Two recent taxation steps have been decidedly reformist rather than inducements to recovery. The tax on undistributed corporate profits is intended to force distribution of corporate earnings and prevent accumulation of excessive savings which may lead to exaggerated depression in the downswing of the trade cycle, and over-investment during the upswing. This is an attack primarily on big corporations. Out of nearly 450,000 corporations reporting in 1933, under 15,000 reported net earnings of $15,000 and over, yet these companies earned over 90 per cent. of the total corporate net income. It is claimed for the tax that it will lead to increased consumption expenditure by the smaller stockholders who will benefit from higher dividends. The second reformist step is the attack on rich men for evading taxes. It is not disputed that most evasions are legal; if it were otherwise the Treasury could apply legal remedies. The campaign is designed to create a public standard of conduct which will discourage tax evasion by the rich, and the use of their brains by the best lawyers to invent new ways of nullifying the intention of the law.

LAW AND THE UNIONS

To the vast majority of Englishmen the right of labour to organise in unions, and to bargain collectively with representatives of employers, is accepted as self-evident, and the objections raised by employers in America seem to be just one more evidence of the backwardness of American social thought. But this overlooks the fact that many Americans who otherwise favour collective bargaining have objected strongly both to the behaviour of the unions and the attitude of the federal and some State authorities. The National Labor Relations Act (or Wagner Act) of 1935 is admittedly a one-sided document. Its purpose was to give legal protection to collective bargaining. Inevitably it concentrated on the rights of labour and on the penalties to be imposed upon recalcitrant employers. Supervision of the conduct of labour disputes is given to a National Labor Relations Board. But the Act contains the much-disputed clause: "Nothing in this Act shall be construed so as to interfere with or impede or diminish in any way the right to strike." This led to the charge that the Act penalised the employer at the same time that it encouraged irresponsibility in the employee.

For some time many employers tried to ignore the Act, in the hope that the Supreme Court would find it unconstitutional. But the Supreme Court saw Mr Roosevelt's big stick, and the Wagner Act found favour. Mr Lewis made the issue alive with the public as well as with employers by his aggressive use of strikes. According to the Wagner Act a union with a majority of employees enrolled in it can exercise monopoly bargaining powers, and the Board has power to supervise elections to prove the membership of the unions. The unions working with Mr Lewis's Committee for Industrial Organisation did not use this procedure, presumably for the good reason that they had no majority.

In the automobile industry the sit-down strike proved completely effective. There was indignant protest from employers against violation of property rights which found considerable support among the public; but on the other side of the argument a claim was made that employees had a moral property right in their jobs. Governor Murphy of Michigan conducted successful arbitration conferences, and emerged as an aspirant for the Democratic nomination for President in 1940.

LEWIS AND GIRDLER

In the steel industry the course was not so smooth for labour, although the prospect must have seemed good at first since Mr Myron Taylor, chairman of the United States Steel Corporation, which generally leads the industry, had reached voluntary agreement with Mr Lewis. But Mr Girdler, of Republic Steel, backed up by the other independent steel companies, thought otherwise. Picketing was the weapon of the unions, and armed police the reply of the companies. The picketing was by no means peaceful, and in several plants a majority of employees found themselves forcibly restrained from going to work. The work-willing employees, aided no doubt by the companies, began to organise; vigilantes were enrolled and sentiment swung against the strikers and against Mr Lewis. The right of the American workman to his job was a far more powerful battlecry against the CIO unions than the rights of property. Governor Earle of Pennsylvania, another possible candidate for the Democratic nomination, decided to reverse his declaration of martial law under which he had closed some factories not successfully picketed by the CIO.

The massacre of pickets by the Chicago police put Mr Girdler in an uncomfortable position from which he is not yet clear; but the day was lost for the CIO. Law and order must be maintained, was the growing demand of the public; though it is one of the oddest tricks of fate that Mr Girdler and the Steel Companies should pose as the champions of this demand.

Mr Lewis lost the battle. But it is a poor general and a poorer army which cannot afford to lose a battle without losing the campaign. The cause of the CIO has suffered from the speed with which the movement spread, and from the lack of sufficient centralised control to prevent irresponsible strikes in defiance of signed agreements. The history of American trade unionism shows that authority in the past has always been with the local, not with the central executive. Mr Lewis has had to give every local dog his day. His aim has been to organise the men as rapidly and as strongly as possible; he would agree that ultimately legal means must be found to enforce the responsibility of unions, but time enough to talk about laws when you have your unions. As a result of the steel strikes responsibility will probably soon be thrust upon him; but Mr Lewis intends to continue his fight. He has the coal industry in his hand; his ally, Sydney Hillman, controls the clothing workers; the automobile industry, bar Mr Ford, is organised, and the U.S. Steel Corporation is the most important unit of the steel industry. He is organising federal employees, and is negotiating with the shipping unions. Ahead of him lie minor campaigns in textiles, shoes, oil, and eventually, when the time is ripe, a major fight with Henry Ford. To Mr Lewis defeat in the independent steel companies is only a battle lost; he hopes to win the campaign. With strongly organised unions, the labour movement can afford to meet the future with confidence. John Lewis himself would probably refuse to forecast what lies round the corner, since he is a strategic organiser, not a maker of labour philosophies; but it is not reasonable to suppose that a strong labour movement will be content with mere economic and industrial equality with its employers.

It is possible that the loss of the first round against the independent steel companies may be more than a temporary set-back for labour; Mr Lewis's plans for the future may come to nothing and he himself may rapidly lose his present position of dominance. This would be in accordance with the previous experience of militant labour campaigns. But there are several reasons why this is not probable. Most important of these is the presence of an administration at Washington which is friendly to labour, and desires for more than reasons of political advantage to see an effective system of collective bargaining established throughout the country. A second reason is that thirty-eight States have Democratic Governors, and some of the most important industrial States, such as Pennsylvania, Ohio and Michigan, have pro-labour Governors. For the first time in the history of America stubborn employers will not be able to use the forces of the law to exterminate labour organisers; for the first time the legal and police powers may be used in an impartial manner; in some States they may be used to support labour. And a third reason is that the general public is not so disposed as in the past to damn all labour organisations as the work of foreigners and therefore of communists; America is realising that its problems are those of a settled and no longer of an expanding economy. But Mr Lewis, or his unions, may alienate public sympathy. He has already lost ground since his strike campaign opened, and unless he can hold his troops in check he may have to anticipate not a long and powerful future, but a quick decline.

LABOUR AND WASHINGTON

The Administration has been severely criticised for its part in the disputes: the President was silent when he should have condemned. The Secretary of Labour seemed openly to approve of labour's illegal activities. When the President did speak, his words were found unpalatable by his critics. Mr Girdler was reported at first to have reached an agreement with the unions which he refused to put in writing because the Lewis movement was irresponsible. The President's comment was that to put in writing what you have already agreed is a matter of common-sense. This was called prejudicing the issue by his opponents. The critics claim that the President did not condemn labour because he was under the thumb of Mr. Lewis, or at least because there was too much political dynamite in a snub for his labour supporters. To an English observer there is more to be said for the Administration's attitude. The dice have been loaded against labour right up to the present Administration. Collective bargaining power for labour must come, and it is highly desirable that it be obtained in as peaceful a manner as possible, so that there shall be no irreconcilable split between labour and employers. The demand that law and order should be enforced seemed suspiciously like the old anti-union attitude in a new guise. If unions could be sued, if their funds could be impounded by court order, their offices closed and other legal restraints applied, they could be strangled at birth. Nothing would give greater pleasure to many industrialists of the extreme school, who encouraged the cry of responsibility for unions for all they were worth. But responsibility can be fairly imposed only if the unions' right to exist is also recognised by industry and protected by law. On more than grounds of political expediency it may be argued that the President did right to hold his hand, and hope that the labour movement would discipline itself.

The next step now will probably be amendment of the Wagner Act, possibly along the lines of Senator Vandenberg's proposals, to require the incorporation of unions, and their submission to the control of law. The President went on record some time ago in favour of this step, and the principle of legal responsibility has been accepted by Mr Lewis. In previous years such regulation would have spelled the end of collective bargaining, but times have changed since the Supreme Court validated the Wagner Act.

One of the most important weapons of the extended reform plan will be federal control of minimum wages and maximum hours of work. These matters are dealt with at present in the Black-Connery Bill, which will doubtless be amended considerably before it becomes law. The essential clauses of the present bill set up a National Labour Board, with power to specify maximum hours of work and minimum wages for any class of labour; and alternatively to determine minimum fair wages. At present it is not decided whether Congress shall write into the bill the extreme limits of hours and wages, or whether this shall be left to the Board. The scale discussed at present is not less than 40 cents an hour for a 35-hour week, a maximum work week of 40 hours, and an upper limit to the minimum fair wage of $1,200 a year. Under the bill the Board would apparently have power to fix higher minimum wages than 40 cents an hour for any class of labour, which may be interpreted as labour in any geographical region, any industry, any craft or degree of skill, and even any factory. And further, one version of the bill empowered the Board to protect labour conditions against unfair competition from goods produced in other regions where labour is not so highly paid.

If this bill becomes law, and the standards set are appreciably higher than the existing practice, the economic consequences will be very far-reaching. One of the most important uses to which it can be put is to attack the wage differentials which now exist between southern and northern labour. Some progress in reducing wage differentials was made under the old N.R.A. Many of the industries in which the lowest wages are paid and longest hours worked are in the South, and many of the workmen are negroes. So that if the present bill is to have any great effect, it must achieve it by an attack on the inferior economic position of the southern negro, even more than on that of the underpaid industrial worker of the north and east. The further the operations of this law are pushed, the greater becomes the vested interest of labour in extending its share of federal protection, and the greater the pressure on America to turn towards a closed economy.

WOOING THE FARMER

Under the Soil Conservation Act much can be done that was ruled out when the AAA was declared unconstitutional by the Supreme Court; within smaller limits the Federal Government can still encourage the farmers to grow desirable crops and not grow crops which threaten to be in surplus. The pressure for legislation is now concentrated on the Ever Normal Granary and Farm Tenancy plans, which became prominent during the 1936 presidential election. Mr Secretary Wallace is handling a difficult problem in a discreet and skilful manner. It is his tactic to have the farmers' organisations adopt the desired agricultural programme as their own, so that it comes to Washington as their plan, rather than Mr Wallace's. And one reason for the slow progress in agricultural legislation is that the farmers are enjoying greater prosperity than for some time past, are looking forward to a better year still, and consequently are less insistent upon Government assistance.

The farmers are the most important political group in the country, for in most State legislatures the farming community is given much greater representation than the cities. Every party must woo the farmer, and it is Mr Roosevelt's difficulty that the farmer is conservative in times of prosperity. Accordingly the Secretary of Agriculture has one of the most critical jobs at Washington, and Mr Wallace has handled it so well that he ranks high among candidates for the Democratic Presidential nomination in 1940. An important clue to the progress of the agricultural programme is the size of the farmers' crops during the coming seasons. The farmer is doing well at present; but if a large farm surplus should develop which cannot be disposed of without a collapse in farm prices and a shrinkage in farmers' income, then the farmer will come back to Washington. If by then the political sentiment is set towards extension of Mr Hull's programme, and if world prices favour it, the farm surplus may be disposed of in foreign markets without any growth of Washington control; but if the trend sets the other way, the farmer will become much more eager for the Ever Normal Granary, crop insurance, and other assistance.

The Social Security Act was passed in 1935. Its aims were admirable; old age pensions and unemployment insurance should have been adopted long ago, in the opinion of English critics at least. But the achievement seems to justify most of the criticisms of the Act which were expressed at the time. Under the Act it is proposed to guarantee future pensions by accumulating a reserve fund of over $40,000 millions to be invested in Government securities, of which the supply at present is only $36,000 millions. The Government is to protect its future liabilities by investing in its own securities, a piece of financial bookkeeping which leaves the pensioner where he started. His protection is, and will remain, the credit and taxing power of the Federal Government.

But more serious criticism of the Social Security Act is based on its effect upon State pension systems. The Federal Government, under the Act, subsidises State old-age pensions systems up to one-half the amount contributed by the State, with a maximum of $15 per month per pensioner. It was hoped that this would help to establish a fairly uniform rate of pensions throughout the States, but in fact it seems to have stimulated the use of State pensions as elements in the political machinery. At the end of 1936 Mississippi was paying $3.92 a month pensions, and California $31.36 a month. Political pressure, not need or financial solvency, seems to have determined the scope of State pensions systems; this perhaps should have been expected from the first, but it does not promise well for the future of social security.

The President's insistence upon an appropriation of $1,500 millions for relief during the present financial year was disturbing evidence to his critics of lack of desire to balance the Budget. Relief rolls have been cut, as the protest strikes of WPA workers testify, and considerable numbers of workers have been re-employed in industry; yet there remains a large body of unemployed upon which statistical information is as unreliable as ever. It is possible that the number of workers in employment could increase by some seven or eight millions during the next three years without reducing the normal unemployment below three millions. Yet a large number of these, if not unemployable, are over forty-five and not likely to find work until the pressure for labour becomes acute. Until then the State has the choice of providing relief approximating more and more to straight dole as the pressure for a balanced Budget increases, or of leaving the unemployed to fend for themselves in the expectation that an increased supply of labour will depress the market price and increase the outlets in private industry. It is obviously impossible for the present administration to adopt the latter plan, even if it were theoretically unassailable.

PLANS: NOW AND FOR EVER

Not the least important element in the collection of administration policies is the development of cheap power on the familiar lines of the TVA. An extension of this programme covers the planned development of American resources in seven large regions instead of through the too small divisions of the forty-eight States, and a still further extension attempts to prepare in advance for such scientific and industrial inventions as may reasonably be expected within the next generation. Cheap power is still at the bottom of many Government ambitions; the power trust is still a popular dragon for a would-be Saint George to slay. The enormous power project now under construction in the North-West is magnificent as an engineering feat and as a symbol of the President's vision of an America planned by economic regions; but as an economic proposition it seems to be useless until some 20 millions of population can be settled in the region. But between the Federal Government and such vast schemes of planning still stands the Supreme Court; which accounts in large part for the President's determination to have that body confine itself to law and forget its political and economic predilections.

One very important aspect of this miscellany of administration policies is its reaction upon America's foreign relations. Mr Hull has been the leader of the move to lower trade barriers; and the President is said to have pictured himself leading the European world back to peaceful sanity and to have liked the picture. Both lines of attack seem to be reaching a difficult stage, if not a dead end. The economic problem is complicated by the heavy flow of gold toward America, representing the transfer of vast capital sums away from Europe, both for the prospect of income and capital gains in America and for the political refuge offered from the instability of Europe. And the Hull programme of generalising through the most-favoured-nation clause the benefits he may secure from bilateral trade agreements has come to a halt at the barriers of the British Empire. American opinion finds it hard to appreciate the apparent reluctance of the Empire to welcome the visitor. The Empire is being offered economic and incidental political benefits of great value at practically no cost; yet the Canadians do not seem to have been willing to translate their fine sentiments into concrete fact; the Australians have indulged in an anti-American trade policy which has led to their exclusion from the benefits of the most-favoured-nation clause; and the sincerity of Britain is doubted.

If Britain wishes to secure the benefits of economic co-operation with the American people three points at least must be covered: co-operation in solving the gold and hot-money problem; a serious offer in settlement of the war debt, of a size that can be presented to Congress with hope of acceptance; and a serious trade agreement.

The scepticism which is induced by the slowness of economic negotiations is strengthened in American eyes by the political behaviour of Britain. The temper of the American is anti-war, expressed in neutrality legislation which is rapidly turning isolationist. The majority of Americans are probably isolationist in any case, but they have been strengthened by the distrust of Britain which has developed among many liberals. Britain's conduct in the Manchurian affair, in Abyssinia and now over Spain throws great doubt, in their opinion, on the sincerity of her democratic beliefs.

Our own actions, or the accident of timing, have given them the impression that we are rebuffing the first serious American overtures toward world co-operation since the war, excepting only the Stimson approaches during 1931 and 1932, at which time America was not so anti-dictatorial in sentiment. The weight of the economic and political programme, discussed earlier, tends to drag America back toward a closed economic system, and there are signs that not even the State Department is prepared for ever to fight this trend.

It is apparent that the collection of policies known as the New Deal, 1937 style, is more than a hodge-podge, but less than a coherent unity. Such unity as it has and some of its confusion comes from the President; the lack of coherence reflects the procedure imposed by the political channels of Washington. When the President is interested in a subject, a Committee is appointed to study it, and eventually to issue a voluminous report. Upon this the administration's group of brilliant young lawyers seize and prepare a thing called a bill, which is a summary of the whole study, a brief to Congress, plus a set of ingenious devices to get past the Supreme Court. This emerges from Congress in a more or less unrecognisable form, in which the kernel desired by the administration may or may not remain. Given the existing division of functions, with the existing organisation of Executive offices, and with the present crisis-conscious drive from the White House, probably nothing better could be expected. The Englishman may indeed marvel that so many good things emerge.

In the President's mind it is evident that two modifications of existing practice are necessary if he is to have power to pursue his aims in the future. The first, a liberalisation of the Supreme Court, is by far the more important; the second is a re-organisation of the executive offices so that he may have efficient powers to carry out the functions imposed upon him by the Constitution. Discussion of the latter will probably be postponed to

next session, while the war against the Supreme Court has just been brought to a temporary conclusion.

THE SUPREME COURT

To an Englishman not indoctrinated from birth with worship of a written constitution the battle over the Supreme Court seemed one of meaningless words. Absurd to fight for an independent judiciary above political influence, when the Supreme Court is essentially a political body. Absurd that nine men, appointed for life, and frequently as a reward for past political services, should have power to reject legislation approved by a President and a Congress fresh from a sweeping electoral victory. Still more absurd to defend this undemocratic power in the name of democracy.

But the old shibboleth exerted its old power over the American people, and the President helped to defeat himself by introducing his proposals for Court reform in too devious a manner. The Supreme Court defeated him by changing its mind, giving him the victory, and approving laws which in its previous temper would have been found unconstitutional. The President continued to press his fight; was forced to compromise with a proposal which would give him power to appoint only one supplementary judge a year, but found the Senate unwilling to go even so far, and finally had to drop the whole matter as it affected the Supreme Court. His defeat is modified by probable victory on legislation to amend procedure in the lower federal courts which will make it impossible for the constitutionality of a federal law to be challenged without opportunity for the Attorney General to defend for the Government, will permit transference of appeals direct to the Supreme Court and so save time, and will prohibit the issue of injunctions suspending operation of federal law by merely one judge. These changes, which will probably be accepted by the Senate, together with the changed attitude of the Supreme Court will give the President most of the powers he needs to press his new version of the New Deal. He need not fear that the Supreme Court will again change its mind, since one conservative judge has already resigned, and it is strongly rumoured that the President will soon have the resignations of two more. His future troubles will come more from the legislators than from the judges.

What is to be the effect of this technical defeat on the future of the President and of the Democratic party at the next election? It can be argued that what has happened is a healthy release from the domination of Washington affairs by the President. The Supreme Court has won independence by giving the substance of submission; the Senate has exerted its independence but will not become irresponsible; the President has gained reform of the Supreme Court but has been put in his place. Now we shall return to the system of separated powers and responsibilities. This is an argument peculiarly attractive to the American, but not very convincing to an Englishman. In the opinion of most English commentators from Bryce to Brogan, the American political system can only meet the needs of the changing times if it is dominated by a powerful President, who is the nearest thing at Washington to a direct representative of the American people. If the substance of victory against the Supreme Court is to lead to better results in the future the President must be granted the Executive reform for which he asked earlier in the year, and on which Congress will have to debate in the next session. A Senate feeling its own power, ready to take the bit between its teeth, may not easily grant the necessary reforms.

One frequently-discussed way out of the quandary is for the President to push ahead with all his aims, and put himself at the head of a new political party whose national unity would be comprised not of intersectional bargains, but of a coherent liberal political philosophy. The omens are strongly against any such development at present. A prominent rôle in the new party would have to be played by labour, and labour is split with no signs of reconciliation; Roosevelt would be able to count only on the CIO, whose membership is estimated at slightly less than that of the American Federation of Labour. Equally important would be the farmers' *bloc*, and identity of interests between labour and farmer would be hard to establish. The farmer is not yet persuaded that his future lies with a new radical party. In the South the President would lose the conservative vote, but would not gain compensating political strength from the negroes who would support his programme, since they would not find it easy to register their votes.

Nor is there yet any sign of reorganisation of the conservatives into a coherent party which would of itself create the need for a left wing opposition. The Republican conservatives carry no conviction with their outraged protests against the Democrats. The Democrats, we are told, use corrupt methods; so did the Republicans in the past, and so will they in the future. There is as yet very little sign of a determination among business men to rule themselves and their practices according to a higher standard of social morality. Yet, until business men change their own behaviour and become a socially responsible group, machine politics will continue their rule.

THE DEMOCRATS IN 1940

It seems therefore that the issue is simply whether the Democrats have consolidated themselves sufficiently during their term of office to be able once again to defeat the Republicans in 1940. Writing in "The American Political System," in 1933, Mr D. W. Brogan said of the Democratic party:—

> The victory of 1932 is probably meaningless in relation to party fortunes . . If by a miracle of political boldness and sagacity, a new orientation could be given to national policy and that were accompanied by a revival of business, the Democrats might dig themselves in, but such a new course would require a degree of boldness and coherence which the Democrats, no more than their rivals, have had any chance of developing. If they remain content to be "maintained by the business interests as a combined lightning rod and lifeboat," they will give way to the Republicans as soon as the major party has got its breath back. If they start on a really new tack, they will split or cease to be the old Democratic party.

The development which Mr Brogan then thought most unlikely may in fact materialise. Mr Roosevelt has given boldness and some coherence to the Democrats; Mr Farley has dug the party in. If the President can retain his grip over his party, his voters, and himself, and can consolidate his programme, if he can secure increased executive power from Congress, there is a reasonable possibility that the Democratic party can establish itself securely. The Republican party owed a large part of its long reign from the time of the Civil War to the mere fact that it always won; its policies were no sounder, its politics no more honest, its politicians no more capable than those of the Democratic party. But its political machines held power, and to him that had went the rewards. The "Hoover Depression" changed all that, and "Who ever heard of Landon?" did nothing to restore the Republicans' lost ground.

In 1932 Mr Hoover lost; in 1936 Mr Roosevelt won. The problem is whether the Democrats can win in 1940. Economic conditions in 1940 will have a large, but not a decisive, significance. A lot will depend upon the candidate. A minor Roosevelt of the Earle or Murphy type hardly seems to be the most promising choice, since the need will probably be for someone more sober and consistent, who can consolidate the gains of the past rather than lead the party into fresh adventures. Mr Secretary Wallace is the most promising candidate. But the election must be won by the party,' not by a man; and the possibility of such a victory will depend very largely upon the political skill of Mr Roosevelt and his Congress during the rest of his term.

Changing Opinion

New York, July 20.—In a broad view of events, this year looks increasingly like a period of transition. Current appraisal of the nature of this transition presents considerable difficulty, for so far it could equally well be interpreted as a purely cyclical phenomenon, as a mere change of pace and *tempo*, as a period of "consolidation" in the upward movement, or as a more basic and non-cyclical change in the social, political and economic trends which emerged in 1932-33. Whatever the explanation, there are many evidences of substantial differences from recent years.

Politically, the temper of the country has moderated substantially; the public no longer has much taste for new and sweeping legislation or for baiting the rich. None of the President's most desired measures has been enacted, although the Congressional session has already dragged through six and a-half months. Even if some enactments do result, they will be vastly different from the President's original proposals. The complete failure of the revelations about tax evasion and avoidance to evoke any public response, and the support which Mr Girdler obtained in fighting the steel strike, are signs of the new attitude. Probably very few people are really satisfied about current unemployment and relief, housing, or the long-term position of agriculture; but the demand for sweeping reforms seems to have subsided.

The forward sweep of labour organisation has been at least slowed down. The loss of the steel strike, the stigma of irresponsibility which Mr Girdler successfully pinned on the movement, the jurisdictional disputes between the various organisations, more generally noticeable higher costs, and the more extreme methods used in some places by the organisers, have evoked considerable resistance to the unions' demands. A lack of well-disciplined and cohesive organisation has been disclosed. And a closer agreement about objectives and the rôle of Government is also called for.

In agriculture, large crops are being marketed this year after four years of extensive governmental and drought restriction of output. Partly because of poorer crops elsewhere, and partly because of the small carry-over from last year, good prices are being realised, and, generally speaking, the rural regions are more prosperous than for a long time. But adequate supplies in most lines this year will tend to restore carry-overs and to raise the question of new governmental intervention next season. The large crop this year may also change the balance of foreign trade in merchandise, which in recent years has been influenced by the need for some agricultural imports.

Business at a Peak

The new fiscal year just opened will, according to current official expectations, be the first in seven when no expansion of Government debt in public hands will occur. Another small deficit is anticipated, but it will be absorbed by the Government departments. The absence of a balanced Budget and of fiscal debt retirement at a time of prosperity is, however, disconcerting and may involve penalties in the next depression. But the expansion of outstanding debts at least has been ended, except for gold buying, and securities for this purpose may be absorbed by trust funds if the inflow diminishes as some people expect.

Expansion of the supply of money has also come to a halt. The earning assets of banks are at the same level as a year ago and deposits are smaller than at the beginning of the year. This is an abrupt change from the rapid increases of the several preceding years. Cessation of public financing by the Treasury and the possible diminution of the rate of gold inflow seem to make marked growth unlikely for some time to come.

In industry, many branches are working close to capacity, and the rapid enlargement of output which has marked recent years appears to be at an end. Steel and machinery, which with automobiles have been the major expansionist industries of the recovery period, can increase output but little from the present levels. Building, though still greatly subnormal, has moved forward rapidly; but from the movement of prices and costs appears now to be virtually at capacity. Since the building industry was the most demoralised of any major activity by the depression, this is probably true. To judge by these industries alone—and many others are in somewhat similar position—the business *tempo* of recent years is not likely to continue.

The Economics of Diplomacy

Fiscal officials have for some time been of the opinion that heavier taxes should be imposed upon alien investments here; the State Department has been reluctant and wary about such action. The Wages and Hours Bill has brought demands for compensatory tariff protection. In some cases labour's demands for higher wages have been countered by the argument of competing imports at lower labour costs. The domestic opposition to Secretary Hull's reciprocal trade programme is the same as that encountered by every Government that seeks to lower tariffs, quotas or other restrictions. Moderation of the trade union movement and of the President's Labour Bill are probably therefore of some consequence to our trade relations and policies abroad.

Reactions to the recent visit of M. Van Zeeland showed the restraints on the conduct of foreign relations. The Press discussed the visit in sympathetic terms, and the Belgian Premier seemed personally popular in his few public appearances, but an undertone of caution was never absent.

The recent monetary agreements with China and Brazil have not evoked any public comment, but if further moves of a similar kind occur the opposition to foreign loans is almost certain to recur. And the question whether the Neutrality Act and the Chinese agreement may soon be in conflict has already arisen. The passing of each war debt instalment date is still noted and the regular payments by Finland are remarked. The Foreign Bondholders' Protective Council recently reported that 38.5 per cent. of a calculated $5,374 millions principal amount of foreign dollar bonds were in default as to principal, sinking fund or interest at the end of 1936, compared with 34 per cent. at the end of 1935; 522 issues were tabulated, with 237 shown to be deficient in some manner. A tabulation by the Institute of International Finance shows somewhat different totals, but indicates that 39.5 per cent. of foreign dollar bonds were calculated to be in default in some manner at the year-end, against 38.2 per cent. at the end of 1935.

Political Compromise

Paris, July 29.—The import surplus for the first six months of 1937 exceeds 9,000 million francs, and imports of coal, which represent 20 per cent. of total imports, are 100 per cent. higher than in the same period of 1936. "No human agency," the Prime Minister has said, "can preserve from poverty a country which must steadily increase its imports of necessaries. If discipline is not observed in production, the social reforms will be endangered." Thus in the new Popular Front Cabinet, M. Bonnet represents the engine, and the Socialist ministers the brake.

The leaders are co-operating in a general economic and social compromise. But the rank and file continue their guerilla skirmishes. M. Chautemps has been constrained to declare that: "Above parties and their demagogical feuds, there is the Nation." The Right maintains that, for the success of the present experiment, a revision of the 40-hour week must be added to the financial measures. The rise in prices, however caused, does not make the action of M. Bonnet any easier. The Right hopes for the formation of a national coalition Cabinet like that of M. Van Zeeland; while the Left hopes that, after the financial maturity of October, when 5,500 millions of middle-term bonds are due, and after the election of delegates for the Senate, the Radical-Socialist Congress at the end of October will adopt a less conservative attitude.

Meanwhile, the main characteristics of French economy are: the decline of the yield of production, a slight recrudescence of unemployment, and great activity in the tourist industries. The Government, now armed with the new financial powers and with new reserves of funds to support the franc and the Rentes, should benefit from the dissension among the Left parties and from the uncertainty of the Right parties, who admit that even if a National Government is inevitable, it would be least dangerous under the cover of a Chautemps Cabinet.

Sharp Rise in Imports

Imports in June were valued at 3,707 million francs and exports at 1,997 millions; the import surplus was 1,710 million francs compared with 1,300 millions in the preceding month. That is the largest surplus of the year, except for February, when it was nearly 2,000 million francs. Compared with June, 1936, imports show an increase of 100 per cent. and exports of 73 per cent. Statistics of the quantities involved show that the principal increases have been in coal imports and iron exports. The sharp increase in imports is explained by new fears of devaluation which have led producers to increase their stocks. Though slight, the improvement in exports is a favourable sign.

Foreign trade in the first six months of 1937 was as follows:—

	Value (thousands of francs)	
Imports (first six months):—	1936	1937
Foodstuffs	3,623	5,112
Raw materials	6,536	12,033
Manufactured goods	1,789	3,136
Totals	11,949	20,284
Exports (first six months):—		
Foodstuffs	1,087	1,565
Raw materials	2,034	3,891
Manufactured goods	4,082	5,578
Totals	7,204	11,035

The difference between imports and exports of raw materials is greater than the whole import surplus. Imports of coal were valued at 2,000 million francs or 1,000 million francs more than in the first six months of 1936. The balance of trade in manufactured goods, which is generally active, has deteriorated, and in June was actually passive, as the result of rising French prices.

Impending New Decrees

New decrees will be issued in the near future. The first will effect a vast reorganisation of the railways and a better co-ordination of rail and road. The second will determine the distribution of the economies, to amount to about 6,000 million francs in 1938 between the various departments. The third will embody measures to arrest the rise in prices and to increase production. The main goal of the Government is to make a voluntary conversion of the Rentes as soon as possible, and the end of the decrees has been fixed for August 31st.

Fiscal Receipts Increase

Total fiscal receipts in June were 3,183 million francs, of which 2,665 millions were ordinary receipts. Comparison with the Budget estimates and with the receipts of 1936 is as follows:—

	Receipts	Increases compared with Estimates	Rec'ts. 1936
June, 1937	2,330	+ 438	+ 319
Six months, 1937	14,410	+ 1,685	+ 1,139

Unemployment on July 17th was 315,593 (221,188 men and 94,405 women), a fall of 889 compared with the preceding week and of 109,281 compared with a year ago.

Germany

Grain Crop Confiscated

Berlin, July 28.—The past week brought two important innovations in State control and State industrial enterprise. The entire bread cereals crop is to be confiscated; a Reich joint-stock company is to be founded to exploit ore resources and to develop the production of iron and steel.

Both are emergency measures, taken in consequence of past governmental mistakes and miscalculations. The fragmentary Economic Plan of the Third Reich has so far had unsatisfactory results. Given by its National-Socialist initiators a Soviet-Russian label, it has never followed the thorough principle of their Russian instructors; but has had a piecemeal, makeshift character, in which little consistency may be discerned except a desire to escape from the immediate trouble of the day, usually induced by lack of foresight.

Since 1933, there have been (including the present year) four unsatisfactory crops. In the main, the cause was bad weather, but Government half-measures of restriction and compulsion also impeded the automatic adjustment of farming to changing market conditions; and a decline in area sown is one of the causes of this year's meagre crop. Already two years ago the town had to be protected against starvation by the fixing of maximum food prices, by requiring part delivery of crops, and by partially restricting the use of bread cereals for livestock feeding.

Now that these half-measures have failed, resort has been had to the Soviet-Russian expedient of commandeering crops wholesale, and to the Soviet-Russian method of treating offenders with inordinate severity. The whole responsibility for the failure of the food campaign has, at least by implication, been put on the farmer.

Food and Fodder Policy

The new decree prescribes that all bread grain, mainly rye and wheat, must be delivered. The only exception is grain required by the farmer and his dependents for their own consumption or seed. This compulsory delivery makes it impossible to use rye or wheat for feeding livestock. But that is also expressly forbidden.

This is a reversal of policy, for only a short time ago the consumption of rye was encouraged. In future, bread grain disposed of in violation of the new rules may be confiscated; persons violating the rules through negligence may be imprisoned for a year; and persons who deliberately violate them may in extreme cases be sent to penal servitude and fined unlimited sums.

This measure raises the fodder question in a new, more acute form, all the more because livestock is increasing, the number of pigs in the past twelve months having risen by nearly 2 per cent. Of a rye crop of about 7½ million tons, 2 to 2.3 million tons have hitherto been used for feeding livestock; about 1.6 million tons has remained for human consumption on the farms; and about 3.4 million tons have been marketed. Of a wheat crop amounting recently to about 4.6 million tons, some 500,000 tons have been used for fodder and 600,000 tons by the farmer for bread.

Under the new system the Food Minister undertakes to supply fodder in sufficient quantity. This will, in the main, be foreign maize and barley. The next crops will probably be rather worse than those of 1936, which were unsatisfactory. Already in the first half of this year maize imports have reached 578,000 tons, compared with 172,000 tons in the whole of 1936; and very much more will be needed.

Reich Undertakes Steel Production

The Reich Company for mining ore and smelting iron, entitled also "Hermann Göring," is also a makeshift measure. One motive is the shortage of iron and steel. This is shown by the fact that a chief feature is to be the construction of ironworks. Under a thoroughgoing planned economy the steel shortage would have been foreseen, or rather prevented, either by the timely expansion of output or the restriction of consumption. Inasmuch as the steel demand is mainly for armaments and public works which were certainly foreseen, such a policy could easily have been adopted. But the shortage was allowed to increase until even supposedly privileged "key" industries were getting only half of their steel ration; and so far from the industry being encouraged to expand, it was hampered, not only by vetoes against raising capital, but also by direct prohibitions against new plant or increased capacity.

As the new Reich Company is part of the Four Year Plan, it may perhaps claim to be justified by foreign exchange considerations. But only a short time ago foreign exchange considerations were adduced to retard the already very rapid development of native ore mining. The 18 million tons of iron ore imported in 1936 cost over Rm. 168 millions. The argument was that cheap steel was much more important than the saving of payments for ore from abroad. Against payments of Rm. 123 millions in 1935 for foreign ore, the export of iron goods brought in foreign exchange to the value of Rm. 1,100 millions net.

Herr Hitler, however, in a speech early this year implied that the Reich could revert to the autarky in ore enjoyed at some remote time in the past. The chief of the Reich Board for Raw Materials and Shop Materials now declares that, within four years, half of the iron ore demand will be met from home resources. Obviously, there is here the usual confusion; and it seems that there is only one good reason for the new ore campaign, and that is self-sufficiency in time of war.

Domestic Ore Production

The capital of the new Reich Company is not stated, and it will in part consist of private mining rights. Works will be erected in the ore domains of the Salzgitter (Brunswick), in Baden and Franconia. A decree of General Göring prescribes that owners of mineral rights may be amalgamated for the purpose of exploiting claims. The new Reich company has already commissioned the Berlin Brassert Kommanditgesellschaft to construct ironworks of a very modern kind.

The present ore position is as follows. After imports fell to 3,451,600 tons in 1932, they rose to 14,061,000 tons in 1935 and 18,469,300 tons in 1936; 8,248,200 tons came from Sweden, 6,859,800 tons from France, and 1,067,700 tons from Spain. In 1935, before the Civil War, Spain delivered 1,320,600 tons. Home ore production is already encouraged by smelters being compelled to take certain fixed quantities.

Home production fell to 1,340,000 tons in 1932, and rose to 6,044,000 tons in 1935 and 6,651,000 tons in 1936. Some 16,000 persons were employed. The greatest ore-producing district was the Peine-Salzgitter, with a production in 1936 of about 2,100,000 tons; then came Siegerland with 1,700,000 tons, and the Lahn-Dill district with some 700,000 tons. There are ninety-five separately exploited fields, and those of Thüringia, Saxony, and South Germany produce 1,600,000 tons.

The average iron content, always low, has recently fallen further in consequence of the working of ever poorer fields; and it was only 33.2 per cent. in 1935, compared with 35.8 per cent. in 1932. In recent years the greatest expansion has been in the Peine-Salzgitter district; but though this district produced in 1935 more ore than its chief competitor, Siegerland, the total iron content was lower. The ore production of 6,044,000 tons in 1935 yielded only 1,849,000 tons of iron. In the present year the expansion has continued and the output of ore was 3,890,000 tons in the first six months, compared with 3,040,000 tons in the same half of 1936.

Holland

Sterling Advance Prevented

Amsterdam, July 20. — Since the disturbance created by the recent depreciation of the French franc settled conditions have not yet set in again on the Amsterdam foreign exchange market. Nevertheless, attention is not so much focussed upon the declining rate of the franc as upon the large offers of dollars. In view of this abundant supply of dollars, the Netherlands Equalisation Fund is gradually reducing its purchasing rate for dollars. This corresponds with a rise in the gold value of the guilder. Last week the Equalisation Fund brought the purchasing rate for dollars down to 1.81½.

This policy is caused not only by a desire to avoid having to absorb an excessive amount of dollars, but also by a desire to counteract a rise in the sterling rate. Sterling is again displaying a tendency to advance in relation to the dollar, and it is said that this is attributable to sales of gold by Japan to the United States; the dollars thereby acquired by Japan are converted into sterling. If, therefore, the dollar rate in this country is maintained at a certain level, the advance of sterling in relation to the dollar inevitably finds expression in a rise in the rates for sterling over here.

Declining Interest Rates

The firm tendency of State and municipal loans is attracting attention to the position of the Netherlands capital market. The process of hammering down interest rates is still in progress, and the unprecedented liquidity of the Amsterdam money market suggests that the end of this process is not yet in sight. A great number of municipal conversion loans has been one result, and the usual rate of interest for these has fallen now to 3½ per cent. Because of the liquidity of the money market and the rising Government revenue, the situation of the State finances has improved considerably. Ordinary Government revenue from direct taxation in the first half of this year amounted to 57,775,000 guilders, compared with 52,021,000 guilders in the first half of last year. Other revenue was 209,115,000, against 175,980,000 guilders last year.

The returns of the Finance Ministry on July 15th show that the Netherlands Exchequer is quite comfortably situated as regards cash resources. The credit balance bearing no interest at the Netherlands Bank amounted to no less than 101,170,505 guilders. For several months in succession there has been no need to issue Exchequer bonds to provide cash for State requirements, and the floating debt has been reduced considerably. The total floating debt, which amounted to about 675 million guilders at the beginning of the year, has been reduced by more than half in the course of the ensuing six months.

These are signs that the financial situation of this country has vastly improved. This is reflected by the quotations for State loans; the 3 per cents. are slowly moving towards par level. The opinion is gaining ground that the Government will embark quite shortly upon the conversion of some of the outstanding loans at 4 per

cent. and higher, bringing them to a 3 per cent. basis. Some 1,870 million guilders' worth of these bonds were outstanding on December 31, 1936.

Rising Cost of Living

Economic developments continue to proceed satisfactorily. Unemployment is steadily falling, and on June 26th the number of registered unemployed had dropped to 310,996 persons. Since October, 1936, that is, since the devaluation of the guilder, the number of unemployed has always been below the corresponding month of the preceding year. During the first quarter of 1937, unemployment was lower than in the first quarter of 1936, 1935 and 1933, but higher than in the first quarter of 1934, when a temporary recovery was perceptible. In the second quarter of 1937 unemployment fell not only below the total for the corresponding quarter of 1934 but even below the 1932 level.

A gradual advance in the cost of living, however, has cast a shadow over the picture. The index of the cost of living for workmen's families (pre-war = 100) was 137.9 in June, 1937, compared with 136.2 in May, 1937, and 132.0 in September, 1936, the month of the guilder devaluation. The advance is, therefore, 1.2 per cent. compared with May, 1937, and 4.5 per cent. compared with September, 1936.

Revival of Foreign Trade

The foreign trade returns for the month of May show that imports rose from 128.3 million guilders in May to 139.8 million guilders in June, and exports from 90.2 million guilders to 94.6 million guilders. Neither imports nor exports reached in June the record levels of the post-devaluation period attained in April; exports were about 6.5 million guilders and imports 2.4 million guilders below the figures of that month. Nevertheless, in the corresponding month of last year the value of imports only amounted to 76.9 million guilders and of exports to 53 million guilders. The import surplus rose from 38 million guilders in May to 45.2 million guilders in June, the highest figure since the devaluation in September, 1936.

The following table summarises the trade returns, quarter by quarter, during recent years:—

	Imports (In million guilders)				Exports (In million guilders)			
	1934	1935	1936	1937	1934	1935	1936	1937
1st quarter ...	276	226	233	336	168	160	156	246
2nd quarter ...	261	229	234	410	171	159	163	286
3rd quarter ...	251	228	243		196	174	194	
4th quarter ...	250	253	307		177	182	233	
Entire year ...	1,038	936	1,017		712	675	746	

These quarterly figures clearly show the sharp recovery in foreign trade since last year. In the second quarter of 1937 the value of exports was 123 million guilders higher than in the corresponding quarter of 1936, compared with an improvement of 90 million guilders comparing the first quarter of 1937 with the corresponding quarter of the previous year.

Argentina

Soaring Value of Exports

Buenos Aires, July 17.—The great expansion of exports which has characterised recent months is slowing down. This is partly seasonal, but is also because the circumstances which caused the boom were largely temporary. The figures for June were considerably lower than in preceding months. The value was nevertheless more than half as much again as in the same month of last year. The volume of Argentine exports during the first half of this year was the highest ever recorded. The value was only a shade lower than in the first half of 1920, the peak year. For the purpose of comparison the figures for each of the last 10 years are given herewith:—

Year	Volume in tons (January to June, inclusive)	Value in Pesos
1928	9,236,984	1,346,303,676
1929	9,396,569	1,221,092,058
1930	9,358,658	796,816,872
1931	9,185,525	753,180,226
1932	9,667,714	757,827,863
1933	7,376,262	580,703,256
1934	7,665,033	717,626,233
1935	8,702,151	849,210,595
1936	9,032,930	723,302,767
1937	11,278,154	1,409,047,103

The increase in the value of exports in the first half of 1937, compared with 1936, is almost wholly accounted for by grain and linseed, which rose by 184 per cent. Pastoral products (meat, hides, wool and dairy produce) rose only by 23.2 per cent. The rise in imports is very slowly approaching the rise in exports, and the effects of the boom are far yet from being felt in all spheres of economic life. Foreign trade during the first five months of 1937 and the previous year was as follows:—

Year (5 mths.)	Imports	Exports (in Pesos)	Export surplus
1936	458,420,033	621,473,194	163,053,161
1937	546,910,578	1,254,276,730	707,366,152

In the first five months imports rose by 19.3 per cent., and exports by 101.8 per cent. Much the biggest increase in imports was in iron and manufactures, the value of which rose by 21,150,503 pesos. Next came machines and vehicles with an increase in value of 15,208,389 pesos, and textiles which rose in value by 8,813,372 pesos. Great Britain supplied 20.1 per cent. of the total Argentine imports compared with 21.9 per cent. in the same period of last year. The United States came next with 15.8 per cent. against 14.55 per cent. last year.

In view of the eminently satisfactory condition of business, importers are demanding the removal of emergency measures imposed during the depression, and especially the 10 per cent. surcharge on all imports which was decreed in October, 1931. A note has been sent by the Importers' Union to the Chamber of Deputies asking that, in next year's Budget, provision be made for the gradual reduction of the surcharge. Apart from the abolition of basic prices for grain and linseed, the narrowing of the margin between the buying and selling rates of exchange, and the lightening of taxation, Argentina is still living under the regulations imposed by the crisis.

While there have been light rains in the Southern part of the cereal zone, the north of the country is reported to be very dry, especially Córdoba and Santa Fé, the two provinces which suffered from the great drought of 1935. In the Central and Southern zones of Argentina sowing is proceeding well.

The Claims of the Railways

On July 14 the Argentine newspapers published details of a note addressed to the Minister of Public Works by the four big British-owned Railways—the Buenos Aires Great Southern, Buenos Aires Western, Central Argentine, and Buenos Aires and Pacific Railways. The note asks for an answer to the request made at the beginning of the year for authority to increase certain rates. The companies invested money in the railways when the country was only a vast undeveloped plain, and now claim the right to receive a fair reward for their work. If they are refused it, they claim that ownership of the lines is worthless.

So long as interest could not be paid through causes beyond the control of the State, the companies did not complain. They linked their destiny with that of the country and accepted the same fate. As the result of various laws which have been passed since 1917 (the note observes), the former flexibility and elasticity of rates have disappeared. In consequence no modification of tariffs could be effective until five months after it had been announced. The modification of the reduced basic rates which was proposed to the National Railway Department early last January was still being studied. In the meantime the companies had seen the

prices of cereals and of all articles they carried rising without any improvement in their own financial position. In addition, the railways had to cope with a considerable increase in their working costs owing to the rise in the price of fuel and materials. The note points to the prosperity of the country and urges the right of the railways to share in it.

The proposed increase in rates could not be called a sacrifice for the country, they allege, because Argentina was now in a position to bear the economic burden without difficulty. The note asks when adequate remuneration will be accorded if it is refused now, when the volume and value of products carried are at record levels. The railway depression is still going on, they say, and can only be checked by a quick favourable decision on the question of tariffs. Such a decision would improve Argentine credit in the centres which provided most of the railway capital. In those centres, it is stated, there is a conviction that the poverty of the companies is due chiefly to exchange losses, that is, to actions of the Argentine Government which, while developing the wealth of the nation, have put obstacles in the way of the financial stability of the railways.

Commenting on this note, the newspaper, *La Nación*, says that the rise of cereal prices in World markets cannot yet be considered permanent, since it is due to factors which are uncertain and independent of Argentine economy. The State cannot truthfully be accused of neglect or indifference to the interests of the companies, since they have always treated them with consideration. Further, the newspaper urges the railways to display the moderation shown in the past and have the patience to await the effects of the collaboration, co-ordination, and organisation begun by the State in order to estimate more justly the true situation of the railway industry.

