMANY

(Metric tons)

Items	1935	1936
Iron ore	14,061,077	18,496,340
Pyrites	1,018,565	1,042,764
Manganese ore	394,256	229,634
Tungsten ore	7,881	8,726
Nickel	6,079	3,392
Nickel ore	29,013	17,651
Chrome ore	95,440	123,375
Antimony	2,109	2,105
Copper	153,365	127,549
Copper ore	400,538	482,471
Copper, brass and bronze scrap	62,666	67,567
Lead (pig and scrap)	54,464	68,895
Lead ore	83,982	99,297
Spelter	75,948	72,769
Zinc ore	117,240	120,642
Zinc Sheets	7,274	5,129
Tin (metal, alloys and scrap)	11,824	9,176
Tinned plates	9,229	5,817
Tin ore	1,232	1,563
Bauxite	505,485	981,161
Aluminium, crude	15,247	4,258
Aluminium scrap	2,821	1,910
Mercury and alloys	869	688
Platinum metals (kg.)	2,643·2	16,356·8
Graphite	12,756	12,893

In a succeeding article we propose to discuss some of the measures which are being taken to stimulate increased mineral and metal production in Germany.

Notes of the Week

Politics in the Doldrums.—No one expected that Labour would wrest from the Government the seats which have been contested in by-elections during the past few weeks. Few can have expected, however—least of all the leaders of Labour themselves—that poll after poll would show so marked a decline in the Opposition vote. The climax came on Tuesday, when the Labour vote at Ilford fell from 25,241 (in 1935) to 16,214. It is true that the Conservative vote was 17,675 less than two years ago, but the Ilford seat was won with a big majority, and the Government can easily afford the maximum of apathy among its supporters so long as the Labour party can offer no effective challenge. Labour adherents have been uneasy for a long time. Mr Shinwell has advocated greater audacity in the House, and his scheme for organising Labour members in expert committees has been blessed by his leaders. Mr Morrison has been sent out to evangelise the constituencies, but he takes with him no more than the gospel which has been so singularly ineffective in recent encounters at the hustings. The energy he has been able to inspire into London municipal Labour politics, he is now asked to infuse throughout the country.

* * *

The Labour Party, composed of trade unions, constituency parties, and Socialist societies, has been dominated at its conferences by the block vote of the unions, which amounts to 1,900,000 against the 419,000 and 45,000 of the other two groups. Elections to the Executive have been decided by the whole vote of the conference, and the constituency parties have complained that their representatives have not necessarily been their choice at all. Recent self-searchings among the leaders have given new heed to these complaints, and the executive intend to propose that in future their members should be elected separately by the various sections of the conference—the unions, the Socialist societies, the local parties and the women. The trade union grip on the party will thus be lessened, though it will still remain by far the most powerful force in the councils of Labour. Similar introspection has led to proposals for amending the constitutions of the mining and transport unions but it would be folly to attribute the electoral failures of Labour and the urgent restlessness of its extremer members to defects in organisation. The close result at St. Ives, where Mr Isaac Foot, the Liberal candidate, was only beaten by 210 votes, in a 25,000 poll, shows that another opposition programme than that of Labour can command considerable electoral support. Indeed, the Liberal vote has been the only one that has been maintained in recent by-elections. Something more than the hunting of Marxist heresy is urgently needed if the ground lost by Labour in 1931 is ever to be regained. There is indeed general apathy in our politics. The unprovocative policies of Earl Baldwin and the danger of war have conspired with the technicalities of modern programmes and the lack of leadership everywhere to dishearten electors.

* * *

The American Strikes.—There has been a sudden change in the outlook for the American steel strike, which has now been in progress for a month. A week ago it had to be recorded that "both the local Governors and the President have sided with labour." But at the end of the week public opinion, sick of violence and blaming most of it on the Committee for Industrial Organisation, made itself felt in decisive fashion. The Governors of Ohio and Pennsylvania were forced to reverse their positions. The State troops, instead of being used to keep the mills closed, were used to protect those workers who wished to resume their employment. All but one of the affected steel mills re-opened. The

strikers' position was not improved by an outrage at Johnstown, Pennsylvania, where the water supply for the huge Cambria works was dynamited. The President has declared " a plague on both your houses," which is a retraction of his previous guarded support for the strikers. In short, the C.I.O., for the first time in its career, is within measurable distance of resounding defeat. As a rebuke to violence this will be welcome. But in the longer run it will hardly prove to have been desirable to encourage by victory precisely the most obdurate and reactionary section of the employers.

* * *

Congress at Berlin.—Not infrequently international conferences have spoken with the tongues of angels, while those responsible for national policies have seemed in league with the powers of darkness to upset plans for political and economic peace. Yet none of the disarmament and economic conferences of the past decade has come together with such sad irony as the congress in Berlin of the International Chamber of Commerce. The object of their meetings is to examine the prospects of freer commerce and less restricted economic relations among nations. The memoranda which have been prepared for the Congress (two of which were discussed in last week's issue of *The Economist* on pages 727 and 736) are uniformly in agreement about the demerits and dangers of autarky. This week the visiting speakers have united on various topics to condemn policies which not only curtail the international movement of goods and capital, but also limit the purchasing-power of the offending nations themselves. The attempt to erect closed economies has been cried down in speeches and documents. But the scene of the Congress is Berlin where, in General Goering's words, " self-sufficiency is looked upon as a national necessity, for independence, honour and prestige." Dr Schacht wanted freer trade—but in a one-way street leading towards Germany. The voices of the critics are raised in the very place where autarky is the ark of the covenant itself, and where, in Dr Schacht's phrase, the " gifts of God " are being conjured up at great cost with colossal mechanical and chemical ingenuity only because divine providence and human rapacity have reserved them for non-German nations. The Four-Year Plan is sign and symbol of the facts which the optimists at Berlin must face. General Goering and Dr Schacht have been frank. To them there are higher considerations than possible systems of world economic freedom. Only if the International Chamber were able to convince their hosts that German interests, too, would be best served by the reconstruction of international trade and the liberation of economic paths, could freer trade become general. But that should stimulate other nations to show its advantages in as wide a field as possible.

* * *

M. Van Zeeland's Hopes.—While the International Chamber of Commerce was measuring the gap between the experts' aspirations and the facts of German policy at Berlin, M. Van Zeeland, the economist-Prime Minister of Belgium, whose desire for a saner system in world economic affairs is well known, was deriving hope and encouragement from his conversations in the United States. In New York on Tuesday he stated his objective and the obstacles which would have to be overcome before they could be realised. He pointed out that the threat of imminent war, so far from being a reason for despair, was a stimulus to act swiftly for economic disarmament. This was our last chance. Trade had revived since the depression years, but its revival had been largely national, and world commerce still languished. Industry had recovered, but much of the recovery had been due to the artificial and dangerous stimulation of rearmament. Quotas and indirect protectionism in all its forms still choked the channels of world business. Countries had shared by no means equally in economic recovery, and over all brooded the menacing instability of international politics. Yet the prospect was not so gloomy as might be concluded, because in the United States he had found two things: a sincere desire to free world trade and a determination to assist in the halting of the armaments race to death. With the encouragement of these ambitions and the comforting words and advice of President Roosevelt, M. Van Zeeland was ready to return to Europe to try again to turn the tide of disaster. Recent correspondence in *The Times* between Sir Arthur Salter and Mr Amery has shown the pitfalls which lie before any attempt to make American co-operation in world economic affairs more effective; but it has shown, too, how important it is for the United States, a creditor choked with gold, no less than for Europe, that such co-operation should be achieved. M. Van Zeeland's hopes add new spirit to what might have become a lost cause. We must still overcome the growth of autarky in all European countries; the intransigence of Imperial Preference; and the threat of war. M. Van Zeeland has played his part well in the States, and his hosts have shown a generous willingness to help. The next step lies with the British Government and the Dominions. Theirs will be in large measure the responsibility of taking or losing what may prove to be the last chance of order, stability and peace in world economic affairs.

* * *

Progress in the Air.—The Air Force pageant at Hendon last Saturday was the most impressive of these annual events, mainly because of the fly-past of 250 machines of all kinds. Their Majesties, and the vast watching crowds, saw the first aerial review of such a kind in this country. The heavy bombers in the middle, light bombers and fighters on either side of them, and scouts and single-seater fighters on each flank took five minutes to fly past; and the scene recalled the arrival of the air armada in Mr H. G. Wells' " The Shape of Things to Come." No one could have failed to imagine what dire shapes might come from such an armada in a war; and the exhibition of aerial bombing of a port conveyed its moral at the end of the day. There were happily no accidents, despite the breath-taking contortions of machines as fast as projectiles at very low altitudes; and the standards of constructional and mechanical efficiency, as well as of the pilots' skill, were evidently of the highest. Further testimony of this was given on Wednesday when an R.A.F. machine regained the altitude record by climbing to a height of 10 miles. On Monday and Tuesday the British aircraft manufacturers held their exhibition at Hatfield aerodrome, where the latest commercial and Service types were on view. Here, more than at Hendon last Saturday, the extraordinarily rapid progress in aircraft design and performance during the last three or four years was manifest. Streamlining, lay-out of fuselages and control cabins, variable-pitch propellers, adjustable wing-flaps for slow landings and variable gliding-angles, were the chief features.

* * *

Progress in aircraft, engines, and control-systems is making greater demands on the pilot's skill; and the flying of a large modern commercial machine or bomber in all weathers is now an intensely exacting and complicated task. Therewith, the importance of the length and thoroughness of training, in all conditions, has increased greatly. The days of flying by sense, and in fair weather only, have gone by. The rapid developments of instruments and apparatus now render equally extensive improvements in the ground equipment of our aerodromes—still very deficient—urgently necessary, for the Air Force as well as for commercial airlines. Visitors to Hendon could not be expected to realise that Air Force pilots do not obtain as much experience in long-distance flying, in continuous contact with ground stations, as the commercial pilots, simply owing to lack of ground equipment in this country. In this connection, the inauguration of the air mail service to South Africa by the Imperial Airways " C " class of flying boats at Southampton on Tuesday has an other than commercial significance; though the carriage of mails at the ordinary 1½d. rate by these machines is a boon in itself. By the time that the new Empire air mail services are in regular operation, we shall possess a corps of commercial pilots in this country as experienced and as numerous as that which post-war Germany carefully and laboriously built up for herself.

* * *

Fascist Marchers.—It was clearly expedient that the proposed Fascist march through the Jewish quarters of East London on Sunday, July 4th, should be prohibited. The choice of route was provocative and breaches of the peace would have been inevitable. It is equally clear, however, that to forbid the Fascists to march anywhere in London—as certain anti-Fascists demanded—would be an unwarrantable interference with freedom of political expression; and we are glad that Sir Samuel Hoare this week refused to countenance such a demand. It may be that the alternative route for next Sunday's march through North London is also through dangerous territory, and that clashes may possibly ensue between the marchers and resentful working people, though it is unlikely unless there is deliberate incitement from anti-Fascist elements. Nevertheless, to counter Fascist provocation by methods of repression would be to reduce the defence of democratic liberties to absurdity. The Public Order Act, under which the ban on the East End march was proclaimed, is potentially a dangerous measure. It should be used only sparingly in emergencies, and always impartially. To use it as an engine of anti-Fascist sentiment and agitation would be contrary to the principles of British law and to the interests of the very democratic structure which Sir Oswald Mosley and his cohorts wish to supersede. The existence of extremist parties which base their policies on undemocratic tenets is a grave embarrassment in a democratic state. In the last resort the peace must be preserved against their methods and activities. Sir Oswald may march, but he must not presume on the freedom which the law permits him. The police must watch both his progress through St. Pancras on Sunday and any interference with it with a wary though tolerant eye. The essence of freedom is equality of treatment.

* * *

The Marriage Bill.—Mr A. P. Herbert, M.P., author of " Holy Deadlock," has tilted against giants all his life. He has never spared the Mother of Parliaments herself in his forays for liberty; and in the august rôle of senior burgess for the University of Oxford he has won a signal triumph in the very House against which he has directed so many assaults. His Marriage Bill, which aims at securing the amendment of the divorce laws according to the recommendations of a Royal Commission a quarter of a century ago, survived the manifold vicissitudes of a Private Member's Bill, and with no more than a belated time-table concession from the Government, was duly passed and handed on to the Lords. It extends the grounds of divorce to include desertion, cruelty and insanity; and Mr Herbert and his supporters believe that its effect will be to alleviate the misery of people condemned through no fault of their own to irremediably unhappy marriages, and to reduce the wretched shifts and contrivances which the present law involves. This week, on its second reading in the Upper House, Lord Fitzalan attacked the Bill because it ignored the sacramental character of marriage. The Archbishop of Canterbury stated that divorce was incompatible with Christian principles, and refused to vote for the Bill, though he conceded to it the virtue of honesty. Lord Atkin described a number of cases in the courts and showed the unhappiness which comes of ruined but indeterminate marriages. Like Lord Reading, he disliked the proposal in the Bill to make divorce impossible until five years after marriage. The bishops were divided: St. Albans followed Canterbury in refusing to support the Bill; but York, tentatively, and Durham, strongly, commended it. " The marriage union is made for man, not man for the marriage union," said Dr Henson; and this view was supported by the Bishop of Birmingham. Dr Barnes welcomed the Bill because it was in accordance with the Christian spirit. He denied that the English Church had ever opposed divorce or remarriage on reasonable grounds in the past; and he maintained that a more humane and logical law would raise rather than lower the institution and status of marriage. So far the discussion had been largely of ethical and religious implications. Lord Dawson added the experience of medicine to the accumulated testimony of the law and the church. To those who opposed the Bill he declared that the only logical alternative was to abolish divorce altogether. Given divorce, then the Bill must be accepted, because it was humane, reasonable, consistent and in accord with the present age. The Bill was read in the Lords a second time; and although the debates in both Houses have shown that a major source of difficulty is the still existing confusion between the laws of the State and the laws of the Church, Mr Herbert is soon likely to see his crusade at least partially successful with the passage of the measure into law.

* * *

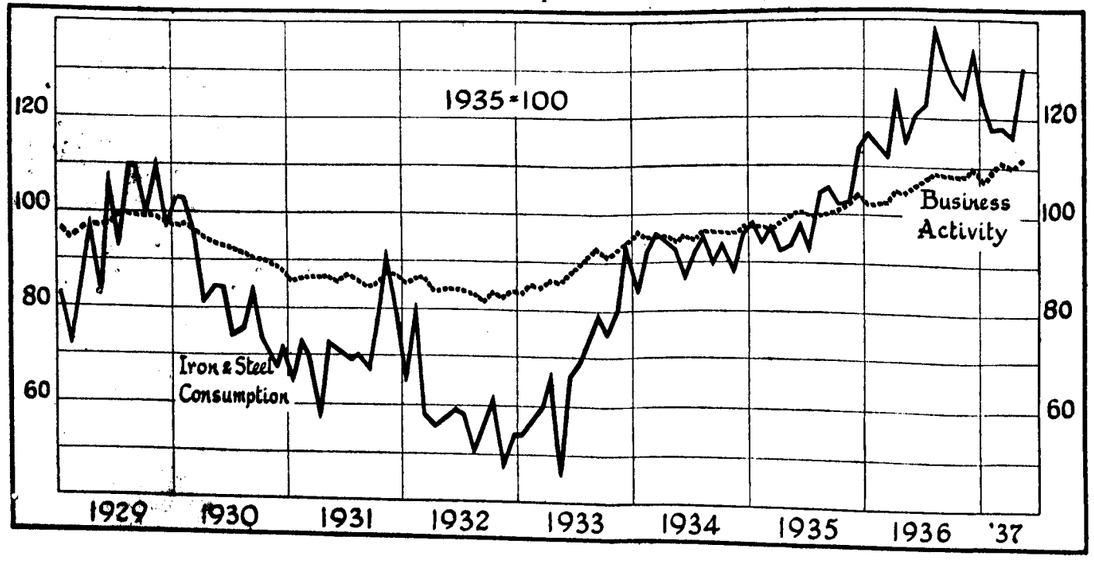
King Carol's Visit to Poland.—The international significance of the visit to Poland which King Carol of Rumania has been paying this last week-end has been somewhat obscured by an acute but merely incidental controversy over the resting-place of the late Marshal Pilsudsky's coffin. The real issue is the choice which Rumania has to make between two policies which are in practice mutually exclusive. At present Rumania's foreign policy is governed by the statute of the Little Entente, which binds the three states concerned to collective action in the event of an attack by Hungary upon any one of them, and also obliges them, in a general way, to keep their respective foreign policies in line with one another. It has always been a moot point whether the parties to this agreement would be prepared to take up arms in one another's support if the aggressor were to be, not Hungary but some Great Power: e.g. if Germany or Poland were to attack Czechoslovakia, or Italy to attack Jugoslavia, or Russia to attack Rumania. Obviously in such an event the solidarity of the Little Entente would be subjected to a serious strain. It is one thing, however, to be uncertain how far one is going to carry a policy to which one is definitely committed within certain limits. It is another thing to embark on a second policy which may be intrinsically contrary to the first. And that is what Rumania might possibly find herself committed to if she were to go all the way in falling in with the policy of Poland. The Polish Government's idea seems to be to establish a zone of insulation between Germany and Russia which would extend without a break all the way from the Baltic to the Black Sea and would thus make it physically impossible for the two Powers to come to blows with one another—at any rate on land. On the Polish sector of the intervening zone, this policy might possibly be made to work without complications, since Poland

herself is the only country situated in this part of the perilous no-man's land. But if Rumania were to join hands with Poland in carrying out this policy of insulation, the effect, on the Rumanian sector, would be to insulate Russia not only from Germany but from Czechoslovakia as well. And President Benes would then find himself in the position of a man boxed up inside a lion's den, *tête-à-tête* with the lion.

* * *

The Agreement between Iraq and Iran.—On Tuesday an agreement was initialled at Baghdad in settlement of the frontier dispute between Iraq and Iran, and it is pleasant to be able to record at least one piece of international good news in a chronicle that reads for the most part like the tidings brought by Job's messengers. The dispute is of old standing, for Iraq has inherited it from the Ottoman Empire and the history of it extends over at least a hundred years. The essence of it has been that Iraq, as the heir of Turkey, has claimed and exercised jurisdiction over the whole breadth (up to the Iranian shore) of the Shatt-el-Arab, which is the common estuary of the Tigris and Euphrates. The Iranian Government has protested that the international frontier between the two states ought to be deemed to run down the median line (*Jalweg*) of the waterway; and the strong point in the Iranian case is that this is the usual international practice. On the other hand, the Iraqi Government has submitted that theirs is a special case, since the Shatt constitutes Iraq's sole channel of communication with the sea, whereas Iran has a long sea-coast on the Persian Gulf, which makes the Shatt of less vital importance to Iran than it possesses for Iraq. It is true that, in selecting a terminal port for their trans-Iranian railway, the Iranian Government have not chosen Muhammarah, on the Shatt, but Khar Musa on the open coast of the Gulf. It will be seen that either party has plenty to say for itself, and, in fact, the controversy has dragged on in spite of the pre-war efforts of the British and Russian Governments and the post-war efforts of the League of Nations to find a solution. It is all the more satisfactory that the two disputants should now have arrived at a direct settlement between themselves; and this good news has a two-fold importance. It not only eliminates a perpetual cause of friction between two neighbours; it also clears the way for the signature of a Middle Eastern Pact, which has long been in view, between Iraq, Iran, Afghanistan and Turkey. This new pact will correspond in the Middle East to the Balkan Pact and the Little Entente Statute in South-Eastern Europe—Turkey supplying the link between the Middle Eastern Pact and the Balkan Pact that is established between the Balkan Entente and the Little Entente by the common membership of Rumania and Jugoslavia.

* * *



Steel in Depression and Recovery.—It is a matter of common knowledge that the capital and durable consumers' goods industries are subject to more violent fluctuations in activity than the trades producing goods for immediate consumption. During a period of declining business activity, renewals of plant and machinery are deferred and there is no incentive to expenditure on extensions to existing productive capacity. On the other hand, a revival of business activity is usually accompanied by a marked increase in expenditure on capital equipment, the incentive being provided by rising profits and cheap money. As iron and steel is the basis of the capital equipment industries, the demand for its products is subject to wide fluctuations during periods of depression and recovery. This tendency is illustrated by the chart below, which is based on our indices of general business activity and iron and steel consumption, published in the monthly Trade Supplement to *The Economist*. In the absence of data, no allowance could be made in our index of iron and steel consumption for changes in stocks. Nevertheless, the chart shows that the demand for iron and steel fell more than general business activity during 1930-32 and has since experienced a remarkable recovery. The downward trend of the index since the autumn of last year is probably due to the using up of stocks as a result of the scarcity of new supplies and, consequently, does not necessarily indicate an absolute decline in iron and steel consumption.

* * *

Industrial News.—Intense activity in the iron and steel and metal-using industries remains the feature of the latest industrial news. In view of the shortage of iron and steel materials the Government's failure to remove the obstacles in the way of imports is causing much irritation. For example, the import duty on sheets and plates exceeding in value £16 per ton is £5 6s. 8d. As plates and sheets are the raw materials of many trades, it is not surprising that a number of consumers, hampered by the shortage of supplies, consider the maintenance of these duties oppressive and iniquitous. The plight of Sheffield and Birmingham manufacturers is becoming serious; and if the situation is aggravated, the prices of many more finished products

BUSINESS ACTIVITY AND IRON AND STEEL CONSUMPTION

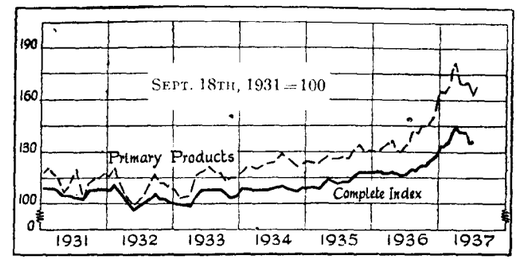
Based on *The Economist's* indices published in the Trade Supplement

than motor-cars will rise sharply in the immediate future. The effects of this development on civil industry will be grave and widespread. The answer of Mr Oliver Stanley in the House of Commons last Tuesday, when he replied to a plea for the suspension of the quota and duty by Colonel Baldwin-Webb that he was not in a position to make a statement on the matter, was thoroughly unsatisfactory. Demand for coal remains at a high level, despite the seasonal decline in household requirements. Current production is about 8 per cent. above last year's level. South Wales, in particular, is experiencing a marked improvement and, as our Cardiff correspondent points out on page 52 the collieries have been compelled to apply for further supplementary allocations. New business in cotton textiles remains limited, but in view of the substantial volume of orders on hand, production continues undiminished. Reports from other trades are generally encouraging.

* * *

Rising Retail Trade.—The increase in employment and wages and in industrial profits is reflected in a steady expansion of the value of retail trade. The statistics for May, published in this week's *Board of Trade Journal*, show that the value of retail sales in that month exceeded that of the corresponding month last year by no less than 13.2 per cent. To some extent the sharp rise in May was due to increased spending during the Coronation festivities and to the concentration of food purchases on a smaller number of selling days than a year ago. The improvement last month was most marked in the North-East and least in Central and West End London, where trade suffered from the bus strike. Sales in the first four months of the current retail year (February-May) showed an increase of 9.2 per cent. over those during the corresponding period a year ago. So far there is no evidence of hesitancy in retail trade. Stocks are showing an upward trend, but the increase over the year, at 4.1 per cent. (at cost), was smaller than the expansion of sales. While retail turnover is now entering a period of seasonal decline, present indications suggest that sales are likely to be maintained well above last year's level during the next few months.

* * *



Wholesale Prices Rally.—There was a slight recovery in wholesale prices during the past fortnight after the previous sharp decline. Wheat, cotton and metals were all higher. *The Economist's* complete British index number is practically unchanged, but primary products have risen by 1.4 per cent. in England and 1.9 per cent. in the United States. The Irving Fisher complete American index number is also one per cent. higher. In France wholesale prices have risen by 1.3 per cent.

† Monthly averages.

We publish below a chart showing the course of *The Economist's* complete index of British wholesale prices, as well as of our index of the prices of primary products in this country from 1931 onwards:—

As a result of the past fortnight's recovery primary products are now higher than they were at the New Year.

The Economist INDEX
(1927 = 100)

	Sept. 18, 1931	June 2, 1937	June 14, 1937	June 30, 1937
Cereals and meat	64·5	93·6	92·0	91·2
Other foods	62·2	68·6	67·7	67·5
Textiles	43·7	73·2	70·5	70·7
Minerals	67·4	110·0	104·9	106·5
Miscellaneous	65·8	86·7	86·3	86·1
Complete index	60·4	86·2	84·2	84·3
1913 = 100	83·1	118·5	115·8	116·0
1924 = 100	52·2	74·5	72·7	72·8

In the cereals and meat group a general rise in wheat, flour, maize and meat was off-set by declines in oats and barley and a sharp seasonal drop in potatoes. Tea and coco-oil are cheaper than a fortnight ago, but there has been a slight recovery in American cotton, English wool and jute. Metal prices have rallied, but leather is cheaper and rubber prices continue to sag.

* * *

The Institute of Actuaries.—Outside the offices of insurance companies, and societies and of the Government Actuary's Department, actuaries used to be a race of men apart, little known by their fellows. But those days are passing. To an extent which is still comparatively small but is steadily increasing actuaries are engaged in other financial businesses and in industry. Even further back in the past are the days when the chief officers of insurance companies and societies had personal knowledge of so many of the comparatively limited number of members of the Institute of Actuaries that they could, from personal knowledge, find candi-

* Includes £13,000 the proceeds of which were not carried to the Exchequer within the period of the account.

† Authority is being sought in the Finance Bill to meet the amount of the Statutory Sinking Funds in 1937 by borrowing.

‡ Motor Vehicle Duties apportioned to Road Fund treated as Self-Balancing in 1936–37 now added to Expenditure figures for purpose of comparison.

dates to fill vacancies. Some years ago the Students' Society compiled and maintained a Register which recorded personal particulars of actuarial students and of qualified actuaries of less than ten years' standing, this being the portion of the Institute membership of chief interest to the Society. This organisation has been found useful and will be included in a new Actuaries' Appointments Board. The new Appointments Board of the Institute of Actuaries is of interest, as the constitution of the Board has been adopted by a professional body. The Board includes the President and the Vice-Presidents of the Institute. It is hoped that the Board will be of assistance to all who need the services of an actuary and particularly to those who, not being engaged in insurance, are likely to find greater difficulty than insurance officials in getting into touch with actuaries who may be eminently suitable for the appointment contemplated.

★ ★ ★

Census of Production: Clay and Building Materials.—Further preliminary reports of the Fifth Census of Production, 1935, have now been published. Details about the scope of the Census were given in *The Economist* of February 27th, page 463. Some of the new statistics giving for each trade the gross value of production, the net output (gross value less the costs of fuel, materials and work given out), the number of persons employed, and net output per employee, are reproduced in the following table:—

Trade		Gross Output	Net Output	Average No. of Persons Employed	Net Output per Employee
		Thous. £	Thous. £		£
Brick and fireclay	1930	21,697	15,343	75,635	203
	1934	25,662	18,095	84,466	214
	1935	27,666	19,722	91,198	216
China and earthenware	1930	13,895	9,027	67,693	133
	1934	13,472	8,829	65,492	135
	1935	14,079	9,288	67,775	137
Glass	1930	13,713	8,299	39,571	210
	1934	16,166	9,911	43,525	228
	1935	17,056	10,521	45,869	229
Cement	1930	8,202	4,727	10,989	430
	1934	7,872	4,592	10,136	453
	1935	9,676	5,805	10,389	559
Building materials	1930	14,293	7,711	30,628	252
	1934	12,121	6,363	26,588	239
	1935	15,045	8,197	30,561	268
Total	1930	71,800	45,101	224,516	201
	1934	75,293	47,790	230,207	208
	1935	83,522	53,533	245,792	218

As most of these trades are lowly capitalised, though in each technical methods vary, the net output per employee is low. Indeed, for china and earthenware it is quite the smallest for any large industry. Cement stands at the other extreme. This industry is highly cartellised and is submitted to continuous and drastic rationalisation, with the result that net output per employee rose to £453 in 1934 and £559 in 1935.

★ ★ ★

Co-operative Food Prices.—The delegates to the quarterly meeting of the Co-operative Wholesale Society at the end of this month will emphasise the economic effect of quotas, restrictions, and Government marketing schemes on the price of foodstuffs. The sales of the C.W.S. for the three months ended April 10th were £27,745,796, an increase of 10½ per cent. over the corresponding period of 1936. Had wholesale prices remained as they were last year this increase would have been very much smaller. According to the Society's index, wholesale food prices have advanced by 9¼ per cent. The turnover of grocery and provisions was £20,626,193, an increase of £2,101,471, but, in view of the rise in prices this substantial improvement must, in the opinion of the directors, be "read with reserve." Supplies from the Society's own factories were valued at £9,971,016, rather more than one-third of the total trade. Thus nearly two-thirds of the federation's business consists in merchandising the goods of other manufacturers. The effect of rising prices can be discerned in the following comparisons:—

	Percentage increase in value	Percentage increase (+) or decrease (−) in quantity
Flour	24½	−4½
Lard	8⅜	−6¼
Butter	1¼	−0⅜
Soap	6¼	−0½
Tea	21¾	+9⅜
Margarine	7¼	+0¾
Biscuits	17	+9⅛

The marked increase in the value of trade during the three months ended April 10th, compared with the same period of last year, thus conceals the fact that the volume of trade has been very little, if at all, greater.

★ ★ ★

While the grocery trade, valued at over £20,000,000, shows an advance of 11 per cent., compared with the corresponding three months of last year, drapery and furnishing have improved by only 2⅞ and 3⅝ per cent. respectively. Men's wear was responsible for a turnover of £888,773 and, for the first time, the London department had a larger turnover than the Manchester headquarters—a reflection of the continued progress of co-operation in the southern area. The sales of boots and shoes totalled £699,830, of which £513,624 were in the output of the Society's own seven boot works. This represented a production of 1,455,737 pairs of shoes. The exports, mainly to national co-operative organisations and to the British Dominions where the C.W.S. has established its own depots, amounted to £116,700, an increase of 61 per cent. The English C.W.S. contemplates the expenditure, this year, of £2,000,000 in buildings for productive works. Land and buildings have been purchased for productive developments in London, Manchester, Northampton, Darlington, Crewe, Derby and Southampton. In the latter port an imported meat department is to be installed. Evidence of the growing inclination towards political activity is shown by the directors' recommendation that donations should be made of £1,000 to the Co-operative Party, £500 to the Women's Co-operative Guild, £150 to the Men's Co-operative Guild and £100 to the National Council of Labour Colleges. To the fund raised by the National Council of Labour in connection with the Spanish conflict the C.W.S. has given 200 guineas, and goods to the value of £1,000 have been given to the similar fund raised by the International Co-operative Alliance.

TRADING ABROAD

The existence of restrictions in a given country may temporarily prohibit dealings in forward exchange, but up-to-date information on this and on all points bearing on Forward Exchange generally may be obtained through any branch of the Westminster Bank. For any who may be unfamiliar with the facility, a very brief outline entitled *Forward Exchange* is always available at its counters

A New Party in the Making

Washington, June 20.—Throughout his presidency Mr Roosevelt has been a liberal confronted by an unliberal Congress. The New Deal has been legislated by this Congress piecemeal, each measure winning support because of a particular and urgent need, and not until this year have the separate parts fallen into a recognisable whole. Now the pattern is simple and clear. The New Deal means centralised government, not centralisation for its own sake, but for four general objectives, the betterment of the living standards of the working population, the conservation of soil and power resources through national and regional planning, the maintenance of a balance between industry and agriculture, and the exercise of national control to combat the fluctuations of the business cycle. Most of the particular objectives could not be reached through the Supreme Court as it was ruling before the last election. Administrative machinery could not deal with these problems effectively since it was not designed for so large a task. So this year the President asked Congress to weaken the Supreme Court and strengthen the executive; and at the same time he proposed control over hours and wages and a division of the country into seven planning regions for purposes of flood control, soil conservation and power development.

The Supreme Court combated the demand for its reform by a series of liberal rulings, the most noteworthy of which validated the Wagner Labour Relations Act and the Social Security legislation. Justice Van Devanter resigned, giving the President further assurance of a liberal majority. At this stage the President was under the strongest political pressure to drop the Supreme Court fight, heal the breach in his own party, and be content with the triumphs already won. But he would not yield. He announced the continuance of the Court fight, and he assured Congress that he wanted action on all the legislation recommended, and wanted it this session.

This is a new Roosevelt; a fighter no longer obsessed with the problem of slipping single pieces of legislation through a conservative Congress. What he is shaping is a national programme, as fundamental as anything in American history. He appears to be preparing to wage a national campaign for it. He has ceased to be the leader of a two-winged Democratic Party, responsible for its unity and success. He is leader now of a school of political thought, which he will carry to the country at the earliest opportunity, and which may split the party. That opportunity comes next year, when the entire House of Representatives and a third of the Senate will be elected.

It now appears that this congressional mid-term election may be the first fought on real issues, instead of traditional party lines, since before the Civil War. The Democratic Party, of course, will still be nominally intact, and its machinery will be used to nominate those who support the now completed programme and to defeat those who are opposed to it. But it is a new party that is in the making, and by 1940 it may include the La Follette progressives, the Lewis labour millions, and be opposed by the united conservatives of the Democratic South and the industrial East. That, certainly, is the prospect opened by the single announcement that the President refused to drop his Court fight. If the breach in the Democratic party is not to be healed, a new party must take its place.

Democracy from Above

The cry against this programme is high-pitched. This is a "revolution in government." Mr Roosevelt is charged with seizing power not far removed from that of Hitler and Mussolini. General Hugh Johnson, still personally loyal to the President, writes charitably that it is all the work of Tom Corcoran and Ben Cohen, two of the leading brain-trusters, and they are doing it without the President knowing quite what is happening. Because Fascist Government is centralised, the Roosevelt programme must be Fascist. And it is in this key that next year's campaign will be fought.

An observer of these developments must recognise that there is a peculiar inversion in the American way of doing things. Revolutionary changes are not made on local political forums, resulting in the election of Congressmen imbued with the new doctrines, until they gather in Washington in such numbers that they can enact the changes into law. The process is reversed; the laws are enacted or proposed first, and finally they reach the local forums, for discussion and ultimate ratification or veto. Congress enacts the new idea, the country then experiences it and decides what it wants to do about it.

That was the process in the case of the National Recovery Administration. Congress—and the business community—concocted something the voters had never dreamed of. After a sad season of test, the N.R.A. was discredited, before even the Supreme Court mercifully vetoed it. That was the process with labour legislation. The nation did not turn union-minded; it was presented with a new doctrine of unionism and now is finding out what that doctrine entails. So, too, with social security. It was hurried through Congress, and the country still has to pass judgment on the way the social insurances are collected and financed. And this, certainly, is the chief virtue of the wages and hours bill; that Congress, if it passes the bill, will be doing little more than starting the education of the nation about both the principle and the method of government control of wages and hours.

In a country the size of the United States, this inversion of the older democratic process, however undesirable, is probably inevitable. That it leads to endless confusion goes without saying. Criticism of legislation does not count. Congress plunges ahead, enacting laws which every legislator must know will have to be rewritten, session after session. But in the long run it probably is the only way a country like the United States can change its governmental habits. And if the electorate can express itself next year on the new ideas, the process cannot be called unhealthy.

Government and Labour

New York, June 22. — When the Governor of Michigan decreed a banking holiday in February, 1933, in order to halt the disastrous withdrawals from banks, he set a style which was quickly followed by other governors; the banking crisis quickly marched to its climax. Now the United States is in the throes of another type of disturbing epidemic, this time of labour troubles, and the Governor of Pennsylvania on June 20th called out troops to maintain peace; the step was followed the next day by similar action by the Governor of Ohio. The President is reported agreeable to this move, and has himself appealed to the steel company executives, in effect, not to try to break the strikes. Just as the banks were prevented from trying to continue operations when trouble seemed imminent, so now the steel companies are being restrained.

The parallelism cannot, however, be pressed very far. Restraint in the present instance is confined to two towns. The steel companies, unlike most of the banks in 1933, desire to go ahead, and appear to be supported by a substantial proportion of their workmen. Only tiny segments of economic activity are directly affected in the present case. But the direct intervention of government force is a noteworthy development in the unfolding drama of the efforts to organise American working men. And it is nearly unique in this country that the companies are being prohibited from trying to operate in the face of a strike; in the previously most noteworthy case, President Cleveland in 1892 used the United States army to assure that the railroads, then affected by a strike, would operate.

Whether this development will bring an early climax in the labour situation only an oracle can know, but it constitutes a move which will inevitably be the source of very intensive controversy for a considerable time. Many employers feel more strongly than ever that the Government is against them, while there are signs of jubilation from labour. Public opinion does not appear to have crystallised. Many feel that overzealous groups within the labour movement are hurting their own cause; and in the motor industry a prominent labour leader has warned his followers that much better discipline is needed. But some of the steel industry executives appear extremely uncompromising, if not obstructive.

Meanwhile, mediation efforts are more widespread. The President's steel mediation board is active, and the intervention of States governments in the strikes makes them strive even more for settlement. The National Labour Relations Board is active in a large number of cases, if not those in the newspaper headlines; it reports the settlement of twenty-three threatened strikes in April, the holding of twenty-nine elections during that month, and the "closing" of cases involving 50,000 workers.

Changing Monetary Position

The banking figures continue to reflect the marked change which has come over the American monetary situation during the last few months. Demand deposits are lower than they were six months ago, and the total earning assets of the banks are lower than a year ago. Bank cash has risen persistently to a new high level. A larger proportion is, of course, now required as reserves, and a lesser proportion is excess than was the case prior to the increases in requirements earlier in the year. Inter-bank balances have fallen abruptly since the year-end. Total investments have also fallen sharply while loans have risen. The following table summarises the developments in the weekly reporting member banks in 101 leading cities:—

Millions of dollars

Average for Month	Total Loans and Investments	Total Investments	Total Reserves	Demand Deposits	Balances due to Domestic Banks
June, 1936	22,373	13,838	4,389	14,563	5,503
September, 1936	22,520	13,892	4,995	14,962	5,890
December, 1936	22,760	13,730	5,264	15,544	6,155
March, 1937	22,610	13,324	5,205	15,429	5,679
June, 1937 (3 weeks)	22,315	12,961	5,308	15,340	5,073

These developments are in marked contrast with those of the three preceding years, when the earning assets and the demand deposits of the banks were rising rapidly. In banking terms the change can be traced directly to the increases in reserve requirements. As the result of these, bankers' balances were extinguished in substantial volume as banks called their funds home to meet the higher needs. Likewise as a result, the banks sold Government securities heavily, partly to obtain needed funds, and partly because they feared a fall in the price of these securities. While loans have risen, they have not done so sufficiently to offset these declines. Demand deposits have not fallen so rapidly as earning assets because of the steady inflow of gold. But this explanation in banking terms does not, of course, set forth the significance which those who think in quantitative monetary terms attach to the development. The abrupt halt which has occurred in banking expansion is, in those terms, a development carrying important implications to business and prices.

The expansion of the public debt was the chief cause of the rapid banking expansion of the preceding several years. Bank purchases of Government securities increased both assets and liabilities at an unusually rapid pace. There is considerable evidence that the expansion of the public debt outside of Government agencies is at an end. While a Budget deficit of $418 millions is anticipated officially—and, in the opinion of many, will be exceeded—during the fiscal year ending June 30, 1938, Government departments are expected to absorb more than $1,250 millions of Government securities during that period. Reserves to be accumulated under the Social Security Act account for the preponderant part of this. Government securities to be issued for the purchase of gold must be taken into account in addition to those issued for budgetary purposes but even so, it does not appear likely that the banks will have the opportunity to acquire any substantial volume of Government issues. If banking expansion is to occur henceforth, therefore, it will have to be largely on the basis of non-Governmental borrowings. Any expansion, furthermore, must be considered in the light of the express belief of the Federal Reserve authorities that bank deposits are sufficiently large.

France

The Programme of M. Bonnet

Paris, June 30.—The Chamber has voted by 374 votes against 206 emergency powers until August 31st to the Chautemps Cabinet, in order to carry out a vast programme of financial and economic recovery. The country has now heard the truth. The situation is not desperate but is at least grave. The outflow of gold amounted to 5,200 million francs between June 1st and June 22nd, and to 2,500 millions between June 22nd and June 28th. The gold of the Equalisation Fund has been exhausted; and the Treasury is empty. Treasury needs until the end of the year are as follows:—

	(Millions of francs)
Ordinary Budget deficit	8,000
Extraordinary Budget	8,500
Advances to undertakings	9,000
September repayment of Auriol Bonds	807
October repayment of 4½ per cent. 1934 Bonds	5,400
December repayment of the English Loan	4,400

Financial Agents of the Government of the Dominion of Canada in London

The Bank undertakes banking business in all parts of the world, and with its numerous branches offers special facilities in Canada, Newfoundland and the United States.

M. Bonnet has proposed that 20,000 million francs should be raised by additional taxes and economies. But measures will first be taken to adjust the external financial position. The lower limit of the franc exchange will be abolished and the franc allowed to find its own level, after the English model. This suggestion is causing some anxiety in France, where the central power is not as strong as in Great Britain. The Equalisation Fund will be maintained and the Tripartite Agreement observed.

Then the balancing of the Budget will be undertaken. Some 10,000 million francs will be obtained from the Bank of France as an advance on the yield of additional taxes. New public expenditure will be prohibited. Direct and indirect taxes, and the charges of public utilities and the railways, will be increased in order to balance the Budget by stages; and the extraordinary Budget will contain nothing but military expenditure. M. Reynaud has suggested that the needs of the Treasury in 1938 might reach 50,000 million francs, but M. Bonnet protested that they would not exceed 30,000 millions, once the taxes had been increased and the economies and reorganisations realised.

Prospects of Recovery

It may be that the "floating franc" will end in stabilisation on a lower level than now, and it seems that the whole increase in taxation and the modifications in social reforms, notably in the 40-hours week, demanded by M. Bonnet, have not yet been entirely accepted. After deflation, reflation and devaluation, France begins a new experiment. The lessons of the two preceding experiences seem to be that no merely financial expedient will lift the country out of the crisis, and that great sacrifices by all citizens are necessary.

The new deflation, which is based on the fact that financial independence, military security, social reform and business revival cannot be secured without monetary stability and without the collaboration of labour and capital, should, however, be quite different from the earlier one. Business revival has already begun, as is shown by the index of production, the rise in prices and the diminution of unemployment. The deflation of public expenditure will be compensated by franc inflation. Moreover, this deflation comes after considerable social progress, and will be carried out by a Popular Front Government, the Vice-President of which is M. Blum.

Nothing suggests that the masses and their leaders will not loyally support M. Chautemps in his policy. There have been none of the threats of the last crisis, and there is a common front in face of the foreign danger. The Socialist Congress at Marseilles on July 10th will show the Government what the position is.

Rising Prices and Imports

The new crisis of the franc has already caused a rise in wholesale prices from 530 (June 19th) to 537 (June 26th); food products have risen from 523 to 529, and industrial products from 536 to 545. This advance in prices added to the increase in taxation will lead to new claims for higher wages. The consumption of coal in May was 6,168,000 tons or 241,000 tons less than in April, but 458,000 more than in May, 1936. Monthly production has fallen to the lowest level for ten years; it was 3,473,000 tons in 20·3 working days in May, against 3,991,000 tons in 22·8 days in April and 3,921,000 tons in 22·1 days in May, 1936. Daily production declined from 117,500 tons in May, 1936, and 175,000 tons in April, 1937, to 171,000 tons in May, 1937. Consumption has risen by 458,000 tons and production has fallen, so that imports rose in May by 720,000 tons to 2,610,000 tons against 2,554,000 tons in April. Coal imports have cost 113 per cent. more than in the same month of 1936, in spite of an increase of mining employment of 15,230.

Fiscal receipts in May were 2,300 million francs, an increase of 310 millions compared with May, 1936, and a deficit of 133 millions compared with the estimates For the first five months of 1937, receipts were 32 million francs below the estimates and 902 millions above the 1936 receipts for the same period. Indirect taxes have yielded 799 millions more, estate duties 20 millions more, and direct taxes 80 millions more.

Germany

Germany and Collective Security

Berlin, June 30.—The International Chamber of Commerce met in Berlin this week, and was welcomed by a vigorous political speech by General Göring. The main interest of the foreign delegates, and in particular of the British, seems indeed to be political, the Congress being, as Germans put it, "in the constellation" of Spain, of Russian and French affairs, and of collective security or insecurity.

Those delegates who enquire on the spot about Germany's attitude towards these international problems will probably depart little wiser than they came. The experience of resident observers on the spot is that they hear everything on all sides of nearly every question; and can correctly quote authoritative Germans in quite contrary senses.

The recent development of German foreign policy has been more than usually erratic. The proposed visit of Herr von Neurath to London was welcomed in Berlin. The attacks on British diplomacy and the disparagement of British ways, which had till then been most pronounced, almost ceased. It even seemed that some mild kind of co-operation was again in favour. Yet all this was reversed quite unreasonably by the mere "Leipzig" incident, which was only a trifle after the more serious "Deutschland" affair had been settled.

Apparently the only explanation of the sudden return to anti-British demonstrations was that, while the "Deutschland" affair had been liquidated by retaliatory demonstration and national pride had been soothed, the "Leipzig" affair could not be so handled; and it was mainly British opposition that prevented any action which would have propitiated Germany. The weakness of German policy is, as it was before the war, a propensity to demonstrate without regard for permanent diplomatic interests.

The new anti-British attitude, and with it the withdrawal from collective security which Herr Hitler, not for the first time, announced at Würzburg, are cases in point. Collective security has never been consistently handled by Germany. It has repeatedly been proclaimed that this international system is radically and in principle wrong. Yet Germany herself has repeatedly announced her readiness to participate. Instances are her willingness to return on conditions to the League of Nations after she had demonstratively left it and Herr Hitler's last speech, the note of which was "we were nevertheless, against our better judgment, ready to participate if only the other wicked parties . . . ."

This ambiguous attitude towards collective security is inherent in German policy; and it appears clearly in concrete cases. The international policy towards Spain which the Reich desires, is itself a collective security policy, the German thesis being that all Europe ought to combine against the attempt of one Spanish faction to involve Europe in war. In the same way, Russia is here represented as intent on involving Europe in war, and Germany daily summons Europe to unite against her.

This German attitude is just as much "collective" as the attitude of the temporarily reprobated League of Nations against Italy in Abyssinia, or against any other peacebreaker. Collective action is sound when it subserves a German aim and unsound when it subserves other nations' aims. This attitude is, of course, natural enough. But it can hardly be exalted, as Germans exalt it, to the dignity of a principle permanently underlying international policy.

Food Stocks

Cereal crops are reported to have suffered local damage in June. The consumption of bread cereals has fallen off because of various official economy measures. The stock available is sufficient for the remainder of the crop year; but in the case of wheat the mills are being in the main supplied by means of imports. Producers' prices for wheat in the crop year 1937-38 remain unchanged; for rye, as announced in March, they are raised by Rm. 20 a ton.

The compulsory admixture of maize flour with wheaten flour will henceforth be imposed on millers instead of as hitherto only on bakers; maize flour, and later potato meal, will also be mixed with rye flour; and the veto against distillation will be extended from wheat and rye to cereals of all sorts. The consumption of bread is to be reduced by forbidding its retail sale until the day after baking.

Owing to unfavourable weather, the outlook for home-grown fruit is bad. The measures of recent years to foster the cultivation of oil plants will be continued in the new crop year. Some of the fixed prices, which since the grower has a right to sell his produce, are also guaranteed prices, will be raised.

Paying for the Boom

The financing of the industrial boom by the State is again a subject of discussion, with special reference to foreign comments on the so-called "German Miracle." The official explanation is that a sufficient national surplus of money was provided by the boom itself, owing to the increase in income from work, the fall in outlay on unemployment relief, and the rise in savings, all of which were in turn reflected in the great increase in the yield of taxation. Among data to illustrate this process, displayed at the Berlin Exhibition "Gebt mir vier Jahre Zeit," are the following: Between 1933 and 1936 income from employment rose from Rm. 26,342 millions to Rm. 34,540 millions; the cost of unemployment relief fell from Rm. 2,256 millions to Rm. 865 millions; savings bank deposits rose from Rm. 12,110 millions to Rm. 14,590 millions; and the yield of public taxes rose from Rm. to 10,581 millions to Rm. 15,437 millions. The official Reichs-Kredit Bank declares that "present German policy aims at checking the investment of new short-term credit and attracting all the resources which are made available by the liquefaction of business and by savings activity."

The official index of industrial activity shows that the number of employed in May was 8.8 per cent. higher than in May, 1936; and the number of hours worked was 11.9 per cent. higher. Compared with April, 1937, the average daily working-time declined. Among important industries, only textiles show a set-back.

Retail sales in March and April were 13 per cent. higher than in the same months of 1936. A new law regulating retail trade will soon appear, under which political reliability will be required from intending shopkeepers.

Coal production in the first five months of 1937 totalled 73,860,000 tons, against 63,210,000 tons in the corresponding period of 1936. Ingot steel output in May was 1,608,200 tons; in the first five months of the year it was 7,888,100 tons, against 7,678,000 tons in the same months of 1936. The domestic supply of pig iron has increased.

At the Hamburg-America Company's annual meeting an earlier statement that no attempt will be made to compete in the North Atlantic with large and speedy ships was confirmed. The company expects to earn a net profit this year. The ageing of Hamburg-America tonnage was complained of, only one new ship having been completed since 1933. The company's present building programme is for 70,000 tons, and is larger than that of any other German company, but is nevertheless considered insufficient. A mild protest was made against priority in building ships for foreign concerns. There has for some time been considerable construction of vessels on foreign account in German yards which has been a source of grievance when shipbuilding is fully occupied.

Belgium

Freer Trade Disillusionment

Louvain, June 22.—Belgium has marked the mission of M. van Zeeland with interest, without expecting too much. This country is anxious to abate policies of protection, since it lives by exports and has suffered more than any other country from the effects of increased import duties and quota systems. Belgium was deceived by the futile negotiations for trade disarmament in 1930 and the abortive agreements of Oslo and of Lausanne.

In the export trade Belgium's position has improved during the last six months. Despite all the hindrances to international trade, foreign markets are more abundant, and Belgium export industries are active. The value of Belgium exports has doubled since the devaluation of 1935. Expressed in gold the increase has been 45 per cent. Only in 1930 was the value of exports comparable to the present figure.

The surplus of imports has declined. For the first four months of 1937 imports reached a value of 9,300 million francs while exports were valued at 8,500 millions. For Belgium this is very satisfactory because her balance of payments includes large invisible exports.

Repayment of Foreign Debt

According to an article published in the *Bulletin of the National Bank of Belgium*, the balance of international payments in the years 1935 and 1936 was active, as appears from the following table:—

Balance of Payments of Belgium

(In millions of francs)

	1935	1936
Assets		
Exports of goods	16,100	19,950
Tourist receipts	1,200	1,000
Revenue from abroad	1,600	2,000
Wages earned abroad	300	350
Surplus of the Congo's trade balance	1,175	1,375
Transit trade	500	600
Net freights registered	200	260
Miscellaneous items	50	50
Total	21,125	25,585
Liabilities		
Imports	17,450	21,500
Interests and dividends paid abroad	750	750
Tourist payments	125	150
Commissions, royalties, etc.	100	100
Total	18,425	22,500
Surplus of assets	*2,700*	*3,085*

There was thus a surplus on the balance of payments in 1935 and 1936 of about 3,000 million francs, or about £20 millions. With this surplus Belgium has repaid an important portion of her foreign debts. The repayments may be estimated at 2,000 million francs. On the other hand the public has bought a quantity of foreign stocks.

The repayment of the flight capital which has come to Belgium was another use for the surplus on the balance of payments. After the collapse of the gold *bloc*, Dutch and Swiss funds are withdrawn. French capital has generally remained either in the banks or at the disposal of the Stock Exchange. In brief, while there was formerly 3,000 million francs of liquid capital held in Belgium, there remains now only about 1,500 millions.

ESTABLISHED 1810

Improved Production and Earnings

The industrial situation is favourable. The present index of basic industrial production is still 8 per cent. below the level of 1929, but has made an advance of no less than 37 per cent. compared with 1934. Metallurgical output has increased during the last few months throughout the whole country. This prosperity is not only obvious in the metallurgical industry which is fully employed; an improvement has also been experienced in building, which had previously been stagnant.

Unemployment is still going down. Indeed it may be said that it has virtually disappeared, and that the 80,000 wholly unemployed, still registered in the official lists, are really unemployable because they lack the necessary skill. In many trades there is an actual shortage of hands. The improved situation has led to an increase in wages. For fifteen years wages have been automatically adjusted to the cost of living; and therefore an appropriate increase has recently taken place. And it has been possible during the past twelve months to give rises outside the agreements. Miners received two such increases, once in January, 1937, and again in June. Metal workers received an advance of 5 per cent. in June. Expressed in purchasing power, the wages of miners and metal workers are now 10 per cent. above the level of 1929, which was the peak of prosperity.

The wages bill in the first quarter of 1937 was 40 per cent. higher than the sum paid out in wages during the first quarter of 1935, before the devaluation. Meanwhile the cost of living has risen 15 per cent. Real wages have increased 22 per cent. on account of the increase in hour wages and many unemployed have found a job again.

The social situation is satisfactory in Belgium, and since June, 1936, no serious strike has broken out throughout the country. Nevertheless the position is still uncertain because of the labour unrest which is being felt all over the world. The proximity of France provides an obvious danger of infection. Labour troubles may spread.

Sweden

The Travels of Mr Sandler

Stockholm, June 20.—The Swedish Foreign Minister has now returned from his latest goodwill tour to the Baltic countries. His travels began with Brussels and the Hague in early spring, closely followed by a visit to London—in answer to Mr Eden's visit to Stockholm in 1934—and to Paris, after an unexpected invitation from the French Government. When the visits to London and Paris aroused some alarm in the German Press, Mr Sandler had to pay an official call on Herr von Neurath in Berlin. This in its turn made it necessary to promise Moscow an official visit. The trip to the Baltic capitals coincided by pure chance with Lord Plymouth's tour from Finland to Lithuania, and thus gave rise to rumours of British efforts to form a Scandinavian-Baltic *bloc* as a political counterbalance to the Third Reich. Mr Sandler's list of visits is not yet exhausted. After a visit to Moscow, announced to take place on July 8th, a trip to Warsaw is projected, which will probably lead to a visit to Prague.

These endless visits by the Foreign Minister of a small country, whose only wish is to keep out of the diplomatic game, have in some countries caused curiosity and in others less harmless suspicion. Though nobody in this country would attribute to Mr Sandler the intention of working for any kind of political *bloc* in the Baltic, the necessity of these visits is not quite obvious, and there is a growing feeling in Swedish political and business quarters that it is not quite compatible with the traditional line of Sweden's foreign policy.

Prices Steady

The economic situation in Sweden has not been much affected by the general fall in the price of raw materials or by the gold panic, except for a slight setback on the Stock Exchange. In spite of the decline of commodity prices in London, Professor Silverstolpe's index of Swedish wholesale prices recorded a new advance in May from 141 to 142 (1913 = 100). That the international break in commodity prices had such little effect in Sweden may be explained by the fact that three important components of the Swedish price index, i.e. coal, pulp and wool, have not been affected by the recent fall in quotations.

Industrial production continues to expand and the index of industrial production rose during April from 116 to 118, with steel and iron production chiefly responsible. Market reports for the chief staple articles continue to be satisfactory. Of this year's export quota for timber only 150,000 standards remain unsold. Demand for pulp is growing and prices are stiffening. Paper sales are brisk and prices rising. The iron and steel industry is working at full capacity. The lockout in the building industry at one moment threatened to check the present boom, but the conflict was happily brought to an end at the beginning of June, and a new three years' agreement was reached. The situation in the Swedish labour market is quieter than it has been for many years. Unemployment has further decreased and the number of unemployed officially registered has dropped in April from 28,000 to 22,000 compared with 47,000 in April 1936. The shortage of skilled labour and the seasonal shortage of agricultural workers remain.

Rising Imports from Britain

Imports in the first five months of the current year have increased in value by about 29 per cent. compared with the corresponding period in 1936. Foreign trade and trade with Great Britain (for four months only) are shown in the following table:—

Foreign Trade

(In million kronor)

	1936 January–May	1937 January–May
Imports	634·2	819·4
Exports	531·4	671·6
Import surplus	102·8	147·8

Trade with the United Kingdom

(In million kronor)

	1936 January–April	1937 January–April
Exports to U.K.	96·8	108·7
Imports from U.K.	92·3	112·2

As the above table shows, Swedish trade with the United Kingdom has for the first four months of this year shown a balance in favour of Great Britain of Kr. 4.5 millions, compared with a balance in favour of Sweden of exactly the same amount in the corresponding period of 1936. It is the first time since the trade agreement of 1933 that Swedish-British trade has shown a surplus of Swedish imports from Great Britain over exports.

The easiness in the Swedish money market continues and the joint-stock banks' cash and holdings at the Bank of Sweden amounted at the turn of May to Kr. 728 millions. Bank deposits steadily increased and reached a total of Kr. 4,057 millions, which is Kr. 124 millions more than at the turn of the year. The new banking law, obliging joint-stock banks to keep cash reserves of a minimum of 25 per cent. of their total sight and one month deposits, and to immobilize a certain amount of these reserves at the Bank of Sweden, has now been adopted by the Riksdag as a preventive measure, whose application will be decided upon by the Bank of Sweden. As the inflation danger has lost its acuteness since the fall in commodity prices, the question of lowering the sterling rate, which was advocated by certain Swedish economists, and which was also laid down by the Minister of Finance as the most effective measure for checking a price inflation, has for the moment lost its relevance. Forward selling of foreign currencies has therefore fallen to normal proportions and speculative buying of Swedish currency for foreign account has practically ceased.

Argentina

The Presidential Election

Buenos Aires, June 19.—Elections for the Presidency of the Republic will take place on September 5 next. The general satisfaction caused by the return of prosperity has distracted attention from politics. In the City of Buenos Aires there have so far been no popular demonstrations or excitement. Nor is there any sign of that interruption of business usually associated with a general election. The official candidate is Doctor Roberto Ortíz, the Minister of Finance, who will represent the *Concordancia* or Government coalition, composed of National Democrats (Conservatives), Anti-Personalist Radicals and a few Independent Socialists. He will be opposed by Doctor Marcelo de Alvear, who was President of the Republic from 1922 to 1928, on behalf of the Radicals, and by Doctor Nicolas Repetto for the Socialists.

Doctor Ortiz is resigning his post in the Cabinet, and will be succeeded by Doctor Carlos Alberto Acevedo, at present Vice-President of the Banco de la Nación Argentina. Doctor Ramón Castillo, Minister of the Interior, is also resigning to stand as the *Concordancia* candidate for the Vice-Presidency. The Ministry of the Interior will be temporarily in the hands of the Minister of Public Works, Señor Alvarado.

The extraordinary recovery of Argentine foreign trade continues. During the first five months of this year the value of exports was more than twice that of the same period of 1936. The following table shows that every branch of the export trade recorded improvement, though cereals and linseed were the predominant factor in the advance:—

(January to May inclusive—in Pesos)

Products	1936	1937	Per cent. Increase in 1937
Pastoral	279,968,829	345,814,894	23·5
Agricultural	312,359,840	872,182,561	179·2
Forest	14,947,023	17,941,465	20·0
Mining	3,888,425	7,506,252	93·0
Hunting, fishing	1,745,222	2,099,975	20·3
Miscellaneous	8,563,855	8,731,583	2·0
Total	621,473,194	1,254,276,730	101·8

The import trade is responding only slowly to the expansion of exports. Thus the export surplus has more than quadrupled compared with last year. Foreign trade during the first four months of 1936 and 1937 was as follows:—

(In Pesos)

Year	Imports	Exports	Export surplus
1936	377,038,505	517,344,052	140,305,547
1937	438,468,232	1,074,558,537	636,090,305

While exports increased by 107.7 per cent., imports rose by only 16.3 per cent. By far the biggest increases in imports were in the value of iron and steel which rose by 14,269,188 pesos; the value of machinery and vehicles rose 13,644,207 pesos. These are the goods which respond first to trade recovery. Textiles, on the other hand, by far the largest item among imports, only increased in value by 5,560,241 pesos; this is due to the long lapse of time between orders for the goods and their actual sale to the public. The increase in Argentine imports has so far benefited the exporters of the United States more than those of other countries, because the former country specialises in ready-made articles such as motor cars, agricultural machinery and wireless sets. There is reason to expect that other countries including Great Britain will enjoy their share of Argentine orders later.

Sharp Rise in Railway Receipts

The receipts of the Argentine railways are an eloquent testimony of recovery. From July 1, 1936, to June 12, 1937, the receipts of the Central Argentine Railway were 125 million pesos compared with 100 million pesos in the same period of the preceding years. Buenos Aires Great Southern receipts rose from 109 million to 122 million pesos; Buenos Aires Pacific from 72 million to 79 million; and Buenos Aires Western from 38 million to 41 million.

The revival of railway receipts indirectly caused the recent partial strike on the Córdoba Central Railway. Under the award of the President of the Republic of October 23, 1934, which was accepted by the companies and the railwaymen, it was agreed that wages should be cut until such time as the surplus of receipts over expenses should reach a certain level. This level has been attained by other companies, but not by the Córdoba Central, which has been the most distressed company of all. The men of the latter company meeting their fellow-workers of other companies whose wage-cuts had been restored in Buenos Aires, Rosario de Santa Fé, and elsewhere, saw no reason for their own less happy lot.

The strike, which was unauthorised by the railwaymen's own leaders, was called off after the strikers' representatives had been interviewed by the Minister of Public Works. The Government is about to issue a decree restoring the cuts. In the meantime efforts are being made in several political quarters, Opposition as well as Government, to persuade Congress to approve the purchase of the Central Córdoba Railway by the State without delay.

The increase of world demand for Argentine products has modified the position of the Argentine meat trade. The packing companies are now paying stockbreeders 29 centavos a kilo liveweight for special chilled beef compared with 27 centavos a few weeks ago. The subsidy paid by the Government has been reduced accordingly. The Ministry of Agriculture stated that the main cause of this was the rise in the price of meat and by-products in foreign markets and especially in Great Britain (which is practically the only consumer of chilled beef).

Exchange Control Profits

On June 8, the Ministry of Finance published details of the Government's exchange profits on the difference between the buying and selling rate of exchange since the beginning of the present system of exchange control on November 28, 1933, until the end of 1936. These are given below together with amounts spent:—

(In Pesos)

Year	Profits	Expenditure
1933	6,104,900	528,300
1934	113,109,900	34,701,700
1935	118,044,400	64,482,000
1936	88,425,200	33,699,500
Total	325,684,400	133,411,500

Exchange control, originally created to remedy an adverse balance of payments, has thus now become a source of revenue. Possibly more important than this, it enables the Government to put a discriminating tax on any article from any country by means of the 20 per cent. surcharge imposed on goods entering the country without prior permits.

The weather during the last six weeks has been unusually dry, and lately unseasonably warm. Maize shelling has been favoured, but some alarm has been felt for the coming crops. In the last few days, however, rain has fallen fairly generally, and was especially heavy in the semi-arid sheep-breeding regions of Southern Argentina.

Letters to the Editor

The Investment Outlook

TO THE EDITOR OF THE ECONOMIST

SIR,—In your issue of June 26th you were good enough to comment, in a note headed as above, on a circular issued by us entitled " The Slump Obsession."

On three points, however, you criticised this pamphlet—its lack of any reference (1) to the building boom and its future possibilities, (2) the upward revision of yields as a limiting factor to market recovery, and (3) the effects of rising costs in industry.

As to (1), we may call your attention to an article in *The Economist* of September 26, 1936, which stated that: " It is clear, therefore, that the social objective of housing policy, though within sight, is by no means yet realised; and that its continued prosecution should in itself be able to maintain a high level of building activity for some little time yet. For instance, if the building of middle-class houses by private enterprise fell from its present rate of about 250,000 a year to 150,000, the completion of the present slum-clearance and overcrowding programmes in a little over two years would be sufficient to maintain the total rate of building at its present figure of 300,000 a year for that period."

If in two years' time building activity should begin to slacken, it is surely not too optimistic to hope that international trade revival, already on the way, as shown in your Trade Supplement of June 26th, will by that time fill the gap.

(2) The upward revision of yields is already, as we say in the House, " in the price." It has brought values down to a level that gives investors a good yield on current rates of dividend, which are likely, not to say certain, to be improved on in many cases.

(3) Rising costs in industry mean increased purchasing power to wage earners and producers of materials, and consequently a wider market for industry which will enable it to sell a larger number of articles with a possibly lower profit per article, the larger output more than counterbalancing the increased costs.

Yours truly,
Authors of
" THE SLUMP OBSESSION."

[Our correspondent's first point may we hope be realised. But even if revival in the export trades were to offset a recession in other industries, the corresponding share groups would be affected in different measure. Similarly, rising costs in the constructional industries may, indeed, assist the consumption trades, but the filtration of increased purchasing power to the capital goods industries is a much slower process. Several points raised by our correspondents are discussed in a leading article on page 24.—ED. *Econ.*]

N.D.C. : New and Old

TO THE EDITOR OF THE ECONOMIST

SIR,—*The Economist* circulates among those who devise our taxes, and doubtless influences their minds. This must be my excuse for a second letter about your proposal to make a surcharge on high profits.

In your reply to my criticism, you make the somewhat surprising comment that such a levy can be " much more easily justified than most of our existing taxes," and you proceed to justify it on grounds both of *ability* to pay and of *equity*.

One type of concern that might attract your suggested tax occurs to me whose *ability* to pay is by no means certain. I refer to firms, not uncommon in the Midlands, producing a specialist line of products, controlled by one or two enterprising people, under whose direction growth from small beginnings has been rapid. In these cases it sometimes happens that profits are high, but all the financial resources available are required for development, and the finding of hard cash for additional taxes would be a real embarrassment.

In connection with *equity*, you suggest that, although some high profits are the result of legitimate causes, just as many are the result of " good fortune or lack of scruples." You may be right, but statistical evidence to prove such an assertion would be more convincing.

On the subject of goodwill I am afraid that your " goodwill which represents development expenditure incurred in the past is legitimately included in capital, while goodwill which is merely the capitalisation of the expectation of excessive profits in the future is not," leads us nowhere. In the first place, as, alas! is sometimes the case, an elaborate publicity campaign may be a failure; the cost of this can definitely be classed as " development expenditure," but it certainly is not an addition to a company's "goodwill."

Secondly the use of the word " excessive " is unsatisfactory because it is so indefinite. If you define as " excessive profits " all those which exceed an arbitrary percentage on the tangible assets, you are ruling out goodwill altogether. If, on the other hand, you allow for the goodwill which you regard as legitimately included in capital, I doubt if many companies will be found to show a profit which can reasonably be regarded as " excessive."

In conclusion, may I submit that, before you advise your readers to demand a tax on " high profits," you should explain how legitimate " high profits " can be distinguished from windfalls, and that you should give some concrete example of industries or firms falling within your definition, and some estimate of their importance.

Books and Publications

Perfidious Albion

" THE desire for isolation, the knowledge that it is impossible—these are the two poles between which the needle of British policy continues to waver." Mr Seton Watson's words, inspired by his preliminary survey of foreign policy from Wolsey to Castlereagh, suffice to show the relevance of this vast and erudite study of British policy in the nineteenth century* to the problems of our own time.

The major theme is policy between 1822 and the 'seventies. It embraces the sage legacy of Castlereagh; the new modes of Canning; the weakness of Wellington; the assertiveness of Palmerston with " his rich harvest of autumnal indiscretions "; the principled embarrassments of Gladstone; and the " Imperial sense " of Disraeli. Mr Seton Watson shows how *rapprochement* with France a hundred years ago brought the first moves towards an *entente cordiale;* and how this western front was broken by the problems of Egypt and the Near East, and by the British *chimera* of " splendid isolation."

Of what went before this special period and has come after Mr Seton Watson reveals only the outlines. Yet, no matter what century he is discussing, the lessons of his story remain the same. Britain has never been able to hold aloof from the affairs of Europe since the Protector " once more joined us to the Continent." The balance of power in Europe has affected too directly the safety of our shores and trade; and

> " next to a sure instinct for discouraging the rise of any omnipotent rival, British policy may be said to have thrown its weight from time to time into the European scales in order to secure virtual immunity for her overseas designs."

Moreover, and this has never varied—until to-day perhaps, when strength in the air has entered into the equation of security—naval power has been the focus of British policy,

> as a bulwark against invasion, as a protection to trade and as a screen behind which colonial expansion could be concluded.

To the quest for the balance of power, for colonies and naval strength there have been certain necessary corollaries. Trade and strategy in the Low Countries and in the Mediterranean have been important since the days of Elizabeth. And there has been surprisingly little change through the centuries. The unification of Germany and Italy, the cutting of the Suez Canal, the experiment of the League and the achievements of applied science in industry, transport and warfare have simply given new reasons for old policies. Britain's " hybrid position " as part of Europe and of the outside world has led her to pursue naval ambitions, and only to seek military allies when all else has failed.

She has regarded the addition of naval to military power by any European state as the great affront; but consistently she has sought peace in Europe where she has had no ambitions in modern times.

> If there is one fact which emerges from the speeches and actions of all foreign secretaries from Pitt to Grey it is the paramount importance attached to peace as the foremost British interest.

These considerations have kept Britain in Europe. Her repeated attempts to break away, and to repudiate any responsibility for Continental affairs, have created the legend of perfidious Albion, never to be relied upon and with no sense of responsibility beyond her own immediate interests. This wavering from pole to pole in policy has been dictated not only by the desire of an Imperial island to be free from entanglements, but also by the Parliamentary character of British government. Castlereagh wrote to Alexander of Russia:—

> " The only chance we had of making the nation feel the wisdom of such a course was to be free, at the moment, to urge the policy of so acting, *not because we had no choice, but as having a choice.*"

And Grey might have echoed these sentences in August, 1914.

The consistency of British policy in Europe has thus been largely negative, and British statesmen have been ever undecided about the twin problems of alliance and intervention which loom again so large to-day. At one time we may say with Disraeli that

> " So long as the power and advice of England are felt in the councils of Europe, peace will be maintained."

But at another we may refuse with Canning to be associated in a system of Congresses, with Gladstone to step in while France and Prussia fight, or with more recent figures to undertake the responsibilities which the Covenant imposes. Non-intervention and neutrality have been our objectives, but we have often fallen short of these marks; and isolation has always been at war in our counsels with Imperialism and trade on the one hand and collective security on the other. We have fought revolutionary France and intervened in Bolshevik Russia. We have striven with Napoleon and Imperial Germany. Yet we believe in neither intervention nor war.

Thus Mr Seton Watson has written a book for our times. But never once has he strayed from the sober path of history. The range and lucidity, documentation, learning and acumen of his study are remarkable. He has produced a volume which rivals the Cambridge History of Foreign Policy in solid worth and the narrative of Mr J. A. Spender in incisive brilliance.

Readers may question some details of his interpretation, may wish to defend Palmerston or to cry down Gladstone, or to analyse economic developments and material motives more closely. But none can deny the authenticity and authority of this book—or the new content which he gives us in 1937 for Wellington's prophetic phrase:—

> " There is no country in Europe in the affairs of which foreigners can interfere with so little advantage as Spain."

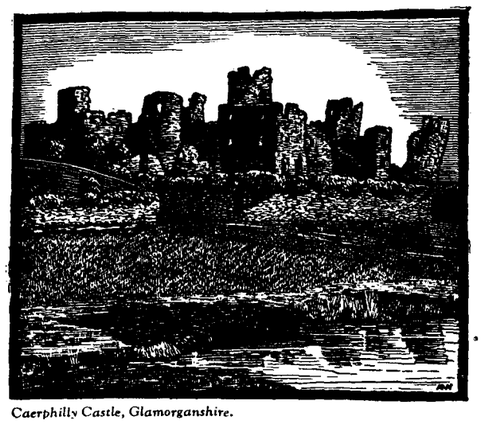
Shorter Notices

" A History of the English People." By E. Halévy. Pelican Books. Penguin Books, Ltd. 256 pages. 6d.



The producers of the now well-known Penguin Books have embarked on a most praiseworthy project in their serial publication of the best comprehensive history of England in the nineteenth century. M. Halévy's great work on the people and institutions of modern England needs no advertisement at this stage, but it has hitherto suffered from the single defect of being out of the reach of the modest purse. Now anyone with a few sixpences will be able to read this unrivalled study as the Pelican produces it volume by volume. The first volume, now published, deals with English political institutions in 1815, and in its production augurs well, not only for this particular project, but also for the whole of this new Pelican series.

" State and National Power over Commerce." By F. D. G. Ribble. Columbia University. Humphrey Milford. 260 pages. 15s.

This book traces the development in administrative practice of the powers over commerce accorded to States and to the Federal Government in the American Constitution. It is an excellent piece of historical writing based on case evidence and illumined with constitutional lore. Written primarily for the constitutional lawyer, it will appeal no less to the economic historian and the intelligent politician. Contemporary problems of inter-State commerce provide a significant comment, amply considered by Mr Ribble on the way in which law has been forged by social, economic and political forces during the past 150 years.

" Jordans' Company Law and Practice." By S. Borrie. Jordan and Sons. 530 pages. 12s. 6d.

The eighteenth appearance of Jordans' well-known alphabetical guide needs no recommendation beyond its acknowledged worth. It has been brought up to date with the usual care, and since there have been no modifications of the Companies Act since the previous edition, no extensive revision has been necessary. The amendment of the Winding Up Rules has, however, been noted, and for a very modest expenditure the lawyer and the layman can place the whole of company law at their immediate disposal.

MONEY AND BANKING

The Exchange Equalisation Account

THE decision to increase the Exchange Equalisation Account by £200 millions to the vast total of £575 millions, announced by the Chancellor of the Exchequer on Friday of last week, has in one sense come as a surprise. But those who had been closely watching the recent trend of events realised that such an increase might become necessary. In particular, the transfer, last December, of £65 millions of gold to the Bank of England showed that the Exchange Equalisation Account was then nearing the limit of its resources. The subsequent flight of capital from France in the shape of gold, and the official gold purchases in the London bullion market during April and May, must clearly have left the Exchange Account once more nearly full of gold.

During the course of the debate on the financial resolution for the enlargement of the Account, Sir John Simon, after five complete years of the Account's life, was able to promise to lift the veil of secrecy from its past operations. He promised that henceforward, every December 31st and June 30th, the state of the Account on the preceding September 30th and March 31st would be published. That this limited information can be safely made available is evidence of the present strength of sterling and the adequacy of our gold reserves. It is to be hoped that past figures may be made available, if only to show the extent of our recovery since the dark days of 1931-32 and to aid us in our study of past and present monetary and exchange trends. For this long-awaited satisfaction of legitimate inquiries, we give much thanks. Meanwhile we agree that it would be most undesirable to publish information without this intervening delay of three months. Such information would indicate the immediate strength or weakness of other currencies than sterling, and if the pound is immune from speculative attacks, other currencies are not.

Sir John Simon followed up his promise by revealing the position on March 31st last. The country's total stock of monetary gold was then as follows:—

	Fine ounces	£ millions*
In Bank of England	73,842,000	516·9
In Exchange Equalisation Account	26,674,000	186·7
Total	100,516,000	703·6

* Valued at 140s. per fine ounce.

At the round figure nearest to the current market price, our total stocks of monetary gold then stood at the record peak of £703.6 millions sterling. This is ample to cover our existing short-term obligations to foreigners; but, according to the Chancellor, the Treasury does not consider it excessive.

The present statutory size of the Account is generally regarded as £375 millions, *plus* or *minus* accrued profits or losses; and Mr Neville Chamberlain, in each of his budget speeches, has stated that the Account continued to "show a profit." Then if the Account last March only held £186.7 millions of gold *plus* a trifling amount of foreign currency, how does it come to need enlargement? And how is it possible to reconcile the apparent margin of £188.3 millions of sterling assets, which presumably are re-lent to the Government, with the fact that last March the floating assets of *all* Government departments were only £198 millions? Did all the other departments only hold £10 millions between them? Or does the Exchange Account hold long-term Government stock?

The key to this riddle probably lies in the Bank of England's gold purchases. Between September, 1931, and March 30th, 1937, the Bank bought £180 millions of gold, valued at 84s. 11½d. per fine ounce. The bulk of this gold was bought during the year ended March 30th, 1937, when the market price of gold was over 140s. per ounce. Taking the average cost of the Bank's purchases over the whole period at, say, 135s. per ounce, the Bank must have paid £285 millions for its gold. This gold had to be written down to £180 millions, at a loss to the Bank of £105 millions. By statute the Exchange Account has had to make good this loss to the Bank.

In reply to a recent question by Sir Arthur Salter in the Commons, Mr Chamberlain said that his statement that the Account showed a profit up to a particular date naturally took into account both the accountancy gains and losses incurred on transfers of gold to and from the Bank, and also the accountancy profits on re-valuation at the market price of amounts thus transferred. This answer of the ex-Chancellor is very obscure, but his successor's subsequent revelations compel at least one conclusion: the Account debits itself with the recompense it pays to the Bank, but simultaneously credits itself with the profit that will ultimately arise from the re-valuation of the Bank's gold. That profit must at the moment be a matter of guess-work, for we do not know what the final price of gold will be. It is certain to be well above 84s. 11½d. per ounce.

In simpler terms, the Account regards the recompense paid to the Bank not as a loss to itself but as a loan for an indefinite period. The effect on the Account's immediate resources, however, is the same: for the loan is not realisable until we return to gold. Therefore, so far as its total available resources are concerned it looks as if the Account last March stood, not at £375 millions, but at approximately £270 millions. This left it with only £90 millions of sterling assets.

This last figure, incidentally, left £110 millions of floating assets for the other Government departments. This agrees approximately with the total amount of floating assets existing before the Exchange Equalisation Account was instituted.

Granted that last March the Account held only £90 millions of sterling assets, this margin must by now have been nearly exhausted through purchases of gold on the London bullion market during the gold scare, and through gold transfers from France during the recent renewed flight of capital. This is the *prima facie* case for the enlargement of the Account.

Further justification of course is needed for a proposal to raise, by short-term borrowing from the banking system, money up to a limit of £200 millions for the main purpose of buying gold. The first answer is that there will always be an asset against such new borrowing in the form of the gold itself. Also to the extent that the gold comes from the monetary reserves of another country, and is sent here in order to cover an influx of funds from that country, then the borrowing of this money to pay for the gold does not greatly reduce the banks' powers to lend or invest elsewhere; for the banks simultaneously gain, directly or indirectly, the use of the funds coming from abroad. This is the real contrast between this kind of borrowing and borrowing to cover unproductive Government expenditure.

It is true that such an influx of gold and capital increases the banks' liabilities and earning assets, while leaving their cash unchanged. To that extent the banks' power to lend elsewhere is curtailed. We have, however, already learned and applied the remedy of diverting just enough of the new gold to the Bank of England to ease the banks' cash position. This process is, of course, mildly inflationary; but it is much less inflationary than would be the influx of the whole of the foreign gold into the Bank of England, as would happen if the Exchange Account ceased to exist or became full to overflowing.

We have used the term "foreign country"; but for the time being there is only one—France. France is today being forced to yet another metamorphosis of her financial and monetary system, of which we have yet to have the full details. The one certainty is that the British authorities are willing and pledged to give all legitimate help within their power. In particular, if France still has gold to give, we must be able to take it so as to preserve the stability of the exchanges at either their present or their new level. This is one strong argument for the enlargement of the Exchange Equalisation Account.

There remains the obvious duty of aiding the United States by taking up our share of the newly-mined or dishoarded gold coming on to the market. We have already expressed the opinion (*The Economist*, May 22 and June 12) that an early reduction in the price of gold is not a practicable policy and that we should continue to buy gold at its present price without limit—that is, for the present we should play for time. Obviously, we cannot expect the United States to bear the sole brunt of this burden, but we must take our share. The Bank of England cannot take new gold without an inflation of the credit base. Therefore the Exchange Account must take it, only pressing on to the Bank a sufficiency of the new gold to offset the effect on the banking system of the Government's borrowings to finance the Exchange Account's gold purchases. Thus we are brought back to the need of enlarging the Exchange Equalisation account. It is a necessary step, which should promote international monetary stability, enable us to help France, and allow us to play our full part in the Tripartite Monetary Agreement.

Financial Notes

The Franc's New Value.—On Tuesday, the Paris Bourse was closed, pending the passing of the Government's new financial legislation, and all dealings in francs were suspended. The franc had closed at Frs. 110 11/16 on Monday, and the British authorities made arrangements to cover at that rate all franc positions maturing during the suspension of dealings. On Thursday, following the divorce of the franc from even an elastic gold value, Paris reopened, and franc dealings were resumed. After starting at Frs. 119 (with a three months' forward discount of 5 francs), sterling rose to Frs. 129. At this stage the Control intervened and brought the rate back to Frs. 128.92. Meanwhile, it became apparent that prior to the closing of the Paris market, many French operators had sold practically every franc in their possession. These francs had to be replaced, and so a buying movement developed late Thursday afternoon. In consequence, the Control turned a seller of francs. Simultaneously, the Banque de France fixed the day's price of gold at a level corresponding to an exchange rate of Frs. 128.75. The franc may now be allowed to find its own level, even if the result is a slight under-valuation of the franc. The French currency, it must be remembered, is now at the mercy of French fiscal developments and more particularly of future movements of capital into and out of France. Furthermore, it is now admitted that the French Exchange Fund has exhausted its reserves of gold and *devisen*. The expectation is that it may be replenished by the transfer of, say, Frs. 5,000 millions from the Banque de France. Unless the British and French authorities are prepared to buy francs instead of gold—and this is most unlikely—some such step appears likely. Incidentally, if the intention is for the Banque de France to recover its new loan of 15 milliards to the Government by means of a revaluation of its gold, this implies that the franc must permanently depreciate at least to Frs. 128.50 to the £.

Other Exchange Movements.—The franc's vicissitudes naturally reacted upon the whole foreign exchange market, if only because the transfer of funds from France to foreign centres has for the moment ended abruptly. In the absence of French demand, spot dollars weakened against sterling from $4.93 to $4.94½. Spot belgas followed the dollar, but forward belgas have gone from a premium to a discount. Guilders and Swiss francs weakened against both sterling and the dollar. A demand for dollars developed against both currencies, and as the respective Controls are only buyers, and not sellers of dollars, this demand had to be satisfied in London. Forward guilders remained at a premium, but forward Swiss francs have imitated the belga, going from a premium to a discount.

★ ★ ★

The Money Market.—The half-year passed fairly easily. There was a fair squeeze for money on Wednesday, and up to 2½ per cent. was paid to those lenders who had money available, but there was not much borrowing at the Bank. The secret of this relative case was that most of this week's maturing Treasury bills fell due in June, while payments for the new bills only became due in July. Thus the pressure for funds fell on the Treasury and not on the market.

	June 10, 1937	June 17, 1937	June 24, 1937	July 1, 1937
	%	%	%	%

Short loan rate:—				
Clearing banks	½–½–1*	½–½–1*	½–½–1*	½–½–1*
Others	½	½	½	½–⅝
Discount rates:—				
Treasury bills	11/16	11/16	11/16	½–⅝
Three months' bank bills	11/16–¾	11/16–¾	11/16–¾	⅝

* Loans against Treasury bills and other approved bills and British Government securities within six months of maturity; 1 per cent. Treasury Bonds and other gilt-edged stocks within six months of maturity; and other collateral respectively.

On July 1st more normal conditions prevailed and some banks resumed buying August and September Treasury bills at ½ per cent. after having held off for most of June. Discount rates, which became firmer during June, have now relapsed to their previous minimum levels.

The Bank Return.—French hoarding and withdrawals by the British public over the end of the month have raised the note circulation to a new high record.

Proportion	*26·3%*	*29·4%*	*28·3%*	*29·5%*	*20·3%*

The wide movements in Government securities and bankers' deposits are due to the incidence of the banking half-year. As explained in the previous Note, Treasury bill payments and maturities are arranged so as to thrust the brunt of June 30th upon the Treasury rather than the discount market. Hence the big increase in Government securities and the very limited increase in discounts and advances.

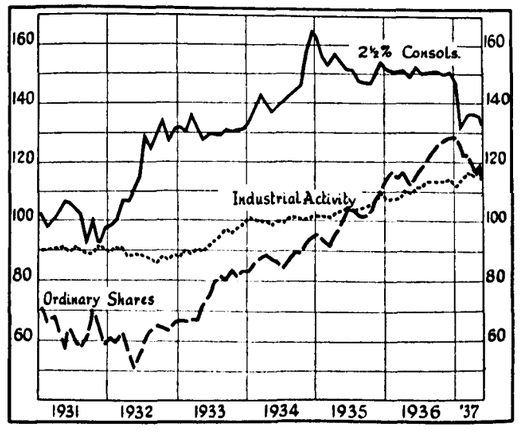
THE STOCK EXCHANGE

Investment Stocktaking

THE turn of the half-year finds War Loan below par for the first time since 1933. Ordinary shares, after the buffetings of the past six months, are 14 per cent. lower. Such is the context for the investor's mid-summer stock-taking. For the first half-year since 1931 he will find himself without capital profits. And if he was an unrepentant bull of gilt-edged during 1936, a fall of 9 per cent. in War Loan since the end of 1935 may now convince him that ultra-low interest rates belong to the past. Will the bullish purchasers of industrials at the peak prices recorded last November be forced, eventually, to admit the same excess of enthusiasm?

In the periodic reviews of the investment outlook in these columns, we have for some time adopted a cautious attitude regarding ordinary share prices. But during the past six months the market itself appears to have questioned the foundations of prosperity. It is true that the optimists still find abundant reason on their side. They cite *The Economist* index of business activity, now at a record high level; they point out that our industrial profits figures show an increase of 14½ per cent. for the first five months of the year, compared with 11½ per cent. for the same period of 1936. They welcome the expansion of overseas trade as a means of broadening the base of prosperity and absorbing the shock of any fall in building activity. Cheap money, it is said, remains the keystone of policy, while the replenishment of the Exchange Equalisation Account is tantamount to a guarantee against any further deflationary gold scares. Finally, the suggestions that anti-slump measures should be prepared now are dismissed as morbid economics.

This school in effect claims that our present recovery is essentially different from all previous bull markets, and denies that a "boom" (in the usual opprobrious sense) exists. But can the market's behaviour during the past six months be interpreted to fit this thesis? The setback may be explained away as the result of a succession of unfortunate events, fortuitous and unrelated. Thus, the first attack came in the gilt-edged market, which proved vulnerable to re-armament finance and rising commodity prices. Yet, if these influences had been ephemeral, would the gilt-edged apologists have failed so completely to persuade the market that long-term interest rates depend solely upon the Treasury's dictates?



There followed the first of the gold scares, which checked the boom in commodities and commodity shares, and brought rout in the Kaffir market. It may be argued that the scare was unreasoning, and that its recurrence is unlikely. But it disclosed fundamental weakness in the Kaffir market, among international stocks, and finally in domestic industrials. For a time, the market threatened to degenerate into a ragged retreat, and only the grant of co-operative support to "deserving" weak positions restricted the range of casualties. After an uneasy spell of consolidation, blow rained upon blow. N.D.C. wrought consternation in a highly sensitive market, out of real proportion to its fiscal terrors, and it was followed by a more severe gold scare, attended by heavy selling in London and Johannesburg.

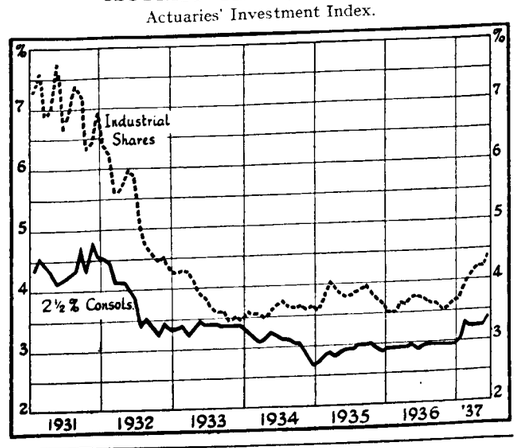
Such are the broad influences which have affected the speculative markets. They have been heightened, of course, by the prolonged reaction in Wall Street and by the growing anxieties of the French economic position. They are all extraneous, in the sense that they do not arise directly out of the present economic situation in this country. But history shows that the check to long bull markets often appears fortuitous at the time. There may be no visible cracks in the market situation until the tremors in some other economic hemisphere reveal its weaknesses. It is, therefore, significant that the market now lacks most of its former resilience. Much was hoped from the substitution of a new N.D.C. for the old, but the market's performance was disappointing. Nor has the alleviation of the gold problem this week brought more than transient encouragement.

The industrial markets, in short, are now appreciably more sensitive to bad news than to good. The first chart below, which sketches the course of gilt-edged and industrial securities against the background of business activity since 1931, suggests several reasons for the change in sentiment. The optimists rightly point to the high level of industrial activity, but the purchaser of ordinary shares, who expects advancing industrial activity and equity earnings, requires progressive prosperity.

SECURITY VALUES AND INDUSTRIAL ACTIVITY, 1931-1937

Actuaries' Index of 2½% Consols; *Financial News* index of ordinary shares; *The Economist* index of business activity. 1928=100 throughout.

His concern is not that industrial activity may decline in the near future—of that there is no present sign—but rather that the curve may have reached a high plateau. When production in many industries is straining capacity to the full, and costs of materials and labour are rising, the discounting of prospective profits should be tempered; the low yields on industrials which were appropriate to the recovery phase should be increased to more normal returns.



Comparison of the yields on Old Consols and industrial shares since 1934 shows that, so far, the rise in ordinary share yields merely counter-balances the rise in gilt-edged rates. Actually, the over-all average of 4.39 per cent. on the mixed bag of industrials comprised in the Actuaries' Investment Index covers a wide spread of ordinary share yields. To-day, a 4½ per cent. yield applies exclusively to such typical stable industrials as Imperial Chemical Industries and Imperial Tobacco. At the other end of the scale may be found the warning lights—London Brick yielding 7½ per cent. and Richard Thomas a few shillings less. Among the intermediate groups, the investor may distinguish coal and cement shares yielding about 5 per cent., marginal railway preferences in the 5¼-5½ per cent. range, and shares affected by rising costs (like motor issues) or by a limited market to yield up to 6 per cent. or more.

It is impossible, then, to define some "correct" margin between industrial and gilt-edged yields as a basis for investment policy. A "normal" industrial yield is merely an abstraction which merges individual investment differences. But examination of the course of security prices and yields during the first half of the year, which appears on this page, suggests that the recent market adjustment is not yet completed. Some shares are still valued in the expectation of larger dividends this year or next. But if the market's recent behaviour holds, these will be fruits already discounted, rather than the inspiration for a new advance in share prices. And if due allowance is made for the rattling of sabres (themselves manufactured from ploughshares) the cautionary moral should be underlined for the conservative investor.

Does this conclusion rule out all further prospect of capital appreciation for the speculative investor? An affirmative answer would deny the possibility that the market may produce an Autumn rally, although it may not achieve impressive dimensions. More scope, probably, lies among commodity shares than among the general run of industrials. If we may adopt a cautious optimism regarding the commodity share outlook, the same reasoning would appear to apply to "commodity bonds," overseas rail stocks, overseas bank shares, and the shares of companies engaged primarily in the exporting or merchanting trades. The market, however, is probably right in concentrating its interest in this group upon the leading shipping and overseas bank issues.

SECURITY YIELDS, 1931-1937

Actuaries' Investment Index.

Investors, of course, will be grateful for the assistance of a reviving export trade in maintaining the present basis of prosperity. But recovery has been largely based on two domestic pillars—the building boom and re-armament. Even if an eventual decline in these industries were broadly compensated by recovery in the export trades, particular industries and shares would still be adversely affected. The market's present attitude towards building material shares and certain steel issues thus appears to be wise. Investors, therefore, must balance their books in a more sceptical frame of mind than at any time since recovery began. Profits are still rising; industrial activity is at a record level; and the threat to gold has been removed for the time being. But while there is still a plethora of short-term credit, long-term rates are tending to rise, and their effect upon fixed-interest securities and the more stable industrial shares has probably not been completed. The technical position of the markets—perhaps even the Kaffir market—should be strong enough to meet any immediate internal shocks, but no market can remain immune from the possibility of unfavourable political developments abroad. The new half-year, if all goes well, should see greater stability in the market, but mere stability will not attract the speculative buyer on an appreciable scale. Successful investment at an advanced stage of the recovery cycle involves the greatest selectivity. If the investor finds choice too difficult, he must seek peace of mind in a deposit account until the outlook is clearer.

Investment Notes

Course of Share Values—June has been a disappointing month in the London market, and scarcely less disappointing for New York. But whereas Wall Street has lately made efforts to hoist itself clear of the resistance levels of last autumn, London has been unable to respond to its few minor blessings. The new N.D.C., for instance, produced no more than transient relief, while the further "incidents" in the Spanish civil war caused considerable uneasiness which was not wholly appeased. Even the announcement of the £200 millions expansion of the Exchange Equalisation Account attracted buyers for no more than a few hours. London is technically ripe for response to favourable news, but buyers still remain aloof. This lack of initiative is perhaps the most chastening portent in the investment

outlook. In the gilt-edged market, the same moral must be drawn, for the results of recent trustee issues reveal no check to the steady rise in long-term interest rates. Further, the increase in the Exchange Fund can be interpreted as a bearish influence on gilt-edged in the long run. But if tonic talk has had no effect in London, it can hardly be claimed that it is much more successful in New York. The fight to a finish between the C.I.O. and the steel "independents" has set a discouraging background for the market, and its link with the unhappy condition of the European Bourses was closer than usual last month. Yet the volume of trading, as in London, remained quite sub-normal. Both markets saw the half-year out in a state of rather uneasy calm, but Wall Street, as befits its prospects, was slightly the more progressive.

OFFER TO NEW READERS

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached :

To The Publisher, Economist Newspaper Ltd.,
8 Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward it to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

The prevailing tendency of the ordinary share markets is reflected in the Actuaries' index of 177 industrial shares, which on Tuesday last stood at 82·6, against 85·2 five weeks ago, and 83·1 a year ago. The respective yields are 4·39, 4·22 and 3·76 per cent. We give below the usual monthly indices of fixed interest securities, and a selection of the separate share indices :—

Group (and No. of Securities)	Prices (Dec. 31, 1928 = 100)			Yield (%)		
	Year Ago (June 30, 1936)	Month ago (May 25, 1937)	This week (June 29, 1937)	Year ago (June 30, 1936)	Month ago (May 25, 1937)	This week (June 29, 1937)
Fixed Interest						
2½% Consols	152·7	135·9	133·2	2·92	3·28	3·35
Misc. industrial deb. (20)	125·7	121·7	121·7	3·92	4·08	4·08
Misc. industrial pref. (47)	121·6	118·9	118·1	4·22	4·37	4·39
Ordinary						
Building materials (5) ...	101·6	96·7	93·6	4·75	5·60	5·76
Coal (7).....	98·9	116·8	121·8	3·43	3·65	3·66
Cotton (6)	36·5	49·8	46·7	2·22	2·28	2·34
Elec. light and power (16)	134·6	125·5	116·8	3·79	4·26	4·58
Oil (5)	82·6	97·9	93·7	3·09	5·30	6·19
Stores and catering (17).	87·4	80·3	75·6	3·58	3·83	4·01
Brew. and distilleries (21)	146·2	148·1	144·2	3·99	4·29	4·40

It will be seen that several of the component industrial groups show fairly severe falls during the month; and only coal shares have achieved an improvement. Industrial debentures continue to resist the stiffening of interest rates.

* * *

Hungarian Debt Agreement.—The task of the Hungarian Government in seeking a general and lasting settlement of Hungary's foreign debt has met with initial success this week. Negotiations which have been proceeding in London for some time have culminated in an agreement covering the 7½ per cent. League Loan of 1924 and the 1930 and 1931 Treasury bills. The League Loan is the only Hungarian long-term issue on which payments in foreign exchange have been made during the depression. In 1933 the coupons were paid in full, but in the following year the rate was reduced to 55 per cent. and since 1935 only 50 per cent. of the nominal interest has been transferred in sterling. Under the new agreement concluded with the League Loans Committee, the Hungarian Government undertakes, as from February 17, 1938, to meet 60 per cent. of the nominal interest. Further, a sinking fund of 1 per cent. per annum will commence on August 2, 1940. As a result, the bonds are now quoted at 59½ against 58½ a week ago. Hungary's willingness and ability to enter the new contract reflects credit on her financial administration. But she has not made these concessions without obtaining an important *quid pro quo;* for all partly-paid coupons are to be considered fully discharged by the payments already made upon them. This concession would mean that the pengö Treasury bills and balances at present deposited in respect of the untransferred portion of the service will be returned to the Government. The acceptance of these terms by the League Loans Committee, however, will doubtless be confirmed by the bondholders. For while it is within Hungary's capacity to transfer, say, 75 to 80 per cent. of the League Loan service, account must also be taken of the country's heavy foreign indebtedness. Holders of other long-term loans (except Government loans which have received pengö Treasury bills only) have received full interest up to a maximum of 5 per cent. in pengös. Four years ago these "coupon pengös" could be converted into sterling or dollars at parity rates. Owing to intensified exchange control, the rates have steadily fallen, and holders can now get only about 25 per cent. in foreign exchange. Negotiations for a revised agreement on these loans are at present in progress, and it would seem in the Hungarian Government's interest to resist any temptation to rest on its oars. Hungary's foreign creditors have in the past accepted treatment according to Hungary's capacity of transfer; their future treatment should, therefore, reflect a fair measure of economic recovery experienced in Hungary.

ODEON
THEATRES LIMITED

(Incorporated under the Companies Act, 1929.)

SHARE CAPITAL - £6,000,000

Authorised	Divided into	Issued or to be issued
£4,000,000	**in 4,000,000 6 per Cent. Cumulative Preference Shares of £1 each...**	**£1,465,000**

		£2,315,000
£6,000,000		

DEBENTURE STOCK AUTHORISED AND NOW BEING ISSUED:
5 per Cent. First Mortgage Debenture Stock £1,800,000

The Subscription List will open and close on WEDNESDAY, the 7th day of JULY, 1937, for an

ISSUE OF

£1,800,000 5 PER CENT. FIRST MORTGAGE DEBENTURE STOCK AT £99 PER CENT.
(Interest payable 1st January and 1st July)

and 180,000 ORDINARY SHARES OF 5s. EACH AT PAR

The Debenture Stock is to be constituted by a Trust Deed in favour of Eagle Star Insurance Company Limited as Trustee, and secured by a first specific charge on 86 Cinema Theatre Properties, valued by Messrs. Harris and Gillow and Messrs. Goddard and Smith at the sum of £3,648,450. In addition, the Stock will be further secured by a floating charge on the whole of the undertaking and remaining assets of the Company, including any uncalled capital, but the Company reserves the right to create first specific mortgages or charges to secure Debenture Stock or otherwise on any properties not covered by the said first specific charge, together with further floating charges on the undertaking and assets of the Company (including uncalled capital), such floating charges to rank pari passu with the said floating charge. The charges for securing the present issue will rank subject only to certain existing mortgages and debentures which will be redeemed out of the proceeds of this issue.

DIRECTORS:

OSCAR DEUTSCH (Director of Cinema Companies), Chairman and Managing Director.
HON. PETER RUDYARD AITKEN (Director, Aitken English Company Limited).
GEORGE ARCHIBALD, J.P. (Director and Secretary, United Artists Corporation Limited).
FREDERICK STANLEY BATES (Director of Cinema Companies).
SYDNEY ALFRED BENNETT (Joint General Manager, Eagle Star Insurance Company Limited).
WILLIAM GEORGE ELCOCK (Director of Cinema Companies).
MAURICE SILVERSTONE (Chairman and Managing Director, United Artists Corporation Limited).
EDWARD COLEMAN SIMMONS, Solicitor.

The Company owns 86 Cinema Theatres in London District, Scotland, Wales and the Provinces, 15 being Freehold (one being subject to a perpetual rent charge), two are part Freehold and part Leasehold, and 69 are Leasehold, 60 of which have over 90 years unexpired. In selecting the sites of the theatres, 61 of which have been erected during the last five years, special regard has been paid to the requirements of the districts, particularly the new suburbs of London and the large provincial towns. In the majority of cases car parks are provided.

Profits, after charging all working expenses, depreciation and amortisation of leaseholds and after charging remuneration of Directors on the basis of their agreements with the Company, have, during the past three years, been as follows :—

	No. OF THEATRES OPEN FOR WHOLE YEAR.	FOR PART YEAR.	
52 weeks ended 5th January, 1935 ...	32 ...	13 ...	**£71,883**
52 weeks ended 4th January, 1936 ...	45 ...	18 ...	**£139,528**
52 weeks ended 2nd January, 1937 ...	60 ...	26 ...	**£225,509**

The Company has also acquired a controlling share interest in London & Southern Super Cinemas Limited, which, with its subsidiaries, owns or controls 10 Cinema Theatres, and also in Entertainments & General Investment Corporation Limited, which, with its subsidiaries, owns, controls or manages 54 Cinema Theatres. In addition, the Company has entered into management agreements with Companies owning 71 other Odeon Theatres (some of which are in course of erection), including ODEON ALHAMBRA, LEICESTER SQUARE, LONDON.

THE COMPANY WILL NOT ENGAGE IN FILM PRODUCTION, EITHER BY ITSELF OR ANY SUBSIDIARY COMPANY.

The total estimated profit in a full year is £460,000. On this basis the service of the Debenture Stock now being issued, after making allowance for income tax, would be covered over 3½ times and, after provision therefor and for the dividend on the 1,465,000 issued Preference Shares, there would remain available for reserves and dividend on the 3,400,000 Ordinary Shares issued and being issued for a full year the sum of £246,100, equivalent to nearly 29 per cent. on such Ordinary Shares.

Copies of the full Prospectus, on the terms of which alone applications will be considered, and Forms of Application can be obtained from the

Foreign Bond Movements.—The foreign bond market during June showed few outstanding features, but while the rest of the market was reactionary, the index of foreign bond prices calculated by the Municipal and General Securities Company has advanced slightly from 116.2 to 116.6 (average January-June, 1934 = 100). Movements in the component indices are shown below:—

Note: Figures in brackets show number of bonds.

The feature of the month (although it is not reflected in the European index owing to weakness in other centres) was the rise in Hungarian issues, in anticipation of this week's debt agreement (discussed in the preceding Note). Most of the Chinese bonds closed higher, but their effect on the total index was broadly compensated by comparable fall in South African Provincial issues, the majority of which are in default.

'RESULTS'

deals with Advertising principle and method: it covers 25 years of working in Advertising, mostly successful.

'Results' will be sent on request to Heads of Businesses and responsible Executives who will surely encounter much that is of interest, and some degree of help, in its 72 practical pages.

LAURANCE HOLMAN
Advertising Service

Founded 1916
Museum 4303 (3 lines)

About 'RESULTS'
the new work on ADVERTISING
by Laurance Holman
reprinted from 'SHELF APPEAL'
(*August* 1936 *issue*)

WHENEVER advertising men congregate, the talk has a habit of turning to the merits and demerits of the different advertising agencies. Someone then is sure to raise a laugh by dismissing them flippantly according to their rumoured characteristics. For instance, one is too arty, another too research-minded, another is too stodgy, another too imitative, uninspired, mean, generous, etc. Few agencies can escape such derogatory remarks. But an almost striking and solitary exception is that small, highly individual, compact agency in Bedford Square known as the Laurance Holman Advertising Service, whose founder recently felt such a literary urge that he published last month a little book entitled *Results*. This book makes good reading, because while it unquestionably does a lot of selling for the agency, it is crammed full of interesting selling and merchandising facts and a wealth of common sense.

Although Holman makes a comfortable livelihood out of his business, he is no out-and-out money-maker, and is frequently credited with having advised more clients to reduce their advertising expenditure than increase it. In these days when accounts change from agency to agency with startling regularity, Holman is in the strong enviable position of having lost fewer accounts than any other agency in the country.

HOLMAN ADVERTISING

Company Notes

Imperial Airways Issue—Extraordinary confusion has resulted from the Imperial Airways issue this week. We referred in the last issue of *The Economist* to the dubious policy of fixing a price of 30s. for the new ordinary shares without conceding specific rights of allotment to existing shareholders. On Monday, the First Conversion Investment Trust obtained a concession during the hearing of an injunction in the Courts. By this settlement, the directors of Imperial Airways undertook to grant existing shareholders the right to apply for one new share for every share held up to 6 p.m. on Wednesday, and this closing time was subsequently extended to noon on Friday. This solution appeared satisfactory to existing shareholders, but it has caused no little trouble in the market. The Stock Exchange Committee on Tuesday morning posted a notice under Rule 114, stating that the new issue constituted a right, and that claims could be made under Rule 114. It is, of course, well established that "pink forms" granting unspecified preferential allotment cannot be claimed from sellers, unlike new issue rights. The decision of the Committee was plainly inevitable, but—equally inevitably—it conflicted with the previous valuation of the shares, which assumed that the new issue carried only preferential allotment, without specific rights. The shares thus closed at 41s. 3d. on Monday, and opened on Tuesday at 36s. 3d. ex rights.

★ ★ ★

Several highly complicated issues arise from the affair. It is widely held in the market that its handling was unnecessarily brusque to existing shareholders. It is instructive to examine the position of an investor who bought his shares at, say, 55s., on the assumption that rights would be granted in the new issue, watched the shares fall to under 40s. on the report that no rights would be given, and then sold them. He now finds that he must satisfy the claims of the buyer—who was not, of course, registered on June 18th—for the rights. Similarly, the new buyer—or rather his broker—is put to the inconvenience of claiming rights for which no provisional allotment letters are in issue. In the short period which has been allowed for tracing sellers, brokers have been frequently compelled to protect their clients by lodging applications pending later signature by the buyer. Some shareholders, paradoxically, will be worse off as a result of the concession of rights, if they have no opportunity or no wish to apply for new shares. If the issue had been arranged on rights terms from the start, these investors would have received a saleable interest; but they must now apply for the new shares if they wish to obtain any benefit from the concession. Meanwhile, the benefit has shrunk to small dimensions. The net effect of the unfortunate arrangement is that Imperial Airways shares have lost a substantial part of their market price overnight. On the long view, there may be some reason for adopting a more cautious valuation for the shares, in view of the vast expansion in the company's scale of operation. But an arbitrary reduction in share values arising from technical mischances of this sort serves nobody's advantage.

★ ★ ★

Union Cold Storage Accounts.—The public holds £10,403,582 of the preference capital of this concern. Its subsidiaries hold £596,418 of the 10 per cent. preference stock, and the £1,000,000 ordinary capital is in private hands. Its accounts are among the least informative holding company documents. Interests in subsidiaries (though partly qualified by the auditors) account for over £9 millions, out of total assets of £17¼ millions. During the past four years, disclosed profits have not varied by more than a few hundred pounds, while the ordinary capital receives 10 per cent. for the thirty-fifth successive year. In short, there is no sign in the accounts of any reduction in earnings, the fear of which led the directors to seek a reduction in the preference dividends

three years ago. The following analysis of recent profits must be regarded as an example of holding company accounting, rather than a record of group earnings:—

	1934	1935	1936
	£	£	£
Profit	962,125	964,049	964,895
Depreciation†	125,000	125,000	125,000
Fees and interest	14,619	14,494	8,988
Preference dividends	720,000	720,000	720,000
Ordinary stock:—			
Earned	*102,506*	*104,555*	*110,907*
Paid	100,000	100,000	100,000
Earned (%)	*10·3*	*10·6*	*11·5*
Paid (%)	10	10	10
Carried forward	206,103	210,658	221,564

† Reserve also increased in each year by transfers other than from profit and loss account.

Preference shareholders, therefore, must content themselves with the knowledge that disclosed profits are less than the aggregate net earnings of the group. Yet the impact of the Anglo-Argentine trade agreement can hardly have left total profits unaffected. The balance sheet refers to "considerable claims for taxation" which are in dispute, against which substantial free reserves are available. The auditors sign their report "subject to the adequacy" of these amounts. It must be confessed that this qualification adds a further feature to accounts which are already by no means simple to interpret. Although the preference shareholders may in theory be placed on the footing of outside interests, their preponderant financial stake in Union Cold Storage surely entitles them to some fuller indication of the group's real earnings. They may, however, console themselves that N.D.C., to which the company is particularly vulnerable, falls on the ordinary stockholders to the extent of nearly 4¼ per cent.

★ ★ ★

Bleachers' Association Meeting.—Increased profits are nowadays attributed to trade expansion; laggard profits are usually explained by rising costs. To ascribe the improvement in Bleachers' earnings almost entirely to economies in production costs is not only unusual, but also creditable to a management which has fought adversity so long. But while shareholders may feel gratified with the payment of part of the preference arrears and with the knowledge that most of last year's improvement arose from greater efficiency, they will hardly conclude that immediate prospects are roseate. Sir Alan Sykes' interesting explanation of the absence of an increased volume of turnover shows that the recovery in the cotton industry is irregularly distributed. He pointed out that the general improvement about which so much had been heard had primarily benefited spinning. Between 1930 and 1936 production of cotton yarn rose by 30 per cent., but in the same period the production of cotton piece-goods—the raw material of the Association—increased only by about 1 per cent. Apart from a larger demand for yarn from the woollen and worsted and hosiery and lace trades, exports had risen by 10 per cent. between 1930-36—due largely to last year's recovery. But total exports of bleached cotton piece-goods fell by 30 per cent. in the same period, the greatest improvement being recorded by countries—particularly British colonies—in which import quotas operate. The outlook for the textile finishing industry in an autarkic world is still clouded.

★ ★ ★

Metal Box Progress—This concern is favoured by a strong upward secular trend, apart from the general stimulus of recovery. Its latest profits are, accordingly, of a highly satisfactory character. Total income has jumped from £346,817 to £446,133, while the amount earned for the ordinary capital has increased from £176,827 to £233,600. The 15 per cent. dividend on the ordinary shares (against 12½ per cent. for the year to

TRUST OF RUBBER AND TIN SHARES

The great improvement in the organization of the Rubber and Tin Industries during the last decade is attracting the attention of discriminating investors. Production is rationally controlled and consumption increasing, owing in part to a rapidly widening demand for these commodities.

For the first time investors have the opportunity to purchase units at the convenient price of about 2/- each, representing a wide-spread interest in outstanding Rubber and Tin producing companies, which have been selected by experts for inclusion in the approved list.

The portfolio of the Trust covers 85 rubber companies and 20 tin companies, in which approximate proportion the funds of the Trust will be invested initially. The Managers are permitted under the Trust Deed to vary the investments within the approved list.

A fully descriptive Booklet, the basis of all transactions, can be obtained from the Trustee, MARTINS BANK LTD., from any stock-broker or bank, or direct from the Managers:

SPECIALISED UNIT TRUSTS LTD.

KING'S HOUSE, KING STREET, LONDON, E.C.2.

Telephone: METropolitan 6531. *Telegrams:* Brigenfix, Cent. London.

March 1936) is in fact covered by earnings of 28 per cent., and the reserve appropriation is doubled, from £50,000 to £100,000, with funds to spare. The report is comprehensive, not only for its financial information—it includes a consolidated balance sheet showing satisfactory group strength—but also for the detailed description of the year's work. Since the new money raised last year was not fully productive, the latest trading results must be regarded as distinctly satisfactory. Further expansion on the decisive but scientific lines adopted in the past is apparently envisaged, and the directors are offering one new ordinary share at £3 for every £10 ordinary stock held. The undertaking appears to have achieved satisfactory progress at home and abroad, and the £1 ordinary stock units, at 3¼ cum dividend and rights, may be regarded as sound long-term holding, with a yield (4.8 per cent.) to match their promise.

* * *

Patons and Baldwins.—Further progress is shown in the latest report of this woollen spinning concern. Total profits have increased from £566,508 to £610,959, being struck, as usual, after provision for exchange losses. Since the usual allocations are little changed, the amount earned for the equity is increased from £327,490 to £374,188, but the rate earned on the ordinary capital (after the issue last July) is slightly reduced. Nevertheless, the 12½ per cent., tax free, dividend is comfortably covered by earnings. An analysis of the recent profits record is given below:—

	Years ended April 30		
	1935	1936	1937
	£	£	£
Profit*	378,983	566,508	610,959
Depreciation	114,484	127,911	126,952

Paid	159,929	199,911	239,894
Earned (%)	*10·4*	*20·5*	*19·5*
Paid (%)	10	12½	12½
Reserve	Nil	125,000	125,000
Carry forward	61,330	63,909	73,203

* After provision for exchange losses.

A year ago the chairman observed that the results for 1936-37 would be satisfactory, provided that wool values were maintained. This factor, of course, primarily determines the swing of the company's profits, quite apart from the level of its manufacturing activity. And since stocks stand at the high figure of £3,569,208, having advanced from £3,148,881 a year ago, a cautionary distribution policy appears justified. In addition, the company last year had £385,000 set aside as a stock reserve, while its general reserve and carry-forward amount to almost £1,000,000, apart from a capital reserve of £479,787 arising from last year's new issue premiums. The company, therefore, is well prepared to meet falling wool prices, while the current quotation of the ordinary stock of 63s. offers the yield of about 5½ per cent. gross. This price appears to take due account of the stock risk.

* * *

Palestine Electric Progress.—The profits of the Palestine Electric Corporation show but little sign of the disturbed political conditions of the past year in Palestine. The rate of increase in gross revenues, in new consumers and in units sold was not so large as in 1935, but the company deserves credit for its further progress, and for maintaining a satisfactory service throughout its large area. The latest profits are analysed below:—

	1934	1935	1936
	£P.	£P.	£P.
Income	363,900	488,443	577,365
Power house and other expenses	170,358	248,011	340,557
Income tax and contingencies	25,000	40,000	25,000
Interest (net)	28,031	9,517	*Cr. 5,400*
Preference dividends & redemption	...	33,480	39,000
Ordinary and "A" ordinary shares (tax free):—			
Earned	*140,511*	*157,435*	*178,208*
Paid	70,322	115,322	130,321
Earned (%)	*15·0*	*10·2*	*10·3*
Paid (%)	7½	7½	7½
General reserve	70,000	50,000	50,000
Carried forward	34,240	26,353	24,240

The 7½ per cent. tax free dividend which is paid for the third successive year is covered by earnings of more than 10 per cent. and an allocation of £50,000 is again made to general reserve. The capital outlay during recent years has been heavy, and no less than £P2,931,958 has been spent on the Corporation's two concessions. But the rapid expansion in units sold from 11·6 millions in 1932 to 65·5 millions in 1936 has justified the expansion programme, and the issue of further share capital which is envisaged in the report will enable the undertaking to meet the growing demand on its power network. The £1 ordinary shares are quoted on the London market at 38s. 9d. to yield £5 7s. per cent. They are not free from political risk, but the technical position of the Corporation is progressive.

OPPORTUNITY FOR

Investment in rising Real Estate market

IN AMERICA

Business recovery in the United States of America has always presaged advances in real estate. There are today positive indications in that country that the real estate market will closely follow the present upward trend in all other market values. A responsible real estate broker in New York City, with a record of years of successful achievement, solicits inquiries from British investors who are interested in American real estate investments and conservative real estate mortgages. Highest references furnished.

Zinc Corporation.—The 1936 report of the Zinc Corporation shows a substantial increase in gross revenue which is not fully reflected in net profits. The increase in gross profits arose mainly from higher metal prices, although the zinc ore was of higher grade, and the percentage extraction of other products was increased. The quantity of ore treated was slightly below the 1935 total. Interest and dividends produced an increased sum; but naturally there was no repetition of the non-recurring profit of £23,100 credited in 1935. Mining expenditure was charged with the full increase in wages granted towards the end of the previous year. Average costs thus rose to 28s. 3d. per ton, compared with 24s. 10d. for 1935. Dividends paid for the year total 50 per cent. on the preference shares and 60 per cent. on the ordinary, as compared with 42½ per cent. and 45 per cent. respectively for 1935. The financial results of the past three years are presented below in sterling:—

	1934	1935	1936
	£	£	£
Gross value of output	768,860	1,042,940	1,207,690
Gross mining profit	85,950	292,910	354,910
Interest, dividends, etc.	64,960	90,580	78,520
Proportion of taxes, office expenses, etc.	19,690	59,490	64,000
Net profit	131,230	324,000	369,440
Fixed 20% Pref. dividends	49,140	49,140	49,140
Participating dividends	67,410	202,230	269,650
Mine development and plant	40,000	50,000	50,000
Carried forward	51,490	54,710	55,360

Appreciable changes are shown in the company's portfolio. Gilt-edged securities now stand at £144,800 against £344,900, while holdings in associated companies amount to £487,000 compared with £363,680. This expansion doubtless reflects the transfer of the company's southern leases to the New Broken Hill Consolidated. Cash on December 31st stood at £246,590, against £141,540 a year earlier, an increase which will meet the heavy development programme. A net expansion of 100,000 tons is reported in the lead lode to 3,100,000 tons. Both the preference and the ordinary yield approximately 6 per cent.

Other Company Results.—The recent spate of company reports is tending to diminish, and our usual analysis of profit and loss accounts, on page 51, includes about 40 further companies. The reports are discussed on the same page under the heading "Shorter Company Comments."

* * *

Company Meetings of the Week.—Reports of company meetings will be found from page 38 onwards in this issue. Reviewing the year's results at the *National Bank of New Zealand* meeting, Sir Austin Harris emphasised the need for a more equitable method of assessing banks for income tax. The Earl of Selborne, addressing *Bank of British West Africa* proprietors, explained that the increased purchasing power of farmers was attributable to a conjunction of good crops and higher produce prices. At the *Trust Company of London and Scotland* meeting, the chairman remarked that the rise in net revenue, though partly due to larger investments, was also helped by increased revenue from investments previously held. Sir Alan Sykes' survey at the *Bleachers' Association* meeting is discussed on page 29. In his address to the shareholders of *George Newnes*, Sir Frank Newnes described the various progressive features during the past year. Interests were more widespread, while advertising revenue continued to expand. Two of the newer publications had fully established themselves. At the *Barclay Perkins and Company* meeting, Lieut.-Col. R. W. Barclay referred to the company's policy of keeping its licensed houses in good repair. The chairman explained to the *Hovis, Limited,* meeting that a conservative distribution was justified by new taxation and by the desirability of keeping resources in hand to meet sudden turns in the wheat market. Mr John Ismay, at the *John Ismay and Sons* meeting, pointed out that despite greatly increased sales of lamps, trading profit was not much higher, owing to keen competition. In reviewing the various interests of the *Globe Telegraph and Trust Company*, the Earl of Midleton stressed the satisfactory yield received from their holdings in American utilities. At the *African and European Investment* meeting, Mr R. W. Townsend referred to the important holding in Amalgamated Collieries of South Africa. Discussing the future of gold at the *Gold Fields Australian Development* meeting Mr John A. Agnew reaffirmed his earlier view that, if international trade were to be revived, a common measure of value was necessary. There was, he declared, no prospect of agreement on the basis of any common measure other than gold. Captain H. B. Jameson, at the *East Rand Consolidated* meeting, referred to developments at the Vlakfontein and the Zonnestraal farms. It was pointed out to *Gordon (Malay) Rubber Estates* shareholders that a proportion of output was sold in liquid latex form, giving a higher return which more than compensated for the higher cost. Mr F. E. Maguire, at the *Sabrang Rubber Estate* meeting, reported that good progress had been made in rejuvenating the property. Lord Hirst emphasised at the *General Electric* meeting that the re-armament programme had played but a small part in last year's progress, but that export business had, in fact, closely approached the record figures of 1929-30. Attention was drawn by Mr Vincent Yorke, at the *Mexican Railway* meeting, to the remarkable increase of 22 per cent. in gross receipts in the first four months of this year, while expenses had not risen to nearly the same extent. *Ohlsson's Cape Breweries* shareholders were informed by Mr W. I. Buxton that opportunities had been taken to buy new properties and to assist licensees to improve their premises. At the *Great Boulder Proprietary Gold Mines* meeting, Mr Claude de Bernales referred to the improved labour situation as a result of the new award by the Arbitration Court.

FINANCIAL INDEPENDENCE can be every widow's INHERITANCE

Make certain that *your* widow would be free from financial anxiety. A "Widow's Income" Policy will not only ensure your own peace of mind, but will provide the comfort and security of a guaranteed income to your wife for her lifetime if she is left to face the world alone.

Full particulars will be sent at your request.

THE WEEK IN THE MARKETS

THE STOCK EXCHANGE

SETTLING DAYS

TICKET: JULY 6 ACCOUNT: JULY 8

FOR a short space on Monday, it appeared that the expansion of the Exchange Equalisation Account's resources had given the market that confident lead which, for so long, it has been incapable of producing on its own account. Yet optimism again proved short-lived. The initial effects were quickly lost amid pre-occupation with the French crisis, and a further period of stagnation ensued while Paris remained closed. Prices in all sections crumbled once more, although Thursday again showed the market struggling—this time with some slight success—to stop the rot.

Gilt-edged opened with an all-round fall which brought War Loan below par for the first time since 1933, with Conversion 3½'s closely in step. Old Consols, curiously enough, found a few buyers, and also managed to resist the further fall in War Loan on Tuesday and in Local Loans on Wednesday. A late recovery in gilt-edged on Wednesday was maintained, after more than one false start, on Thursday. A demand for recent investment scrips was held to explain part of the fall in gilt-edged, and the L.C.C. scrip, in particular, was appreciably better at $\frac{8}{16}$ discount at Wednesday's close.

Chinese bonds continued firm in the foreign market, with the railway issues in the lead. Japanese bonds, however, were affected by the Amur River incident. An early rise in Brazilian issues was well maintained. French rentes were on a nominal basis for a time, and German issues were affected by the political situation.

Home rails opened without any enthusiasm, and quotations were hardly affected later in the week. Transport "C" stock fell to 79 on persistent selling, further stimulated by the traffic loss. Cordoba debentures improved in the overseas rail market, but Argentine issues were otherwise dull.

The week-end scribes failed to arouse enthusiasm in the industrial market. Coal shares opened with some support for Wm. Cory, but failed to hold their modest gains. Steel shares enjoyed a small turnover from the first, and quotations registered minor losses on succeeding days. A sharp advance in Cable and Wireless "A" was not held. Motor shares began well, but support soon dwindled. Interest in Parnall Aircraft revived on the circular to shareholders, but here also initial gains soon evaporated. Electrical equipment shares could boast little more than a firm tone, and reduced support was followed by lower quotations. Breweries at first were inclined to go better, but were overcome by general neglect. Distillers, which reached 115s. 7½d. at one time, closed no better than 110s. on Thursday's dividend announcement of 22½ per cent., against 20 per cent. Paton and Baldwins rallied a little on the report (discussed on page 30), but among the industrial leaders falls extended to Woolworth, Courtaulds, British Oxygen, Turner and Newall, and Imperial Chemical Industries. Tobacco shares were neglected, shedding small amounts. Shipping shares were the only relieving feature in the mid-week market.

Oil shares were again disappointing this week. The market of course, was sensitive to the French situation, and safeguards had already been taken against selling of Paris favourites like Royal Dutch and Shell after the Bourse re-opened on Thursday. Trinidad issues remained dull, and a small investment demand for Anglo-Iranian and Burmah Oil kept these two issues steadier than the rest. Conditions in the rubber market remained dismal, with limited business, both on behalf of professional operators and the public. Anglo-Dutch in particular reacted sharply on the 7 per cent. dividend. Tea shares attracted the minimum of attention.

A feeling of greater assurance at the opening was not held in the Kaffir market, and the market was soon concerned with new problems arising from the French crisis and the closing of the Paris Bourse. There was a slight recovery tendency in mid-week, although it was largely limited to the investment Kaffirs, like Crown Mines and Sub Nigel. The Far West Rand issues were again depressed after a false promise at the opening, and were no better than steady at the close on Wednesday. Diamond shares opened dull, and were later affected by Paris selling, but copper shares tended slightly to improve.

OVERSEAS STOCK EXCHANGES

NEW YORK

WALL STREET'S mood has been inconsistent, but on balance a slight improvement in sentiment occurred, and the market has refused to pay much attention to disturbing news. At the outset, there was considerable selling, particularly in steel, rail and motor shares, with small general losses, due primarily to the truculent attitude of Germany and Italy, and also to symptoms of continued aggressiveness on the part of the Administration. On Tuesday, however, the market chose to ignore the fresh outburst of violence in the steel strikes, which had previously become less serious; nor did it pay any attention to the French crisis—no doubt because only the expected had happened. The volume of business remained small, but the tone was stronger, and small gains were common. U.S. Steel went ahead on the preferred dividend announcement. In mid-week, the brighter atmosphere persisted, steel and rail issues leading a recovery. *Iron Age* estimates steel mill activity at 76½ per cent. of capacity against 75 per cent. a week ago.

IN QUEEN VICTORIA'S REIGN

— 1854 — the House of Rattray was established. Now, as then, they specialise in the blending, tending and maturing of choice tobaccos — their fame is world-wide—their reputation unique. Unheeding of the modern craze for speed and output, the Rattray's tobaccos are still matured and blended under the same careful and leisurely conditions.

7 RESERVE

is skilfully blended from seven selected varieties of choice tobacco — no single flavour predominates.

Price: 2/1 per lb., post paid.
Send 5/4 for sample ¼-lb. tin, post free.
Export: 24/- per 2 lbs., plus postage.

Chas. Rattray

PERTH, SCOTLAND

Rattray's 3 Noggins tobacco has the full and generous strength of 7 Reserve.

PARIS

A month of crisis culminated in the closing of the Bourse for an "indefinite" period (actually June 29–30th). Until the bear speculators overwhelmed the Bourse on the tottering of the Blum Government, there was little tendency to discount a crisis. The market was restrained by the conviction that a drastic action must be enforced to meet the financial situation. The failure of the Blum Government to obtain its powers brought no immediate disturbance, for the Bourse was by then convinced of the task to be faced, whatever the complexion of the Government. A gloomy setting had already been staged on fears for the future of gold. Attention was then turned increasingly to home affairs, fraught with the certainty of new taxation. Internationals alone attracted support at this stage, but rentes recovered a little when stabilisation was optimistically canvassed. The Bourse marked time before M. Blum's resignation, and in the event behaved with surprising calm. Speculative buyers were attracted to many sections, including rentes, in the belief that the new Chautemps Government would devalue, and it was found necessary to raise cover margins. The closure of the Bourse on M. Bonnet's arrival, however, found the market nervous in the extreme.

BERLIN

The volume of trading in shares declined in June. The market was irregular and predominantly weak, but average quotations fell little below the end May level. Standard industrials were neglected, although chemicals were periodically active. Leading shipping shares gained on relatively favourable annual reports, and potash issues recovered after their heavy declines of the spring, though they lost part of their gains later. Firm markets developed in certain specialities, including Bemberg rayon, Stoehr wool, Harpener coal, and certain inactive real-estate companies. Copper issues were weak, and Steel Trust, Mannesmann, and some other heavy industrial shares closed lower. Commercial banks were steady, but Reichsbank, after a sharp advance in mid-[illegible]e, closed weak. Reichsmark bonds at first continued their [illegible]e and touched the year's highest point, but later reacted slightly, and the German section of Young Loan moved in accord. The turnover in dollar bonds was small. The official shares index (1924–26 = 100) for May was 111·80, against 110·57 for April, and for mark bonds 98·80, against 98·47.

	June 2, 1937	June 15, 1937	June 30, 1937

(c) New issue.

AMSTERDAM

Though keeping throughout a wary eye on foreign events, the Bourse was sufficiently encouraged by the domestic situation to put prices slightly higher, although trading often betrayed limited investment interest. Most of the news from France exerted a depressing influence, but the constitution of the new Cabinet was well received, and prices went ahead late in the month on considerable French buying. The market was as sensitive as ever to Wall Street's moods during the first part of the month and shared its anxiety regarding the future of gold. A good impression was created by the increase in the British Exchange Equalisation Fund. The strength of sugar shares was one of the few features in the first fortnight, but interest in rubber issues revived somewhat later.

CANADA

The Canadian stock markets recently have been dull and irregular, and there is no indication yet that the downward trend which began in March after a year's uninterrupted

(*Continued on page 36*)

HAVE YOU TRIED

RE-FORMED

SHELL

All Shell is now made by the 're-forming' process which re-arranges the molecular structure of the petrol. The result is even smoother running, better pick-up, and an absence of 'pinking'.

YOU CAN BE SURE OF SHELL

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields of fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

(a) Interim dividend. (b) Final dividend. (c) Last two yearly dividends. (d) Yield worked on a 30 per cent. basis. (e) Annas per share. (g) Includes a Special Jubilee bonus of 2½ per cent. free of tax. (n) Based on current annual dividend rate $2·00 per share. (m) Including bonus of 5% free of tax. (r) Calculated on basis of 13⅓ annas per share of Rs. 9. Taken at 16 annas to one rupee. † Free of Income Tax. (v) Yield worked on a 35% basis. (p) Yield worked on a basis of £10 5s. 7d. per cent. less tax. (w) Yield worked on a 12½% basis. (t) Special Jubilee bonus. (s) Last year's dividend equal to 18¾% on increased capital on which yield is worked.

(*Continued from page 33*)

advance has been halted. Trading remains slack and collateral borrowings on the Montreal Stock Exchange totalled only $37 millions for May, compared with $41 millions for April. Although prices have moved irregularly, they now stand considerably higher than the low point reached at the end of April. Hopes of recovery ahead are still meagre, and investors continue to display great caution. Towards the middle of the month there was an average loss of 1½ points on the Montreal Exchange for the leading industrial and utility stocks, due to the depression in Wall Street and to anxiety about the French situation. Advances have been confined to oil companies operating in Alberta, which have risen on favourable drilling developments. The mining market has been thoroughly reactionary and gold stocks have fallen. A short burst of cheerfulness in Toronto was followed at the end of the month by a recession. The bond market shows its usual summer torpor, but high-grade government and corporation bonds remain firm. The "Investors'" Index of the Bureau of Statistics, which stood at 130·4 on May 14th, rose to 134·0 by May 30th, but has since fallen to 131·2. The average for the week ending June 10th was 131·8, against 113·8 for the corresponding week of 1936.

CAPITAL ISSUES

THE new issue market has been somewhat more active this week. The largest issue—and certainly the most confusing—was of 1,000,000 £1 ordinary shares in *Imperial Airways* at 30s. The circumstances of this issue, and the future investment position of the shares are discussed on page 28. The *Mercantile Estate and Property Company* has offered £1 ordinary shares at par through Charterhouse Investment Trust. The Trust has also acquired £300,000 of 4 per cent. debenture stock, which has been placed privately at 96 per cent. The leasehold properties acquired consist of certain modern office premises in the City, and a furnished flat and shop property in the West End. On the basis of the first year's estimated revenues, the ordinary shares should earn 6 per cent. and over 7½ per cent. when the properties are fully let. The *Union Cinemas Subsidiary Properties* issue of 6 per cent. participating preference shares at par ranks after a 5 per cent. mortgage securing £638,042. The Company derives its income from leases of 17 properties to Union Cinemas (which provides for maintenance) at annual rentals totalling £89,262. On the basis of the parent Company's profits, the preference shares, which participate up to 8 per cent., appear well covered. The *Dorchester Hotel* 4½ per cent. debenture stock issued at 97 is offered in conversion of the existing 6 per cent. debentures. The profits of the undertaking show a considerable expansion during 1936, and on the present earnings basis the debentures are satisfactorily covered. Statements for information only have been published by *Associated Gas and Water Undertakings, Polberro Tin, Aveling-Barford,* and *Ambrose Wilson.*

PUBLIC OFFERS

Imperial Airways.—Issue of 1,000,000 £1 ordinary shares at 30s. Receive half of profits after 10 per cent. dividend; special dividend fund maintained from March, 1938. Government annual payment, £1,650,000, reducible to £1,350,000; includes £900,000 for mails; reviewed triennially. Profit balance, years to March 31: 1934, £97,397; 1935, £168,932; 1936, £181,273—after obsolescence £191,336, £192,960, £199,328, and subsidy, £524,494, £494,495 and £389,390, respectively. Total assets, £1,639,890. Existing holders have preferential right to take one new share for one held.

Union Cinemas Subsidiary Properties.—Issue at par of 300,000 6 per cent. cumulative participating £1 preference shares. Receive also up to further 2 per cent. after 6 per cent. on ordinary. Owns 17 cinemas, leased to Union Cinemas, Ltd., for £89,262; valued at £1,105,440; subject to a 5 or 5½ per cent. mortgage for £638,042. Available for dividends, £49,110 (after £31,902 5 per cent. mortgage interest). Union Cinemas (whose earnings for rents are estimated at £220,000 to £270,000) take 1,000,000 4s. ordinary shares at 4s. 7½d. Lists closed 9.5 a.m., June 29th. Oversubscribed.

Dorchester Hotel.—Issue of £550,000 4½ per cent. first mortgage debenture stock at 97. Redeemable at par, 1970, or from 1938 by drawings, or from 1947 on notice at 102½; no prior charge can be created without consent. Proceeds to redeem existing 6 per cent. debentures. Profits, before interest, after maintenance: 1934, £53,541; 1935, £57,327; 1936, £75,100. Debenture service requires £26,125. Net assets, £1,090,771. Now under management of directors; formerly managed by Gordon Hotels.

BY OFFER FOR SALE

Mercantile Estate and Property Company.—Offer for sale of 210,000 £1 ordinary shares at 20s. Property investment company; acquisitions valued at £632,750. Aggregate income, £84,314; estimated net income, £39,000 first year, leaving £30,850 available for debenture interest (taking £12,000) and over 6 per cent. for ordinary, or 7½ per cent. when fully let. Purchase price, £600,000 payable by £300,000 4 per cent. first mortgage debenture stock and 300,000 ordinary shares. Charterhouse Investment Trust buy all stock at 95 and ordinary shares offered at 19s. (or 95⅛ and 19s. 3d., respectively, including expenses).

FORTHCOMING ISSUE

Odeon Theatres Ltd.—Lists will open and close on Wednesday next, July 7th, for an issue of £1,800,000 5 per cent. first mortgage debenture stock at £99 per cent. and 180,000 5s. ordinary shares at par. The prospectus will show that the company owns 86 cinemas, of which 61 have been erected during the last five years, valued at £3,648,450. The debenture stock will be secured by a first charge on the properties, and a floating charge on the remaining assets. Estimated profits in a full year, £460,000 covering debenture service 3¼ times, and 29 per cent. earnings on the ordinary capital after preference dividends. Recent profits, approximate calendar years: 1934, £71,883; 1935, £139,528; 1936, £225,509.

BY STOCK EXCHANGE INTRODUCTION

Aveling-Barford, Ltd.—Issued capital, 640,000 5s. ordinary and 160,000 5½ per cent. cumulative £1 preference shares. Makers of power-driven rollers. Properties, plant, etc., valued at £239,951. Profits, after depreciation, years to March 31, 1935, £7,946; 1936, £39,237; 1937, £38,292. Messrs Cohen, Laming, Hoare take 110,000 preference shares at par. Total assets, £399,667 (stock, £195,006).

Ambrose Wilson, Ltd.—Issued capital, 300,000 4s. ordinary shares; also 200,000 5½ per cent. cumulative £1 preference shares, of which 160,000 taken by Charterhouse Investment Trust at par, less 5 per cent., and 40,000 bought at 19s. Proceeds for redemptions and repayments. Mail order business. Net assets, £251,001. Profits, after depreciation: 1933, £42,097; 1934, £55,473; 13½ months to February 15, 1936, £46,044; year to February 15, 1937, £64,545.