Letters to the Editor

British Banks' Reserves

TO THE EDITOR OF THE ECONOMIST

Sir,—In the article on the banking half-year which appeared in your issue of July 24th there are certain passages which seem at first sight to suggest, unless I misread them, that it is not an increase in the amount of a bank's reserve which increases its capacity to lend and invest, but an increase in that part of a bank's reserve which it holds in the form of a balance with the Bank of England.

As a matter of theory it is the amount of the reserve, in whatever form it may be held, which is material in this connection, and it would seem from the following figures that there is no divorce between theory and practice in this matter.

	Bankers' Balances with the Bank of England	*Reserve of the ten London Clearing Banks*	*Short Loans, Bills, Investments and Advances of the ten London Clearing Banks*
		(Million £) (Averages for each year) (000,000 omitted)	
1933 ...	100	212	1,752
1934 ...	100	212	1,676
1935 ...	97	215	1,791
1936 ...	96	221	1,924

The figures may be of interest to your readers as showing that the Bank of England's weekly figures relating to bankers' balances are no index of the capacity of the deposit banks to make loans and investments, and do not necessarily throw any light on the question whether the banking system has been expanding or contracting the volume of bank credit.

There was naturally some compression of language in your article, and I assume that the passages referred to owe their origin to this compression and not to any divergence from orthodox views.

I am, Sir,
Yours faithfully,
London, S.W. G. D. Rokeling.

[Our argument depends upon these two facts: (*a*) that the joint-stock banks' cash comprises their till-money plus their balances at the Bank of England; (*b*) that the banks' till-money as a rule is equal to 5 per cent. of their deposits. The causal factor is the size of their balances at the Bank of England, since these govern earning assets, which determine deposits, which, in turn, determine till-money; and all in such a way that balances at the Bank plus till-money equal about 10 per cent. of deposits. The movements in the figures of bankers' balances and reserves, quoted by Mr. Rokeling, are too small to prove much either way; and in any case bankers' balances at the Bank of England comprise those of all British banks and not of the ten London clearing banks alone.—Ed. *Econ.*]

War Debt and the Price of Gold

TO THE EDITOR OF THE ECONOMIST

Sir,—Three important periods of history, which have demonstrated the relationship between the price of gold and the debt accumulated through the waste of wars, have been either passed over or ignored by economists. These periods are as follows:

1. Prior to the formation of the Bank of England in 1694, the costs of wars were liquidated, in part, through the reduction of the gold content of the gold coins then in circulation. The price of gold in London was written up from 18 shillings per ounce in 1250 to 100 shillings per ounce in 1694.

2. The Bank of England was formed in order that British trade might expand. The credits issued were self-liquidating and were substituted for payments in gold. This system of the substitution of credits for gold was so successful that by the time of the Napoleonic Wars, public borrowers contracted credits that were not self-liquidating. There was no further write up in the price of gold to offset the increase of the debt incurred by the Napoleonic Wars. A marked difference exists between short-term credits, which are self-liquidating, and public obligations incurred in an emergency, such as a war, which are unsecured and cannot be paid off through the turning of goods into cash.

3. Following the World War and the break in prices in 1921, the debts accumulated and issued to pay for the cost of the War were not liquidated by a further write up in the price of gold. Instead, we had a further extension of credits, both international and domestic. These new credits were issued despite the fact that the total money cost of the War was about 186 billion dollars. If we deduct from this amount the net money cost of the War to the Russians and the Central Powers Group, the net money cost of the War to the Allies was about 102 billion dollars.

The money cost of the War to France and Great Britain was partly liquidated, when in 1928 France wrote down her total pre-war and post war debt from approximately 464 billion francs to about 92 billion francs, and Great Britain in 1931 wrote down her total debt from approximately 7·7 billion pounds sterling to 5·1 billion pounds sterling.

A study of the ratio of the present monetary gold stock of Great Britain, France and the United States to their total Government debt when compared with 1913 shows that, while in 1913 the total gold stock of England, France and the United States amounted to $2,134,408,350, the total debt of England, France and the United States amounted to $10,857,471,500. The total gold stock of these three countries was 19·66 per cent. of their total debt. In 1936, the total gold stock of England, France and the United States was $9,829,690,850, while the total debt of these three

The British and Polish Trade Bank A.G., Danzig

Paid-up Capital: D. Gulden 5,000,000.--
Reserves: D. Gulden 3,527,571.57

Chairman: Sir William Grenfell Max-Muller, G.B.E., K.C.M.G.
Vice-Chairman: Józef Kożuchowski.
Joint Managers: Stanisław Pawłowicz and Philip Frederick Rann.
Assistant Manager: Aleksander Kowalski.

The Bank was formed to facilitate Exports and Imports from and to Poland, including Danzig.
INQUIRIES SOLICITED

countries was $58,033,066,760. The total gold stock in 1936 was, therefore, 16·94 per cent. of the total debt of the three countries. These figures do not give any consideration whatsoever to the gold requirements of the rest of the world, especially Central Europe. Assuming, however, that the same relationship existed as in 1913, the present gold stock of England, France and the United States would have to be written up 16·07 per cent.

It seems pretty clearly established, therefore, that insomuch as some form of credits, based on gold, which are self-liquidating will have to be created in order to bring Central Europe back to a reasonable state of solvency, the ratio of the gold held by the three countries in question to their present total debt should be written up to at least 25 per cent. of their total debt.

We agree with Sir Henry Strakosch that we must expect a gradual but steady rise in prices, but in our opinion this price rise is dependent almost entirely on the revival of the total volume or tonnage of world trade. It has been proved that following the British suspension of gold payments in September, 1931, there was no price rise of any importance in Canada, Great Britain or Japan until mid-summer 1936, when the demand for raw material for armaments developed. It would seem to us, therefore, as the British and American price levels are to-day almost exactly in line, measured in gold, namely about 71 per cent. of 1913, that when the politicians are forced to take action they will authorise an increase in the price of gold rather than resort to the printing press.

Returning, therefore, to our principal thought, that insomuch as the total debt of the leading industrial countries cannot be liquidated at the present gold content of their currencies, and furthermore that the world's monetary gold stock is inadequate for the extension of self-liquidating credits necessary to restore world trade to a normal tonnage, it would seem to us that an agreement could be reached between the United States Treasury and the British Treasury by which a gradual rise in the price of gold could be maintained and announced in advance. This rise in the price of gold could be accompanied by a flexible rediscount rate.

Yours very sincerely,
DOUGLAS W. CLINCH.

Small Company Prospectuses

TO THE EDITOR OF THE ECONOMIST

SIR,—You have given investors some timely guidance by your article on Prospectuses Good and Bad. It is to be hoped that you will extend your help to another deserving section of the public.

Small company flotations continue. Men who have built up suitable businesses are being approached by people associated with recently-formed issuing houses and persuaded that a public flotation will bring them immediate cash gains, new working capital, greater profits in the future, and considerable prestige. At one time, as many of your readers know, those responsible for new issues would not undertake "small" flotations. The number of shares available for the public was too few for a market, and the expenses necessary for issue were too great for equity to all concerned. Newcomers have utilised shares of low denomination and Offer for Sale facilities to overcome the first objection and obscure the second. A likely consequence is loss to the unfortunate men whose businesses they convert. The following illustration is from one among many recent issues.

The assets to be acquired by the new company were valued at £86,900, and the annual profit average was taken as £15,500. The purchase consideration included £53,000 cash and 190,000 shares in the new company. At par the latter were valued at £38,000, and at issue price, £47,500; so that goodwill was £4,100 on par valuation and £13,600 on the other.

The flotation finance may be summarised as follows :—

Asset Items		*Capital Items*	
Assets acquired from old company	£86,900	*Public :* 390,000 shares (4s.)	£78,000
New cash	25,000	390,000 premiums (1s.).....	19,500
Goodwill	13,600	*Original Shareholders :* 190,000 shares (4s.)	38,000
Expenses and profits of issue.....	19,500	190,000 premiums (1s.)	9,500
	£145,000		£145,000

Before flotation the original owners had net assets of £86,900, less £13,000 due to preference shareholders, say, £73,900; and they were entitled to all the profits after payment of about £650 preference dividend, say, £14,800 or so annually in recent years. After flotation they had £40,000 in cash and in net assets of the new company nineteen fifty-eighths of £(86,900 plus 25,000), say, £76,700 in all. If their share of future profits is to equal their earlier average of £14,800 or so annually, the new company must earn about £14,800 × 58/19, or more than £45,000 annually, which none of them thinks it will.

Thus, for a change in the cash proportion of their assets, accompanied by about £3,000 increase in the total of those assets, they must contemplate a reduction clearly greater than £3,000 annually in their share of future profits. The promoters did not mention this. It may be observed that the latter appear to have made about £5,550 gross profit on the issue, the difference between £19,500 and the published expense of £13,950. As usual, the public are supposed to have paid these expenses, not the original shareholders. If public participation in small enterprises is to be encouraged, issue methods should be devised whereby expenses are fair to all concerned.

Those interested may note that simple reasoning establishes an upper limit for issue expenses and profits if original owners of a business are not to suffer loss from the conversion and the earning rate of new assets is assumed equal to that on the old. Let E denote issue expense and profit, G the goodwill purchased, C the cash for new working capital, and A the valuation of acquired assets, then, where there is one class only of shares, E must not exceed G × C/A.

Applying this rule to the illustration above we see that issue expense should have been limited to £(13,600 × 25,000)/86,900 or about £3,920; and if the illustration is typical it is clear that a large gap has to be bridged before small flotations are fair to shareholders both old and new. Perhaps both classes would benefit if before parting with their money or other assets they had, as a legal right, a summary of the proposed flotation finance in some such form as that used above.

I am, Sir,
Yours faithfully,
AN INDUSTRIAL EXECUTIVE.

Books and Publications

In Search of a Remedy

NOT many years ago, the "ups and downs" of business were regarded, like human ailments, as inevitable and inescapable. Economists have, however, refused to take these things for granted, and much time and thought has been devoted to seeking some logical explanation for the alternation of prosperity and depression.

Many causes, cures and preventive measures have been suggested. But the economic doctors still disagree in their diagnosis and prescriptions. The curious layman is accordingly perplexed and even irritated. In times of crisis he turns to the ready cure-alls of witch-doctors, or awaits a sign from the accredited experts with a growing lack of confidence.

Steps are being taken which may restore his faith. The recent grave depression prompted the Assembly of the League of Nations, seven years ago, to resolve upon an attempt to co-ordinate the analytical work in progress on the nature and causes of slumps. The first task was to examine existing theories, to notice points of agreement or controversy, and, if feasible, to formulate on the basis of present knowledge a consistent explanation of depressions.

This task was entrusted to Dr Haberler, who has now produced by far the best summary of current theories

of the trade-cycle*—a little over-simplified at times, perhaps, but none the less a major achievement. He begins by examining the purely monetary explanation of the trade cycle; and then proceeds to tackle the variety of over-investment theories, whose central theme is the changing relationship between the production of capital goods and consumers' goods. These latter views now unquestionably hold the field, and Dr Haberler has distinguished three variations: those who find a monetary explanation for the disequilibrium between the output of these two types of goods; those who put it down to changes in investment opportunities; and those who give technological reasons.

Dr Haberler does not rest content, however, to investigate only the more respectable views. Underconsumption theories, psychological explanations, harvest theories and even sunspot correlations are patiently sifted and seriously examined. His task of sorting out this multitude of arguments and opinions is not easy because different economists are prone to say the same thing in widely different ways—or even to devise a new language from the technique of mathematics. But Dr Haberler's painstaking search is never deterred by merely accidental divergences of expression.

At the end he goes on to fit together what he has found. The arrangement of his Chinese puzzle is courageous and almost complete. Here and there the pieces do not quite fit, and sometimes Dr Haberler inevitably intrudes his own personal opinions, stoically excluded for the greater part of this work. But in a mere two years he has done what might have taken some men a lifetime. He does not claim finality for his exposition, but he has drawn together our stock of knowledge.

Moreover, he teaches a vastly important lesson. The most serious gap in our knowledge of the trade cycle is in its international aspects. Even in the most recent studies of the trade cycle international implications have been neglected, whereas nothing is more evident in experience than the growing interdependence of nations. If any progress at all is to be made in the control of fluctuations in trade and industry, it can only be by conscious co-operation. Dr Haberler has shown both the wisdom and experience of such an approach, not only in theory but equally in common practice.

All these conclusions are now to be tested by the evidence of historical data. The Economic Intelligence Service of the League will proceed from these assembled theories to the observed facts. An excellent start has been made to a great project; and we may only hope that the task will be carried to a fruitful end with equal skill, industry and integrity. Action for the welfare of the whole world might well be the outcome.

Shorter Notices

"India's Balance of Indebtedness, 1898–1913." By Y. S. Pandit. Allen and Unwin. 210 pages. 10s. 6d.

This admirable treatise by Mr Pandit of Bombay is the first study of its kind about India between the eventful years 1898–1913. The author acknowledges in handsome terms his indebtedness to Professor Jacob Viner, on whose classic treatise on "Canada's Balance of Indebtedness" the present work is modelled. The period examined was one of increased foreign borrowings by India and of increasing foreign demand for her products; and the gold exchange standard was being gradually introduced into India. This study supports the contention that the rise of prices in India during the opening decade of the century was primarily due to changes in the volume of her foreign trade, especially to her expanding exports, rather than to the imperfections of the gold exchange standard. There are lucid chapters about balances of trade, service transactions and non-commercial transactions; and a critical examination of the amount of foreign capital invested in India. This is a sound book for study and reference. It is to be hoped that Mr Pandit will find time to bring his studies nearer to modern times.

* "Prosperity and Depression." By G. von Haberler. League of Nations Publications. Allen and Unwin. 363 pages. 7s. 6d.

"The Peace Year Book for 1937." National Peace Council. 418 pages. 2s.

Not the least illuminating features of this useful book of reference are the maps by J. F. Horrabin and two selected cartoons by Low. They add point to a notably sound collection of information about the peace movement at home and abroad, the League of Nations, the International Labour Organisation, mandates, armaments and the traffic in arms. The review of international affairs which prefaces these reference details is concise and lively; and, among the appendices, those on raw materials, world production and trade, and the cost of warlike preparations are especially worthy of notice. Here are the facts about peace work and war costs in a cheap and handy form.

MONEY AND BANKING

Groom *v.* Crocker

INSURANCE policies that cover a third-party risk contain almost invariably what is known as a take-over clause, which appears to give to the insurance company the entire control of all claims made against the insured. To this rule motor policies are no exception. Any motorist who looks through his policy will find in it some such words as these:—

> The company is entitled to take absolute control of all negotiations and proceedings, and is entitled to use the name of the insured to settle and/or defend any claim, and it reserves the right to abandon the same at any time.

The object of the clause is clear. It is to put the defence of any claim into the hands of one party and—on the principle that the man who pays calls the tune—it chooses the hands of the insurance company, on which any loss will ultimately fall. That clause is the holy of holies of every motor policy, and no company would think of issuing a policy lacking this clause.

From this essential clause there arose the curious dispute of *Groom v. Crocker and Others*, which has been before the Courts in the last few weeks and has raised an astonishing volume of interest and heat in the general public. Mr William Groom was in 1934 driving his brother, Mr Aubrey Groom, when the car collided with a lorry. The lorry came out of a side road, cut across the bows of the Groom car, swung round sharply on to its own course, brought its helm round too far, and finally hit the Groom car a crack on the starboard quarter. The passenger, Mr Aubrey Groom (whom for clarity's sake we will take the liberty of calling Aubrey, while his brother shall be called William), was badly injured, having amongst other things a fractured skull and a number of serious cuts.

The first thing that happened was that the police took proceedings against the driver of the lorry and secured a conviction. Then Aubrey, as he had every right to do, laid his plans for recovering damages and issued a writ both against the owners of the lorry and against William, while William (who was less seriously injured) also took action against the lorry owner to recover his damages.

So far the case is plain and ordinary, but now a complication arises. William's car was insured with the National Farmers Union Mutual Insurance Society, and the lorry was insured with the Motor Union Insurance Company; and it so happened that these two offices had at the same time another collision in which they were interested on different sides. To avoid unnecessary strife it was decided that the two offices should go fifty-fifty and, irrespective of their actual liabilities, should halve the gross total of the two claims combined.

Under the take-over clause in their policy, the National Farmers instructed Messrs Crocker, who acted—as solicitors always act in third-party claims—nominally for the insured, actually for the insurer. Their duty, as they saw it, was to conduct the case in such a way as to produce the lowest damages for the insurer, whom they regarded as *de facto* their client. They knew that, owing to the arrangement between the two insurance offices, it did not matter to their client whether Aubrey established his claim against William or against the lorry. All that mattered was that the damages should be kept as low as possible. They consulted counsel informally, and on counsel's advice they decided that Aubrey would be likely to obtain higher damages from the lorry-owners than from William, and that the right thing in the interest of their *de facto* client was to admit that William was negligent, leaving the lorry to drop out of the case altogether. This was done, and Aubrey in the action recovered £924 damages from William.

At this point the case was apparently over. But William was dissatisfied. Messrs Crocker maintained throughout that he knew what was being done; but he denied it. I did not know, he said, that Crockers, who were acting for me, were going to admit negligence, and I never would have admitted it. Why should I have a black mark standing against my record, when the lorry-driver had been fined for bad driving and everything pointed to the fault being entirely his? I object to this slur being put on me, without my knowledge, by my own solicitor, and I will not sit down under it. William therefore started an action on his own account against Messrs Crocker and the National Farmers. He claimed damages from both of them, on two grounds: (a) negligent handling of his case and (b) libel. It is part of the topsy-turvy complications of the story that the same firm of solicitors which had in the first lawsuit acted for Aubrey against William now acted for William against Crockers and the National Farmers.

In this action various questions were left to the jury, who found against both defendants on both points. They awarded £1,000 for negligence and £1,000 for libel against the National Farmers, and the same sums against Crockers. Thus the strange position was reached that the brother who was badly injured got £924, and the brother who was said to have for one moment been negligent in his driving was to receive £4,000.

After legal argument, Mr Justice Hawke over-ruled the jury in the matter of the National Farmers. Of the soundness of his judgment there can be no question. They cannot by any stretch of language be said to have been negligent and William's counsel admitted that the jury's verdict could not stand. The libel alleged against them was this phrase used in a letter from head office to an agent:—

> If we had repudiated liability we ran a very serious risk of the Court holding a different view and giving a decision against us.

Into that almost platitudinous reference to the uncertainty of litigation the jury read a libel so serious as to merit £1,000 damages, despite the privilege of a departmental communication. The obvious comment is that juries move in a mysterious way their wonders to perform, and that the judge's common sense in over-ruling them prevented a grave miscarriage of justice. Damages against the company would have been grossly wrong.

But what of Messrs Crocker? Their position was different, for they were in law acting for William; and though they had been instructed to protect the interests of the insurance company they came into court as solicitors for William against Aubrey. It may well be true that Aubrey did not regard his brother as the defendant and would not, but for the insurance behind him, have started an action against him at all. But that does not alter the fact that Crockers were William's solicitors; and the judge emphasised strongly the duty that they owed to him irrespective of any insurance interests that might lie in the background. But did not the take-over clause justify Messrs Crocker in taking whatever line best suited the insurance company? The judge held that it did not, and that a defendant, even with this clause in his policy, cannot be called on to give his case away or to sit down while it is given away for him. The interests of a client, in law, cannot be disregarded in favour of some other party (not legally concerned in the suit) whom the solicitor regards *de facto*, as his client. The take-over clause does not entitle the solicitors to "throw away the insured and put whatever imputations on him they like." On these grounds he held that the jury's damages against the solicitors both for mishandling the case and for libel must stand; and, further, that the damages recovered by Aubrey from William must be made good by the solicitors. He has, however, granted a partial stay of execution, pending consideration of an appeal.

With the judgment there would appear to be a considerable measure of agreement in the popular mind, but its implications are worth study. The take-over clause is intended to give the insurance company the right to settle even if the insured motorist disagrees; and thousands of cases are settled every week by payments which the insured regards as uncalled-for, excessive, absurd and preposterous. Few motorists believe that they are responsible for an accident. It is common form for a motorist to say that the insurance company threw away his case, and that if he had had control of it himself the result would have been very different. Does this judgment give him the control of his own case, despite the take-over clause? It looks very much as though it does. Here is the relevant passage in Mr Justice Hawke's judgment:—

> He did not think the policy meant that the insurance company could do what they liked and disregard the interests of the insured, but they might take what steps they thought proper in the course of conducting the defence, and if the insured did not like their methods or the views they took as to the proper method of conducting any defence they could tell him to go away.

The meaning of this seems to be that when the insured disagrees with the insurer he can go away and conduct the case through other solicitors for himself; that he may conduct it not in accordance with the view the insurance company takes, but with the view that he takes, of a proper settlement, the insurance company remaining liable for whatever damages may result. That the insurance company would remain liable seems to be unquestionable. If it did not the whole purpose of compulsory insurance would be frustrated, and the insurance company would have a defence against the third party which the Road Traffic Acts never meant to give it.

The effect of this judgment, if we have interpreted it correctly, and if it were generally acted on by insured motorists, would be to increase enormously the cost of settling claims and to force insurance premiums up—possibly to two or three times their present figure. Take away from the insurer the right which he has always believed himself to have under the take-over clause, and the whole basis of rating motor risks must be revolutionised. And it is very difficult to read into Mr Justice Hawke's judgment any meaning except this—that the motorist may disagree with the insurance company in the handling of the claim and express his disagreement in appropriate action.

It may perhaps be suggested that the real moral of this case is to do away with the legal fiction that the motorist is the defendant. Let the action be brought, it may be argued, not against the motorist, but openly against the company that insures him. Given compulsory insurance and the Act that allows the third party the right of direct action in certain circumstances against the insurer, the legal fiction has already worn thin. If the motorist were openly short-circuited, and action were brought straightway against the insurer, the ground would be cleared and the machinery of litigation would be simplified. Let the solicitor appear in court as solicitor for the party who has, in truth, instructed him. There will doubtless be ample opportunity to discover, in future, whether this view will prevail.

Financial Notes

The French Economies.—Fresh details of the proposed French economies are gradually becoming available. As we pointed out last week, the objective is to reduce a total deficit for 1938 from Frs. 47,000 to Frs. 22,000 millions. This requires a saving of Frs. 25,000 millions, to be achieved partly by new taxation and partly by reduction in expenditure. Towards this end, the balancing of the ordinary budget is expected to get rid of a deficit of Frs. 8,000 millions, while the recent increase in railway rates and fares will yield Frs. 2,500 millions. This provides Frs. 10,500 millions as a beginning, thereby reducing the deficit from Frs. 47,000 to Frs. 36,500 millions. The new railway reorganisation plan, together with reductions in the deficits of the Paris and Seine local governments, and also after allowing for certain minor economies, is expected to yield a further Frs. 14,500. Thus the final deficit is to be reduced to Frs. 22,000 millions. This deficit will consist in part of direct Government borrowing up to Frs. 15,000 or Frs. 16,000 millions, of which about Frs. 10,000 millions will be required for re-armament and Frs. 3,000 millions for public works. The remaining Frs. 6,000 or Frs. 7,000 millions represents the final railway deficit. At the present rate of exchange the proposed rearmament borrowing is equal to £77 millions sterling, or to almost exactly the amount of our own annual defence borrowing. It seems fair to suggest that the new French Government is making a reasonable effort to straighten out the country's finances, but much depends upon the future trend of prices, wages and costs and still more on its success in commending the confidence of the Chamber. On the whole a rising trend of prices should help to balance the budget, as theoretically it should expand revenue more than expenditure, and so these new estimates should stand the test of actual experience. The real crux is whether the Government can attract back sufficient funds from abroad to reconstitute the country's gold reserves and also to provide the funds which will have to be borrowed to meet even this lesser deficit.

* * *

World Monetary Policy.—Sir Charles Addis has contributed an outstanding article to *The Quarterly Review*, entitled "The New Monetary Technique." In it he brings the banking experience of a lifetime to bear upon the fundamental changes that have followed our suspension of the gold standard in 1931. The subordination of gold, the growth of Exchange Funds, the spread of economic nationalism and the increasing intervention of the State in matters of commerce, all come under his review. It is not surprising that he feels very uneasy at these changes, but he equally recognises that change is inevitable. The first important doubt he expresses arises from the fact that the new monetary technique has, as the result of the past few years' recovery, operated on a rising market. Can it prove equally successful, he asks, on a falling market? This is a very pertinent question, though it carries the important qualification that in the opinion of many authorities the new monetary technique was a leading instrument of recovery. Sir Charles also complains that the mystery enveloping Exchange Funds creates an atmosphere of doubt and hesitation, and so is a deterrent to enterprise. There is some substance in this allegation, which really merges in the larger fact that monetary policy has passed under the direct control of Governments. Still this is not an argument against Exchange Funds *per se*, but against excessive secrecy of operation; and in England, at least, this secrecy is already being mitigated. We agree entirely with Sir Charles' prediction that we are never likely to return to the old gold standard, but almost certainly to some modified form. We also agree with his condemnation of economic nationalism, and with his plea for a *via media* to be shared by Capitalism and Socialism. The questions he raises are of grave importance and we shall have occasion to discuss some of them at greater length in the future. Our main purpose to-day is to call attention to this valuable contribution to modern monetary theory and practice.

* * *

Export Credits.—This week the Royal Assent is being given to a new Bill placing the Export Credits Guarantee Department (which insures British exporters both against the insolvency of their foreign customers and against the risk of payment being prevented by exchange restrictions) upon a permanent basis. Hitherto the Department has had to limit its guarantees to a maximum of £26 millions to be outstanding at any one time, and though of course the total amount of British

export trade guaranteed during the year was considerably in excess of this amount, it had become apparent that a higher limit was desirable. The new Bill fixes this at £50 millions. Also the Department has hitherto enjoyed only temporary powers, so that it was not able to give any new guarantee later than 1940, or to cover any liability extending beyond 1950. These time limits have now been removed. The Department is also being allowed certain new powers. Thus it may cover exports consisting of a proportion of imported goods, while its medium-term guarantee of foreign contracts placed with British engineering firms is also widened to cover the cost of local labour, etc., incurred at the site of the contract. The recent world rise in shipping freights and the re-employment of idle tonnage has also made it possible for the Department to cover foreign orders for new tonnage placed with British yards. Hitherto there has been an objection to this, on the ground that the new tonnage would compete with British shipping, but it was pointed out that one consequence of this restriction was simply to divert orders from British to foreign yards. For these reasons, the Department is now prepared to consider applications in cases where the new ship is certain to be built somewhere, so that the only question outstanding is whether or not a British yard secures the order. The Export Credits Guarantee Department has certainly established itself as a useful component of our foreign trade machinery; and in these days of exchange restrictions and other Government interference in trade, a Government department is in a position to obtain vital information which is not available through private inquiry. Its transfer insurance scheme has saved exporters to Spain from heavy loss, while its medium-term credit scheme was recently nstrumental in obtaining for our heavy industries an important Turkish contract. We are glad to see that its powers are being extended and made permanent.

* * *

Gold—a South African View.—The Deputy-Governor of the South African Reserve Bank, Dr M. H. De Kock, in his speech at the annual meeting of stockholders on July 28th, took the opportunity of making some reassuring remarks on gold. He said that the Reserve Bank had throughout the past four months experienced no difficulty in disposing of South Africa's weekly gold output at ruling market prices, nor was any difficulty anticipated in the future. The gold industry, he added, was continuing to consolidate its sound position by building up large ore reserves. He condemned the suggestion of any restriction on the output of gold on the ground that any tampering with the production of a commodity, which served as a basis for currencies, would introduce another artificial speculative factor, and that public distrust of the efficacy of control would be bound to occur from time to time. He welcomed the current and prospective increase in the supply of gold as the very factor which would render possible a restoration of the gold standard. A greater supply of gold would assure countries that they could return to the gold standard without any loss of elasticity in their monetary systems. It would also compensate for the maldistribution of the world's monetary gold stocks. As a short-term view there is considerable force in these arguments, though Dr De Kock passed over the fact that South Africa has only been able to sell her gold during the last few months because the British and American authorities remained willing to buy it.

* * *

The Foreign Exchanges.—The franc has once more been brought under control by the French authorities. After depreciating to Frs. 135 to the pound, the spot rate was brought back first to Frs. 133 and later to Frs. 132⅞. Unlike British practice, the French authorities have also intervened in the forward market. This week they have brought the discount on one month's francs down from Frs. 3 to Frs. 1½, and the three months' discount down from Frs. 7 to Frs. 4. It is an open question how long the resources of the French Exchange Fund will last, but so far many operators have regarded a spot rate of Frs. 135 as being the present limit of depreciation. It was noticeable that business fell away when that rate was reached, and this suggests that dealers then ceased to sell and held off the market altogether. Dollars have been reasonably steady, with fluctuations mainly depending upon the amount of Japanese selling. At one time sterling touched $4.98½, but the rate has since fallen to $4.97¾. The British Control took the opportunity of the recovery to below $4.98 to sell a few dollars. Belgas were weak on Monday at Bel. 29.63, as there was a sudden rumour that the new depreciation of the French franc would force Belgium into a new devaluation. This rumour quickly subsided, and the rate improved to Bel. 29:53, later weakening to Bel. 29.57. Forward belgas are quoted at either side of par. There was some offering of guilders towards the middle of the week. This was merely because some Dutch dealers who had been short of guilders were squaring their books in preparation for the holidays.

* * *

The Money Market.—At the Treasury bill tender of July 23rd the discount market only secured 19 per cent. of the total allotment of £40 millions. In consequence brokers were not greatly in need of funds this week, nor were they eager to sell bills to the banks. Money therefore remained very comfortable, with little calling by the banks, and the banks were also ready to buy September and October Treasury bills when available.

	July 8, 1937	July 15, 1937	July 22, 1937	July 29, 1937

In spite of the week's currency withdrawals by the public, bankers' deposits have risen by £7.1 millions, and are once more over £100 millions. The causes of this increase are first a drop in public deposits and, second, an increase of £7.0 millions in Government securities held by the Bank. It is clear that every effort is being made to keep money easy during the holiday expansion in the circulation.

THE STOCK EXCHANGE

Small Company Prospectuses

THE Macmillan Committee made a break both with tradition and proverbial philosophy by concerning themselves, *de minimis*, with the plight of the relatively small company which had outgrown local and private financial facilities but was too small really to be a public market proposition. That was six years ago, and in the interim a number of special agencies, with high repute and substantial backing, have been created to fill the gap. Their work has been conscientious, praiseworthy and, within its limits, useful. But current report has it that many potential clients are tending to bypass the institutions created ostensibly for their especial benefit, and to go direct to the market, which in theory should be closed to them. Recent issue figures lend colour to this view; for while small company prospectuses have represented only a minor part of the £200 millions raised by prospectus and public offerings in the London capital market during the first seven months of this year, their number has been impressively large.

We have made an analysis of all issues, by prospectus or offer for sale, between January 1 and July 24, 1937, of company shares or debentures involving a total money subscription of less than £150,000. This upper limit is conservative, for many companies with considerably greater capital fall short of being "large" concerns. We find that some 45 companies have offered new shares to a total of £3,441,506 at par and £4,725,098 at the average prices of issue, which thus included a premium of 37 per cent. The average amount obtained from the market by each of these "small" companies was £76,500 at par and £105,000 at issue prices. In certain cases, however, the issue did not take the form of a straight capitalisation, but was subdivided into preference and ordinary shares. Altogether some 62 blocks of new shares were created, and the average per block was reduced to £55,400 nominal value and £76,100 cash subscription.

In view of the smallness of these figures, it would seem that subscribers, in many cases, must needs have obtained a security which is far from liquid. The chief difference between the private and the public subscriber to a developing business is that the former is and the latter is not, as a rule, prepared to lock up his money without the assurance that, in case of need, he can realise his investment readily and quickly, at a price. It is true that the great majority of the companies concerned have subsequently obtained facilities for dealings in their shares on the London Stock Exchange. But permission to deal does not in itself make a market. There are times when even the carrying out of an order for one or two hundred shares of a company with a capital of over a million may alter the market price by 10s. or more. But if the total in issue is little more than £50,000 in nominal value, there is a serious danger that, when the initial marketing operations in connection with the issue have been completed, wide and free dealing may be impossible for long periods together. Much depends, of course, on the identity of the promoters and issuing houses. Whether an issue be large or small, an efficient and substantial "shop" will do its best to ensure a two-way movement, as far as possible, even if this involves the warehousing of substantial supplies of its own issues for lengthy periods. The true disability of the unduly small issue is that it either does not attract the really responsible and influential issuing house, or that it does attract the small mushroom group, which is anxious to to take its profits and get the shares off its hands as quickly as may be.

One legacy which the 1928-29 issue boom has bequeathed to the market in 1937 is the intensive exploitation of the share of small denomination—1s., 2s., 5s., etc.—as a device for increasing marketability. Actually, of the 62 issues in our list, 51 were in shares of less than £1 each. It would be highly convenient if marketability were increased in precisely inverse proportion to the size of an individual share; for a small company might rank among market leaders merely by issuing a million or two counters of a farthing each. In practice, unfortunately, there are obvious limitations to the rule. A large company may widen its appeal by having its stock quoted in units of £1 instead of £100. But the process of sub-dividing the already minute is less likely to widen the market for the genuine investor than to facilitate manipulative dealings by attracting the gambler who prefers small stakes.

As a sidelight on the question of marketability we have taken the London Stock Exchange *Supplementary List* for last Monday, July 26th, and examined the "markings" for the 13 new securities issued by the "small" companies during the month of January last. The results are given in the following table:—

MARKINGS IN LONDON STOCK EXCHANGE "SUPPLEMENTARY LIST" (July 26, 1937)

Small Company Issues in January, 1937	Nature and Denomination of Shares	Number of Markings on July 26	Date of Most Recent Recorded Dealings

,, K	Ord. 5s.	*	*

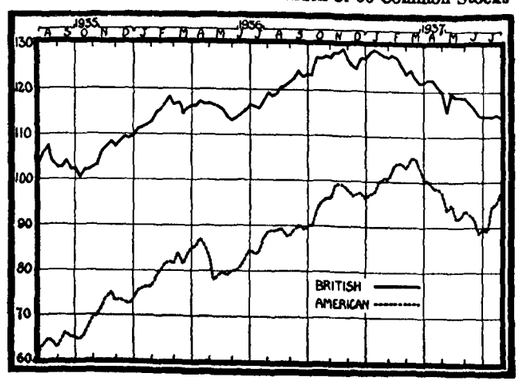
* Not quoted.

The evidence is not conclusive, for the marking of bargains is not compulsory. The record as it stands, however, suggests that, although no stock in the list has been in existence for as long as seven months, market dealings are already quiet, intermittent and irregular. Of the 13 shares, four have no quotation; and of the residual nine only one is really active (with 15 quotations). Two have a single "mark," and six have no recorded dealings for periods ranging from the preceding business day to a month back.

On page 248 of this issue of *The Economist*, a correspondent who signs himself "An Industrial Executive," criticises small company issues on other grounds. Dissection of the terms of a recent issue impels him to conclude, first, that the original owners made a bad bargain in terms of future income, and secondly, that an oppressively large part of the issue proceeds was absorbed by expenses. Our correspondent's argument that the first owners should expect to suffer no diminution of their income, after selling for cash approximately 67 per cent. of their total interest in the business, smacks of eating one's cake and having it. The same remark applies to his suggested formula for fixing the upper limit of issue expenses. But there is substance in the writer's real argument in both cases. To convert a successful business from the "workshop" stage to the "factory" stage is a difficult, delicate and

undoubtedly hazardous operation. Every private soldier is, of course, a potential field marshal, every office boy a potential managing director, and every garage mechanic a potential Lord Nuffield. For that matter, someone or another must hold the winning ticket in the Calcutta Sweepstake. But, in fact, blanks are more common than prizes, and respectable mediocrity more common than business genius. From the vendor's viewpoint, it may sometimes be better to go on adding one to one, and to be successful even in Lilliput, than to fail disastrously among the giants. And for investors the moral is that the financing of young businesses is a specialised activity for which they, as outsiders, have few qualifications, either by way of knowledge or experience.

Our correspondent's second point concerns the burden of expenses on small issues. These expenses are incurred, broadly, under three heads—stamp duties, *expertise* and publicity. The last two—and to some extent the first—are a species of overhead charge which is incapable of being reduced below a certain point, however modest the profits taken by promoters and intermediaries. In the instance cited, expenses and profits of £19,500 were equivalent to 20 per cent. of a total of £97,500 obtained in cash from the public, and to 78 per cent. of the £25,000 remaining in cash as a net addition to the company's resources, after meeting all payments to vendors and intermediaries. In other words, the company had to spend £19,500 in order to gain £25,000 of new capital. By no stretching of terms can this proportion be described as anything but onerous. This example need not necessarily be taken as representative. We are justified, however, in saying that a small company which uses the market's facilities starts inevitably with a heavier *relative* burden of dead assets than the large or medium-sized concern.



Altogether, there appears to be a point below which company financing in the open market is definitely uneconomic. And there is strong evidence that some recent new company issues have come near the limit or below it. We have confined our criticisms to the intrinsic and inevitable disadvantages of small company issues—restricted marketability, speculative prospects and heavy, non-productive initial expenditure. We have said nothing of the possibility of over-capitalisation, though this danger may be presumed to be greatest when normal promotional profits, *ex hypothesi*, are least. On the whole, we must conclude that the issue market has not solved the basic difficulty to which the Macmillan Committee drew attention, merely by extending its facilities to businesses which the Committee believed to be outside its economic scope.

Investment and Company Notes

Course of Share Values.—The stock markets have enjoyed not only an improved tone but an increase in business this week. But the best that can be said for July as a whole is that, for the first time since January, a month has passed without seeing prices lower at its end than at its beginning. That the bull market has suffered a serious check this year is made clear by the chart which we publish on this page. Ordinary share values have, in fact, declined since January with a rapidity almost identical with that of their advance in the second half of last year. They have now receded approximately to the level at which they were becalmed for five months between February and July, 1936. To this experience, that of Wall Street stands in strong contrast. Wall Street, like London, had an indeterminate period in the middle of last year, and a slight setback in November and the first part of December, which was fully recovered by the middle of January. Thereafter, however, share values in America rose for a couple of months while they were falling in Great Britain, and it was only in March that Wall Street turned downwards in unison with London. By the beginning of last month, American prices were close to the level at which progress had been interrupted in the spring of 1936, and in that respect their position was not, after all, very different from that of British prices. During the past month, however, a strong revival has been recorded in America, which has had no parallel in London. That the movement has succeeded in raising average prices by nearly 10 per cent. at a time when foreign money was, on balance,

BRITISH AND AMERICAN INDUSTRIAL SHARE VALUES DURING THE PAST TWO YEARS
(1928 = 100)

British: "Financial News" Index of 80 Ordinary Shares
American: "Standard Statistics" Index of 50 Common Stocks

being withdrawn from New York, suggests that its chief stimulus came from a revival of domestic confidence in the home outlook. If Wall Street maintains its present trend for long, it is unlikely that London will be wholly unaffected. The immediate continuance, therefore, of London's improved sentiment may be a welcome possibility, given a respite from disturbing political headlines. Industrial news remains almost uniformly good and overseas trade is expanding. But the evidence still throws no certain light on the longer term trend in the market.

* * *

Investment Appetite and Policy.—The authorities who lead the capital market, like a famous Grandee of Spain, from behind, have taken full advantage of the improvement in demand for new high-grade securities on the eve of the holiday—which would have been even more welcome had it occurred a month ago. This week a wholly new borrower has, by permission of the management, made a first appearance on any stage and has been received with *éclat*. The Iraq loan for £1 million, with a life of 15 years and an average yield of 5.1 per cent., was largely "stagged." Although the British Treasury has no responsibility, direct or indirect, for the financial affairs of Iraq, the market regarded the loan as mainly a sterling area offer, carrying a political risk by no means negligible but probably limited in practice by Britain's treaty rights and Service arrangements. Hard on the issue came details for a Middlesex loan of £3½ millions of 20-25 year 3½ per cent. stock, offered at 101. The significant features of this offer were its relatively large amount and its confirmation of the authorities' decision to screw up the issue price by a half-point as compared with earlier successful but more modest operations. The market appears, this time, to have been nicely judged, and underwriters may be released, with very little in the matter either way. At least three further sizeable issues are in the immediate foreground, but the holidays are close at hand. Presumably all concerned would like to make any necessary interruption as short as possible. But over-eagerness and undue exigence in the past have frequently delayed the delivery of the golden eggs, and it might be good policy, in deciding the time and price of future issues, to allow a little for the market's infirmity.

Railway Charges Decision.—The laconic statement issued by the Railway Rates Tribunal this week fell upon a market which had, broadly speaking, already discounted the success of the Railway Companies' application. After an initial rise in the stocks on Wednesday, the traffics proved disappointing, and the gains were not held. The broad potential effects of the decision are indicated on page 234 of this issue. From the market viewpoint, clearly, the first consideration is the effect of the higher charges upon gross revenues. It is evident that the more optimistic market forecasts (which assumed that the companies would obtain the full benefit of the 5 per cent. increase) require scaling down. In his evidence before the Tribunal, Sir Ralph Wedgwood, chief general manager of the London and North Eastern Railway, adopted a much more cautious view, which allowed for diversion of traffic. He put the increase for passenger receipts at 3½ per cent., with 3 per cent. for general merchandise, 3½ per cent. for other minerals and 4 per cent. for coal. Presumably these estimates, which must be regarded as instructed guesses, would now require some slight modification in view of the exclusion of suburban passenger fares in the London Transport Area, of freights less than 10d. per ton and workmen's fares under 5d. For calculating earnings possibilities, Sir Ralph's statement of potential revenue increases in a full year (using an estimate for 1937 based on the traffics for the first 23 weeks only as a datum) is not entirely suitable, but it provides a jumping-off point for net revenue estimates.

* * *

The following figures show the estimated outcome of 1937, on this basis, and the estimated addition to railway receipts and other revenues in a "future" year:—

GROSS RAILWAY RECEIPTS AND OTHER REVENUE (NET)
(In £ 000's)

	L.M.S.		L.N.E.R.		G.W.R.		S.R.	
	Estimate 1937	Yield of 5% Increase	Estimate 1937	Yield of 5% Increase	Estimate 1937	Yield of 5% Increase	Estimate 1937	Yield of 5% Increase
Passenger	25,063	816	16,746	505	10,799	359	16,091	332
Goods.....	39,236	1,344	47,580	1,585	16,261	559	4,775	163
Total receipts.	67,986	2,357	49,455	1,733	28,534	983	23,154	537

The figures take no account of variations in wages and other costs. The total estimated gains amount to £5.6 millions, of which £5.3 millions refers to charges within the jurisdiction of the Railway Rates Tribunal. If we assume that the increased receipts for 1937, compared with 1936, are roughly balanced by additional working expenses at current rates of wages and material prices, the increase in available revenues resulting from higher charges which falls into the current railway year should amount to £1.4 millions. But an estimate of the additional cost of a restoration of the final wage cuts might be put at £2.4 to £2.5 millions for all the companies from August 12th to December 31st. The National Wages Tribunal has not yet delivered its findings, but it is significant that on Wednesday the two parties were invited to express their views regarding the effect of the increase in charges announced on the previous day. It would, altogether, be premature to count on a substantial rise in net revenues for this year, although the broad effect in future should be to preserve some part, at least, of any further gains in traffics. for the stockholder. Even this conclusion, however, is subject to the possibility of increased costs for materials and stores.

* * *

L.N.E.R. Statement.—The half-yearly dividend season began with a flourish with the Southern statement, and the market's inspiration was increased by the L.N.E.R. announcement. Investors, indeed, may wonder whether in some respects they are not too good, compared with the evidence submitted before the Rates Tribunal. The London and North Eastern statement, in particular, shows that net receipts for the first half of the year rose by no less than £770,500—equivalent to nearly 1.2 per cent. for the second preference stock, which received ½ per cent. last year. The first preference and redeemable preference stocks receive an interim dividend of 1 per cent.—the first half-yearly payment since 1931. The statement reveals that gross receipts of railway and ancillary businesses and miscellaneous net receipts increased by £1,222,400 during the half-year, while the estimated increase in expenditure is put at £451,900, leaving a net increase of £770,500. The directors' cautious references to the pending decisions on charges and wages were naturally unheeded by the market in view of these results. It is, indeed, remarkable to find that 63 per cent. of the increase has been saved net. Although passenger receipts increased by 4.69 per cent. and goods by 4.96 per cent., advancing costs of operation are reflected in increased passenger and goods engine mileages of 3.09 and 4.89 per cent. respectively. The explanation may lie in the board's reluctance to embark on extensive renewals programmes while costs are rising, and the special effect of the Coronation must also be considered. The statement, therefore, gives the bulls of L.N.E.R. second preference stock (now at 30) some scope for their optimistic forecasts of a 2 per cent. dividend, but they may reflect that it is not all-revealing.

* * *

L.M.S. Disappointment.—The L.M.S. statement, perhaps, accords with the more conservative estimates of the effects of advancing costs, but it came as a considerable disappointment to the market on Thursday. "Street" gossip had toyed with the prospect of resumed interim payments on the £95 millions of ordinary stock at ¼ or even ½ per cent. The statement, however, crushed such optimism. Full interim payments are announced on the preference stocks, as a year

She used to be comfortably off . . .

EVERY year illness or accident leaves thousands of families to face the world alone. In most cases they are not well provided for. Few men are in a position to put aside money enough to maintain their dependants at a satisfactory standard of living in the event of death. It is only fair to your family and to yourself that you place this burden on broader shoulders.

Consider the

'SAFEGUARD' PLAN

which provides a guaranteed income of £3, £6 or £9 per week tax free for a period of years after your death and a cash sum, if desired, when the income commences. When the annual income ceases a cash payment of £1,000, £2,000 or £3,000 is made. If you survive the period of your family responsibilities it can be arranged for the cash sum to be payable to you.

An enquiry for full details and for an illustration suited to your own circumstances will cost you nothing; rest assured you will incur no obligation by doing so.

LEGAL & GENERAL ASSURANCE SOCIETY LTD.
10 FLEET STREET, LONDON, E.C.4

Established 1836 *Assets exceed £36,000,000*

ago, but the ordinary stock receives no interim dividend for the seventh successive year. In fact, the L.M.S. has retained net only 22 per cent. of its total increase in revenues. The total gain for the half-year was £1,410,000, but of this sum no less than £780,000 was absorbed by increased costs of wages and materials and £320,000 for the cost of moving the additional traffic, leaving £310,000 retained net. But for increased costs the company would have retained 77 per cent. of its gross gains—a figure which is sufficiently close to the L.N.E.R. results to suggest grounds for comparison. The L.M.S. may have been less fortunately placed regarding contracts for supplies, but probably the main explanation lies in development policy. The half-year's increase in net revenue is equivalent to one-third of one per cent. on the ordinary stock, which reflected the market's disappointment by falling to 34 on Thursday.

* * *

Insurance Share Index—*The Economist* insurance share index shows a fall during the past quarter from 4,800 to 4,656 (1913 = 1,000). The quarterly index number has reacted by 8·4 per cent. from the end-December level of 5,111. The indices are based on the course of an investment of £1,000 in the ordinary shares of each of the twenty-four concerns represented, with allowance for bonus issues by assuming the sale of rights and a purchase of additional shares. The course of component shares is set out below :—

	1932	1933	1934	1935	1936	Mar. 31, 1937	June 30, 1937
Alliance	1,638	1,979	2,208	2,316	2,525	2,310	2,184

Royal	2,464	2,656	2,828	3,129	3,366	3,097	3,054
Scottish Life	2,583	3,174	3,708	4,382	4,761	4,382	4,270
Scot. Union & National	3,803	4,335	4,732	4,996	5,490	5,176	5,028
Sun Fire	2,364	2,889	3,088	3,271	3,316	3,067	3,022
Sun Life	2,040	2,349	2,632	2,972	3,375	3,022	3,274
Yorkshire	2,731	3,212	3,401	3,575	4,091	3,762	3,711
Average	2,911	3,535	4,025	4,497	5,031	4,800	4,656

Of the twenty-four shares represented, Gresham Fire is unchanged, while four shares—Commercial Union, Employers' Liability, Phœnix and Sun Life—are higher than at the end of March. The nineteen instances of decline are usually of a moderate character.

* * *

Furness, Withy Outlook.—The market expressed its disappointment with the resumption of ordinary dividends by Furness, Withy at no higher rate than 3 per cent. by marking down the £1 ordinary stock units to 27s. cum dividend. The present price of 30s. is associated with buying of shipping shares in general and with a well-founded belief in the long-term prospects of the company itself. That confidence has been strengthened by Lord Essendon's speech at the meeting this week. In its financial aspects, the chairman's address illuminated certain points which were not altogether clear from the accounts. He disclosed, for instance, that the increase of £313,282 in deposits due to subsidiary companies arose from the central control of surplus balances. Again, of the fourteen subsidiaries (six shipowning concerns and eight others) four shipping subsidiaries paid no ordinary dividends, although their financial positions have been materially strengthened. In a balance sheet which was something less than an epitome of clarity, it was obvious that the fleet was very conservatively valued. Lord Essendon properly underlined this source of financial strength. Shipping property is £320,000 lower than a year ago, after providing for the sale of two steamers and the depreciation provision, but including payments for new tonnage. A revaluation of the fleet at to-day's replacement cost, less depreciation, would show a substantial surplus over book values. The high cost of new building, however, does not represent a disadvantage, for the company has covered its requirements for new tonnage, while high costs will prevent any excessive building during the next year or two. Shipping costs are, however, rising considerably; wage cuts have been restored, shore labour is dearer, fuel has advanced in some cases by as much as 70 per cent., while stores and repairs cost more. And, as chairman of a liner group, Lord Essendon emphasised that such concerns neither plumb the depths nor scale the peaks to the same extent as tramp shipping. He is, however, a convinced exponent of the advantages of co-operation, and would be glad to see the same measure of co-operation in the liner trades as the tramp shipowners, assisted by subsidy, have achieved. But the improvement in liner shipping has been material, and if so cautious a judge as Lord Essendon anticipates that improvement will continue for some time to come, stockholders may surely retain their interest with confidence.

* * *

Associated British Picture.—Although the Stock Exchange rightly takes a cautious view of cinema finance, the accounts of Associated British Picture Corporation (like those of General Theatre recently) show that high profits are now being earned from the exhibiting branch. Total profits reached the record level of £1,265,829 for the year to March last, and the 18 per cent. dividend is covered by earnings of no less than 49 per cent., after providing for appreciable increases in interest and depreciation. The following table analyses the strong upward trend of earnings during the past three years :—

	Years to March 31, 1935	1936	1937
	£	£	£
Profit	656,725	926,483	1,265,829

Carried forward	83,481*	88,998†	96,346

* After crediting £149,698 undistributed profits of Associated British Cinemas. † After writing off £39,631 debenture issue expenses.

The directors have again followed a cautious distribution policy, setting aside as much as £375,000 to general reserve, which raises the total of the fund to £1¾ millions—some £125,000 in excess of the issued ordinary capital. The balance sheet shows the effect of a consolidation of activities during the past year. British International Pictures and two other subsidiaries have been liquidated, and their assets are now carried directly in the Corporation's balance sheet, with a consequent reduction of interests in subsidiaries from £2,428,457 to £931,839. No direct reference is made to the purchase of 250,000 "B" (non-voting) shares in Metropolis and Bradford Trust—the first part of a transaction which included the purchase of the 5,100 "A" voting shares (which carry control of the Trust and of Gaumont British) "as soon as practicable." Sundry investments have jumped from £17,148 to £841,375, an increase which presumably reflects this acquisition. Shareholders will hope that Mr John Maxwell will discuss the present position of the company's relations with Gaumont-British at the meeting next month. On present indications, the plan appears to have reached an *impasse*, and there is no apparent likelihood of an immediate solution. In view of the large sum at present involved in an interest which has a strategic importance stopping short of control, the position warrants further elucidation. The Corporation's financial situation (backed by a consolidated balance sheet) appears sound. The 5s. ordinary shares stand at 15s. 6d. and yield 6 per cent.

* * *

U.S. Steel Earnings.—The payment of all outstanding arrears on United States Steel 7 per cent. preferred stock is not an event of decisive market importance. The overhauling of arrears ($9¼ remained at the beginning of the year) proceeded steadily from the end of May, and the final $1¼, together with the quarterly payment of $1¾, completes the task within eighteen months. The market was disappointed with the absence of a common dividend, but Wall Street observers were impressed by the accompanying earnings statement. This shows that earnings for the June quarter were equivalent to $3·43 on the common stock, compared with 75c. last year. For the half-year, $5·99 was earned, against 41c. Wall Street had little inclination to respond to this news, and the common stock which closed at $116⅞ on Tuesday, reacted to $115 on Thursday. During the June quarter operations averaged 88.4 per cent. of capacity, against 82·6 per cent. for the March quarter. Trading profits totalled $53·7 millions, of which depreciation absorbed $16·3 millions, and preferred dividends and arrears $25·2 millions, leaving a surplus of $11 millions for the quarter. The way is now clear for common dividends. They may not be such as would justify the present price, according to British notions of dividend yields; but from the American point of view, the clearance of preference yields enables the market to adjust the price-earnings ratio to a more favourable basis. So, while the announcement of full payments was discounted well in advance, it provides scope for a further advance in the shares if conditions remain favourable.

* * *

Prices Tailors' Prosperity.—Comparison between leading concerns in the same line of business often provides the investor with a useful yardstick, for he can sometimes infer the trend of profits of one company from the progress or retrogression of the other. It happens that the multiple tailoring business this year provides him with an example of this kind. The Montague Burton results, which were announced recently, gave an impression of stability rather than positive progress. Prices Tailors, whose chairman announced his intention to double the number of depots (which numbered 290 in June last year) is the chief competitor of Montague Burton, which controls 570 shops. Both businesses appear to be enjoying a secular expansion of turnover, but during the past year Prices Tailors made greater progress, reckoned in terms of profits. The operating company announces a profit, subject to audit, of £521,000 approximately, compared with £446,470 for the previous year to June 30th. After providing £92,500 for depreciation and £40,000 for income tax, the available balance for reserves and dividends is increased by £225,725 to £544,437. Prices Trust, which owns the ordinary capital, receives a dividend of £192,000 net, compared with £162,000 for 1935-36. Dividends totalling 45 per cent. will be distributed by the Trust for the year to September 30th compared with 30 per cent. last year. The "Fifty Shilling Tailors" group thus appears to have protected itself effectively against rising costs during the year, and the figures also suggest that new stores quickly become profit-earning. The ordinary shares of the Trust have a "group" gearing, for the parent company's revenues must first cover its own preference requirements and the debenture and preference dividends of Prices Tailors Properties (which owns certain of the stores), before the preference shares of the Trust rank for payment. At 50s. 10½d. the Trust's ordinary shares yield £4 12s. per cent.

Griffiths Hughes Meeting.—Although at last Wednesday's meeting Sir Bertram Hyde Jones disposed of the suggestion that last year's serious fall in the profits of Griffiths Hughes was associated with the trend of advertising expenditure in previous years, he was diffident in expressing an opinion regarding the results of the current year's trading. Shareholders, therefore, will find his recital of special causes which affected last year's profits less reassuring than they might have hoped. Currency devaluations, Sir Bertram stated, accounted for "a large part" of the drop in profits. It is, indeed, evident that the company has been unable to increase the prices of its products in overseas markets fully to compensate for the reduced sterling value of local currencies. It is somewhat surprising, however, to find that the constitutional crisis had so marked an effect, from which the company is "just recovering," upon Empire business. Nor would investors have expected so considerable an effect from the fears of a patent medicine tax which were in circulation comparatively late in the company's financial year. Doubtless, these factors combined to affect profits adversely. The trend of advertising costs, however, is the most considerable feature in the profits equation. And the figures which the chairman gave suggest that considerably increased sums have been expended recently. Expressed as a series of index numbers, with the year to March 1931 as base, the figures for subsequent years have steadily grown as follows :—

YEARS TO MARCH 31ST

(1930–31 = 100)

1932	120	1935	140
1933	129	1936	140
1934	130	1937	162

The recent increase in expenditure has been partly compelled by competition, and partly led by increased sales. Last year, however, much of the additional expense was on account of new products, and although it was charged to revenue, it is expected to produce a fuller return in the future. In view, however, of the large trading interests which the company appears to enjoy in devalued currency areas it would seem premature to expect a rapid recovery of profits. Griffiths Hughes Proprietaries £1 ordinary shares therefore appear to be fairly valued at 25s. 7½d.

* * *

British Celilynd Questions.—In October last year, the board of British Celilynd announced that arrangements had been completed for the sale of patent rights in the company's process to an American concern. This statement obtained wide publicity, and the 5s. shares (issued in February last year) jumped to 22s. 6d. No such *éclat* was sought for the first report, covering a period from November 30, 1935, to May 31, last. The document, which does not appear to have been circulated to the press, shows a trading loss of £9,746 and a total debit of £11,976 for the period—a result which is disappointing but not necessarily irretrievable for a company developing a new process. Considerations of initial losses, however, are unimportant compared with the position disclosed in the report. The chairman's promise to deal with the question of foreign rights at this week's meeting was clearly well-advised. The hopes of last October are now apparently represented in the balance sheet by a note of a "contingent liability in respect of litigation pending in connection with the sales of certain foreign rights of the company." A sale of rights to "a territory in the Near East" has, however, been

HOTEL WESTMINSTER
Le Touquet

effected for a consideration of £11,000 in shares. Has this item any relation to the agreement, reported at the statutory meeting, for the disposal of rights for "a territory in the Middle East" for £20,000? The shares now stand at 2s. There have been changes in the board since last year, and it certainly seems that the original directors would have been less cruel had they been at less pains to be kind, and had left to individual shareholders the process of counting chickens before they were hatched. So British Celilynd finds itself with cash holdings of less than £10,000 and more liabilities to meet than debtors. Equally serious is the disclosure that the selling arrangements have proved unsuitable, "having regard to the actual use for which Celilynd products are particularly applicable." The meeting on Thursday revealed that this statement referred to the abandonment of the agreement with Wiggins, Teape, which was an attractive feature of the prospectus. Unfortunately, however, the proceedings were more productive of noise than information regarding the company's future.

* * *

Rhokana Profits.—The market was expecting an impressive profits statement from Rhokana Corporation, and it has not been disappointed. Estimates for the year to June show a profit of £2,010,000, subject to income tax, after providing debenture interest, depreciation and development expenditure. The profit, however, does not include any dividend in respect of the Corporation holding in Mufulira Copper Mines. This level of net profits is well over three times the 1935–36 figure of £602,000. Production of blister copper rose from 25,057 long tons to 46,247 long tons, and of electro copper from 25,342 to 29,007 long tons. This combined tonnage of 75,000 tons compares with the anticipated capacity of 120,000 tons, which should result from recent plant extensions by the end of this year. Half way through the company's year, the copper restriction scheme was removed, and the current copper price of £57 is well above the level at which, by common report, the participants might reimpose curtailment of output. In terms of equity earnings, the latest profits represent some 79 per cent., and an interim dividend of 25 per cent. has already been paid, compared with 12½ per cent. for the previous year. At the current price of £14, the £1 shares are valued on an earnings basis of 5.65 per cent. Present prospects suggest that the current year's earnings may surpass these results.

* * *

Rubber Results and Prospects.—Mincing Lane begins to suspect that Malaya will produce her 90 per cent. quota this year, just as an impressive batch of rubber company reports is completed—the reverse paradox to that shown by the tea market. There is no inevitable link between 90 per cent. quotas and ninepenny rubber, although the achievement of this rate of production would more than cover the present rate of consumption. Although the rise in Malayan output in June came as a shock to the market, native production—or rather, sales—appears to have accounted for a considerable part of the increase, while, on the consumption side, manufacturers' demand continues sparing. There is, therefore, no conclusive testimony whether the price of rubber—now struggling to regain 9d.—will register any marked movements for some time to come. Investors who have regarded ninepence as a "comfortable" figure for rubber may not be so well impressed by 8 13/16d. They may, however, derive comfort from the calculation that for the year to March last, quotas averaged 66 per cent., while for the nine months following the average will be 87 per cent. Between April, 1936, and November, rubber climbed slowly from 7½d. to 8½d., and the average of 8·68d. for the whole year to March was, in fact, slightly below to-day's price. But it must be admitted that while shares can be found on a reasonable yield basis, in relation to these figures, the material for a wide speculative advance is far to seek. With costs tending to rise, it cannot be expected that rubber companies will show an advance in profits for the current year comparable in magnitude with that achieved last year. We set out below the progress of five leading concerns since 1935–36 :—

YEARS TO MARCH 31ST

Company (and Denomination)	Total Profits		Earned for Ord.		Earned %		Paid %		Ord. Shares	
	1936	1937	1936	1937	1936	1937	1936	1937	Price	Yield (%)
	£	£	£	£					s. d.	£ s. d.
Anglo-Java (1s.)	84,518	166,131	22,273	95,002	2·1	8·9*	2½	7½*	1 4½	5 9 0
Bertam Cons. (2s.)	28,625	57,360	24,611	52,314	7·0	15·0	7½	14	4 1½	6 15 6
Bukit Mertajam (2s.)	31,041	77,173	26,167	63,053	7·0	13·6	8	12½	3 10½	6 10 6
East Asiatic (2s.)	53,094	76,860	43,576	69,759	5·6	9·1	5	7½	2 10½	5 5 6
Laras Sumatra (2s)	31,026	60,247	...	721	Nil	0·4	Nil	5	1 9	5 14 0

* On increased capital.

Anglo-Java acquired a further area of rubber this year, and it has, of course, a considerable area of rubber and coffee in Java which will enjoy a full year's benefit from the devalued guilder. Bukit Mertajam has obtained its claim for a larger assessment. Other features favouring the companies are recorded in the directors' reports: small increases in acreage or assessments, provision for additional labour force, new factories, and—in the case of Laras (Sumatra)—a financial reorganisation last year which cleared the way to a resumption of dividends recently, after seven years' absence from the list. It is possible, of course, to find shares which are at least as responsive to rising rubber prices, but for a collection of florin and shilling issues this list covers a good field.

* * *

Other Company Results. — About thirty-five additional company results are analysed in our usual table on page 276 and discussed in detail under the heading "Shorter Company Comments," on page 275. The list includes *G. H. Downing, Associated Breweries, Geo. Bassett* and *S. Hoffnung.*

* * *

Company Meetings of the Week.—Reports of company meetings appear in this issue from page 264 onwards. The *Furness, Withy* and *Griffiths Hughes Proprietaries* meetings are discussed in notes on pages 256 and 257. Dr J. H. Hinchcliff, addressing shareholders of the *Irish Sugar Company*, reported another successful year, and described the outlook as more promising than appeared likely earlier this season. At the *Anglo-Dutch Plantations of Java* meeting, Sir Robert Williams emphasised that tea showed an increased profit and an improving statistical position, while rubber prospects were good, and results from the Soekamandi estate were very satisfactory. Mr A. F. Goodrich reported that *Bukia Mertajam Rubber* had obtained an increased assessment of 6,005,079 pounds for 1937. Mr Philip E. Hill attributed the reduction of *Scribbans* profits to the rise in the price of raw materials. At the *Southern Kinta* meeting, Captain Oliver Lyttelton commented on the strong financial position of the company and related the increased dividend to the increased production quota. The advantages of the policy pursued by *Finance and Industrial Trust* in making its principal investments in rubber companies were discussed by Mr E. B. Ridsdel. The chairman of *Threlfall's Brewery* reported good progress, reflecting the improved conditions on Merseyside and in the Lancashire cotton trade. At the meeting of *Gold Fields Rhodesian Development*, Mr D. Christopherson discussed the past year's increase in revenue, and gave a satisfactory account of the company's present holdings. The record profits of *McDougalls Trust* were attributed by the chairman, Mr Kenneth E. Moore, to the company's policy of specialisation. Mr Herbert Guedella at the *San Paulo Improvements* meeting, referred to an important advance in land prices. Improved results and proposals for settling arrears of preference dividend in the near future for *Tanganyika Concessions* were forecast by Sir Reginald Wingate.

THE WEEK IN THE MARKETS

THE STOCK EXCHANGE

SETTLING DAYS

TICKET: AUGUST 10 ACCOUNT: AUGUST 12

THE second week of the holiday account has shown better form than most observers had expected. Whether the recovery is due to the automatic projection of the much-canvassed autumn improvement, to the remoteness of Peiping or to the waiting period in the non-intervention deadlock, is open to argument. But in almost every section of the "House" recovery has been the keynote. Gilt-edged have tended to improve, despite the weight of new issue business. Industrials have made consistent progress of a few coppers per day, with really impressive rises in the shipping group. And even Kaffirs, at long last, are arousing from their long stagnation.

The attractions of a date were still operative in the gilt-edged market, where the Funding issues made the best showing. War Loan and Old Consols, after initial improvements, were steady in mid-week. New scrips in the corporation market remained firm, despite the appearance of the Middlesex issue.

In the foreign market, Far Eastern bonds followed the day-to-day fluctuations in the military situation with uneasiness, and the serious mid-week news depressed prices severely. Brazilian issues remained in demand, in anticipation of better terms in a new debt settlement, and the movement spread from the unsecured issues to the Fundings. Apart from a rise in Greek issues, the European section remained dull.

Home rails have enjoyed a spate of good news, and the market made the best of it, until the appearance of rather indifferent traffics and the disappointing L.M.S. decision. We refer to the railway rates decision and this week's half-yearly statements on page 255. L.N.E.R. second preference made further progress on the statement, but the all-round advance on the freights decision was checked on Wednesday. A distinctly better tone was evident in the Argentine rail market, and under the lead of good traffics, both ordinary and prior charge stocks made headway.

There was not much activity in the industrial market, but the tone was good throughout the week. Transatlantics were the exception, irregularity appearing early and becoming marked as the week progressed. Motors provided a number of interesting features, Standard enjoying particularly lively dealings. There was little doing in aircraft shares, but the general impression was not unsatisfactory. A good appearance was presented by iron and steel issues, Stewarts and Lloyds leading the way, while Hadfields were strong on the announcement of the increased interim.

Breweries showed considerable improvement, early buying of Distillers beginning a fairly general advance, which, however, was slightly checked on Thursday. The favourable outlook for shipping shares attracted considerable buying, and the encouraging Furness, Withy report maintained the market interest. Dealings in the building group were small and the general tone was easy. Electrical Equipment shares remained firm, and General Electric, in particular, showed an advance.

Conditions were quiet in the oil share market, Trinidads being particularly dull owing to the labour unrest. Despite some profit-taking in Anglo-Iranian and Burmah Oil early in the week, an underlying firmness and a steady demand for the leaders was evident. On Wednesday afternoon, advance reports of a reduction in the price of petrol produced a considerable reaction, but the market showed a commendable recovery on Thursday.

Rubber shares continue dull, with slight declines in some cases. Business dwindled to low ebb, but hopes of brisker conditions, based on an expected recovery in the commodity price, were prevalent. The scarcity of tea shares continued and the supply became only slightly freer as the week advanced. A consistent demand for Indian shares still reveals an acute shortage of shares.

Following a good start, Kaffirs became firmer and buying was remarkably brisk. The general advance of prices was helped by good quarterly reports, and a further recovery was generally anticipated despite some irregularity on Thursday. Coppers improved a little, and the market was encouraged by the Rhokana profits (see page 258).

NEW YORK STOCK EXCHANGE

MARKETS closed at the end of last week on a rising trend, for which the defeat of the President's proposals to reform the Supreme Court was largely responsible. Utilities, motors and steels were all higher. But this week prices have drifted downward. Wall Street is determined to have its political worries, and since the Supreme Court issue was settled, it began to be troubled because the President may be able to keep Congress in session for some time longer. In addition, the railroad results were found disappointing, and there was some anxiety over the anticipated U.S. Steel earnings statement. Later, weakness continued on the failure of U.S. Steel to declare any dividend on the common shares, on the renewed outburst of strikes at the Republic Steel plant, and on the war developments in the Far East. Utility issues are reaping the rewards of the political situation, and the continued increase in output of electricity. Shares benefiting from the high farmers' income were inclined to harden. *Iron Age* estimates steel mill activity at 85 per cent. of capacity, against 82 per cent. for last week.

By courtesy of the Standard Statistics Company, Inc., of New York, we print the following index figures of American values calculated on closing prices (1926=100) :—

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields of fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

CAPITAL ISSUES

THE stags have been drinking their fill up to the eve of the holiday. The *Iraq* loan provided an obvious attraction, with its sizeable yield of £5 1s. 8d. to redemption and a flat yield of 4½ per cent. As we point out on page 254, Iraq is a youthful kingdom with an untried investment record, but the loan is in principle well secured, and has evidently attracted buyers for mixing purposes. The queue of municipal borrowers has again moved up—on this occasion following a £3½ millions issue by *Middlesex County Council*, of which, however, half has been taken firm. This is a bigger operation than the market would have welcomed even a week ago, particularly at a point over par, but the borrower enjoys high standing, and stronger market conditions ensured its prompt subscription. *Arnott and Harrison* have offered 4s. shares at 5s. This company incorporates two precision engineering and die-casting concerns, and its profits record follows the familiar recovery pattern. The company has a small capital, but its industrial connections appear to be extensive. The shares are of principal interest to the speculative operator. *Lea-Francis Engineering* issues 720,000 2s. shares at par, for which permission to deal will be sought of the Birmingham Stock Exchange. The prospectus, which shows that British Mutual Banking Company are acting for the issue, discloses that the business taken over from a concern of similar name has been operating at a loss for some years under receivership. Applicants, therefore, must recognise the speculative nature of the new undertaking, and should consider the possibility that the Birmingham Stock Exchange might decide to postpone the grant of facilities until the results of the first year's trading of the new company were available. A statement for information only has been published by *Victory Real Estate Company*.

COMPANY MEETINGS

CÓMHLUCHT SIÚICRE EIREANN, TEORANTA
(IRISH SUGAR COMPANY)

ANOTHER SUCCESSFUL YEAR

DR J. H. HINCHCLIFF'S ADDRESS

The annual ordinary general meeting of Cómhlucht Siúicre Eireann, Teoranta, was held on July 22, 1937, in Dublin.

Dr J. H. Hinchcliff (the chairman) presided.

The Chairman said:—I have much pleasure in proposing the adoption of the directors' report for the year ended April 30th last and of the balance sheet and profit and loss account which are appended thereto. A copy of the report and accounts was furnished to each shareholder last month and, with your permission, I will take the report as read.

PROFIT AND ALLOCATIONS

The trading profit for the year under review, namely £287,935, is approximately £17,800 higher than that of the previous year. At our meeting last July I explained the necessity for the provision made in the 1935-36 accounts for depreciation of premises and plant, and you will observe that, in the accounts before you, a like provision of over £148,000 has again been made. Debenture stock interest amounting to £31,000 includes the service for a full year of the second issue of debenture stock made during the course of the previous year, and is, therefore, £4,844 higher than the corresponding figure in the previous year's accounts. A further sum of £60,000 has been placed to the reserve for sinking fund and general purposes as against £40,000 a year ago and if, at to-day's meeting, you approve of your directors' recommendations relative to the payment of dividends, the amount carried forward will be £52,030, i.e. £5,637 more than was brought forward.

BALANCE SHEET ITEMS

With regard to the balance sheet, there are but few items which call for comment. I mentioned a year ago that no further issue of capital was contemplated and the amount of issued share and loan capital remains the same. The liabilities in respect of sundry creditors, including bank overdraft, reserve, etc., at £321,411, are less by £130,960 than in the previous balance sheet. The liability of £15,500 for debenture interest was, of course, discharged on the due date, namely, May 1st last. On the other side of the balance sheet, you will find stock-in-trade, valued at £931,003, is up by £21,775. With regard to this item I should mention that the changes in sugar duties, which became effective on June 1st last, involved a reduction on and from that date of 1s. 2d. per cwt. in your company's sale price, and this reduction is reflected in the valuation placed on the stock of sugar in hand at the date of the balance sheet. The usual seasonal expansion of your company's cash resources has taken place since the date of the accounts under review. Save when changes in duties and price are imminent, sugar goes into consumption with remarkable uniformity month by month and the realisation of your company's sugar stock proceeds with the same regularity. Though the balance sheet shows only £103 cash on hand on April 30th last, the bank overdraft, which was of a temporary and seasonal nature, was paid off shortly after the close of the accounting year and your company's liquid assets then again became represented by actual cash in place of sugar.

INCREASED DELIVERIES OF BEET

The total quantity of beet delivered under contract by 30,082 farmers to your four factories last campaign was 590,311 tons, an increase of 27,137 tons as compared with the previous campaign. The deliveries represented the produce of 57,608 statute acres. The average yield, in terms of factory weight, was 10.25 tons per statute acre as against a corresponding figure of 10.38 tons for the 1935 crop. The 1936 yield, particularly on heavy low-lying soils, was adversely affected by the high rainfall experienced last summer. Weather conditions last autumn and early winter were, however, more favourable to the ripening of beet than were those experienced in the two previous seasons, and the average sugar content of the entire deliveries to your factories last campaign was 17.5 per cent., while that of the 1935-36 deliveries was 17.17 per cent.

INCREASED PRODUCTION OF SUGAR

Such trouble as was experienced with the steam turbines at two of your factories last campaign, about which there were alarmist reports, but which occasioned only temporary disorganisation of manufacturing operations, is not altogether of an exceptional nature. Save for that interruption, to obviate a recurrence of which all practicable steps have been taken, and for a fire in the Thurles pulp store, manufacturing operations proceeded normally and smoothly throughout the campaign. Because of the larger quantity of beet worked last season and of the superior sugar content of the beet, a larger quantity of sugar was manufactured, the total production, in terms of white sugar, for the 1936-37 campaign being 86,314 tons as against 78,911 tons in the previous campaign.

REDUCTIONS IN SALE PRICE OF SUGAR

On August 1st last both Customs and Excise duties on white sugar were reduced by 2s. 4d. per cwt., i.e. by a farthing per lb., and your company's sale price and also, in turn, the retailers' prices were reduced to the like extent. When, however, the Excise duty was further reduced by 1s. 2d. per cwt., i.e. by one-eighth of a penny per lb., on June 1st last your company agreed to reduce their sale price by 2s. 4d. per cwt., or a farthing per lb. Since our last meeting the wholesale and retail prices of granulated sugar have, therefore, been reduced by a half-penny per lb. Your company's terms and conditions relative to the sale of sugar have not, however, been materially altered in other respects. You will recollect that under the provisions of the Sugar (Control of Imports) Act, 1936, your company has since May, 1936, been charged with the import of all the sugar required to supplement home production. This branch of your company's business has been operated smoothly and efficiently. I should, however, again remind you that all profits accruing to your company from the sale of imported sugar have to be remitted to the Government.

CURRENT YEAR'S CROP PROSPECTS

I will now advert to a few matters which relate to the current accounting year or which are of a general nature. The acreage of beet allotted under contract last spring was 60,484. An increased acreage was allotted in the Carlow factory district from which applications for acreage were far in excess of the area available. The weather last spring was unfavourable to the preparation of the land either for beet or for other root crops and particularly so in the case of the heavier or stronger soils. Up to a fortnight or so ago, the condition of the 1937 crop was not as promising as that of the 1936 crop at the corresponding date. This was due to late sowing which, as I have already indicated, was unavoidable, and also to damage caused in many parts of the country and, I regret to say, throughout the Tuam factory district, by an attack of mangel or beet fly shortly after the crop had brairded. The current season's crop has benefited from the warmer weather which we have experienced during the past fortnight or so and the outlook for a satisfactory yield is now much more promising. The realisation of that promise depends, of course, almost entirely on the nature of the weather during the coming few weeks.

SUCCESSFUL TRAINING OF IRISH NATIONALS

At previous meetings, I have referred to the steps taken by your directors in connection with the training of Irish nationals for the higher technical posts in your factories which have hitherto been occupied by alien technologists who, I am glad to report, have rendered your company excellent service. You will recollect that, under a scholarship scheme to which your company contributed, it was arranged for six honours graduates in chemistry to take a special course of study in the School of Sugar Manufacture of the Royal Technical College, Glasgow, and that these young men entered your company's service in September, 1934. I am now pleased to say that all but one, who had to relinquish his work for a time because of health reasons, were promoted some months ago to the grade of shift engineer and will, therefore, have charge of the operation of the factories during their respective shifts in the coming campaign. It is also gratifying to report the successful operation of your company's apprenticeship scheme which, as you will recollect, was devised in co-operation with the Department of Education and the Department of Industry and Commerce for the training of young men in sugar cooking and the skilled trades and crafts applicable to the beet sugar industry.

PROPAGATION OF SUGAR BEET SEED

I referred a year ago to the small commercial scale experiment on the propagation of sugar beet seed which your company had undertaken and which was commenced at six centres last year. As the seed harvest will not take place until late summer or autumn, I am not in a position to forecast the outcome of this trial. It was extended this season by the inclusion of six new centres and a half-acre plot was sown with elite seed last month at each of the twelve centres. Pending the result of this trial, and in furtherance of your board's policy, a reserve of approximately a normal year's supply of imported seed has been maintained and, in case of emergency, this would serve for two years.

INCREASED PRICES FOR COMPANY'S REQUIREMENTS

I have already alluded to the changes in sugar duties and the reduction in your company's sale price for sugar, which came into operation on June 1st last, and have indicated that this reduction in price is reflected in the accounts before you, for it was taken into account when the stock of sugar in hand was valued. The change will, of course, operate as regards the entire production during the coming campaign. As you are doubtless aware, there has been a general advance in the price of most manufacturing requisites and, in common with other concerns, your company has been obliged to purchase much of its requirements of iron, steel, timber, chemicals, coal, etc., at the higher prices now obtaining. Most of the boiler-house coal is obtained from home collieries—in fact, your company has taken all the suitable coal which these collieries could supply—and I am glad to say that the main supplies of imported coal for the coming campaign were purchased on favourable terms some months ago.

TRIBUTE TO STAFF

The results of the year's operations, as set out in the accounts before you, could not have been achieved without the loyal and efficient co-operation of the staff of all grades at the Head Office and at the factories. All have shown a keen interest in their work and have willingly and cheerfully responded to the calls made upon them. On behalf of your board, I would again tender thanks to them.

CHAIRMAN'S RETIREMENT

From the report before you, you will have observed that under the articles of association it fell to me, as a director appointed by the Minister for Finance, to retire this year from the board. I intimated to the Minister that I did not seek reappointment and that I desired to relinquish my post in the company's service, and he has been good enough to accede to my wish and to arrange for my resumption of duties in the Civil Service. This is, therefore, the last occasion on which I shall have the honour of presiding at a general meeting of your company. I have been associated with the company throughout all its stages for, as some of you know, I served as a member of the committee which was responsible for much of the preliminary work which led up to its establishment. I have, therefore, derived much satisfaction from being able to report to you, year after year, the continued progress and success of the undertaking in the launching and direction of which I have been privileged to participate. I am conscious of and grateful for the assistance rendered me on many occasions, in my capacity as chairman of your board, not only by my colleagues, but also by the Ministers and the State Departments with whom your company's affairs have brought me into contact. Though I shall no longer be associated with the company it has, needless to say, my earnest hopes for its continued progress.

The report and accounts were adopted.

McDOUGALLS TRUST, LIMITED

SATISFACTORY YEAR

The fourth annual general meeting of McDougalls Trust, Limited, was held, on the 28th instant, at the registered offices, 3 Thames House, Queen Street Place, London, Mr Kenneth A. E. Moore (the chairman of the company) presiding.

The Chairman, in the course of his speech, said:—The trading profit of McDougalls, Limited, for the year ended March 31, 1937, amounted to £260,340, as compared with £208,044 in the previous year, and as compared with average profits of £160,842 disclosed in the prospectus issued in 1933. I make this comparison to emphasise the statement in the directors' report that last year was "an exceptionally good year" in the literal sense of those words. As a matter of fact, both profits and sales constituted a record.

During the past year the wheat market has been subject to violent fluctuations, and we have had no alternative but to adjust our selling prices both upwards and downwards from time to time during the period. McDougalls Self Raising Flour is retailed as a proprietary article principally in bags of from 1 lb. to 3 lb. in weight, and so far as possible we avoid alterations in our selling prices because, apart from any other aspect of the matter, the currency of this country does not lend itself to fine adjustments in the retail price of such small units. We particularly dislike having to increase our selling prices beyond a certain point, because, however much the increase may be justified by rising wheat prices, we find, in common with others, a certain resistance on the part of consumers which tends to restrict sales. You will appreciate, therefore, that we would much prefer stability of wheat prices on a moderate level rather than the wide fluctuations that have been experienced in recent times.

POLICY OF SPECIALISATION

We continue, of course, to meet with considerable competition, but in this connection we believe that one of the keys to the success of our business is that the whole of our efforts are concentrated upon the manufacture and sale of one article—McDougalls Self Raising Flour. By intense specialisation we are able to mill exactly the right type of flour, to pack it efficiently and economically, and thus to sell to the distributive trades a proprietary article of unvarying and highest quality at a fair price.

We adopt a policy of specialisation. We could wish that some of the larger retail grocery organisations would equally follow, as in the past, a similar policy by confining themselves to their primary function of distributing as distinct from manufacturing. We believe that such a policy would be to their benefit as well as ours.

During the past year our new packing warehouse at Millwall has been completed and is now in full operation. It is equipped with the very latest automatic machinery, and, if any of our shareholders would care to visit our mills and see how McDougalls Self Raising Flour is milled and packed, we shall be happy, on hearing from them, to arrange to show them round.

PROFITS AND DIVIDENDS

To return to financial matters, you will observe that of the profit of £260,340 dividends paid to McDougalls Trust, Limited, absorb £202,000, staff bonuses £5,000, and that £53,340 has been retained in the business in the form of reserves and increased carry-forward. We have no doubt that you will approve the directors' policy of adding to our reserves in times of prosperity.

Turning now to the accounts of McDougalls Trust, Limited, you will see that the net revenue for the year amounted to £201,951. After provision for income tax and preference dividends and setting aside £10,000 as a reserve against our trustee investments, the balance available enables the directors to recommend the payment on the ordinary shares of a final dividend of 4 per cent. and a bonus of 2 per cent.—making a total of 10 per cent. for the year—which will leave a balance of £37,817 to be carried forward.

Our object in distinguishing in our recommendations between final dividend and bonus is to remind shareholders that it is only when the profits of the operating company exceed the long-term average that a bonus is likely to be forthcoming, but, to avoid any possibility of misunderstanding, I should mention that these remarks are general and not specific, and that, in fact, the trading profits of the operating company for the first four months of the current financial year have been most satisfactory.

The report and accounts were unanimously adopted.

FURNESS, WITHY AND COMPANY, LIMITED

ORDINARY DIVIDEND RESUMED

IMPROVEMENT IN SHIPPING

LORD ESSENDON'S ADDRESS

The forty-sixth annual general meeting of Furness, Withy and Company, Limited, was held, on the 28th instant, at Furness House, Leadenhall Street, London, E.C., the Lord Essendon (the chairman) presiding.

The Chairman, in the course of his speech, said that it was with no little pleasure that the directors submitted the accounts for the past year, which enabled them to fulfil the hopeful anticipation which he had ventured upon a year ago of recommending the payment of a dividend upon their ordinary share capital after a lapse of three years in an otherwise unbroken record of forty-six years.

The profit and loss account reflected the improvement which had set in in 1935 and continued quietly throughout 1936. As a result, there was a profit for the year after providing for expenses of every description of £544,744, an improvement of approximately £130,000. A dividend of 3 per cent. per annum, less income tax, was recommended on the ordinary capital of the company.

INCREASED INVESTMENT IN ROYAL MAIL LINES

Since the close of their financial year they and their associated companies had increased their investment in the Royal Mail Lines, Limited, by the acquisition of a further substantial block of shares. They had many interests in common with the Royal Mail Company; they were closely associated in the South American and the North Pacific Coast trades, and since the Royal Mail Lines, Limited, was incorporated in its present form it had made steady progress both in respect of earnings and in building up a strong balance-sheet position. The directors were satisfied that this investment would be the means of expanding the company's interests in a profitable manner.

Their subsidiary companies consisted of fourteen, of which six were shipowning companies and eight were other than shipowning, and although four of the shipping companies had paid no dividend on their ordinary capital last year, they had been able quite materially to strengthen their positions and add to their internal resources. The Prince Line, in particular, had benefited substantially from the improved trading conditions which had been experienced in all their trades with the exception of the New York-South African service, in which the conflict of interests had continued throughout the year, and in consequence freight rates had remained on an absurdly low level. He was glad, however, to say that some small progress had recently been made towards a better understanding, and although the competition of non-Conference lines continued, freight rates had been advanced, so that he hoped it might be possible to avoid further losses in this trade.

IMPROVED CONDITIONS

It was an obvious deduction from the facts and figures before shareholders that shipping had experienced a considerable improvement in the past year, but he thought it was to be regretted that so much should be written of what were described as "boom" conditions. It was no doubt a fact that some tramp ships, which were free to take the fullest advantage of market conditions, had recently made substantial profits, but those same ships usually felt the effects of depressed conditions more quickly and more severely than liners. There was always a time lag in the case of liner shipping, and as a general rule liners neither plumbed the depths nor scaled the peaks to the same extent as tramps. None the less, the improvement in the case of liner shipping had been of a material nature, and there was good reason to anticipate that this improvement would continue for some time to come. However, lest he be regarded as over-optimistic, he had to point out that operating costs had advanced in practically every direction. All wage cuts had been restored; port labour costs had increased, coal and oil fuel had advanced, in some cases as much as 70 per cent.; stores cost more and repair costs were heavily up. All those items applied generally, but the increases were greater in some trades than in others.

BENEFITS OF CO-OPERATION IN SHIPPING INDUSTRY

Their plain duty was to protect themselves as best they might, and that gave him the opportunity of paying a tribute to the work of the Tramp Shipping Administrative Committee, in whose work the liners had collaborated. By their efforts minimum freight schemes had been established and maintained in a number of the most important tramp trades with most successful results. He sincerely hoped that means would be found of continuing co-operation within the shipping industry, in which, he was sure, the liners would give their full support. It was true that the mainspring of the minimum freight schemes and other measures which had so largely contributed to the better conditions now prevailing, was the subsidy paid to the tramp ships, but it seemed to him that if, in consequence of the conditions attached to the subsidy, shipowners were enlightened as to the possibilities and merits of co-operation, the need for the continuation of such co-operation would be even greater when the subsidy had been withdrawn, and it would be lacking in imagination to discard the benefits which had ensued therefrom.

He need make no apology for referring to the fact that in the discussions in which they were all deeply occupied a year or two ago on the subject of rationalisation, he had expressed his conviction that self-interest was sufficient to ensure the fullest measure of support for any practical scheme. Events had abundantly justified that conviction, and it was a matter of record which should be freely acknowledged that foreign shipowners had loyally supported the measures which were created under the influence of the tramp subsidy, but in which all sections of shipping, including liners and foreign owners, had benefited. He had no doubt, therefore, that foreign owners would continue to support any well-founded measures which might be evolved for continued co-operation in freight markets, even though it were from no higher motive than self-interest.

THE LINER TRADES

He wished it were possible to achieve the same measure of co-operation in the liner trades. It was true that in the majority of these trades there were established conferences, but it was equally true that in many cases there were both shipowners and shippers who, like the proverbial Irish, were always "agin the law." Conferences were originally established for the dual purpose of protecting shipowners from unfair competition and of guaranteeing shippers regularity of sailings and uniformity of freight rates. He knew of no single instance where such conferences had been made use of to exploit shippers, and yet the very fact of labelling a conference as a ring had conjured up in the minds of some of the shippers the idea that a conference was a band of wicked shipowners whose object was to force freight rates up to an exorbitant level.

It was probably true that to some extent the improvement in the shipping industry was due to the changeover in this country and elsewhere from disarmament to re-armament; in other words, while the effect had been good, the cause had been bad. It was the fear of war and the consequent belief in the necessity for economic nationalism which chiefly stood in the way of expanding international trade, upon which the future prosperity of the shipping industry largely rested. Granted peaceful conditions, he believed that in the next year or two, during which period high costs would prevent any excessive building of new ships, there would be a continuance of profitable trading for the shipping industry.

In that period it should be possible to bring about a revival of international trade so that by the time the effects of the re-armament policy began to wane there should lie before the shipping industry a further period of profitable trading, based on sounder foundations than those which underlaid existing conditions.

CONFIDENCE IN THE FUTURE

That they had faith in the future was apparent from the survey of their company's affairs which he had given them, and it might be of interest to them to know that they either owned or had a material interest in no less than 140 ships of about 1,150,000 gross tons, a fact which spoke for itself. It was impossible to disguise from themselves the fact that there were many matters of world-wide concern over which they had no control, and which might affect their undertakings either favourably or unfavourably—an extension of labour troubles and the stabilisation of currencies, to mention only one of each description which came immediately to his mind—but meantime they went forward in the confident belief that they were carrying out a policy approved by their shareholders and that they should be able to meet again a year hence with an acceptable account of their stewardship.

The report was unanimously adopted.

ANGLO-DUTCH PLANTATIONS OF JAVA, LIMITED

SUBSTANTIALLY IMPROVED POSITION

THE OUTLOOK FOR TEA AND RUBBER

The twenty-seventh ordinary general meeting of the Anglo-Dutch Plantations of Java, Limited, was held, on the 23rd instant, at 19 Fenchurch Street, London, E.C., Colonel Sir Robert Williams, Bart. (the chairman of the company), presiding.

The Chairman, in moving the adoption of the report and accounts, first announced his intention of vacating the chairmanship of the company after thirteen years of service in that capacity, while still retaining a seat on the board.

Continuing, he said: I commenced my speech in 1936 by expressing disappointment that the recovery in the price of commodities which began in 1934 had not fulfilled our hope and expectation by gathering further force in 1935; in fact, I described 1935 as a disappointing year. It is, therefore, with particular gratification that I am able to speak of the year 1936 as one of considerable improvement, as, indeed, I ventured to foreshadow last year.

Having dealt at some length with the figures in the accounts, he proceeded:—

TEA

In connection with the regulation of export scheme a resurvey of our various estates has been taking place. The latest figures give our tea area as amounting to 26,744 acres, all of which are in bearing with the exception of 161 acres. The crop figure for the year of 12,618,333 lb. included 442,281 lb. of leaf bought from the population and manufactured in our factories, whilst of the tea produced by ourselves 1,948,378 lb. were exported against licences purchased. Our standard assessment for 1936 was 18,711,968 lb., our exportable quota being, therefore, approximately 57 per cent. Our production, excluding bought leaf, gives an average yield of 458 lb. per acre, our standard assessment being the equivalent of just over 700 lb. per acre.

Climatically last year was a favourable one as regards tea. The tea market throughout 1936 showed very small variation. The price of common Indian tea at the first sale in January was quoted at 11⅞d. to 1s., whilst at the last sale in December of the same year it was quoted at 11¼d. to 11⅜d.; the average for all teas on January 9th was 1s. 1.18d., and the average for the whole year 1s. 1.07d. What change there was, therefore, was slightly in a downward direction.

On the other hand, the statistical position had been steadily improving, consequently, whilst stocks in bonded warehouses of the United Kingdom amounted to 302,000,000 lb. at the end of December, 1934, they had decreased to 265,000,000 lb. on the same date in 1935 and a further decrease to 234,000,000 lb. at the end of last year. This decrease in stocks has been much accelerated during the present year, and at the end of June they amounted to not more than 144,613,000 lb.

The gross profit from tea showed improvement, and amounted to f.958,748, against f.805,000 in 1935, including the profits made by the three subsidiary companies. This improvement was brought about by a decrease in the cost price from 6.91d. to 6.07d. per lb. and an improvement in the selling price from 9.05d. to 9.37d. per lb. Turning for one moment to the prospects for the current year, these are certainly encouraging. At last the regulation scheme has succeeded in relieving the market of the heavy weight of stocks which had been such a depressing influence for some years past.

RUBBER

The rubber area is 35,955 acres, of which 28,138 are in production. Actually we had last year 1,105 acres less in production than during the previous year, which is accounted for by our rejuvenation policy, to which I will refer later. The crop amounted to 12,197,951 lb., and of this amount 2,108,520 lb. was exported against licences purchased. Standard assessment for 1936 was 16,966,440, and of this 59½ per cent. was exportable.

For the current year our standard assessment, subject to certain small increases we still expect to receive on appeal, has been fixed at 17,196,521 lb., of which, so far as we are able to calculate at present, we expect to be able to export 77½ per cent.

Last year the amount exported was the equivalent of an average yield of 433 lb. per acre in bearing, whilst our standard assessment was equal to a yield of just over 600 lb. per acre. In the meantime, the replanting of our oldest areas with the most up-to-date planting material continues to be in the forefront of our policy. The gross profit from rubber last year, amounting to f.1,079,182, showed a satisfactory improvement compared with the previous year, namely f.755,000. With regard to the prospects for 1937, as I have already said, the smaller percentage of restriction means a considerably higher exportable crop. In addition, the selling price must show a satisfactory advance on that for 1936, while for 1938 we have already sold forward 4,250,000 lb. at an average of slightly under 11d. per lb. c.i.f.

Regulation so far has done its work satisfactorily inasmuch as during the three years of regulation world stocks have been reduced from approximately 730,000 tons at the end of 1934 to 454,000 tons at the end of 1936.

COFFEE

In my recent speeches I have always spoken about coffee pessimistically, and even now the general improvement in the commodity position is less evident in coffee than in any other product. Nevertheless, an improvement is taking place. At the price ruling to-day this product should not again show us a loss; in fact, we may reasonably hope to see some profit, especially as the crop prospects are more favourable than for some years past, and we hope to harvest in the region of 22,000 cwt.