Polberro Tin, Ltd.—Issued capital, 640,000 2s. 6d. shares (remainder of 800,000 authorised under option at par to vendors till 1940). Acquires licence to develop Royal Polberro Consols mine in Cornwall (closed since 1880); also plant, etc. Estimated: mill output, 45,000 tons annually; tin concentrate, 683 tons (70 per cent. content); all-in costs, 27s.; smelting charges, £12; depreciation, £2,500. Estimated net profit on that basis (tin at £200), £23,174. Purchase price, 160,000 shares and option on same number at par. Vendors acquire plant, etc., for £11,000; licence for £5,000.

Associated Gas and Water Undertakings.—Particulars of issue of 250,000 4 per cent. redeemable cumulative £1 preference shares. Rank with other preference shares. Redeemable 1952 at 2½ per cent. premium. Snell and Swaffield place issue at par for 3d. commission.

ISSUES TO SHAREHOLDERS ONLY

Associated Gas and Water Undertakings.—Issue of 250,000 4 per cent. cumulative £1 preference shares at par; also 250,000 £1 ordinary shares at 20s. 6d.

Emerald Rubber and Coconut.—Issue of 26,873 new £1 ordinary shares at 30s. to shareholders as at July 2nd (one new for seven held).

Forward Trust.—Issue of 200,000 10s. ordinary shares at 35s. to shareholders as at June 11th (one new for five held). To rank from May 1, 1937.

Lamson Investments.—Issue of 200,000 5s. ordinary shares at par.

Low Temperature Carbonisation.—Issue of 3,187,500 2s. shares at 3s. 3d. to stockholders as at June 10th (one share for four ordinary stock units).

Odhams (Watford).—Issue of 150,000 5½ per cent. cumulative £1 preference shares at 21s.

Seager, Evans and Company.—Issue of 95,500 £1 ordinary shares at £2 to ordinary stockholders registered June 16th (one share for every £4 ordinary stock held). To rank for any final dividend for year to July 31, 1937.

Trent Motor Traction.—Issue of 75,040 new £1 ordinary shares at par to ordinary shareholders registered June 21st (one new for five held). To rank from July 1, 1937.

Aplin and Barrett.—Issue of 50,000 6 per cent. cumulative preference shares of £1 at 24s. To rank from July 1, 1937.

Metal Box.—Issue of 109,266 £1 ordinary shares at £3 (one new for ten held).

Davy and United Engineering.—To complete extensions, existing holders will be offered additional shares in the proportion of 18 new to 100 old, at 23s.

CONVERSIONS AND REPAYMENTS

Four per Cent. Victory Bonds.—Bonds amounting to £3,502,200 have been drawn for repayment at par on September 1st.

The Perak River Hydro-Electric Power Company, Ltd.—The directors will redeem the £400,000 4 per cent. prior lien debenture stock on July 21, 1937, at par.

Barclay Perkins and Company, Ltd.—The £470,536 5 per cent. mortgage debenture stock, 1937-77, is to be repaid at 102 on January 1, 1938. The company has created £750.000 4 per cent. mortgage debenture stock, the 5 per cent. stockholders having the right to convert into an equal amount of 4 per cent. stock and 7s. 6d. per cent. cash.

UNIT TRUSTS

Trust of Rubber and Tin Shares.—Managers, Specialised Unit Trusts, Ltd. Flexible and cumulative; 5 years' life; portfolio covers 85 rubber (85 per cent. of fund) and 20 tin companies (40 per cent. of fund). COMPANY MEETINGS

BLEACHERS' ASSOCIATION, LIMITED

IMPROVED MARGIN OF PROFIT

EXPORT TRADE DIFFICULT AND OUTLOOK UNCERTAIN

BENEFITS OF COLONIAL PREFERENCE

SIR ALAN SYKES'S REVIEW

The annual general meeting of Bleachers' Association, Limited, was held, on the 25th ultimo, at Manchester. Sir Alan Sykes, Bt. (the chairman), presided.

The chairman, in the course of his address, having dealt with the figures in the balance sheet, said: The trading profits available, after providing for income tax, central charges, and interest, and after charging £157,811 for repairs and maintenance, amount to £320,748. From the available profits there are deducted directors' fees amounting to £2,349, depreciation £140,000, and debenture interest £101,250, leaving a balance of the year's profits amounting to £77,149. The amount brought forward from the last account—£174,669—gives us a total available balance of £251,818.

Your directors have given the most careful consideration and a great deal of thought to the question of the disposal of the available profits from the past year's trading, and they have come to the conclusion that, in the circumstances, they are justified in recommending the payment of a dividend on the preference stock at the rate of 5½ per cent. per annum for six months in respect of arrears to December 31, 1933, and that the remainder of the available balance, amounting to £183,411, be carried forward to the next account.

We have sufficient profit in hand from the past year's trading to permit this distribution without depleting our resources in any way, and we feel that the recommendation which we make is a right and proper one in the circumstances. At the same time, I am bound to point out that trading conditions and the general outlook are such that it would be unwise to assume that we shall necessarily be able to make a similar recommendation next year. Of one thing you may be sure, and that is that your directors will continue to do all that they can to further the interests of the company as a whole.

The improvement in the margin of profit earned during the past year is not due to any material increase in the volume of our trade, but is almost entirely attributable to the economies which we have been able to effect in the cost of production, in spite of the tendency towards higher prices for commodities and higher rates of remuneration for our workpeople. I think the result is one for which the managing directors deserve our thanks, and I know that they would be the first to acknowledge the valuable assistance which they have received from our branch managers and our head office staff. I should like to take this opportunity of recording our thanks to all of them for the work which they have put in during the past year.

COTTON TRADE CONDITIONS

Those of you who depend on current reports for your knowledge of the condition of the cotton trade may be wondering why the accounts which have been presented to you do not reflect, to any great extent, that return of prosperity to the cotton trade of which, no doubt, you have read. Improvement there certainly has been, but it has not been uniform. It has been most marked in the spinning section of the industry, and, unfortunately, it is often assumed that the conditions which obtain in that section are typical of the cotton trade as a whole.

I make no excuse for dealing with this subject somewhat fully, as it is important that the matter should be placed in correct perspective, not only so that you as stockholders may be satisfied, but that the Government, who have under consideration ways and means of assisting the cotton industry to recover its export trade, should not be under any misapprehension as to the real position.

According to the figures published by the International Cotton Federation, the mill consumption of raw cotton in the United Kingdom increased by 28 per cent. between 1930 and 1935, and by 7 per cent. between 1935 and 1936—a total increase between 1930 and 1936 of 37 per cent.

The production of cotton yarn, recorded in the Census of Production, increased by 17 per cent. between 1930 and 1935, and the index prepared by the Joint Committee of Cotton Trade Organisations shows a further increase of 10 per cent. between 1935 and 1936—a total increase between 1930 and 1936 of nearly 30 per cent.

PIECE GOODS PRODUCTION

If now we look at the production of cotton piece goods, which I might call the raw material of our trade, we find, from the Census of Production, that between 1930 and 1935 there was an increase of only 1 per cent. in square yardage, and, as far as can be judged from the figures available, the production in 1936 was no greater, and probably slightly less, than in 1935.

With an increase of 1 per cent. or less in the production of cotton piece goods, it is clear that we must look elsewhere to account for the increase of 37 per cent. in the mill consumption of cotton and the increase of 30 per cent. in the production of yarn. Contrary to experience in the piece goods trade—where exports have shown a substantial decline between 1930 and 1935 and a continuation of that decline in 1936—exports of cotton yarn increased by 10 per cent. between 1930 and 1936, and of that increase more than 6 per cent. occurred last year. In addition to this, there has been a larger demand for cotton yarn from the woollen and worsted trade, as well as from the lace trade and the hosiery trade.

As our turnover is derived almost entirely from the processing of cotton piece goods you will readily appreciate the reason why our figures do not reflect an improvement comparable with that which has taken place in the spinning section of the industry.

IMPROVED COLONIAL TRADE

After referring to the decline in the total exports of bleached cotton piece goods, which had fallen by more than 30 per cent. since 1930, and particularly to the reduction in exports to India, China, Morocco, and Egypt, the chairman continued:—

But it is not altogether a picture of unrelieved gloom. In some directions we have established definite gains. Trade in bleached goods with the Dutch East Indies and with British Malaya has expanded slightly during the last year, and there has been a substantial increase in our exports to British West Africa. In Egypt also we have made better progress in 1936, although, as I said a few moments ago, the trade is little more than one-third of that which was done in 1930. There have been small gains in South Africa, United States of America, and Canada, but it is noticeable that the greatest improvement has occurred in those markets where imports have been regulated by quota. This has been particularly marked in the case of those of our own colonies where such arrangements have been in force.

Exports of bleached cotton piece goods from the United Kingdom to colonial markets where quotas are in operation were practically doubled between 1934 and 1935 as a result of those arrangements; and the exports for 1936 are almost three times as great as those of 1934. Much the same is true of cotton piece goods of all kinds, and, although the advance has been less spectacular, British trade with these particular markets in 1936 was twice as great in volume as in 1934.

This substantial improvement is a testimony to the value of the steps taken by the British Government to protect our trade with our colonies, and it is not inopportune that it should be stressed at the present time, when so much emphasis is laid upon the desirability of freeing international trade from many of the restrictions by which it is bound. The protection of our trade by the imposition of quotas was not in any way a cause of the contraction of international trade. Those arrangements were a necessary consequence of disturbances of a more deepseated character. They were protective measures designed to minimise the disastrous effect of these other disturbances upon our export trade, and, as they were the last and the least inimical of the protective measures necessary, they must be the last to be removed. Any modification of these essential provisions, which ultimately may be found possible, must be postponed until the conditions which necessitated their imposition have been corrected.

The chairman concluded with a reference to the uncertain outlook for the bleaching trade and to the rising tendency in costs of production, to meet which a moderate increase in prices had been decided upon. He expressed the hope that, at the next annual general meeting, he would be able to report a continuation of the slight improvement revealed by the accounts for the past year.

The resolution approving the report and accounts was moved by the chairman, seconded by Sir William Clare Lees, Bt., and carried.

The retiring directors were re-elected and Messrs Jones, Crewdson and Youatt and Messrs P. and J. Kevan were reappointed joint auditors.

The meeting terminated with a vote of thanks to Sir Alan Sykes for presiding, proposed by Mr E. R. Clark and seconded by Mr R. W. Bennett.

MEXICAN RAILWAY COMPANY, LIMITED

EFFECT OF FURTHER INCREASE IN COSTS

REMARKABLE IMPROVEMENT IN TRAFFICS IN CURRENT YEAR

The 144th ordinary general meeting of the Mexican Railway Company, Limited, was held, on the 30th ultimo, at Winchester House, E.C.

Mr Vincent W. Yorke, the chairman, commenced by expressing regret at the absence of the secretary, Mr C. Tennant, who had just undergone a severe operation, from which they all hoped he would make a speedy recovery. (Hear, hear.) He went on to express pleasure at the presence of Senor Aaron Saenz, a member of the board in Mexico.

Proceeding, he said:—I much regret that the forecast which I made to you at our last meeting has turned out to be correct, namely, that we would show an actual operating loss for the half-year. The loss when converted into sterling was as much as £5,954. Inasmuch as this was after showing an increase in gross traffic of 7 per cent., the working of the railway for the half-year can only be described as most disappointing.

Passenger and express traffic for the half-year show together a decrease of $75,000, the increase of $63,700 in passengers being more than wiped out by the decrease of $138,700 in express. This latter result is due to our having had to come to the assistance of the company which has held the contract for working of our express traffic for the last seventeen years.

INCREASE IN PASSENGERS

The increase in passengers, which consists wholly of second class passengers, reflects a greater amount of prosperity among the working classes. Of the total increase of $515,000 in freight traffic no less than $277,000 is attributable to fuel oil and must, I fear, be looked on as fortuitous. It has been mainly due to the breakdown of a bridge on the line of the National Railways in the Tampico district and the consequent diversion of this traffic during its repair. The increases in both foreign and national traffic show healthy and satisfactory growth.

Unfortunately the increases which I have mentioned, and which amount to 7 per cent. as compared with the corresponding half-year, are more than offset by an increase of 9.4 per cent. in expenses. This is accounted for to some extent, of course, by the extra work done to earn the increased receipts, but very largely by the payment for the seventh day, which was not in full force in the corresponding half-year.

REMARKABLE TRAFFIC INCREASE

I am glad to say that a very remarkable, I might almost call it a phenomenal, increase in gross receipts for the first four months of this year has put a far more healthy complexion on our affairs. The increase is no less than 22 per cent. and, though expenses have also increased, as must be to pay for the additional work performed, they have not increased in nearly the same proportion. The result has been that we can show in net receipts for the four months the figure of $410,800, worth to us at present rates of exchange about £23,000. So far as I can judge there is every probability of the high level of gross earnings which we have attained being maintained for some little time to come. The last week's traffic cabled to us was even higher than the average of the preceding weeks of this year and reached the figure of $50,000 per diem, an almost unprecedented figure in our history, and all indications that I have been able to study, both as regards foreign and local freight and tourist traffic, point in the same direction.

SITUATION IN MEXICO

I returned from Mexico a fortnight ago, after spending five weeks in the country, during which I spent every working day at the office in endeavouring to master some of the very difficult problems with which our management have to deal. I have known Mexico for the last thirty-seven years and never at any time have I seen prosperity approaching to that which exists to-day. On the other hand Mexico has always been a country of contradictions, and I have never in so short a space of time met so many really worried business men. Strikes were in the air in every direction, either impending or in existence. This condition of affairs, which has lasted for quite three years, has created a feeling of lack of confidence and lassitude among all business men and is, in spite of the great opportunities offering, discouraging the development of industry and the further investment of capital. It remains to be seen how long it will be before the Government will call a definite halt to the demands of the workers. If they do not do so it must undoubtedly lead to a serious increase in the cost of living, which in itself may bring an abrupt end to the present prosperity.

NEED FOR CAPITAL EXPENDITURE

As regards our own business I was at great pains to investigate the physical condition of our property and equipment, which is feeling the strain of dealing with the rapidly growing traffic. I estimated then that an expenditure of at least £300,000 would be required to put it into satisfactory condition. Since then we have been fortunate in acquiring a number of second-hand cars and coaches which, together with some new steel cars purchased have, I believe, remedied the car situation for a good many years to come. The total of our requirements now is about £240,000.

You may well ask where is such a large sum of money to come from, but I also made it my business to go minutely into the cash earnings of the business on the basis of the first four months of this year, and came to the conclusion that these are actually to-day at the rate of not less than £200,000 per annum.

We have for the last two years been charging to special renewals the large allocation of 10 per cent. of our gross receipts. Therefore, just as the gross receipts have increased so have our allocations to special renewals. This fund will, of course, be available for the purchase of locomotives and other requirements. It would, therefore, appear to me that if present conditions continue so long, it ought to be possible to put the whole property into really satisfactory order out of our own resources in very little more than a year's time.

The period I have mentioned is, I am glad to say, well within the period of the moratorium granted us by our debenture holders; and it would, therefore, follow that if the anticipations which I have been bold enough to hold out to you are realised, we might be in a position, when the moratorium ceases at the end of next year, to offer them at any rate the hopes of something tangible. I do not for a moment pretend that our position is satisfactory; in fact if a depression in trade came along to-morrow, and we were asked to continue the payment of wages at the present scale, we could not carry on at all, but it is very much better than it has been, and that being so I think you ought to know it.

The report and accounts were unanimously adopted.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to:—

NATIONAL BANK OF NEW ZEALAND, LIMITED

SIR AUSTIN HARRIS REVIEWS A DIFFICULT YEAR

The sixty-fifth ordinary general meeting of the National Bank of New Zealand, Limited, was held, on the 30th ultimo, at 8 Moorgate, London.

Sir Austin E. Harris, K.B.E. (the chairman), in the course of his speech, said that the year had again been one of change and difficulty for the banks. Some of the changes and difficulties had weighed heavily with them, a sterling bank whose business was confined solely to New Zealand, and the board therefore considered that the result of the year's working was satisfactory. Moreover, they felt that, provided there was no further encroachment by Government measures on banking business, they should be able to participate in the returning prosperity of the Dominion. They had already paid an interim dividend at the rate of 4 per cent. per annum and proposed to make a final distribution at the same rate, leaving £112,797 to be carried forward as against £113,959 last year.

Last year he had referred to the somewhat sweeping legislative measures introduced by the Government during its first year of office, making changes which widely affected both the economic and social life of the Dominion, but he had also said that it was early to criticise those measures. During the year under review those measures—chief among them the Primary Products Marketing Act—had come into effect. In addition, the Government had passed the Mortgagors and Lessees Rehabilitation Act, which aimed at the reduction of moneys secured by mortgage to the value of the security.

NEED FOR MORE EQUITABLE BASIS OF TAXATION

In August next the Prime Minister intended to introduce a National Health and Superannuation Insurance Bill, and it was also understood that another measure to be introduced would deal with the revision of the basis of taxation. That latter was a matter of great importance and interest to the bank and in their opinion was overdue. On numerous occasions they had drawn attention to the inequity of the arbitrary method by which the banks were assessed for income tax. Their profits were calculated on a basis which bore no relation to their earning capacity, and it would be realised that in these days, when through the operation of the Marketing Act the banks had lost a large part of their exchange business, in addition to suffering a fall in interest rates and increased cost of labour—both enforced by legislation—their earning capacity must be impaired. The banks had, of course, represented their case to the committee which the Prime Minister had appointed to examine the whole question of taxation, and they were hopeful that they might be afforded some alleviation when the Bill came before the House.

The Government had ended the year with a surplus of £472,000, which, although satisfactory as the result of the year's working, had only been obtained by means of heavily increased taxation. Revenue was £31,147,000, as compared with £26,172,000 a year ago, and expenditure £30,675,000, as compared with £25,891,000. Of the increased revenue a little over £2,000,000 had come from income tax and £600,000 from the graded land tax, which was reintroduced in the last Budget.

During the year the Government had decided to exercise its option to redeem the £12,400 4 per cent. Loan due January, 1937-40, and had made an offer to convert it at par to either a 3½ per cent. Loan maturing 1953-57, or a 3 per cent. Loan due 1939-41. At the same time they had invited subscriptions for an additional £1,530,000 to purchase the assets of the Southland Electric Power Board, making £13,930,000 in all. Applications for conversion were received to the extent of £8,254,000, and cash subscriptions amounted to £2,715,000, leaving a shortage of nearly £3,000,000, which had been made up from "other sources"—probably Government Departments.

THE OUTLOOK

Prices were good to-day, and trade was active, and there was money in the pockets of the people, but one could not regard the lavish expenditure without some concern, for there would come again in its due course a period of reaction and lower prices, when trade would find it difficult, if not impossible, to bear the additional casts which were being imposed on it by legislation, and the minimum wages and shorter hours might become an economic impossibility. It was then that the policy of guaranteed prices would be put to the test; it might be a severe strain.

The report and accounts were unanimously adopted.

BANK OF BRITISH WEST AFRICA, LIMITED

DISTINCT ADVANCE TO BETTER TIMES

The forty-third annual general meeting of the Bank of British West Africa, Limited, was held, on the 29th ultimo, at 37 Gracechurch Street, London, The Rt. Hon. The Earl of Selborne, K.G., G.C.M.G. (the chairman), presiding.

The Chairman, in the course of his speech, said that a net profit of £90,635 was recorded, as compared with £85,298 in the previous year, and premises and furniture had been written down by £30,000, against £25,000 in 1936 and £15,000 in 1935. Last year the dividend was 5 per cent., and it was proposed to make the same distribution again, which would leave a balance of £55,608 to be carried forward; this was just a little higher than the amount brought in. An interim dividend of 2 per cent. was paid in December, and it was now recommended that the final dividend should be 3 per cent., making 5 per cent. for the year, less tax.

After the hard lean years through which the West African Colonies had passed it was a relief to experience in conjunction with satisfactory crops last year such a substantial rise in produce prices as greatly to increase the income of the farmers, upon whose prosperity the Colonies were so largely dependent. The expansion of trade which resulted from the enhanced spending power of the producers was very noticeable and Government revenues benefited appreciably. The improvement was specially marked in connection with cocoa, the price of which was more than doubled during the course of the season, and the rise was so unexpected and so rapid that all calculations were upset and a temporary shortage of currency developed.

It would be seen from the report and balance sheet and from the account he had given of the progress of their business in the past year that the record of the last two years marked a distinct advance to better times. Considering the acute nervous tension that existed in the politics of Europe and the extraordinarily complicated obstacles to trade which the wisdom of statesmen had put in the way of trade and commerce in almost every foreign country, the recovery of trade, not only in Great Britain and Ulster, but throughout the Empire, was really very remarkable and something for which we were devoutly thankful.

The report and accounts were unanimously adopted.

TRUST COMPANY OF LONDON AND SCOTLAND, LIMITED

RESUMPTION OF DIVIDEND

The eighth ordinary general meeting of this company was held, on the 28th ultimo, in London, Mr Alfred Shepherd (the chairman) presiding.

The Chairman, in the course of his speech, said:—The balance carried down is £29,456, against £24,417—an increase of £5,039, and, after making the various payments referred to in the report, there is a balance to be carried forward to next year of £16,692—an increase of £3,531.

A valuation of the company's investments shows a depreciation of 10.53 per cent., as against 19.03 per cent last year. While it is pleasing to find the valuation improving, the most reliable figures to indicate the progress of the company are those of the company's revenue. As you will see from this year's accounts, the net revenue is £29,456, as against £24,417—a rise which, although to some extent accounted for by the larger amount of investments, is also due to an increase in the revenue from investments held at the date of last balance-sheet.

It is with satisfaction that your board present to you this year's report, showing a satisfactory increase in net revenue and the elimination out of profits realised of the large sums which stood in the previous year's balance-sheet on account of losses on investments sold and preliminary expenses. The revenue has been such that after paying the dividends on the preference stock there is a balance, as shown in the report of £6,768, and out of this sum the directors recommend the payment of a dividend of 1½ per cent. upon the ordinary stock of the company, less income tax, leaving a surplus revenue for the year of £2,268, which has been added to the carry-forward.

It must be a gratification to all stockholders to see, after the unsatisfactory years during which the company has experienced diminishing revenue, that an improvement has taken place which justifies the board in recommending the resumption of ordinary dividends.

Unless unfortunate developments take place during the current year, the revenue should not be less than that of the year under review.

The report and accounts were unanimously adopted.

GEORGE NEWNES LIMITED

A GOOD YEAR AND DIVIDEND OF 15 PER CENT.

The fortieth annual general meeting of George Newnes Limited was held, on the 29th ultimo, at Tower House, Southampton Street, Strand, London, W.C.2.

Sir Frank Newnes, Bart., the chairman, presiding, congratulated the shareholders on another good year, the profits for the year being £145,853, as compared with the previous year's figures of £142,666. A dividend of 15 per cent. was declared. A sum of £22,759 was allocated to general reserve account, bringing that account up to the round figure of £140,000. After referring to other figures in the balance sheet and various other matters, the chairman continued:

I may remark here that in one respect the position of your company has become more advantageous and stronger in recent years; its interests have become more widespread by reason of a larger variety of publications, and also by the acquisition of the controlling interest in more subsidiaries than hitherto. This is all to the good. National Trade Press, Limited, a company all of whose ordinary shares were acquired in the previous year, has had a good year, and we have every reason to be satisfied with our investment in that company.

You will be interested to know that the "Strand Magazine," the oldest of your company's publications except "Tit-Bits," still easily holds the first place among British magazines, and that it shows an increased circulation on the previous year. The sales of the "Wide World Magazine" continue as steady as ever. The "Grand Magazine" figures are well maintained. Our old friend "Tit-Bits" is prosperous, and I can say the same for "John o' London's Weekly," which continues to do well. As I have told you in previous years, no other literary weekly has anything like its large circulation. The "Humorist" also continues to prosper; its steadily rising circulation is very gratifying, for it is an excellent paper. Two of our newer publications, "Practical Motorist" and "The Cyclist" have now well established themselves, and we anticipate for both of them a long and prosperous career. The various publications of the company and of its subsidiary companies are now so numerous that I can only refer to the chief of them. Among Leach's publications are the sixpenny monthly journals, "Modern Woman," "Modern Home," and "Miss Modern." They continue to do well. Among our women's weeklies, "Lady's Companion" fully maintains its position.

I wish to say a special word about "Woman's Own," one of our women's weekly journals. In its new and enlarged form, printed in photogravure and in colour, it stands out as a twopenny weekly of wonderful value. Although in its old form the publication was doing excellently, we had been planning and experimenting a super-weekly of this kind for a long time in view of the developments in the photogravure field. We finally decided to remodel "Woman's Own" so as to take full advantage of the technical advance in photogravure process, particularly in colour reproduction. In producing and launching this new style paper we have purposely incurred a large initial expenditure, which we feel sure is going to be fully justified. This new "Woman's Own" is a remarkable twopennyworth, with a wealth of colour pages both in the editorial and for advertisers at very attractive rates. It is enjoying remarkable sales.

"Home Notes" is the property of C. Arthur Pearson, Limited, and it has had an excellent year; it remains in the very first rank of women's papers. I can say what I said last year—it continues its successful career undiminished. Its circulation shows an increase on the previous year, and it is noteworthy that its advertising revenue has beaten all records in its long and prosperous life. Amongst other publications of C. Arthur Pearson, Limited, are "Pearson's Magazine," "Pearson's Weekly," "Home Gardening" and "The Smallholder," "Men Only," "Woman's Sphere," and a group of popular papers, including "Peg's Paper," and "Lucky Star," which show a gratifying increasing circulation.

Another of our subsidiary companies is Country Life, Limited, which has also had a good year. There is no falling-off in the fine reputation of "Country Life"; it still holds it proud position as the most beautifully produced paper in this country.

"Homes and Gardens" is another magnificently produced paper owned by Country Life, Limited, with a first-rate reputation and continued prosperity. "Amateur Gardening," owned by another of our subsidiaries, W. H. and L. Collingridge, is the widest read gardening paper in the country; its prosperity, too, is undiminished.

I am pleased to say that our advertising revenue continues to increase. For the year it is considerably higher than the previous year, and that was the highest for a good many years. All this speaks well for the estimation in which our publications are held by our advertising friends. The value to advertisers of monthly and weekly publications such as ours, with sound and solid circulations, cannot be over-stressed. They are all, in their own respective ways, specialised publications, and therefore make the most direct and telling appeal to a particular public an advertiser wishes to reach.

The directors again desire, and in no merely formal way, to express their warm appreciation of the valued work of the staff during the year.

GREAT BOULDER PROPRIETARY GOLD MINES, LIMITED

IMPROVED WORKING PROFIT

The forty-third ordinary general meeting of the company was held in London on Friday, June 25th.

The Chairman, Mr Claude de Bernales, said: The accounts reveal a sound financial position. The mine working profit of £117,301 17s. 2d. is £28,641 8s. 10d. higher than that for 1935. The net profit for the year is £87,065 19s. 9d., compared with £70,636 3s. 7d. for 1935. The footage developed during 1936 totalled 11,075 ft., as compared with 7,397½ ft. for 1935.

Diamond drilling was resumed, and 3,887 ft. of drilling was done during the year. The positive ore reserves plus ore broken in stopes at the end of the year amounted to 552,939 short tons valued at 7.3 dwt. per ton, after providing 145,096 tons of company's ore for mill requirements. This compares with 480,988 short tons valued at 6.3 dwt. per ton for the previous year.

At the end of the year there were estimated to be 284,020 tons of probable ore, value 6.88 dwt. per ton, making a grand total of positive and probable ore of 836,959 tons, value 7.2 dwt. per ton.

The total tonnage treated during 1936 was 192,591 short tons, as compared with 147,987 short tons in 1935.

Under the new award, granted by the Arbitration Court, freedom from labour unrest is now assured for three years. I think I am justified in saying that in no part of the world to-day is there such a sane, fair-minded, common-sense, understanding lot of men as are representative of Australian labour. There appears no reason why gold should be displaced from its world-wide accepted position as the yard measure of finance and commodities, and why gold should not finally be fixed at a sufficiently advanced price to permit of a settlement at a definite international exchange value of all national currencies.

The general outlook at the mine is better to-day than at any time since 1923. The mine's average grade of ore has advanced to 7 dwt. per ton, and our recovery has now reached approximately 84 per cent.

The outlook could not be more encouraging, and I look forward to the best of good news when next year I hope again to have the pleasure of addressing you.

The report and accounts were unanimously adopted.

EAST RAND CONSOLIDATED, LIMITED

ANOTHER SUBSIDIARY TO BE FORMED

The ordinary general meeting of this company was held, on the 29th ultimo, in London.

Captain H. B. Jameson (the chairman) said that properties stood in the balance sheet at £544,599, an increase of £7,280, which was accounted for by the acquisition of a half interest in the mineral rights of the farm Zonnestraal No. 50. The company's investments stood in the books at £543,017, and the market value at December 31st was £1,830,243.

With regard to Vlakfontein No. 65, he was very pleased to say that results so far obtained from the borehole being drilled on the boundary of that farm and the property owned by the Vlakfontein Gold Mining Company were most satisfactory. Application had been made for a lease of Vlakfontein No. 65 and a portion of Zonnestraal No. 50, and when this was granted a further subsidiary—West Vlakfontein Gold Mining Company, Limited—would be formed with a capital of £2,350,000.

On the Spaarwater Company's property the No. 1 shaft had been completed at 3,388 feet. Of real importance was the fact that the Nigel Reef had been proved at the depth anticipated by the technical advisers. Thirty-five per cent. of the footage sampled was payable at 9.3 dwts. over a stoping width of 29.4 in., and the development disclosures indicated the existence of pay shoots hitherto unknown. The 21st and 25th West Haulages from Sub Nigel were expected to connect at the beginning of next year with the five headings from the No. 1 shaft of Spaarwater, which would shortly be started.

The chairman concluded by referring to the satisfactory progress and the excellent prospects of the company.

The report was unanimously adopted.

GOLD FIELDS AUSTRALIAN DEVELOPMENT COMPANY, LIMITED

CONFIDENCE IN FUTURE OF GOLD

The fourth ordinary general meeting of Gold Fields Australian Development Company, Limited, was held, on the 30th ultimo, at the Hall of the Institute of Chartered Accountants, Moorgate Place, London.

Mr John A. Agnew (the chairman), in summarising the year's results, said:—These results on the whole have been distinctly favourable, though one could have wished for better success in our search for outside properties. Developments at the Moonlight have been most encouraging and one may fairly anticipate that further satisfactory additions will be made to the reserves during the current year. From Yellowdine, now that their cyanide plant has come into operation, we expect to receive very satisfactory returns on our investment whilst our interest in Comet should also prove remunerative. The search for new properties and the development of such as hold out a good promise of success has again proceeded without intermission throughout the year.

FUTURE OF GOLD

Though I hold very strong views on two matters that have engaged the attention, not only of people like ourselves interested in the development of the gold-mining industry, and not only of gold-mining companies, but of almost all sections of the community, I am a little in doubt as to the wisdom of adding still further to the multitudinous opinions that have been expressed recently in the Press and at public gatherings. I refer to the statements made that gold may no longer be taken as a basis of credit, or of currency, and to the further view that if it is it will be stabilised at a price considerably less than that which has prevailed for the last year or two.

Referring to the former, I do not think I can do better than repeat the remarks I made a little over three years ago when addressing shareholders in New Consolidated Gold Fields, Limited: "We are convinced that gold will continue to find eager purchasers, that for all purposes of this generation and the next its price in terms of sterling will not be appreciably inferior to the present level, and may be considerably higher, and that world recovery is ultimately only possible on the basis of a general return to a gold standard at revised parities.

"It seems clear that if international trade is to be revived, or even if it is to continue in any volume, one of the first conditions is the creation of a common measure of value which will afford, and be accepted as, an absolute basis of comparison between monetary units. We are witnessing to-day the paralysing effects of fluctuating foreign exchanges, and the whole world is beginning to realise that trade can never flourish in an atmosphere of such uncertainty.

ONLY ACCEPTABLE COMMON MEASURE

"Can it be seriously maintained that within any reasonable time which would interest this long-suffering generation international agreement can be reached upon any other common measure than the metal which has hitherto been universally accepted? I submit that if for a moment you forget all about rival theories and regard the problem purely as a practical and urgent one, the answer to that question cannot be in doubt.

"The plain fact is that the prospect of the measure of agreement which any substitute for gold presupposes is not even upon the horizon.

"No one, of course, maintains that what is sometimes referred to as 'the measuring rod of gold' is either foolproof or infallible.

"We believe further that as a result of the vast debts, national and international, that have been incurred during the last 20 years, a drastic revision of parities cannot be avoided.

"We look forward to the price of the metal, in terms of sterling, being permanently stabilised at a price not greatly, if at all, inferior to the present level.

"If these conclusions are correct it clearly follows that our policy is justified and that gold-mining under proper conditions will for many years to come contrast favourably with any other industry from the standpoints either of security or the margin of profit."

On the second point to which I have referred, as to whether gold should be reduced in price or not, it seems to me unthinkable that when the time comes for stabilisation to be effected on an agreed parity this will be at a price below that at which present stocks of gold are held by the United States and Great Britain. I express here my own personal views, though I believe they are shared in the main by my colleagues.

The report and accounts were unanimously adopted.

GENERAL ELECTRIC COMPANY, LIMITED

RECORD RESULTS

The annual general meeting of the General Electric Company, Limited, was held, on the 1st instant, at Magnet House, Kingsway, W.C.

The Rt. Hon. Lord Hirst, of Witton (chairman and managing director), who presided, said that the directors and staff had taken full advantage of the happy business conditions which prevailed during the year under review, and the result had, in consequence, exceeded the achievements of any previous year. Their trading results and income from investments amounted to £1,604,512, roughly £119,000 better than the previous year. As a result of more generous depreciation and greater contributions to the pension fund, the net profit showed an improvement of £73,000. They recommended in addition to their usual 10 per cent. dividend a bonus of 7½ per cent. for this year, as against 5 per cent. last year.

The Armament Programme had played no appreciable part in their activities during last year. In fact, the activity of their engineering works was mainly due to the requirements of industry as a whole. Moreover, what they had achieved was not due to any spectacular work. They had built and developed slowly and firmly on the foundations which they created years ago—research and development on the production side, and keen salesmanship and efficient service on the commercial side, nor had they just relied on home orders. Their export business showed a very satisfactory increase. They had not yet quite attained their top figure of 1929-30, but they were not far away from it—in volume they had certainly exceeded it, as prices were higher then. They had maintained, even slightly improved, their respective share in the total export of the British electrical industry. The bulk of their exports—79 per cent.—went to British territories overseas.

He was particularly happy to see that their export of wireless sets had increased. They, in common with the rest of the British wireless firms, had been lamentably weak on the export side, but the advance shown, coupled with the success of the current year, led him to hope that the G.E.C. and the British wireless industry would, before long, take their proper place in the wireless industry of the world.

HEAVY ENGINEERING

At home they had further strengthened their efforts on the heavy engineering side. He had referred last year to their success with the pumpless, air-cooled steel-clad mercury arc rectifiers, in which the G.E.C. had led the world. Already a number of installations were giving satisfactory service for municipal supply, electric traction and electrical undertakings. The re-equipment of steel works had involved a large amount of electrification. They had just completed satisfactorily the installation of a 20,000 h.p. rolling mill motor for Dorman, Long and Company, this machine forming one item of a scheme of a most comprehensive character for which their company had been responsible. Of even greater magnitude was the contract entrusted to them by Richard Thomas and Company in connection with the hot and cold strip and tinplate mill which that firm was building.

Railway electrification was ever making demands for motors and control gear capable of dealing with severer traffic conditions. The London Passenger Transport Board had just ordered from them no less than 800 motors, which would enable substantial improvement to be made in train acceleration, speed performance and passenger capacity. In the field of electrical communications a general improvement in industrial conditions, coupled with a stable yet progressive policy of successive Postmasters-General, had jointly contributed to further expansion, and had kept their telephone works engaged to their full capacity.

The Pirelli-General Cable Works, in which they held 50 per cent. of the capital, had been fully occupied during the year, and the pressure on all departments had necessitated considerable extensions to the works, which were now in progress.

They had again found it necessary to extend their research laboratories. The new electric discharge lamps, which were seen everywhere lighting the streets and which were the product of their laboratories, were finding many new applications.

Progress had been made in every one of their departments. They were to-day one of the leading electrical companies of the world, and engineers all over the world were interested in their progress.

The report was unanimously adopted.

GLOBE TELEGRAPH AND TRUST COMPANY, LIMITED

PROMISING OUTLOOK

The sixty-fourth annual general meeting of the Globe Telegraph and Trust Company, Limited, was held, on the 28th ultimo, at the Incorporated Accountants' Hall, London.

The Rt. Hon. The Earl of Midleton, K.P. (the chairman), said that their total income, less tax, had amounted to £231,959, as compared with £208,214, and after deducting expenses there remained £219,556, against £195,449—an increase of £24,107. The board proposed to pay a final dividend of 2½ per cent. net, making with the previous payments a total of 5½ per cent. net for the year, carrying forward £128,538. That compared with 4½ per cent. net in 1936, which, shareholders would agree, showed an encouraging result.

The company was still without any return on the holding in International Telephone and Telegraph Corporation, and the Postal Telegraph and Cable Corporation, and they were awaiting the result of the investigation of the latter company's affairs, which had been in the hands of a committee for some time past. The American Telephone and Telegraph Corporation had continued to pay regular quarterly dividends, and it was gratifying to see the Western Union Telegraph Company, which resumed payments the previous year, had now felt justified in making quarterly payments. The company's holdings in American Utilities gave a good yield, while among the companies that had resumed or increased dividends he might mention Telegraph Construction and Maintenance Company, Brazilian Traction and Shawinigan Water and Power. Beyond all that their main holding—Cable and Wireless—had made considerable improvement. In addition to paying the full 5½ per cent. on the preference stock, it had now reached a position to deal with the arrears.

While the present dividend of 5½ per cent. was equivalent to a gross dividend of £7 6s. 8d. per cent. at the present rate of tax, they might hope, in the absence of untoward developments in 1937, to increase the distribution in 1938. The value of their securities at the moment was well in excess of capital as in former years.

The report and accounts were unanimously adopted.

AFRICAN AND EUROPEAN INVESTMENT COMPANY, LIMITED

ANOTHER SUCCESSFUL YEAR

The thirty-second ordinary general meeting of the African and European Investment Company, Limited, was held, on the 25th ultimo, in Johannesburg.

Mr R. W. Townsend presided in the absence of the chairman, Mr Louis Marks, and, after referring with regret to the loss the company had sustained by the death of Mr H. D. Lewis, said that the gross profit was £889,201 for the year, compared with £680,971 for 1935 and £959,071 for 1934. This was the third annual meeting at which very satisfactory figures of profit has thus been submitted, the total for the past three years amounting to £2,271,061. The directors had applied no less than £426,432 in writing down the book cost of some of their investments, thus placing the company on a very sound and sure foundation. They had transferred £500,000 to general reserve; provided £325,000 for taxation; placed £35,000 to staff benefit fund; and paid £923,621 to the shareholders in dividends. The book cost of their quoted securities had increased to £1,843,178, and it was satisfactory to note that over 70 per cent. of the amount was represented by dividend-paying securities.

With regard to their coal interests, the outstanding feature of the year had been the formation of Amalgamated Collieries of South Africa, Limited. The board looked upon their interest in this concern as a very important one, and they were sure that it would prove to be a large contributor towards their income. They had increased their large interest in Vereeniging Estates, which had benefited from the general prosperity during the past few years and had done remarkably well.

The Chairman referred to the options taken in the Orange Free State and the South Western Transvaal and in the Ventersdorp and Lichtenberg areas. Referring to the company's interest in the Palmietkuil Gold Mining Company, he said that whilst no payable values had as yet been encountered, the reef values had been steady and consistent, and the company had every reason to anticipate that payable values would be made in due course as normal development proceeded.

After a reference to the company's interest in New Central Witwatersrand Areas, Limited, New Machavie Gold Mining Company, and other companies, the report and accounts were adopted.

JOHN ISMAY AND SONS, LIMITED

A SATISFACTORY REPORT

The fourth ordinary general meeting of John Ismay and Sons, Limited, was held, on the 25th ultimo, at the Sterling Works, High Road, Dagenham.

Mr John Ismay (chairman and managing director) presided.

The Secretary (Mr G. S. Rate) read the notice convening the meeting and the report of the auditors.

The Chairman said:—Gentlemen,—In presenting our report and accounts for the year ended March 31, 1937, I presume that I have your permission to take them as read. (Agreed.) In pursuance of the policy outlined at the last meeting we have disposed of some of our investments and strengthened the cash position, our intention being to restrict ourselves principally to the manufacture of the lamps and their components. Other lines we are leaving to the associated companies of the Ismay Industries group.

EXPANDING LAMP SALES

Our lamp sales have steadily expanded during the year. Sales both at home and abroad were very much greater than in the previous year, but, owing to the keenness of competition, the trading profit was only a few thousand pounds up. We are again extending the factory at Ilford, and our capacity during the coming year will be about 12 million lamps, an increase of approximately 50 per cent. The demand for our lamps is continuing, and we are now supplying many more Government departments and Corporations. Competition continues keen, but with the increased output we are justifiably confident as to the outlook for the current year. The gas-mantle side of the business has, I am pleased to say, continued satisfactory during the year.

The Chairman concluded by moving the adoption of the report and accounts and the payment of a dividend of 45 per cent. on the ordinary shares.

Mr. T. S. Cornwell seconded the resolution, and it was carried unanimously.

The retiring directors, Mr T. S. Cornwell and Mr Z. Dezsoe, were re-elected, the auditors, Messrs James Worley and Sons, were reappointed, and the proceedings then terminated.

BARCLAY, PERKINS AND COMPANY, LIMITED

SATISFACTORY INCREASE OF TRADE

The forty-second ordinary general meeting of Barclay, Perkins and Company, Limited, was held, on the 30th ultimo, at Southern House, London, Lieut.-Col. R. W. Barclay, the chairman, presiding.

The Chairman, in moving the adoption of the report and accounts, said that the profit for the year amounted to £347,445, which, with the carry forward, gave them an available total of £409,198. Freehold and leasehold public and other houses, reversions and equities stood in the balance sheet at £3,501,723, an increase of £134,419. He desired to stress that that increase followed on an increase of more than £200,000 last year, and was due to the acquisition of new licences and the cost of purchasing the freehold interest of houses where they were leaseholders only.

Last year he mentioned the increased amount they were expending on repairs and alterations to public houses, and impressed on them the fact that that expenditure, though absolutely necessary to bring their houses to the highest standard that they had rightly adopted, did not always add proportionately to the profit-earning capacity of the houses. They had been acquiring or building new licences and purchasing freeholds of existing licensed properties.

They were in course of issuing £750,000 4 per cent. debenture stock, and from the proceeds intended to redeem the existing 5 per cent. stock amounting to some £470,000, the balance to replace a proportion of the cash they had invested in fixed assets and to provide for continued expansion.

The board vigorously pursued the policy of keeping the licensed houses in good repair, and the new public houses they had opened had come up to their expectations. Trade during the year had shown a satisfactory increase, but it was already apparent that costs were rising. He was glad to report that the volume of their export trade was higher and a good proportion of it was lager beer in addition to ales and stouts. In this country also their lager beer was enjoying increased sales.

The report was unanimously adopted.

OHLSSON'S CAPE BREWERIES, LIMITED

LARGELY INCREASED PROFIT

The ordinary general meeting of Ohlsson's Cape Breweries, Limited, was held, on the 1st instant, in London.

Mr W. D. Buxton (the Chairman) said that the accounts recorded the steady progress of the company's business. Trading conditions throughout the whole of the Union had continued to be favourable, and such opportunities as had presented themselves for the increase of the business by the purchase of new properties, or by the provision of financial assistance to licensees desirous of improving their premises, had been taken advantage of. That, in addition to the increased purchasing power of the public—which had resulted in a larger demand for the company's products—had enabled them to show an enhanced profit on trading and rentals for the year of £53,822.

Reference had been made a year ago to the prosperity which the Dominion was then experiencing, which had been maintained throughout the year, of which proof was afforded in the ability of the Union Government not only to reduce the public debt but to grant generous assistance to the agricultural interest, and in addition to set aside substantial sums for public works.

He thought they could face the future with confidence, and they had the opinion of the general manager and others that, as a consequence of expenditure on converting premises to comply with the South African Liquor Act, some of which had still to be met during the current year, no setback in the prosperity of the company as a result of the legislation was anticipated.

In allocating the profit earned they had continued the practice of previous years by transferring £70,000 to reserve for contingencies.

The net profit for the year was £188,977, and it was proposed to pay a final dividend of 5 per cent. and a bonus of 7½ per cent., both less tax, making, with the interim dividend already paid, a total distribution of 17½ per cent. for the year. The continuation of the policy of extending and modernising many of their licensed properties resulted in the increased value of such properties as revenue-producing assets, and the growth of the business was proof of the soundness of that policy, which had been followed by the board since the passing of the Liquor Act in South Africa nearly ten years ago.

The report was unanimously adopted.

HOVIS LIMITED

RECORD PROFITS

The thirty-ninth ordinary general meeting of Hovis, Limited, was held, on the 30th ultimo, at Caxton Hall, London.

Mr A. H. Dence, J.P. (the chairman), said that the directors were able to report that the business continued to progress and was strong, healthy and vigorous in all its departments. The balance sheet accounts and profit and loss account were in every way satisfactory and revealed a very strong position. There were but few companies that had shown in the past such a consistent record as their own over a long series of years, and in which, not only had profits been so steadily progressive, but also in which such regular and generous dividends had been maintained.

The net profit on trading, after making the usual provision for income tax, contingencies and other expenses, amounted to £190,269. That figure was a new record for the company. In considering the allocation of these profits, the directors had had to bear in mind the fact that the Chancellor was placing additional taxation on the profits of limited liability companies and until the full amount of such taxation was known they felt it incumbent upon them to exercise caution in their recommendations. Also it became necessary, when wheat was high in price as it still was at the present time, to conserve their resources to meet any sudden or unexpected turns in the market. They were therefore recommending the payment of the same dividend and bonus as last year. As soon, however, as the incidence of the new taxation was known and the board felt that they were justified in doing so, they would reconsider the position in the hope that they might be able to make a higher distribution at a later date. In addition to the dividend, the directors proposed to place £30,000 to the general reserve fund, £15,000 to the dividend equalisation reserve and £20,000 to the Hovis Pension Fund.

They were satisfied that the daily use of Hovis bread could do much to promote the good health of the people of the nation and they were all proud to be associated with the work of a company whose product they considered to be so vitally necessary to the national physique.

The report was unanimously adopted.

SABRANG RUBBER ESTATE, LIMITED

IMPROVED RESULTS—REPLANTING PROGRAMME

The seventeenth annual general meeting of the Sabrang Rubber Estate, Limited, was held, on the 25th ultimo, in the Council Chamber of the Rubber Growers' Association (Inc.), 19 Fenchurch Street, E.C.

Mr F. E. Maguire (the chairman), in the course of his speech, said:—We submit to you to-day the accounts for the year ended December 31st last, which show a profit of £12,038 2s. 7d., as compared with £5,354 2s. 7d. earned during 1935. The balance brought forward from the previous year was £12,662 11s. 4d., so that the total amount available is £24,700 13s. 11d., out of which we propose to transfer £7,500 to reserve and we recommend the payment of a dividend of 4 per cent., which will leave £7,200 13s. 11d. to be carried forward to the current year's accounts.

I do not want to dogmatise as to the actual economic life of a rubber tree, but we know that, like every other form of cultivation, the economic life must eventually come to an end and it is our duty to rejuvenate the property either by replanting existing areas or, when such a course again becomes permissible, by planting new areas.

We have already made substantial progress with this process of rejuvenation. During 1935 and 1936 we cut out and replanted 257 acres, and during 1937 we hope to replant a further 241 acres, of which 35 acres were in process of replanting at the close of last year.

All these replantings will consist of budded rubber from which we expect to get substantially higher yields than from ordinary seedling rubber.

The forward sales made on behalf of the company have from time to time been published in the Press. In total they amount, for 1937, to 141½ tons at an average price equivalent to 8.7d. per pound, landed terms, and for 1938 to 36 tons at the equvialent of 11.35d. per pound.

The report and accounts were unanimously adopted, and resolutions were also passed approving the conversion of the shares into stock and the adoption of new articles of association.

GORDON (MALAYA) RUBBER ESTATES, LIMITED

HIGHER DIVIDEND ON LARGER CAPITAL

The fourteenth annual general meeting of the Gordon (Malaya) Rubber Estates, Limited, was held, on the 29th ultimo, at 19 Fenchurch Street, London.

Sir Francis Voules, C.B.E. (the chairman), in the course of his speech, said: The average price realised for our crop was equivalent to 8.31d. per lb., London landed terms, as against 6.21d. per lb. for the previous year. As formerly, a proportion of the output was sold in liquid latex form, which, although increasing cost, gives us a higher return per lb., which more than compensates for the increase in production cost as compared with sheet rubber.

The f.o.b. cost of 4.2d. per lb., exclusive of depreciation, shows a slight increase when compared with the previous year's cost of 4.06d. per lb. This is mostly due to the higher cost of labour and the greater proportion of rubber sold in liquid latex form. As a result of the improved conditions resulting from the operations of the Regulation Scheme our profit for the year amounts to £16,897, or more than 2½ times the profit we earned in 1935. Your directors recommend that a dividend of 5 per cent. (less income-tax) be paid, absorbing £14,135, and leaving £9,517 to go forward.

The dividend of 5 per cent. is payable on the Ordinary capital at date—namely, £282,700, which includes the 257,000 Ordinary shares we issued in the early part of the current year for the purchase of our new estate in Negri Sembilan. You will therefore see that, whilst increasing our dividend from 2 per cent. to 5 per cent., we are paying this on a larger Ordinary share capital, which makes the increase rather more than appears at first sight. Your directors consider the results of the past year satisfactory.

As regards the current year, your estates have received assessments totalling 2,489,835 lb., of which 2,085,240 lb. should be exportable. Towards the end of last year we sold forward 546,560 lb. of this rubber at an average gross price of 8.44d. per lb. c.i.f., thus leaving 1,538,680 lb. for free sale.

As regards the industry itself, the outlook is most encouraging and I look forward with confidence to the future.

The report and accounts were adopted.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the 11 days ended June 30, 1937, amounted to £11,537,000, against ordinary expenditure of £20,975,000. After allowing for an increase in Exchequer Balances of £72,095, the operations for the period, as shown below, increased the gross National Debt by £9,740,000, to approximately £7,982 millions.†

CENTRAL AND SOUTH AMERICAN EXCHANGE RATES

The Bank of London and South America, Ltd., issues the following details relative to quotations for certain of the South and Central American exchanges. All these exchanges, with the exception of that of Bolivia, are related to the United States dollar, and the approximate sterling rates may be obtained by applying the dollar-sterling exchange rate:—

*Bolivia.** Commercial Banks' "free" selling rate was 120 bolivianos per £ on May 20th.

*Colombia.** Sight selling rate 175·40 pesos per 100 United States dollars on June 3rd. This rate applies to holders of permits buying in the "open" market.

*Ecuador.** Official sight selling rate on New York was maintained up to June 4th at 10·50 sucres per United States dollar.

Guatemala. Sight rate on New York is maintained at 1 quetzal per United States dollar, but a commission of 1 per cent. is charged by the Banco Central for the sale of drafts.

*Nicaragua.** Sight selling rate on New York was officially fixed at 2 cordobas per United States dollar on March 19th, 1937.

Salvador. Sight selling rate on June 5th was 2·51 colones per United States dollar.

Venezuela. Sight selling rate on New York was officially fixed at 3·19 bolivares per United States dollar on April 27th, 1937.

* Exchange controls are operative in these countries.

GOLD MARKET

Messrs Samuel Montagu and Company write on June 30, 1937:—

The Bank of England gold reserve against notes amounted to £326,406,625 on June 23rd, as compared with £321,261,366 on June 16th.

Conditions in the open market were comparatively quiet. At the daily fixings about £2,500,000 of bar gold changed hands during the week and offerings continued to be taken for shipment to America. Prices advanced slightly owing to the firmer tendency of the dollar in terms of sterling, but again ruled below dollar parity.

Measures to deal with the crisis of the franc were announced on June 29th, when the French Finance Minister stated that if the Government obtained the powers they desired the franc would be detached from the gold standard and allowed to find its own level. He said that he had been in communication with Mr Morgenthau and Mr Montagu Norman, and had received their assent to this proposal. The s.s. "Corfu," which sailed from Bombay, on June 26th carries gold to the value of about £135,000.

SILVER MARKET

The tone of the market improved during the week, and there was a slight advance in prices. The Indian Bazaars were less inclined to re-sell and gave some support, but American buying was only in evidence at the lower levels. China sales and speculative re-sales continued on a moderate scale. The market appears fairly steady at about the present level, and no wide movements are expected in the near future.

Quotations for gold and silver are shown below:—

1937	Price of Gold per Fine Ounce	Equivalent Value of £ sterling	Price of Bar Silver in London per ounce standard: Cash	Price of Bar Silver in London per ounce standard: Two Months	Price of Silver New York per ounce ·999 fine

Shorter Company Comments

COMPANY RESULTS OF THE WEEK.—An increase of over £20,000 is shown by ATLAS ELECTRIC AND GENERAL TRUST profits to £181,719, but the accounts of the Trust make no provision for a loss incurred by one of the subsidiaries. RHODESIA RAILWAYS TRUST are paying the same dividend of 5 per cent., tax free, and report that the approximate working results for the Rhodesia Railways (including the Mashonaland Railway) for the six months to end of March show a substantial increase in the surplus. A considerable rise, from £79,584 so £132,282, in the profits of BEIRA WORKS is an encouraging pointer to the results of Port of Beira Development. Although net profits are a trifle lower at £112,235, CARLTON MAIN COLLIERY have raised their dividend from 4 to 5 per cent., but have made no allocation to reserve. STEPHENSON CLARKE AND ASSOCIATED COMPANIES, with net earnings of £211,710 against £204,107, are maintaining their 10 per cent. dividend. CHARLES ROBERTS AND COMPANY are returning to the dividend list with a 10 per cent. distribution, net profits of £135,010 comparing with £116,451. The chairman's speech, incorporated with the report, draws attention to the generous expenditure on maintenance and depreciation. The profits of LOBITOS OILFIELDS are almost trebled, and are accompanied by an increase in dividend from 7½ to 12½ per cent. Earnings of UNITED BRITISH OILFIELDS, at £177,245, are, however, only slightly higher. Net production rose by 3 per cent., but the sales of refined products decreased. Among rubber companies, substantial improvements are recorded by BUKIT SELANGOR and JAVA PARA, but tea company results continue disappointing. Profits of JOREHAUT, for instance, declined from £59,199 to £44,853. SANGERS' profits of £150,426 are some £4,400 higher; £7,000 is set aside as a reserve for N.D.C. The AIRSCREW report states that turnover was 2½ times the amount recorded for the previous year, and the company doubles the dividend, with a payment of 30 per cent. Profits for the first year's trading of BLACKBURN AIRCRAFT amount to £120,480, after providing £20,000 for depreciation. BRITISH GLUES AND CHEMICALS' profits of £104,025 compare with £86,841, and the dividend is raised to 10 per cent. against 7½ per cent. The report, however, refers to the uncertain world outlook and the need for conserving resources. The report of LOVELL AND CHRISTMAS does not comment on the disappointing setback; net profits of £111,803 are 24 per cent. lower, and their dividend is reduced from 10 to 7 per cent.

Appointments and Personal

Vickers, Ltd., announce that General Sir Herbert A. Lawrence has resigned as from June 30th. Mr J. Reid Young has been appointed a director.

London Midland and Scottish Railway Company have appointed Viscount Runciman to their board.

Mr K. K. Peters, F.C.I.I., general manager of the Northern Assurance Company, Ltd., has been elected president of the Chartered Insurance Institute.

Sir George Beharrell, D.S.O., has been elected chairman of Dunlop Rubber Company, and Imperial Airways in succession to the late Sir Eric Geddes.

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

The financial crisis in France has had remarkably little effect on the commodity markets, indicating the general improvement in their technical position after the decline during April–June. Although most consumers are still persisting in their attitude of reserve, those with ample stocks holding aloof and others covering only immediate requirements, any favourable development is quickly reflected in an advance of quotations, especially as there is no longer any fear of an early change in British and American gold buying policy.

For example, adverse crop reports from North America led to a sharp increase in wheat prices, December futures in Liverpool having risen from 8s. 5d. per cental on June 23rd to 9s. 5d. on June 30th. Moreover, this sharp recovery took place in the absence of a revival of European demand. Linseed and linseed oil were marked up in sympathy with wheat, although the yield of the American crop is still uncertain. Raw sugar quotations maintained their recent advance. Cotton was firmer, but raw jute, exceptionally, was easier in anticipation of a heavy crop. With the exception of copper, the principal non-ferrous metals were dearer. Rubber is unchanged on the week.

In the United States, the markets in primary products also showed an upward tendency. On Wednesday, Moody's index of staple commodity prices (December 31, 1931 = 100) stood at 204·6, against 201·7 a week ago, 206·2 a month ago and 169·0 last year.

COAL

SHEFFIELD.—Export demand is slackening (a) because current prices are considered too high, and (b) owing to the previous accumulation of stocks on fear of a strike. There is still difficulty in obtaining small doubles. The demand for industrial coal is well maintained. Soft coal is being crushed in order to meet the demand for smalls for coking and other purposes. Additional blast furnaces have increased the demand for furnace coke. All prices are very firm.

NEWCASTLE-ON-TYNE.—Whilst there is a certain dullness in the prompt position of the North-East coal trade due to a sharp seasonal decline in domestic consumption, the forward position is very firm, and there are no symptoms that prices can be discounted. Northumberland steam collieries continue to work regularly, prime brands being fully booked, but among the second classes prompt coal is available. The Durham market remains firm under a brisk home trade, and apart from second-class bunkers, which are offering more freely, there is little coal available.

GLASGOW.—While the collieries are still generally well booked on export account, prices in some directions have an easier tendency. This results mainly from the position of house coal in the home market, for the slowing down in demand there is diverting supplies to the shipping trade, and, of course, the larger aggregate coal output this year tends to increase available quantities of nuts. In addition, the shortage of steamers on occasion brings parcels on to the prompt market. Despite tonnage difficulties, however, shipments last week were, at 291,000 tons, the highest for nine months. Industrial demands remain brisk, and while Ireland is absorbing smaller tonnages of house coal, the needs of the public utility undertakings, notably the London power companies, account for the firmness of pearl nuts.

CARDIFF.—The South Wales coal market continues exceptionally firm. Prices are very strong for all classes, and disposals have been so active during the past few days that the collieries have exhausted their supplementary allocations for the June quarter and were compelled to apply for further additional supplies, chiefly for export. Shipments at the South Wales ports last week totalled 468,000 tons, compared with 431,800 tons the previous week, and 299,331 tons in the corresponding week last year. Stocks have been reduced to a minimum. Coke is also very firm and scarce, and patent fuel steady. A revised arrangement has been made for French pitwood under the barter agreement, and the price for the September quarter is likely to be fixed at 32s. 9d. per ton, c.i.f., which compares with 27s. 3d. for the June quarter.

MISCELLANEOUS

KRAMAT PULAI TIN.—Net profit for 1936 £135,071, against £136,942. Ordinary dividend, 80 against 85 per cent. To written off property, plant, etc., £29,888, against £25,039. Carry forward £9,311, against £9,127.

HOVIS, LTD.—Net profits advanced by £11,710 to £190,270 in the year to March 31, 1937. To depreciation £18,354, against £18,135. Ordinary dividend again 20 per cent. To reserves: General £30,000, as before; dividend equalisation £15,000, as before; pension fund £20,000, against £10,000. Carry forward £45,383.

AIRSCREW COMPANY, LTD.—Profit for year to March 31, 1937 £40,200. To taxation reserve £11,250. Ordinary dividend 30 per cent. for year. Carry forward £21,601.

SOUTH-EASTERN GAS OFFER.—The Corporation offers its shares as follows: For each £100 of North Middlesex 6 per cent. standard cons. ord. stock, 133⅓ ordinary £1 shares; for £100 of 5 per cent. preference stock of the Middlesex Company, 125 4 per cent. irredeemable cumulative. preference £1 shares; for £100 6 per cent. preference stock of the Middlesex Company, 150 4 per cent. irredeemable preference shares. Plus accrued dividend in each case.

UNIT TRUSTS ASSOCIATION.—From April 21 to June 1, 1937, the nine groups of Unit Trusts in the Unit Trusts Association bought securities to the extent of £625,890 for the creation of new units. During the same period their sales to the Stock Exchange amounted to only £90,248.

CHARLES ROBERTS AND COMPANY.—Profits for year to March 31, 1937, were £157,510, an increase of £27,559. Depreciation, £74,911, against £77,720; income-tax provision, £22,500, against £13,500. Old ordinary stock receives 10 per cent., and the new 1¾ per cent. Sum of £10,000 to debenture sinking fund, and carry-forward raised from £15,431 to £24,159.

CABLE AND WIRELESS (HOLDING), LTD.—The capital reduction of £23,596,899 has been confirmed by the Court.

BRITISH GLUES AND CHEMICALS.—Results for year to April 30, 1937, after crediting £5,000 no longer required, but after £20,000 to reserve for contingencies, amount to £89,026 against £86,841. Ordinary dividend raised from 7½ to 10 per cent. To writing down: Machinery, etc., £15,000 against £5,000; investments, £7,500; Taxation, £5,000. Carry-forward, £32,083.

UNITED STEEL DEAL.—An offer has been made by this company to acquire for cash all the shares of Sheffield Coal Company, at £1 per £1 preference and 13s. per 7s. ordinary shares.

BEIRA WORKS, LTD.—Net revenue for year to March 31, 1937, £303,578, an increase of £57,971. Ordinary dividend raised from 10d. to 1s. 5·4d. per share. To contingencies, £80,000 as before. Carry-forward £1,218 lower at £22,660. Traffic increased during the year by 25·2 per cent.

ATLAS ELECTRIC AND GENERAL TRUST.—After debenture interest, etc., balance of £181,719 for year to March 31, 1937, compared with £165,198. The 7 per cent. preference dividend for the year absorbs £161,000, leaving £37,929 to go forward.

LOBITOS OILFIELDS, LTD.—Total income for 1936, £215,668 against £76,322. Profit of £44,477 on sale of investments; a dividend of £92,000 against nil was received from a subsidiary. To writing off preliminary operating, £46,769; £30,000 for tax. Ordinary dividend, 12½ per cent. against 7½ per cent. Carry-forward raised from £191,912 to £214,412.

UNITED BRITISH OIL OF TRINIDAD.—Net profit for 1936, £67,680, compares with £64,689 after £109,565, against £101,746, to depreciation. Ordinary dividend, 8½, against 7½ per cent.

LOVELL AND CHRISTMAS, LTD.—Profit for year to June 12, 1937, was £143,204, against £205,623. Ordinary dividend reduced from 10 to 7 per cent. To: Benevolent fund, £4,000 against £6,000; sinking fund, £5,000, as before; tax reserve, £1,200 against £8,000; general reserve, £5,000 against £10,000. Carried forward, £99,471.

* Revenue from gold based on a price of £7 per fine ounce. † Reduced profit due to decrease in tonnage milled and lower grade following dislocation as a result of strike and fire. ‡ The tonnage milled includes 15,600 tons from low grade surface dumps accumulated during the development period.

TRANSVAAL OUTPUT, EMPLOYMENT AND WORKING PROFIT.—Gold output, May, 1937: Witwatersrand, 946,183 fine ounces; outside districts, 24,067 fine ounces; total, 970,250 fine ounces. Value for purposes of declaration, £7 0s. 6d. Total output, April, 1937: 981,565 fine ounces. The number of natives employed at end of May was: Gold mines, 300,374; coalmines, 15,291; total, 315,665. Total estimated working profit for May, 1937: Witwatersrand, £2,607,316; outside districts £9,271; total, £2,616,587. Comparable figures for April, 1937: Witwatersrand, £2,642,288; outside districts, £9,310; total, £2,651,598.

IRON AND STEEL

LONDON.—The weekly report of the London Iron and Steel Exchange indicates that consumers' pressure for delivery is becoming accentuated with the approach of the holidays. Comparatively few new transactions are reported, as most of the steelmakers are pursuing a cautious policy in view of the already heavy commitments upon their books. Only in exceptional cases is it possible to place orders for delivery before the last quarter of the year.

Business in pig iron is held up as the majority of the manufacturers have sold their production as far forward as they consider advisable. A number of contract renewals have taken place, but almost invariably for lower tonnages than was provided for in the original arrangement. Small offerings of foreign pig iron which have been made at high prices have attracted few buyers.

In the semi-finished steel department the producing works are making great efforts to meet consumers' requirements, but production is much less than the market could absorb. As a consequence, there is still a certain amount of irregular working in the consuming industries.

Stringent conditions continue to rule in all departments of the finished steel market. The periods required for delivery appear to be expanding in spite of record production. There is a considerable amount of export inquiry, and as much attention as possible is being devoted to this side of the business in order to retain old connections in overseas markets.

MIDDLESBROUGH.—The iron market continues firm. Makers are sold out for early delivery, and the shortage of foundry pig iron is pronounced. Some of the foundries have been obliged to purchase Continental iron in order to enable them to cover their requirements. The new official price of No. 3 Cleveland foundry pig iron came into operation on July 1st, and is based on No. 3 quality at 101s. per ton, delivered locally. The market in East Coast hematite remains stringent, and output is fully absorbed. Business for shipment abroad is suspended owing to the strong home demand. Prices are based on mixed numbers East Coast hematite at 122s. 6d. per ton, delivered locally. Shipments of pig iron from the Tees during June are much below the quantity shipped during the previous month.

Production of manufactured steel, both for constructional and shipbuilding work continues to increase, and all manufacturers are doing their utmost to obtain bigger outputs. Railway material is in strong demand and sheet makers have extensive contracts on their books. The supply of semi-manufactured steel remains short of requirements.

Steel scrap is coming forward regularly in small quantities from the Continent and larger deliveries are expected from the United States. Prices are unaltered. The position regarding blast furnace coke is unchanged, with the price remaining at about 40s. per ton, delivered at the furnaces.

SHEFFIELD.—The condition of the iron and steel market remains unaltered, with demand at a high level, and supplies inadequate for consumers' needs. The shortage of foundry iron continues to cause a good deal of difficulty and there seems no prospect of early improvement. Basic pig iron is also very scarce, and full supplies of forge iron are not now procurable. Actual business is confined to occasional small parcels of which early delivery can be given and there is keen competition for these. Makers generally appear to have accepted contracts to their output capacity over the third quarter, and bookings are being made to the end of the year, until which time prices are established. Some imported iron is available, but the price does not accord with consumers' ideas. Good business is being done in East Coast hematite, although makers are showing rather less readiness to book new business. West Coast hematite is not readily obtainable. Finished iron business is quiet pending the announcement of the new prices. The heavy pressure for basic steel billets continues, and delay in delivery is handicapping re-rollers. For bright-drawn steel, wire rods and stainless steel sheets the demand is fully maintained. Most classes of steel scrap sell freely at the controlled prices. Efforts are being made to bring iron scrap within the control system, but they are opposed by a body of merchants which may make such an arrangement impossible. Negotiations, however, are continuing.

Production of steel ingots and castings in May, according to the official returns, amounted to 135,000 tons, bringing the total for the first five months of the year to a new record of 705,100 tons.

GLASGOW.—Clyde shipbuilders are all exceedingly busy at present. Work on hand will keep them fully employed for many months to come. Locomotive builders and carriage and wagon builders in Glasgow and the West of Scotland are also very fully employed and have booked further important contracts for overseas within the past week. Steelmakers are still finding it impossible, despite intense activity at the plants, to meet all the requirements of users. The situation has not improved in regard to supplies of finished materials. Owing to the continued shortage of their raw materials, re-rollers cannot keep all plant in operation and consequently are unable to keep to rolling programmes previously arranged to fulfil orders already booked. New business is only being accepted where definite delivery dates are not stipulated.

CARDIFF.—All branches of the South Wales iron and steel trade continue exceptionally active. Prices of pig iron, steel bars, tinplates and galvanised sheets are firm at the increased figures. Shipments of tinplates at Swansea last week totalled 11,384 tons, compared with 5,762 tons the previous week, and 4,664 tons in the corresponding week of 1936.

OTHER METALS

COPPER.—After showing a stronger tone at the end of last week, the market turned rather easier, the cash quotation at the close on Wednesday being £1 7s. 6d. down on the week. The backwardation, which amounted last week to 15s. per ton, has now narrowed to 7s. 6d. These fluctuations are attributable to outside influences. The improvement at the beginning of the period under review was traceable to the improved tone of Wall Street, the easing of the strike situation in the United States, and the announcement of the increase in the resources of the Exchange Equalisation Account. Subsequently, the French crisis had a somewhat depressing effect. It may be noted that the early rise in quotations was accompanied by a spate of bear covering, while, when prices subsequently gave way, offerings showed a sharp contraction. This may be taken as an indication that weak speculative positions must by now have been eliminated. No major weakness is therefore likely in the near future, while an improvement in the general outlook might be followed by a sharp rise. The maintenance of a higher price level would, however, be dependent upon the resumption of consumer buying, and in this respect the last few days have been somewhat disappointing.

Sales on the London Metal Exchange: 1,800 tons on Monday, against 1,650 tons last week; 1,800 tons on Tuesday, against 950 tons last week; 750 tons on Wednesday, against 2,300 tons last week. Domestic spot was quoted at 13·57½ cents per lb. in New York on Wednesday, against 13·57½ cents a week ago and 14·05 cents a month ago. Wednesday's official closing price for standard cash in London was £54 to £54 5s. per ton, compared with £55 7s. 6d. to £55 10s. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 10,569 tons, showed a decrease of 198 tons, while stocks of rough copper, at 8,994 tons, were 493 tons smaller.

THE FINANCIAL CRISIS IN FRANCE

THE BANKER could hardly have chosen a more opportune moment than the present to publish a special survey of financial and economic conditions in France.

The July issue of THE BANKER (published to-day, price 2s. 6d. through a newsagent or bookseller; by post 2s. 9d.) is largely devoted to present conditions in France. M. Blum himself has contributed a foreword to this series of articles, while among other authorities who have written for THE BANKER on their respective subjects are "Pertinax," who reviews French foreign policy; M. Roger Auboin, who discusses French economic conditions and the Tripartite Monetary Agreement; M. Detoeuf, who describes the present state of French industry; M. Schwob, who analyses the French financial position; M. Sarraut, who deals with the French Colonial Empire; and M. Olivier, who discusses French communications by land, sea and air.

It is unlikely that so comprehensive a description of French economic and financial conditions has ever before appeared in print, the chief purpose of this issue being to explore ways of closer co-operation between France and Gt. Britain.

The special survey of Germany which was published in the February issue of THE BANKER met with a world wide response. Three very large printing orders were quickly exhausted and right up to the present time, orders which can no longer be executed are reaching us from every quarter of the globe. The obvious moral to be drawn is to place a definite order with a newsagent or bookseller to-day for the July issue of THE BANKER.

Orders for copies by post should be addressed to The Publisher:—

THE BANKER

20 Bishopsgate, London, E.C.2

LEAD AND SPELTER.—After fluctuating in sympathy with general movements of the market, both metals closed on Wednesday slightly higher on the week. An improvement in the international outlook might be expected to benefit lead and spelter; but the upward trend of production is likely to limit the volume of speculative interest.

World production of spelter, according to the American Bureau of Metal Statistics, reached 162,300 short tons in May, against 157,000 tons in the previous month. World lead output, excluding Spain, rose from 151,600 short tons in April to 158,500 short tons in May. These increases are satisfactory, and will help to normalise supplies on the two markets.

Sales of lead on the London Metal Exchange: 1,500 tons on Monday, against 1,300 tons last week; 1,950 tons on Tuesday, against 900 tons last week; 1,100 tons on Wednesday, against 1,050 tons last week. The New York quotation on Wednesday was 6·00 cents per lb., against 6·00 cents a week ago and 6·00 cents a month ago. Wednesday's official closing quotation in London for soft foreign for shipment during the current month was £23 8s. 9d. per ton, compared with £22 18s. 9d. last week.

Sales of spelter on the London Metal Exchange: 1,900 tons on Monday, against 1,350 tons last week; 1,300 tons on Tuesday, against 350 tons last week; 1,350 tons on Wednesday, against 1,250 tons last week. Wednesday's quotation in East St. Louis was 6·75 cents per lb., against 6·75 cents the week before and 6·75 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipment during the current month was £21 13s. 9d. per ton, against £21 last week.

TIN.—Although, like copper, tin has fluctuated in accordance with outside influences, the cash price shows an improvement on the week, and the backwardation has narrowed to a mere 5s. per ton. The comparative strength of the market has been largely due to the publication of the May export figures. These showed that the seven restricting countries were 5,456 tons in arrears with their shipments, and that the accumulated arrears at the end of May amounted to no less than 24,296 tons. More than half of this total (14,145 tons) was attributable to Bolivia, the country on which the British tin-smelting industry is mainly dependent. Owing to the steps taken by the Government, a rising trend of production may be expected in Bolivia before long. But when this increase makes itself felt on the market, the summer period of seasonal slackness will probably have come to an end; the increase in Bolivian supplies will then be necessary to close the gap between production and the very satisfactory rate of consumption.

Sales of tin on the London Metal Exchange: 400 tons on Monday, against 305 tons last week; 250 tons on Tuesday, against 175 tons last week; 110 tons on Wednesday, against 245 tons last week. The New York quotation on Wednesday was 56·50 cents per lb., against 55·85 cents a week ago and 56·12½ cents a month ago. Wednesday's official closing quotation in London for standard cash was £252 10s. to £253 per ton, compared with £247 15s. to £248 a week ago. Stocks of tin in London and Liverpool at the end of last week totalled 3,181 tons, a decrease of 9 tons on the week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted on Wednesday at £100 per ton, and rolling billets at £102 per ton. Nickel, for home and export, was maintained at £180 to £185 per ton. Quicksilver, on the spot, was quoted at £15 5s. to £15 5s. 6d. per flask of 76 lbs., the same as last week. Chinese antimony was quoted at £68 per ton, ex warehouse, the same as last week. Chinese wolfram for "June–July" shipment was quoted at 63s. per unit, c.i.f., compared with 63s. to 64s. last week. Refined platinum was quoted on Wednesday at £10 15s. per ounce, the same as last week.

TEXTILES

COTTON.—Manchester.—Spinners and manufacturers in the Lancashire cotton industry remain very busy completing old contracts, but so far as fresh business is concerned the turnover continues within narrow limits. Now and again there have been indications of improving demand, but important transactions have been few and far between. Outside factors, such as the financial crisis in France, have had their effect upon traders, and in most quarters buyers have followed a policy of marking time.

On July 8th, the United States Government will publish the estimate of the area planted with cotton. The market is expecting a figure in the region of 35,000,000 acres, which will compare with the last crop of 30,028,000 acres. There have been signs of more stability in prices. The rise in prices on one or two days was due to short covering by operators owing to the fear that any change in the crop outlook is bound to be unsatisfactory. Recently, however, very favourable weather conditions have prevailed, but according to some advices there is now more danger of the yield being adversely affected by boll weevil damage.

American and Egyptian yarn quotations have been steady. Business has been small, but the mills are engaged to full capacity delivering against old contracts.

There has not been much activity in the cloth section. Most buyers have again operated with caution. For the most part sales have consisted of retail lots to meet urgent requirements. Manufacturers with wide looms remain very busy, but producers of narrow cloths are not in quite the same position, and unless there is a speedy revival of demand there will be more eagerness for fresh contracts. The cloth turnover for India has been on a small scale. Only miscellaneous transactions have been arranged for Java and Singapore. There has been a fair turnover for West Africa. Some of the contract dates extend into next year. Scattered sales have taken place for South America. There has not been much business passing for the Empire markets or the home trade.

JUTE.—Dundee.—Raw jute prices are fluctuating, and the gradual decline of recent weeks has been followed by a sharp recovery. This week, however, weakness is again in evidence, and the uncertainty creates caution amongst buyers of all products of the industry. Spinners are not inclined to pay current prices for their raw material in view of the probability of a huge crop in the coming season. So far there is no news of the first forecast of the crop being issued this year, though a year ago this week the district returns were being received. It is estimated that the new crop will yield about 12 million bales, and there is sufficient jute from the past crop to satisfy the needs of the world, though the carry-over must be small, except in the hands of consumers, who are probably holding something like 5,500,000 bales. Conditions governing the new crop have been fairly satisfactory in most districts recently, though in some there has been too much rain. Speculative sellers are not so keen to offer new crop jute this season, whereas formerly they were usually inclined to discount old crop prices by 20s. to 40s. per ton.

Old crop Daisee–2/3 is quoted at £20 10s. for the full group, and Tossa–2/3 at £21, June/July, while new crop Daisee–2/3 might be bought at £19 5s, if a buyer were interested. Spinners, however, expect to purchase at much less than that limit before long, and are holding off. New crop Lightnings are quoted at £21 12s. 6d., and Hearts at £20 10s., August/September.

Jute yarns are very quiet, with common 8 lb. cops selling only occasionally at 2s. 3d. and 8 lb. spools at 2s. 4d. Twist rules slow at 4½d. for 3 ply 8 lb. and sacking yarns are firm at 2¾d. for 24 lb. weft and 3 11/16d. for 8 lb. chains, Rove is quieter and is now offered at £21 10s. for 48 lb. and £17 5s. for 200 lb., while the Rio yarns are well sold ahead and can only be bought at reduced prices for far forward delivery. Carpet yarns are firm at 3¾d. for 14 lb. warp.

Orders for jute cloth are usually for trifling lots for immediate delivery. Manufacturers are keen to secure further business, and they might shade the rates of 2 11/16d. for 10 oz. 40 in. and 2 5/16d. for 8 ozs. Linoleum hessians are quiet but steady, and heavy goods are of only occasional interest.

Calcutta goods have steadily declined and closed at 17s. 4d. for 10 oz. 40 in. and 14s. 11d. for 8 oz., June; 17s. 7d. and 14s. 6d., July/September, and 17s. 8d. and 14s. 6d., October/December. Liverpool twills are quoted at 46s. 1½d., and "B" twills at 40s. 6d., June; 46s. 9d. and 41s. 1½d., July/September, and 47s. 4½d. and 41s. 10½d., October/December.

GRAIN MARKETS

WHEAT.—After a relatively steady period, prices advanced sharply in mid-week in sympathy with Chicago and Winnipeg. Dry weather continues in Canada, and reports this week confirm the damage done by rust in the United States. Canadian authorities are taking a serious view of the drought, and abundant rainfall is now becoming urgently necessary. It is apparent that, even in the most favourable circumstances, there can be no great accumulation of world stocks this year.

On Wednesday last, "July" futures were quoted in Chicago at 118⅛ cents per bushel, against 113⅜ cents the week before and 110⅛ cents a month ago. Quotations in London, Wednesday: No. 1 and No. 2, Northern Manitoba, ex ship, not quoted; No. 3, 52s. per 496 lbs., as against 46s. last week. According to the *Corn Trade News*, total shipments of wheat and flour last week amounted to 931,000 quarters, against 1,331,000 quarters in the previous week and 986,000 quarters in the corresponding week a year ago.

FLOUR.—Prices have advanced in sympathy with wheat. Wednesday's *London quotations* (excluding quota payments) were: Straight run, delivered Home Counties, 41s. 6d. per 280 lbs., as against 40s. a week ago; delivered inner London, 41s., as against 39s. 6d. a week ago. Manitoba patents, ex store, 41s. to 42s. 6d., as against 37s. 6d. to 39s. a week ago. Australian, ex store, 33s. to 34s. 6d., as against 32s. 6d. to 33s. 6d. a week ago.

BARLEY.—Although demand continues quiet, imported feeding barley is a steady market. "July" futures were quoted at 66⅛ cents per bushel in Winnipeg on Wednesday, as against 65½ cents last week. Quotations per 448 lbs. in London on Wednesday were: "English feed" at farm, 35s. to 36s., as against 35s. to 36s. a week ago; "English malting," at farm, 36s. to 42s., against 36s. to 42s. last week. California, ex ship, 50s. 6d. to 53s., as against 50s. 6d. to 53s. a week ago. Chilean, brewing, ex ship, 44s. 9d. to 50s., as against 44s. 9d. to 50s. a week ago.

OATS.—On Wednesday, "July" futures were quoted at 42⅜ cents a bushel in Chicago, against 40⅛ cents a week ago and 43⅛ cents last month. Quotations in London, Wednesday: "English black," at farm, 27s. to 28s. per 336 lbs., as against 27s. to 28s. a week ago; "English White," at farm, 27s. to 28s., as against 27s. to 28s. a week ago; mixed Canadian feed (Vancouver), landed, 26s. 6d. per 320 lbs., as against 25s. 6d. a week ago.

MAIZE.—The Chicago market has firmed up this week on the resumption of Plate buying by the United States, and British markets have advanced in sympathy. "July" futures were quoted on Wednesday at 125 cents per bushel in Chicago, against 117⅞ cents a week ago and 122 cents last month. Quotations in London, Wednesday: "Plate," landed, 27s. 6d. per 480 lbs., as against 26s. 6d. a week ago; "Plate," ex ship, 26s. 6d., as against 25s. 6d. a week ago; "Plate," "June," 26s. 9d., as against 25s. 6d. a week ago; yellow maize meal, ex wharf, was quoted at £6 17s. 6d. to £7 per ton, as against £6 15s. to £6 17s. 6d. last week.

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations for selected weeks in 1935–1937:—

Nearest Future	Jan. 2, 1935	Dec. 31, 1935	July 1, 1936	Dec. 30, 1936	June 23, 1937	June 30, 1937
Winnipeg (No. 1, Manitoba) —Cents per 60 lb.	82⅞	84⅛	80⅜*	129	126⅛	138⅛
Chicago (No. 2, Winter)— Cents per 60 lb.	98⅛	101½	95⅛	135½	113⅛	118⅞

* June 30.

The visible supply of wheat in Canada amounts to 45,653,000 bushels, against 48,294,000 bushels last week, and 80,217,000 bushels in the corresponding week last year.

SALES AND PRICES OF BRITISH CEREALS.—The following table gives the estimated sale of home-grown wheat during the harvest years 1933–34 to 1936–37.

	1933–1934	1934–1935	1935–1936	1936–1937
Estimated sales of home-grown wheat—	Cwts.	Cwts.	Cwts.	Cwts.
1 week to June 26	83,862	84,653	70,154	101,310
43 weeks to June 26	9,804,039	12,958,600	12,869,556	10,426,284
Average price of English wheat per cwt.	s. d. 5 6	s. d. 5 6	s. d. 6 8	s. d. 9 6

The following is a statement showing the quantities sold and the average price of British cereals in the past two weeks, and for the corresponding weeks in each of the years from 1933 to 1936:—

Week ended	Quantities Sold			Average Price per cwt.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
	Cwts	Cwts.	Cwts.	s. d.	s. d.	s. d.
June 24, 1933	47,859	15,578	8,746	6 5	6 11	5 9
June 23, 1934	83,862	6,564	21,985	5 6	7 6	6 3
June 29, 1935	84,653	9,834	10,353	5 6	7 2	7 6
June 27, 1936	70,154	3,672	13,843	6 8	6 4	6 3
June 19, 1937.....	135,717	6,496	18,135	9 9	9 6	9 1
June 26, 1937	101,310	3,168	13,486	9 6	9 6	9 0

OTHER FOODS

BACON.—In response to a firm demand, quotations show an all-round advance. The official quotations (per cwt. for No. 1 Sizable) which formed the basis for dealings on the London Provision Exchange this week were: English, 90s.; Canadian, 84s.; Danish, 91s.; against 86s., 79s., and 87s., last week. Arrivals in London last week included: Danish, 13,815 bales; Canadian, 6,754; Dutch, 2,440; Lithuanian, 1,083; and Polish, 2,965; as against 14,124, 7,216, 2,430, 1,038 and 3,324 bales, respectively, in the previous week.

BUTTER.—The market has had a quiet tone, and Colonial makes are again a shade cheaper. Quotations (per cwt.) on the London Provision Exchange on Monday were: New Zealand, finest salted, 109s.; Australian, choicest salted, 107s.; Danish, 115s.; compared with 110s., 108s., and 115s., respectively, a week ago.

CHEESE.—Cheese was a quiet market, with New Zealand the turn easier. Quotations (per cwt.) on the London Provision Exchange on Wednesday were as follows: Canadian, finest coloured, 78s. to 80s., and New Zealand, finest coloured, 71s. 6d. to 72s. 6d.; against 78s. to 80s. and 73s. to 73s. 6d., respectively, a week ago.

COCOA.—The spot quotations in New York on Wednesday was 7 5/16 cents per lb., as against 7⅛ cents per lb. last week. In London, on Wednesday last, good fermented new crop, Accra, "November–January," was quoted at 34s. 9d. per 50 kilos., c.i.f. Continent, against 34s. 3d. for "October–December" a week ago. Last week's movements of cocoa in London were as follows: Landed, 1,236 bags; delivered, for home consumption, 4,219 bags; exported, 532 bags; stocks, 283,455 bags, against 166,282 bags a year ago.

COFFEE.—On Wednesday, Rio No. 7 (cash) was quoted at 9¼ cents per lb. in New York, as compared with 9¼ cents per lb. last week and 9¼ cents per lb. a month ago. Movements of coffee in London last week were as follows: Brazilian, landed, 39 cwt.; delivered for home consumption, 54 cwt.; exports, nil; stocks, 1,968 cwt., against 10,307 a year ago. Central and other South American: Landed, 578 cwt.; delivered for home consumption, 2,742 cwt.; exported, 368 cwt.; stocks, 114,250 cwt., against 121,116 last year. Other kinds: Landed, 380 cwt.; delivered, for home consumption, 3,095 cwt.; exported, 97 cwt.; stocks, 113,461 cwt., against 164,129 last year.

EGGS.—The market has had a firm tone, with prices higher for most selections. At Smithfield, on Wednesday, English (ordinary packing, Grade I, about 15–15½ lb.) realised 13s. 6d. to 14s. 3d. per 120, against 11s. 9d. to 12s. 3d. last week; while Danish (15½ lb.) made 9s. 3d. to 9s. 9d., as against 8s. 6d. to 9s. last week.

FRUIT.—At Covent Garden during the past week a good demand was maintained, according to *The Fruitgrower*. Although most attention was concentrated on soft fruits, prices of other lines were not adversely affected. Strawberries were in short supply, but owing to the competition of cherries and currants, prices showed little alteration. Gooseberries, in consistent demand, declined in price in response to heavier arrivals. Fair quantities of black and red currants arrived from home sources, while a few English raspberries realised 10d. to 1s. per lb. Larger consignments of oranges from South Africa and Brazil caused prices to ease, but lemons were firm. Grapefruit was more plentiful and was consequently cheaper. Apples and pears from Australasia, on the other hand, rose in price. Hothouse grapes and also melons declined, but English peaches and nectarines sold at higher rates.

MEAT.—At Smithfield this week, trade was generally steady, with imported beef a shade dearer. On Wednesday last, Argentine chilled hindquarters were quoted at 4s. 4d. to 4s. 8d. per 8 lbs., as compared with 4s. 2d. to 4s. 6d. a week ago. New Zealand frozen mutton was 3s. 4d. to 4s. per 8 lbs., against 3s. 4d. to 4s. a week ago. According to the Smithfield Market official report, supplies during last week amounted to 8,596 tons, an increase of 946 tons on the corresponding week last year. Beef and veal accounted for 4,955 tons, mutton and lamb 2,596, and pork and bacon 667, as compared with 4,115, 2,696 and 436 tons, respectively, in the same week of 1936.

PEPPER.—On Wednesday, Singapore white Muntok, August–October, was quoted at 4¼d. per lb. sellers, against 4⅛d. per lb. a week earlier. Black Lampong, spot, in bond, was quoted at 3d. per lb. sellers, compared with 3d. per lb. last week. Movements of pepper in London last week were as follows: Black, landed, nil; delivered, 2 tons; stocks, 1,995, against 1,753 last year. White, landed, 9 tons; delivered, 31 tons; stocks, 11,825 tons, compared with 12,029 a year ago.

RICE.—The spot price of Burma No. 2, cleaned, was 10s. per cwt., ex warehouse, on Wednesday, as compared with 10s. per cwt. a week ago. "July–August," in singles to Continent and U.K., was quoted at 9s. per cwt., against 9s. for "June–July," last week. Movements in London last week were as follows: Landed, 217 tons; delivered, 56 tons; stocks, 1,815 tons, against 1,584 a year ago.

SUGAR.—The markets have been generally steady. The New York spot quotation was 3·45 cents on Wednesday, as compared with 3·45 cents per lb. last week and 3·35 cents per lb. a month ago. Wednesday's sales of raw sugar in London included "August" delivery at 6s. 7½d. to 6s. 8½d., against 6s. 7¾d. to 6s. 8¼d. a week ago. Movements of raw sugar in public warehouses in London and Liverpool last week were as follows: Imports, 15,783 tons, against 3,537 in the previous week and 11,837 in the same week of 1936; deliveries, 16,129 tons, against 16,153 and 18,341 tons, respectively; stocks, 194,574 tons, against 194,920 and 134,201 tons, respectively.

TEA.—The following table shows the average price (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account in recent weeks:—

Week ended	Northern India	Southern India	Ceylon	Java	Sumatra	Africa	Total
	d.	d.	d.	d.	d.	d.	d.
June 25, 1936	12·20	12·26	12·98	10·26	9·95	11·21	12·18
May 27, 1937	14·76	15·25	16·11	13·24	12·17	14·03	15·10
June 3, „	14·26	14·42	15·25	12·83	11·99	13·56	14 48
„ 10, „	14·57	14·61	15·12	13·73	12·15	13·94	14·67
„ 17, „	14·67	14·62	15·06	13·11	12·45	13·70	14·51
„ 24, „	15·60	14·50	15·16	14·16	12·28	13·77	14·96

At this week's public auctions in Mincing Lane, 18,558 packages of Indian and 26,227 packages of Ceylon tea came up for disposal. Indian grades met a good demand. Prices for new season's Dooars and South Indian teas, although somewhat irregular, showed little change. Prices of Ceylon sorts were also generally unaltered, although fannings were slightly easier.

VEGETABLES.—Salads and greens have been in short supply at Covent Garden during the past week, and have consequently risen in price, says *The Fruitgrower*. Tomatoes and cucumbers remained in steady demand; asparagus enjoyed a good sale at improved prices, but peas were lower in response to an increase in supplies. Lettuce was in demand, while new carrots, turnips and broad beans sold well. Meanwhile, new potatoes have continued to increase in supply, and prices at the various London markets have consequently fallen. At the Borough, on Tuesday, Cornish, Lincolnshire and Bedfordshire were quoted at 10s. to 12s., while Jersey made 9s. to 11s. per cwt. Old crop potatoes sold slowly at lower prices, best siltland King Edward making 6s. 6d. to 7s. 6d. per cwt., ex market, against 9s. 6d. to 10s. 6d. a week earlier.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OILSEEDS.—Markets have a much brighter tone, and there is more willingness to buy. The feature is the sharp advance in linseed oil, which had been depressed for the greater part of last month; over the week-end an increase of 20s. per ton for early delivery was registered. With stocks moderate and Continental prices rising, crushers were extremely reserved and business was small. A factor in the firmer market was the strength of grain prices (including linseed) caused by adverse reports concerning the new crops in North America. Meanwhile, shipments from Argentina continue at a fair level, including a substantial proportion destined for the United States, the yield of whose new crop is still very uncertain. The United States and Canada so far this year have taken about half a million tons from Argentina, or nearly three times the quantity at the corresponding date last year. Future imports depend on the yield of the domestic crop. India is shipping only modest quantities of the new crop, growers evidently having faith in the future of the market. The world's exportable surplus for the second half of the year is estimated, in round figures, at 800,000 tons, against over a million tons actually shipped in the remainder of last year. Cotton seed is firmer, and a fair trade is reported in the balance of the old Egyptian crop at rising prices. Business has also been done in new crop, up to £7 7s. 6d. having been conceded for September shipment and rather less for later dates. Trade in cotton oil, however, continues unsatisfactory. Oilcakes are steady and demand is about normal for the season.

RUBBER.—The market showed an improvement in the early part of the period under review, largely in consequence of the announcement that the resources of the Exchange Equalisation Account would be increased by £200 millions and of the improvement in the American strike situation. The franc crisis has since had a depressing effect and the gain has been lost. In view of the strength of the statistical position, however, and the liquidation of weak speculative positions, no major weakness is likely in the near future. The spot price in New York on Wednesday was 19¼ cents per lb., compared with 19 7/16 cents per lb. a week ago and 20 3/8 cents a month ago. Wednesday's official buyers' price for standard ribbed smoked sheet on the spot in London was 9 7/16 d. per lb., as against 9 7/16 d. on the corresponding day last week. In forward positions business has been done at 9 3/8 d. to 9⅝d. for "August" shipments, as against 9 3/8 d. to 9⅝d. a week ago. Stocks in London and Liverpool at the end of last week totalled 43,403 tons, against 43,653 tons a week earlier. A year ago stocks amounted to 122,700 tons.

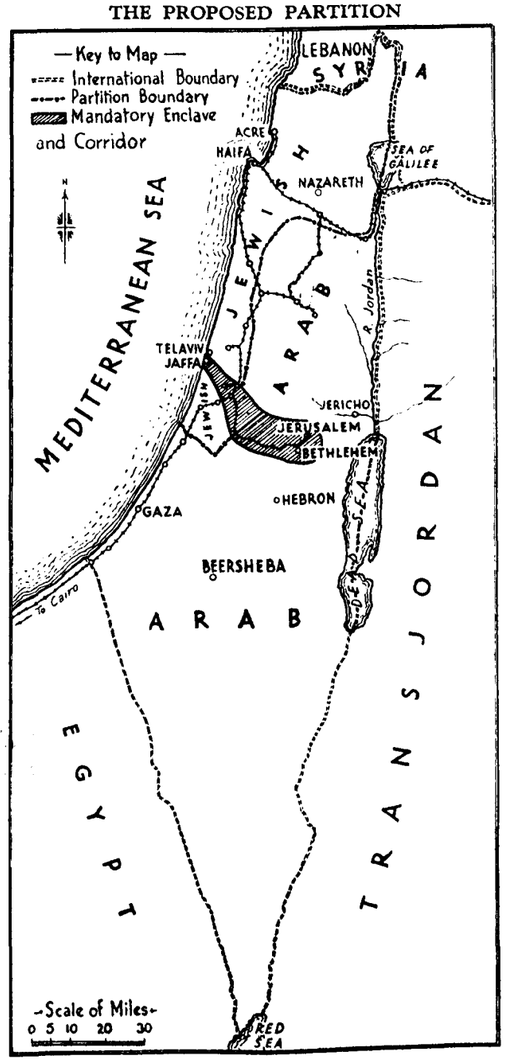
Partition of Palestine

ALTHOUGH the gist of the conclusions of the Royal Commission on the future of Palestine had been widely and correctly forecast, the publication of their unanimous report this week was greeted with excitement and intense interest. This was only its due as an historic State paper affecting the destinies of three great peoples. In felicitous and blunt language, the Commissioners pile historical fact on historical fact to justify their conclusion that the present aims of Jews and Arabs are fundamentally incompatible. "We cannot—in Palestine as it now is—both concede the Arab claim to self-government and secure the establishment of the Jewish National Home." Whether, in Palestine as it might have been, reconciliation would have been possible is perhaps a barren speculation. Certainly, when the mandate was first given, Arab leaders like KING FEISAL and Jewish leaders like DR WEIZMANN as well as British statesmen assumed that our war-time pledges to the two parties were compatible and that Jewish and Arab aspirations could be accommodated in a single State. But the spirit of nationalism, devastatingly potent throughout the world since the war, has so taken hold upon the thought and feeling of both communities that the problem of Palestine has resolved itself into this dilemma: that a self-governing Palestine must be either a Jewish or an Arab state, and either alternative means death to the hopes of a great subject people.



Hence it follows, according to the Commission's reasoning, either that Palestine cannot be self-governing, or that some form of partition is inevitable. The British people have accepted a trust for the government of Palestine, and are ready to carry it out, costly, dangerous and repressive though the means might have to be. But "it is not easy to pursue the dark path of repression without seeing daylight at the end of it." There the Commission have touched upon the inner defect of the present system: the channel of political advance would be stagnant, if not regressive, without hope of gradual progress towards a better condition of things in which tutelage and coercion could be withdrawn. The test of their alternative plan will be the measure in which it makes for a gradual improvement instead of a gradual deterioration of Jewish-Arab relations, and of the whole political life of the country which is now Palestine.

Their proposal is to surrender the mandate and replace it by a triple system. This would comprise a new mandate for the Holy Places (with a corridor to link them with the sea), and treaties of alliance between the mandatory Power and the Government of Transjordan and representatives of the Palestine Arabs on the one hand, and with the Zionist organisation on the other. These treaties would set up sovereign independent States, one Arab and the other Jewish. The treaties would include, besides military clauses, strict guarantees for the protection of minorities in each State, and financial and other provisions. It is proposed that, in view of the higher tax-paying capacity of the Jews and the loss to the Arabs of a portion of a land they have claimed as their own, a subvention (to be fixed by a Financial Commission) should be paid by the Jewish to the Arab State. The latter would also receive a non-recurrent grant of £2,000,000 from the British Treasury in composition for the present subsidies to Transjordan.

The details of this plan, including the new lines of the

frontiers, are now being hotly contested by opposing interests. Its principle has already been accepted by His Majesty's Government, and to judge by the evidence of its immediate reception will be accepted by the great mass of British opinion. The Commissioners themselves plainly recognise that it is likely at first to arouse disappointment and hostility in both camps in Palestine. At the same time they put forward cogent reasons why upon reflection it should be acceptable to both Jewish and Arab opinion. To either community it offers a chance for the fulfilment of its chief hope, a chance which the report shows does not exist under the present system. The Arabs may have national independence, unhampered by fears of being swamped by the Jews. The Jewish National Home may be established, in a form which the Jews may in the fullest sense call their own, and relieved from the possibility of its being subjected in the future to Arab rule. "To both Arabs and Jews partition offers a prospect — and there is none in any other policy—of obtaining the inestimable boon of peace. It is surely worth some sacrifice on both sides if the quarrel which the mandate started could be ended with its termination."

THE PROPOSED PARTITION

Can that quarrel, indeed, be ended by these terms? The most comprehensive exchange of lands and peoples, which the Commission hold in prospect, will still leave minorities of each community in the State of the other. Jewish and Arab nations will still face each other across a frontier which is essentially a work of politics rather than of nature. Partition is an expedient with an unhappy history in the British Commonwealth's past; the partition of Ireland is still the heart of a cankerous problem very near home. Too much, however, need not be made of the Irish analogy, for there are many vital differences. The two parts of Ireland were not allowed to work out independently their own destiny, for one remained incorporated with the external British power which the other regarded as an historical enemy. Palestine, where Jew and Arab have lived on amicable terms for centuries before the mandate, affords no parallel to this. Nevertheless, it will be well if the Government and the Mandates Commission, and the Arabs and Jews themselves, who will have the task of implementing the Commission's report, bear in mind the lessons that Irish partition affords. One of those lessons is that the boundary, unnatural as it is, is being steadily converted into a Chinese wall by the piling-up of vested interests created by economic nationalism. If the Jewish and Arab States are to live together on progressively closer and mutually more profitable terms, it is essential that too free a rein should not be given to extreme fiscal and administrative nationalism during the infancy of the new independence. The Commission justly regarded it as an essential part of the proposed treaty system that a commercial convention should be concluded "with a view to establishing a common tariff over the widest possible range of imported articles and to facilitating the freest possible interchange of goods between the three territories concerned."

An even more fundamental lesson to be drawn from the Irish partition is the need for some common institutions, if only of an informal or consultative kind, between the two neighbour States. Misunderstandings grow unweeded, and paths of policy needlessly diverge if there are no organs for joint consideration of common problems. To create such common organs, with a view to fostering the friendship, peace, wealth and good government of the three Palestinian brother-states, will be among the first of the constructive tasks of British, Jewish and Arab statesmanship, if Parliament and the League of Nations accept the principles of the Commission's report. Only if the future contains the prospect of peaceful and prosperous good - neighbourliness between Jew and Arab can the post-war history of Palestine be written off as anything but a failure. It is the fundamental merit of the Commission's report that it views that history and the problems that emerge from it, not as an isolated episode in colonial administration, but as a crucial page in a story older than that of Europe. In that story, Jewish civilisation, dispersal and repression; Arab dominion, decline and revival; and the intervention of the Western Powers in the resettlement of the Near East after the Great War had swept away the remnants of Turkish imperialism, have all played great parts. It is for us a matter of pride that the heritage of British democratic statesmanship can outweigh the evil legacies of the past: the nationalist ferment of the Near East, and the cruelties of Christendom to the people of Israel.

The strident protests that have immediately been voiced by both sides show that to carry through this scheme will prove no easy task. Indeed, the Government, whose handling of the situation last year is the subject of rather sharp criticism, are evidently concerned lest matters might again get out of hand and have taken early precautions against disorder. But we will hope that all such fears may prove groundless. The Egyptian treaty last year, and now the acceptance of office by the Indian Congress leaders, should do something to convince the Eastern world of Britain's good will and of the healing quality of freedom. The Commission have offered a way out of a terrible dilemma. It is up to the interested parties either to find a better course or to accept it.

Politics in the Dog-days

A QUITE abnormal degree of apathy is the outstanding feature of recent by-elections. So disturbing are its implications that both the Government and the Opposition are engaged in much heart-searching. For politics are in the dog-days; and, like the weather at that time of year, a flat calm may be ominous.

Here are the figures for nine constituencies in which there were contests both last month and in 1935:—

	1935	%	1937	%
Electorate	532,000	*100*	548,000	*100*
Total voting	357,600	*67*	270,400	*49*
Government poll	232,000	*43½*	169,000	*30½*
Combined Opposition poll	125,600	*23½*	101,400	*18½*
Government majority	106,400	*20*	67,600	*12*

In the 1929 General Election, these same constituencies polled 75 per cent. of their electorate; in that of 1931, 73 per cent.; in that of 1935, only 67 per cent.; and now as little as 49 per cent. This landslide in the poll—with a majority of the electors abstaining from the use of their franchise—needs explanation in terms of political sensitivity. There is no question whatever that if the issue at the polls were couched in terms of democracy *v.* dictatorship, the response would show almost a 100 per cent. poll of the electorate in favour of democracy. Then what has caused this rot in our democratic politics?

At best it is not very exciting to vote for or against candidates who are certain to get in—and in the past month the eleven elections have all taken place in safe Government seats. But the lack of interest of the electors goes deeper than this. The public is grateful for peace and prosperity; but it has grave doubts whether either is permanent. For though it is true that we are still at peace, we have plunged into an arms race and a series of European crises, and our prosperity, like that of other countries, is being buttressed by a spate of armament orders. The electors like the ends achieved, but mistrust the means and fear the aftermath. And if this is the reason for the lukewarm support of Government candidates, most of the electors dislike—even if they do not positively fear—the alternative; and very few have any faith in the competence of the Opposition leaders to form an effective alternative Government. And that is a grave deficiency.

If events have led the public to take a non-committal attitude towards the National Government, it must not be overlooked that the policy which the Government has pursued is itself the consequence of a coalition mentality. EARL BALDWIN, with his liberal sympathies but lack of clear or strongly held political views, was the ideal coalitionist. Under MR LLOYD GEORGE, coalition policy was the result of bargaining between vigorous opposing forces to enable vitally important policies to be carried out. EARL BALDWIN'S policy has been the natural compromise of the cross-bench mind. Its effect has been to release political thinking from party restrictions so that political views within the coalition ranks have tended to become blurred and neutral in tint. This in turn has reacted on the Opposition—and particularly the Socialist section of it, which has watered down its Socialism partly because of lack of dogmatic conviction among the great mass of its supporters, and partly because other issues are obviously uppermost in people's minds.

This does not mean that there is no difference between the attitude of EARL BALDWIN and that of MR ATTLEE, or that a Left Government would have behaved very much as the National Government has behaved in the last six years. Far from it. A Left Government, in particular, would have resisted the drift towards insularity in both the political and economic realms which has been so marked a feature of the BALDWIN regime. Ottawa and unilateral rearmament are the characteristic results of an attitude which has, indeed, helped this country over its own immediate difficulties but has powerfully helped to bring the world to its present pass.

The net effect, however, has been that no simple issues of political principle have been presented to the electorate, who have therefore left politics alone.

This is not good for democracy; for it means that there is a great floating vote which might at any moment become a danger as a result of some sudden uprush of popular feeling. During the next few critical months and years, therefore, it is essential that the Parties on whose shoulders our democracy is still perched should safeguard its existence and their own by a clearer enunciation of policies and principles. If they cannot, or will not, do this, government will be carried on in the traditional home of democracy in default of a majority of the electors. And from that to either kind of dictatorship is only a small, administrative step. It is widely hoped that MR CHAMBERLAIN'S assumption of the premiership will bring about a clearer definition of political issues in this country.

The Economics of Population—I

The Future of Young and Old

RECENT surveys show that the age of Britain's population is rising. They also suggest that, if present trends continue, the total population will soon begin to decline.

That the prospect is already disturbing influential sections of popular opinion is evidenced by the trend of recent public discussions, in Parliament, on the wireless, and elsewhere. It may be well, therefore, at the outset, to point out that some degree of uncertainty attends all estimates of future population. But though they are uncertain, such calculations are not therefore worthless.

No comparable limitations restrict the value of estimates covering the years near at hand. The overwhelming majority of those who will be alive ten and twenty years hence, the majority even of those who will be alive after thirty years, are already living to-day. Their numbers can therefore be affected only by death. Apart from war and pestilence, experience shows that death-rates are now likely to change relatively slowly. Even a war like that of 1914-18 has a surprisingly small effect on total numbers. Assuming that the birth-rate which prevails now will continue—an assumption which, though reasonable and likely for the nearer years, becomes increasingly less likely for those more remote—it is a straightforward though laborious task to compute for given dates both the total population and its distribution among various age-groups.

The changes thus forecast in the numbers and age distribution in England and Wales between 1935 and 1965 are shown in the table overleaf, and illustrated graphically

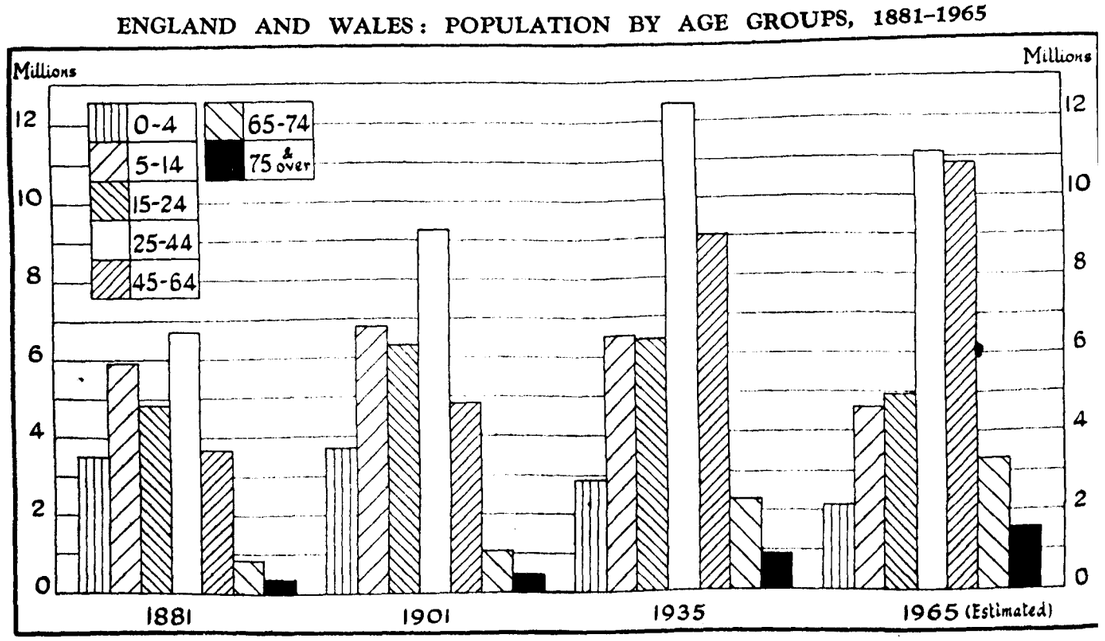
in the diagram at the foot of this page. In order to give perspective, the diagram also represents the position in 1881 and 1901. The data for 1935 and 1965 have been obtained from a calculation by Dr Enid Charles,* which assumes that the fertility and mortality rates occurring in 1933 will continue throughout the period. The data for 1881 and 1901 are taken from the Registrar-General's census returns.

TOTAL POPULATION, ENGLAND AND WALES

(000's omitted)

Age group	1881	1901	1935	1965 (estimated)
75 and over	336	442	908	1,549
65–74	852	1,076	2,308	3,311
45–64	3,708	4,845	9,016	10,811
25–44	6,734	9,252	12,476	11,114
15–24	4,875	6,367	6,428	4,967
5–14	5,948	6,829	6,572	4,601
0–4	3,521	3,717	2,860	2,149
TOTAL	25,974	32,528	40,568	38,502

By every test—whether by the numbers and proportions of children and the young, the old and the very old, or those in the middle years—the population was older on the average in 1935 than in 1881 or 1901. And it will be still older in 1965. The ageing of the population is the more marked when account is taken of the change in absolute numbers from 26 millions in 1881, and from 32.5 millions in 1901, to 40.6 millions in 1935 and to an estimated 38.5 millions in 1965. Thus, if we take first the children, at the two earlier dates there were roughly two adults to every child under fifteen; to-day there are three, and in 1965 there will be nearly five. Those of sixty-five and over accounted in 1881 and in 1901 for under one-twentieth of the population; to-day the proportion is about one-twelfth, and in 1965 it will be one-eighth. More striking still is the change in the ratio of children under fifteen to old people over sixty-five. In 1881 there were eight times as many children as old people, and in 1901 seven times as many. To-day, the ratio is only three to one; and in 1965, if the trend goes on, it will fall to 1.4 to one.



The great mass of the population—nearly 70 per cent. in all—was between fifteen and sixty-five years old in 1935. The probable percentage in this age-group will be only slightly larger in 1965. Both these years differ, however, from the two earlier census years, when this age-group contained only about three-fifths of the whole. But though the percentages for 1935 and 1965 are similar, there are important changes in the make-up of the group. The fifteen to twenty-four-year-olds sharply diminish, and the forty-five to sixty-four-year-olds increase, their numbers. The twenty-five to forty-four year age-group also shifts towards an older average. Both the numbers and proportion of those aged twenty-five to thirty-four fall in 1965 as compared with 1935; those aged thirty-five to thirty-nine lose in total numbers, but their decline is no more than proportionate to the expected decline in the total population. Those aged forty to forty-four increase in numbers and proportion.

The most striking change of all is the growth, in 1965 as compared with 1935, in the numbers of the old and the very old. Because of the more favourable mortality experience of females than of males at these ages, this shift is to the special advantage of women. Between these two years males aged sixty-five to seventy-four increase by a third, and males aged seventy-five and over by two-thirds. For females the corresponding increases are one-half and three-quarters. In the members of these age-groups—which from 1965 onwards will comprise the survivors of those born in the 18th century—the fecundity of the Victorian age sees its last fruits.

To what causes may we attribute these far-reaching tendencies? Broadly, birth-rates and death-rates supply the immediate reasons for the changes we foresee. The ultimate causes, however, lie deeper and are too complex for discussion in a brief review. If we confine our analysis to recent changes in birth- and death-rates, we find that the birth-rate has declined almost steadily from its peak of 36.3 per thousand in 1876. The lowest figure reached in the next twenty-five years was 28.7 per thousand in 1900, and even this figure was about double the present rate. During these twenty-five years there were only six with rates below thirty per thousand. The arithmetical mean figure for the period was thirty-two per thousand, and the numbers born averaged nearly

* "The Effect of Present Trends in Fertility and Mortality upon the Future Population of England and Wales and upon its Age Composition." By Enid Charles. Royal Economic Society, by arrangement with the London and Cambridge Economic Service. Memorandum No. 55. London, 1935. Dr Charles, in addition to the calculation used here, also makes two other calculations on different assumptions about fertility and mortality rates.

ENGLAND AND WALES: POPULATION BY AGE GROUPS, 1881–1965

900,000 per annum. After 1900, the birth-rate continued to fall until the end of the war, and in 1918 it was 17.7 per thousand. But as the total population to which the rate applies had meanwhile increased, the number of births in the first two decades of the 20th century still averaged about 900,000 per annum. After the delaying effects of war, the resumption of normal life raised the rate to a temporary peak of 25.5 in 1920, when the absolute number of births reached the large figure of 958,000. The former level, however, was quickly re-established. Both the rate and the number of births have continued to fall, apart from a slight upward movement in the last year. The rate is now under fifteen per thousand and the number born averages about 600,000 annually.

No comparable fall has occurred in the death-rate. In the 'eighties of the last century it averaged around twenty per thousand. A slow and somewhat irregular decline, mainly after 1900, has reduced it to about twelve per thousand. But this exceedingly low rate results largely from the abnormal age distribution and the comparatively small proportion of old people to total population at present. A death-rate of twelve per thousand cannot be indefinitely maintained, for it means that the *average* age at death is over eighty—which is absurd. Even without any change in mortality (i.e. the average expectancy of life), therefore, the death-rate per thousand of the total population will rise as the average age of the population rises.

The future of the birth-rate is the most important element of uncertainty affecting the population and its age distribution in 1965, but the range of uncertainty is limited. To maintain in 1965 as high a proportion of people under 30 to the total as exists to-day would involve an *average* birth-rate in the intervening three decades of 50 per cent. above its present level. This is so improbable that it may be dismissed from consideration; indeed, it is even possible that the birth-rate may fall further. Since all who will be older than thirty in 1965 are now alive, there seems no reason to question the main conclusion which the forecasts suggest: that during the next 30 years the population of Britain will *certainly* grow older on the average; that by 1965 it may *possibly* be smaller in total than it is to-day; and that after that date it will *almost certainly* decline. We propose to discuss some of the more important implications of this conclusion, from the standpoint of national welfare, in forthcoming articles.

The Steel Plan

THE iron and steel industry of this country has recently come in for severe criticism, first over its opposition to the Jarrow schemes and then over its policy, backed by the Government, to restrict imports during a period when it is quite unable to satisfy home requirements. The reduction of the import duty on a large variety of products last Wednesday to 12½ per cent. *ad valorem* was a belated, though inadequate, concession. As a result of the controversy over the Jarrow schemes, the Government asked the Import Duties Advisory Committee in July last year "to examine the present position of the iron and steel industry in the light of all the data now available and in so far as is practicable to report, with due regard to the national interest, on the general lines of its future development." Of this task the Import Duties Advisory Committee acquitted itself in a report issued on Wednesday.*

The problem facing the industry may be stated shortly. During the twenty years before the Great War the industry in this country, which had had a long start, was overtaken in scale and technical efficiency by the steel industries of the United States and Germany. During the war its capacity was enlarged, but in some cases at high cost and without regard to organisation for peace production. Subsequently, the industry's profit-earning capacity was seriously impaired by the fall in home demand and by competition in foreign markets which rendered it difficult to obtain the capital necessary to improve technical efficiency. In contrast to the United States and Germany, the British industry in 1914 was split into a large number of relatively small firms. Little was done in the post-war decade to reorganise the industry and to bring it into line with modern developments abroad. During the depression the difficulties of the industry were sharply accentuated and it was steadily drifting towards the rocks of financial ruin. Taking the industry as a whole, earnings during 1927-33 were insufficient to meet the full interest on the preference capital and left no margin for ordinary shareholders. It became evident, a few years ago, that something drastic had to be done to enable the industry to re-establish itself on a firm basis. In the view of the steelmasters protection offered the only solution. On the other hand the Government held, and had persistently urged for a decade, that the industry needed first to set its own house in order by rationalising production and the marketing of its products.

As a first step towards its rehabilitation the industry was granted protection on March 1, 1932, on condition that it would take steps to improve its efficiency by reorganisation. In July, 1935, the industry's position in the home market was further entrenched by its agreement with the Continental Steel Cartel, under which imports of a specified range of products from the member countries were severely limited. Imports from other countries, though not quantitatively limited, not adhering to the Cartel were made subject to a relatively heavy duty in order to keep out supplies of any magnitude.

As a result of these measures, the British iron and steel industry had the home market almost to itself. Meanwhile, demand showed a rapid increase and the profit-earning capacity of the industry was quickly restored. Concurrently, the industry has done much to bring its equipment into line with modern technical developments. But plant extensions have not kept pace with the expansion of home demand, partly because of the industry's obsession with the fear of again being saddled with the problem of excess capacity in a few years' time.

While absolving the British Iron and Steel Federation (whose constitution and objects were analysed in *The Economist* of May 1st and May 8th, 1937) from responsibility for the current shortage of supplies, the Import Duties Advisory Committee suggest a number of improvements to the present organisation of the industry. In its view the Government's policy since 1932 has contributed materially to the rehabilitation of the industry. Hence, the Committee reached the conclusion that "there cannot be a return to the lack of organisation, the almost casual development and the competition largely unrestricted at home and almost wholly unrestricted from abroad." But they realise that Government responsibility for the conduct of the industry is a necessary corollary to protection.

This very important point of principle is, of course, open to debate. It is true that the demand for iron and steel is subject to wide cyclical fluctuations and that in the absence of central control over plant extension, the industry must periodically suffer from the problem of surplus capacity and price-cutting. It is equally true, however, that, in the anxiety to prevent over-expansion of capacity, a central authority may underestimate future demand. This, clearly, has happened during the past two

* "Report of the Import Duties Advisory Committee on the Present Position and Future Development of the Iron and Steel Industry." Cmd. 5507. H.M. Stationery Office. 2s. net.

years and is partly responsible for the present shortage of supplies. Moreover, the industry in this country has long been dependent on substantial imports of iron ore and cheap semi-finished products and on exports of finished products. In the past the concentration on the finishing processes has served the industry well, especially as the production of semi-finished steel had been developed in Belgium and elsewhere to provide a substantial proportion of Britain's requirements at low cost.

Assuming, however, the principle of State protection and responsibility, the Committee was faced with the problem of elaborating the form which supervision should take. In their view "the problem is to secure the systematic planning of the industry as a whole and the maintenance and development of internal co-ordination and co-operation, with the aid of a tariff so far as necessary and with the continuance of international agreements, whilst at the same time avoiding the evils of monopoly, safeguarding the public interest and fostering efficiency." These are great and critical tasks in the achievement of effective industrial control. Unfortunately the Advisory Committee's proposals for the best methods to accomplish them seem rather vague and inconclusive. A policy of price regulation, in their view, is inherent in the new organisation of the industry, and the method of control adopted by the Federation appears to them to be well-devised and in the interests of producers and consumers alike. But the Committee rightly deem it essential that the regulation of prices should be supervised in the public interest by an independent body. In view of the enormous pressure for supplies during recent months, the Federation's price policy, designed to prevent an inordinate advance, has so far been reasonably successful. The Federation should also maintain its arrangements for the consideration of development schemes, which should be extended, in the Committee's view, to schemes originating outside the Federation. Moreover, any of the Federation's conclusions about development schemes "whether favourable or not, should be reported, in continuation of the existing practice, to an independent body looking after the general public interest." That body should have regard not only to the relation of the scheme to the general plan of the industry but also to possible social consequences.

Clearly, the powers and composition of an independent committee to supervise extensions of plant are of the utmost importance, and it is in this essential matter that the Committee's recommendations seem least adequate. If the industry, through the Federation, is allowed to exercise control over capacity, prices and imports, the suggested independent body must be given definite powers to see that the aims laid down by the Committee are accomplished as far as possible.

At present the industry is passing through a period of transition from unrestricted competition to central control in a protected home market. The leaders of the industry are probably among the first to admit that much remains to be done before its organisation is perfected within the new framework. Control over extensions of capacity, for example, raises a whole host of complicated problems not mentioned by the Committee. Is the way out of this difficulty to be sought through amalgamations or through jointly financed schemes with profit-sharing arrangements? The long-term trend of the demand for steel, both in this country and abroad, is undoubtedly upwards, providing a favourable background for an efficient British iron and steel industry. But the wisdom of substituting a quasi-monopoly for free competition has yet to be proved by the strains and stresses of the future. The change-over may have been wise in principle; but much will depend on the ability and judgment of those entrusted with the guidance of the industry through a difficult period of transition.

More but Dearer Motors

ANOTHER successful season has run more than half its course in the British motor industry and the time is opportune for a review of achievements and prospects. Of all factors in the immediate outlook, the problem of working costs looms largest in the minds of motor manufacturers. Their industry, like other metal users, has further increased its output recently, and like them it has had to meet increasing charges for raw materials and labour. Reduced overhead costs have partly offset this tendency; but a small rise in retail prices has nevertheless been found necessary. An increase of £10 to £15 per vehicle does not greatly increase the total price, but it means much to the manufacturer, who works normally on a small margin. Well-confirmed estimates put the trading profit per vehicle produced last year at £10 for Austin, £15 for Morris, £8 for Standard, £9 for Ford and £24 for Vauxhall.

The trade believes that under present conditions of prosperity the market will not be unduly disturbed by a moderate increase in prices, following a series of reductions which continued right up to last year. Nevertheless, the decision lends point to criticisms of the wide discrepancy between production costs in Great Britain and in the United States and Canada, which has persisted despite the virtual doubling of the capacity of the British industry in the last eight years. The causes of this disparity are, we understand, being examined in detail by one of the most progressive of British manufacturers. So long as it continues, however, consumers will with difficulty be persuaded that the industry, with all its enterprise, has yet reached the highest peak of possible efficiency.

However that may be, sales of vehicles on the home market are continuing to expand, though at a slower rate than during the past few years. For the first seven months of the current season, home sales of private cars increased by 10.1 per cent. to 196,843, of goods vehicles by 8.1 per cent. to 49,387, of omnibuses by 26.7 per cent. to 3,333, and of vehicles exempt from taxation (which are mainly purchased by the Government) by 29.2 per cent. to 6,896. An apparently disturbing feature of these figures is that both goods vehicles and omnibuses secured their increases mainly in the earlier part of the season. It would be unwise, however, to attach undue importance to this feature; short-period figures, in this industry, are usually misleading, especially on the commercial side. Omnibus registrations in any one month, for example, are largely affected by the numbers taken up by a few larger buyers, such as the London Transport Board, whose total purchases, in fact, do not fluctuate widely between one year and another. Current returns for goods vehicle sales, again, afford comparison with exceptionally high figures last year. Foreign trade in motor vehicles continues to show rapid expansion. Exports of private cars and chassis increased in the first seven months of this season by 34.0 per cent. to 46,736, and of goods vehicles by 40.3 per cent. to 11,739, while imports of cars increased by 51.6 per cent. to 11,301 and of goods vehicles by 30.8 per cent. to 1,962.

Comparisons based on numbers of units sold, however, considerably underestimate the real progress of the industry during the past year. The increased purchasing power of the motoring public, and wider ownership of garages attached to private houses, have been jointly responsible for a movement in demand in the direction of the larger and more expensive types of car. The 14 horse-power and to a smaller extent the 12 h.p. models, have gained at the expense of the small cars of 8 to 10 horse-power, and the high-powered cars of American manufacture or American type have made further headway. The preference of users for a bigger car, however, is not a sufficiently powerful factor in itself to overcome the difficulty of higher production costs. For most manufacturers higher selling prices are an essential condition

of any endeavour to maintain the present profit level. So long as the fundamental economics of the motor industry are unchanged, wide fluctuations are inevitable in the profits of individual companies, between one season and another. The rules of the game are fairly simple. A successful change in one company's models, like that made by Austin this season, produces increased sales which more than compensate the company for the increased expenditure which the change involved. On the other hand, the retention of the same models for a second year, without any appreciable alteration—as in the case of Hillman this season—frequently checks home sales which more than compensate the company for the increased attention to the export trade. A few years ago it was customary for one particular model to catch the public's fancy and, consequently, to enjoy bumper sales. To-day, however, it is more usual for a range of models produced by one particular manufacturer to enjoy a spell of popularity, for most of the larger manufacturers have deliberately increased the number of their models in an effort to cater for all, or nearly all, the different sections of the market.

One result of the public demand for rather more expensive cars has been a more aggressive sales policy by manufacturers of vehicles of a type intermediate between the popular mass-production models and the luxury vehicles. This policy has been fairly successful in some cases, particularly in those of Rover, Riley, S.S., Armstrong, Triumph, M.G., and Wolseley. Increased attention is also being given by some of the "popular" manufacturers, such as Standard, to the motorist who is prepared to pay a little more for the car of his choice. A somewhat different market, which has not yet received all the attention it deserves from "popular" manufacturers other than Ford, is that for high-powered but relatively cheap cars of American type. Experience shows that while this branch of the trade is exceptionally vulnerable during a depression, it benefits proportionately during a boom. It deals in a type of car to which many export markets are virtually restricted. A large part of the demand is still supplied by American manufacturers, but these are increasing by carrying out their assembly work, and purchasing parts for their British trade, in Great Britain itself.

So much for the private car side of the industry. Makers of commercial vehicles are becoming increasingly concerned with Government orders. They now account for over 10 per cent. of home sales, and the proportion is steadily rising. So far as civil requirements are concerned, the most active demand on the goods side is still for "middleweight" vehicles of 2 to 2½ tons category, followed by lighter vehicles of 1 to 2 tons. The bulk of the market, consequently, remains the more or less exclusive preserve of the mass-production car manufacturers who also make petrol-engined goods vehicles—particularly the "Big Three," Bedford (General Motors), Ford and Morris Commercial; followed at some distance by Austin and Commer (Rootes). Competition is growing somewhat rapidly, however, from imported American "middleweights" and from American-type vehicles assembled in this country.

Goods vehicles of over 2½ tons unladen weight are, in general, the field of the "heavyweight" manufacturers, such as Leyland, Dennis and A.E.C. Sales of these vehicles totalled 3,952 for the first seven months of this season compared with 3,814 last year. Some 22.8 per cent. of the whole (against 18.8 per cent.) were Diesels. The "heavyweight" manufacturers are, however, more dependent on passenger vehicles than on lorries for their prosperity, the average price paid for an omnibus being anything up to twice that for a heavy lorry. Sales of omnibuses in the seven months were 3,333 this season against 2,630 last year, and these included 67.9 per cent. of Diesels (against 51.4 per cent.) and 7.6 per cent. of electric vehicles (against 8.3 per cent.). On the commercial side as a whole, the increase in home sales appears to have been temporarily checked, but a permanent recession is unlikely while general trading conditions remain active. On the contrary, there is every indication that new registrations during the summer will be substantially higher than last year. On the whole, though the outlook for the industry may be largely "the mixture as before," the mixture itself seems highly palatable.

Diplomacy and Non-Intervention

THE meeting of the chairman's sub-committee of the Non-Intervention Committee on Friday of last week will prove to be the end of one act in the European drama staged in Spain and the beginning of another.

The sub-committee had to deal with the situation created by the withdrawal of the Italians, as well as the Germans, from participation in the naval control, on account of the refusal of the British and French to join in making the naval demonstration which the German Government demanded on account of the alleged attack on the German cruiser *Leipzig*. The proceedings began with a renewal of the offer—made by the French and British Governments at the last meeting and unfavourably received on that occasion by the representatives of Germany and Italy—to fill the gap left in the naval patrol of the Italo-German withdrawal. It was again made clear that the French and British Governments were willing to carry neutral observers on board their warships as a guarantee that their international task would be carried out with impartiality. While renewing the Franco-British offer, Lord Plymouth asked for Italo-German counter-proposals; and at the same time he uttered the warning that, if a complete supervision scheme, to replace the broken scheme, could not be devised and agreed to, it might be difficult or impossible to salvage the policy of non-intervention itself.

An Italo-German counter-proposal was then duly put forward by Herr von Ribbentrop; but while he began by declaring that the two governments sponsoring this proposal were firmly resolved to maintain the principle of non-intervention, the suggestions that followed did not fulfil this condition in the eyes of his French, British, Belgian, Czechoslovak, Russian, and Swedish colleagues. The gist of the proposal was that the international naval patrol system, so far from being re-established in the sectors where it had lapsed through the Italo-German withdrawal, should be abandoned altogether, but that the rest of the present system of supervision by land and sea should be maintained, while at the same time all the interested Powers should grant belligerent rights to both the Spanish contending parties.

These suggestions are unacceptable because their effect, in combination, would be to fly in the face of impartiality by weighting the scales heavily, and perhaps even decisively, in General Franco's favour. The effect at sea of a grant of belligerent rights would be to give both parties in theory a free hand which General Franco alone would be able to use in practice. The insurgent naval forces are so superior in strength to those of the Government that they would be able, as recognised belligerents, to establish a blockade of the Government's coasts to which the Government would be virtually unable to retaliate in kind. If the proposal had been to grant the belligerent rights without restriction, then the Spanish Government might have made up—or perhaps even more than made up—for being subjected to a blockade at sea by recovering its liberty to import supplies and munitions overland across the frontier between Catalonia and France—with which General Franco's land forces are not at present in a position to interfere. But this natural corollary of the abandonment of the naval control and of the grant of belligerent rights was expressly ruled out in the Italo-German proposal, since the third point in it was that the present barriers along the French and Portuguese land frontiers of Spain should be maintained.

The authors of a proposal which, on the face of it, would have been palpably unfair, sought to justify it on two grounds. On the one hand they argued that the replacement of Italian and German by British and French patrol ships, even if these carried neutral observers, would destroy the equilibrium between the Berlin-Rome and the Paris-London axis. In the second place they argued that the existing control scheme was unsatisfactory—even when all four Powers were playing their part—because Spanish merchant ships and non-European merchant ships were exempt from control, and because there was an unimpeded

coastwise traffic, within the three-mile limit, from French into Spanish governmental territorial waters.

These arguments did not avail to commend the Italo-German proposal. And although, to gain time, it was referred to the governments, it was made clear on the sub-committee that it would not be acceptable to any other government than the Italian or German. In full committee the majority against Italy and Germany seems likely to be even greater, since their only further supporter here, if Portugal abstains is said to be Hungary. Portugal has rapidly espoused the British view—to judge by a broadcast talk on the non-intervention crisis which was given by the Portuguese Radio Club on July 3rd and which has since received, in Dr. Salazar's words, the approval of the Portuguese Government. The speaker not only spoke with approval of British policy; he described the Italo-German proposal as an attempt to break the Anglo-Portuguese alliance and to prevent General Franco from making any new friends; and he hinted that the proposal was by no means agreeable to General Franco himself. Coming from a source which is strongly sympathetic towards the Spanish insurgents, these observations seem to indicate that General Franco and his Portuguese friends alike are anxious for some settlement which will save the Peninsula from the formidable alternatives of falling into Italy's and Germany's clutches and becoming the arena of a general European war. This view was confirmed on Tuesday in a statement by General Franco, since communicated indirectly to the British Government, in which he denied that his movement would yield up Spanish territory or interests to Italy or Germany; though he also took occasion to warn Britain and France that he might be driven to do this if he had to depend on Germany and Italy alone. General Queipo de Llano announced on Tuesday night that he had reason to believe that General Franco would be prepared for all foreign volunteers to be withdrawn from Spain. This surprising declaration has evoked wonderment in Rome and Berlin, as well as in London and Paris; and what elicited it remains a matter of piquant conjecture.

If the indigenous conservative forces in the Peninsula are really turning in this direction, they will be encouraged by the firmer tone which has been audible in both France and this country since the week-end. Speaking in Warwickshire last Saturday, Mr. Eden repeated—it was widely welcomed—that Great Britain has another interest in the Spanish civil war, over and above her concern to prevent its spreading beyond the frontiers of Spain; and that is the maintenance of the territorial integrity of Spain. "This point of view," Mr Eden shrewdly remarked, "is shared by both parties in Spain, however much they may disagree on all else." And he added that "in pursuit of it they will always have our support." Recalling his statement in the House of Commons last November, in answer to Signor Mussolini, that "for us the Mediterranean is not a short cut, but a main arterial road," he declared that "disinterestedness in Spain's form of government must not be taken to mean disinterestedness where British interests are concerned on the land or sea frontiers of Spain or the trade routes that pass her by." In a similar vein M. Blum, speaking at Bordeaux on Sunday, said that he wondered whether the demands and the intransigence of certain Powers had not arisen out of a belief that the fall of his government would destroy the unity of France and cancel her authority in the councils of Europe; and he declared that if the Powers in question had really been acting on any such belief, then they had made a very great mistake. And the French Government have since made it clear that they will either demand complete land and naval control of Spain's frontiers or they will open their own frontier and enable their citizens to supply the Spanish Government with arms.

After these diplomatic reconnaissances, the committee meets again this Friday; and decisions cannot be much more delayed.

Notes of the Week

Congress Advances.—The Working Committee of the Indian Congress decided on Wednesday that Congressmen should be permitted to accept office under the new Constitution. It scarcely did so with good grace, however, denying that the statements made by the Secretary of State and the Viceroy offered the assurances that Congress desired; and it added a proviso that office must be accepted and utilized for the purpose of furthering the Congress policy of combating the new Constitution while at the same time prosecuting a constructive programme. But this is not to say that in reply the Government of India, the British Government and the British people should accept the decision with bad grace, or should lay too suspicious an emphasis upon the wrecking purposes of Congress. For it seems likely that the qualifications and decorations of the resolution were added chiefly in order to sweeten the defeat of the faction led by Pandit Nehru, who were opposed to taking office at any price. The resolution virtually acknowledged that the motive for the change of front was the state of public opinion and the feeling among the mass of Congressmen in the legislatures. It is the substance of the decision that counts; and the substance means that a great experiment in democracy—circumscribed as it may be in certain particulars—is to have a fair trial. The whole episode, since Congress originally refused to take up the responsibilities that its electoral victory had given it, has had a profound educative effect upon British and Indian opinion on the practice and meaning of responsible government. The historian of the future may perhaps conclude that India's political development was the better for it.

* * *

General Hertzog and the Protectorates.—General Hertzog's outburst against the United Kingdom Government for rejecting his demand for the transfer of the three High Commission territories to the Union forthwith is misleading. He accuses the Government of going back on a written and public assurance given in 1935 that transfer might possibly occur after a few years, at least as far as one or two of the territories were concerned. But, whatever Mr J. H. Thomas may have said in private, the written and public assurance (Cmd. 4948) contained no such promise. Its only mention of "a few years" was in the following passage:

> The policy of both Governments for the next few years should be directed to bringing about a situation in which, if transfer were to become a matter of practical politics, it could be effected with the full acquiescence of the populations concerned.

General Hertzog specifically charges the United Kingdom Government with failing to direct its policy to bringing about such a situation, because no instructions have been given to British officials in the territories to use their influence with the natives in advancing a favourable disposition towards the Union. There seems to be some room here for misunderstanding, yet for mutual adjustment. But General Hertzog cannot be blind to the fact that both British opinion and native opinion in the territories themselves regard the domestic native policy of the Union as a vital factor in determining whether transfer is to "become a matter of practical politics," and that his own native policy, carried through since 1935, has made the prospect of transfer much more remote. The General accuses the British Government with "playing politics." If ever *tu quoque* was a decisive retort it is so on this occasion.

* * *

The Localisation of Industry. — The Prime Minister announced in the Commons on Wednesday that a Royal Commission had been set up to investigate the distribution of Britain's industrial population and the prospects of changes in location, both of industries and their workers. This Commission has been long awaited. In November 1936, the final report by (then) Mr Malcolm Stewart on the Special Areas was issued, containing a well-conceived plan for ameliorating the distress in those districts, while at the same time somewhat redressing the disequilibrium in Britain's economic life inherited from 19th century specialisation. In particular, he proposed that transference of labour from Special Areas should be supplemented by the diversion of new industries into the areas to utilise their unemployed human resources and capital equipment. He declared as his opinion that the concentration of industries and population in London was industrially and strategically dangerous, and harmful to the general welfare of London and the national well-being. Rightly deprecating compulsion in the placing of new industries, he advised the use of inducements: the prohibition of new factories in London without proved justification and, more positively, the granting of concessions in rating, income tax, and finance in the Special Areas themselves. Here, then, is the origin of the Royal Commission just appointed.