The profit on cinchona shows very little variation from that of the previous year.

SOEKAMANDI

Last year I was able to forecast a considerable improvement in the result from this estate, and I am glad to say that this forecast has been justified. From the accounts of the local company you will see that the gross profits from sisal and tapioca amounted to something over 2,000,000 guilders. The area under sisal at December 31st last was 13,256 acres; of this 10,213 acres were on Soekamandi estate itself and 3,043 acres on other estates in close proximity. The crop obtained during the year was a record, amounting to 12,323 tons, compared with 8,104 tons in 1935 and 9,548 tons the previous year. The chief factor in the improved result was the better selling price, which advanced from an average of £14 5s. per ton in 1935 to £25 per ton in 1936. The factory worked at a high efficiency throughout the year. A high percentage of first-grade fibre was turned out, "A" grade amounting to 36 per cent., against 28 per cent., the highest previously obtained in any year, whilst the two standard grades "A" and "X" amounted together to 63 per cent. of the total outturn. The gross profit from sisal amounted to f.1,410,000—compared with a small loss for the previous year.

The total tapioca area, at December 31st, was 7,835 acres, of which just over half were on Soekamandi estate itself, the remainder being on neighbouring estates.

As with sisal, the selling price of tapioca showed distinct improvement, advancing from an average of £9 8s. 4d. per ton in 1935 to £12 11s. 8d. per ton in 1936.

The gross profit for tapioca was f.622,567, an improvement of roughly f.400,000 on the year before. Prospects for the current year are good. So far selling prices have been well maintained and the crop estimates are satisfactory, therefore we have reason to anticipate another good year on Soekamandi.

The engineering department has been very active throughout 1936, and we again congratulate Mr Cochrane and his staff on the year's work. The most important undertaking was the erection of the Tjinangling Power Station, which came into service on August 20th last. The completion of this power station practically doubles the company's available amount of power, as the new station is estimated to give a maximum of 2,300 h.p., and a minimum of about half this figure.

THE PRESENT MEASURE OF PROSPERITY

In conclusion, I must express my own and the board's satisfaction that once again we are able to present to shareholders a report and balance sheet indicating a return to a greater measure of prosperity. I would, however, like to utter one word of warning: prosperity at present is rather that of silver plate than of solid silver, by which I mean that the position cannot be considered as wholly satisfactory so long as many of our chief products are only able to enjoy prosperity under cover of regulation. As long as this continues, the foundation of prosperity is not secure, and it is the work of all the leaders in the various industries to work to make that prosperity solid which is at present only a surface covering. Whilst keeping production in check both by regulation of export and by prohibition of new plantings temporary prosperity can be achieved, permanent prosperity can only be assured when world consumption is brought level to potential production.

The report and accounts were unanimously adopted, and as a mark of appreciation of his invaluable services to the company the chairman was asked to accept a portrait in oils of himself, together with a replica to be hung in the board-room.

GOLD FIELDS RHODESIAN DEVELOPMENT COMPANY, LIMITED

INCREASED REVENUE AND PROFIT

MR D. CHRISTOPHERSON'S REVIEW

The twenty-fifth ordinary general meeting of this company was held, on the 29th instant, at the Institute of Chartered Accountants, London, E.C.

Mr D. Christopherson (the chairman), in the course of his speech, said:—The total profit for the year amounted to £266,353, as compared with £209,846 for the previous year, an increase of £56,507. This increase is practically all accounted for by revenue from dividends, interest, net profit realised by sales of investments and sundry receipts being £55,791 in excess of that which was shown for the former year. It is satisfactory to be able to state that the revenue from dividends and interest amounted to £67,821, being £6,791 more than last year. The interim dividend of 5 per cent. was paid in April last and the directors recommend a final dividend of 5 per cent.

WANDERER HOLDING

We still retain a large interest in the Wanderer Consolidated Gold Mines, Limited, from which we receive a very good return on the book value of our holding, the company paying dividends at the rate of 12½ per cent. on its £1 shares. With the higher tonnage milled, working costs have been reduced to 10s. 6.18d. per ton milled, a remarkably low figure, especially when consideration is given to the fact that this cost includes everything expended on development during the year. The latest information we have received goes to show that development at depth, both in the Wanderer section of the mine and the Ashton section, is highly encouraging.

During the year under review the Wanderer Company purchased the old Surprise mine where, from the old plans, it could be assumed there was a material amount of fully developed ore still remaining available for stoping and of good grade. The time taken to dewater and open up the mine was rather longer than was expected for various reasons. Up till now, as far as can be estimated, there may not be quite so much fully developed ore as we had expected, but the values come up to what was shown on the old plans. Exploration is now going on to establish, or otherwise, the continuance of the ore shoot beyond the horizon that had been reached when the mine closed down.

WITWATERSRAND INTERESTS

Our investments in Witwatersrand Mining Companies remain the same as last year, except for a few additions. We still retain our West Witwatersrand Areas, Limited, holding, having every confidence that in due time we shall receive a very fine return from this investment, not only from the benefits accruing to that company from shares in subsidiary companies already formed, received in consideration of the ground put in, but also from the rights we were entitled to take up and have taken up in working capital shares. Also, to my mind, there is no question but that, in due time, there will be further subsidiary companies formed carrying the same benefits.

As you will have seen, the Blyvooruitzicht Gold Mining Company has recently been formed by the Central Mining and Investment Corporation, Limited. Although not a subsidiary company of the West Witwatersrand Areas, Limited, that company is largely interested in same, having put certain ground into the new company in consideration for which the company will receive 684,000 shares and its shareholders were given the right to subscribe 2½ shares for every West Witwatersrand Areas, Limited, share held.

Our holding in Sub Nigel remains the same. This company continues, and is likely to continue, to make high profits, whilst development continues to expose extremely satisfactory values.

NEW INVESTMENTS

The three new investments made during the past year in Witwatersrand companies are in Libanon Gold Mining Company, Limited, which we acquired, and were well satisfied to acquire, through our holding in West Witwatersrand Areas, Limited, Vogelstruisbult Gold Mining Areas, Limited, and Luipaards Vlei Estate and Gold Mining Company, Limited.

Turning to our West Coast investments, we still have a large interest in the Ashanti Goldfields Corporation, Limited, from which we receive a substantial revenue by way of dividends. In meantime, development on those properties continues to expose very satisfactory values. We also still have a substantial interest in Gold Coast Selection Trust, Limited. In view of the holdings of that company, as set out in the report, your directors are well satisfied with this investment.

Apart from the indirect interest we have through our holding in Gold Coast Selection Trust, Limited, in the Ariston Gold Mines (1929), Limited, Marlu Gold Mining Areas, Limited, Amalgamated Banket Areas, Limited, and Bremang Gold Dredging, Limited, we have a direct interest in that we have a considerable holding in those companies.

OUTLOOK FOR CURRENT YEAR

For the current year it is difficult to prognosticate what the prospects are, so very much depending on how far world conditions may improve. We are only two months in our new financial year, and during those two months conditions have been such as to lead one to be particularly cautious in making any forecasts. It must also be borne in mind that last year, at any rate up to the latter end of April, was an exceptionally favourable one for profitable business by way of realising certain of our investments. So much was this the case that when I left for South Africa in the middle of February this year, it appeared practically certain that we should be able to recommend an additional 2½ per cent. dividend. At that time there was no indication whatsoever that it would be necessary to appropriate so much of the profits for depreciation purposes. This only emphasises how desirable it is to keep a company such as this in as sound a position as possible to meet unexpected setbacks as the one recently experienced.

The report and accounts were unanimously adopted.

SOUTHERN KINTA CONSOLIDATED, LIMITED

DIVIDEND OF 30 PER CENT.

The third ordinary general meeting of this company was held on the 26th instant, in London.

Captain Oliver Lyttelton, D.S.O., M.C., the chairman, in the course of his remarks said :—At the present rate of quotas the life of our properties may be estimated at anything from 15 to 25 years. The Government of Malaya has recently announced that those companies which are already at work in the field will be permitted to prospect and take up new areas. This opens up great possibilities of our being able to employ our cash profitably and to increase our ore reserves. If in the future we can no longer see profitable and rational use for our funds in the industry in this way we should propose to make a return of capital. But this is far from being so to-day.

The financial position of the company is particularly strong, its liquid resources amounting to the impressive figure of nearly £457,000. This figure has since increased, but is of course subject to the payment of the final dividend of 15 per cent., if confirmed by you, and of the interim dividend which your directors have declared.

The enhanced profit now shown is entirely from current operations and does not include, as it did last year, any special receipts from the sale of buffer stock. The profits now shown are entirely due to the increase in the percentage of assessment, which has risen from 51·52 per cent. to 68·75 per cent. The price upon which we have realised our first quarter's production for the current year is very much above this average of £204/£205.

The tin industry's prospects are bright. The consumption for 1937 may well reach a record figure. If my wishes could become facts, however, I would prefer a rather lower price for tin. I must once again say that the unknown factor in making any statistical forecast of the future is always the amount by which demand will exceed actual consumption.

The report and accounts were adopted and a final dividend of 15 per cent., less tax (making 30 per cent., less tax, for the year), was approved.

TANGANYIKA CONCESSIONS, LIMITED

BETTER POSITION AND OUTLOOK

Addressing the annual meeting of the Tanganyika Concessions, Limited, held on the 29th instant in London—at which General Sir F. Reginald Wingate, Bart., G.C.B., G.C.V.O., G.B.E., K.C.M.G., D.S.O., the chairman of the company, presided—Sir Robert Williams, the managing director, said:—When I addressed you last year, I said that there were encouraging features which led one to hope that better prospects were in view, and this has proved to be the case. It should be borne in mind, however, that the improvement in conditions which was then starting did not get fully into its stride until the present year and is not reflected in the accounts for 1936. The results for 1937 should be very much better.

The big improvement in the copper position since last year puts a very different complexion on the company's affairs generally. The Union Minière has been enabled to effect a most advantageous capital reorganisation, which paves the way for an era of increased dividends from that company. The taking up of a large number of new Union Minière shares should prove to be a very profitable transaction. The greatly augmented output of the Union Minière and the general improvement in trade, as well as a growing appreciation of the natural advantages of the line, have resulted in a progressive increase of traffic receipts on the Benguella Railway, and this should continue.

In co-operation with the Zambesia Exploring Company, you have acquired a direct interest in two valuable gold properties in Tanganyika Territory, thereby providing Kentan Gold Areas, in which you are largely interested, with finance for continuing development until the necessary funds can be raised by that company for the erection of a mill and the production of gold on an extensive scale.

Finally, after meeting all expenditure up to date, including provision for the redemption payments of the debentures of the African Railway Finance Company until the end of the year, you have a cash balance of some £260,000, and can look forward to improved results in the near future.

The report was unanimously adopted.

CITY OF SAN PAULO IMPROVEMENTS AND FREEHOLD LAND COMPANY LIMITED

IMPROVED LAND PRICES

The twenty-fifth ordinary general meeting of the company was held, on the 29th instant, in London, Mr Herbert Guedalla, F.C.A., presiding.

The Chairman, after dealing with the balance sheet and referring to the auditors' report thereon, said that the decrease in the surplus from land sales, etc., of £21,472 was mainly accounted for by the fact that in the previous year's sales there was included an area of land formerly earmarked as gardens and standing at no cost in the balance sheet, which produced £16,550. A dividend of 7½ per cent. from the subsidiary, the San Paulo Mortgage and Finance Company, Limited, had been included.

The balance of £281,070 to the credit of profit and loss account was subject to any adjustment in exchange which might be made in future. Prices received for land sold in all estates showed important improvement. The Stadium and roadway construction in Pacaembú were making that estate ripe for sale, and would probably provide chief sales in near future. Other districts were being affected by road construction and development schemes. During the current year a large factory site in Lapa had been sold. Of the debtors for land sales, 3 per cent. only were in arrear. A few contracts might be subject to cancellation, as stated by the auditors, but it was impossible to anticipate the result.

Conditions in San Paulo had been favourable and relations with the Municipality were excellent. On the question of exchange it should be noted that both exports and imports had increased in 1936 with a net improvement in the Brazilian balance of trade. It was to be hoped that this would lead to increased confidence, such as was shown by the recent agreement with the United States to provide 60 million dollars, but the ultimate effect on exchange could not yet be foreseen. The directors were not satisfied that the time had arrived for altering the basis of the accounts (taking milreis at 6d., and writing off differences on remittances), as the assets consisted of land which will take a long period to dispose of and debtors who were repaying by monthly instalments over, say, ten years.

The report and accounts were adopted.

THRELFALL'S BREWERY COMPANY, LIMITED

CONTINUED PROGRESS

The fiftieth annual general meeting of Threlfall's Brewery Company, Limited, was held, on the 28th instant, in London.

Major Charles M. Threlfall, J.P. (the chairman), said:—It is a pleasure to my colleagues and myself to be able again to submit accounts showing improved results and to report continued progress in the development of our business. As you will appreciate from the figures now before you, we have had a very good year and an appreciable expansion in our sales has taken place.

A pleasing feature is the very definite improvement which has manifested itself in connection with the shipping trade of Merseyside and the Lancashire cotton trade. This factor has undoubtedly had a most beneficial effect upon the business of your company's houses which are situated in these important areas.

We are faced, however, with increased prices of manufacturing materials and considerably enhanced costs in respect of our building operations. Taxation continues to increase, and, in common with other companies, we shall have to bear our proportion of the National Defence Contribution.

In accordance with the policy of your board an extensive programme of reconstruction and renovation of our various licensed establishments is proceeding, and during the year under review a large number of hotels have been dealt with. Additional ones are in process of erection, and every opportunity is being taken to acquire sites in new areas. As you will appreciate, it is essential for this purpose that we should have ample cash resources always available, and the proceeds of the sale of the Wigan properties during the year—of which I informed you in my speech 12 months ago—will be employed usefully in the furtherance of our schemes of development.

After deducting interest on debenture stock, interest on deposits, directors' fees, compensation levy, and adding transfer fees and bank interest, there is a net profit of £303,835 19s. 9d. for the year, which, together with the carry forward from last year, makes a total of £643,668 2s. 6d. to be dealt with.

The report was unanimously adopted and a dividend of 18 per cent. for the year on the ordinary shares was approved.

SCRIBBANS AND COMPANY, LIMITED

THE RISE IN PRICES

The tenth annual general meeting of this Company, was held, on the 27th instant, in London, Mr Philip E. Hill (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said that last year he had told the shareholders how the rise in the price of raw materials had adversely affected their profits, and he had expressed the personal opinion that they were going to see a further rise. Unfortunately, that had proved correct, with the result that their profit on trading for the year now under review amounted to £150,085, compared with £193,348 for the previous year. That setback in their profits had been entirely due to the higher prices for the commodities which they used, coupled with increased labour costs.

Scribbans's products had a high reputation for quality, and that the directors were determined to maintain. That policy was at the moment expensive, but they were satisfied that it was the soundest in the best interests of the business. The obvious solution of their difficulties would be to make some slight increase in the price to the consumer, and that, he felt certain, would ultimately have to be done, but so far it had been found impossible to obtain concerted action throughout the trade. The increased cost of commodities during the last two years had really been staggering, and, whilst they were naturally disappointed at the smaller profits resulting, the great resilience of their business should afford them satisfaction clearly pointing, as it did, to the fact that on a return to more favourable conditions of trading considerably increased profits should be available. In the meantime they might in all probability have to experience a further rise in the price of commodities. The remarks he had made applied mainly to the business of Scribbans; he was satisfied with the prospects of their subsidiaries.

The large number of new accounts opened during the year spoke volumes for the ability and energy of their selling organisation, and he would like to take that opportunity of personally thanking them for what they had done and were continuing to do. He regretted that he was unable to speak more encouragingly, but he felt confident that the expansion of their business would be maintained.

The report was unanimously adopted.

FINANCE AND INDUSTRIAL TRUST, LIMITED

IMPROVED POSITION AND PROSPECTS

The thirty-third ordinary general meeting of the Finance and Industrial Trust, Limited, was held, on the 28th instant, at Winchester House, London.

Mr E. B. Ridsdel (the chairman) in the course of his speech said:—You will see that the profit earned was £5,867 from the sale of investments and £3,712 from dividends, interest and underwriting commission, which, after allowing for administration expenses, resulted in a net profit of £8,321. After providing for the dividend on the preference shares for the current year, we have available a sum of £6,462, and propose to pay a dividend on the ordinary shares of 5 per cent., less tax, which will absorb £5,481, leaving to be carried forward £981, as against £376 brought in.

Referring to the balance sheet, our principal investments are in rubber companies, the percentage being 43 per cent. of our total investments. Our liquid position as disclosed by the balance sheet is sound, which is equal to 31 per cent. of our total capital account.

As you all know, it is very difficult to invest money to-day with any degree of safety to yield a reasonably good return, but it is possible to earn 7½ per cent. to 10 per cent. in good rubber shares. One must, of course, realise that rubber is not a "gilt edge" security, and we have seen so many ups and downs, but I have a strong feeling that for the next few years rubber shares will prove a remunerative investment.

We have invested in Thistle Etna Gold Mines, Limited, the sum of £8,000, the present market capitalisation of which is nearly £13,000, and as this mine is now reaching the profit-earning stage we hope to reap a good return on this investment. The balance of our investments is as to 18 per cent. in tin mining and 21 per cent. in industrial companies.

It is not possible to forecast the future, but I hope now we have got our arrears of preference dividend out of the way we shall be able to do something more for the ordinary shareholders than we have done in the past year.

The report and accounts were unanimously adopted.

BUKIT MERTAJAM RUBBER COMPANY, LIMITED

DIVIDEND INCREASED TO 12½ PER CENT.

The twenty-eighth ordinary general meeting of Bukit Mertajam Rubber Company, Limited, was held, on the 28th instant, at Winchester House, Old Broad Street, London, Mr A. F. Goodrich, the chairman, presiding.

The chairman, in the course of his speech, said that they harvested 3,630,681 lb., compared with 2,415,887 lb. for the previous year, and the net profit stood at the satisfactory figure of £63,053 as compared with £26,166, the increase being due to a full year's possession of their new areas and the improvement in the average price obtained of 9·15d. per lb. London landed terms as compared with 6·55d. per lb. for the previous year.

The directors recommended a final dividend of 7½ per cent., making 12½ per cent. for the year, as compared with 8 per cent. for last year.

Since the issue of the report they had received telegraphic advice from their agents in Penang and Singapore that the assessment for 1937 for Kedah and Jabor Valley Estates had been increased to 6,005,079 lb. The directors were still not satisfied with the Jabor assessments and their Singapore agents advised they were taking the necessary steps which the directors trusted would result in a further 200,000 lb. being granted.

The release at present was 90 per cent. of the standard, as against 66⅔ average for the past year, and they anticipated producing that larger crop at a reduction in the f.o.b. cost per lb. for 1936–37.

They had sold forward for delivery April, 1937, to March, 1938, a total of 636 tons, equal to about 30 per cent. of the total crop for this financial year at 9·63d. London landed terms.

The Rubber Regulation Scheme had continued to work satisfactorily throughout the year, and there was little doubt but what it would be extended for a further period.

Mr J. K. Swaine, referring to the Kedah and their new Jabor Valley property, said he could assure the shareholders that labour and health conditions were excellent and the estates were being soundly and economically run.

The report was unanimously adopted.

KRUSCHENS GRIFFITHS HUGHES PROPRIETARIES

PROFIT £234,401

The third ordinary general meeting of Griffiths Hughes Proprietaries, Limited, was held on July 28th, at Salford, Manchester.

Sir Bertram Hyde Jones, K.B.E. (the chairman), said how much the board regretted the big drop in profits to £234,401 for the last financial year, a large part of which was due to the heavy devaluation of currency in certain of the company's big markets. Another factor was the constitutional crisis over here, and a third was the projected Medicine Tax which results in retailers keeping as small a stock of the company's products as possible until the Budget was out. Large amounts also had been spent in developing new lines.

While it was unfortunate that so many diverse factors should have affected them simultaneously, the most serious factors were not likely to recur together and money spent on advertising new lines and developing certain old ones would prove profitable investments. They could, of course, have placed the money spent on development to a special development fund, but they preferred to deal with it by treating it as an expense chargeable this year. They hoped shareholders would agree with the board in their determination to keep the balance sheet free from what he might describe as "financial moss."

As to the results of this year's trading, he preferred not to express an opinion. The board were doing their utmost to build and strengthen their business so that it might withstand whatever buffets fate might have in store and at the same time be able to bear the weight of an increasing trade and prosperity. Looking ahead, as the shackles were gradually cast off international trade, so would the company further benefit from its widespread export trade. For currency and other reasons some of their markets had shown large, though, they believed, only temporary, decreases in profits, but at the same time in other markets they had considerably increased their business. Profits, too, would be increased as their expenditure on new lines began to bear fruit, of which there were already welcome indications.

The report and accounts were unanimously adopted, and the payment of the final dividend of 6 per cent., less tax, was approved.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended July 24, 1937, amounted to £13,480,694, against ordinary expenditure of £12,687,656. After allowing for an increase in Exchequer Balances of £148,038, the operations for the period, as shown below, reduced the gross National Debt by £645,000, to approximately £7,987 millions.†

No gold movements were reported at the Bank of England between July 23rd and 29th. Details of previous movements appeared in the issue of July 3rd, page 49.

GOLD MARKET

Messrs Samuel Montagu and Company write on July 28, 1937 :—

The Bank of England gold reserve against notes amounted to £326,406,625 on July 21st, showing no change as compared with July 14th.

The market has passed through another quiet week during which a total of £1,230,000 has been dealt in at the daily fixing at prices which, except on Friday when there was a 2d. premium, have represented parity with the current dollar rates. Demand has to some extent, it is thought, represented the replacement of metal previously dishoarded. A momentary hardening of the dollar led to the quotation of 140s. 0½d. on July 24th, but quotations have since once again slipped away.

The s.s. "Carthage," which sailed from Bombay on July 24th, carries gold to the value of about £208,000. The Southern Rhodesian gold output for May, 1937, amounted to 68,448 fine ounces as compared with 68,059 fine ounces for April, 1937, and 68,331 fine ounces for May, 1936.

SILVER MARKET

Some revival of Indian demand manifested itself early in the period under review and, offerings being small, imparted an upward tendency. Aided by the sharp appreciation of the dollar, quotations reached 20d. for both deliveries on Saturday and, although the dollar reacted on Monday, silver prices on that day advanced further to 20 7/16d. for cash and 20⅛d. for forward. At this higher level the market appeared over-strained and in face of China and Continental sales and speculative resales prices reacted yesterday to 20d. for both deliveries, at which they remain unchanged to-day. With the dollar-sterling exchange at its present level, there would appear to be little likelihood of any sustained improvement in prices, but sellers would probably once again show reluctance at lower levels. The fluctuations of the past week have served to illustrate how readily the market responds to even a moderate revival of demand.

Quotations for gold and silver are shown below :—

1937	Price of Gold per Fine Ounce	Equivalent Value of £ sterling	Price of Bar Silver in London per ounce standard		Price of Silver New York per ounce ·999 fine
			Cash	Two Months

SHORTER COMPANY COMMENTS

COMPANY RESULTS OF THE WEEK.—This week's output of company reports is seasonally smaller, but it is representative of industrial companies of moderate size. In the brewery group, NUTTALL'S BREWERY reports an increase in net profits from £65,672 to £79,100, while the ordinary dividend is doubled at 5 per cent. ASSOCIATED BREWERIES have also enjoyed a prosperous year, for profits have risen from £82,411 to £100,145, the ordinary dividend being raised from 7½ to 9 per cent. In the land group BRAZILIAN WARRANT shows a sharp increase in profits from £7,059 to £36,362. AILSA INVESTMENT and CONTINENTAL AND INDUSTRIAL TRUST have recorded slightly higher net revenues during the past year, and pay increased dividends. Among the industrial concerns, G. H. DOWNING, whose profits were severely reduced for 1935–36, have staged a recovery from £47,726 to £72,502, although the anticipated increase in dividend has not been realised. DAVY AND UNITED ENGINEERING report approximately doubled profits at £42,082, and the dividend is increased from 5 to 7½ per cent. Other increases in profits are recorded by GEO. BASSETT AND COMPANY and CROPPER AND COMPANY, while S. HOFFNUNG and NATIONAL CANNING, with profits of £46,930 and £42,132 respectively, have slightly improved on the previous year's figures. A disappointing first report has been issued by CONSOLIDATED SISAL, whose net profits amount to no more than £7,372 after depreciation, compared with prospectus estimates of £12,000 for eight months to December last. No final dividend is recommended in addition to the 2 per cent. interim. The prospectus showed that considerable forward sales of sisal had been made, which the directors are now compelled to buy-in. The serious deficiency of output, compared with prospectus estimates, is attributed to shortage of labour and overhauling of machinery.

APPOINTMENTS AND PERSONAL

Messrs Dawnay Day and Company, Ltd., announce that Mr Christopher P. Dawnay, the secretary, has now been elected to the board.

Sir Lynden Macassey, K.B.E., K.C., has been appointed a director of Settle Speakman and Company, Ltd.

Kassala (Sudan) Gold Mines, Ltd., announce that Mr C. M. Dolby and Mr F. W. Duñl have joined the board of the company.

The directors of the National Mutual Life Assurance Society have appointed Mr James Wilson More, F.F.A., to be joint actuary. Mr More has been assistant actuary of the society since March, 1929.

The Rt. Hon. Lord Pentland has joined the London Board of the Australian Mutual Provident Society.

MISCELLANEOUS

SAKER BARTLE (SOUTH AFRICA), LTD.—Profit of £68,403 for initial period from March 6, 1936, to March 31, 1937. Ordinary dividend 10 per cent. Underwriting commission £5,556. Union tax reserve, £3,750. Forward, £11,528. Turnover shows a substantial increase over the previous year. Debtors, £162,102. Creditors, £53,639.

HEAD WRIGHTSON AND COMPANY, LTD.—Profits for year to April 30, 1937, amounted to £60,448, against £52,556 for previous year. Depreciation provision repeated at £20,000. Ordinary dividend 5 per cent. net against nil. Carried forward £7,420. All the works continue to be fully employed.

THRELFALL'S BREWERY COMPANY, LTD.—Gross trading profits for year to June 30, 1937, £423,855, an advance of £30,527. To depreciation, £48,847, against £40,336. Ordinary dividend raised from 17 per cent. to 18 per cent. To properties improvement reserve, £35,000, against £22,000. Carry forward £334,650, against £339,832.

SOUTH AFRICAN DISTILLERIES AND WINES, LTD.—Dividends received for year to June 30, 1937, £259,549, against £165,942. Ordinary dividend and bonus 20 per cent., against 10 per cent. Carry forward increased from £1,055 to £1,491. A compromise has been reached in the civil claims against E. K. Green at £133,000, and the company has called upon the vendors of the shares for indemnification. The vendors have refused to acknowledge any liability, and the company has claimed an arbitration.

McDOUGALLS TRUST, LTD.—Revenue for year to June 30, 1937, £205,211, compared with £204,392. Ordinary dividend raised from 7½ per cent. to 10 per cent. To reserve for depreciation of trustee securities £10,000. Carry forward reduced from £46,180 to £37,817.

SHEFFIELD STEEL PRODUCTS, LTD.—Profit for year to March 31, 1937, £33,388, against £46,193 for preceding year. Net profit £1,015, reducing debit balance brought in to £34,618. Accounts are not comparable with preceding year owing to the sale of two branches and the assets of two subsidiaries. The reorganisation of the personnel and plant is nearing completion.

IRISH SUGAR COMPANY.—Trading profit for the year to April 30, 1937, was £287,935, approximately £17,800 higher than for 1935–36. The total quantity of beet delivered last campaign was 590,311 tons, an increase of 27,137 tons, with average sugar content of 17·5 per cent., compared with 17·17 per cent. for 1935–36. A larger quantity, in terms of white sugar, was manufactured at 86,314 tons, compared with 78,911 tons for 1935–36. The outlook for a satisfactory yield during the current season is now more promising.

ASSOCIATED BREWERIES.—Net profit £100,145 against £82,411. Ordinary dividend raised from 7½ per cent. to 9 per cent. Carry forward raised from £42,310 to £49,762.

20 BISHOPSGATE, LONDON, E.C.2

ARMSTRONG WHITWORTH SECURITIES.—Net profit for 1936, £15,116, to be deducted from the debit balance of £293,4,783, leaving a deficiency of £2,919,667. The loss for 1935, after providing for debenture interest and directors' fees was £18,326.

INTERNATIONAL HOLDING AND INVESTMENT COMPANY.—This Company is considering a plan to permit of the resumption of dividends, and shareholders will be notified as soon as the board is in a position to recommend a reorganisation. No dividends have been paid since 1929.

RHODESIAN ANGLO-AMERICAN (OFFER TO PURCHASE LOANGWA SHARES).—Rhodesian Anglo-American, Ltd., has offered to purchase Loangwa Concessions (Northern Rhodesia) at the rate of one 10s. share in Rhodesian Anglo-American for every 12 shares of 5s. each in Loangwa Concessions. Offer conditional upon its acceptance by at least 90 per cent. in value of the holders of the 3,787,666 shares.

ELECTROLUX CORPORATION.—Consolidated net profit for the second quarter of 1937 $843,867, compared with $836,286 for same period 1936. Total earnings first six months 1937, $1,612,236, compared with $1,558,758. After all charges, including Federal income tax and surtax on undistributed profits.

ABITIBI POWER AND PAPER REORGANISATION PLAN.—The bondholders' protective committee have published a reorganisation plan, providing for the formation of a new company to take over Abitibi properties and issue new bonds, income debentures and common stock, in exchange for outstanding obligations and stock on which heavy arrears of interest and dividends are due. In addition it is proposed to raise $14,000,000 of fresh capital by an issue of 4½ per cent. bonds.

BROKEN HILL PROPRIETARY COMPANY.—Net profit for year to May 31, 1937, £1,183,171, after providing £670,801 for depreciation and £18,406 for debenture interest. In the previous year net earnings were £850,361. Ordinary dividend is maintained at 12½ per cent.

SHAWINIGAN WATER AND POWER.—Gross revenue for six months ended June 30, 1937, $7,397,401 against $6,658,489. Net revenue $4,198,705 against $3,668,193.

BANK INSURANCE AND FINANCIAL SHARES TRUST.—Net revenue for half-year to June 30th, 4·50547d. per unit, which, added to 3·58264d. earned during previous half-year, amounts to 8·08811d. per unit for the year. Distribution payable August 15, 1937, 4½d. per unit (free of tax), making 8d. per unit for year.

HADFIELDS, LTD.—Interim dividend of 9d. per share (7½ per cent.), payable August 31st, compared with 3½ per cent. a year ago. The present increased interim dividend is paid upon a larger capital. As a result of the offer made in April, £445,813 debenture stock has been surrendered and 296,648 ordinary shares issued in exchange. Comparative position of capital shown below :—

	Before Offer	After Conversion
	£	£
Ordinary shares	929,892	1,078,216
Preference shares	300,000	300,000
Total	1,229,892	1,378,216
4½ per cent. 1st debenture stock	1,039,137	593,324
Total	2,269,029	1,971,540

REPUBLIC OF COSTA RICA 6 PER CENT. MORTGAGE BONDS OF 1912.—The Government of Costa Rica have made a proposal to buy the outstanding bonds of this issue together with all claims for coupons accrued thereon for the sum of 10s. in the pound, provided the whole or practically the whole of the bonds outstanding are offered to them on the terms mentioned.

CROPPER AND COMPANY.—Net profit for year to June 30, 1937, £42,885 against £36,623. Ordinary dividend maintained at 10 per cent. To general reserve £7,500 against £2,500. To obsolescence reserve £2,500 against £5,000. To reserve for doubtful debts £2,500 against nil. Carried forward £10,737.

ARGENTINE NAVIGATION.—The Argentine Navigation Company, Mihanovich, Ltd., announces that gross takings and those of associated concern, together amounted to Arg. P. $2,947,121, in June 1937, an increase of Arg. P. $573,121, or 24·1 per cent., on June, 1936. For the period January–June, 1937, takings aggregate Arg. P. $2,581,984.

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

In anticipation of the approaching holiday, business in most commodities was below normal during the past week. Although prices generally fluctuated within narrow limits, an easier tendency was evident in some cases.

Better weather reports from the Canadian growing areas, and a disposition to raise North American crop estimates were responsible for reversing the upward trend of wheat prices. Other grains were generally rather cheaper in sympathy. On the other hand, a firm tone was displayed at the Mincing Lane tea auctions, and sugar was also marked up in price. On the London Provision Exchange rather higher prices were the rule, bacon, butter and cheese all sharing in the improvement.

The metal markets were quiet, with prices showing little alteration compared with those ruling a week ago. The controversy which has arisen over the proposal to reconstitute a buffer pool in tin is discussed in a Note of the Week. Rubber prices sagged further owing to reports of expanding production in Malaya, and cotton suffered a sharp drop on the continuance of bearish crop news. Jute, on the other hand, enjoyed a slight price rise, despite the quiet tone of the market. Other textile fibres were mostly unchanged in price. This week's advance in the combine price of petrol by ½d. per gallon is the subject of a Note of the Week.

In the United States the general tendency of prices was downwards, grains, cotton and rubber all sharing in this movement. Thus Moody's daily index of staple commodity prices (December 31, 1931 = 100) declined from 207·7 to 205·2 in the week ended Wednesday. The index stood at 205·0 a month earlier and at 162·1 on the corresponding day last year.

COAL

SHEFFIELD.—The sporadic strike trouble in South Yorkshire is not yet at an end, and in consequence output of coal is somewhat seriously interfered with. The call for best locomotive hards continues to be very strong. Gas coal demand is quieter, and household requirements show a big falling off. Coke of all descriptions is in keen request, with supplies short. Blast furnace coke is an active item. Large patent-oven qualities make up to 31s. per ton on rail at ovens for inland, and walnut, bean and pea sizes, 30s. to 31s. 6d. Export trade shows a further decline. Germany is now competing sharply with British coal, and shippers forecast a fairly long period of quietude, with probably a reduction in the export quota. Certainly very few inquiries for autumn delivery are about.

WORKINGTON.—The coal trade is strong. There is a slightly better demand for land sale, and though Whitehaven's production is rising, requirements are larger than can be satisfied. There is an acute shortage of industrial fuel, and accordingly coke makers, hard pressed by iron smelters, are crushing round coal and importing Welsh small coal. Shipments to Ireland for a few weeks rose to 5,000 tons, but have fallen again, and Irish merchants will be strictly rationed during the autumn and winter.

NEWCASTLE-ON-TYNE.—The persistent demand for Durham coking coal from home and abroad is the feature of the North-East coal market. This class of fuel, so urgently required by the iron and steel trade and by gas works, has set a pace which is easily outstripping the productive capacity of the Durham coking collieries. All other sections of the market are steady despite a seasonal decline in domestic consumption. Patent oven coke is in keen demand by home consumers.

GLASGOW.—The collieries reopened this week after the holidays ; but with outputs only gradually returning to normal, and producers well booked, there has been little in the way of pressure of supplies for new business. Foreign inquiry has not yet opened out again, and the most interesting development was the invitation by the Swedish State Railways of tenders for 20,000 tons of locomotive steam coal for August-September delivery. In the inland branch household fuel remains slow, but other classes of round coal are well taken up, as also are the smaller sizes of nuts. Owing to the stoppage at the pits and the docks shipments last week were much reduced, totalling only 94,000 tons.

CARDIFF.—Coal shipments at the South Wales ports continue to expand. Last week the exports in the coastwise and foreign trades totalled 474,800 tons, the highest weekly figure since January, 1932, and under the holiday pressure now in swing it is anticipated that this week's loadings will equal, if not exceed, those of the past week. Current market inquiries are inactive, but contract commitments are absorbing the increased export supply quota for the current quarter, and with a fair supply of tonnage there has been very little further accumulation of stocks. Prices are nominally unchanged for backward positions, but quotations for prompt shipment are from 6d. to 1s. per ton lower than the peak values reached in June, except for dry nuts, which are still hardening. Cokes continue a very strong market and supply is barely equal to demand. The price of French pitwood under the coal-pitwood barter agreement has been reduced from 32s. 9d., ex ship, to 31s. for the three months ended October 15th next. The exemption of coal conveyance charges of less than 10d. per ton from the 5 per cent. increase conceded by the Railway Rates Tribunal does not affect the transport costs of shipment coal, and it is estimated that these will be increased by approximately £70,000 per annum.

IRON AND STEEL

LONDON.—The volume of new business continues to be restricted by the difficulty of finding manufacturers who can accept orders for delivery within a reasonable period, says the official report of the London Iron and Steel Exchange. The quietness of the market is accentuated by the holiday conditions ruling in the producing districts, although outputs are being maintained at a higher rate. The demand for pig iron is undiminished and the postponement of deliveries at some of the consuming works as a result of the slowing down of operations during the holidays is welcomed by the makers as it gives them an opportunity of overtaking delivery arrears. Foreign iron continues to be offered at high prices; but few transactions have been reported.

Great stringency continues to rule in the semi-finished steel section, although British production is being pressed to the utmost. Operations at the consuming works are restricted by the difficulty of obtaining supplies, but it is hoped that the position will be improved later on by the arrangements which have been made for increasing imports. In the finished steel department the pressure to obtain deliveries is not quite so severe owing to the holidays; but many consumers are endeavouring to cover their future requirements for several months ahead. In some cases contracts have been entered into for delivery over the early part of 1938; but in the prevailing conditions few makers or consumers care to commit themselves so far ahead.

SHEFFIELD.—The approach of the holiday has had a quietening effect on the iron market this week, and there is little likelihood of any revival during the next month. Some producers are off the market altogether, having nothing to offer, and being unwilling to add further to their contract commitments for the present. Rationing is now accepted as the only equitable method of distribution in the prevailing circumstances. Forge, foundry and basic pig conditions show no change, but the position in hematites has become rather difficult again. Makers of common and marked bars are fully booked. The new official prices have not affected the market to any extent.

In the steel section demand continues to exceed supplies, and producers are unable to accept all the business available, despite the fact that output is being expanded to the utmost. Business in iron and steel scrap is on a good scale, and users are securing somewhat more adequate supplies. In the former prices continue to show a hardening tendency, prices being in the main uncontrolled. The total production in June of castings and ingots in the Sheffield district was 148,000 tons, making 853,100 tons for the first six months of the year, an increase of 68,800 tons over the corresponding six months of 1936. All the lighter sections of the steel trade here are well booked, and the heavy engineering branches will remain fully employed for a lengthy period.

MIDDLESBROUGH.—Consumers of both foundry and hematite pig iron continue to take up the output in this area, and, although there is only one furnace regularly producing foundry iron, the output is rationed to keep home users supplied as far as possible. There are now twelve furnaces in blast producing hematite pig iron, and after producers' own requirements have been met the remainder is readily taken up by the home demand. Only small parcels of pig iron are available for shipment, the total quantity shipped from the Tees during the month of July up to the 26th being 4,952 tons, against 4,786 tons during the same period in June. There are twenty-one furnaces in operation in this area producing basic iron, whilst two furnaces are making ferro-manganese. Prices are maintained at the official figures of 101s. per ton for No. 3 Cleveland foundry pig iron; 123s. per ton for No. 1 quality East Coast hematite pig iron; and basic pig iron 100s. per ton, less rebate; all including delivery locally. There is actually no basic pig iron available for the market as this goes into consumption at producers' own steelworks.

The semi-finished and finished steel departments are running at full capacity. The output of steel ingots in this area during the first half of the year amounted to approximately 245,000 tons, and every effort is being made to expand production. Blast furnace coke is stronger owing to the increased demand for export, and the price of good Durham coke, delivered at the furnaces here, is 40s. per ton. No alterations have been made regarding prices of scrap, and consumers have no hesitation in paying the official figures for their heavy requirements. Whilst the importation of iron ore from the North of Spain has ceased, supplies are coming forward from other countries, the total quantity imported into the Tees during the month up to July 26th being 171,600 tons, as compared with 143,700 tons during the same period in June.

WORKINGTON.—Though there is plenty of demand in the North-West Coast hematite pig-iron market, hardly any business is being done. There will be little resumption of forward selling until substantial progress has been made with the reduction of arrears of deliveries. The ore and coke position having become easier, smelters are obtaining their maximum production, but since more than 60 per cent. of the make is required for the steelworks associated with the furnaces there is only a small spill-over for users in the Midlands, South Wales and Scotland. Of special qualities of iron there is even less to spare for consumers outside the district. Prices are firm. Bessemer mixed numbers are £6 6s. per ton at Glasgow; £6 8s. 6d. at Manchester; £6 11s. at Sheffield; and £6 13s. 6d. at Birmingham; low-phosphorus iron being 5s. 6d. to 16s. 6d. extra. Malleable iron at £8 delivered at Birmingham, and ferro-manganese at £18 15s. home, are in keen demand. Steelmakers are so full of orders that they can maintain their mills in operation for another twelve months. Workington is rolling rails, billets, bars and slabs, and Barrow is busy on rails, strip and hoop. Native ore, at 24s. 6d., f.o.t., is a bigger output, but is sold only to local smelters.

GLASGOW.—At the Clyde shipyards and at the manufacturing plants in Glasgow and neighbourhood operations have been resumed this week. A full start will not be made at the steelworks till next week. In every branch there is a vast amount of work on hand and, provided supplies of the raw materials of the different branches are available, there are prospects of regular employment for many months. The difficulties as regards supplies of semis have not yet been overcome, but users are hopeful that the arrangements which have been made for additional supplies of Continental material will ensure, within a short time, that deliveries will be more regular and in sufficient quantity to make it possible to operate somewhere near capacity. There has not been a great deal of important

new business placed within the past week, largely on account of holidays here and elsewhere, and possibly, too, because makers cannot undertake early deliveries.

CARDIFF.—Conditions in the South Wales tinplate trade are slightly easier, and production under the most recent ascertainment was 71·75 per cent. of allotted output capacity. Shipments, however, have been well maintained, and last week they totalled 9,326 tons, compared with 8,896 tons the previous week, and 5,653 tons in the corresponding week last year. Stocks have been further reduced to 1,518 tons, as against 8,275 tons a year ago. Prices are unchanged at 25s. to 26s. per basis box, f.o.b. Galvanised sheets are quiet, but firm, at £18 15s. per box, f.o.b., and steel sheet and tinplate bars at £7 15s. per ton, delivered locally.

OTHER METALS

COPPER.—The market has been completely overshadowed by holiday influences. Turnovers have been very small, and on several days remained well below 1,000 tons. Price movements, too, were narrow, the range between highest and lowest prices of the period under review being only 6s. 3d. The cash price gained 1s. 3d. on the week, while the forward quotation remained unchanged. The only news of interest during the week was the publication of the Northern Rhodesian copper production figure for June, which was 17,863 tons, against 19,151 tons in the preceding month and 11,027 tons in the corresponding month of last year. The country's output during the first half of 1937 reached the new record level of 105,437 tons, as compared with 65,480 tons a year ago.

Sales on the London Metal Exchange: 1,250 tons on Monday, against 950 tons last week; 750 tons on Tuesday, against 1,950 tons last week; 1,150 tons on Wednesday, against 1,600 tons last week. Domestic spot was quoted at 14·07½ cents per lb. in New York on Wednesday, against 13·95 cents a week ago and 13·57½ cents a month ago. Wednesday's official closing price for standard cash in London was £56 16s. 3d. to £56 18s. 9d. per ton, compared with £56 15s. to £56 16s. 3d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 9,740 tons showed a decrease of 295 tons, while stocks of rough copper, at 9,967 tons, were 1,171 tons larger.

LEAD AND SPELTER.—Lead turned easier and closed on Wednesday at £22 13s. 9d., a decline of £1 1s. 3d. on the week. Spelter, on the other hand, gained 2s. 6d., thus closing at £22 15s. The lower lead price is due to a slackening in the demand for the metal for building and on fairly good offers; while spelter benefited from reports that the United States has imported some spelter in recent weeks. According to the American Bureau of Metal Statistics, the world's lead output outside Spain declined from 158,500 tons in May to 147,200 tons in June, while the world's spelter production declined from 162,300 tons to 155,400 tons. In both cases the reported decline had little influence on the sentiment of the markets, as supply conditions have greatly improved in recent weeks.

Sales of lead on the London Metal Exchange: 500 tons on Monday, against 1,100 tons last week; 1,650 tons on Tuesday, against 1,850 tons last week; 1,150 tons on Wednesday, against 1,150 tons last week. The New York quotation on Wednesday was 6·00 cents per lb., against 6·00 cents a week ago and 6·00 cents a month ago. Wednesday's official closing quotation in London for soft foreign for shipment during the current month was £22 13s. 9d. to £22 15s. per ton, compared with £23 15s. to £23 17s. 6d. last week.

Sales of spelter on the London Metal Exchange: 475 tons on Monday, against 750 tons last week; 1,050 tons on Tuesday, against 1,000 tons last week; 800 tons on Wednesday, against 850 tons last week. Wednesday's quotation in East St. Louis was 7·00 cents per lb., against 7·00 cents the week before and 6·75 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipment during the current month was £22 15s. to £22 16s. 3d. per ton, against £22 12s. 6d. to £22 15s. last week.

TIN.—The tin market, too, has been quiet, but prices were not so well maintained as in the case of copper. There was a decline of £4 10s. to £262 in the cash price. The backwardation, which had widened to £3 10s. at one time during the week, was again £1 10s. on Wednesday, i.e., the same margin as last week. The decline in prices was partly due to the poor demand and partly to the belief that tin stocks will show a rise of about 1,000 tons in the July statistics, due to be published on Tuesday next. This expectation is mainly based on the high Straits shipments, which amounted to 7,892 tons in the first 26 days of July, as compared with 6,390 tons in the whole of June. A feature of the past few days was the controversy on the tin buffer pool, discussed in a Note of the Week.

Sales of tin on the London Metal Exchange: 250 tons on Monday, against 375 tons last week; 300 tons on Tuesday, against 300 tons last week; 325 tons on Wednesday, against 200 tons last week. The New York quotation on Wednesday was 59.12½ cents per lb., against 60.00 cents a week ago and 56.50 cents a month ago. Wednesday's official closing quotation in London for standard cash was £262 to £262 10s. per ton, compared with £266 10s. to £266 15s. a week ago. Stocks of tin in London and Liverpool at the end of last week totalled 2,075 tons, a decrease of 314 tons on the week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted on Wednesday at £100 per ton, and rolling billets at £102 per ton. Nickel, for home and export, was maintained at £180 to £185 per ton. Quicksilver, on the spot, was quoted at £13 10s. to £13 10s. 6d. per flask of 76 lbs., as against £15 1s. to £15 1s. 6d. last week. Chinese antimony was quoted at £69 to £70 per ton, ex warehouse, the same as last week. Chinese wolfram for "August-September" shipment was quoted at 71s. to 73s. per unit, c.i.f., compared with 69s. to 71s. per unit for "July-August" last week. Refined platinum was quoted on Wednesday at £10 5s. per ounce compared with £10 5s. a week earlier.

TEXTILES

COTTON.—Manchester.—The market has been under the influence of a sagging tendency in raw cotton prices, and with quotations falling practically from day to day, there has been no improvement in the turnover in yarn and cloth. Spinners and manufacturers as a body have booked only comparatively small contracts. Order lists are lighter, and there is increasing anxiety as to future developments. A slightly firmer tone in the cotton markets has, however, given rise to the view that steadier prices are likely in the immediate future. At the same time, most buyers are disposed to hold aloof until after the publication of the official American cotton crop estimate on August 9th.

The American crop has continued to make good progress, weather conditions having again been excellent. The crop, however, has yet to pass through a critical period, and prices will depend to a large extent upon weather reports. Bearish sentiment was increased by the statement alleged to have been made by President Roosevelt regarding the possibilities of a crop totalling 14,500,000 bales followed by another large output next year, with the possibility of prices in New York falling to around 8 cents a lb.

Demand in piece goods has been within narrow limits, and only a small turnover has been recorded. Buyers for export have placed orders very cautiously. No particular outlet is displaying any inclination to operate on a freer scale. With regard to the home trade section, clearances of light fabrics and made-up goods are very unsatisfactory, as a result of the poor weather. Large stocks look like accumulating in the hands of the wholesale and retail establishments and these will have to be cleared before the autumn at cut rates. Meanwhile, manufacturers remain well engaged, for most producers are booked up until the end of the year. Wide cloths cannot be delivered until the early months of 1938.

There has only been a small business in American and Egyptian yarns. Prices, however, have been fully maintained owing to the successful operation of the selling schemes. There had been some rumours on 'Change that there was a possibility of spinners reducing their selling rates, but an official statement was issued to the effect that the present margins on all yarns made from American cotton will be maintained until the end of the year. Spinners of Egyptian yarns have decided to continue the price selling scheme for a further period of twelve months. The existing agreement which has been in operation for six months, expires at the end of August. The trade outlook in Lancashire still remains unsettled. Buyers continue to operate from hand to mouth. A sustained upward movement in raw cotton prices, no matter how small, would probably result in a change of attitude on the part of shippers and merchants who would be more disposed to place larger contracts.

JUTE.—Dundee.—Holidays are now interrupting business in the Dundee jute trade. All works are closed for the annual summer holidays and practically no markets are being held here. Calcutta has attempted to put up prices for raw jute, but buyers are still unwilling to follow any advance. Indeed, prices are too high in comparison with those obtainable for yarns and cloth, and the policy is to hold off until such time as prices for the raw material come down to a level at which business could be done at reasonable terms. All consumers of the fibre are holding good stocks and they feel that, though the first forecast of the acreage disclosed that the present crop is not expected to be so large as last year, an error has again been made in the estimate. Last season's crop actually yielded 10,700,000 bales, compared with the final forecast of 8,736,000 bales, and the average under-estimation of the crops during the past six seasons has been 1,750,000 bales. Of the past crop, the Indian jute mills took 6,078,000 bales, compared with only 4,417,000 bales in the previous season, while the exports from Calcutta and Chittagong to all other consuming countries were 4,869,000 bales, against 4,133,000 bales in the previous season. One of the reasons for the maintenance of a high level of prices this season is the fact that the new crop is likely to be about one month late.

The value of Daisee–2/3 is £20 10s. and Tossa–2/3 £21 12s. 6d., October/November, while good First Marks are obtainable at from £23 5s. and good Lightnings at £22 10s., August/September. Hearts are named at £21 10s., same shipment. Yarns are quiet, but spinners refuse to accept less than 2s. 2d. for common 8 lb. cops and 2s. 3d. for 8 lb. spools, while twist rules at 4d. to 4¼d for 3-ply 8 lb., and sacking yarns are very steady at from 2⅞d. for 24 lb. weft and 3 3/16d. for 8 lb. chains. Rove has been in demand at from £21 to £22 for 48 lb., and £17 5s. to £17 10s. for 200 lb. The Rio yarns are quiet at 2s. 10d. for second quality 8 lb. warp, 2s. 7d. for third and 2s. 5d. for fourth. Carpet descriptions continue in request at from 3¾d. for 14 lb. warp. Cloth has had a prolonged spell of quietness, and prices are more or less nominally unchanged at 2¾d. for 10 oz. 40 in. and 2¼d. for 8 oz.

GRAIN MARKETS

WHEAT.—The market was again easier in the period under review. Prices declined in sympathy with easier North American markets, better weather in Canada and a tendency to raise estimates of both Canadian and United States crops. Business has shown some improvement at the lower level. The position is further discussed in a Note of the Week.

On Wednesday last, "July" futures were quoted in Chicago at 124 cents per bushel, against 122 cents the week before and 118¾ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba (Atlantic) ex ship 53s. 6d. per 496 lbs., against 55s. 6d. last week; No. 2 Northern Manitoba (Atlantic), ex ship, 52s. 6d., against 54s. 9d. last week. According to the *Corn Trade News*, total shipments of wheat and flour last week amounted to 751,000 quarters, against 649,000 quarters in the previous week and 963,000 quarters in the corresponding week a year ago.

FLOUR.—Prices are lower in sympathy with wheat and on a quiet demand. Wednesday's London quotations (excluding quota payments) were: Straight run, delivered Home Counties, 42s. 6d. per 280 lbs., as against 43s. 6d. a week ago: delivered inner London, 42s. as against 43s. a week ago. Manitoba patents, ex store, 40s. 3d. to 41s. 9d., as against 41s. 9d. to 43s. 3d. a week ago. Australian, ex store, 33s. 6d. to 34s., as against 33s. 6d. to 34s. 6d. a week ago.

BARLEY.—"July" futures were quoted at 71¼ cents per bushel in Winnipeg on Wednesday, as against 71¼ cents last week. Quotations per 448 lbs. in London on Wednesday were: "English feed" at farm, 35s. to 36s., as against 35s. to 36s. a week ago; "English malting," at farm, not quoted. Californian, ex ship, 49s. 6d. to 63s., as against 52s. to 54s. a week

ago. Chilean, brewing, ex ship, 46s. 6d. to 50s., as against 44s. 9d. to 50s. a week ago.

OATS.—On Wednesday, "July" futures were quoted at 31 cents a bushel in Chicago, against 35¾ cents a week ago and 42¾ cents last month. Quotations in London, Wednesday: "English black," at farm, 28s. to 29s. per 336 lbs., as against 28s. to 29s. a week ago; "English White," at farm, 28s. to 29s., as against 28s. to 29s. a week ago; mixed Canadian feed (Vancouver), landed, 27s. 6d. per 320 lbs., as against 27s. 6d. a week ago.

MAIZE.—Demand has been quiet and prices have eased in sympathy with wheat. "July" futures were quoted on Wednesday at 100⅜ cents per bushel in Chicago, against 116¾ cents a week ago and 125 cents last month. Quotations in London, Wednesday: "Plate," landed, 28s. 9d. per 480 lbs., as against 29s. a week ago; "Plate," ex ship, 27s. 9d., as against 28s. a week ago; "Plate," "July," 27s. 9d., as against 28s. a week ago; yellow maize meal, ex wharf, was quoted at £7 7s. 6d. to £7 10s. per ton, as against £7 7s. 6d. last week.

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations for selected weeks in 1935-1937:—

Nearest Future	Jan. 2, 1935	Dec. 31, 1935	July 29, 1936	Dec. 30, 1936	July 21, 1937	July 28, 1937
Winnipeg (No. 1, Manitoba) —Cents per 60 lb.	82⅛	84⅛	98	129	145⅝	137⅛
Chicago (No. 2, Winter)— Cents per 60 lb.	98⅛	101⅛	108⅞	135⅛	122	124

The visible supply of wheat in Canada amounts to 35,179,000 bushels against 37,979,000 bushels last week and 72,693,000 bushels in the corresponding week last year.

SALES AND PRICES OF BRITISH CEREALS.—The following table gives the estimated sale of home-grown wheat during the harvest years 1933–34 to 1936–37.

	1933–1934	1934–1935	1935–1936	1936–1937
Estimated sales of home-grown wheat—	Cwts.	Cwts.	Cwts.	Cwts.
1 week to July 24	77,712	47,458	40,866	85,334
47 weeks to July 24	10,080,712	13,202,929	13,083,477	10,757,626
Average price of English wheat per cwt.	s. d. 5 4	s. d. 5 6	s. d. 7 2	s. d. 9 9

The following is a statement showing the quantities sold and the average price of British cereals in the past two weeks, and for the corresponding weeks in each of the years from 1933 to 1936:—

Week ended	Quantities Sold			Average Price per cwt.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
	Cwts.	Cwts.	Cwts.	s. d.	s. d.	s. d.
July 22, 1933	27,471	4,003	10,099	6 8	6 7	5 10
July 21, 1934	77,712	8,253	12,087	5 4	7 7	6 4
July 27, 1935	47,458	5,206	8,056	5 6	6 5	7 10
July 25, 1936	40,866	2,132	9,931	7 2	5 10	6 6
July 17, 1937	80,590	2,400	9,764	9 9	9 6	9 6
July 24, 1937	85,334	1,911	7,464	9 9	9 2	9 4

OTHER FOODS

BACON.—The bacon market remains active, supplies being cleared quickly at firm rates. The official quotations (per cwt. for No. 1 Sizable) which formed the basis for dealings on the London Provision Exchange this week were: English, 98s.; Canadian, 94s.; Danish, 100s.; against 96s. week were: English, 98s.; Canadian, 94s.; Danish, 100s.; against 96s. 90s., and 96s., last week. Arrivals in London last week included: Danish 13,886 bales; Canadian, 5,275; Dutch, 2,261; Lithuanian, 954; and Polish, 2,981; as against 13,774, 5,172, 2,626, 1,089 and 3,055 bales, respectively, in the previous week.

BUTTER.—Demand continues strong, with prices still on the up-grade. Quotations (per cwt.) on the London Provision Exchange on Wednesday were: New Zealand, finest salted, 118s. to 119s.; Australian, choicest salted, 117s. to 118s.; Danish, 124s.; compared with 117s., 115s. to 116s., and 125s., respectively, a week ago.

CHEESE.—A firmer tone has prevailed and prices have risen slightly. Quotations (per cwt.) on the London Provision Exchange on Wednesday were as follows: Canadian, finest coloured, 72s. to 73s., and New Zealand, finest coloured, 72s.; against 72s. and 71s. to 71s. 6d., respectively, a week ago.

COCOA.—The spot quotation in New York on Wednesday was 8⅝ cents per lb., as against 8 7/16 cents per lb. last week. In London, on Wednesday last, good fermented new crop Accra, "November–January," was quoted at 38s. sellers per 50 kilos., c.i.f. Continent, against 37s. 6d. a week ago. Last week's movements of cocoa in London were as follows: Landed, 674 bags; delivered, for home consumption, 7,912 bags; exported, 15 bags; stocks, 262,149 bags, against 168,611 bags a year ago.

COFFEE.—On Wednesday, Rio No. 7 (cash) was quoted at 9¼ cents per lb. in New York, as compared with 9¼ cents per lb. last week and 9¼ cents per lb. a month ago. Movements of coffee in London last week were as follows: Brazilian, landed, 178 cwt.; delivered, for home consumption, 101 cwt.; exports, nil; stocks, 2,010 cwt., against 10,155 a year ago. Central and other South American: Landed, 1,883 cwt.; delivered, for home consumption, 1,734 cwt.; exported, 297 cwt.; stocks, 103,974 cwt., against 103,770 last year. Other kinds: Landed, 789 cwt.; delivered, for home consumption, 3,192 cwt.; exported, 685 cwt.; stocks, 105,693 cwt., against 149,690 last year.

EGGS.—The market has been quiet, but prices are fairly steady. At Smithfield, on Wednesday, English (ordinary packing, Grade I, about 15-15½ lb.) realised 15s. to 16s. per 120, against 15s. to 16s. last week; while Danish (15½ lb.) made 11s. to 11s. 3d., as against 11s. to 11s. 3d. fast week.

FRUIT.—Business at Covent Garden remains active though prices are at a lower level, states *The Fruitgrower*. The supply of strawberries is practically exhausted, but raspberries are still plentiful at steady prices. Black currants are more in evidence than red and there is a good supply of gooseberries, with prices firm. English plums are coming on the market slowly as yet, but increased supplies from Spain and Italy are selling fairly well. English grapes are meeting a better demand, and supplies from Guernsey and Belgium are heavier with prices lower. Oranges are inclined easier on larger arrivals, and lemons show a similar tendency. Grapefruit sells rather better. Moderate supplies of English green apples sell well, but imported are slow; imported pears, on the other hand, have been an active market.

MEAT.—At Smithfield market on Wednesday last, Argentine chilled hindquarters were quoted at 4s. 6d. to 4s. 10d. per 8 lbs., as compared with 3s. 10d. to 4s. 2d. a week ago. New Zealand frozen mutton was 3s. 4d. to 4s. per 8 lbs., against 3s. 4d. to 3s. 10d. a week ago. According to the Smithfield Market official report, supplies during last week amounted to 7,648 tons, a decrease of 1,509 tons on the corresponding week last year. Beef and veal accounted for 4,258 tons, mutton and lamb 2,448, and pork and bacon 496, as compared with 4,981, 3,028 and 722 tons, respectively, in the same week of 1936.

PEPPER.—On Wednesday, white Muntok, August-October, was quoted at 4½d. per lb., sellers, c.i.f. Rotterdam-Hamburg, against 4 5/16d. per lb. a week earlier. Black Lampong, spot, in bond, was quoted at 3d. per lb., sellers, compared with 2 15/16d. per lb. last week. Movements of pepper in London last week were as follows: Black, landed, nil; delivered, 3 tons; stocks, 2,055, against 1,753 last year. White, landed, 8 tons; delivered, 30 tons; stocks, 11,524 tons, compared with 12,241 a year ago.

RICE.—The spot price of Burma No. 2 cleaned, was 10s. 1½d. per cwt., ex warehouse, on Wednesday, as compared with 10s. per cwt. a week ago. "August-September," in singles to Continent and U.K., was quoted at 9s. 1½d. to 9s. 3d. per cwt., against 9s. to 9s. 3d. for "July-August" last week. Movements in London last week were as follows: Landed, 2 tons; delivered, 3 tons; stocks, 2,046 tons, against 1,959 a year ago.

SUGAR.—The London market remains quietly steady; in New York firmer conditions have obtained, prices showing a small advance. The New York spot quotation was 3·45 cents on Wednesday, as compared with 3·42 cents per lb. last week and 3·45 cents per lb. a month ago. Wednesday's sales of raw sugar in London included "August" delivery at 6s. 7¾d. to 6s. 8d., against 6s. 6½d. to 6s. 7d. a week ago. Movements of raw sugar in public warehouses in London and Liverpool last week were as follows: Imports 8,665 tons, against 12,064 in the previous week, and 18,687 in the same week of 1936; deliveries, 11,893 tons, against 15,257 and 14,187 tons, respectively; stocks, 160,661 tons, against 163,889 and 133,544 tons, respectively.

TEA.—The following table shows the average price (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account in recent weeks:—

Week ended	Northern India	Southern India	Ceylon	Java	Sumatra	Africa	Total
	d.	d.	d.	d.	d.	d.	d.
July 23, 1936	12·11	12·01	12·93	10·22	9·88	11·44	12·32

At this week's public auctions in Mincing Lane, 21,010 packages of Indian and 27,103 packages of Ceylon tea came up for disposal. Demand for Indian was good, especially in the low price and medium grades where prices hardened. Prices of Ceylon teas were also fully maintained, the market continuing active.

VEGETABLES.—Prices of tomatoes at Covent Garden have declined on heavier arrivals, states *The Fruitgrower*, while cucumbers are also more plentiful and cheaper. Runner beans have fluctuated in price and green peas are now easier. Vegetable marrows have declined in consequence of larger arrivals and cabbage is also cheaper. Carrots and onions, however, in shorter supply, have been marked up in price. Supplies of English new potatoes have been on a liberal scale and, with only a moderate demand, prices moved in buyers' favour. Sharpe's Express, British Queen, Majestic and Eclipse were quoted at 6s. to 7s. 6d. at the London Borough market on Tuesday, against 7s. to 8s. 6d. a week earlier.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OILSEEDS.—Trade continues on very quiet lines, which is not unusual at this time of the year. Mills are running below capacity to meet modified immediate requirements and production of oilcake and oils is restricted by demand. In the oilseed market linseed remains steady, but subject to slight fluctuations due to variable weather and crop reports and the movements in wheat. There is, however, only a small demand from crushers both here and on the Continent. The Indian crop is moving off very slowly, and in view of a strong statistical position growers are in no mood to press sales, apparently hoping for an improved market as the year advances. Shipments from Argentina continue at a fair level, with the result that the unsold balance of the exportable surplus has further diminished and today is only slightly more than 400,000 tons. India, however, has about a quarter of a million tons in reserve. Together however, the prospective supplies are still far below actual exports in the remainder of 1936. Smaller quantities are being shipped on American account and further requirements will depend largely upon the outturn of the crop in U.S.A. and Canada. The quantity now afloat for Europe is 106,800 tons (including 23,900 tons from India), while that afloat for the United States is 45,000 tons, against 12,600 tons a year ago.

Cottonseed is in rather better demand at the lower level of prices, but trade in oil is slow. Contracts in crude oil from the new Egyptian seed are reported at £25 10s. September delivery. Linseed oil is in only quiet demand and a shade lower on the week. Oilcakes are a fair trade, deliveries being about normal for the season.

RUBBER.—Prices have again shown a sagging tendency in the period under review, but it is reported that buyers have been active at the lower level. The main factor depressing the market is the belief that Malaya will, after all, be able to produce the 90 per cent. quota fixed for the last half of the year. This view is based upon the export and production figures for June, which may not, however, be representative of the country's real capacity. In the circumstances, the long-term outlook is obscure.

The spot price in New York on Wednesday was 18½ cents per lb., compared with 18 3/16 cents per lb. a week ago and 19¼ cents a month ago. Wednesday's official buyers' price for standard ribbed smoked sheet on the spot in London was 8¼d. per lb., as against 9d. on the corresponding day last week. In forward positions business has been done at 8 11/16d. for "September" shipment, as against 9 3/16d. a week ago. Stocks in London and Liverpool at the end of last week totalled 41,782 tons, against 41,645 tons a week earlier. A year ago stocks amounted to 114,376 tons.

WHOLESALE COMMODITY PRICES

UNITED KINGDOM: LONDON, July 28th

Holiday Diplomacy

WHILE Japanese bombers whine above ancient Chinese cities, while battle and sudden death rage throughout Spain, while Jew and Arab wrangle over the future intended for the Holy Land, while Germany and Jugoslavia are torn by religious dissension, and while all Russia is being swept by a vast heresy hunt, another August 4th has come and gone. In such a ferment, twenty-three years after the outbreak of the Great War which was to save the world from the dictates of power-politics, the world to-day may be forgiven if it forgets for what August 4th stands. After all, Time does not stand still if politicians do; and there are now young men at universities throughout the Western world who were born after the war to end wars. Nevertheless, when Parliament went into recess last week-end and Bank Holiday weather crowded the roads and beaches of this country, many grown men—and many more women—will have remembered that brilliant August week-end twenty-three years ago, when a young and energetic Government and a singularly gifted House of Commons took one of the most historic, most responsible decisions that assembly had ever been called upon to make. Those who recalled that week-end in August, 1914, must, on looking round the world's political landscape last week-end, have wondered for a moment whether Mankind—at least in the short run—possesses any faculty at all for growing either in wisdom or in grace.

There is, however, one striking feature of world politics to-day which characterises dictatorships and democracies alike. Though the former are naturally disposed to make the most of bluff and menaces in their diplomacy, neither they nor the democracies have any stomach for the hazardous responsibility of unleashing general war. Indeed, in this respect Europe, at least, despite vastly greater armaments and more overweening threats of power-politicians than in 1914, is paradoxically more aware of the risks of war to victor or vanquished alike than twenty-three years ago. And this, again somewhat paradoxically, is mainly the outcome of popular pressure upon the leaders of dictatorships and democracies alike. The foundations of civilisation and culture, the limits of autarky, and the bounds of political compulsion are all more evident to-day than they were before. The world to-day is certainly insecure, both politically and economically; but precious little readiness to pull it down in ruins is evident anywhere, even though equally little readiness to underpin its structure is discernible.

It may be that perception of these things at the beginning of the summer recess impelled the PRIME MINISTER to take the initiative in penning a personal letter to SIGNOR MUSSOLINI last week-end, appealing for the re-establishment of friendly relations between Italy and this country. THE DUCE'S equally personal reply is known to have been cordial; and we believe he sincerely wishes such a consummation. It is certainly the desire of the overwhelming majority of the British people to live in peace and amity with all men, irrespective of the forms of government which other men affect; and Italy, as well as Italian nationalism, has always enjoyed a peculiar

affection among Englishmen, to whom the men of the *risorgimento* owed much.

But if it is hard for Englishmen to-day, stoutly true to democratic principles and traditions, to understand the outlook of Fascism, it is apparently even harder for Fascists to understand the outlook of Englishmen. True to those same principles of democratic nationalism which in the hands of MAZZINI, GARIBALDI and CAVOUR made modern Italy, we only require of Fascism that it should subscribe to a common code of international conduct: namely, to do as it would be done by, to keep to its own house, not to overset democracies abroad and bring the European structure about our ears by exporting the domestic principles of Fascism to the foreign scene. Force and violence and bluff may be required under Fascism; but let them be kept at home.

It is this British doctrine which savours of perfidious hypocrisy to Fascists. In the flush of militarist zeal, they ask why they should not behave in the twentieth century as some Britons behaved in the world of the eighteenth; why they should not act on the same standards, with the same instruments. To that question there can only be one answer: August 4, 1914. If no new way in diplomacy is discovered, as the world thought it had been after the last war, "back to the eighteenth century"—with its wars of Spanish Succession and colonial plunder—will become the watchword for the twentieth; and, despite the British Government's abhorrence at the inevitability of such a choice, that Government, or another, will be forced by Fascism to defend its own and other democracies' interests. And that means war.

In nothing has the actual division of Europe into two camps of conflicting outlook been more apparent than in the sterile sessions of the Non-intervention Committee in London. Last week-end all the totalitarian States—Russia, Germany, Italy and Portugal—combined to reject the compromise British Plan to secure non-intervention. True, the Russians objected to any grant of belligerents' rights to GENERAL FRANCO at all, while the other three countries demanded it as a condition precedent to any beginning of a withdrawal of foreign "volunteers" from Spain. Still, the significance is that the dictatorships were on that occasion ranged together in rejecting a compromise solution; and that is the measure of Europe's anxieties to-day. For if no middle way is ever to be driven between warring dictatorships—except at the intolerable cost of paying one or the other all it demands by threat of force—then the curve of armaments will assuredly rise to explosive point, and we shall all be faced with another August 4th, from which perhaps not even as many neutrals will escape as did in the last Great War. It may be that the French FOREIGN MINISTER'S representations to Moscow and the British reminders to Rome and Berlin of the indivisibility of the British Plan will have the effect of inducing a more accommodating attitude on both sides in the Chairman's Sub-committee due to meet on Friday of this week. But the chances of securing real non-intervention are now invisibly thin.

COUNT CIANO has described the exchange of *billets doux* last week-end between THE DUCE and MR CHAMBERLAIN as "a great stride forward." English observers, mindful of the ill-styled Gentleman's Agreement of January last, will wait to see the ground covered before gauging the step. There is no disposition in this country to recognise Italy's ill-gotten gains in Ethiopia; or to acquiesce in her carrying GENERAL FRANCO to victory in the Iberian peninsula on Italian bayonets; or to sit idly by with folded hands while British and French vital communications are ambushed and enfiladed. On the other hand, the Anglo-Italian *détente* may be welcomed if it only serves to ease tension, to substitute a will to understand for a will to annoy, to give breathing-space in which a wider view of Europe's destinies may be taken. It must not be taken as one more testimony of British timidity or cowardice in dealing with dictators. That would, in all literal probability, be a fatal error. MR CHAMBERLAIN and MR EDEN may well be glad the dog-days are here; but foreign policy cannot be put into cold storage.

Milk Policy

IT has been tacitly recognised for some time past that the Government's policy on the production, sale and consumption of milk is the supreme test of all its agricultural endeavours. A number of reasons coincide in conferring an especial importance on the problem of milk. It is, in the first place, the most nearly perfect human food and, in the second place, the foodstuff in which British consumption lags most seriously behind that of other countries. On the more exclusively economic side, milk is probably the most valuable single product of British agriculture and certainly the branch of farming which concerns the greatest number of producers. From the consumers' point of view, milk is the one important foodstuff whose price has been exempt from all downward movements of the cost of living. And finally, it still has to be recorded that the cleanliness of the national milk supply is very far from satisfactory.

From the start, the new policy of organising agriculture has largely concentrated on milk, and the Milk Marketing Board represents the largest and most elaborate of the offspring of the Agricultural Marketing Acts. Its working, however, has never been free from criticism. No less than 14 official reports on milk were published between the beginning of 1933 and the end of 1936. The last and most authoritative was the report of the Reorganisation Commission for Milk for Great Britain (the CUTFORTH Report) which was issued in November last. With such an inherent importance of the subject, and such an impressive accumulation of advice, the promised and portended announcement of the Government's policy was awaited with some eagerness. When it appeared on Thursday of last week (it was very briefly mentioned in last week's *Economist*) it seemed as if the long delay in producing it had been devoted solely to a whittling away of its contents. We had occasion some weeks ago to state our preference for MR MORRISON'S *andante* rather than MR ELLIOT'S *allegro con brio*. But we spoke too soon, for to judge by the White Paper on Milk, the tempo has died away altogether. With a great array of difficult problems to solve, the White Paper solves none of them. With the desirable objectives of milk policy clearly defined, hardly advances towards any of them.

What are those objectives? For the consumer they can be stated to be the attainment of a milk supply as clean and as cheap as possible. For the farmer, the objective is the maintenance of such a structure of prices as will ensure a living to the reasonably efficient producer. Of these three objectives, the last, as usual, is to receive preferential treatment. The prices of butter and cheese (and hence of milk sold for manufacture) have risen in recent months. But if they fall back again, the Government undertakes to "put a bottom" in their fall by paying subsidies to the Milk Marketing Boards. Payments of this nature made in the past have been advances. But in future they are to be free gifts, and the Boards are forgiven the greater part of their existing indebtedness.

When the White Paper considers cleanliness, the greater part of its proposals likewise consists of the promise of subsidies. Thus the Exchequer is to pay a handsome contribution towards the cost of special premiums for the producers of the three grades of quality milk, at a cost of nearly £2,000,000 per annum. There is also a provision that local authorities are to be given powers to make pasteurisation compulsory in their districts in two years' time. But there is apparently to be no compulsion on the local authorities to use their powers. This hardly looks like the "national policy" which was promised when Glasgow was persuaded to withdraw the Bill in which it sought powers for much the same purpose.

Towards the objective of cheapness there is even less sign of progress. The Milk-in-Schools scheme is, it is true, to be continued and there is an undertaking to "bring forward proposals for securing, in co-operation with the industry, a reduction in the price of liquid milk to local authorities for the purpose of their maternity and child welfare arrangements." There is also an even vaguer promise of "provisions to facilitate the improved organisation of the distributive service." But these phrases hardly add up to a policy for cheapening milk for the ordinary consumer.

The criticism that can justly be urged against this White Paper is not that any of its proposals are bad—even the subsidies could be justified if the community had some prospect of getting some return for them—but that it ignores the major problems of organising milk marketing. The CUTFORTH Report made two major recommendations which would have placed the whole scheme on a sounder basis. The first of these was that the crucial power of fixing the wholesale and retail prices of milk—prices which may not be undercut under pain of the law—should no longer be entrusted to a Board representative of the producers alone but to a Commission appointed by the Government to represent all interests impartially. The Commission is to be found in the White Paper proposals, but it is shorn of all the powers suggested for it by the CUTFORTH Report. "It is not proposed," says the White Paper, "to disturb the existing arrangements for the negotiation of contract terms and prices."

The second major recommendation of the CUTFORTH Commission was that the price of milk for liquid consumption should no longer have to bear the burden of making good the loss sustained on milk sold for manufacture at a price below the cost of production. This touches the heart of the absurdities of the present scheme. Not only is milk sold at the highest price for that use in which it confers the greatest benefit on health, but a glut of milk has actually led to an increase in the liquid price, since that price has had to bear the cost of selling an increasing "surplus" at a loss. It is true that, in order to ensure a regular supply to the liquid market, more milk must be produced, on the average of months, than is consumed in liquid form. But the actual "surplus" has long ago far surpassed this inevitable and desirable reserve. To sell milk at a low price for umbrella handles (or even for cheese) and at a high price for babies is bad enough. But to justify an increase in the price for babies by the low price for umbrella handles is the economics of Bedlam. And this is what has been happening under the Milk Marketing scheme. The CUTFORTH Report made an attempt to prevent it happening any further. Apart from the proposal for an impartial Commission, it suggested that the liquid consumer should pay the cost of disposing only of the necessary reserve, which it estimated at 20 per cent. If these suggestions had been adopted, the retail price could have been immediately reduced, even without any economies in distribution. But the Government are apparently not sufficiently interested to impose these reforms on an unwilling industry.

The crux of the matter lies in the decision to leave untouched the domination of the marketing organisation by a producer-elected Board. Such a Board cannot be blamed for acting in the interests of its constituents, or even for making its peace with the distributors, who are organised and vociferous, at the expense of the consumers, who are neither. The blame lies on those who think that such a system could possibly safeguard the public interest or even work consistently with itself. For a Board elected annually by scores of thousands of small producers cannot even act as an intelligent monopolist would. He would realise that he could not keep up prices without limiting production, or expand production without accepting a fall in price. But an elected Board must fight to the death both for higher prices and for unrestricted production; it has an inherent tendency to rely either on subsidies of public money or on a steadily rising price to the consumer, or (as the history of the last four years shows) on both. It is no answer to this argument to draw hair-raising pictures of the chaos which would have descended on the market if the Board had not been set up. Chaos is not the only alternative to this particular form of organisation.

The White Paper is thus unsatisfactory for its omissions rather than for the proposals it does contain. It is hardly an exaggeration to say that there is no branch of the nation's economic life in which greater rewards of public or individual welfare, both for the producer and for the consumer, await those who can plan a really efficient and equitable organisation than the supply of milk to our urban population. It is impossible not to feel the most profound disappointment that the opportunity has not been grasped.

The Book Trade

"I RESPECT MILLAR, Sir. He has raised the price of literature." If SAMUEL JOHNSON, who spoke these words, were able to revisit Fleet Street he would be astonished by the revolution which has taken place since his time in the rewards of authors and publishers. He might also be inclined to revise his opinion of the methods by which the "price of literature" has been so notably magnified. No single MILLAR or combination of MILLARS has alone accomplished the miracle of cheap books which all enjoy to-day. Not only has illiteracy been banished, but the spread of education and culture has created a mass reading market undreamed of in JOHNSON'S day. At the same time, developments in the mechanics of book production have replaced the hand press, on which the great Dictionary was printed in 1755 at the rate of less than 200 sheets an hour, by giant rotary machines working a hundred times as fast. Almost as important has been the cheapening of paper, mainly in the latter part of the nineteenth century.

Only to-day are we beginning to discover how low book prices can be. MR BERNARD SHAW followed the first edition of his "Intelligent Woman's Guide to Socialism," published at 15s., with a cheap edition at 5s., and now the same book has been produced, with paper covers, in a popular series, in two parts at sixpence each. Sets of dictionaries, encyclopædias and the works of popular writers have been provided for a few shillings and a few coupons by some national daily

papers. And it has been strongly rumoured that some of these works were not supplied at a loss, incredibly low though their prices seemed to be. Again, the various "Book of the Month" clubs in America and in Great Britain have cheapened books enormously, on the basis of a guaranteed market.

Such results as these have frequently induced the question why the cost of books, in general, has not been reduced far below its present level. The answer is that while, in the language of economists, the "supply curve" of book production falls to low unit prices as production is increased, the demand for all but a limited number of popular classics is inelastic. However low the prices of some books might be, the number of copies sold would never be very large. If a treatise on the theory of optical instruments were sold for half-a-crown instead of a couple of guineas, would thousands rush to buy it? They would not.

There is no monopoly in publishing. The book trade is open to all. Any author with a manuscript to sell, which offers any possibility of attracting a sufficient public to make it worth the risk of printing, is certain of an attentive hearing at a dozen or so London publishing houses of the first rank. Authors who have been launched and advertised by one publisher may (and some in fact do) seek improved terms at a rival publisher's office. Publishing is a mystery only in the mediæval and not in the modern sense. The amount of capital required by a newcomer is as small as in any British industry and smaller than in most. The rewards of success may be handsome but the penalties of failure, though relatively small on single books, may in quite a short time be cumulatively disastrous in the early days of a new business. Later, however, the law of copyright makes the fear of failure proportionately less menacing, as a list of works in popular demand is steadily built up.

The publishers, however, represent only half of the book trade. No large publisher, except His Majesty's Stationery Office, maintains his own retail establishments. And the Stationery Office's annual accounts show that, despite the specialised nature of most of its publications, more than half the face value of its sales is secured through the book trade. In the last resort, therefore, the price of literature depends upon the activity of the nation's booksellers.

Bookselling, in turn, is a free and open profession. Recognition by the Publishers' Association is the only formality necessary in order to secure the trade discount which is the bookseller's only remuneration for his services. That discount is calculated on complicated scales, varying from publisher to publisher, but is generally 25 per cent. of the "net" published price which the public must pay. It is rarely more on single copies in Great Britain, although one large publishing house not so long ago increased its trade discount to 33⅓ per cent. The question of trade terms has always been prolific of controversy and frequently of honest misunderstanding. Booksellers have claimed that their trade discount is too low. Publishers have been more sceptical, and authors have shown undoubted resentment on learning that the man who sells a copy of their book obtains perhaps two or three times as much of the consumer's half-guinea as they. Apart, however, from the fact that the total trade discount has to be split amongst hundreds of booksellers, while the author's royalty is undivided, bookselling is frequently a hazardous business for the small man, outside a few favoured centres of large population or of learning. In some instances it hardly yields a living wage to those engaged in it; and its earnings are frequently augmented by those of a more remunerative stationery trade, or perhaps a trade in second-hand books or foreign stamps. Yet it is an essential link between the author and his public. In well-informed quarters it was estimated that two best sellers of yesteryear, "The Seven Pillars of Wisdom" and "In the Steps of the Master," had twelve months ago secured sales totalling £180,000 and £200,000 respectively, of which 85 per cent. was taken over the counters of the nation's bookshops. Two swallows like these may well have made a summer for many booksellers, but such plump birds are rare.

Whether some new policy is necessary to put the book trade on its feet is a matter which is hotly disputed, and the arguments of the interested parties do not always carry conviction to an outside mind. Some publishers believe that every bookseller ought to be a species of publicity crusader in their service. Some booksellers criticise public libraries, lending libraries who sell their surplus stock, and book clubs, as though the one purpose of the trade in books were to secure booksellers a competence, irrespective of their own enterprise. Authors have described the economics of production and distribution in the language of a predatory middlemen's racket. But all such views seem to miss the heart of the problem. The trade as a whole is becoming increasingly aware that the crux of the matter is rather to discover ways and means of increasing the demand for books in general. The movement towards co-operative effort has not indeed gone as far as some would wish. Yet the formation of the National Book Council, the invention of the book-token, the now annual book exhibition organised by a well-known Sunday newspaper, all afford impressive evidence of co-operative activity to divert a greater share of the national income to enlarging the price of literature. Clear limits are, unfortunately, set to the increase in the private possession of books by the available space in the average small English house or flat and the available margin in the average English income. Within these limits, however, there would undoubtedly be room for more small private collections, if once the basic desire to cultivate the things of the mind could be stimulated.

Nevertheless, much as popular education and broadcasting are likely to do in this cause, a considerable part of the increased demand they induce is likely to fall, in the first place, upon the public libraries. Indeed, such a development may be the only method of coping with the ever rising flood of new books, many of which, for the reasons discussed in an earlier article, can expect, at best, only a limited market. In the *Publishers' Circular's* annual census, the number of new books (excluding pamphlets) published in Great Britain in the year 1936, under merely four out of many classifications, was given as 2,078, made up as follows:—

Classification	*Number*
Sociology	730
Religion	720
History	500
Law	128

When the corresponding figures from the United States, France and Germany are brought into reckoning, it is evident that the intellectual problem of book absorption is no less baffling than the economic. This vast output will never be brought into the three-and-six-penny class of cheap reprint, to say nothing of the six-penny class. Other methods of distribution are therefore required to supplement sales at the "economic" price, and here the part played by public libraries is, or ought to be, indispensable. We can now at least, thanks to the National Central Library, boast in England a well-organised national book pool. It should soon be possible to claim that a poor scholar is no longer denied the essential tools of his craft, even though, like CHAUCER'S Clerk Oxenford, his own possessions are no more than twenty tattered tomes.

Hungary Looks at Europe

IF one takes one's stand in Budapest to-day and looks at the international landscape through Hungarian eyes, the prospect turns out, after all, to be not so very different from what it is in London. The German feature in the European landscape gives a certain unity to the British and Hungarian outlooks, and, by the same token, it makes the present international position of Hungary a matter of practical interest to ourselves.

The resurgence of Germany as a Great Power in the European arena is affecting Hungary in several different ways. To begin with the relations between Hungary and her Danubian neighbours, the emergence of the Third Reich inevitably conjures up lively hopes in certain Hungarian breasts. But, no less inevitably, it quickens profoundly disquieting second thoughts. Every Hungarian understands that Germany has the physical power to deliver to Hungary certain territorial goods that Italy can only promise. Hungarians have been made disappointedly aware that Signor Mussolini's periodical pronouncements on the subject of territorial revision in Hungary's favour are words which will never turn into deeds through mere repetition. On the other hand, if Hungary were actively, or even only passively, to support Germany in an aggressive war on Czechoslovakia, Germany would have it in her power to restore Slovakia to Hungary, supposing—a hazardous postulate—that the enterprise did not bring a European war about the ears of the aggressors.

But the very strength of Germany gives the Hungarians pause. *Timeo Danaos et dona ferentes.* What would it profit Hungary to regain one lost province at the cost of losing her independence and being reduced, herself, to the status of a province in a Mittel-europa under German hegemony? That is a price which even the most ardent or embittered Magyar irredentist might hesitate to pay. In this situation the Hungarians are finding themselves forced into striking a balance of profit and loss between two alternatives. Would it profit Hungary more to collaborate in the destruction of Czechoslovakia for the sake of restoring the integrity of the Crown of St. Stephen in that quarter? Or is the independence of Hungary, whatever her frontiers, so closely bound up with the existence of Czechoslovakia that Hungary cannot afford to take a hand in sweeping this buffer State away? The value of Austria to Hungary as a buffer between Hungary and Germany was one of the axioms of Hungarian policy from the Ausgleich in 1867 until 1918. But the Moravian and Bohemian territories of Czechoslovakia are ex-provinces of the pre-war Austria. Therefore, if Hungary is to be shielded from Germany under post-war conditions, must she not interest herself now in the independence not only of post-war Austria, but also of Czechoslovakia?

These considerations have brought statesmen of all significant Hungarian parties to a remarkably moderate state of mind in their attitude towards Czechoslovakia. It may now be said with some confidence that there has been no moment since the peace settlement when the prospects have been as favourable for a Hungaro-Czechoslovak reconciliation as they are to-day. A first step would be for Czechoslovakia to agree to Hungary's right to rearm and to remove the few grievances of her Hungarian minority; while Hungary, on her side and for a season, would refrain from pressing her claim to territorial revision, without being asked to renounce it. This step has now come very near to practical politics; and if only it could be taken the atmosphere would almost certainly improve progressively within the next few years.

One factor that has made the possible danger from the Third Reich very vivid to the Hungarian imagination is the Nazi propaganda among the German minority in Hungary. These 470,000 Germans, out of a bare 9,000,000, are the most substantial non-Magyar element left in Hungary after the removal of the Croats, the Rumans, and all but 200,000 of the Slovaks. The German minority is a scattered community of peasants who were brought in by Maria Teresa. They have been hitherto on the whole—in contrast to the Slovaks and the Rumans—well treated, prosperous and content. The new frontiers and the economic depression have deprived many of the Hungarian German villages of their former markets; economic trouble has bred political discontent; and Dr Goebbels has seen and taken his opportunity. Nor has Nazi propaganda from Berlin confined its activities to the German element in the population of Hungary. It has also set itself to work up Fascist movements among the Magyars themselves. There is plenty of tinder here among the 1,000,000 landless agrarian proletariat; yet the Hungarian tradition of parliamentarianism is probably too strong to give the Nazi spark much chance of starting a serious conflagration. Here, again, the main effect is likely to be to deter all far-seeing Hungarians from steering their country into Germany's orbit.

Thus, Hungary finds herself in a very puzzling situation to-day. Yet though the Hungarians may find it difficult to make their choice between the possible alternative policies that lie before them, their decision, when they do take it, is likely to be of considerable importance for the destiny of Europe. Hungary is freer to act than Austria or even Czechoslovakia, just because these two neighbouring Danubian countries are still there to relieve Hungary from the full incidence of the German and Italian pressure upon the Danube.

Hungary's Prime Minister, M. Darányi, her Foreign Minister, M. Kánya, and her great post-war statesman, Count Bethlen, have all recently emphasised her loyalty to friendship with Italy and Germany. But it has been made clear by speakers of all parties in Parliament and by the Press of all parties that Hungary's foreign policy in the immediate future will have to be one of expediency, until the durability of the Rome-Berlin axis has been tested by the application of German pressure at its weakest spot: Central Europe. For Hungarians, like many other Europeans, nurse doubts in their hearts about the ultimate reconcilability of the aims and interests of Germany and Italy in Austria and Czechoslovakia. They realise that while Signor Mussolini might lower both eyelids at the rape of Czechoslovakia, he still has, and will always need to have, both eyes wide open on Austria. And whether Germany pockets the one State or the other, the outlook will be bad for Hungary; for her economic, her foreign, and even her internal policy would thenceforth lie at Germany's dictation. This explains both the warm Hungarian support for Dr Schuschnigg's regime in Austria, and the rapid recent improvement in Hungarian-Czech relations.

The ideal solution remains a political and economic understanding between the Danubian countries. This should not, for it cannot, altogether exclude Germany and Italy. *A fortiori,* it should not "encircle" those two Powers. In economic terms we might conceive of a Danubian system of preferences in which Germany and Italy were admitted to participate partially but not in full measure. Could not the British Government now—in requitement of its fatal *non possumus* at Stresa and Ouchy in 1932—see its way to waiving its claim to most-favoured-nation treatment in the Danubian area? It would be a sound British economic contribution towards European peace. The imperceptible economic sacrifice would be richly rewarded; for the only alternative course which Central European history could conceivably take would be an attempt, on Germany's part, to impose unity and organisation upon the Danubian region by force. And that would ultimately—if not at the outset—mean a war over the European balance of power. In such a war, our own country would assuredly be involved. So let us move heaven and earth to remove the possibility of its ever breaking out.

Shops and Shopkeepers

ALTHOUGH shops are a familiar feature of our daily life we know surprisingly little about the business of shopkeeping. Yet it is our largest industry. Over two and three-quarter million people are engaged in the distributive trades of this country, and over two million of them are employed in retail trade. Shopkeeping employs nearly twice as many people as farming, over twice as many as coal-mining and five times as many as the manufacture of cotton goods. Moreover, this enormous business of retail distribution is growing very rapidly. There are well over half a million shops of all kinds in Great Britain to-day; twenty years ago there were probably no more than 400,000 or 450,000. The number of shops is growing four or five times faster than our population and quite as fast as the number of new houses. Finally, more people are being employed, on the average, in each shop. The number of shops has increased by one-third, but the number of employees has at least doubled in little more than ten years.

Up to a point this striking growth in shops and personnel is no more than we should expect, in view of rising standards of life. Moreover, we are ready to pay more for convenient retail services, for pleasant up-to-date places to shop in, for extensive delivery services and for easy credit facilities. Although reliable figures are almost unavailable, it has been estimated that the cost of retailing amounts *on the average* to some 30 per cent. of the retail price charged; including perhaps 12 per cent. for rent, rates, display, amenities and advertisement, about 9 per cent. for staff wages and salaries, 5 per cent. for administration, and the balance of 4 per cent. for profit. It is slightly disturbing, however, to find that the costs of retailing appear to have been steadily rising for two decades. Moreover, when wholesale prices fell sharply during the recent depression, retail prices did not fall in sympathy; and some critics have contended that this lag, partly due to the fixed prices of branded goods, was also due to an inelastic burden of retail costs.

How far is anxiety justified? Is there a case for extending to the business of shopkeeping some of the zeal for planning which the authorities have lately applied to air transport, agriculture, coal, iron and steel, and electrical distribution? To the elucidation of these problems Mr Henry Smith has made a notable contribution in a work* which has just been published. Mr Smith has been compelled, in many instances, to base important conclusions on a scanty statistical foundation, but that is no fault of his. The whole task of setting problems of retail distribution in the context of contemporary social facts is beset with difficulty. The term "shop" covers a vast variety of businesses. Nine out of every ten are very small; and the average daily turnover of them all is as low as £10. The larger establishments, which account for only one-tenth of the total number, carry nearly half the total annual turnover. Mr Smith calculates that department stores, fixed-price stores, co-operative societies and multiple shops or "chain stores" have sales in the vicinity of £800 millions per annum; while "specialist" shops, grocers, dairies, butchers, fishmongers, drapers, etc., have an annual turnover of £870 millions, and "amorphous general shops"—many of the parlour-window type—have annual sales of only £30 millions.

There are similarly important variations in the goods handled and the markets in which they are offered for sale. In general, different commodities require different methods of sale. Most foodstuffs are necessaries but relatively perishable; they require small stocks and quick sales. Furniture takes up a great deal of room; it must be stocked in wide ranges and it sells slowly. The rate of turnover (which is the ultimate determinant of success or failure) depends not only upon the goods stocked but also upon the kind of customers available.