* * *

The problem before the Commision is broader than Sir Malcolm Stewart's. The Royal Commission, a welcome landmark in economic policy, will perhaps begin with the Special Areas and London. But its members must go on to consider the problems involved in a wholly national context. No industrial region in the country should escape their scrutiny as they seek to find out whether the present situation is economically, socially and strategically sound. Is Lancashire still too dependent solely on textiles to be able to weather fluctuations in the cotton trade? Or again, is adjustment proceeding in Lancashire by the establishment of new industries and the transference of cotton workers to compensate for the decline in foreign textile markets? Is the development of industries and population in Essex strategically safe? How far is industrial growth in the Midlands eating into good agricultural land which may soon be ill-spared from farming? These, together with the general social problems arising from the concentration of factories and people in *any* region, will be the staple of the Commission's inquiry. For the first time an officially appointed body of investigators have been given the task of probing to the core of our current Industrial Revolution. Indeed, their recommendations may be the beginning of a positive policy for the national benefit. At least the guiding principles for a long-term policy of town planning, siting and regional development should emerge, with perhaps a specific authority enjoying wide powers to guide future changes and to protect posterity from evils which we have too easily suffered.

* * *

Measuring the Cost of Living.—It has been recognised for a long time that the Ministry of Labour's index of the cost of living is unsatisfactory. On this index, by agreement, the wages of more than one million workers in heavy industries are largely computed; and the salaries of most civil servants vary according to its movements. It was constructed on the basis of a survey of family budgets made as long ago as 1904, and has become increasingly inappropriate as diets have changed and as the constituents of working-class expenditure have altered in their relative importance—notably, rent, clothing, and transport. Revision of the index has been frequently promised by successive Ministers of Labour, and Mr Ernest Brown's announcement in the House of Commons on Tuesday that a Government inquiry would be opened in October is welcome, if overdue, news. The investigation will extend to possibly 30,000 families, and an attempt will be made to relate the new index to current custom and expenditure. The inquiry will cover both insured and uninsured workers, and will be made at four periods: in October, January, April and July. Mr Brown was asked whether, if the new index showed that the cost of living was really higher than the present index suggested, he would consider some revision of unemployment benefit accordingly. He did not, at least, refuse to do so. In the course of his speech, the Minister pointed out that the number, but not the importance, of strikes had increased in the last eighteen months; and that in many cases they were due to the unwillingness of employers to recognise trade unions. He further emphasised the need to improve and co-ordinate wages and working conditions in such large and relatively unorganised trades as road transport and retail distribution.

* * *

While he was speaking the Minister met with the interruptions to which he must now be accustomed; not least when he spoke of the transfer of 28,000 men and women and 10,025 families from depressed areas in 1936. Opposition speakers were sceptical of both the humanitarianism and utility of this process. Nevertheless, the facts of Mr Brown's survey cannot be gainsaid. The total number of unemployed in the Special Areas fell from 374,088 to 274,198 between June, 1936, and June, 1937. There were decreases of 31,876 and 53,979 in the North-East and South Wales respectively. Over the whole country the incidence of unemployment among insured persons has fallen from 22.9 per cent. in January, 1933, to 10 per cent. in June of this year. Employment of insured persons has risen to a record level of 11½ millions, and the wholly unemployed may fall, at least temporarily, below the 1,000,000 mark. No economic observer would attribute to the Government the full credit for these gratifying changes, which are due to general recovery. Neither can it be denied that the residual problems of the Special Areas and of over a million unemployed are grave and urgent; nor that, as the Minister himself stated, the particular difficulties of the elderly unemployed, the young man who has never worked, and the sweated domestic servant, are very serious. Yet the improvement which has taken place in the last 18 months is remarkable. Mr Ernest Brown was on safe ground when he claimed some credit, and more encouragement, from this record of achievement.

Agriculture Debated.—The Government's bill to subsidise the production of lime, basic slag, oats, wheat and barley, to encourage drainage, and to combat animal diseases was further discussed in an almost empty House of Commons on Monday. The Minister of Pensions defended the measure as a necessary peace-time programme and repudiated the suggestion that this was one more step to a war-economy. The cereal subsidy was needed to save the plough. Mr Paling, who followed for the Labour Opposition, like Napoleon, attacked and went on attacking. He pointed a censorious finger at the steel trade which was to benefit from the subsidy on basic slag, the brewers who were to batten on the cereal subsidies, the landlords who had left 1¾ million acres undrained, and the Government who had neglected the agricultural worker. For the Liberal Opposition, Mr Richard Acland began by renewing the charge when he accused the Government of " vote-scrounging " and " tinkering." He delivered a lucid and effective speech on the management of grass, and showed how the Government was by its proposals failing to solve a problem which it had not begun to understand. Still more criticism came from the Labour benches, where the cereals subsidy was denounced as either uneconomic or unnecessary. The wages of agricultural labourers were described as deterrently low. The speeches of Government supporters referred once again to the chronic indebtedness of farmers, and registered a plea for easier long-term credit. The matter was not pressed to a division. The two or three gathered together at the close of the debate seemed to have concluded that the Government's agricultural policy might have been worse. In none of the discussions so far have the relative merits of subsidies and marketing schemes been debated, though not unnaturally there have been pleas for the alternative of guaranteed prices. There is much to be said for the subsidy *faute de mieux*. It is at least less rigid than the cumulative tyranny of marketing schemes; and the nation knows the exact cost—which, with concealed levies like those on sugar and meat, it can never know.

★ ★ ★

Economic Aspirations.—The International Chamber of Commerce Congress has dispersed. In its deliberations at Berlin, a welcome note of sanity and common sense was struck. Yet it would be nothing short of a world revolution were its very moderate proposals to be adopted by the governments most nearly concerned. There can be no doubting the premise of the Chamber that " a period of expanding trade like the present is the appropriate time for dealing with obstructions to trade." Nor can it be questioned that if the contemporary problems of raw materials, currency, debts and trade, and international lending could be solved, " all countries would live together as good neighbours," and the general standard of living—especially in dictatorships—would rise. To achieve these desirable ends the Congress resolved upon a series of appropriate policies: to reduce the present hindrances to international trade and migration, and to progress as rapidly as possible from bilateral barter to multilateral trade again; to relax such invisible trade barriers as import quotas, methods of valuation, requirements of mark of origin, and regulations about the nationality of goods; and to stabilise exchange rates on a gold basis.

★ ★ ★

If all these hopes were realised, the prospects of peace and prosperity would certainly be considerably enhanced. But in the last resort the decision will be made by politicians and the vested interests behind them, not by economists, and perhaps not even by those far-sighted business men in all countries, like those at this particular conference, whose number is steadily growing. The Congress at Berlin passed, with almost desperate optimism, over the crux of the problem. " A competition in armaments endangers the peace of the world and depresses its living standards. It is, therefore, of urgent importance to compose political disputes . . . and to devote economic resources to improve the lot of mankind." It is, indeed; and for the moment the prospects are poor. Germany and Italy have announced—the former at the Congress itself—that autarky is a matter of principle. In other countries, protectionism and restrictive policies are the preserves of vested interests. All this, however, does not minimise—indeed, it enhances—the need to make a beginning with all those nations who are prepared to increase their mutual trade over the widest possible area. In the currency field, the Tripartite Agreement is already a jumping-off point; and an agreement abolishing quotas and reducing tariffs between Great Britain the United States and the Oslo Powers would be a powerful stimulus to commerce. It would also be a sound reinsurance policy against a recession in purely domestic business. As the Congress resolved, " any striking initiative will help to stimulate a general movement of negotiation and agreement."

★ ★ ★

M. Van Zeeland's Return.—M. Van Zeeland arrived in London on Monday with new light on international affairs, and new information collected by him in America. He told inquirers that when he had seen members of the British Government he would be able to arrive at some conclusion. After he had seen Mr Chamberlain and Mr Eden on Monday, an official *communiqué* announced that agreement was reached on what further steps might usefully be taken in pursuit of the object of his investigations. These pale and non-committal generalities are not the kind of " striking initiative " sought by the International Chamber of Commerce, nor do they promise well for the successful conclusion of an Anglo-American trade agreement, let alone a wider international agreement. We are in imminent danger of losing an agreement between England and America if we do not show more determined evidence of good faith. The Washington Administration has been more than willing to secure an agreement with the democratic countries which must inevitably have political as well as economic significance. Even this week a new and specific statement of policy was made by Mr Sumner Welles, Under-Secretary of State, who cited four principles which, if adopted by the overseas nations, would receive American support. First, the revitalisation of international morality, of which the first and most important element was to restore the sanctity of the pledged word between nations. Secondly, restoration of international trade through reduction and abolition of trade barriers. Thirdly, limitation of armaments. And fourthly, free and frequent interchange of ideas between governments and peoples of all nations. Mr Sumner Welles believed that the American people would overwhelmingly favour co-operation by their Government with other nations along these lines, if the other nations would for their part undertake to achieve political readjustment of the inequities created among them after the War. In these inequities Mr Sumner Welles saw the source of practically all our present troubles.

★ ★ ★

The members of the British Empire profess to desire an agreement on the lines drawn by the Washington Administration, but their emphasis is all on the difficulties of negotiation and persuasion within the Empire. It should be realised that there are equally great difficulties within America; that if there is not a fairly quick and concrete response to the offers to the Empire and other democratic countries, the pressure of internal events may force America to change her policy. America is at what may prove to be a turning-point in her history. She has the choice of further international co-operation and freeing of trade, or of turning inward on herself towards a closed economy. A vital element in such choice will be the response of the British countries to the offer of co-operation now being made to them. So far we have appeared to accept the principle without outspoken enthusiasm; and many Americans doubt the sincerity of the members of the Empire, not excluding Canada and Britain herself. Here surely is need for Britain to give an assurance that she is determined to solve the difficulties, and not to let them bar the way to agreement. A public statement by the Prime Minister which raised the fear, however indirectly, that some relaxation of the Ottawa preferences was contemplated might lead to the defeat of Mr Lyons in the forthcoming Australian elections, and so wreck negotiations in advance. But without some such sign not even a victory for Mr Lyons may bring an agreement with America, for by then America may have turned her back on the outside world. The responsibility is that of the British Government; and they cannot in any way absolve themselves from it.

★ ★ ★

Brymbo Colliery Disaster.—After a fire had broken out on July 2nd at Brymbo Colliery, Chesterton, Staffordshire, two explosions occurred, killing twenty-seven men. Most of the men killed were members of the rescue party who entered the pit after the first explosion and were caught by the second. They included a managing director of the colliery company, the under-manager of the pit and two inspectors of mines. Whatever the cause of the explosions may have been, the heroism and bravery of all those in responsible positions are undoubted. With fellow workers of the first men trapped, the managing director, under-manager and inspectors went to face probable death. They lost their lives; and the affected district of the pit is now flooded and derelict. The bodies are still unrecovered, and until the section can be safely opened the tragedy will remain a mystery. This disaster, the latest of three grave pit fatalities this year involving altogether the loss of forty-four lives, lends a tragic importance to the new regulations for mine safety issued by the Mines Department on Tuesday. These rules, inspired by the findings of the inquiry into the accident at Gresford Colliery where 265 men were killed in October, 1934, include provisions for the adequate supply of water underground to fight fires, frequent inspection of fire-fighting apparatus, prompt and exact reports of the presence of gas or other sources of danger, and close control of electrical equipment liable to produce sparks. In addition, sixteen new mines inspectors are to be appointed. Meanwhile, the Royal Commission on Safety in Mines is still sifting evidence, and no doubt observing with a growing sense of alarm and responsibility the rising toll of life in this vital but unhappy industry. Those in authority must not relax their efforts as long as death is carrying off some 800 men each year. Safety in mines is more than a mere technical problem. Mining itself must be made safe for those who work at it. Public opinion demands early action against the dangers which the Gresford and Brymbo disasters have so tragically emphasised.

★ ★ ★

Trade Union Politics.—Mr Bevin, secretary of the Transport and General Workers' Union, gave short shrift to the unauthorised and militant movements which have recently been so much in evidence among a minority of busmen, when the Union met in conference at Torquay at the beginning of this week. The clash between Mr Bevin and the Left extremists was inevitable if he was ever to restore discipline and order within the organisation. The conflict was ironically heralded by an unofficial strike which broke out among local transport workers while the conference was assembling. But Mr Bevin carried a large majority of the delegates with him in banning all unofficial organisations among transport workers, whether within or without the Union. The report of the Executive to outlaw these movements was carried by 291 votes to 51, with 50 delegates abstaining. In consequence, unauthorised strikes can in future only occur through disruption of the Union itself, and the position of the London busmen's rank and file movement, which organised and maintained the recent strike, becomes extremely precarious. Mr Bevin has led his followers back to the path of peace and conciliation, and there can be little doubt of the wisdom of his policy in the face of public opinion. Nevertheless, he has a difficult task before him. The London bus strike, with the leaders of which he and the Executive have still to deal, was as surely authorised by him as it was undoubtedly organised by Communist and unofficial elements.

★ ★ ★

The problem of the health of London busmen is still unsolved. The Medical Research Council, which began an inquiry into this question eighteen months ago, reported on Tuesday that drivers and conductors on London buses suffer unduly—but not so unduly—from gastric troubles. The Council have analysed more than 1,250,000 days of sickness between 1933 and 1935, and find that gastric troubles account for one in every six and a half days of sickness among busmen, compared with one in every seven and a half days among tramwaymen. The report mentions as possible causes of this undue incidence of gastric ailments among busmen the speeding up of services and the inhaling of carbon monoxide gas. It is significant that this type of sickness is, if anything, more frequent among bus conductors than drivers. For the most part, however, the Council are content to state the facts of sickness among busmen, and to leave the allocation of causes to the more specific medical inquiry which is, presumably, still pending. Mr Bevin has yet to satisfy a large section of the London busmen that the steps which he took at the conclusion of the recent strike have given an adequate guarantee that their health will be more effectively protected in future. The Medical Research Council have emphasised the urgency of the inquiry. It has not yet been held. Mr Bevin has acted with great common sense in the past few months; but he has still to formulate a forward policy to improve working conditions, especially in the road transport industry, if he is to maintain the solidarity in his union which was so strikingly shown in the voting at Torquay.

★ ★ ★

Free State Elections.—When Mr de Valera welcomed the American " Clipper " from the clouds at Foynes on Tuesday he was at least happy in the knowledge that his Party, Fianna Fail, had not been defeated in the General Election last week-end. Neither, however, had it been victorious. In the new Dail, Mr de Valera will have 69 followers out of a total of 138, and 21 more than Mr Cosgrave. To rule he must be supported by the Labour Party, whose recovery from 8 members in 1933 to 13 in the new assembly is a chief feature of the election. In the past, that support has been generally forthcoming; but, as Mr de Valera's ill luck will have it, the Labour Party is not happy about the new Constitution, which has received 75 per cent. of the votes so far cast in the plebiscite. It appears that Mr de Valera cannot have both the power to rule indefinitely and an unamended new Constitution. It is improbable that he will make any important concessions to Labour, and possible that, after becoming President of the Executive Council and forming a Government, he will appeal again to the country in a comparatively short time. As our Dublin correspondent points out on page 80, there was not sufficient difference between the programmes of Mr de Valera and Mr Cosgrave to stir the electorate to react violently one way or the other. While Mr de Valera's constitutional push is temporarily at an end,

The NATIONAL BANK of NEW ZEALAND, Limited

Currency Reserve - £500,000
The Bank has branches throughout New Zealand and conducts every description of Banking business with that Dominion.

Mr Cosgrave is not anxious to reverse his policy. Nor did he propose at the election to jettison the expensive apparatus of autarky which Mr de Valera had erected. As the election went, Mr de Valera lost ground. In 1933, he had a majority of four over all parties and of 24 over Mr Cosgrave's group; now one majority has gone and the other has been reduced. But he has not lost enough ground to lose power. He will remain in office for at least the next few months. The Irish constitutional scene will be peaceful; but autarky and the " economic war " with the United Kingdom will go on. The fate of Mr de Valera and his policy is still in the balance. This election has only deferred a decision.

* * *

The New Kulturkampf.—On the German home front the offensive against religion, which has long been heralded by Dr Goebbels' drum-fire of calumny, has now been launched. Within the last few days there have been formidable new attacks on Catholicism, Protestantism and Jewry in the Third Reich. On the anti-Protestant sector the offensive opened on June 30th, when Herr Kerrl, the Reich Minister for Church Affairs, issued two new decrees: the first destroying the last vestiges of the Protestant Churches' financial independence, and the second forbidding any kind of canvassing for the forthcoming elections for the General Synod. This was followed up on July 1st by the arrest of Dr Niemöller, the famous Pastor of Dahlem, who is the life and soul of the Confessional Movement in the German Protestant Church. This step, which Herr Hitler has hitherto shrunk from taking, can only mean that the Third Reich has at last fully made up its mind to pursue its attack on religion *à outrance*. For Dr Niemöller is a man of such noble character, and is so highly esteemed by lovers of religion and lovers of liberty both at home and abroad, that for the Government to lay hands on him means finally closing the door on the possibility of a compromise. Eleven other pastors were arrested in East Prussia last week; and on July 2nd four Protestant prisoners—two pastors and two laymen —were tried in Berlin, and two of them were condemned to a fine of 600 marks and 30 days' imprisonment, while the other two were acquitted.

* * *

Meanwhile, on the anti-Catholic sector of the front, the campaign of calumny has drawn a direct letter of protest addressed to Herr Hitler by Count Preysing, the Bishop of Berlin, on behalf of the whole Episcopate. In East Prussia four priests and six Catholic laymen were sentenced to terms of imprisonment on July 3rd. And in a sermon preached in Munich on Sunday Cardinal Faulhaber, in reference to the recent arrest of a Jesuit priest, Father Mayer, declared that religion had now taken the place of Bolshevism as the enemy towards whose destruction the Third Reich was bending all its energies. It is religion, without distinction of creed, that is Herr Hitler's target; for in intensifying his attack upon Christianity he has not slackened his campaign against Judaism. During these very days the Reich Government has enacted a law for extending the existing anti-Jewish legislation of the Reich, as from the 15th of this month, to the German portion of Upper Silesia, where the Jews have hitherto benefited from the fifteen-years-long German-Polish agreement for the local protection of minorities. In their anti-God campaign, our Nordic neo-pagans are at least consistent in striking at religion in every form in which it displays itself within their reach. But there is ample evidence for believing, this time, that in trying to impose a new unity on the German people by a new State religion, they have overreached themselves.

* * *

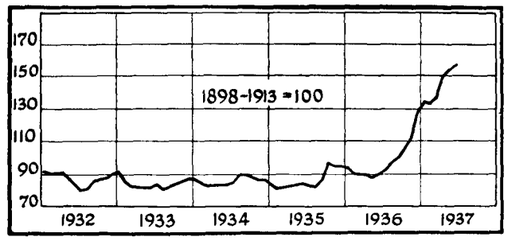
Incidents on the Amur.—During the past week the peace of the world has once again been placed in jeopardy in the Far East as well as in Europe. Though the Russo-Japanese incident on the river Amur is still producing local disturbances, it may yet be composed. The temporisations of Russia and Japan afford evidence that the heavily armed Powers of the world still recoil from the prospect of a first-class war with their equals—however ready some of them may be to bring the world to the brink of disaster time and again by fishing in troubled waters and preying on small fry. On June 30th there was fighting on the river Amur, at a point below Blagoviestchenk, between Manchukuo-Japanese land forces and Russian gunboats. The Japanese reported that one Russian gunboat had been sunk, and another severely damaged, with heavy loss of life. On the Russian side, however, there has been no mention of the loss of a warship, and the account given of the engagement presents it in a distinctly less serious light. The clash arose out of a diplomatic controversy which has been in progress for some time over the ownership of two islands in the Amur channel. In pre-war days these islands appear to have been in Russian occupation. On the other hand, the Amur River is recognised as constituting the frontier between Russia and China (or China's successor-states) under a Russo-Chinese treaty of 1860; and it is an accepted principle of international law that, unless it is expressly provided to the contrary, the *tracée* of a river frontier shall be deemed to run down the median line (*Talweg*) of the main channel. On this principle, the islands in dispute in this case would fall to China or to China's successor-state—which is what " Manchukuo " is *de facto*, though not, of course, *de jure*. In support of this contention, the Japanese point out that beacons have been maintained on both islands by the Manchukuo Government since it was laid down, in a Manchukuo-Russian waterways agreement of 1934, that each party should be responsible for the lighting of its own bank. Neither Government has yet withdrawn its armed forces from the neighbourhood of the two islands; and negotiations are still proceeding between them. This is, at least, of good augury.

* * *

Diplomatic Pressure on Central Europe.—King Carol's recent visit to Warsaw, and Colonel Beck's renewed attempts there to bring Roumania on to the German axis, have coincided with a feverish outbreak of diplomatic activity in Central and Eastern Europe. At the same time, Dr Goebbels has renewed his propaganda offensive against Czechoslovakia, as if to emphasise the Italo-German endeavour to isolate that little country from both the Western democratic Great Powers and the Little Entente. It seems as if Colonel Beck is acting as an effective agent for Berlin by ringing Czechoslovakia round in a Polish-Roumanian " neutral " block. Meanwhile, M. Titulescu has announced that he is resuming his seat in the Senate at Bucharest ; and the Roumanian Government is drawing closer to the Czech Government. A new credit of over £4,000,000 has just been granted by a consortium of all the Czech banks for the mechanisation of the Roumanian army by the Czech firms of Skoda and Tatra-Ringhoffer. It seems paradoxical, therefore, that in Poland, Roumania and Jugoslavia foreign policies should now be mooted which are in flat contradiction to the desire of the bulk of their people. In Czechoslovakia, on the other hand, while the Government's policy of an understanding with Austria and Hungary is popular—it is against this policy that Germany, Italy and Poland have been working in recent weeks—the extreme right-wing Agrarians in the Coalition are carrying on a dangerous flirtation with the National Democrats of the extreme Right-wing Opposition. In the German districts they are even helping the Henlein Party against the German Social-Democrats and the other two German groups in the Government Coalition. On the other hand, in the Czech districts the Right-wing Czech Agrarians are fast losing ground as their ambivalent manœuvres become patent. It would not be surprising if a split were to develop between M. Hodza, the moderate Agrarian Premier, and his Right Wing. If so, the Agrarians might lose their key position: the Ministry of the Interior. The vast majority of Czechoslovak citizens stand behind the policy of President Benes, M. Hodza and M. Krofta, the Foreign Minister. That policy is one of progress and reform at home and of non-provocation abroad. It is commending itself to more and more leading men in all Central European countries.

* * *

N.D.C. in Committee.—When the Finance Bill was discussed by the Commons in Committee on Wednesday, the Chancellor of the Exchequer announced a reduction in the liability of building societies to the new National Defence Contribution. Whereas the rate of this tax will be 5 per cent. in the case of companies and 4 per cent. for firms, it will be reduced to 1½ per cent. for building societies. This is justified as a recognition of their share in the progress of housing, and the reduced rate will be charged on the total income of the societies less expenses, without any deduction for interest paid to depositors. Thus the smaller percentage will be charged on a bigger total than would be the case were the societies assessed according to the ordinary schedules of the Act, when a deduction for borrowed money would be allowed. Sir John Simon turned a deaf ear to the pleas of Mr Alexander and Mr Barnes that industrial and provident societies and co-operative societies should receive a similar concession. Although the Chancellor was probably right when he refused to admit that these bodies were exactly on all fours with building societies, he did not adequately meet the case put forward from the Labour benches for some special concession to them. Nor is it clear why, in making his concession to building societies, he did so by altering the accounting practice which has been laid down in all other cases for the application of N.D.C. This concession, with the duel between Sir John and his opponents on the threadbare theme of the co-operative societies' nature and privileges, was but one episode in a lengthy series of complicated discussions. Amendments for the special treatment of agricultural property, for relief from double taxation when income is also chargeable in a foreign country, and for the exemption from import duty of agricultural implements and raw materials were withdrawn or rejected. The question of agricultural implements was enlivened in the discussion by a cut-and-thrust conflict between the Chancellor and Mr Benn, who drew the attention of the House to an earlier Sir John Simon who was wont to deliver himself of pamphlets on the justice and expediency of free trade. Apart from this sparkling episode, which even kept the Chancellor from a well earned cup of tea, the debate was dull, and not even a proposal to exempt " living " entertainments from duty—which was rejected —could brighten the proceedings.



* * *

Industrial News.—This week has witnessed a number of encouraging industrial developments. The employment returns in June reveal further substantial progress in industrial activity during the past month. Moreover, the increase in activity on the capital market reflects some return of confidence, which had been seriously impaired by N.D.C. No. 1, the gold scares and political developments in Europe. The rise in stock exchange and commodity prices is further evidence of this. The iron and steel industry has been in the news this week. On Wednesday the import duty on a number of semi-finished and finished iron and steel products was reduced to 12½ per cent. *ad valorem*. The new level of duties will remain in force until the end of March, 1938. On the same day the Import Duties Advisory Committee's report on the iron and steel industry, examined in an article on page 61, was published. Demand for steel remains as strong as ever, but supplies are gradually increasing. The output of coal has shown a seasonal decline in recent weeks, but remains about 13 per cent. above last year's level. Welsh trade with France, however, has suffered temporary dislocation as a result of devaluation. As our Manchester correspondent indicates on page 109, new business in cotton goods has not yet recovered from the recent decline, partly owing to the downward trend of raw cotton prices. Last, but not least, is Mr Chamberlain's announcement on Wednesday of the appointment of a Royal Commission, under the chairmanship of the Right Hon. Sir Montague Barlow, to inquire, among other things, into the causes which have influenced the present geographical distribution of the industrial population of Great Britain and the probable direction of any change in that distribution in the future. In general, prospects for most branches of activity continue promising.

* * *

Shipping Freights Still Rising. — Despite the severe recession in the prices of primary products entering international trade, freight rates showed a further increase in the past month. According to the index of the League of Nations, the volume of world trade has practically recovered to the pre-depression level. And, since the world's shipping capacity is still smaller than in 1927, the rise of freight rates above the level of eight years ago is scarcely surprising. The extent of the advance in freight rates is shown graphically below:—

The Economist INDEX OF SHIPPING FREIGHT RATES

(1898–1913 = 100)

	Average, 1913	June, 1936	March, 1937	April, 1937	May, 1937	June, 1937
European waters ...	110·0	93·3	150·4	157·9	174·8	186·8
North America	113·1	89·6	117·1	121·0	123·1	120·7

2, 3 & 4 Cockspur Street, London, S.W.1

B

As there are indications that the recession in the prices of primary products has run its course, and that business activity in the majority of countries will continue to expand, shipping prospects for the second half of the current year are encouraging.

* * *

Steel Scrap Supplies.—The urgent need to enlarge raw material supplies for the British steel industry has led the Iron and Steel Federation to launch a national appeal to the public to deliver all available quantities of steel scrap through the existing channels. This measure is a continuation of the agreement between the Federation and the scrap merchants, concluded last February, the benefits of which are already discernible. Considerable stocks have been released and supplies of domestic scrap to consumers have substantially increased. Moreover, exports of scrap have recently diminished and imports have considerably increased, the latter as a result of the activity of the International Scrap Convention established in March between the principal scrap-consuming countries. The following figures give an outline of the development of the consumption of, trade in, and prices of scrap, in Great Britain during recent years:—

	1929	1935	1936
Consumption for steelmaking, '000 tons	4,968	5,850	6,915
Consumption per ton of steel made, cwts.	10·31	10·80	10·67
Imports, '000 tons	68	438	1,085
Exports, '000 tons	424	168	139
Net imports, '000 tons	*356	270	946
Apparent domestic supply, '000 tons†	5,324	5,580	5,969
Average price on the North-East Coast	64/–	52/4	58/4
Average price of imports	64/–	48/5	56/8

* Net exports. † Without allowance for movements in stocks.

The peculiar conditions of the scrap market, where supplies are quite uncontrollable and subject to abnormal and sometimes accidental factors, do not permit strict control or an increase in supplies when desired, as do those in other raw material markets. As to the future trend of scrap supplies, a certain increase is to be expected in view of the increasing tendency towards technical modernisation of industry and towards more rapid obsolescence. On the other hand, measures for the preservation of steel work and other economies in the use of steel will tend to reduce supplies of scrap.

* * *

Germany's Economic Drive.—The series of purely bilateral barter and compensation agreements concluded between Germany and the Eastern and South-eastern European countries during the depression has made those countries dependent on Germany's own destinies. Now that rising world prices and demand offer these countries better markets and free foreign currencies, they find they are tied to the German demand for oil-seeds and specially required products, to whose production they were forced to turn over in the depression at Dr Schacht's or Herr von Papen's behests. Between 1933 and the end of 1936 German exports to Poland, Estonia, Latvia, Lithuania, Bulgaria, Greece, Hungary and Roumania together rose from Rm. 231 millions to Rm. 484 millions; and in the first quarter of this year, compared with that of last, these exports have risen in Reichsmarks by a further 20 per cent. German imports from this group of countries between 1933 and 1936 rose from Rm. 198 millions to Rm. 501 millions. Thus the volume of Jugoslavia's trade with Germany rose in the same period by 250 per cent., while her imports from Austria, for example, fell by 7 per cent. Germany took 26.2 per cent. of Bulgaria's exports in 1930, but in the first quarter of this year her share amounted to 69 per cent. Her share in Bulgaria's imports was 23.3 per cent. in 1930, and in the first quarter of this year was 68 per cent.

* * *

Such are the results of Germany's insistence on buying from these countries products which Germany alone in Europe needs, e.g. soya beans from Roumania, Bulgaria, Hungary, instead of the normal imports of wheat, tobacco, maize, etc.; or cotton from Turkey instead of tobacco. Turkey in 1932 exported only 9,142,000 metric tons of cotton, valued at £T2,740,000. In 1936, it was up to 22,785,000 tons, valued at £T9,480,000, and £T6,650,000 worth of it went to Germany instead of American, Egyptian or Indian cotton. This Turkish cotton could only with difficulty be sold elsewhere; and—like the Hungarian, Bulgarian, Greek, Roumanian and Jugoslav deliveries of special products for Germany—it has not yet been fully paid for through the clearing or compensation accounts. Italy is now buying more from Turkey. But the painful realisation is rapidly growing in all these small client-States of Germany that the links forged with the German economic system during the depression have now become fetters which, in many cases, prevent them from deriving the full benefits of the increase in prices and demand in the world's markets for free exchange. This realisation has already made them shy of the Rome-Berlin axis—as, if report is true, Baron von Neurath recently discovered in Belgrade, Sofia and Budapest.

* * *

Employment Moves Ahead Again.—The lull in the expansion of employment which was shown in the Ministry of Labour's estimates for May 24th is proved to have been temporary by the figures for June 21st. On that date the number of insured persons aged 16-64 at work was about 11,517,000, which was 130,000 more than the month before, and 584,000 more than on June 22nd, 1936. At the same time, the number of unemployed has fallen by 346,078 since a year ago, and by 94,732 since last month, to 1,356,598. The main changes in particular industries are shown in the following table. The percentages now given for the first time in the last two columns are necessarily somewhat rough. Figures for the insured population employed in each industry are only available for every July, and the percentage is calculated on those figures. Thus, the percentages are too high for expanding, and too low for declining, industries. Furthermore, the totals are only fully available for Great Britain and Northern Ireland together, and the unemployment figures used in the table relate only to Great Britain, since the aggregate figures are not published before the middle of the month. Consequently, the percentages are somewhat hybrid. In every case in which it has been possible to check, however, the error is extremely small.

UNEMPLOYMENT BY INDUSTRIES

Industrial Group	Number in thousands			Percentage	
	June 22, 1936	May 24, 1937	June 21, 1937	June 21, 1937	Change since June 22, 1936
Coal mining	274·2	156·0	169·2	19·0	−11·6
Iron and steel	29·4	23·2	19·8	10·9	− 3·8
Engineering	57·5	39·3	37·7	5·0	− 2·8
Metal goods manufactures	39·2	28·6	28·1	7·6	− 2·5
Shipbuilding and repairing	44·9	39·0	36·9	23·2	− 6·6
Building	104·3	110·4	101·3	10·0	+ 0·4
Public works contracting	108·2	103·8	98·1	34·0	− 4·6
Cotton	69·7	46·3	42·3	10·1	− 6·5
Woollen and worsted	24·6	22·4	19·3	8·7	− 2·4
Tailoring	20·1	14·2	17·4	8·3	− 1·5
Boot and shoe	17·0	22·2	13·2	9·4	− 3·3
Hotel, boarding house, etc., service	51·1	54·0	48·2	11·1	− 0·8
Road transport services	29·8	31·3	28·5	13·0	− 0·9
Distributive trades	180·9	169·3	155·7	7·6	− 1·4
All persons registered (including other trades)	1,702·7	1,451·3	1,356·6	...	...

The detailed figures confirm the good impression left by the aggregates. Apart from the coal-mining industry, where the temporary stoppage of about 27,000 men due to an annual demonstration of the Yorkshire Mine Workers' Association more than accounts for the recorded increase in unemployment, only in tailoring did employment decline, and there the fall was wholly seasonal. The different districts have shared the new employment fairly equally. Scotland and North-Western England have done best, and the Midlands and North-Eastern England worst, but the other five areas have each gained round about 10,000. Classified by industries, the distributive building and footwear trades have taken on the greatest numbers of new men, as would be expected, but textiles and the heavy industries all come fairly high in the list. There is thus no sign that industrial expansion is coming to an end.

Czechoslovakia's German Problem

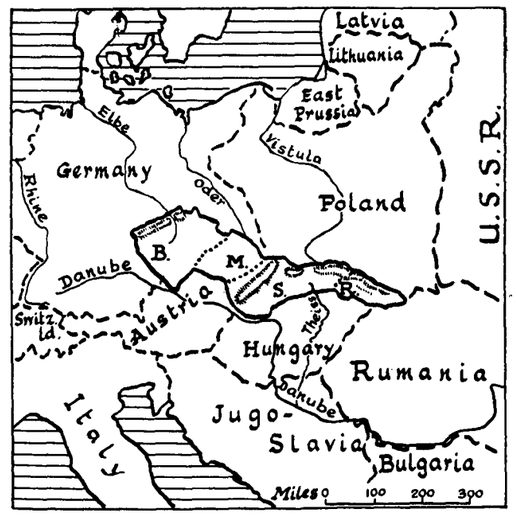
Professor Arnold J. Toynbee, well known as historian and author of the annual Surveys of International Affairs *published by the Royal Institute of International Affairs, has just returned from an extensive tour of Central Europe. He has communicated to us the following views, formed after a special study of some of the factors and influences which make Czechoslovakia's German problem so vexatious in an already distraught Continent.*

INTRODUCTION

In a recent visit to Central Europe, the writer concentrated upon the problem of the German minority in Czechoslovakia, because this seems to him to be at present the most difficult and dangerous of all the Central European problems that he has come across. Its difficulties and dangers are manifold: there is the temper and policy of the Third Reich, which marches with the German districts of Czechoslovakia on three flanks. There is the economic distress in these districts. And in the third place there is the temper and policy of the Czechs. These three factors are acting all the time upon one another.

In laying emphasis, as he has done, on the third of these factors, the writer has not forgotten that the action of the Czechs is only one of several elements in the problem, and that there are other elements which are outside the Czechs' control—for instance, the two potent influences of the world economic crisis and of the rise of the National-Socialist Movement in Germany. The Czechs are the victims of circumstances as well as of themselves, and it is not at all difficult to point to neighbouring countries whose record, in the treatment of minorities, has been not so good, but which have been placed by fortune in a position to behave badly with comparative impunity. This privilege (if it be one) has been denied to the Czechs. For them—as their leading statesmen clearly see and frankly admit—a thorough and speedy solution of their minorities' problem is an urgent necessity of State.

This Czech necessity is at the same time a British interest; for a satisfactory solution of the minorities' problem would appear to be an indispensable condition for the maintenance of the independence and integrity of Czechoslovakia; and if Czechoslovakia were to disappear from the map, that would mean a change in the European balance of power which might end in putting Great Britain at Germany's mercy. Any foreign observer who wishes to see Czechoslovakia preserved and fortified must will the means to this end and must therefore wish to see the minorities' problem in Czechoslovakia solved, before it is too late, by Czech statesmanship.



THE BURDEN OF THE CZECHS

Even a short visit to Czechoslovakia is enough to make one aware that the Czechs to-day are labouring under a staggering burden. The political and strategic side of this burden is, of course, the most conspicuous. The Czechs' neighbours do not love them; their friends and backers are far off; their country has a curious shape which would make it difficult to defend against a host of potential adversaries who might one day perhaps join forces in order to deliver a concerted attack upon the object of their common hostility. The Czechs have a German and a Hungarian and a Polish problem on their hands; but the German problem overshadows the rest. The Polish minority in Czechoslovakia is, after all, a small affair, and the Czecho-Polish quarrel that rages round it is vivacious rather than deep. The Magyars' grievance against Czechoslovakia is a good deal more serious, but it is now in a fair way to a mutual solution. Czechoslovakia's Hungarian problem is being put into the shade by a German problem which looms up ever larger and more menacing.

It is menacing for a number of different reasons. In the first place, the German minority in Czechoslovakia is by far the largest numerically. In the second place, this German element in Czechoslovakia mainly consists of an old industrial population which has lost its links with the countryside. It has therefore been more heavily hit than the younger Czech industrial population by the impact of the world economic crisis. Whereas the Magyar peasantry who have been annexed to Czechoslovakia are said to have benefited economically by the Czechoslovakian Agrarian legislation, the German peasantry do not seem to have shared in the windfall, while the German industrial population in Moravia and Bohemia have fallen into dire economic distress. The origins of this distress can for the most part be traced to economic causes for which neither the Czech Government nor the Czech people are responsible. The catastrophic slump in the Sudetenländ is not the Czechs' fault, but their misfortune. When we remind ourselves, in the third place, that this numerous and unhappy German population in Czechoslovakia has for its kinsfolk and neighbours not the eight or nine million people of post-war Hungary, but the sixty or seventy million people of the Third German Reich which flanks Bohemia on three sides, we may begin to see the Czechs' German problem in its full magnitude. But it must be always remembered that this "German" population is really Austrian, and only "German" by adoption, as the Nazis have adopted the Austrians themselves.

The districts mainly inhabited by the Sudetenländer vary in racial composition, and are only roughly indicated by the hatching on the map on page 72. In twelve districts within the area, indeed, Czechs are in the majority. Moreover, as the figures on page 72 show, as many as 305,200 Czechs live in the German region of Bohemia alone; and either these, or the 730,000 Germans who live outside the main German-speaking region, would form big minorities under any system of cultural autonomy. This, however, only exemplifies the

CZECHOSLOVAKIA AND HER NEIGHBOURS

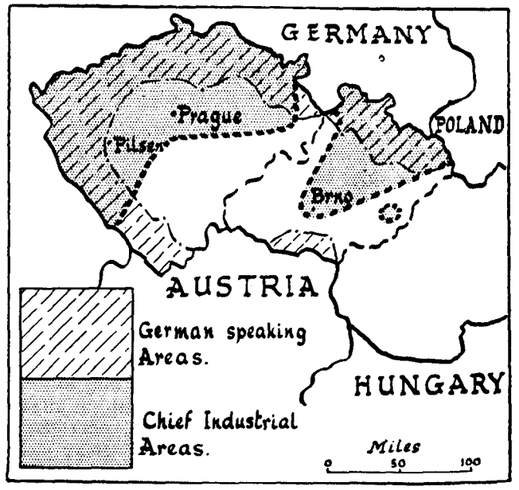
B—Bohemia; M—Moravia; S—Slovakia; R—Sub-Carpatho-Russia, or Ruthenia.

difficulty of the task facing both the Germans and the Czechs; it does not render its achievement unnecessary or impossible.

The actual temper of the Czechs is easy to apprehend and by the same token difficult to modify, for it is mainly the inevitable product of the Czechs' historical experience. For the last three centuries the Czech people have been living as under-dogs; they have acquired the under-dog's characteristic virtues and vices; and these are as palpable as ever to-day. A habit of mind that has been inculcated by the experience of many oppressed generations cannot be erased miraculously overnight by a simple change of external circumstances.

This in itself is awkward, for the under-dog mentality is not the right one for a ruling people. Under-dog finds it an almost insuperable difficulty to forgive and forget, whereas the secret of playing the part of a ruling race is to have a sublime consciousness of effortless superiority — a conceit of oneself which makes one forget injuries and ignore provocations. This quality—which the English have to an almost odious degree—is perhaps no merit, but it is certainly a notable convenience if the task that lies to one's hand is to manage other people.

When you talk to a Czech about the minorities problem in Czechoslovakia, he is apt to begin by making the general statement that Czechoslovakia is a democracy. And when you talk to a member of the German minority, you find that this Czech claim to be democratic is like a red rag to a bull.



The truth is that even the most genuine and old-established democratic way of life is exceedingly difficult to apply when you are dealing with a minority that does not want to live under your rule. We know very well that we ourselves were never able to apply our own British brand of democracy to our attempt to govern the Irish. And in Czechoslovakia to-day the methods by which the Czechs are keeping the upper hand over the Südetendeutsch are not democratic.

In their post-war intercourse with the Western peoples whom they so pathetically admire, the British infection which the Czechs have caught is not "effortless superiority," but "British hypocrisy," and they have taken it strong! Of all the burdens that the Czechs are carrying to-day, this vein of disingenuousness is perhaps the worst.

THE SÜDETENLAND

As our car turned the corner of a hill, a weird line of little volcanic mountains came into view. "And

INDUSTRIAL REGIONS OF CZECHOSLOVAKIA

here," said my companion, "we are crossing the line between Czech and German country; and when we are past those little mountains we shall see the Erzgebirge. We oughtn't to be able to see it, for the whole basin, in between, ought to be filled with a fog of factory-chimney smoke—the thick smoke from our brown coal. But to-day you will see the Erzgebirge, I am afraid, for most of the factories are idle." It was only too true.

How can I give a British reader who has never been on the spot some notion of the Südetenland problem?

Take South Wales and make the industrial basis of its life still more precarious than it is. For one half of the coal industry substitute a number of ingenious minor trades—lace making, glove making, porcelain manufacture, glass manufacture, straw plaiting and basket work—which are dependent on a wide foreign market that is being raided by the Japanese. Put this constitutionally enfeebled South Wales into the world economic crisis—expose it to the full blast of the crisis for year after year. And then imagine that, instead of there being the resources of the whole of the United Kingdom to back it, the United Kingdom has been repartitioned into the primæval heptarchy, and that your distressed South Wales hangs like a millstone round the neck of a west-country successor-state called

POPULATION

(Official Estimate, 1936 : 15,184,036)
Total 1930 Census : 14,729,536

Czechoslovaks	9,688,770	or 66·91%
Germans	3,231,688	or 22·32%
Magyars	691,923	or 4·78%
Ruthenians, Ukrainians	549,169	or 3·79%
Polish	81,737	or 0·57%

(iii) **Secondary Schools :** 1934-35.
Total number 284, with 3,433 classes and 125,564 pupils.
Average number per class, 36·6.

Schools by language of instruction : 1931-32.
Total : 290. Czech ,199; German, 91; Ruthenian 8; Magyar, 6; Polish, 1.

Mercio-Wessexia which is bounded by a line drawn from Chester to Southampton. But, to make this imaginary British parallel realistic, you must go on to imagine things that are more difficult for British minds to conceive. You must imagine that the English-speaking majority of the population of your Mercio-Wessexia have a fixed idea that the presence of the Welsh-speaking minority is a menace to the security of their own newborn state.

With this idea deeply fixed in their minds, the Mercio-Wessexians have been taking measures which in their eyes are merely natural precautions, but which can only be regarded as a campaign of aggression when one looks at the situation from a Welsh—or even from a neutral —standpoint. The Mercio-Wessexian Government have been "grouting" Wales with English officials—from postmen and railway pointsmen upwards—and leavening it with English-teaching schools. And now (at least, so the Welsh honestly believe) the Anglicisers are actually taking advantage of the economic distress in Wales (which did not, of course, originate in any fault of theirs) in order to intensify their political "offensive defensive." Here is a mother of a Welsh-speaking family drawing a dole that cannot keep body and soul together, or else doing sweated labour for wages that amount to no more than the dole itself. How is she to feed and clothe her children? If she sends them to the old Welsh school, her problem is unsolved; but if she sends them to this brand-new English school that has been planted in the village the child will get soup and shoes as well as English book-learning. And here is a Welsh mine or factory which is on its beam-ends. It applies for a loan to a Mercio-Wessexian bank, and is informed that it will be given accommodation on condition that it discharges 20 to 30 per cent. of its present Welsh labour force and takes on, instead, a contingent of English-speaking workmen who will be drafted in from Shropshire or Dorset. Nor is this the worst. For the Mercio-Wessexian police force in Wales is recruited entirely from the dominant nationality.

But do not let your imagination flag; for you have also to imagine that this nightmare Wales is bounded on three sides, not by the "salt estranging sea," but by a great Welsh Reich as large as the United States. While the little Welshman on one side of the frontier is having his arm twisted by the Mercio-Wessexian powers that be, a great Welsh nation, now armed to the teeth, is looking over the fence.

THE HEART OF THE PROBLEM

THE Czechs pursue their policy of Czechisation and thereby antagonise the Germans on both sides of the frontier; the Germans resent and resist, and this drives the Czechs, out of fear, into still more drastic precautionary measures in Czechisation. So the vicious circle remains closed, and the current of hatred runs round and round its full circuit.

The sheer economic distress is harrowing enough in itself. The Südetenland has always been sensitive to economic depressions—even in the old days when its industries had the world market, as well as the market of the whole Danubian Monarchy, to rely upon (and the Monarchy alone was a market of fifty million potential purchasers).

But this extreme economic distress, which may be traced in the main to impersonal economic causes, is not the worst feature in the situation. The worst thing is the interaction between economic distress and political strife. This German minority in Czechoslovakia feels all the time, in its dire extremity, that it is not cared for, not wanted; that the Czech majority on the whole would far rather that the German minority were not there; that the Czechs are taking systematic steps to Czechise the Germans or else push them to the wall; and that, in pursuit of this policy, they are taking advantage on the one hand of the economic crisis and on the other hand of the new legislation for the defence of the Republic against the menace—and it is genuine enough—from the Germans of the Reich.

CZECHS AND GERMANS

WHAT are the prospects for a reconciliation between the Czech and German communities in Czechoslovakia? Are the omens favourable? It depends where you take your stand. If you talk *tête-à-tête* with Dr Beneš and then do the same with Herr Henlein, you come away with the impression that the gulf can be bridged. But immediately you are confronted with the question how far either statesman is really master in his own house. President Beneš—with his wide vision and acute understanding of all that is at stake—no doubt sincerely desires to find a genuine solution for the minorities problem; and Herr Henlein is no doubt equally sincere in wishing to secure tolerable conditions of existence for his own people within the framework of the Czechoslovak Republic, without changing the existing frontiers or setting up a state within the state. If the two statesmen could one day meet *tête-à-tête* together, as I met each of them in turn, they could probably solve the question between them. But could either afford to meet the other? And, if they did meet, could they act as plenipotentiaries? When the Czechs refuse to negotiate with Herr Henlein, they excuse this undemocratic line of policy on the ground that Herr Henlein is the prisoner of his own extremists, and that these Südetendeutsch die-hards take their orders from Berlin. Conversely, the Czechoslovakian Germans express scepticism about President Beneš's ability to deliver the goods that he has promised them. He is a prisoner, they declare, of the Czech Agrarian Party, which holds the key positions in the Government offices at Prague and in the Government services throughout the country.

President Beneš has, indeed, to reckon with a force that is still more potent than the Czech Agrarian Party machine. In striving to make life tolerable for the German minority in Czechoslovakia, the President is "up against" the nationalism of the most powerful section of his own resolute people. Here you see a people who are well aware that at any moment they may find themselves again engaged in a struggle for existence, and who will not yield, or even flinch, if the catastrophe comes. If they are crushed, they will get to their feet again sooner or later, as they have done in the past. Czech-meat would be as indigestible a fare for Berlin as it once proved to be for Vienna; and it is not even likely that Germany, if she did attack Czechoslovakia, would have the chance of killing and devouring her prey at leisure. The Czechs are ready, well-equipped, determined. They have had time to prepare efficiently. And highly technical modern warfare favours the defence. The clash between Prussian and Czech would be so shattering a shock that it would bring down the whole European house.

The mere fact that one can talk of Czechs and Prussians in the same breath shows that the Czechs do not make the impression of being a small nation, like the Danes, or even the Swiss. What one feels here is numbers, power and drive. Quantitatively, of course—and over a long campaign, which would damage Germany as much as Czechoslovakia—the force of the Czechoslovak Republic is no match for that of the Third Reich. Qualitatively, however, it is a force of the same kind.

But is not the political life of the Czechs democratic and not authoritarian? And how can Czech democracy and German Fascism be treated as in any way comparable? The answer depends on the extension that one gives to the meaning of the term democracy. The Spartans, for example, were a thoroughly democratic community in their own domestic life. The Spartan electorate had the whip hand over the Spartan Government. Yet the Spartans did not look like democrats in the eyes of the non-Spartan populations over whom they ruled. The Czech nation is unquestionably a democracy in that Spartan sense; but it does not necessarily follow that the benefits of democracy are shared, under a Czech regime, by the non-Czech populations of Czechoslovakia. It is even conceivable that the very genuineness of the democracy of the Czech people itself is one of the obstacles to the extension of the benefits of democracy to their

non-Czech fellow-citizens. This is easier to understand when the Czechs hear the tenets of totalitarianism preached by some of Henlein's followers. The laws on the statute book of the Republic may make every provision that is needed for giving the minorities a tolerable life; and the Government of the Republic may be anxious to go beyond the letter of the law in this direction. But suppose that an implacable nationalism is the breath of life—the veritable religion—of this democratic Czech people. Herr Hitler can command his Reichsdeutsch followers to shake hands with the Poles; President Beneš and Prime Minister Hodža can only exhort their Czech and Slovak constituents to show mercy.

And what of the German minority? The Czechs are still pinning their faith to the three so-called " Activist " German parties—the Social Democrats, Christian Socials and Agrarians. These German " Activists " have been co-operating politically with the Czechs since 1926. They are now represented in Dr Hodža's present coalition government; and the Czechs' policy is to make to the " Activists " any concessions that they may be disposed to make to the German minority, and, for the rest to wait till the Hitler-Henlein cloud rolls by.

But will it roll by? And will the " Activists " ever recapture a majority of the Czechoslovakian German votes? The " Activists " can so plausibly be held up to odium as traitors to their own people that their political position would be delicate enough. Prosperity is weakening Herr Henlein's hold on the Czech Germans; the Czech Government have spent more in the German districts than elsewhere to achieve the present striking increase in employment; but his movement, even if a minority, will remain large and troublesome.

Is it within the power of Herr Henlein and President Beneš to bring this solid Südetendeutschtum and equally solid Czechdom together, supposing that one day the will to appeasement were to arise on both sides simultaneously? The task is almost desperately hard, and it will not be made easier by provocation. But a refusal to try, or a failure to succeed, are likely to have appalling consequences. Bohemia, where these two solid national phalanxes now collide, is the veritable heart of Europe.

THE FUTURE OF CENTRAL EUROPE

ANY Western observer who visits Central Europe to-day will discover before long that, beneath the surface, all is not well; and in the nineteenth year after the Armistice this obstinately persistent fact is more significant than it was fifteen years ago. If Central Europe is still distraught and miserable, that can only mean one thing to-day. It must mean that there is some radical defect in the peace settlement.

What are the alternative kinds of settlement that can be discerned on the horizon? We may classify the alternatives according to the rôle for which Germany is cast in each of them. At one extreme lies a " solution Barthou " which would exclude Germany from playing any part at all in Central Europe ; at the other extreme lies a *Naunmannsche Lösung* which would make the task of reorganising Central Europe a monopoly of the Third Reich. Fortunately, however, these two extremes are not the only possibilities ; for it is hard to believe that either of them could be applied without precipitating a catastrophe which would not be confined within the bounds of Central Europe itself, but would engulf the whole continent, including its British annex.

What would happen if we were to try to construct a Central Europe in which Germany had no part or lot? In the first place, this would be an economic *tour de force,* for it is hardly possible to conceive of a balanced and thriving Central European economy being re-established without the participation of the Reich. Secondly, Germany would deem it an hostile act.

Equally perilous would be a settlement imposed on Central Europe by Germany alone, to the exclusion of the other European Powers. For one thing, such a solution would be vitiated by what was perhaps the fundamental fault of the settlement of 1919-21. It would right one set of local wrongs only to create another. The broad territories that lie between the present frontiers of the Third German Reich and of the Soviet Union are sown thick with German minorities—from the 3½ millions of Südetendeutsch in Czechoslovakia, whose homelands actually march with the frontiers of the Reich, right away to Estonia and Transylvania and Bessarabia. At present, these minorities are all of them subject to the ruling elements in the post-war successor-states of the pre-war Habsburg and Romanov and Hohenzollern Empires ; and most of them have something to complain of under this post-war regime. But it would be no remedy simply to make the players exchange their rôles without re-casting the play ; and it is to be feared that a mere exchange of rôles would be the sole result of a *Naumannsche Lösung* of the Central European problem. If Central Europe were to be reorganised by the imposition of Germany's hegemony the German minorities *in partibus* would be exalted from the rank of second-class citizens to the rank of privileged garrisons and outposts of the great German Empire which would now be casting its shadow over the basins of the Danube and the Vistula.

The best solution would be one which neither gives Germany a monopoly nor shuts her out. The problem concerns in the first place the Central European countries themselves, and in the second place all the great Powers of Europe, from Russia to Great Britain inclusive. But if we go on to consider what the respective contributions of the several great Powers should be, we shall have to take account of a number of practical factors—geographical, historical and psychological—and as soon as we do bring these factors into account, we shall see that the great Powers' contributions to a settlement of the Central European problem can hardly be all exactly similar or exactly equal to one another. Take the case of Great Britain first. Our British inclination, situation and tradition will work together to deter us from doing more in Central Europe than the minimum that may be necessary in order to preserve the European balance of power. On the other hand, history, geography and desire will combine to make Germany throw herself eagerly into the Central European problem.

The European statesmen have to find a solution which will give Germany as large an economic scope in Central Europe as may be compatible with the maintenance of the political independence and integrity of Germany's eastern neighbours. Economically, both parties would stand to benefit by co-operation between the Central European countries and Germany. The delicate point is to make sure that economic penetration does not bring political hegemony in its train. And it is on this account that the other Great Powers of Europe ought to be parties to the settlement in the rôle of guarantors of the political *status quo.*

Great Britain cannot refuse to concern herself in the solution of the Central European problem. The first reason is that our very aloofness is a guarantee of our impartiality ; and, without the participation of at least one recognisedly impartial Great Power, this delicate settlement could scarcely be achieved. But there is also a second reason which touches our own vital interests. If we close our eyes to the problem of Central Europe and let things drift there, then there may come a day when Germany will stake her existence on an attempt to take the law into her own hands and to solve the Central European problem in exclusively German terms. If we allow that day to overtake us, we shall find ourselves in a horrible dilemma. We shall either have to stand aside and let Germany create for herself a position in Central Europe which will ultimately give her the whip-hand over ourselves, or else we shall have to go to war with Germany to save the balance of power.

Great Britain's duty and interest are to work with all her might with those—whether in Central Europe or not—who are striving to obtain a peaceful and a moderate solution of the Central European problem. Now is the time to act. To-day the Central European auspices are more favourable than for years past. To-morrow it may be too late.

Business Stability

NEW YORK, June 29.—The level of business activity in May was virtually unchanged from April. With seasonal adjustment, most of the Federal Reserve indices were identical with the figures of the previous month:—

FEDERAL RESERVE BOARD INDICES

(1923–25 = 100. Adjusted for Seasonal)

	May, 1936	April, 1937	May, 1937
Industrial production (total) ...	*101*	118	118
Manufactures	*101*	118	118
Minerals.....	*102*	115	116
Construction contracts (total)	*46*	53	53
Residential	*32*	44	44
All other	*57*	61	61
Factory employment	*89·8*	101·6	102·1
Factory payrolls	*80·8*	104·9	105·1
Freight car loadings	*72*	84	80
Department store sales	*87*	93	93

A moderate decline can be anticipated in the business index for June, although the figures will not be available for some weeks. Steel output has declined a little under the influence of strikes, and has been about 75 per cent. of capacity during recent weeks compared with 90 per cent. during most of May. The total, however, is not expected to be markedly lower than last month's.

The relative steadiness of the business indices, which has now lasted for seven months, has not extended to other economic factors. Commodity prices, after being fairly steady during January and February, rose sharply, and then declined rapidly. Moody's index of sensitive commodities rose about 10 per cent. to 228 from mid-February to early April, then fell to the year's lowest point of 198 on June 14th, and has since hovered slightly above that figure. The wholesale price index of the Bureau of Labour, which is much broader and more slow moving, rose from 84.7 at the end of the year to 88.3 on April 3rd, and had fallen to 86.5 by June 19th.

Slump in Bonds

High-grade corporate bond yields fell to 3.07 per cent. early in the year, rose to 3.48 per cent. in early April, and have fallen back to 3.30 per cent. Government bond yields declined to about 2¼ per cent., reacted to about 2⅜ per cent., and have now recovered about one-third of the loss. Medium and lower grade bonds have fallen almost steadily from their high prices of early in the year, and reached their lowest prices in the year this week. Short-term money rates became moderately firm in the spring, but are now declining again. Equity prices have fallen about 15 per cent. in the average from the peak levels of the spring. In short, sharp reactions have occurred in commodities, equities and bonds, while business has remained stable.

Some further decline in business, in addition to that seen in June, is expected by many analysts. Orders are reported to be falling off in some industries, and inventories are said to be rather large in some cases. Confidence and sentiment have been set back by the labour difficulties and by proposals for legislation at Washington. The expansion of bank deposits has come to an abrupt halt during recent months after several years of rapid advance. Disequilibrium exists between industries: thus building is still very depressed, while machinery makers are extraordinarily active. The question is whether the decline is to be moderate and short, or more severe; the majority of opinion appears to hold to the former answer. But there is no certainty about developments in the near future.

Financing Activity

The activity in investment goods, excluding building, is an important constituent in the volume of business maintained during the first half of 1937. Such activity requires long term financing. During the recovery thus far, Treasury deficit financing, with the proceeds being paid out to business, has largely fulfilled that function; it has been supplemented by the use of depreciation reserves, and to some extent, more recently, by bank loans, retained earnings and some new issues. But this did not last very long.

This situation is now altered. Deficit financing has fallen to a low level. The new issue market, which showed signs of revival last year and in the early months of 1937, has been virtually dormant for some months since the flurry in bond prices. The tax on undistributed earnings militates against investment through this channel. Bank loans and depreciation reserves remain available, but it is doubtful whether they are or can be sufficient to finance the maintenance of current levels of investment goods activity. A bond market strong enough to absorb a substantial volume of new issues is badly needed, lest the economy suffer from anæmia. New domestic corporate bond issues, excluding refunding, during the first five months of this year totalled $337 millions in this country, or about half those in the London market.

Changes in Industry

Industry has just been provided with figures by one of its own research organisations which raise some interesting labour questions. In manufacturing, it is calculated that output per man hour in April was 27.6 per cent. above the average for 1929, while labour cost per man hour was 17.7 per cent. more. Labour cost has been rising rapidly for several months, while output, though fluctuating, has shown little change. Labour cost per $100 of output is shown to be about the same as in 1929. Total man hours in industry were shown to be 81.6 per cent. of 1929, but employment was reported to be 97.6 per cent. and payrolls 96.1 per cent. Wholesale prices of finished products were 92.5 per cent. of the 1929 level. No comment is offered by the National Industrial Conference Board, which compiled the figures, and the situation presumably varies widely from industry to industry. It is very difficult to interpret the figures, for they would seem to point to profits equal to or exceeding 1929 (assuming that material costs do not exceed that year, which they evidently do not) which have not in fact appeared. But they give strong support to contentions that a large advance has been made in technology.

France

The New Franc

Paris, July 8.—The Stock Exchange received the new "free" franc as calmly as public opinion greeted the new Cabinet. After having slumped as low as 129, the franc has been stimulated by rumours that the financial authorities intend to establish it in the neighbourhood of 125 francs. Stocks were adjusted to the probable new level, with a certain margin to allow for the new taxes on companies which will shortly be announced. Public funds were bid up after the lowering of the rediscount rate of the Bank of France from 6 to 5 per cent.

Two problems are now vital: will the Socialists loyally collaborate in voting the new taxes, and what will be the effects of the new devaluation and new taxes on prices? M. Blum declared at Bordeaux that he was in agreement with M. Chautemps about the need for new taxes to put an end to fiscal fraud, so long as they were not imposed on necessities. It is rumoured that a series of decrees to provide 7,000 million francs from new taxation will be issued before the opening of the Socialist National Congress at Marseilles on Saturday. M. Chautemps will also appeal to the trade unions for support and co-operation. The new taxes will probably be chosen in such a way that they will not involve M. Blum in too great embarrassment before the Congress.

These taxes must not lead to an immediate rise in prices, which would set up a "vicious spiral" of prices and wages, and imperil the "floating franc." M. Bonnet is aware of the danger; and the first decision of the Government was to issue a decree prohibiting a rise in wholesale and retail prices above the level of June 28th, with the exception of imported products—and even these are to be controlled. The Government knows that some rise in prices is inevitable, but M. Bonnet also knows that the new devaluation would be nullified by a sudden rise in wages, which M. Blum could not resist, if prices rose very sharply. M. Blum also declared in Bordeaux that the first care of the Government would be to prevent prices from following the movements of the franc.

International Implications

The new Cabinet and the new depreciation of the franc were received, not only with calm, but also with scepticism. This has been lessened by the lowering of the Bank rate, which was accompanied by rumours of an important change at the head of the Bank of France, and the launching of a scheme to reorganise credit and of an "open market" policy. The Rentes then advanced by 3 points, as the following table shows:—

	Lowest, 1937 (June 8th)	Reopening of the Stock Exchange (July 2nd)	(July 7th)
3 per cent.	59·85	70·75	73
4 per cent. 1918.....	59·70	69·25	71·35
4½ per cent. 1932 "A"	65·80	73·80	75·90
4½ per cent. 1937 (with guarantee of exchange)	90	98·60	99

This movement was also aided by better news about affairs in Spain and by the statements of M. Van Zeeland on his return from Washington. Indeed, the Stock Exchange considers that the new French experiment has radically altered the situation and may open the way to new hopes, if it is made part of a widespread international move towards peace and prosperity. The fear persists that unless this happens, the efforts of MM. Chautemps and Bonnet will be checked after a few months by rising prices and social complications, followed by a return of the old political constellation with coercive measures.

Meanwhile hopes and fears are concentrated upon three problems. Will the new Government be able to pursue a policy sufficiently tactful to retain the support of the Left without again alienating investors and business men? Can the major task of balancing the Budget be successfully effected without undue prejudice to the new social and political structure of France? And will the international diplomatic crisis be ended without any real threat of war?

Holland

Extremists Beaten at the Polls

Amsterdam, June 26. — The past month has been of great political significance. In the elections for the Lower Chamber of Parliament the right-wing parties again secured a majority in the House, and the extremist elements, the National-Socialists (Fascists) and the Communists suffered a crushing defeat. Of 100 seats in the Lower Chamber, only four were captured by the National-Socialists, and they failed to retain even 50 per cent. of the number of votes recorded in their favour at the provincial elections two years ago. Dr Colijn has now been invited to form the new Cabinet. Although the Ministers have not yet been made known, indications are that a Cabinet of the right-wing parties will be formed.

These political events have tended to divert attention from the economic development of the Netherlands. But recovery continues. In the recently published annual report of the Netherlands Bank, Dr Trip stated that the course of economic affairs in the Netherlands was still displaying an unmistakably upward trend. For our colonies, too, a new era has been opened, and prospects for 1937 justify considerable optimism. The finances of the Netherlands East Indies are in such a flourishing state that the Governor-General has been able to announce that taxation will be reduced in 1938.

All-round Improvement in Business

Economic developments in the Netherlands are clearly illustrated by the following data compiled by the Rotterdamsche Bankvereeniging:—

January–April, 1937 (compared with January–April, 1936)	
Exports	Up by 63 per cent.
Imports	,, ,, 53 ,,
Transit traffic without transhipment	,, ,, 32 ,,
Aggregate port traffic	,, ,, 23 ,,
Arrivals of ore at Ymuiden	,, ,, 21 ,,
Transit traffic with transhipment.....	,, ,, 19 ,,
State revenue	,, ,, 16 ,,
Yield of sales (turnover) tax	,, ,, 15 ,,
Unemployment	Down ,, 14 ,,
January–March, 1937 (compared with January–March, 1936)	
Contracts by public tender	Up by 92 per cent.
Imports of raw materials	,, ,, 36 ,,
Exports of manufactures	,, ,, 30 ,,
Output of coal mines.....	,, ,, 13 ,,
Ships in commission	,, ,, 10 ,,

Statistics issued by the Amsterdamsche Bank, analysing the 1936 profits of 217 different companies, are also interesting. Of the aggregate net profits of the 217 companies, amounting to 103,106,000 guilders, 46,805,000 guilders were distributed as dividend. In 1935 the figures were 54,925,000 and 29,584,000 respectively. In 1936, therefore, 56,301,000 guilders, or 54½ per cent. of the profits, were retained in the business; in 1935 the amount was 25,341,000 guilders or 46 per cent. The companies have thus given first thought to a judicious fortification of their financial structure. The total net profits are 88 per cent. larger than in 1935, and represent 9.4 per cent. of the capital, compared with 4.9 per cent. in 1935. It should not be overlooked that it was not until the last three months of 1936 that trade and industry in the Netherlands began to pick up to any considerable extent, so there is ample justification for anticipating far better results for the year 1937, both for the Netherlands and for the Netherlands Indies.

The returns of registered unemployed also show an improvement:—

Number of Registered Unemployed	1936	1937	Decrease
January	471,348	439,183	32,165
February	476,726	451,923	24,803
March.....	450,273	430,029	20,244
April	419,066	384,600	34,466

There have been no serious labour disputes, and the cost of living has not risen in proportion to the depreciation of the guilder or the increase in wholesale prices since September.

Rising Import Surplus

After the remarkably high figures for April, it is no wonder that the month of May should show a pronounced reaction in foreign trade; but the May returns can nevertheless be regarded favourably, for they are far in advance of the figures for the corresponding month last year, both in weight and value. Imports in May weighed 1,939,000 tons compared with 1,548,000 tons last year, and the exports were 1,313,000 tons compared with 1,021,000 tons last year.

The value of imports and exports in recent years, month by month, is set forth below:—

	Imports (In millions of guilders, excluding gold and silver)				Exports (In millions of guilders, excluding gold and silver)			
	1934	1935	1936	1937	1934	1935	1936	1937
January	100	76	79	106	56	55	50	73
February	81	70	74	105	51	51	50	79
March	94	80	79	125	61	54	55	94
April.....	85	78	81	142	54	50	57	101
May	87	78	76	128	57	58	53	90
June	89	73	77		59	51	53	
July	86	76	80		58	54	60	
August	87	76	82		69	61	63	
September ...	78	76	82		69	59	72	
October	87	94	92		62	70	76

Jan.–May ...	*448*	*362*	*389*	*607*	*279*	*268*	*265*	*438*

The surplus of imports in May, valued at 38.05 million guilders, was more than 3 millions smaller than in the preceding month. Compared with May of last year, however, when the imports surplus was 23.23 million guilders, there has been a considerable increase. For the first five months of the current year, the import surplus amounts to 169.14 million guilders, compared with only 124.86 millions in the corresponding period of last year.

The improvement in the terms of the Netherlands German clearing arrangements is very important for our exporting trades. There have been increased imports from Germany, and it has been proved possible to agree upon a considerable expansion of our exports to Germany in the third quarter of this year. As Germany is still our biggest customer, this will be of great benefit.

Gold Imports

The Amsterdam Bourse remained dull in sympathy with the tendency on Stock Exchanges abroad. Trading remained within very narrow compass, and the fluctuations of local securities were, on the whole, only slight. Despite the growing import surplus gold continues to flow into the country. Since the depreciation of the guilder, the stock of gold of the Netherlands Bank has grown from 670 millions to 1,200 millions. No revaluation of the gold stock has taken place, and the Exchange Equalisation Fund of 300 million guilders is also in possession of foreign bills or gold.

All these circumstances have combined to enhance the liquidity of the Amsterdam market, especially as the Government has not availed itself of the money market recently for the issue of exchequer bonds. In the face of such an unprecedented surfeit of liquid funds, it is no wonder that there is no rate of interest worth mentioning on the private money market.

Switzerland

Increase of Electric Power

Geneva, June 27.—In a country like Switzerland, where raw materials are practically non-existent, but water is abundant, the production of electricity is an important asset. Swiss water power resources are estimated at about 4 million horse-power, of which three-quarters have so far been brought into use. During the hydrographic year 1934-35 about 4,152 million kilowatt-hours of electric power were produced by the Swiss water power plants—excluding railway plants. In 1935-36 the production rose to 4,669 million kilowatt-hours, and it is still increasing.

In their last report, the Federal Railways Board point out that their expenditure on electricity last year was 11 million francs below what would have been spent had coal been used. Of 1,800 miles of track, 1,325 are now electrified, or about 74 per cent., and the consumption of electric power is increasing year by year. The Federal Railways have therefore contributed towards the building of a new powerful water power plant on the Etzel, near the lake of Zurich.

The construction of the Etzel plant began in the autumn of 1934, and an artificial lake 6 sq. miles in surface and containing 275 million cubic feet of water was made. The power plant is expected to be working at full capacity next autumn. The Etzel power plant is estimated to yield about 120,000 h.p., of which 45 per cent. will be used for lighting, heating and industrial purposes, while the remaining 55 per cent. will be taken by the Federal Railways.

Recovery and the Hotel Industry

The economic situation continues to improve steadily In April, imports totalled 172,948,912 francs in value, and exports 105,417,056 francs, compared with 91,456,223 francs and 68,634,881 francs, respectively, in April, 1936. In May, which had two working days less than April, the value of imports was 147,132,878 francs, and that of exports 102,346,098 francs, against 88,602,496 francs and 68,927,847 francs, respectively, in May, 1936. During the six months which have elapsed since the currency was devalued, exports have risen by 19 per cent. in volume and 27 per cent. in value. The net surplus of the post and telegraph service rose by 18 per cent., that of the Federal Railways by 47 per cent. Customs duties yielded 18 per cent. more than a year ago, and the Stamp duty 36 per cent. more. The earnings of the hotel industry have risen by 44 per cent.

At a recent meeting of the Association of Swiss hotelkeepers, it was decided to leave prices unchanged for the summer season despite the small rise recorded in the prices of foodstuffs. Many hotels are heavily handicapped by the interest they have to pay on the mortgages they were compelled to raise during the economic slump. A number of hotels have been saved by means of State subsidies granted by the Federal Government to the *Fiduciaire hôtelière*, a body formed by hotel keepers for the purpose of providing mutual aid for hotels. This body has closed many hotels recognised to be unnecessary; and it has distributed the Government grants to the hotels in the most difficult situation which it is urgent to keep working. They hope now to obtain higher subsidies from the Government to enable the hotels to pay off their mortgages. Meanwhile, the Government is maintaining the decree prohibiting the building or establishment of new hotels.

The recovery of the Swiss hotel and tourist industry is being fostered by the splendid weather which has prevailed since the end of May. During the four first

months of the year the number of persons who put up at the 7,000 Swiss hotels was nearly 790,000, compared with 672,000 in 1936. Out of this total about 310,000 were foreign tourists, compared with 207,000 in 1937. Prospects for the summer season are very good, and it is hoped that the industry will register a record year. Though not the most important activity in Switzerland, the hotel industry represents about one-fourth of indirect exports, with total earnings in normal years of 200 million francs.

Czechoslovakia

Pending Elections

Prague, July 1.—In external politics a new uneasiness has set in after a brief period of relaxation, and this has had repercussions in business circles. In addition, the Press campaign against Czechoslovakia has been renewed in a new form. When in London at the Coronation festivities, the Prime Minister, Dr Hodza, carried out some political negotiations. Recently, he paid a visit to Bucarest, where the ties of the Little Entente countries have been newly strengthened at the conference of Prime Ministers.

Preparations for the communal elections in the autumn are now being made, and the Government have insisted that elections to the Chambers of Commerce, of Agriculture, and of Social Insurance Institutions should take place. The special law, providing the Government with extraordinary powers, expires at the end of this month and is not likely to be prolonged.

The Government's programme in economic matters, to be carried out before the recess, is still extensive. The adjustment of corn prices has still to be undertaken, and problems of alcohol production, agrarian indebtedness and the position of traders and Government employees have still to be solved. The French Finance Minister has lately been empowered to guarantee a Czechoslovak loan up to 800 million francs. The Central Association of the Czechoslovak Industrialists again discussed in its general assembly the question whether the present prosperity could be considered permanent, and passed a resolution in favour of democracy and freer economic life, especially with regard to foreign trade.

Slump in Industrials

Prosperity is spreading into all branches of activity. This development is also apparent in the money market, which remains easy and quiet, and is shown in the increase of savings deposits. On the Stock Exchange, prices rose steadily up to the middle of April. On April 20th, however, a sharp fall in stocks began —just as it did abroad—which nipped the speculators, but at the same time curbed the confidence of the public. In May and June, the Stock Exchange was quiet, but whereas quotations for public securities remained approximately on the same level, industrial shares were very weak. The index of Stock Exchange prices which had risen on April 20th to 167.7, declined on April 23rd to 155.1, and had fallen to 139.3 on June 18th. This slump affected industrial shares almost exclusively, and an increased interest in public securities is being shown.

Increased Prices and Production

The index of wholesale prices shows an upward trend and stands at 752 compared with 691 in August, 1936. This increase has led farmers to claim higher prices, and some sections of labour to demand higher wages. Increased prosperity is reflected in a considerable diminution of unemployment. The number of unemployed at the end of May was 384,386 against 503,632 in April. There was thus a decrease of 23.7 per cent. and unemployment has reached the lowest point since 1931. The index of industrial production in April reached 97.7 (1929=100). In May and June some agricultural districts were damaged by drought, which may have an adverse effect upon the coming harvest.

The output of coal in May increased substantially compared with last year, and amounted to:—

(Thousands of Tons)

	1936	1937
Coal	858·5	1,241·9
Lignite	1,091·1	1,284·9
Coke	149·8	273·2

The production of pig iron was 142,659 tons, compared with 92,384 tons in 1936, and the output of raw steel was 188,512 tons against 118,877 tons a year ago. In almost all branches of industry improvement is noticeable. Building activities, delayed on account of the unfavourable spring weather, were revived in May and June. Industries working for foreign markets showed a considerable increase of sales.

A commercial agreement has been concluded with Denmark, Bulgaria and Belgium, and new commercial treaties with Columbia and Argentine. Negotiations with Germany are in progress about the adjustment of some outstanding economic questions and especially the clearing position. Preparations are being made for negotiations with Austria, Hungary, Netherlands, France, Greece and United States.

Jugoslavia

New Chapter in Politics

Belgrade, June 28.—The stream of political visitors to Jugoslavia continues unabated. Dr Neurath's official reception was cordial; though neither the official *communiqué*, couched in the usual diplomatic phraseology, nor subsequent developments contains any indication that Germany has broken any new ground or obtained further economic concessions from Jugoslavia. Nor, on the other hand, has Dr Hodza been more successful in persuading Dr Stojadinovic to a further tightening of the Little Entente ties and mutual guarantees. There is little doubt that, while Jugoslavia has certainly effected a *rapprochement* with the Fascist powers, which *ipso facto* means a loosening of the pro-French and Little Entente bonds, she prefers for the time being to watch events from the fence before committing herself irretrievably one way or the other.

Internally, the most important political event recently was the declaration of the Serbian Democrat opposition for a federal solution of the Croat problem, although the actual word "federal" was avoided in the declaration. A new chapter has thus been opened in domestic politics, though it is too early as yet to judge whether the declaration has gone far enough on the one hand to satisfy the Croats, or too far on the other to suit the Regency.

The trade position is steadily improving. Exports have more than doubled during the first four months of the year, while imports have also increased, as the following table shows:—

	1936				1937			
	Exports		Imports		Exports		Imports	
	Tons	Mill. dins.	Tons	Mill. dins.	Tons	Mill. dins.	Tons	Mill. dins.
1st q'r't'r	468,201	843·4	250,666	1,056·3	903,979	1,333	209,034	1,106·1
April	190,464	268·5	82,573	325·9	404,005	370	98,094	482·6
4 months	658,665	1,111·9	333,239	1,382·2	1,340,984	1,903	307,128	1,588·7

There are several important facts which emerge from an examination of the trade figures. One is that although the total value of exports to Germany has risen from 291.9 to 436.3 million dinars for the first four months of 1936 and 1937 respectively, this increase is less than 50 per cent. compared with a total increase of 103 per cent. in the value of Jugoslav exports. The second point is that exports to Italy, valued at 154.5 million dinars, have reached 65 per cent. of the pre-sanction exports. Thirdly, and most interesting, is that imports from both Germany and Italy exceed the exports to those countries.

Reducing Clearing Claims

Jugoslavia is in fact pursuing a policy of gradually diminishing her outstanding claims on the clearing account against these two countries. The German debt, which, two months ago, still stood at over 36 million marks, was reduced by June 3rd to 25.2 million marks, though this was achieved largely by means of Government orders, the repayment of private debts through clearing being a painfully slow process. Thus, on June 3rd, the last account to be paid was that for August 3, 1935. Negotiations are similarly on foot to diminish the Italian pre-sanction clearing debt, now 47 million lire. This will be done partly by Government orders, and partly by the surrender by Italy of her holdings in the Croatian Bank.

The economic outlook for the near future remains good. The wheat harvest, although less than last year's bumper crop, promises to be fair, and should yield a surplus for export of about 20,000 to 25,000 trucks of new grain, most of which should find a ready sale, since there are practically no old stocks left, except those already ear-marked for the French market. It is still too early to predict the maize harvest, but there are fairly large reserves from last year's record crop of 52 million metric cwts. The fruit crop promises to be of only average size.

Capital and industrial production are still on the increase. Deposits at the banks in April reached 11,231 million dinars, compared with 10,360 million dinars last year. The index for mining in March was 111.8 compared with 109.9 in 1936. The employment index for February was 107.2 compared with 97.7 in 1936. Government receipts for the first quarter were 2,522 million dinars, against 2,397 million dinars in 1936.

Tourist traffic is still a growing asset in the balance of payments. Whereas in 1924 only 190,000 visitors spent 1,570,000 days in Jugoslav holiday resorts, in 1936 948,000 spent 5,265,000 days. Of these 258,000 were foreign tourists with 1,500,000 days stay. The estimated receipts were 342 million dinars, which, when balanced against an expenditure of Jugoslavs abroad of 192 million dinars, leaves a credit balance of 150 million dinars net. The Ministry of Finance has now introduced a special tourist rate for the dinar of 250 to the £1 compared with the official exchange of 238.

Palestine

Undeterred Enterprise

Jerusalem, July 1. — The Memorandum on the development of the Jewish National Home during 1936 which has just been submitted to the Permanent Mandates Commission by the Jewish Agency for Palestine has a special interest, both because of the troubled events in the Holy Land during last year, and because of the proposed changes in the status of the country if the recommendations of the Royal Commission are adopted. The outstanding feature of the Memorandum is that the progress of the Jewish National Home was maintained despite the obstacles of continued unrest and the Arab strike.

In the disturbances eighty-two Jews were killed and 369 were wounded, and the damage to property was estimated at £250,000. Yet during the same period there was a Jewish immigration of 30,000, a fresh investment of private capital estimated at £8,000,000, and a Jewish contribution for public purposes of over £1,000,000. The 30,000 immigrants included between 8,000 and 9,000 from Germany, and a large part of the private capital was brought by them.

Business Activity

When the port of Jaffa was closed by the Arab strike, the Jews constructed a temporary jetty at Tel Aviv, now by far the largest city of Palestine with about 150,000 inhabitants. They are developing their lighterage port to rival Jaffa, and employ permanently 400 Jewish port-workers. There was a considerable decline in building, particularly in Tel Aviv, but a corresponding increase in agricultural labour, Jewish workers taking the place in Jewish orange groves of Arabs who were on strike.

The increase in the export of oranges was remarkable. In the year 1935-36, when the crop was poor, exports amounted to between 5,000,000 and 6,000,000 cases; in the year 1936-37, they were over 10,000,000 cases. The value of orange exports rose by £3,500,000 of which about half goes to the Arabs and half to the Jews.

Local industries received a certain setback, largely because Arabs would not buy Jewish products, and the success of the Levant Fair at Tel Aviv last summer was impaired. On the other hand, the few major industries in the country continued their upward progress.

It is another indication of steady progress that the Anglo-Palestine Bank increased its capital by £300,000. The General Mortgage Bank, and the Palestine Corporation, which is an English enterprise, also made large increases of capital and there was a big rise in the loans issued. The Co-operative Societies, which represent the principal instrument of Jewish development, and have 100,000 members out of a total Jewish population of 400,000, continue to multiply: the total number of registered societies now reaches nearly 700.

Jewish Expenditure

The Memorandum contains an estimate of the expenditure of Jewish enterprise among the Arabs in a normal year. It reckons the amount at nearly £3,000,000, made up of: £1,500,000 spent on agricultural produce; £750,000 on building materials produced in Arab quarries and industries; £250,000 in wages to Arab labourers; and £250,000 in rents of buildings, transport of goods, etc. It is estimated, too, that the Jews to-day, who constitute 30 per cent. of the population of Palestine, contribute about 60 per cent. of the Government's revenue. It is reckoned that they pay over £10 per head in State taxation, while the Arabs pay £2 6s. per head. It is a feature of Palestine economy that the capital of new enterprises is in great measure provided by immigrant settlers or by public contribution by the Jewish people, and a very small amount of interest is paid abroad.

Not less striking than the record of material progress is the account of the development of the Jewish social services and of educational institutions. Some 9,000 children were added to the school population, which amounted at the end of the year to 61,000, and the budget of the Jewish school system was £335,000, of which the Government contributed less than 12 per cent. The Hebrew University continued its activities, though one of its lecturers and six of its students were killed during the troubles, and work was begun on a new University hospital which will include a post-graduate medical school. The Technical Institute in Haifa likewise showed a great expansion, the number of students rising from 230 to 360.

New Zealand

Rising Revenue

Canterbury, June 17.—Returns of public revenue and expenditure for the financial year ended March 31st last were recently published, subject to audit, and the surplus of revenue over expenditure amounts to £472,000. This is well above the estimate based on

BRITANNIC
ASSURANCE COMPANY LIMITED
(Established 1866)
Annual Income : : : : £6,200,000
Funds - - : : : £27,000,000
All classes of Life, Fire, Accident, Motor and General Insurances transacted
Chief Office BROAD STREET CORNER, BIRMINGHAM

eleven months' returns which the Prime Minister made on his departure for London. The returns compare with those of the two preceding years as follows:—

REVENUE (£NZ '000)

	1934–35	1935–36	1936–37
Taxation—			
Customs	7,424	8,161	9,499
Beer duty	671	715	842
Sales tax	2,171	2,463	3,045
Highways	1,910	2,124	2,503
Stamp and death duties	3,521	2,842	3,163
Land tax	493	459	1,048
Income tax	3,796	4,581	6,619
Other taxes	192	211	222
Total Taxation	20,178	21,556	26,941
Interest receipts	2,930	2,721	2,387
Other receipts	3,018	1,895	1,819
Total revenue	26,126	26,172	31,147

EXPENDITURE (£NZ '000)

	1934–35	1935–36	1936–37
Permanent Appropriations—			
Debt service	9,781	9,346	9,380
Exchange	1,459	1,594	1,581
Highways	1,587	2,107	2,509
Other services	615	702	618
Annual Appropriations—			
Social services	7,145	7,756	9,913
Other services	3,913	4,386	6,674
	24,500	25,891	30,675

In 1936-37 the graduated land tax replaced a flat land tax, and income tax rates were increased. These two taxes accounted for £NZ2,627,000, nearly half the total increase of £NZ5,385,000 in taxation. Non-tax revenue was lower, interest receipts falling by £NZ334,000. Customs, sales tax, and income tax yielded substantially more, and land tax much less, than the estimate. On the expenditure side debt services and exchange exceeded the appropriations, while social services and other services cost less than the amounts provided. Total expenditure was £NZ387,000 less, and total revenue £NZ80,000 more than the amounts estimated.

For the coming year provision must be made for a full year's expenditure on many items which were increased for only part of last year, and further social services are promised as well. Though the tax yield is increasing, there is some concern that further exactions may be made. At the same time the Government is being reminded of its pre-election promises to reduce taxation. Both the sales tax, imposed in 1933, and the petrol tax of 10½d. per gallon, of which 6d. goes to the highways fund and 4½d. to general revenue, have been severely criticised.

The Cost of Public Works

The full year's expenditure on capital account is not yet available, but for the nine months ended last December the amount spent from the public works fund was £NZ2,370,000, compared with £NZ1,056,000 for the same period in 1935. The nine months' results suggest that the full year's expenditure will be well below the amount provided for public works. In the past two years these works have absorbed about 8,000 additional employees, and the total employed on public construction now exceeds 20,000. The numbers have increased steadily during the past year, and it appears that the public works programme, supported as a means of lessening the effects of depression, will reach its fullest activity about the time that prosperity reaches its peak.

Local experience shows the necessity for deliberate and long-term planning if public works are to be used as a means of ironing out the fluctuations of the trade cycle. Constructional expenditure, both public and private, usually varies with the general level of confidence, increasing in times of active business, declining in times of depression, and therefore widening rather than narrowing the swing between good and bad times.

Over the past two years the improvement has been definite and substantial. Comparing the March quarters of 1935 and 1937, free bank deposits have increased by 36 per cent., note circulation by 38 per cent., the local debits to all bank accounts by 46 per cent., and the yield of the sales tax by 43 per cent. These figures indicate an increased monetary turnover of the order of 40 per cent., and the rising trend of export income should ensure a continued expansion both of domestic trade and of imports. Both exports and imports have now shown an unbroken upward movement for two years. For the year ended April, 1937, exports, including specie, amounted to £NZ62.5 millions, the highest figure ever recorded. The highest pre-depression record was £NZ57.1 millions in 1924-25. Imports at £NZ48.4 millions have also reached their pre-depression level and are following exports.

[*Erratum:* In the New Zealand letter published in the issue of *The Economist* dated May 15th, the total value of bales of wool exported in the four months ended February, 1937, was printed as £NZ901,505 instead of £NZ6,901,505, which is the correct figure.—ED. *Econ.*]

Irish Free State

After the Elections

DUBLIN, July 4.—Mr de Valera has all but received a renewed vote of electoral confidence, and his Constitution has been approved by a majority in the plebiscite. The election was a singularly tame one, principally because there did not seem to be very much difference between the policies of the two main parties. In the matter of election promises Mr Cosgrave attempted to outbid Mr de Valera by offering a programme which would have been extremely costly to carry out, while, on the vital issue of the Free State's relationship with the British Commonwealth, there was not much to choose between Mr Cosgrave's not very enthusiastic desire to co-operate and Mr de Valera's realistic acceptance of the *de facto* situation. In the circumstances the more striking personality carried the day.

While there is a great deal to be said by way of criticism of Mr de Valera's handling of affairs in the last five years, his return to power is by no means an unmixed evil. On constitutional issues, he has gone as far as he proposes to go for the present, and there is no danger of any step that would lead to a severance of the slender ties that bind the Free State to Great Britain. Apparently the new Constitution is regarded by its author as a satisfactory charter of Irish liberty, and it may be taken that constitutional equilibrium has been attained. Mr de Valera is in a better position than Mr Cosgrave to deal with the extreme elements in the country, and he has recently shown a commendable firmness against the forces of disorder. In the political sphere the result of the election, though disappointing to many, is not the cause of any anxiety. Unfortunately, the same cannot be said of the probable results in the economic sphere.

High Prices and Emigration

It may be assumed that no immediate settlement of the annuities dispute will be reached and that the economic policy of the Government will remain unchanged. This will involve the continuance of the economic war and the pursuit of self-sufficiency to the utmost possible limits. The economic war has been the cause of serious losses to farmers, and the exports of agricultural produce has been maintained only with the aid of bounties. The self-sufficiency policy cannot be pursued much further except at a totally disproportionate cost, as the majority of articles that can be produced in the Free State are already being produced, and imports now consist almost entirely of raw materials and capital goods. Complaints about the rising cost of living are heard on all sides and are largely responsible for the numerous strikes in Dublin. Spokesmen for the Government party at the election were driven to admit that these complaints were not without foundation, and were fertile in inventing ingenious explanations of the prevailing high prices.

The high cost of living may accelerate the already rapidly moving stream of emigration. The following figures show the numbers who have emigrated to Great Britain (excluding those who have gone through Northern Ireland) in the last three years:—

Year ended March 31, 1935	15,979
Year ended March 31, 1936	20,161
Year ended March 31, 1937	28,512

The most striking fact that emerges is the rate at which the movement is growing. Everything points to a still further increase in the future, and the prospect of a serious decline in the population is causing much anxiety. The emigrants come from all parts of the country. In the rural areas the movement is the result of unemployment and agricultural depression, while in the towns it reflects the rising cost of living.

In view of the high degree of mobility of labour between the Free State and Great Britain, a rising cost of living in Ireland will cause emigration of skilled workers unless money wages are raised proportionately. At the present time large numbers of workers in the building trades are moving to England because Dublin employers are unable to pay the wages necessary to satisfy them at home. When the building strike is settled, a serious shortage of skilled labour may be experienced. This drain of men is a grave problem.

The injury inflicted on the export trades by high protection and the rising cost of living is illustrated by the decision of the Dublin Dockyard Company to close down. The reason given for this regrettable step is the high cost of materials in the Free State. Thus the exporting industries are deserting the country one by one, and their place is being taken by protected industries which can never hope to sell outside the domestic market. Possibly the amount of employment in industry is increasing, but much of the new employment is of a badly paid and unskilled nature. Of course, it cannot be suggested that the volume of employment in the Free State as a whole is increasing, as the emigration statistics clearly prove that it is on the decline. The Free State is in the unhappy position of subsidising the supply of the most important factor of production employed by its antagonist in the economic war.

Letters to the Editor

N.D.C.: New and Old

TO THE EDITOR OF THE ECONOMIST

SIR,—Being accustomed in general to suspend judgment on economic and financial questions until I have seen the considered opinion of *The Economist* upon them, I am shocked to discover your journal adopting a standpoint in the controversy between Mr Cadbury and yourselves on "N.D.C.: New and Old," in favour of which, so far as I can see, nothing but sophistical arguments can be advanced.

"A tax on high profits can be much more easily justified than most of our existing taxes." This is an *obiter dictum* which would require some proving.

"The ability to pay is unquestioned." If by this is meant that the money is there and can be taken without regard to other considerations, as much might have been said of the old N.D.C.

"As for equity, it is true that continued high profits may be due to superior management. But they may equally be due to good fortune or lack of scruple. In any case, high individual earnings, due to the same causes, are already taxed at a differential rate. Is that inequitable?" Is there any good reason why high profits which *are* due to superior management should be taxed at a higher *rate* than profits obtained in spite of inefficiency or through monopoly? Is there any prospect that we can establish an equitable system for a differential tax on the earnings of good fortune, or still more of unscrupulousness?

If I may quote from a letter which has already appeared in *The Times*, I would answer that the principle of graduation is generally accepted in the case of individuals on the simple ground that a given fraction of a small income represents a much more serious burden on the taxpayer than the same fraction of a much larger income. The same reasoning cannot be applied to company earnings, which are distributed among a vast number of shareholders at very different income levels.

"Finally, there would be little effect on *enterprise*, since the profits to be taxed, by definition, would be those in excess of the rate to be expected normally. It would be, in general, a tax on windfalls—the fairest of all taxes." The effects on enterprise and on prices would be difficult to calculate, but, leaving aside the question what is the rate of profit to be expected normally, I have no hesitation in saying that the imposition of a graduated tax on enterprise must inevitably be to discourage it and to educate business in the belief that after a normal profit has been attained the additional effort to achieve better results must require the prospect of a still greater additional profit to elicit it.

We may say farewell to enterprise, which is constantly and properly seeking abnormal profits, if investors are to be divided into two categories—holders of fixed interest securities paying a "normal" rate of interest, and holders of equities specially taxed if the yield exceeds that rate of interest by more than one or two per cent.

In fact, the maintenance of your point of view seems to me to be entirely inconsistent with capitalism; it is a disguised attack on the profit system in industry, which is the essence of industrial capitalism.

As for the statement that a tax of the kind under consideration would be in general a tax on windfalls, I am unable to attach any meaning to the phrase, unless it is contended that, in general again, the different earning capacities of various undertakings in the same line of business can rarely be accounted for by a difference in efficiency of management or in enterprising spirit: that, in short, profit is in general, beyond a somewhat arbitrary figure of normal profit, an unearned increment.

Your obedient servant,

3 St. Helen's Place, E.C.3. ANDREW MCFADYEAN.

The Problem of Lending Abroad

TO THE EDITOR OF THE ECONOMIST

SIR,— was interested to read your review on foreign investments in *The Economist* of June 26th. British foreign investments in the past were in countries that were undeveloped, such as Canada, Australia, Africa, the South American countries, India and China. These were all countries that needed capital equipment to develop their national resources. This made work for our secondary industries, our shipping and our banking. It also gave us control over the mineral and agricultural resources of a great part of the world. And it is on the foreign investments of the past that we have to depend to-day for the greater part of our invisible imports. We are living on the past.

The trend of foreign investment since the war has been in industrialised countries. Germany and Japan are two examples. In Germany, because of blocked currency and defaults, foreign investments have been more of a liability than an asset. British investments in Japanese industry have assisted Japan to become our biggest trade competitor in the colonial market and in South America. In Australia, for instance, with her depreciated currency, our goods are too dear to buy, and they buy cheaper ones from Japan. Thus in neither of the cases quoted are foreign investments of benefit to our secondary industries. They are, rather, a menace.

There is another form of foreign investment, on the American Stock Exchange. This benefits American industry, and also the holder of American securities, but it does not benefit our secondary industries as our foreign investments of the past did. It is difficult to see what will be the outcome; but it is obvious that the foreign investments of the past were the best.

I remain, yours sincerely,

H. S. VINCE.

Holloway

Books and Publications

Russia in the Making

THIS book* by the Planning Commission of the Soviet Union describes the second instalment of a leading adventure in national planning, and comes appositely when the whole industrial scene in Russia has been disturbed by rumoured treason and plot. The first Plan, upon which actual work began in 1928, was concerned in the main with the development of heavy industry and the production of capital goods. In the second Plan it is aimed to complete this process of capital construction, while effecting a considerable increase in the volume and variety of goods for final consumption.

The stipulated industrial progress to be made in the second five-year period makes very impressive reading. The total value of production was to be increased from 43,000 million roubles in 1932 to 92,700 millions in 1937. Large-scale developments were specified in coal, iron and steel, electricity, chemicals, building materials, and in road, rail and air transport. In agriculture, no considerable increase in grain acreage was contemplated, but the production of industrial crops was to be greatly extended, and greater sums were to be spent on the improvement of agricultural technique generally.

The Plan anticipates at the end of the period a net increase in the national income of over 100 per cent. compared with 1932, and a larger proportion of the total is to be used for increased personal consumption and the improvement of social conditions. The total wage fund was to be raised 55 per cent. compared with 1932, permitting an average wage increase of 23 per cent.; while real wages were to be improved by a fall of 35 per cent. in the retail prices of food and manufactured articles, and a considerable increase in the sums allocated for housing, health, education and other social services. There is in all this an almost cosmic optimism in the power of the State to control economic forces, belied a little perhaps by recent events in the sphere of politics.

From the economist's point of view, the actual Plan presents some interesting features, the most noteworthy being the attention paid to the question of production costs. Again and again it is insisted that costs can and must be greatly reduced. The danger of bureaucracy and the determination of the planners to deal with it are at once evidenced by a decision to abolish some half-a-million administrative posts in industry. Productivity per worker is to be increased in all industries by the progressive mechanisation of productive processes; by the general application of piece-work and bonus systems; by the encouragement of the Stakhanov movement (individual output record-making and breaking); and by the provision on a large scale of special technical and industrial training. Time lags between cognate processes are to be reduced, and output lags in certain sections of industry eliminated.

Altogether, the Plan is conceived on an immense scale. Every phase of industry has its herculean task; every side of cultural life has its purpose to be served. How far it will prove successful is difficult to estimate. The President of the Commission, in the foreword, assures us that already in 1935 there was evidence enough to justify considerable optimism; but careful reading shows that while in some respects expectations may be fulfilled, in others the results are certain to be disappointing. It is likely, however, that the net results, calculated in terms of Russian conditions, will show considerable progress and place Russia in the first rank of industrial nations. And there are lessons in the experiment for the would-be planners of industries in other countries.

The book itself makes rather tedious reading. Its repetitions, statistical and terminological, are tiresome. It makes many claims which are of doubtful merit, and many comparisons which are misleading and difficult to check. In places it bears too patently the impress of its origin, and, as might be expected, it raises many points which could usefully be discussed at greater length. The section on working costs is likely to have a mixed reception among Socialists and trade unionists; for, in truth, it might have come from the office of the hustling managing director of some American corporation.

Doubts might also be raised about the claim of the Plan to have established a classless society, in view of the general adoption of differential wage and salary rates and the building up of a technical intelligentsia. It might even be feared that what was ultimately to mean the establishment of a Socialist pattern which one day the world in its wisdom would hasten to emulate, is actually degenerating into a modified form of State capitalism which, in the end, will differ little in essentials from the condition of things to be found in other countries. Meanwhile the Plan has been more than a little obscured by the ramifications of the Plot.

Shorter Notices

"The Rise of Modern Industry." By J. L. and Barbara Hammond. Fifth Edition, revised and enlarged. Methuen. pp. xii + 303. 10s. 6d.

The number of the editions through which this book has already passed shows how aptly it has supplied a demand for an expert, concise and comprehensive history of the origins of the material factor that dominates the life of the contemporary world. The additions made to the book in its latest version notably increase its value; for in a new chapter the authors resurvey the Industrial Revolution in the light of a world economic crisis which had not appeared above the horizon at the time when the book was first published. In trying to perform the difficult task of charting the world's present course, the authors have taken their bearings from an analogy with the state of the world during the first two centuries of the Roman Empire. They point out that in that age, too, there was a world economic order which was comparable to our own during the past hundred years; but they go on to show that this ancient economic world order was set firmly in the framework of a political world order—the *Pax Romana*—which has, unhappily, no equivalent in our modern society. This book will help every reader to gain light on the sphinx-like question whence our modern society has come and whither it is going.

"The L. S. D. of National Defence." By Miss P. M. Rae. Hodge. 199 pages. 6s.

Miss Rae pleads with verve and lucidity for the proper planning of our warlike economy. National defence is a new science embracing a range of special economic problems, and effective organisation for war must include the coordinated adjustment of taxation, debt, money, prices, exchange rates, commerce, production and supplies. It is a sad state to which she calls us. It may be that *Wehrwirtschaft* is our destiny, but probably the canons of what Mr Einzig in his introduction calls orthodox economics will not be so inapplicable to our preparations as this book suggests. In any case, it is comforting to be told that economists do not favour war-making, even though Miss Rae and Mr Einzig regard their fastidiousness as dangerous.

MONEY AND BANKING

Currencies and Trade in Scandinavia

IN all four countries of Northern Europe in the last six months there has been a marked expansion in the turnover of foreign trade, imports rising even more quickly and to a higher level than exports. But the causes and effects of this movement differ in each country. Sweden to-day is in an embarrassingly good position, whereas that of Denmark justifies a certain amount of apprehension. The situation in Finland closely approximates to that in Sweden, while Norway is about halfway between its more fortunate and less happy brethren. A glance at the latest figures for each country's balance of international payments below illustrates the magnitude of the problem.

Sweden and Finland are suffering from an abnormal accumulation of gold and foreign currency. They are finding it difficult to keep the krona and the mark down at the present " sterling club " levels. Norway, which has had a much slower start on her way to prosperity, is now developing in a somewhat similar way, while Denmark, which for a long time suffered from a shortage of gold and foreign currency, is still faced with certain peculiar difficulties—even though during the second quarter of the year the position has visibly improved. The rise in world prices raises the export proceeds of Norway, Sweden and Finland at once, but Denmark has first to pay higher prices for imports of fodder and raw materials before she can raise her export prices.

There is much closer collaboration in Sweden between economists and the Government or central bank than in this country, and the authority of both the senior generation of economists (like Professors Cassel and Heckscher) and the younger (like Professors Myrdal and Ohlin) is very great. Yet, so far, they have not been able to secure adoption of their views, which vary in detail but seem to agree on the main principles of desirable action. Their contention at the moment appears to be that, for a number of reasons, it would be advisable for Sweden to avail herself of her liquid financial and commercial position to take certain precautionary measures now—in order to avoid the possible shock or complications that may later arise from the world's present monetary and commercial trends. The Government and the Riksbank, while not denying that some steps may become necessary in the future, are as yet reluctant to take any action and do not seem at all anxious for the moment to follow one of the main courses that have been suggested—namely the " unpegging " of the krona from sterling and a return to the old gold parity of the krona or to one even higher than that.

In 1931, after abandoning the gold standard, the aim of Swedish policy was stated to be the maintenance of the krona's purchasing power in the hands of the Swedish consumer. Further consideration in 1932 and 1933 resulted in the realignment of this policy so as to bring about a rise in domestic wholesale prices without any perceptible rise in the cost of living. The rapid recovery of the country, and the uninterrupted expansion of its industrial production and of its foreign trade made it at times very difficult to keep the krona pegged to sterling; for the accumulation of gold and foreign currencies was gradually becoming embarrassing. The Riksbank seems quite prepared even now to follow its singularly successful policy of the last five years. But a new factor has now arisen which seems to warrant—if not yet to dictate—certain modifications in the 1933 programme.

The strong upward tendency in world prices and the threat of inflationary developments—particularly in England—not unnaturally fill the Swedish authorities with apprehension. Legislation has been introduced which permits the Government and the Riksbank to take action should it become necessary; but to avoid any misunderstanding, the Minister of Finance has pointed out that no change in the external value of the krona was contemplated " for a foreseeable time." That expedient, no doubt, would be utilised only in the last resort; but it is hard to see how it could possibly solve Sweden's fundamental problem, which is also that of Finland: namely, how to check effectively the further accumulation of gold and foreign currency, and the rise in prices consequent on present trends in their exports.

It is generally agreed that if any unpegging of the krona is to occur, it would be desirable for Finland to unpeg the mark simultaneously. The pressure in Finland

SWEDEN'S BALANCE OF PAYMENTS 1936

is as yet somewhat less strongly felt than in Sweden: not only is there an internal market that is still capable of much development and can absorb the rapidly growing imports, but Finland can still (but not for long) go on repaying the remains of her foreign indebtedness. Not only has she already succeeded in wiping out most of her long-term and short-term loans, but she is the only country in the world to-day paying her war debt. Finland has been carefully investing in foreign production goods, in machinery and equipment of every sort.

Sweden and Finland would like to use their ever-growing sterling balances for purchasing more British goods. But there are unexpected obstacles. Re-armament and the building boom in this country, themselves the main causes of the great trade expansion in Scandinavia, are at the same time preventing British manufacturers from supplying Scandinavian customers, despite five years of official exhortation of Scandinavians to "Buy British." Scandinavians are noting with anxiety that British makers of machinery and equipment cannot even fulfil British demands without sharp rises in price and unconscionable extension of delivery dates. They do not want to have to hand over their accumulating sterling balances to Germany, for both political and commercial reasons, since it would greatly aid Germany and make their trade dependent on her economic system. But this is now a real danger. Even Denmark, which has been severely—and quite wrongly—criticised in certain British circles for not buying enough (actually her purchases in Great Britain by far exceed those of any other Scandinavian country) finds herself handicapped not only by her own exchange control but also by the demands made on British manufacturers by our home market.

The situation in Denmark this year has developed in a series of ups and downs. During the first quarter there was an alarming disparity between the prices of raw materials which the Danes are compelled to import, and the prices of agricultural produce exported by them. This naturally exercised adverse effects on the economic life of the country. In April and May, however, a marked reaction in commodity prices set in, while on the other hand the shipping boom has done much to mitigate the trade disequilibrium. Although in Denmark, too, imports have risen much quicker than exports, the general expansion of foreign trade has been most beneficial. But the uncertainty of Great Britain's agricultural policy is having an unsettling influence. Under the circumstances it must be considered as something of an achievement that the Danish National Bank has been able to make considerable repayments of its foreign loans and credits, and that at the end of June its net foreign indebtedness amounted to only Kr. 16 millions. It is, however, constrained to pursue a restrictive credit policy, which has already resulted in the slowing down of building activities, and must further curtail production—unless, of course, a good harvest and an improvement in export prices materially alleviate the present tension. British commercial policy in this respect is crucial for Danish currency policy.

Finally, from slow beginnings, Norway has made a big spurt in the recovery race, greatly aided in her foreign trade by the steep rise in shipping freights in the last year (see chart on page 69). Norway has the second largest mercantile fleet in the world, and her income from abroad on this account last year was almost as great as that from exports of merchandise. This has enhanced the liquidity of her money market.

Thus, Scandinavian domestic economic problems, and those of Scandinavian currencies as a whole, have reached a stage at which they are dependent on developments in other countries. Of these Britain is chief. But while Scandinavians prize the great British market, they are becoming increasingly anxious over the implications for them of British economic developments, especially as these may be reflected in the movement of British prices. It would be unwise for British governmental, business and banking authorities to ignore these considerations, for the four Scandinavian countries have become very important to Britain as suppliers of vitally necessary products at a time when other importing countries are competing for them.

Financial Notes

Recent Franc Trends.—Until Wednesday evening, there was a steady repatriation demand for francs, and the French authorities were able to accumulate a certain amount of gold. This demand, however, only represented the repatriation of liquid balances (estimated at Frs. 2,500 to 3,000 millions) urgently required at home, and on Thursday it came to an abrupt end. In consequence the French control had to become a buyer of francs and seller of gold, and while the spot rate for sterling remained at Frs. 128¼, three months' francs weakened from Frs. 2⅜ to Frs. 4 discount, the latter rate equalling 12½ per cent. per annum. The Banque de France return for July 1st is most discouraging. It shows a gold loss of Frs. 6,000 millions during the preceding week, an increase of Frs. 780 millions in provisional loans to the State, raising them to Frs. 22,160 millions, and an increase of Frs. 2,000 millions in the note circulation to Frs. 88,000 millions. The latest figure is the highest on record since the days of the *assignats*, while the ratio of gold to sight liabilities has fallen to 47 per cent., which is the lowest figure since the Poincaré stabilisation and is not far above the legal minimum of 40 per cent. This return coincides with the height of the recent crisis, and makes it clear that the French Exchange Fund had lost all its gold by early June. The Government's tax plans are an important factor, and a rumour that the increased direct taxes would yield only Frs. 500 millions was one explanation of Thursday's reaction.

★ ★ ★

The Dollar and Gold.—Early this week French repatriation caused the dollar to depreciate from $4.94⅛ to $4.95. The American Control is then thought to have intervened and bought dollars, chiefly to maintain equilibrium all round the pound-dollar-franc triangle in face of the French repatriation movement. Suddenly, on Tuesday and Wednesday, the American Control dropped out of the market. Sterling at once went to $4.96¼, and most dealers were taken by surprise. Then the American Control came in again, and also owing to Thursday's check to French repatriation the sterling rate was brought back to $4.95 and then to $4.95⅛-¼. Meanwhile the weaker tendency of the dollar was the direct cause of the disappearance of the London gold discount and the appearance on Wednesday of a premium of ½d. per ounce above the New York parity price. On Thursday the price was at par. The explanation was that the New York parity price fell with the depreciation of the dollar, and so buyers were tempted into the market. Also there was an inducement to the British authorities to buy gold in London in order to support the dollar. Official British gold purchases would both reduce gold shipments to the United States and also release sterling, some of which might be turned into dollars. In these circumstances the disappearance of the gold discount is a perfectly normal consequence of the weakening of the dollar.

★ ★ ★

The Floating Debt.—The passage into law of the Bill increasing the Exchange Equalisation Account by £200 millions lends special interest to the latest floating debt return: for so soon as the new increase in the Exchange Account takes effect, the floating debt will be raised by the same amount. Initially this new expansion will take the form of tap issues of Treasury bills, but if the authorities have to make use of their new powers to acquire gold, then the expansion will gradually be transferred from tap to tender issues of Treasury bills. The following table shows the latest floating debt posiiton, compared with that of the New Year and a year ago. The statement for March 31st last is also added, as that was the date on which the Exchange Equalisation Account's gold holdings were disclosed at £186.7 millions.

	June 30, 1936	Dec. 31, 1936	Mar. 31, 1937	June 30, 1937
	(£ millions)			
Treasury bills—				
(*a*) Tender	568·0	552·0	500·0	503·0
(*b*) Tap	197·3	214·2	174·6	135·2
Ways and Means Advances—				
(*a*) By Public Depts.	35·2	27·8	23·5	18·2
(*b*) By Bank of England	26·7	57·0	...	49·3
Total	827·2	851·0	698·1	705·7
Floating Assets	232·5	242·0	198·1	153·4

The estimates of the volume of tender and tap Treasury bills outstanding on June 30th and December 31st represent an attempt at an adjustment to allow for the fact that there are heavy maturities and few payments for new bills during the closing days of each half-year. The adjustment took the form of deducting from the tender issue and adding to the tap issue an amount approximately equal to the Ways and Means borrowing from the Bank at each date. The justification for this is that the borrowing is needed to bridge the temporary discrepancy between maturities and payments. The crude figure of tender issues obtained by adding together the preceding thirteen weeks' allotments would be too high by this amount, and as the tap issue is obtained by deducting the tender issue from the total Treasury bill issue, it would equally be too low.

★ ★ ★

After making these necessary adjustments, the table shows the extent of the drop in the department's floating assets, consisting of tap issues of Treasury bills plus Ways and Means advances from the departments, both during the past winter months and also since March 31st last. This drop partly reflects the "inside" support given to new Government loans, notably the National Defence Bond issue of last April, £49.5 millions of which had been paid up by June 30th. The final call of £50 millions fell due at the beginning of this week, and this will probably cause a fresh drop in floating assets. Still allowing for other imponderables, including official re-sales of Defence Bonds on the market, this contraction of £45 millions in floating assets since March 31st also reflects the recent gold purchases by the Exchange Equalisation Account. These involve a reduction in the Accounts holdings of Treasury bills and an equivalent increase in tender issues of Treasury bills. Incidentally, once the half-year's disturbance is over, the effective tender issue will be £552 millions, which is the amount shown by adding together the past thirteen weeks' allotments. This figure compares with one of £500 millions for March 31st last, and while this increase of £52 millions partly arises from the much smaller expansion of £7.6 millions in the floating debt, it is mainly due to the Government borrowing to finance the Exchange Account's gold purchases and also to re-armament expenditure financed in part by a loan which has only been taken up very incompletely by the general body of investors.

★ ★ ★

The Money Market.—While funds have been reasonably plentiful, the clearing banks have experienced a steady afternoon demand for money during the whole of this week. The Bank return shows that the supply of cash has been a little on the low side. Monday's call of £50 millions on the National Defence Bonds made little difference, as the bulk of the bonds are still held "inside."

	June 17, 1937	June 24, 1937	July 1, 1937	July 8, 1937
	%	%	%	%
Bank rate	2	2	2	2
Clearing bank's deposit rate	½	½	⅛-⅝	½
Short loan rate :—				
Clearing banks	½-¾-1*	½-¾-1*	½-¾-1*	½-¾-1*
Others	½	½	½-⅝	½
Discount rates :—				
Treasury bills	⅝	⅝	½-⅝	½
Three months' bank bills	11/16-¾	11/16-¾	⅝	17/32-⅝

* Loans against Treasury bills and other approved bills and British Government securities within six months of maturity; 1 per cent. Treasury Bonds and other gilt-edged stocks within six months of maturity; and other collateral respectively.

There has only been a moderate demand for bills by the clearing banks, possibly because of the reduction in their cash. Discount rates, however, are back again at their minimum after their firmer tendency in June. The banks have bought a few August and September Treasury bills at ½ per cent., and on Thursday began to buy October Treasuries.

★ ★ ★

The Bank Return.—There has been a further increase in the note circulation, which has not only raised the total circulation to a new high record, but is also unusually large when compared with the parallel movements of previous years. A further expansion in internal spending at home is advanced as the main explanation, but it is possible that the joint-stock banks are still replenishing their currency reserves, which were drawn upon during June through French hoarding. The funds so far repatriated to France represented liquid industrial and financial balances sent over here just in time to snatch the profit on the new franc depreciation. None of the French money previously hoarded in British currency has yet been repatriated.

BANK OF ENGLAND

	July 8, 1936	June 16, 1937	June 23, 1937	June 30, 1937	July 7, 1937
	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Issue Department :—					
Gold	225·6	321·3	326·4	326·4	326·4
Note circulation	443·1	479·8	483·7	488·4	494·4
Banking Department :—					
Reserve	43·5	42·4	43·6	38·9	32.9
Public deposits	10·5	10·0	15·5	10·8	15·2
Bankers' deposits	96·7	102·3	95·0	140·5	88·5
Other deposits	38·4	37·1	37·2	40·2	37·2
Government securities	96·8	101·3	98·0	140·6	96·6
Discounts and advances	6·0	3·7	3·8	6·3	9·0
Other securities	17·4	19·9	20·2	23·7	20·4
Proportion	*29.8%*	*28·3%*	*29·5%*	*20.3%*	*23.3%*

The week's movements in the banking department represent the aftermath of the end of the half-year. The Government has repaid the bank out of the receipts for new Treasury bills at the end of last week, and in consequence bankers' deposits have fallen to more normal dimensions. A comparison with the return of a fortnight ago in fact shows that bankers' deposits have fallen by £6.5 millions as the result of the £10.7 millions expansion in the note circulation. The Reserve and the Proportion have also fallen to an unusually low figure, and it looks as if the Bank may have to take over more gold from the Exchange Equalisation Account.

★ ★ ★

Six Months' Money Rates.—The following table gives for purposes of record a comparison of money and discount rates for the past half-year with those of previous years:—

AVERAGE MONEY RATES

Year	Bank Rate	Market Rate 3 Months' Bills	London Deposit Rate, Banks	Average Short Loans Bill Brokers
	£ s. d.	£ s. d.	£ s. d.	£ s. d.
1925	4 11 0	4 2 0	2 11 0	3 9 3
1926	5 0 0	4 10 3	3 0 0	4 1 1
1927	4 13 0	4 4 10	2 13 0	3 15 0
1928	4 10 0	4 3 0	2 10 0	3 12 6
1929	5 10 0	5 5 4	3 10 0	4 12 3
1930	3 8 5	2 12 3	1 8 5	2 9 6
1931	3 18 7	3 11 0	2 1 0	3 0 10
1932	3 0 2	1 16 9	1 5 2	1 15 7
1933	2 0 0	0 13 10	0 10 0	0 15 5
1934	2 0 0	0 16 7	0 10 0	0 16 10
1935	2 0 0	0 11 3½	0 10 0	0 14 10½
1936 First Half	2 0 0	0 11 9	0 10 0	0 15 0
Second Half	2 0 0	0 12 0	0 10 0	0 16 0
1937 First Half	2 0 0	0 11 6	0 10 0	0 15 0

Since last year most rates in the money market have been controlled. The clearing banks have lent at fixed rates of ½, ¾ and 1 per cent. against different types of collateral. "Outside money" does not come into the agreement, and rates have recently been in the neighbourhood of ⅛ per cent. And the clearing banks are still refraining from the purchase of "hot" treasury bills altogether, and of others at less than a minimum of ½ per cent. As a result the table shows little more than reversal of the gradual trend towards higher rates.

THE STOCK EXCHANGE

Prospectuses Good and Bad

WHEN the Stock Exchange is active, and all geese are swans, investors are prone to subscribe to prospectus offers which, in a period of less extreme mental exaltation, they would leave severely alone. It is a truism that the speculative company promoter tends to give the public a good deal of what the public wants rather than a little of what is good for it. The State may pass severe penal laws against *supressio veri* and *suggestio falsi*, but it cannot prevent the seller from exercising his common law right of praising his wares. Those who frame prospectuses are entitled to all the privileges exercised by the itinerant vendor who says: "Buy my oranges, lady; they are sweet and juicy"; for the three elements—informatory, complimentary and exhortatory—of salesmanship are common to both.

It is worth while asking, therefore, whether those who demand a higher standard of prospectus practice might not be wise to devote increased attention to the possibility of reforming public taste rather than statute law. Many things which are perfectly legal in this country are not the acts of a gentleman. The rules of the game of bridge provide detailed penalties for misdemeanours like revoking, exposing a card and leading from the wrong hand, for these are all presumed to be unintentional. They do not provide for card-sharping, which is just not cricket. If an Investors' Prospectus Club, with a million membership, were to choose an Issue of the Week or the Month, what features should govern the Selection Committee's award of good and bad marks? Can we, in fact, draw up a code of professional etiquette for capital issues, having the force of custom, though not of law?

We can obviously take for granted, at the outset, all the reforms embodied in the Companies Act of 1929; but our adjudication will be appreciably influenced by the spirit in which the law's stipulations are carried into effect. We shall give no marks for a three-year statement of a company's profits, but we shall deduct points in cases: (a) where the basis of computation is appreciably different from that on which future shareholders' profits will be assessed; (b) where the total is swollen by extraneous items, whose nature is explained, but whose amount is undisclosed; (c) where all necessary charges, like depreciation, are not deducted before profits are struck; and (d) where they *are* deducted, but at a rate whose adequacy the investor has no opportunity to check. But, above all, we shall frown upon obscurantist auditors' certificates which show profits "after making such adjustments as are believed to be appropriate." On the other hand, we shall award points to businesses which, if they have been established sufficiently long, show profits not for three, but for anything up to ten years, so that we can trace their vicissitudes during a complete trade cycle. Where several companies are being merged, we shall extend our favour to prospectuses which show separately the past earnings of the constituent enterprises.

It is probable, indeed, that the award of a very large share of the total points will be decided in the light of our conclusions on the profits figures. The earnings statement is the crux of every prospectus. It is a yardstick which alone enables the would-be subscriber to measure the company's proper capitalisation, the purchase price which should be paid for its assets, the payments made to intermediate parties, and the price asked for its shares. We must closely concern ourselves, not merely with the form in which profits are presented, but with the character of the figures themselves. The potential subscriber should carefully ignore the conclusions drawn from the figures by the prospectus draughtsmen, and frame his own. He will find that, in nine cases out of ten, he can thereby obtain a shrewd inkling of the true character of the business with whose fortunes he is being asked to identify himself.

The following table illustrates this point. It is a compendium of some of the more common types of profit record, which, before the coming into force of the Companies Act, 1929, would all have been blanketed under the general statement: "Profits for the last three years have averaged £50,000":—

	Case I	Case II	Case III	Case IV	Case V	Case VI
	£	£	£	£	£	£
Year A ...	40,000	20,000	60,000	10,000	80,000	100,000
Year B ...	50,000	50,000	20,000	15,000	55,000	*Dr.50,000*
Year C	60,000	80,000	70,000	125,000	15,000	100,000

Let us examine these figures and see what conclusions follow from them. Case I shows a steady rise in earnings, which suggests a reasonable probability of future continuance—though the investor should remember that if years A to C are part of the recovery phase of a trade cycle, the company may be merely sailing with the tide. Case II shows a far more rapid rise, which needs generous discounting on the ground that those who make records in a hundred yards race seldom win prizes for the mile. Case III is a company to be avoided because, *prima facie*, it is liable to embarrassingly wide fluctuations in earning power during short periods. Due weight should, of course, be given to the arguments which the prospectus will invariably offer in extenuation of year B, but investors will reflect, nevertheless, that stability of earnings is preferable to the passing of dividends for the very best of reasons. Case IV is one of the most difficult of all on which to reach a sound judgment. The extraordinary rise in profits after two meagre years may be due to emergence from severe depression, or to an abnormal boom in trade or to unexpectedly large orders, or to a combination of all these and other non-recurrent factors. One thing only is clear—that no prudent man would base estimates of permanent earning power on the showing of the latest year. Case V is the opposite of Case I; the trend of profits is obviously retrogressive. No statement that "operations since the close of the year show that profits of at least £50,000 are assured for the current period" should persuade the investor to reverse his first unfavourable impression. It may be true; but in the new issue market it does not pay to bet against the form book. Case VI is a more extreme example of the disability instanced by Case III. We have separately enumerated this case to emphasise the principle that a loss in a single year is far more dangerous than a succession of small profits. The probability is that a Case VI company will have more fixed-interest capital than a Case III company, because its *normal run* of profits is higher. The Case III concern could survive a recurrence of Year B, in all probability, with nothing worse than the passing of its preference dividend; but the Case VI company might well have its debenture interest uncovered.

There is one more case which does not merit inclusion in our table, though examples of it have lately been distressingly frequent. Under it come all instances where profits of, say, £15,000, £15,000 and £20,000 are followed by a statement that profits of £12,500 have been earned in the first three months of the current year, and that these are "equivalent to £50,000 for a full year." The arithmetic is correct, but no valid conclusion whatever can be founded upon it.

Our hypothetical code will not necessarily exclude any company under Cases I to VI from the capital market, but it will insist that every material figure in the prospectus shall be related to the crucial facts of the profits return. We shall insist that, though a purchase price and a share capitalisation based on *average* profits would be identical in all instances, much lower figures would be appropriate, e.g. in Cases IV and V than in Case I. Our code would then, naturally and logically, proceed to consider the "gearing" of capital. We might find it advisable to begin by laying down an arbitrary rule that companies with a total capitalisation of less than, say, £150,000 or profits of less than £25,000 should not, in any circumstances, issue debentures or preference shares. In such instances the total issued capital would be insufficient to ensure free marketability. To subdivide would be to create preference shares whose priority was probably worthless, and ordinary shares whose speculative quality made them manipulative counters rather than investment media. Whether the total capital were large or small, we should withhold our blessing from capitalisations in which preference shares of high denomination (£1 or more) ranked in front of ordinary shares of low denomination (1s., 2s., 5s., etc.) We should be particularly severe in our adjudication in cases where the issued preference capital, at par value, represented more than one-third to one-half of the total capital; and where preference dividends were covered less than three times *in the worst year* shown in the prospectus. Where debentures and/or preference shares were included in the capitalisation, we should deduct points where the "cover" was incorrectly shown under the "prior deductions" system and award them where it was correctly displayed under the "cumulative requirements" system. The following examples illustrate the differences of the two systems in the case of a company earning total profits of £120,000, with £400,000 in 4½ per cent. debentures, £1,000,000 5 per cent. "A" preference and £200,000 5½ per cent. "B" preference capital:

"PRIOR DEDUCTIONS" SYSTEM [Incorrect]

	Annual Amount Required	Amount of Profits Available	No. of Times Covered
	£	£	
4½% Deb. ...	18,000	120,000	6·67
5% "A" Pref.	50,000	(120,000 *less* 18,000) = 102,000	2·04
5½% "B" Pref.	11,000	(102,000 *less* 50,000) = 52,000	4·73

"CUMULATIVE REQUIREMENTS" SYSTEM [Correct]

	Annual Amount Required	Amount of Profits Available	No. of Times Covered
	£	£	
4½% Deb. ...	18,000	120,000	6·67
5% "A" Pref.	(18,000 *plus* 50,000) = 68,000	120,000	1·76
5½% "B" Pref.	(68,000 *plus* 11,000) = 79,000	120,000	1·52

The figures are self-explanatory. The obvious absurdity of the result suggested by the "prior deductions" system—that the "B" preference have more than twice as much cover as the senior "A" preference—has not, in the past, prevented the use of this misleading method of computation in ninety-nine per cent. of all new company prospectuses.

Obviously, the list of attributes of a well-tempered prospectus is endless, and to endeavour to discover the perfect document is to search for the philosopher's stone. Many other points might be mentioned: the relative disinterestedness of all experts whose testimony on matters of fact, technique or judgment may vitally affect a subscriber's decision; the use of large and small print to produce a given psychological effect; the practice (itself perfectly legal) of giving lists of material contracts rather than their essential conditions and effects—all these questions, and many more, might be discussed at great length. Whatever judgment be reached on points of detail, however, the basic conclusion remains. A code defining sound conventional practice, as distinct from the minimum requirements of the law, would serve a decidedly useful purpose. It would tend not only to prevent investors from subscribing to the less desirable type of prospectus, but also to prevent many such prospectuses from seeing the light of day. To exclude speculative enterprises from the capital market would be undesirable; but the investor ought to be made aware of the grade of goods he is buying.

Investment Notes

Signs of Recovery? — Is this week's recovery in the security markets the flattery of deception? Or has the fall in share values throughout the first half of the year been reversed on the threshold of the second? The firmer tendency of the London and American markets this week has noticeably reassured professional market observers, although it has not proceeded sufficiently far to attract the public investor on any substantial scale. This week's volume of business in London shows clear signs of expansion, however, and although the in-and-out operator still tends to take the profits of the day, rather than risk them over an account, prices have made fair headway on balance. Bullish factors have at last made their influence felt, in a technical situation which has, for many weeks, been only theoretically responsive. Temporary calm in the Spanish situation, allied with a record unemployment return since 1929, and the firmer tendency in several commodities, have favourably affected investment sentiment. And among internationals, Wall Street's renewed activity has brought the usual bullish interplay between American closing prices and British parities on the following morning. In addition, the appeasement of the franc crisis, marked by the lowering of the Bank Rate, has played some part in the arbitrage markets. After initial hesitation arising from fears of future taxation, the Paris Bourse has subsequently improved quite briskly, and both rentes and industrials have held their advances.

★ ★ ★

The international stage, therefore, was fittingly set for recovery in London. Wall Street, too, has shaken off its recent lethargy. The "little steel" fight is turbulently proceeding towards its close, and emphasis is now being laid upon the important settlements which have been peacefully secured and upon the promising industrial situation. The American market was supported by a net capital inflow of $323 millions during the first quarter of 1937, although net purchases of securities fell from $328 millions for the previous quarter to $161 millions. Wall Street must therefore be regarded as vulnerable to any precipitate withdrawal of foreign funds. Rumour credits the Administration (not, indeed, for the first time) with the intention of introducing discriminatory taxation on foreign holdings, or of exchanging information on "hot money." The latter fear seems to be responsible for a certain exodus of French funds from New York this week, although the figures above, and the behaviour of Wall Street, suggest that such withdrawals came from bank balances rather than securities. Meanwhile, the American industrial prospect appears sound; there is no tendency to discount any turndown in business activity, and the incidence of political factors is less extreme. At this moment, the world's security markets present a firmer front than at any previous time this year. Their next task is to prove their staying power—if they have it.

Hungarian Non-State Debts.—Official intimation was given last week of an agreement between the League Loans Committee and the Hungarian Government regarding the 7½ per cent. League Loan of 1924, on terms described on page 26 of last week's issue of *The Economist*. The creditors' representatives now announce the results of discussions early in June with the Hungarian delegation on the subject of Government long-term debts and long-term non-State debts. The results of the former negotiations will be published separately, but an offer is now made regarding the long-term debt of Hungarian municipalities, ecclesiastical bodies and certain private debtors, covering a period from August 1st next to July 31, 1940. During this period bondholders are

offered payments in full satisfaction at the following rates in free exchange:—

Contractual rate %	Rate offered %
4 or less	1½
Over 4, up to 4½.....	1⅝
Over 4½	1¾

These payments will be made only where the debtor concerned has deposited the full amount in pengöes with the Cash Office of Foreign Credits, and *pro rata* reduction will be made where the debtors have deposited only part of the currency service. Foreign holders are also offered the opportunity to utilise the pengö deposits for personal travel expenses under certain conditions. The offer applies to a large number of issues in various currencies, including such loans of concern to the British investor as City of Budapest, Counties of Hungary, and Hungarian General Savings Bank among others. The offer is recommended for acceptance by the Council of Foreign Bondholders. This prompt and reasonably favourable offer will encourage hopes that the Government bondholders will receive similar treatment in due course.

* * *

Industrial Profits in June.—If the rate of increase in industrial profits were the sole determinant of share values, the market would be exceptionally active at present. The company reports in June showed the substantial increase in profits of 21.19 per cent. This impressive result is largely attributable to the important oil company reports issued during the month, which contribute over 40 per cent. of the total profits. The record of recent months is shown below:—

Reports published in 1936—	No. of Companies	*Rise in Profits** %	Reports published in 1936—	No. of Companies	*Rise in Profits** %
March	236	17·39	December .	175	15·49
April	254	9·66			
May	269	9·41	1937—		
June	214	13·50	January ...	110	15·92
July	228	15·69	February ...	208	8·95
August	47	14·21	March	307	12·52
September ...	107	12·32	April	245	23·36
October	146	18·09	May	255	14·09
November ...	177	13·49	June	265	21·19

* After payment of debenture interest.

The total net profits covered by the June reports amounted to £43,924,563, compared with £36,244,117 for the preceding year. If the oil group is excluded the improvement in manufacturing profits is 13.2 per cent. The recovery is well diversified, although iron, coal and steel companies are an important element.

Company Notes

Half-Year's Railway Traffics.—In recent weeks, the home rail stock market has watched the trend of weekly rail traffics with growing satisfaction, and this week's figures, which complete the railway half-year, were particularly good. The gross gain of £217,000 makes a total increase for 26 weeks of £3,545,000—an advance of 4.74 per cent. The improvement is equally divided between goods and passenger traffic. Passenger receipts have increased by 4.54 per cent. and goods receipts by 4.89 per cent., the latter figure combining a 3.31 per cent. advance in merchandise and one of 7.63 per cent. in coal. The following table shows the total receipts divided according to companies and according to classes of traffic, and compares the 26 weeks' figures with those of 1936 and with the last "normal" period, 1927-30.

GROSS RECEIPTS FIRST 26 WEEKS 1937

	L.M.S.	L.N.E.R.	G.W.R.	S.R.
Passenger receipts (£).....	12,139,000	7,920,000	5,044,000	7,764,000
Change compared with 1936 (%)	+ 4·1	+ 4·7	+ 3·7	+ 5·7
Change compared 1927–30 (%)	— *9·2*	— *10·5*	— *14·1*	— *5·6*
Merchandise receipts (£)	12,737,000	8,820,000	5,119,000	1,572,500
Change compared with 1936 (%)	+ 2·9	+ 4·8	+ 3·8	— 3·2
Change compared 1927–30 (%)	— *14·9*	— *19·4*	— *11·3*	— *24·8*
Coal receipts (£)	6,873,000	6,534,000	2,922,000	806,500
Change compared with 1936 (%)	+ 7·7	+ 7·0	+ 11·5	— 0·7
Change compared 1927–30 (%)	— *1·8*	— *3·0*	— *9·3*	— *0·8*
Total receipts (£)	31,749,000	23,274,000	13,085,000	10,143,000
Change compared with 1936 (%)	+ 4·4	+ 5·4	+ 5·4	+ 3·7
Change compared 1927–30 (%)	— *10·3*	— *12·3*	— *12·0*	— *5·3*

The figures show that railway receipts have not yet regained step with the expansion in business activity as a whole. During the first five months of this year, *The Economist* index of business activity was 6 per cent. higher than for the corresponding period of 1936—a rate of advance unequalled except by coal receipts on three of the lines. But the gap, nevertheless, is becoming narrower. Recovery in heavy industry is, for the first time, producing a tangible effect upon receipts. The expansion of foreign trade, moreover, should have considerable influence upon the level of goods traffics, for the dependence of railway traffic upon exports has been repeatedly stressed by railway chairmen during the last seven years. These tendencies are confirmed by the trend of receipts of the L.N.E.R. and Great Western, the two lines which are most dependent upon heavy industry, and upon exports, and which have made the largest relative gains this year.

* * *

Statistical analysis suggests that the advance in traffics this year has been steady. In the following table the movement of each class of traffic, compared with 1936 and with 1927-30, is traced in four-week periods since the beginning of the year. Comparison is rendered somewhat difficult by the incidence of the holidays and the Coronation (which gave a fillip to passenger receipts but, by adding another public holiday, reduced goods traffic), but the improving trend is quite clear, particularly in the comparison with 1927-30:—

TRAFFICS OF ALL LINES COMPARED WITH 1936 AND WITH 1927–30

Weeks	Change compared with 1936 (%)				Change compared with 1927–30 (%)			
	Passenger	Merchandise	Coal	Total	Passenger	Merchandise	Coal	Total
1–4	+ 1·2	+ 2·4	— 6·6	— 0·4	—16·1	—16·0	— 6·0	—13·7
5–8	+ 3·8	+ 3·2	+ 3·4	+ 3·5	— 9·5	—18·7	— 6·3	—12·4
9–12‡	+16·8	— 2·4	+ 8·2	+ 7·2	+ 0·8	—21·6	— 8·7	—10·5

21–24	— 3·5	+ 9·7	+21·8	+ 5·3	— 7·6	— 9·9	+ 6·6	— 6·0
25–26	+ 3·0	+ 6·0	+12·4	+ 5·5	— 0·2	—13·8	— 8·9	— 6·6

† Coronation and Whitsun weeks in 1937. ‡ Includes pre-Easter traffics.

During the last six weeks the margin between current receipts and the pre-depression level has fallen much lower than at any time since recovery began. The coal receipts of the two northern lines, even over the whole half-year, are but slightly below the 1927-30 period, and the passenger receipts on all four lines have lately been very satisfactory, even when the influence of the Coronation is taken into account. These movements of gross receipts are encouraging for the holder of home rail stocks. At the same time, investors will remember that expenditure is increasing together with revenue. The latest figures, however, suggest that, at the moment, total receipts are keeping in step with the increased wage and material costs. The outlook for modest dividend increases on the marginal stocks seem promising. But unless the Railway Rates Tribunal sanctions the proposed 5 per cent. increase in charges, expenditure will probably rise faster than receipts over the next eighteen months.

London Transport Year.—With London Transport "C" stock quoted at 78 compared with 104 a year ago, and an increase in traffics (before pooling) of no more than £255,100 for the 52 weeks to June 26th, the Board completes its second year of operation under the "receivership rule." For 1936-37 or 1937-38 the Board, having paid 4 per cent. on the "C" stock for 1935-36, must pay 5½ per cent. on the stock, under pain of a receivership application by holders of five per cent. of the stock. The bus strike in May was, of course, responsible for the disappointing traffic results for the year which has just closed. For comparative purposes, we set out the quarterly movement in traffic since 1934-35:—

(In £'000's)

	A 1934–35	B 1935–36	C 1936–37	Percentage changes: B over A	Percentage changes: C over B
Quarters ending—					
September	6,909	7,012	7,235	+ *1·5*	+ *3·2*
December	7,033	7,135	7,372	+ *1·4*	+ *3·3*
March	6,826	7,021	7,163	+ *2·9*	+ *2·0*
June.....	7,329	7,309	6,962	— *0·3*	— *4·7*
Total	28,097	28,477	28,732	+ *1·3*	+ *0·9*

The 52 weeks' total of £28,732,000 shows an increase of less than one per cent. compared with the corresponding period of 1935-36. The first half of the year appeared fairly promising, with a 3.2 per cent. advance, although even this scale of improvement would have implied little or no improvement in net revenues. Indeed, Lord Ashfield disclosed at the strike inquiry that the increase of £735,500 recorded for the first 44 weeks of the past year had been more than absorbed by increased expenses. The increased cost of fuel alone involves an additional sum of £273,000 in a full year. Since the standard 5½ per cent. dividend was short-earned last year by £384,000, it is quite evidently outside the reach of "C" stockholders for 1936-37. Granted the present trend of operating costs, the Board's immediate problem is rather to maintain earnings equivalent to last year's level.