The disposition of shoppers, indeed, has a great deal to do with the way retail trade is now developing. Economists from Mill to Pareto and Marshall have combined to point out the imperfection of the retail market due to the purchaser's disinclination or inability to higgle and haggle. The author, whose grasp and application of economic science are admirable, follows up these theories with an appeal to modern sources of fact, such as Kelly's Directories, industrial surveys, Bank of England statistics and Mr Colin Clark's work on the national income. He is not content merely to allege a steady rise in retail costs. Tentatively, and with praiseworthy ingenuity, he produces a series of indices: of wholesale and retail prices, value of sales, volume of turnover and wage costs. These statistical *tours de force* are reproduced in the table below:—

	1924	1925	1926	1927	1928	1929	1930	1931
Wholesale price level of retailed goods	100	89·9	94·2	90·0	90·4	87·7	80·2	73·5
Retail price level	100	100·4	98·7	95·6	95·0	93·9	90·1	84·1
Volume of retail turnover	100	103·0	105·0	109·3	112·9	118·3	124·4	121·0
Value of sales per worker	100	98	93	89	90	89	89	79
Ratio of expenses to sales	100	107	118	128	123	133	149	162

These indices are experimental in high degree, and have been constructed from a variety of sources for lack of more exact and complete data. But they do suggest that a considerable increase in the cost of retailing took place between 1924 and 1931, not entirely to be explained by "natural" time-lag between the fall in wholesale prices and in retail prices. The author has also prepared a table to show the total cost of retailing, which again he derives by a roundabout but ingenious way:—

(In £ millions)

	Total Value of Retail Turnover	Composed of		
		Factory Value of Retail Turnover	Costs of Wholesaling and Transport	Total Cost of Retailing
1924	2,259	1,749	148	362
1925	2,337	1,783	153	401
1926	2,342	1,731	153	458
1927	2,361	1,721	157	483
1928	2,423	1,787	160	476
1929	2,510	1,815	166	529
1930	2,532	1,754	171	607
1931	2,299	1,556	157	586

On the strength of this extremely rough and ready evidence, Mr Smith has made a serious indictment of retail trade development in the period chiefly covered by his survey. He finds that, during those years, "the increase in the total cost of retailing was greater than the growth of productive efficiency could have justified, or than changes in the tastes of consumers might have called forth; and also that the increase in the number of shops was in excess of that necessitated by the migration of population or by the results of rehousing schemes."

Mr Smith may here have overstated his case. It would have been advantageous, also, to have had sufficient data to carry on the writer's estimates to a more recent year than 1931, though there is no reason to believe that the trends to which he refers have been seriously modified in the last six years. But with all their inevitable imperfections, Mr Smith's figures at least suggest a *prima facie* case which, from the viewpoint of the community as a whole, is indeed far from reassuring. In the long run, however, it is probable that only an official Census of Distribution, undertaken by the Board of Trade with statutory powers, can give a final answer to the question whether there are relatively too many shops and too high costs. In the meantime, the author has added something to our knowledge, and even more to our curiosity, about a strangely unknown industry which is of daily and vital importance to us all.

* "Retail Distribution: A Critical Analysis." By Henry Smith. Oxford. 178 pages. 7s. 6d.

Notes of the Week

Holiday Traffic and Politics.—Appropriately on Bank Holiday Monday, the traditional festival of fairs and showmen, Sir Samuel Hoare spoke at Cambridge in praise of the excellent entertainment inside the Government booth. In a speech which ranged from trade revival to the "litter lout," the Home Secretary maintained that our present prosperity was due to the revival of normal business under the ægis of the National Government. He admitted, however, that the completion of the defence programme would leave a gap in demand which could only be filled by an expansion of the export trade. In the rest of his speech, Sir Samuel touched encouragingly upon a variety of topics of immediate interest. At home, he found comfort in the possibility of factory accidents being reduced by the new Factory Act; in the energetic drafting of plans for air raid precautions; and in the awakening of the public conscience to the litter nuisance. There was an optimism born of Monday's sunshine in Sir Samuel's utterances; but not even his reiterated confidence in the past, present and future achievements of the Government in all these matters could hide his anxiety when he came to consider the rising number of persons killed and injured on British roads. He announced that the police in two selected areas, in Lancashire and London, were shortly to engage in an experiment to reduce accidents by warnings and advice rather than by prosecutions.

★ ★ ★

Recent official statements have shown the urgent need for such a plan—and, indeed, for some much more radical reform. The report of the Home Office for 1935 showed that 432,816 (or 57 per cent.) out of 759,423 sentences in that year in the courts of England and Wales were for traffic offences. A return issued by Scotland Yard reveals that, in the London district between January 1st and June 30th this Coronation year, 267 people were killed and 15,660 injured, compared with 232 and 15,076 in the same period of 1936. On the very day of Sir Samuel's speech, traffic congestion on arterial roads reached record density. According to the Automobile Association, cars passed Staines at the rate of 3,500 an hour, Esher at 3,300 an hour, and Warlingham at 3,000 an hour. On the five main coastal roads from London 120,000 cars an hour were observed, and about the same number of bicycles. Not even the new plan for polite patrols of minatory policemen can remove the risk of accidents in conditions like these. Only a remodelling of main roads, foreshadowed perhaps in the announcement that "fly-overs" are to be introduced at certain points in the Home Counties, can restore safety.

The Debate on the Adjournment.—The parliamentary session ended on Friday of last week with a debate on foreign affairs in the House of Commons, on the Prime Minister's motion to adjourn till October 21st. Mr Attlee drew attention to the present precariousness of the international situation in both the Peninsula and the Far East, and to the subsequent likelihood of serious developments within the period of the recess. He asked the Government for a specific undertaking that Parliament would be called together before the Government embarked on any new policy that would involve the granting of belligerent rights to General Franco. Mr Lloyd George followed with a slashing attack upon the Government's Spanish policy; and Mr Eden confessed in his reply that he found it very hard to see how non-intervention could be saved, and that its collapse would create an entirely new situation. Nevertheless, he rejected Mr Attlee's request. In defence of this line, he repeated the formula—"hypothetical questions deserve no anticipatory answers"—which has now become almost the *arcanum imperii* of the Government. On the British Plan, Mr Eden re-affirmed that it must stand or fall as a whole, and that the Government would not agree to any major modifications which would upset its balance. And on the Mediterranean he re-affirmed that the Government were prepared to take action to ensure that this sea should continue to be a main arterial road of the British Commonwealth—while once again adding, very properly, that we were willing to grant to others the same right of way that we demanded for ourselves.

★ ★ ★

These were perhaps the main points in the foreground of the debate; but, all through, there loomed up from the background a question which was both larger and graver than any of these. Mr Boothby suggested that "What the Opposition seemed to ask the Government to do was to pledge themselves to go to war in the event of aggression anywhere"; and he submitted that "that was a policy which the country would not support." Mr Boothby's statement was neither an accurate nor a fair description of the limited and moderate demand which Mr Attlee had in fact put forward; but it was an apt and timely reminder of an issue which is being presented—and has been presented to this country for half a dozen years past—by a logic of events quite independent of British parliamentary politics. Sooner or later we believe this issue will have to be faced by both the Government and the country. And while Mr Chamberlain may be a good second to Mr Baldwin in postponing the day of reckoning, we are sceptical about his, or any other politician's, ability to evade it altogether.

The Navy's Aircraft.—After long and often embittered contention between the Air Ministry and the Admiralty, which has lasted intermittently ever since the Navy's aircraft were turned over to the Air Ministry's ultimate responsibility after the war, the Navy is once more to have complete control of its own aircraft. All aeroplanes permanently based on shore, however, including flying boats, are to remain in future under the operational and administrative control of the Air Ministry. Such is the decision of the Government, announced by the Prime Minister last Friday, on the report of the recent special committee set up to examine the conflicting claims of Navy and Air Force under the wing of the Minister for the Co-ordination of Defence. It is an obvious compromise, like the office of Sir Thomas Inskip itself; and, like that, its shortcomings are evident. Mr Churchill and other supporters of an Air Arm completely controlled by the Navy were anxious to secure a promise that the Navy should have the right to independent training at its own shore bases of its own pilots. Mr Chamberlain agreed that this right emerged in principle, but refused to be drawn on the details of its realisation in practice. He pointed out that the above solution was in broad terms, and that much depended on how the Air Ministry and Admiralty collaborated to execute the new system. Clearly, however, the Navy's complete control over its seaborne aircraft will in future raise serious problems of co-ordination for defence of trade routes, shipping, docks, ports, etc.; for two independent Air Arms will probably be involved in devising strategy and tactics for the defence of such vital positions all over the Empire and at home. Thus, while the Fleet Air Arm properly so called now obtains complete freedom of action for itself, the possibility of a clash in policy between two Defence Services becomes greater. With an overriding Ministry of Defence, such as has consistently been urged by Mr Churchill and the Liberals, this would have been avoided. Once again, a passion for compromise seems to have ended in pleasing neither the public nor the pundits. It was lucky for the Government that, in the rush of the last day of the effective session, the matter was not probed—as was once threatened—in the debate on the adjournment.

* * *

Geneva and Palestine.—The Permanent Mandates Commission of the League of Nations is considering the future of Palestine in no spirit of haste or of easy conformity with the views of the Mandatory. As a matter of procedure the Commission has decided to base its work on an elucidation of the report on the working of the Mandate for 1936 in the light of those points in the 1935 report which had been held over and of the Palestine Commission's findings. This means, in effect, that it will study how the disorders of last year originated and were dealt with, rather than how a "deep-rooted disease," of which in the Royal Commission's view those disorders were only a symptom, is to be permanently cured. This does not bode well for the prospects of the Mandates Commission's endorsing the British Government's proposals. Indeed, the cross-questioning to which Mr Ormsby-Gore and Mr. J. Hall, formerly Chief Secretary of the Government of Palestine, have been subjected at Geneva suggests that the Mandates Commission suspects the disorders to have been due more to the weakness of the Administration than to any inherent defect in the Mandate. Lord Peel and his colleagues themselves agreed that a firmer hand might have saved Palestine from some of the violence it suffered. But, as they said, "it is not easy to pursue the dark path of repression without seeing daylight at the end of it." Mr Ormsby-Gore told the Mandates Commission that it must consider not merely the record of administration in Palestine, but also its future political destiny in the light of the difficulties of the past seventeen years. While the British Government were not committed in detail to the particular scheme of partition outlined by the Royal Commission, some such solution was necessary, because the mutually antagonistic aspirations of Jews and Arabs must be reconciled if there was to be peace and good government in that part of the world.

* * *

Meanwhile, the Zionist Congress at Zurich has been making up its mind on the same subject. Dr Weizmann did not spare his criticisms of the Palestine Administration, which he contrasted unfavourably with the British people. And, amid applause, he rejected the particular scheme of partition proposed by the Royal Commission. But on the principle of setting up an independent Jewish State in part of Palestine, he asked the Congress to say "Yes." It had to choose, he said, between a Jewish minority in all of Palestine, or a compact majority in part of the country. Mr Ussishkin, the President of the Congress, replied by opposing any form of partition, and it is clear that the Zionist movement is sharply divided. Dr Weizmann poured scorn on Lord Samuel's plan for a permanent Jewish minority in a semi-independent Palestine—a plan which seems to be attracting increasing favour in Arab quarters. It is virtually endorsed in a note to the Mandates Commission from the Government of Iraq, which protests against partition as an injustice to the Arab people. Thus the situation is full of paradoxes. The Arabs, who reject the mandate, apparently prefer its continuance to partition. The Jews, for whom the mandate is their Magna Carta, apparently prefer partition to the Arab view of the mandate. Yet, in Great Britain, the main attack on the Royal Commission's plan comes from those who favour Jews rather than Arabs.

* * *

The Far Eastern Crisis.—Since we went to press last week the flames of war in North China have first flared up and then died down; and it is at the moment possible that the fire will now flicker out altogether. The collapse of the Chinese forces engaged in the fighting has now become complete, and the Japanese forces on the spot have gained their immediate objectives. They have cleared Tientsin of Chinese troops; they have set up a puppet administration in Peiping without proceeding to a military occupation of the Walled City; and they have advanced at every point to the line of the Yungting River and—along the Peiping-Hankow Railway—some distance beyond it. In the Japanese air-bombardment of Tientsin the ability of our modern science to destroy the civilisation that begat it has been demonstrated once again by the devastation of another of the world's great cities; and the Japanese Army has also once more shown—though this perhaps hardly required proof—that it can knock the Chinese Army out whenever the latter is rash enough to confront it in a pitched battle. The most likely consequence of what has happened so far would be the erection of a "Manchukuo No. 2" in the Chinese provinces of Hopei and Chahar; and probably the cooler heads in both Nanking and Tokyo are hoping that nothing worse than this will follow at the moment. But it is by no means certain that we shall get off so lightly; for both Governments appear to be moving up considerable bodies of troops towards the scene of hostilities, and there are rather violent symptoms of war-fever not only in China—which is being treated to a second act of Japanese aggression that cuts deeper into her flesh than the first—but also in Japan, where the whole nation seems to be up in arms against a China who has the audacity to try to defend herself. Even if the immediate crisis passes off as lightly as may be possible, the outlook for the future is dark; for a situation in which Peiping and Tientsin are under Japanese control is not one that can be expected to last. Even to-day, it is beyond Japan's strength to put China entirely out of action; and with the passage of time the balance of power in the Far East is bound to shift, however slowly and haltingly, to China's advantage. The present generation of Japanese imperialists are laying up calamities for their children if not for themselves.

Policy for British Films.—Every year, the British public pays over £40 millions for admission to the cinema. Every week, some 20,000 miles of film are delivered to provide entertainment for an average of 20 million persons in about 4,500 cinemas. In view of the public importance of the provisions which the Government will embody in a Bill, next Session, to replace the Act of 1927, our readers may find special interest in the following criticisms, which have been contributed by a writer in close touch with the film industry. No surprise (he declares) will be felt that the quota system is to be continued for another ten years. But changes in detail are now considered necessary and possible. The most important new proposal is the substitution of an elastic and flexible system of administration for the rigid law which has been in operation under the existing Act. Had the Board of Trade possessed during the past ten years the quasi-legislative powers which are now to be reserved to it, the "quota quickie" would probably have been unable to rear its mischievous head. The evils of blind-booking would never have reappeared. The necessary adaptations to the existing law caused by the "talkie revolution" in 1930 would have been made. The production losses, of which so much has been heard recently, might never have occurred. The special quota for "shorts" would have been introduced years ago, and the new legislation now under discussion might have been dispensed with. Unqualified support cannot, however, be given to the other concrete proposals of the Government. Unless the objective is the establishment of an industry that will produce progressively more and better pictures, the entire *raison d'être* of the Government's interest in it disappears. Instead of stabilising and increasing the activities of the industry, the first consequence of the proposals may well be a considerable reduction in the output of British studios.

* * *

Certain figures given recently in *The Times* put the total value of British production in 1936 at £4,200,000. Of the two groups of producers directly affected by the new provisions, the first, comprising the producers of "quota quickies" for American renting companies, made 104 out of the total of 120 pictures they were compelled by law to acquire in 1936. The remaining 16 were scrambled together from various parts of the Empire at nominal and negligible prices. The 104 pictures, however, certainly represent an expenditure of about £700,000 on British pictures. A somewhat detailed calculation suggests that the new scheme would compel the American companies to acquire only 56 instead of 104 pictures. On the assumption that an expenditure of £7,500 on labour costs (wages, salaries, and personal services) means an approximate total expenditure of £12,500—which the trade believes to be nearer the mark than the £15,000 suggested by the Government—there will be precisely the same total of expenditure by the American companies in 1938–39 as in 1936. A second group of pictures, made in 1936 at a total cost of £650,000, represented the output of those independent producers who obtained their finance from the City, against the guarantees of British renting companies. Unless the Government's proposals induce the City to revise its decision to withhold fresh financial support (which seems unlikely), the number of pictures from this source will be substantially curtailed, and the value of the output may, it is estimated, be reduced by £300,000 to £400,000. It would be an inauspicious beginning for the new Act if it synchronised with a reduction of nearly 10 per cent. in the value of the prospective output, and of (probably) nearly 15 per cent. in the volume of British labour employed.

* * *

Other Film Questions.—We may now turn to the exhibitors who, as a class, have been most vociferous in their opposition to the Government's plan from the outset. In view of the facts that exhibitors have shown nearly 50 per cent. more British films in the past year than they were required to do under their statutory liability, that production programmes of this year have been arranged to meet an exhibitors' quota of 20 per cent., and that no pictures under the new Act can possibly be available for exhibition before October, 1938—in view of these facts it is difficult to see why the exhibitors' quota for 1937-38 has been reduced to 15 per cent. Even less obvious are the reasons for introducing the new regime of better pictures by a further reduction of exhibitors' quota to 10 per cent. in 1938-39. Finally, the rejection of the Moyne Committee's recommendation of a Films Commission is inadequately explained by the statement that the Commission would have had no compulsory powers. There is much to be said for an *ad hoc* body, in closer contact with the trade than even the most sympathetic and well-informed Government department. Such a body could devote itself exclusively to cognate problems, without preoccupation with any of the multifarious other subjects for which the Board of Trade is equally responsible. Its membership might remain unchanged for a long time, whereas officials are liable to be transferred to different duties at short notice. And a Commission's powers of persuasion of dissident trade elements would gain if it were known that the Board of Trade possessed the power to give statutory effect to any of its approved recommendations.

* * *

Pigs and Bacon.—In addition to the issue of a White Paper on Milk Policy, on which comment is made in a leading article this week, the Minister of Agriculture also made a statement before the adjournment of Parliament on the Government's policy towards the Pigs and Bacon Marketing schemes which have been in suspended animation since last January, when the price offered for bacon pigs by the Bacon Board proved insufficiently attractive to pig-breeders to induce them to make the required minimum number of contracts for delivery. Since then there has been no "organisation" in the marketing of pigs for curing. The Government have decided to tackle what is the root difficulty in the whole pig-bacon nexus—the fact that the curing factories in this country are too numerous, and on the average too small and inefficient. Exactly how the Government are going to effect a concentration is not revealed, but the Minister stated that the Government "would be willing to propose that some assistance should be accorded to the industry over a sufficient period to enable the contract system for the supply of bacon pigs to be re-established if they were assured that the reorganisation of the bacon factories would so proceed as to hold promise of a reduction in curing costs which would enable both producers and curers to work at a profit." Another agricultural subsidy thus seems to be in prospect, but it is a very great gain that the solution is not once more to be sought in some penalisation of the consumer.

* * *

National Health.—The report of the Ministry of Health for 1936 covers more than 300 pages, and records the expenditure of £140 millions, more than £3 per head of the population of England and Wales. In bulk and scope alone this report is a review of impressive achievements. Maternal mortality was lower in 1936 than in any year since 1922. The recent reduction

THE BRITISH LINEN BANK

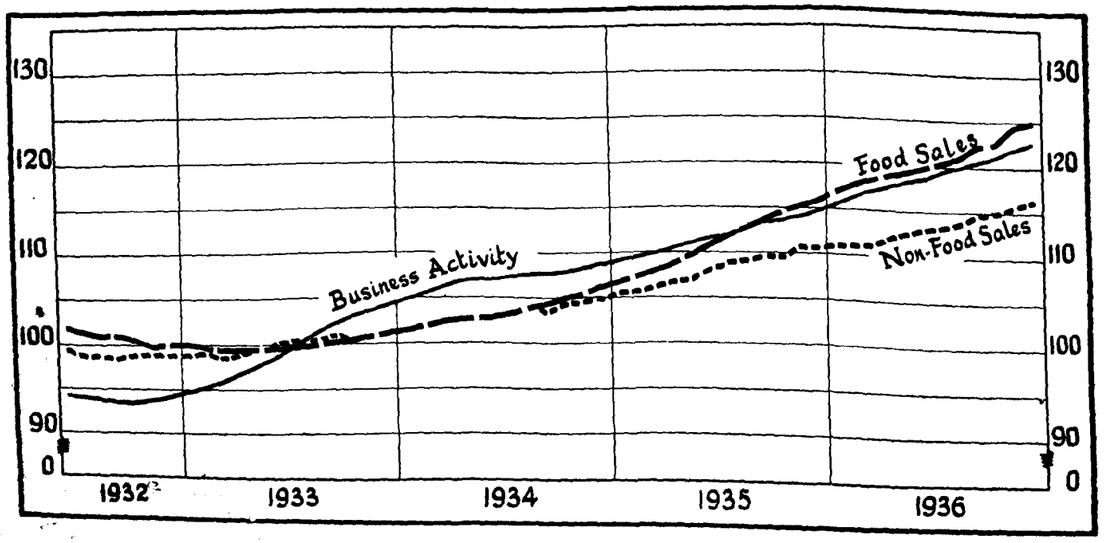
West End Branch: 198 Piccadilly, W.1

in infant mortality was maintained. Deaths from tuberculosis were 7,500 fewer than in 1931. The fourth of the five years of planned slum clearance brought the total of houses demolished to 100,355 and of houses built to replace them to 127,553. Local authorities built 71,734 houses in 1936, compared with 52,357 a year ago; and private enterprise, on the rising tide of economic recovery, built 273,516 houses without State assistance. Over 80 per cent. of these houses had a rateable value not exceeding £26 (£35 in London); and despite the rise in building costs, likely now to be a serious factor, the average cost of non-parlour subsidy houses in 1936 was only £324 compared with £310 in 1935. Nearly 22½ million acres of England and Wales are now under town and country planning control, though not all planned and often not planned very well, and 3,000,000 acres were added in 1936. These facts in themselves are a notable demonstration of the concentration of British policy on social welfare, despite the recent diversion of resources to re-armament purposes.

★ ★ ★

Yet there can be little room for complacency while the number of maternal deaths in a single year is as high as 2,302; while over 28,000 persons die in one year from tuberculosis; while nearly 350,000 dwellings are definitely overcrowded according to the most ascetic standards, with 380,000 more "on the borderline"; and while the national consumption of milk and green fruit and vegetables is from 40 to 50 per cent. below the minimum standard for adequate nutrition. We discuss the Government's milk policy in a leading article on page 282. The outstanding events of last year—the Midwives Act, the Investigation into Maternal Mortality, the Overcrowding Report and the Nutrition Report—show at least that the State is aware of the magnitude and many-sidedness of the problem of public health. The Physical Fitness Campaign has brought new criteria into public notice to test the consequences of health expenditure. While 11 million wage-earners have incomes of less than £125 a year, with an average of less than £100, the task of the State is difficult but all-important. The State contribution to health and fitness cannot be dispensed with by a majority of the population, and the Ministry of Health, which in the words of Sir Kingsley Wood "embraces the seven ages of man from the cradle to the grave," holds the key to national happiness.

★ ★ ★



The Growth of Crime.—The Report of the Home Office on the criminal statistics for 1935 reveals a number of striking increases in offences of various kinds. The total number of persons found guilty in the courts of England and Wales in that year was 759,453; traffic offenders had risen from 260,467 in 1931 to 432,816, offences by prostitutes from 1,260 to 3,176 in the same period, and indictable offences by persons under sixteen years of age from 12,556 to 22,425. There was a diminution of suicides and an increase in drunkenness. Very largely these increases were due to changes in legislation or administrative strictness, as in the case of traffic offences, or to the usual effects of trade recovery. These factors cannot, however, explain away the growth of juvenile crime. The explanation may partly be that this is the legacy of war; but, whatever the cause of this disturbing form of law-breaking, its incidence suggests that the rational treatment of the juvenile delinquent is more than ever imperative. Recent changes in the law's machinery for such cases have not yet been fully used. The Home Office report records an astonishing discrepancy in 1935 in the relative use made in different districts of probation, fines and corporal punishment. At the summer conference of the Howard League for Penal Reform, last week-end, the abandonment of birching and the proper use of probation were discussed, and in particular the more careful selection of magistrates to deal with juvenile cases was advocated. Clearly no uniform improvement in the treatment of juvenile delinquency has yet taken place. It is accordingly encouraging that the new Home Secretary has already shown himself eager to further the cause of penal reform. On Monday, at Cambridge, he stated that he was not only engaged on a comprehensive review of prison administration but also on the examination of proposals to amend the Borstal system. The national welfare demands a scientific and successful approach to this problem of juvenile crime.

★ ★ ★

Progress in Retail Trade.—As a footnote to our leading article on British shopkeeping, which appears on page 286 of this week's issue, we have drawn up the chart at the foot of this page. The two broken lines, representing respectively the value of food and non-food sales, are based on the sample investigation conducted by the Society of Retail Distributors and other bodies, the results of which are published monthly in the *Board of Trade Journal*. In order to focus attention on the trend, we have calculated a twelve-months' moving average of these monthly figures, the averages being plotted at the middle of the period to which they relate. For purposes of comparison, we have added a similar moving average of *The Economist's* index of business activity. As might be expected, the most striking feature of the chart is the evidence it affords of the maintenance of consumption in the depression years. Falling prices increased the real wages of those in employment during the depression, and consumption of non-food items

BUSINESS ACTIVITY AND VALUE OF RETAIL SALES IN GREAT BRITAIN

(Twelve Months' Moving Averages, 1930=100)

(e.g. clothes and motor cars) was maintained on a remarkably high level. On the other hand, the reabsorption into industry of many of the unemployed is probably the major reason for the subsequent rise in the value of food sales. The rising trend of retail trade has continued in recent months. Thus, sales of food in February-June this year were 9.4 per cent. above last year's corresponding figure, while non-food sales advanced by 6.9 per cent. over this period. Part of the recent increase, however, is due not to a further expansion of turnover, but to rising prices.

★ ★ ★

Meanwhile, the money value of retail sales in June, 1937, was 4.8 per cent. above the level of June, 1936, which in turn showed an advance of 4.7 per cent. over the previous year. The latest increase was much smaller than the 13.2 per cent. gain recorded in May, comparison with 1936 having been disturbed by the different incidence of Whitsun and by the Coronation. In contrast to recent tendencies, improvement in June was most marked in Central and West End London (+ 7.9 per cent.); expansion was least evident in Scotland (+ 2.6 per cent.), the North East (+ 2.9 per cent.) and the North West (+ 2.8 per cent.). Sales of food and perishables, which account for 52 per cent. of the total, advanced by 4.5 per cent. compared with June last year, while the non-food groups showed an aggregate gain of 5.0 per cent. The latter figure, however, masks a wide range of disparate movements. For example, sales of women's wear (fashion departments) and of men's and boys' wear were respectively 10.9 and 9.5 per cent. above the level of June, 1936; whereas the miscellaneous group showed a decline of 5.7 per cent. In view of the continued expansion of general business activity, and the gradual advance of retail prices, there is no reason to anticipate a downturn in the curve of retail sales in the near future.

★ ★ ★

American Legislation in the Heat.—The final abandonment of President Roosevelt's plan for the enlargement of the Supreme Court has broken the log-jam which has hitherto condemned Congress to eight months of session without any legislative accomplishments. And the heat is rising in Washington. It is a commonplace among political scientists that the power of the British Prime Minister over Parliament is due to his ability to send it out to face the country. In America at this time of year, contrariwise, the President gains power from his ability to keep the legislators in Washington. This year the session has already lasted longer than usual, and less has been accomplished. The results of this pressure have already begun to appear in the passage by the Senate of the controversial Black-Connery Wages and Hours Bill. This measure would set up a Labour Standards Board empowered to fix minimum wages (not below 40 cents an hour) and maximum hours (not above 40 per week) for any industry, or section of industry, which can be said to affect inter-State commerce. Recent decisions of the Supreme Court have greatly enlarged the definition of what affects inter-State commerce and the new Labour Standards Board will, in effect, be able to lay down conditions for the whole of American industry. The Bill has still to pass the House of Representatives, but any changes which it undergoes at the hands of that body are more likely to be in the direction of stiffening its terms than of weakening them. It is clear that an enormous new weapon of Governmental intervention is being created, and it is impossible not to feel that, in the heat of the constitutional battle, its implications have been inadequately discussed. There are other Bills still to be passed of hardly less far-reaching importance, such as the measure embodying the President's proposals for the reform of the executive machinery of the Government. Whether it was his intention or not, the President looks like obtaining, as a by-product of his long-continued obstinacy on the Court plan, a large instalment of further reform projects, which might have had a much more bitterly disputed passage if more time had been available for their leisured consideration. What is more, the threat of enlargement has manœuvred the Supreme Court into a position from which it will find it very difficult to veto these Bills and retain any shreds of judicial consistency.

★ ★ ★

Volume of Overseas Trade.—When the trend of prices is not stationary, statistics of the value of overseas trade afford no certain guidance to quantitative changes in British imports and exports. Particular interest attaches, therefore, to the quarterly surveys of the volume of overseas trade, made by the Board of Trade. The most recent of these surveys relates to the second quarter of 1937, and the following table summarises certain of its most significant figures:—

VOLUME AND VALUE OF IMPORTS AND EXPORTS

Period	Retained Imports				Exports of Domestic Produce			
	Declared Values	Index of Average Values	Values in terms of 1935 Values	Index of Volume	Declared Values	Index of Average Values	Values in terms of 1935 Values	Index of Volume
	£ Million	1935 = 100	£ Million	1935 = 100	£ Million	1935 = 100	£ Million	1935 = 100
Years								
1930	957·1	128·4	745·2	106·3	570·8	116·6	489·6	115·0
1935	700·7	100·0	700·7	100·0	425·8	100·0	425·8	100·0
1936	788·5	105·0	751·2	107·2	440·7	101·9	432·4	101·5
Second Qr. of								
1935	166·1	98·4	168·8	96·3	101·0	99·0	102·0	95·8
1936	185·9	103·1	180·1	102·9	101·8	101·1	100·6	94·6
1937	232·1	119·9	193·6	110·5	130·1	109·2	119·2	112·0

In the three months from April to June last, retained imports were 7·5 per cent. above the corresponding figure for 1936, an increase approximately equal to that which occurred between 1935 and 1936. The rise in average import prices was, however, much more marked. Meanwhile, British exports, which were actually smaller in the second quarter of 1936 than in the same period of 1935, rose by no less than 18 per cent. between the second quarters of 1936 and 1937, while average values rose by 8 per cent. A comparison of the second quarter of this year with the first is particularly encouraging. Imports rose by 5 per cent., and British exports advanced by almost 4 per cent., though normally the second quarter's figures show a decline. No early change in present trends appears likely.

★ ★ ★

Shipping Freights React.—While shipping freights moved irregularly last month the average result was a slight drop of 1·6 per cent. in *The Economist* index number. News from the leading ports points to a general easing of activity but there is no pronounced set-back in business.

(1898–1913 = 100)

	Average, 1913	July, 1936	April, 1937	May, 1937	June, 1937	July, 1937

Currency Reserve - £500,000
The Bank has branches throughout New Zealand and conducts every description of Banking business with that Dominion.

The following table of detailed changes records several wide movements both in near waters and in the Far East:—

	Index No.	Inc. or dec. Points		Index No.	Inc. or dec. Points
Home trade	128·5	—17·9	South America:—		
Bay—outwards	266·2	+24·0	Outwards	103·1	− 0·8
Bay—homewards	261·5	+ 9·9	Homewards	196·1	− 2·8
Mediterranean:—			India—outwards	150·8	− 0·8
Outwards	167·1	− 5·5	India—homewards	178·8	+13·5
Homewards	164·1	+ 2·2	Far East, etc.	158·5	+ 0·8
North America	119·2	− 1·5	Australia	149·2	−16·3

We append a chart showing the course of the freight index number during recent years:—

While freight rates have not reached their astronomic post-war peak, they are now back at their pre-depression levels.

* * *

Industry in a Holiday Week.—The advent of August is reflected in a seasonal slackening of activity in certain branches of industry, but the movement is generally less marked than usual. The output of coal in England and Wales has been reduced by holidays, and by strikes of haulage hands at Yorkshire pits; but in Scotland the mines have been working normally. Export business in coal is quiet, but exports of iron and steel products are well maintained. Many steelmakers are reported to have orders sufficient to keep them busy well into next year, and supplies on the open market are correspondingly scarce. Meanwhile, the South Wales tinplate and sheet works have been idle. In the textile trades, the experience of Yorkshire and Lancashire offers a striking contrast. Business in cotton yarns and piece goods has been disturbed by the fresh fall in raw cotton prices, and there is little prospect of an improvement until the raw material shows greater stability. Order lists are consequently running down. On the other hand, in the wool textile industry machinery is mostly working full time, although the holiday period is in full swing throughout the West Riding. Raw material prices are firm, and the carry-over of wool in Australasia is the smallest for many years.

Co-operative Leadership.—On the eve of the International Co-operative Congress to be held in Paris in September the 1,001 retail members of the English Co-operative Wholesale Society are considering the constitution of its directorate. Since 1875 the directors have been elected from three districts, centred at Manchester, Newcastle and London. The changes involve the abolition of district representation in favour of a national election and the reduction of the delegates entitled to attend the two annual meetings from 6,032 to 3,886. Of the twenty-eight directors of the C.W.S., fourteen have hitherto been drawn from Manchester, six from Newcastle-on-Tyne and eight from London. The London area which should—on the basis of trade and membership—have eleven directors has only eight; whereas the Newcastle district has six compared with the three to which it should be reduced if equity were preserved. This disparity is the root of the discontent which has prevailed for a decade and which it is now sought to allay. A national outlook is urged as essential to meet the united opposition of competitors and to secure the close co-operation of the 171 factories owned by the federation.

* * *

The significance of the growth of the co-operative system in the South is seen in the steady advance of the trade of its retail societies with the C.W.S. between 1910 and 1925. In the former year it constituted only 23 per cent. of the total turnover, the Manchester district being responsible for 57.6 per cent. and that of Newcastle for the remaining 19.4 per cent. In 1925 London advanced to 29.6 per cent.; Manchester receded to 54.9 per cent. and Newcastle to only 15.5 per cent. In the following five years London rose to 36 per cent.; and last year's returns gave London and the South a trade with the retail societies of £40,831,728, equivalent to 40.4 per cent. That of the Manchester district was £49,220,355, or 48.6 per cent. of the total, while the Newcastle district's turnover was only £11,131,335 (compared with £18,346,496 in 1920), or 11 per cent. of the C.W.S. trade. This disparity is likely to become more apparent as the present advance continues in the South; hence the hope of the North-West and Midland areas that the institution of a national directorate will arrest the discord that has been threatening Co-operative harmony.

Census of Production: Engineering, Shipbuilding and Vehicles.—More of the preliminary reports of the Fifth Census of Production, 1935, have been published. Details of the scope of the Census were given in *The Economist* of February 27th, page 463. The table below reproduces the new data for the engineering, shipbuilding and vehicle trades. Net output means gross output *less* the costs of fuel, materials and work given out. Where figures are given for 1934 they have been drawn from the Import Duties Act Inquiry of that year.

Trade		Gross Output	Net Output	Average number of persons employed	Net output per person employed
		(Thous. £)	(Thous. £)		£
Mechanical engineering	1930	165,341	92,943	455,588	204
	1934	133,943	77,080	360,486	214
	1935	166,258	95,532	420,110	227
Electrical engineering	1930	87,875	44,891	192,322	233
	1934	91,413	48,869	216,845	225
	1935	103,287	65,534	238,977	231
Motor and cycle (Manufacturing)	1930	109,697	45,380	195,281	232
	1934	117,129	47,700	200,638	238
	1935	132,108	53,830	218,665	246
Aircraft	1930	8,688	5,577	21,322	262
	1934	8,963	5,811	23,775	244
	1935	13,919	8,481	35,032	242
Railway carriage & wagon	1930	10,735	4,396	23,339	188
	1934	5,583	2,251	12,255	184
	1935	9,657	4,066	20,333	200
Total	1930	382,336	193,187	887,852	218
	1934	357,031	181,711	813,999	223
	1935	425,229	217,443	934,117	233
Shipbuilding	1930	62,724	27,553	133,453	206
	1935	34,765	15,213	79,478	191
Carriage, cart and wagon	1930	2,410	1,162	7,015	206
	1935	1,943	932	5,345	191
Motor & cycle (repairing)	1930	13,861	8,082	46,429	174
	1935	11,702	6,962	42,731	163
Total	1930	461,331	229,984	1,074,749	214
	1935	473,639	240,550	1,061,691	227

On the one hand, electrical engineering and motor and aircraft manufacturing are expanding industries, and in each employment and output have been steadily increasing. Railway carriage-making and mechanical engineering have, however, borne the brunt of trade fluctuations, in the former employment falling between 1930 and 1934 by nearly a half, and recovering with extreme rapidity in 1935. Shipbuilding was still below the 1930 level, even in 1935, recovery only coming late in 1936. The figures for net output per person employed, which are low in comparison with many industries, but not among the lowest, are conditioned by these industries' employment of expensive materials rather than of a great deal of capital equipment; though it is true that the expanding industries are quite highly capitalised.

Triumphant Conservatives

New York, July 27.—Two subjects dominate current discussions of the business situation. One is the recent trend of politics and the other is the position of agriculture.

The abrupt termination of political strain is encouraging business and finance. The attempt to reorganise the Supreme Court has been defeated; the Conservatives in Congress have gained much strength; and the remainder of the Administration's legislative proposals are being restricted to a minimum both in number and scope. The Committee for Industrial Organisation was conclusively beaten in the steel strike, and labour is now generally on the defensive. Congress is expected to adjourn in the middle of August, or at the latest by September 1st.

All this is wholly to the liking of business and Wall Street. While some voices are raised to suggest that neither Mr Roosevelt nor Mr Lewis has been finally disposed of, they are little heeded. For the present the Conservatives are enjoying their victory, satisfied to look to-morrow at to-morrow.

It appears that agriculture will this year, like business, experience its best season since 1929. The marketing season, already under way to last for the next few months, seems likely to see more money flow to the farms than in any year since the boom peak. That money will have a higher purchasing power than during any recent year, because of the relation between farm prices and those of non-farm products. This improves the outlook for autumn trade, and the prospect of large sales to farmers is already being reflected in current production statistics.

Improved Farming Outlook

Official estimates are available for practically all crops, and show not only an advance from the drought year 1936 but also totals better than most recent periods. The official cotton estimate has yet to be made public, but Press reports quote a figure, said to come from the White House, of 14,500,000 bales, which would be the highest since 1931. The following table shows figures for recent years, together with current estimates for wheat, cotton and maize, and official calculations of total agricultural cash income from marketing and benefit payments:—

Year	Cotton '000 bales	Maize '000,000 bushels	Wheat '000,000 bushels	Farm Cash Income $000,000
1929	14,825	2,521	823	10,417
1930	13,932	2,080	886	8,030
1931	17,099	2,573	937	5,801
1932	13,002	2,927	757	4,377
1933	13,047	2,396	552	5,409
1934	9,636	1,478	526	6,227
1935	10,734	2,292	623	7,090 ¶
1936	12,400P	1,529	626	7,865 ¶
1937	14,500UE	2,572OE	882OE	8,700PE

P = Preliminary.
UE = Unofficial estimate attributed to the White House.
OE = Official Department of Agriculture estimate on July 1.
PE = Private estimate, unofficial.

The wheat supply will be in excess of domestic requirements. In view of conditions elsewhere, the surplus is expected to move abroad at satisfactory prices. The crop of maize, which is largely fed to livestock, is probably also in excess of domestic requirements, because of the decline in livestock caused by the droughts in 1934 and 1936. This crop may well serve to depress prices slightly.

The cotton estimate attributed to the White House is larger than private figures, and should a crop of this size result the position of cotton will cause concern. A substantial expansion of foreign demand is not considered likely, and a large surplus is the probable result of such production. Federal operations in cotton to attempt to support this price would not be surprising.

The Future of Agricultural Policy

Agricultural prosperity is diminishing the demand for laws to regulate farming, just as industrial prosperity has greatly reduced general interest in "reform" laws. The Secretary of Agriculture, Mr Wallace, and his colleagues are exerting every effort to induce Congress to enact the "ever normal granary" plan, which combines Government purchase (or loan) and storage of crop surpluses in good years with release of supplies in small crop years, crop insurance and production control.

They argue that, as soon as the effects of the 1934 and 1936 droughts wear off, the problem of over-production will again confront the farmers; and that if good crops occur in 1938 after this good year low prices will be the result. Preparation now is better than hurried action later, they suggest, and the President endorses this programme. But neither Congress nor the farmers are sympathetic, and there appears little chance that any action will be taken this year.

This year's crops will affect the foreign trade figures in coming months. This is especially true of wheat. After a long period of little or no export, shipments of considerable magnitude are likely. The virtual balance between merchandise imports and exports which has existed for a number of months may thereby be somewhat changed. Whether this prospective increase in exports will be matched by a rise in imports, or by some change in the monetary situation, is a subject which will be watched with much interest.

The internal movement of funds which will result from the crops is also important. The marketing of this harvest should entail a flow from the cities, including New York, to the country. For some time the New York City banks have been relatively less well supplied with excess reserves than the banks elsewhere; although total bank reserves are higher than a year ago, the rise has occurred almost entirely outside New York. This has been largely the result of the gold sterilisation programme, whereby New York is deprived of its chief source of reserves, while Treasury payments tend to move funds away from it. If this situation remains unchanged, and in addition funds move out of New York on account of the marketing of crops, some tendency towards firmness may develop in the money market.

Prospects for the New Decrees

Paris, August 5.—A new series of decrees has been issued dealing mainly with the replenishment of the Treasury and the reorganisation of the railways. The ordinary Budget has been balanced, by the recent increase in taxation, and in 1938 the Treasury will only borrow about 26,000 million francs, instead of the 47,000 millions previously forecast.

For the State	(Millions of francs)	
Military expenditure	11,100	
Public works	3,590	
Pension fund	2,300	
Advances	1,500	
		18,490
For State-assisted Undertakings		
Railways, Post Office, City of Paris, Seine, Colonies		7,500
		25,990

Borrowing this year has been reduced by economies on the Public Works programme, amounting to 1,900 millions, and by the estimated yield of the new taxes, about 4,100 millions, making in all 6,000 million francs.

The decrees which accompany these decisions should ensure their success. These decrees establish a new control of the finances of the City of Paris, a revision of local finance and of the finances of the public undertakings, and a preliminary reorganisation of the railways, to reduce the deficit from 7,800 million francs to about 3,600 millions.

These decrees have also been accompanied by a *communiqué* from M. Bonnet, the Minister of Finance, emphasising that in the course of the last few days forward rates for foreign currencies have declined; quotations of public funds have improved; and the demand for Treasury bonds has revived. This shows that the country understands the need for making an effort to place the national finances on a sound basis.

Other decisions have also been taken. The hard wheat price has been fixed at 169 francs. New measures will follow after August 15th, including the creation of a "National Railway Company," which will arouse some resistance from the Companies and the Socialist members of the Cabinet, since M. Bonnet intends that it shall not entail any new charge on the public finances.

If these financial forecasts are to be realised, the country must have social peace, as M. Chautemps said, and must work more, as M. Bonnet said. Prices are actually rising. The latest weekly index shows that despite the rise in import prices domestic prices have moved only a little. But the devaluation, the increase in taxation and charges, and the advance in wages, following numerous agreements between employers and workers, must soon affect French prices. The Government has just authorised producers and business men to include these new charges in their selling price, by an amendment to the decree against illegal increases in prices.

Uncertain Political Outlook

The political situation is far from clear. The Communists, exploiting the discontent provoked by the recent financial and economic measures, are working actively for working-class unity by inviting the Socialist party to fuse with their own party to restore a Thorez-Blum Cabinet. The Socialists are for the time being reluctant to do this. But what will happen if in a few weeks the cost of living is raised by the effects of the decrees?

The Socialist leaders of the trade unions, already merged with the Communist syndicates, object to the unions being permeated by their allies. They say they will accept the challenge. But is it not already too late?

What will be the decisions of the Radical-Socialists at their Congress in October? What will be the "far-reaching liberal plan" to increase employment and to stimulate trade recovery, which the Cabinet is preparing for the second fortnight of August? And what may be the answer of the Stock Exchange to M. Bonnet's decision to pursue the revival of business by a cheap money policy?

French coal production was 3,569,867 tons in June, for 21.1 working days, compared with 3,473,358 tons in May, for 20.3 working days, and 3,481,850 tons in June 1936, for 20.7 working days. The number of men employed was 237,636 at the end of June, compared with 236,836 in May and 222,192 at the end of June 1936. The production of coke in the coke plants of the coal mines was 366,000 tons in June, compared with 364,000 tons in May.

For the first six months of the year, French coal production was 22,738,000 tons, for 130.7 working days, compared with 23,670,000 tons in the first six months of 1936, for 133.3 working days. The production of coke for the same period was 2,108,000 tons in 1937, compared with 2,002,000 tons in 1936.

Germany

New Reich Loan Expected

Berlin, August 4.—During the holiday season, business and the capital and credit markets were more than usually inert. A few industrial loans, totalling some Rm. 20 millions, were issued in July, but there were no share issues of any magnitude. The firmness of bonds on the Bourse, which simply expresses the fact that the supply of securities is small compared with the quantity of money to invest, is taken to foreshadow a new Reich consolidation loan. This will probably be announced in late August.

Private concerns in need of capital, in some cases for expansion under the Four Year Plan, are still not allowed to appeal freely to the market. Journals near to the Government are apologetic about the Reich's new iron-ore and smelting enterprises. They admit that the Reich's undertaking has no sound economic basis, and explain that "restrictions and sacrifices" which private concerns could not bear must be laid upon "the broad shoulders" of the taxpayer. Manufacturers fear that an advance in home steel prices, which despite the rise in world prices have been kept stable, will be one result. Further, according to semi-official utterances, finishing manufacturers may have to move their works in order to be nearer to the new ore and smelting centres to save transport costs.

Doubtful Harvest Prospects

Harvest prospects are still uncertain. The latest official report showed that in all except one of the seventy districts statistically covered, winter rye was worse than at the same date in 1936, when there was eventually only a mediocre crop; and the same was true of the seventy winter-wheat districts, with four exceptions. The condition of spring rye and wheat was also worse than last year. The stocks of rye and wheat held by farmers, mills, and elevators were only slightly lower on July 1st than at the same time in 1936, but the mills have lately been using imported grain. A compulsory mixture of rye flour with wheat flour is expected.

According to reliable private authorities, including physicians, the alleged undernourishment of German children (a matter which incidentally has led to an absurd Press feud with Czechoslovakia) is not a fact. The standard of working-class feeding in Germany is of course lower than in England; but it has not materially deteriorated recently. The compulsory consumption of maize in bread is, however, condemned on medical grounds; and the bread now in the market is unappetising.

Railway-car loadings in June were 5.8 per cent. higher than in June 1936. The first six months of 1937 produced an operating surplus of Rm. 320 millions, which is two-thirds of the surplus obtained over the whole of 1936. The Railway Corporation is now in a position to pay all its fixed charges, its preference dividend, and the contribution to the Reich.

The partial return of women to industry is being discussed in connection with the labour shortage. The number of women in earning occupations has lately increased a little, despite the fact that 700,000 were withdrawn from wage work by the marriage loans. The President of the Reich Unemployment Insurance Board holds that the labour shortage problem must be solved by technical improvements and mechanisation, despite the Nazi party's past opposition to machinery.

New Customers for Textiles

The finishing manufactures are reported to be doing somewhat better, owing mainly to the new export activity. The export of finished textiles began to recover in 1936, after a long decline, and this year a further recovery has taken place. In the first five months, the value of textile exports rose 10.6 per cent. compared with the same months of 1936, and the quantity rose 5.8 per cent. Formerly, much the greater part of textile exports went to a few countries classed as "big buyers"; but the new increase in exports is to a variety of smallish customers. Customer countries in the latter class took, in 1933, only 4 per cent. of the total export, and have this year taken 30 per cent. already. In particular, Bulgaria, Jugoslavia, Roumania, British India, and some Central and South American countries have taken more.