* * *

At this point, however, the stockholder should consider the effect of the pooling arrangement. A recent article in *The Railway Gazette* outlines the operation of the pool in detail. The participation of London Transport and the four main-line companies is based on the standard year 1932, subject to later adjustments in respect of revised working and wage conditions. From the gross receipts, a deduction is made by each party for working expenses and other allowances. The net pool is then divided, London Transport taking 62.10364 per cent., and the main-line companies 37.89636 per cent. (of which the Southern Railway ranks for 25.48506 per cent.). Through the operation of the pool, therefore, London Transport will transfer nearly two-fifths of the net loss arising from the bus strike to the railways, and will receive more than three-fifths of any increase in the net suburban revenues of the main-line companies. Since the operating allowances appear to be based on rates of expenditure per mile, which are then multiplied by the mileage run to produce gross expenditure, the Board will have some reduction in costs to offset its fall in revenue. Investors, however, can only await the report to discover the effect of this factor on the Board's net revenues. Meanwhile, the market is occupied with the lively possibility—ruling out any alteration in the rights of the "C" stockholder—that a standard dividend for 1937-38 may have to be found at the expense of the renewals provision. But this procedure would be no contribution towards a solution of the Board's central problem—providing an efficient and cheap system of transport and meeting the standard dividend requirments of the "C" stock within a context of acute traffic pressure and rising operating costs.

Bank and Discount Interims.—No surprises are contained among the bank dividend statements, but the market has learned with a sense of shock of the reduction in Alexanders' Discount interim from 18 to 15 per cent. per annum. The announcement has been followed by a fall in the shares from 81s. to the present level of 67s. 6d. This company transferred £300,000 to investment reserve account in 1934 and 1935, when jobbing profits on securities were comparatively plentiful. Last year, when provision against depreciation on the securities portfolio was required, the directors followed the conservative course of providing the necessary sums from current profits, leaving the reserve intact. The reduction in the interim dividend rate suggests that the directors have adopted the same conservatism to meet a similar earnings situation. The Union Discount rate is halved, but it is payable, of course, on a paid-up capital of £2,750,000 against £1,250,000 a year ago. The banking dividends have been maintained, in accordance with general expectation. The banking half-year appears to have been somewhat more profitable on the trading side, to judge from the trend of advances, but the fall in gilt-edged securities during the period may have prompted some further strengthening of the internal provision against securities. The details of the interim dividends so far announced are given below:—

Name and Shares	1936 Interim	1936 Total	1937 Interim	Price, July 8, 1936	Price, July 7, 1937	Yield (%)
	Per cent. per ann.	%	Per cent. per ann.			£ s. d.
Banks						
Barclays "B" £1.....	14	14	14	3 11/16xd	3 11/16xd	3 14 0

(*a*) Allowing for increase of capital and capitalisation of reserves. (*b*) Yield on a 17½ per cent. basis, £5 3s. 9d. per cent.; on a 15 per cent. basis, £4 8s. 11d. per cent.

The classical view regarding bank shares holds that, in times of depression, low interest rates maintain share values, while in times of prosperity, advancing profits provide an expanding equity. Investment policy, based on these principles, has proved highly successful in the past. But do they apply with equal force now that the banks hold vastly increased amounts of gilt-edged securities, while their advances respond comparatively slowly to expanding trade? This consideration appears relevant in comparing the trend of bank shares and industrial equities over the past year. During the second half of 1936, bank and discount shares remained comparatively stable. But during the past six months the Actuaries' Index of bank shares shows a nine-point fall, comparable with the decline in the industrial index. These movements are shown below:—

Share Indices	1936 June 30	1936 Sept. 29	1936 Dec. 29	1937 Mar. 30	1937 July 6
Banks and Discount Companies (12)	124·4	124·2	125·1	119·2	114·2
All Industrials (177) ...	83·1	88·2	90·8	86·5	82·1
Yields					
Banks and Discount Companies (12)	3·87	3·88	3·85	3·97	4·12
All Industrials (177).....	3·76	3·62	3·68	4·09	4·40

While industrial equities have experienced a rapid upward adjustment of yields, the bank share group shows a rise inversely proportionate to the fall in share values. The issue, therefore, is whether this fall has finally adjusted yields to a new basis, or whether the

process is still in train. Investors who prefer a comparison with gilt-edged securities will agree that, on their merits, bank shares deserve a differential of ⅛ per cent. in yield over the gilt-edged rate; but the latter itself is a shifting basis.

United Dominions Trust.—The latest Report of United Dominions Trust shows the results of the most prosperous year in the Trust's history, and it is accompanied by proposals for a change in its capital structure of no little importance. During the year to June 30, 1937, bills receivable and notes on hand held by the company and its subsidiaries rose by nearly 15 per cent. from £5,456,728 to £6,255,122—an increase which comfortably exceeds the advance in business activity. Profits are £23,694 higher at £201,802, but the ordinary dividend is maintained at 17½ per cent. Following this continued expansion, the directors have decided to issue the remaining 75,000 £1 ordinary shares, while the Bank of England has decided to relinquish almost entirely its financial interest in the company. The ordinary shares are to be offered to existing shareholders at £4 10s., at the rate of 3 for every 17 held, while the Bank of England is selling 150,000 of the 4½ per cent. £1 cumulative preference shares, which are offered to the ordinary shareholders at 20s. 6d., at the rate of 6 preference for 17 ordinary. The Bank is to receive £1 per share, *plus* one month's interest, and a further sum bringing the total to 20s. 6d. is payable for expenses. Since the Bank originally held the whole £500,000 of preference capital, and sold 340,000 shares a year ago, the new sale is equivalent to an almost complete severance of this financial interest. It appears that the proceeds of the ordinary share issue will go to reduce the company's bank borrowings. As a result of the new issue, the next balance sheet will probably show a smaller proportion of the liabilities under Loans, Acceptances, etc. This item has borne the brunt of the expansion in business during the last year, jumping from £775,000 to £1,700,000, whilst Deposit, Current and other accounts have been practically stationary. It does not appear to be the policy of the company to provide a great quantity of inland bills for the market, and the increase in capital may even lead to a reduction in their amount.

* * *

Richard Thomas Accounts.—The full accounts of the Richard Thomas group are, as usual, very clear and informative. In the preliminary profit statement, which was discussed in a Note on page 690 of our issue of June 19th, the market was given a very complete summary of the consolidated profit-and-loss account. The full report to March 31st shows total profits of £1,717,232, an increase of £531,252 over the 1935-36 level, and of £265,000 over the prospectus estimate. The net profits show earnings of nearly 18 per cent. on the new ordinary share capital, and a dividend of 15 per cent. on the old capital has been declared. The following table analyses the consolidated profits of the group and the appropriations of the parent concern:—

	Years to March 31, 1935	1936	1937
	£	£	£
Total profits	879,140	1,185,980	1,717,232

* Special contingencies reserve. † Struck after extraneous credits and miscellaneous debits. ‡ After deducting £3,270 proportion of profits apportionable to capital. § On the old capital.

In view of the large-scale development programme at Ebbw Vale, and the reconstruction at Redbourn, the consolidated balance-sheet is of special significance. Development has cost rather more than had been expected and further capital expenditure of £8,000,000 is anticipated in the accounts, towards which the company has (or will have, when the calls on the new debentures are due) liquid resources of some £6,000,000. This suggests that the liquid position may become somewhat tight, but the group's earning power is at the moment so great that the company may be able to avoid a further issue of capital, and to finance the final stages of its programme internally. The report, of course, gives no further information about the progress and prospects of the new undertaking. Certainly, the group is at present enjoying a period of high prosperity. The tinplate and sheet output, though still over 20 per cent. below capacity, is one-sixth higher than it was last year, and following the May increases in steel prices, the profit margin must have increased slightly. Prospects in the export market, moreover, are good, and in the home market there appears to be a secular upward trend in demand. Consequently, it appears very probable that the prospectus estimate of profits for the current year may be substantially exceeded, and the 15 per cent. dividend should be comfortably maintained on the increased capital. Further information about the company's prospects when the new strip mill comes into operation may be provided by Sir William Firth's speech next Thursday. In the meantime, the outlook appears to be reasonably promising.

* * *

Powell Duffryn Group Results.—The profits of the reorganised Powell Duffryn group for its first year to March, 1936, were affected by sanctions, export quotas and rising wages. The past year has seen some measure of recovery, which the two holding companies have passed on to their shareholders. The operating concern —Powell Duffryn Associated Collieries—has increased its trading profits, after providing for depreciation, from £788,284 to £814,236. This advance covers an increase in the participation dividends from £420,000 to £450,000, with £13,000 to spare. The Powell Duffryn holding company takes two-thirds of this amount, and receives a maiden dividend of one per cent. on its half interest (£2,539,008) in the Welsh Associated Collieries ordinary stock. By the conversion of over £400,000 preferred stock into ordinary stock last year, the preference dividend requirements are reduced to £34,032, and the 7 per cent. ordinary dividend (against 6 per cent. for the previous year) is covered with £3,910 to spare. The group figures and the revenue position of the two holding concerns are analysed below:—

YEARS TO MARCH 31ST

Powell Duffryn Associated Collieries

	1936	1937
	£	£
Profit, after depreciation	788,284	814,236
Debenture service	67,125	75,000

Ditto (%)	6	7	Nil	1
Carried forward	2,731	6,641	8,013	3,815

* Includes dividend from Welsh Associated Collieries.
† Nine months dividend. ‡ Including preferred ordinary.

This scale of progress is sufficient to justify a rise in Powell Duffryn ordinary from 18s. to 25s. during the past year. It cannot, however, be regarded as striking, and the report of the operating company adopts a qualified note in discussing the past year's work. The

Spanish civil war has materially affected the group's business, and has occasioned further provision against trading debts. For the greater part of the year exports showed little improvement, and exchange difficulties and subsidised competition remained rife. But since the directors note that "every effort" is being made to increase output to meet the larger demand which has been evident since December last, some improvement is evidently in progress, although it would doubtless be well to exercise caution regarding further recovery possibilities. The £1 ordinary stock of Powell Duffryn yields £5 12s. per cent.

* * *

Distillers' Report.—The announcement of a total distribution of 22½ per cent. on Distillers' ordinary stock, compared with 20 per cent. for 1935-36, caused some disappointment in the market. The shares fell from a speculative peak of 115s. 6d. immediately before the announcement to 111s., and are now 110s. ex the 15 per cent. final distribution, yielding £4 2s. per cent. The trend of profits in recent years is shown in the following table:—

	Years to May 15 1935	1936	1937
	£	£	£
Profits, after deb. interest and fees etc.	2,212,133	2,321,576	2,458,415
Staff fund	100,000	100,000	100,000
Fire insurance fund	...	50,000	50,000
Preference dividend	102,300	101,475	99,825
Ordinary stock:—			
Earned	*2,009,833*	*2,070,102*	*2,208,590*
Paid	1,657,099	1,640,394	1,814,123
Earned (%)	*24·3*	*25·2*	*27·4*
Paid (%)	20	20	22½
Reserve	350,000	400,000	400,000
Carried forward	319,073	348,781	343,249

The indicated rise in profits is of the order which investors have come to expect in recent years, and it is now clear that operators were too optimistic in taking the stock up to 125s. earlier this year. The purchase of Booth's Distilleries equity capital and the knowledge that matured whisky stocks are falling have apparently encouraged the speculative investor to concentrate on the potable spirits side of the business. He has thus tended to overlook the commercial alcohol trade, which is being extended by a policy of low prices. For steadiness of earnings, Distillers has few rivals; its leadership in its industry (enhanced by past and possible prospective mergers) is unrivalled; and the expanding financial strength of the concern is clearly apparent in the latest balance sheet. These are necessary characteristics to justify a yield on the present scale.

* * *

International Tea Setback.—Although indications of acute competition were plain in the 1935-36 accounts, and the 5s. shares have fallen from 30s. to 15s. 6d. during the past twelve months, the market was hardly prepared for a 21 per cent. drop in International Tea profits. The report frankly discusses the reasons for this serious setback which has compelled a reduction in the ordinary dividend from 30 per cent. to 16 per cent. Turnover actually increased, but gross profits were affected by the acute competition necessary to maintain the volume of trade. Evidently the company has been forced to bear an appreciable proportion of increased wholesale prices. The ordinary shares suffer a severe blow, for the cut in the dividend is the first since 30 per cent. payments were instituted in 1928-29. The following table shows, however, that the dividend reduction is more drastic than the fall in equity earnings.

GOLDEN MOMENTS

The Men's Singles

'Vantage striker—he leads 6 to 5 in the fifth set. A fizzing service, but a brilliant return and the match is over—a new Champion. What a Golden Moment it must be for him as he makes the winning stroke.

† Direct transfer from reserve of £19,274 for writing off assets of a subsidiary, and £508,744 transferred to reserve from share premiums. ‡ Share premiums of £21,779 transferred direct.

The net allocation to reserves from revenue is actually £40,000, against £10,000, though the process of maintaining general reserve provisions by drawing on the dividend equalisation reserve cannot continue indefinitely for the latter fund is now reduced to £50,000. The profits trend for the past decade indicates that the company's prospects are more than usually incalculable. Disclosed earnings have not followed the general trend of industrial profits closely in the past. Although investors may hope that the bottom has been reached, there is less reason to expect any immediate recovery in profits while competition remains acute and wholesale prices are rising. Some progress in management economies is possible, for the report instances the transfer of certain Star Supply Stores branches trading in the George J. Mason, Limited, area to the control of the latter company. Under the present severity of competition and rising expenses, which cannot fully be passed on, the shares appear fairly fully valued, on a yield basis of £5 3s. per cent.

* * *

Tin Share Developments.—After weeks of stagnation, the metal markets have recently shown signs of returning life, and tin has been well to the fore. With the discouraging effect of the French crisis removed, tin prices have advanced by £10 to £265 during this week. There are three elements in the present situation which hold out better hopes for tin companies. The first is the satisfactory level of consumption. Despite the labour trouble among the U.S. "independent" steel producers, tinplate activity has fallen by only a few points to 93 per cent. of capacity, and fears of a serious reduction in American demand have proved groundless. Elsewhere, in Great Britain and on the Continent, consumption is still improving. In the twelve months ending last April, "apparent" world demand amounted to almost 174,000 tons, only 4,000 tons below the all-time peak reached in 1929. Secondly, and perhaps most significantly, the exporting countries are still unable to reach their allotted output quotas. Bolivia, as usual, is the worst offender, and by May her total deficiency had increased to over 14,000 tons, while the world deficiency was as much as 24,000 tons. During the past six months, the industry has been working virtually to its present capacity, but output has been about 5,000 tons below nominal consumption and visible supplies have shown no increase. From the statistical point of view, therefore, the outlook for tin prices and company revenues can be regarded as assured, at least until the end of the year. Finally, the announcement that prospecting for new tin areas is again to be permitted in Malaya has met with universal welcome. Malaya has thus been brought into line with other producers, and her future capacity safeguarded. By one of Nature's coincidences, extensive drought conditions are reported this week from Ipoh, which are affecting tin output severely and threaten the production of full quotas. And by one of the market's paradoxes, Malayan tin shares have led the advance this week. In the accompanying table, we give details of the reserve position of a number of producers who appear likely to obtain particular advantage in the new prospecting ordinance:—

Company and Share Denomination	Latest Available Reserves	Ground dredged or tonnage produced latest year	Indicated Life (approx.) Years	Dividends Latest full year %	Interims, current year %	Current Price of Ord.	Yield on Latest Div. %
Kramat Tin (£1)	9,200 tons*	812 tons*	11	25	50	66/6	7·9
Malayan Tin Dredging (5/-)	1,039 acres	78 acres	13	80	67½	45/9	8·7
Renong (£1) ...	19 m. cu. yds.	1·6 m. cu. yds.	12	20	7½	52/6	7·6
Ulu Klang (2/4)	370 acres	25 acres	15	15	10	3/6	10·0

* Tin ore.

The life estimates are inevitably approximate, as in most cases only the area of remaining ground is known and no allowance can be made for its varying tin content and its unpayable sections.

* * *

Other Company Results.—Apart from the more important results discussed in preceding Notes, this week's reports contain a fairly large number of plantation company results. Our usual analysis on page 108 covers some 55 other companies, including *Covent Garden Properties, Tredegar Iron and Coal* and *Trustees Corporation*. The results are discussed on pages 98 and 107 under the heading "Shorter Company Comments."

* * *

Company Meetings of the Week.—The reports of company meetings begin in this issue on page 99. The working of the exchange Control Commission of the Iranian Government was discussed by Sir Hugh S. Barnes at the *Imperial Bank of Iran* meeting; stability of rates had been achieved, but there remained a shortage of foreign exchange to pay for imports. Mr Arthur d'Anyers Willis, addressing the proprietors of the *P. and O. Banking Corporation*, described the various factors that had affected profits—including among them closely controlled exchanges which reduced opportunities for increasing the Corporation's income. At the *Thistle-Etna Gold Mines* meeting the chairman reported that it was proposed to increase the mill's capacity so soon as the situation underground warranted it. The satisfactory reduction in the cost per foot drilled was referred to by Mr H. C. R. Williamson in his address to *Lobitos Oilfields* shareholders. At the *Anglo-Spanish Construction Company* meeting the chairman described the effect of the Spanish Civil War on the company's prospects. He regarded sympathy with the Nationalist cause as so general in the provinces through which the company's line passed that peaceful working conditions should be guaranteed. Mr T. Walton, in his speech to *British Glues and Chemicals'* shareholders, referred to the importance of technical research for the company. Sir Edward Rolings, at the *Anglo-Ceylon and General Estates Company* meeting, disclosed that it had been decided to maintain a full cultivation programme over a smaller area and to produce the restricted crop at the least cost on that area. Mr Douglas Christopherson pointed out to the *Associated Tin Mines of Nigeria* meeting that many leases were unprospected which should increase their reserves when systematically prospected.

THE WEEK IN THE MARKETS

THE STOCK EXCHANGE

SETTLING DAYS

TICKET: JULY 20 ACCOUNT: JULY 22

A MARKED improvement in Stock Exchange conditions has occurred this week. It is true that the tone at the opening was no better than at any time in the previous month, but a combination of mildly bullish factors, assisted by the better tendency on Wall Street, led to an all-round advance in the market on Tuesday. Further gains were reported in mid-week, although the volume of business showed no great expansion and tended to decline towards the end of the week, prices were well maintained.

Gilt-edged led with an improvement, with War Loan taking the first step to regain par. By mid-week this objective had been achieved, and further advance was recorded on Thursday. The feature in the trustee market, however, was the buoyancy of the new scrips, led by Australia 3½ per cent. and the L.C.C. loan, which all but reached par. In the foreign bond market, Japanese bonds recovered on the settlement of the Amur River incident, but were again disturbed (as were Chinese issues) by the fighting near Peking. Further buying of Chinese railway issues had previously been reported. Hungarian 7½ per cent. bonds were in demand on the debt agreement, but the suggestion that interest rates on Brazilian issues might be cut, affected the bonds.

In the home rail market, the last week's traffics of the half-year were well received. Great Western led the advance, with L.M.S. runner up. The traffics are discussed on page 88. Transport "C" stock was again sold to 77½; the past year's traffics position is examined on page 89. Argentine rails opened in poor style, but the traffics and the prospective passage of the bill for the purchase of the Cordoba line attracted buyers.

After a dull opening, interest in the industrial market revived. The international group assisted the improvement, but the steel group attracted domestic attention, and in mid-week general gains were recorded. Profit-taking then checked the advance, but spectacular movements occurred in Indian Iron, together with smaller advances in certain domestic issues. In the aircraft group, De Havilland declined on the new issue proposals. Imperial Airways new shares opened below the old shares, and although both issues improved later, the old shares at 35s. were still, paradoxically, 2s. 6d. higher than the new. Improved conditions were enjoyed by motor shares, while electrical equipment issues, although favoured with little business, were generally firm.

Moderate support for brewery shares was reported. Guinness advanced in anticipation of good profits, while South African Breweries responded to the good report. After the initial surprise of the Distillers dividend, some support was forthcoming for the ordinary stock. Tobacco shares were quiet, but the tone was firm. Bank shares were but little moved by the interim dividends (discussed on page 89) and Alexanders' Discount were maintained at the lower level. Store shares were weak at the opening, but recoveries occurred subsequently. Shipping shares similarly staged a rally in mid-week, when rayon shares, led by Courtaulds, were also a few pence better. The leading miscellaneous industrials took a turn for the better after a dull opening, but building material shares were slower to participate in the general advance.

Oil shares opened in dull fashion, for Paris selling depressed London prices of the leading international favourites at first. When Paris operators turned buyers, however, the tide turned. Anglo-Iranian were in keen demand, and Burmah Oil improved sharply in mid-week. Some improvement was recorded in the Trinidad shares on the appeasement of the labour situation. The rubber market was dull on the relative inactivity of the price of the commodity, but little selling took place, and quotations on Tuesday showed some response to the better tone in the markets generally. Tea shares likewise gained a little from the all-round improvement.

After a quiet opening to the week, conditions in the mining market became considerably brighter later on, political troubles seeming at least in abeyance. Kaffirs were listless on Monday, and the Blyvooruitzicht issue failed to arouse enthusiasm at first, though quotations improved later. A brighter atmosphere prevailed in the next few days, the finance house issues being particularly well supported, though producing and developing mines also shared in the advance. The "Johnnies" results created a good impression. After a dull start, copper issues led by Rhokana and Roan gained substantially, and base metal shares responded to the hardening of metal prices. Tin shares in particular were stimulated by the appearance of a contango on tin for the first time in some years, and as supplies were short, prices advanced sharply.

NEW YORK STOCK EXCHANGE

AFTER the Independence Day holiday, trading was resumed in a brighter mood than for some weeks, owing chiefly to a gradual quietening down of the labour troubles and also to a satisfactory passing of the franc crisis. The volume of business was the highest since mid-May. Opening quotations were mostly above the previous close, and under the lead of steel and aviation shares, prices advanced appreciably during the day, withstanding without difficulty a few profit-taking assaults. The next session started with some irregularity, but the upward trend was again resumed, although at a less exciting pace than the previous day. Rails and industrials were well supported, while Republic Steel responded to news of a continued back-to-work movement. Steel mill activity is reported as 67·3 per cent. of capacity, against 75 per cent. a week ago, the decline being due to the holiday; activity was at 63·7 per cent. in the corresponding week of last year.

By courtesy of the Standard Statistics Company, Inc., of New York, we print the following index figures of American values calculated on closing prices (1926=100):—

CAPITAL ISSUES

New issue activity has expanded in remarkable fashion this week, for the accumulation of business due to N.D.C. is now meeting the pressure of the approaching holiday. The largest issue of the week is of 5 per cent. debenture stock of *Odeon Theatres* at 99 with a small slice of the equity at par as a *bonne bouche*. This debenture is specifically secured on cinemas valued at slightly more than twice the £1,800,000 nominal stock which is issued. Its income cover, however, is based on earnings of the specifically charged properties, together with income from shareholdings in subsidiary companies, and management fees and participation in profits of 71 other theatres. The issue is a high-yielding security, as befits its nature. Full earnings should be receivable from the 86 cinemas specifically charged (in accordance with the chairman's estimate), but the full profits participation in 71 remaining theatres, of which 37 are in actual operation, is taken in calculating the earnings cover of 3¼ times. Full cover in accordance with the prospectus estimate, therefore, depends upon the earnings of theatres which have yet to be completed. The 5½ per cent. £1 preference shares of *William Mallinson and Sons* are offered at 20s. 6d. The prospectus shows that the earnings of the company and its subsidiary have fluctuated considerably during the past decade. For this clear display of a ten-year profits record, the prospectus is to be commended. As a timber merchanting concern, however, the company carries substantial stocks, and it appears to be exposed to some risk of price changes. *Boulton and Paul* issue 5½ per cent. preference shares at par. This concern shows a rapid recovery in profits from £2,559 for 1933–34 to £51,296 for 1935–36. It has lately broadened its interests by the acquisition of two existing concerns in a similar field of business, and the preference issue may be regarded as a fair industrial issue of its kind. The mixed issue of *Peter Brotherhood* consists of 5½ per cent. preference shares at par and 10s. ordinary shares at 150 per cent. premium. This concern shows that current profits are running at a high level. At the issue price, the ordinary shares show an earnings yield of 9 per cent. over the past three years and 15 per cent. on latest profits. This, in short, is a typical "recovery profits" offer. *J. H. Fenner and Company* offer 5½ per cent. preference shares at par, and 5s. ordinary shares at 40 per cent. premium. This concern with its subsidiary has approximately doubled its profits during the past four years, and the latest earnings for the ordinary shares, at the issue price, are equivalent to 12·92 per cent. The 4s. ordinary shares of *J. Collett* are offered at 50 per cent. premium. This is a hat manufacturing concern, whose rate of profit increase is less spectacular than some of the engineering issues just discussed. The latest earnings are equivalent to 12·2 per cent. on the ordinary shares, at the issue price. Net assets of £157,312 have been acquired for £235,000 in 4s. shares. The premium demanded on the relatively small proportion of the ordinary shares offered thus represents a further increase in the goodwill valuation of the concern. The offer for sale on behalf of *Kay and Company (Engineers)* is of 5s. shares at a premium of 190 per cent. Total net assets in this case are valued at £75,831 and are acquired for £109,975, in 5s. shares. The effective goodwill valuation in this case also is substantially increased by the share premium, although the company's future balance sheet will show no trace of this second component. Mining shareholders have been catered for this week by the offer of *Blyvooruitzicht Gold Mining* 10s. shares to shareholders of West Witwatersrand Areas at par. A statement for information only has been published by *Kelly and Kelly*.

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields of fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

SHORTER COMPANY COMMENTS

COMPANY RESULTS OF THE WEEK.—Expanding prosperity in South Africa is reflected in the SOUTH AFRICAN BREWERIES results, which show a 15 per cent. increase in profits to £487,569. The previous dividend of 20 per cent., tax free, is supplemented by a tax free bonus of 2½ per cent. An indication of continued expansion is shown by the net addition of £67,141 during the year to premises. Another important undertaking, VICTORIA FALLS & TRANSVAAL POWER shows a profit of £586,365, representing an increase of some £38,000 resulting from the expanding power requirements of the Rand mines. It is reported that work on the Klip Power Station has proceeded continuously. Although the directors of TREDEGAR IRON AND COAL refer to a shortage of labour, and to a small fall in output, there is no reflection of any special difficulties in the latest profits, which have risen by no less than 62 per cent to £102,520. The latest figure, however, includes certain refunds. Sales of UNITED GAS INDUSTRIES have increased, and further expenditure on plant is necessary; the profits for the latest financial year are £171,908, against £154,767. PHOENIX OIL earnings have fallen slightly, from £54,714 to £51,262, and in view of continued foreign exchange and trading restrictions, these results are regarded as satisfactory by the directors. Dividends and rents, etc., received by COVENT GARDEN PROPERTIES rose by 10 per cent. last year, but owing to higher requirements for taxation and debenture interest, net profits of £124,668 rose by no more than £2,000. Some important rubber company results have appeared this week, and they again show a satisfactory trend. The profits of TIMBANG-DELI (SUMATRA) are more than four times greater than in the previous year, while CHEMBONG MALAY pays 4½ against 2½ per cent. Tea results no longer show a uniform decline. ASSAM CONSOLIDATED have earned £17,400, against £12,630, and while JOKAI (ASSAM) reports a considerable fall in profits from £86,686 to £70,862, other smaller companies have some improvement to report. CELLULOSE ACETATE SILK have more than doubled their net profits, at £55,064, owing to improved efficiency and widened outlets for their products. GROUT & COMPANY have, however, earned slightly reduced profits of £19,965, and fluctuations in raw silk prices have proved a disturbing factor. Among investment trusts, satisfactory improvement is recorded by TRUSTEES' CORPORATION, whose net revenues of £114,901 are 12 per cent. higher. The directors of THOMAS DE LA RUE AND COMPANY point out in their report that a large increase in turnover was foreshadowed last year and has been realised to the full. Profits amount to £51,122, against £31,141, and much of the cost of additional machinery has been written off. The second year's net earnings of SILENTBLOC, LTD., as a public company, are no less than £39,952, against £16,696.

APPOINTMENTS AND PERSONAL

Messrs Slaughter and May announce that they have taken into partnership Mr Charles Hilary Scott, who has been associated with them for some year past.

The Hon. G. Howard Ferguson, late High Commissioner for Canada in London, and for a number of years Prime Minister of Ontario, has been appointed president of the Crown Life Insurance Company in succession to the late Sir Robert Borden.

The National Bank of New Zealand, Ltd., announce that the Rt. Hon. Lord Balfour of Burleigh has been elected deputy chairman.

The Rt. Hon. Lord Marchwood, K.C.V.O., has been appointed a director of Consolidated Tin Smelters, Ltd.

Mr Graham Wallis having decided to retire from business life, resigns his seat on the board of Lambert Brothers, Ltd., and Companies Associated, as from June 30, 1937. Mr A. E. Hodgkins, Mr N. H. Lahaye and Mr John M. Wallace, managers, have been appointed directors from July 1, 1937.

Mr Henry L. Farrer has resigned from the board of Legal and General Assurance Society, Ltd. Mr W. A. Workman has been elected to the board.

Sir James Braid Taylor has been appointed Governor of the Reserve Bank of India.

COMPANY MEETINGS

THE P. & O. BANKING CORPORATION, LIMITED

SATISFACTORY INCREASE IN ADVANCES

EFFECTS OF NARROWER EXCHANGE MARGINS

The seventeenth ordinary meeting of the P. and O. Banking Corporation, Limited, was held, on the 2nd instant, at 122 Leadenhall Street, London.

Mr Arthur d'Anyers Willis (the chairman), in the course of his speech, said:—The shareholders will wish to join with the directors in their appreciation of the services rendered to the bank by Sir William Preston, who resigned the chairmanship and his seat on the board on March 31st last. For over ten years, first as deputy chairman, and then on the death of the late Lord Inchcape as chairman, Sir William has been associated with the conduct of the affairs of this bank; we are indebted to him for the progress which the bank has made under his guidance, and he takes into his retirement the good wishes and affectionate respect of all. It will be my aim to endeavour to the best of my ability to harmonise the policy of this bank with that of the Chartered Bank, so that the best results may be achieved by common policy and closer working between the two institutions, yet at the same time they will work independently, and there is no intention that any business should be diverted from the P. and O. Bank or to deprive it of its initiative and of the fruits of its own efforts.

I have now to refer to the working of the year, the results of which show some diminution in the profits brought into the account for the year. In some ways the year has been singularly fortunate. We have had a favourable and satisfactory experience with our advances and loans, and indeed a comparison of our trade advances with the figures for the previous year shows a satisfactory increase of £700,000. There has also been a satisfactory improvement in our bill business.

There has also been an increase in current deposit and other accounts, and generally speaking a comparison of our figures with those of the previous year entitles me to say that the ordinary trading business of the bank is improved.

FACTORS AFFECTING PROFITS

Our profit figures, however, have been affected by other causes, of which the most noticeable is the absence of the opportunities which in the past, when exchanges were freer and less controlled, added materially to our income through exchange operations. The stabilisation, if I may call it so, of the China exchanges, and the narrower margins which unfortunately are now available on exchange operations in India, are a direct contributory cause of the falling off in profits. Eastern banks will have to rely in the future to an increasing degree for their profits on the financing of the internal trade, and of the local industries and commerce of the areas in which they are operating.

A third cause which has affected our results is to be found in the changed conditions which have come over the gilt-edged market, both here and in India. We have, fortunately, in the past been able to set aside an amount to care for a possible change in the market prices of our securities, and we have met from these sums the amounts required in the current year, and are still left with some surplus for future contingencies of the same character. I can only hope that the improvement in trade, accompanied by an increase in the business transacted by the bank, will enable us to maintain a fund sufficient to meet a further depreciation in the value of our securities and also to maintain the present dividend.

I have in my earlier remarks referred to the improvement which this year's figures show in our advances and in our bill business, but a far greater volume of suitable advances will be required to enable us to maintain profits at the present level. Shareholders may rely on the executive to take every opportunity to increase the business of the bank compatible with safety, but we may have a long road to travel before the recovery which has occurred in certain parts of the world will extend fully to the spheres in which we operate.

In considering the distribution of the profit of £102,481 2s. 1d. the directors felt that the shareholders would wish that provision should be made out of the profits of the present year, as in past years, for the benefit of the staff, and they have accordingly appropriated the modest contribution of £5,000 to the officers' pension fund.

Following the precedent of previous years there is attached to our report the balance sheet, as well as the profit-and-loss account of the Allahabad Bank. You will observe that our affiliate has made good and vigorous progress during the year under review.

The report and accounts were unanimously adopted, and a dividend of 5 per cent. per annum, less income tax, was declared.

The retiring directors, Mr A. d'A. Willis, Mr F. A. Johnston and Sir Henry Macnaghten, were re-elected, Messrs Peat Marwick Mitchell and Company were reappointed auditors, and a hearty vote of thanks was accorded to the chairman and directors, as well as to the manager and the staff at home and abroad.

THE ANGLO-SPANISH CONSTRUCTION COMPANY, LIMITED

WORKING OF THE RAILWAY

CONDITIONS UNDER FRANCO ADMINISTRATION

At the twelfth annual general meeting of The Anglo-Spanish Construction Company, Limited, held, on the 8th instant, at 1 London Wall Buildings, London, E.C., Mr David McA. Eccles (the chairman) said that during the year a further 5 per cent. had been distributed on the debentures outstanding, making them 65 per cent. repaid. It was not the board's intention to distribute any of the remaining cash in hand until after the Civil War had given place to more settled conditions.

Weekly remittances of foreign exchange had ceased in July, 1936. The company had the undisputed right, expressed in a contract between the Currency Control Committee and itself, to export gold if and when foreign exchange was not forthcoming. In spite of strong representations the Valencia Government had so far failed to fulfil this contract, which, if it were honoured, would do much to prove that Government's good faith.

Referring to the effect of recent events upon the Santander-Mediterraneo Railway, the chairman said that 1935 was a year of increasing discontent and consequent economic stagnation, which accounted for the rise in the deficit on operations to pesetas 642,000. In the first half of 1936 things went from bad to worse; social legislation, that had previously been introduced, threatened to impose conditions under which efficient exploitation would have been impossible. Although the line was running at a loss, demands for increases in pay and other additions to costs were put forward which, had they come into operation, would have had the effect of raising the wages bill by 150 per cent., although no upward revision in tariffs could have been made to offset these changes. Conditions became so threatening in the early months of the year that special insurances had to be taken out against aggression and personal attacks upon the administration and higher categories of the staff.

RECENT RECOVERY IN TRAFFIC RECEIPTS

In July, Civil War broke out. Since the first day of hostilities the whole area served by the Santander-Mediterraneo Company's railway system had remained under the control of General Franco's Government. Between the 18th and 27th July of last year there were some minor interruptions in the train services; but since the latter date the system had been regularly and efficiently operated, and the shareholders would be interested to hear that no special precautions by way of supervision had had to be taken, and that the general sympathy with the Nationalist cause in the provinces through which the line passed had been sufficient guarantee of peaceful and satisfactory working conditions.

Traffic receipts were affected by the dislocation in trade at the beginning of hostilities, and the year closed with a deficit of approximately Pts. 1,200,000. However, in 1937, in spite of the loss of the coal traffic, which normally provided a high proportion of the total, takings had shown a vigorous recovery, and for the first four months were 30 per cent. better than those for the same period of the previous year, and 12 per cent. better than the corresponding figures in 1935. The staff was to be congratulated upon this excellent achievement, not forgetting that the administration of General Franco's Government was responsible for the conditions in which this recovery had been made.

At a general meeting of debenture holders, held at the conclusion of the shareholders' meeting, an extraordinary resolution was passed, postponing the fixed redemption date and interest payment to September 30, 1939.

THE IMPERIAL BANK OF IRAN

DIVIDEND AND BONUS MAINTAINED

The forty-eighth ordinary general meeting of the members of the Imperial Bank of Iran was held, on the 2nd instant, at Southern House, London, Sir Hugh S. Barnes, K.C.S.I., K.C.V.O. (the chairman), presiding.

The Chairman, in moving the adoption of the report and accounts, said:—You will remember that at our extra-ordinary meetings on September 16th and October 2nd last year we gave effect to the restoration of our capital to its original figure of £1,000,000, allocating for that purpose the £200,000 received for our note issue rights, and also £150,000 from provision for contingencies. These changes now appear for the first time in the balance sheet which is before you.

The total figures of the balance sheet show a reduction of £148,754, mainly under the head of acceptances, etc. The drop in acceptances is due to a reduction in the guarantees issued by us on behalf of customers, chiefly in relation to constructive work in Iran. Deposits are practically unchanged. Bills payable, contingencies, etc., is reduced by some £184,000, most of which represents the transfer of £150,000 to capital.

On the other side of the balance sheet the changes are greater. We are employing more money in discounts, loans and advances, and in the purchase of bills. The totals of these items are increased by some £548,000. Cash and short money is accordingly reduced by some £203,000 and investments by £415,000. Bank premises, furniture and stationery are again at a nominal figure.

PROFIT AND ALLOCATIONS

The profit and loss account shows little change. After making, as usual, adequate provision for income tax and for bad and doubtful debts, our profit amounts to £77,429 11s. 1d., which is some £1,600 more than last year. We are again placing £10,000 to reserve account, which brings our reserve to the substantial round figure of £750,000. We propose with your approval to make the same distribution as we have done since 1930—namely, 7s. per share and 2s. bonus per share, both free of income tax. This, with the interim dividend of 4s. makes a return for the year of 13s. tax free per share, which on our enlarged capital, is the equivalent of over 8½ per cent. subject to income tax. The maintenance of the same tax-free dividend represents an increase of over 3d. per share in the gross dividend, which I trust you will find satisfactory. These allocations enable us to increase the carry-forward by over £2,400 to £53,034 0s. 8d.

I mentioned last year that the Iranian Government had placed all operations in foreign exchange, as from March 1, 1936, under the strict control of a commission, and had fixed the sterling exchange at 80 rials for the buying rate and 80½ rials per pound for the selling rate. These rates have since been maintained without variation, all foreign exchange operations being taken over from the authorised banks—that is, the Banque Mellie Iran and ourselves—by the Control Commission. We have, accordingly, in our day-to-day operations in Iran, no longer to cope with fluctuations in the sterling exchange. The Government, however, in maintaining stability of rates, have not yet achieved equilibrium in exchange. There has been throughout the year a shortage of foreign exchange to pay for imports into Iran. This shortage may be expected to last while expenditure abroad for constructive development in Iran continues on its present scale.

CONTINUED INDUSTRIAL DEVELOPMENT

The Transiranian Railway makes steady progress. The northern section from Bandar Shah on the Caspian Sea to Teheran is now in running order, and it is expected that the southern section will be completed early in 1939. Industrial development continues, but the pace has rightly been slowed down to meet the threat of overproduction which was becoming apparent in certain directions. The Government have also wisely reversed the trend towards the monopolisation of foreign trade, and a degree of freedom for private enterprise has been restored to the important trade in carpets.

You have no doubt heard that an American company has recently obtained from the Iranian Government concessions to bore for oil in the East and North-eastern provinces and to construct a pipe-line from the wells to the sea on the Mekran coast in the South. The company operating in Iran is to be called the Amiranian Company. The same company has applied for permission to bore for oil in the Herat province of Afghanistan, the intention being, if oil is found, to convey it to the sea by the Amiranian pipeline.

The report and accounts were unanimously adopted.

ANGLO-CEYLON AND GENERAL ESTATES COMPANY, LIMITED

IMPROVED RESULTS—ENCOURAGING PROSPECTS

The fifty-first annual general meeting of the Anglo-Ceylon and General Estates Company, Ltd., was held, on the 7th instant, at Winchester House, London, Sir Edward Rosling (chairman and managing director), presiding.

The chairman, in the course of his speech, said that the results for the past year showed a general improvement, the net profit being £54,177, against £50,661 last year. In Ceylon the tea crop amounted to 3,635,192 lb., as compared with 4,234,419 lb. in the previous season, but whereas last year they were able to purchase export licences for 400,000 lb., enabling them to ship some 4,000,000 lb., in the year under review the price of licences kept at such a high level that purchases would not have paid them.

During the early months of this year the vice-chairman visited Ceylon and thoroughly reviewed all their interests there. In particular he dealt with the allocation of the restricted crop amongst the various estates. In a company such as that with estates producing different and varying qualities of tea, the apportioning of the crop under restriction had not been easy. In considering the matter afresh, the view taken was that restriction would continue for a further period of five years after the season 1937–38, and it now seemed probable that that would be the case.

It was therefore considered necessary to devise a policy to be followed during the next six years which would enable the company to produce at an economic cost and at the same time afford them the opportunity of taking full advantage as quickly as possible of any increase in output which might be allowed by the International Tea Control Committee. The decision arrived at was to maintain a full manuring and cultivation programme over a smaller area and to concentrate on producing the actual restricted crop at the least possible cost on that smaller area.

BETTER SEASON FOR COCOA

Cocoa, after two very unsatisfactory years, had experienced a much better season. They had harvested 7,284 cwt., as against 4,582 cwt. in the previous season, and the sales to date had netted 52s. 6d., an increase of 28s. 9d. per cwt. over last year. The rubber harvested under restriction was 187,142 lb., as compared with 187,447 lb., but the average price of 8.74d. net showed an improvement of nearly 3d. per lb.

In Mauritius their properties were reported to be in satisfactory order. The climatic conditions in the island were again favourable and the amount of sugar produced in their own factories and those of the subsidiary companies totalled 34,937 tons, as compared with 33,647 tons in the previous year. Of the tons of cane handled, 196,022 tons were estate canes and 95,253 tons were purchased from or manufactured for cane farmers. Despite much lower prices they had been able to maintain practically the same profit as for the previous year, owing in no small degree to the reductions in cost of production effected over the past few years.

CURRENT YEAR'S PROSPECTS

On the whole the prospects for the current season might be regarded with a certain amount of optimism. The International Control Committee had increased the export quota for tea from 82½ per cent. to 87½ per cent., and this allowed the company to export some 3,830,000 lb., as compared with 3,620,713 lb. last year. The stocks in the United Kingdom showed a reduction of some 80,000,000 lb. on the 12 months and were now at a reasonable level, so it did not appear to be unduly optimistic to anticipate better results from tea, especially as the prices ruling to-day were in excess of those at the same time last year.

Rubber was, with them, of small importance, but the indications pointed to their making a small profit on that commodity.

In regard to sugar there was likely to be another good crop for the third year in succession. The major portion of the Mauritius crop had already been sold at prices in excess of the average for last year, but freights had risen and therefore the additional price obtained would not be all additional profit.

Summing up the position, with the company's properties in the condition they are, they were prepared to take full advantage of improvements in the selling prices of their products, and unless untoward circumstances arise their results for the current year should show an improvement over those for the past year.

The report and accounts were unanimously adopted, and a final dividend of 5½ per cent. was approved.

ASSOCIATED TIN MINES OF NIGERIA, LIMITED

INCREASED PROFITS—DIVIDEND OF 20 PER CENT.

The tenth ordinary general meeting of the Associated Tin Mines of Nigeria, Limited, was held, on the 7th instant, at 20 Aldermanbury, London. Mr Douglas Christopherson (the chairman) presiding.

The chairman, in moving the adoption of the report and accounts, said that the results for the year under review had shown a further satisfactory improvement, the profit for the year being £221,848, as compared with £171,966 for the previous year, an increase of £49,882. That increase included a non-recurring item of £19,053 for "Recoveries from advances previously written off." As against that, when comparing the results with those for the previous year, allowance must be made for last year's profits having included some £29,000 for the net proceeds of buffer stocks and, moreover, included 400 tons of reserve stocks in respect of which costs were only charged with the dressing, bagging and realisation costs, whereas for the year under review revenue had no such credits. Thus it could be taken that the results for 1936, when compared with 1935, were even more favourable than indicated by the profit and loss account.

The average price realised for the company's product was £2 9s. 5d. per ton higher than in the previous year, but on the other hand working costs were up by £74,005. That at first sight might appear to be an undue increase, but they were satisfied that everything had been done to keep costs down to a minimum.

After charging directors' additional remuneration, there remained a distributable balance of profit for the year's operations of £159,664, out of which two interim dividends of 5 per cent. each had already been paid. A final dividend of 10 per cent. was recommended, making a total of 20 per cent., less tax, for the year. Concurrently with the proposed final dividend the directors had declared a 5 per cent. interim in respect of 1937.

ORE RESERVES

Since the end of the year an electrically driven Monighan dragline had been ordered. It was confidently expected that that machine would strip certain of their ground at an appreciably lower cost figure than was incurred by present methods, and less water would certainly be required.

The ore reserves were reduced by 2,214 tons, as against the 3,003 tons taken out by production during the year, a higher proportion of tin being won from reserves than was usual owing to the necessity for the rapid increase in production. Prospecting had brought in an additional 1,467 tons to their reserves, but certain quantities left in solitary patches, with which it would not be economical to deal with the present plant, had been deleted from the year's figures. When the new dragline was available it was expected that much of that would be recovered. He would again emphasise that prospecting had been handicapped by the fact that available staff and labour had been required for production and that they still had numerous mining leases and exclusive prospecting licences unprospected which could be relied on to increase their reserves when there had been opportunity to prospect them systematically.

The international quota for the first three-quarters of the current year was fixed at 100 per cent., 110 per cent., and 110 per cent., respectively, giving the company an allowed production of 884 tons for the first quarter and 967 tons for each of the latter two quarters, a further considerable increase.

So far the rains in Nigeria had been unusually poor and for a time the supply of electricity had had to be rationed, but given a fair run for the rest of the year, it was expected that the mines would produce the output required.

THE FUTURE

In regard to the future, world consumption in 1936 was shown in the most recent calculations at a figure of 162,738 tons, as compared with 148,713 tons in 1935, and the first four months of the current year showed a further expansion, the consumption figure being 65,636 tons as against 54,691 tons in the corresponding period of 1936. America, the biggest consumer of tin, was having her strike troubles, and in England material expansion in the manufacture of tin plates was delayed through the shortage of tin-plate bars, but those difficulties could be looked upon as temporary. Meantime, he might mention that the average price of tin for the year up to date had been about £250 per ton as against an average of £204 for the whole of the previous year.

The report was adopted.

THISTLE-ETNA GOLD MINES, LIMITED

ENCOURAGING DEVELOPMENTS

The ordinary general meeting of this company was held, on the 6th instant, in London.

Sir Godfrey B. H. Fell, K.C.I.E., C.S.I. (the chairman), moving the adoption of the report and accounts, which covered a period of six months only, pointed out that pursuant to a resolution passed in October, 1936, the capital showed an increase from £120,000 to £150,000, of which 540,000 shares of the nominal value of £135,000 had been issued, leaving 60,000 shares under option at 15s. per share until December 31st next.

Taking the Etna and Thistle mines together, the result of six months' development work might thus be summarised. Of a total footage of 3,384 ft., 2,147 ft., or 63.4 per cent., were on the reef; 2,064 ft. were sampled, and 1,835 ft., or 54.2 per cent. of the total footage and 85.5 per cent. of the footage on the reef, proved to be payable, having an average value of 11.8 dwt. over an average width of 22 in.

The first unit of the mill commenced operation in February, and ran for 19 days in February and 26½ days in March—a total of 454 hours. It milled 2,150 tons of ore, of 8.38 dwt. value, for a recovery of 797 fine oz. of gold. In April 1,800 tons were crushed for 506.39 oz. of gold, in May 1,875 tons were crushed for a recovery of 550 oz. of gold, and in June 1,880 tons for 536.2 oz. of gold.

So soon as the situation underground warranted it the board proposed to increase the capacity of the mill.

Their consulting engineer, Mr Parsons, had paid a visit to the mine in March and April, and his report, which was very satisfactory, was attached to the directors' report. During his visit No. 5 borehole was being put down to the north of the Hooper shaft, and just before Mr Parsons left the mine it intersected the reef at 1,[illegible] ft., the ore assaying 54.8 dwt. over a corrected channel reef width of 42 in.

They now had a clear indication of the extent of the known ore body below their present levels, and under the mining laws of Southern Rhodesia they were allowed to follow a reef indefinitely. He hoped shareholders would regard the progress of the last six months as satisfactory.

The report and accounts were unanimously adopted.

LOBITOS OILFIELDS, LIMITED

INCREASED PRODUCTION

The twenty-ninth annual ordinary general meeting of this company was held, on the 16th instant, in London.

Mr H. C. R. Williamson (the chairman) said that the profit of £26,133 shown in the general profit and loss account was arrived at after deducting refinery losses. Last year he had informed the stockholders that the refinery was likely to show a loss for the first six months but that he hoped a small profit might be achieved in the second six months. His anticipations had not been fulfilled owing mainly to delay in completion of additions and alterations, but the board were more than ever convinced that the policy of erecting a refinery in this country was a correct one.

The Peruvian company had operated satisfactorily. Production had increased by over 21,000 tons and one of the most satisfactory features of the field operations was that increase in production had been obtained at a lower cost per foot drilled than in the previous year. In the northern area several good wells had been drilled and special efforts had been made to bring into production wells which had been left uncompleted to the deeper sands.

The directors proposed to pay a dividend of 10 per cent., less tax, and a bonus of 2½ per cent., less tax, and to allocate £7,000 towards the foundation of a staff provident fund, carrying forward £214,412, as compared with £191,911 brought in.

Some stockholders had inquired whether the time had not come when the company might resume its old practice of paying an interim dividend. He would just like to say that that was a matter to which careful consideration would be given towards the end of the calendar year.

The report and accounts were unanimously adopted.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8 *Bouverie Street, Fleet Street, London, E.C.4.*

BRITISH GLUES AND CHEMICALS, LIMITED

LARGER DIVIDEND DISTRIBUTION

The seventeenth ordinary general meeting of British Glues and Chemicals, Limited, was held on the 8th instant, at the Connaught Rooms, London.

Mr. T. Walton, F.C.A. (the chairman), presided, and in the course of his speech said:—Since we last met there has been in most trades of the country a continuance of improved trading conditions in which we have participated, with the result that your directors are pleased to be able to recommend an increased dividend and again soundly to have added to the company's reserve strength.

We continue earnest attention to technical research and development, and all expenditure in that direction is of course charged against revenue; its benefits are continuous and its results contribute to economies, improved manufacturing processes, improved output, better products and consequently more efficient service to our customers.

In the past year our raw materials have cost more, and greases and tallows, which as you know we produce largely, have realised less; but on the other hand, increased demand for glue has contributed more to our profit. The weather conditions this spring slowed down fertiliser demand, but our cattle feeding stuffs have again made headway; in so many directions do I hear of the good results of their use that the increased demand is no surprise.

Turning to our balance sheet; the reserve for contingencies is increased by £20,000, but there is no change this year in the central reserve figure; the carry forward is £3,000 lower. These reserves and carry foward total £141,500 against £124,800 last year; and taking parent and subsidiary companies together our excess of liquid assets over all liabilities, including the dividends proposed to be paid on July 31st, amounts to £375,000 against £359,000 a year ago.

Notwithstanding that in recent years overseas markets have yielded unattractive prices for glues we have not overlooked their importance to us in the long run and we have persistently cultivated Empire and international trade; we propose to continue this policy, and as there has been a substantial shrinkage in world glue stocks we look for continued good demand both at home and abroad. The grease outlook is difficult to forecast but to-day prices are better than at this time last year. On the other side of the picture, coal and railway transport will cost us more, and in the present and immediate future years our taxation burden must inevitably be heavier; but we are fortunate in our managing director and chief officers, we have the right products efficiently produced, there is good spirit amongst employees, and we are financially strong; we therefore look forward to the new year with confidence, given reasonable freedom from world disturbances.

The report and accounts were unanimously adopted.

THE BANK OF LONDON AND SOUTH AMERICA, LTD., has received telegraphic advice from the Valencia Branch that the gold surcharge for Spanish customs duties has been fixed for the period July 1st to 10th at 140·98 per cent. The previous rate was fixed as from June 21st at 141·08 per cent.

The French Bank Rate was reduced on July 6th from 6 to 5 per cent. It was raised from 4 per cent. to 6 per cent. on June 14, 1937. Other overseas bank rates, and exchange rates for South Africa, Central and South America and Australasia appeared in our issue July 3, 1937, pages 48 and 49.

GOLD AND SILVER

GOLD MARKET

Messrs Samuel Montagu and Company write on July 7, 1937:—

The Bank of England gold reserve against notes amounted to £326,406,625 on June 30, 1937, showing no change as compared with June 23rd. In the open market about £1,860,000 of bar gold changed hands at the daily fixing during the past week. Offerings were taken mostly for shipment to New York and, until today, prices had ruled at a discount under dollar parity, but as the amounts available were on a smaller scale the tendency was for the discount to diminish. On July 7th, owing to the small offerings, the price realised included a small premium over dollar parity for the first time since April last. The s.s. "Chitral," which sailed from Bombay on July 3rd, carries gold to the value of about £596,000.

SILVER MARKET

The market was very steady during the past week and after remaining unchanged at 19¼d. for cash and 19 1/16d. for two months' delivery for three consecutive working days, prices advanced on July 6th to 20d. and 20 1/16d. for the respective deliveries; on July 7th, with sellers hesitating, prices eased back to 19 15/16d. and 20d. Conditions continued to be quiet and selling on China account and buying by the Indian Bazaars were again the main features, but a few purchases were made for America, and there was also some speculative re-selling. At the moment there appears little likelihood of pressure being exerted in either direction and for the immediate future price movements may keep within narrow limits.

Quotations for gold and silver are shown below:—

1937	Price of Gold per Fine Ounce	Equivalent Value of £ sterling	Price of Bar Silver in London per ounce standard: Cash	Price of Bar Silver in London per ounce standard: Two Months	Price of Silver New York per ounce ·999 fine
	s. d.	s. d.	d.	d.	Cents
July 1	140·6	12 1·12	19 1/16	20	1937
2	140·6	12 1·12	19¼	19 1/16	June 30 to July 6 inclusive 45
,, 3	140·6	12 1·12	19⅛	19 1/16	
,, 5	140·6	12 1·12	19⅛	19⅛	
,, 6	140·4½	12 1·25	20	20	
,, 7	140·1½	12 1·51	19 15/16	20	
Average	140·50	12 1·21	19·916	19·979	
July 8	140·4	12 1·29	20	20 1/16	

The highest rate of exchange on New York recorded during the period from July 1st to July 7th was $4·96⅞ and the lowest $4·93⅝.

Statistics for the month of June, 1937:—

Bar silver per oz. std.

	Cash delivery	Two Months' delivery	Bar Gold per oz. fine
Highest price	20⅛d.	20 1/16d.	140s. 9d.
Lowest price	19⅜d.	19⅝d.	140s. 3½d.
Average	20·0216d.	20·0649d.	140s. 6·69d.

No gold movements were reported at the Bank of England between July 2nd and July 8th. Details of previous movements appeared in our issue of July 3rd, page 49.

MISCELLANEOUS

JOHANNESBURG CONSOLIDATED INVESTMENT COMPANY, LTD.—Dividend of 3s. and a bonus of 1s. per share, as last year, for year to June 30, 1937. Profit for the year, after depreciation and contingencies, £1,142,000, against £1,086,282 (£350,000 to reserve). Carry forward, £169,000.

SOUTH AFRICAN BREWERIES, LTD.—Profits for year to March 31, 1937, £572,689, against £486,084. To reserve, £10,852. Tax provision £58,000, against £48,000. Tax free ordinary dividend and bonus of 20 and 2½ per cent., against 20 per cent. tax free. Carry forward increased from £60,901 to £89,497.

VICTORIA FALLS AND TRANSVAAL POWER.—Net profit for 1936, £586,365, an increase of £43,289. Ordinary dividend 12 per cent., as before. To reserve £100,000, against £80,000. Carry forward increased from £81,383 to £135,831.

GROVESEND STEEL AND TINPLATE.—For year to March 31, 1937, gross profits rose from £335,693 to £439,394. To depreciation £45,000, as before. Ordinary dividend raised from 40 to 50 per cent. To contingences £40,000, against nil. Carry forward increased from £95,385 to £96,287.

THOMAS DE LA RUE AND COMPANY.—Net profit for year to March 31, 1937, £51,122, an increase of £19,981. Ordinary dividend 8 against 6½ per cent. To reserve £31,700, against £15,000.

LEOPOLDINA RAILWAY.—Net receipts for 1936 £47,256, higher at £128,496. Balance from working of £124,684, an increase of £15,287 after adding interest, and debiting various charges, deficiency of £189,919 making a debit forward of £300,952 (Dr. £111,033) brought in.

CELLULOSE ACETATE SILK COMPANY.—Trading results for period from March 29, 1936, to April 3, 1937, show net profit of £55,063, compared with £19,442, and after deducting a non-recurring credit of £5,037 in that period. Ordinary dividend 5 against 2½ per cent. £10,242 to reserve for contingencies; £58 187 is carried forward.

UNITED GAS INDUSTRIES.—Net profit for year to March 31, 1937, £171,908, against £154,767. Ordinary dividends increased from 12 to 12½ per cent. Deferred dividend 62½ against 50 per cent. To reserve £30,000, against £20,000. Carry forward increased from £11,052 to £12,164.

AMALGAMATED COTTON MILLS TRUST (SCHEME SANCTIONED).—A card vote was taken at each meeting to consider the scheme, the voting figures being as follows: Cumulative preference for the scheme, 310,000; against, 36,715. Cumulative "B" preference, for 639,900; against 16,771. Ordinary shareholders, for, 1,582,000; against, 83,000. Extraordinary general meeting for, 2,542,000; against, 106,000.

JOHN BROWN AND COMPANY'S ACQUISITION.—This company acquired the whole of the shares of Markham & Company, Ltd., mechanical and structural engineers, of Chesterfield, and a subsidiary of Staveley Coal and Iron Company, Ltd.

COVENT GARDEN PROPERTIES.—Revenue increased by £23,976 to £252,387 during year to June 30, 1937. Profit on property sales £29,208, against £30,771 from investment realisation a year ago. Net profit £1,946 higher at £124,668. Ordinary dividend 7½ per cent. for eighth successive year. Carry forward raised by £11,724 to £76,208.

EDMUNDSONS ELECTRICITY CORPORATION, LTD.—The results of the operations of the Edmundsons group of companies during the month of June, 1937, as compared with the corresponding month of 1936, show an increase of 21 per cent. of units sold.

TRUST OF RUBBER AND TIN SHARES.—The managers announce that, on the latest dividends of companies in the portfolio the yield is approximately 4¾ per cent. on the prices of June 25, 1937.

CITY OF MOOSE JAW, CANADA.—It was proposed that interest on City of Moose Jaw Bonds should be reduced by 40 per cent., but if 20 per cent. of bondholders lodged objections by June 21, 1937, the Order would be withdrawn. More than 20 per cent. of bondholders did in fact, lodge objections, but the London paying agent is acting as if the Order offering 60 per cent. of coupons was in force, and asking bondholders to accept this in full discharge. Bondholders are very strongly advised to refuse these terms, and to await the result of negotiations.

SALFORD CORPORATION STOCKS.—Williams Deacon's Bank, Ltd., give notice that in order to prepare the interest warrants due September 1, 1937, on Salford Corporation 3½ per cent. stock 1953–63, 3½ per cent. stock, 1954–64 and 3 per cent. stock, 1954–56, balances will be struck on August 3, 1937. Stockholders registered on that date will be entitled to receive the next dividend.

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

THE view that any favourable development would at the present stage find quick reflection in the commodity markets has been borne out by events this week. The relaxation of political tension over non-intervention in Spain and the orderly devaluation of the French franc did not fail to exert a strong influence on the majority of commodity markets. Many consumers, having held aloof from the markets in recent weeks, and being in need of supplies, resumed purchases. Consequently, prices of many materials showed a strong upward trend.

The improvement was particularly marked in the case of non-ferrous metals. Copper, lead, spelter and tin all registered substantial price advances. Wheat, which was rushed up last week as a result of the deterioration of the North American crop, has held its previous gain. Rubber, however, tended to vary on Wednesday on the news of heavy shipments from the Dutch East Indies. The market in vegetable oils remains seasonally dull. Quotations for United States cotton showed a further decline on favourable crop reports, but wool sold at firm prices at this week's London auctions. The previous improvement in raw sugar prices was maintained.

In the United States, quotations for many primary products continued to advance. On Wednesday, Moody's index of staple commodity prices (December 31, 1931=100) stood at 206·8 on Wednesday, against 204·6 a week ago, 200·2 a month ago, and 175·5 last year.

COAL

SHEFFIELD.—The demand for coal on the export market has lessened considerably, with the result that the Midland Quota Committee has lowered the export quota in order to prevent the accumulation of stocks and the consequent lowering of prices. On the inland market the demand for house coal has quietened and some of the cheaper grades have been reduced by 1s 8d. per ton at pits. Demand for steam coal remains strong, and the near approach of the holiday period is causing an increased call for best locomotive steam hards for the railways. Small coal continues to be scarce. Gas coal is quieter, with a full supply. A general increase in the price of patent oven coke for works purposes and central heating has taken the price of large selected and graded coke to 31s. 6d. per ton at ovens, plus 3s. 6d. per ton for delivery to Sheffield works. The increase is 3s. 6d. in the case of large and 2s. 6d. in the case of graded coke.

NEWCASTLE-ON-TYNE.—Whilst the prompt position on the North East coal market is much quieter owing to the seasonal decline in domestic trade, collieries are nevertheless working regularly and an optimistic view is taken of the forward position. Northumberland steam collieries are comfortably stemmed and there is no inclination to reduce prices for prompt shipment. In Durham, local industrial trade is very brisk, compensating for the lull in the export section. Patent oven coke remains a steady market.

GLASGOW.—Stemming arrangements for cargoes due for despatch before the close-down at the end of next week seem to be fairly well completed, and there is little indication of the pre-holiday pressure which is not unusual at this period. On the whole collieries are well booked, and there are indications of an increase of foreign buying interest after the resumption of work. In Fife and the Lothians the better classes of steam coal and the smaller sizes of nuts are readily taken up against contract, while second steams and trebles can be had for prompt delivery. Lanarkshire and Ayrshire have been suffering to some extent from the contraction in domestic demand, but otherwise the position is not unsatisfactory, industrial takings being on a brisk scale and Irish business well above average.

CARDIFF.—There is no longer any pressure for prompt supplies on the Cardiff coal market, and current quotations are consequently much easier than they have been at any other period this year. The devaluation of the franc has dislocated trade with France, and new business with Italy has been virtually suspended as a result of the warning of the Secretary for Mines against further commitments in view of the exhaustion of the resources of the Anglo-Italian Clearing Agreement. The collieries, however, have little free coal to spare and shipments under contract continue active. Loadings at the South Wales ports last week totalled 416,600 tons, compared with 468,000 tons the previous week and 329,843 tons in the corresponding week last year. Since the beginning of 1937 the foreign and coastwise trades show an increase of nearly 2 million tons, or about 20 per cent. There is still a scarcity of coke for which prices are very firm; patent fuel is a relatively quiet but steady market; while pitwood is scarce with French wood ruling at 32s. 9d., ex ship.

IRON AND STEEL

LONDON.—The weekly report of the London Iron and Steel Exchange reveals no decline in the demand for practically all descriptions of iron and steel, and buyers find it difficult to place fresh orders. Whilst consumers hope that the reduction in the duty will encourage the importation of larger quantities of Continental steel to relieve the shortage in this country, they are by no means optimistic owing to the heavy demand for Continental steel elsewhere. Lately, however, there has been a decline in the requirements of some countries which may enable larger tonnages to be sent to Great Britain.

In the pig-iron market the stringency shows no signs of relaxing. Although a system of rationing has been in force for some time, many consumers have to work on hand-to-mouth supplies. Whilst the position at the steelworks has been improved by large importations of basic pig iron and scrap, producers are not free from anxiety and great importance is attached to the campaign for a national collection of iron and steel scrap.

Although there is still a scarcity of semi-finished steel, it is hoped that the position will be relieved by recent purchases of Continental semis, and an increase in the imports due against the quota.

In the finished steel department consumers are exerting great pressure to obtain deliveries against contracts and are finding it practically impossible to place orders for delivery before the end of the year.

MIDDLESBROUGH.—Shipments of pig iron from the Tees during June amounted to 5,080 tons, a reduction of about 4,000 tons on May. Of this total, 3,755 tons were sent abroad, the largest parcel being 1,500 tons to Australia. Since two additional blast furnaces were put into operation in this area during June, the increased output has all gone into home consumption. The quantity of manufactured steel shipped during June was 44,000 tons, of which 16,000 tons were shipped coastwise, the remainder going to foreign destinations.

Pig-iron producers have practically disposed of the whole of their saleable output for the next three months. Merchants are still unable to obtain delivery of hematite iron for shipment against contracts made some time ago. Pig-iron prices are unaltered.

It is hoped that the reduction in the import duty on steel from countries outside the cartel will encourage increased supplies from abroad. In the meantime, manufacturers are not anxious to book further orders for semi-finished and finished steel, as the present output continues to be much below requirements. Prices of manufactured steel remain unchanged.

Producers of blast furnace coke continue to ask 40s. per ton for good Durham quality, delivered at the furnaces, although it is reported that slightly less has been taken. The demand for scrap continues strong, and the fixed prices are adhered to. A cargo of mixed scrap has now arrived in the Tees from America. A further blast furnace is expected to be lighted in this area within the next few days for the production of basic pig iron.

SHEFFIELD.—The reduction of import duties on certain iron and steel materials has given considerable satisfaction in the iron and steel market. It may bring some relief from the prevailing stringency, but the shortage is so widespread that additional supplies can be only on a limited scale. On July 1st the increase of £1 per ton in prices for forge and foundry iron came into operation officially, though it had been applied to new business for some weeks. Makers of pig iron have nothing to offer in the market and there is practically no business. Works have no chance of accumulating reserve stocks, and many are working from hand to mouth. Makers of both East and West Coast hematite are well booked for the next few months and are unwilling to accept new business on a large scale. The delay in the announcement concerning finished iron prices is causing dissatisfaction and business is virtually at a standstill. The output of steel in this district is being continually expanded, yet fresh business in both acid and basic billets is small owing to the fact that firms are booked for months ahead. Wire rods and strip, as well as bright drawn steel, are in heavy demand. Structural steel requirements show further expansion. Prices are generally firm and unaltered.

GLASGOW.—All descriptions of iron and steel are in great demand and buyers are finding it increasingly difficult to place orders. While there has been some improvement in deliveries of semis, these still fall far short of requirements, but it is hoped that increased tonnages will be available from Continental and overseas producers as a result of the reduction of import duty just announced. While home producers are working to

WELL EQUIPPED TO HANDLE YOUR SWISS BANKING BUSINESS

Personal Service and Information at the disposal of Tourists. — Mail Department.

capacity they are unable to meet the demands of re-rollers. Consumers are pressing for deliveries of finished materials and are unable to obtain early delivery. All branches of the engineering trade are exceedingly busy at present, and there is an enormous amount of work on the market for which tenders are being prepared. Holidays are being observed this week in several districts of the West of Scotland which, in most cases, extend for one week, although in one or two industries the period has been shortened owing to pressure of work.

CARDIFF.—Active conditions continue in the various branches of the South Wales iron and steel industry. There has been an improvement in the supply of steel billets, but there is still a scarcity of tinplate bars, and works are employed at about 72 per cent. of allotted capacity compared with about 76 per cent. recently. Prices show no change and are ruling at £7 15s. per ton for bars, £18 15s., f.o.b., for galvanised sheets, and 25s. to 25s. 6d. per standard box for tinplates. Shipments of tinplates at Swansea last week totalled 8,793 tons, compared with 11,384 tons the previous week and 4,424 tons in the corresponding week last year, while stocks have fallen to the low total of 2,775 tons.

OTHER METALS

COPPER.—Prices rose fairly sharply in response to an improvement in the general economic and political position, and there was a revival of buying both by consumers and speculators. The backwardation narrowed to 2s. 6d. per ton on Wednesday. It is thought possible on the Metal Exchange that the latest improvement may act as a stimulus to buyers; and, in view of the narrow market, this would be likely to cause a sharp price advance. It must be remembered, however, that while the international outlook remains obscure consumers will probably continue to exercise caution; the technical improvement on the market may therefore be insufficient to justify any significant price advance.

Following the announcement on July 1st that the 4 cents per lb. import duty had been extended to June 30, 1939, the United States market has also shown an improvement. There is some talk of a pending rise in the United States domestic price; if London quotations further improve these expectations may be realised.

Sales on the London Metal Exchange: 1,500 tons on Monday, against 1,800 tons last week; 2,300 tons on Tuesday, against 1,800 tons last week; 2,750 tons on Wednesday, against 750 tons last week. Domestic spot was quoted at 14·15 cents per lb. in New York on Wednesday, against 13·57½ cents a week ago and 13·62 cents a month ago. Wednesday's official closing price for standard cash in London was £58 to £58 1s. 3d. per ton, compared with £54 to £54 5s. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 10,505 tons, showed a decrease of 64 tons, while stocks of rough copper, at 7,880 tons, were 1,114 tons smaller.

LEAD AND SPELTER.—Although these markets showed no new features, prices improved in sympathy with copper and tin. On Wednesday lead was higher than at any time since April 23rd. Meanwhile the June stock figures of the London Metal Exchange disclose a slight decline in lead stocks and a small increase in spelter stocks during June. Movements in lead and spelter in the near future are likely to be mainly dependent on developments in copper and tin.

Sales of lead on the London Metal Exchange: 1,150 tons on Monday, against 1,500 tons last week; 2,450 tons on Tuesday, against 1,950 tons last week; 4,650 tons on Wednesday, against 1,100 tons last week. The New York quotation on Wednesday was 6·00 cents per lb., against 6·00 cents a week ago and 6·00 cents a month ago. Wednesday's official closing quotation in London for soft foreign for shipment during the current month was £25 2s. 6d. to £25 3s. 9d. per ton, compared with £23 8s. 9d. last week.

Sales of spelter on the London Metal Exchange: 850 tons on Monday, against 1,900 tons last week; 1,950 tons on Tuesday, against 1,300 tons last week; 2,600 tons on Wednesday, against 1,350 tons last week. Wednesday's quotation in East St. Louis was 6·75 cents per lb., against 6·75 cents the week before and 6·75 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipment during the current month was £22 15s. to £22 17s. 6d. per ton, against £21 13s. 9d. last week.

TIN.—Following the publication of the June statistics on Thursday of last week, tin prices began to rise, reaching £266 10s. per ton on Wednesday—the best price since April 22nd. The backwardation has now completely disappeared.

Total visible supplies, according to A. Strauss and Company, showed a further decline of 571 tons, to 21,636 tons in June. Deliveries (11,028 tons) were only 163 tons smaller than in May, while new supplies (9,616 tons) were not only below the May level, but were less than in any month since last October. The unsatisfactory supply position was largely attributable to the Straits—shipments from that area amounting only to 6,390 tons, against 7,150 tons in May. Whether Malaya will be able to fulfil her quota in July remains to be seen. A feature of the market this week was a certain spot demand from the United States, the continuance of which would be likely to carry London prices to a higher level.

Sales of tin on the London Metal Exchange: 350 tons on Monday, against 400 tons last week; 775 tons on Tuesday, against 250 tons last week; 825 tons on Wednesday, against 110 tons last week. The New York quotation on Wednesday was 59·75 cents per lb., against 56·50 cents a week ago and 55·87½ cents a month ago. Wednesday's official closing quotation in London for standard cash was £266 10s. to £266 15s. per ton, compared with £252 10s. to £253 a week ago. Stocks of tin in London and Liverpool at the end of last week totalled 2,985 tons, a decrease of 196 tons on the week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted on Wednesday at £100 per ton, and rolling billets at £102 per ton. Nickel, for home and export, was maintained at £180 to £185 per ton. Quicksilver, on the spot, was steady at £15 5s. to £15 5s. 6d. per flask of 76 lbs., the same as last week. Chinese antimony was quoted at £68 per ton, ex-warehouse, the same as last week. Chinese wolfram for "July–August" shipment was quoted at 63s. to 64s. per unit, c.i.f., compared with 63s. for "June–July" shipment last week. Refined platinum was quoted on Wednesday at £10 per ounce, compared with £10 15s. a week earlier.

TEXTILES

COTTON.—Manchester.—Although in some respects the tone of the market since a week ago has been rather better, it is not possible to record any real increase in the amount of new business. Sales of spinners and manufacturers have not been equal to current output. Traders have been harassed by the disturbing political news from the Continent. Fairly wide fluctuations have occurred in raw cotton prices. After a fall in prices there has been a partial recovery. Interest has been centred on the U.S. Government's estimate of the area under cultivation, but it is recognised that the extent of the acreage is not a reliable guide to the yield of the crop. Weather news from the belt during the last day or two has been rather less favourable, the plants being adversely affected by heavy rains.

Yarn prices have varied according to the fluctuations in raw cotton prices, but spinners as a body have been firm at quotations. Some moderate sales have been reported in coarse and medium American counts. There is still considerable pressure for the delivery of twists. Egyptian descriptions have moved off slowly.

Sales of cloth have again been unimportant. Most buyers have kept in touch with Manchester prices, but firm offers for lots of quantity have been scarce. Sales for India have been of limited dimensions. There have been further attempts at transactions in fancies for Hong Kong, but not much has been done. Rather less satisfactory advices have been received concerning the position in Java. Contracts have been arranged in prints for West Africa with miscellaneous sales in printing and finishing styles for South America. Dress materials have attracted some attention for the Dominions and the home trade. Taking the weaving section as a whole there is a tendency for order lists to run down.

WEAVERS' WAGES.—The operative cotton weavers of Lancashire received an increase in wages last April and recently the Operative Weavers' Amalgamation has taken a census of their members showing the average wages earned under the new conditions. Particulars have been published for several districts, but all the figures have not yet been received and an analysis is expected to be published very shortly. On the other hand, the Cotton Spinners' and Manufacturers' Association have taken a census of weavers' wages, returns having been received from 488 employers relating to 305,000 looms, employing 71,000 weavers on the average. The information secured shows that the average adult weaver's wage is £1 19s. 9d., 79½ per cent. of the 71,000 weavers being women. A comparison with similar returns received last year shows that under-employment has decreased and that loom production has been raised from 85 per cent. to 92 per cent. As a result of this increased employment and of the higher rates of wages which came into operation in the week beginning April 12th, earnings have risen by fully 16 per cent.

WOOL.—Bradford.—The event of the week has been the opening of the fourth series of London sales. Results generally exceed expectations. The offerings are unusually small, except slipe New Zealand lambs, which are very plentiful. To find greasy combing wools as well as greasy crossbreds selling at practically unchanged prices indicates the soundness of the wool position. Both the home and Continental trades, with the exception of Russia, are buying freely. No doubt slipes would have sold better if the home woollen trade had been in a healthier position, and the decline of 7½ to 10 per cent. in fine halfbred lambs is indicative of distinctly quieter trade in that section. There is evidence that next season worsteds will be more popular for ladies dress goods than during the past two seasons, when woollens were very largely favoured. The tone of the market is encouraging and a good reception is expected to be given to the Queensland new clip wools when they are offered, mainly next week. There is every likelihood of these wools selling on a basis of 40d. for 64's warp tops. Clothing wools may be a little cheaper, but they, too, occupy a very healthy position, and there is little need for any big margin between clothing and combing merinos. The few greasy crossbreds that are available will be absorbed readily at firm prices, and an extensive Continental demand for slipes is wanted to reduce the opening decline. Generally the woollen and worsted industries are enjoying a fair measure of prosperity, and consumption in the aggregate is still large.

GRAIN MARKETS

WHEAT.—Prices have fluctuated with a rising tendency during the past week. The major factor is still the drought situation in the principal Canadian wheat areas, only scattered showers having fallen during this week. The outlook for the Canadian crop is now serious, while reports of rust damage are still being received from the United States. Prices are likely to show wide fluctuations in accordance with weather reports.

On Wednesday last, "July" futures were quoted in Chicago at 123 cents per bushel, against 118½ cents the week before and 109½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba (Atlantic) ex ship 55s. 6d. per 496 lbs., against 53s. last week; No. 2 Northern Manitoba (Atlantic) ex ship 55s., against 52s. 9d. last week; No. 3, 54s. 3d., against 52s. last week. According to the *Corn Trade News*, total shipments of wheat and flour last week amounted to 1,172,000 quarters, against 931,000 quarters in the previous week and 921,000 quarters in the corresponding week a year ago.

FLOUR.—The market is firm, prices having advanced in sympathy with wheat. Wednesday's London quotations (excluding quota payments) were: Straight run, delivered Home Counties, 43s. 6d. per 280 lbs., as against 41s. 6d. a week ago; delivered inner London, 43s., as against 41s. a week ago. Manitoba patents, ex store, 42s. 6d. to 44s., as against 41s. to 42s. 6d. a week ago. Australian, ex store, 33s. 6d. to 34s. 3d., as against 33s. to 34s. 6d. a week ago.

BARLEY.—Although demand remains quiet, the relative scarcity of supplies is reflected in the advance of quotations. "July" futures were quoted at 71½ cents per bushel in Winnipeg on Wednesday, as against 66½ cents last week. Quotations per 448 lbs. in London on Wednesday were: "English feed" at farm, 35s. to 36s., as against 35s. to 36s. a week ago; "English malting," at farm, 36s. to 42s. (nominal), against 36s. to 42s. last week. California, ex ship, 49s. 6d. to 50s., as against 50s. 6d. to 53s. a week ago. Chilean, brewing, ex ship, 44s. 9d. to 50s., as against 44s. 9d. to 50s. a week ago.

OATS.—On Wednesday, "July" futures were quoted at 43½ cents a bushel in Chicago, against 42½ cents a week ago and 40½ cents last month. Quotations in London, Wednesday: "English black," at farm, 27s. to 28s. per 336 lbs., as against 27s. to 28s. a week ago; "English White," at farm, 27s. to 28s., as against 27s. to 28s. a week ago; mixed Canadian feed (Vancouver), landed, 27s. 6d. per 320 lbs., as against 26s. 6d. a week ago.

MAIZE.—An improved demand, smaller Plate shipments and the firm tone on the wheat markets have combined to raise the price of maize this week. "July" futures were quoted on Wednesday at 125½ cents per bushel in Chicago, against 125 cents a week ago and 116¾ cents last month. Quotations in London, Wednesday: "Plate," landed, 27s. 9d. per 480 lbs., as against 27s. 6d. a week ago; "Plate," ex ship, 26s. 9d., as against 26s. 6d. a week ago; "Plate," "June," 26s. 9d., as against 26s. 9d. a week ago; yellow maize meal, ex wharf, was quoted at £7 to £7 2s. 6d. per ton, as against £6 17s. 6d. to £7 last week.

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations for selected weeks in 1935–1937:—

Nearest Future	Jan 2, 1935	Dec 31, 1935	July 8, 1936	Dec. 30, 1936	June 30, 1937	July 7, 1937
Winnipeg (No. 1, Manitoba) —Cents per 60 lb. ...	82⅛	84⅛	90¼	129	138⅛	143⅛
Chicago (No. 2, Winter)— Cents per 60 lb.	98⅛	101⅛	105¼	135⅛	118⅞	123

The visible supply of wheat in Canada amounts to 43,010,000 bushels, against 45,653,000 bushels last week, and 68,229,000 bushels in the corresponding week last year.

SALES AND PRICES OF BRITISH CEREALS.—The following table gives the estimated sale of home-grown wheat during the harvest years 1933–34 to 1936–37.

	1933–1934	1934–1935	1935–1936	1936–1937
Estimated sales of home-grown wheat	Cwts	Cwts.	Cwts	Cwts.
1 week to July 3	75,291	80,134	63,413	97,856
44 weeks to July 3.....	9,879,330	13,038,734	12,932,969	10,524,140
Average price of English wheat per cwt.	s. d. 5 7	s. d. 5 6	s. d. 6 9	s d 9 6

The following is a statement showing the quantities sold and the average price of British cereals in the past two weeks, and for the corresponding weeks in each of the years from 1933 to 1936:—

Week ended	Quantities Sold			Average Price per cwt.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
	Cwts	Cwts.	Cwts.	s. d.	s. d.	s. d.
July 1, 1933	42,553	9,877	10,135	6 5	6 9	5 6
June 30, 1934	75,291	4,780	25,650	5 7	6 6	6 5

July 4, 1936	63,413	3,554	13,897	6 9	6 6	6 1
June 26, 1937	101,310	3,168	13,486	9 6	9 6	9 0
July 3, 1937	97,856	4,421	12,431	9 6	9 8	9 3

OTHER FOODS

BACON.—In response to a sustained demand, prices were unaltered. The official quotations (per cwt. for No. 1 Sizable) which formed the basis for dealings on the London Provision Exchange this week were: English, 90s.; Canadian, 84s.; Danish, 91s.; against 90s., 84s., and 91s. last week. Arrivals in London last week included: Danish, 13,963 bales; Canadian, 4,374; Dutch, 2,440; Lithuanian, 1,145; and Polish, 2,777; as against 13,815, 6,754, 2,440, 1,083, and 2,965 bales, respectively, in the previous week.

BUTTER.—The market has firmed up this week. Quotations (per cwt.) on the London Provision Exchange on Monday were: New Zealand, finest salted, 109s. to 110s.; Australian, choicest salted, 108s.; Danish, 115s. to 116s.; compared with 109s., 107s., and 115s., respectively, a week ago.

CHEESE.—A rather quiet tone has prevailed, with New Zealand and Australian easier. Quotations (per cwt.) on the London Provision Exchange on Wednesday were as follows: Canadian, finest coloured, 78s. to 80s., and New Zealand, finest coloured, 68s. 6d. to 69s.; against 78s. to 80s. and 71s. 6d. to 72s. 6d., respectively, a week ago.

COCOA.—The spot quotation in New York on Wednesday was 7⅛ cents per lb., as against 7⅛ cents per lb. last week. In London, on Wednesday last, good fermented new crop, Accra, "November-January," was quoted at 35s. 6d. sellers per 50 kilos., c.i.f. Continent, against 34s. 9d. a week ago. Last week's movements of cocoa in London were as follows: Landed, 3,901 bags; delivered, for home consumption, 7,440 bags; exported, 20 bags; stocks, 279,896 bags, against 182,048 bags a year ago.

COFFEE.—On Wednesday, Rio No. 7 (cash) was quoted at 9½ cents per lb. in New York, as compared with 9½ cents per lb. last week and 9⅝ cents per lb. a month ago. Movements of coffee in London last week were as follows: Brazilian, landed, 284 cwt.; delivered, for home consumption, 132 cwt.; exports, nil; stocks, 2,120 cwt., against 10,166 a year ago. Central and other South American: Landed, 1,112 cwt.; delivered for home consumption, 4,962 cwt.; exported, 1,279 cwt.; stocks, 109,121 cwt., against 118,180 last year. Other kinds: Landed, 2,962 cwt.; delivered, for home consumption, 2,815 cwt.; exported, 339 cwt.; stocks, 113,269 cwt., against 160,719 last year.

EGGS.—Owing to the shortage of English and Irish eggs, prices have advanced for all selections. The maintenance of the present firm tone is expected. At Smithfield, on Wednesday, English (ordinary packing, Grade I, about 15-15½ lb.) realised 14s. 9d. to 15s. 3d. per 120, against 13s. 6d. to 14s. 3d. last week; while Danish (15½ lb.) made 10s. 3d. to 10s. 9d., as against 9s. 3d. to 9s. 9d. last week.

FRUIT.—Trade at Covent Garden during the past week was fairly well maintained, states *The Fruitgrower*, prices being firm except for soft fruits. Fair supplies of strawberries have sold well, quotations showing little variation for reliable samples. Raspberries have eased. English loganberries are now on the market, while English cherries are an increasing item. Black and red currants are rather lower on the week. Abundant supplies of green gooseberries sell well, while plums from various sources are a steady market. Apples continue exceptionally firm. Oranges also excite a lively interest, but South African have eased on heavier arrivals. Grapefruit is selling well, while lemons and pineapples are steady. English and Belgian grapes sell at the moderate rates ruling last week, except Belgian Royal, which are slightly cheaper.

MEAT.—At Smithfield market on Wednesday last, Argentine chilled hindquarters were quoted at 4s. 4d. to 4s. 8d. per 8 lbs., as compared with 4s. 4d. to 4s. 8d. a week ago. New Zealand frozen mutton was 3s. 4d. to 3s. 10d. per 8 lbs., against 3s. 4d. to 4s. a week ago. According to the Smithfield Market official report, supplies during last week amounted to 7,873 tons, a decrease of 687 tons on the corresponding week last year. Beef and veal accounted for 4,475 tons, mutton and lamb 2,471, and pork and bacon 564, as compared with 4,602, 2,874 and 568 tons, respectively, in the same week of 1936.

PEPPER.—On Wednesday, Singapore white Muntok, August-October, was quoted at 4½d. per lb. sellers, c.i.f. Rotterdam-Hamburg, against 4½d. per lb. a week earlier. Black Lampong, spot, in bond, was quoted at 3d. per lb. sellers, compared with 3d. per lb. last week. Movements of pepper in London last week were as follows: Black, landed, 57 tons; delivered, 5 tons; stocks, 2,047, against 1,769 last year. White, landed, 8 tons; delivered, 66 tons; stocks, 11,767 tons, compared with 12,273 a year ago.

RICE.—The spot price of Burma No. 2, cleaned, was 10s. per cwt., ex warehouse, on Wednesday, as compared with 10s. per cwt. a week ago. "July-August," in singles to Continent and U.K., was quoted at 9s. per cwt., against 9s. last week. Movements in London last week were as follows: Landed, 13 tons; delivered, 53 tons; stocks, 1,775 tons, against 2,131 a year ago.

SUGAR.—A firmer tendency has been evident this week. The New York spot quotation was 3·50 cents on Wednesday, as compared with 3·45 cents per lb. last week and 3·35 cents per lb. a month ago. Wednesday's sales of raw sugar in London included "August" delivery at 6s. 8½d. to 6s. 8¼d., against 6s. 7½d. to 6s. 8½d. a week ago. Movements of raw sugar in public warehouses in London and Liverpool last week were as follows: Imports, 51,633 tons, against 15,783 in the previous week and 19,133 in the same week of 1936; deliveries, 15,736 tons, against 16,129 and 20,172 tons, respectively; stocks, 184,471 tons, against 194,574 and 133,162 tons, respectively.

TEA.—The following table shows the average price (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account in recent weeks:—

Week ended	Northern India	Southern India	Ceylon	Java	Sumatra	Africa	Total
	d.	d.	d.	d.	d.	d.	d.
July 2, 1936	12·19	12·10	13·04	10·33	9·89	11·26	12·22
June 3, 1937	14·26	14·42	15·25	12·63	11·99	13·56	14 48
„ 10, „	14·57	14·61	15·12	13·73	12·15	13·94	14·67
„ 17, „	14·67	14·62	15·06	13·11	12·45	13·70	14·51
„ 24, „	15·60	14·50	15·16	14·16	12·28	13·77	14·96
July 1, „	15·12	14·49	15·09	13·37	12·24	13·76	14·78

At this week's public auctions in Mincing Lane, 21,408 packages of Indian and 26,551 packages of Ceylon tea came up for disposal. The Indian sorts met a good general demand. Southern Indian teas, and new season's Dooars, ruled firm at previous rates. Ceylon teas up to 1s. 3d. per lb. were fully firm and occasionally dearer. Better class teas were irregular, while fannings showed little change.

VEGETABLES.—Moderate supplies encounter a good demand at Covent Garden, according to *The Fruitgrower*. Asparagus prices vary from day to day. Tomatoes remain in demand, with quotations about steady. Cucumbers are going out well, while lettuce and other salads are a good trade. Inquiry for broad beans and house beans is well maintained, but marrows are easier. Cabbages, spinach and mint have improved a little in price. Meanwhile, business in old potatoes at the London markets is now virtually over, home-grown earlies being now on the market. With increasing supplies, prices show a declining tendency. At the Borough on Tuesday, Cornish, Lincolnshire and Bedfordshire ranged from 10s. to 11s. 6d., and Jersey from 9s. 6d. to 10s. per cwt., ex market.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OILSEEDS.—Trade is seasonably quiet. Crushers' requirements are limited. Linseed is in some demand in bear positions, but forward enquiry is almost negligible. On the whole, prices are well maintained, but for shipment an easier tone is developing. The market is still subject to weather conditions and conflicting crop reports. In America the position is still obscure, but the latest advices indicate an area under linseed equal to that of last year. The ultimate yield of seed, of course, depends upon the progress of the young plants. Last season only half the area was harvested and production fell to 148,000 tons, against 363,000 tons in the previous season. Meanwhile, substantial shipments of Plate linseed continue to the United States and Canada. The quantity now afloat being 62,800 tons, bringing the total destined thither this year up to 495,000 tons. The estimated balance remaining available for export in the current half year from South America and India is around 800,000 tons. The new Indian crop is moving off slowly. For Calcutta on passage to Hull, £14 10s. has been paid, and for August shipment £14 15s. A fair trade is reported in old crop. Egyptian cottonseed to Hull at £7 6s. 3d., while new crop, September loading, has been done at £7 10s., and in October at £7 7s. 6d. The price of linseed oil is maintained and only slight fluctuations have taken place. Cotton oil is quiet and a shade steadier. Demand for oilcakes is not so good and stocks are ample.

RUBBER.—After a week of quiet trading, prices show little alteration. The uncertain outlook in Europe and the strike situation in America continue to act as a drag on the market. Shipments from Malaya and Ceylon during June fell short of the permissible amount, but the Dutch East Indies exceeded its June quota. Meanwhile, stocks in this country continue to decline. The spot price in New York on Wednesday was 19 1/16 cents per lb., compared with 19¼ cents per lb. a week ago and 18⅜ cents a month ago. Wednesday's official buyers' price for standard ribbed smoked sheet on the spot in London was 9¼d. per lb., as against 9 7/16 d. on the corresponding day last week. In forward positions business has been done at 9¼d. to 9⅜d. for "August" shipments, as against 9 7/16 d. to 9⅜d. a week ago. Stocks in London and Liverpool at the end of last week totalled 43,047 tons, against 43,403 tons a week earlier. A year ago stocks amounted to 120,857 tons.

WHOLESALE COMMODITY PRICES

Britain's Plan for Spain

THE crisis over non-intervention has developed rapidly during the past week. On Friday of last week there was a tense meeting of the full Non-intervention Committee when the Franco-British counter-proposals to the Italo-German proposals were tabled. MM. GRANDI and VON RIBBENTROP made speeches which not only were militant in tone but contained accusations against the British Government which LORD PLYMOUTH rightly repudiated. The German and Italian Ambassadors immediately testified to the emptiness of their own charges when they concurred in the Dutch representative's proposal that the British Government should be invited to work out and bring before the Committee a project for bridging the difference between the two opposing plans.

The Foreign Office has done its best. On Thursday the British compromise plan, which was handed to the various Governments on Tuesday in readiness for discussion by the Committee on Friday, was published. Broadly, it retains the principle of supervision of non-intervention on which the French and British Governments have always insisted; but—and here the compromise peeps out—it also meets the German and Italian demands, to the extent that belligerent rights would be accorded to the insurgents once the Committee has (unanimously?) decided that the withdrawal of volunteers from both contending sides in Spain "has in fact made substantial progress." Naval patrols are to be abandoned, and in their place control is to be assured by posting neutral observers at all Spanish ports. The ships of other non-interventionist countries than Great Britain—who has already legislated to cover the case—which ply from foreign countries' ports to Spain are now to be covered by the British plan; and control at all land frontiers is to be maintained. Special commissions are to see that withdrawal of "volunteers" is really effective on both sides.

Now this British plan—and it is 100 per cent. British—is not a wholly admirable programme. No compromise is; and this is worse than most compromises, for it has virtually incorporated two mutually exclusive attitudes to the contestants in Spain: the Italo-German and the French. Accordingly, the Italo-German view—roughly, that the Spanish Government should be discriminated against—has had to be accommodated at the cost, once more, of the Anglo-French viewpoint. The abandonment of naval control throws control of the seas not only to GENERAL FRANCO'S warships but also to those "unknown" submarines and warships whose providential aid has effectively hampered the Spanish Government on many occasions. This is a bias in GENERAL FRANCO'S favour, for Spanish ships have hitherto been, and will continue to be, exempt from the non-interventionist control. But owing to the refusal of belligerent rights the insurgent fleet has not been free to exercise a general right of search on the high seas off "blockaded" ports. If this right is conceded, the insurgent ships may well be able to make more effective the "blockades" which they will hereafter proclaim.

On the other hand, the scheme does something to weight the scales in the other direction. For the supervision of foreign aircraft coming by air, by placing

neutral observers at all aerodromes, will favour the Government side. If this is accepted we shall certainly be nearer non-intervention from the air than ever before.

Thus, the scheme is a compromise. Its weakness is that, apart from its immense complexities, it seeks to reconcile two quite different aims of non-intervention. Primarily, the non-intervention scheme was to prevent foreign Powers from intervening in the Spanish civil war. This has not, however, been the principal purpose in the minds of the Governments that devised the system. This has been proclaimed clearly and emphatically again and again by His Majesty's Government. It is to prevent the local European war in Spain from expanding into a general European war.

It is on this ground that the British and French Governments have deliberately tolerated the Italian and German Governments' gross and persistent breaches of the Non-intervention Agreement—while the two Fascist Governments, on their side, have been content to put up with the Soviet Government's counter-breaches so long as they themselves were, on balance, breaking the Agreement more effectively. If the outcome of this *de facto* intervention in Spain were a matter of indifference to France and Great Britain, the game might have been kept up until Italy and Germany had carried their Spanish pawn to victory.

An Italo-German control over Spain—including Spanish territorial waters and overseas possessions—would bring with it such palpable threats to concrete French and British interests that even a strictly and narrowly Machiavellian calculation might lead to the conclusion that this would be too high a price to pay for the maintenance of European peace. If the Fascist Powers became masters of Spain they would be in a position to cut the communications between France and her African possessions and to subject France to an encirclement such as Germany has never experienced. They would also be able to block at the Canary Islands the British sea route to the East via the Atlantic and the Cape, besides blocking the shorter route via the Mediterranean. Thus, after all, it *does* matter to France and Great Britain most vitally—and this in terms of the old-fashioned balance of power—whether non-intervention in Spain is a farce or a reality. The realisation of this by French minds has been the result—and it is a momentous result—of the Fascist Powers' withdrawal from participation in the non-intervention scheme. They convinced the French that the British policy of turning a blind eye could not be tolerated. And the French Government, with apparently the approval of all classes of Frenchmen, reacted, positively and violently.

In French eyes the last straw was the Portuguese Government's action in suspending the activities of the neutral (i.e. British) observers along the Portuguese-Spanish frontier, as a gesture of sympathy with the Italo-German act of withdrawal. This left the Franco-Spanish frontier as the only land frontier along which the neutral control was still in operation. Accordingly, the French Government followed the Portuguese Government's precedent by suspending the activities of the neutral observers on French territory last Tuesday.

Perhaps the most important feature in the new situation is that the British Government manifestly now believe, in their hearts, that the French are right. They have publicly stated that in their view the action of France is not unreasonable.

The Italo-German withdrawal from participation in naval control and the concerted Portuguese suspension of the activities of the neutral observers were ventured upon on the assumption that France was now out of the game. This has proved a childish miscalculation. The present scheme is drafted on the assumption that non-intervention can be made *really* effective, the essential condition of which is the withdrawal of volunteers. If that is impossible, then neither France nor England can continue to acquiesce in a one-sided pretence. And for these Powers, the ultimate reason for making this last effort—with such faint hopes as they may still retain—is that if both sides in Spain are left to their own devices, then the time for conciliation will be near at hand. And in the final settlement under those conditions there will be no room for Italian, German, British or French domination. It is for SIGNOR MUSSOLINI to say whether he concurs.

The Fourth National Government

MR CHAMBERLAIN'S first general pronouncement as head of the Government, which he made at the Albert Hall last week, was a great personal success. In the first place, he made it quite clear at the outset that he wished not merely to maintain the national character of the Government but to pursue the moderate policy which coalition implies. This may not be entirely to the liking of the party machine managers, and it involves the danger of lack of definition and confusion of public issues which have been characteristic of recent times. But the public, as distinct from the party caucus, has become so accustomed to the liberal if easy-going outlook of LORD BALDWIN that any sharp change from this tradition would have been an unpleasant jolt. Moreover, large numbers of his nation-wide audience read with great interest the new PRIME MINISTER'S peroration. In this he touched upon his personal approach to politics, and revealed that in political philosophy he is in direct descent from the radicalism of JOSEPH CHAMBERLAIN.

It is not, however, to be expected that the country will take MR CHAMBERLAIN'S oration entirely at its face value. The speaker naturally showed his gratification at the prosperous condition of the country, and with a modesty that politicians do not always display, he specifically refrained from claiming that this was due solely to the Government. He did, however, urge that Government policy had created favourable conditions which did not exist when they came into office. The two factors to which he referred in this connection were "sound finance" and the "change in our fiscal system." For the first of these, the Government can properly be given nearly full marks; and even so far as the second is concerned, no one can deny that the introduction of Protection did do something to stave off some of the disturbances which occurred in world trade at the bottom of the depression. MR CHAMBERLAIN, however, omitted to mention that our protectionist policy also stimulated the raising and the maintenance of trade barriers everywhere, and that this delayed the recovery of world trade, and thereby of our own.

Nor is this the only ground for qualifying MR CHAMBERLAIN'S claim. Whatever measure of credit be given to the Government for our present economic well-being, there is a serious debit on the other side of the account. Our prosperity is at present precariously poised, and this is due to economic and political conditions that have arisen in the world largely as a result of our Government's policy, or lack of it. MR CHAMBERLAIN had nothing to say on the possibility of

reaching a trade understanding with the United States which might start a reduction of high tariffs; for in spite of the enormous political importance of such a step the PRIME MINISTER'S hands are still tied by Ottawa. In the foreign field generally the peace of the world is threatened both in Europe and in Asia by the militant Powers; and the League of Nations has been so weakened that it is an altogether inadequate protection against this danger. In all the chief countries of the world, including our own, the prosperity of the day is largely due to the arms race in which we are all engaged. But in spite of this enormous artificial expenditure, both business men and economists, who were slightingly dismissed by the PRIME MINISTER as "dismal jimmies," are fearful of a turn in the tide; and all must be concerned to know how this feverish activity of the armament industries can be diverted to peaceful ends.

Considerations such as these were certainly in the minds of the public when they read MR CHAMBERLAIN'S pronouncement. They doubtless also remembered the heavy fall in the Government poll when he spoke of the "wonderful success of the by-election victories." To MR CHAMBERLAIN the outstanding feature of these elections was the drop of 20 per cent. in the poll of the Labour opposition. But the Government poll fell by 27½ per cent. The PRIME MINISTER said that "no one is able to challenge the success of the policy we pursue." Surely the apathy of the electorate suggests a doubt. MR CHAMBERLAIN claimed that the results of this miniature General Election ranged "the country" behind the Government. SIR JOHN SIMON said the Government is "a safeguard against the evil of minority government." But, as we showed in figures last week, these elections resulted in a poll of only 49 out of every hundred electors—a figure unprecedented in any General Election this century, and of these the Government only polled 30. On this showing national government may be only government by a majority of a minority of the people!

Politics, in the words of BURKE, remains an art which varies the means to secure a consistency of ends. Few of the electors have questioned the ends which the Governments of the last six years have placed before them; but few, also, have shown any enthusiasm for the means that have been advocated and adopted.

There is one passage in MR CHAMBERLAIN'S speech which may suggest how the apathy may be removed—namely, that in which he speaks of the Imperial Conference and observes how easy it would be for different nations to agree with one another if only they would approach matters in the spirit of that conference. The full power of the Empire is a potent influence on the side of peace and general decency in the world. It is significant that the only definite diplomatic agreement which this group of countries has been able to achieve is not adherence to any Empire formula, but adhesion to the Covenant of the League of Nations; while the harmony which exists and such unity of action as has been achieved are due, not to dictatorship from Downing Street, but to the voluntary acceptance of the leadership of this country.

If MR CHAMBERLAIN wishes to make for himself a great place in history the surest way to do so would be to widen the orbit of the free countries of the Empire to include, in a similar relation to one another, the democratic countries of Europe and of the world. This would require, particularly in the field of tariffs and the preferential system, a broadening of the Imperial idea in which he has been brought up, and a more conscious effort to encourage the prosperity of other countries as a vital causal factor in our own. MR CHAMBERLAIN is by tradition an Imperialist. It is a very short step from the British Imperialism of modern times to an international order between free peoples. Let us hope that MR CHAMBERLAIN will have the vision to take that step.

The Economics of Population—II

Old Age Creeps On

THE first article in this series, published in *The Economist* last week, sketched in broad outline the changes in population which can be expected in the immediate future on the basis of past and present vital statistics. In general terms, it is possible to distinguish two periods. In the first, lasting for twenty-five or thirty years from the present, there will be very little change in the total population of the country. But there will be a rapid change in the age-composition of the population. Secondly, beginning a generation hence, the position will be reversed. There may be comparatively little further change in the age-composition of the population, but total numbers will begin to decline.

These two periods also differ in the certainty with which their characteristics can be predicted. The change in age-composition in the earlier period is certain, as even the most startling change in the birth-rate could only affect the numbers of those under 30 in 1967. In the second period, a decline in total numbers is not absolutely certain. But to maintain our present population, 666,000 live births are required each year (assuming present mortality rates). The average number of births in the last five years has been about 600,000. Moreover, in the next thirty years the number of women in the child-bearing ages is going to fall by about one-quarter, and the number of women between 20 and 35 by nearly one-third. To prevent a fall in total numbers would therefore require an increase in the size of the average family by something like 50 per cent. in one generation. It is therefore safe to conclude that, though we do not know exactly how rapid will be the fall, there will be *some* fall in the total population starting a generation hence.

In this second article we take these facts as given and proceed to inquire into their economic consequences. In strict terms, it is possible to distinguish three factors which may be expected to have economic consequences: (*a*) the change in age-composition; (*b*) the cessation of growth of population; and (*c*) the decline in total numbers. Of these three, (*a*) and (*b*) coincide in time. On the other hand, (*b*) and (*c*) are logically connected, since the effects of a cessation of growth are likely to differ only in degree and not in kind from those of an actual decline. For the purpose of discussion, it is best to amalgamate (*b*) and (*c*). In this article we shall deal with the effects of the change in age-composition, leaving aside the effects of the cessation of growth in total numbers. In a concluding article we shall turn to the effects that can be expected to flow from the cessation of growth and the incipient decline.

The first subject of inquiry must be into the effect of changing age-composition on productivity. The propor-

tion of people in the earning ages (15-65) will increase in the course of the next generation. It is now roughly 68½ per cent. and will increase to 70½ per cent. and possibly more. This means that there will be the possibility of greater production per head of total population than would otherwise have occurred, and hence of a higher standard of living. But it is unfortunately necessary to draw a distinction between the *potential* effects of such a change and the actually *probable* effects. Two per cent. of the population amounts to 800,000 persons (in England and Wales). If the *working* population, but not the *total* population, were suddenly to increase by 800,000, there would be a sudden increase in the supply of labour (though not to the full extent of the 800,000) but no offsetting increase in the consumption-demand of the people; and the effect would be to increase unemployment rather than the country's productive capacity. Actually, this growth in the labour supply will come gradually, but it will have to be accommodated in a comparatively short period, for the maximum proportion (and number) of persons between 15 and 65 may be reached within ten years, and will almost certainly be reached within fifteen years from now. It is clear that this will present a problem of adjustment which, if not insoluble, will at least be very difficult. Incidentally, it is worthy of note that the proportion of persons in this age-group has risen from 63.4 per cent. in 1901 and 59.0 per cent. in 1881—a cause of temporary unemployment which has perhaps not received the attention it deserves.

On productivity, then, our conclusion must be that the effects of the changing age-composition will be favourable, provided that they are not all wasted in increased unemployment. Another way of looking at the matter would be to say that we shall be able to support a volume of unemployment half as large again without any reduction in employment or productivity.

How many, and what sort of, dependants—other than unemployed—will these workers have to support? The number of dependants per worker will fall slightly. But the most striking change will be a decrease in dependant children and an increase in elderly persons " not gainfully occupied." In pure theory, a shift of this nature would be of importance only if the elderly retired man's (or woman's) needs were larger than the child's. It is possible that they may be somewhat larger, though not very greatly. But descending from pure theory there is the very practical difficulty that, while there is a legal obligation on parents to provide for their children, nobody is under any obligation to support the elderly. Even support by their children is more difficult when the average number of children is much smaller. Consequently, it is highly probable, almost certain, that the amount of poverty and destitution among the elderly will steadily increase. The cost of old-age pensions, even at the present very low figure of 10s. per week, will rise rapidly, and any increase in the amount paid, if it is to be non-contributory, may well be considered too expensive. The only solution would seem to be to assist, or even compel, the generation which will be elderly in 1967 to build up resources for its old age by means of a nation-wide superannuation scheme. If this were done on any considerable scale, however, it would mean a large addition to the nation's annual savings without any corresponding demand for increased physical capital —a conjunction which would have unfortunate economic results. It may also be noted in passing that this particular problem will be intensified if there is any further extension of compulsory early retirement from industry.

Offsetting this problem of indigent old age, problems of education will become much more simple. Since there will be a decline in the numbers of children in all ages and all localities, it is unlikely that it will be possible to close many schools or many classes. The same physical equipment and the same number of teachers will, therefore, in all probability, be required, but overcrowding will be relieved and it will be possible to make classes smaller.

The same sort of problems of adjustment will arise in relation to the nation's consumption. Those articles which are consumed mainly by children will be wanted in smaller quantities, while those articles which supply the needs of the elderly will be in brisk demand. There will be a slump in patent milks and a boom in invalid port. Perambulators will be beaten into bath-chairs. This again involves a transfer of resources. Children and old people have some needs in common. But the shift of between 1½ and 2½ million persons (between 3¾ and 6¼ per cent. of the population) from the one category to the other cannot fail to have perceptible disturbing effects upon the distribution of industry. Gradual changes leave time for adjustments. But changes of this magnitude in a single generation hardly deserve the epithet.

Changes will also be necessary in the nature of the demand for labour, and they will involve changes in industrial methods. The traditional structure of the labour market can be compared to that of an upright triangle, with comparatively few older people at the top and a large number of young assistants at the base —each master with several apprentices. In 1901, this was appropriate. There were almost twice as many people between 25 and 44 as between 45 and 64, while those between 15 and 24, in spite of covering only ten years, were more than two-thirds as numerous as those between 25 and 44. In 1965, the 25-44 and 45-64 groups will be approximately equal in size, while the 15-24 group will be less than half the size of either. It is clear, then, that if serious maladjustments are to be avoided, a reversal of the present tendency of employers to prefer young workers will be needed.

Under every head of this summary discussion a need has been found for considerable adjustments. These may take the form of shifting resources of labour and capital from one set of industries to another. There are also, however, the problems of absorbing an enlarged proportion of workers to total population and of adjusting industrial technique and traditions to the larger supply of older workers. This is a formidable enough programme for a single generation. It is fitting, accordingly, to inquire whether the change in the age-composition is going to affect the adaptability, or absorptive capacity, of the economic system. Increasing average age imposes a psychological barrier to change or transfer, and a physical barrier in the sense that a larger proportion of workers will be settled, married men with families. With a smaller proportion of young people there will also be a smaller ratio of recruits in any one year to total employees. This will make it more difficult to *expand* an industry rapidly. But it has the corollary of a larger annual proportion of retirements to total employees, and this should make it possible to speed up the painless *contraction* of an industry. Since contraction will always be a more difficult operation than expansion, this particular effect of the changing age-composition should increase adjustability and do something, though perhaps not very much, to offset the paralysing effect of increasing average age.

In summary, it would appear that the need for adaptation will be considerably greater during the next generation, while the adaptive capacity due to natural causes is unlikely to be any greater. This would seem to make probable a volume of unemployment higher than would otherwise be caused by cyclical factors, shifts in international trade and so forth, unless steps are taken to develop the elasticity of the whole economic structure. To secure this elasticity is one of our chief tasks in the next decade.

Profits Still Rising

PROFITS have made front-page news in the year 1937. The results of our latest analysis of company reports should be highly welcome to the Chancellor of the Exchequer, who is this year increasing his vested interest in the growth of industrial earnings by an extra 3d. on the standard rate of income tax and a supplementary National Defence Contribution of 5 per cent. on the profits of commerce and trade. The returns show, in fact, that profits are still rising and that the momentum of their advance has increased rather than decreased during the last twelve months.

The data for these gratifying conclusions are set out at the foot of this page and in a series of supplementary tables on page 157. In considering their significance it may be advisable to dwell first on the totals for the twelve months to June 30th last. The periods which these figures cover, for individual companies, coincide generally with those on which Schedule D income tax will be assessed and paid in 1937-38. For many years past we have analysed the reports of a varying sample of over 2,000 companies. Our figures show that between 1930-31 and 1932-33 profits fell steeply, comparison of each year with its immediate predecessor showing declines of the following order (per cent.): 14.7, 26.5, 6.7. The tide turned in the middle of 1933, and subsequent percentage rises have been: 12.1, 19.5, 12.6 and, in the latest period, 15.6. Thus it appears that the prophecies of economic observers, who forecast a declining rate of increase in industrial profits as recovery proceeded, have happily not been borne out. As each percentage figure is based on a higher absolute profits total than its predecessor, the advance, in pounds, shillings and pence, has been even greater than these figures suggest.

The 2,271 companies whose reports were issued during the last twelve months paid out 18.7 per cent. of their aggregate earnings in preference dividends (against 20.9 per cent. in the preceding year) and 53.7 per cent. in ordinary dividends (against 54.4 per cent.). Thus they " reserved " rather more than one-fourth (27.6 per cent.) of their profits, against rather less than a quarter (24.7 per cent.) in 1935-36. Nevertheless, the average rate of ordinary dividend paid by the companies included in our 1936-37 sample was 8.5 per cent., against an average of 7.3 per cent. in our sample of 1935-36. In other words, shareholders and " reserves " have both received more in the latest year than in its predecessor, and the Exchequer may expect to obtain something like 15 per cent. more from these companies in the current financial year than in that just past—apart altogether from the additional increment due to the rise in the standard rate of tax. As between shareholders and " reserves," however, the beam is being increasingly tilted in the latter's favour. Though dividends have increased, and are still increasing, they account for a steadily declining proportion of total earnings.

What light do our figures throw on the probable future trend of industrial profits? In this connection, the figures for the last three months have special relevance. They are much the most up-to-date source of available

INDUSTRIAL PROFITS

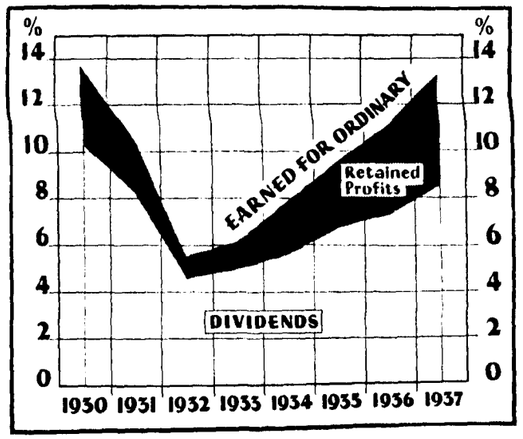
1937	622,067	13·3	8·5	4·8

information, and they cover the most prolific quarter of the year for company-reporting purposes. Actually, the April-June quarter's returns include 34 per cent. of the total companies and 38 per cent. of the total profits in our last twelve months' sample. We have, accordingly, taken out the results of the " second quarter " companies in every year since 1930 and combined them in a chain index in Table V. The chart, given on this page, in which the resulting figures are graphically displayed, confirms the impression that the rate of advance, as shown by the most recent reports, far from having any tendency to slacken has actually been expedited in recent months.

The most recent quarter's figures, similarly, confirm the view that amounts " ploughed back " are increasing relatively faster than dividends. We have made a special computation of earnings and payments on ordinary shares by " second quarter " companies, and have plotted the results on a second chart. The rate of ordinary share earnings, it will be observed, is two and a half times as high to-day as in 1932, at the bottom of the depression. Dividend fluctuations, however, have been less severe. Incidentally, the rate of earnings on ordinary shares is still slightly, and the rate of dividend is appreciably, below the pre-depression level of 1930, although

CHART I.—TREND OF INDUSTRIAL PROFITS

(Companies Reporting in Second Quarter of each Year)
1930 = 100



N.D.C. on ordinary shareholders in British companies. Actually, only a small part of the profits comprised in our " second quarter " sample of results has been earned since March 31st last, when liability to N.D.C. begins, and the basis of computation of profits for N.D.C. is somewhat different from that adopted in our analysis. If, however, the companies concerned had been liable to the new tax on the whole of their latest year's profits their N.D.C. payments would have been at the rate of 5 per cent. of aggregate profits (after debenture interest) of £100,690,626. The total earnings available for ordinary shareholders would consequently have been reduced by £5,034,531, from £82,767,691 to £77,733,160; and the average rate of earnings would have fallen from 13.3 per cent. to 12.5 per cent. on a total ordinary capital of £622,066,523.

These figures suggest, at least, that so long as profits remain at or near their present level ordinary shareholders need fear no catastrophic consequences from the imposition of the new tax. Much may depend on the policy of directors who, if they chose, could, on the showing made by our figures, have met hypothetical N.D.C. requirements last year wholly out of earnings which were actually put to reserve; and would still have had a substantial surplus to " plough back." Their

CHART II.—ORDINARY SHARE EARNINGS AND DIVIDENDS

(" Second Quarter " Companies Throughout)

total earnings, as shown by our chain index, are substantially higher than before the depression. This result is largely attributable to recent increases in the total ordinary capital outstanding—particularly in the last couple of years. Many companies have issued bonus shares from reserves, and others have offered new shares for cash at less than the current market price.

Our figures afford a basis for an interesting—though necessarily approximate—estimate of the effect of policy will, in fact, be determined by special individual circumstances; but even in the case of highly geared ordinary shares, on which N.D.C. will fall with especial force, there seems no reason to expect a damaging reduction of dividends.

Per contra, it is unlikely that the rise in profits as a whole will indefinitely maintain its present velocity. Costs are rising, but their rise has been too recent to be adequately reflected even in the latest quarter's profits (which were mainly earned during the calendar year 1936), and still less in the last twelve months' figures. The industrial groups with the largest percentage rises in profits, among the " second quarter " companies, were (1) shipping, (2) rubber, (3) oil, (4) iron, coal, steel and engineering, and (5) motors, cycles and aircraft —in that order. The list includes industries which produce primary commodities, industries to which recovery has come laggardly, and industries which are producers of capital goods and beneficiaries of the Government's programme. Revival in all these trades may still have some way to go, but the last-named group in particular is vulnerable to rising costs. On the whole, *some* further rise in aggregate industrial profits, in coming months, seems certain, but it would be unwise to expect a geometric movement to be maintained much longer.

INSURANCE SUPPLEMENT

containing detailed tabular and textual reviews of the results of a large number of British Offices in 1936, with special articles on the importance of insurance in the national economy

Books for the People

ON Saturday, July 10th, Mudie's Select Library went out of business. Founded 95 years ago by Charles Edward Mudie to cater for educated Victorians and their families, this institution became the respected purveyor of books for the 19th century middle class, whose effective demand did not extend to the purchase of " three decker " volumes at half a guinea a volume. Within its field Mudie's remained unchallenged for more than half a century, and so long as books were expensive its prosperity was assured. But the days when Mudie's was able to impose a ban on George Moore and Grant Allen passed with the coming of the popular press and the passing of the Education Acts. Mudie's found it hard to adjust its methods and outlook—even as a limited liability company of forty years' standing—to the new regime. Cheap books, cheap periodicals, halfpenny newspapers and public libraries conspired to revolutionise the library business; and now Mudie's has gone to the wall.

Other libraries with similar methods, however, have shown themselves better able to cope with the new conditions. In spite of free libraries subsidised by local rates and the spreading rash of twopenny libraries which in the last six or seven years has broken out on all sides, there are still successful concerns which cater for the Mudie's clientèle of to-day. Smiths', Boots' and the Times Book Club are subscription libraries like Mudie's. They provide different kinds of service for different annual subscriptions and offer varying classes of literature to a discriminating public. They operate on a large scale. Smith's have library branches at some 300 bookshops and 400 bookstalls, while Boots' Library has more than 450 branches; and books borrowed from one branch may be exchanged at any other.

The problems of policy which face these organisations are not dissimilar from those which Mudie's unhappily failed to solve. They all charge a fixed subscription for a given period of time. It is therefore impossible to calculate the number of times a book must be borrowed in order to cover its cost. Revenue depends upon the number of subscribers, and not directly upon the turnover of books. The touchstone of successful commercial librarianship, in fact, is a wise choice of new books.

The average life of a book in circulation is about two years, which is considerably less than it used to be. Smiths' have a stock of about one million books, half of which are retained in the head warehouse—compared with the six million books possessed by the inimitable Mudie's in 1888. More revealing perhaps is the velocity of circulation. Smiths' do not keep a register of book-exchanges, but Boots' estimate that the number of exchanges in 1936 amounted to 41,629,000. This means that, on the average, each book was changed once every two and a half weeks.

To the subscription system, whereby the borrower pays for quality, convenience and unlimited time, has recently been added a method of payment per volume. Smiths', for instance, have a service whereby Class B books (all except those recently published) can be borrowed by subscribers and non-subscribers alike at the rate of 2d. for five days, and Class A books for 1d. a day. Boots' have a similar short-period arrangement, confined to subscribers.

The introduction of short-term rates by the subscription libraries probably indicates the influence of the *twopennies*. These new ventures actually compete very little with the older establishments, since they cater for a largely undiscriminating public, which is content to find its reading in cheap reprints loosely classified under the simple headings of " General," " Love," " Westerns," and " Thrillers "—a category which surprisingly includes the admirable detective novel. Nevertheless, there is a marginal class of readers, who seek bargains in borrowing, and hover between the subscription and the twopenny libraries in their search for good books cheap. To these irregular optimists, the subscription libraries have offered the possibility of short-period rates to preserve them from the maw of the *twopennies*.

Generally speaking, however, the twopenny library is *sui generis,* and provides books for a clientèle never reached by Mudie's, Boots', Smiths' or The Times Book Club. The only losers by its success are the cheap periodicals and (probably and unfortunately) the public libraries. Twopenny libraries are a very recent growth. To-day there are between six and seven thousand of them. For the most part, they are operated as agencies rather than as branches. It is usual for a wholesale organisation to hire books to a large number of such agencies, and to receive payment in a fixed rent or a proportion of the receipts. The agencies lend the books at 2d. per volume. The Argosy and Sundial Library Company, for example, had 2,217 agencies in 1934 and carried a stock of 1,350,000 books. Where the rent of the agent varies with his profits, he is very dependent upon the wholesaler, and unsuccessful agents tend thus to be speedily eliminated.

The method of payment by fixed rent is more usual than the percentage system. The rent charged by the wholesaler is perhaps 4s. per hundred books per week; and 10 per cent. of the books hired are changed, on the average, every month. The agent does not choose the books sent to him, and need have no special knowledge of books or popular tastes. On the face of it, therefore, the agent's task is simple. He has merely to lend 25 per cent. of his stock each week to cover the cost of hire; and, more often than not, he runs his library as a side line to some form of retailing, and therefore has no overheads directly attributable to it. In practice, however, the agent is seldom so fortunately placed. He may have less difficulty in finding borrowers than in securing the return of the books they borrow, for whose loss he is responsible to the wholesaler. Respect for property in books is not, perhaps, as widely developed as it might be, and the *twopenny* can neither charge a deposit on each volume—which would drive away its customers —nor check the names and addresses given by many borrowers. The main insurance against the cost of lost books is the system of fines.

The prospects of the agent may be precarious, but the *twopenny* is popular and successful. For the most part these libraries handle only cheap reprints and second-hand copies of a very limited range of fiction; but they have an enormous attraction for people whose previous reading has consisted largely of periodicals. The window display of lurid book-jackets and the lure of cheapness bring in the crowds to the *twopennies*.

None the less, this appearance of cheapness is largely an illusion. While the twopenny library charges only 2d. per volume per week, at least a quarter of its income is derived from fines, which considerably increase the average weekly cost. For a charge of about 10s. per year the subscription library offers an infinitely wider selection of books, with no restriction on the number borrowed and no fines. If only one book is borrowed each week, the subscription works out at about 2¼d. per week, which, allowing for fines, is at least as cheap as the *twopenny*.

On the whole these two kinds of libraries cater for different markets. They are a natural consequence of our democracy; the one serving the educated middle class, the salary-earner, and not infrequently the black-coated worker and his family; the other catering for readers without time or desire for literary niceties. They are to each other much as the theatre is to the present-day cinema. It would reflect more credit upon our popular education—and, perhaps, on our free public libraries—if the latter were more widely used by a reading public, in both groups, which still reads largely what it is given rather than what it has selected for itself. Free reading, like free education, is a proper test of democracy.

Notes of the Week

Reactions to the Palestine Report.—The prognostication of the Palestine Royal Commission that neither party would be satisfied at first sight with their proposals has been amply justified. The executive council of the Zionist Federation of Great Britain has denounced, as inconsistent with the obligations of the Mandatory, both the recommendations restricting immigration and the proposals for partition. The former, in the Federation's view, makes a Jewish National Home impossible. The latter offers to the Jews a State "insignificant in size, deprived of opportunities for development and without the characteristics of full sovereignty." Mr Jabotinsky, leader of the extremist Zionist wing, has told Members of Parliament that partition would create a modern Naboth's vineyard, the prey of Arab envy. The Histadruch (the Jewish Labour organisation in Palestine), in a long reasoned resolution, accuses the Commission of overstepping its terms of reference by calling the Mandate in question. The troubles, it maintains, were due not to the Mandate, but to the British Administration, which grossly failed to carry it out. Nevertheless, the references to partition in the Histadruch's resolution, though strongly critical, leave open a loophole for acceptance if amendments were made in favour of the Jewish State.

* * *

On the other side, the Mufti of Jerusalem has been stirring up agitation against the report, as was only to be expected, since his status as leader of the Palestine Arabs would be lost under partition. The Arab National Defence Party (the Nashashibi faction which broke away from the more uncompromising Arab Higher Committee) has combined an appeal for calm with a round condemnation of partition as undermining the national unity of the Arabs and threatening a section of them with annihilation. The Higher Committee itself, after issuing a manifesto criticising the scheme on the ground that it gave the best part of Palestine to the Jews, has been marking time while seeking the views of the neighbouring Arab rulers. These have not all been of one mind. The Prime Minister of Iraq, presumably with royal authority, is reported to have said that any person venturing to become head of the proposed Arab State would be regarded as an outcast throughout the Arab world. On the other hand, the Emir Abdullah of Transjordan, an obvious candidate for that post, while expressing his disappointment and adding some constructive criticisms, has urged the Arabs to accept the report. King Ibn Saud has cautiously replied that the Palestine cause is occupying his profound attention and that he is sparing no effort to discover a just solution.

* * *

British Views on Palestine.—In most British circles the report continues to find reluctant acceptance. Private comment, however, admits that there is room for detailed improvement, especially in regard to the economic, financial and administrative problems of the new States. Whether for want of expert knowledge among their membership, or in order to leave their main proposal to stand or fall by its naked merits, the Commission were somewhat superficial in their comments on these points. How are the Governments of the Jewish and Arab States to be launched? How are their budgets to be balanced, their economic systems to be brought into relation to each other, and their tariff rivalry to be kept in check? What plans for defence and frontier control are envisaged? What joint organs should be set up for such matters as roads and railways, posts and telegraphs, education and broadcasting? These are some of the questions that will have to be thrashed out before the partition plan can attain practical shape. Next week Parliament is to debate the report, and in a fortnight's time the matter will come before the Mandates Commission at Geneva. There a fresh series of questions will probably arise involving awkward diplomatic problems of whose nature British public opinion is as yet scarcely aware.

* * *

Crisis in North China.—The Japanese Army are evidently out for trouble, on the Amur yesterday and in Chihli to-day. The reason is not far to seek. Ever since the murderous but unsuccessful military *Putsch* in Tokyo in February of last year the tide of Japanese civilian opinion—impelled by the mounting figures of the appropriations for defence in the Budget—has been setting once more against the fighting services. The latter seem now to be reacting again as they reacted in 1931. The present fighting in China began when, on the night of July 7th, the Japanese troops in Chihli Province—inside the Great Wall—made a sham night attack on a strategically important bridge, some thirty miles west of Peking, under the walls of the town of Wangping in which Chinese troops were in garrison. It should be mentioned that the Japanese troops had no title to be in this district at all—not even by the terms of the Tangku truce which the Japanese Army imposed upon the Chinese Army at the end of the war-in-all-but-name in which the Japanese conquered the Manchurian territories of China up to the Great Wall. The Japanese troops beyond the Tangku armistice line are simply invaders whose intrusion has hitherto not been resisted. Their presence in force cannot be covered by the Boxer Treaty, however far its provisions may be stretched. For these Japanese troops in this Chinese territory to practise operations in the night at a strategically vital point without even giving notice of their intention to the local Chinese military authorities was simply asking for trouble. The local Japanese military authorities showed some "sincerity" (to use the Japanese phrase) in co-operating on July 8th with the local Chinese military authorities to bring the fighting to a stop. For a moment it looked as though the Japanese were going to halt on the brink in Chihli as they halted on the Amur. Unhappily, the next move was a statement in Tokyo that the fighting had broken out again on the 10th, and since then the Japanese have been taking more drastic and alarming steps. Japanese troops are being rushed from Japan and Manchuria to Chihli; a new commander has been sent over by air; and the negotiations with the Chinese are lagging along.

* * *

Ministerial Activity.—Sir Kingsley Wood has occupied much of the political limelight during the past week. His circular requesting the four major associations of local authorities to consider whether the proposals of the Royal Commission on Tyneside Government for regional development were applicable to local government generally was followed by his announcement at Birmingham on Tuesday that an all-party campaign for the full utilisation of the health services would be launched in the autumn. There is commendable energy and foresight in both these projects. Though inspired denials have refuted the suggestion that a major reform of local government is contemplated, there can be no doubt that the proposal of the Tyneside Report to consolidate the administration of regional services in that area has more than merely local implications. What is sauce for the Tyneside goose is sauce for the Merseyside, Clydeside, or even Thames-side, gander. The last attempt to thrash out the merits of regional consolidation in local government failed when the Royal Commission of 1928 became entangled in a network of vested opposition and obstructive detail. The logical development of local administration has yet to be decided, and the Tyneside Report is a timely challenge. The Minister's other contribution to the week's political interest accorded well with Sir Kingsley's reputation as the Government's publicist *par excellence*. The national health campaign which he announced will be equipped with all the personal and mechanical apparatus of modern propaganda. Moreover, while the existing services are being intensively pushed before the popular notice, no effort will be spared to advance their usefulness. Not least important in the Minister's speech was his admission that the basis of good health is good nutrition. No health drive or physical fitness campaign can be fully effective while the diet of a considerable minority of the people is inadequate. In our milk supplies, for instance, there is still much to be done. It is true that the consumption of liquid milk has risen by 13 million gallons in the last nine months, but it is also true that many necessitous persons cannot afford to consume milk in adequate quantities because of the unduly high price under the present marketing arrangements. When Mr Johnston pointed out in Monday's debate on the Milk (Amendment) Bill that there were three prices for milk, 6d. a gallon for chocolate makers, 1s. for children at school, and 2s. for infants and mothers, he summarised the tragic irony of the present position. Attention to details of this kind will earn for the Government the encomiums which the energy of Sir Kingsley Wood deserves.

* * *

Road Traffic Policy.—The new Minister of Transport, Dr Burgin, cannot have derived much satisfaction from the debate in the House of Commons on July 9th. It is true that his statement that it was the duty of the Minister to see that the roads themselves did not provide a cause of accidents was rightly popular. Parliamentary motorists were also pleased by his surprising comment that, since five-sixths of the persons killed in 1936 were pedestrians and pedal or motor cyclists, these classes of road-users were the source of most traffic trouble. Moreover, Dr Burgin made out a reasonably good case for the efficacy of remedial measures, of beacons, lights, tests and the speed-limit—thus paying a tacit tribute to the energetic activities of the much-maligned Mr Hore-Belisha. The number of cars on the road is now 10 per cent. more than in June, 1936, and the rise in casualties has been largely arrested. But in the first six months of this year 106,639 persons were killed and injured on the roads compared with 105,810 in the corresponding period of last year. Deaths rose by 169 and injuries by 660. Only a more positive policy of road development can appreciably lessen the risks of road travel. It was on this fundamental point that the new Minister failed to impress the House. He announced that since 1935 programmes estimated to cost £127 millions had been submitted by local authorities, and that about £60 millions of expenditure had actually been approved. But it is now obvious that the Government's programme, announced at the last election to spend £100 millions on road improvement, means little more than a slight increase in an annual expenditure which had become normal before the plan was launched. The recent nationalisation of 4,500 miles of trunk roads has not yet produced any imaginative programme of safety reconstruction. We are merely making the best of the roads we have. We have as many as 14 cars per road mile compared with 8 per road mile in the United States. We have too few roundabouts, no fly-over crossings and no specialised motor roads. With this material no Minister, however energetic, can do more than tinker with the problem. What is urgently needed is the reconstruction of British roads to meet the requirements of modern traffic. At the moment the financial exigencies of re-armament make this difficult; but the death-roll of the roads remains as a mute witness of a grave national problem.

* * *

Coal Royalties. — The first step towards the execution of the Government's decision to nationalise coal royalties, at a cost for compensation of £66,450,000, was taken on Tuesday. A preliminary Bill to secure a register of coal properties as a basis for the larger measure of next session was introduced in the House of Commons by the Secretary of Mines. As outlined by Captain Crookshank it seemed curiously tentative. Coal-owners are to be invited, and not compelled, to register their holdings; and the register will be kept secret. Indeed, it was alleged by the legal luminaries of the Labour Opposition that the Bill would defeat its own purpose since, if owners were not to be compelled to register and yet were to be entitled to obtain a reconsideration of the list when it was compiled, this preliminary procedure might be sheer waste of time. Exception was also taken to the proposal that the coalowners should have the expense of registration defrayed by the Government, at an estimated cost of £30,000. There was a general sense of uneasiness in the House, particularly over the possibility of further delay. The unification of coal royalties has been postponed in the face of expert opinion for two decades. Now, when the cost of compensation has been agreed and the Government is pledged to complete the reform, the major Bill is held over until next session; and the chances of its being further delayed are hardly diminished by this odd Bill, with its air of procrastination. The principle has been accepted by all parties and the application should follow as soon as is administratively possible.

* * *

Ex-Civil Servants.—The recruitment of Ex-Civil Servants and ex-officers of the Defence Services by armament firms with an open interest in Government contracts was deprecated by the Royal Commission on the Private Manufacture and Trading in Arms, on the ground that it was liable to be construed unfavourably, however innocent such engagements might commonly be. Accordingly, the Commission recommended that recruitment should be supervised by the Ministers in charge of the Service Departments concerned. The Government has now issued a White Paper laying down principles for the conduct of all such persons wishing to enter into employment with firms in contractual, financial or administrative relationships with the Govern-

ment. Officers of or above the rank of Assistant Under-Secretary of State, Principal Assistant Secretary, Ministers abroad, Rear-Admiral, Major-General, and Air Vice-Marshal must in future obtain the consent of the Government before accepting employment with such interested businesses. This regulation will also affect officers in posts of a special or technical character, and will apply for two years after the date of retirement. It remains to be seen whether the net has in fact been cast sufficiently wide; and there are sound reasons in principle, however difficult the course might be in practice, for extending the rule to include firms prospectively, but not actually, interested in Government contracts or assistance. It is probably true, as the White Paper urges, that in most cases of this kind in the past there has actually been no prejudice to the integrity of the civil and defence services. Equally, however, there have been incidents which to some members of the public, at the time, had the appearance of being prejudicial; and the service of the Crown ought, like Cæsar's wife, to be above suspicion. The new restrictions will in themselves enhance the reputation of the services. Their effectiveness will depend upon the determination of Ministers to leave no loophole whatever for irregularity, or even possible misconstruction, in enforcing them.

* * *

Austro-German Negotiations.—Since the conclusion of the Austro-German Agreement of July 11th last year, Herr Hitler's watchword for the solution of his Austrian problem has been "the inevitability of gradualness." But the cunctator is also a dictator, subject to a dictator's necessities. He finds himself constrained to make interim reports of progress. On July 11th of this year Herr Hitler wanted to be able to convince the impatient radical Reichsdeutsch Nazis—and their even more impatient Austrian comrades who are still either in exile in the Reich or under the weather at home—that, during twelve months of nominal truce, he had been able to penetrate surreptitiously an appreciable distance into the positions of the enemy. Accordingly, as the first anniversary of July 11, 1936, approached, it was arranged that an official Reichsdeutsch delegation should come to Vienna to discuss with the Austrian Government the possibility of their falling in with certain Reichsdeutsch desiderata. The delegation was to have arrived in the Austrian capital simultaneously with Baron Neurath's arrival in London; but the dent in the hull of the "Leipzig" delayed their journey as well as their chief's. Whereas, however, Baron Neurath has still not left for London, the German delegation to Austria have already paid their visit and come home again—*re infecta*, to judge by the tenour of the official *communiqué*. The Germans wanted a general amnesty for the Austrian Legion; a general abrogation of the veto upon the entry of Reichsdeutsch newspapers into Austria; and, in particular, a permission for the entry of the *Völkische Beobachter* and of Herr Hitler's canonised "Mein Kampf." They secured the entry of "Mein Kampf." The Austrian Government were only prepared to review the cases of individual legionaries on their merits or demerits, though not to amnesty the corps as a whole. Herr von Schuschnigg can stand up to his compatriot in the Wilhelmstrasse despite the Berlin-Rome axis, and although the Austrian Vaterländische Front no longer has Signor Mussolini's "eight million bayonets" behind it.

* * *

M. Blum Wins Again.—The ex-Prime Minister of France, and present Vice-Prime Minister, defended the policies of his late administration at the Congress of the Socialist Party at Marseilles this week to such good purpose that on Tuesday night the Congress approved his handling of the late Government by 4,539 votes to 19, with 828 abstentions. The Socialist Party, the main prop of the Popular Front Government, was naturally incensed with the Senate, the bankers, the big industrialists, and even with the Radicals—who combined to secure the reversion of the late administration's political estate—so that M. Blum expected, and indeed on Monday received, pretty severe criticisms of his alleged truckling to the groups farther to the Right of the Party itself, especially from the Socialist intransigents, MM. Zyromski and Pivert. M. Blum's great *apologia* was remarkable for three features. First, he announced that the danger of European war was so pressing when his conflict with the Senate was begun by the latter body that he decided it was in the interests both of France and of the Party to resign in order to maintain the Popular Front intact. Secondly, he declared that he would pursue the possibilities of either a constitutional or practical solution of the procedure which permits an administration with a strong majority in the Lower House to be turned out by the Senate. Thirdly, he announced—a significant and important development for the new Government and the Budget (discussed in our article on page 135)—that a decree was imminent which would place the railways under single administration in one company. M. Blum's latest victory is a good augury for both the Socialist Party and the new Government; and the Socialist Congress has confirmed the Party's support of the new Government.

* * *

M. Van Zeeland Leaps Another Hurdle.—The Cabinet crisis in Belgium, provoked during M. van Zeeland's absence in America by the ex-Servicemen's opposition to the Coalition Government's recent law for an amnesty for "war traitors," is now virtually overcome. For M. van Zeeland, who preferred to offer the King on Tuesday the resignation of his Catholic and Liberal Cabinet rather than bow to Diehard feeling by dropping his Liberal Minister of Justice, M. de Laveleye, who had incurred Liberal wrath by sponsoring the Bill, received at once from the King the command to continue in office. In the King's view—and without doubt that of the majority of his subjects—the circumstances did not call for the Cabinet's resignation. The Amnesty Law, a gage of progress and toleration, was not a major measure of policy; but popular passions, worked upon by extreme Rexist and other Right Wing influences, led to a crisis. The Liberals in Chamber and Senate resolved on Tuesday to support M. van Zeeland in a new Government of National Union; though M. de Laveleye will probably be replaced. Meanwhile, M. Degrelle, the Rexist leader, has been sentenced to a nominal four months' imprisonment for libel by imputing corrupt practices to a leading politician. This sentence is under appeal. But the tension between the Flemish Nationalists and their once bosom cronies, the Rexists, is growing. Accordingly, M. van Zeeland's latest leap over a nasty hurdle may have brought him to a smoother patch in the political running.

* * *

Congress Ministries in India.—No time has been lost in giving effect to the resolution of the Congress Working Committee authorising acceptance of office in the Indian provinces. Congress Ministries have either been formed or are in the process of formation in all six of the provinces in which the party has a majority, the interim Ministries having resigned. It was at first announced that the Ministry of Sir Dhanjisshah Cooper in Bombay would go forward and face Parliament, but there appeared to be little or no enthusiasm for the miscellaneous Coalition that gave him a bare equality of votes with the Congress. The reconstruction of Governments will bring into the ranks of responsible chief Ministers such public figures or Mr Rajagopalachar in Madras, and Pandit Pant in the United Provinces. An unusual situation has arisen in the Central Provinces, where Mr M. Y. Shareef, a Moslem representative, has accepted office in a Congress Ministry, although no Moslems had been returned on a Congress ticket. If this may be taken as a hint that under the new regime the Congress may lose some of its character as a majority Hindu organisation, and that party divisions will tend to fall less along nationalist and communal lines and more along lines of practical social policy, then it is one of the most significant events in recent Indian politics.

* * *

Misunderstanding over the Protectorates.—On Friday of last week Mr Malcolm MacDonald replied in the House of Commons to General Hertzog's charges about the delay in transferring the administration of the High Commission territories to the Union. Clearly, he said, there had been some misunderstanding. The *aide-mémoire* of 1935 had made no reference to any time limit, and the instructions to the High Commissioner in connection with the agreement had been shown to General Hertzog, who had concurred in their terms. During his visit to London this year, General Hertzog had claimed that the process of transferring the territories to the Union should begin in the near future. To this Mr MacDonald had replied that the situation described in the *aide-mémoire* had not yet greatly altered. The Government adhered without qualification to the terms of the agreement reached in 1935, and he had undertaken to consider carefully what further steps were now practicable to implement that policy. He and General Hertzog had agreed that after the latter's return to South Africa they would communicate further with each other on the matter. At the end of a spate of supplementary questions, the Dominions Secretary renewed the Government's two pledges: to consult the local populations, and to give Parliament an opportunity of expressing its views. It would be for Parliament to consider, he said, what consultation meant.

* * *

Back to the 16-inch Gun.—The United States Administration announced last Saturday, through Mr Secretary Cordell Hull, that as "there is not universal acceptance by the Washington Naval Powers of a limit of gun calibre at 14 inches," the Federal Government had decided "with the greatest reluctance" to mount 16-inch guns in the two new 35,000-ton battleships now in building. This is the direct outcome of the unaccommodating attitude of the Japanese Government which, invited by the British Government after last year's abortive Naval Conference to agree on the 14-inch limit, would give no undertaking not to exceed that calibre. The French, Italian and American Governments had agreed to such limitation if the other Powers did so; the Germans and Russians would also have agreed, in the treaties about to be concluded with Britain; but the Japanese remained obdurate. Thus, not only the five original Washington Treaty signatories, but now Germany and Russia as well, may have to envisage both a naval building race and a race in gun calibres. True, the German and Russian building will move parallel with the British; but while battleships are to be limited to 35,000 tons, the Japanese refused to agree even to that limitation. Accordingly, it is Japan *contra mundum*; and the United States, as might have been expected from the Americans' susceptibilities on their Pacific side, has reacted first. Japan has made a bad deal for the world's Naval Powers; but it looks like being an even worse deal for herself. For technical experts aver that bigger battleships than 35,000 tons with bigger guns than 14 inch are not decisively more effective to-day. And the economic strain will fall most heavily on Japan's already strained economic and military resources.

* * *

Impressions on the Steel Report.—The Import Duties Advisory Committee's report on the future organisation of the British iron and steel industry, discussed in *The Economist* of July 10th on page 61, has had a sympathetic reception among the majority of producers and consumers. In part the absence of more criticism can be traced to the laudable aims expressed by the Committee in general terms. The report, indeed, contains no definite and detailed proposals on which criticism could have seized. Thus the steel industry was satisfied by the Committee's virtual approval of its recent policy, and consuming interests found encouragement in its excellent statement of the general principles by which the industry should be guided. At the same time it is borne in mind that the report was produced, not by a strong and independent Royal Commission, but by a Committee which has, by virtue of the industry's dependence on the tariff, been in a quasi-paternal position for the last five years. It is generally admitted, as we pointed out last week, that the composition and functions of the independent supervisory body, recommended by the Committee, is of the utmost importance in guiding the industry through a period of transition. The view is widely taken, however, that the composition and duties of the Import Duties Advisory Committee do not render it suitable as the body which is to be entrusted with shaping the destinies of the iron and steel industry. The present period, when the industry is making substantial profits, presents an excellent opportunity for that measure of rationalisation which is required to ensure its future. Although much may be achieved, and has in fact been accomplished, by individual reorganisation, central guidance is essential to re-establish the industry within a framework which is at once adaptable and efficient.

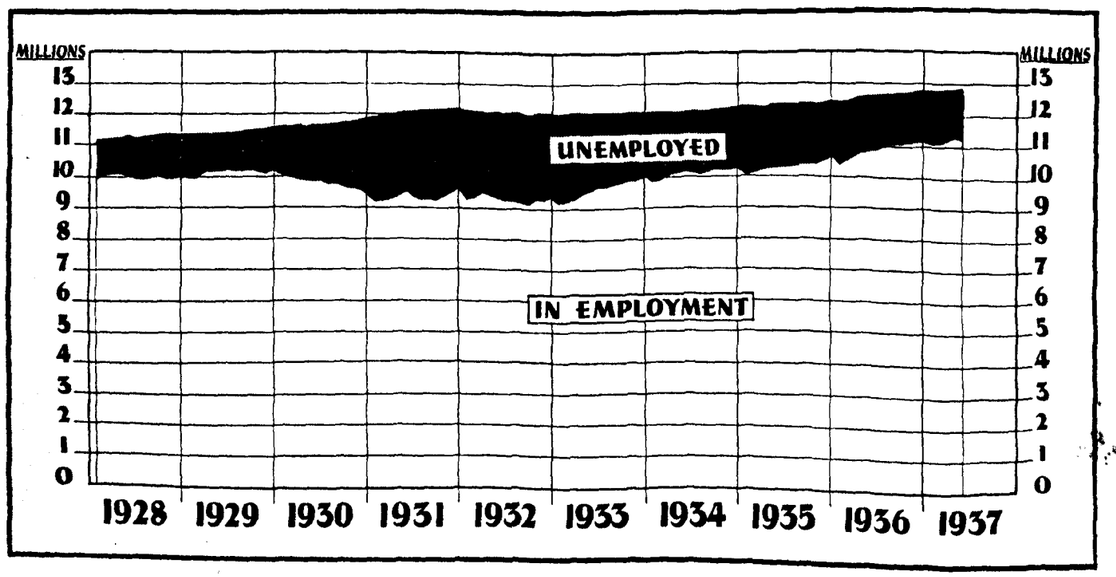
* * *

Progress of N.D.C.—This week's debates on the report stage of the Finance Bill in the House of Commons have made it clear that N.D.C., Second Edition, will reach the Statute Book with few changes of substance. The building societies have been more fortunate than the insurance companies. Their contribution has been reduced to 1½ per cent. on the amount of their profits, without allowing any deduction for interest on money borrowed from members or depositors—a concession estimated to reduce their total payment from £900,000 to £400,000. The representatives of the insurance companies, however, have come empty away from the Treasury. Parliament has itself been concerned with a number of important details. For example, the question of assessment of holding companies has been settled. The profits of parent and subsidiary companies may be amalgamated, and the losses of one company set against the profits of another in the same accounting period. The test of "subsidiary" relationship will be the ownership by the principal company of at least

THE LONDON & LANCASHIRE INSURANCE Co LTD
7, CHANCERY LANE, LONDON
C

nine-tenths of ordinary share capital. The new clause, however, is permissive only, and advantage will, presumably, be taken of it only in those cases where the benefit obtainable by setting off losses exceeds the total abatements obtainable by retaining separate assessments for each company. In the section of the Finance Bill applicable to controlling interests held by directors, the provision that deductions for directorial remuneration shall not exceed 15 per cent. of the profits or £1,500 (whichever is the greater) has been waived in the case of specially defined "whole-time service directors," who must not, however, hold more than 5 per cent. of the ordinary shares. Another concession designed to reduce a potential hardship is represented by the Government's acceptance of a private member's suggestion that a partnership firm should have the option of paying tax either at 4 per cent. with no deductions for partners' salaries or at 5 per cent. with such a deduction. Such firms will now be on at least as favourable a footing as their limited company counterparts. It is clear that the new N.D.C., in its final form, will be "simple" only by comparison with the tortuousness of its ill-fated predecessor. But the figures of industrial earnings discussed in a leading article on page 117 of this issue suggest that, on the whole, its burden will not seriously affect the dividend-paying power of the majority of British companies.

* * *



The Trend of Employment.—In current discussions on the problem of unemployment, the remarkable increase in the number of persons at work since 1932 is frequently overlooked. The chart below shows changes in the number of insured persons at work and unemployed in Great Britain since 1928, as recorded by the Ministry of Labour. Persons temporarily out of work as a result of sickness and trade disputes are excluded. Unemployment, though still greater than in 1928-29, has been halved since the summer of 1932. But owing to the increase in the number of persons of employable age, the number at work has risen appreciably faster than unemployment has declined. Thus, as the chart shows, the number of persons at work last May exceeded the total of both employed and unemployed insured workers in 1928. Last month employment in Great Britain was equal to the total number of employed and unemployed in November, 1929. And it is still increasing.

Good Industrial News.—Cheerful news continues to predominate over bad. The trade returns for June are particularly encouraging, exports and imports being higher than in any month since October and December, 1930, respectively. Compared with June, 1936, exports show substantial quantitative increases in almost every group of products, another indication of the now rapid expansion of world trade which may soon surpass the 1929 level. Despite the complaints of growing competition from subsidised German coal exports, voiced this week by the chairman of Powell Duffryn Associated Collieries, British shipments are recovering fairly rapidly. In June, for example, exports of coal showed an increase of 35 per cent. in quantity and of 52½ per cent. in value over the corresponding month last year. Moreover, the *Statistical Summary* of the Mines Department, issued this week, shows that earnings per man-shift in January-March and profits per ton of coal were higher than at any time during the past ten and thirteen years respectively. The scarcity in the iron and steel industry has been relieved to some extent by a substantial increase in pig iron imports during June which is to be followed by heavier steel purchases abroad under the reduced duties which came into operation last week. The situation had become critical, for, as we showed in a chart in *The Economist* of July 3rd, on page 10, the industry had depleted its stocks since last summer in spite of a further expansion of output. The news from other branches of activity also remains encouraging, though, as our Manchester correspondent points out on page 160, new business in cotton goods is still limited. On the whole, industrial prospects remain favourable.

* * *

Still More Shipbuilding.—Merchant shipbuilding is still recovering rapidly. The *Lloyd's Register* Shipbuilding Return gives a total for merchant vessels under construction in Great Britain and Ireland at the end of June of 1,199,973 tons. This is the highest volume under construction since June, 1930; it exceeds the March figure by 185,519 tons and the figure for last June by 351,241 tons. Thus we have recovered in the last year no small part of the ground lost in the depression. If expansion continues at its present rate—and if sufficient capacity is available—we should next year be producing as much as in the best post-war years before 1929, with about 1,500,000 tons under construction. But our revival, all the same, is not proceeding faster than, or as

REGISTERED EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN

fast as, that of the rest of the world. Our percentage of world tonnage under construction last month was 41.6, fractionally above last month's figure, but distinctly lower than the average of the last few years. In the last year the United States and Japan have more than doubled their tonnage under construction, while ours has increased only about 41 per cent. Germany's has risen by 12 per cent. Moreover, the present percentage of ships which are being built in Great Britain for export to other countries is relatively small. Nevertheless, with a rising tide of world trade, the outlook for the industry remains more promising than for many years past.

* * *

Expanding Steel Output.—Activity in the iron and steel industry continued to expand in June, when pig iron output was higher than in any month since May, 1937, and crude steel production was almost equal to the all-time record of last March:—

PRODUCTION AND FOREIGN TRADE IN IRON AND STEEL

(In thousands of tons)

Period	Production		Foreign Trade	
	Pig Iron	Steel Ingots and Castings	Total Imports	British Exports
1913—Monthly Average	855·0	638·6	185·9	414·1
1929 " "	632·4	803·0	235·2	364·9
1932 " "	297·8	438·5	132·7	157·4
1936 " "	640·5	974·8	123·6	183·8
1936—May	661·0	963·0	117·5	204·1
" June	644·1	965·9	110·6	173·5
" July	665·6	974·1	170·3	216·1
" August	635·8	872·7	141·8	164·0
" September	650·8	1,027·0	165·0	183·0
" October	670·3	1,060·5	101·0	194·4
" November	643·1	1,001·3	90·7	193·3
" December	671·4	1,019·2	94·8	204·8
1937—January	650·7	998·9	83·1	215·0
" February	603·7	995·9	82·9	200·5
" March	680·3	1,109·5	94·3	231·8
" April	680·7	1,080·4	88·5	239·5
" May	698·3	1,047·3	98·1	228·3
" June	699·3	1,106·4	174·8	235·4

The salient feature of the past month was the marked increase in imports of pig iron, which totalled 75,809 tons, against 12,568 tons in June, 1936. These imports came mainly from the United States and British India. Moreover, since the reduction of duties last week, arrangements have been made for a substantial increase in imports of steel from the Continent, which should alleviate somewhat the stringency of supplies. The trend of exports remains upwards, and last month's shipments to British India, New Zealand, Canada, Australia, Argentina, Holland and Iraq were appreciably higher than a year ago. There is no lack of customers, either at home or abroad, but despite prodigious efforts the British iron and steel industry is still unable to satisfy all their requirements.

* * *

Six Months' Overseas Trade.—The upward trend of Britain's overseas trade during the first half of this year is most encouraging. Total imports show an increase of 20 per cent., and British exports, 20·9 per cent., compared with the corresponding period a year ago; in re-exports the increase (25·2 per cent.) is even more pronounced. The figures for June show similar tendencies; imports, at £88,116,677, reached their highest level since December, 1930, while total exports, at £51,499,967, are higher than in any month since October, 1930. The rise in imports this year was well spaced between the main categories, though the most substantial increase took place in raw materials. In this category, coal and raw silk were the only groups to show a decline. All sections of the manufactured goods category showed increased imports, 40 per cent. of which was accounted for by the non-ferrous metals group. The full returns are shown in the following tables.

MONTH OF JUNE (000's omitted)

	1935	1936	1937	Change between 1936 and 1937	
	£	£	£	£	%
Total imports	57,829	67,599	88,117	+ 20,517	+30·4
British exports	32,914	32,064	44,373	+ 12,308	+38·4
Re-exports	5,222	5,008	7,127	+ 2,119	+42·3
Total exports	38,136	37,073	51,500	+ 14,427	+39·8
Excess of imports over exports	19,693	30,526	36,617	+ 6,091	+20·0
Transhipments under bond	1,755	2,203	3,427	+ 1,224	+55·5

FIRST SIX MONTHS (000's omitted)

	1935	1936	1937	Change between 1936 and 1937	
	£	£	£	£	%
Total imports	359,371	402,619	483,422	+ 80,803	+20·0
British exports	206,475	207,890	251,214	+ 43,324	+20·9
Re-exports	28,844	32,407	40,553	+ 8,146	+25·2
Total exports	235,319	240,297	291,768	+ 51,470	+21·4
Excess of imports over exports	124,052	162,322	191,654	+ 29,332	+18·1
Transhipments under bond	11,753	12,755	18,896	+ 6,142	+48·1

As to the very remarkable figures of British exports, the position is dominated by the increase in the manufactured goods category, though there is a welcome expansion in coal exports. It must be remembered, however, that part of the rise in both imports and exports must be discounted owing to the higher level of prices compared with the level last year.

* * *

Trade by Commodities in June.—The following tables show quantitative changes in the main items of imports and exports over the last three years:—

RETAINED IMPORTS—Month of June

Items and Measure	1935	1936	1937
Wheat ('000 cwts.)	8,729	10,332	8,093
Beef and veal ('000 cwts.)	1,085	1,029	1,184
Mutton and lamb ('000 cwts.)	614	668	773
Sugar, unrefined ('000 cwts.)	3,486	3,930	3,605
Iron ore and scrap ('000 tons)	420	581	734
Raw cotton ('000 centals)	831	1,326	1,120
Sheep's and lambs' wool ('000 centals)	550	680	817
Flax, hemp and jute (tons)	19,965	16,406	25,346
Crude petroleum ('000 galls.)	67,855	71,547	44,649
Hides, wet and dry ('000 cwts.)	116	166	153
Wood pulp ('000 tons)	170	241	156
Rubber ('000 centals)	312	80	234
Unwrought copper (tons)	30,410	25,648	40,600
Pig lead (tons)	25,516	23,809	31,964
Tin: ore and concentrates (tons)	2,344	2,487	4,468
Tin: blocks, ingots, slabs and bars (tons)	600	671	2,221
Iron and steel manufactures ('000 tons)	98	111	175
Machinery (tons)	5,722	7,573	12,529

The most striking movements, apart from a big drop in petroleum imports, chiefly from Iran, have taken

TRADING ABROAD

The existence of restrictions in a given country may temporarily prohibit dealings in forward exchange, but up-to-date information on this and on all points bearing on Forward Exchange generally may be obtained through any branch of the Westminster Bank. For any who may be unfamiliar with the facility, a very brief outline entitled *Forward Exchange* is always available at its counters

WESTMINSTER BANK LIMITED

Head Office: 41 Lothbury, London, E.C.2

place among metals and iron and steel materials. Imports of unwrought copper continue on a large scale, Northern Rhodesia and Chile being mainly responsible for the increase. Substantial purchases, too, were made, both of pig lead and of tin. Imports of machinery were maintained at the high level of recent months, as the demand from home industries continues unabated.

BRITISH EXPORTS—Month of June

Items and Measure	1935	1936	1937
Coal ('000 tons)	3,062	2,574	3,482
Iron and steel scrap (tons)	16,435	7,180	20,416
Pig iron and ferro-alloys (tons)	11,197	7,986	11,171
Railway materials (tons)	10,747	26,720	29,403
Total iron and steel manufactures (tons)	187,083	173,536	235,412
Textile machinery (tons)	4,986	3,926	5,955
Total machinery (tons)	30,956	27,550	37,557
Cotton yarns ('000 lbs.)	11,776	12,313	14,274
Cotton piece-goods ('000 sq. yds.)	138,316	129,634	154,794
Wool tops ('000 lbs.)	4,002	2,990	3,402
Worsted yarns ('000 lbs.)	2,231	2,006	2,313
Woollen tissues ('000 sq. yds.)	4,795	5,383	6,302
Worsted tissues ('000 sq. yds.)	2,941	3,006	3,942
Linen piece-goods ('000 sq. yds.)	5,938	6,223	7,629
Leather boots and shoes (doz. pairs)	23,764	21,301	30,836
Leather (cwts.)	24,095	19,006	23,573
Paper and cardboard (cwts.)	295,064	298,363	400,126
Locomotives, complete and parts (tons)	617	2,205	1,813
Motor vehicles and chassis (tons)	5,372	7,234	8,835

The export figures make a good showing. Of the exports listed above, all, except those of locomotives, are larger than a year ago. Coal exports have increased again after a temporary slackening in the previous month. Once more Poland is mainly responsible for the heavy increase in exports of iron and steel scrap. In textiles, the improvement, though of smaller dimensions than in the metal groups, continues, the exports of cotton goods outdistancing those of the other textiles.

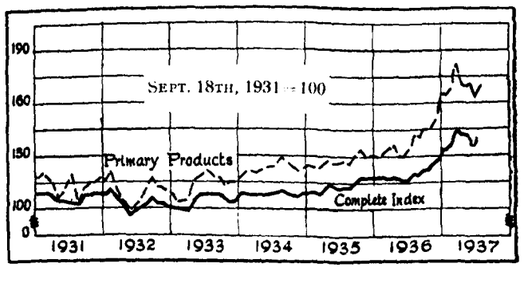
* * *

Accidents in Mines.—While the tragic memory of the disaster at Brymbo Colliery is still fresh, the recent reports of H.M. Inspectors of Mines for the Northern and Midland Divisions strike a new note of warning. Although explosions and major disasters bulk largely in our knowledge of colliery dangers, the greater toll of life is taken year by year by single fatalities due to haulage accidents and falls of stone. The miner is not merely exposed to the occasional chance of fire and explosion. He is daily liable to lose his life or his bodily health through the constant mischances of his livelihood. In 1936, 4.69 workers per thousand aged 18 years or over were killed or seriously injured in the Northern Division. More grave, the rate of serious accident per thousand workers between 16 and 18 years of age was 6.50; and for workers under 16 it was 7.40—a distressing figure. In the Midland Division nearly 60 per cent. of serious accidents were caused by falls of roof and sides, and 18 per cent. by haulage failures. Moreover, in both Divisions, the inspectors report that more than 50 per cent. of the accidents might have been prevented with ordinary care on the part of all persons concerned. It is regrettable that persons under 16 years of age should work at all in mines. Obviously, such children and youths require more intensive education in safety precautions than they at present receive. In all these reports are yet another indication of the grave responsibility for the preservation of life which rests upon owners, managers, inspectors and workers alike—and upon the Royal Commission on Safety in Mines, which has yet to report its findings.

* * *

Aftermath of the Bus Strike.—Mr Bevin, Secretary of the Transport and General Workers' Union, has not spared the rod in his campaign to restore order and discipline in his organisation. Strengthened by the large majority vote at the Torquay Conference against unofficial movements, the Union Executive have expelled three of the leaders of the London bus strike and suspended three more from holding official positions. There can be no doubt that Mr Papworth, organiser of the London strike, and his colleagues are hand in glove with those bodies outside the trade union movement which have been repeatedly condemned in recent months, both by Mr Bevin and Sir Walter Citrine, as subversive and undemocratic in their methods. It is equally certain that these men are the leaders of the most effective of the unofficial movements banned at Torquay. But while the busmen's leaders' co-operation with outlawed bodies during the London strike was unconstitutional, the strike itself was fully authorised by the Union Executive, and the district leaders had officially plenary powers. Mr Bevin has, however, taken advantage of the overwhelming support secured for his policy of conciliation to drive home his victory. There may possibly be an attempt to form a breakaway union among the London busmen, and although the attempt is likely to fail, much will depend now on the success of the Executive in securing an adequate medical inquiry into the health of busmen. The discipline of the Transport Union depends ultimately upon the ability of the Executive to redress by negotiation the grievances, in the provinces as well as in London, which have recently given a platform to the advocates of militant action.

* * *



Further Recovery in Prices.—The past fortnight has witnessed a fresh rise in wholesale prices, both in England and the United States. While prices are still below their spring peak, the recovery has now been sustained for a month. In England the past fortnight's increase is 0.9 per cent. for all commodities and 1.6 per cent. for primary products. The American increases are 2.0 per cent. for primary products and 0.4 per cent. for all commodities. No recent French index number is available, but German and Italian prices show a firmer tendency.

† Monthly averages.

We publish below a chart showing the course of *The Economist's* complete index of British wholesale prices, as well as of our index of the prices of primary products in this country from 1931 onwards.

The chart shows that the net reaction in the complete index has ceased to be serious.

The Economist INDEX
(1927 = 100)

	Sept. 18, 1931	June 14, 1937	June 30, 1937	July 14, 1937
Cereals and meat	64·5	92·0	91·2	92·6
Other foods	62·2	67·7	67·5	67·6
Textiles	43·7	70·5	70·7	71·9
Minerals	67·4	104·9	106·5	108·1
Miscellaneous	65·8	86·3	86·1	85·8
Complete index	60·4	84·2	84·3	85·0
1913 = 100	83·1	115·8	116·0	116·9
1924 = 100	52·2	72·7	72·8	73·4

The table shows that the past fortnight's recovery is very general, the main exception being a further drop in the price of rubber.

* * *

The Perils of Irony.—In *The Economist* of June 26th appeared (page 722) an article entitled "Enterprise, Employment and Theft." It was preceded by an editorial foreword, of which the following were the opening sentences:—

> *A correspondent, lately engaged in an empirical appreciation of theft as an influence on enterprise and interest, has communicated to us the following essay. Five years' hard concentration upon the material consequences of theft have, not unnaturally, caused him to adopt a confined—indeed, isolated—attitude to its ethical and social consequences; an attitude no pure economist could hope to share.*

Irony is, apparently, more perilous than we thought. At any rate, one of our distinguished contemporaries in Germany has paid us a backhanded compliment. It consecrated a most serious and painstaking article last Saturday to the analysis of the economic fallacies and social dangers inherent in the conclusions expressed by our contributor after his (as they rendered it) "researches into the influence of theft on *Investitionstätigkeit und Zinsbildung*." It describes him as being "in error"; "following a Will-o'-the-wisp"; "ignoring two direction-beacons of all social life . . . moral law and the penal code . . . on which repose both the security of public life and society itself." It calls the article a "weed in the garden of thought," and concludes, with uplift, that "healthy common sense" will take its stand on the penal code. We trust it will. We also trust that, even in Germany to-day, it will evince, now and then, that dangerous English characteristic—a sense of humour.

* * *

Rising Colliery Profits.—After many years of adversity the coal-mining industry has again joined the list of relatively prosperous trades. The recent improvement of the industry's earning capacity, however, is due to an increase in unit selling prices rather than to an expansion of total sales, which remain well below the pre-depression levels:—

Period	Tonnage Disposable (Mill.)	Costs per Ton: Wages	Costs per Ton: Total net	Proceeds per Ton	Profit per Ton	Output per Man-shift	Earnings per Man-shift †
1932		s. d.	s. d.	s. d.	s. d.	Cwts.	s. d.

† Excluding allowances in kind, amounting to 4·95 pence per man-shift worked in the first quarter of 1937.

The tonnage of coal disposable during the first quarter of 1937, given in the latest *Statistical Summary* (Cmd. 5508; 1d.), was actually rather smaller than in the corresponding period last year. The absence of an increase in output during a period of expanding demand can be traced chiefly to the influenza epidemic, which caused considerable reduction in the number of man-shifts. Compared with the corresponding quarter of 1936, costs per ton in January-March, 1937, showed an increase of 6¼d., of which wages accounted for 3¾d. Proceeds per ton, on the other hand, rose by 10d. to 15s. 6½d. As a result, profits per ton (before allowing for interest on debentures, bank loans and overdrafts and certain other items amounting in all to about 3d. per ton) rose to 1s. 9½d., the highest level since the first quarter of 1924. The increase in profits per ton, however, was not achieved at the expense of the miners, for earnings per man-shift in January-March this year, at 10s. 4.18d., have showed an advance of more than 1s. per shift since the last quarter of 1935. Moreover, if allowances are included, average earnings per man-shift are higher than at any time during the past ten years. This all-round advance in an industry which has conspicuously lanquished in recent years is encouraging. The effects of new capital expenditure are clearly shown in these figures for the past half-decade; and the increase in earnings per man-shift bears witness in part to the elasticity of wage adjustment which has insulated the industry from serious labour trouble.

* * *

Origins of Glasgow Accountants.—An investigation made in Glasgow by Dr A. K. Cairncross of the special matriculation forms which accountancy students are required to fill in has produced an interesting analysis of the occupation and place of origin of accountants in that city. Some 525 students matriculated in the six years 1931-37. In 140 cases their fathers were dead or retired. Of the 445 students who stated their parents' occupation, alive, dead or retired, 17 per cent. were the sons of professional men; 22 per cent. of men in managerial posts; 16 per cent. of men in business on their own account; 16 per cent. of clerks; 11 per cent. of engineers; 12 per cent. of skilled artisans; 5 per cent of civil servants; and one per cent. of unskilled labourers. Thus the sons of manual workers form a fair proportion of Glasgow accountants, as considerable as one in five if all engineers are included. Most of these manual workers are highly skilled and well-paid. Secondly, the sons of tradesmen and clerks account for over a third of the accountants who are trained every year in Glasgow. And the attraction of accountancy for the business classes is further shown by the fact that nearly half the students covered by this investigation were sons of professional men, business men and specialised engineers. The students were drawn, geographically, from a large field. Of 525, some 200 came from Glasgow and its suburbs, an equal number from the rest of South-West Scotland, and fifty from more distant parts of Scotland. Thirty-three came from England and Wales, one from Ireland, and twenty-eight from abroad. The analysis shows, in short, that almost a majority of Glasgow accountants are the children of a small group of business and professional people; and a large majority of them are born in or around the city.

The Strike in "Little Steel"

Washington, July 7.—The strike in "Little Steel," culminating in the failure of the Federal Mediation Board, and the President's "A plague on both your houses," brings the labour crisis to a new stage. The forward rush of the Committee for Industrial Organisation is broken, and it remains to be seen whether its hurricane tempo will quieten down to a steady wind. The President borrowed the Shakespearean exclamation without any of the vehemence of the original. He spoke suavely and smiled cheerfully as he said it at a press conference, suggesting that the phrase described what the country felt about the strike. His motive in making his first public criticism of the C.I.O. since the election was probably complex. Certainly there was in it the desire to quieten the alarm of Congress about his silence in the face of the growing disturbance of strikes. There was also in it the need to be abreast of public feeling, for if he is not leading public opinion the captain of the New Deal is nowhere. And there may have been a desire, too, to tell Mr Lewis—something he knows better than anyone else—that his movement was going too fast.

The strike in "Little Steel" so far has gone against the form sheet. Tom Girdler, chairman of Republic Steel, opened the struggle with about as poor a war-cry as he could have chosen. He was willing to bargain collectively, since the law said he must; but he refused to sign a contract with the union because the law did not require it. He called in newspaper men and told them how well prepared he was for battle, implying that his mills were well armed. His were the voice and manner of the nineteenth-century American employer. The strike brought about the Chicago "massacre," and wanton brutality in the Youngstown area. Though the C.I.O. was not popular outside the unionised East and John L. Lewis was a new and disquieting figure, Tom Girdler was worse. Since in the last analysis a strike is an appeal to the public, it appeared as though the decision was bound to go against Girdler.

C.I.O. Weaknesses

Then Girdler changed his battle-cry. Instead of refusing to sign a contract with the C.I.O., he would make no contract whatever, verbally or in writing, because the union was "not responsible." And he changed his objective to that of fighting for the "American" right of the worker to his job without paying a union for it. It was a shift from the defensive to the offensive, and it struck the two chief weaknesses of the opposition. The C.I.O. has been lamentably unable to prevent unauthorised strikes, particularly in the automobile field. Since the agreement with General Motors and Chrysler there have been a hundred or more stoppages. In one small western city there were twenty-eight strikes in a single General Motors plant, the last one over the failure of ten union members to pay their dues. The situation is not fundamentally serious, and it is doubtful whether the motor executives are unwilling to renew the contract with the C.I.O. which expired this month. Indeed, many stoppages have been due to mistakes by the management. But the public, unaccustomed to labour troubles, suspicious of the rise of a new power, and indoctrinated against the closed shop, has written down all these strikes to the debit of the C.I.O.

The second weakness of the C.I.O. has been its abuse of picket privileges. According to the Supreme Court, in an opinion written by the late Chief Justice Taft, picketing can at best be a tea-party affair, a few men standing at plant gates and arguing with workers. The current use of pickets is nothing so gentle. It amounts in many cases to a siege of the plant, and the worker who tries to enter a "struck plant" does so at the risk of violence. Pickets have been imported from neighbouring cities and other industries. The size of the picket-lines has led to a reinforcement of plant guards and police, and it has been inevitable that violence should result. Anyone familiar with strike strategy will know that the threat of such violence is one of the standard strike pressures. And the successful strategist is the one who can make it appear that the violence, when it comes, was precipitated by the other side.

Organised Fight Against Unions

In the Chicago "massacre," and in several of the riots in the Youngstown area, the verdict has gone against the companies and the police. But in Monroe, Michigan, and in other traditionally non-union towns, the C.I.O. has closed plants where the union was in a minority. And it is here that Girdler's "American" theme of the right-to-work has caught hold. Union activity in such communities has engendered a counter-movement of vigilantes. The American Legion, veterans of foreign wars, have supplied the middle class volunteers ready to make war on the unions. The vigilantes are even digging themselves in and co-ordinating their efforts on a regional basis. This gives the United States its first actual parallel with the rise of Fascism in the dictator countries, though this aspect of the situation is not arousing much comment.

The President, condemning extremists on both sides, presumably is preparing to bless some changes in the Wagner Act. Senator Vandenberg makes the suggestion of amending it to require signed contracts on the one hand, and union responsibility on the other. The new Michigan Labour Act sets up conciliation machinery with full powers of inquiry and limits picketing to actual employees or union officials representing the employees. Congress, having most of its members from regions unaccustomed to unions, stands far to the right of the President in its labour views, and would gladly amend the Act if administration leaders would permit the subject to come to debate.

The labour crisis would be more alarming if U.S. Steel and General Motors and Chrysler had not signed with the C.I.O. Girdler and the steel independents are fighting a rearguard action. Presumably they are trying to prove to the interests that gave in to Lewis that they made a mistake and that labour can be broken. What they would like would be that the General Motors' contract should not be renewed this summer, and the contract with U.S. Steel should be dropped next year.

But the tide is not in that direction. And the President's condemnation of labour extremists was not preparation for a steel victory but for modifications in the Wagner Act.

Foreign Trade and Foreign Funds

New York, July 6.—For the second successive month imports in May declined slightly, while exports continued the steady advance which has marked each month this year. The result was a small export surplus for the first month since November, 1936. The declining tendency of imports since March suggests that the demands of this country abroad have become less intense. But the demand from abroad is still heavy, particularly for industrial goods and armaments. May exports of iron and steel semi-manufactures, copper, ingots and bars, and aircraft were more than double those in May, 1936. Gold imports fell from the amazing April total of $216 millions to $155 millions, which is slightly below the figure of a year ago.

The Treasury Department has just announced its quarterly figures of the movement of funds into the United States from abroad. The total for the first quarter of 1937 is estimated at $323 millions, consisting of $170 millions of short-term funds, $161 millions of security transactions and an outflow of $8·7 millions of brokerage balances. The total inflow of funds into this country for the two-and-a-quarter years ended March 31, 1937, is put by the Treasury at $2,930 millions. At the beginning of 1935 there were $5,035 millions of foreign long-term investments in the United States, according to the Department of Commerce, together with several hundred millions of short-term balances. The total of foreign funds in this country would therefore appear to be some $9,000 millions at the present time.

Very high reserves are held against these liabilities. The Treasury now has about $1,100 millions of inactive or sterilised gold; and the Stabilisation Fund has $1,800 millions of untouched gold. Bank reserve requirements have been increased by an amount equalling $3,000 millions and could be reduced commensurately, freeing an equal amount of gold; in addition, there are more than $800 millions of excess reserves. In short, some $6,700 millions of gold resources are available, or a reserve of about 75 per cent.

This state of affairs does not mean that security markets would be unaffected if alien funds were to be repatriated, or that the volume of deposits would not decline. But it does mean that the monetary system would not be embarrassed by even extreme withdrawals. Criticisms of monetary management in this country can scarcely include that of unpreparedness for an outflow of funds. It should be added that there is little expectation here that these reserves will soon be called upon. Discussions of increased taxation on the earnings of foreign funds continue, and although no legislation has yet been presented, it is still anticipated.

Labour out of Favour

While labour conditions are not quiet and are hardly likely to become so soon, indications accumulate of growing public antipathy to the labour methods of recent weeks. This has been sufficient to bring about a reversal of policy in Pennsylvania and Ohio: troops were first used in these two States to prevent the opening of steel plants closed by strikers, but are now being used to permit those workers who desire to return to the plants to do so.

Moreover, Michigan has enacted a labour relations law which is copied from the Wagner Act, but includes restrictions on labour. The President has commented unfavourably on both labour and employer extremists, and the Secretary of Labour has criticised sit-down strikes. Some labour leaders have been expelled by their organisation for participation in unauthorised strikes. Financial circles have become much more cheerful about the labour outlook as a result of these developments.

Another Fiscal Deficit

The Federal Government completed its fiscal year on June 30th with a deficit (excluding debt retirement) of $2,707 millions. This deficit was $150 millions greater than was officially estimated last December, but $1,654 millions less than in the preceding fiscal year. This is the seventh consecutive fiscal year which has shown a deficit. Expenditure, including the sinking fund, has exceeded revenue during this period of years by $22,242 millions; and the gross national debt has risen from $16,185 millions to $36,400 millions.

France

The Bank's Significant Return

Paris, July 14.—The latest return of the Bank of France on July 1st shows how serious the financial crisis has been. The gold stock is 48,859 million francs only (francs at 49 millig. of gold). This represents a loss of 8,500 millions. Some part has been transferred to the Exchange Equalisation Fund, which on the other hand seems to have acquired 2,000 millions of foreign currencies since the last depreciation of the franc. Another feature of the return was the advances made to the State. Some 1,760 millions francs had already been advanced on the newly authorised account of 15,000 millions, and in the preceding week 1,400 millions had been advanced on the old 10,000 million account, so that total advances to the State now reach 32,767 million francs. If the new 15,000 million account were fully utilised, these advances would reach a total of 46,000 million francs, approximately equal to the gold stock account. The ratio of the gold stock to notes and other liabilities was 47½ per cent. or the lowest for seven years, the legal minimum being 35 per cent.

This return demonstrates the need for energetic fiscal measures. Decrees have been issued to raise 10,500 million francs from increased taxes and charges; some 2,500 million will be derived from the railways.

FIXED DEPOSIT ACCOUNTS

Rates will be quoted on application.

Ordinary Budget (In millions of francs)		Estimated yield of Decree measures
Fiscal control and check on currency speculation...		630
Tax on securities		970
General income tax (20 per cent. increase above 20,000 francs per annum)		380
Tax on various incomes		500
Indirect taxes :—		
Transfer of real estate		375
Stamps.....		200
Tax on production (6 to 8 per cent.)		1,400
Gas oils		725
Customs duties		1,000
Tobacco (20 per cent. increase)	700	1,400
Postal, telegraph and telephone charges ...	700	
Railways (fares) :—		
Goods (18 per cent. increase)		2,600
Total		10,500

These new burdens were generally well received. The Government had carefully avoided taxes on necessaries, in order to facilitate the task of M. Blum at the Socialist Congress at Marseilles, and in order to prevent too rapid a rise in prices. The Stock Exchange, however, severely criticised the regulation that lists of coupons should be furnished to the fiscal administration after verification of the holder's identity, and deplored the confiscation of all speculative profits made on the franc during the crisis.

Taxation, Prices and the Exchanges

After the courageous speech of M. Blum at the Marseilles Congress, urging Socialist participation in the Government and the maintenance of the Popular Front, it is certain that there will be no difficulty in this quarter. And the recent attempt to secure a 40-hour week in the hotel industry by strike action was not a success.

This effort to balance the Budget was welcomed as support for the "floating" franc. The question is now what receipts the new taxes will actually yield, and what their effect will be on prices. May they not, when added to the effects of devaluation, lead to a new paralysis of business ?

M. Roger Auboin, who has just been chosen by the Minister of Finance to be General Secretary of the *Comité National Économique*, considers that French prices were 20 per cent. higher than English prices in May, 1936. The social reforms and the rising cost of raw materials entailed a rise of 50–60 per cent. in cost prices, compared with 10 per cent. in Great Britain. The index of French industrial costs was raised from 120 to between 180 and 192 from May, 1936, to May, 1937, while the British index rose only from 100 to 110. The rate of 111 francs to the pound therefore maintained a disparity of between 10 and 20 per cent. But equilibrium has been re-established at the rate of 128 francs to the pound. The problem now is to maintain as effectively as possible French prices and wages to restore the authority of the State and to increase production.

Commercial Treaty with Germany

A new financial and commercial pact has just been signed with Germany, available for two years from August 1st. The clearing is suppressed and replaced by a system similar to the treaties with Belgium. The services on the Dawes and Young loans are maintained, probably in Bonnet francs, but without reduction of interest.

The index of industrial production compiled by the *Statistique Générale de la France* showed a decline in May, principally in the extractive industries, in textiles and automobile manufacture :—

	1936		1937	
	May	March	April	May
General index	102	104	105	104
Engineering.....	102	116	118	118
Iron and steel	92	102	104	106
Textiles	67	69	69	66
Mines (adjusted figures)	103	106	103	98
Building ,, ,, ...	70	67	62	61
Leather ,, ,, ...	108	98	101	101
Paper ,, ,, ...	165	144	144	140
Rubber ,, ,, ...	985	771	781	801
Motors ,, ,, ...	464	494	459	424

In the motor industry, 15,206 automobiles have been put on the road, against 15,483 in April and 14,550 in March. The figures for the cotton industry are as follows :—

	Feb.	March	April	May
Spinning (average per spindle in kilograms) :—				
Production	1,615	1,851	1,803	1,734
Deliveries	1,649	1,864	1,761	1,653
Stocks	1,172	1,171	1,212	1,217
Unfulfilled orders	5,448	5,707	5,051	5,077
Weaving (average per loom in pieces of 100 metres) :—				
Production	4·63	5·13	4·91	4·16
Deliveries	4·40	5·08	4·33	4·10
Stocks	4·82	5·01	5·08	5·53
Unfulfilled orders	27·46	26·52	20·61	16·30

Coal production in June was 2,201,000 tons, against 2,125,000 tons in May, in spite of an additional working day, and daily production was 103,300 tons, compared with 104,100. This decline took place in spite of an increase of 500 in the number of employed.

Germany

Congress Agrees, but —?

Berlin, July 14.—The Congress of the International Chamber of Commerce yielded no surprises and brought out no considerable conflicts. The resolutions, where they concerned general economic policy, expressed views that are seldom contested. Were there greater differences of opinion the outlook for world economy might perhaps be more promising. One cannot really regard the I.C.C. Congress as an assembly of experts and practical business men earnestly seeking to convert unenlightened statesmen-in-office to sound principles. Nearly all statesmen-in-office hold the same principles as the Congress; and if they pursue contrary policies they do so, they profess, reluctantly, under the stress of ancient impediments, of immediate emergencies, and, of course, of the perversity of other countries' statesmen.

Although Germany is usually regarded as the chief champion of autarky and economic isolation, her official and Party spokesmen habitually defend this policy apologetically; and imply that they would gladly subscribe to the principles of the I.C.C. Congress if only ——. It is the provisos that count. Probably had the statesmen in power in all countries met at the Kroll Opera House last week they would have passed resolutions differing little from those of the Congress; and equally, if the Congress experts and business men had been in office they would have pursued policies differing little from those of the statesmen. A consensus of academic opinion is not propitious to the cause of reform; and it seems that there would be more hope of economic emancipation if the emancipators were less unanimous.

New Debts for Old

The suggestion of the British delegates that Germany might obtain new loans caused some stir. Germans in authority, including Herr Hitler in a recent speech, have consistently declared against new borrowing; and put instead in the foreground their demand for the reduction of existing debts. It is hardly likely, however, that new foreign credits would be rejected if they were entirely free from embarrassing conditions. But the conditions implied at the Congress would probably be refused. A loan to the Reichsbank which, as suggested, would enable the Reich to get rid of its exchange control entirely and to abolish all trade restrictions, would be regarded as offered under impossible conditions. It is not conceivable that Germany should restore complete freedom of foreign payment. This would indeed not be practicable unless the loan were very large, and unless an export surplus could also be surely counted on for the service of the new loan. A return to freedom of foreign payments would certainly lead to the withdrawal of all old credits already due for repayment.

It is not easy to see how Germany would gain from such a substitution of new credits for old. And it is easy to see how she would lose; for the old credits are in great measure conveniently defaulted, and it would be difficult to default immediately on new credits. Moreover, a complete freedom of trade and automatism in the balance of trade and payments would require as a first step the drastic devaluation of the Reichsmark; and this would upset the whole system of "bound" internal economy.

"A solution of the problem of international debts of political origin," as the Congress resolution put it, is probably no more likely; but it would be more to German taste than the contraction of new debts. The wording quoted, which was not accepted in this form by delegates of Britain and certain other countries, expresses the familiar German theory that not only the Dawes and the Young loans, but also other Reich and all State, municipal and private borrowings, are indirectly "political," being due to the drain of capital caused by Reparations; and that they ought to disappear. The treatment of the debts question by the Congress was not very clear. While international indebtedness was treated as one cause of present ills, freedom in the international movement of capital was favoured, although this might mean new accumulation of debts. Some Germans regarded the British delegates' suggestion of a loan with unreasonable suspicion as a diplomatic manœuvre, citing Mr Arthur Guinness' proviso that "political adjustments" must be a prior condition of a loan.

Japan

The New Government's Policy

Tokyo, June 21.—The Hayashi Ministry resigned *en bloc* on May 31st. Prince Konoe, President of the House of Peers, was commanded to form a new ministry, which was installed on June 4th. Mr K. Hirota, the former Premier and Foreign Minister, returned to the Foreign Office; Dr E. Baba, the Minister of Finance in the Hirota Ministry, took charge of the Home Office; Mr O. Kaya, Under-Secretary of the Treasury, was promoted to the Ministry of Finance; and two minor seats were given to the representatives of the two major parties; while the two Services Ministers and the Minister for Justice retained their respective posts. Financial circles strongly criticised Dr Baba's appointment, even though it was not to the Treasury, and the welcome accorded to the new administration was on that score greatly qualified. The junior minister at the Treasury may, it is feared, find his work obstructed by his senior colleagues, especially by certain individuals, but there will be no deviation from past policies. Nor can the new Premier, in spite of the insistence of the Army, carry out any radical "internal reform."

The Government is preparing measures to be presented at the forthcoming special session of the Diet. Most of the measures that failed to pass the dissolved Diet are to be re-introduced. There are very few new measures. One of these is the Gold Production (Control) Bill, which provides for State control of the gold-mining industry and the compulsory purchase of the metal by the Bank of Japan. The Government intends by these measures to gather up all the newly-mined gold in its hands and ship it abroad to settle the adverse trade balance, which has steadily grown to grave dimensions. Another notable new scheme is the Skilled Labour Bill, which aims to meet the shortage of skilled labour.

Sharp Rise in Foreign Trade

The foreign trade returns for May show that, compared with the corresponding month of 1936, imports rose by 179,446,000 yen (74.6 per cent.) and exports advanced by 62,415,000 yen (28.4 per cent.); thus the import surplus amounted to 137,823,000 yen, the largest monthly total since March, 1925. The larger demands of both the light and heavy industries are reflected in an increase of 77,335,000 yen in imports of raw cotton and raw wool and of 47,612,000 yen in iron and steel, copper, and machinery. Though exports have not kept pace with imports a further improvement is shown in exports of manufactured articles. Raw silk exports increased by 12,674,000 yen and cotton exports by 6,677,000 yen.

Imports for the first five months of the present year amount to 1,763,707,000 yen and exceed the corresponding figure for 1936 by 503,189,000 yen (39.9 per cent.). Exports are 236,909,000 yen (23.4 per cent.) larger and are valued at 1,246,418,000 yen. Thus the total visible adverse balance for the period is 517,289,000 yen, an increase of 266,280,000 yen (106 per cent.) compared with a year ago.

The reaction in wholesale prices continued during the past month. The Bank of Japan's wholesale index number for May registered a drop of 2.8 per cent. on the month. In addition to the recent general recession in world prices, political uncertainty undoubtedly contributed to the decline in the general level of prices. There were, however, appreciable advances in such articles as rice, green tea, soy, *sake*, and charcoal, which are almost entirely destined for home consumption.

Improvement in Agriculture

The spring cocoon crops are arriving on the markets. They are quoted at about 6.00 yen per kamme on the average, against an average of 5.00 yen for last spring and 4.00 yen two years ago. Owing to favourable weather conditions throughout the rearing period the crop is larger and the quality is better. The wheat crop is also reported to be satisfactory. The official report estimates the year's crop for the country, excluding the north-eastern provinces and Hokkaido, at 8,690,000 koku, an increase of 7.7 per cent. compared with last year and 13.6 per cent. higher than the average for the last five years. The ruling wheat prices are about 20.00 yen per koku, compared with a fraction less than 18.00 yen a year ago.

South Africa

Extra Imperial Trade

Johannesburg, June 24.—During the first three months of the present year South Africa imported supplies from foreign countries (outside the British Empire) to the value of £10,332,655, representing 48.1 per cent. of this country's total imports in that period. From British sources of supply imports totalled in value £11,123,405, or 51.9 per cent. of the total imports. Inclusive of gold, South Africa's exports to countries of the British Commonwealth totalled in value £17,303,274, and thus exceeded imports from the same sources by £6,200,000. In trade with foreign countries, however, South Africa shows an adverse balance; exports to these countries amount to £5,755,110, approximately £4,600,000 less than the value of South African purchases from those countries.

South African imports from the United States were mainly responsible for the large import surplus. These imports were valued at £4,430,500 and in return the United States purchased South African products to the value of only £442,422. The Union's trade relations with Germany show a closer visible balance. South Africa exported to that country goods to the value of £1,745,000, compared with purchases in Germany to the value of £1,207,400.

Another significant feature disclosed by the latest trade returns is that Japan now ranks as the Union's chief foreign customer. Japan bought South African products to the value of £1,557,633 and sent to this country in return goods to the value of £791,426. Germany is the Union's next best foreign customer, followed by Belgium; France, who took first place among the Union's foreign customers in the previous year, is now fourth.

Rapid Rise in Mineral Exports

Recent war scares have been responsible for some of South Africa's increased mineral exports in the first quarter of the present year. In this period manganese exports from the Union totalled 63,573 tons, compared with 11,598 tons exported in the corresponding period of 1936. The comparative values were £61,988 in the first quarter of this year and £14,782 in the first three months of 1936. The rate of export for the first quarter of the current year represents an expansion of almost sixfold on the figures for the corresponding period of 1936.

Germany is mainly responsible for the increased export of this valuable commodity; in 1936 that country took 40 per cent. of South Africa's production of the mineral, compared with only 9 per cent. in 1935. France and Holland have been taking the bulk of the balance in the last two years.

The Government Mining Engineer's report—the last to be issued over the signature of Dr Hans Pirow who has now resigned the appointment and accepted a responsible position with the Central Mining-Rand Mines Group—shows that last year's mineral production reached the record value of £88,516,790, of which gold accounts for £79,495,202.

Road Development

The expansion of the gold mining industry has not only enabled the Union Government finances to be established on a much more favourable basis than would otherwise have been possible, but in many other directions national and local amenities have been enormously assisted. In particular a great national roads scheme has been inaugurated, though the ambitious programme with which the National Road Board commenced operations in April 1936 has not made the progress anticipated.

The chairman of the Board, addressing a Publicity Conference this week, said the Board had hoped to build about one thousand miles of national roads each year, but in the first eight months of its operations the total mileage completed was 170 instead of about 800 miles contemplated. The scheme therefore was not likely to be completed in the five years planned, but it was hoped to speed up the work and complete it within six years. The total cost of the 5,396 miles of national roads to be constructed had been estimated at £11,175,000, but it was now realised that this would be exceeded by about £2,000,000. Delays had been due to inadequacy of plant, but about £750,000 had now been spent thereon, and it was believed that there was now sufficient plant in the country.

Government estimates of expenditure for the year ending March 31, 1938, have just been issued. They provide for an expenditure of just over £40,000,000, compared with £37,657,000 in the previous year. The principal items are as follows:—

Estimated Expenditure.

	£	Compared with previous year £
Provincial administrations	6,620,420	+ 149,494
Public debt	5,506,918	— 101,465
Pensions	4,858,500	+1,050,400
Posts, telegraphs and telephones	3,784,000	+ 349,255
Police	2,572,100	+ 22,100
Agriculture, forestry and irrigation	2,648,778	+ 195,379
Assistance to farmers	1,447,000	— 808,000
Defence	1,666,090	+ 302,550
Union education	1,121,347	+ 119,971
Public works	1,229,995	+ 92,145
Public health	666,995	+ 36,407
Mines	858,320	+ 270,645
Child welfare, reformatories, labour and social welfare	1,169,830	+ 265,738
Justice (with magistrates and prisons)	1,672,400	+ 54,370
Mental hospitals and feeble-minded	668,400	+ 40,000
Native affairs	570,158	+ 50,505
Ministry of Interior	333,855	— 36,688
Commerce and industries	276,696	— 2,198
Ministry of Lands	458,271	— 15,500
Customs, excise and Inland Revenue	465,450	+ 31,695
High Commissioner in London	77,302	+ 5,316

The marked increases in pensions, communications and welfare services are noteworthy. And the large decline in assistance to farmers is most significant.

Letters to the Editor

Czechoslovakia's German Problem

TO THE EDITOR OF THE ECONOMIST

Sir,—Professor Arnold Toynbee's article in your issue of July 10th, although undoubtedly inspired by a desire for fairness, presents a picture which can but be misleading to those without first-hand acquaintance with the Czech–German question.

Professor Toynbee alludes to Czechisation. But forcibly to change people from one nationality to another can only be achieved during the school age; you cannot do it in the case of the adult. As Professor Toynbee's own statistical tables show, there is no discrimination against the Germans in Czechoslovakia in regard to schools. Indeed, the table giving the figures for the classes in primary schools demonstrates that, if anything, the Germans are better catered for than the Czechs. In the matter of schools—as indeed in many other respects—the Germans in Czechoslovakia are enjoying infinitely more rights than they do in other countries, such as, for instance, Poland, Italy, etc.

With regard to industrial and official discrimination in the Südetenland, Professor Toynbee's analogy with his imaginary "Welsh minority" in a "Mercio-Wessexian" State looks convincing enough on the surface. But in detail it will not bear too close examination. He says, for instance, that German firms asking for loans from Czech banks can only get them on condition they sack German employees and replace them by Czechs. He does not mention the fact that, as regards the mining districts of Brüx and Teplitz Schönau ("Most" and "Teplitz Sanov") and the industrial district of Reichenberg, where there are Czech minorities within the German minority, at the beginning of the slump the German directors (not unnaturally) discharged their Czech workers and retained their German, and that therefore (also not unnaturally) the Czech banks make re-engagement of some of these Czechs a condition of granting loans.

With regard to the predominance of Czechs in the police and Government services and munition factories, etc., the attempts of the Südetendeutsch Heimat Front (Henlein Party) to terrorise the Activist Germans, has necessitated the predominance of Czechs in the personnel of the police; as it was found that German policemen (adhering to the Henlein Party) took sides with the Henlein majority against the Activist minority. As far as employment in the other public services and in factories is concerned, the number of Germans thus employed must necessarily be in ratio to the degree of confidence—from the point of view of the safety of the State—which these Germans engender. Actually, under the new agreement between the Czechs and the Activist German leaders, all these grievances are on the way to being remedied. But still the question of "confidence" must necessarily remain very important.

For, in spite of Professor Toynbee's imagery, the fact remains that Czechoslovakia *is* a democracy in a part of Europe composed of dictatorships and semi-dictatorships. Within this democratic State is the highly-organised German minority party of Herr Henlein, modelled upon and taking its directives from, the Nazi Party machine in totalitarian Germany.

Add to this the following facts. Herr Henlein, in his address to the Royal Institute of International Affairs in London in 1935, as published in the organ of that Institution, *International Affairs*, for July–August, 1936, put forward claims which on the whole were of a moderate and reasonable nature, and these have since been met in the *modus vivendi* arrived at between the Government and the Activist leaders this year. But now Herr Henlein has tabled new demands which go infinitely further. Also, while leading a party in opposition to the Government, which party is organised on the *Führerprinzip*, Herr Henlein declines to assume the responsibility of a seat in Parliament.

I ask: Is this kind of thing—accompanied as it is by a menacing anti-Czech propaganda from the German Reich—likely to engender the confidence necessary to inspire the Government to employ large numbers of Südeten Germans in services and avocations concerned with the security of the State? And is this situation—of provocation without personal parliamentary responsibility on the part of Herr Henlein—the best inducement for that heart-to-heart talk between President Benes and Herr Henlein which Professor Toynbee supposes would bring about a solution?

I have before me as I write Herr Henlein's original speech in London: his subsequent demands in Prague; and the Prague-Activist agreement. Herr Henlein has since gone much farther than those original claims which have since been met.

For what the Südetendeutsch Partei really want—and in fact they now make little or no bones about it—is not merely the adjustment of economic and other ordinary minority grievances, but radical reorganisation of the internal structure of the State and equally radical reorganisation of external policy in such a way that, as regards the first, the position of the Czechs internally would be drastically reduced, and the situation of the country externally be that of a vassal State of the Third German Reich.

This being the case, even if Prague were to bring about an economic and administrative and cultural millennium, and meet all the ordinary minority grievances to-morrow morning, the agitation of the Henlein Party, directed from the German Reich, against Czechoslovakia would continue the same. For this is not an ordinary minority question, but a political question.

Proof of this is afforded by the fact that the German minority has a much better deal in Czechoslovakia than in Poland and Italy. Yet all the fury of German propaganda is directed against the Czechs; not against the Poles, because of the German–Polish Ten Years' Pact; not against Italy, because of the Rome–Berlin axis.

If Czechoslovakia cared to follow the example of Warsaw and Rome, we should hear no more about the Südetendeutsch minority, well treated or badly treated. But it would be a bad blow for British interests if Czechoslovakia bought peace with Germany at the price of entering the German orbit. For then Austria would lose her independence and Hungary and the Balkans would fall within the German politico-economic sphere. Thus would Germany realise her dream of a German controlled Mitteleuropa, and, thus predominant from the Baltic to the Balkans, she would be in the position finally to challenge not only France but also Britain.

Nobody pretends—least of all President Benes, or Dr Hodza—that Prague has been perfect and not made mistakes in regard to the Südetendeutsch. But for Heaven's sake let us draw a distinction between this and what is patently a matter of political propaganda, the real aims of which are ulterior to the objectives put in the shop-window.

It is this distinction which, to my mind, Professor Toynbee has not had sufficient realism to make.

I am, Sir,
Yours faithfully,
C. F. Melville.

London, E.C.4.

The Exchange Equalisation Account

TO THE EDITOR OF THE ECONOMIST

Sir,—In your article upon the Exchange Equalisation Account you state that the Account is compelled by statute to make good the loss involved by the Bank of England's purchases of gold since September, 1931.

The Bank could not have obtained additional gold since 1931 but for the fact that the Exchange Equalisation Account has purchased gold at higher prices and has transferred some of it to the Bank of England at 84s. 11½d. per fine ounce. It would seem to be more proper to say that the Equalisation Account had incurred losses.

In stating that the Exchange Equalisation Account "shows a profit," the Chancellor of the Exchequer has apparently written off these losses by taking credit for a hypothetical profit on the re-transfer of the gold from the Bank to the Account and its revaluation at current prices. A commercial firm would not be allowed by its auditors to do this especially when the asset, upon which the profit may be made, is in the legal ownership of another party, namely, the Bank of England.

It is strange accounting, indeed, for the Chancellor of the Exchequer to take credit for a profit which may never be realised. *Quis custodiet ipsos custodes?*

I am, Sir,
Your obedient servant,
Edward Maitland Campbell.

Edinburgh, 3.

MACMILLAN

A Study of the Capital Market in Post-War Britain
By A. T. K. GRANT
12s. net

A detailed study of methods and developments in the financing of British enterprise during the last 15 years.

The book begins with a discussion of the relationship of finance and enterprise in the face of risk and uncertainty, and assesses the power of the banking system to vary the attractiveness of the terms on which safe investments are made available. The author examines the influence of three factors on the development of post-war monetary policy, and shows their bearing on the activity of the capital market. The main section of the book deals with the methods and institutions of the capital market, and the work concludes with an analysis of the present position, and of probable future changes.

The Theory of Forward Exchange
By DR. PAUL EINZIG
21s. net

"Dr. Einzig's challenging work will deservedly receive a warm welcome from economic students and business men, who will recognise the book as a very serious contribution to the understanding of a difficult subject . . . . Readers may be assured that they will find the book lucid, stimulating and provocative."—SIR CECIL KISCH in *The Financial News.*

MACMILLAN & Co. Ltd., London, W.C2.

Books and Publications

Capital for Industry

TWENTY years ago if you had asked a member of the general public how industry obtained its long-term capital you would probably have been told that it got it through the Stock Exchange. If you asked him the same question to-day you might get one of a great number of answers. He might, of course, give you the old answer, but more probably he would tell you that the money was now raised by the banks or the finance houses or the insurance companies or even the Government.

None of these answers would be wrong. Since the war the capital market has changed practically out of all recognition, to meet the needs of a profoundly changed national economy. The current answer to your question is thus complicated; nor can it be found easily in print. For this reason alone Mr Grant's book* is timely. Since Mr Lavington's rather general treatise was published in 1921, no one had attempted to survey the capital market until Mr Grant produced this study, which goes a fair way towards filling the gap.

On the whole, however, this is not a very good book. The author has undertaken too much in far too little space. Nobody could satisfactorily trace the course of English investment, English financial policy and the rates of interest since the war, and then add analyses of investment and market technique—all in a mere three hundred of Messrs Macmillans' well-spaced pages! Inevitably, when the attempt is made, much of the theory is superficial and unoriginal, the history is often controversial, and only a few of the fundamental problems are solved.

Nevertheless, the descriptive sections of this book are for the time being indispensable. They are readable and well balanced; and they suggest many important points for further inquiry. Useful summaries are given of such bodies as the Bankers' Industrial Development Company and the United Dominions' Trust. Some interesting information is collected about recent changes in the local financing of industry, about its decline in Lancashire and its survival in Bristol. Indeed, these facts might well serve as the basis of a useful regional study in the light of the different traditions and aptitudes of different places.

But, since its imperfections make this no more than a suggestive book, there are other points raised by Mr Grant that should offer him and others topics for further study of a valuable and interesting kind. A full analysis, written with the confidential co-operation of the businesses in question, of the security holdings of large concerns—their amount, their constitution and their turnover—might throw considerable light on the course of share values, and, as a result, upon the growth and decline of investment from year to year. Nor do Mr Grant's scattered remarks very much advance the vitally important study of the degree of speculative interest of English wealth-holders: that is to say, he does not tell us how many Englishmen go for a yield and how many for capital profits. But our sobriety in such matters is of the utmost significance. It is not only the gamblers who suffer if we run our investments on the principles of, in Mr Keynes's famous metaphor, a casino.

These are only some of the points that call for further study. Until that study is made the frequent plea for some kind of authoritative Investment Board, echoed rather cautiously in the peroration of this volume, lacks that overwhelming proof which is needed before so great an innovation could be made. Partly because we dislike the unknown and partly for more substantial reasons, Englishmen usually suspect financiers, but we will not vote for them to be taken in hand until we have something more than suspicions to determine us. Mr Grant would perform a real service if, in several separate and detailed inquiries, he tried to discover whether we have.

Shorter Notices

"Lloyds Bank Review," July 1937.

To the July issue of *Lloyds Bank Review* Mr Alwyn Parker has contributed a remarkable article on "The Economic Outlook of Germany." After a long penetrating historical and sociological introduction, the author concludes that the German self-sufficiency programme is an intended safeguard for defence rather than preparation for war. The hand-to-mouth nature of Nazi economic policy is emphasised—witness the forcing of independent small craftsmen and shopkeepers, once the *protégés* of the Nazis, into industrial employment. This is well described in the section on foreign trade policy and raw material supplies; and the author states that "an unrevealed reserve of foreign exchange . . . almost certainly exists." Moreover, he says, Germany, by cutting down *exports*, could abolish her debt service which reposes on her credit balances; though it may be doubted if suppliers would then continue to send her the same volume of materials, if any. Mr Parker thinks that the financing of rearmament and the Four-Years-Plan can go on for years, since the public debt is small in relation to taxable capacity, owing to the complete restriction of the Reichsmark to internal use and the consequent liquidity of private concerns, whose dividends are limited, the balance being forced into Government paper. The shortage of free foreign exchange is analysed; and the conclusion emerges that Germany just maintains both a large export trade and an export surplus, to which the export-levy on industrialists is directed. There are informative sections on synthetic and substitute products, the regulation of German exports so as to retain as much base metal at home as possible, agriculture, finance and taxation, foreign exchange and foreign debt. Mr Parker concludes that Germany's performance lags behind her capacities because of vast unreproductive effort and expenditure and the growing deadweight of overhead charges; and he calls on Germany to make a change of direction towards real international collaboration, especially with this country, in exchange for credits and the progressive freeing of trade. There is a wealth of original information, statistical and otherwise, for the discerning reader of Mr Parker's able and scholarly article.

"The L.S.D. of National Defence." By Miss P. M. Rae. Hodge. 199 pages. 6s.

A review on page 82 of *The Economist* last week of this work—which urges systematic economic preparation against a possible aggression—concluded with this sentence: "In any case, it is comforting to be told that economists do not favour war-making—even though Miss Rae and Mr Einzig [who contributed a Foreword] regard their fastidiousness as dangerous." To avoid misunderstanding, we may point out that nothing in this comment was intended to imply that the book condemned economists for not favouring the making of war. The work, in fact, criticises them on the ground that they do not pay sufficient attention to the special problems raised by the requirements of national defence. We did not imply that the author or Mr Einzig thought war desirable, but that they thought it a regrettable probability. In our own view, as the tenor of our *critique* implied, this criticism of economists errs on the side of exaggeration. We believe that war economy, so far from being a special and separate study, is already comprehended within the bounds of a sound body of economic theory.

MONEY AND BANKING

France's Financial Struggle

THE publication of the new tax decrees representing the attempt of M. Chautemps' Government to meet the needs of the French Treasury renders it possible to take a fresh view of France's financial problems. It is easy to see that for two compelling reasons the June depreciation of the franc was necessary. The rise in internal costs, due to wage increases, together with the enforcement of the forty-hour week, and more particularly its transformation into a five-day working week of five eight-hour days, meant that a fresh alignment of the franc was essential. Ultimately these reforms will bring about the widespread consolidation and rationalisation of French industry, but this will take time in a country of small employers. Again, while French labour will never let go the principle of the forty-hour week or even of the five-day week, ultimately some alignment will prove practicable; but this again will take time. Thus there was an immediate need of a further depreciation of the franc sufficient to balance the rise in internal costs, and even after taking into account the possibility of a further rise in world prices, it is thought that an exchange rate of Frs. 125 to £1 will represent approximate equilibrium when once the recent measures of social reform have taken full effect.

The second reason for the June depreciation arises from the further loan of Frs. 15,000 millions from the Banque de France to the Treasury. The only possible way of repaying the Bank is out of the profits of a fresh revaluation of the Bank's monetary stocks, and for this to yield Frs. 15,000 millions a depreciation of the franc from Frs. 110 to Frs. 128.50 was necessary.

For the moment the new franc is being held. The funds which returned from abroad during early July enabled the French Exchange Fund to gain some gold. It is also probable that part of the gold lost by the Banque de France during June was still retained by the Exchange Fund at the end of June. Thus at present the Fund may have a gold reserve of about Frs. 7,000 millions. But this improvement does not alter the fact that the future of the franc really depends upon how far M. Chautemps can succeed in solving the French Budget and Treasury difficulties and in drawing back capital from abroad. It is easy to reply that this in turn largely depends upon the attitude of the French bankers, who can have either a "good" franc or a "bad" franc, as they choose. They in turn can answer that unless their customers repatriate their funds they, the bankers, are powerless to help the Treasury.

Thus everything at the moment depends upon the Budget and the Treasury. During the six months from June 30th this year to December 31st, which is the end of the French financial year, the Treasury is faced with the following demands:—

	Frs. millions
Deficit on ordinary budget	6,000 to 8,000
Advances to railways, posts, *collectivités publiques*, etc.	10,000
Extraordinary budget deficit, mainly rearmament	8,000
Maturing debt, i.e., October Treasury bill maturities and the railway *sterling credit*	7,000
Total	31,000 to 33,000

To meet this the Government have so far done three things. They have imposed fresh taxation, which may yield Frs. 4,000 millions to Frs. 5,000 millions this year, and will yield Frs. 8,000 millions in a full year. They have raised railway rates and fares, to yield Frs. 2,500 millions in a full year (less any future increase in operating costs). They have borrowed Frs. 15,000 millions from the Banque de France. Nevertheless, on a conservative estimate there is still a gap of about Frs. 12,000 millions to be filled.

It is an open question whether this gap will be filled. Bankers are probably willing to help the Chautemps administration up to a point, if only because of their fears of any likely alternative. Again, illogically enough the Caisse d'Amortissement is collecting about Frs. 4,000 millions a year in revenue and applying it to the redemption of debt just at the time when the Treasury is hard put to it to meet its needs. This is a legacy of the Poincaré reforms, but it at least means that this amount is being released each year, if only its owners are willing to re-lend it to the Government. There is a further potential nest-egg in the shape of the franc resources of the Exchange Fund, estimated at Frs. 10,000 millions, and these could legitimately be re-lent to the Treasury in accordance with the English precedent. One way and another, provided that all goes well, and that there is some return of confidence, revival in trade and repatriation of funds, the Treasury may just scrape through. In a sense time is in its favour, for July, August and September are good revenue months, and there are no heavy maturities until October. Much depends on whether there has been some general improvement before that critical month is reached.

Meanwhile, what of the new tax decrees? These are set out in detail in the following table, the estimates covering a complete year:—

ANNUAL YIELD OF NEW TAX MEASURES

	Frs. millions
(1) *Measures against tax evasion* :—	
Income tax	300
Interest on commercial current accounts	125
Tax on undistributed profits	25
Marriage settlements	2
Definition of period of prescription	55
Widening of right to inspect documents	10
Minimum alcoholic content of perfumes	5
Taxation of extracts sold to make liqueurs, etc.	60
Fraudulent mining of petrol and petroleum	10
Other measures	30
	622
(2) *Direct taxation* :—	
Increase of 20 per cent. in *impot général*	365
Miscellaneous registration duties	83
Duties on transfers of real estate, etc.	375
Increase in coupon tax	759
Directors' fees	20
Duties on transfers of securities	136
Increase in duty on issue of securities	75
Increase in rate of ordinary income tax	500
Tax on profits from public contracts	150
Miscellaneous stamp duties	200
	2,663
(3) *Indirect taxation or affecting consumers* :—	
Tax on automatic lighters	2
Modification of beer duty	6
Increase of tax on production from 6 to 8 per cent.	1,400
Miscellaneous modifications in tax on production	70
Customs duties	1,000
Import licences	50
Transport licences	305
Increased duty on heavy oils, benzol, etc.	441
Postal, telephone and telegraph charges	710
Increase in price of tobacco and cigarettes	700
Other measures	43
	4,727
Total	8,012

Briefly this additional taxation should enable the ordinary budget to be balanced, but will leave nothing for advances to the railways, etc., or for the extraordinary budget. Here borrowing will still be necessary. The measures against tax evasion should be effective, but are to yield a mere Frs. 622 millions. Frs. 2,663 millions are to come from heavier direct taxation, but Frs. 4,727 millions, or over half the total new yield, consists of additions to indirect taxation, and so will fall on the consumers. The increases in the tax on production (the successor to the turnover tax) and to customs duties stand out in sharp relief. The consumer will also have to bear the main brunt of the new increase in railway rates and fares, expected to yield an additional Frs. 2,500 millions.

So far the general public has stood these onerous proposals well. A great parade was made of the 100 per cent. tax upon foreign exchange speculators. Actually the tax only applies to dealings in forward francs initiated between June 10th and June 30th, so that most of those who removed funds from France, including all the big interests who invested abroad months ago, escape scot free. Still, though the cannon was aimed practically off the target, it made a very comforting noise, under cover of which the new tax decrees have so far been made to appear acceptable to the French public. Also, so far as can be told, financial interests are not generally alarmed by the 100 per cent. tax and so it may not act as a serious deterrent to repatriation. Still, granted the success of the way in which the new tax decrees were introduced, their effect upon the cost of living has not yet had time to sink in. When it does, as it inevitably will before long, there may be new demands for higher wages and a fresh increase in internal costs. Here, again, as in the case of the Treasury problem, France is engaged in a race against time. The real question is, will French trade recover, French national income expand, and revenue become more buoyant in time to bring French finances relief before a new breakage-point is reached? All that can be said to-day is that the chances are in many ways good, but that there is no certainty.

Financial Notes

The Exchange Account Increase.—The floating debt statement for July 10th shows the effect of the new increase of £200 millions in the Exchange Equalisation Account. So far the Account has taken the whole of its additional resources in the form of sterling, and in accordance with its normal practice it has re-lent the sterling to the Exchequer, the method adopted being that of taking "tap" Treasury bills. The result is shown in the following table :—

	June 19, 1937	June 30, 1937 (£ millions)	July 10, 1937
Treasury bills :—			
(*a*) Tender	545·0	503·0*	552·0
(*b*) Tap	136·3	135·2*	316·4
Ways and Means Advances :—			
(*a*) By Public Departments	22·1	18·2	17·4
(*b*) By Bank of England	2·2	49·3	...
Total	705·6	705·7	885·8
Departments' Floating Assets	158·4	153·4	333·8

* Adjusted to allow for the estimated discrepancy between Treasury bill payments and maturities at the end of the half-year (see *The Economist*, July 10, 1937, p. 85).

Owing to the disturbance to the money market at the end of the half-year, the more reliable comparison is between June 19th and July 10th. This shows a net increase of £180 millions in the floating debt, consisting of the expansion of £200 millions in the Exchange Equalisation Account, less other net receipts by the Exchequer during these three weeks. These last consist in turn mainly of the receipt of £38 millions in respect of the National Defence Bonds call, less a revenue deficit of £21 millions for the period. The floating assets of the public departments have risen during the same three weeks by £175 millions. The discrepancy of £25 millions between this last figure and the £200 millions of tap Treasury bills taken by the Exchange Account is mainly explained by the departments' share of the National Defence Bond call; for the payment of this means that they are able to hold fewer tap Treasury bills. At a very rough guess it looks as if the Exchange Account's gold holdings have been little altered during the past three weeks, for all these changes previously discussed appear fairly coherent by themselves, and leave little margin to be ascribed to operations by the Exchange Account.

* * *

Hungarian Standstill Agreement. — A new Hungarian standstill agreement has been initialled by the representatives of the American, British, Dutch, French and Swiss short-term banking creditors. It represents an important improvement on the previous arrangements. In future, payments will be made in foreign exchange, instead of in pengös without any foreign exchange guarantee. A cumulative annuity of 5½ per cent. will be established for the service of the standstill debts. One per cent. will be allotted to interest, and the balance (4½ per cent. in the first year) will be applied to the repayment of an equal amount of debt. The agreement is to remain in force for one year, with two renewals, each for a further year—that is for three years in all. This period brings the new agreement into line with the agreements recently concluded with the other creditors of Hungary. It is clear that Hungary is taking advantage of her progressive recovery, both internally and in respect of her external trade, to discharge her outstanding obligations to the best of her ability, and it is particularly satisfactory that the standstill creditors are relieved of any further exchange loss. More generally it shows that with the progress of the world trade revival the problem of international indebtedness is becoming more tractable, and that granted good-will on both sides it is not beyond reasonable solution.

* * *

China and American Gold.—The United States authorities are evidently anxious to find some fruitful use for their milliard of sterilised gold. An agreement was reached on June 9th with China which is a further welcome proof of their interest in the stabilisation of currencies. China is to sell silver to the United States under the terms of the Silver Purchase Act of 1934 and to receive in return earmarked gold direct from the inactive gold account. This accession of gold to China will of course have a most important effect upon Chinese Central Bank reserves. The new machinery is likely to be more effective than that of the agreement of May, 1936, under which the United States Treasury purchased the silver direct, leaving China to convert their dollar balances into gold or not as she wished. The prices at which this barter transaction is to take place are not stated, nor is there any estimate of the sum involved. But it is said to be large enough to have some effect upon the world prices of gold and silver, and Mr Kung has warned speculators. On the other hand, Mr Morgenthau has announced that the Treasury's policy of buying bills to the amount of any gold outflow will not apply in the present case, on the grounds that the sums involved are small. But since silver certificates are to be issued to the value of the silver purchases, it follows that if Mr Morgenthau's interpretation of the term small amounts is generous, the new agreement will lead to an expansion of American money supplies in relation to the stock of precious metals. In effect the American Treasury is carrying out a policy of diversifying its reserves, and of handing over to others who are in a difficult position some of that part of its gold which is useless to itself. It is a far-sighted and generous

plan, and a rumour, which has not been definitely denied, that it will be applied to Brazil also suggests that more may be heard of it in coming months.

* * *

The Money Market.—Conditions have been quiet this week. Special buying of bills replenished the supply of funds, and there was comparatively little calling by the clearing banks. The market only secured 22 per cent. of last week's Treasury bill allotment, while only £36 millions of bills were actually allotted, the top four millions being cut off the tender. Thus there was no great demand for funds.

	June 24, 1937	July 1, 1937	July 8, 1937	July 15, 1937
	%	%	%	%
Bank rate	2	2	2	2
Clearing bank's deposit rate	½	½–⅝	¼	½
Short loan rate :—				
Clearing banks	½–¾–1*	½–¾–1*	½–¾–1*	½–¾–1
Others	½	½–⅝	½	½
Discount rates :—				
Treasury bills	11/32	½–⅝	½	½
Three months' bank bills	11/16–¾	⅝	11/32–⅝	11/32–⅝

* Loans against Treasury bills and other approved bills and British Government securities within six months of maturity; 1 per cent. Treasury Bonds and other gilt-edged stocks within six months of maturity; and other collateral respectively.

It is believed that less "outside" money is now available, which means that the market has to rely more upon the clearing banks. The reports current in Paris on Tuesday that a sterling credit of £50 millions had been arranged for General Franco are entirely unfounded. Apart from political considerations, no London house would risk its funds in that direction.

* * *

The Bank Return.—There is only a slight drop in the note circulation, and little change may be expected for the forthcoming week. The holiday expansion will then begin, and will probably carry the circulation to over £500 millions. The Proportion of Reserve to liabilities is already unusually low, and so it looks very much as if the Bank will have to take over more gold from the Exchange Equalisation Account.

BANK OF ENGLAND

	July 15, 1936 £ mill.	June 23, 1937 £ mill.	June 30, 1937 £ mill.	July 7, 1937 £ mill.	July 14, 1937 £ mill.

In the banking department inequalities between Treasury bill payments and maturities have raised public deposits by £7.9 millions. To ease the consequent pressure upon bankers' deposits, there has been some special buying of early October Treasury bills. This probably explains the week's increase of £7.4 millions in Government securities.

* * *

The Foreign Exchanges.—The main tendency this week has been the strength of sterling and the weakness of the dollar. From $4.95⅛ on July 8th the dollar depreciated to $4.97⅛ on Tuesday of this week, subsequently recovering to $4.96¾. The Netherlands Bank has also lowered its buying rate for dollars from Fl. 1.81⅞ to Fl. 1.81½. The reasons for these movements are the withdrawal of French balances from New York and more particularly heavy Japanese purchases of sterling out of the dollar proceeds of the big Japanese gold shipments to the United States. The Japanese economic position is beginning to cause some anxiety owing to its inflationary trend and the heay military expenditure. Revertiing to the dollar, there has been on official support and only a moderate commercial demand with no sign of any autumn buying. The free rate for Argentine pesos has also risen from 16.38 to 16.52 pesos to the pound, subsequently recovering to 16.46 pesos. This movement is partly in sympathy with the dollar and partly because of sales by those who had previously bought in expectation of a reduction in the official import rate below 16 pesos. This expectation has not been fulfilled. After the setback of July 8th there has been a moderate demand for French francs at Frs. 128 1/16–⅛, with three months' francs stronger at Frs. 3 discount. The Paris market was closed on Wednesday, and the next day the three months' rate weakened again to Frs. 3⅜ discount. Still it was thought in Paris on Tuesday that the French Exchange Fund had regained some gold.

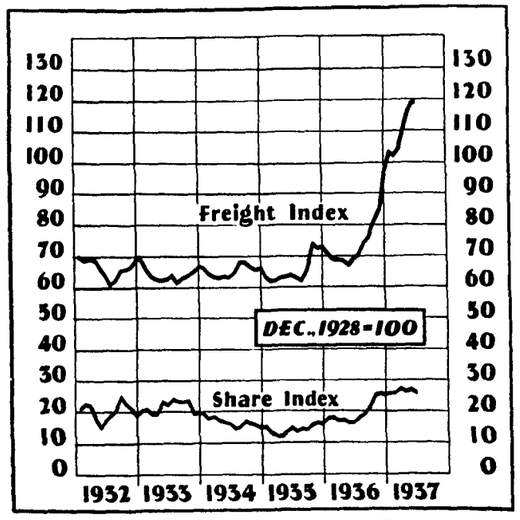
* * *

New Zealand Banking in 1936.—The description of the progress of the National Bank of New Zealand given by Sir Austin Harris at its annual meeting on Monday might go into a text-book as a typical example of banking affairs in a period of recovery. All the items in the balance sheet have moved exactly as they should. Deposit and current accounts have risen very little, the cash reserves have fallen, Treasury bill holdings have risen, and advances have risen; while there has been a big change-over from time to current deposits in the trading banks' accounts, and their advances, too, have increased substantially. At the same time there has been no change in rates of interest on twenty-four month deposits and advances. This model recovery has had, however, its unwelcome aspects for the bank, in that the Government's Primary Products Marketing Act which now controls the export of the main export commodities has lost the bank a great part of its business in British bills. The banks are also defenceless against higher wages and shorter hours. Though for the time being this policy has worked well, as Sir Austin points out, the real test will come when guaranteed prices and high taxation have to be maintained in a falling market.

* * *

Rating of Ship Insurances.—As we show in the Insurance Supplement published with this week's issue of *The Economist*, marine underwriting profits last year were less favourable than in 1935, despite an aggregate increase in marine insurance premium income. It has been clear for some time that heavier claims were an inevitable consequence of the extensive recommissioning of idle tonnage. The cost of effecting repairs has also risen substantially, and is still rising. For these and other reasons marine underwriters in London and Liverpool, including underwriters at Lloyd's, have come together and reached agreement to increase the rates for all insurances, irrespective of flag or policy conditions, but excluding insurances against total loss. A sliding scale has been devised, based on the present tendency to increase insured values in harmony with the increased level of tonnage prices generally. Where the insured value, under a policy, is raised by 15 per cent. or less, the rate charged per £100 will be increased by a minimum of 15 per cent. The percentage rate of increase, however, will decline as the increase in the insured value rises; and when the new insured value is more than 30 per cent. above the oldfi the rate per £100 will be unchanged. A supplementary provisional agreement declares that underwriters shall not negotiate renewals more than three months before the first risk of a contract is due to take effect. This will preclude, for example, the placing of insurances now to take effect in the middle of next year and to run until the middle of 1939. At a time when shipbuilding and repairing costs are rising steeply, underwriters are naturally reluctant to give too great a hostage to fortune. Altogether, the terms of the agreement should strengthen the position of the marine insurance market without inflicting hardship on the shipping industry in a period of expanding and increasingly profitable activity.

THE STOCK EXCHANGE



Shipping Share Prospects

It is well when two sharply divided schools of thought have one thing in common. At present, when some market observers fear that we are near the top of a boom, both sceptics and optimists at least agree that commodity shares, " commodity bonds " and shipping shares may deserve further attention. According to the *Actuaries' Index*, shipping share prices have roughly doubled since 1935, although present prices are still 75 per cent. below the end-1928 level. Compared with freight movements, however, this advance in shipping shares looks moderate indeed. After remaining almost stationary between 1932 and the middle of last year, freight rates have jumped by 75 per cent. during the past twelve months. The accompanying chart of the two movements is indeed instructive for holders of shipping shares.

At this stage, however, freight movements alone give a superficial view of earnings prospects. The case for shipping shares becomes more impressive in view of the virtual disappearance of idle tonnage from British waters, and of the restoration of world trade to something like its pre-depression volume. The spurt in freights during the past year appears, further, to have been linked, not merely with the sharp rise in commodity prices, but also with increased employment of cargo space. The world's mercantile tonnage is 7 per cent. smaller than in 1931, but it is more efficient, and its cargo-space is better filled.

SHIPPING SHARES AND FREIGHT RATES

The Economist Index of Shipping Freights: Actuaries' Index of Shipping Shares. December 1928 = 100

Share yields of 2½ to 3 per cent. are already discounting the fruits of this substantial recovery. But it may be seriously questioned whether the revival of shipping fortunes can be directly translated into terms of distributable earnings. Shipping revenues are rising substantially; but costs are also rising. The wages bill of a typical cargo steamer of 7,000 tons has increased by almost 10 per cent. since March, 1935. This percentage could not properly be applied to, say, motorships or passenger liners, but their wage costs and fueling bills are undoubtedly increasing.

Finally, investors must consider the problem of fleet replacement. Periods of high gross revenues provide both the justification and the means, for building new tonnage. But in view of current pressure on the yards for naval building, orders are more difficult to place than they were some months ago. Moreover, the cost of new cargo tonnage has recently risen phenomenally. According to *Fairplay*, a modern 7,500 ton steamer would have cost £64,000 (£8 12s. per ton deadweight) at the end of 1934. To-day, this type of steamer would cost £100,000, or £13 6s. 8d. per ton. Building costs, therefore, have risen by some 55 per cent. since 1934, and by 28 per cent. during the past six months alone.

These statistics point a dual moral for the investor. The advance in net shipping earnings is now being tempered by rising costs; and dividend policy may be affected, in some cases, by the need for replacing tonnage at costs which are higher than at any time since 1920. For these reasons the most promising shares are likely to be those of companies whose past depreciation policy has been generous ; whose distribution policy has been prudent, and whose balance sheet is well decked with net liquid assets. Such shares, however, are not easy to find. Modest equity earnings are still the rule in the shipping industry, and (with certain exceptions) net liquid assets are rarely large in relation to total capital. The position of selected shipping concerns, judged by these criteria, is set out in the following table.

	1933	1934	1935	1936	Ord. Shares Price	Ord. Shares Yield

* Price and yield for Elder Dempster Lines Holdings ordinary. † Assuming normal preference requirements. ‡ To April 30th of following year.

Viewed from the standpoint of surplus liquid assets, Peninsular and Oriental easily heads the list. But the recent accounting changes of this well-managed concern raise interesting questions regarding depreciation provision. The regular allocations to the fund have served the company well in the past and are to be continued. Last year, however, the company employed resources from subsidiary concerns to reduce the book value of the fleet from £27.1 millions to £22.6 millions and this procedure will reduce the company's depreciation charge. The function of shipping depreciation allowances, however, is not to satisfy some vague canon of sound finance, but to provide the actual wherewithal from current profits to replace old tonnage. If the fleet can be kept fully up to date, the relief afforded by these accounting changes will be entirely compatible with the maintenance of long-run earning power. But those investors who endow P. and O. deferred stock with dividend possibilities on the pre-depression scale of 12 per cent. tax free might well re-read the chairman's last speech, which frankly scouted such notions. Yet the present price anticipates a distribution of twice last year's rate.

Furness Withy has recently competed with P. and O. deferred for the investor's favour, but this week's dividend announcement has put the market back on its heels. The uninformative nature of the Furness Withy accounts belongs to a tradition which is fortunately passing. Out of a balance sheet total of £11¾ millions, over half is represented by interests in subsidiaries, and no inkling is provided regarding their distribution policy. But the disclosed profits and depreciation record of this concern is instructive:—

(Years to April 30th)	Profit	Depreciation	Earned for Ordinary
	£	£	£
1932	269,672	150,000	64,359
1933	379,674*	200,000	123,424
1934	378,165*	300,000	20,978
1935	395,083*	300,000	36,958
1936	415,310	350,000	7,654
1937	544,744	350,000	138,025

* Including transfers of approximately £100,000 from reserves.

The balance sheet, however, provides one obvious lesson, so far as it lends itself to interpretation. That lesson is the building up of massive internal strength. The fleet was already valued substantially below cost less 5 per cent. depreciation last year. It has since been written down by £314,000, while investments in subsidiaries, less depreciation, are £281,000 lower. During the past decade, in fact, as much as £2½ millions has been provided for depreciation by the parent concern. The market appreciates high earnings, but loves high dividends even better. A 3 per cent. ordinary dividend may be good shipping finance, but it leaves the optimists hungry for more.

The mixed interests of the Furness Withy group provide one of the widest " spreads " throughout the shipping list. These interests have recently been increased by a substantial block of Royal Mail Lines ordinary. It is possible that a sum of £1¼ millions has been involved in this purchase, and the market reads the transaction as a significant bull pointer for Royal Mail Lines shares, which have risen from 26s. when they were introduced to the market in March, 1937, to 28s. 6d. The transaction, perhaps, represents a somewhat unusual departure for Furness Withy, since the interests acquired do not confer control while, under a common chairman, the relations between the respective fleets in the South American trade have for some time been intimate. At first sight, therefore, the latest Furness Withy acquisition appears to strengthen an already close liaison, though not to a decisive point. A yield of little over 3 per cent. on Royal Mail Lines suggests that a dividend of say, 7 per cent. or more is anticipated despite the cautious passage in the chairman's speech. It should, in fact, be comfortably covered by earnings, which amounted to 10 per cent. for 1936. Another newcomer—Elder Dempster Lines Holdings—also deserves comment. With the rise in West African Conference rates, the outlook for the operating company is believed to be promising. Substantial depreciation is provided against the operating company's fleet, and a progressive dividend policy could be afforded under existing circumstances. The conversion rights of the 3 per cent. income debenture stock of the holding company may restrain the ordinary shares, which otherwise should have favourable prospects.

We pass, finally, to consider the position of Union-Castle, which involves consideration, in turn, of the two Realisation Companies. In our analyses of the break-up possibilities of R.M. and E.D. Realisation the illogicality of the substantial premium of R.M. over E.D. was always stressed, and the two shares stand to-day at the same price. The main shipping assets of the two concerns are now realised, while the distribution in specie of Union-Castle ordinary stock will probably be made fairly soon. The directors of Union-Castle, in turn, have indicated that the 6 per cent. preference dividend will be paid up to date this year. What are the indications for the ordinary?

The most important point, undoubtedly, is the finance of the company's substantial programme for new building and re-engining. Financial arrangements have been made, but they will involve heavy repayments in future years, " which may have to be dealt with on a more permanent basis." This suggests that distribution policy is likely to be cautious when the preference arrears are cleared off. A revision of our R.M. and E.D. analyses suggests that the market is valuing Union-Castle ordinary stock between 24s. and 25s. 6d. The recent repayment of R.M. income debenture stock leaves £701,250 outstanding, to be repaid at 10 per cent. premium—presumably as the Royal Mail Lines sale is completed. Apart from the Anglo-Foreign properties holding, the remaining assets are either of relatively small dimensions, or may require considerable time to realise. After repaying the income debenture stock, some £675,000 (plus or minus £50,000) may eventually be available for the shareholders, together with their share of Union-Castle ordinary. These calculations attribute 25s. 6d. for £1 of Union-Castle ordinary stock.

For E.D. Realisation, the position is more complicated. There are no debentures outstanding, but the remaining assets are of difficult shape to realise, and correspondingly difficult to estimate. In addition to cash holdings of £285,000, a value of say £400,000 to £500,000 may be suggested, but the figure is subject to contingencies in respect of such assets as Atlantic Coaling, Elder Dempster (Grand Canary) and Agence Maritime. Assuming, however, that these estimates prove near the fact, the Union Castle ordinary stock would bear an attributed value of 24s. to 25s. 6d. for holders of E.D. Realisation. Clearly, on these estimates, there is little to choose between the two shares at the present price. A time may be approaching, however, when both companies, having performed their main task with admirable expedition and economy, may have to consider the desirability of liquidation. Meanwhile the present price of 48s. 9d. for E.D. and R.M. inferentially values Union-Castle ordinary at a figure which may perhaps be described as a good seller's price.

Investment Notes

Hope Restrained.—At the end of last week the Stock Exchange appeared to have shed its fears and to be preparing for at least a major secondary revival, which might conceivably extend over the summer and well into the autumn. The expected increase of business, however, was not forthcoming this week on any striking scale. Industrial and commodity shares have made negligible progress (the *Financial News* ordinary share index stood at 110.4 on June 15th, against 111.7 on July 9). Though the maintenance of a fairly firm sentiment itself affords reassuring testimony to market conditions in a week when the international political situation has still hung in the balance, faith without works—by way of greatly increased new business—is barren from the viewpoint of the average member of the " House." These considerations, however, do not apply to an important branch of Stock Exchange activity which has lately had more than its fair share of hardship. Demand for gilt-edged stocks has markedly revived, and many new issues, which were largely left with underwriters a short time ago, have now become " buyers only." Large institutional investors have been taking up National Defence Bonds. The L.C.C. scrip, which slumped to an immediate discount, is now at a premium. The West Riding and Leeds scrips have been fully absorbed; and the " stag " has reappeared and secured a satisfying meal from offers like the Cape Town issue.

Buying of high-grade fixed interest stocks has been the result of what is technically called "good investment demand." Institutional investors, including the banks, who, in any case, cannot hold off the market indefinitely, appear to have decided that present levels are neither unprofitable nor likely to look dear, say, three months hence. The current transfer of French money from New York to London, again, involves repercussions extending as far as the gilt-edged market. It is improbable, however, that the buying movement would survive any really stiff increase of prices, or, on the other hand, that the market would readily absorb any new issue of really large amount at present price levels. Perhaps the best commentary on the situation is the remark, made on the Stock Exchange this week, that the Blackpool Corporation, which, according to report, obtained applications of £9½ millions for an offer of £500,000 of 3½ per cent. stock at 100½, would probably have secured £500,000 had it issued £9½ millions.

* * *

French Taxation and Securities. — The Paris Bourse has taken its taxation medicine manfully, although it still questions the wisdom of the 100 per cent. tax on speculative profits arising from the latest depreciation of the franc. For the details of the new taxation schedules and their repercussions on the French economic outlook, readers may consult the report from our Paris correspondent on page 129 and a leading article on page 135. The Bourse has shown a better tendency this week, although business remains quiet. For the time being, at any rate, it is clear that refugee holdings of stocks in New York and London escape the tax-gatherer's net. But the recording of coupon transactions by the banks together with the return of dividends received by each client to the Revenue clearly reduces the attractions of the Frenchman's favourite bearer securities. Perhaps the recovery in other centres is helping the Bourse to some extent, for a moderate cheerfulness in internationals casts a warmer hue on domestic industrials, although rentes remain dull. The Bourse's next hurdle may be the nationalisation of the railways, and the extinction of debts due to the State. It appears that control through share interests is envisaged, leaving autonomy in railway administration. Present indications suggest that the status of the railway bonds known to the London market will not, in fact, be greatly changed.

* * *

Pre-Natal Prospectus Care.—A well-informed reader welcomes the suggestion, put forward in a leading article in last week's *Economist*, that a code defining sound conventional practice in prospectus ethics, as distinct from the minimum requirements of the law, would serve a useful practical purpose. This correspondent points out, however, that a body already in existence exercises some, at least, of the functions of *The Economist's* hypothetical Portland Club Committee in the new issue market. The hope of success for any sizable prospectus issue is slender unless its sponsors can offer a reasonable prospect of obtaining subsequent permission to deal in the shares on the Stock Exchange. Wise brokers to an issue, therefore, nowadays take good care to go over the terms of the prospectus with Stock Exchange officials, before finally committing themselves or their clients. Such preliminary discussions are officially unofficial, but the Stock Exchange Committee strongly encourages them, for wholly praiseworthy reasons. It is well known that a standard of physical fitness is adopted in these preliminary medical examinations which, in certain important particulars, is more stringent than that of the Companies Act; and it is known, further, that consequential changes are frequently made which redound to the advantage of subsequent subscribers. The Committee's requirements can be progressively raised, as circumstances and public opinion demand; and they can be applied without fuss, noisy publicity, or the law's inevitable delay. In the last resort, however, the Committee can do no more than separate the sheep from the goats. It is no part of their duty to indicate gradations of merit among applicants who satisfy their minimum requirements. The Stock Exchange, working along these lines, may play an invaluable part in raising contemporary standards in the new issue market. But even greater progress would be achieved if powerful investment opinion could be mobilised so as to confer substantial favour on candidates who did not merely pass their finals, but were placed in the honours list.

* * *

News for the Bondholder.—This week's news for the bondholder is of that slightly less disagreeable variety which brings not, alas, full payments, but at least an agreed composition of claims. It is good news indeed that the Greek Government is to send a financial delegation armed with full powers to negotiate a final settlement of the debt service. From the city of Danzig come proposals concerning the service on the 7 per cent. loan of 1925 and the 6½ per cent. tobacco loan of 1927. As from July 1st it is proposed that the loan services should be reduced and sinking fund periods extended. The 7 per cent. loan is to receive 5 per cent. with final redemption extended by five years to 1950, while the 6½ per cent. loan is to receive 4½ per cent. with final redemption in 1952 instead of 1947. These modifications are to be accompanied by similar adjustments for the 7 per cent. tramway loan of 1928 and the 6 per cent. match monopoly loan of 1930. The League Loans Committee wisely recommend the acceptance of this composition—pressure for full service until actual default occurred would obviously be a senseless alternative. From Canada, also, comes relatively good news. The city of Calgary proposes a scheme to continue interest payments on all outstanding issues at present rates up to their respective redemption dates, and to continue payments thereafter at 4½ per cent. until 1962. Since this offer apparently requires positive acceptance by 60 per cent. of the bondholders interested, it would obviously have been convenient to appoint a London representative for the receipt of acceptances, for at present the debenture holders are under the disability of communicating with Toronto. This offer recognises the creditors' rights in full, but the two principal issues now outstanding are finally redeemable in 1942 and 1944, carrying interest at 4½ per cent. and 5 per cent. respectively. The proposals thus extend the life of the two loans on ostensibly favourable conditions, for recent business has been around 80. As a consideration for full present payment this price appears high. An argument may be found for acceptance of the terms in present circumstances, but they form a highly dubious precedent.

* * *

Company Registrations.—As a general indicator of business enterprise, the trend of company registrations is significant. The compilation of Messrs Jordan and Sons during the first six months of the year show that 6,780 companies, both public and private, were registered with a capital of £70,041,339, compared with 7,046 companies with a capital of £80,523,604 for the corresponding period of 1936. These amounts are often substantially increased after incorporation, and bear no necessary relation to the new investment actual involved. The computers record a marked diminution in new registrations "at the end of April and throughout May"—a fall which is laid at the door of N.D.C. Old Style. Since the upward trend was renewed in June, however, enterprise was only temporarily checked. Among the unusual features of the half-year was the registration of "International Council for Non-Intervention in Spain"—a company limited by guarantee which has carried out the executive work of the international control scheme. Two other concerns represent the apotheosis of share capital practice, for their £100 capitals are divided into 96,000 shares of one farthing and 24,000 shares of one penny, respectively.

Company Notes

Palestine Investments. — The report of the Palestine Royal Commission does not refer directly to the effect of the partition proposals on Palestine industrial investments held in this country. Palestine's public debt is limited to £4,475,000 5 per cent. stock, which was issued in 1927 at 100½ under Treasury guarantee. This stock is redeemable between 1942 and 1967 and now stands at 111. The partitions of the country will involve a division of the existing debt between the Arab and Jewish States, and a Finance Commission is to be entrusted with the ascertainment of the proper proportions. So far as the British holder is concerned, however, this is an academic exercise, for under Treasury guarantee the stock will fall for redemption at its earliest date if present interest levels are maintained, and it now ranks as a gilt-edged "short." Among the industrial issues (leaving aside such interests as Barclays Bank D.C. and O., which has branches in Palestine, and the Iraq Petroleum pipeline, in which Anglo-Iranian has a 23¾ per cent. interest) the consequences of the report do not appear to be far-reaching. These shares have fallen considerably as a result of last year's disturbances, as the following table shows:—

	Two Latest Years		Ord. Div.		Share Prices		Yield %
	Earned for Ord.				High, 1936	Present	
Anglo Palestine Bank	41·4†	8·0†	8†	8†	47/6	33/9	£ s. d. 4 14 10†
Palestine Electric ...	10·2†	10·3†	7½†	7½†	57/6	37/6*	4 0 0†
Jerusalem Electric...	7·8	10·3	5*	6	44/3	26/3*	4 11 5
Palestine Potash ...	...	...	...	...	18/6	12/–	Nil

* On smaller capital. † Tax free.

Jerusalem Electric, which has again increased its dividend and profits for 1936-37, is situated entirely in the mandatory *enclave*. Anglo-Palestine Bank appears to have its main branches in the proposed territory of the Jewish State or in the mandated corridor. Palestine Electric has an important power station at the south of Lake Tiberias, which will be on the proposed new boundary of the Jewish State, but its high tension network running westwards to Haifa and south to Tel-Aviv apparently lies largely within the boundaries of the new state. There is, therefore, little political or administrative problem facing these concerns. Palestine Potash, however, works on the Dead Sea concession, and has made moderate progress to the point of covering its preference requirements. Since this territory will be Arab, questions of Customs on any requirements imported through Jewish ports may arise. The company is also obliged to pay royalty and a share of profits to the Governments of Palestine and Trans-Jordan. The Royal Commission lays down the general principle that industrial concessions granted by the Palestine Government should be taken over by the Jewish and Arab States under guarantees.

* * *

Handley Page Progress—As the maturing of successful new Handley Page types coincided with the first stages of the R.A.F. expansion programme, it is not surprising that gross profits should have risen from a low level of £38,463 in 1933 to £272,304 last year. This profit compares with £195,736 in 1935, but that figure included a credit of unspecified amount from realisation of investments. A 50 per cent. dividend is declared on the ordinary stock, which was increased last year to give preference shareholders a direct holding in the equity in exchange for their former participation rights. Earnings for 1936, as shown below, are equivalent to 72 per cent. for the ordinary.

	Years to December 31, 1934	1935	1936
	£	£	£
Gross income	135,265	195,736	272,304
Expenses and tax	87,187	112,886	163,315
Depreciation	2,738	4,207	5,294
Fixed preference dividend	19,914	19,914	19,914
Further preference dividend	9,957 (5%)	19,914 (10%)	*
Ordinary dividend	9,957	19,914	62,232
Earned % for Ord.	*173·7*	*424·2*	*72·0*
Ord. div. %	132·76	265·53	50
To reserve	Nil	Nil	25,000
Carry forward	5,705	23,854	16,888

* The preference holders' participation rights were commuted in 1936. Ordinary earnings then amounted to £82,765 for 1936.

The company works on fixed capital so surprisingly small (£150,059 for land, buildings, etc., and £42,811 for plant, factory fixtures and motors) that the £5,294 for depreciation is probably adequate on normal scales. But the ultimate real capital of an aircraft manufacturer is his aircraft designs, against which it is prudent to set aside something in the nature of depreciation when profits are good. Perhaps the £25,000 put to general reserves should be regarded in this light. With £240,429 in gilt-edged securities, the company is strongly financed for its present scale of operations. Handley Page is an established concern with investment merit far above certain newcomers in the aircraft group, but it produces a relatively narrow range of types and must therefore be classed as more speculative than, say, Bristol Aeroplane, whose results are reviewed in the following Note. The ordinary shares stand at 50s. to yield 5 per cent.

* * *

Bristol Aeroplane Expansion.—As manufacturers of military aircraft and of aero-engines suitable either for military or heavy commercial work, the Bristol Aeroplane Company is assured of large profits on the present scale Air Force expansion. Trading profits, after depreciation, for 1936 thus amount to £387,756, against £300,366 for the previous year. This increase is creditable, but it does not suggest that profit margins are

BREWERY UNIT TRUST

Trustees:
MIDLAND BANK EXECUTOR & TRUSTEE CO., LTD

● Brewery Units make it possible for the first time for both small and large investors to acquire a well-spread interest in brewery undertakings.

● Brewery dividends are more consistent over periods of years than those of almost any other industry and rank among the safest shares in the industrial market.

● The fact that Brewery and Distillery Shares are tightly held and in many cases difficult to obtain, makes the facilities offered by the Brewery Unit Trust of real value to the private investor.

● The Brewery Unit Trust has been formed in consonance with the Board of Trade Report on Unit Trusts.

● Price of Brewery Units 17/6d., as at 15/7/37. Estimated yield at this price based on cash dividends alone is 4½%.

● Comprehensive booklet about the Brewery Unit Trust which forms the basis of all transactions, is obtainable from any Bank or Stockbroker, or direct from the Managers.

LONDON MANAGEMENT SECURITIES LTD

excessive. In some respects, it is less remarkable than the steadiness of profits between 1930 and 1933, when the highest profits (£141,950 in 1930) exceeded the lowest (£117,346 in 1932) by a relatively small amount. The company has, in fact, maintained its position both for engines and airframes with remarkable consistency in an industry where fortunes fluctuate with the varying success of new types. Whether the present level of profits can be maintained after the R.A.F. expansion has been completed is another question. But the chairman's speech last year showed that the board is alive to its importance and is developing foreign connections to supersede the present abnormal R.A.F. demand. The profits for the two years of the company's public career are shown below:—

	1935	1936
	£	£
Total profit after depreciation ...	302,627	388,400
Tax ...	65,000	80,000
Preference dividend ...	23,250	22,875
Earned for ordinary ...	*209,877*	*272,213*
Ordinary dividend ...	103,500	203,625
Earned % ...	*43·6*	*30·1*
Paid % ...	22½	22½
To reserve ...	100,000	100,395
Carried forward ...	40,233	8,426

Despite the doubling of the capital during the year, the 22½ per cent. dividend is maintained with a comfortable margin, while, in addition to £100,395 transferred from profit and loss, general reserve receives £899,605 from the premium on the issue of June, 1936, bringing the total up to £1,100,000. Of the proceeds of the issue, nearly £700,000 net, after depreciation, has gone to plant extension, and just over £700,000 has been absorbed by extra stock and work in progress. Though surplus liquid assets amount to £1,197,000 (against £311,000 last year) the cash holding is only £210,103. That would be ample if the business were stationary, but if expansion continues, or if rising prices require larger sums for working capital, a further issue of moderate size would not be out of the question. At 49s. 6d., cum the final 15 per cent. dividend, the shares yield £4 13s. Though capable of some further recovery, the price is unlikely to approach this year's high of 64s. 6d. until the post-expansion prospect is clearer.

* * *

Richard Thomas's Future.—Sir William Firth's speech at the Richard Thomas meeting on Thursday was, as usual, full of important information. The company produced very full accounts, with consolidated balance-sheet and profit-and-loss statement, but the rapidity of the group's development and the magnitude of its scale of operations have suggested to the market a number of questions to which only Sir William could give a reply. First and foremost, Sir William dealt with the developments of Ebbw Vale and Redbourn. Technically, both are proceeding satisfactorily. The strip mill—about the technical merits of which Sir William was as convinced as ever, a conviction supported by the increasing adoption of the "Armco" Mills in the United States—will be finished in June, 1938, and the Ebbw Vale blast furnaces should both be in production in six months' time. The cost of the programme will exceed the prospectus estimates of £8,500,000 by a margin of £700,000-800,000—a margin due in part to extra construction and in part to higher construction costs. But Sir William is confident that the cost will not be beyond the company's resources. It appears that some £2,000,000 will be required over and above the proceeds of the issues of capital, but the group is at present so prosperous that Sir William hopes to be able to finance the work without new recourse to the capital market. Secondly, Sir William is optimistic about the group's earning power. About one-half of the group's profit comes from sheets and tinplates—the rest comes from coal, steel (at Redbourn and elsewhere) and the miscellaneous investments, which are very profitable (investments as a whole yield over 21 per cent. on the book value). Now, the tinplate and sheet mills are working at 78 per cent. of capacity, compared with 62 per cent. a year ago, and the export figures show the rapid improvement which is taking place. When the strip mill comes into operation, the output from existing mills will be reduced, but Sir William announced that he intends to "operate our existing plant as fully as any similar plant owned by competitors is operated"—an intention which would involve a fall only to 65 per cent. of capacity if demand were maintained at its present level. Moreover, Sir William pointed out that his company's control of the "Armco" patents in this country protected the group against competition from other British strip mills—an interesting and rather typical commentary upon the projects which have been attributed to John Summers and Company, the Shotton sheet-makers. On the whole, therefore, it was an optimistic speech. Time will show whether Sir William's optimism is justified, but certainly the group's profits are now running far ahead of prospectus estimates, and the medium-term outlook for the shares is promising.

* * *

Powell Duffryn Meeting.—It is remarkable to find a South Wales colliery concern straining its available resources to meet current demand, and unable to obtain a sufficient supply of skilled labour. Such striking points from Mr E. L. Hann's speech to Powell Duffryn Associated Collieries suggest that investors may have to revise their ideas about the depressed areas. But lest ordinary stockholders of Powell Duffryn should rashly assume that roses now grow where only thistles thrived, the chairman was at pains to point out that the group's improvement was of essentially recent growth. And since it comes at a relatively advanced stage of recovery, the undertaking is unable to augment its equipment so rapidly or so cheaply. But the merger of the Powell Duffryn Welsh Associated pits is now in a position to show its benefits on a larger scale—nor, indeed, have these advantages been exhausted. Consequently, the chairman was able to express himself more optimistically than on any occasion in recent years. The labour settlement has removed a handicap which has frequently been felt with special force in South Wales. The main problem, however, still lies before the group—that of regaining lost export trade, and indeed of maintaining what is left, in a context of subsidised exports. It seems probable, however, that a general recovery in export trade must in some measure be shared by the South Wales coal exporter, and in the meantime he has the advantage of an expanding home market in which sales are now controlled. Powell Duffryn ordinary, in short, seem reasonably valued at 24s. 9d. on the basis of a 7 per cent. dividend.

* * *

Anglo-Dutch Plantations of Java.—An impressive increase in profits is reported by this important plantations concern, and its £1 ordinary stock units have risen from 24s. last year to the present price of 38s. 6d. with good reason. The dividend is increased from 4 per cent. to 7 per cent., but the profits of the Dutch operating company are even more striking, for they show an increase from 1.5 million florins to 4.1 millions. Translated into sterling terms, the Dutch company has provided £538,593 (from which £206,879 has been deducted for depreciation and other provisions) compared with £182,516 for the previous year. The parent company's revenue expansion is shown below:—

	1934	1935	1936
	£	£	£
Total receipts ...	167,524	152,244	355,937
Fees and charges ...	16,228	15,416	16,643
Debenture interest ...	49,268	44,121	41,910
Tax reserve ...	...	...	20,000
Pensions fund ...	...	...	10,000
Ordinary stock:—			
Earned ...	*102,028*	*92,707*	*267,384*
Paid ...	98,300	100,000	210,000
Earned (%) ...	*4·2*	*3·8*	*9·6*
Paid (%) ...	4	4	7
Carried forward ...	88,067	80,774	88,159†

† After transferring £50,000 to general reserve.

Analysis of the report shows that sisal was the most profitable crop, with rubber placed second. Tea ranked third as a producer of profits but provided a much smaller increase in revenues than tapioca. The past year's progress, therefore, is associated to a considerable extent with the success of two of the less familiar crops. The distribution policy of the group appears to have taken due account of the fact that, but for the advance in sisal revenues, the past year's substantial depreciation provisions would not have been possible. The current year's profits should still reflect good sisal profits, but the rubber plantations should provide a bigger proportion towards gross revenues. The company's financial position is strong, and the prospects of a further substantial increase in dividend are evidently not being ignored, for the ordinary stock yields no more than £3 13s. per cent.

* * *

Associated Tin Mines of Nigeria. — During 1936 this company—by far the largest producer in Nigeria—obtained a gross income of £495,220, against £379,930 in 1935, while the accounts were credited with £19,050 recovered from advances previously written off as compared with less than £200. On the other hand, expenses under almost every heading were higher, while £50,000 was set aside for income tax, against only £15,000. No further sums, however, were written off investments, although £15,000 was required in the previous year. An increase of 2½ per cent. to 20 per cent. in the total dividend total was covered by available profits. On this basis, the 5s. shares at the current quotation of 12s. 9d. yield about 8 per cent. A decrease of some 2,200 tons in the ore reserves is attributed chiefly to deletions of isolated blocks. Actually it is considered that much of the ground thus rejected will be workable when the drag line comes into operation. In any case, the total of 48,450 tons represents some sixteen years' supply at the 1936 rate of output. Reference is made on a later page to the impressive dividends and profits announced by a number of Malayan producers this week.

* * *

Other Company Results.—Reports from industrial companies are showing signs of a seasonal decline, and the total of fifty-four additional companies whose reports are analysed on page 158 includes a number of rubber results. Among the industrial reports are those of *Tankers, British Plaster Board, Hecht Levis and Kahn,* and *Steel Barrel Scammells.* The results are discussed under the heading "Shorter Company Comments" on page 157.

* * *

Company Meetings of the Week.—Reports of this week's company meetings will be found on page 149 onwards. The speeches at the Powell Duffryn and Richard Thomas meetings are discussed on the preceding page. At the Millar's Timber and Trading Company meeting, Mr James White discussed the well distributed increase of the company's trade and the important effect of the Australian prosperity on the company's fortunes. Mr Sandford Poole discussed the reasons for setting up a dividend equalisation account at the Trustees' Corporation meeting. At the South African Breweries meeting, Mr Stroyan declared that a recent inspection of the South African business had left him much impressed with its recent development and with the efficiency of the Union Government. Lord Samuel gave a detailed account of the progress of Palestine Electric Corporation on Thursday. He disclosed that a further issue of capital was contemplated, and that the Reading power house at Tel-Aviv should be in operation early next year. The chairman also gave a provisional viewpoint regarding the effects of the Royal Commission's findings on the undertaking.

THE WEEK IN THE MARKETS

THE STOCK EXCHANGE

SETTLING DAYS

TICKET: JULY 20 ACCOUNT: JULY 22

THE second week of the account is proving much less impressive than the first—a fact which is conveniently, and probably truthfully, attributed to the critical calm in the Spanish situation. The tone is good, but there is too little business to prevent last week's favourites from shedding a few pence of their gains each day. Apart from active dealings in the new corporation scrips, there were but few exceptions to the general indifference of the market.

Gilt-edged obtained a certain amount of support at first, with War Loan and 3½ per cent. Conversion fractionally higher. This improvement was continued on Tuesday but by mid-week the market appeared to have lost its steam. But National Defence Bonds rose ⅛—the first movement in a week—while Funding 2¾ per cent. were suddenly in good demand. In the corporation market, the L.C.C. scrip advanced further to ⅞ premium, while the Cape Town stock at one time reached 1¼ premium before closing on Wednesday at ⅞ premium.

War clouds over Peking depressed both Chinese and Japanese issues. The Chinese railway issues were among the worst victims, with falls of up to 3½ points on Tuesday. A further fall in mid-week was arrested by premature reports that troops might be withdrawn. Greek issues were stimulated by anticipations of the forthcoming debt negotiations, but South American issues generally ruled dull.

Home rails were dull at the beginning of the week, and relapsed into a dividend waiting mood, uninspired by moderately good traffic returns. London Transport "C" stock provided the only feature with a partial recovery after its recent falls. Argentine issues registered featureless declines, both in the ordinaries and prior charges.

The industrial market was quiet throughout the week, and while buyers supported the leading issues at times, the general trend was towards slightly lower levels. The revival in Wall Street stimulated the international section. Cable and Wireless were quoted in the new form, with the ordinary opening at 84, and closing at 82 in mid-week. Last week's higher prices for steel shares were not maintained, but among coal issues Wm. Cory resisted the fall for a time. Motor shares remained quiet, recording small falls, while aircraft shares were similarly uncertain in their movements. The Bristol and Handley Page reports (discussed on page 141) were of no assistance to the shares.

Bovril deferred improved on the resumption of interim dividends, but International Tea were affected by the frank explanation of the recent fall in profits at this week's meeting. Scribbans, too, were a weak feature until the reduced dividend proved better than expected. Moderate support was accorded to brewery shares at first, Guinness rising in anticipation of the dividend, while provincial support was reported for other issues. Distillers, however, led a mid-week decline. Tobacco shares were uninteresting but steady. Shipping shares at first received moderate support, but lost a little ground later. Furness Withy fell on the dividend which, as explained on page 138, was hardly up to the market's expectations. Among the miscellaneous industrials, changes were rarely of moment. Apart from a sharp rise in Consolidated Signal and some intermittent support for building material shares, prices were generally lower.

The Distinctive System

of

The Scottish Provident Institution

Under *The Distinctive System* the premiums are so moderate that, at early and middle ages, the annual sum charged elsewhere for a Whole Life Assurance of £1,000, with profits, will here secure from the first as much as £1,300 or thereby with right to share in the Surplus.

HEAD OFFICE 6 St. Andrew Square, EDINBURGH

FUNDS EXCEED £24,000,000

In the oil market business has been extremely restricted. Prices tended downwards, and even when the non-intervention crisis receded, there was little sign of recovery. On Tuesday, indeed, Shells were marked up ¼, but they fell again later. Excellent American consumption figures have passed unnoticed.

Rubber shares told the same story. The commodity price proves unresilient, and exports seem likely to fulfil quota requirements. In the circumstances, complete inactivity and stationary prices are natural. Tea shares, by contrast, seem almost prosperous. The public have been showing quite considerable interest, the turnover, though much smaller than a few weeks ago is not to be despised, and prices have generally moved up. The chief gains have been shown by Indian shares.

In the Kaffir market the pervasive inertia has again been in evidence. Prices have fallen all round, particularly those of Rand Mines and Anglo-American. Dealers were driven to amusing themselves on Tuesday by doing a vast business in a well-named but fictitious share called Rocks, but on Wednesday there was not even a hoax to play with. Copper shares show much the same experience. There was some business on Monday, and a few quotations rose, but Rhokanas led a decline later. Base metals have been inactive with a few sporadic movements. The only bright spot in this section has been the rise in tin shares, the drought in Malaya leading, curiously enough, to optimism about the future earnings of Malayan concerns. Despite professional profit taking many prices moved up through public buying, and Siamese were especially favoured with a rise of 3s. between Monday and Wednesday.

NEW YORK STOCK EXCHANGE

OPERATORS on Wall Street retained their new-found confidence this week, and prices have been very well held after a substantial rise on Monday. Various reasons are given for the change in attitude from the pessimism which had prevailed for so many months. Wall Street seems now to be erecting its hopes for recovery on the defeats of others; defeat for Mr. Lewis in his battle with the independent steel companies, and a possible defeat for the President in his battle to get his Supreme Court proposals through Congress. So long as they win their campaigns both the President and Mr. Lewis can afford to lose single battles, and Wall Street would be rash to rejoice too soon merely for this reason. Fortunately for the investor in American securities, there are much more substantial reasons for anticipating a reasonably long life for the present recovery movement on Wall Street. The pressure of economic recovery cannot for ever be ignored, and there are signs that the summer industrial recession may be neither as marked nor as long as had been expected. At the beginning of the week steels, oils and a variety of industrial issues were in the lead, and the expectation of a bumper wheat crop at excellent prices for farmers encouraged mail order and agricultural implement stocks. Subsequently there was a swing between rapid improvement and profit-taking, but the tone remains firm to strong. Electricity output for the week ending July 10th was 7·2 per cent. higher than for the corresponding week of last year, and steel mill activity has almost completely recovered from the effects both of strikes and of holidays.

CAPITAL ISSUES

THIS week's feature in the new issue market is the revival of activity in the corporation loan market, to which we refer on page 139. The week opened with the biggest "stag" of the year in the fixed interest market, in the issue of *Cape Town* 3½ per cent. stock redeemable 1957 at 98. This stock, cheaper by 2½ points and five years' life than the *Blackpool* issue was eagerly taken up by investors not requiring the cachet of trustee status, although with a twenty-year single date it falls among the "medium-longs." The results of the Blackpool issue were not known as we went to press, but market report suggested a vast over-subscription. Recent corporation scrips are now fully taken up, and the absorptive powers of the market are not likely to be tested severely by the next issues in the queue, provided that they are maintained at moderate size, and the present terms are observed. Success has also attended the *Grimsby, Cleethorpes and District Water Board* issue of 3½ per cent. stock 1952–62 at 99. This is a new Board which acquires several water undertakings in its district. It should enjoy the excellent credit of other water authorities known to the investor. Industrial issues to the public are limited to the 5 per cent. £1 participating preferred ordinary shares of *Sir Lindsay Parkinson* at par. The net assets acquired by this contracting concern are valued at £139,724, and are purchased for £139,824 in loan stock, which is to be repaid from the proceeds of the issue, and £199,900 in deferred ordinary capital. The profits record of the company during the past decade is of somewhat unusual pattern, for peak profits were earned during the depression, and earnings have fallen considerably since 1933. On the directors' estimate of profits, a first dividend of 5 per cent. per annum and participation at the rate of 2½ per cent. per annum should be made in respect of the second half of the current year. If profits average £70,000 (the actual level for 1936) the participation rights should be valuable. But this must be accounted a speculative share, subject to large-scale swings in contracting activity and profits. Statements have been published this week on behalf of *National Industrial Credit Corporation* (a South African concern in which shareholders of Mercantile Credit Company are offered participation), *Jamaica Sugar Estates* (giving particulars of an issue of debenture stock) and *Talliar Estates*.

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields of fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

COMPANY MEETINGS

RICHARD THOMAS AND COMPANY, LIMITED

FURTHER DEVELOPMENTS

SIR WILLIAM FIRTH'S SPEECH

The eighty-eighth ordinary general meeting of Richard Thomas and Company, Limited, was held, on the 15th instant, at River Plate House, London.

Sir William Firth (chairman and managing director) presided, and in the course of his speech, said: The steelworks were built towards the end of the War and during the boom that followed, but were not ready to operate until 1921, a year in which the total steel output of the country had fallen to the almost zero figure of 3,703,400 tons. The losses suffered during this period by the steel trade as a whole are unlikely, I think, to be repeated in our time. Flexible protective tariffs and improved organisation within the industry make this improbable, but, our industry apart, business conditions generally have much improved. For this improvement we are greatly indebted to our National Government. I doubt if in the whole history of this country we have ever been blessed with a better or more experienced Cabinet. I believe that in politics, as in business, co-operation is the surest means of securing sustained success. We are indeed fortunate to have in the Cabinet men drawn from all parties, and at its head a man of sound industrial experience and high ideals.

VALUE OF TARIFFS

Our own industry has greatly benefited by tariff protection, the Exchange Equalisation Fund, and trading agreements. Together they have made business less hazardous and more profitable in both our home and export markets. They have made possible an improvement in commodity prices which has increased foreign purchasing power, so beneficial to our export trade.

Over a period it is reasonable to assume that world demand for steel will expand, and that protection and organisation will ensure profit margins being earned with more regularity than heretofore. The benefits of protection and organisation cannot be doubted. They have not only resulted in a reduction of unemployment, but they have increased the prestige and bargaining power of the industry, making possible cartel and price arrangements that ensure a fair margin of profit under all conditions. They have also led to plant improvements and greater efficiency. The Import Duties Advisory Committee, despite the absence of statutory power, have suceeded in preventing the inflation of prices in a period of strong demand.

THE REDBOURN PLANT

We are entitled to believe that from now on our Redbourn plant, instead of being a drag, will be a valuable asset, contributing its quota to the earning power of the company. I am satisfied that during the current year it will contribute an amount sufficient to take care of the whole of the annual interest charge on our new £7,000,000 debentures, and the annual interest charge on the Grovesend Company's debentures.

At Redbourn the well-known coke oven experts, Woodall, Duckham and Company, are erecting for us two batteries of 82 modern coke ovens, with a coking capacity of approximately 400,000 tons per annum, together with a modern by-product plant. We are also erecting at Redbourn new blast-furnace stoves, gas-cleaning plant, and enlarging our melting shop capacity, and in other ways increasing the output and reducing the production cost, and I am satisfied that from now on we shall be able to maintain operations at Redbourn on a profitable basis.

The Grovesend Company throughout the long depression, excepting only the year of the general strike, never failed to pay dividends on its ordinary share capital. It has a depreciation reserve of £825,000, and other reserves of £183,000, and after meeting all prior charges, including depreciation, its average profits for the four years ending March last were equal to 21½ per cent. of the figure at which it stands in the parent company's balance sheet. On a 7 per cent. basis, which as compared with other steel companies is a generous yield, the market value of the Grovesend ordinary shares would exceed £3,400,000, or £2,300,000 more than the balance sheet figure.

COMBINED BALANCE SHEET

We will now turn to the combined balance sheet of our company. On the debit side you will see on July 1 there fell due for redemption our 7 per cent. and 4½ per cent. debentures. These were duly redeemed at a cost, including premium, of £966,265. When the further instalments of the new 4 per cent. debentures have been received the combine's total debenture indebtedness—including the Grovesend Company—will be £7,833,000.

Our bank balance on Monday last was £1,117,000, but between now and October 6 the remaining instalments on the debentures fall due, amounting to £3,465,000. This, added to our bank balance, amounts to £4,582,000. The whole of this money, and probably an additional two million pounds, will be required to defray the cost of the new plant and improvements at our Redbourn works, and the balance of the cost of our new works at Ebbw Vale and the development of our Irthlingborough orefields.

The total cost of all these developments will probably exceed our estimate by £700,000 to £800,000, owing partly to additional processing plant we are installing and partly to an increase in the size of our water reservoir, which is now being enlarged to hold 264 million gallons, and partly to the increased cost of foundations, raw material and wages.

A COMPLETE UNIT

When our Ebbw Vale plant is complete you can be definitely positive it will be the most modern and efficient complete steel, tinplate and sheet unit in this country or on the Continent, and equal to the most modern in America, and capable of a lower production cost than is possible in America, and I have not the slightest doubt that you will be justifiably proud of it.

We shall assemble coal from our own nearby coalmines, converting it into coke and by-products in our new coke ovens and by-product plant. We shall consume the coke in adjacent blast furnaces, where ore will be converted into hot pig metal, which will be transferred to the adjoining steel plant. The steel plant will be fuelled by gas drawn from the coke ovens and blast furnaces, and the hot pig metal will be converted into suitable steel which will be conveyed to the adjoining hot strip mill. There it will be rolled into steel strip and passed on to the nearby cold reduction mills, where it will be reduced and processed and transferred to the adjoining finishing departments.

Thus we shall on the one site assemble raw coal and ore and in one continuous process, without intervening carriage, convert them into finished tinplates and sheets and other products of the highest quality. One of the blast furnaces at Ebbw Vale is expected to commence production next month, a little later than we had hoped, and a second blast furnace should be operating early in January next. These two blast furnaces will each have a capacity approximating 3,500 tons per week, so that during the current financial year some profit may be expected from our new Ebbw Vale works. According to contractors' promises, the whole works should be completed by the end of June next.

THE CURRENT YEAR

Now permit me to make a few remarks about the prospects for the current year. To the best of my belief and judgment, I think the current year will yield profits in excess of last year, because demand has much improved and shows no sign of abating, and this increased activity has enabled us to put into operation a larger percentage of our finishing plant. We have at present approximately 25 per cent. of our finishing plant idle, due mainly to our obligation to supply steel to independent re-rollers, but we are arranging, pending completion of our Ebbw Vale plant, to import steel to enable us to increase operations in our finishing departments.

Meanwhile, it is interesting to note that in recent months we have produced more tinplates and sheets than ever before produced in the history of the company. This has been made possible by reason of our purchases in recent years of competing re-rolling businesses. Our present weekly production of tinplates and sheets exceeds 8,000 tons and 3,700 tons respectively. During the year under review the profits on these two products represented less than 50 per cent. of our total profits.

TRIBUTE TO THE STAFF

Before concluding, I want to say a few words about our organisation. No company could have more loyal or more industrious senior officials and staff. No chairman could be more proud of them than I am. I know them to be as efficient as they are loyal and industrious.

We have, in conjunction with our competitors in the tinplate trade, expressed our willingness to contribute to a pension scheme for our workpeople on a basis which will cost your company—on to-day's output—approximately £40,000 per annum.

The report and accounts were unanimously adopted.

POWELL DUFFRYN ASSOCIATED COLLIERIES LIMITED

THE POWELL DUFFRYN STEAM COAL COMPANY

WELSH ASSOCIATED COLLIERIES

MR EDMUND L. HANN'S SPEECH

At the annual general meeting of Powell Duffryn Associated Collieries Limited, held on July 14th, the chairman, Mr Edmund L. Hann, after dealing with the accounts, referred to the modest increase in the profits for the year despite the substantial provision against all amounts overdue from Spain. The company's Spanish business had been considerable and substantial sums of money were outstanding in that country. Nevertheless, the position should not be viewed too despondently since Spain, before the civil war started and for a great number of years, had a credit trade balance with Great Britain and would certainly wish to trade again as soon as her internal difficulties had been overcome.

At the end of 1936 and since the beginning of 1937, there had been a very appreciable increase in demand. The company's collieries, although working regularly, had been unable, for reasons which would be well understood by those acquainted with mining conditions, suddenly to increase outputs to an extent sufficient to meet the requirements of all their customers. Everything practicable had been done to overcome this shortage, with the result that the output since the beginning of January had been considerably increased.

In the latter part of 1936 the representatives of the colliery owners and of the mine workers had started a series of frank yet friendly discussions, which culminated in the acceptance of a new Wages Agreement nearly six months before the expiry of the old The workers had received as from April 5th last substantial increases in earnings, which they might not otherwise have enjoyed until October 1st next.

SUBSIDISED GERMAN EXPORTS

The welcome increase in demand was principally due to the improvement in the inland market; the picture so far as export trade was concerned was a different one. He felt it his duty again to draw attention to the alarming decrease which had taken place in this country's export coal trade since 1929. This was principally due to the heavily subsidised exports from Germany. Last year the question of a Government grant to subsidise coal exports from this country was much discussed, and it must again receive consideration, otherwise the chance of any satisfactory arrangement being reached in regard to a European Coal Cartel would be remote.

Shareholders would be aware that a Government Committee had been appointed to report upon the organisation of the distribution of electricity in Great Britain. Among other recommendations made by this Committee, there was one that the distribution of electricity, unless provided by statutory undertakings, should be made the subject of compulsory purchase on a "cost less depreciation basis." This proposal was almost the equivalent of confiscation, for no consideration was being given to the supplier's loss of profit and goodwill. The company intended to take all steps possible in conjunction with other colliery companies similarly placed to prevent such unfair proposals being put into effect.

OIL FROM COAL

Shareholders would have seen in the Press that the company had made proposals to the Government in regard to the installation of an oil from coal plant, and that the Government had set up a Committee to deal with this matter. The company's officers had given evidence before this Committee and awaited with a great deal of interest the Committee's report. The erection of such a plant would be of incalculable value both to the country and to South Wales.

The great improvement which was taking place in heating appliances had increased the demand for all grades of smokeless fuel, and the public had been quick to show its appreciation of PhurnoD, which could be burnt with the highest efficiency under the most exacting conditions. The result had been that for the year under review sales had increased very materially.

The directors' report and accounts were adopted, and the dividends recommended were duly declared.

The annual general meetings of The Powell Duffryn Steam Coal Company, Limited, and Welsh Associated Collieries, Limited, were subsequently held, at which the reports and accounts were adopted and dividends recommended duly declared.

PALESTINE ELECTRIC CORPORATION, LIMITED

FURTHER SUBSTANTIAL PROGRESS

The fourteenth ordinary general meeting of the Palestine Electric Corporation, Limited, was held, on the 15th instant, at 2 Grosvenor Gardens, S.W.

The Right Hon. Viscount Samuel, P.C., G.C.B., G.B.E. (the chairman) said that notwithstanding the serious unrest in Palestine during the year the Corporation's business had continued its uninterrupted progress. Their policy of reducing whenever possible the rates of charge for electricity had resulted in a steady rise in the consumption. In 1936 the units sold were 30 per cent. more than in the previous year, and the gross revenue 19 per cent. more. The operating expenditure was higher in a somewhat greater ratio, mainly owing to the effect of drought in restricting the output of their hydraulic power station and obliging them to use the fuel stations to a greater extent. The disturbances of last year involved them in special expenditure of £17,078, which had been charged to the share premium reserve, which now stood at £322,346. Their depreciation reserve amounted to £366,854. The profit amounted to £242,208, and a final dividend of 5 per cent., free of tax, was recommended on the ordinary and "A" ordinary shares, making 7½ per cent., free of tax, for the year, the same as last year. In their desire to give the consumer the advantage derived from increased sales the directors had again made considerable reductions in various classes of rates charged, which had come into force this year.

The expenditure in 1936 on capital account was £407,593. The extension of the building of the Haifa Power House was completed during the year, and the two additional boilers for that power house were now installed. Work on the Reading power house, north of Tel-Aviv, which began on April 16th of this year, was proceeding with all speed, and it was expected that the station would be brought into use early next year. With its completion the total installed capacity in all their stations would be 77,000 kw., distributed between the Jordan Hydro-Electric and the fuel power houses in Haifa and Tel-Aviv.

INCREASE OF CAPITAL

The continued expansion of demand had necessitated considerable capital expenditure, and to meet this and to provide for the requirements anticipated in the near future the directors proposed that a further issue of share capital should be made at such time as the market conditions were favourable. At present they were of opinion that the issue should take the form of preference shares, ranking junior to the existing preference shares. In view of anticipated future developments it was proposed that the increase in nominal capital should be from £2,500,000 to £4,000,000, though it was not intended at once to issue shares to the whole amount of the increase.

The directors desired to express their appreciation of the work done by their staff in Palestine during the year under review. The large amount of new construction that was being carried out and the rapid expansion of their normal operations, together with the very difficult conditions that had prevailed for some time over a large part of the country, had made the year a strenuous one for their employees.

It was not the occasion on which he should engage in a general review of the situation in Palestine in the light of the Report of the Royal Commission and the statement of H.M. Government with respect to it. But so far as the position of the Corporation was concerned they had no doubt that whatever changes might be made, the rights under the Concessions that had been granted with the approval of the Mandatory Power would be fully recognised. The Royal Commission's Report recommended that, "In the event of partition, agreements entered into by the Government of Palestine for the development and security of industries should be taken over and carried out by the Governments of the Arab and Jewish States. Guarantees to that effect should be given in the Treaties." The directors, having made a close study of the Report so far as it affected the Corporation, would submit representations to H.M. Government on certain specific points.

The steady progress of the undertaking continued. The first five months of this year showed a further advance in revenue on the favourable figures of last year. Under ordinary conditions of peace and order there was no reason to doubt that the prosperity which had been achieved in the past would be fully maintained in the future.

The report was adopted, and at an extraordinary general meeting the capital increase was approved, as were also certain minor alterations in the Articles made to comply with the requirements of the London Stock Exchange.

THE TRUSTEES CORPORATION LIMITED

FURTHER ADVANCE IN REVENUE

The forty-ninth annual general meeting of the Trustees Corporation, Limited, was held, on the 14th instant, in London.

Mr W. Sandford Poole (the chairman), referring to the classification of the securities held by the corporation, said that nearly 66 per cent. represented investments in Great Britain and the Empire. Nearly 74 per cent. were of an industrial nature or under the heading "Banks, insurance and financial," and over 51 per cent. were classed as ordinary and deferred.

During the year to May 31, 1937, the position revealed by the valuation of their investments still further improved. The surplus at that date over the balance-sheet figure was very considerable, with the result that the margin over and above capital, reserves and carry-forward was much in excess of a year ago.

Interest and dividends for the year, less requirements for income tax, amounted to £148,662, compared with £134,651 for the previous year.