The increasing home output of motor fuel has led to a sharp decline in petrol imports; and for the first time the import of Diesel motor oil exceeded the petrol import. Shipping companies report a considerable improvement in business. The shares of the Hamburg-Amerika and Norddeutscher Lloyd companies are now quoted on the Bourse at about 90-100 instead of the former 19-20.

Reich revenue from taxation in June totalled Rm. 1,310 millions compared with Rm. 999 millions in June 1936; and, in the first quarter of the financial year, Rm. 3,077 millions compared with Rm. 2,528 millions. While the yield of direct taxes and taxes on business rose from Rm. 1,693 to Rm. 2,157 millions, the yield of customs and excise rose only from Rm. 835 to Rm. 921 millions.

Czechoslovakia

Agriculture and Politics

Prague, July 28.—Despite the unsettled international situation, economic improvement has been maintained in recent weeks. On July 16th an unexpected Cabinet crisis took place. The external cause was corn prices. The Agrarians asked that these should be raised before the coming harvest, and substantiated this claim by pointing to the smaller yields of this year, the higher costs of production and rising world prices. The Socialists objected, fearing that higher bread prices would be the result.

Among political questions the communal elections and elections for other autonomous bodies were discussed. No agreement being reached, the Government resigned. But on July 21st a new Government was appointed of the same composition as before, with the exception of the Finance Minister.

The new Government decided to raise the prices of corn: wheat by 14 Cz.K., rye by 18 Cz.K., malt-barley by 16 Cz.K. and oats by 11 Cz.K. The national stock of corn will be bought and kept on behalf of the Ministry of National Defence. The communal elections are to be held gradually to avoid their being "exclusively political." Just before the parliamentary recess, the last part of the armament programme was sanctioned.

Signs of Prosperity

The money market has been easy, and bank deposits have risen. Interest is growing in long-term building credits. In the second week of July, conditions on the Stock Exchange improved after the recent decline. The Stock Exchange index rose between June 4th and July 23rd from 134.1 to 152.1. Gilt-edged stock remains substantially unchanged; the advance emanates from the general improvement in trade, and chiefly affects industrial shares, the index of which reached a peak of 188.8 on April 2nd, declined on June 4th to 145.4 and advanced again on July 23rd to 168.6.

The index of wholesale prices rose between August 1936 and July 1937 from 691 to 763. The index of working-class cost of living has risen since November 1936 from 704 to 725. Fears are now being expressed that the advance in prices, and especially in corn prices, will cause a movement for higher wages in the autumn.

The improvement in economic conditions is also reflected by a further fall in unemployment. At the end of June there were 304,345 unemployed persons, compared with 384,386 a month ago and 565,799 a year ago. The decline of unemployment in industrial districts with a German-speaking majority is very striking.

The recent rains greatly improved the crops, but there are substantial differences in various districts and the harvest has been delayed by the rainy weather.

The index of industrial production reached 101.2 in May (1929 = 100) against 78.6 a year ago. There has been better employment both in trades producing for the home market and for foreign demand. In some cases the delivery terms have to be prolonged. Many factories are now overhauling plant. Building activity is brisk. The output of coal in June amounted to 1,375,000 tons compared with 890,300 a year ago, and of lignite 1,348,900 compared with 1,137,200. The production of coke was 260,000 tons compared with 149,000 tons a year ago; the production of pig iron in thousands of tons amounted to 136,400 compared with 88,900 a year ago, and of steel rose to 201,800 from 119,100 tons a year ago. Prosperity affects not only the heavy industries, such as iron and metal engineering, but also those producing consumption goods, such as textiles, clothing, pottery and glass.

Foreign trade for the first six months shows a great advance on last year:—

Value of Foreign Trade (first six months)	1936		1937
Imports:	3,485.9 mil. Cz.K.	...	5,306.5 mil. Cz.K.
Exports:	3,501.3 mil. Cz.K.	...	5,487.1 mil. Cz.K.

This gives an export surplus of 174.7 million Cz.K. in goods, exclusive of precious metals, against 3.96 million Cz.K. last year.

Spain

Expropriated Plant and Mines

Barcelona, July 21.—The industrial plants seized during the first months of the civil war are only considered to be temporarily under State control. With regard to those the seizure of which had been called permanent on account of their proprietors having fled the country and been declared Fascists, a decision will

be arrived at at a later period. Several large plants belonging to aliens have been restored to their lawful owners. The decree expropriating lead and zinc mines has been rescinded, but official measures will be taken to increase their output.

On the other hand, the Catalan potash mines will become the property of the State and a potash monopoly will be instituted. A shipment of Spanish potash has been embargoed in France on behalf of the former owners of the mines; the French courts have not as yet given any decision. It is supposed that the World Potash Syndicate is behind these developments. At present, there are enormous stocks of potash available, which will eventually be thrown on the international market in competition with the Syndicate.

Trade in War-Time

After statistical silence figures are now available of foreign trade in the second half of 1936, covering the first six months of the war. They are in gold pesetas and refer to Republican Spain; the comparative figures for the second half-year of 1935 refer to the whole of Spain:—

IMPORTS

	July–December, 1935 (All Spain)		July–December, 1936 (Republ. Spain only)	
	Tons	Gold Pesetas	Tons	Gold Pesetas
Live animals	1,450	1,475,620	27	67,256
Raw materials	1,434,748	157,331,414	396,881	55,799,212
Manufactured articles	960,421	229,520,462	200,800	47,661,962
Foodstuffs	195,334	63,272,137	41,513	20,553,411
Total	2,591,953	451,599,633	639,221	124,081,841

EXPORTS

	July–December, 1935 (All Spain)		July–December, 1936 (Republ. Spain only)	
	Tons	Gold Pesetas	Tons	Gold Pesetas
Live animals	203	238,387	9	4,850
Raw materials	2,263,040	56,876,469	739,711	19,416,897
Manufactured articles	193,332	51,513,567	47,973	25,447,056
Foodstuffs	583,363	181,687,633	331,513	77,315,478
Total	3,039,938	290,316,056	1,119,206	122,184,281

Comparison of the totals for the second half-year of 1936 with those for the same period of 1935 show clearly the effects of the regulating policy of Government, inasmuch as the import surplus, so far as Republican Spain is concerned, has almost disappeared.

Among the principal exports from Republican Spain during this first half-year of civil war, agricultural products, as usual, occupy first place, especially oranges, onions and potatoes, hazelnuts and lemons. Exports to Russia have increased to such an extent that Russia is now the best customer of Republican Spain; and it seems that the greater part of the wheat imported during the first months of 1937 was of Russian origin.

Municipalisation of Catalan Houses

A decree for the municipalisation of tenement-houses in Catalonia has been published. The Government of the autonomous State of Catalonia reduced rents at the beginning of the civil war by a maximum of 50 per cent. This reduction had the unwelcome consequence of keeping capitalists from investing money in houses, and even from supplying the necessary funds for the continuation of house building. The number of unemployed in the building trades increased greatly. It has therefore been decided to municipalise all tenement-houses by means of the expropriation of the present owners, who will be duly compensated, with the exception of those who have been declared rebels by the law courts.

Only single family houses occupied by the family of the owner, and small properties, are excepted; they remain the property of their present owners, who can dispose of them freely. In future, the municipalities will be responsible for all building activities. Offices have been set up to classify the properties for expropriation, to fix the amounts of compensation, and to attend to repairs, sanitary improvement, etc., of existing properties and to the building of new tenements.

The Landed Property Offices will issue bonds in favour of the former owners of properties falling under the law, entitling the holders of these bonds to an annual rent of 4 per cent. of the value of their properties on June 30, 1936, for 25 years. A proprietor may receive for his property, however valuable, a maximum of 240,000 pesetas in 25 years, and that only if it is situated in the city of Barcelona. Even if a proprietor has more than one property, the maximum amount he is entitled to for all of them is limited.

Exceptions are made for all properties belonging to foreigners, to savings banks, to co-operative building societies, to insurance companies and to banks in general, who will be paid in monthly instalments for 25 years, but to the full value of their properties whether situated in the city of Barcelona or in any other place within the Catalan territory.

Canada

Western Crop Disaster

Ottawa, July 19.—The return of Mr King and his colleagues from London has reunited the Canadian Cabinet, who have been tackling the problem created by another disastrous crop failure in Saskatchewan and Alberta. In a report covering to the end of June the Bureau of Statistics would only place the condition of the spring wheat crop at 51 per cent. of the average, which was a tremendous decline from the figure of 85 per cent. given for the end of May, and also far below what was regarded as the poor figure of 82 per cent. recorded at the end of June, 1936.

In the opening week of July the deterioration of the crops continued until it was estimated by experts that there was no longer any hope of a marketable crop from 10 million acres in the two provinces which had been planted with wheat. Last week a generous rainfall came to break the drought over most of the prairie country, but it arrived too late to save crops which were badly wilted. It has, however, checked the deterioration and should make it possible for a substantial acreage of wheatland to produce feed for livestock; it has also saved the oat crop, and revived pastures. Anxieties about the feed situation have now been relieved. But Mr Gardiner, the Federal Minister of Agriculture, will not estimate the western wheat crop at more than 150 million bushels, and thousands of farming families in the West will once more be without income, and will have to be maintained by public funds throughout the winter.

The Cabinet have agreed to continue relief for the drought-stricken farmers and to salvage livestock threatened with starvation. Free carriage will be provided for livestock shipped out of the devastated areas, and feed will be supplied for the maintenance of a nucleus of live stock for breeding and milking purposes in the dry area. Assistance will be given to assist the processing in *abattoirs* of the animals which must be killed; and special grants for railway fares and cost of shipment will be available to outside people to buy stock in the afflicted territory. The programme of water conservation, and the creation of dams and dugouts, under the Prairie Farm Rehabilitation Act, will be proceeded with; and the governments of the prairie provinces will be asked to co-operate in a scheme under which areas, once well settled but now largely deserted, will be taken under lease and fenced off. When the few remaining settlers have been moved elsewhere, all grazing on these reserves will be forbidden, in order that the natural grasses may have a chance to grow and the areas be restored to their original rôle of a ranching country.

Happily the crops in the rest of Canada are up to or above the average. Manitoba has escaped the ravages of the drought, and, if a threat of rust does not materialise, should reap its best grain crop in years. There has been rather too much rainfall in Eastern Canada, but Ontario has, for all kinds of crops, one of the best yields in its history, and conditions are also very satisfactory in British Columbia. Grain prices have been rising rapidly in face of a strong export demand; and the visible stocks of Canadian wheat were on July 5th reduced to 40½ million bushels, compared with 140,700,000 bushels on the corresponding date in 1936.

Business Activity Resumed

In early July, adverse crop reports from the West, labour troubles and fears about the European situation had created considerable pessimism about the outlook, but there is now a revival of confidence. The general index of business activity of the Bureau of Statistics, after falling slightly for some weeks, has climbed upward from 108.3 to 109.6 in the week ending July 10th. Given below are data about three of the major components of the index.

Week ended	Carloadings	Wholesale Prices	Bank Clearings	General Index
July 11–36	74·6	73·9	114·6	108·5
July 3–37	78·5	86·2	127·7	108·3
July 10–37	78·0	87·0	131·4	109·6

The mining industry is maintaining its output at a high level and in June the exports of nickel, copper and zinc were 350,004, 217,522 and 342,249 cwts., respectively, compared with 245,944, 142,281 and 286,456 cwts. in June, 1936. The production of gold also reached a new high level for the year in June when it was 350,094 fine oz. The newsprint industry continues to recover ground, and its output in June was 310,871 tons, compared with 270,051 tons in June, 1936. For the first half of 1937 its total production was the record figure of 1,783,350 tons, an increase of nearly 20 per cent. compared with the output for the same period of 1936.

Letters to the Editor

Outlook for France

TO THE EDITOR OF THE ECONOMIST

SIR,—In your article, "Outlook for France," published in the issue of *The Economist* dated July 24th, I find the remark that: "France has never fully recovered from the loss of technical ability due to the expulsion of the Huguenots three centuries ago." In the same breath the author adds: "French labour is *rightly* determined not on any account to relinquish many of its major concessions. The 40-hour week has come to stay . . ."

Granted the premises, I should have thought that the conclusion would be the other way, i.e. that what France lacks in technical ability should be made up by an *increase*, and not by a *decrease*, in the number of daily working hours.

The 40-hour week may be an "act of fundamental justice," but, if indeed "the average French worker is much worse off than his compeers in England," whilst working the same number of hours, he will certainly not improve his condition by working 20 per cent. less and therefore producing 20 per cent. fewer goods.

I am, Sir,
Your obedient servant,
J. D'HARCOURT.

Paris.

Czechoslovakia's German Problem

TO THE EDITOR OF THE ECONOMIST

SIR,—A recent issue of *The Economist* contains an admirable article on the German problem in Czechoslovakia by Professor Toynbee. It is the most difficult and dangerous of all the problems in Central Europe. And I am in such hearty agreement with him that I wish I could also believe, as he does, that it lies in the power of Czech statesmanship to solve this problem.

Certainly President Benes is making to-day a strenuous effort to conciliate the German minority, and short of endangering the essential framework of the Czech State, he will go as far as he can in this direction. Some causes of justified resentment have been removed, and more government jobs will be given to Bohemian Germans. All this is to the good, and cuts off a bit from the deep fringe of discontent. Improvement in business and fewer unemployed further help to ease the situation; also, many of the *Südetendeutschen* have little liking for Nazi ideology. But when all is said, the feeling even of "Activist" Germans is, for natural reasons, rather one of acceptance than of enthusiasm for Czech rule; and it is difficult to imagine how any statesmanship in Prague could ever alter this.

Professor Toynbee touches the real source of trouble when he hints at the need of "effortless superiority" on the part of the ruling race. The question whether Czechs or German Bohemians are superior is beside the point, just as are the exasperating activities of many Czech bureaucrats. The important fact is that neither of the so-called races will admit inferiority; and that there is, and will remain, a German problem in a Czech State which, even with the best intentions, is just as insoluble as would be a Czech problem in a German State. The old Bohemian Crown lands have had too ancient an administrative and economic unity to be divided. And the fact that politicians on both sides have thrived on racial problems during the last hundred years does not make these any easier to solve. The disease is therefore endemic; but like other endemic complaints, it need never be dangerous if kept isolated from other complications. That it has become so to-day is not owing to any new developments of its own, but to the neighbourhood of a Totalitarian Reich which has shown some readiness to temporize but hitherto none to compromise. And short of surrendering the control of their State and losing their independence, it is hard to think of any steps which Czech statesmanship could take that would remove this danger.

Among other similarities to the Middle Ages which Herr Hitler has revived lies an admitted ambition to create an Empire which would be comparable to that of the Hohenstauffens. The German problem in Czechoslovakia is therefore only confused by bringing up the question of the greater or lesser rights which ought to be accorded to a minority, and believing that a wise statesmanship can solve their grievances. There is one paramount question. That is, whether small States possess a right to an independent existence or whether they are to be suppressed from the map in order to make way for an Empire that would then stretch from the North to the Black Sea. For to-day the main obstacle in Central Europe to the creation of such an Empire lies in the resolution of the Czechs and the value of their pacts of defence. And the future of European peace largely depends on how the Fuehrer may appraise the powers of Czech resistance.

I am, Sir, etc.,
LEWIS EINSTEIN,
Former United States Minister to Czechoslovakia.

Groom *v.* Crocker

TO THE EDITOR OF THE ECONOMIST

SIR,—I gather from your article on the Groom *v.* Crocker case that, as it is a practical method of reducing claims and consequently premiums, you consider the take-over clause a boon to the insuring public.

There is one aspect of the take-over clause that merits ventilation. A motorist, when involved in an accident, is forbidden to have any communication with a victim of the accident. He is not allowed to send the sufferer flowers, delicacies or even convey the sympathy that is natural to most people, however little they may be to blame for the injury. Insurance companies seem to think that in the eyes of the Law sympathy implies guilt. I know many motorists who have resented this ban to common decency, and I agree with their view that their apparent lack of sympathy is largely responsible for the unpopularity of motorists among the poorer classes.

I am, Sir,
Yours faithfully,
J. W. S.

Charlwood, Surrey.

Population and Intelligence

THE articles on the "Economics of Population" which appeared in *The Economist* on July 10th, 17th and 24th, showed the magnitude and direction of the population changes which will shortly confront this country and their probable consequences. It is clear, however, that our understanding of the forces which are now arresting and will presently reduce our numbers is inadequate. More light is wanted on their causes, extent and effects, to extend and deepen our knowledge, and to enable an appropriate policy to be worked out.

At first sight, the current population problem seems peculiarly adapted to the method of inquiry by a Royal Commission. In fact, this is not the case. A Royal Commission can do little more than ventilate opinions already formed and marshal information already available. But knowledge about many aspects of the population problem is not yet adequate. We have still to collect and collate statistics about fertility, showing the numbers of births to particular parents, the kinds of parents, and the conditions in which they produce many children or few. We need to know the ages of parents, the duration of marriages, and the dates and sequence of births. It is important to study the factors bearing on the growth of population in various regions with different types of industry and agriculture; to investigate the effects of urban life and rural conditions on birth-rates and fertility; to examine the medical, economic, social and psychological causes of infertility; and to determine as far as possible the extent to which poverty, the fear of unemployment, inadequate housing, etc., make parents limit their families.

At present two inquiries dealing with the future of our population are in progress: one by the Registrar-General, and the other by the Population Investigation Committee, a voluntary body under the chairmanship of Professor Carr-Saunders. The Population Investigation Committee has recently issued an excellent short pamphlet* summarising existing knowledge about British population trends and their causes so far as known, outlining a programme for further work, and appealing for funds. The representative and authoritative membership of the Committee ensures that its work will be thoroughly and admirably done.

Obviously associated with changes in numbers are changes in the quality, and particularly in the average intelligence, of the population. On this subject Dr R. B. Cattell has lately thrown the clear if disconcerting light of a recent investigation.† The gist of Dr Cattell's discovery, in the authoritative words of Lord Horder's introduction, is

> that the birthrate is falling much more rapidly amongst those social classes in which intelligence is relatively high than it is in those in which it is relatively low. The level of the nation's intelligence is therefore steadily falling.

If there is a correlation between economic status and intelligence—which cannot necessarily be taken for granted except so far as the conspicuously deficient among the depressed masses are concerned—then this average decline is occurring because the birthrate of the more intelligent is low, whereas the less intelligent increase and multiply. In other words, the numbers of those whose inborn stuff is in any way defective, and of those whose native wit is inherently inadequate to the heavy demand of a complex civilisation, are increasing more rapidly than the numbers of the able and the leaders. The proportions of the deficient are growing even faster. "Civilisation," Dr Cattell observes in a striking metaphor,

> must be thought of as a melody played on the living brains of men. However magnificent may be the music which past and present geniuses have composed, it can never be rendered fully on instruments which have lost the original complement of strings.

In all future studies of the trend of population it is to be hoped that Dr Cattell's investigations and the profound and suggestive analysis of their causes set forth in his brilliant book will be taken fully into account. Until then, however, many of his conclusions must be taken as challenging hypotheses.

* "The Future of our Population?" By C. P. Blacker, M.C., and D. V. Glass. Population Investigation Committee, 69 Eccleston Square, S.W.1. 30 pages. 6d.

† "The Fight for our National Intelligence." By Raymond B. Cattell. With introductions by Lord Horder, Major Darwin and F. P. Armitage. P. S. King. 166 pages. 8s. 6d.

Shorter Notices

"Health and a Day." By Lord Horder. Dent. 213 pages. 7s. 6d.

These collected addresses form a whole which is more than the sum of the parts, for one common theme inspires each of Lord Horder's addresses: What are the limits of the doctor's capacity in securing health for the people? This enables Lord Horder's professionally untrammelled mind to range over an extremely wide but relevant field, in which it studies all the variable factors that condition any answer to the above question: the strain of civilisation on the human organism, the doctor and the community, government and the nation's physique, direct action in medicine, the doctor as humanist, etc. None can fail to understand Lord Horder's arguments and conclusions. None can fail to be impressed by the sound common sense informing them, which refuses to treat "ill" people for isolatedly "ill" organs, but for being ill *people*. Doctors, unfortunately, do not often publish their views on the social aspects of medicine; and Lord Horder's views, trenchantly yet carefully expressed, are eminently well worth remembering. Many years of sympathetic insight into the psycho-physical structure of the ordinary man and woman have enabled the author to produce a book which is a really fascinating contribution to current social thought.

"Capital, Wages and Profit or Loss." By E. C. van Dorp. P. S. King. 290 pages. 12s. 6d.

We have received certain comments about the review of this book, published in *The Economist* on February 13th (page 361), from the author, who states:—

> (1) You question my attack on the marginal productivity analysis, because of "my not having grasped its mathematical basis." But economic theories never have a mathematical *basis* though they may eventually find a mathematical *expression*; and marginal productivity theory has never been mathematically expressed.
>
> (2) It is not true to say that my book makes "no original contribution" since my theory of wages, the gist of which is well given in one short sentence of the review, leads up to quite new views of capital, savings and profits.
>
> (3) My book does not deal with Marshall extensively because he belonged to the old school who were not yet concerned with the special problems of profit, interest or wages.

Our reviewer replies:—

> (1) From the time of Walras economists have given a mathematical expression to the doctrine of marginal productivity, and it does not matter whether we call it mathematical *expression* or *basis*.
>
> (2) Since Dr van Dorp admits that the gist of her theory has been adequately though briefly given in the review, whether or not it is original can be left to the reader of the review—or the book.
>
> (3) There seems little reason in such a book to devote so much less space to Marshall than to Böhm-Bawerk. At any rate, English readers will not easily understand this disproportion. The debt of Keynes to Marshall, for instance, has been often admitted. (*General Theory*, pages 126, 177, etc.)
>
> (4) There was one inaccuracy in the review. Dr van Dorp *did* in passing refer to working-class savings.

MONEY AND BANKING

A Landmark in British Insurance

IN the Road Traffic Act of 1930, Parliament enacted that all insurance companies which deposited £15,000 with the Board of Trade should be authorised to give cover for third-party motor risks. Within a few years, five or six of the companies so authorised had failed. It was an exasperating business, because British insurance companies in general are the strongest in the world, and there was no need for their failure. Indeed, if the Act, instead of relying on the out-of-date and irrational system of deposits, had relied on a reasonable device for maintaining solvency there would have been no failures; and *The Economist*, in May, 1935, indicated what this more reasonable device might be. We then wrote as follows:—

> We would suggest that, under the guidance of the Board of Trade, the insurance offices should form a committee to work out and administer a scheme for vetting at regular intervals all insurance companies doing business in Great Britain. Let the committee and the Board of Trade together lay down a standard of solvency and let the Board of Trade have the power to say stop to any company which fails to reach the standard.

A few months later Mr Runciman appointed a Departmental Committee, with Sir Felix Cassel as chairman, to investigate the problems of compulsory insurance. The Committee's report* has now been issued. It recommends:—

> That no insurer should be permitted to undertake any branch of compulsory insurance business unless licensed to do so by the Board of Trade. . . . Every insurer should be required to comply with standards of solvency to be prescribed by the Board of Trade after consultation with advisory committees. . . . The committee to advise on the licensing of insurance companies should consist of five members appointed by the Board of Trade from persons nominated by the companies.

Respectfully, we greet the author of this scheme as a brother and congratulate him (with the reservations appropriate to a decent modesty) on an admirable report.

The recommendation of the Committee that has attracted most notice in the daily Press refers to a central fund, subscribed by the insurance interests, out of which claims on defaulting insurers would be met. In fact, this is a less important feature than the licensing system with its approved standard of solvency. If that provision is adopted and allowed to develop for a few years, it will do away for good and all with the scandal of defaulting insurers. Without it, no central fund would be possible; for the insurance interests would not consent to subscribe to the fund without a licence based on a standard of solvency. With it, the central fund, though useful as a last line of defence, will in all probability never be called upon for contributions to make good the deficiency of a failed insurer.

The scheme may be briefly described. Every authorised insurer doing compulsory insurance business must once every year submit his figures and open up his financial position to a committee. The companies will submit their figures to a committee of five drawn from company officials. Lloyd's underwriters will submit theirs to a committee of five Lloyd's underwriters. The mutual associations (whose business lies mainly in the compulsory insurance of miners' workmen's compensation) will submit their figures to a corresponding committee, which in this case will include one qualified actuary. The committees, therefore, will be composed of men directly engaged in the industry, who know what to look for, who understand where the shoe is most likely to pinch and who are most capable of deciding what each insurer's figures ought to look like and at what point they may conceivably fail to disclose a safe margin above the border line of solvency. The first duty of the committees will be to lay down, in conjunction with the Board of Trade, a schedule of this standard of solvency, prescribing what assets are needed for a business of a given character, with given outstandings and a given scale of premium income. Their second duty will be to examine the accounts of all the insurers who come within their orbit, and to determine whether they attain the standard laid down in the schedule. They will then be in a position to separate the sheep from whatever goats there may be, and they will report to the Board of Trade accordingly. The Board of Trade, having considered the report, will license the sheep and disqualify the goats, concentrating its attention on solvency alone and framing its decisions in such a way that every insurer will be certain of obtaining a licence if he complies with the published standard of solvency.

The importance of this scheme, if it becomes law, is obvious from the vital fact that the figures which an applicant for a licence will be required to give are the figures of the insurer's whole business, and not merely those of the compulsory sections. It was suggested to the Departmental Committee by some witnesses that each department of an insurance company or underwriting syndicate should be required to segregate its own assets and to be responsible for its own solvency; so that a composite office might, in theory, have been solvent *vis-à-vis* its motor policyholders and insolvent *vis-à-vis* its marine policyholders. The Committee, however, has prudently rejected this proposal (except for life and other permanent contracts) and has recommended that the assets of the motor business and workmen's compensation shall remain in hotchpot. The effect of this recommendation will be that the advisory committees will need to survey the whole of an insurer's business and to give a certificate of solvency which will vouch for its soundness, not in the right arm or the left leg, but all through the body—heart, head, lungs and loins. In other words, all companies, underwriters and mutual associations which transact motor or miners' workmen's compensation insurance in Great Britain will either receive annually a clean bill of health for their business as a whole, or will retire stricken from the field. And so high is the value which the Committee attaches to this reform that it proposes the return of certain deposits which are now lodged with the Board of Trade as a guarantee of solvency. The new method of licensing on a certificate of solvency overrides and supersedes the inadequate method of deposits, which has for so long been in force in Great Britain, and has unfortunately been adopted in turn by almost every other country in the world. It may even be that, if Great Britain adopts the more natural method, other countries will in turn follow suit, and foreign deposits—that nightmare of the insurance manager—will go ultimately by the board.

In another section of its report the Committee turns from the problem of solvency to the narrower problem of how to make a motor policy afford one hundred per cent. security for the injured third party. This problem—apart from insolvency—has arisen in several ways, the chief of which has been the breach of a policy condition by the insured motorist—a breach which, by avoiding the motorist's rights, has prevented the third party from recovering his damages. The problem is not easy, for the Road Traffic Act of 1930, at the same time that it made insurance compulsory, left the freedom of contract between a motorist and his insurer almost untouched.

* Cmd. 5528. H.M. Stationery Office. 1s. 3d. net.

Some amendment was made by the Road Traffic Act of 1934, which laid down a few policy conditions that should not be allowed to operate against the third party. The 1934 Act, however, did not mention a hundred other conditions, which were still to be permissible. The present report recommends an approach to the problems from the other side. It suggests that the law should allow no conditions, except a few which would be named. Consequently, unless an injured third party came up against one of the few permitted conditions, he would not be prejudiced by clauses inserted in a contract, of which (until his accident) he knew nothing and to which he was never a party. Further, the Committee suggests that, just as there ought to be a central fund to make good losses due to insolvency of insurers, so there should be a central fund out of which the injured third party would be indemnified if he failed, because of some policy condition, to recover on the motorist's policy. This central fund would be subscribed by the insurance interests who would bear, as a common burden, such third party's losses as arose from gaps in the motorist's insurance. The third party's position should thus be made almost impregnable. The additional cost to the insurers, however, must ultimately fall on the motorist, by way of increased premiums. Already, it is said, certain reinsurance underwriters—on whom all big third party claims finally rest—have taken steps to revise their scales of premiums. If the cost of reinsurance rises substantially a rise in original premiums cannot be far behind.

Financial Notes

Insurance Companies and N.D.C.—The precise nature of the liability of insurance companies in Great Britain for National Defence Contribution under this year's Finance Act has lately given rise to considerable discussion among the offices chiefly concerned. It may be useful, therefore, to indicate certain general principles which appear to bear closely on the subject. For this purpose insurance business may be divided into three groups: (1) Ordinary life assurance; (2) Industrial life assurance; and (3) Fire, accident and miscellaneous insurances. A company which transacts business in all three groups is assessed for income tax purposes as though it were a separate entity within each group. For Groups (1) and (2) the basis of assessment is set out in Section 33 of the Income Tax Act, 1918, and Section 16 of the Finance Act, 1923. Tax is charged on interest income less expenses of management, but from these expenses are deducted any fines, fees, profit from reversions and profit from life annuities. It is provided, however, that the tax will not be less than would have been paid in respect of profits under Case 1 of Schedule D of the 1918 Act. Section 16 of the Finance Act, 1923, which is of vital importance in connection with N.D.C., runs as follows:—

> Where the profits of an assurance company in respect of its life assurance business are for the purposes of the Income Tax Acts computed in accordance with the rules applicable to Case 1 of Schedule D, such part of those profits as belongs or is allocated to, or is reserved for, or expended on behalf of, policyholders or annuitants shall be excluded in making the computation. . . .

In a mutual life assurance society (i.e. where there are no shareholders) all profits, including annuity profits, belong to the policyholders, and no assessment can be made under Case 1 of Schedule D. In the case of a proprietary insurance company (i.e. one having shareholders) assessable profits under that Case would appear to consist, in the ordinary life assurance branch, of the amount credited to shareholders. In practice, that amount would always be less than the interest income, adjusted as above. In industrial assurance expenses are necessarily on a much higher scale than in ordinary life assurance, and the shareholders usually take a larger proportion of the profits. Assessment of an industrial assurance branch might therefore be on the basis of Case 1 of Schedule D. In the case of companies in Group (3) the underwriting profit is taxed under Case 1, Schedule D, and the interest income on the funds is also taxed.

* * *

Provisions of the New Tax.—So much for the companies' income-tax position. It is laid down that N.D.C. is to be computed on "income-tax principles," which means the "principles on which the profits arising from the trade or business are computed for the purpose of income tax under Case 1 of Schedule D, *or would be so computed if income tax were chargeable under that Case in respect of the profits so arising.*" It would seem that life assurance business (both ordinary and industrial) will only be liable to assessment for any amounts credited to shareholders. Sinking fund business, however, does not properly come within the definition of life assurance. In cases where it is transacted, therefore, any profits arising from it might be liable to N.D.C., even in the case of a mutual society which transacted only life assurance and sinking fund business. The focal point of recent discussion, however, has been the extent to which insurance companies are liable to N.D.C. on their income from investments. This income is to be included in profits in the case of

> . . . assurance business or business consisting wholly or mainly in the dealing in or holding of investments or other property . . . except income received directly or indirectly by way of dividend or distribution of profits from a body corporate carrying on a trade or business to which the section of this Act charging the national defence contribution applies . . .

Although the provision applies to "assurance business," mutual life assurance societies do not appear to be affected, as there are no profits as computed under Case 1.

* * *

The position of the life fund in a proprietary company, however, is more open to doubt. Theoretically, it would seem that the computed profits under Case 1 would be assessable, less some appropriate allowance in respect of investment income derived from sources subject to N.D.C. It may be maintained that life assurance consists "mainly in the dealing in, or holding of, investments"; for the whole structure is based on long-dated contracts, depending on the operation of the interest factor. In the basis of assessment for income tax, this fact is recognised. The miscellaneous branches depend, on the other hand, largely on yearly or other short-dated contracts into which the interest factor need hardly enter at all. In practice, fire and miscellaneous funds at any time consist, broadly, of necessary reserves for the unexpired portion of the current premiums and for outstanding claims, plus the undistributed profits of past years. The retention each year of a portion of the profits is highly desirable as a provision against catastrophic risks in any part of the world; and the amounts retained differ little from the general reserves invested by trading companies outside their business, income on which, in their case, is not liable to N.D.C. Indeed, the analogy between the miscellaneous branches of insurance and trading companies is almost complete. It seems erroneous, therefore, to regard these miscellaneous branches as businesses "consisting, wholly or mainly, in the dealing in, or holding of, investments." In fairness, it would appear that the funds of an insurance office in these branches ought to have received the same exemption as the investment income of a trading concern.

* * *

German Foreign Exchange and Agriculture.—Germany's exchange resources, earmarked for necessary imports, are likely to be progressively needed to offset a food and fodder deficiency in the near future. Since the extreme fodder shortage in 1934, which led to an emergency slaughtering of livestock, there has been a new shortage each year, e.g. of eggs in 1935, of meat in 1936, and of fodder and bread this year. Diversion of consumption to other foodstuffs, and sometimes increased imports, have temporarily plastered over the cracks. The official claim that in 1936

already 83 per cent. of the total consumption of foodstuffs was home-produced, compared with only 75 per cent. from 1928 to 1932, indicates a steady decline in consumption of foodstuffs, especially a fall in that of butter, fats and eggs. It is significant that Germany has now lost even that self-sufficiency in bread-cereals which was, contrary to common belief, achieved before Herr Hitler's advent to power. An indication of the extent of this failure is given in the following figures of stocks available at the end of April of each year:—

STOCKS IN 1,000 TONS

	April, 1935	April, 1936	April, 1937
Wheat	2,310	1,780	786
Rye	2,530	1,920	1,520
Total bread cereals...	4,840	3,700	2,306
Barley	450	410	330
Oats	1,320	1,350	1,302
Total fodder grains	1,770	1,760	1,632

Poor harvests, combined with increased bread consumption and increased use of wheat and rye as substitutes for fodder, have drastically cut into the available stocks. Stocks available at the end of April, 1937, are now below the officially estimated consumption of 2,530,000 tons of bread grain during the three months May, June and July, 1936. This fact is the more significant because stocks at the end of April, 1935, were double those of this year.

* * *

Such a failure has naturally upset the balance of Germany's foreign trade in agricultural products. The most outstanding proof of Germany's self-sufficiency in bread grain during 1933 to 1936 was an average export surplus of flour amounting to 169,000 tons. During the first four months of 1937, the figures show an *import* surplus of flour of 6,052 tons. But the shortage in bread cereals is even more strikingly shown by the following figures of net imports:—

NET IMPORTS IN TONS

	January–May, 1936	January–May, 1937	Annual Average for 1933 to 1936
Wheat	9,184	299,119	217,000
Rye	10,872	42,055	32,000
Barley	30,852	39,958	192,000
Oats	2,819	23,800	41,000
Maize	111,833	398,886	274,000

The figures for wheat, rye and maize show higher imports for the first five months of 1937 than the annual average of 1933 to 1936. Not even a bumper harvest this year could restore the conditions of 1933 and 1934, when bread cereals had to be exported and the peasants had to be induced to use wheat and rye as fodder. To-day, the direst punishments can be inflicted on peasants who dare to feed wheat or rye to pigs or poultry. To cut down the consumption of bread and bread-cereals as fodder a whole batch of emergency measures was recently imposed, as reported in *The Economist* of July 3rd. Nevertheless, the drive for self-sufficiency goes on. Quite recently General Göring inaugurated a kind of a second "battle of production" on agricultural fields, comprising land reclamation, improvement of arable land, cheaper fertilisers, higher prices for cereals, new State credits, and certain alterations of the famous "Hereditary Farm Law." The latter has now been virtually repealed by allowing tenants to run "Hereditary Farms." Four years have sufficed to prove that complete and immediate agricultural self-sufficiency is impossible in Germany, and that the hopes to achieve it were based on the low consumption figures experienced during economic depression.

* * *

The Foreign Exchanges. — The London market has experienced a very quiet week, with dealings mainly under the shadow of the holidays. The spot Paris rate has remained very steady at Frs. 132.80. The three months' rate was brought down early in the week to Frs. 2½ discount, but has since widened to Frs. 3 discount. There has been very little business in francs, but the French control has continued to give some support to both the spot and forward rate. There is, however, a better feeling in Paris, partly because of the absence of any new political developments, and partly because the Treasury is now benefiting from a seasonal influx of revenue, while the franc is receiving the support of the holiday tourist traffic. The Banque de France discount rate was reduced from 5 to 4 per cent. This week's return of the Banque de France shows an increase of nearly Frs. 7,000 millions in the bank's gold, this representing the revaluation determined upon at the beginning of July. Dealings in dollars have been very limited, at rates varying either side of $4.98. President Roosevelt's declaration against early stabilisation had no effect on the market. Belgas, guilders and Swiss francs have all followed the dollar, but forward belgas have slightly strengthened, with the three months' rate quoted at par to ½ centime premium.

* * *

The Money Market.—In spite of further currency withdrawals from the banks by the public, which raised the note circulation to a new high level, money has remained quite plentiful. A certain amount was called from the market on Thursday, but early in the week there was no calling at all. According to one report, loans against bonds were not quite so easily obtainable outside the clearing banks, and it was not possible this week to obtain money at less than ½ per cent.

	July 15, 1937	July 22, 1937	July 29, 1937	Aug. 5, 1937
	%	%	%	%
Bank rate	2	2	2	2
Clearing banks' deposit rate	½	½	½	½
Short loan rate:—				
Clearing banks	½–1*	½–1*	½–1*	½–1*
Others	½	½–⅝	½–⅝	½–⅝
Discount rates:—				
Treasury bills	½	½	½	½
Three months' bank bills	17/32–9/16	17/32–9/16	17/32–9/16	17/32–9/16

* Loans against Treasury bills and other approved bills and British Government securities within six months of maturity; 1 per cent. Treasury Bonds and other gilt-edged stocks within six months of maturity; and other collateral respectively.

The discount market fared better in the Treasury bill tender on July 30th. The quantity of bills allotted was raised from £40 to £45 millions, and the markets obtained 35 per cent. for the issue, against only 19 per cent. the week before. In consequence there was a little more activity this week.

* * *

The Bank Return.—As was anticipated the public's currency requirements over the holidays have raised the note circulation to the record high level of £503.8 millions. The Reserve has consequently fallen to £23.6 millions and the Proportion to the unusually low level of 16.6 per cent. Next week some of the holiday notes should begin to return from circulation, and so the Reserve and Proportion should be strengthened.

BANK OF ENGLAND

	Aug. 5 1936	July 14, 1937	July 21, 1937	July 28, 1937	Aug. 4 1937

Other securities	18·5	20·7	23·4	20·8	20·1
Proportion	*33.3%*	*22·7%*	*22·4%*	*19·1%*	*16·6%*

In contrast to a week ago, the Bank of England this week allowed Government securities to run off, the total contraction being £4.2 millions. The result of this movement, superimposed upon the public's currency withdrawals, is a reduction in bankers' deposits by £8.9 millions. This reduction, however, has still left the banks well supplied with funds, while at the same time it has prevented an undue contraction in the Bank of England's Proportion.

THE STOCK EXCHANGE

The Unilever Scheme

In 1929, when the twin Unilever undertakings presented their first accounts, the world still knew the gold standard, free exchanges and more or less free trade. The grouping of the vast Unilever organisation (which embraces 600 companies connected with the Jurgens-Van den Berghs and Lever interests) has always been recondite to the average investor. In principle, it has consisted of a liaison arrangement between the Dutch group represented by Unilever N.V. and the English interests represented by Unilever, Ltd. Around these two companies a gigantic solar system has revolved. In detail, however, the method of linking the two groups on a basis of parity of profits and assets has produced odd effects under the unforeseen and unforeseeable conditions of world trade in the last eight years. In particular, the ordinary dividends of both companies have been declared in Dutch guilders, while sterling shareholders have continued to rank on the capital basis of Fls. 12 to £1. This rate originally corresponded to the exchange parities, and it has remained inviolable during a period in which first sterling and then the guilder have forsaken gold.

This is the point from which examination of the consolidation scheme, announced this week, must necessarily start. The dividend distribution arrangement remains intact, and the reorganisation plan must needs therefore accommodate itself to this fixed context. Investors who had contemplated a more far-reaching scheme may be reminded, first, that no separation of the two groups was envisaged in Mr D'Arcy Cooper's outline of the scheme last May, and, secondly, that the avoidance of double taxation and the pursuit of co-operation and dividend equality, which were integral objectives of the original grouping, are also principal features of its present modification. On general grounds, it seems fitting that the grouping should be rearranged so that the Dutch company controls all interests except those in the British Empire, which are left to the British side. This arrangement carries on the design, embodied in the original grouping, of making more common use of the trading strategy and industrial experience of both sides, but adapts it to the changed conditions of to-day. This simple objective, however, has produced a scheme of no mean intricacy.

It may be said at once that the scheme is to the advantage of the ordinary shareholder in Unilever, Ltd. At the same time, the preferential rights of all parties have been scrupulously safeguarded and their status has even been improved. That this happy consummation is achieved by the British group divesting itself of nearly £12 millions of non-Empire assets at first sight heightens the mystery. How, then, is the ordinary shareholder in Unilever, Ltd., to benefit—for the scheme specifically anticipates a larger distribution of profits in proportion to earnings? The best way to answer this question is to analyse the actual proposals, step by step.

The scheme, in fact, is pivoted on the amalgamation of Unilever, Ltd., with Lever Brothers. The £8½ millions ordinary stock of the latter company is already held by Unilever, and provides more than half the parent company's profits. This amalgamated company (to be known as Lever Brothers and Unilever, Ltd.), will offer shares with identical rights, on a £ for £ basis, to the existing holders of £5,222,608 7 per cent. and £2,000,000 5 per cent. preferred stock, of £11,318,750 ordinary and of £100,000 deferred stock in Unilever, Ltd. At the same time, £4½ millions of the 20 per cent. preferred ordinary capital of Lever Brothers (which has always been held within the group) is to be cancelled. The net effect of these capital changes is next set out.

Capital Structure of Amalgamated Company

	Unilever		Lever Bros.		Lever Bros. and Unilever	
	Authorised	Issued	Authorised	Issued	Authorised	Issued
	£	£	£	£	£	£
7% pref.	6,500,000	5,222,608	40,000,000	30,762,082	35,984,690	35,984,690
5% pref.	2,000,000	2,000,000	...	...	4,015,310	2,000,000
8% "A" pref.	...	...	40,000,000	15,655,173	40,000,000	15,655,173
20% pref. ord.	...	...	20,000,000	6,787,312	2,287,312	2,287,312
Ordinary	12,000,000	11,318,750	30,000,000	8,500,000	59,031,438	11,318,750
Deferred	200,000	100,000	...	...	100,000	100,000
Total	20,700,000	18,641,358	130,000,000	61,704,567	141,418,750	67,345,925

Three main points may be emphasised. First, the £4½ millions of preferred ordinary capital of Lever Brothers disappears, and with it the right to issue £13.2 millions of further stock of the same class. Secondly, the 7 per cent. and 5 per cent. preferred stocks of Unilever are placed on the same footing as Lever 8 per cent. preference (and ahead of the junior preferred ordinary capital) with a consequent improvement of their cover. Thirdly, the resulting capitalisation, though still complicated, introduces a certain measure of simplification, compared with the independent structures of the two existing concerns.

In order to assess the significance of these changes in terms of prospective cover and earnings, the sale of non-Empire assets must now be considered. In recent years, Unilever N.V. has been handicapped by exchange difficulties, particularly in Germany. The result is perceptible in the disparate trends of the profits of the two concerns. In 1934, the British undertaking provided 47 per cent. of the total profits, and the Dutch company 53 per cent. Recovery has since favoured the British group, whose proportion of total profits rose to 57 per cent. in 1935 and to 67 per cent. in 1936. The consequences, in terms of ordinary earnings and dividends, are set out below:—

	Unilever N.V.			Unilever, Ltd.		
	Earned for Ord.	Earned	Paid	Earned for Ord.	Earned	Paid
	fl. '000's	%	%	£	%	%
1929	17,202	10·8	10	504,382†	22·7†	10†
1934	8,877	5·2	4	1,038,030	9·2	6·6
1935	7,136	4·2	4	1,233,897	10·9	6·7
1936	9,699	5·7	5½	1,765,510	15·6	7·3

† On £2,500,000 Ordinary Capital.

The inability of Unilever N.V. to achieve a material improvement in earnings has evidently tended to limit the distribution which Unilever, Ltd., has made from its own expanding profits. The excellent consolidated profits statements provided in the reports bring out this feature even more clearly. Out of consolidated profits of £3,463,038, last year, no less than £1,313,540 was retained by Unilever, Ltd., subsidiaries. In the absence of a substantial increase in the Dutch company's profits—an event mainly dependent upon the unfreezing of the mark—it is evident that Unilever Ltd. would be destined to set aside further amounts to reserve, or, alternatively, to make transfers to the Dutch company (and so attract double taxation) if it wished to increase its own dividends.

The scheme, in fact, neatly eludes both horns of this dilemma. By the transfer of non-Empire assets valued at £11,892,989 to the Dutch company, the original intention of preserving equal rights to both sides should be facilitated. In return, the British company receives adequate security and leaves £11 millions on loan in Holland at 3 per cent. The Dutch company's revenues will, on balance, be increased by a substantial amount. The new British company divests itself of certain sources of past income, which had been retained and not distributed. But, *pro tanto*, the Dutch company, with increased earnings, could distribute more; and the British company, duly keeping step, could raise its own dividend, for it would no longer be compelled to put back as large a sum as before to reserve under the terms of the agreement. More exactly, the British company would obtain relief from reserve allocations previously made necessary by *force majeure*, which might more than compensate for the loss of revenue from the making over of assets to the Dutch company. Here is an explanation of the mystery that under the scheme everybody seems to be better off. In fact, more of the aggregate earnings of the combined organisation should be divisible than before, and the wording of the scheme certainly holds out the prospect that more will be divided. Within the bounds determined by the fixed relation, for dividend purposes, of 12 guilders to the pound, no other permanent arrangement, presumably, was feasible.

We may now revert to the special position of the new British undertaking. The loss of revenue from the non-Empire assets of Lever Brothers will be more than offset by the net revenue brought in by Unilever Ltd. This excess, indeed, will cover the dividends on the new preference capital with something to spare. It follows that the preference and preferred ordinary capital of the new concern will enjoy better security than under the existing régime. It follows, further, that somewhat increased earning power will be available for the new ordinary capital. Next, therefore, it is necessary to relate the £11,318,750 ordinary capital of the new company to the recent equity earnings position of Lever Brothers. Since 1934, the rate earned for Lever Brothers ordinary has advanced from 25.7 per cent. to 30 per cent. on an increased ordinary capital of £8½ millions. The corresponding rate on £11,318,750 capital would be 22½ per cent. This represents the minimum prospective equity earnings ratio on Unilever Limited ordinary stock, now quoted at 42s. 9d. It clearly covers the prospect of an appreciable increase in dividends in the future.