The total net revenue, at £114,901, showed an increase of £12,876. The directors recommended a final dividend of 7 per cent. on the ordinary stock, making a total distribution for the year of 10 per cent. less tax, compared with 9 per cent. for the previous year. The three years to May 31, 1935, 1936 and 1937, had proved years of steady recovery in revenue. In those three years the dividends on the ordinary stock had been 8½ per cent., 9 per cent. and 10 per cent. respectively.

The directors had come to the conclusion that this year, after three years of steady expansion in revenue, wisdom dictated and the time was opportune for the creation of a dividends equalisation account. In the report now submitted they had set up such an account by providing, in effect, £12,513 from the net revenue account of the year and £27,487 from the balance brought forward from last year, making a total of £40,000. By this means they hoped to ensure a stabilising element in so far as future distributions on the ordinary stock of the corporation were concerned. After providing for the appropriations and dividends recommended they carried forward the substantial sum of £72,855.

The report and accounts were unanimously adopted.

MILLARS' TIMBER AND TRADING COMPANY, LIMITED

LARGER PROFIT

The annual general meeting of this company was held, on the 19th instant, in London.

Mr James White, LL.D. (the chairman), said that in 1935 their profit was £78,265, while in 1936 it had increased to £87,699. In 1934 they had shown a trading profit of £33,012 and in 1935 one of £92,465, and in 1936 it was £110,699, indicating satisfactory progress. In 1935 they had owed their bankers £35,522, but at the end of 1936 they owed them nothing. In 1935 they had carried £11,200 to depreciation; in 1936 they were carrying £20,000 to depreciation, and in doing so they were considering not only the purposes of the moment but were looking forward to what might be necessary for the proper conduct of the business.

A large amount of their prosperity was due to the prosperity of Australia, and that country now appeared to have reached a period of considerable prosperity. A statement setting out the combined financial position of the company and its subsidiaries at December 31, 1936, showed that their circulating capital amounted to £655,400. The prospect was that, if things went as well in the current year as in the past year, the combined account would not show anything worse than what was now shown.

The production of timber for consumption in the Australian and overseas markets had again increased and there was a satisfactory reduction in stocks. Trade in Australian markets had been well maintained. Generally, a large portion of their business was done in railway sleepers, and they were continually adding new railways to the buyers of Jarrah sleepers. The same applied to Jarrah flooring, which had been made popular in this country some years ago and the success of which was increasing.

Overseas trade had been reasonably good. The Philippine company had done very well, its turnover being a record. The machinery companies had also had a record turnover; 1936 had been a very good year, and, although the turnover for 1937 up to the present was somewhat better, the profit probably would be little affected.

The report and accounts were unanimously adopted, and new articles of association were approved.

SOUTH AFRICAN BREWERIES LIMITED

FRESH RECORD ESTABLISHED

The forty-second ordinary general meeting of the South African Breweries, Limited, was held, on the 14th instant, at Winchester House, London. Mr John Stroyan, J.P., D.L. (the chairman), presiding.

The Chairman, in moving the adoption of the report and accounts, said that the present was the twenty-second year in succession in which it had been his privilege to be the chairman of this outstandingly successful company. During the long term of his chairmanship they had experienced good years and indifferent years, but they had never failed to pay a satisfactory dividend, and those who had steadfastly held their shares had shared in the company's prosperity.

The net profit for the year under review of £556,422 was a record, and showed an increase over last year's record figures of £84,007, less an increased charge of £10,000 for income tax, or a net increase of £74,007. With regard to the current year, prospects were entirely good, their sales to date showing continued improvement.

He had returned two months ago from a visit to South Africa, where he had gone into the company's affairs.

He had come back much impressed with all the developments he had seen. Those developments were due to the helping hand of a not only sympathetic, but a very able and competent Government, every member of which was anxious and active in the development, on sound lines, of the country. South Africa was a land of much promise. Her men were capable and active and justly loved and were proud of their country, and had played the game.

A big effort was being made to cultivate the tourist traffic. That was as it should be, and it would draw many to benefit by and enjoy the beautiful climate and in many ways help South Africa.

The Right Hon. Sir A. Griffith-Boscawen, P.C., J.P., vice-chairman, in seconding the motion, said he wished to express how glad everybody was to see their chairman once again presiding at their meeting after an absence through temporary ill-health. (Cheers.)

The report and accounts were unanimously adopted.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the 10 days ended July 10, 1937, amounted to £20,224,000, against ordinary expenditure of £30,822,000. After allowing for an increase in Exchequer Balances of £20,226, the operations for the period, as shown below, increased the gross National Debt by £10,618,000, to approximately £7,993 millions.†

GOLD MARKET

Messrs Samuel Montagu and Company write on July 14, 1937:—

The Bank of England gold reserve against notes amounted to £326,406,625 on July 7th, showing no change as compared with June 30th.

In the open market about £1,230,000 of bar gold was available at the daily fixing during the week. With offerings on a smaller scale, a general demand was sufficient to maintain prices at a small premium over dollar parity, but owing to the weakness of the dollar in terms of sterling quotations ruled lower; the price of 139s. 11d. fixed July 13th, was the lowest since September of last year.

Gold shipments from Bombay last week amounted to about £222,000, of which the s.s. "Naldera" carries £170,000 and the s.s. "President Hayes" £52,000. The Transvaal gold output for June, 1937, amounted to 979,069 fine ounces, as compared with 970,250 fine ounces for May, 1937, and 944,165 fine ounces for June, 1936.

SILVER MARKET

It was announced in Washington on July 9th that an agreement had been concluded between China and the United States under which China will buy a substantial amount of American gold and America will buy silver from China in addition to that already being acquired under the original agreement effected last May. The statement added that the purpose of the agreement is to assist in stabilising currency relationship and to augment the gold reserves of the Chinese Central Bank. The announcement had little effect upon the market, which has maintained a fairly steady tone. Buying from India finding the market rather poorly supplied, prices advanced to 20 9/16d. for cash and 20½d. for two months' delivery on July 9th; however, offerings on China account and resales by speculators were made rather more freely at the rise and, the buying not being sustained, prices eased back gradually to 20d. for both deliveries quoted July 14th. There are still no indications of any important change.

Quotations for gold and silver are shown below:—

1937	Price of Gold per Fine Ounce	Equivalent Value of £ sterling	Price of Bar Silver in London per ounce standard: Cash	Price of Bar Silver in London per ounce standard: Two Months	Price of Silver New York per ounce ·999 fine
	s. d.	s. d.	d.	d.	1937 Cents
July 8	140 4	12 1·29	20	20⅛	July 7 to July 13 inclusive 45
,, 9	140 5½	12 1·16	20⅜	20½	
,, 10	140 3	12 1·38	20⅜	20½	
,, 12	140 2	12 1·46	20½	20⅜	
,, 13	139 11	12 1·72	20⅜	20⅜	
,, 14	140 1	12 1·55	20	20	
Average	140 2·42	12 1·43	20·094	20·146	
July 15	140 1½	12 1·51	19 15/16	20	

The highest rate of exchange on New York recorded during the period from July 8th to 14th was $4·97½, and the lowest $4·94⅞.

Statistics for the month of June, 1937:—

Bar silver per oz. std.

	Cash delivery	Two Months' delivery	Bar Gold per oz. fine
Highest price	20⅜d.	20 7/16d.	140s. 9d.
Lowest price	19⅜d.	19⅜d.	140s. 3½d.
Average	20·0216d.	20·0649d.	140s. 6·69d.

No gold movements were reported at the Bank of England between July 9th and July 15th. Details of previous movements appeared in our issue of July 3rd, page 49.

SHORTER COMPANY COMMENTS

COMPANY RESULTS OF THE WEEK.—Among this week's industrial reports, BRITISH PLASTER BOARD stands out; the profits figures have already been known for some time, and the full report shows that the 50 per cent. dividend is very substantially covered, by earnings of over 70 per cent. TANKERS, LTD., reports an increase in net revenues from £97,292 to £109,759 for the year to March, of which only part enjoyed a sharp increase in freight rates. AMALGAMATED DENTAL profits are £10,000 lower at £141,554, but the 5 per cent. dividend is fully covered. Several newcomers to the industrial market present their first reports as public companies. ALLIED BAKERIES, for example, reports a net profit of £60,445 and pays 8 per cent., while CORNERCROFT reports a profit of £17,756 and pays 15 per cent. STEEL BARREL SCAMMELLS is another new concern to the market. Profits amount to £28,114, and the dividend of 12½ per cent. is comfortably earned, after making substantial provisions. HECHT LEVIS AND KAHN, the produce brokers, reveal a substantial jump in profits from £108,472 to £190,418, and the dividend has been doubled at 35 per cent. TILBURY CONTRACTING AND DREDGING is an essential steady profit earner, and a fall in net profits from £129,242 to £117,227 is not highly significant when the 17½ per cent. dividend is so handsomely covered. For building material shareholders, some significance may be attributed to the fact that, while EASTWOODS CEMENT has appreciably increased its profits during the past year, EASTWOODS FLETTONS profits are comparably reduced. Moderate progress is recorded by such brewery concerns as PARKER'S BURSLEM and TAMPLIN AND SONS. PEKIN SYNDICATE records a profit of no less than £38,330, compared with a loss of £16,804 for the previous year.

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

Last week's fairly general advance in the prices of primary products was followed by a somewhat irregular tendency this week. But this was not unexpected, for at the beginning of a recovery of prices from a severe set-back, buyers are still hesitant and hold off the market on the slightest provocation. Thus, there are frequently one or more false starts until the movement gathers strength from an increase in confidence.

The rapid advance in quotations for non-ferrous metals last week was followed by a relapse except in the case of spelter and tin. Rubber declined in price on the publication of returns showing higher clearances from the regulated areas in June than had been anticipated. Raw sugar was also slightly cheaper.

But this practically exhausts the list of leading commodities which registered a decline in price last week. Raw cotton advanced on the publication of an official estimate of the area under cultivation in the United States which was smaller than expected. Jute prices advanced for a similar reason on the issue of the official estimate of the area under cultivation in India. Wool prices rose on the realisation that the 1937–38 clip cannot be expected to be much heavier than that of 1936–37, while consumption is likely to expand further. On the wheat markets the upward trend of prices continued on reports of further crop deterioration in Canada. Linseed and linseed oil were firmer on the uncertainty of this year's crop in America and the reduction of Argentina's exportable surplus to a level appreciably smaller than a year ago.

In the United States the upward trend of commodity prices continued this week, a feature being the advance in quotations for steel scrap. Moody's index of staple commodity prices (December 31, 1931 = 100) stood at 208·4 on Wednesday, against 206·8 a week ago, 198·2 a month ago, and 174·9 last year.

(*Continued from page 157*)

These earnings permit dividends on the Shansi and ordinary shares. Among plantation companies, rubber concerns generally show considerably higher profits, with BUKIT RAJAH, KUALA MUDA, STRAITS PLANTATIONS and VALLAMBROSA among the more impressive examples. Tea results, however, continue mixed. DIMA shows a substantial increase in earnings from £11,986 to £19,411, but BUDLA BETA profits are down from £24,683 to £17,257.

APPOINTMENTS AND PERSONAL

Mr A. G. Sweet, general manager of the Guardian Assurance Company, Ltd., has been elected president of the Insurance Institute of London.

Sir John Dewrance has retired from the chairmanship of the board of Babcock and Wilcox, but will retain his seat as a director. Lt.-Col. J. H. M. Greenly has been appointed chairman and Mr A. McKinstry deputy chairman.

Sir Nigel Leslie Campbell has been appointed to the board of the District Bank, Ltd.

BANKS

GLYN MILLS AND COMPANY.—Total assets June 30, 1937, £46,546,516 against £46,113,112 on December 31, 1936 and £42,084,144 on June 30, 1936. Deposits have risen during year from £38,208,958 to £41,439,323 on June 30, 1937. Cash £5,516,536 against £5,268,545 on June 30, 1936. Money at call has risen from £8,059,000 to £12,928,600 on June 30, 1937. Investments £13,401,029 against £10,550,887. Advances have declined from £13,522,766 on June 30, 1936, to £7,398,551 on June 30, 1937.

IMPERIAL BANK OF INDIA.—Net profits for the half year to June 30, 1937, Rs. 39,09,900; brought forward from previous half-year Rs. 28,02,600; total, Rs. 67,12,500. Dividend of 12 per cent. per annum free of income tax absorbing Rs. 33,75,000; transferred to pension fund, Rs. 72,400; transferred to premises account, Rs. 2,50,000; carried forward, Rs. 30,15,100.

MINES

SIAMESE TIN SYNDICATE, LTD.—Estimated working profit, for six months ended June 30, 1937, is £129,151.

BANGRIN TIN DREDGING COMPANY, LTD.—Estimated working profit for six months ended June 30, 1937, is £35,283.

BISICHI TIN COMPANY (NIGERIA), LTD.—Net profit for 1936 £40,649, against £28,092 in 1935. Ordinary dividend raised from 7½ per cent. to 10 per cent., absorbing £34,500. Carry forward increased from £513 to £6,662. An interim dividend of 2½ per cent. is declared in respect of 1937.

MISCELLANEOUS

EASTWOODS CEMENT.—Profit for year to March 31, 1937, £60,675 against £52,282. Provision for depreciation £12,000 as before. To investment reserve £5,000. To general reserve £6,000. Ordinary dividend 16 per cent. as before. Carry forward increased from £10,381 to £11,977.

EASTWOODS FLETTONS.—Profits for year to March 31, 1937, £71,774 against £78,382. To depreciation £10,000 against £18,500. To investments reserve £3,635 against nil. Preferred dividend unchanged at 15 per cent. Deferred dividend unchanged at 200 per cent. Carry forward £8,789.

COAL

SHEFFIELD.—Conditions in the export coal market show little change, but the reduced export quota is having its effect on collieries and prices are easing slightly. Washed steam and coking smalls realise 20s. to 21s. per ton, f.o.b. and in bunkers, South Yorkshire hards sell at 23s. to 24s. per ton f.o.b., Humber ports. Inquiries for forward delivery are practically nil. Inland demand for coal remains strong. Small coal for coke-making and for electrical works is scarce. All grades of steam coal are in strong request. Coke is in short supply. Household coal is quiet, but prices remain firm for this time of the year.

NEWCASTLE-ON-TYNE.—The North-East coal market remains quiet. There is little inquiry from abroad, but with tonnage in better supply the position is better than a week ago. Northumberland steam collieries continue to work regularly, shipments being mostly against contract. In the Durham section, coking coals are steadily cleared, mostly on home account, but all other classes are offered more freely. Patent oven coke is available in larger quantities for the export market, but there is no change in the persistent demand from the local iron and steel trade

GLASGOW.—Collieries in the Lothians have been closed this week, and those in other districts will mostly observe the "Fair" holidays next week. Little new inquiry has come from abroad recently, but producers are fairly well booked, and after meeting the still active demands of inland consumers (except in household fuel), only odd lots have become available for new prompt shipping business. With foreign importers fully covered, the usual pre-holiday rush has been absent, and there was little indication of pressure to secure cargoes for last week's shipments which totalled 305,000 tons, the heaviest for two years, with one exception.

CARDIFF.—Shipments continue active at the South Wales ports. Last week exports in the foreign and coastwise trades totalled 433,400 tons, compared with 416,600 tons in the previous week, and 293,777 tons in the corresponding week last year. During the 28 weeks ended July 11th the volume of traffic, at 10·9 million tons, showed an increase of over 2·1 million tons. There has been no improvement in the prompt position, but this is partly due to the heavy re-stocking which took place recently, and collieries are committed well up to their allocated tonnages under contracts. Prices are unchanged and recent contract figures are being repeated for 1938 deliveries. Partridge, Jones and John Paton, Ltd., have acquired control of the Tirpentwys Colliery and with a standard tonnage of between 6 and 7 millions this concern now has a dominating influence in both the eastern and western valleys of Monmouthshire.

TILBURY CONTRACTING AND DREDGING COMPANY.—Profits for year to March 31, 1937, £140,442 against £135,983. Ordinary dividend and bonus 17½ per cent. as before, absorbing £70,000. To general reserve £10,000 against nil. Carry forward £32,496.

TANKERS, LTD.—Profit for year to March 31, 1937, £118,297 against £111,463. To depreciation £200,000 against nil. To survey and repairs £25,000 against £5,191, but the sum of £60,000 has also been taken from survey and repairs reserve. Dividend of 4 per cent. on preference shares absorbed £23,460. Carry forward £6,016.

SECOND AND THIRD CONVERSION INVESTMENT TRUSTS.—The managers of the British Empire Fixed Trusts have formulated two more conversion schemes. The first, covering "B" units, offers exchange into 9s. shares in "Second Conversion Investment Trust," with a capital of 1,200,000 ordinary 9s. shares if all convert. The other relates to the cumulative series of group, holders being one 15s. share for each sub-unit held. Full conversion would result in a "Third Conversion Investment Trust" with a capital of 450,000 ordinary shares.

GENERAL THEATRE CORPORATION.—The latest report shows profit for year to March 31, 1937, £337,041, an increase of £61,072. Participating preferred ordinary dividend 15 per cent. against 12 per cent. to reserve, £50,000. Carry forward increased from £50,834 to £54,494.

PEKIN SYNDICATE.—Accounts show a profit of £36,503 against £5,262 for previous year. To employees' fund £2,000. First dividends of 55 per cent. on Shansi shares absorbed £15,035 and 45 per cent. on ordinary shares absorbed £12,302. Carry forward £7,166. Coal output 1,269,728 tons against 1,111,310 tons for 1935. Sales of coal expanded by 537,630 tons.

HECHT LEVIS AND KAHN.—Trading profit for year to March 31, 1937, £228,091 against £134,257. Ordinary dividend and bonus 35 per cent. against 17½ per cent. To income tax reserve £35,000 against £14,500. To dividend equalisation account £36,000 against nil. To general reserve £23,168 against £31,472. Cash stands at £161,022 against £127,792. Debtors £787,402 against £326,915. Stocks £2,378,478 against £3,382,362. Creditors £3,766,410 against £3,734,988.

OFFER TO NEW READERS

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached :

To The Publisher, Economist Newspaper Ltd.,
8 Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward it to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

IRON AND STEEL

LONDON.—The weekly report of the London Iron and Steel Exchange indicates that the shortage of most descriptions of steel continues to be the most prominent feature of the iron and steel markets. At the moment the shortage is accentuated by the pressure of consumers anxious to secure deliveries before the holidays affect production. Following the reduction in the duties last week, arrangements were made for a substantial increase in imports of Continental steel under the quota, and this should somewhat relieve the anxiety regarding future supplies.

In the pig-iron department all consumers are seeking supplies; but the foundries are apparently able to keep their plant in operation largely because makers are doing their utmost to maintain a regular distribution of the available pig iron through their rationing scheme. Supplies of steel-making iron have improved with the increase in imports, but the forward position is causing some concern.

The scarcity of semi-finished material continues severe, and it will be some time before the increased imports become available to consumers. British works are pressing production to the utmost, and a scheme is now in operation for a more regular distribution of this class of material.

In the finished steel section consumers are being rationed on the basis of their purchases during last year, for current output, though expanding, is below the full requirements of the market. There is no relaxation in the pressure from home consumers; and there is a large export inquiry that is not entirely satisfied.

MIDDLESBROUGH.—The output of foundry and hematite pig iron is readily taken up. Foundry pig-iron continues to be rationed to consumers, and every effort is being made to supply slightly increased quantities to the foundries. Both for foundry and hematite pig iron makers are fully sold to the end of the third quarter, and are therefore not keen on negotiating new business. The supply of basic iron has been increased by the putting into blast of an additional furnace at Seaton Carew, but the whole of this production will be consumed in producers' own steelworks. Prices remain unaltered. Shipments of pig iron from the Tees are slightly higher, being 3,415 tons during the first thirteen days of July, compared with 2,291 tons during the same period in June.

The demand for semi-finished and finished steel continues greater than local production, and the announcement that the Cartel has increased the quota of imports into this country by 200,000 tons is welcome. In the finished steel trade deliveries of certain products are in arrears, whilst for new orders fulfilment cannot be undertaken within three-four months.

The scrap position continues to engage the attention of steel smelters, and works are readily paying the fixed maximum prices to merchants. A further cargo of steelworks scrap has arrived in the Tees from America. Ore cargoes continue to arrive from Sweden and North Africa, but supplies from Spain have practically ceased. Good Durham blast-furnace coke is still being quoted at 40s. per ton, but supplies are easier.

SHEFFIELD.—Business in the iron and steel market is small, producers having next to nothing for disposal. Parcels of foundry and basic pig iron for immediate delivery are hardly obtainable. Rationing is in force, and contracts are renewed on the basis of those made twelve months ago. The amount of imported iron is not on a sufficiently large scale definitely to ease the situation, and the increased Derbyshire output is immediately used up. In hematite the position is a little easier, though considerable difficulty is experienced in transacting West Coast business. The revision of prices in finished iron has not yet been made, and all new business is subject to price changes.

Demand for acid and basic steel billets is as heavy as ever, and producers are finding the utmost difficulty in carrying out orders. The suggested national gathering of scrap has aroused considerable interest, but it has to be borne in mind that the cost of collection may be fairly high. There is a shortage of cast-iron scrap for steelworks, but other classes are coming along a little more freely. Heavy basic steel scrap is controlled, the maximum price being 67s. 6d. per ton for 500-ton lots.

GLASGOW.—The shortage of steel is still seriously affecting the smooth running of practically all businesses. Many producing plants are working to capacity, but output is passing into consumption as soon as produced. Neither producers nor users have any stock on hand, and it is exceedingly difficult to arrange future programmes owing to the uncertainty regarding supplies. Supplies of semis are not yet showing much improvement. As a result of the recent reduction of import duties, users confidently look forward to increased supplies of Continental material, but it is feared that it will be some months before regular and substantial supplies are available. Somewhat heavier tonnages of home semis have been obtained, but the requirements of local re-rollers are far in excess of deliveries. Holidays commence this week in Glasgow and many other areas in the West of Scotland. In most cases works will close on Friday, and operations will be resumed on July 26th. In some cases holidays will be somewhat shorter owing to the enormous amount of work on hand.

CARDIFF.—The South Wales tinplate works were operated last week ay 71·78 per cent. of allotted capacity. The shortage of scrap continues, but mills are well employed, and there are prospects of the reopening of another of the works closed down during the depression three or four years ago. Shipments of tinplates last week were slightly below the recent average, and stocks have increased by about 1,000 tons; the volume of business, however, has been well maintained, and Britain's proportion of international trade is increasing. All the other local finishing branches of the industry are active, as well as the blast and steel furnaces. Prices for tinplates, sheets, steel bars, and pig iron are unaltered.

OTHER METALS

COPPER.—Last week's advance was not held, the cash price showing a net loss of £2 8s. 9d. on the week at the close on Wednesday. Forward rates, however, showed more resistance, with the result that last week's backwardation of 2s. 6d. has been replaced by a contango of 3s. 9d. per ton. The easier tone was due to the uncertainties of the international political position, coupled with the expectation of rising world stocks. The latter fear was confirmed by the publication of the June statistics of the U.S. Copper Institute. These showed a further rise of over 10,000 tons in world stocks of refined copper between May and June to 301,760 tons, consumption being 6,380 tons lower at 189,680 tons.

An impressive increase in production was reported this week from the Belgian Congo, where the Union Minière du Haut Katanga produced 67,786 metric tons of copper in the first five months of the year (or 13,557 per month) against a total output in 1936 of 95,667 metric tons (or 7,972 monthly). If production continues to expand, the temporary shortage of supplies will soon be over and the re-imposition of restriction would be likely. Meanwhile, New York export quotations have eased in sympathy with London, a factor which renders unlikely an early change in the U.S. domestic price, despite the recent advance in scrap copper prices in that country.

Sales on the London Metal Exchange: 675 tons on Monday, against 1,500 tons last week; 1,200 tons on Tuesday, against 2,300 tons last week; 1,050 tons on Wednesday, against 2,750 tons last week. Domestic spot was quoted at 13·92½ cents per lb. in New York on Wednesday, against 14·15 cents a week ago and 13·22½ cents a month ago. Wednesday's official closing price for standard cash in London was £55 11s. 3d. to £55 13s. 9d. per ton, compared with £58 to £58 1s. 3d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 10,402 tons, showed a decrease of 103 tons, while stocks of rough copper, at 8,596 tons, were 716 tons larger.

LEAD AND SPELTER.—While lead moved in sympathy with copper, spelter gained 5s. on the week. Moreover, the forward quotation for spelter remains slightly above the spot price. Consumers have begun to re-enter the market and supplies at present are not too plentiful. Production fell from 55,012 short tons in May to 50,526 in June, while deliveries declined from 55,201 to 50,219 short tons. Spelter stocks consequently showed a slight rise from 13,774 short tons to 14,081 short tons. The publication of these figures was followed by a small price advance in the United States, which contributed to the firmer tone here. Meanwhile the demand for lead remains satisfactory, but supply appears to be increasing.

Sales of lead on the London Metal Exchange: 1,350 tons on Monday, against 1,150 tons last week; 1,000 tons on Tuesday, against 2,450 tons last week; 650 tons on Wednesday, against 4,650 tons last week. The New York quotation on Wednesday was 6·00 cents per lb., against 6·00 cents a week ago and 6·00 cents a month ago. Wednesday's official closing quotation in London for soft foreign for shipment during the current month was £24 16s. 3d. to £24 17s. 6d. per ton, compared with £25 2s. 6d. to £25 3s. 9d. last week.

Sales of spelter on the London Metal Exchange: 1,250 tons on Monday, against 850 tons last week; 2,900 tons on Tuesday, against 1,950 tons last week; 1,500 tons on Wednesday, against 2,600 tons last week. Wednesday's quotation in East St. Louis was 7·00 cents per lb., against 6·75 cents the week before and 6·75 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipment during the current month was £23 to £23 1s. 3d. per ton, against £22 15s. to £22 17s. 6d. last week.

TIN.—After an early relapse, the cash price recovered, to show a net gain of 5s. on the week. Wednesday's price was the highest since April 22nd. Reports of labour unrest in Bolivia and of drought in parts of Malaya imparted a firmer tone to the market and caused American consumers to show more interest. However, Malayan production rose from 5,649 tons in May to 7,899 tons in June, and thus exceeded the quota by 1,304 tons. Straits shipments between July 1st and July 12th attained the high level of 4,060 tons, against 6,390 tons for the whole of the previous month. Thus, recent production and shipment figures show no evidence that drought has restricted the output, and the rumours mentioned above should therefore be treated with reserve. Even so, however, the market position remains strong, and no major reaction of prices appears likely.

Sales of tin on the London Metal Exchange: 410 tons on Monday, against 350 tons last week; 475 tons on Tuesday, against 775 tons last week; 550 tons on Wednesday, against 825 tons last week. The New York quotation on Wednesday was 60·10 cents per lb., against 59·75 cents a week ago and 55·12½ cents a month ago. Wednesday's official closing quotation in London for standard cash was £266 15s. to £267 per ton, compared with £266 10s. to £266 15s. a week ago. Stocks of tin in London and Liverpool at the end of last week totalled 2,787 tons, a decrease of 198 tons on the week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted on Wednesday at £100 per ton, and rolling billets at £102 per ton. Nickel, for home and export, was maintained at £180 to £185 per ton. Quicksilver, on the spot, was reduced to £15 1s. to £15 1s. 6d. per flask of 76 lbs., against £15 5s. to £15 5s. 6d. a week ago. Chinese antimony was quoted at £68 per ton, ex-warehouse, the same as last week. Chinese wolfram for "July-August" shipment was quoted at 64s. 6d. to 65s. 6d. per unit, c.i.f. compared with 63s. to 64s. last week. Refined platinum was quoted on Wednesday at £10 per ounce compared with £10 a week earlier.

TEXTILES

COTTON.—Manchester.—There have been no signs of any real improvement of business in yarn and piece goods. Many buyers have been disturbed by the bearish feeling in raw cotton circles, although prices in New York and Liverpool have been fairly steady. However, there have been no indications of spinners and manufacturers being more prepared to make price concessions.

The American Government's estimate of the area under cultivation of cotton published at the end of last week, at 34,192,000 acres, an increase of 10·4 per cent. over 1936. This was rather less than expected, and the report was considered slightly bullish. Weather advices from the belt remain favourable and, unless there is a change for the worse, most experts expect a forecast of a heavy yield early in August.

Although spinners of American and Egyptian yarns have had another quiet week so far as new business is concerned, quotations for all counts and qualities remained firm. Most producers are covered by the legalised price agreements, and are, therefore, compelled to maintain selling prices. Demand is being fully maintained and many users are still pressing spinners for deliveries.

Business in cloth, both for export and the home trade, has been limited. Manufacturers have reported a fair amount of inquiry, but only comparatively small transactions have been recorded. Buyers seem quite content to mark time and purchase from hand to mouth, although now and again there are reports that some customers are nursing orders.

AMERICAN COTTON CROP.—At the end of last week the Department of Agriculture of the United States Government estimated the area under cotton for the season 1937–38, at 34,192,000 acres, an increase of 10·4 per cent. on the acreage for the current season. It was pointed out by the Department that the area planted, however, was 17·5 per cent. less than the average acreage for the five-year period 1928–32. In the present forecast, increases are shown in all States, with the least expansion in Texas and Oklahoma, where the increases are 7 and 3 per cent. respectively. Increases in South Atlantic and South Central States range from 10 per cent. in Louisiana and Alabama, to 16 per cent. in South Carolina and 28 per cent. in Florida. Georgia shows an increase of 15 per cent., Mississippi and Arkansas of 12 per cent., and North Carolina of 11 per cent. The increase in California is estimated at 67 per cent., which, following the increase of 68 per cent. in 1936, places the current year's acreage for the State at the high record of 618,000 acres. It is significant that a total of 20,000 acres of Sea Island cotton is reported in Florida and Georgia. This compares with less than 5,000 acres last year. The estimate of the Government was slightly below anticipations and after the receipt of the report the Liverpool market advanced about 10 points. There is every indication of substantial supplies of raw cotton from America in the new season, and according to some authorities the information so far available indicates an output of about 14,200,000 bales, against the crop for the current season of 12,399,000 bales. So far as the weather is concerned, the plants are now approaching a critical period and rumours are being circulated of there being every probability of increased damage from the boll weevil. The first forecast of the probable output will be published by the American Government on August 9th. It is quite impossible at the moment to estimate the probable world consumption in the new season.

JUTE.—Dundee.—According to the first forecast of the jute crop for the season 1937–1938, the area sown is not as large as has generally been expected. The revised figures for last year were 2,822,100 acres, compared with the original estimate in July last year of 2,505,800 acres. The district returns this year indicate that 2,747,100 acres have been sown, showing a decrease of 2½ per cent. on the revised figures for last year. The jute industry has paid little or no attention to these returns, as during the past six seasons the crop has been underestimated by 1,750,000 bales on the average. Last season's crop yielded 10,725,000 bales, compared with the final estimate of 8,711,000 bales. A crop of about twelve million bales has been estimated by private firms for this season, and the estimated consumption of the world is in the vicinity of eleven millions. Consumption, however, depends upon whether the Indian jute mills will continue to work 54 hours per week during the next twelve months. This is doubtful, for stocks of both hessians and heavy goods showed an increase during June of 21½ per cent. and 33½ per cent. respectively. Stocks are not yet unduly high, but it has to be remembered that the strikes in Calcutta last spring considerably curtailed production and a further increase in stocks is expected as time goes on. At the end of June, stocks of hessians were 96,685,619 yards and stocks of sackings 101,350,361 yards. A deputation from Dundee, representing the Town Council, Chamber of Commerce, employers and employees, is meeting the President of the Board of Trade in order to place before him the seriousness of the great increase in imports of Calcutta manufactured goods into the United Kingdom, and to ask for some form of protection against these, which are allowed to enter this country free of import duty.

Raw jute has advanced in price recently and the full group of Daisee–2/3 is now quoted at £20 15s. and Tossa 2/3 at £21 15s. October–November shipment. Good First Marks are at £24, Lightnings at £22 17s. 6d., and Hearts at £21 15s., August–September.

Jute yarns have come in for more attention at 2s. 2d. for common 8 lb. cops, and 2s. 3d. for 8 lb. spools. Twist is steady at 4½d. for 3 ply 8 lb., sacking yarns at 2 11/16d. for 24 lb. weft and 3⅜d. for 8 lb. chains, while Rove is quiet at £21 10s. for 48 lb. and £17 5s. for 200 lb.

Only a small business is being done in jute cloth, and prices are nominal. Orders might be entered at 2¾d. for 10 oz. 40 in. and 2½d. for 8 oz., though quotations are usually ⅛d. more. Linoleum hessians and heavy goods are steady and unchanged. Calcutta goods have improved in sympathy with the rise in raw jute prices, and 10 oz. 40 in. is now named at 18s. July September, and 18s. 1d. October–March, with 8 oz. at 14s. 10d. July and 14s. 7d. August–March.

GRAIN MARKETS

WHEAT.—Markets have been firm in the period under review, prices in this country having advanced in sympathy with Chicago and Winnipeg. Drought continues to take its toll of the Canadian crop, while hot, dry winds are aggravating the effect of the absence of rain. On the basis of the official condition index, an out-turn of about 210 million bushels is indicated, compared with 229 bushels finally harvested last year; but the possibility of a yield smaller than this must not be ignored. Meanwhile the situation in the United States remains fairly satisfactory, though reports of past damage are still circulating.

On Wednesday last, "July" futures were quoted in Chicago at 126 cents per bushel, against 123 cents the week before and 110¼ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba (Atlantic) ex ship 56s. per 496 lbs., against 55s. 6d. last week, No. 2 Northern Manitoba (Atlantic) ex ship 55s. 3d., against 55s. last week. According to the *Corn Trade News*, total shipments of wheat and flour last week amounted to 882,000 quarters, against 1,172,000 quarters in the previous week and 980,000 quarters in the corresponding week a year ago.

FLOUR.—Prices are unchanged after a week of quiet trading. Wednesday's London quotations (excluding quota payments) were: Straight run, delivered Home Counties, 43s. 6d. per 280 lbs., as against 43s. 6d. a week ago; delivered inner London, 43s., as against 43s. a week ago. Manitoba patents, ex store, 43s. to 44s. 6d., as against 42s. 6d. to 44s. a week ago. Australian, ex store, 33s. 9d. to 34s. 6d., as against 33s. 6d. to 34s. 3d. a week ago.

BARLEY.—The market in imported feeding barley continues strong. "July" futures were quoted at 74¼ cents per bushel in Winnipeg on Wednesday, as against 71¼ cents last week. Quotations per 448 lbs. in London on Wednesday were: "English feed" at farm, 35s. to 36s., as against 35s. to 36s. a week ago; "English malting," at farm, 36s. to 42s. (nominal), against 36s. to 42s. last week. California, ex ship, 49s. 6d. to 58s., as against 49s. 6d. to 58s. a week ago. Chilean, brewing, ex ship, 44s. 9d. to 50s., as against 44s. 9d. to 50s. a week ago.

OATS.—On Wednesday, "July" futures were quoted at 43¼ cents a bushel in Chicago, against 43½ cents a week ago and 39¼ cents last month. Quotations in London, Wednesday: "English black," at farm, 28s. to 29s. per 336 lbs., as against 27s. to 28s. a week ago; "English White," at farm, 28s. to 29s., as against 27s. to 28s. a week ago; mixed Canadian feed (Vancouver), landed, 27s. 9d. per 320 lbs., as against 27s. 6d. a week ago.

MAIZE.—The market has had a steady tone. "July" futures were quoted on Wednesday at 126⅞ cents per bushel in Chicago, against 125½ cents a week ago and 112 cents last month. Quotations in London, Wednesday: "Plate," landed, 28s. 9d. per 480 lbs., as against 27s. 9d. a week ago; "Plate," ex ship, 27s. 9d., as against 26s. 9d. a week ago; "Plate," "July," 27s. 9d., as against 26s. 9d. a week ago; yellow maize

July 10, 1937	67,562	3,340	9,021	9 7	9 7	9 2

OTHER FOODS

BACON.—Bacon has been in keen demand this week, with the market showing a firm tone. The official quotations (per cwt. for No. 1 Sizable) which formed the basis for dealings on the London Provision Exchange this week were : English, 90s. ; Canadian, 84s. ; Danish, 91s. ; against 90s., 84s., and 91s. last week. Arrivals in London last week included : Danish, 13,994 bales ; Canadian, 7,406 ; Dutch, 2,399 ; Lithuanian, 1,105 ; and Polish, 3,344 ; as against 13,963, 4,374, 2,440, 1,145 and 2,777 bales, respectively, in the previous week.

BUTTER.—The firm tendency has been maintained, and prices are higher on the week. Quotations (per cwt.) on the London Provision Exchange on Wednesday were : New Zealand, finest salted, 114s. ; Australian, choicest salted, 113s. ; Danish, 120s. ; compared with 109s. to 110s., 108s. and 115s. to 116s., respectively, a week ago.

CHEESE.—After early weakness, New Zealand recovered in price ; other descriptions were generally steady. Quotations (per cwt.) on the London Provision Exchange on Wednesday were as follows : Canadian, finest coloured, 78s. and New Zealand, finest coloured, 70s. ; against 78s. to 80s. and 68s. 6d. to 69s., respectively, a week ago.

COCOA.—The spot quotation in New York on Wednesday was 7 1/16 cents per lb., as against 7⅛ cents per lb. last week. In London, on Wednesday last, good fermented new crop, Accra, "November-January," was quoted at 36s. 3d. sellers per 50 kilos., c.i.f. Continent, against 35s. 6d. a week ago. Last week's movements of cocoa in London were as follows : Landed, 1,205 bags ; delivered, for home consumption, 3,807 bags ; exported, 751 bags ; stocks, 270,881 bags, against 179,634 bags a year ago.

COFFEE.—On Wednesday, Rio No. 7 (cash) was quoted at 9¼ cents per lb. in New York, as compared with 9¼ cents per lb. last week and 9⅜ cents per lb. a month ago. Movements of coffee in London last week were as follows : Brazilian, landed, nil ; delivered, for home consumption, 99 cwt. ; exports, 12 cwt. ; stocks, 1,980 cwt., against 10,203 a year ago. Central and other South American : Landed, 409 cwt. ; delivered for home consumption, 3,560 cwt. ; exported, 264 cwt. ; stocks, 105,709 cwt., against 112,243 last year. Other kinds : Landed, 1,263 cwt. ; delivered, for home consumption, 3,572 cwt. ; exported, 165 cwt. ; stocks, 11,269 cwt., against 156,723 last year.

EGGS.—As was foreshadowed last week, the firm tone has been maintained. At Smithfield, on Wednesday, English (ordinary packing, Grade I, about 15-15½ lb.) realised 14s. 9d. to 15s. 3d. per 120, against 14s. 9d. to 15s. 3d. last week ; while Danish (15½ lb.) made 10s. 6d. to 11s., as against 10s. 3d. to 10s. 9d. last week.

FRUIT.—Business at Covent Garden has been particularly good, states *The Fruitgrower*, with prices generally firmer. The rush of the strawberry season is over, only moderate supplies being now available. A particularly good showing of raspberries meets a steady inquiry, prices ranging from 4d. to 8d. per lb. ; loganberries sell at 4d. to 4½d. English black and red currants are a prominent item, while green gooseberries sell well. Cherries are rather easier and sell well at present rates. Plums are also cheaper in consequence of heavier Continental arrivals, but trade is good. Hothouse grapes have eased for a similar reason, but English melons about hold their price. Peaches continue to sell well and nectarines are firm. Apples and pears have been a steady trade, with prices showing a firmer tendency. Oranges have been in good demand, but lemons are lower on larger arrivals. Grape fruit have improved in price.

MEAT.—At Smithfield market on Wednesday last, Argentine chilled hindquarters were quoted at 4s. 2d. to 4s. 6d. per 8 lbs., as compared with 4s. 4d. to 4s. 8d. a week ago. New Zealand frozen mutton was 3s. 4d. to 3s. 10d. per 8 lbs., against 3s. 4d. to 3s. 10d. a week ago. According to the Smithfield Market official report, supplies during last week amounted to 8,400 tons, a decrease of 743 tons on the corresponding week last year. Beef and veal accounted for 4,150 tons, mutton and lamb 3,133, and pork and bacon 604, as compared with 4,866, 3,243 and 558 tons, respectively, in the same week of 1936.

MILK.—Information relative to the operation of the Milk Marketing Scheme during June as issued by the Milk Marketing Board is given in the following table, together with comparable statistics for earlier months :—

	June, 1936	March, 1937	April, 1937	May, 1937	June, 1937
Regional pool prices* (*per gallon*) :	d.	d.	d.	d.	d.
Northern	9	13¾	12¼	9¼	9¼
North-Western	9	13¾	12¼	9¼	9¼
Eastern	9¼	14	12¾	9¾	9¾
East Midland	9	14	12¼	9¼	9¼
West Midland	8¾	13¼	12¼	9	9
North Wales	8¾	13¼	12¼	9	9
South Wales	9	13¾	12¼	9¼	9¼
Southern	9¼	14¼	12¾	9¾	9¾
Mid-Western	8¾	13¼	12	9	9
Far Western	8¾	13¼	12	9	9
South-Eastern	9¾	14¼	13	10	10
Liquid milk price (*per gallon, all regions*)	12	17	16	12	12
Manufacturing price (*per gallon, average*)	4·941	5·824	5·293	5·532	5·404
	Million gallons				
Total sales under contract	87·56	69·45	72·81	89·08	86·85
For liquid consumption	46·67	49·17	47·77	49·73	48·93
For manufacturing	40·89	20·28	25·04	39·35	37·92

* On account to the nearest farthing.

Accredited producers receive 1d. per gallon in addition to the above prices. Premiums for level deliveries and for Grade "A" or special services are paid to the producers concerned in addition to the pool price. Transport charges are payable by individual producers and are deducted from accounts.

PEPPER.—On Wednesday, white Muntock, August-October, was quoted at 4 1/16d. per lb., sellers, c.i.f. Rotterdam-Hamburg, against 4¼d. per lb. a week earlier. Black Lampong, spot, in bond, was quoted at 2 1/16d. per lb. sellers, compared with 3d. per lb. last week. Movements of pepper in London last week were as follows : Black, landed, 16 tons ; delivered, 13 tons ; stocks, 2,056, against 1,759 last year. White, landed, 26 tons ; delivered, 47 tons ; stocks, 11,546 tons, compared with 12,273 a year ago.

RICE.—The spot price of Burma No. 2, cleaned, was 10s. per cwt., ex warehouse, on Wednesday, as compared with 10s. per cwt. a week ago. "July-August," in singles to Continent and U.K., was quoted at 9s. per cwt., against 9s. last week. Movements in London last week were as follows : Landed, 172 tons ; delivered, 34 tons ; stocks, 1,913 tons, against 1,989 a year ago.

SUGAR.—The London spot market in raw sugar has been quiet and rather easier. New York quotations remain unchanged. The New York spot quotation was 3·50 cents on Wednesday, as compared with 3·50 cents per lb. last week and 3·40 cents per lb. a month ago. Wednesday's sales of raw sugar in London included "August" delivery at 6s. 7d. to 6s. 7½d., against 6s. 8½d. to 6s. 8¾d. a week ago. Movements of raw sugar in public warehouses in London and Liverpool last week were as follows : Imports 3,922 tons, against 5,633 in the previous week and 21,350 in the same week of 1936 ; deliveries, 17,484 tons, against 15,736 and 18,993 tons, respectively ; stocks, 167,082 tons, against 184,471 and 136,647 tons, respectively.

TEA.—The following table shows the average price (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account in recent weeks :—

Week ended	Northern India	Southern India	Ceylon	Java	Sumatra	Africa	Total
	d.	d.	d.	d.	d.	d.	d.
July 9, 1936	12·15	12·11	13·06	10·42	10·01	11·32	12·23
June 10, 1937	14·57	14·61	15·12	13·73	12·15	13·94	14·67

July 1, ,,	15·12	14·49	15·09	13·37	12·24	13·76	14·78
,, 8, ,,	15·34	14·38	15·12	14·64	12·25	13·69	14·83

At this week's public auctions in Mincing Lane, 15,175 packages of Indian and 32,118 packages of Ceylon tea came up for disposal. Demand for Indian was good and prices ruled steady at last week's rates. At the Ceylon auctions on Tuesday and Wednesday a firm tone was evident and prices were occasionally dearer.

VEGETABLES.—Although demand for tomatoes remains good, heavier supplies have resulted in a price decline, says *The Fruitgrower's* Covent Garden report. Cucumbers, however, have been firm on an active demand. Green peas rose in price owing to shortage of supplies, and broad beans have shown a firmer tendency. Cabbage and cauliflower are also dearer. Meanwhile, supplies of home grown new potatoes at the London markets are now ample for all requirements. Business in Jersey has about finished, but at the Borough on Tuesday English realised from 7s. to 9s. per cwt.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OILSEEDS.—Oilseed markets have a much better tone and business has shown an increase. Linseed is in active demand and is firmer. Calcutta seed is in most request on British account, while a good trade in Plate seed is reported from the Continent. Interest is mainly in early positions, though transactions in the new Argentine crop only just sown are taking place, up to £12 12s. 6d. having been paid for December-January loading to Hull. Shipments of Argentine linseed continue at a fairly high level, and include further quantities for the United States. The exportable surplus has now been reduced to 485,000 tons (including a small quantity from Uruguay), against 760,000 tons actually shipped in the remainder of last year. India's new crop has not yet been drawn on to a marked extent, but a surplus for export about equal to that of last season is counted upon. The outlook for the newly-sown American crop is stated to show improvement, but the small outturn expected in Canada has been further prejudiced by drought in certain districts. The quantity of linseed afloat for Europe has increased to 106,800 tons (including 30,800 tons from India), while that for the United States is 53,700 tons.

There has been a sharp advance in cottonseed, and up to £8 has been paid for old crop Egyptian, while new crop for September loading is quoted around the same figure. Vegetable oils are in fair demand. Linseed oil for prompt delivery has advanced 20s. per ton in the past few days, and cotton oil is also 20s. dearer ex Hull. Oilcakes are in normal demand and fully steady.

RUBBER.—Exports from the principal producing areas during June were substantially higher than had been expected ; the publication of this information was the factor mainly responsible for the easier tone of the market this week. A considerable volume of buying was, however, encountered at the lower level. Generalisation from one month's export figures is dangerous, but it appears that less difficulty will be experienced in producing at the rate of 90 per cent. of standard during the second half of the year than had recently been supposed.

The spot price in New York on Wednesday was 19 cents. per lb., compared with 19 1/16 cents per lb. a week ago and 19¼ cents a month ago. Wednesday's official buyers' price for standard ribbed smoked sheet on the spot in London was 9 1/16d. per lb., as against 9¼d. on the corresponding day last week. In forward positions business has been done at 9¼d. to 9 1/16d. for "August" shipment, as against 9¼d. to 9⅜d. a week ago. Stocks in London and Liverpool at the end of last week totalled 42,175 tons, against 43,047 tons a week earlier. A year ago stocks amounted to 119,095 tons.

Spreading Prosperity

MOST countries of the world have been enjoying increasing internal prosperity for some time past. These domestic recoveries, which in a few cases have almost reached boom proportions, are now beginning to stimulate international trade. In the last twelve months, as the reader of our Monthly Trade Supplement this week will readily perceive, world trade has recovered in volume; and it is now just about equal to what it was before the Great Depression eight years ago. The chief bulk-commodities of world trade, the collapse in the prices of which ushered in the depression—wheat, rubber, coal, sugar and non-ferrous metals—are now being traded in increasing quantities, in markets from which the fatal influence of vast unsaleable stocks has been removed. A corollary of this is the rocket-like rise in shipping freights, the shortage of cargo capacity, the disappearance of idle tonnage, and the increase in shipbuilding. The rise of 20 per cent. during the last twelve months in world prices of primary products—first to fall in depression, last to rise in recovery—has increased both the international purchasing power and the transfer-capacity of those debtor States which mainly export them. And British exports, as well as those from other industrial countries, are, after the usual time-lag, approaching their 1929 level.

This is all to the good as far as it goes. But it only goes back to 1929. Even in that year, which by now has come to bear a halcyonic tinge, the exchange of commerce between nations—especially in Europe—was proportionately much lower than before the Great War, if we allow for the intervening growth in the world's productive capacity. "Trade's proud Empire" flagged as the paraphernalia of economic nationalism grew. Up to 1914, the industrially developed European nations were increasingly exchanging specialised products among themselves, and developing the potentialities of other continents; and the result was a rapid expansion in national incomes and the range of consumers' choice. After 1918, it took world trade a decade to surpass its 1914 level, though its productive capacity was immensely greater. The general realisation that trading between nations was being prevented from continuing its upward pre-war trend led the representatives at the 1927 World Economic Conference unanimously to recommend a reduction in barriers to trade. And now, almost another decade farther on, there is precious little need to throw our bonnets into the air if we see the volume of trade between nations approaching its 1929 and 1914 levels, despite an enormous growth in the world's actual productive capacity. Even the striking boom in shipping freights and shipbuilding—an increase of almost 100 per cent. in twelve months—has only pushed up the tonnage of mercantile shipping under construction in this country to little more than a half of what it was in 1913.

The welcome if long-delayed recovery in world trade, moreover, is not evenly spread. This is no matter for complacent passivity. The world remains divided into States with relatively free trade and currency systems, and those whose foreign trade and currency are alike arbitrarily controlled. Into the first category come the greater and smaller democracies: the United States, the British Commonwealth of Nations, France, Holland, Belgium, Scandinavia. Among these, whose currencies are kept in a stable relationship with each other, talks have been progressing for the further freeing of their commerce; notably between the United States and Great Britain. The Belgian Prime Minister, M. VAN ZEELAND, himself an economist of repute, has just returned from seeing PRESIDENT ROOSEVELT at the latter's invitation. He is pursuing his inquiry, undertaken at the request of the French and British Governments, about the necessary first steps towards a reduction of the barriers, reared in depression, to trade. In the debate on Monday MR EDEN told the Commons that the British Government supported the aims of all these countries, as well as those of the League Committee, on Access to Raw Materials.

On the other hand, there are countries like Germany, Italy, Poland, and the overwhelming majority of Central and South-eastern European States, whose foreign trade and currencies are controlled by their governments to the smallest detail. While the rise in prices of foodstuffs and raw materials may aid such of them as have not mortgaged their home production to bigger neighbours — as, notoriously, Jugoslavia, Hungary, Bulgaria and Greece have done—it must exert a cumulative and crushing pressure upon those —e.g. Germany and Italy—whose industries depend almost entirely on imported raw materials. Now that the latter are becoming dearer, the dilemma, masked while the small countries had surplus stocks for disposal, is becoming acute. The German and Italian economic systems are too rigid to permit of a rapid increase in civil industry working for export. They are caught in the toils; and even if those toils are mainly of their own fashioning, that does not lessen the disruptive danger they constitute to the freer-trading nations outside. General world-wide recovery cannot come unless measures are taken which, directly or indirectly, will enable the " controlled " countries gradually to abandon their controls and slide into the wider system of freer-trading nations. This is as much an essential condition of durable general prosperity as it is of world peace.

Such is the burthen of a petition, signed by an impressive number of signatories in this country, which was presented to the Prime Minister last week-end. " Through economic appeasement to political understanding and peace " is a sensible slogan at an opportune moment; and it is commanding ever wider support. It was therefore something in the nature of a cold douche when MR EDEN last Monday said this:—

> A good deal of work is being done to show practical support of recent endeavours to promote international trade and to remove potential causes of international friction. We shall persist in these endeavours, though our contribution must necessarily be limited by the fact that His Majesty's Government's policy in regard to imports is clearly a liberal one—(Opposition laughter)—as is illustrated by the very large volume of our imports and the very steady increase throughout recent months.

In a narrow sense, i.e. in comparison with other countries' fiscal systems, MR EDEN is right: our tariff is relatively liberal. But as an argument this is not good enough; for it overlooks the fact that our adoption of protection has been probably the greatest single act of obstruction in recent years. Our market was, and still is, so important an element in world trade that even a moderate check to the freedom of importation is of far greater moment than much severer restrictions by countries whose markets are of minor importance. A small obstruction in a main thoroughfare causes a bigger traffic jam than the complete closure of many a back street. The Governments of the British peoples should give positive help to clear the jam in world trade. The measure of their present opportunity is also the measure of their possessions, prestige and responsibilities in a world still a long way from peace and prosperity.

The Far Eastern Imbroglio

THE same lesson is to be learned from present events in the Far East as from those in the Mediterranean and the Iberian Peninsular. We are being taught that it is impossible to evade international obligations by running away.

When Japan committed aggression in 1931 and Italy in 1935, the policy on which the Government of this country acted was to let the aggressor " get away with it." " The Covenant of the League of Nations," so ran the argument, " is only a scrap of paper, while a war between ourselves and another Great Power would be a first-class catastrophe. Really to act on the principle *Fiat justitia ruat cœlum* would be midsummer madness. We will not bring the firmament down about our ears for the sake of anything in the world—except, of course, some concrete British interest." This policy prevailed; and its authors were not slow to proclaim that the children of this world had, as usual been wiser than the children of light. Nearer home, the entry of the Italian troops into Addis Ababa and the cancellation of the sanctions against Italy have had their nemesis in the intervention of Italy—and Germany—in the Spanish civil war. Now, to cap it all, we are entering chapter two of the companion Far Eastern volume of the Recording Angel's ledger. And in spite of everything, British interests are more threatened than ever.

In order to understand the origins of the new and grave crisis that has once more arisen in the Far East, we must recall what has been happening since May 31, 1933, when an armistice was signed at Tangku between the Japanese military authorities on the Asiatic Continent and the Chinese military authorities in Peiping (Peking). On the morrow of that armistice, the Japanese were in effective military occupation of the four Manchurian provinces of China. No outsiders had interfered. The Chinese themselves were accepting the *fait accompli* by concluding an armistice which would enable the Japanese to retain their conquests without having to go on fighting. The signatories of the armistice on the Chinese side were only the local military authorities in Northern China, and Japan's puppet State of " Manchukuo " has not been recognised either at Nanking or elsewhere.

There was, however, a flaw in the Japanese Army's calculations. For while the conquest of Manchuria turned out to be easy, the exploitation of the conquered territories has been more disappointing than even their critics ventured to predict. Manchuria is a rich man's investment which needs long-continued expenditure of a vast capital before it can be made to yield a profit. The Japanese peasant, however, is a poor man in a hurry. Overcrowded on the land and overburdened with debt, the Japanese peasantry were already near their last gasp when the Japanese Army let fly at Mukden in September, 1931. The soldiers told the peasants then that the seizure of Manchuria would bring them the millennium and bring it instantaneously. But four years' experience has told another tale. The only effect of the conquest on the welfare of the Japanese peasantry up to date has been to starve the work of ameliorating agrarian conditions at home by loading the Japanese budget with ever larger appropriations for capital development in Manchuria and for the expansion of the Japanese fighting forces. In face of the peasantry's natural disappointment, the Japanese Army has been able to think of no better recourse than to repeat its Manchurian adventure by trying to lop off another half-dozen Chinese provinces between the Manchurian border and the Yellow River. This is the immediate cause of the present crisis. But the Japanese Army's policy is now coming under the rule of the law of diminishing returns. On the one hand, the creation of a " Manchukuo No. 2 " is no remedy for the unremunerativeness of " Manchukuo No. 1." On the other, the sheer business of conquest has not been proving as easy in Chahar and Hopei as it was in Fengtien and Jehol.

China is an awkward dish to swallow. Like a string of macaroni, she is too long to swallow whole but also too tough to bite off short. If anyone is rash enough to take one end between his teeth, he finds himself forced to go on swallowing till he chokes. Nor is it only the bulk and the consistency of the Chinese body politic that are putting Japan in a fix. Japan has helped China to progress with the vast task of reorganising her life on a Western basis much faster than she would have been likely to move if she had been left to her own devices. All observers seem to be agreed that China has been pulling round with remarkable success during the last year or two. The Central Government's authority has been becoming rapidly more effective over an ever wider area, for example in the Far South. The financial and economic condition of the country has been distinctly improving. And whatever the inwardness of the mysterious kidnapping of PRESIDENT CHIANG KAI-SHEK by MARSHAL CHANG HSUEH-LIANG at Sianfu last year, it probably portends at least a truce between the Kuomintang and the Chinese Communists. Have the Japanese Army now made up their minds to swallow China whole before she is completely herself again? If so, they will probably find, like GENERAL FRANCO, that it is easier to start a war than to wind it up.

The shots in the night outside Peiping which precipitated the present crisis were aimed at Japanese soldiery who, contrary to custom and convention, deployed without due notice in an area where the Chinese Government's writ should run. Though negotiations are still being carried on by the political authorities of each nation, the Japanese army leaders demand that their effective control of the Chinese northern territories should be tacitly recognised and confirmed by a purely local agreement. To this the Nanking Government object that their approval must be given, since the Japanese could overbear any local Chinese commander left in an area denuded, under the terms of the local truce, of the recalcitrant 37th Division of the Chinese 29th Route Army which had speedily arrived there.

This week fighting around Peiping has been sporadic, and the neighbouring town to the south-west, Liukouchiao, has been bombarded by the Japanese from the air and by artillery. PRESIDENT CHIANG KAI-SHEK has moved some divisions up to Hopei-Chahar to meet the Japanese reinforcements from Manchuria and Tientsin —a natural precaution. The Japanese have so far not despatched troops from home, though they have partially mobilised. Meanwhile the resources of diplomacy are not exhausted; and Japan has still time to effect a settlement which will save her militarists' faces and her ill-gotten gains without throwing the Far East into the furnace of war. Whatever the outcome, Japan could not hope to emerge unscathed from such a holocaust.

The Economics of Population—III

Problems of Contraction

IN earlier articles on Britain's future population, which appeared in the last two issues of *The Economist*, the probable course of the population was sketched and some of the economic consequences of the changes to be expected were outlined. For about twenty-five or thirty years from now there will be very little change in the total numbers of the population, but there will be substantial alterations in the age-composition. In a later period, however, some fall in total numbers is all but certain. In last week's article the discussion was confined to the effects of the changing age-composition; the effects of changes in the size of the total population were left for this concluding article. In strict terms, a distinction should be drawn between the effects of the cessation of growth, which is already upon us, and those of an actual decline, which will not begin for about a generation. But the two are likely to differ in degree rather than in kind; and since any precise quantitative estimates of the rapidity of the eventual decline will almost certainly be disproved by events, the two can conveniently be discussed together.

In view of current misconceptions it is perhaps necessary to begin by drawing the very obvious distinction between the effects of a *smaller* population and those of a *declining* population. It may be that if the population of England and Wales in 1937 were less than the actual 40 millions the economic welfare of the inhabitants would be greater than it is—though it would be very difficult to adduce any evidence for such a belief. But even if economic welfare would be greater with a population of 30, or 20, millions, it does not in the least follow that the process of reducing from 40 to 30 or 20 millions would be economically beneficial. Even Paradise is approached through Purgatory.

Our first objective is the effect of a falling population on industrial, or rather economic, productivity. The " net rate of reproduction " in this country (i.e. the extent to which the present generation of mothers are reproducing themselves) was in 1935 about 0.75, and if this were maintained, the population would eventually fall at the rate of one-quarter each generation. For the present, this may be taken as the maximum probable rate of decline. It so happens that an increase of one per cent. per annum in economic productivity per head (which is about the average rate actually attained in recent decades) would almost exactly suffice to offset this rate of decline in total population. If both these rates applied, then the total production of the country would remain stable. If the population were to fall less rapidly, or productivity per head to rise more rapidly, or both, total production would increase. There is consequently no reason to anticipate a catastrophic fall in total productive capacity.

There is, in fact, some reason to believe that productivity *per head* could increase more rapidly than in the past. For the ratio of land to labour, and probably of capital to labour, will increase. On the average,

the amount of land and capital available per worker will be larger than it would otherwise be. And this can hardly fail to increase potential productivity per head.

Emphasis must, however, be laid upon the word " potential." The last two paragraphs have been based upon the tacit assumption that the available resources of labour and capital would be as fully utilised as at present—that is, that there would be no increase in unemployment. That depends upon whether the resources of labour and capital are available in the industries and localities in which they are wanted. The nation's total productive capacity, and hence its total potential demand, may be maintained or even increased. But the constituents of the demand will change. For example, a population of 30 millions would certainly demand less bread than a population of 40 millions, even though its total purchasing power were unchanged. But if it still has the capital and labour in the baking industry to produce bread for 40 millions, waste and unemployment will ensue.

This problem is crucial. It is not enough to take the total working population, to multiply by an assumed rate of productivity and to announce the result as the total production of the country. By such means of calculation, the hundreds of thousands of workers marooned in the export trades since the war would be assumed to be in useful employment, whereas it is well known that they are not. The *potential* production of the country will remain unchanged or even increase slightly. Whether the *actual* production comes up to this potential depends upon whether the available resources of capital and labour can be transferred quickly enough from where they will not be wanted to where there will be a demand for their services. And as we know from our experience since the war, it cannot lightly be assumed that the transfer will be made.

The adaptability of the economic system is thus the crux of the problem. If the capacity for adjustment is equal to the demands made upon it, the total production of the country will be maintained, the standard of living will rise and we shall be spared the bad effects (e.g. on the railways) of a shrinking total volume of production. But if not, maladjustments will lead to unemployment. It therefore becomes important to examine the probable needs for adjustment and the probable variations in the adaptive capacity of the economic system.

The need for adjustment will arise out of the changing character of demand. The industries which will be worst hit will be those which are related not to the size of the population, but to the growth of the population. Foremost among these is the building industry. Up to the present very little of the demand for building has arisen from the replacement of existing houses, and almost all from the demand for additional houses. This depends, to speak accurately, on the growth in the number of families rather than in total population. There is a time-lag between the two quantities, but clearly families cannot go on increasing for long after total population falls. A demand for new houses in replacement of old houses may spring up, but it will be handicapped by the existence of a growing surplus of existing houses, which will be obtainable at low prices. When there are 11 million houses for 9 million families, it is hard to believe that there will be much new building.

A second set of industries which will suffer a decline in demand comprises those whose activity can be expected to vary with the size of the total population. Broadly speaking, these are the industries which provide the basic necessities of life. The most obvious is agriculture. As the standard of living rises, it is reasonable to suppose that there will be some increase in the consumption of food per head. But there is likely to be an even greater increase in the production of food per agricultural worker, owing to advances in chemistry and biology. If so, the number of people who can be employed in agriculture will fall with, or even faster than, the population. In the British case, this will be felt in the shape of smaller imports of food, and hence a declining demand for the export industries.

In one way and another, then, there will be considerable adjustments to be made. It is not quite impossible to get some idea of their order of magnitude. If the number of workers marooned in the export trades after the war be put at 1,000,000 (almost certainly an over-estimate), they represent less than one-tenth of the workers insured against unemployment. If the population were to decline by a quarter in thirty years, some industries, such as building, might suffer a very large fall in employment—say, by two-thirds—while others, such as agriculture, would shrink by one-quarter. Building in this country employs about a million workers, while the supply of food employs, directly or indirectly, something of the order of 5,000,000 people. In these two industries alone, then, there would be a shrinkage of nearly 2,000,000 workers. It is true, of course, that all industries will have a " natural " shrinkage of employment as the old men retire and are not replaced by an equal number of recruits. To this extent contraction will be painless. But there is no similar " natural " decrease in the productive capacity of industries, so far as physical capital or finance are concerned. The problem of adjustment will, therefore, be almost certainly greater than that which we faced in the post-war years—and have not yet solved.

What of the effects on the adaptive capacity? MR KEYNES recently argued in his Galton lecture that one of the effects of declining population will be to expand the supply of savings relatively to the demand for them. The normal effect of this, in default of radical redistribution of incomes or much lower interest rates, would be to cause a considerable wastage of resources—in a word, to make the recurrent slumps in trade deeper than they would otherwise be. Moreover, one of the most powerful stimuli to recovery from a depression—the automatic increase in demand due to rising population—would be lacking. For instance, the population of the United States in 1937 is about 7,000,000 larger than in 1929, and provision for the essential needs of these 7,000,000 people is one of the strongest influences that have made for recovery. Finally, as a last item in this doleful recital, account must be taken of the depressing psychological effect of chronically falling demand in many industries, with increasing surplus capacity.

These unfavourable factors may have been stated too strongly. But that they will have *some* validity can hardly be denied. If so, the conclusion is inescapable that the capacity for adjustment will decline just as the need for adjustment increases. There is, however, one offsetting factor which should not be overlooked. A stability, or decline, in total production, will tend to make the level of prices higher than it would otherwise have been, since it is unlikely that the quantity of money in circulation will be affected by population changes. This gentle inflationary effect will be welcome.

The moral of this analysis, as of last week's, is that the greatest need of the twentieth century will be for adaptability in the economic system. The increase of productive efficiency will be vital, as it has always been, and a fairer distribution of economic rewards will continue to be the demand of the under-privileged. But the peculiar and distinctive requirement of this century will be adaptability. The authoritarian states can secure it, if they will, but only at the sacrifice of all human freedom. A democratic economy can secure it too, if it will submit itself to the discipline of forethought and pre-arrangement. It should be possible to meet this last demand more completely than it has been met in the past century.

Expanding Steel Capacity

PERHAPS the most significant feature of the Import Duties Advisory Committee's report upon the condition of the British steel industry (reviewed in *The Economist* on July 10, page 61) is its reiterated emphasis upon expansion of capacity. Only five years ago the industry was lamenting its over-capacity, and drastic pruning seemed to be the only remedy for a situation brought about by war-time expansion and subsequent loss of exports. That some units in the industry were less efficient, technically, than their overseas competitors had been generally admitted since the publication of the Balfour Committee's report. There was grave doubt, however, in many quarters whether the outlook would ever be sufficiently promising to justify the large-scale investment of new capital necessary for effective reorganisation. No one foresaw that within five years the existing plant would be found inadequate, and that the Ministry of Munitions' estimate of a " normal " post-war output of 12 million tons would actually be exceeded. Yet to-day there is a shortage of steel capacity, and the I.D.A.C. report is mainly—and rightly—concerned, not with the elimination of redundant plant, but with the maintenance of supplies and the need for central regulation and planning of new construction. And the British Iron and Steel Federation has now charged itself with the duty not only of approving, but also of initiating proposals for the extension of capacity.

The magnitude of the revolution in the technique and organisation of the industry during the last six years is not generally appreciated. Its output has attained levels which it has never previously approached. Production of steel ingots and castings touched 9,717,000 tons in the peak year of the war, reached 9,636,000 tons in 1929 and fell to 5,203,000 tons in 1931. By 1935, however, it had risen to 9,859,000 tons, and last year totalled 11,705,000 tons. But in 1937 it is likely to be at least 12,500,000 tons, and it may even approach 13,000,000 tons; for by the end of this year the industry's productive capacity will have been increased to 13,500,000 tons.

The technical implications of this advance have been far-reaching. For the first time since the collapse of the post-Armistice boom, ample funds have been available for development. Since 1931, new expenditure has been of the order of one-fourth of the whole of the industry's present capital. A few comparisons between production in 1936 and in 1929 bring out the extent of the resulting increase in efficiency. Pig-iron output per furnace in blast has increased from 47,900 tons to 69,700 tons. Fuel consumption, per ton of pig iron, has fallen from a coal equivalent of 38.2 cwt. to 33.2 cwt. Nearly 45 per cent. of the total pig-iron output is now consumed in a molten condition, compared with 36 per cent. in 1929. In the steel industry as a whole the output per worker has increased by about one-quarter. The Import Duties Advisory Committee, it is true, points out certain weaknesses which still exist in the industry's technical structure—for example, there is still a need for a greater number of large and modern blast furnaces, and there is a strong case for the erection of another large basic Bessemer steelworks. It is clear, however, that the industry is much less vulnerable to technical criticism than it was five years ago.

Development, in fact, has followed two major lines. The first—and the less spectacular—represents simple reconstruction to eliminate bottle-necks and to improve general efficiency. Thus, the balance of existing works has been improved by combining coke-ovens, blast furnaces and steelworks, and by taking full advantage of the valuable process gases. The United Steel Companies, for example, are re-building their Appleby-Frodingham works at Scunthorpe, and have already reconstructed their Cumberland plant by the addition of new batteries of coke-ovens. Richard Thomas, similarly, is reconstructing its Redbourn works on a plan which includes the building of coke-ovens and their linking with the iron and steel works. Though Dorman Long's projects are, possibly, less far-reaching, they have involved, nevertheless, the complete reconstruction of the company's coking plant. Other projects include the erection of sintering and other plants for pre-process treatment of raw materials on the one hand, and the provision of additional mills of various types on the other.

Reconstruction work of this character has had a highly important function ; indeed, it has probably contributed most to the advance in efficiency in the industry as a whole. In many works, however, existing layouts did not readily lend themselves to renovation on these lines, and in their case complete rebuilding has frequently been found necessary, sometimes in a different locality. Much the most spectacular of these operations has been the erection of Stewarts and Lloyds plant at Corby, which was conceived from the outset in accordance with the principles of industrial location derived from the technical development of fuel economy. Formerly, it was cheaper to make the steel on the coalfield and to transport the iron ore; to-day, it is cheaper to move the coal. Moreover, the exclusion of foreign imports of cheap steel made by the Bessemer process induced the company to break with British tradition, and itself to employ the Bessemer process. Thus a complete composite unit has been built up, buttressed by long-term agreements with other concerns, like the Lancashire Steel Corporation, in order to safeguard the market for its production. The plant came into full operation last year. Experience, however, has already shown that the original plans were unduly conservative, and that more mills are required. The original project of a 40-inch blooming mill and a semi-continuous strip mill was supplemented last year by the decision to erect a 32-inch mill and a 24-inch tandem mill. These, in turn, are to be supplemented by a 24-inch continuous mill and a small strip mill, and even these extensions may conceivably be found inadequate in the long run. If the company, on leaving Scotland, had not come to an agreement under which Colvilles took over its plate business, there would to-day be a strong case for adding a plate mill to the Corby plant. The plan, as a whole, has been costly, and the original estimates of over £3,000,000 have been substantially exceeded; but after the inevitable growing pains, it now appears to be developing satisfactorily.

Second only in importance to the Stewarts and Lloyds scheme is that of Richard Thomas at Ebbw Vale, which embodies a change of a major technical interest—the introduction of the American process of continuous rolling of wide sheets. This is a complete break with traditional British methods of sheet and tinplate production, and experience in America—where 23 strip mills are already in use—suggests that it holds out the prospect of substantial economies in production costs. The old Ebbw Vale company's plant has been entirely scrapped, and on its site a new composite unit is being erected, to produce sheets and tinplates direct from coal and iron ore. The technical merits of the scheme are hardly open to question, in the light of American experience. Possible difficulties lie rather on the commercial side; for a substantial increase of demand may be necessary if the mill is to be fully employed without involving the old-style mills in substantial loss. The financial problems of a scheme costing £8,000,000 are also, inevitably, formidable. Judgment, therefore, may perhaps be deferred until the future course of demand for sheets and tinplates can be more closely forecast. Meanwhile there appears to be some possibility of the introduction of analogous processes by other firms. John Summers and Sons, of Shotton, for example, are reported to have placed contracts for a similar plant, despite Sir William Firth's claim to the possession of exclusive patent rights in this country.

Finally, three schemes have been carried out which are less fundamental in character, but which admirably illustrate current technical tendencies. The transfer of

some of the Whitehead Iron re-rolling plant from South Wales to Redbourn, Lincs, though quantitatively small, was symptomatic of the general trend towards the Midlands. Another South Wales development has been the building of the Guest Keen Baldwins blast furnaces and steelworks at Cardiff, replacing the old Guest Keen Nettlefold's works at Dowlais, which were originally based upon local (and now practically exhausted) ore deposits, by a modern plant on the coast, consuming imported ore and saving transport costs both on raw materials and on the finished products. This new plant, is now being expanded. A final scheme of long-term interest—upon which, so far, little progress has been made—is that of Colvilles. Technically, Scotland has hitherto been the most backward of the steel districts, partly for natural reasons (particularly the exhaustion of raw material supplies upon which the industry was originally based) and partly because of the depression on the Clyde. There are, in fact, no composite firms in Scotland. Colvilles, however, has been gradually acquiring and scrapping its rivals' plant, and is now in a quasi-monopolist position. The group is embarking upon a £2,500,000 development scheme, which includes the building of a cokery, blast furnaces, steel furnaces and a plate mill. Like the Richard Thomas scheme, this is certainly the correct technical policy. But its success, similarly, postulates the maintenance, or even the increase, of demand at or above its present boom level.

In all schemes such as these, at the present time, there must necessarily be a significant element of commercial risk. That the demand for steel and its products will, in future, rise well above its present level is unquestioned, but the industry, in the short run, is subject to wide cyclical fluctuations. Recent developments in the steel trade as a whole, however, show at least that those firms which were courageous enough to embark upon schemes of expansion at the beginning of the recovery period have been among those to whom recovery has brought most benefit.

Outlook for France

A WEEK ago (*The Economist*, July 17th, page 135) we discussed the fresh divorce of the franc from gold and the new taxation proposals of the Chautemps Government. Since then there have been further important developments, including a fresh break in the franc, the change in the Governorship of the Banque de France, and the Government's new economy plans. We comment on these measures on page 186 of this issue. What is the political, psychological and economic background for these far-reaching changes?

Economically, France is not a homogeneous country. On the contrary, she is divided as to one-third into the relatively rich North and as to two-thirds into the relatively poor South. The North is not wholly industrial, for it includes some of the wealthiest vineyards; while, conversely, the South includes the ports of Bordeaux and Marseilles and the Riviera littoral. In representation both in the Chamber and Senate the South naturally predominates. This division is politically important; and it is additional to the better-known line of political demarcation between Paris and "the Provinces." Industrially, France is still a country of small producers, which, in a sense, has never fully recovered from the loss of technical ability due to the expulsion of the Huguenots three centuries ago. The need for industrial consolidation has been emphasised more recently by the consequences of M. Blum's "new deal." To dwell solely on the increase in French production costs induced by last year's social reforms is to miss their main significance. Before their enactment the average French worker was much worse off than his compeers in England or the United States. Though the New Deal was hurried and ill-conceived in many ways, it was an act of fundamental justice, and French labour is rightly determined not on any account to relinquish many of its major concessions. The 40-hour week and even the five-day week have come to stay, though modifications may doubtless be made to meet the special needs of individual industries.

Recent visitors to France have been impressed by the declining political influence of the *rentier*, and all that he stands for. The old generation has been nearly hammered out of existence by the post-War depreciation of the franc, and the younger generation of investor is turning to other types of security. This has an important economic consequence. Politically, the French from time to time veer suddenly to the left, but they always drift gradually back to the right again. Last year's jerk to the left was unusually marked and has left permanent results, but the backward drift has already begun.

In the last resort, however, Frenchmen, whatever their political beliefs at home, retain their innate patriotism. Fear of foreign aggression is always a unifying force. To-day, even those Frenchmen who sympathise politically with the Spanish insurgents realise the need for withstanding the totalitarian States, and are indisposed to see Spain an appanage of Germany or Italy. The suspension of international control over the Pyrenees frontier under the non-intervention scheme was immediately and unanimously welcomed by all shades of French political opinion. Conversely, the unfounded rumour that General Franco was obtaining a sterling credit in London evoked feelings of uneasiness which were equally general and equally sincere.

Seen against this background, the significance of recent events may be readily appreciated. M. Blum resigned on his first defeat for three very good reasons. First, he was naturally anxious to throw upon his successor the burden of the fresh currency depreciation, the new taxes and the new economies; and so far as the support of his own party was concerned this was the surest way of "living to fight another day." Secondly, he was reluctant to make a change at the Ministry of Finance, even though it had become apparent that a change was essential. Finally, he was unwilling to inflict a period of prolonged political deadlock upon France at the moment when the international situation was seriously strained. He said as much in a speech on July 2nd, less than a week after his resignation. The following day there were unconfirmed reports of a movement of French troops towards Savoy.

The retirement of M. Labeyrie from the Governorship of the Banque de France is the direct consequence of the change of Government. The Banque de France has now become virtually part of the financial machinery of Government, and M. Chautemps and M. Bonnet, not unnaturally, desired to have their own Governor. Beyond that, it might be unwise to read significance into the change in the Governorship.

The initial depreciation of the franc in early July and the announcement of the new taxes took place quietly enough, but the effect on the consumer has still to be appreciated by the general public. Also, the franc has since fallen further. We suggested a week ago that M. Chautemps had told the bankers, in effect, that they could have a "strong" franc or a "weak" franc as they wished, and it looks as if they were beginning to make their choice. In any event, the French Exchange Fund can to-day give only limited support to the franc, and it may be wise to let the franc find its new level as quickly as possible. Certainly, little French capital will return from abroad until it has done so.

The attempt to divert the profit on the new revaluation of the Banque de France's gold into a fund for the support of the rentes market, on the other hand, appears ill-advised. It might have been preferable either to use the profit for the partial repayment of the new loan of Frs. 15,000 millions granted by the Banque de France, or to earmark a portion of the Banque's gold, equal to the profit, for employment by the Exchange Fund. In the present temper of the French investor the use of this profit as a support to the rentes is unhappily suggestive of Mrs Partington's mop.

Both internally and externally the franc is undergoing a fresh downward adjustment whose ultimate magnitude cannot yet be assessed. Theoretically, this should facilitate an expansion in the national income, expressed in terms of francs. The impression in France is that the whole of this additional income will accrue to Labour and to the Treasury, and none of it to the capitalist. If this view is correct, then the finance of the recent social reforms, wage increases and reductions in hours will be automatically provided, and the Budget problem will be alleviated. Admittedly, these results will be achieved at the *rentier*'s expense, but the *rentier*, as we have shown, has lost much of his former political power. In any event, an expansion of the national income provides the only permanent road by which France can escape from her financial troubles. The present financial reforms are but palliatives introduced in the hope of carrying the Treasury over the intervening critical period.

If these hopes are fulfilled and financial disaster is averted, France may be well served by her traditional powers of recuperation. She is still a creditor nation, but it is essential that her expatriated capital should be induced to return home again to finance the reorganisation and consolidation of her industries. Ultimately the depreciation of the franc and the expansion in the national income should restore the profitability of France's industries and benefit the capitalist in his turn. At the moment, the interests of Labour and the Treasury have priority, since the only alternative to the present policy may be social upheaval and financial breakdown. Ultimately, however, the capitalist must regain his faith in his country, and the Government must help him to regain it. This cannot be done quickly, and it may even be done too late—for time presses. All friends of France will hope that whatever travails are immediately before her, the vitality and resilience of her people will triumph in the end over economic vicissitudes.

Notes of the Week

The Palestine Debates.—The Lords on Tuesday, and the Commons on Wednesday, debated the proposals of the Royal Commission on Palestine, now accepted as a whole by the Government, and awaiting examination at Geneva at the end of this month by the League's Permanent Mandates Commission. In the Upper House, Lord Snell heralded the Labour Party's clearly reasonable demand in the Commons next day for examination of the proposals by a Joint Select Committee of both Houses before Parliament stood committed. Lord Peel hotly rejected Lord Snell's contention that the Government's precipitate acceptance of the Commission's recommendations was a confession of failure properly to administer the mandate and to preserve law and order. Both in the Lords and Commons the prevalent mood was one of disappointment, frustration and scepticism about the proposed partition of Palestine. Lord Samuel showed that the scheme would end in important racial minorities in both new States: There would be a Saar, a Polish Corridor, and five or six Danzigs in a country the size of Wales. Lord Melchett, his co-religionist, voiced the deep disappointment of Jewry at having its promised national home whittled down to the size of Norfolk. In the Commons the impressive speech of Mr Ormsby-Gore in support of the Government's acceptance of the proposals did not avail to prevent Mr Morgan Jones (for Labour), Sir Archibald Sinclair, Mr Amery, Mr Churchill and Mr Lloyd George from combining to force the Government's acceptance of a reasoned amendment to set up an adequate inquiry on the proposals after they had been discussed by the Mandates Commission at Geneva. This will precede any plan by the Government to implement the proposals, does not commit Parliament to the partition of Palestine, and gives the Lords and Commons the opportunity to examine the proposals more closely after the League's decisions or recommendations. This is the best solution of a vexatious problem. Time will help all parties concerned.

* * *

Mr Eden on British Interests.—The debate last Monday on the Foreign Office Estimates was as creditable and as interesting to all Parties as that, secured on the Labour Party's moving of the adjournment on Thursday of last week, was barren. The Labour Party, anything but splendidly isolated, precipitated themselves upon the British Non-intervention Plan on Thursday of last week, and attempted to torpedo it in advance by moving the adjournment. The Liberal Opposition took the reasonable line that it was the Government's plan for future discussion in the London Committee, and that to denigrate it beforehand was no service to Non-intervention as an aim, nor to the standing of a British Government charged with the onerous duty of reconciling bitterly opposed national aims in the London Committee. In the event, the Labour Party were ignominiously reduced to evading a division by putting up Mr Seymour Cocks to talk their motion out. On Monday of this week, in the big debate, Mr Eden began his wide survey of foreign affairs with an appeal to Japan and China to abandon the shifts and stratagems whose long continuance in North China had provoked such incidents as that now straining their mutual relations. He called for a return to a normal and reasonable status there—and his language made it clear that the British Government do not in any way view the Japanese regime in North China with complaisant eyes.

* * *

Over Spain, the Foreign Secretary clearly reiterated his earlier pronouncements that Britain's interests were to preserve Spanish territorial integrity and the unfettered viability of that "main arterial road," the Mediterranean. He extended this British warning to cover the eastern shores of the Red Sea; but affirmed that the Government's foreign policy was not aimed at any other nation, and that there was room in the Mediterranean for the legitimate aims of other Powers as well. (Signor Mussolini may remark with some pleasure Mr Eden's reminder that there is no word for *vendetta* in English.) Once again Mr Eden warned other Powers that, while the latest British Plan may be modified in detail, its general scope and principles must be accepted as a whole; otherwise Europe would face that risk of imminent and general war which, to him, seemed to have sensibly receded in the last year. (His remarks on economic appeasement are commented upon in an article on page 165 of this issue.) Mr Eden repeated his earlier announcements of Government policy over the reform of the League of Nations; which is, apparently, to try to bring Germany and Japan back into the League by making it easier for "conciliation" to keep the peace. On this score, Mr Eden's words perilously approached equivocation; for, as many speakers reminded him later, to keep the peace one must nowadays be prepared to show more firmness than a pure preference for "conciliation." Conciliation that made a world safe for aggressors would be no more effective than the last war, and the League to which it gave birth, have been to make it safe for democracy. The Foreign Secretary concluded with an appreciation of the firm and close relations now subsisting between France and this country.

* * *

Is Gibraltar Threatened?—The fireworks in Monday's debate were let off by Mr Churchill and Mr Lloyd George, who both demanded full information from the Government about the nature of the guns mounted during the last few months by the insurgents or their

foreign friends on Spanish soil near Gibraltar. Mr Churchill hinted that they were Ansaldo or Krupp howitzers capable of pulverising Gibraltar harbour and commanding the Straits. The Government, he said, should raise the question with General Franco at once, not wait till he was safely ensconced in power by aid of foreign helpers to whom he would owe much more than a debt of gratitude, which might well be discharged in other coin than cash. Mr Lloyd George made the same point, but insisted—in tune with Sir Archibald Sinclair, the Duchess of Atholl, and other speakers—that the Government should support France in not according General Franco belligerents' rights till foreign volunteers had been evacuated. He and the others, including the chief speaker for the Labour Party, Dr Dalton, made it clear that if the Plan failed—either through the nonfulfilment of this condition, or the lack of good faith on the part of the Fascist Powers who were in close league with each other—then the British and French Governments should revert to the international legal position, according to the recognised Spanish Government the right to buy and transport munitions anywhere at its own risk. The House betrayed an evident anxiety about the uncommunicativeness of Government spokesmen, notably Lord Cranborne, over the guns near Gibraltar; and there was little disposition to lend credence to the Government's military advisers who had, apparently, asserted that these guns were no menace to Gibraltar. In the questions on the protection of British ships by the Navy which preceded the debate, and throughout the debate itself, the House, including even the pro-Franco element among the Tory Die-hards, was manifestly uneasy about the implications of the *liaison* between the Spanish insurgents and the two Fascist Great Powers. Mr Eden's able, if a trifle too transcendental, discourse did little to calm the uneasiness.

* * *

The Powers and Spain.—The British Plan for securing non-intervention in Spain was "approved in principle" by all the Powers on the Non-intervention Committee on Friday of last week; and discussion of its details and procedure began in the Chairman's Sub-Committee on Tuesday. Here, however, a deadlock quickly emerged; for the representative of Italy, supported by that of Germany, moved to secure official termination of the remaining Anglo-French naval patrol, but the reintroduction of supervision on the land frontiers of Spain—which would have meant giving the insurgents complete control of the sea, while the Spanish Government would have had the French land frontier blocked. The other Powers could not agree to this; and when Count Grandi and Herr Woermann went on to object to Lord Plymouth's proposal to take the questions of frontier supervision and evacuation of volunteers before that of belligerents' rights—the order in which the British Plan placed them—the deadlock on procedure was complete. The French and Russian Ambassadors have firmly adopted the British viewpoint; and it is reported from Paris that the French Government will never allow the land frontier supervision to be reinstated without control of Spanish ports, nor accord belligerents' rights till, as the British Plan stipulates, substantial progress with the evacuation of volunteers has been reached. Italy and Germany, after provoking the crisis by retiring from naval supervision and refusing to put anything in its place, have thus this week tried to distort the British Plan at the outset, in open defiance of Mr Eden's warning on Monday that the Plan must be accepted as an integral whole. So yet another adjournment is now spinning out the time.

* * *

Meanwhile, in Spain there has been much military activity. The Government forces launched a big attack south-west of Madrid and have made considerable progress. The insurgents have counter-attacked there, and for the present the Government's gains are being held. Only on the northern coast sector have the insurgents retained the initiative; but even there, most of the activity seems to have been on the high seas against foreign ships—many of them British or under charter, manned by colleagues of "Potato" Jones of immortal memory. The losses on both sides this week have been heavy; and the biggest aerial combats of the campaign have occurred with, apparently, greater loss to the insurgents.

* * *

Naval Agreements.—At the Foreign Office last Saturday two naval agreements were signed. In the thick of an unrestricted armaments race it is satisfactory to be able to record the conclusion of even bilateral agreements for restriction of armaments. But the most encouraging point about the recently signed agreements is that the non-British party to one of them is Russia, and to the other Germany. For in diplomacy, as in geometry, Powers which agree with the same Power agree with one another. In each making its own separate naval agreement with the United Kingdom, the Third Reich and the Soviet Union are indirectly restricting their naval competition with each other, especially in the Baltic. Any step which promises to relieve the tension between the chief Fascist Power and chief Communist Power is a step in the right direction. The two new bilateral naval treaties bring Germany and Russia into the circle of naval Powers that have subscribed to the provisions of the multilateral naval treaty of 1936. No doubt the treaty of 1936 is a poor substitute for those of 1930 and 1922. Quantitative limitation has disappeared; only qualitative limitation remains; and even this has been accepted by only three of the five signatories of the Washington and London multilateral instruments. But the very fact that Italy and Japan have so far held aloof from the 1936 agreements makes it all the more satisfactory that Russia and Germany should now have come into line. The two new bilateral treaties that embody this happy result are both of them consequences of the Anglo-German bilateral naval treaty of 1935; for it was in pursuance of this that the Anglo-German negotiations were opened for bringing Germany into the ambit of the 1936 agreement. It soon became apparent that—owing to the fact of Russo-German competition in the Baltic—Germany could not be brought in without bringing Russia in too. There is thus at the moment a definite, though modest, measure of agreement for the restriction of naval armaments between five out of the seven naval Powers of the world. But the achievement remains precarious so long as Italy and Japan stand out; for their refusal to bind themselves has compelled the other Powers to qualify their agreements with one another by inserting "escape clauses." It is to be hoped that these may never have to be invoked.

* * *

Boom and the Special Areas.—It needs no partisanship for the Government to discern evidence of persistent recovery in industry and trade. Iron and steel, shipbuilding and coal production are active and remunerative; and, as Mr Chamberlain and Sir John Simon were at pains to point out last week-end, the revival in heavy industries and the export trade has been specially potent in resuscitating the depressed areas. Since the passing of the Special Areas Act the number of wholly unemployed persons in these regions has fallen by 38 per cent. from 442,000 to 274,000. Both the Prime Minister and the Chancellor of the Exchequer were anxious to show that this happy conjuncture had not been brought about merely by the re-armament programme. While Government defence contracts have clearly been influential on Tyneside and Clydeside, there has been a higher rate of decline in unemployment in the Special Area of South Wales, where coal is the staple product—partly accounted for, however, by depopulation. All this is so far true. Last month's figures of employment in the whole country were the highest ever recorded. The number of insured persons at work on June 21st was 11,517,000, which was over half a million more than

on June 22, 1936. The Special Areas have clearly shared in this striking improvement. In Durham and on Tyneside in June, 1936, there were 135,891 unemployed; in June, 1937, there were 104,015. In West Cumberland in the same period unemployment fell from 11,986 to 10,030; in South Wales and Monmouthshire from 155,598 to 101,619; and in Scotland from 70,613 to 58,534.

* * *

Only a rash observer, however, would attribute these changes entirely to the Government's Special Area policy. It was reported last week that the combined financial assistance given or promised to new or expanded undertakings in the Special Areas by the Treasury Fund, the Nuffield Trust, and the Special Areas Reconstruction Association has been just over £2,000,000. The expenditure of this sum, with an additional £1½ millions from other sources, will provide employment for 10,500 persons. Almost simultaneously with this report by the Commissioner came the announcement that Sir John Jarvis proposed to establish a trust of £200,000 to assist small enterprises on Tyneside, and especially in Jarrow; and the information in the seventeenth annual report of the Forestry Commissioners that, up to May, 1937, 14,100 acres of plantable land had been acquired in the Special Areas, and 86 forest holdings had been established or begun. All this is excellent, if limited in scope. A beginning has clearly been made with the policy of re-establishing the economic life of these areas on a broader and more secure basis. But international recovery has already achieved, or promised to achieve, more for them than public effort or Government contracts. World trade is at last rising steeply. Primary producers have been stimulated by higher commodity prices, and industrialised countries are being driven by shortages to seek their needs abroad. In this re-awakening the Special Areas are sharing, for coal, iron and steel, and engineering are the chief industrial beneficiaries of the improvement.

* * *

Unemployment in the Areas.—No assessment of the prospects of the Special Areas would be complete without some exact knowledge of the classes of workers unlikely to benefit from the present tide of prosperity. The Ministry of Labour has made an analysis of unemployment in the Areas by duration, age and occupation. The total number of unemployed men on the live registers in West Cumberland, Durham and Tyneside, South Wales, and the Scottish Area, on March 15th, was 239,026. Of 187,852 in the Special Areas of England and Wales, 31,297 had little work in recent months, and 120,756 had been continuously unemployed for three months or more. Thus 64 per cent. of the unemployed men in the Special Areas of England and Wales had been unemployed for a protracted period. In the Scottish Area, too, this core of long-term unemployment was evident; some 56 per cent. had been out of work for three months or over. The grave problem of protracted unemployment is intensified by the age distribution of the sufferers. Nearly 70 per cent. in the Special Areas of England and Wales of the men out of work for three months or more were over 35. The 55,722 men over 45 are unlikely to gain from transference to other areas, nor are they apt to acquire new skill easily. In the Scottish area over 22 per cent. of the long-period unemployed were more than 45 years of age.

* * *

The analysis by occupations was equally disturbing in its conclusions. Of the 149,217 men who had been out of work for three months or more, 47,779 were nominally coal-miners by trade—at a time when, both in Durham and Tyneside, and in South Wales, there is an acute shortage of skilled and employable miners. Of these workless miners, nearly 50 per cent. were over 45 years of age. Perhaps the chief ray of hope to be discerned in this analysis—which would have been much more informative if the Ministry had included figures of total workers available for employment and data for earlier periods—comes from the fact that over 66,000 of the long-period unemployed were between 25 and 44 years of age. The rate of employability should be high among these men. At the other end of the scale there is another serious problem. Over 16,000 in all the Areas are under 25 years of age, and have for the most part had no technical training at work. These are all problems for the Government to face. Their solution is the real test of current statesmanship.

* * *

The Marriage Bill.—After great argument, the Marriage Bill has been returned by the Lords to face once more the temporal vicissitudes of Commons procedure. In the Lords it was early evident that rejection was improbable, and that although the Archbishop of Canterbury and a few adherents could not approve of the measure on religious grounds, they did not deem it their duty as legislators to oppose it. At one time, indeed, it seemed that the Bill might be slaughtered by its overzealous friends rather than its downright enemies. As it came from the Commons, this measure to extend the grounds of divorce to include desertion, cruelty and insanity was a series of avowed compromises. Most conspicuous among these shifts was the provision for a five-year waiting period after marriage, during which no divorce might be sought. Abolition of this clause in the Lords would have wrecked the Bill, since no time could have been found for House of Commons members to fight out their battles again. An undue number of con-

troversial amendments was equally likely to pile up the measure on the rocks of private member procedure in the Commons. Ultimately, however, the Upper House rejected proposals to exclude insanity as a ground of divorce, other sweeping alterations both for and against the spirit of the Bill were rejected, and no change was made likely to cost the House of Commons more than a few hours' debate. The waiting period was reduced to three years, and judges were given powers of discretion to waive this requirement in special circumstances. The peers' debates have added the lore and acumen of the Church, the Law and Medicine to a measure justified, ultimately, by the dictum that "bad law makes hard cases."

* * *

Guglielmo Marconi.—Italy, mother of great sons, has lost one of her greatest, and the world one of its rare geniuses, in the death in Rome on Tuesday morning of Senatore il Marchese Marconi. Marconi's indefatigable zeal in pursuing the implications and possibilities of the Hertzian electric waves has rightly associated his name more than any other with the development of wireless telephony and telegraphy. A Frenchman once said: *Toutes nos merveilleuses inventions sont aussi puissantes pour le mal que pour le bien.* That cannot be said of Marconi's work, to which the world's navigators by sea and air, the world's ordinary citizens in their homes, and countless of the aged, the sick, halt and blind, owe an undischargeable debt of gratitude. In the last fifty years of amazing scientific achievement Marconi's work challenges that of the first men to fly; but so far his has been the more pacific gift to mankind; and not even the far from effective abuse of his invention for propaganda purposes can lessen the lustre of an achievement which, in the history of human progress, will compare with, and may even supersede, that of the printing press.

* * *

Cabinet Crisis in Prague.—After a long term of office, the Czechoslovak Coalition Cabinet of Dr Hodza suddenly resigned on Friday night of last week. The ostensible reason was the inability of the non-Agrarian groups in the Cabinet—Clericals, Socialists, Activist Germans, and others—to agree to the Agrarians' demand for a rise in the fixed wheat price under the Grain Monopoly Board of 8 kc. per 100 kg. and in other grain prices. The wheat monopoly in Czechoslovakia, a private preserve of the Agrarian Party maintained by the public purse and the price paid by urban consumers for bread, has been so worked in recent years as to make the country, normally a cheap grain-importing country, into a grain-exporting one this year for the first time. In the event, the Agrarians finally demanded the almost complete exclusion of the Catholic agricultural co-operatives from the Agrarian-controlled Grain Monopoly. The Right-wing Agrarian Ministers of Agriculture and the Interior, Zadina and Cerny respectively, stood pat on their demands; the Finance Minister refused to give more public money; and Dr Hodza, the moderate Agrarian Premier, preferred to resign.

* * *

Actually, however, the cause of the crisis—long envisaged in these Notes—was the rapid movement of the Right-wing Czech Agrarians away from the Slovak Agrarians, Dr Hodza's moderate Agrarians, and *a fortiori* the Clerical and Social-Democrat Parties in the Coalition, towards the extreme Right-wing Opposition—the National Democrats and Business Party. Above all, these Right-wing Bohemian and Moravian Agrarians had recently been collaborating before the autumn local elections in the German districts with the Südetendeutsche Party of Herr Henlein to "dish" both the Activist German and other Parties, the colleagues of the Agrarians in the Cabinet! As a result the Right-wing Agrarians lost face in the country and, apparently, decided during the dog-days to demand dictatorial control over Dr Hodza's Coalition. Instead, they have only overset it; they did not get their desired "Cabinet of Officials," which would have strengthened their hold on the constituencies for the autumn elections; for Dr Hodza has remained loyal to President Benes. He has formed a stop-gap ministry of the same Cabinet *minus* the former Finance Minister; but he will face the big political reckoning in the winter. The new Defence programme, to cost Kc. 5-6,000 millions (£35-£40 millions) has increased the burden of the national debt service and the Agrarians want to increase the Budget by Kc. 500 millions (£3½ millions). Both inland and foreign long-term loans are difficult to conclude at present; and it seems that the temporary expedient of Treasury bills will be utilised to carry on till the political situation is cleared up in late autumn or winter.

* * *

Jugoslavia in Convulsions.—The Concordat with the Catholic Church sponsored by Dr Stoyadinovitch's Cabinet—but mainly by the Catholic Minister of the Interior, Father Koroshetz—has released political passions in Jugoslavia. The Belgrade Serbian Orthodox crowds and their bishops and priests protested *en masse* on Monday. With the same heavy-handed measures which are suppressing free speech and a free Press everywhere in Jugoslavia under the now farcically familiar plea of protection from Communism, Father Koroshetz justified the police in breaking up the procession. Many priests were injured, one bishop having his skull fractured through a blow from a truncheon on his metal mitre. Thus, after his recent agreements with Italy and Germany—by no means popular, hence Father Koroshetz's attacks against all newspapers which he himself does not directly control, e.g. the famous Serbian liberal *Politika*—Dr Stoyadinovitch's para-Fascist regime has plunged the country's internal politics into a vortex of violence, and all with the excuse of defence against an almost mythical Communism. If, as reports aver, the Prince Regent Paul is really accepting responsibility for the Jugoslav Government's extraordinary policies, both domestic and foreign, he is estranging himself from the people to whom he was called by the assassination of his cousin. The late King Alexander's dictatorship was no success. And he was a king. Dr Stoyadinovitch and Father Koroshetz are playing with lighted matches in a bomb factory.

* * *

Next Phase in Upper Silesia.—On July 15th expired the fifteen years' agreement under which Upper Silesia, both German and Polish, has been administered since—and in consequence of—the League Council's award of 1922. Fifteen years ago the Principal Allied Powers referred to Geneva the awkward question of the effect to be given to the results of the Upper Silesian plebiscite. The Council recommended that the Gordian knot should be cut by a partition of the plebiscite area, a thickly populated industrial district which was one and indivisible for every purpose except that of nationality. Accordingly the League proposed local restrictions, for a transitional period, upon the sovereignty of the two Governments between whom the territory was to be politically divided. This solution was accepted by all parties; and for the past fifteen years the Minorities Bureau, the Arbitral Tribunal and the Mixed Commissions—which were the special organs provided for in the League plan—have been working admirably for the common benefit of all the people of Upper Silesia. The inhabitants of the area have indeed benefited impartially whether they happen to speak Polish or German as their mother-tongue or to live, as a result of the partition, under the Polish or under the German flag.

* * *

For all Upper Silesians alike, the expiry of this beneficent regime spells tragedy. For they are now left at the mercy of two Powers which are both dedicated to the worship of the idol of nationalism; and this idol is a Moloch who demands human victims. The story has a cogent moral for Palestine to-day. In the portion of Upper Silesia that has remained under the rule of Berlin, the anti-Jewish legislation of the Third Reich has now promptly been brought into force. And the Government at Warsaw—which denounced, in September, 1934, the minority protection treaty which it had concluded with the Principal Allied Powers as an integral part of the peace settlement—is now taking steps to apply its own agrarian laws and language laws in the portion of Upper Silesia that was awarded to Poland in 1922. Each Government cares less about promoting the welfare of its minority on the other side of the frontier than about asserting its own sovereignty on its own territory. "Let me stamp on your minority on my ground, and I will let you stamp on my minority on yours" is the tacit bargain which the two Governments are inclined to propose to each other. They are only too likely to arrive at a practical understanding on this basis—especially in view of the pact of January, 1934. The existence of this German-Polish Pact certainly diminishes the danger that the expiry of the Upper Silesian Convention may lead to international trouble; and this is all to the good as far as it goes. But it does not help the minorities who are now going to be sacrificed to the same idol on both sides of the line.

* * *

Cost of Air-Raid Precautions.—Although the mock air raid carried out last week on Portsmouth and Southampton demonstrated, within the narrow limits of such an experiment, the efficacy of air-raid precautions and anti-aircraft measures in the absence of gas, the execution of safety plans has been delayed in most local areas for nearly two years. Courses of instruction have been given in many places, and ambulance services have been mobilised; but the larger provision of shelters, depôts, casualty stations, transport facilities and the protection of vital services and public buildings has hung fire. Only in rare places has this reluctance been due to political disapproval or pacifist principles. The common reason has been the unwillingness of local authorities to foot the bill. When the Home Secretary met representatives of local authorities on July 19th, he was empowered by the Government to offer 70 per cent. of the total cost of air-raid precautions, amounting actually to only 60 per cent. of the probable local expenditure, since the provision of gas masks had already been undertaken by the Government. His offer was refused.

* * *

It was argued, on behalf of the local authorities, that these measures were an integral part of the programme of national defence, and therefore should be a national charge. Many conflicting principles are involved in this dispute. Clearly the immediate beneficiaries of expenditure on air-raid precautions are local residents. Equally clearly, however, the protection of Middlesbrough or Portsmouth is a national concern, which neither of the towns could easily finance adequately, even in part. On the whole, since the defence plan must be nationally conceived and will be directed by the Central Government, there is much to be said for the contention that its local application should be nationally paid for. Whether it is proper to exempt rates entirely from any contribution is another matter. But in view of the unsatisfactory nature of local rates as a mode of taxation and of the current tendency to substitute the proceeds of taxes for those of rates in local finance, a national payment will be fairest and simplest, provided an adequate measure of local responsibility can be ensured.

* * *

Pedestrian Crossings.—The confused disregard of pedestrian crossings by all classes of road users, including the pedestrians themselves, has rendered largely nugatory a promising device for diminishing the casualty toll of the roads. It is well, therefore, that the Court of Appeal has called attention to the relevant regulation which amply defines the law.

> The driver of every vehicle approaching a crossing shall, unless he can see that there is not a foot passenger thereon, proceed at such a pace as to be able if necessary to stop before reaching the crossing.

With this order in mind, the Court reversed the decision of a lower court, which had ruled that, since a pedestrian had used a crossing when his sight of the road was obscured by a tram-car, he was responsible by his negligence for the damage he sustained when struck by a motor vehicle. The law is clear—and right. Without special roads and a reconstructed system of highways, junctions and crossings, life and limb are more important than time and temper. The motorist must give way, even though crossing succeed crossing every few hundred yards as repetitive memorials to Mr Hore-Belisha. Whether these legal safety-ribbons have achieved a tithe of what their enthusiastic pioneers expected may be doubted; but, until we have something much better, a well-defined and well-known law is a desirable adjunct to courtesy, common sense and caution.

* * *

The Toll of Prosperity.—In his annual report for 1936 the Chief Inspector of Factories and Workshops, Mr D. R. Wilson, has not hesitated to impute responsibility for the alarming increase in serious accidents to the methods used to expand production in times of rising prosperity.

> A rising toll of death and injury must still be regarded as a penalty to be paid for increased prosperity. Increase in production is accompanied by expansion in means of production, and in particular by the installation of new machinery and plant. . . . *Too often immediate production is the main, if not the only consideration, with the result that the question of safeguarding is left to the last and machines are put into use before proper fencing has been provided.* [The italics are ours.]

These are grave words. In 1936, although the rate of accidents per hour worked did not generally increase, there were 176,390 serious accidents in factories, an increase of 18 per cent. over those in 1935. Deaths were 920, compared with 843 in the previous year. And in the main these increases were due, in the opinion of the Inspectorate, to work at high pressure and to the irresponsible installation of unguarded plant. The rising incidence of accidents was most marked in places like Lanarkshire, Glasgow, Middlesbrough and Gateshead, where iron and steel, heavy engineering and shipbuilding were booming again, and many of the recruited employees came from the adjacent Special Areas, with their speed and skill diminished by inactivity.

* * *

Moreover, the speeding-up of processes and the increase of mechanisation have taken a heavy toll of juvenile life and limb. Like the recent reports of colliery

Family provision scheme

A scheme to secure a Capital Sum payable at death and a regular income over a period of years for dependants in the event of early death, at a cost which is little more than that of ordinary life assurance.
It is readily adaptable, and rates will be quoted on application for policies to suit the needs of each individual.

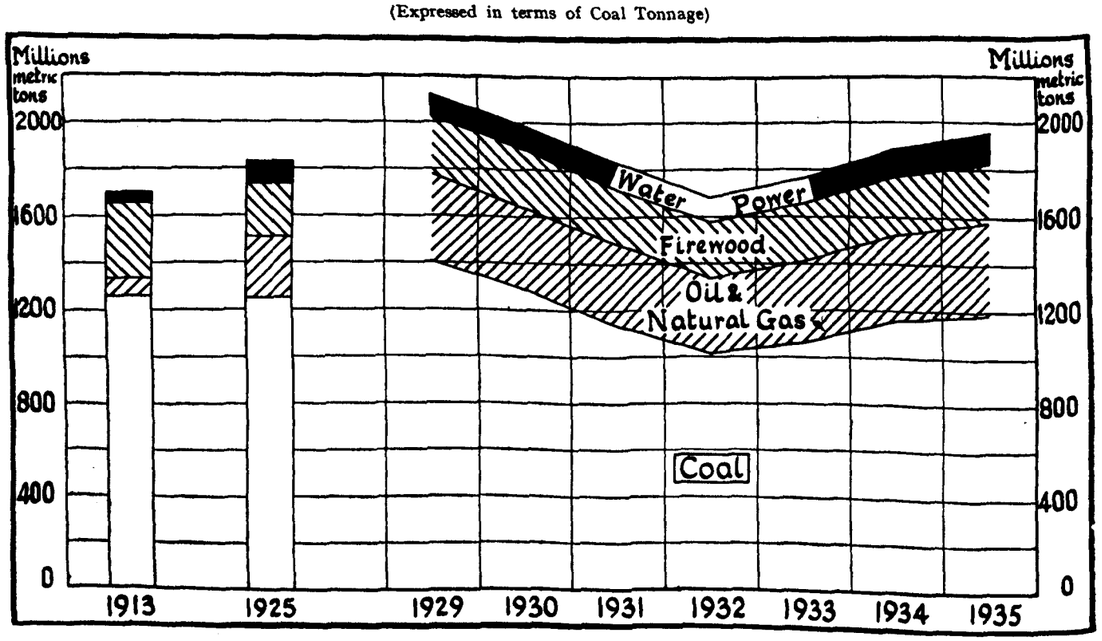
inspectors, this annual report on factories stresses the rising risks to which boys and girls are subjected—partly because of their youthful "contempt for danger" but mainly because of the hazardous conditions in which they are permitted to work. The price recorded by this report is too heavy for the nation to pay for the boom. The Inspector has frankly voiced his alarm about these accidents, and about a number of gross cases of overwork, from which unscrupulous employers cannot be deterred by the inadequate penalties commonly inflicted. It may be that some workers "accept industrial risks as inevitable." It may also be that boys transferred from the Special Areas do not cavil at working illegally long hours to earn a few extra pence. But employers and managers must observe and enforce the law. A safe working environment must be provided, and weeks of seventy or eighty hours' work must no longer be allowed. The standard of conduct in these matters, when some employers habitually wait until the inspector's visit before fencing or guarding their new plant, and when textile machinery is increasingly started illegally soon in the day and shut down illegally late, is disturbingly and dangerously low.

* * *

World Power Sources.—In these latter days the association of power, in the mechanical sense, with power-politics is increasingly intimate. The world's power resources, like its raw materials, are unequally distributed among different countries. The discovery and utilisation of new fuels, again, has had many political as well as economic repercussions. During the rise of modern industry timber was displaced by coal as the world's primary source of heat and power. For many years coal supplied a major part of the requirements of heat and power, but since the Great War the predominance of that fuel has been challenged by new power sources. Changes in the world's utilisation of the various sources since 1913, as estimated by the German Institute for Business Research, are shown in the chart below, where oil, natural gas, firewood and water power have been expressed in terms of a common denominator—i.e. units of coal. The proportion of the world's total heat and power derived from coal declined from 71.4 per cent. in 1913 to 56.6 per cent. in 1932. During the following three years, however, coal has maintained its share of total consumption, but the relative importance of timber as a source of heat and power has fallen steadily. Oil and natural gas, on the other hand, have steadily increased in importance, their contribution to the total supply of heat and power having risen from 5.9 per cent. in 1913 to 20.3 per cent. in 1935. The utilisation of water-power has almost trebled since 1913, its contribution to total requirements being 6.6 per cent. in 1935, against 2.4 per cent. in 1913. But, as the chart shows, coal is still the primary source of more than 50 per cent. of the world's requirements of energy and is unlikely to be displaced from its leading position in the foreseeable future.

* * *



Industrial News.—So far there have been few indications of the usual seasonal decline in business activity between May and August. The latest reports from various industrial centres, given on page 220, indicate that the volume of operations in certain industries is at last declining a little, but the lull is likely to be much less marked than usual. Activity in the metal-using industries, in particular, is still tending to expand as fast as materials become available, and the cessation of operations in a number of steel mills which require repairs is aggravating the shortage of supplies. Some relief is expected later on when additional imports of steel, arranged after the recent reduction in duties, become available. New business in cotton goods continues to run below current output, partly owing to the uncertainty about the future of raw cotton prices. And, if the volume of new orders does not expand during the next few weeks, operations may have to be curtailed. The wool textile industry is still fairly active and expects to receive substantial orders for 1938 after the holidays. In general, prospects for the autumn are still encouraging.

* * *

Expanding World Trade.—Hitherto the improvement in world trade has been much smaller than the expansion of industrial activity. For example, the "Review of World Trade" for 1936, published by the League of Nations, reveals that the volume of international trade in 1936 was still 14½ per cent. below the 1929 level. The figures showing changes in the share of each country in total world trade, contained in this survey, are particularly illuminating. The data, which are expressed in terms of gold dollars, show that Britain's share of world imports rose further during the past year, from 17·46 per cent. in 1935 to 18·22 per cent. in 1936, against 15·93 per

THE WORLD'S POWER SOURCES, 1913, 1925 AND 1929-35

(Expressed in terms of Coal Tonnage)

cent. in 1929. The United States comes next with 11·24 per cent. of the total import trade in 1936, compared with 12·79 per cent. in 1929. Germany's and France's shares in 1935 were 7·90 per cent. and 7·09 per cent. respectively. The United States has maintained its leading position in the export trade, though its share of the total has fallen from 16·20 per cent. in 1929 to 11·70 per cent. in 1936. The United Kingdom was the second largest exporter last year, accounting for 10·61 per cent. of the total, against 11·15 per cent. in 1929. Germany's share of the world export trade in 1936 was 9·31 per cent., against 10·09 per cent. in 1929. Other countries follow at a considerable distance. For example, France's share of world exports in 1936 was only 4·50 per cent., while Canada, with 4·98 per cent., was fourth on the list in the past year. The League report contains a wealth of other interesting material, essential to the study of world trade tendencies.

* * *

Increased Cost of Living.—As a result of the marked increase in the prices of imported foodstuffs and raw materials and of the more modest rise in the cost of converting raw materials into finished products, the upward curve of the cost of living is tending to grow steeper. For example, the Ministry of Labour's index of the cost of living has risen by 6 per cent. during the past twelve months. Nevertheless, the cost-of-living index for July was still 3.7 per cent. below the figure for the corresponding month of 1929. Wage rates, on the other hand, are now as high as in 1929, and real wages based on average weekly rates are therefore still above the pre-depression level. The indications are, however, that recovery has now reached a stage where the increase in wage rates may no longer keep pace with the rise in the cost of living—a development whose implications are not wholly reassuring.

* * *

Rising Import Prices.—Both imports and domestic exports in June showed a marked increase in value over the corresponding month last year, amounting to 30.4 per cent. and 38.4 per cent. respectively. But owing to the increase in prices during the past twelve months, trade has shown a smaller expansion in volume than in value. As *The Economist* indices of Business Activity given on page 3 of the Trade Supplement show, the volume of imports of raw materials and partly-manufactured products last month was about 17½ per cent. higher, while that of domestic exports of manufactures was some 28½ per cent. higher, than in the corresponding month last year. Import prices, on the whole, have tended to rise faster than export prices, with a consequent modification in the terms of trade against this country. Changes in the average import prices of some of the principal commodities are given below:—

AVERAGE PRICES OF IMPORTS

Item	Unit	June, 1935	June, 1936	June, 1937	Change 1936 to 1937
		£	£	£	%
Wheat	cwt.	·303	·333	·564	+ 69
Chilled beef	cwt.	1·61	1·73	2·06	+ 19
Bacon	cwt.	4·33	4·09	3·96	− 2·7
Butter	cwt.	3·58	4·55	4·77	+ 4·8
Sugar, unrefined	cwt.	·29	·33	·43	+ 30·3
Raw cotton (⅞–1 staple)	cental	2·67	2·71	3·12	+ 15·1
Wool, merino greasy	1,000 lbs.	4·25	5·6	6·305	+ 12·5
Cottonseed	ton	5·56	5·51	7·01	+ 27·2
Motor spirit	1,000 galls.	14·72	16·14	19·5	+ 21·1
Rubber, raw	centals	2·59	3·07	4·29	+ 39·8
Copper (electrolytic)	ton	35·24	40·3	65·89	+ 63·5
Lead (unwrought)	ton	13·95	15·76	24·68	+ 46·5
Tin (blocks, etc.)	ton	228·78	194·3	255·04	+ 31·2
Zinc	ton	14·79	15·59	24·24	+ 50·6

The advance has been particularly marked in the case of wheat and non-ferrous metals. It is due mainly to the increase in consumption which has led to the exhaustion of surplus stocks accumulated during the depression. In the case of wheat a succession of crop failures was a contributory cause of the reduction of surplus stocks. Present indications, moreover suggest that the long-term trend of raw material prices remains upwards.

Trend of Export Prices.—The rise in the prices of imported primary and semi-finished products is reflected in the rise of average export prices. But as the cost of converting imported materials into finished products has risen considerably less than that of imported materials, the advance in export prices has been less marked on the average. Nevertheless, as the next table shows, some individual commodities have been considerably marked-up in price during the past year:—

AVERAGE PRICE OF EXPORTS

Item	Unit	June, 1935	June, 1936	June, 1937	Change 1936 to 1937
		£	£	£	%
Spirits	Proof gall.	1·28	1·17	1·31	+ 11·9
Tobacco	lb.	·102	·112	·112	...
Coal, large steam	ton	·832	·849	·887	+ 4·4
Coal, sized steam	ton	·762	·762	·929	+ 21·9
Galvanised sheets	ton	12·7	13·45	19·34	+ 43·9
Tinned plates	ton	19·84	20·4	24·35	+ 19·4
Steel tubes	ton	17·25	19·28	20·9	+ 9
Cotton yarn*	100 lbs.	5·74	5·9	6·49	+ 10
Cotton piece-goods bleached	1,000sq. yds.	17·2	17·52	20·8	+ 18·6
Cotton piece-goods, dyed in the piece	1,000sq yds.	26·25	25·0	28·3	+ 13·2
Worsted yarns (combed)	100 lbs.	12·7	14·47	16·32	+ 12·7
Woollen tissue†	100 sq. yds.	16·47	17·27	17·87	+ 3·4

* Unbleached up to No. 40 count. † All wool, 8 to 12 oz. per sq. yd.

In a number of industries, export prices have been raised more than proportionately to the increase in costs of production—of which the cost of raw materials is only a part. Consequently, many producers and exporters of coal, cotton goods and steel materials, for example, are now operating at a higher profit-margin per unit than a year ago. Thus, even if the terms of trade are now against this country, the rise in the purchasing power of primary producing countries has had two important consequences. Thus, the latter are not only able to purchase larger quantities of manufactures but they are paying prices which are more remunerative to many British exporters than those of a year ago.

* * *

Regulation of Steel Orders.— Ever since last winter consumers of iron and steel have been complaining about the scarcity of supplies and of the inability of the iron and steel industry to satisfy all their requirements. Steel producers, on the other hand, have maintained that the shortage is largely artificial in that it is due to the fact that consumers' orders exceed their actual requirements. It is difficult to ascertain to what extent these assertions are justified, but the following table, showing the trend of apparent steel supplies, indicates that, after making allowance for decreased imports and higher exports, the tonnage available for the home market during the first half of 1937 showed only a small increase over the second half of last year:—

BRITISH STEEL SUPPLIES
(in thousands of tons)

	Jan. to June, 1936.	July to Dec., 1936.	Jan. to June, 1937.
Steel output	5,743·4	5,954·8	6,338·4
Imports	722·7	763·6	621·2
Exports	1,050·9	1,155·6	1,349·7
Available supplies	5,415·2	5,562·8	5,609·9

Actually domestic consumption of steel during the first half of this year probably shows a greater increase than supplies, the deficiency having been made good from stocks previously accumulated. It appears, however, that consumers' stocks have now fallen to a low level. In order to improve the position an arrangement has now been concluded between steel producers and certain groups of consumers under which consumers'

orders are to be based on actual prospective consumption for a trial period of eight weeks beginning on August 14th. Owing to the difficulty of ascertaining prospective requirements the scheme may not be easy to work at first, but sufficient experience may be accumulated during the trial period to establish the scheme on a more permanent basis and to achieve a better distribution of available supplies.

* * *

World's Shipping Capacity.—Concurrently with the enormous decline in the volume of international trade during the depression, the world's shipping capacity was reduced from its peak of 70.1 million gross tons in June, 1931, to 64.9 millions in 1935. Shipowners, therefore, were unprepared for the tardy, but all the more rapid, expansion of international trade since last summer. Freight rates, consequently, have leapt ahead, and *The Economist's* index for June shows an increase of no less than 73 per cent. on the corresponding month a year ago. Owing to the time taken in the construction of new vessels, the world's shipping capacity cannot be increased at short notice, and, as the accompanying chart shows, the present carrying capacity, though slightly higher than in 1935, is still below the pre-depression level. Incidentally, "Lloyd's Register of Shipping" for 1937 reveals a further decline in Britain's share of the world's total carrying capacity:—

BRITISH AND WORLD MERCANTILE SHIPPING CAPACITY SINCE 1929

(In thousands of Gross Tons)

While the volume of international trade has again reached, and may soon be expected to surpass, the pre-depression level, the world's shipping capacity is still 1.8 million gross tons lower than in 1929. Moreover, as the latest statistics of the Chamber of Shipping show, there is now practically no idle tonnage which can be put into commission. The volume of unemployed capacity in this country has fallen from 502,200 net tons to 61,200 net tons during the twelve months ended July 1st. The volume of new capacity under construction is steadily increasing, but the rate at which new tonnage becomes available is likely to be smaller for some time than that of the expansion in international trade. Consequently a further increase in freight rates during the remainder of this year is probable.

* * *

Industrial Profits: Some Additional Figures.—In a leading article in last week's issue of *The Economist* (page 117) we showed that the momentum of the rise in the earnings of British companies had been maintained, and even accelerated, in recent months; and that some 765 companies reporting in the June quarter of 1937 had increased their net earnings by nearly 20 per cent. The following table shows how the return on the capital of these companies varied in each of 25 industrial groups:—

REPORTS ISSUED DURING QUARTER ENDED JUNE 30, 1937.

Group	Debenture Capital	Rate of Int.	Preference Capital	Rate of Int.	Ordinary Capital	Rate of Div.*	Rate of Div a year ago†
	£	%	£	%	£	%	%

* 765 reports. † 739 reports.

The figures reveal a much wider spread in average rates of preference dividend than of debenture interest. The lowest average rate paid on debentures is 3.8 per cent. in the electric lighting and power group, and the highest is 7.1 per cent. paid in the rubber group. The great majority of companies, however, have been able to issue their debentures on a basis of less than 5 per cent., and the average for all the companies in our table is no more than 4½ per cent. The average dividend on preference capital is nearly 1 per cent. higher, at 5.4 per cent., but the figures for individual groups range between 2.2 and 7.7 per cent. The preference share, in many instances, is a costly medium; in as many as seven groups the average rate paid this year was over 6 per cent. In twenty out of twenty-five groups the average ordinary dividend was higher this year than last. A final table, on page 218, shows that no group paid out more than 90 per cent. of its total profits in dividends, the average proportion for the 765 companies, as a whole, being as low as 70 per cent.

* * *

Australian Internal Borrowing.—The tactics of Australian Loan Council meetings are almost invariable. The optimistic coat-measurements submitted by the State Governments have to be adjusted to suit the cloth offered by the Commonwealth Bank and—in these days of its affluence—by the Commonwealth Government. This process has just been repeated at the July Council. The States asked for £19,868,000 for public works and £3,400,000 for the writing-down of agricultural debts. They are to receive £16,000,000, including £2,500,000 which will be allocated to the Commonwealth and re-transferred to the States for debt adjustment. In 1935-36 the aggregate loan programme was more than £10,000,000 higher. Last year it totalled £20,000,000, of which £2,340,000 was for funding budget deficits. On this occasion the deficits have been transformed into a surplus of about a million pounds, for the States and the Commonwealth together, though Queensland and Western Australia are still on the wrong side of the balance. Moreover, £9,700,000 was paid out in sinking funds during 1936-37. Thus, in spite of continued borrowing, the net increase of government debt will probably be very small this year. These facts bear startling witness to the complete reversal of Australian financial policy since the last boom period.

Business and Politics

NEW YORK, July 13.—The business and financial community is again giving unusual attention to the political arena. Feeling against the Administration is in another intense phase—and at the same time is tentatively hopeful. The legislation proposed at this session of Congress has not only been distasteful, but has also aroused much distrust among many hitherto not altogether unfriendly.

The Supreme Court "packing" measure and the proposal to reorganise the executive departments have seemed attempts to centralise power; and the rewritten Court bill is free from none of the criticism directed at the original. The wages and hours bill caused much apprehension, especially among smaller concerns and in the lower paying South. The proposal to blanket the country with agencies like the Tennessee Valley Administration has aroused opposition from coal and shipping, as well as utility interests.

Simultaneously with these proposals there occurred the epidemic of strikes. The most sensational of these—and probably the most numerous—have been directed by the Committee for Industrial Organisation, whose leader, Mr John L. Lewis, has been pointedly allied with the President. Responsibility for the labour disturbances has therefore been assigned to Washington. The extent and persistence of these troubles have caused much apprehension, which the charge of irresponsibility levelled against the unions has furthered. Business circles are now satisfied, however, that labour has received a major set-back.

Finally, public discussion within the Democratic Party about a possible third term for Mr Roosevelt as President has not been soothing to the state of mind aroused by the legislative proposals and the labour disturbances. The tradition against a third term is deep-rooted.

The President is obviously experiencing far greater opposition in Congress than on any occasion in his periods of office, and this opposition is preponderantly from within his own party. If the Supreme Court measure is to pass with any resemblance to the original proposal, it will only do so after a Senate battle as bitter as that which prevented American participation in the League of Nations. The bill to reorganise the executive has already been vastly altered, and the wages and hours bill, as now revised, would grant only a fraction of the power conceded by the original proposal.

The Effects of Taxation

Statements of corporation earnings for the second quarter of 1937 vary somewhat in the profit trends which they show. This is not surprising in view of the strikes, the movement of prices and other developments of the past three months. But one uniformly depressing factor is standing out with increasing clarity: that is, taxes. The levy on undistributed income enacted last year, and the Social Security Act assessments are particularly influential; and in longer term comparisons the increased income taxes and the variety of miscellaneous imposts cut sharply into the amount left for the equity-holder.

The following table shows the disparity which existed between first quarter earnings and business this year and in 1929, and the course in certain intervening years; 21 industrial groups, including a total of 227 companies, are included in the earnings series.

	First Quarter Industrial Earnings ($000,000)	Index 1929 = 100	Industrial Production First Quarter Average Federal Reserve Index (adjusted for seasonal 1923–25 = 100	1929 = 10
1929	396·6	100	118	100
1930	300·4	76	105	89
1932	16·6	4	69	58
1936	217·5	55	95	80
1937	319·4	80	116	98

Labour cost was doubtless a partial factor causing this discrepancy. Differences in the grade of goods produced was another: a lesser proportion of steel output is now heavy, high profit steel than in 1929; and building remains depressed while other less profitable industries are booming. But such analysis as can be made points to the higher taxes as the principal factor; in a broad sense these taxes are in fact largely labour costs, being mainly levied as a consequence of unemployment relief and the "amortisation" of unemployment and old age. While much of the tax bill is passed on to the consumer, it seems that social welfare is absorbing an increasing share of the return from industry.

Hire Purchase Developments

The course of instalment selling has aroused much discussion in recent months, though few facts have been available. Official estimates now indicate that the proportion of retail sales on credit in 1936 approximately equalled that of 1929, but that the proportion on instalment was slightly smaller. Retail sales in 1936 are given as $37,000 millions, with 12.1 per cent. on instalment and 33.7 per cent. on credit, the remainder being "open" credit, or "charge" accounts. Comparable figures for 1929 were $49,100 millions for retail sales, 13.2 per cent. on instalment and 34.1 per cent. on credit. The instalment total of $4,500 millions in 1936, however, was 25 per cent. above that of 1935, while total sales were only 12 per cent. more than in the preceding year.

These figures do not disclose fully the extent of instalment selling, for some amounts of money are borrowed, to be repaid in instalments, the expenditure of which is shown in retail sales as cash. Furthermore, some financing of sales occurs in other than retail lines. In the retail field, bad debt losses on instalment paper are reported as smaller in 1936 than in 1935, and the average period for which the paper was outstanding was very slightly less.

NEW YORK PARIS BRUSSELS HAVRE ANTWERP

Nevertheless, 1936 was a year of rapidly improving business and incomes. The competition for business has led some firms to extend terms somewhat beyond the point of caution, and to finance merchandise which is non-repossessable. Some of the larger lenders are reported dissatisfied with the present situation, and plans are under way to lessen the length of contracts and to increase deposits. No sweeping move is apparently contemplated, but merely a precautionary trimming of sails.

France

Drastic Economies

Paris, July 22.—Economies have followed the new taxes. The Government has decided upon three measures. M. Fournier, the Second Governor of the Bank of France, has replaced M. Labeyrie as Governor. Thus, a liberal succeeds a supporter of exchange control. Secondly, a fund has been created to support rentes, which will be stocked by the revaluation of the gold stock of the Bank, on the basis of 43 milligrammes, compared with 49 milligrammes, which has been the gold content of the franc since the devaluation of October 1, 1936. This fund of 8,000 million francs will pave the way for a rapid conversion of the debt. Thirdly, huge economies will be realised. After the ordinary Budget was balanced by the latest decree-laws, there still remained an extraordinary Treasury deficit of 47,000 million francs for 1938. Some 25,000 millions of economies will be made; the extraordinary Budget containing military expenditure is fixed at 15,500 millions, and 7,000 millions represents the uncovered deficit of the public undertakings. These measures will be immediately applied, which will reduce the deficit for 1937 by 6,000 million francs. It has been emphasised that these economies will not reduce military pensions, nor major public works, by more than 3,400 million francs in 1938.

These measures are welcomed by public opinion, and notably by the Stock Exchange, where in two sessions the 3 per cent. rentes recovered by 5 points to 71.10 francs. How long the improved atmosphere will continue, nobody can say. The stiffening of opinion does not only appear in the speeches of the Prime Minister, who has declared that law will be rigorously enforced. It is shown in numerous small incidents, such as the punishments pronounced by judges against the makers of disorder.

Undoubtedly, the new calm results in part from the instructions given by trade unions to their members, and also from a certain weariness, and the fear of disturbances if another financial crisis had occurred. Moreover, there has been a counter-attack by the employers, evident in the recent hotel conflict. The resistance of liberals has hardened, because they perceived a threat of controls and autarky when the last Cabinet fell.

The Importance of Rising Prices

The anxiety of M. Bonnet, the Minister of Finances, is to regain public confidence before prices rise too far. This explains the formidable increase in taxation and the drastic economies. Perhaps these estimates will remain on paper, like the munificent projects of great public works under the former Cabinet. But time is short, and the past errors of deflation and reflation "without end" must not be repeated. The situation remains precarious, but there is no reason why, with the lessons of experience at hand, the new Government should not win in the end.

The Government's attempt to restore the authority of the State would be quickly hampered by the extremists, if public opinion were aroused by a fresh rise in the cost of living. This would provoke new social claims, and liberty would have been safeguarded, only to prove again its inability to further financial and economic recovery. The following table shows the rise of wholesale prices since June, 1936, and after the two devaluations:

	June, 1936	After the first devaluation (Oct. 3, 1936)	After the second devaluation (June 26, 1937)	July 17
General index	377	426	537	571
National products	421	464	565	581
Imported products	298	359	488	554
Foodstuffs	405	457	529	551
Vegetable foods	412	501	535	550
Animal foods	406	426	507	535
Sugar, coffee, cocoa	389	430	567	588
Raw materials	353	400	545	590
Minerals and metals	348	445	628	710
Textiles	279	314	460	517
Miscellaneous	401	424	545	560

The rise has been clearly most marked at each stage in the price of imports.

Germany

Increased Gold Exports and Cereal Imports

Berlin, July 20.—A feature of the June trade returns is the export of gold and silver, mainly of gold. The value of these exports in June reached Rm. 62 millions and in the half-year Rm. 76 millions. Imports of these metals in June were valued at only Rm. 8 millions and Rm. 147 millions in the first half-year. These gold movements are not shown in the Reichsbank's weekly returns. The large import of the earlier months is believed to have been paid for out of the exchange yield of expropriated foreign currency securities. The *Deutscher Volkswirt*, which is supposed to voice Dr Schacht, rejects the suggestion, made at the Congress of International Chambers of Commerce, about a foreign gold loan to the Reich, affirming that a loan would be useless unless debts were first regulated.

The index of wholesale prices on July 14th was 106.4, compared with 106.3 on July 7th. The cost-of-living index in June stood at 125.3, compared with 125.1 in May. Rebutting criticism of its index, the Reich Statistical Bureau mentions that an "*index family*" consists of parents with three children, aged 12, 7 and 1½ years; and that the bases of calculation are family budgets and the prices actually paid for 116 necessaries, whereby certain substitutes are taken in the place of standard but unobtainable foods. The index, the Bureau claims, is accurate to within 1 per cent.

Wheat imports in the first half-year amounted to 594,760 metric tons, with no export worth mentioning, compared with a net import of 24,000 metric tons in the whole of 1936. Maize imports were 399,000 tons, compared with 171,000 tons in the whole of 1936. The cost of bread cereals imported this year so far has been Rm. 87,900,000, against Rm. 6,500,000 in the same month of 1936. The crop report for July 1st describes all cereals except rye as being somewhat better than middling, but middling really means unsatisfactory.

The Bavarian Minister-President, Herr Koehler, has retired from his post as Director of the Business Group for Raw Materials in the Four Year Plan. Certain changes in organisation have been made in the Plan, including the foundation of a new Business Group for Foreign Trade, which is to foster exports. The *Frankfurter Zeitung* calls attention to the fact that the mere contents table of the "Reich Law Journal" for the first half of 1937 fills 715 pages, mostly dealing with administrative ordinances, for formal laws are few and usually merely lay down principles as the foundations for ordinances.

Large Rise in Foreign Trade

The reappearance in the recent returns of a passive foreign trade balance, which seems to have attracted attention abroad, was here taken calmly and had no influence on the Bourse. The last monthly import surplus (of Rm. 19 millions) was in April, 1935; and in June, 1935, exports only just balanced imports. The import surplus of last month was due to special circumstances, and the return as a whole is satisfactory and by no means foreshadows a reversion to unfavourable balances over any long period. The causes were the sudden rise in food imports and the large increase in imports of raw and half-manufactured materials, which were one-third higher than in June, 1936. The total increase in imports amounted to Rm. 57 millions, compared with May, and foodstuffs accounted for Rm. 27 millions. The main items were cereals, the June deliveries of which were about equal to those of all the preceding five months of the year.

That, with such large increases in imports of food and materials, the import surplus was only Rm. 23 millions was due to the simultaneous increase in exports, which totalled Rm. 481 millions, compared with Rm. 456 millions in May and Rm. 371 millions in June, 1936. In June, 1936, the value of exports actually decreased, though only by a very small sum. In general June is a poor month for exports; the increase this year must therefore be considered favourable. The trend, observed for a long time, towards increased exports of capital goods continues, and the June figures show large rises in ships, electrical goods and chemicals.

The trade balance for the first half-year showed an export surplus of Rm. 192 millions, compared with an import surplus of Rm. 131 millions in the first half of 1936. In 1936 more than three-quarters of the total export surplus of Rm. 550 millions fell in the second half of the year. In addition to the seasonal increase in exports which may be expected in the second half of this year, continuation of the cyclical increase is probable. This cyclical increase was evident in the first half of the year, when the value of exports was Rm. 2,711 millions, compared with Rm. 2,235 millions in the same period of last year. Unless imports of foodstuffs in the coming months are very heavy, there is no reason why the export surplus of 1936, which amounted to Rm. 550 millions, should not be reached or even exceeded. The following are the latest trade figures:—

	May	June	Jan.–June
	Millions of marks		
Imports			
I. Foodstuffs	169·4	196·4	942·1
(*a*) Livestock	6·3	6·6	46·5
(*b*) Animal foodstuffs	37·0	29·1	217·6
(*c*) Vegetable foodstuffs	99·2	132·6	520·3
II. Industrial goods	273·7	303·0	1,553·0
(*a*) Raw materials	164·9	184·2	936·7
(*b*) Semi-manufactured	79·5	87·3	437·4
(*c*) Manufactured	29·3	31·5	178·9
Total	447·3	503·6	2,519·2
Exports			
I. Foodstuffs	6·3	7·3	44·9
(*a*) Livestock	0·2	0·1	1·7
(*b*) Animal foodstuffs	0·6	0·6	3·7
(*c*) Vegetable foodstuffs	3·2	4·4	23·9
II. Industrial goods	449·4	473·5	2,665·8
(*a*) Raw materials	45·0	49·5	262·7
(*b*) Semi-manufactured	42·1	43·7	252·0
(*c*) Manufactured	362·3	380·3	2,151·1
Total	455·8	480·9	2,711·4

Iron and Steel Policy

Pig iron and steel output seems to be again increasing, though slowly. Pig iron production in the first half-year of 1937 was 7,710,300 tons, compared with 7,383,400 tons in the same period of 1936. The private "key" industries (machine manufacturing, etc.) are reported to have been getting only about half their proper steel rations. Nevertheless, the net export of iron and steel is 2½ times greater than in 1934, and the export of rolling-mill products has even reached the figure of 1929. In addition to the rise in world prices, an important factor in these increases is the wish to make a good showing when export quotas in the International Cartel come up for reconsideration in 1940. In some quarters the demand is made that exports should be restricted, because the shortage impedes the production of machinery for export. Exports of machinery give a much better yield of foreign exchange; but in authoritative quarters the remedy suggested is to restrict still further home consumption.

According to an official return stocks of commodities have of late increased, despite the depletion of raw materials. In particular, stocks of half-manufactured goods have risen. It is consequently denied that the extreme liquidity of the money market is due to realisations of goods. The number of unemployed fell in June to 649,000, compared with 1,315,000 in June, 1936. Railway goods traffic in May was 10.76 per cent. greater than in May, 1936. Industrial consumption of electricity is 21 per cent. higher than a year ago.

Hungary

The Regency Bill

Budapest, July 17.—Both Houses of Parliament have passed without any dissenting vote a Bill to extend the prerogatives of the Regent and containing certain provisions for his succession. The Bill is the first part of the constitutional reform promised by the Government. The Prime Minister, M. Darányi, declared that after the summer recess a Bill to extend the powers of the Upper House, and the long awaited Electoral Reform Bill, providing for secret ballot in all constituencies, would be submitted to Parliament.

The wholehearted co-operation of the leaders of the Opposition, notably Dr Eckhardt, of the Farmers' Party, and Dr Rassay, of the Liberal Party, with M. Darányi to extend the prerogatives of the Regent is much more than a friendly gesture or a political truce. It is a demonstration of faith in parliamentarism and in the strict maintenance of constitutional tradition, that the Head of the State is above political parties. In 1920 when Admiral Horthy was elected Regent for an indefinite period, the law did not provide for certain royal prerogatives, and there was no provision made for succession. The rights of Parliament are properly safeguarded in the new law, which enacts that besides the three names suggested by the Regent for successor Parliament can elect others by a majority of both Houses. The right of the Regent to veto legislation is so modified that a Bill twice vetoed by him but voted again by Parliament must become law after 15 days of its passing.

It should be pointed out that during the 17 years of the Regency there never was any clash between the Regent, Admiral Horthy, and Parliament, though there were numerous and important changes in the Government. The unanimous vote of the first part of the projected Constitutional Reform has undoubtedly strengthened the prestige of the Cabinet, though M. Darányi emphasised that the absence of any opposition must be ascribed to the high esteem of the people for the services rendered by the Regent to the nation in difficult circumstances.

NATIONAL BANK OF GREECE

HELLENIC BANK TRUST COMPANY
51 Maiden Lane, NEW YORK

Capital paid up and Reserves Drs. 1,205,000,000

Satisfactory Financial Position

Before adjourning for the summer recess Parliament voted without alteration the Budget estimate for the financial year 1937-38. The results for the 11 months of the budgetary year 1936-37 are very satisfactory. Receipts of the administration proper amounted to 786.3 million pengös, compared with 728.9 million pengös in the same period of 1935-36; those of the State Undertakings totalled 387.6 million pengös, compared with 342.9 million pengös, an aggregate increase of 10 per cent. The expansion of revenue wiped out altogether the estimated deficit and in all probability there will be a surplus at the end of the financial year.

The satisfactory settlement of the so-called League Loan will enable the Treasury to effect considerable savings in its forthcoming accounts, because hitherto the full 7½ per cent. interest and the statutory sinking fund were entered in the estimates, though only 50 per cent. of the original interest was actually transferred, and no sinking fund payments were actually made.

Public opinion in Hungary responded favourably to the settlements effected in London; and there is every reason to believe that the present Administration will leave no stone unturned to restore Hungary's credit, though no new foreign borrowing is contemplated or encouraged.

Recovery Without Boom

The harvest does not promise so well as last year, but prices are satisfactory and marketing does not present the difficulties of the past four or five years. Recovery continues, but there is no spectacular boom in any industry. The money market is easier than at any time since 1930. Commercial banks, though complaining that saving deposits do not increase in sympathy with recovery in business, are eager to resume lending. The absence of any increase of saving deposits is due to direct investments in real estate, housing, stocks and bonds.

Since the collapse of the speculative boom in the stock market at the end of April, prices have recovered some of their losses and are around their level of last September. Bonds are in steady demand, and quotations are at their highest since 1931. Some of the mortgage bonds and the League Loan bonds are selling above par, and the 5 per cent. Internal Forced Loan at 82-83 is at a record high level.

That the British and American portion of the League Loan are selling at or above par in Budapest does not mean that their quotations are out of harmony with those of London and New York, where they sell at 60-62. Quotations in Hungary are calculated at the old rate of 16.80 pengös to the pound, and 3.40 pengös to the dollar, so that the discrepancy between the external and internal quotation is much smaller than it seems at first sight, if it is taken into consideration that the actual commercial value of the pound is 26 pengös. With the increased interest of 4½ per cent. in sterling, the net yield of the League Loan bonds in Hungary will be 6¾ per cent. in pengös, so that the present quotation is in line with the rate of interest ruling in the domestic capital market, where the Government's credit is rated somewhat higher than in foreign markets.

Canada

Encouraging Crop Forecasts

Ottawa, July 3.—The crop surveys of the Bureau of Statistics are more encouraging than they have been. All crops are doing well in Ontario, and even in Quebec and the Maritime Provinces, where weather has been unduly wet, pastures are in good condition and the hay crops are promising. The fruit crop in Eastern Canada should also do well. In Saskatchewan there is again, however, a black spot in the south where drought has prevented the grain from getting a good start; even heavy rains can hardly do more than provide the farmers with seed and feed from their crop. In Manitoba, Alberta and British Columbia prospects are favourable. Nevertheless, the number of western farming families on relief will be still large, and this expenditure may well upset Federal and provincial Budgets.

The situation in the province of Alberta still remains very critical for the Aberhart Ministry. When the provincial legislature resumed after a long adjournment, Mr Aberhart managed to get the support of the insurgent Social Crediters to defeat a non-confidence motion moved by a Liberal, and also for his Budget, whose orthodoxy nearly brought about its defeat some months ago.

Both factions of Social Credit seem to be unshaken in their faith in Social Credit theories; and Mr MacLachlan, the chairman of the Social Credit Board, has claimed that 85 per cent. of the Social Credit members of the legislature have signed a pledge to stand behind any scheme which may be evolved. There has, however, been no real healing of the feud within the party, and the view seems to be gaining ground that a change in leadership would be desirable.

Business Still Active

Business is reasonably satisfactory, and is better in the Maritime Provinces and in British Columbia than in the prairie provinces, Ontario and Quebec. The general index of the Bureau of Statistics rose from 110 on May 22nd to 110.7 on June 5th, but fell sharply in the following week to 107.7, which was 2.3 below the corresponding figure for 1936.

Sales of seasonal summer clothing have been smaller than expected because of wet, cool weather, but both wholesale and retail traders report that business is better than a year ago. Moreover summer tourist traffic promises to be larger than ever.

The heavy industries are still active, and the production of pig iron in May was 79,147 tons, compared with 68,138 in the previous month and 58,832 a year ago. The motor industry produced 23,458 vehicles in May compared with only 20,006 in May, 1936.

The mining industry is also still busy, although its profits have been curtailed by the fall in the price of non-ferrous metals; and there is still great nervousness about the future of the price of gold. A serious fall would make many low-grade mines in Canada unprofitable. All the forestry industries are doing well, and the newsprint industry is steadily regaining ground. The asbestos industry is very prosperous, and its exports in May amounted to 22,163 tons, more than double the figure for May, 1936. The volume of flour exports in May (348,866 barrels) was the lowest in this month for the last four years, but because of a sharp rise in the export price, which is $2 per barrel higher than it was a year ago, the total value of these exports was the highest recorded in this month.

In May the value of new construction ($24,170,000) was slightly below the April figure, but roughly 60 per cent. higher than the figure for May, 1936. The downward tendency of commodity prices has persisted, but there has been an encouraging expansion of employment, and the Government of Ontario has felt justified in cutting off from relief all single unemployed men. The banking situation is excellent and the last returns of the chartered banks showed that deposits had reached a new high level; money remains cheap and the Federal Government was able to place its latest issue of three-month Treasury bills at an average yield of 0.643 per cent., a rate which has once before been equalled but never surpassed for lowness.

Government Finance

In May the Federal revenues showed their largest gain in any month for many years, the total yield being $99,972,279, compared with $78,347,008 in May, 1936. Part of the gain is accounted for by the fact that payers of income tax have now to pay a minimum of one-third of their levy as the first instalment, instead of one-fourth as before. There is no disappointment about the meagre results of the Imperial Conference as nothing much was expected from it.

Stories have appeared in Canadian papers that the Government and the banks are worried about a steady inflow of "hot money" on a large scale, due to the fears of European investors who, having placed their funds in the United States, have now become alarmed about industrial troubles and about the possibility of new taxation directed against foreign investors. Apparently there has been some northward movement of this "hot money," but Treasury officials are not disposed to think that it has reached dimensions to create an embarrassing situation in the event of its sudden withdrawal.

Hearings before the Canadian Tariff Board initiated by domestic manufacturers have led to a controversy between the Board and the Customs branch of the National Revenue Department. The officials of the latter body refused to disclose publicly the prices of competing American manufacturers which were used as the basis for fixing valuations for tariff and dumping duties. The Board took strong objection both to the attitude of secrecy and the methods followed.

Letters to the Editor

Czechoslovakia's German Problem

TO THE EDITOR OF THE ECONOMIST

Sir,—May I take up (briefly, for fear of making too great demands on your space) some of the points in Mr Melville's interesting letter, published in your last issue.

I differ with Mr Melville on some important points of fact. For instance, I do not agree with him that all the grievances of the Czechoslovakian Germans are on the way to being remedied by the agreement of February 1st between the late Government of Dr Hodza and the Activist German leaders. Without questioning the Government's sincerity, I believe that their measures have had little practical effect. Again, I do not agree that Czechoslovakia is a democracy for the non-Czech half of the population. I believe it to be an imperfect democracy even for the Slovaks, while I am convinced that for the Germans, Magyars and Poles (who account, between them, for more than a quarter of the whole population) the present regime in Czechoslovakia is not essentially different in character from the regimes in the surrounding countries. Mr Melville, however, raises a question of policy which is to my mind still more important than these questions of fact, and it is on this that I chiefly want to join issue with him.

If I read him right, Mr Melville maintains that the Czechs cannot afford to try to come to an understanding with Herr Henlein's Südetendeutsche Partei because Herr Henlein will, Mr Melville thinks, propose terms which will be put into his mouth by Herr Hitler and which will be incompatible with the maintenance of Czechoslovakia's independence. Therefore, Mr Melville suggests, to call for a *rapprochement* between the Czechs and the Henlein Party shows a lack of "realism."

But, if "realism" is the touchstone, where would Mr Melville's policy lead the Czechs? Suppose they do persist in refusing to have any dealings with Herr Henlein, that does not dispose of the Südetendeutsche Partei. The party will certainly continue to exist and also to retain the allegiance of a substantial following among the 3¼ millions of Czechoslovakian Germans. If the Czechs insist on making an enemy of the Henlein Party, they will have to try to repress it. And if they do involve themselves in this, which of two alternatives is the more likely: that the Czechs will succeed in suppressing the Henlein Party? Or that the Third Reich will intervene forcibly on the Sudetic Germans' behalf? The second alternative is surely the more probable one—and the more so because, in such circumstances, it is not at all likely that Great Britain would think of intervening on behalf of Czechoslovakia. Therefore, in my belief, Mr Melville's policy for the Czechs leads straight to the destruction of Czechoslovakia's independence; and as I am at one with him in wishing to see her independence preserved, I deprecate his attitude towards the Henlein Party.

If, without offence, I may parody Mr Melville's concluding words, I will add that, to my mind, Mr Melville "has not had sufficient realism" to face the implication of the facts that there are 3¼ million Germans in Czechoslovakia and that this German minority (constituting one-fifth of the total population of Czechoslovakia) adjoins the frontiers of a German Reich which is more than four times as big and as strong as Czechoslovakia. In view of these facts, I suggest that Czechoslovakia is bound in the long run to make friends with Germany, if she is not prepared to forfeit her existence.

There is a lesson for the Czechs to-day in the history of the Habsburg Monarchy. The Monarchy perished in 1918 because Austro-Hungarian statesmen had taken the view that, on account of the presence in the Monarchy of a Czech and a Jugoslav minority, the Monarchy could not afford to make friends with Russia and Serbia. Mr Melville recommends Czechoslovak statesmen to take a corresponding line towards their German minority and their German neighbours. Is this really good advice?

I am, Sir,
Yours faithfully,

York. Arnold J. Toynbee.

The Gold Problem

TO THE EDITOR OF THE ECONOMIST

Sir,—In your June 12th issue you consider two solutions of present gold difficulties: first, redistribution through Government action; second, restrictions upon new mining of gold.

You fail to consider a third solution that in the past two or three thousand years most effectively supported the value and price of gold, i.e. the free circulation of gold coin. I am well aware of the serious objections to this solution. All these objections, however, run counter to the well-settled experience of thousands of years.

Moreover, they run counter to the very foundation of gold's value. The scarcity of the yellow metal exists only when gold is permitted to circulate freely and satisfy human vanity. Once that appeal to human affections is either restricted or suppressed, gold automatically becomes over-abundant and loses its value.

You could create a similar over-abundance of diamonds, or any other commodity. Remove the desire for any commodity and its value will tend to evaporate.

Unless this unnatural and absurd dilution of gold's value ceases, it will become ever more difficult to maintain its market price.

Yours very truly,
Samuel Laufbahn.

New York.

The Fourth National Government

TO THE EDITOR OF THE ECONOMIST

Sir,—In your issue of the 17th instant you publish an interesting survey of the past performances of the National Government, and refer to Mr Chamberlain's pronouncement as head of the present Government. You state, with reference to one of the factors which they claim as successful, i.e. "sound finance," that "the Government can properly be given nearly full marks." This appears to me to be a most amazing statement. Here is a Government which makes no attempt to deal with the National Debt; has suspended the Sinking Fund; is branded as a defaulter in the United States of America; and proposes an expenditure on armaments during the next five years of £1,500,000,000, involving borrowing £400,000,000 in time of peace, an income tax of 5s. in the pound, not to speak of sur-tax, totalling taxation per head of £19, the highest in the world, and practising inflation of the currency by continuous issues of inconvertible paper money which depreciate the value of the pound.

These are a few of the well-known counts in the indictment of the Government's finance and you state they "can properly be given nearly full marks." Such a statement takes one's breath away. If this record entitles the Government to nearly full marks, what must a Government do to be given no marks at all?

I am, Sir,
Your obedient servant,

34 Queen's Gate Gardens. D. M. Mason.

Books and Publications

Mr Senior

IN the history of English economic thought, it has been too long customary to assume that there was a barren gulf between the age of the classicists—Adam Smith and his successors and emendators, Ricardo and Malthus—and the years following 1862, when Jevons' paper was delivered before the British Association. To the eradication of this bad habit Miss Marian Bowley devotes her critical and analytical appreciation*—indeed, she has succeeded in her aim of making it a rehabilitation—of Nassau Senior, first Drummond Professor of Political Economy in the University of Oxford. It is a profound, original, scholarly, and informative interpretation of Senior's work and place in the development of economics which Miss Bowley has produced. Although here and there the style limps, and the schematic structure of the book jolts the mind of the reader, the author has succeeded in her ambitious task: to lay bare the nature of Senior's contribution to economic theory, to applied economics, and to the principles of government.

Nassau William Senior was born in 1790 and died in 1864. He did not come on to the economic scene until 1821, when he published a penetrating article on the Corn Laws in the *Quarterly Review*. At thirty-one he had acquired a considerable practice as conveyancer. He had been Vinerian scholar at Oxford, a friend of Archbishop Whately (as a preface to whose *Logic* he wrote, in 1825 or earlier, his *Definitions in Political Economy*), but he was never a " practising member " of the Philosophical Radicals. He was too much of a Whig for that. As a son of the country manse, he had a strong bent towards land, agriculture, and the agricultural labourer's lot, which deteriorated so badly after 1815. It is therefore interesting that in that very year he told his sister his ambition was to improve the lot of the agricultural labourer, and of the poverty-stricken classes in general. Between 1815 and 1821, then, he approached the tense and lively economic discussions of Ricardo, Malthus, McCulloch, and the lesser luminaries *via* the law of real property, the incidence of tithe and local rates (Speenhamland coloured his vision for many years), and the fundamental source of all agrarian disputes: the nature of rent. One of Senior's contributions to English economic theory was his application of the principles of rent to other factors. In 1823, the year Ricardo died, he became a member of the Political Economy Club; and from 1825 to 1830—as again from 1847-52—he was Drummond Professor. Senior's legal approach made him a shrewd business man, as well as a realistic economist; he put Archbishop Whately into American stocks which showed 11 per cent!

Miss Bowley uncovers, from a wealth of detail, Senior's development of the utility theory of value—" net advantage"—of both goods and services after Ricardo's death; his realistic denial of the cost of production theory; and his strangely modern versions of monetary theory and international trade. She shows that Senior's *Political Economy* in 1836 was the most powerful influence bringing English economic theory away from the Ricardian direction, more into line with Continental developments along the path blazed by Say.

In a final section, the author handles a complex subject—the object of Senior's life—his drafting, at Lord Melbourne's request, of the Reform of the Poor Law in 1834. Here, Miss Bowley clearly shows by considerable citations from Senior's writings that much, if not all, of the Webbs' criticism of Senior for his allegedly *laissez faire* attitude, was completely misconceived. Senior took his stand on the right of the labourer to protection and maintenance of his personal capital, his skill, by the State, and on the right to education at the public expense. He was not very *laissez faire*, and certainly no bigot! Perhaps this explains why Walter Bagehot, the Radical editor of *The Economist*, had so profound a respect for the man who, throughout his life and even in his wife's diary, was known as " Mr Senior." Under the same title Bagehot wrote a moving obituary in these columns in 1864. And it is good to learn from Miss Bowley's exhaustive analysis of his work that, before long, we may expect the biography of the man by his granddaughter, Mrs St. Loe Strachey. At any rate, Miss Bowley has ably rehabilitated a neglected but important economist. Her book deserves wide circulation. It should find it among those who now begin to appreciate the crucial importance of the period 1820-1860 in our economic and social history. Nassau Senior was an intellectual adornment of that period.

* "Nassau Senior and Classical Economics." By Marian Bowley. Allen and Unwin. 358 pages. 15s.

Shorter Notice

" Hitler's Conspiracy against Peace." By S. Erckner. Gollancz. 288 pages. 6s.

" A former staff officer in the German Army " reveals the alleged plans of the Nazi authorities for the next war. The German objective is defined as a German world created by conquest, and the beginnings in armament, propaganda and foreign policy are here described. Herr Erckner shows how Holland, Poland, Czechoslovakia and Switzerland are on the line of march, but how the real enemy is France. The major problems, however, are economic. The policy cannot succeed without colonies and raw materials. The war cannot end in victory unless swiftly won before supplies have been exhausted. The importance of North Africa and therefore of Spain in the campaign against France is suggested, and the whole argument is based on quotations and references from German sources. The net effect is telling and to a point convincing, but Herr Erckner proves too much. The springs of such a conspiracy may indeed lie in Nazidom, but its operation cannot feasibly be envisaged by Germany to-day.

Books Received

Prelude to 1937. By F. J. C. Hearnshaw. John Murray. 180 pages. 5s.

Trade Centres and Trade Routes. By Eugene Van Cleef. D. Appleton—Century. 308 pages. 15s.

Review of World Trade, 1936. League of Nations Publications. Allen and Unwin. 91 pages. 2s. 6d.
This valuable report is discussed on page 176 of this issue.

The Problem of International Investment. A Report by a Study Group of Members of the Royal Institute of International Affairs. (London) H. Milford. 373 pages. 18s. net.

Atkin's Manual, 1937. (London) 495 pages. No price stated. This annual publication by a leading firm of dealers in the electricity supply and equipment share market contains full particulars of the capital, financial record and personnel of utility companies at home and abroad. The new edition matches the high standard of earlier volumes, and will be welcomed by the electricity share investor.

Basic Physical Training. By Margaret Morris. 278 pages. Heinemann. 10s. 6d.
Miss Margaret Morris, the founder of the movement that bears her name, has recently received just recognition of her pioneer work in the realm of physical training by her appointment to the supervisory body of the Government's national physical fitness campaign. In this book she sets forth 55 exercises in diagram, with explanatory comment, whose aim is to secure physical fitness for the average occupied man and woman with perfect balance and fluidity of movement. They adapt and analyse normal and natural muscular movements of whose nature her readers will probably be quite unaware. She rightly lays great emphasis on breathing exercises. Her book should help forward the growing movement in all classes for a fitter nation.

MONEY AND BANKING

The Banking Half-Year

THE publication of the leading joint-stock banks' statements of accounts for June 30th provides a useful opportunity for an examination of the general banking trend. The banks' supply of cash is divided into two parts, namely (1) coin and notes in the tills of their various branches and in their local currency reserves; and (2) their balances at the Bank of England. The amount of till-money is under the control of the banks; for they can always draw on the Bank of England. In practice each branch holds in till-money about 5 per cent. of its deposits. The size of the banks' balances at the Bank of England, however, is largely determined by the monetary authorities, namely the Government and the Bank.

If we assume that the joint-stock banks maintain a 10 per cent. ratio of cash to deposits, it follows that the ratio of their balances at the Bank of England to their deposits is 5 per cent., the remaining 5 per cent. being till-money. That leaves 90 per cent. for earning assets, on the presumption that the banks' capital and disclosed reserves can be set off against the value of their premises. By a well-established canon of banking practice, the sum total of investments plus advances is not as a rule much in excess of 70 per cent. of deposits, the remaining 20 per cent. being left for more liquid assets.

This is the framework of a British bank balance sheet. The crux of the whole matter is the size of the total bankers' deposits at the Bank of England. To illustrate this point, let us set out a hypothetical bank balance sheet, expressing every item as a multiple of a quantity x, which is assumed to represent the size of that bank's balance at the Bank of England:—

	Amount	Ratio to Deposits
Liabilities :—		
Deposits	20x	100
Assets :—		
Cash—		
(*a*) Balance at Bank of England	x	5%
(*b*) Till-money	x	5%
Balances, short money and discounts	4x	20%
Investments and advances	14x	70%

Given a balance at the Bank of x, a banker knows that he needs x of till-money, and that he can take up 4x of the more liquid assets and 14x of investments and advances. That will give him deposits of 20x, and will also give him his correct ratios of 10 per cent. cash and 70 per cent. investments plus advances. This is the framework within which he must act.

Before we can apply this broad analysis to the actual position at June 30, 1936 and 1937, there are certain reservations to be made. The first is that Lloyds and Martins, but not the other banks, use the detailed form of accounts recommended by the Cunliffe Committee. In their case advances have a narrower (and more accurate) meaning than in the case of the other banks, and their ratio of advances to deposits tends, therefore, to be smaller. Next, two of the " big five " banks refrained from participating in the £40 millions sterling credit which was granted last winter to the French railways and is still outstanding. The remaining banks rank their shares of the credit among advances. Finally, as a result of the South American bank merger of July, 1936, Lloyds Bank no longer shows its share-holding in the Bank of London and South America as a separate item. Instead, its investments include an item of about £3,000,000, called " investments in other banks."

With these reservations, we may set out the available figures in three tables, the first two embracing eight banks, and the last table the " big five " alone.

Broadly speaking, there has been a general increase in cash, earning assets and deposits, but as the banks do not disclose their balances at the Bank of England as distinguished from their till-money, it is impossible to estimate the size of x, which is the basic and causal factor in their accounts.

How has this increase in bankers' deposits at the Bank come about? And is it fortuitous or an act of deliberate policy? The position is obscured by the banks' practice of augmenting their total cash when they draw up their half-yearly balance sheets, and by the market's practice of forcing the Government to borrow from the Bank of England in order to supply the banks with additional cash. To avoid any consequent distortion, we may use the figures of the Bank of England's return on June 23rd of each year as a basis of comparison. The principal changes since a year ago are these:—

	£ millions
Gold	+ 110
Note circulation	+ 49
Fiduciary note issue	— 60
Reserve	+ 1
Securities in banking department	— 2
Public deposits	— 5
Bankers' deposits	+ 4

The largest movement is in gold. Some months ago the Bank took over £60 millions to relieve the Exchange Account, off-setting it by the reduction in the fiduciary note issue. The remaining £50 millions was taken over to support the expansion in the note circulation and to obviate a contraction in the Reserve and also in bankers' deposits. Thanks to a possibly fortuitous reduction in public deposits, bankers' deposits have actually risen during the past year.

Finally we come to the distribution of the banks' earning assets. Theoretically, after deducting cash and balances, etc., from deposits, an increase of £47 millions was possible. The actual changes were:—

	£ millions
Call and short loans	+ 9
Discounts	− 53
Investments	+ 2
Advances	+ 93
Net total	+ 51

A year ago the ratio of investments plus advances to deposits was only 67.1 per cent., and the banks thus had some margin in hand below the normal ratio of just over 70 per cent. To-day, thanks to the £93 millions growth in advances, the ratio is 69.3 per cent. The leeway has been considerably reduced; and for this reason —quite apart from the uncertain trend of the gilt-edged market—the banks have been unable to add much to their investments.

We thus arrive at the main conclusion suggested by the bank balance sheets. The ratio of investments plus advances to deposits is now nearly up to its effective limit, and the banks can no longer buy securities, or substitute advances for discounts, unless they simultaneously realise securities. The only way of escape from this dilemma is a further increase in x, namely bankers' balances at the Bank of England; and this implies a deliberate expansion of the credit base. In short, granted the continuance of Government defence borrowing, the technical banking position suggests that the choice now lies between an expansion of credit, which, in existing circumstances, would have something of an inflationary character, a rise in the long-term rate of interest, or possibly a deliberate regulation of non-Governmental borrowing. It may be that in the event we shall experience a combination of all three.

Financial Notes

Further Moves in France.—After an attempt to hold the franc at about Frs. 128 to the pound, the French authorities had to abandon control temporarily, and the pound at once rose to over Frs. 130. The authorities have since intervened at times, but rates have been very irregular, with the discount on three months' francs running at times up to a wide margin. It rather looks as if the authorities both realise the meagre size of the gold resources in the possession of the Exchange Fund and are also disposed to let the franc find its natural level without undue delay. Meanwhile the tax decrees have been followed up by three new moves. First there is the change in the Governorship of the Banque de France, commented upon below. Next the Banque de France's gold reserves have been written up from a basis of 49 milligrammes to one of 43 milligrammes per franc, thus raising the Banque's total gold stocks from Frs. 48,900 to Frs. 55,600 millions. The resulting profit of 6,700 millions is to be used to constitute a special fund for the support of *rentes*. This proposal is of doubtful efficacy, and it would have been better either to earmark this profit against the Banque de France's new loan of Frs. 15,000 millions to the Government, or to divert an equivalent quantity of gold from the Banque to the Exchange Fund. Still, the new basis of valuation only equals an exchange of about Frs. 112.50 to the pound, so that there is room for further writing-up so soon as the new value of the franc is definitely established. This, however, will require legislation. The final proposal is that of economies to supplement the recent tax decrees.

The French Economies.—Complete details of the proposed economies are so far lacking, and it is possible that their publication has been deferred pending the creation of a more favourable atmosphere. According to the latest information available, the balancing of the ordinary Budget for 1938 through the new tax decrees still left a total deficit of Frs. 47,000 millions, after including the extraordinary Budget and the advances to the railways and *collectivités publiques*. Economies of Frs. 25,000 millions for 1938 are now proposed, the extraordinary Budget including defence expenditure being fixed at Frs. 15,500 millions, and Frs. 7,000 millions now representing the deficit of the *collectivités publiques*. These economies are to take effect at once, and our Paris correspondent calculates that they will yield Frs. 6,000 millions of relief to the expenditure for the remainder of the current year to December 31st. A week ago we estimated that after allowing for the Banque de France's loan and the yield to December 31st of the new tax decrees, there was still a gap of Frs. 12,000 millions. Half this gap will be covered by these new economies, and the remaining half should be filled without undue difficulty if all goes well. The immediate reception of the new economy proposals was favourable and there was a recovery in *rentes*, but it remains to be seen how they work out in practice.

* * *

The Banque de France.—The change of Government in France has been followed by the retirement of M. Labeyrie from the Governorship of the Banque de France. It will be recalled that M. Labeyrie was appointed Governor in June, 1936, immediately after M. Blum's assumption of office. M. Labeyrie, who by profession was a civil servant with no previous banking experience, retained his former position of Procurator-General at the Court of Accounts, and he will remain in this position after his retirement from the Banque de France. He is succeeded by M. Fournier, who has been First Deputy-Governor of the Banque since 1930, and who has had a long experience of central banking. M. Guiraud, the Second Deputy-Governor, succeeds M. Fournier, and is in turn succeeded by M. Yves de Boisanger, Director-General of the Finance Ministry. M. Labeyrie's appointment obviously indicated the closer contact of the Banque de France with the Government of the day, and it was quickly followed by the new law reforming the constitution of the Banque de France. Now that a new Government has taken office, with a pronounced reorientation of financial policy, it was easy to see why a change in Governorship at the Banque was thought advisable, and it is also significant that an experienced central banker has been appointed to the post. The liaison between the Government and the Banque will no doubt continue, but it is clear that M. Chautemps wished to make an appointment which would command the confidence of the banking world.

* * *

Australia's "Macmillan Report".—To judge from the cabled summaries so far available the report of the Australian Banking Commission is not a startling document. The nationalisation of the trading banks is definitely rejected by a five-to-one majority of the members of the Commission, but recommendations are made for the development of the central banking functions of the Commonwealth Bank. Thus it is suggested that the Commonwealth Bank may with the consent of the Treasury require the trading banks to maintain for a limited period minimum balances with it, in addition to the trading banks' own till-money. No specific ratio of these minimum balances to the trading banks' own deposits is prescribed, nor does the report suggest the circumstances in which this power should be exercised. The report also recommends the conclusion of a new agreement between the Commonwealth Bank and the trading banks, giving the former certain powers of mobilisation over the latters' London funds. The voluntary Exchange Mobilisation Agreement is to be continued, with contributions to the mobilisation fund remaining in excess of Australia's external debt service requirements. The note issue is to be based on a normal fiduciary note issue of £A60 millions, subject to limited increases with the consent of the Treasury. Miscellaneous recommendations relate to the compilation of bank accounts and statistics, the systematic revision of collection charges within the Commonwealth, and the licensing of new banks. There are also suggestions for the foundation of new mortgage banks, as well as institutions to finance small industries. Dr Earle Page, the acting Prime Minister, in accepting these last recommendations, has announced that legislation will be introduced to found a mortgage bank attached to the Commonwealth Bank, and also says that the Commonwealth Bank is examining the question of the provision of capital for small industries. For the Commonwealth Bank to undertake either of these functions itself is inconsistent with its development as a central bank. On the other hand there are English precedents, such as the Banker's Industrial Development Company, for the formation by the Commonwealth Bank of subordinate and semi-independent institutions for these purposes.

* * *

The Australian Pound.—The Banking Commission accepts the present value of the Australian pound, and recommends the continuance of its link to sterling. It also endorses the Bank of New South Wales' action, when it took the lead early in 1931 in bringing about a fresh depreciation of the Australian pound to its present level. The recommendation of a reasonably stable rate of exchange carries with it the implication that an adequate supply of both Australian currency and sterling must always be forthcoming at that rate, and this raises the question of London funds. The trading banks will naturally be jealous of surrendering to the Commonwealth Bank complete control over their London funds, but as a matter of broad principle they should be controlled by the central bank. On the other hand, the trading banks possess the longer experience. Another point, which it is hoped will be brought out more clearly in the full text of the report, is the relation of the trading banks' London funds, their till-money and their balances at the Commonwealth Bank to their own total deposits. To the extent that the trading banks regard their London funds as part of their cash, any sudden depletion of London funds due to inequalities in Australia's balance of payments might create internal banking stringency. One object of the proposed extension of the Commonwealth Bank's central banking powers should be the provision of greater elasticity in this direction, and it will be of interest to see what the Commission has to say in detail on this matter. Meanwhile we may note that the trading banks do not regard the whole of their London funds as equivalent to cash, but we agree with the recommendation that more information should be available regarding their size.

* * *

Japan's Gold Revaluation.—The Japanese Government has decided that the Bank of Japan's gold reserves shall be written up from a basis of 1.33 yen per gramme to one of 3.50 yen per gramme. On the old basis of valuation, the par of exchange between the yen and sterling was 24.58d. per yen, but on the new basis, and after allowing for the depreciation of sterling in terms of gold, the revaluation makes one yen equal to 15⅜d. The current rate of exchange is 14d., so that there is still a margin of 10 per cent. available for further revaluation of the Bank of Japan's gold if such a course is thought desirable. Regarded from another angle, at the present sterling rate of exchange the Bank of Japan's gold is now revalued at the equivalent in yen of 127s. per ounce, against the London price of about 140s. per ounce. The Bank of Japan's gold holdings, valued at the old price, were returned on June 5th last at 531 million yen. Revaluation will raise them to 1,400 million yen, yielding a profit of 869 million yen. Also gold amounting to 1,400 million yen gives a 100 per cent. cover to the note circulation. This profit, of course, will be appropriated by the Government, and according to one report will be used to establish an Exchange Equalisation Account. This in turn will be used in part to buy newly-mined gold for shipment abroad. The reactions of this on the internal credit structure remain to be seen, though the creation of an Exchange Account is legitimate enough. Still it is clear that the Japanese Government are in need of funds both to cover their budgetary requirements and to provide for the adverse trade balance—both a consequence of military expenditure. The revaluation of the central bank's gold holdings was in these circumstances too obvious a chance to be missed.

* * *

June Clearing Bank Averages.—The War Loan dividend payment at the beginning of June depleted public deposits at the Bank of England and necessitated some Ways and Means borrowing. All this money found its way into the clearing banks, and this is the main explanation of the month's expansion of £8.1 millions in clearing bank cash, for the increase in the note circulation was offset by further gold purchases by the Bank of England. The banks' calling operations for the half-year's balance sheets only occurred right at the end of the month, and so had only a limited effect upon the monthly average returns.

(In £ millions)

	June, 1936	Feb., 1937	March, 1937	April, 1937	May, 1937	June, 1937
Capital and reserves	131·8	132·5	132·5	132·5	132·5	132·5

Cash	221·6	226·9	222·4	226·2	229·6	237·7
Cheques, balances and items in transit	66·6	64·2	67·3	64·6	68·7	73·0
Money at call	152·6	161·2	164·8	171·6	163·4	168·2
Discounts	327·5	305·1	246·2	239·5	242·8	257·5
Investments	626·2	655·8	651·9	646·0	641·4	638·2
Loans and advances	858·8	888·0	918·8	930·6	936·6	947·4
Investments in affiliated banks	25·1	23·5	23·5	23·5	23·5	23·5
Cover for acceptances, premises, etc.	148·6	159·0	166·4	170·3	169·7	168·2
Total assets	2,427·0	2,483·7	2,461·3	2,472·3	2,475·7	2,511·7

With £8.1 millions more of cash in hand, the banks could theoretically add £72.9 millions to the earning assets, thereby increasing their deposits by £81.0 millions. Actually deposits only rose by £37.4 millions, so that the banks' cash ratios were strengthened. As regards earning assets, there was a somewhat surprising increase of £14.7 millions in discounts—during a month when the banks were reluctant buyers of bills. Between May and June, however, tender issues of Treasury bills rose by £13 millions, taking the average for each month. Advances have risen by £10.8 millions. In consequence the banks have had to make a slight reduction in their investments, for even so the ratio of advances plus investments to deposits still stands at just over 70 per cent.

* * *

The Foreign Exchanges.—The fresh depreciation of the franc, discussed in previous notes, has made the Paris rate very jumpy, the more so as the French Control has only been giving spasmodic support. After breaking to Frs. 133 over the week-end, the spot rate for francs was brought back abruptly by the French Control on Monday to Frs. 130¾, but was then left free again with the result that by Thursday morning it had depreciated to Frs. 135. Later in the day it came back to Frs. 133½. Three months' francs were offered up to Frs. 6 discount and one month's up to Frs. 2½ discount. The New York rate has been inactive at $4.98¼, with three months' dollars still at 1⅜ cents premium. Guilders have been strong. There have been further reductions in the Netherlands Bank's buying rate for dollars, the total movement for the week being from Fl. 1.81½ to Fl. 1.80⅞. The sterling rate for guilders has also been firm at Fl. 9.01⅛. Belgas have been weak with the spot rate up from

bel. 29.50 to bel. 29.62. The premium on three months' belgas has also disappeared, the latest rate being either side of par. It is realised that Belgium is not indifferent to the reactions of the fresh depreciation of the French franc, and when the franc has found its new level, Belgium may have to consider the position of the belga. As a result of the weakness of the dollar, gold has now fallen to below 140s. per ounce, the price at Thursday's fixing being 138s. 6½d. per ounce, this price leaving no premium over the dollar parity.

* * *

The Money Market.—The increase in bankers' deposits has made conditions easier. There was only a moderate amount of calling by the clearing banks, who on the whole were ready to lend freely. There were some reports of slightly firmer rates for "outside" money, but generally speaking credit remains plentiful with no real change in conditions.

	July 1, 1937	July 8, 1937	July 15, 1937	July 22, 1937
	%	%	%	%
Bank rate	2	2	2	2
Clearing banks' deposit rate	½–⅝	½	½	½
Short loan rate :—

Others	½–⅝	½	½	½–⅝
Discount rates :—				
Treasury bills	½–⅝	½	½	½
Three months' bank bills	⅝	11/16–⅝	11/16–⅝	11/16–⅝

* Loans against Treasury bills and other approved bills and British Government securities within six months of maturity; 1 per cent. Treasury Bonds and other gilt-edged stocks within six months of maturity; and other collateral respectively.

The clearing banks have been buyers of Treasury bills at ½ per cent., but last week only £35 millions of Treasury bills were issued, and the tender rate dropped to only a fraction of a penny above ½ per cent. This week £40 millions of bills are being offered, but with money more plentiful it is doubtful if the rate will prove much better.

* * *

The Bank Return.—This week the note circulation is practically unchanged, but it is now at its lowest point for the present, as the holiday currency expansion is due to begin. As the Reserve and Proportion are now unusually low, it seems very likely that the Bank will have to buy fresh gold.

BANK OF ENGLAND

	July 22, 1936	June 30, 1937	July 7, 1937	July 14, 1937	July 21, 1937
	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Issue Department :—					
Gold	238·8	326·4	326·4	326·4	326·4
Note circulation	443·6	488·4	494·4	493·4	493·1
Banking Department :—					
Reserve	53·1	38·9	32·9	33·9	34·2
Public deposits	19·9	10·8	15·2	23·1	17·5
Bankers' deposits	98·2	140·5	88·5	89·2	97·2
Other deposits	38·5	40·2	37·2	37·1	38·1
Government securities	95·8	140·6	96·6	104·0	107·4
Discounts and advances	6·5	6·3	9·0	8·8	5·8
Other securities	19·4	23·7	20·4	20·7	23·4
Proportion	33.9%	20·3%	23·3%	22·7%	22·4%

In the banking department there is a drop of £5.6 millions in public deposits in spite of the receipt of the mid-monthly excise duty payments. Government securities have risen by £3.4 millions, and there were suggestions in the discount market of a small amount of special buying of bills. As a result of these changes bankers' deposits have risen by £8.0 millions. It is clear that the low level of the Reserve is not being allowed to contract the supply of joint-stock bank cash.

* * *

Standard Bank of South Africa.—The annual report of this important bank reflects very clearly the unexampled prosperity of South Africa in the course of the last year. Total deposits have risen from £73,709,555 to £84,277,804, a rise of 15 per cent. within twelve months. The note circulation has increased from £608,156 to £736,133, deposits, current and other accounts from £57.9 millions to £66.0 millions, and bills discounted and advances to customers from £29.6 millions to £36.4 millions. These figures speak for themselves. There has been a decline in cash in hand and with bankers from £13.0 millions to £11.4 millions, and the reserve ratio has fallen from 17.6 per cent. to 13.6 per cent. The latter figure is still high, even after making all allowances for the different standards of this country and South Africa. At the general meeting held this week the chairman alluded to the general prosperity of South Africa. He said that the rise in world prices was helping South African agriculture, though in some ways it was adding to the costs of her secondary industries. The bank itself had been able to write back advances previously considered doubtful, as the result of the continued prosperity of the Union. The directors recommend a doubling of last year's 2s. bonus to the shareholders. The dividend of 5s. is left unchanged.

* * *

National Bank of Australasia.—Another of the Dominion banks has published an annual report that adds to the now almost monotonous record of Imperial prosperity. The symptoms of recovery shown by the statistics of the National Bank of Australasia, though considerable, are not so overwhelming as those of the Standard Bank of South Africa. Total deposits have risen from £47,496,677 to £51,499,254, a rise of 8 per cent. against the Standard Bank's 15 per cent. The omnibus item of coin, bullion, Australian notes, cash at bankers and at short notice in London, which constitutes the cash reserve of this bank, has, however, risen from £5.6 millions to £6.0 millions, an almost equal rise proportionately. Bills receivable in London have risen from £3.6 millions to £4.5 millions, and holdings of Commonwealth Treasury bills have risen from £2.7 millions to £3.6 millions. Unfortunately the recent developments of the Commonwealth Bank make a proper comparison of the liabilities this year and last year impossible. Government deposits, which were £334,449 last year, have vanished, and the item of other deposits has been metamorphosed into deposits and other accounts including reserve for contingencies. If these are to be taken as equivalent, there has been a rise from £37.7 millions to £42.2 millions. This bank has also raised its dividend, the increase being from 5 per cent. to 5¼ per cent.

* * *

The National City Bank.—The latest accounts of this leading New York bank illustrate some of the recent American banking trends, including the raising of minimum reserve requirements, the growing demand for bank credit, and the reduction in bank investments. These latter tendencies are finding their counter-part in Great Britain. The following are the salient features of the National City Bank's accounts:—

	June 30, 1936	June 30, 1937	Intervening Change
		($ millions)	
Cash, etc.	482·8	549·8	+ 67·0
U.S. Government securities	622·6	419·4	−203·2
Loans, discounts, etc.	551·9	710·2	+158·3
Deposits	1,730·0	1,807·8	+ 77·8
Ratio of cash to deposits	27·9%	30·4%	...

There have also been smaller increases during the past year in investments other than "Governments." The increase in cash is largely traceable through the Reserve system to the continued gold influx, but owing to the higher reserve requirements the total of member bank excess reserves for the whole country has fallen from $2,670 millions to a mere $870 millions. The change-over from "Governments" to loans, discounts and other investments is very marked—particularly from the viewpoint of the Washington Administration.

THE STOCK EXCHANGE

Outlook for Tea Shares

To the general investor, the tea share market is among the most difficult for successful dealing. Its peculiar seasonal movements can be, and are, turned to professional profit, but are largely unappreciated by the layman. It may produce an appearance of activity when other markets are in the doldrums; but more often speculative activity elsewhere diverts attention from tea shares for weeks on end. And, by general admission, tea shares enjoy something less than a free, wide and regular market on the Stock Exchange.

Is the recent interest in tea shares a flattering but deceptive movement, based on advancing prices for a few packages of new season's Northern Indian teas? The main auctions do not begin until next month. So far, Northern Indian teas for the season 1937-38 average 15.53d. per lb., compared with 13.78d. for 1936-37, but only a small quantity has been sold. But the averages for *the calendar year* 1937 to date, compared with 1936, show unmistakable improvement. Both Northern and Southern Indian teas are 1½d. higher at 14.28d. and 14.54d. respectively. Ceylon teas show a greater increase, from 14.37d. to 16.06d. per lb. These calendar year figures have special significance for the investor. Though they bridge two seasons, they cover the accounting periods of the great majority of companies.

It frequently happens in the plantation industries that improved market conditions coincide with the publication of indifferent trading results. Actually, our records of industrial profits show that the 138 tea company reports received during the year to June 30th last showed net profits of £2,556,000—an increase of 20.3 per cent. over the 1935-36 total. But of the companies considered, no fewer than 89, with total profits of £1,810,000, issued their reports in the June quarter, and these showed a mere advance of 1.3 per cent. During the whole year to June, the average rate of ordinary dividend was 7.7 per cent. against 5.7 per cent. During the past quarter alone, it was 8.3 per cent. against 7.5 per cent.

This order of advance is not impressive for a period during which normal profits have been restored for most commodities. In a broad sense, the basic problems of restriction no longer apply to such commodities as rubber, copper and tin. Consumption has rapidly expanded, and producers are now assured of prices which offer satisfactory returns. But tea is an article of consumption which, like coffee but unlike wheat, has little strategic significance. The problem of tea is concerned with the resumption of a natural increase in consumption. The International Committee has estimated that the margin between demand and *potential* output next year will be 315 million pounds, i.e. 37 per cent. of world absorption at last year's rate. And consumption shows no strong and striking response to rising world economic standards. For 1931, world absorption was computed at 901,200,000 lbs. The figure fell steadily to 854,308,000 lbs. for 1934, improved somewhat in 1935, but fell back to 858,106,000 lbs. last year after the increase of 2d. per lb. in the British duty. Admittedly, these statistics do not show changes in blenders' stocks; but they cannot be considered impressive.

Tea shareholders, altogether, would be rash to count on any increase in demand likely to fill any large part of the gap in the near future, despite the stimulus of propaganda under the genial influence of Mr T. Pott. On the other hand the restriction screw can hardly be tightened by reducing permissible exports much below the present 87½ per cent. The extension of the restriction scheme promises no prompt solution of the problem, but it still seems inevitable. Meanwhile planters are encouraged to manufacture better quality tea, and the consumer benefits. There have been occasions when rising prices have closed the "concertina" between common and fine teas but, on the whole, the conception of a "normal" margin between fine and common teas has lost much of its pre-restriction significance. Incidentally, the International Committee's writ does not run in China, Japan and Formosa, which shipped 17 per cent. of the world's exports last season.

Tea is not a single elemental commodity. The blenders are accustomed to vary their demand for different grades according to the nature of the supplies which are offered. One weakness of the restriction scheme is that it makes no distinction between common and fine grades, and for technical reasons its operation is necessarily inflexible. Ostensibly, the trend of existing stocks is favourable, for bonded warehouses have no more than 148,669,000 lbs. in stock—the lowest figure since 1927. Without returns, however, of blenders' stocks—which have never been disclosed—the evidence is incomplete.

These considerations appear to limit the long-term scope for tea shares within relatively narrow limits. Common teas should remain firm, and auction prices as a whole may well have an upward trend in the near future. But the market in Mincing Lane is often vitally influenced by the decisions of a few large buyers. Some allowance, again, must be made for possible increases in production costs for the current year, though the expenses of tea gardens are usually steadier than those, say, of rubber estates. Given these broad facts, the investor will be inclined to pay greatest attention to the shares of companies whose costs are already low, whose crop is being marketed at favourable prices, whose capital costs per planted acre are reasonable, and whose

* Including some rubber. † Cost f.o.b.

equity shares are most responsive to an upward movement in tea prices. Above all, it is essential to select shares in which tolerably free dealing conditions exist.

The table at the foot of the preceding page analyses the position of a number of leading Northern India and Ceylon companies. It does not give an exclusive selection, but rather illustrates the criteria which must be satisfied even for a short-term interest in tea shares. The table takes no account of the increase in export quotas from 82½ per cent. to 87½ per cent. as from April 1st. For the full year, however, this amounts to 86¼ per cent., and thus represents a 4½ per cent. increase in maximum potential shipments this year. An increase of this order is, however, of less importance than potential price-cost relationships. It would be reasonable to leave some margin for increased costs, although our sample of companies shows that increases and decreases balanced each other last year. The price outlook for the autumn sales is promising, but not yet conclusive. Interpretation of the Indian company averages for the 1937-38 season must bear this point in mind. The averages, in fact, show comparatively few decisive advances to which the "1d. per lb. on 1936 crop" multiplier can be related for valuing the ordinary shares.

In the Ceylon list, where "calendar year to date" averages appear, the rising trend is more apparent, except for the finest grade producers like Nuwara Eliyah which have scarcely derived any benefit from restriction through rising prices. If a share of this sort, however, is fairly valued on a 5 per cent. dividend yield basis—the return is on the low side, but the company's earnings record in recent years is sound—Lunuva might surely stand somewhat higher, in view of its low costs and capitalisation, the rising auction prices for its crop, and its present yield basis of 5.2 per cent. The recent new issue, in these circumstances, appears sensibly devised, for it has financed the purchase of an adjoining estate. This policy might with advantage be considered by other concerns, for partition of small separate properties often rules out the most economical methods of working. The two companies in the Dooars group offer examples where investment on the basis of the 1937-38 averages so far recorded might eventually prove misleading. These concerns have sold only the smallest proportion of their new season's teas, and while their prospects may be considered good if prices at the post-holiday auctions continue favourable—for both shares show a good response to rising prices—a present purchase involves a step in the semi-darkness.

On the whole, so far as these and other Indian companies are concerned, the best advice to the investor is to watch the weekly sales returns for a decisive price trend. Speculative profits—in moderation—may be obtained from taking a view now, in the expectation of an autumn rise. But for short-term investment purposes nothing will be lost by awaiting Mincing Lane's clearer signals. The long-term tea shareholder is usually a person with family affiliations with the industry, who has accustomed himself to its vagaries. He himself would be among the first to recognise that the industry's basic problem—that of finding outlets for its vast potential supplies—has not yet been solved. And if his holdings include shares of the highest quality producers he will certainly have been unimpressed, so far, by the blessings of restriction.

Investment Notes

Counterpoint in the Markets.—Market conditions remain more suspended than animated. Prices have been steady in the first week of the traditionally inactive Bank Holiday Account, but there has been general complaint of lack of business. From the viewpoint of Stock Exchange members, this apathy is the more disappointing because this year's series of falls has brought prices down to a level which—on any criterion but that which presupposes a further decline—is unquestionably attractive. A year ago, the Actuaries' indices put the average yield on gilt-edged (2½ per cent. Consols) at 2.92 per cent. and on industrial equities at 3.72 per cent.—a difference of 0.80 per cent. To-day, the gilt-edged yield is 3.35 per cent. and the equity yield 4.39 per cent.—a difference of 1.04 per cent. This year, in fact, industrial dividends and ordinary share prices, after uniting for four years in an inspiriting part-song, have changed from harmony to counterpoint.

* * *

The extent to which rising profits have lately synchronised with stationary or falling prices is brought out by the following table, which contrasts the average rates of ordinary dividend paid by certain important groups of companies (analysed in our table of industrial profits on page 178) with the indices of share values for broadly similar groups, computed by the Actuaries:—

Group	*Economist* Figures		Actuaries' Index Figures				
	Average Rate of Ordinary Dividend Paid in		Average Share Values (Dec., 1928=100) in Mid-July			Average Yield on Mid-July Prices	
	1936	1937	1936	1937	Change	1936	1937
	%	%			%	%	%
Breweries	14·0	16·3	147·1	144·1	− 2·0	3·99	4·44
Electric light and power	8·0	9·2	133·7	118·2	− 11·7	3·82	4·52
Gas	5·6	5·2	131·5	121·6	− 7·5	4·49	4·85
Iron and steel	4·5	7·0	78·5	74·9	− 4·6	3·81	5·07
Coal			100·7	120·6	+19·8	3·36	3·75
Motors, etc.*	6·9	11·6	58·3	48·8	− 16·3	4·04	4·99
Oil	15·4	20·5	82·1	96·4	+17·4	3·27	6·67
Shipping	1·8	1·6	16·3	25·3	+ 55·3	0·81	1·76
Shops and stores	15·6	16·5	85·4	74·6	− 12·7	3·66	3·89
Textiles†	8·7	5·8	40·9	46·3	+ 12·9	2·23	2·31
Electrical equipment	9·6	14·0	143·2	146·3	+ 2·2	3·81	4·37

* *Economist* figures include motor, cycle and aircraft companies; Actuaries' figures refer to motor companies.
† "Textiles" in *Economist* figures, "Cotton" in Actuaries' classification.

In seven of the ten groups, the average rate of ordinary dividend has been higher this year than last. In six groups, share values are lower to-day than a year ago. Even where values have risen, they have not kept pace with increased dividends. The average yield figures of the Actuaries (like those of share values) are based on a much smaller sample of companies than our that there is no single group which does not offer the investor a higher percentage income now than a year ago. The difference would seem to reflect both an adjustment to higher interest rates in general, and a diminished readiness to discount a further prospective rise in earnings.

* * *

Defending the Rentes.—It was a Frenchman who first emphasised the therapeutic value of self-persuasion. But it is doubtful if this week's proposal to set up a fund for maintaining the price of rentes has even the advantages of economic Couèism. When companies buy their own shares the law steps in. And when Governments attempt to manufacture an artificial price for their own wares, the effect is not to inspire confidence, but rather to increase distrust. Within the limits of a consistent credit policy, arguments may be advanced for official interest in the market for Government securities. An "open-market policy" is a recognised means of intervention by the authorities in well-organised monetary centres, and if the new fund were designed as a contribution to the machinery of an effective money market (which Paris sadly lacks), its intention would merit high praise. But when intervention means merely manipulation for what, in a less exalted context, would be called "rigging the market," it seems no more promising of success than the arbitrary maintenance of a currency above its proper level. The wherewithal for this defence fund will be obtained from the profits from the revaluation of the gold reserve of the Bank of France in consequence of the devaluation last autumn, which we discuss on pages 170 and 186. If this fund is expected to fulfil a policy of cheap money, in close co-ordination with the Stabilisation Fund, its success seems highly improbable. The Government has eschewed the proposal to convert rentes, which would involve *force majeure*, and the rentes defence fund proposal has been well received by the Bourse. But more fundamental measures to increase the attractiveness of Paris for the rentier's funds will be needed before cheap money is realised. A rentes defence fund merely palliates a symptom without removing a cause.

* * *

Wall Street.—A decidedly more optimistic sentiment has prevailed on Wall Street this week. It has been held in London for some time that the present economic conditions and future prospects in America would justify a higher level of security prices than Wall Street operators have thought reasonable. Stock markets, and Wall Street in particular, operate on hunches more than on reason. And it has been Wall Street's hunch that things in America were not as good as they might seem to the outsider. Wall Street feared a slump, or at least that rising costs would wipe out any possible increase in profits; it feared the principles of the New Deal, disliked the passing of initiative from New York to Washington, and could find nothing good to say for the Dragon in the White House. Many operators saw Wall Street condemned to a long vista of 500,000-share days, which spelled depression if not ruin. And the ever-present emissaries of the Securities and Exchange Commission were as obnoxious to Wall Street as mosquitoes, whose buzzing, according to Wall Street was useless but irritating. It was to be expected, therefore, that the President's difficulties at Washington over the Supreme Court Bill would release an upward movement, and this lasted until the New Deal supporter, Senator Barkley, was elected to lead the Democratic Party in the Senate in place of the late conservative Democrat, Senator Robinson. That choice caused a slight setback. Steels, rails and utilities were prominent in the advance—all of them stocks which might be expected to benefit from a defeat for the President and a weakening of the Administration's support for labour organisation. Fortunately, these are not the only reasons for optimism concerning security prices in America. They may have served their purpose if they open the eyes of Wall Street to the much sounder underlying reasons which justify confidence in the future progress of the American economy.

* * *

Taxing the Foreigner.—Mr Marriner Eccles chairman of the Federal Reserve Board, has make public a plan to increase the federal taxation on investments in America belonging to non-resident aliens. From the American viewpoint the present situation is neither just nor expedient. Non-resident foreigners are now liable to a 10 per cent. withholding tax, but they do not pay surtaxes or capital gains taxes. It is now proposed to increase the withholding tax to some 25 per cent. and to make the foreign holder's income liable to surtax and his capital gains to taxation on the same basis as those of resident Americans. The foreigner may avoid payment of the withholding tax only by filing an income return with the authorities and paying such taxes as he may then have levied against him according to the American schedules. There are a number of motives behind the decision of the American authorities. The Federal Treasury will gain income, and it will be easier to prevent evasion of the proper taxes by such American citizens as are able at present to disguise themselves as non-resident aliens. It will obviously put difficulties in the way of investment in America by foreigners for income or capital, although America may still retain its attractiveness as a relatively safe refuge for those fleeing from the wrath which has visited European centres. The attempt to discourage the inflow of hot money is more prominent in the mind of the Administration than any desire to discourage that almost legendary phenomenon—normal overseas investment. In the past, the State Department has discouraged similar measures in

order to assist its own policy of freeing the channels of international trade, but Mr Eccles now expects to receive assistance from the State Department.

* * *

The measure does provide evidence of a leaning toward a closed economic system which is becoming increasingly evident in America as a result of internal pressure and as a reaction to the meagre response so far given by the Great Powers of the world to Mr Hull's overtures. This tendency might be checked, for the door is still open for an effective trade agreement between America and the Empire. The British investor is threatened by the proposals, for, if they are implemented, he will become liable to double taxation from American and British authorities on a punitive scale. But here also the remedy lies to some extent in British hands. There is a clear case for an agreement between the two nations on double taxation in principle, and it is strengthened by considerations of financial interest. A breathing spell for negotiation is available, since legislation is not expected during the present Congress. But it is dangerous to suppose that this scheme to impose taxation on the foreigner will prove as abortive as past proposals, for the Administration is now completely informed on the holding of foreigners in America, and must be fully prepared to make its proposals effective.

Company Notes

Building Material Shares. — The market may dislike the word "slump," but, in its valuation of typical building material shares, it has for some time been acting as though the building boom was over. The recent experience of representative companies does not, *prima facie*, warrant a lowering of their investment status: the setback in the total profits of London Brick was of small significance, while the improvement in total profits of other companies was in most cases at a satisfactory rate. The latest profits of British Plaster Board (which show an increase from £411,931 to £564,396) and of Williams and Williams are also encouraging at first sight. An analysis of some typical companies follows:—

Company (and date of accounts)	Total Revenue	Earned for Ordinary		Ordinary Dividend	Ordinary Shares	
		Amount	Rate		Price and Denom.	Yield (%)
	£	£	%	%	s. d.	£ s. d.
London Brick (Dec. 31)—

* After deducting sundry reserves. † Also capital bonus of one £1 ordinary share per £9 stock. ‖ After interest paid.

The market's apprehensions, however, now have some statistical support. Following a 28 per cent. fall in the value of building plans in May, the June preliminary returns show a 13.2 per cent. fall compared with June, 1936. For the first six months of the year, housing plans passed were valued at £33.7 millions, against £39.5 millions, and non-residential building has made good only part of this fall, and the total for all classes is £57.8 millions, against £61.5 millions for January to June last year. The divergence of trend between house and other building has been evident for some time past, and is reflected by the difference of yield between brick shares and other building material issues. Cement shares now offer a higher return, but present dividends are expected to be at least maintained. Cement companies share not only in continued industrial expansion, but also in the public works activity which, it is urged, should be developed in times of depression. Nor need the investor ignore the potentialities of improvement and maintenance of existing buildings, as compared with new construction. But the market is probably right in taking a sober view of the future demand for bricks, for assuming a continued decline in dwelling-house building and a growing use of concrete, a yield exceeding 7½ per cent. may not be as excessive as it seems even for so sound a concern as London Brick.

* * *

Southern Railway Statement—The market was well satisfied with the Southern Railway statement on Thursday, when an interim dividend of 2 per cent. was declared on the preferred ordinary stock, compared with 1 per cent. last July. An immediate advance to 93½ was recorded by Southern preferred, and other rail stocks responded similarly. Whether succeeding statements will rival the merits of the Southern announcement, however, remains to be seen. Passenger receipts for the half-year show an increase of £403,000, but goods traffics, with a fall of £65,000, are disappointing compared with the progress recorded by the other three lines. Railway expenditure, however, has increased by the moderate amount of £188,000, and 44½ per cent. of the increase in railway gross receipts has thus been retained net. With the addition of £60,000 from net receipts from steamboats, etc., net revenue has increased by £210,000. These figures show a striking improvement over those recorded for the first half of 1936, when a fall of £17,000 in net revenue was recorded. They plainly suggest that the long-term advantages of electrification are becoming an important factor in net revenue possibilities. With the full dividend on the preferred stock assured, the bulls of Southern deferred come into their own. The half-year's results in fact suggest that other things being equal, the much-canvassed 2 per cent. earnings figure may yet be approached. But such estimates must remain conjectural until outstanding questions of charges and wages are decided. The London and North Eastern statement was awaited as we went to press.

* * *

W. and T. Avery.—The ordinary shares of W. and T. Avery are among that select list which does not attract speculative attention, but is cherished by the investor for steady expansion of earning power. For the past decade this weighing machine concern has paid 15 per cent. on its ordinary capital, but its progressive character is marked by periodical capital bonuses—50 per cent. in 1928 and 20 per cent. in 1935—when the directors are satisfied that dividends can be maintained on the increased capital. The company, by common report, has been operating at full pressure during the past year, and an increase of £20,000 in profits to £209,195 may be regarded as satisfactory. The 15 per cent. dividend is covered by earnings of nearly 24 per cent. compared with 21 per cent. for 1935-36, as the following table shows:—

Years to March 31st

	1935	1936	1937
	£	£	£
Profit	155,386	189,502	209,195
Depreciation	22,471	29,987	32,550
Fees	8,829	9,914	10,000
Preference dividend	11,565	11,565	11,349
Ordinary Shares:			
Earned	*112,521*	*138,036*	*155,296*
Paid	81,628	98,764	97,608
Earned (%)	*20·7*	*21·0*	*23·9*
Paid (%)	15*	15	15
Reserve	30,000†	37,363	55,000†
Carried Forward	60,483	62,392	65,080

* And 20 per cent. capital bonus. † Pensions Reserve received £100,000 from General Reserve in 1935 and £10,000 from revenue in 1937.

These advantages explain why the £1 ordinary shares, which have fallen from 90s. to 81s. this year, still yield no more than £3 14s. per cent. The company, of course, is affected by the trend of business generally, and it should enjoy some participation in a recovery of world commerce. And its precision work can probably be turned to armament purposes in case of need. The company's financial circumstances are strong, and though it is difficult to forecast any rapid upward movement in the shares, they have all the attributes of a sound long-term holding.

* * *

Griffiths Hughes Questions—The full report of Griffiths Hughes Proprietaries offers no mitigation of the decidedly disappointing showing made by the preliminary figures of the operating company, and of the reduction in the parent company's dividend from 17½ per cent. to 11 per cent. Nor is the fall in trading profits from £444,801 to £221,650 accompanied by any explanation in the report. Meanwhile the £1 shares of the holding company have fallen from 32s. 6d. in May to a present level of 25s. 7½d., and at this price they offer the significantly high yield of £8 12s. per cent. Next week's meeting will provide an opportunity for a frank discussion of the company's circumstances, of which all concerned should take full advantage. For the present shareholders can only fall back on inference. Some investors paid up to 62s. 6d. per share for a holding in a company whose main asset is goodwill arising from successful salesmanship, and whose main expenses are advertising costs necessary to build up and maintain its goodwill. But the accounts have never given any indication of the quantitative importance of these advertising costs. For analytical purposes the history of the operating company's trading profits has been as follows:—

Years to March 31st

	£		£
1930	191,187	1934	447,346
1931	275,370	1935	452,205
1932	479,956	1936	444,801
1933	437,884	1937	221,650

These figures exclude any income received from subsidiaries, and up to 1934 they are taken from the prospectus. As they stand, they afford a record of rapid advance between 1930 and 1932, of noteworthy stability at a high level from 1932 to 1936, and of steep and unlooked-for recession in 1937. Is the rapidity of that descent, in a period of advancing economic prosperity, attributable wholly to general trading causes? A full statement of the part which advertising and other special or non-recurring items have played each year since 1932 seems essential before any investment significance can be attached to the profits figures, or any deductions whatever can be drawn as to the correct market value of the shares.

* * *

Distillers' Progress.—Sir Alexander Walker's speech at the Distillers' meeting on July 16 corroborated the view that the company's stock is of the type which a substantial investor may lock away in a japanned box with the certainty of present security and ultimate appreciation. Although the whisky and potable spirit side of the business remains a leading—and improving—profit earner, the Distillers' group of companies comes every year nearer to filling a rôle akin to that of Imperial Chemical Industries, as a supplier of essential raw materials to modern industry. Its industrial alcohol sales further increased last year. This branch is certainly not yet profitable enough to be more than a second string to the group's original business. But the board's policy of encouraging a wide increase in consumption by low prices is bearing fruit in lower manufacturing costs. Sales of "Discol," a motor fuel whose alcohol content is solely supplied by Distillers, are also showing a steady rise. There has been progressive development in the chemical sections of the business. Production of plaster board has continued to expand. The market for carbonic acid gas has so largely developed that Distillers has supplemented its plants at Dagenham and Hull by new units installed at Bankhall and Hammersmith. All this clearly gives special point to the company's conservative financial policy. The chemical side offers immense potentialities, but its capital requirements, in the interim, will be substantial. The company will eventually have many winners, but it must frequently back several runners for a place. In short, Distillers shares are less a market counter than a gilt-edged equity with equal proportions of each element.

* * *

City of London Brewery.—The market has always shrewdly surmised that City of London Brewery and Investment Trust had impressive capital profits at its disposal, arising from the sale of certain assets of Nalder and Collyer's Brewery (its subsidiary) to Ind Coope and Allsopp last year. But these profits, whatever their amount, remain beyond the deferred stockholders' grasp. The Nalder and Collyer's report does indeed show that £1,617,993 has been taken to reserve as a capital profit—a figure which appears to square with the reported sale price and the book value of the assets sold. No part of these profits, however, appears to have been brought into account by the Trust, which has declared a 20 per cent. capital bonus on the deferred shares without paying a cash dividend. This operation appears to be designed to straighten out the capital structure on the basis of a permanent increase in the Trust's investment holdings, part of which (presumably arising from the Ind Coope and Allsopp shares received last year) is already shown in the Trust's holdings. The ultimate treatment of these capital profits and the proper dividend basis for the deferred shares would seem to merit discussion at the meeting. At the present price of 18s. 9d. cum rights, the 5s. deferred units yield no more than 1¾ per cent. on last year's earnings.

COMMERCIAL SERVICE

The Bank has over 370 Branches in Africa, and Agents and Correspondents throughout the World. The closest touch with Trade and Industrial conditions is maintained, with special attention to Commercial and Credit Intelligence. This service is available to Exporters, Importers and others wishing to develop trade with South, East and Central Africa.

THE STANDARD BANK MONTHLY REVIEW is sent post free on application. It gives the latest information on all South, East and Central African matters of Trade and Commercial Interest.

Tate and Lyle Policy.—The publication this week of a statement " for information " regarding the 6 per cent. preference shares of Waterloo Sugar Estates (Trinidad) completes a further stage in the development of colonial sugar supplies by Tate and Lyle. Sir E. W. Tate gave a general outline of the company's new policy at the last general meeting in December. In October, the company had acquired a substantial financial interest in Caroni Sugar Estates, also a Trinidad grower. Tate and Lyle provided a preference dividend guarantee and technical assistance, and in return appointed three directors to the board and obtained an equity interest. Following the formation of the British Sugar Corporation, and the agreement between the beet sugar growers and the refining industry, the returns from the company's beet sugar interest may now be regarded as stabilised. The new policy appears to be linked with the fact that sugar from Empire sources last year amounted to 80 per cent. of the company's trade for home consumption. It is advantageous to increase this proportion, and the company's provision of funds and technical advice to colonial growers should prove a good investment. In the case of Waterloo Sugar, Tate and Lyle guarantee the dividend on 320,000 6 per cent. £1 preference shares until 1947, and subscribe 265,200 5s. ordinary shares, 2s. 6d. paid, out of 520,000 shares.

* * *

Tanganyika Concessions Report.—A net loss of £78,156 is reported for 1936 by Tanganyika Concessions, resulting from a sale of Union Minière shares at less than book value. Receipts from dividends and interest, in fact, totalled £71,594, compared with a mere £4,202 for the previous year. Signs of progress, therefore, are apparent, but they are not yet of a far-reaching nature. Taking the company's main interests in turn, the Union Minière capital reorganisation has been effected, and the Concessions Company has increased its interest to 176,581 shares. The Union Minière accounts showed a net profit, converted into sterling, of £1,232,160 last year, compared with £680,090, and Tanganyika Concessions ranks for a net dividend of £106,000 on its holding. In future, Tanganyika Concessions will rank for 4 per cent. of any excess of distributed profits over Frs. 93,150,000. This is perhaps the most promising part of the company's holdings, for Union Minière is now producing at the rate of 180,000 tons of copper per annum, at a current price some £20 higher than last year. Kentan Gold Areas and Rhodesia-Katanga are still in various stages of development. The large interest in the Benguela Railway still stands in the balance sheet at £6,571,877, but traffics have not improved to the point at which any precise value can be placed on these interests. Improving receipts, moreover, must first be devoted to providing adequate sums for renewals, and it can only be said that the present book figure is substantially in excess of the true current value. Again, Tanganyika Concessions guarantees principal and interest on African Railway Finance 2 per cent. debentures to the extent of £1,467,000. This company's assets consist largely of " B " preference shares in Tanganyika Concessions. To date, £449,000 has been advanced on loan to this concern, and while the annual charge will be reduced by £25,000 in future, the ultimate settlement of the sum outstanding depends wholly on the potential marketability of Tanganyika Concessions " B " preference shares above their present level of 15s. Since they are convertible into ordinary shares until 1943, their prospects in turn depend upon the movements of the ordinary shares, now at 13s. 9d. It is difficult to foresee a recovery in earnings on a sufficient scale to enable the company to adjust its balance sheet in the near future, or to justify an immediate improvement in the ordinary shares.

* * *

Other Company Results—Results from nearly seventy additional companies are included in our usual summary of profit and loss accounts, which appears on page 219. Of this total, however, more than twenty reports come from rubber companies. The industrial companies include *Scribbans, Threlfall's Brewery* and *W. Barratt*, and the list is discussed in detail under the heading " Shorter Company Comments " on page 220.

* * *

Company Meetings of the Week.—Reports of this week's company meetings will be found from page 201 onwards. The *Distillers Company* meeting is discussed on page 193. Sir Francis M. Voules, at the *Kuala Muda Rubber Estates* meeting, commented favourably on the prospects for the company's large holding in Kepong (Malay) Rubber Estates and on the statistical position of rubber. The chairman of *Victoria Falls and Transvaal Power*, reported on his recent visit to South Africa, and expressed satisfaction with the company's co-operative relations with the Union Government. Despite disturbances of the price of gold, mining activity was maintained and the company's sales of power had increased. At the first *New Broken Hill* meeting, Lord Horne referred to the satisfactory results of drilling operations, and to the advantages of co-operation with the Zinc Corporation. The chairman of *Eastwoods Cement*, Mr Horace Boot, declared that the lull in house building had been more than offset in the case of cement by construction of roads, aerodromes, factories and public works. At the meeting of *Eastwoods Flettons*, Mr Boot reported continued progress, and emphasised that increased public and industrial construction was taking the place of house-building. Addressing *Consolidated Tin Smelters* shareholders, Mr E. V. Pearce drew attention to the fact that costs were the lowest on record, and expressed optimism regarding the future of the tin industry. Mr Walter Fletcher emphasised that *Hecht Levis and Kahn* had benefited from rubber market activity and that stocks were well covered by forward sales. Mr E. Russell Polden mentioned to shareholders of *Amalgamated Dental* that increased dental services were an essential corollary of the physical fitness campaign. Mr Eric Macfadyen, at the *Straits Plantations* meeting, reported favourably on the steady prospects for copra, and the efficient production of palm oil on the new property recently purchased. Mr W. Garfield Weston said that *Allied Bakeries*, with 2,786 employees, 17 bakeries, 86 shops, and 494 bread routes in operation, was now the largest of its kind in the country. The successful policy of buying properties with reversionary values was discussed by Mr Philip E. Hill at the *Covent Garden Properties* meeting. At the *Zinc Corporation* meeting, Lord Horne outlined the successful results of the past year's varied activities. The improved prices of lead and zinc accounted for increased proceeds from production, which greatly exceeded the increased costs. Investments in associated companies showed satisfactory results, the prospects for New Broken Hill Consolidated were good, the technical working of the mine was in excellent order, and the readjustments of the Australian organisation were proceeding favourably. Mr G. Kingsley discussed the successful results of *Merlimau Pegoh*, and stated that the statistical position of rubber was sound. At the *Standard Bank of South Africa* meeting Sir Samuel H. Wilson commented on the prosperity attained by the Union, and the central part played by the gold-mining industry. Mr E. B. Ridsdel, chairman of *Chungloon Rubber*, welcomed the increased export allowance permitted by the Restriction Committee. At the meeting of *H. E. Proprietary*, Sir Frederic Hamilton declared that world gold stocks were not too high, and that the rate of supply would tend to diminish in the future. The record profit of *United Dominion Trust* was discussed by Mr J. Gibson Jarvie. Their Trust had decided to offer the 75,000 ordinary shares still unissued. Sir Edward Rosling, reporting improved results by *Bukit Rajah Rubber*, praised the success of the Regulation Scheme. The chairman of *Bristol Aeroplane*, Mr W. G. Verdon Smith, stated that the works were now employed to full capacity. The company is assisting in the production of Bristol aircraft and engines by other companies within the " Shadow Scheme."

THE WEEK IN THE MARKETS

THE STOCK EXCHANGE

SETTLING DAYS

TICKET: AUGUST 10 **ACCOUNT**: AUGUST 12

THE first week of the three-week holiday account has begun in dull style. Holidays at home, diplomatic moves in the non-intervention deadlock, and the war on Peiping do not make for good markets. Some of the international stocks have done well, but gilt-edged are lower, industrials featureless, and Kaffirs weak.

Gilt-edged opened easier, amid idle conditions. War Loan fell below par once more, and there was considerable evidence of " swapping " from longs into shorter dated stocks like 2¾ per cent. Funding and the National Defence Bonds. The further corporation borrowing on more favourable terms to the borrower checked the recent activity in corporation scrips. Dominion issues were also less active, and the recent premiums were not maintained on the Cape Town and Commonwealth scrips.

The dangerous situation in North China produced heavy falls in Japanese and Chinese issues, and a recovery on Wednesday was based on premature reports that peace might be preserved. Falls of several points were common throughout this group. Greek bonds were still responsive to the forthcoming debt negotiations. In the Brazilian list, American purchasing of the 6½ per cent. issue of 1927 was reported, and the 5 per cent. loan of 1903 was also in demand. Funding issues, however, were sold, on the idea that the new debt settlement might seek a reduction of interest.

The home rail market remained under the shadow of the wage tribunal hearings, and would not commit itself to a view on good traffics in advance of the dividend announcements. The Southern Statement, discussed on page 192 put the market in better spirits. London Transport " C " stock provided a redeeming feature, with a steady recovery to 81. At first, the Argentine list was completely idle, but a good batch of traffics helped the ordinary stocks to secure fractional improvements.

Only small support was given to home industrials at first, and business became even more subdued later. The trans-Atlantic section was the most impressive, International Nickel and U.S. Steel responding to Wall Street's bullish mood. Johnson and Phillips and Telegraph Construction were the bright features in the electrical equipment section. Motors improved slightly but changes were rarely important. Handley Page opened higher, but aircraft shares were generally dull, with Rolls Royce particularly affected. In a firm opening market, moderate improvements in steel shares were recorded, but the later tendency was uncertain and easier. Chinese Engineering were an especially weak feature on the critical situation.

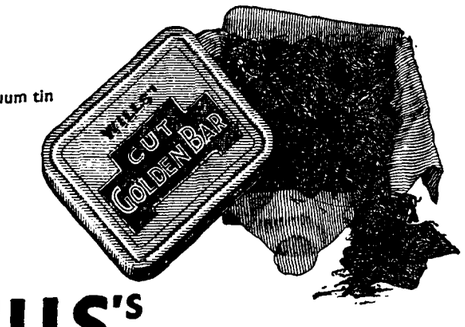
In the brewery market, the South African Wines results were adversely received, after a sharp rise in the shares in anticipation of the results. Distillers improved in mid-week, and fractional advances were reported in other brewery issues. Fixed price store shares moved to lower levels, and International Tea were a conspicuously weak feature. The improvement in freight rates assisted shipping shares. Uncertain changes ruled in the miscellaneous section, and building material shares were affected by the June building plan figures. On the other hand, some of the engineering issues registered small improvements.

The oil share market showed a welcome improvement, for which the strength of the American market appeared partly responsible. Trinidad issues, in particular, were in good demand, but the twin Eagles experienced a sharp setback on Wednesday afternoon on news of further labour troubles on the Mexican fields.

Rubber shares continued quiet, and the pervading dullness deepened into something approaching depression with the fall of the commodity below ninepence. Dealings were in any case very small, and there is no solid ground for uneasiness. Tea shares were surprisingly bright, but this feature was not entirely pleasing. Prices were over-sensitive to a small public investment demand, for the market has been practically cleared of shares in the last few weeks. The outlook for tea shares is discussed on page 189.

There were few changes of any consequence in the Kaffir market amid a general atmosphere of depression. West Wits. were particularly weak, and the technical disturbances from Johannesburg have not ceased. Activity in copper shares was not marked, though the tone was on the whole firm. The best prices, however, were not maintained.

Tin shares continued relatively bright, though as the week advanced they presented a more uneven appearance. The general tone was good enough to withstand some professional profit taking.



(*Continued on page* 198)

GOLDEN MOMENTS

The Men's Singles

'Vantage striker—he leads 6 to 5 in the fifth set. A fizzing service, but a brilliant return and the match is over—a new Champion. What a Golden Moment it must be for him as he makes the winning stroke.

But even he cannot buy a better tobacco than "Cut Golden Bar" at a shilling an ounce. But it must be Wills's.

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields of fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

NEW YORK STOCK EXCHANGE

THE upward tendency of prices on Wall Street which was evident last week became much more pronounced at the opening of business on Monday. Difficulties for the President at Washington were jam for Wall Street, and the Far Eastern troubles would be solved, it was hoped, by the unlimited capacity of the Chinese to compromise. Industrial news at home was excellent. Steels, agricultural implement shares, and rails were better, and even Western Union improved despite the concern of the market over the possible effect of rising wages upon this company's securities. On Tuesday turnover went over the million mark, with rails leading in the hope that a possible rise in freight rates would more than compensate for whatever wage increases were found inevitable. Motors, mail order shares, and even utilities were better, the latter moving up as the prospects of victory for the President were marked down. Toward the end of business in mid-week, prices came down slightly on the election of Senator Barkley as leader of the Democratic party in the Senate, but on Thursday this was forgotten and prices moved ahead rapidly. Prices on the bond market were very firm. Electricity output for the week to July 17th was 13·2 per cent. up on the corresponding week of last year, and reached a new high record. *Iron Age* estimates steel mill activity for the current week at 82 per cent. of capacity, against 83 per cent. for last week, and anticipates that there will be an early rise in activity.

NEW CAPITAL ISSUES

FURTHER British and South African corporation borrowing has been carried out this week. The market was somewhat critical of the decision to raise the price for the *Finchley* loan to 101, although its effective life is four years shorter than the Blackpool issue. This young borough, however, evidently appeals to the corporation stock investor, and the issue was soon subscribed. The size of the issue—£500,000—no doubt contributed to its success, but it is understood that heavier issues are in preparation for Essex, Bradford and Manchester. *Johannesburg* quickly follows Cape Town, with a conversion offer of 3½ per cent. stock at 99, a point dearer but with five years' shorter life. This issue, however, is unlikely to provide so large a meal for the stags, for the conversion list remains open until Wednesday next. The offer of 4½ per cent. debenture stock by *Hugh Stevenson* is largely for conversion purposes. It is satisfactorily covered by assets and earnings, and the company's record is progressive. The capital of *Rippingilles* consists of £50,000 6 per cent. preference shares of 10s., and £60,000 in 5s. ordinary shares. Some 75,000 preference shares are offered at par, and 180,000 ordinary shares offered at 80 per cent. premium. This company's net assets are valued at £104,478, and are acquired for £125,000, of which £95,000 is in cash. The profits record is of the now customary pattern. It shows that profits have been doubled during the last four years, with a particularly sharp rise in the latest year. While the ordinary shares show an earnings ratio of 15·1 per cent. on the issue price, it must be emphasised that this is based on a highly prosperous year. The average over the four years is slightly under 10 per cent. The prospectus also refers to special Government business, which presumably cannot be permanent in character. The *Grassmoor Company* issues 80,000 6 per cent. preference shares at 21s. These shares are a well-secured colliery preference issue, and while they are likely to have a somewhat restricted market, the prospect of expanding dividend cover should add to their investment status. A line of £250,000 *Chesterfield* 3½ per cent. stock, redeemable 1962, has been placed this week. Other statements for information only include *Waterloo Sugar Estates* (*Trinidad*) to which reference is made on page 194, *Aberdeen, Edinburgh and London Trust*, and *Roadways Transport Development*. *Salts* (*Saltaire*) have also offered £350,000 5 per cent. non-secured loan stock, at par, to existing debenture and shareholders.

OIL OUTPUTS

ANGLO-ECUADORIAN OILFIELDS, LTD.—The production for June is cabled as 22,718 tons.

THE ANGLO-IRANIAN OIL COMPANY, LTD.—Production in Iran for the month of April amounted to 824,000 tons, making a total of 3,043,000 tons for the first four months of 1937. Production in Iran for the month of May amounted to 827,000 tons, making a total of 3,870,000 tons for the first five months of 1937.

THE VENEZUELAN OIL CONCESSIONS, LTD.—Production for the week ended May 22, 1937, was: Bolivar District, 867,642 barrels; Maracaibo District, 24,179 barrels; total, 891,821 barrels. Production for the week ended May 29, 1937, was: Bolivar district, 915,736 barrels; Maracaibo district, 24,562 barrels; total, 940,298 barrels. Production for the week ended June 5, 1937 was: Bolivar District, 961,729 barrels; Maracaibo District, 23,606 barrels; Total 985,335 barrels. Production for the week ended June 12, 1937 was: Bolivar District, 987,266 barrels; Maracaibo District, 20,744 barrels; total, 1,008,010 barrels. Production for the week ended June 26, 1937, was: Bolivar district, 947,984 barrels; Maracaibo district, 20,978 barrels; total, 968,962 barrels. Production for the week ended July 3, 1937, was: Bolivar District, 915,881 barrels; Maracaibo District, 23,876 barrels; Total, 939,757 barrels. Production for the week ended July 10, 1937, was: Bolivar district, 825,154 barrels; Maracaibo district, 23,487 barrels; total, 848,641 barrels. Production for the week ended July 17, 1937, was: Bolivar district, 880,116 barrels; Maracaibo district, 23,065 barrels; total, 903,181 barrels.

COMPANY MEETINGS

ZINC CORPORATION, LIMITED

YEAR OF GRATIFYING PROGRESS

INCREASED REVENUE AND DISTRIBUTION

BOARD'S SOUND POLICY OF DEVELOPMENT AND PRODUCTION

VISCOUNT HORNE ON ENCOURAGING OUTLOOK

The twenty-sixth ordinary general meeting of The Zinc Corporation, Limited, was held, on the 21st instant, in the Hall of the Chartered Insurance Institute, 20 Aldermanbury, London, E.C.

The Rt. Hon. Viscount Horne of Slamannan, P.C., G.B.E. (chairman of the corporation), presided.

The secretary (Mr. F. A. Crew) having read the notice convening the meeting and the report of the auditors,

The Chairman said:—Ladies and gentlemen,—The annual accounts of the corporation have been before you for some weeks and I need not occupy your time in traversing the various items in detail. I propose to deal only with those outstanding matters which disclose themselves in the results of the year's working and influence our policy for the future.

The period which I am now about to pass in review is one of gratifying progress. After several years of doubt and difficulty we have arrived at a stage when we can look upon what we have achieved with reasonable satisfaction and upon our prospects with a glow of encouragement. The mine has given us a higher grade of ore; the mill has afforded us a better yield with more efficient recoveries; and the markets have, except in the case of silver, taken our products at higher prices. Our plans for the future reflect our rising hopes but, as we believe, exceed in no degree the limits of well-founded expectations.

For the success by which we have been brought to this position we are chiefly indebted to our managing director, Mr W. S. Robinson, whose foresight and administrative ability always command our admiration. (Applause.) We are glad to welcome him again in this hall to-day and to thank him for the services which he has rendered to us, both in Australia and in London. (Hear, hear.)

BENEFITS FROM TREATMENT OF BETTER GRADE ORE

In 1936 the corporation's revenue was adversely affected by a temporary decrease in production, but the decline was more than offset by the benefits obtained from treating a better grade of ore with improved recoveries and the realisation of our lead and zinc at higher prices. The latter showed a considerable improvement in the last quarter of the year, raising the average prices per ton, in comparison with 1935, by £3 6s. 10d. to £17 12s 6d. in the case of lead and by 17s. 2d. to £15 0s. 8d. in the case of zinc. Silver, however, showed a serious decline in the twelve months, the average being 21.66d. fine or 9.64d. per oz. lower than in 1935. I ought to remind you that the figures in the mine trading account with which I am now about to deal are expressed in Australian currency.

The gross value of mine production includes profits arising from the sales—at prices in excess of book values—of lead in stock which was carried forward from the years of severe depression. In 1935 the revenue from this source was £A34,407 and in 1936 £A64,909. The total value of mine production in 1936 amounted to £A1,509,611, or an increase of approximately £A206,000 on the previous year.

COSTS

Costs, including transport and realisation, were nearly £A105,000 greater than in the previous year. The increase in mining, treatment, and smelting costs reflects the conditions of the new industrial agreement governing wages and hours at Broken Hill and Port Pirie, plus the general increase in the cost of all supplies and services. The increased cost of mine development and administration is the result of our policy of expansion which I will refer to later. Mining royalty fluctuates with mining profits and was therefore higher last year than in 1935.

INCREASED REVENUE FROM INTEREST AND DIVIDENDS

In the profit and loss account—expressed in sterling—our revenue from interest and dividends on investments, together with sundry receipts, reached the satisfactory total of £78,523. If we leave out of account special non-recurring revenue in the previous year, this amount shows a gain of over £11,000. The greater part of our revenue under this heading came from our investments in associated enterprises, while the smaller part is derived from gilt-edged securities, which naturally yield a lower rate of interest.

PROFITS AND DIVIDENDS

The total profit from mine-trading account, interest, dividends, etc., reached £433,434 sterling, or nearly £50,000 more than in the year 1935. (Hear, hear.) After providing for taxation and directors' fees, both of which were affected by the increased profits, we carried £369,436 to the appropriation account. With the amount brought forward we had £424,144 available for distribution this year, against £379,083 in the previous year. After reappropriating £50,000 for special development—i.e. shaft-sinking work—and meeting the preference dividend to the amount of £49,138, we decided to pay participating dividends to the amount of £269,649, an increase of £67,000. This distribution represents a total of 6s. per share, against 4s. 6d. per share distributed in respect of 1935. The balance carried forward is £55,357, or slightly more than in the previous year. I hope you will agree with me in regarding these results as satisfactory. (Hear, hear.)

BALANCE SHEET ITEMS

Turning to the balance sheet you will note that leaving out of account the £15,000 which we received from the transfer of the southern leases, the item "Mining property machinery, plant and equipment" has increased by approximately £105,000, all of which arises from the sinking of the new shaft and erection of the new plant necessary to extend our output. During the year, however, we increased our reserve for general purposes, including depreciation and contingencies, by £50,000.

A year ago I explained to you the reasons for the large increase then shown in our holdings of Government securities. We desired to have investments which would be immediately available to meet the requirements of our policy in regard to development and equipment. This year our Government securities show a decline of about £200,000, due to realisations prompted by the high prices of these stocks and the low interest return on their market value. Had we retained our full holding of Government securities we should to-day have been facing a not inconsiderable drop in their price in the market. The proceeds of our sales have been temporarily utilised at more favourable rates of interest. It is interesting to note that while our holdings of Government securities are lower by approximately £200,000, our liquid and quick assets—the latter including concentrates and metals in hand in course of realisation—together with the net balance of sundry debtors are approximately £250,000 better than a year ago. Of this sum cash deposits and loans at call amount to £135,000. These increases have occurred during a period when we spent over £104,000 on our new shaft and plant. During the current year the expenditures under these headings will be substantial and the cash resources shown in the accounts are not, I think, unnecessarily large. (Applause.)

INVESTMENTS IN ASSOCIATED COMPANIES

Our investments in associated companies show an increase of about £113,000, the greater part of which is due to the transfer to the New Broken Hill Consolidated, Limited, of our interest in Barrier South, Limited, which a year ago figured in our accounts as a holding in a subsidiary company valued at £53,215. We now hold approximately 600,000 shares in the latter company, of which about 100,000 were at December 31st last paid as to 3s. and the balance fully paid up to 5s. These shares stand in our accounts as

an investment in an associated company at approximately £90,000, which was their actual cost to us. Current market quotations for them are very substantially greater.

Our investments in associated industries as I explained to you on a previous occasion include 337,055 shares of £1 each—or over 25 per cent. of the capital—in Broken Hill Associated Smelters Proprietary, Limited, the company which handles all our lead concentrates in its smelters at Port Pirie, South Australia. They include also our interest, costing £120,000, in the Electrolytic Refining and Smelting Company of Australia, Limited, which has smelters at Port Kembla, N.S.W., and treats among other things the slags and residual materials of Port Pirie ; our interests in Imperial Smelting Corporation and Improved Metallurgy, Limited, handling in the United Kingdom much of our zinc concentrates ; Metal Manufactures, Limited, fabricating in Australia a portion of our metals ; and the Western New South Wales Electric Power Proprietary, Limited, supplying us with all our light, power and compressed air requirements at Broken Hill. Certain relatively less important interests are also included. Our policy as to investments in related industries is governed by the same principles as that of our associates in the North Broken Hill and Broken Hill South Companies. It may be shortly stated as directed to fortifying our joint efforts to handle more efficiently and profitably the main products of our mines. (Applause.)

CONSERVATIVE VALUATION

We regard these investments as essential to the development and well-being of our business. They in fact form a very important part of it, and we apply the same rigid rules to them regarding book values as are adopted for our fixed assets. The value of those engaged in essential services to us, such as power smelting and fabricating of metal, depends very largely on the successful operation of our mine, and it would obviously be dangerous to apply any but conservative estimates in the determination of their values. The present book value of our interests in associated companies you may certainly regard as very conservative and our aim is to keep it always so, in order that in all circumstances the shareholders' capital shall be adequately protected. (Hear, hear.) Valued as part of going concerns it would not be unreasonable to say that our interests in related industries were worth over a million pounds sterling, while their realisable value in case of emergency would obviously be much less.

In accordance with the policy I outlined to you at a previous meeting, we have taken an interest in the Commonwealth Aircraft Corporation, in which we have 50,000 shares paid up at present to the amount of 6s. 3d. per share. This company, 90 per cent. of the capital of which is held by the Broken Hill Proprietary, North Broken Hill, Broken Hill South, Orient Steam Navigation Company, Imperial Chemical Industries, and ourselves, has, at the invitation of the Commonwealth Government and as a contribution to the defence of the Commonwealth, entered into the manufacture of aircraft and aero engines in Australia. Its factory is now in course of construction at Melbourne and arrangements have been made to construct a considerable number of aircraft in accordance with the orders and requirements of the Commonwealth Government. (Applause.)

During the year we have added to the investment reserve account over £34,000 from the surpluses over book value which we realised on sales of investments, thus raising the account to £109,000. On the other side of the balance sheet our reserves and undistributed balance of profits now total £695,749, against £601,718 in the previous year. The provision for taxes, royalty, etc., shows a substantial but necessary increase. Altogether I think I may fairly claim that the balance sheet indicates a strong financial position. (Hear, hear.)

NEW BROKEN HILL CONSOLIDATED, LIMITED

You will recall that at our meeting in 1935, in referring to our interest in Barrier South, I mentioned to you that the exploration and special development work then proceeding on our main leases might justify an early start being made with the active prospecting of the southern areas. I emphasised the fact that work of this character in its initial stages was obviously speculative and that any risks attaching to it should not be permitted to affect the working of our main property. At the same time I added that there should be reserved to our shareholders a prior right to find the working capital. At our last annual meeting I again referred to this matter and told you that preliminary work appeared to us to justify seeking the necessary capital for the further exploration and development of the property, but, adhering to our previously expressed policy of not prejudicing the finances of the Zinc Corporation itself, I stated that this would be done through the formation of a separate company. I detailed to you the capitalisation of the new company and the preferential rights which would be reserved to the shareholders in the Zinc Corporation for supplying necessary resources. Since our last meeting the new company —the New Broken Hill Consolidated—has come into active operation and all our shareholdings in Barrier South, Limited, plus the property known as our Southern leases, have been duly transferred to it in the terms of the prospectus. The new company issued 1,250,000 shares of 5s. each at par in September last to provide working capital. Shareholders in the Zinc Corporation, Limited, very freely availed themselves of the right reserved for them to subscribe a portion, while the holding of the Zinc Corporation itself in the new company represents over 600,000 shares, approximately 30 per cent. of its entire issued capital.

At the first general meeting of the shareholders of the new company, held yesterday, I described its position and its prospects so far as they can be determined to-day. A copy of the report of that meeting will be circulated to the shareholders of the Zinc Corporation, Limited, along with details of to-day's proceedings. The two companies have agreed to a policy of close co-operation in development and equipment which will be of substantial advantage in the saving of capital expenditure and in reduction of working costs to the shareholders in both. I think we are entitled to regard the prospects of the new company and our investment in it with satisfaction. (Applause.)

THE MINE

The report of our technical managers and consulting engineers—Messrs Bewick, Moreing and Company—which has been circulated to our shareholders, deals with the year's work at the Zinc Corporation mine at Broken Hill and indicates the very satisfactory progress which has attended our underground operations. Ore reserves have increased by 100,000 tons, notwithstanding the extraction of 364,000 tons during the past year. These ore reserves are at and above the thirteenth level, which is 1,832 feet below the surface. While the figures represent a conservative estimate based on conventional methods of calculation, they do not, as I have pointed out to you before, define the limits of reasonable ore expectations founded on our exploration and development work. We know that the ore body maintains its satisfactory values and dimensions far below our present deepest workings, and it is on this knowledge we base our policy of expansion to which I will refer shortly.

Last year I informed you that the site for the new shaft, which had become an urgent necessity, had been selected some 500 ft. east of Block 5 shaft. This shaft, which is located on what is believed to be the centre of future operations, was designed to give sufficient capacity for the expected requirements of your mine, and in addition to be of service in the working of the adjoining property in which we are so deeply interested. Rapid progress has been made with the work of sinking the new shaft by simultaneous advance from crosscuts driven from different levels. Subject to the absence of unforeseen circumstances, it now looks as if this shaft—I think the largest yet sunk in Australia—will be completed to the 11th level—1,573 ft.—by the end of January and to 2,200 ft., or the 16th level, by about the end of May. Those responsible for this work are to be congratulated on their efforts. (Applause.) Contracts have been let for important items of the permanent equipment, but I regret to say that there have been serious delays in deliveries by British manufacturers which unfavourably affect our plans.

One of the essentials for the economic working of large ore bodies is an ample and cheaply handled supply of filling for stope support. As the workings are steadily deepening, the sand-filling passes through the old upper workings require attention. It was therefore decided to provide an independent line of supply direct from the surface to the No. 8 level, whence filling would be distributed by conveyor belts to the various operating points in the workings below that level. This new sand-pass was commenced in the year under review and has since made good progress. When in operation it should quickly repay its capital cost by a reduction in working expense. (Applause.)

THE MILL

The results of the efforts of our metallurgical staff are shown by the further improvement in the already high recoveries of the three metals, lead, silver, and zinc. An improvement is also shown in the grade of the lead concentrate. The work of those in control of the department merits our high commendation. (Applause.)

THE SMELTERS

The work done at the Port Pirie plant of the Broken Hill Associated Smelters continues to be highly satisfactory, and we again have reason to congratulate Mr Yates, the manager, and his staff on their work. These smelters are now running to capacity, producing approximately 200,000 tons of lead and 8,000,000 oz. to 10,000,000 oz. of silver annually. (Applause.)

PRODUCTION POLICY

I would like to take advantage of this opportunity to refer to our policy of development and production. As you know, it is now some ten years since we decided on a policy of expansion, reasonably in accord with what we believed to be the ore resources of our property. This policy was severely affected and delayed during the recent years of depression, but within the limits of our financial resources it has been steadily pursued. In 1927 our output was about 260,000 tons—by 1930 we had raised it to about 335,000 tons, and in 1935 to over 375,000 tons per annum, with a slight improvement in the grade of ore treated. Next year the capacity of the mine to produce, and the mill to treat, will be approximately 440,000 tons ; in 1939 550,000 tons, in 1940 680,000 tons, and thereafter 730,000 tons per annum. (Applause.) I desire to make it clear that these figures are estimates of what our capacity to produce will be and are not to be taken as definite expectations of production. While our mine will be opened up to produce and our plant extended to treat largely increased tonnages, our actual output in the future will obviously be governed by the industrial and commercial conditions then ruling. If we were not reasonably confident that these would be favourable and would permit us to expand our output we would not, of course, have started out on our present programme. It is of interest to note that in the four weeks just ended we mined 35,000 tons of ore—a record. (Applause.)

POLICY MORE THAN JUSTIFIED

Our policy is admittedly a bold one, but not more so than is justified by our estimates of the resources of your property. Apart from the increased dimensions and larger equipment of the new shaft, which was required in any case, it has necessitated a complete reconstruction of all surface buildings and equipment and the erection of a new mill which with the existing mill will be capable of handling the increased output. The new and existing mills will be brought into line and will incorporate the various mechanical and metallurgical improvements effected in recent years and, by close attention to design and control, it is anticipated that costs and efficiencies will be satisfactory.

Our policy of expansion creates the necessity for a housing scheme for our employees which is now being formulated and which I hope will shortly be in operation. (Hear, hear.)

The capital expenditure involved in opening up and equipping your mine to produce, say, three times as much as it did ten years ago is substantial. I am pleased to be able to say, however, that a profitable investment policy and wise utilisation of our income has enabled us to make provision for this purpose without calling on you for any additional capital and without interfering with your dividends. (Applause.)

THE OUTLOOK

Notwithstanding a continuance of scares and alarms the world as a whole, and certainly our part of it, is much better off to-day than it was a year ago. I can see no reason why it should not be much better off a year hence provided that we can on the one hand escape the calamity of international quarrels, and on the other hand avert the folly of artificial attempts to keep down the price level. (Applause.) There are, it is admitted, many possibilities of trouble, but to-day they don't look quite so alarming or so numerous as those of a year ago. In the interim, as it is well to remember, the world has been making progress—in some cases great progress. Both inclination and reason place me among the optimists. I believe the future will be better than the past. In November, 1935, speaking in this hall to the shareholders of a company with which we are associated, I had the temerity to predict that the real problem of the world would very soon be one of scarcity rather than over-supply. I claim that evidence is accumulating in support of this view. Iron, steel, coal, coke, certain non-ferrous metals, shipping tonnage are some of the things which to-day are really scarce in many, if not all, parts of the world ; and the list is being added to steadily. If Governments really fulfil their promises for a higher standard of living there will be little chance of a surplus in essential commodities and no likelihood of a price level which leaves the producer or worker in the industry without his reward. A higher standard of living and a low commodity price level are not companionable. Those who fight for a low commodity price level are in reality fighting for a lower standard of living. (Applause.)

INCREASED CONSUMPTION OF CORPORATIONS CHIEF PRODUCTS

The consumption of the corporation's chief products is still increasing and the statistical positions in most cases are sound. Subject to any adverse international and financial development, I think we can reasonably expect a continuance of profitable prices. No reasonable man wants boom prices—we only desire such values as fairly reflect the relation between supply and demand. These should, according to my forecasts of the future, be profitable to producers.

But in considering the outlook it is necessary for me to draw your attention to special factors affecting future costs. The industrial agreement which governs wages and hours at Broken Hill and Port Pirie as modified in 1936 provided for the payment of a lead bonus, which varies with the price of lead. On a price between £24 and £25 sterling for lead this bonus reaches its peak —viz. £2 Australian currency per week to each employee. This bonus is intended to and does give the workers a definite share in the prosperity of the industry. As it is an addition to wages it naturally, as the lead price rises, adds to the costs of mining, milling and smelting. Rates of freight in the South Australia railways also vary with metal prices, but here I am glad to say the serious difficulty I mentioned to you a year ago has been satisfactorily settled. In addition there has been a very sharp rise in the c.i.f. cost of timber—of which we use about 4,000,000 feet in a year—and of all other supplies. Coke and coal are higher both in first cost and in freighting, while a serious advance on overseas rates of freight and great scarcity of tonnage add materially to our expenses. It is hoped that these material increases in our costs will be at least compensated for by higher prices for our products. (Hear, hear.)

METAL PRICES

Up to date this year metal prices have ruled at higher levels, as the following figures show:—

	Average 1936	Average 6 months 1937	Latest price
Lead ...	£17 12 6	£26 17 8	£23 8 9
Zinc ...	£15 0 8	£25 2 4	£22 12 6
Silver (fine)	21.66d.	22.05d.	21.5d.

While dealing with metal prices I think I should warn shareholders against accepting loose estimates of the increased revenue coming to us from zinc concentrates owing to higher prices for the metal. Zinc concentrates only contain approximately 53½ per cent. of zinc, and, apart from heavy transport costs, call for expensive metallurgical treatment from which recoveries are relatively low. It will interest you to learn that at present our concentrates increase in value to us by from 5s. to 7s. per ton—according to the range of metal prices—for every £1 rise in the price of zinc.

NATIONAL DEFENCE CONTRIBUTION

You will probably expect me to say a few words on a subject upon which I have frequently and firmly expressed my views in other places. The National Defence Contribution as originally proposed placed a most unfair and, in fact, intolerable burden on progress. It heavily penalised new enterprise while permitting all fixed revenues to escape. No reasonable man can fail to recognise the necessity of an additional tax for national defence and no reasonable man would object to paying it so long as the burden of it is fairly distributed. (Hear, hear.) A universal protest, in which I played a part, killed the first proposals. The new impost, while it still involves what may be regarded as the unfair principle of a tax on the profits of a company rather than a tax on those who receive them, is certainly easier to justify, and in view of the necessity from which it sprang, will be readily, if not cheerfully, borne by the community. I would not have referred to this matter even at this length had it not been for the constitution of this corporation. Its business interests, as you know, are centred in Australia ; a substantial portion of our capital is owned by Australians ; and all our staff and employees are Australians. The first proposals for a National Defence Contribution would have penalised them by an intolerable burden of taxation which the Australian domiciled companies, also working at Broken Hill and associated with us in smelting at Port Pirie and Port Kembla, would not have had to pay. The only way in which we could have met this situation would have been by altering the domicile of this corporation. Even the new proposals affecting the Australian proprietors, as they do, may have unfavourable repercussions. The extent and incidence of taxation to-day adds in

no small degree to the difficulties surrounding the conduct of an inter-Empire business such as ours.

TRIBUTE TO STAFF

We shall issue to you with the report of to-day's proceedings a small illustrated brochure prepared by the officials at your mine. This will give you a clear idea of what has been and is being done at Broken Hill and, I hope, prove both of value and of interest to you, as well as bring you close to those on the job. The new programme has made great calls on our staff. We are greatly indebted to our manager at Broken Hill, Mr A. J. Keast, who has worked untiringly and with great enthusiasm in the interests of both shareholders and employees. (Applause.) On Mr Carey, the chief engineer, much of the responsibility for the complete re-equipment on the surface has fallen. We have nothing but praise for his efforts. Mr Mawby at the mill has more than maintained the excellent results to which his past record has accustomed us. Mr George Fisher has succeeded to the underground managership during a period of great expansion in the mine, and we congratulate him on his success. I have mentioned the principal officials individually, but this is not intended in any way to detract from the appreciation we feel for the efforts of all our staff and employees. I could not omit to mention also the great advantage we derived from a visit by Mr E. A. Loring, of Messrs Bewick, Moreing and Company, whose presence at Broken Hill, together with Mr Edquist, during this difficult period of energetic development was of great assistance to us.

READJUSTMENTS OF AUSTRALIAN ORGANISATION

The expansion of the corporation's activities has not been limited to Broken Hill. In what we may term our associated activities—including power, smelting, metal manufacturing, transport and realisation—there has naturally been a comparable increase, and the growth of these interests has demanded some readjustments in our organisation in Australia. Our corporation was originally designed for a mining and ore treatment company, whereas now we are really an important industrial undertaking. Our friends Messrs Bewick, Moreing & Company have at our request agreed to act in future as technical managers and consulting engineers to our mines and works at Broken Hill and we have established our own office in Melbourne for handling our commercial and financial affairs and for taking part in the control of our associated industries. The separation of the technical from the commercial and financial sides of our business is, we believe, necessary to the successful conduct of an industrial undertaking such as ours. The new arrangement, I am glad to say, secures to us a continuance of the services of our friends Messrs Bewick, Moreing and Company on the technical side and at the same time enables us to build up our own commercial organisation.

We propose to send to Australia this year our very accomplished secretary, Mr F. A. Crew, to assist in the reorganisation of our Melbourne and Broken Hill offices. Mr Crew's services to our corporation can scarcely be exaggerated, and we have every confidence in his ability to perform this function with complete success. We are fortunate in possessing a local board in Melbourne of great knowledge and prudence, the members of which have devoted themselves to our interests. One of them, Mr M. L. Baillieu, is now on a visit to London, thus giving us valuable opportunities for consultation.

SATISFACTORY PROSPECTS

In concluding my address to you I need scarcely assure you that you have a great mine, the development and equipment of which, in reasonable accord with its estimated ore resources, will shortly be completed. If we can be certain of peace among the nations, I believe that with our prospects of increased output and reasonable expectations as to the metal market, you will be justified in expecting an increased reward for your support of an enterprise which now ranks as one of the most important industrial undertakings in the Commonwealth of Australia. (Applause.)

The Chairman concluded by moving the adoption of the report and accounts.

Mr Robert W. Skipwith (vice-chairman) seconded the motion, and after some congratulatory remarks by Mr Caverhill it was carried unanimously.

The retiring directors (Mr J. R. Govett and Captain Oliver Lyttelton, D.S.O., M.C.) were re-elected; and the auditors (Messrs Monkhouse, Stoneham and Company) were re-appointed.

The proceedings terminated with a cordial vote of thanks to the chairman, directors and staff.

STANDARD BANK OF SOUTH AFRICA, LIMITED

CONTINUED PROGRESS IN THE UNION

INCREASED BONUS AND CARRY-FORWARD

The one hundred and twenty-fourth ordinary meeting of the Standard Bank of South Africa, Limited, was held, on the 21st instant, at Southern House, London.

Brig.-General Sir Samuel H. Wilson, G.C.M.G., K.C.B., K.B.E., who presided, said that owing to the continued improvement in the general economic conditions prevailing in South Africa, recoveries had been made in respect of some of the doubtful accounts for which it had been considered advisable to make provision in the past; and the reserve fund had been increased to £3,000,000 by the transfer of £500,000 from the contingencies account, thus restoring to the reserve fund the major part of the amount of £664,170, which it was deemed expedient to transfer from it to the contingencies account in 1932.

The deposit, current and other accounts now stood at just under £66,000,000, an increase of eight millions on the figures for last year. Drafts outstanding and acceptances under credits had risen by approximately £500,000, and customers' bills, etc., for collection by about £1,300,000.

Cash in hand and at call and short notice showed a reduction of nearly £2,000,000. Investments had increased by about £2,500,000; bills of exchange purchased showed an increase of approximately £1,500,000; and bills discounted, advances to customers and other accounts showed a rise of just under £7,000,000.

PROFIT AND ALLOCATIONS

After making an appropriation to contingencies account, there was a balance of profit of £556,587, as against £477,535 at March 31, 1936. The directors had appropriated £75,000 to writing down bank premises, and recommended that £125,000 be allocated to the officers' pension fund, and that a final dividend of 5s. per share be paid, together with a bonus of 4s. per share (making a total of 14 per cent. for the year), carrying forward £149,292, as against £142,705 a year ago. The bonus represented an increase of 2s. per share on that paid in respect of the previous year. He was sure that shareholders would be satisfied with the strength of the bank's position as disclosed by the figures submitted.

ECONOMIC CONDITIONS IN SOUTH AFRICA

The remarkable degree of prosperity attained by the Union in 1935 was maintained during the year, and it was evident that the country remained relatively one of the most prosperous in the world. In its contributions to the welfare of the Union, both directly and indirectly, in the form of taxation, dividends, stores purchased and wages, the gold-mining industry had maintained its position as the pivot of the country's financial progress, and it would be difficult to overestimate the stimulus it had imparted to industrial and commercial life in South Africa. The recent wide fluctuations in the shares of gold-mining companies would appear to have been in a great measure due to public expressions of opinion which had cast doubt on the part which gold played, and was destined to play, in the economic life of the world. The resulting uncertainty had naturally caused some hesitation in putting into force some projected plans for expansion in the mining industry, but signs were not lacking that confidence was being restored, and there appeared to be no reason to believe that there had been any serious change in the fundamental conditions upon which the economic welfare of the Union was based.

The welcome general improvement in world commodity price levels during the year materially strengthened the position of the agricultural industry as a contributory factor in the development of South African prosperity. Other export industries in the Union, notably the diamond trade, had also benefited from the more favourable conditions prevailing overseas, but the increased cost of raw materials was now becoming more pronounced in secondary industries.

Notwithstanding the rise in production costs, industrial activity in the Union developed materially during the year, which was marked by the establishment of many new factories and undertakings. The remarkable expansion of the building industry recorded in 1935 was maintained, and interest again centred at Johannesburg, where the value of building plans passed during 1936 amounted to nearly ten million pounds, as against about six and three-quarter millions in the previous year.

The report was unanimously adopted.

BRISTOL AEROPLANE COMPANY, LIMITED

WORKS EMPLOYED TO CAPACITY

SUCCESS OF "BRISTOL" AEROPLANES

The annual meeting of the Bristol Aeroplane Company, Limited, was held, on the 22nd instant, at Filton, Bristol.

Mr W. G. Verdon Smith, C.B.E., who presided, said:—Ladies and gentlemen,—The operations of the company for the year 1936 resulted in a net trading profit, after providing for depreciation, of £387,756, which, with transfer fees £644, yielded a total income of £388,400. After charging directors' fees and interest on temporary borrowings and making provision for income-tax liability, the balance of net profit is £295,088. Including the balance forward of £40,232, the total available profit was £335,321.

DISTRIBUTION OF 22½ PER CENT.

The directors have placed £100,395 to the credit of general reserve, the dividend on the 5 per cent. cumulative preference shares required £22,875, the interim dividend on the ordinary shares paid in December last at the rate of 7½ per cent., less income tax, absorbed £68,625, and the directors now recommend the payment of a final dividend on the ordinary shares of 15 per cent., less income tax, making a total distribution for the year on the enlarged ordinary capital at the rate of 22½ per cent. The balance remaining to be carried forward is £8,425, and this amount is considered sufficient having regard to the substantial sum now standing to the credit of the company's general reserve fund.

The net premium on the 1,200,000 ordinary shares issued in July last has been added to the general reserve. This addition, with the amount already at the credit of that fund and the further sum allocated from the year's profits, brings the total of the general reserve up to £1,100,000.

On the credit side of the balance sheet, fixed assets, after writing off depreciation, show an increase of no less than £678,136. This important sum represents very considerable extensions of the factories, plant and equipment, and offices. These additions yielded increased output and profit during the year under review, but obviously the full benefit of the expenditure will only be reflected in the future trading profits.

The directors would have desired that the issue of the report should have taken place at an earlier date. This has not been possible owing to the time required for the settlement of prices to be paid to the company for a substantial portion of the greatly increased volume of work performed during the year; indeed, the final prices the company will be paid under certain contracts have not even yet been arrived at. There may therefore be additional profits for last year; but as the matter is still under discussion, I can only refer to it without attempting to forecast the ultimate outcome.

HIGH QUALITY AND PERFORMANCE

Reasons of national policy require that full details of our activities should not be made public. During the year this company's manufacturing resources have been employed to their maximum capacity, while the highest standard of quality and performance of the company's aircraft and aero engines has been maintained. Progress in design has received constant attention, and the new "Bristol" sleeve valve air-cooled series of engines is now in production. I may say that the new "Bristol" Hercules fourteen-cylinder engine, which employs the sleeve-valve principle, is the most powerful type-tested British aircraft engine in existence at the present time. We are confident that the merits of our sleeve-valve types of engine will be recognised as outstanding and that we can look forward to large and profitable sales, not only in this, but in many foreign countries, from which already a considerable demand for the supply of the engine has been received.

Beyond the output of aero engines in our own works in large numbers, "Bristol" engines have been adopted, as I informed you last year, by the Government for manufacture under an emergency programme by what is known as the "Shadow Industry." Under this scheme, "Bristol" engines are being manufactured in specially erected factories by a group of companies consisting of five of the principal motor-car manufacturers. At the request of the Air Ministry, this company has also joined the group and has undertaken the erection, equipment and management of a Shadow Factory. This factory is, of course, entirely separate from the company's ordinary business.

BLENHEIM MACHINES

On the aircraft side, the "Bristol" Blenheim, a type of medium bomber, is in active production in our own works, and, in addition, one of the leading motor-car companies has been entrusted with the erection and equipment of a shadow factory in which is to be built a large batch of this type of aircraft. Another manufacturer has also received a contract for Blenheim machines to be produced in existing aircraft works. Another type of aircraft has been successfully designed, but our company is already so fully occupied that another aircraft manufacturing company has been given a contract for its production.

You will realise from this short account of the company's affairs that in addition to its own manufacturing operations, the company has been called upon to assist in the production of aircraft and engines by other companies on a substantial scale.

ROTOL AIRSCREWS, LIMITED

This company, in conjunction with the Rolls-Royce Company, has embarked upon a new enterprise in connection with controllable pitch airscrews. For some years we have regarded the improvement and development of airscrews as of considerable importance in relation to aero engines, and we have carried out a considerable amount of research and development in our own works. We had acquired manufacturing licences for two types of controllable pitch airscrews, and our friends, the Rolls-Royce Company, had also been working along similar lines. It was considered by that company and ourselves that mutual advantage would result if we pooled our technical knowledge and manufacturing resources in a joint effort to develop and produce the latest and most efficient type of airscrew.

A company with a capital of £250,000 has been registered under the name of Rotol Airscrews, Limited, the capital of which will be subscribed equally by the two companies. The new company has been furnished with a competent technical staff and is already at work. It has acquired premises in Gloucester as a temporary measure pending the completion of a new factory which is in course of erection and equipment with up-to-date and efficient machinery on an excellent site two or three miles from the City of Gloucester.

OUTSTANDING PERFORMANCES

I must not conclude without referring to some of the recent outstanding performances by the company's products, both aircraft and engines. In September last, the world height record of 49,944 feet was achieved by Squadron-Leader Swain, flying a "Bristol" aeroplane equipped with a "Bristol" Pegasus engine. Then three weeks ago a height of 53,937 feet was reached by Flight-Lieutenant Adam, also flying a "Bristol" aircraft with a "Bristol" Pegasus engine. Subject to confirmation by the international body, the height then reached constitutes the new world altitude record.

The company has supplied for many years past "Bristol" engines to the Imperial Airways Company and the company's latest types of engine have taken their full share in the highly successful long-distance flights carried out by the Empire flying boats of Imperial Airways. These performances culminated this month in the first Transatlantic crossing by air in both directions by a British commercial aircraft, the machine to accomplish this feat being the Imperial Airways Flying Boat "Caledonia," fitted with four "Bristol" Pegasus engines.

SALES ABROAD

That the high quality of "Bristol" engines continues to be appreciated in many foreign countries is shown by the substantial sales which have been effected during the year. The fact that "Bristol" engines are being constructed under licence in various foreign countries is also evidence of their high reputation.

National policy in this country with regard to air defence has undergone important changes during the last two or three years, and it is now considered essential that the country should provide itself with greatly increased aircraft resources. This company has made strenuous efforts to cope with the Government's requirements in accordance with this policy, and it is fortunate that in spite of the long period of lean years when the aircraft industry received orders on a very meagre scale, technical research and development were not neglected by us. Thus, when the necessity arose, the company's progressive policy with regard to new types of aircraft and engines has helped to put Great Britain in a position of being unrivalled in regard to design, technique and quality of aircraft.

The report and accounts were unanimously adopted.

THE DISTILLERS COMPANY, LIMITED

RECORD NET PROFIT—DIVIDEND AND BONUS OF 22½ PER CENT.

IMPROVED HOME AND OVERSEAS TRADE

The sixtieth annual general meeting of the Distillers Company, Limited, was held in the North British Station Hotel, Edinburgh, on the 16th instant, when Sir Alexander Walker, K.B.E., presided in the unavoidable absence of Mr. Thomas Herd, the chairman of the company.

Sir Alexander Walker, in the course of his speech, said:—I propose to deal with the various activities of the company in sections.

Our grain whisky distilleries have been operating at almost their maximum output throughout the year, and the demand still appears to be likely to continue. In view of this, your board have decided to reconstruct Cambus Distillery, which was destroyed by fire in 1914. Cambus enjoyed the reputation of being the finest grain whisky produced in Scotland, and, with this distillery in production the trade should be assured that, along with our other distilleries, there should be ample quantity and variety available to meet their requests.

The malt distilleries have also experienced a similar demand, and during the year we operated no fewer than twenty-eight malt distilleries, and are arranging to reopen several others which have been silent for some time.

The home trade shows an improvement during the year, and the popularity of the various group brands increases year by year. Each unit in our group carries ample matured stocks to ensure continuity of quality and age in order to maintain the confidence which the public have in them.

In the export field our turnover for the year discloses a very substantial improvement upon that of last year, and I am glad to think that our reputation abroad follows the popularity of the home market. This increase in export is the more remarkable in spite of the fact that we are, in many countries, subjected to heavy taxation, and, in addition thereto, exchange rates in many instances remain unfavourable.

Our Dominion and Colonial trade shows a very steady upward tendency, and the progressive demand for our brands in the United States of America is very encouraging.

Referring to the gin interests owned by the company, of which the best known is "Gordon's," I may state we are very well satisfied with the progress made during the year, both at home and abroad.

INDUSTRIAL ALCOHOL

The industrial alcohol trade has shown an increase during the year also, and, although prices leave comparatively small margins, the increase in sales and the economic efficiency of our distilleries are factors in keeping down the costs of manufacture. A supply of this spirit at these low prices has enabled many new manufactures to be started in this country, and the high standard of our spirit, both methylated and unmethylated, is appreciated by these trades. You will be interested to note that the sale of Cleveland "Discol," the alcohol content of which is solely supplied by us, shows a steady rise, and is approved more and more by motorists.

The yeast trade, of which you are aware we have a very large proportion, has been maintained about the same level as last year. The control of this production through our laboratories, as well as the excellent delivery facilities we provide through our selling agency, the United Yeast Company, have enabled us to retain our trade satisfactorily with the exception of the Irish Free State, where the prohibitive duties have to some extent shut out our goods.

CHEMICALS

There has been progressive development in the chemical section of the company, and there may emerge during the current year the manufacture of new products to meet the needs of our clientele, and this may necessitate considerable outlay on buildings and plant.

As indicated last year, new discoveries and syntheses, based on alcohol or alternative raw materials, are continually being brought to our notice, whether from our own research laboratories or from abroad. We cannot afford to disregard any new discovery which, in quality or cost, may displace our existing processes, and which are well within the area of the chemical industry which we consider our function to develop.

It is often disconcerting to forecast which of several new processes may prove to be the most economic, having regard to the changes taking place in the raw material market, and we may be compelled, to use the language of our sporting directors, "to back two or three for a place." This has been the practice of some of the largest chemical companies on the Continent and in the United States, and there is no alternative if we are to hold our place in the industry.

You will appreciate the need of conservative finance and ample resources to cover the risks inevitable in this type of business.

BOTTLES

During the year your directors entered into an arrangement with the United Glass Bottle Manufacturers, Limited, whereby our various group companies interested in British Bottles, Limited, exchanged their shares for a substantial holding in the foregoing company. We believe that this combination will facilitate the application of the latest technical and practical manufacturing plant and processes and thereby secure economy in operation. We are certainly confident that this arrangement will result to the advantage of both companies concerned.

"GYPROC"

You are aware of our interest in the production of "Gyproc" Plaster Board, and the sales of this commodity have continued to expand to the extent that the capacity of our Rochester factory has been over-taxed. The new factory, referred to at the last meeting, will shortly be completed at Shieldhall, Glasgow, and we expect it to be in production within the next few weeks. The prospects for the sale of "Gyproc" in Scotland are very promising, particularly in view of the activity in industry.

CARBONIC ACID GAS

The market for carbonic acid gas shows steady development, more particularly in respect of its solid form known as dry ice, under our brand name of "Cardice." Our plants at Dagenham and Hull have been fully occupied, and new units have been installed at Bankhall and Hammersmith to meet any additional requirements of the trade. This will give us an excellent system of geographical distribution throughout the country.

ACCOUNTS

Dealing now with the accounts, I wish to touch on those items which appear to call for comment. The additions which your board have considered it desirable to make to the reserve fund, fire insurance fund and superannuation and provident fund are on the same scale as last year. As regards the superannuation and provident fund, I have to explain that it is our aim to establish this fund on an investment basis sufficient to take charge of the payments under the superannuation scheme which at present form an increasing charge against the profits of the company. As the satisfactory position of the company to-day is in no small measure due to the unremitting activities of your staff, the board are confident that this provision for their welfare has your cordial approval.

Loans to and from subsidiary and associated companies are both slightly lower than at the close of the preceding year. These balances fluctuate from year to year in the normal course, and no significance attaches to the variations from last year's figures. As you are aware, the parent company is the depository of the surplus funds of our subsidiary and associated companies which are applied by your board in the manner best designed to serve the interests of the group.

Sundry creditors, reserves for taxation and contingencies and credit balances are up by £550,015, compared with last year. This increase is due in large measure to the increased balances owing to trade creditors on revenue and capital account, an addition to the reserve for taxation, and a further augmentation of the reserve against inter-company transactions.

The first two items on the assets side of the balance sheet, land and buildings and plant and utensils, have been written down by £110,856 from last year. Revenue has borne the expenditure on repairs and renewals which was on a higher scale than usual during the year under review. It is perhaps unnecessary to mention that the further reduction in the book value of these assets does not connote any decrease in their earning capacity, but furnishes evidence of the policy of the board in fortifying the company against any encroachment in the sphere of its activities.

INVESTMENTS

Sundry investments appear in the balance sheet at £6,387,780, a figure which is £872,922 in excess of the corresponding figure of last year. To a considerable extent this increase is accounted for by an addition to our holding of gilt-edged securities.

Investments in subsidiary companies show an increase of £435,150. Full provision has been made for all contingencies in the accounts of our subsidiary companies. In addition, all investments held by your company are carefully scrutinised by your board, and provision made where necessary against the values at which they stand in our books.

Increased activity in the production of potable spirit accounts for the increase of £94,654 in stocks as compared with last year. The last item calling for comment is cash, which, at the substantial figure of £3,147,819 is £252,625 greater than last year. To the extent of £1,252,233 this balance falls to be applied in payment of final dividends and bonus, if approved at this meeting.

This completes my survey of the balance sheet. You will have gathered from my remarks that full provision has been made for all contingencies. There is, I think, no necessity to emphasise the obvious benefits to be derived from our policy of strengthening the reserves and liquid resources of the company, having regard to the progressive growth in the company's commitments and activities at home and overseas, and the vicissitudes and risks which attend the manufacture and sale of the diversified products of the group.

NET PROFIT OF £2,458,416

Turning now to the profit and loss account, you will observe that the net profit for the year available for appropriation to reserves and for dividends, amounts to £2,458,416, an increase on last year's figure of £136,839. This profit constitutes a record in the history of the company, and it is proposed, as you will observe from the report, that it should be partly applied towards making an increased distribution on the ordinary stock. After giving effect to the appropriations detailed in the report, the balance carried forward at the credit of profit and loss account amounts to £343,249.

The directors feel sure that you will share their satisfaction in the continued success which has attended the activities of the company during the year under review, a year which incidentally marks the Diamond Jubilee of your company.

You may wish me to give some indication of the future—perhaps the most dangerous ground on which a chairman may venture. We can, I think, look forward at any rate to another year of reasonable prosperity, but you must be aware that there has been recently a very rapid rise in the price of cereals and practically all our materials, which, undoubtedly, will affect costs sooner or later. It is possible, however, that economies may to some extent moderate these increased costs of operation, apart altogether from the possibilities of adding new productions.

DIVIDEND AND BONUS

I have now much pleasure in moving the adoption of the report, which recommends a final dividend on the preference stock of 3 per cent., less tax, making, with the interim dividend of 3 per cent. already paid, a dividend of 6 per cent., less tax, for the year, also a final dividend on the ordinary stock of 12½ per cent., less tax, making, with the interim dividend of 7½ per cent. already paid, a dividend for the year of 20 per cent., less tax, also the payment of a bonus of 2½ per cent., less tax, on the ordinary stock, and carrying forward to next year a sum of £343,249 1s. 5d.

The report and accounts were unanimously adopted.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to:—

UNITED DOMINIONS TRUST, LIMITED

FURTHER RECORD IN PROFITS

The fifteenth annual general meeting of United Dominions Trust, Ltd., was held, on the 21st instant, at Regis House, King William Street, London.

Mr J. Gibson Jarvie (Chairman and Managing Director), in the course of his speech, said: Ladies and gentlemen, for a succession of years it has been my privilege annually to announce to you a record both in the volume of business and in profits earned. The year just ended is again a record, and the report and accounts in your hands disclose a position of strength which should make you well satisfied with the security and value of your investment.

The profit for the year, after making provision for rebate of interest, bad debts, and contingencies, has now reached £201,802, £3,290 has been paid in directors' fees and £41,030 has been allocated to income tax and provision for National Defence Contribution.

In all departments the volume has increased during the year under review. Industrial activity has created a bigger demand for equipment and there has been a corresponding need of credit facilities. As we are prepared to finance the sale and purchase of every kind of machinery, no reputable manufacturer or trader need any longer work under the handicap of obsolete or inefficient plant for lack of the money to buy.

Although it is frequently difficult to persuade a manufacturer or trader or contractor to change over from the extension of credit on the old-fashioned open and rather haphazard method to the system of organised credit which we offer, once having made the change it is our almost invariable experience that the number of transactions passed by them through this office increases.

The agricultural department which we organised a few years ago has expanded considerably, and to-day it is handling an important volume of business, and we are rendering a notable service to this very important industry. The facilities we offer the farmer cover livestock and dead stock, and there are many farmers in Great Britain who have cause to thank us that their farms are now adequately supplied with livestock and the mechanical devices which modern conditions have made essential.

Our business is not only well spread through many industries—and this is a material factor in the stability of the company—it is also well spread throughout Great Britain and Ireland. During the year we have opened four additional branch offices in districts where our business has grown sufficiently to justify them, and further offices will be opened as required. There is a need for the kind of credit facilities we offer, and we have evolved a banking technique suited to the need. Experience and results have justified us.

AMPLE FACILITIES FOR CREDIT-WORTHY

The extent of our service to the community is measured and limited by the legitimate demand made on us by those whom we exist to serve. We cannot force anyone to use the credit we offer; we dare not extend it to the unworthy. We offer medium and long-term credit where that kind of credit can be profitably and efficiently used.

In deciding to form our first Dominion subsidiary in South Africa we were influenced by the fact that conditions appeared to be favourable and because some of our British connections requested our services there.

We hope and intend that each new subsidiary may eventually become an important and essential part of the financial machinery of the country in which it is operating, toward the end that it may contribute something of economic value and forge one more enduring link between the Empire countries.

OFFER OF SHARES

Your board have decided that the time has come to offer the 75,000 ordinary shares still unissued. By the issue of these shares we shall bring our ordinary capital to the round half-million pounds, and we shall again substantially increase our general reserve.

With regard to the offer of preference shares that offer is being made to you on behalf of the Bank of England on generous terms. When the Central Institution first took an interest in your company the authorities were actuated by a desire to render a particular service at a critical time.

The report was unanimously adopted, and a final dividend of 11½ per cent., making 17½ per cent. for the year, was approved.

NEW BROKEN HILL CONSOLIDATED, LIMITED

PROGRESS OF DIAMOND DRILLING

The first ordinary general meeting was held, on the 20th instant, in London.

The Right Hon. Viscount Horne of Slamannan, P.C., G.B.E. (chairman of the company), in the course of his speech, said:—The authorised capital of the company is £600,000, divided into 2,400,000 shares of 5s. each, and at the date of the balance sheet 2,018,110 shares had been issued. Of these, 768,110 shares were issued as fully paid against the transfer of the shareholdings in Barrier South, Limited, the leases to the south of the property of Barrier South, Limited, and the holdings in Aplite and Gresham Syndicates; 1,250,000 shares were issued for cash, upon which at the date of the balance sheet 3s. per share had been called up, though payments in advance had been received to the amount of £7,541.

You will recall that shareholders of Barrier South, Limited, were offered the right to exchange their shares on the basis of five shares of this company for each £1 preference share of Barrier South, Limited, and one share of this company in exchange for two ordinary shares of 2s. each in Barrier South, Limited. This offer was open for acceptance up to September 15, 1936. As there were a number of shareholders in Barrier South who, for one reason or another, were not able to lodge their acceptances within the period, the directors agreed to accept any applications lodged before December 31st. As a result, 3,417 additional shares of this company's capital have been issued and to-day New Broken Hill Consolidated, Limited, holds 75,816 preference shares out of a total issue of 76,078 preference shares and 584,897 ordinary shares out of an issue of 672,879 shares of the capital of Barrier South, Limited. There appears to be now no reason for maintaining the Barrier South, Limited, as a separate company and steps will shortly be taken to terminate its existence.

At the date of the balance sheet the company had nearly £175,000 in cash or at short call, and since that date the instalment of 2s. per share—due on March 15th—has become payable, representing, after allowing for the amount paid in advance, £117,459. The total liquid assets at June 30th were approximately £285,000—£120,000 Australian Government securities and £165,000 cash and deposits.

SATISFACTORY INDICATIONS

Since the incorporation of the company diamond drilling operations on Barrier South property have been carried on continuously. Five boreholes have been sunk and the detailed results, which have been notified through the Press, are reviewed in the report of the consulting engineers and technical managers, Messrs Bewick, Moreing and Company, which accompanies the directors' report.

The results of the drilling operations I regard as highly satisfactory. They indicate the continuance of the ore body now being so successfully worked in the adjoining property of the Zinc Corporation, Limited, and provide grounds for the belief that widths and values will be maintained. Furthermore, they afford reasonable proof that the broad section of the lead lode enters your property at a shallower depth than originally estimated. You will, of course, understand that we are dealing with diamond drilling results, which, while they may be regarded as giving reasonable indications, cannot yet be accepted as conclusive evidence of widths and values.

CO-OPERATION WITH ZINC CORPORATION

The whole of the work on the property is being carried out for us under the direction of our managers, the Zinc Corporation. After seven months of continual consideration between our representatives and the Zinc Corporation, a scheme is now in course of completion which will provide for the closest possible association of the two companies. Co-operation in mining under one management and ore treatment in one mill will save this company a great amount of capital expenditure and provide for the speediest opening up of your property to the point of production. The advantage to the Zinc Corporation by saving in capital expenditure and working costs will also be considerable.

It is as yet too early for any estimate as to the date of production to be mentioned. You may rest assured, however, that every effort will be made to bring your property into the revenue-producing stage at the earliest possible date. I shall be disappointed if we do not commence production before 1940. Subject to the course of metal prices, I consider the outlook for this company to be quite satisfactory.

The report and accounts were unanimously adopted.

H. E. PROPRIETARY, LIMITED

SIR FREDERIC HAMILTON ON THE FUTURE OF GOLD

Presiding at the annual general meeting of H. E. Proprietary, Ltd., held on Monday, Sir Frederic Hamilton (Chairman) dealt with the board's attitude and policy on the gold question, and said:—

In the first place it is well to remember that this question of gold goes very deep. Investors do not necessarily escape risk by not holding gold shares. If the price of the metal were to be drastically lowered, and violent deflation were to follow, as it certainly would, industrial profits would vanish and goods of all kinds would decline in price. If again we had to rely on a managed currency altogether divorced from gold a great deal would depend upon the managers, who in effect would represent the political party that happened to be in power. In that case confidence in the guarantees against violent inflation would assuredly be weakened and fixed interest bearing securities, and even money at the bank, would lose in real value.

Eminent authorities have expressed widely different opinions regarding the functions and value of gold, but, important as these differences are, there is an absolutely overwhelming consensus of authority upon one point, and that is, that in the present stage of our economic evolution credit must have a physical basis, and that for a variety of reasons that basis can only be gold. There is a general measure of agreement that universal demonetisation of the metal would mean universal chaos, and for all practical purposes that possibility can, I think, be excluded. There remain, however, certain further questions of great importance to investors. Is there too much monetary gold in the world? Is it desirable to lower the price as expressed in dollars and pounds? Would such a reduction necessarily have a deflationary effect on commodities generally?

PRESENT GOLD OUTPUT

Roughly speaking, the monetary gold in the world, as expressed in the depreciated currencies, has doubled in the last five years, and the annual output since 1929 has increased by about 75 per cent. in weight, and has trebled in terms of currency. These are impressive figures, and if there were the faintest chance of such a rate of increase being continued it would be necessary either for the countries buying gold to sterilise their purchases on a large and increasingly expensive scale or, alternatively, to contemplate a marked and disorderly rise in their internal price levels. It is largely the fear of these alternatives that has been responsible for the recurrent scares of the last six months.

There are, however, several considerations which suggest that this fear is altogether exaggerated. In the first place there is no reason to think that there is a surplus of gold for the world as a whole. Dishoarding has largely increased the stocks of monetary gold, but that is a non-recurrent process which has probably nearly come to an end, and which in certain circumstances might easily be reversed. As to the increase of output, two factors must be borne in mind. It is mainly due to the largely increased Russian production.

PRICES AND PRODUCTION

Another factor, the importance of which has, I think, been unduly minimized, is that any general increase of prices will tend to reduce gold production. So far gold mining has been getting the best of both worlds—a greatly increased price for its product and almost stable mining costs. That, of course, will not continue indefinitely, and the tendency to rising costs is already noticeable, especially in countries dependent wholly upon white labour. What is equally important is that mines, like mortals, are always dying, and every rise in the general price level increases the initial capital cost of bringing a new mine into production. Those factors will necessarily tend to diminish the rate of supply.

The assumption that there is too much gold in the world is probably due to some extent to maldistribution having created a kind of optical illusion. In the long run we have to legislate either for a world that remains for peace or a world that is mad and wicked enough to go to war. In the first case maldistribution would be remedied, and there would be none too much gold to support the structure of credit which increasing prosperity would call for. In the latter case currencies unbacked by gold would cease to possess any outside purchasing power whatever. In our view gold will remain a store as well as a measure of value for more years than the present or the succeeding generation need concern themselves with.

The report was unanimously adopted.

THE VICTORIA FALLS AND TRANSVAAL POWER COMPANY, LIMITED

SUBSTANTIALLY GREATER SALES OF CURRENT

POLICY OF REDUCING CHARGES CONTINUED

The annual general meeting of the Victoria Falls and Transvaal Power Company, Limited, was held, on the 20th instant, at Winchester House, Old Broad Street, London, E.C.

Mr Arthur E. Hadley, C.B.E., the chairman and managing director, presided and, in presenting a satisfactory account of the company's business for the year 1936, said:—

The net profit after providing for taxation and all other requirements amounted to £586,365, against £543,076. The maximum dividend of 10 per cent. had again been paid on the preference shares and a dividend of 12 per cent. on the enlarged ordinary share capital of £2,500,000. The reserve fund had been brought up to £400,000 by the addition thereto of £100,000, and a further £16,000 had been added to the renewals fund.

REDUCTION IN CHARGES

The sales of power amounted approximately to 2,300 million units, an increase of 17 per cent. over those for 1935. The company's tariffs were designed to give effect to the policy of reducing the price of power as business increases. As a result of lower prices, a further reduction of £93,000 had been made in the amount charged to consumers. Notwithstanding the attention recently given to the price of gold and the effect it has had on market values, there has been no diminution of activity on the Reef. From a careful review of the outstanding notified demands and of the steps being taken by the mining industry with regard to further developments in the company's area of supply, it was expected that Klip Station will be fully loaded up to its capacity of 420,000 kw. shortly after completion early in 1940 and that further demands will require to be met. The question of a further generating station is receiving attention, and the problems arising in connection therewith are being studied in co-operation with the Electricity Supply Commission of South Africa.

The Commission was formed by the Government of the Union of South Africa to supply electricity to Government departments, etc., and also to co-operate with the then existing undertakings. The company's co-operation with the Electricity Supply Commission dates back to the year 1924, soon after the Commission had been established. As a result of this co-operation both the Witbank and Klip Stations were owned by the Commission, but were constructed and operated by this company. The policy of co-operation had proved to be very satisfactory, and it was anticipated that, if a new station is found to be necessary to meet the increasing demands of the company's consumers, it will be handled broadly on the same lines as the Witbank and Klip Power Stations. The transmission and distribution of the increasing number of units, together with the expansion of the company's compressed air plant and other services, call for a large outlay of capital. The works undertaken during the past year and those at present forecast involve an expenditure of £1,940,000.

PROGRESS OF LIVINGSTONE INSTALLATION

Progress was being made with a small hydro installation at the Victoria Falls for supplying Livingstone. It was expected that the plant would be completed about the end of the year. As a result of the establishment of the large copper mines in Northern Rhodesia, that territory had become a great wealth-producing country, producing wealth exceeding £10,000,000 a year on copper alone. It was not inconceivable that this might lead to some new and increasing activities in Livingstone.

From the beginning of the current year certain changes had been made in the organisation in South Africa. Dr Bernard Price, O.B.E., who had held the position of general manager and chief engineer for the last ten years, had at his request been relieved of the routine management of the company's business. He remains as the company's resident director and has been appointed its principal representative and adviser on all commercial and technical matters in South Africa. Mr T. G. Otley, formerly deputy general manager, has been appointed to succeed Dr Price as general manager. The board is confident that the management in South Africa is in most competent hands.

In the early part of this year the chairman paid a visit to South Africa to be present while the changes in the organisation were taking place and to review the company's properties and meet its consumers and the authorities with whom it is concerned.

TRIBUTE TO STAFF

Mr Hadley conveyed on behalf of the board and the shareholders to the staff in London and South Africa their thanks for the loyal and able way that they have carried out their duties.

He also referred with deep regret to the deaths of Sir Henry Birchenough and Major Wills, who had been directors since the formation of the company. In their places the board had appointed Mr D. O. Malcolm and Mr. J. B. Braithwaite.

The report and accounts were adopted, and the retiring directors, Dr B. Price, Messrs. F. Astley Cooper, D. O. Malcolm and J. B. Braithwaite, were re-elected, and Messrs Cooper Brothers and Company were re-appointed auditors.

AMALGAMATED DENTAL COMPANY, LIMITED

INCREASING DEMAND FOR DENTAL SERVICE

The thirty-second annual general meeting of the Amalgamated Dental Company, Limited (formerly Claudius Ash, Sons and Company, Limited, and De Trey and Company, Limited), was held, on the 16th instant, in London.

Mr E. Russell Polden (the chairman) said that during the past year there had been no fresh developments to produce beneficial effects in international trading, with which this company was immediately concerned. Home trade, however, had further progressed to the advantage of the company, but, being organised for business in all parts of the world, members would realise that full effects of the endeavours of the company could not be expected under the unsettled conditions that existed to-day.

The future of the industry, as affecting increased demand for dental commodities, was assured. In his view a point of progress in this respect was now reached far in advance of what might reasonably have been anticipated even two or three years ago. He referred particularly to the marked progress in so far as the recognition of the essential need of dental services was concerned. In Great Britain we had experienced the setting up of an authoritative body to lead the nation to the realisation of a greater measure of physical fitness. It was almost trite to say that care of the teeth was an essential contribution to any such scheme. The present situation demanded the active collateral support of a well-organised and efficient service in the essential materials and appliances necessary to the work of the dentist. The Amalgamated Dental Company was in the position fully to meet the responsibilities falling upon the dental industry in this respect.

The report was unanimously adopted.

BUKIT RAJAH RUBBER COMPANY, LIMITED

IMPROVED RESULTS

The ordinary annual general meeting of the Bukit Rajah Rubber Company, Limited, was held, on the 21st instant, in London.

Sir Edward Rosling (the chairman of the company), who presided, said:—The results for the past year, when compared with the previous season, show a marked improvement, the profit amounting to £20,947, as against £10,805.

The price obtained shows an improvement of something over 2¼d., and the proposed allocation of the profit is shown on the front page of the report. The crop harvested amounted to 1,186,533 lb., of which we were allowed to export 976,313 lb.

The improvement in the market price is entirely due to the satisfactory working of the International Scheme for Regulating Exports. I think there is a very general wish that this regulation should be continued for a further period of five years, when the present term comes to an end on December 31, 1938.

You will have seen from the report that the directors have decided not to undertake any replanting at present. The Malayan authorities have given permission to open 250 acres of our reserve land, the Rubber Institute of Malaya directing the methods by which the opening is to be undertaken.

In regard to the current season, with our assessment increased by 50,000 lb. as from July, together with the exportable allowance now running at 90 per cent., the prospects justify a more hopeful outlook than we have been able to indulge in for some time past.

We have contracts running at present for 1937 for 300 tons at the equivalent of 10¼d. London landed terms, and 120 tons for 1938 at the equivalent of about 10¾d., also London landed terms.

The report and accounts were adopted.

HECHT, LEVIS AND KAHN, LIMITED

RECORD PROFIT

The twelfth annual general meeting of this company was held, on the 16th instant, in London.

Mr Walter Fletcher (the chairman) said that last year he had pointed out in regard to the outlook that they were in the midst of a considerable lull, but that the company was likely to surmount the difficulties arising from lack of trading. Rubber, in common with every other commodity and most shares, had been subject to one of the largest and most widespread bouts of activity which they had ever seen. The result was a record profit for the company.

In pursuance of their normal policy, at the date of the balance sheet the whole of their stock, valued at £2,378,478, was hedged by forward sales. They would draw particular attention to that point as they had frequently been asked whether the stock they held was not in reality a long position; he could not place too much emphasis on the fact that the running of positions for long periods was avoided as far as possible.

The profit on trading, including reserves formerly made for depreciation of investments and not now required, amounted to £228,090. Those reserves amounted to £16,839, having been charged against profit and loss in previous years and, being no longer required, had been written back. They proposed to pay a final dividend of 15 per cent., making 20 per cent. for the year, and a cash bonus of 15 per cent. With the proposed additions the reserves would amount to £100,479. There had also been added to the general reserve £35,395, representing the increase in value of an investment in an associated company.

The directors recommended a bonus issue of preference shares to the ordinary shareholders to a nominal amount equivalent to 10 per cent. upon the ordinary share capital, and an extraordinary general meeting would be held on July 29 to give effect to these proposals. The dividend equalisation account of £36,000, which had been started with the ultimate object of evening out dividend and bonus distributions, plus general reserves, gave the total reserve of £146,874 and showed an increase of approximately £70,000 from the past year's results.

The report and accounts were unanimously adopted.

ALLIED BAKERIES, LIMITED

SATISFACTORY EARNING POSITION

The second annual general meeting of Allied Bakeries, Limited, was held, on the 19th instant, at Winchester House, Old Broad Street, London.

Mr W. Garfield Weston, the chairman, who presided, said that the company was now the largest of its kind in this country. It had, at the date of the balance sheet, 2,786 employees; it operated 17 modern bakeries, owned 86 shops and operated 494 bread routes. It to-day had an issued capital of £1,125,173 in preference and ordinary shares, but it was only in the latter part of the year under review that the whole of that capital was earning dividends for the company.

Owing to the dates of acquisition of additional businesses during the year they had only been able to bring into the profit and loss account part of the profits earned by those companies during the year, so that it showed only the net sum of £96,464 received as dividends, but the total profits actually earned by their subsidiaries in the period under review had amounted to £156,390.

If, therefore, the profits of their subsidiaries during the current year showed neither expansion nor diminution, it would appear that, after allowing for management expenses, the interest on the issued preference capital would be covered nearly five times, and the earnings yield on the ordinary capital would be considerably above the satisfactory earnings shown in the balance sheet.

The cash position had been built up substantially and now stood at £67,000. The cash balances of the combined companies stood at £168,443, to which must be added the marketable securities in the hands of their subsidiaries, whose total at the date of the balance sheet was £76,668, or a total of liquid assets amounting to £245,111.

It was the policy of the company to buy British, and so far as was possible the company would continue to support the agriculture and industries of this country and the Empire. Current business was maintaining the levels reached last year, and, though the troubled state of the world made it impossible to forecast the future price level of commodities in which they were interested, he could see no factor of sufficient importance that was likely to retard their progress.

The report and accounts were unanimously adopted.

EASTWOODS FLETTONS, LIMITED

CONTINUED PROGRESS

The tenth ordinary general meeting of Eastwoods Flettons, Limited, was held, on the 20th instant, at River Plate House, London.

Mr Horace Boot, M.Inst.C.E., M.I.Mech.E., M.I.E.E. (the chairman), presided, and in the course of his speech said: The company has continued to make good progress. Production has been well maintained at the Kempston Works, having regard to adverse weather conditions.

The trading profits of the period are somewhat disappointing, as the production and sales were seriously affected during the winter months, when between January and March last brick-making everywhere was interrupted by adverse weather conditions. It is fortunate that our make for the full year should have been reduced by only two or three million bricks. Lower production, however, has the effect of increasing works costs at every stage, and we found it impossible to recover the lost ground prior to March 31st. The lower trading profits were substantially offset by increased dividends on investments and by reduced overhead charges.

There is left to be carried to the balance-sheet a net profit of £52,363. We recommend the payment of a final dividend on the preferred shares of 10 per cent., making 15 per cent. for the year, and a dividend of 2s. per share on the deferred shares, leaving to be carried forward the sum of £8,789, compared with £8,850 brought in.

Actually there is something like a brick shortage at the moment, if one speaks in terms of specific grades for particular destinations. The return of fine weather and the disappearance of clouds from the political horizon has led to an influx of orders which includes the arrears of previous deliveries.

The total production of bricks in the United Kingdom during the year 1936 amounted to 7,912 millions, which is an increase of practically 100 per cent. during the past ten years. The feature of the trade has been the diminution of speculative house building and the substitution of increased construction in the way of public and industrial buildings. The industry, therefore, is likely to be in a more healthy state during the next few years than ever before.

The report and accounts were unanimously adopted.

EASTWOODS CEMENT, LIMITED

RECORD PROFIT

The twelfth ordinary general meeting of Eastwoods Cement, Limited, was held, on the 20th instant, at River Plate House, Finsbury Circus, London, Mr Horace Boot, M.Inst.C.E., M.I.Mech.E., M.I.E.E. (the chairman), presiding.

The Chairman, in moving the adoption of the report and accounts, said:—The directors recommend the payment of a final dividend at the rate of 11 per cent. less tax, making a total of 16 per cent. for the year, leaving to be carried forward the sum of £11,977, which compares with £10,381 brought in.

Somewhat larger sums than usual have been expended this year on repair and maintenance, in addition to which the company has had to meet the increased cost of coal, paper, sacks, steel and maintenance materials generally, together with certain adjustments in works wages.

Coal supplies have been very irregular and difficult since the Quota Scheme has been in vogue, and in the opinion of our federation should receive more serious personal attention of the Minister of Mines than has been accorded. The increases in price have in many instances been exorbitant, and the position is aggravated by the inability to obtain adequate, regular and suitable supplies, and often of very poor calorific power, with a high ash and moisture content, thus showing grievous profiteering by the colliery owners.

It will be noticed that the net profit for the year is the highest yet recorded since the formation of the company in 1925. The temporary lull in speculative house building has been more than offset in the case of cement by large-scale construction of roads, aerodromes, public works, harbours and industrial and factory buildings, which involve increasing demands on the manufacturer. Our "Durocrete" (rapid hardening) and "Eastwoods" (ordinary) brands have been supplied to some of the most important of these schemes, and we are holding contracts for part requirements of H.M. Office of Works, Ministry of Transport, the largest of the railway companies and several important county and municipal authorities. I should be unduly pessimistic if I did not say that I look forward with confidence to the continued success of your company.

The report and accounts were unanimously adopted.

CHUNGLOON RUBBER ESTATE (1932), LIMITED

SATISFACTORY RESULTS ACHIEVED

SOUND FINANCIAL POSITION

MR E. B. RIDSDEL'S SPEECH

The fifth ordinary general meeting of the members of the Chungloon Rubber Estate (1932), Limited, was held on July 22, 1937, at Winchester House, Old Broad Street, London, E.C., Mr E. B. Ridsdel (chairman of the company) presiding.

The representative of the secretaries and commercial agents (Messrs E. B. Ridsdel and Company, Limited) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen, the report and accounts having been in your hands for the past week, with your permission I will take them as read. The results achieved during the year, you will agree, I am sure, are very satisfactory, and it is very pleasing to us to be able to recommend the payment of a final dividend of 6 per cent., making 10 per cent., less tax, for the year.

PURCHASE OF ADDITIONAL AREA

Before dealing with the accounts, I would like to direct your attention to the reference made in the report to the acquisition of another estate. The new property, which adjoins our own, consists of 121.86 acres, of which 105.98 acres are planted. When I visited the property about two years ago I was then impressed with the possibilities attached to the purchase of this additional area, and, having regard to the fact that the purchase has been carried through by the allotment of 40,000 fully paid shares of 2s. each—equivalent to only £38 per planted acre—I think you will agree that the purchase has been made on very reasonable terms. The visiting agent, commenting upon the new area in a report received from him about a fortnight ago, states:—"I think the rubber can best be described by saying that it is more or less identical with ordinary Chungloon Estate rubber and should give the same yields. This is only natural, as the two properties adjoin and have similar soils."

The chief value to the company in the purchase made is that the new area can be worked without any increased capital costs, such as buildings. Moreover, owing to its situation, no increase in general charges is necessary under the heading of supervision.

CROP FIGURES

From the report it will be observed that during the year we harvested a crop of 239,723 lbs. of rubber, which, compared with last year, represents an increase of 22,000 lbs. Of the quantity produced, 179,241 lbs. were sold, realising 8.68d. per lb., equivalent to approximately 9½d. per lb. landed London, which compares favourably with the average landed London price for the year of 8.70d. per lb.

Our f.o.b. cost for the year was 3.323d. per lb., which, compared with last year, shows a decrease of approximately ¼d. per lb. This must also be considered very satisfactory, as during the year wages had to be increased about 20 per cent., apart from a similar increase in regard to estate supplies.

RESULTS OF YEAR'S WORKING

As will be seen from the accounts, the profit earned, after providing for depreciation and all other charges, amounts to £3,621 14s. 7d., or approximately 15 per cent. on the issued share capital of the company appearing in the balance sheet. Allowing for the interim dividend of 4 per cent. which has already been paid, we are now left with £2,618 12s. 8d. to deal with. Out of this sum we recommend the payment of a final dividend of 6 per cent., less tax, making 10 per cent., less tax, for the year, which, calculated on the present issued capital of the company, namely £29,077 8s., will absorb £1,744 12s. 11d., leaving £2,119 9s. 9d. to be carried forward, as against £1,245 10s. brought in. It will be appreciated that the 40,000 fully paid shares which were issued in satisfaction of the purchase price for the neighbouring estate acquired, now rank for dividend.

Turning to the balance sheet, it will be observed that our financial position is sound. Cash in hand, War Loan, debtors and rubber stocks total £7,171 13s. 3d., and, after deducting creditors, the net liquid position is £6,199 14s. 3d. Compared with last year this shows an improvement, after allowing for the interim dividend paid, of approximately £1,450.

CONDITION OF ESTATE

As regards the estate, the condition generally is satisfactory throughout. During the year 26.34 acres were replanted, and this year the replanting of a further 55 acres is being undertaken. These areas, in addition to the 172 acres planted during 1930-33, will be budded, which will still further increase the yielding capacity of the property.

So far as the future is concerned, world stocks of rubber have dropped appreciably during the year ended May 31st last, and now represent only slightly over four months' supply. To counter this, the Restriction Committee have increased export allowances for the six months to December 31st next, to 90 per cent. of standard production assessments. As, however, a great many estates have been tapping on what is known as the A.B.C. system for some time past, it remains to be seen how many estates will be able to produce the 90 per cent. to which they are entitled. I am glad to say that we anticipate no difficulty in this respect; in fact, we are hoping that our standard production assessment may be increased.

NO FORWARD CONTRACTS

I do not think there is anything further I can tell you except that we have no forward contracts, and shall, therefore, be able to take advantage of any rise in the selling price of the commodity.

I will now move:—"That the directors' report and accounts for the year ended March 31, 1937, together with the auditors' report thereon be and they are hereby approved and adopted." I will ask Mr Martin to second this resolution, but, before putting it to the meeting, I shall be pleased to answer to the best of my ability any questions you may care to ask.

Mr W. Egerton Martin, J.P., seconded the resolution, and it was carried unanimously without question or comment.

The dividend as recommended was approved; the retiring director, Mr E. B. Ridsdel, was re-elected; and the auditors, Messrs Fitzpatrick, Graham and Company, having been re-appointed, the proceedings terminated.

KUALA MUDA RUBBER ESTATES, LIMITED

RESUMPTION OF DIVIDENDS

The twelfth annual general meeting of Kuala Muda Rubber Estates, Limited, was held, on the 19th instant, at 19 Fenchurch Street, London.

Sir Francis M. Voules, C.B.E. (the chairman), in the course of his speech, said:—The profit for the year amounted to £50,525. Debenture interest absorbs £12,600, and note interest £544. We have paid off the balance of the 7 per cent. notes, £18,900, provided £8,360 for income tax, and written off the year's expenditure on replanting, and we recommend a dividend of 3 per cent. (less tax).

We are proceeding with the replanting programme of which I spoke last year. We hope to have about 150 acres replanted this autumn and by October or November, 1938, this figure should be increased to 500 acres.

Our large holding of shares in Kepong (Malay) Rubber Estates provided us with dividends amounting to 8 per cent. during our financial year. Since the end of the year we have already received a further dividend of 8 per cent., and, granted favourable market conditions, we may reasonably expect another distribution before our current year ends. As against the value shown in our balance sheet of 2s. 4½d. the market value of these shares to-day is 4s. 9d. The rubber regulation scheme, now entering its fourth year, continues to function with great effectiveness, and all sections of the planting industry will welcome its continuance on similar lines on its expiration next year.

World stocks outside the regulated areas at May 31, 1937, are estimated at 396,500 tons, compared with 541,200 tons a year previously. These world stocks represent about four months' consumers' requirements, as against about 6½ months' supplies a year previously. From a statistical viewpoint, rubber is in a sound position.

Personally, I consider that the outlook for rubber producers is very promising and that we may look forward to better returns to set off against the lean years through which we have been passing.

The report was unanimously adopted, and the conversion of the shares into stock was approved.

COVENT GARDEN PROPERTIES COMPANY, LIMITED

CAPITAL INCREASE APPROVED

The thirteenth ordinary general meeting of the Covent Garden Properties Company, Limited, was held, on the 16th instant, at the Hotel Victoria, London.

Mr Philip E. Hill (the chairman), in the course of his speech, said:—You will have seen from the accounts before you that the profit for the year, before providing for directors' fees, taxation and debenture interest, amounts to £281,000 odd. The income from rents, tolls and interest on investments amounts to £252,387, an increase of some £24,000 over last year's figure. The balance of revenue arises from the profit on sale of properties, which amounts to £29,208.

Last year I foreshadowed an increase in our revenue during the next two years of £30,000, of which £24,000 has materialised during the present year, and the balance should be more than made up in 1938. For the tenth successive year, the directors are recommending an ordinary dividend of 7½ per cent.

The policy of the board has not been merely to confine itself to the purchase of properties producing fixed incomes, but also to buy properties with reversionary values. In the latter case, of course, it has meant taking a smaller present income than one would receive on ordinary purchases. The success of this policy is evidenced by the fact that during the last ten years the company has realised from the sales of properties alone upwards of £400,000 and, on the basis of the last valuation, the difference between the book value and the estimated selling value was equivalent to over 100 per cent. on our ordinary shares.

At an extraordinary general meeting to be held following this meeting, you will be asked to authorise the increase of the ordinary share capital to £1,300,000 by the creation of a further 650,000 ordinary shares of £1 each. If you agree to this step being taken, we have decided to issue the whole of these ordinary shares, on bonus terms, to existing ordinary shareholders. The board are of opinion that the dividend of 7½ per cent. on the increased capital should be maintained.

The report was unanimously adopted, and at a subsequent extraordinary general meeting the increase of capital was unanimously approved.

CONSOLIDATED TIN SMELTERS, LIMITED

LOWEST COSTS ON RECORD

The eighth ordinary general meeting of Consolidated Tin Smelters, Limited, was held, on the 20th instant, at the Institute of Chartered Accountants, London, Mr Ernest V. Pearce, Assoc.Inst.M.M. (chairman and managing director), presiding.

The Chairman, in moving the adoption of the report and accounts, said: In view of the special circumstances with which we have had to contend during the year covered by the accounts, our results cannot, I think, be considered unsatisfactory.

Our net income from subsidiary companies and investment totals £223,444; this is £45,509 less than the corresponding figure of the previous year. The other items to the credit of revenue account show the small decrease of £150. Our total revenue therefore is down by £45,659. On the other hand, our expenses show a decrease of £1,000, with the result that the net balance on revenue account is £216,473, compared with £261,132 in the previous year. Your directors recommend that a dividend of 6 per cent. be paid on the ordinary shares. It is not a pleasing duty to inform shareholders of a decrease in the rate of dividend, but your board are convinced that in conserving the resources of the company by adding to the reserve, writing down the shares in subsidiary companies, and providing for the National Defence Contribution tax, they have adopted a policy which is sound, and in the best interests of the shareholders.

Regarding the future of the tin industry, I see no reason to-day to vary the optimistic opinion which I expressed in my speech last year. The International Tin Control Scheme has, as you are doubtless aware, been renewed for a period of five years, from January of this year.

I can assure you that there has not been the slightest indication of any slackening in the endeavours of the staff either to improve the smelting process or to reduce costs. You will appreciate that, with costs of all materials rising, the latter is not an easy matter, but I am happy to be able to tell you that our costs to-day are the lowest in our records—the best proof of the efficiency to which I have referred.

The report was unanimously adopted.

MERLIMAU PEGOH, LIMITED

SUCCESSFUL RESULTS—INCREASED DIVIDENDS

The twenty-seventh ordinary general meeting of this Company was held, on the 21st instant, in London.

Mr G. Kingsley (the chairman), in the course of his speech said: Our rubber crop realised 2½d. per lb. more than the average price obtained during the previous year and our net income was more than doubled. As a result we are in the satisfactory position, after adding £8,000 to the special cultivation reserve, to recommend payment of a final dividend of 12 per cent., making a total of 15 per cent. for the year, against 7½ per cent. paid last year.

The subsidiary companies all made good progress during the year. The Consolidated Eastern Plantations earned in round figures £59,100, against £27,700 in the previous year.

The Central Johore Rubber Estates had an excellent year, and at their annual meeting this week a dividend of 15 per cent. is being recommended, against 5 per cent. last year.

The condition of all the plantations has been maintained, and I think I am safe in saying that the properties throughout the group were in better fettle at the end of the financial year than at the beginning.

If releases remain at 90 per cent. for the first quarter of 1938 the average exportable allowance for this financial year will be 87½ per cent. of standard, against 66⅔ last year, an increase of over 30 per cent. Crops from Merlimau Pegoh and our chief subsidiary C.B.P., Limited, are estimated in round figures at 7,500,000 lbs., against 5,800,000 lbs. last year, so both these companies should do well.

The market for rubber, in common with other markets, is passing through a period of hesitation and inactivity, but the statistical position is inherently sound, and I see no reason for undue anxiety or pessimism.

Last year I drew attention to the vital importance to the industry of a renewal of the Rubber Regulation Scheme upon its expiry. I have no reason to change my views on this subject, and I am glad to say that the general consensus of opinion appears to be overwhelmingly in favour of a continuance of control.

The report was unanimously adopted and the dividend as recommended was approved.

STRAITS PLANTATIONS, LIMITED

FAVOURABLE RESULTS

The annual general meeting of The Straits Plantations, Limited, was held, on the 19th instant, at 1-4 Great Tower Street, London, Mr Eric Macfadyen (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said:—The year has been a good one for the company; copra has shared in the rise in commodity prices. If the 1929 price is taken as 100, averages for recent years have been 40 in 1934 (the worst year), 55 in 1935, and 67 in 1936. The sharp rise which reached its peak in January was not maintained, but the present price of £16 15s. is still above the average realised for the crop of our financial year ending March and the outlook continues quite favourable.

Vegetable oils, being largely interchangeable in use, constitute really one market. Their total is given as about 8,000,000 tons a year, of which some 900,000 tons come from coconuts. Each crop is affected by seasonal variations and the differences between good and bad cropping years, but the spreading of these over the oil market as a whole diminishes their effect on prices. The year 1936-37 was only a moderate one for coconuts grown in the Far East and our crop remained at just over 8,000 tons of copra, as in 1935-36, to which figure it had grown fairly steadily from 6,400 tons in 1929-30. The current year's indications are good and we anticipate a resumption of the up-grade.

The year's profit is £43,340, and the proposed dividend of 8 per cent. is well within our means.

The production of palm oil, undertaken by the recent purchase of a property, all in bearing, near our coconut estates, falls naturally within our sphere. We have taken over a tried and capable staff, and made very satisfactory arrangements for expert advice. The planted area has no superior in the country. The large area of reserve land is first class, and we have it in mind to proceed with development here if the results of operation of the present planted area fulfil our hopes. We embark on this new activity in the belief that we shall later look upon this year as marking the initiation of a very advantageous new departure.

The accounts were unanimously adopted, the dividend of 8 per cent. approved, and a resolution was passed to convert the company's shares into stock.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended July 17, 1937, amounted to £16,124,000, against ordinary expenditure of £9,906,000. After allowing for a reduction in Exchequer Balances of £262,484, the operations for the period, as shown below, reduced the gross National Debt by £6,481,000, to approximately £7,987 millions.†

CENTRAL AND SOUTH AMERICAN EXCHANGE RATES
The sight selling rate for Colombia on New York was fixed on July 1st at 175·80 per 100 United States dollars. This rate applies to holders of permits buying in the "open" market. Quotations for other centres were given in our issue of July 3rd, page 49.

Exchange rates for South Africa and Australasia and overseas bank rates also appeared in the above issue. The French bank rate was reduced on July 6th from 6 to 5 per cent.

The Bank of London and South America, Ltd., has received telegraphic advice from the Valencia Branch that the gold surcharge for payment of Spanish customs duties has been fixed for the period July 21st to 31st at 148·25 per cent. The previous rate was fixed as from July 11th at 141·86 per cent.

GOLD AND SILVER

No gold movements were reported at the Bank of England between July 16th and 22nd. Details of previous movements appeared in the issue of July 3rd, page 49.

GOLD MARKET

Messrs Samuel Montagu and Company write on July 21, 1937:—

The Bank of England gold reserve against notes amounted to £326,406,625 on July 14th, showing no change as compared with July 7th.

In the open market about £950,000 bar gold was available at the daily fixing during the week. Further weakness of the dollar has led to the establishment of still lower prices, the quotation of yesterday marking a fresh low point for the current year.

The premium over the dollar parity which on July 15th was 2d., contracted to ½d. on July 16th, and remained at that level until July 20th, when it disappeared. On July 21st there was again a premium amounting to 1d.

Two consignments of gold from Russia, each valued at about £900,000, are reported to be on their way to London.

The s.s. "Malojа," which sailed from Bombay on July 17th, carries gold to the value of about £251,000.

SILVER MARKET

The market has remained small, with only spasmodic Indian interest upon the buying side, whilst offerings have comprised resales by tired bull operators and small China sales. Influenced to some extent by the weaker dollar, the tone has been heavy and the tendency downward, prices to-day at 19 1/16d. for cash and 19⅞d. for forward comparing with 20d. for both deliveries on July 14th.

The market, though still sluggish, would probably respond readily to any fresh factor.

Quotations for gold and silver are shown below:—

1937	Price of Gold per Fine Ounce	Equivalent Value of £ sterling	Price of Bar Silver in London per ounce standard: Cash	Price of Bar Silver in London per ounce standard: Two Months	Price of Silver New York per ounce ·999 fine

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

THE irregular tendency noted a week ago has again been evident, price movements being indeterminate. In many cases business has been restricted and the markets generally appear to be awaiting a fresh lead.

It was rumoured this week, following Monday's meeting of a sub-committee of the International Tin Committee, that the latter body was contemplating the re-establishment of a buffer pool for the better control of tin prices. Such a step is, however, unlikely to be taken in the near future; for the Committee is not anxious at present to raise prices further and the re-constitution of the buffer pool would withdraw supplies from the market. Tin prices were actually slightly easier this week, while lead and spelter declined on reports of rising production. Copper, although in quiet demand, recovered after last week's fall. Business in rubber was on a very narrow scale and prices sagged below 9d. per lb. for the first time this year. Cotton was also marked down in response to favourable crop reports, but other textile figures were mainly unchanged.

The recent rise in the price of wheat was checked by absence of demand and news of rainfall in Western Canada. Although rain is now of little use except for late-sown wheat, it appears that the Canadian crop may be better than some of the more pessimistic observers had predicted. In contrast to wheat, maize was firmer, on a more active demand. The Mincing Lane tea auctions showed a firm tone, but the market in sugar was quiet and barely steady. On the London Provision Exchange quotations were generally firm, while egg prices were steady.

Following last week's rise, prices in the United States developed a reactionary tendency. Thus Moody's daily index of staple commodity prices (December 31, 1931 = 100) declined from 208·4 to 207·7 in the week ended Wednesday, the latter figure comparing with 200·4 a month ago and 177·8 on the corresponding day last year.

COAL

SHEFFIELD.—On the inland market, demand for house coal has turned very quiet, due in some measure to the fact that there has been no general summer reduction in prices. Industrial demand is very strong, and prices are firm. Best locomotive hards are being well taken up. Graded steam coal is scarce, particularly singles and smalls. Coke of all descriptions is scarce. In blast furnace qualities the output is fully sold. Large patent oven coke is very firm, full supplies being difficult to arrange. Some collieries are crushing large coal to meet the shortage of coking coal. Export inquiries have fallen away, shippers being hampered by the scarcity of suitable tonnage. All qualities are easily obtainable. Output in the South Yorkshire coalfield has been hindered this week to some extent by the haulage hands' wages dispute, a number of unofficial strikes having occurred. The chief cause of the trouble is the drop of 5 per cent. in the monthly wage ascertainment, which the youths engaged in this work complain virtually wipes out the advance of sixpence per day granted last year.

NEWCASTLE-ON-TYNE.—So far as foreign trade is concerned, the North East coal market is quiet, there being little inquiry from abroad. On the other hand, home industrial trade is brisk, which, combined with foreign contracts made some time ago, provides sufficient business to keep collieries working regularly. Northumberland steam collieries are steady, there being little doubt that present prices will be maintained owing to the large amount of trade booked ahead. Durham gas coal and bunkers are offered freely, but there is still a persistent demand for coking classes.

GLASGOW.—The Lothian collieries resumed this week, and one or two pits were working in Ayrshire, but elsewhere holidays were general. Market conditions were therefore quiet. Producers appear to be comfortably placed for orders for the restart, and a gradual expansion of demand over the coming weeks is to be expected. Certainly the Lothians have had little to offer for new prompt business this week, washed treble nuts alone being available in any quantity. Libau Electricity Works invite tenders for the supply of 15,000 tons of washed smalls and steam coal for delivery August–February.

SHORTER COMPANY COMMENTS

COMPANY RESULTS OF THE WEEK.—Good progress is shown by THOMAS BOLTON. Profits have advanced from £98,296 to £154,094, and the ordinary dividend is raised from 7½ to 10 per cent. HOLLYCHROME BRICKS have earned slightly higher profits, but the dividend is maintained at 15 per cent. The profits of SCRIBBANS have suffered a set-back, which has compelled a reduction in the ordinary and deferred dividends. Net profits for the year to April were £105,781, compared with £127,941 for 1935-36. The GENERAL THEATRE CORPORATION reports better trading results, for profits have increased from £98,356 to £137,292, and the preferred ordinary shareholders receive 15 per cent., compared with 12 per cent. for the previous year. Among brewery concerns, THRELFALL'S BREWERY reports an increase in net profits from £322,861 to £352,684, thus permitting the raising of the dividend from 17 to 18 per cent. McDOUGALLS TRUST profits are only slightly higher at £179,025, but the dividend has been raised from 7½ per cent. to 10 per cent. In the engineering group, HEAD WRIGHTSON show an increase in profits from £45,056 to £52,698, while CROSSLEY BROTHERS' net earnings have been increased from £34,249 to £45,453. The ordinary dividend of W. BARRATT has been raised from 10 to 11 per cent., but the net profit is only slightly higher at £133,236. The record of this week's rubber companies is impressive BERTAM CONSOLIDATED has doubled its profit—£54,474 against £27,008—and has raised its dividend from 7½ per cent. to 14 per cent. EAST ASIATIC shows a profit of £69,758 against £44,962, the dividend being raised from 5 to 7½ per cent. LARAS (SUMATRA) whose profits are more than doubled at £38,543, have resumed dividends with a 5 per cent. payment. Other large concerns whose profits show decided improvement include BURMA, JAVA PRODUCE, JERAM, and PRANG BESAR.

BANKS

NATIONAL CITY BANK OF NEW YORK.—Leading items in the balance sheet of the National City Bank of New York as at June 30, 1937, and June 30, 1936, are compared in the following table :—

	June 30, 1936	June 30, 1937
ASSETS	$	$
Cash and due from banks	482,847,279	549,793,277·03
U.S. Government obligations	622,644,698	419,401,464·82
State and municipal bonds	101,487,261	92,891,746·00
Other bonds and securities	106,256,881	140,441,108·95
Loans, discounts and bankers' acceptances	551,930,592	710,217,081·27
LIABILITIES		
Deposits	1,730,019,146	1,807,822,047·23
Liability as acceptor, endorser, etc.	45,432,421	44,426,198·90
Undivided profits	10,805,481	13,746,581·15
Balance sheet total	1,969,852,055	2,006,169,216·52

MISCELLANEOUS

TRUST OF BANK SHARES.—The managers announce that the semi-annual management charge will be reduced from ¼ of 1 per cent. to 1/8 of 1 per cent. of mean market value of the fund. Similar reductions are being arranged for other trusts in the Trust of Insurance Group.

THOMAS BOLTON AND SONS.—Gross trading profit £232,870, an increase of £69,790. After all expenses £140,165 was earned on the ordinary. Final ordinary dividend 7½ per cent., against 5 per cent., making 10 per cent., against 7½ per cent.

CABLE AND WIRELESS, LIMITED.—INDEX NUMBERS.—The index numbers are all shown upon a comparable basis. Monthly figures reduced to working day average. Working day average of comparable receipts year 1929 = 100.

	1930	1931	1932	1933	1934	1935	1936	1937

December	87·1	83·6	78·8	76·7	80·7	80·1	96·4	

AERONAUTICAL CORPORATION OF GREAT BRITAIN, LTD.—A meeting will be held on August 20th at Grotrian Hall to consider a resolution that the company be wound up voluntarily. The liquidator proposed is Mr. B. C. Gotelee, who was a member of the shareholders' committee.

SCRIBBANS AND COMPANY, LTD.—Trading profit for year ended April 30, 1937, £150,085, against £193,347 for previous year. To depreciation £20,357, against £18,518. To development reserve £30,000 as before. Ordinary and deferred dividends £85,708, against £95,908. Carry forward raised from £30,714 to £31,713.

TRUST OF INSURANCE SHARES.—Progress report for sixth half-year of Trust to June 30, 1937, announces distribution of 3·7119d. net per Unit, making, with the previous half-yearly payment, a total for the Trust year of 6·5577d. per unit, tax free. The half-yearly management remuneration has been reduced from one-sixteenth of one per cent. of the mean market value of the fund to one-twentieth of one per cent.

MEXICAN EAGLE STRIKE.—The London financial agents of the Mexican Eagle Oil Company are advised that a strike of the workmen in the Poza Rica field began on July 21st, negotiations in connection with a list of petitions presented by the workmen having broken down.

TAQUAH AND ABOSSO MINES.—Net profits for year to March 31, 1937, were £141,038, an increase of £5,480. Final dividend of 31½ per cent. makes total of 43¾ per cent., against 50 per cent. for 1935–36. Carried forward, £47,410, subject to directors' extra remuneration and to proposed transfer of £10,000 to tax reserve, against net balance of £29,419 brought in. Proposed to increase authorised capital by £50,000 to £350,000 and to offer shareholders one new 4s. share for every five shares held at 25s. per share.

GOLD FIELDS RHODESIAN DEVELOPMENT.—Advance of £56,508, to £266,353, in profits is announced for year to May 31, 1937. There has been written off expenditure on prospecting, £565, against £10,353. Sums of £110,000, against nil, is reserved for depreciation, and £25,000, against nil, is transferred to reserve. Ordinary dividend 10 per cent., as before. £28,670 forward, against £26,315 last year, when £69,562 was written off investments.

NICARAGUA 5 PER CENT. LOAN PLAN.—The Republic of Nicaragua proposes further to reduce the interest to 4 per cent. on its 6 per cent. (now 5 per cent.) sterling loan of 1909 Stamped Assented bonds. The redemption date is to be extended by 13 years to 1957. The acceptance of the plan is recommended by the Council of foreign bondholders.

CARDIFF.—Current business on the Cardiff market continues comparatively restricted, but shipments have been well maintained, and last week they totalled 430,000 tons, compared with 433,400 tons the previous week and 349,300 tons in the corresponding week last year. Little improvement is anticipated in the current demand for the rest of the month, but confidence is expressed that with the approach of the autumn the market will recover its recent strength. The comparative easiness of the market position during the past few weeks was marked by a revival of efforts on the part of buyers to depress prices, but under the new system of central control these have been firmly resisted, and there has been no reduction in quotations for forward deliveries. Stocks of large coals have slightly increased, but there is still a shortage of best washed and sized grades. Coke prices are very firm, and quotations for patent fuel and pitwood are unchanged.

IRON AND STEEL

LONDON.—The weekly report of the London Iron and Steel Exchange indicates that the effect of the holiday season in the producing districts is now apparent, for it has accentuated the difficulty of placing orders and securing deliveries. On the other hand, the temporary cessation of operations at some of the steelworks, particularly in Scotland, is welcomed by the pig-iron branch of the industry, as it affords an opportunity of accumulating stocks and overtaking arrears of orders.

There are no signs of any relief from the pronounced scarcity of foundry iron, and the consuming works continue to operate on hand-to-mouth supplies which are distributed by the makers in accordance with the rationing scheme. The situation of the steelworks has been strengthened by the purchases of foreign iron arranged by the British Iron and Steel Federation; but there is a distinct shortage of hematite.

The demand for semi-finished steel continues at a high level, and although British works producing this class of material are operating at capacity, the output is much below the requirements of the consuming industries. It is hoped that the imports of this description of steel as a result of the reduction in the duties will considerably improve the position of consumers.

Home demand for finished steel shows no sign of subsiding, and the requirements of the market are well in excess of the supplies available. There is a good export inquiry; but trade with some of the overseas markets is showing a seasonal decline.

MIDDLESBROUGH.—Very little new business is heard of in pig iron. Slightly larger deliveries of Cleveland foundry pig iron are being made, but users have to obtain supplies from other areas when possible. East Coast hematite is also in strong demand, and sales have been made for supply over the next two months. Prices of Cleveland and hematite pig iron remain unaltered. Quantities of French pig iron are now being offered on the market.

The extension of the control of supplies of structural steel on the basis of deliveries made during 1936 is of assistance to finished steel manufacturers. Larger supplies of Continental semi-finished steel are expected, which will tend to ease the position of re-rollers. The price of finished iron has now been advanced by 27s. 6d. per ton, the price for common iron bars now being £13 5s. per ton. Heavy steel scrap is in good demand at fixed prices. Good Durham blast-furnace coke remains at 40s. per ton delivered furnaces.

SHEFFIELD.—There is little change in the condition of the iron and steel market, and new business is of very small proportions, a state of things which seems likely to persist for some time, as sellers have hardly anything to offer. Foundry iron business is a trifle less difficult to transact. Users of basic and forge iron are not finding it easy to place orders. A keen look-out is kept for any odd lots of material, however small, but these are rarely to be picked up. A still further increase in Derbyshire output is being talked of. The position in hematites is unaltered. Makers are accepting contracts less freely than was the case a few weeks ago, which suggests that they are fairly well committed over the next few months. The delay in the announcement of the revised prices for finished iron has now ended, quotations having this week been officially advanced by 27s. 6d. The new prices are: Marked bars, £15 15s.; crown bars, £13 5s.; No. 3 bars, £11 12s. 6d.; No. 4 bars, £12 2s. 6d.; hoops and strip, £14 2s. 6d. These prices will operate as from July 1 to December 31.

Demand for basic and acid steel billets continues unabated, and new orders are accepted subject to long delay in delivery. Wire rods, strip and bars are in full request. The output of stainless steel sheets is being increased to meet the ever-expanding demand. Structural steel business continues to develop.

GLASGOW.—During the holidays a large amount of repair work is being carried out, some quite extensive alterations and repairs being undertaken during the present week. Trade circles are looking forward to a period of great activity at all the plants, where it is expected that operations will be continuous until the next holiday break, which is at the end of the year. West of Scotland re-rollers expect that a good share of the additional tonnage of Continental material which has been released will be allocated to them, and so enable them to keep their mills fully employed. Like others they have many months' work on order books.

CARDIFF.—All the heavy branches of the iron and steel industry in South Wales continue active, and the scrap position is easier than it has been for some time past. The most recent of the output returns of the tinplate industry shows production at 74·99 per cent. of allotted capacity. Shipments at Swansea last week totalled 8,896 tons, compared with 4,618 tons in the corresponding week last year, while stocks in warehouses and in vans, at 2,439 tons, were less than one-fourth the reserves in the corresponding period of 1936. Prices of tinplates, galvanised sheets, steel bars and pig iron are unaltered.

OTHER METALS

COPPER.—Although turnovers remain small, the market has developed a firmer tone, the cash price showing a gain of £1 3s. 9d. on the week. Quiet conditions have also prevailed in the United States, rumours of a revival of restriction being the only notable feature of the week. Restriction, however, is unlikely to be re-imposed while prices are rising—especially in view of the fact that last month's increase in stocks, which probably provided the basis for this week's rumours, was due to slackening consumption rather than to the growth of production.

Sales on the London Metal Exchange: 950 tons on Monday, against 675 tons last week; 1,950 tons on Tuesday, against 1,200 tons last week; 1,600 tons on Wednesday, against 1,050 tons last week. Domestic spot was quoted at 13·95 cents per lb. in New York on Wednesday, against 13·70 cents a week ago and 13·57½ cents a month ago. Wednesday's official closing price for standard cash in London was £56 15s. to £56 16s. 3d. per ton, compared with £55 11s. 3d. to £55 13s. 9d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 10,037 tons, showed a decrease of 367 tons, while stocks of rough copper, at 8,796 tons, were 200 tons larger.

LEAD AND SPELTER.—Mainly in consequence of reports of rising production, prices were weaker. The world's lead smelter output (excluding Spain) amounted to 671,217 metric tons in the first five months of this year, according to the Metallgesellschaft, against 590,210 metric tons in the corresponding period of last year. Excluding the United States, the total was 488,209 metric tons, an increase of 56,053 tons. Production in May—again excluding Spain and the United States—at 102,151 metric tons, was the highest monthly figure ever attained.

According to the same source, world output of smelter zinc advanced from 606,478 metric tons in January–May, 1936, to 667,099 metric tons in the first five months of 1937. Production outside the United States this year aggregated 451,131 metric tons, against 417,582 metric tons last year. These figures disclose a satisfactory buoyancy of production; but since stocks are small and buyers fairly active it is unlikely that rising output will threaten the present price structure.

Sales of lead on the London Metal Exchange: 1,100 tons on Monday, against 1,350 tons last week; 1,850 tons on Tuesday, against 1,000 tons last week; 1,150 tons on Wednesday, against 650 tons last week. The New York quotation on Wednesday was 6·00 cents per lb., against 6·00 cents a week ago and 6·00 cents a month ago. Wednesday's official closing quotation in London for soft foreign for shipment during the current month was £23 15s. to £23 17s. 6d. per ton, compared with £24 16s. 3d. to £24 17s. 6d. last week.

Sales of spelter on the London Metal Exchange: 750 tons on Monday, against 1,250 tons last week; 1,000 tons on Tuesday, against 2,900 tons last week; 850 tons on Wednesday, against 1,500 tons last week. Wednesday's quotation in East St. Louis was 7·00 cents per lb., against 7·00 cents the week before and 6·75 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipment during the current month was £22 12s. 6d. to £22 15s. per ton, against £23 to £23 1s. 3d. last week.

TIN.—Tin has again been a steady market. Business was small and price fluctuations narrow, the cash quotation showing a trifling net decline on the week. Recent reports of drought difficulties in Malaya have been officially denied this week. It appears that only a few smaller companies have been affected by water shortage and that this will not stop Malaya from fulfilling her quota. Moreover, plenty of rain has fallen this week. In Bolivia the change in the presidency, which at first caused concern in London tin circles, has actually proved beneficial for the tin producers. For the new President intends to stimulate production by all possible means.

On Monday a sub-committee of the International Tin Committee held a private meeting in London. Although no statement was issued, it is believed that the formation of a new buffer pool was discussed. This course has been advocated in certain circles recently, but British producers are opposed to it. Whether a new buffer pool will in fact be formed remains doubtful; but the adoption of such a course would probably cause prices to rise since the whole of the current output is urgently needed to keep the market stable.

Sales of tin on the London Metal Exchange: 375 tons on Monday, against 410 tons last week; 300 tons on Tuesday, against 475 tons last week; 200 tons on Wednesday, against 550 tons last week. The New York quotation on Wednesday was 60·00 cents per lb., against 60·10 cents a week ago and 55·85 cents a month ago. Wednesday's official closing quotation in London for standard cash was £266 10s. to £266 15s. per ton, compared with £266 15s. to £267 a week ago. Stocks of tin in London and Liverpool at the end of last week totalled 2,389 tons, a decrease of 398 tons on the week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted on Wednesday at £100 per ton, and rolling billets at £102 per ton. Nickel, for home and export, was maintained at £180 to £185 per ton. Quicksilver, on the spot, was quoted at £15 1s. to £15 1s. 6d. per flask of 76 lbs., the same as last week. Chinese antimony was quoted at £69 to £70 per ton, ex warehouse, as against £68 last week. Chinese wolfram for "July–August" shipment was quoted at 69s. to 71s. per unit, c.i.f., compared with 64s. 6d. to 65s. 6d. last week. Refined platinum was quoted on Wednesday at £10 5s. per ounce compared with £10 a week earlier.

TEXTILES

COTTON—Manchester.—Conditions have not been favourable for an increase in trade. Raw cotton prices have been easier, and political news from abroad has caused a good deal of anxiety. In the circumstances, buyers of yarn and piece-goods have restricted their commitments, and very few spinners and manufacturers have been able to sell the output of the machinery. The slightly bullish acreage estimate of the United States Government has been followed by a continuance of favourable reports relating to the progress of the crop. Undoubtedly, the weather at the present time in most parts of the belt is ideal for the plants. A bearish Government production forecast is expected at the beginning of next month.

There has been rather more discussion in trade circles concerning the length of time during which spinners and manufacturers can stand the slack demand which has been experienced for many weeks without some weakness in prices showing itself. Makers of cloth with wide looms have still plenty of work to go on with, but producers of narrow widths are not so satisfactorily situated. Spinners of yarn remain in a strong position owing to good order lists and the protection which is given by the legalised price agreements. There continues much pressure for the delivery of American counts. It is quite unnecessary to go into any detail as to the cloth business done during the week. For export and the home trade, buying has been confined to small lots to meet urgent wants. A restricted turnover has again taken place in the yarn market, but most sellers have not been at all concerned, and the output in American and Egyptian descriptions is being well absorbed.

WOOL.—Bradford.—The strong finish of the fourth series of Colonial sales shows that the raw material is in a very sound position, though the advance in prices over those ruling at the close of the May series was not very marked. A gradual increase in confidence as the auctions proceeded led to bigger operations, a feature being the activity of the Continent. Slipes improved considerably from their rather weak position during the opening days, notwithstanding adequate supplies, and the improvement of ½d. to 1d. per lb. on opening prices indicates that the home trade in particular will need these wools during the forthcoming somewhat long interval. The home trade is credited with having purchased 37,500 bales, the Continent 24,500, the carry-over being 22,000 bales. The next series begins on September 14, this being the longest vacation of the whole year.

The general position of Colonial wool can be regarded as sound. Consumption is perhaps hardly as big as earlier in the year, but mills generally are busy, and most machinery is running. During the next month or six weeks, considerable new orders should be placed for the spring and summer of 1938, and although every effort has been made on the part of wholesale cloth buyers to push cloth prices back to near where they stood a year ago, higher prices seem inevitable. Most mills continue to be fairly busy, although some spinners are running only three days per week. The outlook for prices favours a continuance of to-day's rates, and greasy merino combing wools are likely to be scarce during the next two months.

GRAIN MARKETS

WHEAT.—Shipments have been unusually small during the past week and business restricted. Prices are a shade lower. This check to the upward movement of prices was partly due to the news of good rainfall in many parts of Canada towards the end of last week. While it is true that this rainfall came too late to be of use except for late-sown wheat, it appears that the Canadian crop may not be quite so small as was at one time feared. Meanwhile, crop news from the United States remains favourable.

On Wednesday last, "July" futures were quoted in Chicago at 122 cents per bushel, against 126 cents the week before and 113⅜ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba (Atlantic) ex ship, 55s. 6d. per 496 lbs., against 56s. last week; No. 2 Northern Manitoba (Atlantic), ex ship, 54s. 9d., against 55s. 3d. last week. According to the *Corn Trade News*, total shipments of wheat and flour last week amounted to 649,000 quarters, against 905,000 quarters in the previous week and 1,086,000 quarters in the corresponding week a year ago.

FLOUR.—Although home-milled flour is unchanged in price, imported descriptions are lower. Trading remains quiet. Wednesday's London quotations (excluding quota payments) were: Straight run, delivered Home Counties, 43s. 6d. per 280 lbs., as against 43s. 6d. a week ago; delivered inner London, 43s., as against 43s. a week ago. Manitoba patents, ex store, 41s. 9d. to 43s. 3d., as against 43s. to 44s. 6d. a week ago. Australian, ex store, 33s. 6d. to 34s. 6d., as against 33s. 9d. to 34s. 6d. a week ago.

BARLEY.—"July" futures were quoted at 71¼ cents per bushel in Winnipeg on Wednesday, as against 74⅛ cents last week. Quotations per 448 lbs. in London on Wednesday were: "English feed" at farm, 35s. to 36s., as against 35s. to 36s. a week ago; "English malting," at farm, not quoted, against 36s. to 42s. last week. Californian, ex ship, 52s. to 54s., as against 49s. 6d. to 58s. a week ago. Chilean, brewing, ex ship, 44s. 9d. to 50s., as against 44s. 9d. to 50s. a week ago.

OATS.—On Wednesday, "July" futures were quoted at 35⅛ cents a bushel in Chicago, against 43⅛ cents a week ago and 40⅛ cents last month. Quotations in London, Wednesday: "English black," at farm, 28s. to 29s. per 336 lbs., as against 28s. to 29s. a week ago; "English White," at farm, 28s. to 29s., as against 28s. to 29s. a week ago; mixed Canadian feed (Vancouver), landed, 27s. 6d. per 320 lbs., as against 27s. 9d. a week ago.

MAIZE.—In response to a more active demand, the market shows a firmer tendency. "July" futures were quoted on Wednesday at 116⅛ cents per bushel in Chicago, against 126⅛ cents a week ago and 117⅛ cents last month. Quotations in London, Wednesday: "Plate," landed, 29s. per 480 lbs., as against 28s. 9d. a week ago; "Plate," ex ship, 28s., as against 27s. 9d. a week ago; "Plate," "July," 28s., as against 27s. 9d. a week ago; yellow maize meal, ex wharf, was quoted at £7 7s. 6d. per ton, as against £7 5s. last week.

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations for selected weeks in 1935-1937:—

Nearest Future	Jan. 2, 1935	Dec. 31, 1935	July 22, 1936	Dec. 30, 1936	July 14, 1937	July 21, 1937
Winnipeg (No. 1, Manitoba) —Cents per 60 lb.	82⅞	84⅛	92⅛	129	151½	145⅞
Chicago (No. 2, Winter)— Cents per 60 lb.	99⅛	101½	104⅛	136½	126	122

The visible supply of wheat in Canada amounts to 37,979,000 bushels against 40,603,000 bushels last week, and 75,810,000 bushels in the corresponding week last year.

SALES AND PRICES OF BRITISH CEREALS.—The following table gives the estimated sale of home-grown wheat during the harvest years 1933–34 to 1936–37.

	1933–1934	1934–1935	1935–1936	1936–1937
Estimated sales of home-grown wheat—	Cwts.	Cwts.	Cwts.	Cwts.
1 week to July 17	59,590	43,615	53,433	80,590
46 weeks to July 17	10,003,000	13,155,471	13,042,611	10,672,292
Average price of English wheat per cwt.	s. d. 5 6	s. d. 5 7	s. d. 7 0	s. d. 9 9

The following is a statement showing the quantities sold and the average price of British cereals in the past two weeks, and for the corresponding weeks in each of the years from 1933 to 1936:—

Week ended	Quantities Sold			Average Price per cwt.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
	Cwts.	Cwts.	Cwts.	s. d.	s. d.	s. d.
July 15, 1933	27,081	11,390	4,678	6 8	6 11	5 10
July 14, 1934	50,590	6,874	11,671	5 8	7 3	6 4

July 17, 1937	80,590	2,400	9,764	9 9	9 6	9 6

OTHER FOODS

BACON.—Bacon met a sustained demand and the tone was firm for all descriptions. The official quotations (per cwt. for No. 1 Sizable) which formed the basis for dealings on the London Provision Exchange this week were: English, 96s.; Canadian, 90s.; Danish, 96s.; against 90s., 84s., and 91s. last week. Arrivals in London last week included: Danish 13,774 bales; Canadian, 5,172; Dutch, 2,626; Lithuanian, 1,089, and Polish, 3,055; as against 13,994, 7,406, 2,399, 1,105 and 3,344 bales, respectively, in the previous week.

BUTTER.—The firm tone was maintained, with prices showing a fresh rise on the week. Quotations (per cwt.) on the London Provision Exchange on Wednesday were: New Zealand, finest salted, 117s.; Australian, choicest salted, 115s. to 116s.; Danish, 125s.; compared with 114s., 113s. and 120s., respectively, a week ago.

CHEESE.—New Zealand was scarce and rather dear, with prices of other makes about unchanged. Quotations (per cwt.) on the London Provision Exchange on Wednesday were as follows: Canadian, finest white, new, 72s., and New Zealand, finest coloured, 71s. to 71s. 6d.; against 78s. and 70s., respectively, a week ago.

COCOA.—The spot quotation in New York on Wednesday was 8 7/16 cents per lb., as against 7 15/16 cents per lb. last week. In London, on Wednesday last, good fermented new crop, Accra, "November-January," was quoted at 37s. 6d. sellers per 50 kilos., c.i.f. Continent, against 36s. 3d. a week ago. Last week's movements of cocoa in London were as follows: Landed, 4,081 bags; delivered, for home consumption, 5,461 bags; exported, 99 bags; stocks, 269,402 bags, against 174,685 bags a year ago.

COFFEE.—On Wednesday, Rio No. 7 (cash) was quoted at 9¼ cents per lb. in New York, as compared with 9¼ cents per lb. last week and 9¼ cents per lb. a month ago. Movements of coffee in London last week were as follows: Brazilian, landed, 8 cwt.; delivered, for home consumption, 50 cwt.; exports, 5 cwt.; stocks, 1,933 cwt., against 10,118 a year ago. Central and other South American: Landed, 609 cwt.; delivered, for home consumption, 1,913 cwt.; exported, 283 cwt.; stocks, 104,122 cwt., against 107,023 last year. Other kinds: Landed, 557 cwt.; delivered, for home consumption, 2,924 cwt.; exported, 121 cwt.; stocks, 108,781 cwt., against 153,241 last year.

EGGS.—The market has continued firm, with prices showing little alteration. At Smithfield, on Wednesday, English (ordinary packing, Grade I, about 15-15½ lb.) realised 15s. to 16s. per 120, against 14s. 9d. to 15s. 3d. last week; while Danish (15¼ lb.) made 11s. to 11s. 3d., as against 10s. 6d. to 11s. last week.

FRUIT.—Business at Covent Garden continues good, and a fair level of prices is maintained, states *The Fruitgrower*. The medium supply of strawberries still available meets a steady sale, while raspberries remain a prominent line. Black and red currants, of fine quality, sell well, and cherries and gooseberries are also active items. A few English early green apples have put in an appearance; Australasian apples are a slow trade, and quotations are lower. Australian pears, however, are inquired for, and are dearer. Hothouse grapes and peaches have eased on heavier arrivals, but nectarines show little change. South African oranges are steady in price, but Brazilian have eased. Lemons are in better supply, and are consequently cheaper. Grape fruit enjoy a steady sale.

MEAT.—At Smithfield market on Wednesday last, Argentine chilled hindquarters were quoted at 3s. 10d. to 4s. 2d. per 8 lbs., as compared with 4s. 2d. to 4s. 6d. a week ago. New Zealand frozen mutton was 3s. 4d. to 3s. 10d. per 8 lbs., against 3s. 4d. to 3s. 10d. a week ago. According to the Smithfield Market official report, supplies during last week amounted to 8,165 tons, a decrease of 465 tons on the corresponding week last year. Beef and veal accounted for 4,520 tons, mutton and lamb 2,717, and pork and bacon 515, as compared with 4,700, 2,826 and 661 tons, respectively, in the same week of 1936.

PEPPER.—On Wednesday, white Muntock, August-October, was quoted at 4 7/16d. per lb., sellers, c.i.f. Rotterdam-Hamburg, against 4 7/16d. per lb. a week earlier. Black Lampong, spot, in bond, was quoted at 2 11/16d. per lb. sellers, compared with 2 11/16d. per lb. last week. Movements of pepper in London last week were as follows: Black, landed, 3 tons; delivered, 1 ton; stocks, 2,058, against 1,755 last year. White, landed, 12 tons; delivered, 12 tons; stocks, 11,546 tons, compared with 12,261 a year ago.

RICE.—The spot price of Burma No. 2, cleaned, was 10s. per cwt., ex warehouse, on Wednesday, as compared with 10s. per cwt. a week ago. "July-August," in singles to Continent and U.K., was quoted at 9s. to 9s. 3d. per cwt., against 9s. last week. Movements in London last week were as follows: Landed, 201 tons; delivered, 69 tons; stocks, 2,047 tons, against 2,035 a year ago.

SUGAR.—The London market was quietly steady, but in New York a weaker tone was evident. The New York spot quotation was 3.42 cents on Wednesday, as compared with 3.50 cents per lb. last week and 3.45 cents per lb. a month ago. Wednesday's sales of raw sugar in London included "August" delivery at 6s. 6½d. to 6s. 7d., against 6s. 7d. to 6s. 7½d. a week ago. Movements of raw sugar in public warehouses in London and Liverpool last week were as follows: Imports 12,064 tons, against 3,922 in the previous week and 9,537 in the same week of 1936; deliveries, 15,257 tons, against 17,484 and 17,140 tons, respectively; stocks, 163,889 tons, against 167,082 and 129,044 tons, respectively.

TEA.—The following table shows the average price (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account in recent weeks:—

Week ended	Northern India	Southern India	Ceylon	Java	Sumatra	Africa	Total
	d.	d.	d.	d.	d.	d.	d.
July 16, 1936	12·27	12·07	13·35	10·34	10·09	11·51	12·41
June 17, 1937	14·67	14·62	15·06	13·11	12·45	13·70	14·51
„ 24, „	15·60	14·50	15·16	14·16	12·28	13·77	14·96
July 1, „	15·12	14·49	15·09	13·37	12·24	13·76	14·78
„ 8, „	15·34	14·38	15·12	14·64	12·25	13·69	14·83
„ 15, „	15·31	14·50	15·15	13·12	12·50	13·84	14·92

At this week's public auctions in Mincing Lane, 13,536 packages of Indian and 25,917 packages of Ceylon tea came up for disposal. The demand for Indian was good, with common and medium sorts showing a tendency to harden in price. Ceylon teas were also in active demand at rather higher rates.

VEGETABLES.—At Covent Garden this week, according to *The Fruitgrower*, supplies of tomatoes have considerably increased and prices are consequently lower. Cucumbers, on the other hand, are in rather short supply and sell at firmer rates. Lettuce has been in irregular demand, while green peas, runner beans and marrows are cheaper in response to larger supplies. Prices for cabbage and cauliflower are well maintained. Supplies of English new potatoes at London markets remain ample for requirements and, since most consignments require to be cleared quickly, prices are easier. At the Borough Market on Tuesday, Eclipse, Sharp's Express, British Queen and Majestic ranged from 7s. to 8s. 6d. per cwt., against 7s. to 9s. a week earlier.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OILSEEDS.—Markets have turned quieter but are steady. Under the influence of the rise in wheat prices, linseed maintains its value, but very little business is passing in either Indian or Plate seed. Shipments from South America continue at a fair level, and the exportable surplus of Argentine seed is rapidly diminishing. It appears likely that the United States may be in the market for some time in view of the small domestic crop, which is officially estimated to produce up to 200,000 tons of linseed. Although this figure accords with trade expectations, the critical time for the new plants has yet to come. Last season the yield was no more than 148,000 tons. The condition appears to be satisfactory, but the small Canadian crop has suffered from drought and heat. The quantity of linseed now on passage to Europe is 104,400 tons (including 34,500 tons from India). That afloat for the United States and Canada is put at 54,300 tons against only 6,000 tons a year ago. The shipment of the new Indian crop is proceeding only slowly. The outlook in Argentina is moderately satisfactory; more rain is needed to nourish the newly-sown seed.

Cottonseed has sharply declined, but some buying interest has developed. For new crop £7 13s. 9d. has been paid for October shipment and rather less for later positions. Vegetable oils generally are steady. Linseed oil is in fair demand for near delivery, and prices are about 5s. per ton below the highest last week, but still 10s. above the opening quotation on July 1st. Cotton oil is dearer but demand is only moderate. Egyptian crude offers at £27 10s. per ton (naked) ex Hull. Oilcakes are steady and in normal demand for the season.

RUBBER.—Trading in London has again been quiet and the market has been featureless. Prices are a shade lower than a week ago. The International Committee met on Tuesday and made no change in the quotas. The next meeting was fixed for September 28th.

The spot price in New York on Wednesday was 18 1/16 cents per lb., compared with 19 cents per lb. a week ago and 19 1/16 cents a month ago. Wednesday's official buyers' price for standard ribbed smoked sheet on the spot in London was 9d. per lb., as against 9 1/16d. on the corresponding day last week. In forward positions business has been done at 9 1/16d. to 9⅛d. for "August" shipment, as against 9⅛d. to 9 1/16d. a week ago. Stocks in London and Liverpool at the end of last week totalled 41,645 tons, against 42,175 tons a week earlier. A year ago stocks amounted to 116,975 tons.

FURS.—The market has been reactionary during the past fortnight, and prices have turned easier. This spell of weakness followed the decline in prices at the 13th Leningrad sale, where losses of between 10 and 20 per cent. compared with the previous sale were common. It is believed likely that an easier tone will be displayed at the Hudson's Bay Company's London summer sale. This sale, which opens next Wednesday, will probably last for two or three days only. Business will be limited to certain kinds of furs, the most important being beaver, mink, musquash and South-West African "Persian" lamb.

An Eventful Session

THE Parliamentary session which began in the first week of last November is now to all intents and purposes ended, though Parliament is to be adjourned rather than prorogued, so that it can be speedily summoned in case of need. The session has been one of much legislative achievement, of surprises on the domestic political scene, and of alarums and excursions in the foreign field. In its course the Government, and the Conservative Party which directs it, have lost one leader and found another. The BALDWIN epoch has come to an end and the CHAMBERLAIN regime has opened auspiciously. Indeed, largely owing to progressive demoralisation in the Labour Opposition, the Government's stock stands firmer at the close of this session than it has at the end of any session since the expedient of a National Government was first tried.

The Spanish cloud has overshadowed every debate on foreign affairs. The House has not always been divided in opinion. Sometimes, as when the Government tried to deny British shipping the naval protection against the depredations of pirates on the high seas to which it was clearly entitled, or when Ministers affected to dismiss the idea that Gibraltar and other British interests might be threatened by the Italian and German intervention in Spain, members of all parties expressed their concern in no uncertain way. It is perhaps permissible to detect a certain hardening in British foreign policy since the advent of MR CHAMBERLAIN to the Prime Ministership. Similar diagnoses have led to disillusion before, and it is too soon to be sure of the Government's resolution; but there is no mistaking the degree to which the temper of the country and of the Commons has strengthened against the power-politics of dictators during the session.

At home, apart from the retirement of LORD BALDWIN, attention has been largely claimed by the most colossal re-armament programme ever undertaken by this country in time of peace. This has not only been the direct concern of the Government and of Parliament, leading to repeated skirmishes over the Co-ordination of Defence; it was also the indirect cause of the pother about the Budgetary and post-Budgetary versions of the National Defence Contribution. The session has produced a notable State Paper in the Palestine Report and an even more notable Private Member's Bill in MR HERBERT'S Matrimonial Causes Act. Outside Westminster, a "general election in miniature" (as MR CHAMBERLAIN described the twelve recent by-elections) showed, in a selected list of safe Conservative seats, an alarming slump in the total poll to below half of the electorate and a drop in the Conservative and Labour votes alike. Still further afield, the work of the last Parliament has been capped by the assumption of office in a majority of Indian Provinces by the Congress Party.

Of all these events, those of N.D.C., the Marriage Bill and the Palestine proposals were the most instructive;

for they showed that a Government with an overwhelming majority cannot ignore the dictates of public opinion freely expressed by Members of all Parties in the Commons. On N.D.C., which bore the evidences of too personal and too secretive preparation, the Government declined to capitulate in the Budget debate itself, though they could have done so with decorum. After amending it in the Finance Bill, they had to jettison it and bring in a revised version. MR A. P. HERBERT'S Marriage Bill, at first only the proposals of an Independent Private Member, quickly attracted a very large body of support in both Houses of Parliament, and so became one of the major legislative achievements not only of the session but also of the decade—almost a generation after a Royal Commission had recommended most of the reforms. To have prevailed on Party Whips, the Church and the Government no longer to block the progress of a clamant reform—as had repeatedly been done during the last twenty years—is a remarkable achievement for a Private Member. Over the Palestine proposals, again, the House had the sense that things were being unduly and dangerously rushed; that they were being jockeyed into mere "rubber-stamping" of decisions taken by the Cabinet without due deliberation of the contingencies.

These three surprises in the session may well mark a turn in our Parliamentary tide, which has too long been merely drifting Members along towards apathy and frustration. It is a very encouraging sign that representative government can still liberate the wellsprings of political energy and endeavour in the representatives of the people.

On the less surprising, less contentious side, the session has also been productive. The Public Order Act, banning political uniforms and regulating processions, was almost universally welcomed as a defence of democracy, as well as of law and order. The raising both of Ministers' and of M.P.s' salaries shows that there is at least no awareness at Westminster of any disgust with Parliamentarianism. The welfare of the people has been advanced by an overdue Factories Act, by the extension of contributory pensions to black-coated workers and by the first beginnings of a campaign for physical fitness. Another notable achievement has been the transfer to the jurisdiction of the Ministry of Transport of several thousand miles of "A" roads. On the other hand, the session has had its failures. The Bill to buy out the owners of mineral royalties has been held up by sectional interests, and the revised Bill to strengthen the powers of the Coal Mines Reorganisation Commission has not yet made its appearance. The Government's proposals to rationalise the distribution of electricity encountered considerable opposition inside and outside Parliament, and it remains to be seen whether this is to be another case in which special interests are able to impose a veto on Cabinet and Parliament.

Thus, on the whole, the session has been remarkably fruitful, both in constructive legislation and in lively political feeling in Parliament. Despite his blunder over N.D.C., MR CHAMBERLAIN has made an auspicious beginning; and if his Government tackles the many outstanding causes of social and economic grievance in the country—for example, nutrition of the people, commercial policy, the Distressed Areas—with an access of new zeal, it will raise its stock further next session. The perils of foreign affairs threaten at any moment to make social progress either impossible or irrelevant; and, even without war, the frenzy of re-armament cannot diminish in Britain until it recedes elsewhere. But a healthier, better-nourished, socially more contented people is the best insurance against national weakness; and to achieve that there remains much to be done which this, or another, Government could still do.

The Economics of Holidays

THIS week, a few days before the beginning of the crowded rush of August holidays, the announcement has been made that nearly 600,000 workers in the engineering trades will in future be entitled to a week's annual leave with pay. The decision follows hard upon the appointment by the MINISTER OF LABOUR of a committee to consider the statutory provision of paid holidays and the launching by the trade unions of a campaign to secure this reform.

The seething holiday crowds of this week-end, and the way in which most working people perforce spend their holidays, add point to this development. Barely a hundred years ago, when the Bank of England had thirty-three holidays each year, most people had none by law and few by custom. The Reformation undermined the old "holydays." The Industrial Revolution finally destroyed them and left only the Protestant Sabbath as a day of rest. Since then, however, holidays have become a national institution. Hours of work have been reduced, half-holidays have been made statutory, wages and salaries have risen; and applied science, through the train, the bicycle, the motor car and the bus, has thrown open the road to the sea and the countryside.

Nevertheless, the lives of the majority of British citizens still pivot round the four secular Bank Holidays, established by Act of Parliament in 1871, and an annual week or so snatched from work and still, more often than not, unpaid. There are weeks each year in certain industrial towns when factories, offices, schools and even shops close down. In some places, like Stockton and Newcastle, these annual festivals coincide with an annual race meeting. In Lancashire, custom, within the last fifty years, has created the Wakes, when one after another the great cotton towns take a week's holiday and their inhabitants disperse in thousands to Blackpool, Douglas, or, sometimes in these days, anywhere between the Scillies and Venice.

The big revolution in transport first made possible the modern holiday. The railway first fronted Brighton's Regency façade with Victorian trippers and planted Blackpool on a few flat miles of coast. The steamer first took the Londoner to Margate and Southend and the Glaswegian to Dunoon and Rothesay. A new industry came into being, which had the beach, the bathing machine and the boarding-house as its stock-in-trade, and was dependent, like most other industries, on the excellence of its communications and the proximity of its markets. A few facts about this extensive and ramified business may be of interest.

Its centre is still at the seaside. Between 1911 and 1921 the population of Blackpool rose by 64 per cent., of Margate by 63 per cent., of Bridlington by 59 per cent., and of Southend by 50 per cent.* These towns are, in part, outer dormitories of great cities and residential centres for the wealthy and the retired; but for the most part they have grown in response to the needs of holiday-makers. And on the whole the direction of holiday travel has changed very little with the years. People who have saved for months still pass their annual interlude more often than not on the nearest beach. It is true that over 60,000 people will leave England for the Continent or on cruises this week-end; that passports are being issued at the rate of 3,000 a day; that camping has grown a hundredfold in a decade; and that the number of cars on the road has doubled in five years. But for the majority of holiday-makers, a holiday still begins with a train journey to the sea. Nor do the majority of holiday-makers go for long. Nearly 70 per cent. of the passenger journeys (excluding workmen's journeys) on the main-line railways in the five holiday months from May to September last year were on day, half-day and evening tickets.

* The increase is slightly exaggerated because the 1921 Census was taken in June instead of April.

But, while habit and limited resources confine the mass of the people to old courses (which they follow in ever-rising numbers), modern enterprise and the competitive efficiency of municipalities and travel agencies have organised a host of new devices for their pleasure. The illuminations at Blackpool and Southend and the Tattoo at Aldershot have become almost national institutions. Between July 31st and August 7th this year over 100,000 people will come from places as far afield as Aberdeen to view the Navy dispersed at Chatham, Portsmouth and Plymouth. Four hundred camping coaches on the railways will in a few weeks provide a novel relaxation for some 12,000 people. Cruises and Continental holidays are more popular than ever before, and will this year attract over 150,000 people in August alone. Thus, on the fringe of the great majority who habitually seek seaside resorts with highly organised amusements, there is a growing minority who take their holidays in novel and refreshing ways. Wales, the Lakes and Scotland are full of walkers and climbers. The Youth Hostels Association has 60,000 members. Everywhere is the ubiquitous bicycle, numbered in its millions, and the more lordly motor-car.

Home touring by motor-car is estimated to have risen by 16 per cent. this year compared with last, and by nearly 100 per cent. in five years. Touring abroad has made even greater strides, having increased by more than 30 per cent. in the past twelve months alone. Where drivers were content five years ago to limit their daily journeys to 100-150 miles, they now travel over 200; and as many as 3½ million people are now in a position to make this decision.

The railways, however, invented the British holiday, and still in the main sustain it. On Friday and Saturday of this week more than a quarter of the population of Great Britain will be moved by rail; and 3 millions will pass through London's termini in only forty hours. Some 43,000 passenger carriages, with accommodation for 2½ million people, will travel 4 million miles in two days. This astonishing August peak of holiday traffic involves a serious problem for railway traffic organisers, which is to-day growing more rather than less difficult. The following table, taken from Ministry of Transport statistics, illustrates this point:—

PASSENGER JOURNEYS ON THE MAIN-LINE RAILWAYS
(excluding workmen and commercial travellers)

	1926	1931	1936
May	29,749,623*	56,224,783	51,930,801
June	39,055,836*	54,593,059	60,010,566
July	57,412,381	62,979,785	64,230,734
August	67,208,045	69,110,470	76,208,549
September	54,876,210	52,753,280	55,061,377
	248,302,095	295,661,377	307,442,027

* Travelling affected adversely by the General Strike.

The concentration of holiday traffic in August increases as the years pass. This year over 250,000 people will leave the Midlands alone in the first fortnight of August. School holidays are largely responsible, since they focus the departure of family parties to the sea or the country on a single month. Proposals for the spreading of scholastic vacations are frequently made, but common experience tends to suggest that if there is any institution more conservative than the English holiday, it is the English school.

For most people, consequently, a holiday means a crowded time at a crowded place. Few travellers to-day could endorse Hazlitt's injunction to travel alone. But it is still true that "the soul of a journey is liberty." All these holiday-makers are seeking the freedom of change: to walk instead of to ride; to think instead of to work; to talk instead of to listen; or even to hit the same golf-ball on a different course, or to see the same cricketer perform on a different ground. And even if the change is usually one of degree rather than kind, it is good and necessary for men to seek in recreation an antidote for the increasing nervous and physical strain of modern life.

The fixing of paid holidays for the 11½ million persons in employment in this country might, in the long run, be a sound investment, viewed from the narrowest standpoint of increased industrial efficiency alone; and it would be a notable reform of our social life. Future Factory Acts may apply the "paid week" or the "paid fortnight" to all workers. Meanwhile, as means and opportunities widen, variety in holiday fashions will spread; and we may eventually find solitude on beaches and crowds on the mountain tops.

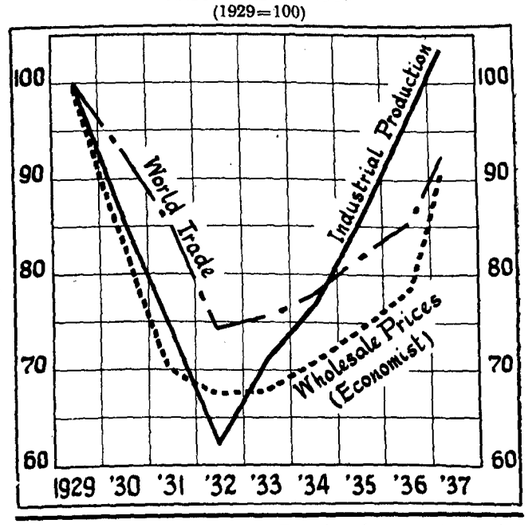
World Trade Recovery

WITHIN the last few months there has been an acceleration of the pace of world trade revival. The causes and probable duration of the movement may be controversial, but its extent is a matter of statistical record. The latest of the admirable surveys of the League of Nations* shows that during 1936 prosperity (or something so closely resembling it as to be indistinguishable from the genuine article) extended its beneficial influence to a widening circle of countries and industries. And in the first half of 1937, according to monthly figures compiled by the same authority, this tendency has been even more strongly marked. The moment, accordingly, is opportune for a survey, in broad perspective, of the course of production, trade and prices during the last eight eventful years.

The chart given overleaf presents the essential facts for such an inquiry, in graphic form. We are indebted to the League's statisticians for basic figures of the volume of trade and industrial production; the course of wholesale prices (in terms of sterling) is shown by our own index. We have used annual averages throughout, except for 1937, where the figures relate to the first quarter of the year. The production figures, unavoidably, exclude the output of the U.S.S.R.

The devastating effect of the slump, and the course of subsequent recovery, are strikingly revealed. Between 1929 and 1932 the volume of world trade declined by fully 25 per cent. and that of industrial production by nearly 40 per cent., while sterling wholesale prices fell by 32 per cent. Manufacturing activity, in other words, declined much more rapidly than international trade. All three indices reached their lowest level almost at the same time, and all three took an upward turn in 1932-33. Their subsequent movements, however, have been far from uniform. Trade and prices have advanced more slowly than industrial production. Last year, the production index was within 4 per cent. of the level of 1929, but the leeway was as much as 14½ per cent. in the volume of trade index, and 21 per cent. in the prices index. This year, however, both prices and international trade have taken a sharp upward turn, which has brought them within hailing-distance of the pre-depression level. The tardiness of their earlier recovery and the suddenness of their later revival alike demand special explanation.

* "Review of World Trade, 1936," League of Nations Publications, 1937. II A.9. 91 pages. 2s. 6d. British agents, Allen and Unwin.



To find a satisfactory explanation of these changes, we need to go back to the early years of depression. Between 1929 and 1932 industrial production and the wholesale prices of primary products both fell catastrophically. But the fall in the prices of primary products was considerably more marked than the decline in the prices of manufactures. The terms of trade, in other words, moved against primary producing countries, and the *volume* of trade in primary products consequently fell less steeply than in manufactures. The figures prepared by the League bring out the remarkable fact that the quantity of foodstuffs entering international trade in 1932 was only 11 per cent. smaller than in 1929. The volume of trade in raw materials and partly-manufactured articles, on the other hand, had declined by 18½ per cent. and the volume of trade in manufactured goods by no less than 49 per cent. Conversely, between 1932 and 1936, when industrial production showed a rapid expansion, the volume of trade in raw and partly-finished materials and in manufactures also advanced, while trade in foodstuffs tended to decline. By 1936, the gap, as compared with 1929, had widened to 14½ per cent. in the case of foodstuffs entering international trade, while in those of raw and partly-finished materials and of manufactures it had narrowed to 4½ per cent. and 24½ per cent., respectively. The further decline in food imports can be traced, in a large measure, to the policy of national self-sufficiency adopted by a number of countries, but the same policy has been less effective in restricting trade in raw materials and manufactures. A dictator may command his people to eat potatoes instead of wheat, and home-grown apples instead of bananas and oranges; but he cannot bring native supplies of tin, copper, nickel and iron ore into existence overnight by decree. And the re-armament policy of many countries has actually increased their imports of raw materials and certain kinds of manufactured goods.

Up to the middle of 1936, however, recovery in the prices of raw materials was delayed by the existence of large accumulated stocks. This factor has now largely ceased to operate; for surplus stocks of many materials have been exhausted and productive capacity has again been fully employed. And, as demand has continued to expand, prices at last have responded by rising sharply in recent months. Thus, the terms of trade are now turning in favour of primary-producing countries, which can command a larger volume of manufactures per unit of their exports of raw materials. Moreover, trade between industrialised countries is tending to increase owing to the decreasing ability of these countries to satisfy domestic needs from internal resources.

Scarcely a single country has failed to experience a substantial improvement in foreign trade during the past year. In the tables at the foot of this page we have set out the average monthly value of the imports and exports of the principal industrial and primary-producing countries in the calendar years 1929 and 1936, respectively. We have added a supplementary column showing the percentage rise in the figures for the first five months of this year as compared with the corresponding period of 1936, which in many ways is the most significant feature of all. The latest rise, it will be seen, has been common to both industrial and primary-producing countries. It has been conspicuous, naturally, in countries which have devalued their currencies during the last twelve months, but its dimensions have been almost equally striking in many other cases to which this explanation does not apply. Incidentally, the expansion in the figures for the United Kingdom, this year, has been less than in those of numerous other countries.

Present indications suggest that the underlying tendencies discussed in this article are likely to remain in

WORLD INDUSTRIAL PRODUCTION, TRADE AND PRICES SINCE 1929
(1929=100)

evidence in the near future. Despite the recent reaction in certain commodity markets, the trend of prices of primary products is still upwards, and the terms of international trade seem likely to move further against countries exporting mainly manufactured articles. The total volume of international trade may soon surpass all previous records, despite the many obstacles put in its way by tariffs, quotas, prohibitions and exchange controls—though trade per head of the world's population is still appreciably smaller than in 1929.

Nevertheless, in some ways, this newly-found prosperity rests on precarious foundations. Apart from the obstinate resistance of vested interests to any widespread removal of trade barriers, there is a lack of confidence in the political outlook, and vast armament programmes absorb a high proportion both of public revenue and of industrial activity. There, as the League's Economic Committee has pointed out, is a vicious circle which it is the task of statesmanship to break.

* Figures for January to April.

Nazi Economic Policy

ON July 3rd (page 6), we discussed the effect of Germany's re-armament, and her efforts to attain a wide measure of self-sufficiency in her production of minerals and metals. We now propose to consider the steps she has already taken to achieve her objective, and their implications both for herself and for other countries.

The restrictive economic regulations and decrees already issued under the Nazi regime make a formidable list. The first batch of regulations date from August, 1934. Subsequently, by a decree of April 28, 1935, quotas were assigned for the consumption of certain metals, based on the figures for the first quarter of 1934, and were fixed at 30 per cent. for copper, 10 per cent. for nickel, and 30 per cent. for tin. On May 2, 1935, the use was prohibited of copper, nickel, lead, tin, mercury, chromium or cobalt in any form for the manufacture of products for domestic use, except in unavoidable cases. This prohibition, however, did not apply to manufactures for export. Ordinances issued by the Reich Controller of Base Metals last October further restrict the use of non-ferrous metals in the building and machine construction industries. A set of six decrees by General Göring, regulating the recruitment of labour, came into force on November 6, 1936. These include provisions which tax employers who do not take apprentices, and compel establishments employing ten or more workers to take in specified numbers of persons above forty years of age. A law of December 1, 1936, against economic sabotage, provides the death penalty for persons who secrete money or property abroad. Another decree, of the same date, compels owners of mineral properties to conduct mining, prospecting or drilling operations when called upon by the authorities. All rights to work such properties, whether they have been conveyed by the State or have been acquired by contract, will be forfeited if the lessee fails to comply, within a stipulated period, with an order to begin or to resume mining.

Further regulations have been issued this year. A decree of January 26 last compels all private persons who neither manufacture nor trade in metals, to place any stocks of platinum, silver, copper, lead, nickel, tin, or zinc which they may possess (with some minor exceptions) at the disposal of the Boards of Control for Non-Ferrous or Precious Metals, respectively. Few hoarders of these metals seem likely to receive full commercial value for them, and some may lose as much as 50 per cent. of their original purchase price. Last, but not least, the measures announced last May Day allot quotas to the chief branches of the German iron and steel trades. The re-armament industry is given first preference, followed by machine construction, mining, shipbuilding, boiler-making and the motor industry; private house-building has a very low quota. Nazi control extends to all branches of economic life. Strikes are prohibited by legislation, and wage rates, for the most part, remain frozen at the levels of the depression of 1932. Last year the tax on companies was raised from 20 per cent. to 30 per cent., and other regulations include the subscription to a Government loan of all increases in dividends over 6 per cent. and all payments (whether increased or not) above 8 per cent. of par value, and provide for contributions towards a fund for subsidising national exports and for various measures intended to finance the Government's programme of work creation and re-armament.

Only last week-end, it was announced that a new State corporation—to be known as the Reichswerke A.G. for Mining and Smelting, under the name of Hermann Göring—has been set up under the Four Years' Plan, of which General Göring is the head, compulsorily to acquire mining rights and royalties in return for its own shares. Its aim is to unite concerns which have failed fully to utilise (however that is to be determined) Germany's own iron-ore resources, and to undertake that work on its own account; and in this way it is hoped to force the private concerns into greater exploitation of the poor quality German ores, or to do it by the new State corporation.

Germany is vigorously pressing her search for substitutes for materials she has hitherto imported under increasing foreign exchange difficulties. Plastic products are displacing metals; home-produced aluminium and zinc are replacing tin, copper and, to a minor extent, lead. Research is being largely centred on the metallurgy of an extensive range of light alloys and on the preparation of heavy metal alloys as substitutes for foreign base metals. Though plastics are mainly used for moulding purposes, they are increasingly competing with and displacing metals, porcelain and rubber. Last year Germany produced 55,000 tons of synthetic resins—this figure representing a seven-fold increase in three years. By their use she is dispensing with large amounts of lubricants. It is estimated that 40,000 tons of copper have been saved by using aluminium instead. The requirements of the Post Office for copper for overhead transmission lines declined from 58,400 tons in 1929 to 3,800 tons in 1936. Some seven tons of copper have been saved in the construction of every locomotive by State railway specifications. Phosphor-zinc ("Metallophos") is replacing phosphor-copper in refining operations.

Tin consumption is being reduced in a variety of ways. Tin foil has disappeared and aluminium has taken its place. For containers, non-metal coatings and aluminium are being used. A whole series of alloys, containing little or no tin, have been developed, such as the "B.N. Metall" for machine bearings. Tin may no longer be used in gas and water systems, and the employment of lead tubes for plumbing and sanitary work has been forbidden; in future, zinc-coated or bitumen-treated steel pipes will be used instead. In the manufacture of machinery, the possibility is being examined of the substitution of aluminium, steel or copper-plated steel for copper. Zinc is extensively replacing brass and bronze. A new zinc alloy, "Z.L.2," has been produced, which contains only 1½ per cent. of copper and 4 per cent. of aluminium. Other zinc alloys with a small amount of aluminium—called "Zamak"—are widely manufactured under an American licence. White zinc and lithophane are displacing lead paints. Cadmium is also being used as a substitute for tin; a new alloy of zinc and cadmium, for example, is believed to be superior for bonding sheet steel than welded jointing. Germany is already the world's leading producer of magnesium and its alloys, with an output of 35,000 tons of a world total of 50,000 tons. The alloy "Elektron" is extensively used in aircraft parts, and forms the core of incendiary bombs. For machining purposes it offers numerous advantages. With it, deeper cuts can be taken on a lathe, and a greater working speed maintained than with any other material, except wood.

We may proceed to review the conclusions suggested by this survey of Germany's economic policy. Her position is distinguished both for its strength and its weakness. For years to come Germany must necessarily import nearly half of her fuel oil requirements. She must needs supplement her meagre and low-grade iron ores from abroad and procure all her major ferro-alloy minerals from relatively distant countries. Despite her energetic policy of increased home production and substitution, she must still buy large quantities of tin, copper, lead and mercury. Her potash supplies are plentiful, and her requirements of nitrate can all be satisfied by the fixation of atmospheric nitrogen. About half her consumption of sulphur is met by her by-product industry. But her production of basic slag must be supplemented by phosphate imports, and foreign countries supply the bulk of her bauxite and beryl.

Undoubtedly, she has in part surmounted her deficiency in minerals, but only at a price. Her production costs are frequently high, and the erection of plants for her synthetic petroleum and metallurgical industries is estimated to have cost her Rm. 1,000 millions. Apart altogether from ideological questions, her unofficial, but extensive, intervention in Spain may be directly related to her deficiency in "strategic" minerals—such as iron ores, cupriferous pyrites, mercury, lead, manganese ore, phosphate, tin and tungsten—of which Spain is an important potential supplier. Her economic penetration of Morocco is being carried out with characteristic energy. The Riff iron mines and the less important lead mines near Mellila are in process of reorganisation by German experts and the ores are being despatched to Germany.

Since Herr Hitler announced Germany's Four-Year Plan, last September, her difficulties have increased. Up to, approximately, the end of 1936, her apparent shortage of metals, which exchange difficulties had accentuated, was due mainly to the fact that she was consuming (and possibly accumulating) raw materials on a very considerably increased scale. More recently, the exchange question has grown more acute, and metal prices have risen steeply in world markets. Her foreign trade is based on a series of bilateral transactions conducted in many cases under clearing agreements. The results of her economic excursions into Southern and Eastern Europe have so far been disappointing, and their relative failure explains Dr Schacht's approaches to Belgium for supplies of copper and vegetable oils from the Congo in exchange for German manufactures, and his expressed approval of the principle of economic *rapprochement* with Russia.

As yet, however, there is no sign of a change of heart, or even of emphasis, among those who control German policy.

Notes of the Week

Royalty Visits Ulster.—After their recent visit to Scotland it was natural that the King and Queen should also visit Northern Ireland. They spent Wednesday in Belfast, and the occasion was marked by fervent demonstrations of loyalty. Before the visit, however, bomb outrages on the railways at the frontier with the Irish Free State were perpetrated by associates of the Irish Republican Army, in order to prevent persons from the Irish Free State going up to Belfast for the occasion. It is unfortunate that the relations between the neighbouring and nearest British Dominion, the Irish Free State, and the United Kingdom have still not improved sufficiently to enable a Royal Visit to be made there. The evil effects of the tariff war, Mr de Valera's and the Irish Republicans' explicit antipathy to the crown as a symbol of the Commonwealth, and their agitation for a United Ireland including the six counties, combine to perpetuate the ill-feeling. There was a time, long before Home Rule, when Queen Victoria's Ministers advised her against making a visit to Ireland. She went, and the visit was an amazing success. A repetition of this in our day seems remote. British sentiment towards the aims and activities of Mr de Valera's Government is more sympathetic than it was a few years ago. Is it too much to hope that his Government will show a more accommodating, less frigidly formal attitude in the future?

* * *

Our National Defences.—The Liberal Party were commendably enterprising on Tuesday in using their right to choose a Supply Day debate to pursue an inquiry about the state of the Government's plans for defending the domestic population in time of war. Sir Archibald Sinclair, in moving a reduction of £100 in the Vote for the salary of the Minister for Co-ordination of Defence, observed at the outset that Sir Thomas Inskip had been given neither executive authority nor responsibility for financial allocations between the Services. The Liberal Leader asked about the state of our home defences against aerial attacks by bomb and gas, and about the re-location of key industries and factories; urged that vulnerable areas should be scheduled and special provisions made for their inhabitants; and inquired about the switching-over of food and other supplies from Eastern to Western ports. Mr Lees-Smith, who followed for Labour, supported Sir Archibald's contention that Sir Thomas's powers were not great enough, and went on to emphasise our need to improve anti-aircraft equipment. Mr Churchill, in trenchant mood, observed that if we could be sure of peace for seven or ten years, the ground might master the air and remove the blackmailing terror of marauding aircraft; meanwhile, he supported Sir Archibald's inquiries, and repeated his own earlier request for details about the guns opposite Gibraltar. Sir Arthur Salter urged the need to distribute inland storage of foodstuffs at less vulnerable points, and asked for financial and administrative action to enable adequate stores for more than the proverbial six week's supply to be built up.

* * *

Sir Thomas was at pains to extricate himself from alleged responsibilities for all kinds of defensive work and planning. He was only there, he said, to co-ordinate, to keep Service plans in close concert, and to hold the activities of the multifarious branches of the Committee of Imperial Defence together. On the more detailed side of home defence, zoning the country had already been done, and the dispute over financial responsibility with local authorities would not arrest the execution of plans, some of which, especially for defence from aerial attack, had shown remarkably successful results. Sir Thomas said the guns opposite Gibraltar were no real menace —though if they were part of "a larger design" against British interests the question would have to be differently approached. This reply roused Mr Amery to indignation at its inadequacy; and the House as a whole, though it rejected the Liberal motion by 306 votes to 141, was manifestly disquieted and dissatisfied, not with Sir Thomas, but with his office, its scope, and the evasive nature of the Government's pronouncements. On Thursday, Sir Samuel Hoare retrieved the situation by announcing that a Bill was being drafted to put Government expenditure on air-raid precautions on a statutory basis, and that local authorities would be brought into conference. The Bill would be retrospective to January 1st of this year.

* * *

Twenty Years After.—Mr A. P. Herbert's Marriage (Matrimonial Causes) Bill was accepted by the Commons on July 23rd, with all the Lords' amendments. This signal success of a private and independent member of the House was greeted with a salvo of Parliamentary cheers; and Mr Herbert has since been the recipient of nation-wide congratulations. When the amended Bill was debated by the Commons, a general sympathy with its sponsor for his gallant and determined campaign was evident. The House had clearly decided not to stymie on the last green a measure which had been driven on a long handicap through the rough and bunkers of private-member procedure. There was an evident feeling that public opinion was now largely behind Mr Herbert in his efforts to implement the reform proposals of the Royal Commission, which recommended the mitigation of the divorce laws twenty years ago. The fears of a British Reno expressed by critics of the Bill are not likely to be realised. There will inevitably be an immediate rush to take advantage of the measure by unfortunate people who for years have had no redress. But once the retrospective effects of the Act have been worked off, the institution of marriage will be subjected to no threat; and the social sign of Mr Herbert's work will be, not licence or levity, but probably greater happiness in marriage.

* * *

Reactions in Palestine.—The proposals for the partition of Palestine are now before the Mandates Commission of the League. Meanwhile the debates of last week in the British Houses of Parliament have had some interesting reactions in Jewish and Arab circles. Perhaps the outstanding feature of the debates was that, in spite of the universal hesitation to accept partition, scarcely anything in the way of constructive alternative was put forward, except by Lord Samuel. His suggestion that Palestine be governed by a federal council, under which each community would manage its own affairs, and that the Jews accept an over-riding limit on immigration which would secure that their number would never exceed a certain minority percentage of the Palestine population, has been received with a great deal of favour in Arab quarters, but has been bitterly denounced by the Palestine Jews. The latter deplore the lack of parliamentary criticism of the immediate restriction of Jewish immigration to a rate of 12,000 a year, although it appears that uncertainty about the future is already acting as a natural check on immigration. Arab intransigence has been somewhat weakened by the non-committal attitude of neighbouring States, except Iraq, and on both hands there appears a greater readiness to discuss practical compromises. The idea of a Round Table Conference is gaining favour. Partition may yet prove, like the Judgment of Solomon, more effective as a threat than as a solution.

* * *

The Congress and the Moslems.—The primary effect of the Congress acceptance of office in the Indian provincial Governments has been an immense improvement in the political atmosphere of the country. A secondary and minor effect has been a revival of the differences between the Moslems and the Congress, which is predominantly Hindu. The latter has been anxious to assert the national character of its mission by including Musselmen in its Ministries. In some provinces it has been successful; in others, such as Orissa, where none of the Moslem members of the Assembly has been willing to accept the Congress ticket, the quest has had to be suspended. Certain Moslem organisations actually appealed to the Governor of Orissa to use his special powers to secure the representation of their community in the Cabinet. He replied that the suggested course was impracticable, and that he had no reason to believe that the legitimate interests of the Moslem minority would suffer through their not being represented among the Ministers. There is clearly a sharp difference of opinion among Moslems themselves. Mr. Jinnah, the President of the All-India Moslem League, has denounced those members of the League in the United Provinces who, it was reported, were about to link up with the Congress, declaring that if they had a shred of conscience they would resign their seats and seek re-election under their new colours. He spoke with scorn of the "stray Moslems here and there" who had accepted office in Congress Ministries; the League was better without men who betrayed their community for the sake of jobs.

* * *

Unemployment Assistance.—The second annual report of the Unemployment Assistance Board for 1936 has been the more eagerly awaited because it includes the period, from November 16th, in which the Unemployment Act of 1934 was first fully implemented. The 1934 Act was intended to co-ordinate under the Board the relief of all able-bodied unemployed, whether insured or not; but the Board's much-criticised Regulations were suspended under the "standstill" arrangement of February, 1935, and did not become fully effective, in a revised form, until November of last year. This administrative change is, however, almost obscured in the report by evidence of the effect of industrial recovery upon long-period unemployment. The cost of payments, which was £42,607,000 in 1935, fell in 1936 to £39,297,000. The effect of the new Regulations was to increase the average allowance from 23s. to 23s. 9d., and actually to raise 37 per cent. of the assessments. The number of applicants in Great Britain fell from 735,665 on January 20th, 1936, to 603,734 on December 14th, a decline of 16.3 per cent., which was greater than the fall in unemployment among the insured in the same period. This demonstration of a definite decline in long-period unemployment is a useful comment on the static analysis of unemployment in the Special Areas recently made in the *Ministry of Labour Gazette;* and shows that the long-unemployed are not in the main unemployable. As the Board claim: "the generality of applicants . . . are no different in character and aptitude from the claimants to unemployment insurance benefit or the persons employed."

* * *

Derelict Unemployed.—Industrial recovery, states the report of the Unemployment Assistance Board, has been unavailing to help three classes of workers: young men without training or experience, men with their health and vigour sapped by enforced idleness, and older men over 45 years of age. Many of the young men in mining areas and large industrial centres have never worked, and are often reluctant to enter the courses of training offered by the Board. The men over 45 years of age, and especially the 25 per cent. over 55, are unlikely to obtain work again. Thus, their allowance becomes a pension for old age, and the importance of providing amenities for their idleness — clubs and allotments — is urged by the Board. The persons deficient in health and vigour are able-bodied and not sick, but unlikely to be taken on by employers. Here is a task for the national health services and the experts in physical fitness and nutrition. Not only are there these derelict and difficult classes of persons in receipt of assistance, but also derelict and difficult areas. While the number of applicants fell in 1936 by 30 per cent. in Birmingham and 29.8 per cent. in Middlesbrough, it fell by only 3 per cent. in Carlisle, 7.4 per cent. in Cardiff, and 7.8 per cent. in Swansea, compared with a decline in Great Britain of 16.3 per cent. The most deeply affected is the aged coal miner, whose unhappy prominence was underlined in the Ministry of Labour's analysis of the Special Areas.

The Means Test.—The difficulties of the Means Test, which aroused a storm two years ago, have been overcome as far as possible. The Unemployment Assistance Board have walked warily; they have provided, in the words of their annual report, "a period of transition from the local standards which had formed the basis of transitional payments to the general standard of the revised Regulations." In the beginning they were assailed as bureaucrats. Accordingly, by an extensive and flexible use of Advisory Committees under the 1934 Act, they have added local knowledge and a personal touch to the enforcement of their Regulations. Not all the acute administrative problems of the past have gone. The average allowance of 23s. 9d. is not large in view of movements in the cost of living, and the allowances for large families still fall short of the B.M.A. standard. The Means Test is still inherently unpleasant to apply, although there is now more elasticity in the assessment of family resources. On the whole, however, the Report suggests the conclusion that the Government's plan " to take the dole out of politics " has been more successful than at one time seemed likely.

* * *

The Government's Milk Policy.—A White Paper was issued on Thursday evening with the details of the Government's decisions on the very vexed question of milk policy. The most important recommendation of the recent Reorganisation Commission was that the legal power of price-fixing should be taken out of the hands of the producer-elected Marketing Boards and entrusted to an independent Milk Commission. Reason and public policy stood behind this proposal; but the vested interests, both of the farmers and of the large distributors, were opposed. The vested interests have won. There is to be a Milk Commission, but its powers are to be purely those of recommending and reporting. The bulk of the White Paper is concerned with the conditions under which public money will continue to be provided for the milk industry. There is to be a scheme of " price-insurance " to prevent a serious drop in the price of manufacturing milk. Exchequer payments will be made if the average prices of imported butter and cheese fall below 100s. and 56s. a cwt. respectively. (The present prices are about 115s. and 72s. a cwt.) The Exchequer is also to contribute part of the funds for the payment of premiums for accredited milk, tuberculin-tested milk and milk from attested herds. These payments are estimated to amount to nearly £2,000,000 in 1939-40, but the scheme is so designed that the cost will fall off thereafter. The White Paper envisages the continuance of the Milk-in-Schools programme and promises further proposals for securing cheaper milk for maternity and child welfare centres. There is also a vague reference to " provisions to facilitate the improved organisation of the distributive service." Many of these proposals are subject to commendation or criticism in detail. But the major disappointment of the White Paper is that it completely misses the opportunity to affect that thoroughgoing overhaul of the present illogical and inequitable organisation of the milk market which is so patently necessary. It is apparent that we are to continue to be " more planned against than planning."

* * *

Non-intervention Extraordinary.—The procedure on the British plan to patch up controlled non-intervention in Spain has gone through yet another metamorphosis in the last week. Like a musical work by a minor composer, it does not easily reach a conclusion, but goes on in fits and starts, now on this new theme, now on that; and it seems that when it does finish it may be on an unharmonious compromise between discords. Last Sunday it was announced that the British Government, in order to escape from the deadlock into which the German and Italian attitudes had plunged the plan by refusing to discuss belligerents' rights before discussing withdrawal of volunteers, had decided to ask forthwith the other twenty-six Governments on the London Committee to accept or reject the plan as a whole, by giving specific replies before noon on Thursday of this week to seven questions summarising the salient features of the plan. Count Grandi had a long talk with the Prime Minister on Wednesday; and, largely as the result of it, Italy notified her acceptance of all points in the questionnaire on Thursday. But, with Germany, Italy reserves her attitude over belligerents' rights and withdrawal of volunteers—which is taken to mean that these Powers make acceptance by both sides in Spain of any detailed proposals a condition of their own agreement. The British Government have been widely expected to seize the occasion of the Parliamentary recess to conclude some kind of a deal with the German and Italian Governments without fear of exacting scrutiny; but there is as yet little reason to believe that the Government have any intention of embarking on a course which would isolate them from France and rivet them to the Rome-Berlin axis. So far they have stood firm on their demand that the withdrawal of volunteers should be certified as having made substantial progress before belligerents' rights are accorded.

* * *

Activity over Spain.—During the past week the bitterest fighting of the Spanish conflict has been taking place on a wide front round Madrid. The Government's drive to the south-west, which at one time went so far as to recapture Brunete, was checked this week by a violent counter-attack along the insurgent's line of positions from Teruel up to Guadalajara, and from the Guadarrama range round to the south-east of the capital. Vast numbers of Moors, Spaniards and Italians, and of German and Italian aircraft and artillery were employed by the insurgents, who reduced many of the Government's advanced posts to ashes. In the air, the Government seem to have held their own by summoning every machine into action; but this has left Barcelona, Valencia and the Basque country denuded of Government aircraft, and severe bombing from the air has occurred there; in Barcelona, it is reported that civilians have been machine-gunned from the air by German aircraft in the service of the insurgents. The aim of the insurgent forces is to strike to the coast from the Guadarrama, separate Barcelona, Madrid and Valencia from one another, and then roll up each section of Government territory in the way Vizcaya has been rolled up, piecemeal. But the Government forces are now showing that, despite divided counsels at home, they are more effective militarily than they were. They are holding the insurgents; and despite big losses on both sides, anything approaching a final decision in the field before winter puts an end to operations seems now beyond the bounds of possibility. This is the worst of the outlook before General Franco.

* * *

On the Razor's Edge in China.—Another week has passed without our seeing Japan and China formally at war with each other; but that is the best that can be said. Peace has already been broken in many places, and the *détente* which appeared to have been achieved at the close of last week has since been reversed by wild outbreaks of fighting. Meanwhile, Mr Eden has announced in the House of Commons that the forthcoming Anglo-Japanese conversations have been put off pending an improvement in the situation in North China. While conversations have been continuing at Tokyo between the Japanese Foreign Minister and the Chinese Ambassador without success, and while Japanese military preparations have been continued without being carried to the length of a full-dress mobilisation, the reported agreement between the Japanese military authorities on the Continent and the Hopei-Chahar Political Council seems to have been locally torn up. This agreement was said to have been reached on the 19th and to have been kept secret for fear that its terms, if published, would produce an explosion of Chinese feeling, and goad the Government at Nanking into action under penalty of an intolerable loss of face if they were to let such a surrender pass. However that may be, the Chinese Thirty-Seventh Division—the troops who had come into conflict with the Japanese in the first instance, and whose withdrawal was the crucial point in the Japanese demands—seem to have made the issue a question of military honour and to have refused to budge. Fierce fighting has broken out again both at Wangping, north-west of Peking, and at Langfang, down on the Peking-Tientsin Railway. By far the most serious engagement, however, took place on Thursday when, in the early hours, Chinese troops tried to capture Japanese military positions outside Tientsin. Wholesale fighting occurred; the Japanese aircraft reduced districts of the Chinese city to ruins; and Japanese artillery completed the work. Eventually the Chinese troops fell back. Meanwhile in Peiping the Japanese succeeded in forcing the General of the recalcitrant Chinese 29th Army and the Mayor of the city to retire to Paotingfu, 80 miles off; and they then set up a regime of their own. This reduces the risk of general war; but President and Marshal Chiang Kai-shek has yet to declare his hand.

* * *

President and Senate.—Mr Roosevelt's obstinate attempt to drive his plan for the reform of the Supreme Court through Congress has ended in defeat at the hands of the Senate. On Friday of last week it became finally clear that a majority could not be secured even for the compromise Bill which would have limited his new appointments to the Court to one a year. His supporters were compelled to agree to the substitution of a second compromise Bill which confines itself to reforms of procedure and leaves both the size and membership of the Supreme Court untouched. That this is a clear defeat for the President is undoubted. That it is his own fault is only slightly less certain, as it is very probable that, if he had been ready to compromise at an early stage of the controversy, he could have obtained a great deal of what he wants. The President has much with which to console himself. He has frightened the Court into a mood of liberalism, and by so doing he has probably protected his policies from further sweeping judicial vetoes. He has persuaded one Justice to resign, and it will surprise nobody in Washington if further resignations soon follow. The Court remains untouched, but it is not likely to be nearly such an obstacle to the New Deal in the future as in the past. It may very well turn out that Mr Roosevelt has won a victory in substance, even though he has suffered a very sharp defeat in form.

* * *

The outcome of this bitter controversy illustrates once more the peculiar position which the Constitution, and the Supreme Court as its guardian, occupy in American political life. As is pointed out in a special Survey of the American scene, printed on pages 238-242 of this issue of *The Economist*, constitutional arguments in the United States are based upon fundamental dogmas which are matters of conscience rather than of reason. Every country has these articles of religion which are unintelligible to foreigners; they must be accepted rather than understood. Englishmen will need henceforth to accept the United States' veneration for an antiquated and illogical Constitution in the same spirit as Americans accept Britain's retention of a monarchy to which the same epithets have frequently been applied.

* * *

Church and State in Jugoslavia.—The dramatic conflict between Church and State in Jugoslavia has had consequences that may have a deep and enduring effect upon the history of the country. On July 23rd the Lower House of the Parliament at Belgrade passed all three readings of the Bill enacting the new Concordat with the Vatican by 167 votes to 127; in the early hours of the following morning, the Patriarch, Varnavas, of the Serbian Orthodox Church, died; and the coincidence of these two events has excited the feelings of the Orthodox to fever heat—the more so as they believe that the Patriarch died of a broken heart. The Bill was not passed without three expulsions and ten resignations of deputies from the Government party; and last Sunday the Serbian Holy Synod, which is the governing body of the Serbian Orthodox Church, retorted by excommunicating all members of the Government and of Parliament who voted for the Bill or worked for it. The deadly earnest of this ecclesiastical ban became apparent when the Minister of Justice, Dr Subotic, who is the leader of the Dalmatian Serbs, was turned out of the Orthodox cathedral at Belgrade by the ecclesiastical authorities as he was attempting to pay his respects, on the Government's behalf, to the coffin containing the body of the Patriarch. The Holy Synod have refused the Government's offer to give the Patriarch a State funeral; and a Belgrade deputy who came to sign the book of the Patriarchate as a would-be conciliatory gesture, was recognised by the crowd as a supporter of the Concordat and was badly beaten up. It is thought that those pro-Concordat deputies who represent districts where the population is Orthodox will now hardly venture to visit their constituencies. Officially, nothing more will happen till the Bill comes before the Senate in the autumn.

* * *

The position is paradoxical in the extreme. Dr Stoyadinovitch and Father Koroshetz have tried to placate the Catholic Croats by the Concordat without offering them their desired measures of autonomy and popular liberties. They have failed; for the Croats, more mindful of constitutional than religious liberties, have used the popular ferment among the outraged majority of Orthodox Serbs to make an alliance with the Serbian Opposition; and, finally, the Government have antagonised the Serbian people by the Concordat—Moslems as well as Orthodox and Jewish Serbs. Many people were killed by the police at the funeral procession on Thursday. All Orthodox Ministers save the Minister for War—the Army has been against the Government's flirtation with Italy—have to take a religious oath. Their position in the country has been rendered virtually untenable. It seems that the retirement of the Prince Regent, Prime Minister, and of Father Koroshetz, the Minister of the Interior, from Belgrade to the country is more than diplomatic. We may soon see another Government in Jugoslavia; and next time it will be hard for Dr Stoyadinovitch to retain the confidence of both Prince Paul and the country.

A Royal Economic Project.—King Leopold of the Belgians has taken an interesting initiative in the economic field. On Friday of last week he addressed a letter to his Prime Minister, M. Van Zeeland, urging the need for an economic organism to study the fundamentals of a free and co-operative world economic organisation. The King's letter says such an organism should be characterised by its universality, permanence, and independence of national influences; and he emphasises the need for close economic collaboration between the nations, on a footing of equality, at a time when they stand in such great danger of becoming irreconcilably split into two antithetical political groups. M. Van Zeeland's final discussions with his coadjutor, M. Maurice Frère, are now taking place on the draft report which is to be presented to the British and French Governments, who first charged M. Van Zeeland with his mission to inquire into the first necessary steps to freer trade. While the spirit and aim of King Leopold's initiative is wholly commendable, it is to be doubted if yet another fact-finding international commission is the best step towards a freeing of trade from its restrictions. We have had plenty of such impartial inquiries—permanent at the League of Nations' economic secretariat, temporary at world economic conferences since 1927 up to the present Committee on access to Raw Materials, the International Chamber of Commerce's Congresses, and M. Van Zeeland's own inquiry—and each has been frustrated by the lack of political will in the various governments to implement the unanimous findings of economic experts from all countries. There is much to be said for permanent convocation of the different nations' economists at some central organisation; but these same experts' views would necessarily be those put forward at Geneva and in other international bodies. The International Chamber of Commerce which has just concluded its Congress at Berlin with eminently sane and practicable conclusions on the very points emphasised by King Leopold. There is a real danger by this time that the drive for freer commerce will become dissipated in repetitive and redundant fact-finding committees. Virtually all the facts relevant to the first steps towards freer trade are already known. If King Leopold's proposed organism would galvanise governments into willing and achieving the aims set before them by economic experts, it would be eminently worth setting up. Otherwise, in default of these governments' goodwill, it is likely to be either sterile or unnecessary. In this matter, and by this time, deeds, not words, are wanted.

* * *

The Film Quota.—The White Paper containing the Government's proposals for legislation to replace the existing Film Quota Act shows that the Board of Trade has, in the main, followed the line of least resistance by including those proposals which are likely to arouse least opposition in the industry. The main principle of the quota remains. The chief amendment is the so-called "quality test," designed to prevent the inclusion in the quota of so-called "quota quickies," which have no entertainment value whatever. In future, a film which has cost less (in labour cost) than £1 a foot or £7,500 in all is not to qualify for the quota unless it is approved as having especial merit. This test of cost is unsatisfactory. The proviso will let through the cheap but good film, but it will not exclude the dear but bad. The Board of Trade has, however, come to the conclusion that any other method of establishing a standard of quality would come up against insuperable practical difficulties. An attempt is also made to assist the export of British films. It is to be provided that any renter who distributes a British film abroad is to be relieved of a corresponding proportion of his obligation to distribute British pictures in Great Britain. In other words, if the American firms show British films in America, they are relieved of the necessity of making films in this country. Whether this provision — or any of the others — will have the desired effect, remains to be seen. But it is typical of the complicated paternalism of the whole scheme. Ten years of the existing Act have not encouraged the layman to accept the argument that protection of the British film industry will produce a plentiful supply of good British films. In these circumstances, is it really in the interests of the British public not merely to maintain the quota but to increase it?

* * *

Higher Railway Charges. — After hearings which lasted sixteen days and are estimated to have cost £100,000, the Railway Rates Tribunal have granted the application of the amalgamated railway companies for an increase from October 1st next of 5 per cent. on standard and exceptional charges. The increase, however, is subject to certain provisions, whose broad effect is that charges of less than 10d. per ton for merchandise and coal, and of less than 5d. for workmen's tickets, will not be increased. The companies' suburban passenger fares within the London Passenger Transport area are unaffected. The decision, indeed, was more or less a foregone conclusion, once the railways had succeeded in establishing the fact that the proposed increases would lessen the gap of about £16 millions between their contemporary net revenue and their standard revenue under the Railways Act of 1921. In his evidence during the hearings Sir Ralph Wedgwood, for the railways, produced certain figures which may thus be summarised:

FOUR MAIN LINES—COMBINED ESTIMATES.

	£
Revenue.	
(1) Total Revenue, all sources, 1936	162,384,907
(2) Estimated Revenue, 1937, on existing rates and charges	169,109,000
Estimated Increase	*6,724,107*
(3) Revenue in full year, presuming addition of 5 per cent. to charges†	174,718,700
Increase, as compared with (2)	*5,609,700*‡
Working Expenses.	
(4) Working Expenses, 1936	126,654,346
(5) Estimated Expenses, 1937*	133,654,346
Estimated Increase	*7,000,000*
Net Revenue.	
(6) Net Revenue, 1936	35,730,561
(7) Estimated Net Revenue, 1937, before increased charges [(2) less (5)]	35,454,654
(8) Ditto, presuming Revenue as in (3).....	41,064,354

† Apparently allowing for increased charges in a full year, in terms of estimated revenue, in 1937.

‡ Of which £5,333,593 within the jurisdiction of the Railway Rates Tribunal.

* On present known conditions for prices and wages.

The figures are necessarily tentative. The course of future gross receipts and, still more, the effect of a probable further rise in material and wage costs are both incapable of precise estimation at this stage. Renewals and maintenance charges—especially for timber and steel—and fuel costs, particularly for coal, have already increased, and will rise even more sharply in the near future when the benefit of existing long-term contracts expires. The decision of the Staff Tribunal on the Unions' application for improved wages and working conditions will not be known until after the holiday ; but it is a safe assumption that the railways have already taken into consideration the possibility at least of the reinstatement of the final 1½ per cent. of the 1931 "cut."

* * *

Effect on Revenue.—A final factor is the precise increase of revenue which the 5 per cent. surcharge will bring. Apart from the low-rated traffics which are unaffected by the decision, it may be presumed that the application by the railways of their new powers will be determined by strategic as well as arithmetical considerations. The companies are apparently satisfied that passenger fares can carry a moderate increase. And, even so, the amount paid per mile by the average passenger will still be well below the effective rate only a few years ago. The facilities which have steadily increased the high proportion of passenger traffic carried at less than full fares—particularly the institution of penny-a-mile monthly return tickets throughout the year—have been equivalent, in effect, to a progressive lowering of passenger fares. The present decision is the first serious break with that policy. On the goods side the railways will be anxious to lose as little as possible of any traffic which happens to be particularly vulnerable to road competition, such as the carriage of newspapers and periodicals. In theory, the application of the permissible increase may be general; in practice, the railways retain their power to quote exceptional rates. Sir Ralph Wedgwood's estimate of a net benefit of £5,300,000 already represents a substantial whittling down of a purely arithmetical increase, on a basis which we indicate in a Note in our Stock Exchange Section on page 255. The companies' spokesman before the Staff National Tribunal has already suggested that the estimate may be lowered further. If the eventual figure is in the neighbourhood of £4½ millions (which is not unlikely), stockholders may wonder if it will leave much over after a potential rise in wages. The days of high dividends are not yet.

* * *

Industry this Week.—With the approach of the holiday there has inevitably been some slackening of the *tempo* of business activity; but the indications are that the decline has been of less than normal seasonal dimensions. In iron and steel, for example, the supply position remains almost as stringent as ever. New business, however, has been reduced by holidays and by the difficulty of finding manufacturers who can accept orders for reasonable delivery. The strength of the market in industrial grades of coal and coke is a reflection of the sustained needs of British industry; but business in house coal is seasonally quiet. Outputs have been affected by holidays in Scotland and by strike troubles in South Yorkshire. In contrast to the normal seasonal trend, output of rayon yarn and waste, according to the *Board of Trade Journal*, rose by no less than 1,880,000 lbs. to a peak of 14,060,000 in June. The cotton industry, on the other hand, is passing through a quiet spell. Buyers are operating from hand to mouth in consequence of the bearish outlook for raw cotton prices; and new business was very restricted this week. In the jute trade, also, a quiet spell is being experienced, the main factor being holidays among producers.

* * *

Outlook for Wheat.—At this season the world's wheat markets are mainly under the influence of North American crop news. And in recent weeks Canadian weather reports have been making the headlines. Hot, dry weather has caused a progressive deterioration of the Dominion's growing crops and it is highly unlikely that 200 million bushels will be harvested from the prairie provinces, against an abnormally small crop of 212 million bushels last year. If this modest outturn is achieved Canada's new crop surplus will amount to less than 100 million bushels. In the United States, on the other hand, the winter wheat crop has been yielding excellently; and, apart from a certain amount of rust damage, the condition of the growing spring wheat is satisfactory. Broomhall accordingly puts the total United States output at 850 to 900 million bushels—which would give an exportable surplus appreciably larger than that of Canada. Meanwhile, among the importing countries, a poor harvest is indicated in Germany, Belgium and parts of France, with the prospect of a good outturn in Italy and Greece. The carry-over from the present season will certainly be small and the coming season's requirements may be little more than covered by the new crops. In the circumstances the recent rather irregular recovery in Liverpool prices from a low level of barely exceeding 8s. per cental to a present figure of over 9s. 6d. appears soundly based. Actually, the tendency of the markets has been reactionary this week, on better Canadian weather news, but a moderate further rise in wheat prices may well occur.

* * *

Parliament and Prices.—The debate in the Commons on July 28th about the movement of the cost of living, distinguished by an incisive and objective speech by Mr Grenfell, scarcely aroused the attention it deserved from a jaded House. Mr Grenfell's thesis was that the cost of living in the past four years had risen unduly in relation both to wage levels and wage movements. On the one hand, many workers were living on the verge of poverty. Coal-miners, for instance, earned an average of only £130 a year, which left little margin for advancing prices. This point was emphasised by Mr Graham White, who stated that, whereas the minimum weekly expenditure on food for proper nutrition according to the British Medical Association was 7s. per head, some 4½ million people actually spent only 4s., and another 9 million only 6s. Mr Grenfell further urged that it was untrue to say that recent increases in wages had kept pace with the rising cost of living. Since 1933, the cost of living index (based on 1914 = 100) had advanced 17 points, representing an increased national expenditure of £255 millions and a rise in working-class expenditure of at least £155 millions—extremely tentative calculations.

* * *

It is notoriously difficult to assess the money value of wage increases over a period of years; and in starting at 1933 Mr Grenfell chose the most favourable basis for his own argument. But, from Mr Colin Clark's computation that total wages rose some £60 millions between the end of 1933 and the close of the first quarter of 1936, and the Ministry of Labour's calculation that between the end of 1933 and the end of 1936 some 4–5 million workers received wage advances totalling perhaps £40 millions, it seems unlikely that the total increase has been so great as Mr Grenfell's estimated increase in working-class expenditure. But the wage increases of the last 3 years have been largely concentrated in the last 18 months, and the *tempo* of wages has probably been recently as great as that of prices. While it is true that potatoes have gone up 40 per cent., bacon 30 per cent. and bread 33 per cent. in the last four years, it is also true that (as the chart in the following Note shows) food prices have risen less than the general index of cost of living since 1920. While undoubtedly, as critics of the Government argued, the policy of protection and regulation has levered up food prices in recent years, part of the current rise is due to the fact that food prices fell much more rapidly than other prices in the depression years. The restoration of remunerative levels for primary producers is a necessary condition, as Government spokesmen pointed out, for the re-establishment of international prosperity. More.

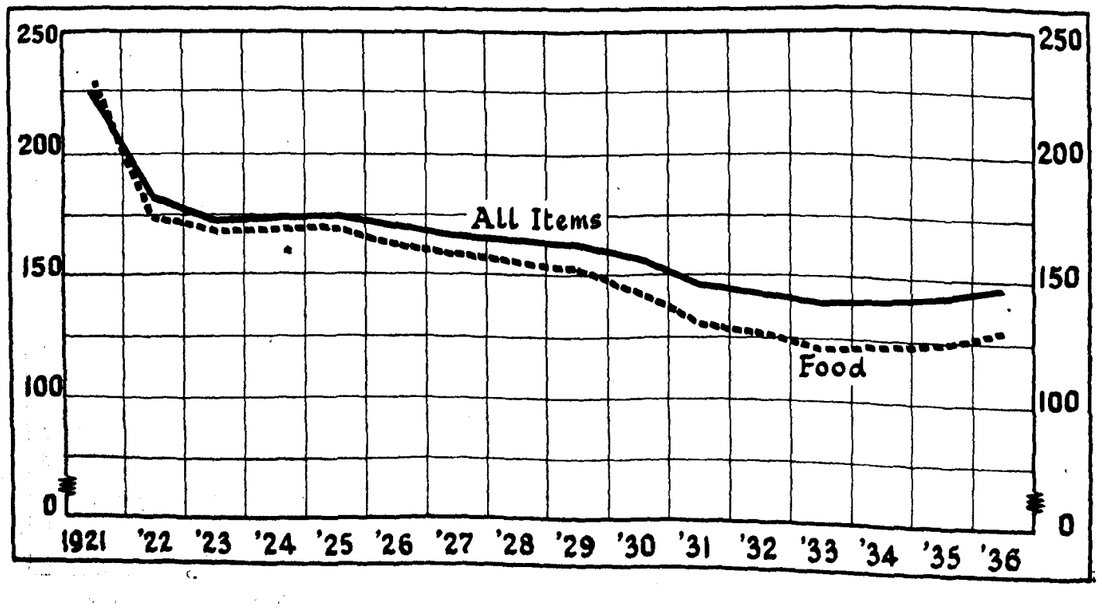
over, both earnings and employment are very much higher than they were three or four years ago, which is not reflected in any mere analysis of wage rates. Nevertheless, proper nutrition and an adequate supply of necessaries are the foundations of working-class health and happiness. While lower real wages and full employment may be socially preferable to high real wages and high unemployment—if the community must choose between two evils—the figures cited by Mr Grenfell are at least a salutary warning.

* * *

The Cost of Living.—By way of a footnote to this week's Parliamentary discussion, we reproduce below a chart tracing changes in the cost of living since 1920. The continuous line represents the Ministry of Labour's complete index (July 1914 = 100) which covers food, rent, clothing, fuel and light and miscellaneous items; while the dotted line represents food prices only. Compared with the pre-war period, the rise in food prices during the period under review has been less than the advance in the cost of living as a whole. After the collapse of the post-war price boom, both curves had an approximately stationary trend until 1925, when the return to the gold standard ushered in a period of deflation. With the onset of the depression in 1929 the fall became steeper, and food prices declined more rapidly than the complete index, since foodstuffs were largely imported. Both curves have risen gradually since the end of 1933 and the upward movement is now gaining momentum. The complete index for July was 155, against 146 a year ago, while the food index rose to 140, compared with 129 in July, 1936.

* * *



Australia and Anglo-American Trade.— Mr Lyons has let the cat out of the bag. Many people had wondered why the Imperial Conference, which was launched amid fervent generalities about the need for economic appeasement, could not proceed beyond generalities in its conclusions — especially as its members had had before them the vitally important concrete proposals for an Anglo-American trade pact. The Australian Prime Minister has now admitted that the chief blame for this indecision did not lie with the British Government. The latter considered, he said in a statement a few days ago, that an Anglo-American agreement would demonstrate to the world that Empire preference, which had done so much to promote trade within the Conference, was not an obstacle to the improvement of trade outside it. The Australian delegation had replied that they could not consider modification of the Ottawa treaty without going into the whole question of revision, or of substituting a new Anglo-Australian agreement altogether. Australia had also declared that her attitude to any such proposals would be determined by the prospects of obtaining increased markets—a vital consideration. She viewed with great concern the American demand for lower tariffs on goods on which Australian producers now enjoyed a preference. It is, indeed, difficult for a government with a general election in prospect to take anything on trust, and perhaps it is as well that the difficulty should be frankly exposed.

* * *

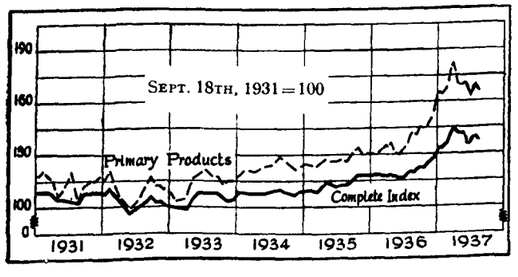
Proposed Tin Buffer Pool.— Propaganda for the establishment of a tin buffer pool, which has been in progress for a number of weeks, has changed to bitter controversy in these last few days. More or less interested parties have made statements for and against the proposed pool, but the attitude of the International Tin Committee is still uncertain. It is scarcely conceivable, however, that the Committee would contemplate a revival of the ill-advised and ill-managed buffer pool of 1934, which brought disorder to the tin market and produced violent and dangerous fluctuations in tin prices. The Committee's policy has lately been, by general agreement, liberal and far-sighted, but the relative inflexibility, both of production and of consumers' demand, has prevented any significant relaxation in the market position. The formation of a reserve stock may be under consideration as a means of making the Committee's policy more effective. But all the countries, except Malaya, are well in arrears with their quotas and have little chance of making up the leeway within the next few months. Total supplies from restricting and non-restricting countries are only large enough to cover current requirements, and the accumulation of a pool from current production would greatly increase the existing scarcity of supplies. As Malaya is at present the only country which is producing at a satisfactory rate, she would necessarily provide the bulk of the pool

FOOD PRICES AND THE COST OF LIVING

(Ministry of Labour Indices, July 1914=100)

stocks. This, she considers, would be unjust, in view of the fact that her tin industry is only now recovering the losses suffered owing to the artificial scarcity of Straits tin supplies during the lifetime of the previous pool. Is there not a more excellent way? Clause 18 of the new tin agreement gives the seven restricting countries permission to accumulate up to 25 per cent. of their standard tonnages in the form of tin metal and tin concentrates within their frontiers. Such a stock accumulated after the recovery of tin production, would provide the best buffer, and render the tin policy flexible enough to prevent dangerous speculation and wide price fluctuations.

* * * *



Reaction in Wholesale Prices.—The past fortnight has witnessed a slight reaction in British wholesale prices. For primary products alone it amounts to 0.8 per cent. and for all commodities to 0.4 per cent. In the United States the reaction was more marked, for *The Economist's* primary products index number has fallen by 4.8 per cent. Heavy declines in cereal and cotton prices are the explanation here. The general Irving Fisher index number has only fallen by 0.2 per cent. The latest French index number shows that since June French wholesale prices have risen by 8.7 per cent. This movement reflects the new depreciation of the franc, and has not yet caught up with it.

We publish below a chart showing the course of *The Economist's* complete index of British wholesale prices, as well as of our index of the prices of primary products in this country from 1931 onwards.

The chart shows that British wholesale prices remained above their level at the end of last year, but that the year's net increase in the prices of primary products is now less extensive. Details of our index number follow:

The Economist INDEX

(1927 = 100)

	Sept. 18, 1931	June 30, 1937	July 14, 1937	July 28, 1937
Cereals and meat	64·5	91·2	92·6	92·6
Other foods	62·2	67·5	67·6	67·2
Textiles	43·7	70·7	71·9	70·7
Minerals	67·4	106·5	108·1	108·6
Miscellaneous	65·8	86·1	85·8	85·6
Complete index	60·4	84·3	85·0	84·7
1913 = 100	83·1	116·0	116·9	116·5
1924 = 100	52·2	72·8	73·4	73·1

Declines during the past fortnight included wheat, flour, potatoes, cocoa, cotton, most non-ferrous metals and rubber. There were increases in bacon, tea, butter, wool tops and copper.

* * *

Co-operation in Tramp Shipping.—On Friday last week British tramp ship-owners, meeting at the Chamber of Shipping, expressed approval in principle of proposals to continue co-operation on a voluntary basis when the Government's subsidy arrangements expire at the close of the year. The grant of a subsidy of £2 millions by the British Shipping (Assistance) Act of 1935, and its subsequent extension for a further two years, were conditional upon the re-organisation of the industry, the minimising of domestic competition and the establishment of co-operation between British and foreign owners. No subsidy will in fact be paid for 1937, since freights are well above the 1929 level; but the provisions of the Act remain in force till the end of this year. In view of the agreement reached last week-end, co-operation will thereafter be continued, at the Government's request, on a basis devised and controlled by the industry itself, but backed by sanctions to secure its enforcement. Details have still to be worked out, but it is proposed to continue existing arrangements for minimum freights and conditions, standard forms of charter and the regulation of tonnage to prevent excessive accumulation in particular markets. When the owners of 90 per cent. of British tramp tonnage have certified their agreement, the new scheme is to be given a trial run for two years. It is unlikely that consent will be withheld; but the testing time for the new scheme is not yet. The expansion of world trade and the reduction of idle shipping tonnage make it easy at present to maintain the level of freight rates. On the other hand, many countries—especially the United States and this country — are rapidly building new merchant ships; and in about a year's time there will be a great increase in merchant tonnage entering into commission. If by that time world trade has not increased very much more than in recent months, idle tonnage, the expression of acute competition for freights, may again increase. When circumstances become less favourable, co-operation may be more difficult to secure. But the proposed scheme represents at least an attempt to mitigate the potential effects of a return to depression in one of the most cyclical of all industries.

Roosevelt and America

Last October The Economist *published a supplement analysing the condition of America under the New Deal. President Roosevelt is now in his second term of office, and second terms are notoriously different from first terms. In the following pages an observer recently returned from America surveys the present situation, and the possible effects upon the fortunes of the President and the Democratic Party of the Senate's refusal to alter the constitution of the Supreme Court.*

PRESIDENT ROOSEVELT'S second term of office will, in all probability, be one of the most critical periods in American history, for in it choice will have to be made of alternative methods of dealing with a considerable number of fundamental problems. The first term of shock tactics in handling the urgent problems of the depression is over; the New Deal in essence was the pursuit of reform so that recovery might appear; now that recovery is here, what is to happen to reform? What is to be the outcome of the campaign against the Supreme Court? Is America to desire economic internationalism, or a closed economy? Is American influence in international affairs to be used to strengthen the democratic nations, or is isolationist neutrality to be her aim? Will the business world accept the new principle of collective power for labour unions, or is the fight for the old principles of American individualism to be carried to a bloody end? Will the labour movement, led by Mr Lewis, collapse into ineffectiveness and be suppressed through public objection to lawlessness, or will it become a responsible part of American industry? And, not least, what is to be the future of the Democratic party? Is it to split into fragments and leave the Republicans to regain their old power, or is it to remain politically intact so that it may inherit seventy fat years after its seventy years in the wilderness?

American recovery is now an established fact. A revival in some consumers goods industries, based in part on Federal disbursements for relief, in part on the vastly improved position of the farmers' income in relation to the cost of goods he buys, in part on what are termed natural causes, has spread to some durable consumers goods and producers goods. The most important of the durable consumers goods industries, housing, is laggard. The output of automobiles is now at about the peak which may reasonably be expected from a survey of the possible market during the next five years, assuming that there is no repetition of the abnormal demand which was stimulated by the speculative boom of 1929. The steel industry was working at nearly its practical limit before the strikes developed, and output has now been restored nearly to the previous level. There has been a substantial rise in national income.

It seems to be popular, at least in New York, to underestimate the extent of American recovery, and to doubt the probability of sustained recovery for several years ahead. This is in part a result of the changed conditions which now prevail in the stock market world. The effect of the various control measures adopted by the Securities and Exchange Commission has been to limit the volume of business on stock exchanges, and to make professional operators' profits more uncertain. It is probable that Wall Street's loss is the country's gain.

But more important than Wall Street discontent is the prevalence of depression psychology in America. The scars of the depression are not yet forgotten, nor are the lessons of the dangerous boom of 1929. On the whole, the business world approved of the attempt made earlier in the year by the Administration to check the rise in commodity prices and slow down the pace of economic advance. Recovery was assumed to be the sounder for its slower pace. But the business world is by no means so approving of the other actions of the Administration. If the President were to do what the business men seem to want, he would at once balance the budget, cut relief both for economy's sake and to make available a cheaper supply of labour, abandon his campaign against the utilities and stop ranting about economic royalists. In other words, now that recovery is here, he should forget about reform.

REFORM FIRST

The President's reply has been to move still further toward reform. Asked if he expected the gross national debt to level off in July at about $36,000,000,000 he replied in effect that this was the wrong way to approach the problem. Some time ago he spoke of the urgent need of the one third of the nation which was ill-housed, ill-clothed, ill-fed. The President has been working with committees of investigation which have more than substantiated his views, and later in the year he proposes to discuss the implications either in his press conference or in a fireside talk over the radio. The problem is to raise the purchasing power of the lower third of the nation, by this means to raise the national income and, incidentally, bring in sufficient revenue to the Federal treasury to balance the budget and to reduce the debt.

According to his critics, these are merely smooth words which he could have used at his first inauguration; in the intervening time he seems to have learned nothing of economic fact and lost nothing of his desire to spellbind. But, pending his own exposition later in the year, the outline of a plan is already evident. A skeleton can be constructed from the policies of the Federal Reserve System, recent taxation methods, the desired reorganisation of executive functions, the federal encouragement given to labour unions and collective bargaining, the proposed control of minimum wages and maximum hours of labour, the agricultural programme, the Government's activity in the utility field, social security legislation and the relief programme, the proposal to develop regional development boards, and the report on probable future inventions and their consequences on government policy. It is yet to be seen whether the skeleton made of these and similar parts can be made to walk and take unto itself flesh, or whether it will turn out to be merely "a hodge-podge, a pot-pourri, a rag-bag, a rigmarole, a salmagundi, a farrago, a gallimaufry, a crazy quilt in the early Haricot pattern, or a good American turkey hash with the fuss-and-feathers left in."

During the past year the reserve requirements of the reserve system have been levered up to protect the banking system from the possible inflationary effects of a steady inflow of gold. The timing and extent of this operation may be evidence of a conscious long-term plan. The income velocity of money, or the annual national income dividend by demand deposits, was about 3 for some years prior to 1929. In the depression this velocity of circulation fell below 2, and subsequent recovery has raised the figure to 2. If by 1939-40 the income velocity of money has risen to about its pre-depression figure, and the present stock of money does not increase, the national income will be about $92,000 millions. This is about the level which would be obtained if the 1936 national income is assumed to be increased by 20 per cent. for increase in numbers of employed, 5 per cent. for increase in output per worker, and 25 per cent. for increase in prices. It is possible that the income velocity of money may not rise as high as 3, since there have been changes in banking practice since 1929. But in so far as these figures mean anything they suggest that to prevent an excessive rise in prices as unemployment falls to its minimum, the present volume of demand deposits should not be allowed to rise.

The recent proposal of Mr Eccles, Chairman of the Board of Governors of the Federal Reserve System, that full taxes should be levied on holdings of securities by non-resident aliens is evidence of a desire to stop the tide of gold which accompanies the flow of capital to America, and so help to protect the American banking system from an inflationary impulse. It is to be expected, further, that an increase in other earning assets of the banking system will be offset to some extent by Treasury fundings of short-term securities. It seems reasonable to expect that with executive influence powerful in the Federal reserve system, monetary policies will be chosen according to the long-term standards implicit in the reform programme. But it has yet to be seen whether the Federal reserve system has sufficient control over the whole banking structure of America, or whether the failure to make the system universal at the time of the 1933 crisis will set a fatal limit to its powers.