It remains briefly to consider the implications of the new agreement as regards the distribution of profits and assets of the Dutch and British concerns. The new provisions seek, as we have said, to maintain the principle of equal pooling of profits and assets, on the fixed ratio of values of Fls. 12=£1. But in view of the disparate preferential capital of the new British company—which, at par value, will be equivalent to 83 per cent. of the whole, compared with a mere 14½ per cent. in the case of Unilever N.V.—it is now provided that the preferential shareholders will first look to the profits (and assets) of their own company. Surplus profits, however, will be available for meeting any preferential claims on the other company. Clearly, the balance of potential advantage under this arrangement, is on the side of the preference shareholders in the amalgamated British company. Residual profits, after the respective preferential dividend claims have been met, will be available under the new pooling agreement, as before, for the ordinary shareholders of both Dutch and English companies. Finally, the capital structure of Unilever N.V. remains intact, but holders of deposit certificates will become direct shareholders and will receive voting rights.

Such are the main outlines of and the provisional investment conclusions on the scheme. The control of the two groups over their destinies is jealously safeguarded; for though the combined votes of the preferential shareholders of the new British company would (if they were ever cast *en bloc*) outnumber those of the "inside" holders of ordinary shares, the "control" holds the deferred shares which carry an exclusive right to appoint the company's board. The scheme may be interpreted as an illustration that the controlling parties

Premier (Trinidad) Oilfields

LIMITED

(Incorporated under the Companies Act, 1929.)

Authorised SHARE CAPITAL	Issued or to be issued
£400,000 divided into 1,600,000 Shares of 5s. each ..	£210,000

The Subscription List will open and close next Thursday, the 12th day of August, 1937, for

an ISSUE AT PAR of

540,788 Ordinary Shares of 5s. each

An issue of 859,988 Ordinary Shares by the Company in November, 1936, was oversubscribed but application moneys had to be returned to subscribers owing to the action of the Governor of Trinidad in withholding his consent to the assignment to the Company of the Stollmeyer Concession which had an unexpired period of 9 years.

Negotiations with the Governor of Trinidad have since taken place and as a result *a direct Crown Lease of the property for a period of* 20 *years has now been granted to the Company.*

The property consists of a proved oil-bearing area of approximately 500 acres in the Palo Seco area of Trinidad. The first moderately deep well drilled to the "third sand" early in 1936 had produced up to 31st March, 1937, slightly more than 22,000 barrels.

TRINIDAD PETROLEUM DEVELOPMENT COMPANY LIMITED, the Managing Agents of the Company in Trinidad, is the third largest oil producer in the Island; it has been operating in the Palo Seco area for ten years and is at present operating successfully properties immediately adjacent to the Stollmeyer Concession. The Premier Company will have the benefit of the experience of the geological drilling and production staff of Trinidad Petroleum Development Company Limited, who will provide full facilities, including workshops, plant and equipment, stores, pumping plant and pipe-line and a deep-sea loading berth with storage space.

The Vendors to the Company are taking their purchase considerations (with the exception of a sum of £3,000 payable in cash) in Ordinary Shares of the Company and will be further interested in future developments of the Company through their holdings of options over a further 400,000 Ordinary Shares at par.

Copies of the Full Prospectus, on the terms of which alone applications will be considered, and Forms of Application will be obtainable on Tuesday the 10th day of August, from the :—

on both sides are determined to perpetuate a rigid dividend arrangement under conditions which have changed, in certain important respects, since it was first made. They have looked, however, to the spirit of the original intention of the pooling arrangement and have sought greater equality in earnings. That success should have been achieved in this task reflects no little credit on the respective boards and on their professional advisers. The next stage—submission of the detailed schemes to the Court—must necessarily await the new term. In the meantime, there is clear reason to anticipate that the dividend prospects of Unilever Limited ordinary, in its future guise, will be enhanced. Investors, however, should not jump immediately to the conclusion that a vast increase in distributions may be forthcoming. It is impossible to dogmatise, since the surplus earnings introduced by Unilever Ltd. to the new company's profit and loss account are not disclosed. But the incidence of N.D.C. is a factor which investors would do well to consider. Assuming that last year's profits apply, the liability of the amalgamated company for N.D.C. appears equivalent, very roughly, to 3 per cent. on the new ordinary capital. The conservative investor, further, will reflect that the Dutch concern, whatever its future potentialities, must inevitably be unable to pull its full weight until Central European difficulties have been overcome, and profits can not only be earned but withdrawn from countries with closed economies. This, under present conditions, is still the governing factor in dividend possibilities.

Investment and Company Notes

Holiday Week. — The August holiday has served appropriately this year as an opportunity to emphasise the markets' convalescence after pernicious anæmia, rather than as an excuse for a fresh falling away. The population of the floor of the Stock Exchange has thinned, as usual, and the thermometer has occasionally made those present wish themselves elsewhere. Nevertheless, improvement has progressed further in almost every market, and has even issued in larger buying orders. The nation, clearly, is spending more than for a long time past. The pre-Bank Holiday week passenger receipts of the London, Midland and Scottish and the London and North Eastern Railways were the highest for eight years, and those of the Southern and Great Western the highest for a decade. The note circulation is at a high level for all time, but the decision not to increase the credit base appears to indicate a state of official satisfaction with the current outlook, *inter alia*, of the gilt-edged market.

* * *

The issue market has seen that *rara avis*, a corporation loan in Bank Holiday week. Blackburn, as a borrower, possibly ranks a little lower in the market's scale of values than Middlesex, whose £3,500,000 offer was shown last week to be within the market's absorptive capacity. Blackburn's issue, however, is only one-seventh that of Middlesex, and what is more to the point, all temptation to stiffen the terms of the earlier and successful offer has been resisted. Other borrowers are waiting at the door but the market would, on the whole, prefer to see the principle of paid holidays extended to this part of the City's activities. Among industrial shares on the Stock Exchange, those of revived and reviving shipping concerns have been well in evidence this week. A moderate volume of speculative activity has also been observable in South African gold mining shares. Altogether the amount of floating stock in every part of the market has now been so appreciably reduced that even a moderate rise in demand would have a highly pleasing effect on the Official List. It remains to be seen whether investors have fully recovered the courage of their convictions.

* * *

Foreign Bond Movements.—The past month has been eventful for the foreign bondholder, and has provided, incidentally, a clear example of the advantages of diversification in an essentially risky field. Despite considerable price movements in the component series, the index of 110 foreign bonds compiled by the Municipal and General Securities Company is scarcely changed at 116.7 (January-June, 1934 = 100). The movements of the past month are shown below:—

Average January-June, 1934=100

	Europe	Near & Far East	Egypt	South and Central America: States	South and Central America: Provinces	South and Central America: Total	Complete Index	*Undefaulted Bonds*	*Defaulted Bonds*

							116·7	*106·3*	*128·6*

Note: Figures in brackets show number of bonds.

The war in Northern China is responsible for an eight-point fall in the Far Eastern index, but this large movement is offset by the improvements in the European and South American (States) indices. The 4½ per cent. rise in European issues is attributable to defaulted bonds—Bulgarian, Roumanian and Greek.

* * *

The Week's Bond News.—The records of the past month, however, reflect only part of the recent foreign bond news, which includes the publication of the full report of the Council of Foreign Bondholders, with its invaluable statistical appendices covering the principal foreign countries, and the record of the corporation's achievements in improving the lot of the foreign bondholder last year. The news from China and Japan is of more critical import. At a time when serious consideration was being given to the possibility of further financial assistance to China for railway and public works construction, the Japanese intervention in North China—which is now reported complete—has materially affected the situation, and it must be confessed that doubts are reflected on the real progress of China towards an effective national administration. From the bondholder's point of view, the potential effects of the present situation upon the Customs and Salt revenues of China demand careful examination, while the assumption by Japan of further financial burdens to prosecute her campaign is inevitably reflected in the prices of her obligations. From a purely fiscal aspect, the bonds of both countries are adequately covered, but cover calculations become totally irrelevant in a state of war, actual or potential. Nearer home comes the news that the London agents for the Roumanian Stabilisation Loan Monopolies Institute 7 per cent. sterling bonds of 1929 are unable to accept the offer to pay 65 per cent. of the coupons due August 1st and February 1st next. Funds covering this payment have been provided through the clearing, and it is claimed that no larger sum can be remitted, owing to collateral undertakings with holders of direct loans of the Roumanian Government. In view of the special security of the principal debtor—the Institute and not the State—and the adequacy of cover provided by the clearing, the banking agents are not prepared to recommend the acceptance of the offer in full settlement —an attitude which appears entirely reasonable, despite the fact that bondholders may be tempted to take the cash and let the credit go. Finally, negotiations with the Greek financial delegation have broken down. The mission had a preconceived limit of 50 per cent. payment, which was clearly unacceptable.

* * *

Capital Issues in July.—Our computation of new capital issues on the old basis shows a fall from £25.9 millions to £14.9 millions in July, but a considerable increase to nearly £60 millions is recorded on the revised basis of computation. The recent figures are shown below:—

(000's omitted) Excluding Conversions

Monthly Average (Old Basis)	United Kingdom	British Possessions	Foreign Countries	Total
	£	£	£	£
1933	17,520	2,429	449	20,398
1934	11,474	2,494	125	14,093
1935	18,388	1,270	21	19,679
1936	19,195	2,035	58	21,288
(New Basis)				
1935	27,233	2,443	97	27,773
1936	37,370	2,823	964	41,157
Monthly Total (Old Basis)	Govt.	Other		
May, 1936	*Dr. 300*	*15,078*	*2,014*	*208*	*17,000*
May, 1937	*Dr. 400*	7,001	3,077	Nil	9,678
June, 1936	*Dr. 150*	8,556	1,676	30	10,112
June, 1937	*Dr. 650*	24,507	2,067	Nil	25,924
July, 1936	*Dr. 300*	16,621	2,669	138	19,128
July, 1937	*Dr. 750*	12,367	2,297	940	14,854
(New Basis)					
May, 1936	*Dr. 300*	*28,442*	*2,387*	*292*	*30,821*
May, 1937	*Dr. 400*	22,551	3,314	Nil	25,465
June, 1936	*Dr. 150*	20,752	2,019	168	22,789
June, 1937	*Dr. 650*	29,690	3,788	40	32,868
July, 1936	*Dr. 300*	35,691	6,763	138	42,292
July, 1937	*Dr. 750*	52,838	6,218	1,513	59 819

New issue business has continued active, though not at the same level as last summer. The increase recorded by our "new basis" computation arises mainly from the inclusion last month of about £29 millions in respect of the Anglo-Iranian bonus issue.

* * *

Great Western Statement.—Rail stockholders may well be gratified by recent news, though they still await the National Wages Tribunal award. Of the four half-yearly statements, only L.M.S. was disappointing. The L.N.E. statement was surprisingly good, and the Southern and Great Western both highly satisfactory. Although Paddington is commonly credited with the intention of maintaining a 3 per cent. ordinary dividend until the reserve depletions during the depression have been made good, the board's gesture in raising the interim dividend from the ¼ per cent., paid for each of the four years to 1936, to ½ per cent. was welcomed by the market. The revenue statement is no less satisfactory. Gross receipts rose by £887,000 compared with the first half of 1936. Of this increase, railway receipts accounted for £694,000, to which passengers contributed £224,000, goods traffics £462,000 and miscellaneous receipts £8,000. The ancillaries, therefore, provided no less than £193,000, and it is evident that this increase in revenue reflects the higher level of activity at the company's docks, which marches with the increase in goods traffics. This double equity in South Wales recovery is an important feature of the Great Western's economy. The advance in revenue from all sources amounted, in fact, to £500,449, and 56½ per cent. of the gross increase has thus been preserved net. From the earnings' aspect—subject always to the possible effects of higher wages and increased costs—the improved industrial equity of Great Western Ordinary is now becoming important. While it would be premature to count on more than the maintenance of recovery in South Wales, this point remains true. But at this stage it would be equally premature to expect more than 3 per cent. on G.W.R. ordinary, despite these indications of advancing earnings.

* * *

Guinness in Transition.—It is not easy to draw conclusions from the 1937 accounts of Arthur Guinness, Son and Company. The revival in trading profits which progressed vigorously in 1934 and 1935 made slight headway in 1936, and has given way to a slight recession in 1937 (all years to June 30th). Simultaneously the decline in dividend and interest receipts has continued —presumably owing to the liquidation of investments to pay for the new Park Royal brewery—and total gross

OLD GOWRIE
TOBACCO
"For almost a century skilled craftsmen have been tending, maturing and blending tobaccos for Rattray's in Perth; their Virginian blends—Old Gowrie and Hal o' the Wynd—are known the World over for their fineness—their unique flavour. Rattray's tobaccos continue to be blended by hand by skilled craftsmen who love and understand their art."
Price: 20/ per 8lb., post paid. Send 5/2 for sample ½ lb. tin, post free. Export: 22/8 per 2 lbs., plus post.
Chas. Rattray
PERTH, SCOTLAND
Rattray's Hal o' the Wynd Tobacco is the full-bodied strength of Old Gowrie.

HAVE YOU TRIED
RE-FORMED
SHELL
All Shell is now made by the 're-forming' process which re-arranges the molecular structure of the petrol. The result is even smoother running, better pick-up, and an absence of 'pinking'.
YOU CAN BE SURE OF SHELL

profits have fallen from £2,180,047 to £2,088,610. A three-year profits comparison follows :—

	Years to June 30th 1935	1936	1937
	£	£	£
Trading profit	1,968,132	1,978,705	1,901,594
Dividends and other receipts	206,982	201,342	187,016
Total profit	2,173,114	2,180,047	2,088,610
Maintenance and depreciation	146,085	141,554	149,339
Sundry expenses and fees	13,819	12,620	13,717
Preference dividend	93,000	92,250	90,750
Ordinary stock :—			
Earned	*1,920,210*	*1,933,623*	*1,834,804*
Paid	1,685,625	1,669,688	1,642,500
Earned (%)	*33·0*	*33·6*	*32·4*
Paid (%)	29	29	29
To reserve	200,000	200,000	200,000
Carried forward	846,309	910,244	902,548

Part of the fall in profits is due to the higher rate of tax deducted, and, when all is said, earnings have fallen only from 33·6 per cent. to 32·4 per cent. Nevertheless, any fall for a year of increased British beer (and presumably stout) consumption is disappointing. So far as shipments from the Free State provide a true guide to Guinness's non-Irish consumption, they suggest a fall—at 1,261,100 standard barrels for 1936 against 1,331,600 for 1935. And for the first half of 1937 the fall has continued. With the Park Royal brewery entering production, however, there may be a special explanation for these falling shipments, which by themselves could easily have caused a much greater recession in profits during the inevitable dislocations of starting a new plant. The present position of the company is, in fact, highly interesting and will doubtless receive an informative survey from the chairman at next week's meeting. Unlike most English brewers, Guinness has no system of tied houses, from whose improvement the English brewers are benefiting. Instead, the company is equipping itself with the most modern production plant and is selling a nationally advertised product. The results of Park Royal have yet to be seen. On the Stock Exchange, highly favourable results were discounted too far ahead. There is no warrant, from the latest accounts, for falling into the contrary error of finding Park Royal a disappointment before its career has started. The £1 stock units have fallen back to 6⅝ and yield £4 9s. 9d.

* * *

Watney's "Improvement" Finance. — The trading profits of Watney, Combe, Reid have still some way to go before the record level of £2,373,476 in 1929–30 is regained, but the steady recovery which began in 1934 has been fully maintained. Trading profits amount to £2,028,808 for 1936–37, against £1,997,869 for 1935-36, and the dividend is again increased, from 18 per cent. to 19 per cent., being generously covered by earnings of 34.0 per cent., against 32.2 per cent. Profits for the last three years have been as follows:—

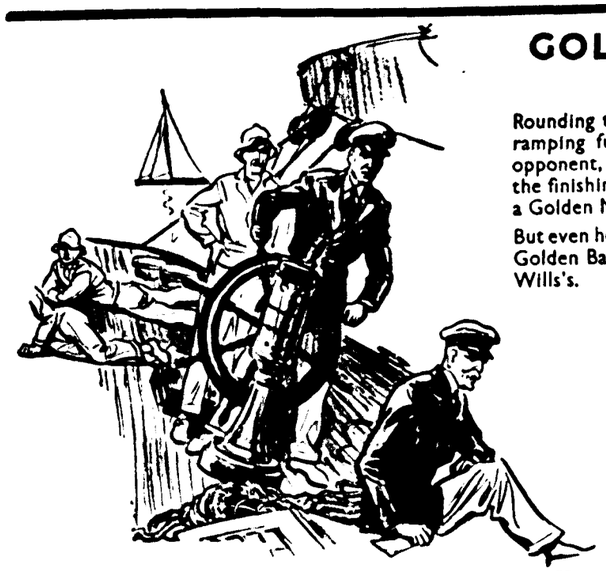
	Years to June 30th 1935	1936	1937
	£	£	£
Trading profit	1,928,133	1,997,869	2,028,808
Rents, dividends, etc.	518,512	533,143	544,128
Total profits	2,446,645	2,531,012	2,572,936
Trade and office expenses	752,683	724,753	773,572
Fees, licence duties and deposit interest	85,460	80,439	75,077
Repairs and depreciation	300,808	337,888	295,703
Debenture interest	263,571	259,008	254,441
Pref. and pref. ord. dividends	211,663	211,663	211,663
Deferred Ordinary Stock :			
Earned	*832,460*	*917,263*	*962,480*
Paid	509,668	573,374	605,228
Earned %	*29·1*	*32·2*	*34·0*
Paid %	16	18	19
To reserve	300,000	350,000	350,000
Carried forward	324,445	318,334	325,586

Like most of the large property-owning brewers, Watney's are steadily overhauling their licensed houses, rebuilding or refitting, and where possible converting leaseholds into freeholds. The company has ample cash resources to finance this programme (with £1,826,000 in Government securities and £427,000 cash), but its policy is apparently to pay for improvements out of the profits retained each year, and so to keep the book value of properties down. Thus, in the last three years no less than £1,000,000 has been put to property improvement and contingencies reserve. But practically the whole of that amount has been retransferred to cover the improvement programme, and the reserve is only £1,023,000, against £973,000 in 1935, while properties are practically unchanged at £14,492,000, against £14,401,000 (1935), and surplus liquid assets total £1,045,000, against £1,171,000 (1935). So long as the improvement programme continues, investors may fairly conclude, the directors will wish to maintain their policy of financing it from the year's retained profits, and may thus preserve the ample margin between earnings and dividends. The £1 ordinary shares yield £4 13s. 6d. per cent at the present price of 84s.

* * *

Tootal Broadhurst Lee.—While the cotton industry generally is still some way short of earning normal profits, Tootal Broadhurst Lee is now enjoying a high level of prosperity. For the year to June 30th, net trading profit has increased from £197,696 to £255,061 after providing £40,000 (against £20,000) for employees' bonus. Since the comparable profits figure for 1934-35 was £148,514, it will be clear that the latest year's rapid progress is not fortuitous. In terms of dividends, the company's record is as stable as its profits history is expansionary. The board, however, has unbent to the extent of supplementing the regular 10 per cent. dividend by a 2½ per cent. cash bonus. That this policy gives no hostage to fortune is abundantly evident from the fact that a 12½ per cent. distribution requires £80,367 net, and is covered by earnings of £150,351—equivalent to 23½ per cent. on the ordinary. After a further transfer of £25,000 to reserve, the balance carried forward is increased from £67,085 to £112,060. General expansion is shown in the active items in the balance sheet, and the report, as a whole, conveys a highly favourable impression. It instances the success which can attend a progressive commercial policy, the enterprising exploitation of brand names, and the introduction of such technical improvements as creaseless fabrics which are assured in advance of an excellent demand. At 55s. the ordinary shares yield £4 15s. 6d. They offer a progressive interest in a moderately capitalised textile concern.

* * *



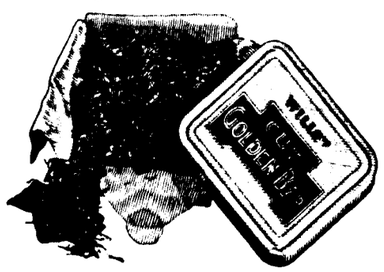
Armstrong Whitworth and Scotswood. Mr Bruce Gardner's speech at the Armstrong Whitworth Securities meeting last week underlined the advantages of careful nursing of assets which, but a few months ago, could not have commanded their present value. The focal point of this custodianship is the disposal of the Scotswood works. In recent years, the volume of railway engine business has been wholly inadequate to support this large plant, for home demand has been sub normal, and export demand hardly existent. During the past year, relief has been obtained by the large orders—particularly from the L.M.S.—for locomotives, under the Government agreement for financial assistance to the companies. These orders have transformed the situation, but only temporarily. Turning towards other outlets for employing the plant, the directors sought and obtained consent from Vickers-Armstrongs for the lifting of the prohibition on the manufacture of armaments at Scotswood. Again, however, the circumstances were clearly exceptional, and afforded no permanent solution. The board decided—wisely, it will be agreed—to negotiate a sale of the Scotswood works, for a better bargaining position was clearly enjoyed for obtaining a "going concern" price than at any time since the depression. The goodwill drawings and dies of the locomotive business have also been realised, on an equally satisfactory basis. Following the disposal of the interests in Craven Brothers, the remaining assets consist largely of holdings in Pearson and Knowles and Partington Steel, which hold together a substantial interest in Lancashire Steel. These holdings now have a far higher value than could have been placed upon them even a short time ago. The salvage work has thus been eminently successful, and the liquidation may even leave something over for the ordinary capital, after meeting preference requirements.

* * *

Cables Investment Progress. — The results of Cables Investment Trust are only of indirect market importance, for the ordinary stock is held equally by Cable & Wireless (Holding) and Globe Telegraph & Trust. The substantial increase in revenues recorded by the Trust for the year to June 30th, therefore, will eventually emerge in the equity earnings of the two holding companies. As a relatively new—and actively managed—trust, however, the company's achievements deserve comment in a wider context. Income from investments rose from £273,457 for the previous 11½ months' period to £356,176; net profits were more than doubled (£229,349 against £105,725) and the amount earned for the ordinary capital has jumped from 2 per cent. to 7.6 per cent. An increase in the ordinary dividend from 1½ per cent. to 5 per cent. is therefore comfortably covered. These results are impressive, but the investment policy of the Trust also merits study. Investments at cost total £7,282,866, against £7,115,008, and show a modest appreciation. But their distribution has been markedly changed. The percentage invested in British funds has been greatly reduced from 10.109 to 1.630, while Dominion and Corporation stocks and railways are also lower. On the other hand, the proportion of industrial shares has been increased from 18.458 to 26.403 per cent., and of iron, coal and commodity shares from 9.539 to 14.117 per cent. By this means, the overall rate of return on the capital has been raised from 4½ per cent. (the rate at which the investments were originally acquired) to over 5 per cent. The managers apparently subscribe wholeheartedly to the view that current income and future salvation are to be found to-day in equity investments rather than in large gilt-edged holdings.

* * *

Company Results of the Week.—Apart from the reports discussed on earlier pages, a limited number of industrial results are available this week. Several appear in the brewery group, where *Friary, Holroyd & Healy's* report a slightly increased net profit of £139,161, and maintain the 13 per cent. dividend. *Showells Brewery* and *Colchester Brewing* have also published their reports, showing somewhat improved profits. Among textile companies, *Kelsall & Kemp* record an appreciable improvement in net profits from £44,533 to £55,314, which is taken to the balance carried forward. *Isaac Holden*, the woolcombers, reveal a somewhat sharp fall in profits from £48,240 to £39,713, which compels a reduction in the dividend to 12½ per cent. tax free. Presumably, rising costs have absorbed an increased proportion of the fixed commission rates. Significant improvements in net revenues are recorded by the *Edinburgh & Dundee Investment* and *Second Scottish Western* trusts. The report of *John Greenwood Millers* shows that the 12 per cent. dividend (against 11 per cent. for 1935-36) is well covered by net earnings of £52,399. In common with other timber merchanting concerns, *Gabriel Wade & English* have achieved a substantial jump in net profits from £67,700 to £120,283. Perhaps the week's best dividend announcement comes from *Burma Corporation*, whose final dividend of 11 annas per share raises the total to 18½ annas, compared with 12 annas for the previous year.



GOLDEN MOMENTS

The America's Cup

Rounding the mark, with sheets hard in he sails her ramping full on the last leg to windward. His opponent, close astern, cheers him as he crosses the finishing line—to win the America's Cup. What a Golden Moment it must be for him.

But even he cannot buy a better tobacco than "Cut Golden Bar" at a shilling an ounce. But it *must* be Wills's.

THE WEEK IN THE MARKETS

THE STOCK EXCHANGE

SETTLING DAYS

TICKET: AUGUST 10 ACCOUNT: AUGUST 12

THE Stock Exchange returned after its Bank Holiday with no less inspiration than at its departure. The improvement in the Anglo-Italian diplomatic position, signalised by the exchanges between the Prime Minister and the Duce, were accepted as an earnest that political influences on the market would become more favourable in the immediate future. The improvement on Wall Street also helped, and while the volume of business was seasonally small, the tone remained unmistakeably good.

Little business was transacted in the gilt-edged market, but conditions were firm, and there was some mid-week purchasing of Funding issues. War Loan and Conversion 3½'s, however, also shared modestly in the improvement. Home corporation scrips were slightly higher, despite the evidence of increased competition from new issues.

The Far Eastern group made heavy weather under the threat of widespread hostilities. The Chinese railway issues suffered most, having risen most before the Japanese invasion, but there were also heavy falls in the senior issues. Japanese issues were fractionally higher in mid-week, though merely on bear covering. Brazilian issues receded on reports that the New York negotiations for a large loan had been broken off. In the European list, Greek issues reacted on the breakdown of the debt negotiations in London.

The usual holiday week activity in home rail stocks was not seen this week. The disappointing L.M.S. statement was still remembered by the market, which made no positive response to the very impressive holiday traffics. Sellers, in fact, were abroad, and since little supporting business was received, small net losses among the equity stocks were recorded. Argentine railway stocks attracted little business, with the exception of Cordoba issues, but the ordinary stocks were well maintained, until the fall in wheat occurred.

In the industrial markets, the Wall Street recovery assisted sentiment, and while business was limited, the atmosphere was cheerful. An excellent tone prevailed in the heavy industry section, with a keen demand for Vickers and T. W. Ward, while smaller improvements were spread throughout the list. Coal shares generally were better, led by Wm. Cory. In the motor section, A.E.C. improved, and Standard enjoyed a good demand. In the aircraft group, Rolls Royce returned to favour.

The Unilever re-grouping scheme (discussed on page 302) was anticipated with a rise in Unilever ordinary, and followed by a strengthening of the preference issues. Textiles were generally firm, with Tootal Broadhurst Lee better on the results (see page 306) and Courtaulds fractionally higher. Guinness, however, reacted on the slight fall in profits disclosed by the report (discussed on page 305), although Watney strengthened on the figures (also discussed on page 306). Tobacco shares improved at first, but became less active. In the miscellaneous list, small changes prevailed, but the tone was good. Turner and Newall were again in demand, and small gains occurred in Murex, British Oxygen and cement shares. Shipping issues closed somewhat easier in mid-week.

Rubber shares gathered momentum on the firmer appearance of the commodity in mid-week. Dealings were mainly professional and rather narrow. The tea share market remained quiet, but the demand for Indian teas persisted, and since shares were difficult to obtain, prices made a full response. Moderate business was reported in oil shares, being chiefly concentrated on Shell and Royal Dutch.

The recent revival in the Kaffir market, although largely professional in character, continues with no lack of confidence. Demand persists also from the Cape and Paris, and gains were registered on a wide front. The dividend-paying Kaffirs, whose yields first attracted attention, stepped from the limelight in favour of the developing counters, with West Wits. again in the lead. Rhodesian copper shares were also active, while West African gold shares advanced. Base metal issues were generally good, with Burma Corporation outstanding on the impressive dividend.

OVERSEAS STOCK EXCHANGES

NEW YORK

AT the end of last week and on the opening day of the current week there was a marked improvement in sentiment, and prices generally went ahead, aided by the announcement of certain price increases by Ford, and not in the least perturbed by the Senate's approval of the minimum wages and maximum hours bill. On Tuesday, the volume of business increased, but prices moved slightly downward in many groups, including steels and motors. Copper and rubber issues moved against the trend. In mid-week the improvement was resumed, inspired mainly by optimism over the railroad prospect. It is hoped that a compromise solution will be reached under which the men will be granted a 6 per cent. increase in wages instead of the 20 per cent. asked for. Copper shares continued to enjoy the favour of operators who for some time have found a refuge in this section of the market, and there were improvements in various industrials. The bond market became more active as the week progressed. Second quarter earnings, according to reports now being issued for many companies, prove the pessimism of Wall Street in past months to have been unjustified, and other business reports continue excellent. *Iron Age* estimates steel mill activity for the current week at 85 per cent. of capacity, unchanged on a week ago, and reports a revival of rail equipment orders, although the volume of new business is smaller than for several months past, and orders on the books are declining.

PARIS

AFTER the Bourse reopened on the formation of the new Government, prices shot up under the lead of Rentes (in which gains of anything up to 5 francs were recorded), and all sections of the market advanced in rough proportion to the degree of further devaluation of the franc. An additional stimulus to speculation was provided by the cancellation of some recent Bourse rules concerning the amount of cover. This spurt, however, was not long maintained, and in the meantime prices have receded. The settlement of July 2nd, postponed from the end of June, provided a disturbing influence, and the early part of the month brought fears of drastic new financial measures. Yet when details were available, prices hardly moved, for the new taxes were more reasonable than had been expected. Second thoughts, however, were less favourable to the Finance Minister. In the latter part of the month, holiday influences prevailed, and no particular tendency emerged.

	July 1, 1937	July 15, 1937	July 30, 1937

THE SCOTTISH INDUSTRIAL ESTATE

AT NORTH HILLINGTON—NEAR GLASGOW
OFFERS EXCELLENT ADVANTAGES
TO THE MAN WITH ENTERPRISE

North Hillington Estate is situated in the heart of the Scottish Industrial Belt—near Glasgow. There is a 2,000,000 doorstep market and a 6,000,000 near-by market. Modern Clydeside docks are at hand and Firth of Forth docks are only 25 miles distant, which places the East and West ports of Scotland within easy reach. Transport facilities by air, river, road and rail are convenient. Thus distribution is assured for both home and foreign markets.

By the services and amenities placed at his disposal, the manufacturer has the opportunity of an economic start to his business and encouragement to its growth.

Factories for either light or heavy industries can be leased. Capital expenditure for building is eliminated. Rents are low as the company does not operate for profit. Factories are heated by the estate. Process steam is available. The Estate is a free delivery and collection area for railways. Railway sidings are available if required. Insurance and upkeep of factories and upkeep of roads are paid by the estate.

For full information and particulars apply to

SCOTTISH INDUSTRIAL ESTATES LTD.
41 ST. VINCENT PLACE, GLASGOW C.1

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields of fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

BERLIN

PRICES of both shares and fixed-interest securities rose in July, reaching the year's highest point. Heavy industrials, however, and most of the other standard shares were dull, interest being mainly concentrated on individual specialities and, temporarily, on the shipping, paper pulp, rayon, and real estate company groups. Towards the end of the month minor industrials in the "cash list" led the market. Speculative trading in Bemberg and Vereinigte Glanzstoffe continued, and both, despite reactions, netted considerable gains. Steel Trust, Mannesmann, and other leading steels gained from 3 to 5 points; the leading chemicals rather less; Siemens and Halske around 8 points, with A.E.G. and other electricals also showed firmness. In the last week of the month Hamburg-Amerika and Norddeutsche Lloyd were quoted on the new capital reconstruction basis, opening respectively at 93½ and 101, from which, however, they slightly receded. Reichsbank and the commercial banks were firm, the chief exception being Dresdner which remained unchanged. In the home bonds market, particularly in mortgage-bank issues, shortage of stock prevailed, and at times buyers were rationed. Dollar bonds were inert but in general firm. The month closed steady for bonds, irregular and predominantly weaker for shares. The official shares index (1924–26 = 100) for June was 112·81 as against 111·80 for May; bonds 98·85 against 98·80.

AMSTERDAM

JULY proved a quiet month on the whole, with prices well maintained and a satisfactory undertone prevailing. The Bourse managed somehow to keep a nice balance between unsettling foreign influences and good business reports at home. At the beginning of the month the volume of business was very small, but price fluctuations kept within narrow limits, and activity expanded as the political outlook improved temporarily. Commodity shares were in good demand, though the brightest features in mid-month were shipping issues, which continued active throughout a number of quiet sessions. The tendency became more irregular as the international horizon began to cloud over again, but there were no important price movements. Towards the end of the month, advances occurred in Philips Lamps, and later, Unilever N.V. came to the fore.

CANADA

THE Canadian stock markets were nervous during the latter half of June, adverse crop reports from the West, labour troubles and the uncertainties of the international situation all contributing to the reaction. No improvement was anticipated in July, but unexpectedly an impressive rally occurred early in the month in industrials and public utilities. The advance in prices has not been great, but steady and well sustained. The best gains have been in newsprint and public utility stocks. The mining market has also recovered considerably. In the latter part of July, interest in utilities and construction stocks was well maintained. The Bureau's "Investors" Index, which stood at 129·5 on June 18th, fell to 128·2 on July 2nd, but by July 15th recovered to 131·6. Apart from weakness in Saskatchewan and Alberta bonds on the crop failure, the bond market has been firm with a good selective demand. The Bureau's index for long-term Dominion bonds improved from 114·9 on June 9th to 115·1 on July 6th.

CAPITAL ISSUES

ALTHOUGH the capital market generally has taken holiday investors have been presented with the unusual feature of a British Corporation issue in bank holiday week. The *Blackburn* loan, much smaller than the Middlesex issue last week, is arranged at the same price and similar terms, without any emphasis upon the small, but definite, distinction between the credit ranking of a leading county and that of a medium-sized borough. The Middlesex scrip being at a moderate premium, success was generally anticipated for the loan, but the market is beginning to question whether conditions really exist for a rapid succession of loans (reported to be arranged) without careful market nursing and perhaps a revision of terms. Statements for information have been published regarding the 4th series of *Konversionskasse für deutsche Auslandsschulden* sterling bonds and the *Second Conversion Investment Trust*, into whose shares holders of 650,236 sub-units of British Empire Fixed Trust Series "B" have elected to convert.

COMPANY MEETING

BRAZILIAN WARRANT AGENCY AND FINANCE COMPANY, LIMITED

POSITION AND OUTLOOK

The annual general meeting of the Brazilian Warrant Agency and Finance Company, Limited, was held, on the 30th ultimo, at Winchester House, Old Broad Street, London, Mr Arthur Whitworth (chairman of the company) presiding.

The Chairman, in the course of his speech, said that the hopes of better times for the Cambuhy Coffee and Cotton Estates expressed at the time of its reconstruction had been justified by the dividend of 7 per cent. just declared for the year 1936, which would affect the company's holding of 50,000 shares. In the year under review their own company's trading profits were very nearly stationary, but instead of a loss in exchange of £34,651 there was a profit in exchange of £17,535. There was also at the end of the year an increase of over £31,000 in the contingency reserve, but owing to the recent heavy fall in security values the reserve at the present time stood at even a lower figure than at the end of 1935. In view of that and of the difficulty they had in increasing the trading profits, it was not possible to suggest paying a dividend to the ordinary shareholders.

CHAIRMAN'S VISIT

He had just returned from a visit to Brazil, where he had spent several interesting weeks at Rio, Santos, Sao Paulo, their Fazenda at Gallia and at the Cambuhy property, the company's cotton gins and presses at Gallia, Tabatinga and Nova Granada, which had now been working for two seasons and were justifying themselves as centres for the supply of cotton, cotton-seed and linters, of which their Sao Paulo branch disposed. They believed that the future of the Sao Paulo branch was now brighter and that it would be able to take an increasing share in the acquisition and marketing of the growing trade of cotton in the State of Sao Paulo. An exhibition of the States' industrial activities and a display of the energetic enterprise of the Paulistas which he saw was convincing in its variety and excellence of production. He could not but think that there were opportunities there of development in which their company could take a part. That would, of course, only be possible if they thought it a favourable moment to transfer some of their sterling resources to Brazil. Before that was done they would have to make as certain as was reasonably possible of the future course of exchange and above all of its stability.

POLITICAL FACTORS

At the present moment there were political factors which could not be lightly disregarded. Dr Vargas's tenure of office as President was coming to an end. He would vacate office with the respect of the great majority of his fellow-countrymen and the good wishes of others who had interests in Brazil, but none could foretell what a change of Presidents might entail, and though he heard nothing to inspire misgivings it seemed only prudent to wait on events before embarking on an uncharted course that might mean much to the future of the company.

It seemed that they were at the parting of the ways. The ordinary shareholders had had no adequate return for years, and to some it might seem desirable to exercise their powers and pay off part of the preference capital. The figures might show that they had the surplus to do that, but he believed that the loss of so much capital would not only seriously affect the credit of the company but irretrievably restrict their ability to pursue any policy of expansion in the country where their trading interests were centred. He asked the shareholders, therefore, to be patient for a little longer.

The coffee position had gone from bad to worse, and it was only with the hope that some early solution would be found that companies like their subsidiary, E. Johnston and Company, could find any encouragement to continue in business. Generally, he was much impressed with the position the company occupied in Brazil, particularly in Santos, where they were equipped through their subsidiary warehouse and transport companies with splendid material to do a far larger business than was possible to-day; for the full use of their warehouses depended in the main upon free movements of coffee, and while these were so restricted, those subsidiary companies could not possibly earn the money that they used to do in the past.

The report was unanimously adopted.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended July 31, 1937, amounted to £10,905,000, against ordinary expenditure of £19,476,000. After allowing for an increase in Exchequer Balances of £143,020, the operations for the week, as shown below, increased the gross National Debt by £8,714,000, to approximately £7,995 millions.†

CENTRAL AND SOUTH AMERICAN EXCHANGE RATES

The Bank of London and South America, Ltd., issues the following details relative to quotations for certain of the South and Central American exchanges. All these exchanges, with the exception of that of Bolivia, are related to the United States dollar, and the approximate sterling rates may be obtained by applying the dollar-sterling exchange rate :—

Bolivia. Commercial Banks' "free" selling rate was 120 bolivianos per £ on June 18th.

Colombia. Sight selling rate 175·80 pesos per 100 United States dollars on July 1st. This rate applies to holders of permits buying in the "open" market.

Ecuador. Official sight selling rate on New York was maintained up to July 2nd at 10·50 sucres per United States dollar.

Guatemala. Sight rate on New York is maintained at 1 quetzal per United States dollar, but a commission of 1 per cent. is charged by the Banco Central for the sale of drafts.

Nicaragua. Sight selling rate on New York was officially fixed at 2 cordobas per United States dollar on March 19th, 1937.

Salvador. Sight selling rate on July 3rd was 2·51 colones per United States dollar.

Venezuela. Sight selling rate on New York was officially fixed at 3·19 bolivares per United States dollar on April 27th, 1937.

• Exchange controls are operative in these countries.

GOLD MARKET

Messrs Samuel Montagu and Company write on August 4, 1937 :

The Bank of England gold reserve against notes amounted to £326,400,625 on July 28th, showing no change as compared with July 21st.

Conditions in the open market continued to be quiet and during the five working days under review offerings were on rather a small scale, the amount disposed of at the daily fixing being about £765,000. Demand was general and prices again ruled at about dollar exchange parity.

The s.s. "Strathnaver," which sailed from Bombay on July 31st, carries gold to the value of about £515,000.

SILVER MARKET

Indian demand continuing good and offerings poor, prices improved until 20¼d. for cash and 20⅜d. for forward were quoted on July 30th. This higher level proved more attractive to sellers and prices sagged until to-day when we quote 20d. for both deliveries, the same as on Wednesday last.

The general outlook remains unchanged, with the likelihood of the continuance of a heavy tone at any levels appreciably above those at which trade or other support from America might be anticipated.

Quotations for gold and silver are shown below :

1937	Price of Gold per Fine Ounce	Equivalent Value of £ sterling	Price of Bar Silver in London per ounce standard : Cash	Price of Bar Silver in London per ounce standard : Two Months	Price of Silver New York per ounce 999 fine

‡ For 11½ months. (b) Per 5s. share. (c) Per £1 share. ‡ Tax free.

W. T. HENLEY'S TELEGRAPH WORKS.—Interim 5 per cent. on ordinary shares (against 7½ per cent. last year before issue of 100 per cent. share bonus).

GRAND UNION CANAL.—The payment of a preference dividend will not be considered until the completion of the year's accounts.

CABLES INVESTMENT TRUST.—Final dividend of 3 per cent., making 5 per cent., against 1½ per cent. for the initial 11½ month period.

INTERNATIONAL NICKEL OF CANADA.—Dividend for third quarter of 50 cts. per common share; same as for previous quarters of 1937, but 15 cts. more than third quarter of last year.

A. GUINNESS, SON AND COMPANY.—Final dividend of 12 per cent and bonus of 5 per cent., making 29 per cent. (same).

ENGLISH VELVET AND CORD DYERS' ASSOCIATION.—It has been decided to defer the 5 per cent preference dividend for the half-year to June 30th last until accounts for 1937 are available.

BURMA CORPORATION.—Final dividend of 11 annas per share free of Indian and British tax, or, at 1s. 6d. per rupee, 12·375d. net per ks. 9 share. This makes 18½ annas tax free, against 12 annas, for the year.

NATIONAL INVESTMENT GROUP CERTIFICATES.—A second income distribution will be payable September 1st of 3·6d. net per certificate, for the period January 16 to July 15.

SHORTER COMPANY COMMENTS

RAILWAYS

BALTIMORE AND OHIO RAILROAD.—Railway operating revenues for the first six months of 1937 were $88,011,689 against $79,466,026 in 1936. Operating expenses were $66,178,562 and $60,159,857, respectively, the net revenue thus being $21,833,107 (an increase of $2,526,038). Net railway operating income of $13,763,886, compared with $12,114,255.

BANKS

THE COMMERCIAL BANK OF AUSTRALIA.—Net profits for the year to June 30, 1937, were £247,435, against £234,480. To reduction of bank premises, £25,000; final 4 per cent. preference dividend for six months, £42,347; final ordinary dividend for six months, at 6·23 per cent. p.a., £86,686; carried forward, £103,337.

MISCELLANEOUS

DAVY AND UNITED ENGINEERING.—Davy and United Engineering Company, Ltd., report an advance in net profits in the year to March 31st last of £21,591 to £44,297. Dividend is raised from 5 per cent. to 7½ per cent., and carry forward is up from £7,034 to £21,859.

CALGARY DEBENTURE PLAN.—Debenture holders are notified that a plan of adjustment has been approved by the City of Calgary and is recommended for acceptance by the Debenture Holders' Committee. To become effective, the plan requires approval of holders of 60 per cent. of the debentures. Committee urges that all holders should communicate with Bank of Montreal, 47 Threadneedle Street, London, E.C.2, to obtain complete details.

CELANESE CORPORATION OF AMERICA.—Consolidated statement for three months to June 30, 1937, shows net income of $1,695,279, after charging Federal income tax provision.

JOHN GREENWOOD MILLERS (1934).—Combined trading results of operating companies, after depreciation, tax, etc., £58,309, against £51,576; dividends payable by subsidiaries £53,250 net, against £45,806, and £5,000 to reserve, as before. J. Greenwood: gross dividends from subsidiary £70,530 (£59,616); net profit £52,399 (£44,956). Forward, £7,407.

NORTH CENTRAL WAGON.—Total profits, £117,049 or £3,754 more. Net profits, £47,839 (£3,823 increase) after £15,250 tax (against £13,435), and interest of £51,655. To reserve, £10,000 (£8,000); carry forward, £6,971 (£7,151).

SHELL UNION OIL.—Consolidated Income Account for the quarter ended June 30th showed gross operating earnings of $88,035,290 and costs of $50,481,356, against $57,039,774 and $42,309,313, respectively, for 1936 (2nd quarter). After depreciation, etc., of $9,309,750 (against $8,817,554), interest and taxes, net income from operation was $4,806,448, against $4,710,032, excluding profit on a sale.

PORT OF LONDON AUTHORITY.—Accounts for the year to March 31, 1937, show a revenue surplus of £1,533,726, against £1,585,925. Tax absorbed £57,444, interest £1,211,306, redemption funds £237,894, and maintenance reserve £100,000 (against £50,000, and £50,000 to general reserve). Carry forward, £404,705.

S. HOFFNUNG AND COMPANY.—Total income for year to March 31, 1937, £63,029 against £61,710 for preceding year. Ordinary dividend is raised from 5 per cent. to 7½ per cent. Carry forward raised from £13,151 to £16,994.

NUTTALL'S BREWERIES.—Trading profit for year to June 30, 1937, after depreciation, £123,738 against £116,859. Ordinary dividend raised from 2½ per cent. to 5 per cent. To write off balance of expenses of debenture issue, £8,000. To licensed houses improvement fund, £6,000 as before. To depreciation fund, £1,500 as before. Carry forward £3,734.

THE NORTH AMERICAN COMPANY.—The consolidated income for year to June 30th shows operating revenues $119,162,690 (increase of 6·74 per cent.), including electric revenues of $94,445,857. Balance available for common stock, $17,257,325 (32·12 per cent. increase), equal to $2·01 per share, against $1·52 a year ago. Depreciation took 12·18 per cent. of revenues, or $1·69 per share.

AFRICAN AND EUROPEAN INVESTMENT COMPANY, LTD.—The sale to the Union Government has been concluded of a large area of land (excluding mineral rights) for white settlement purposes. Negotiations are proceeding for the sale of further areas.

EDMUNDSONS ELECTRICITY CORPORATION, LTD.—The Corporation has purchased the ordinary shares of the Wisbech Electric Light and Power Company, Ltd., from the B.E.T. Electricity Supply Company, Ltd. The Wisbech undertaking is adjacent to the areas of companies already controlled by Edmundsons.

GOVERNMENT LIFE ANNUITIES. The National Debt Office announces that under the Finance Act, 1937, the commission of 2s. 6d. per cent. previously charged where an annuity is purchased for cash is abolished; also the period allowed for completion of purchase is increased to a maximum of 18 days. Full particulars of the arrangements for the grant of annuities may be obtained from the department.

U.S. HIRE PURCHASE FINANCE COMPANY. Total volume of business of $778,980,975 is announced for the six months ended June 30th last. Net profits, $11,573,885, compared with $9,787,387 for the first six months of 1936, or, after preference dividends, $11,370,400 for the common stock, equivalent to $3·43 per share, against $3·10 per share.

SHOP INVESTMENTS, LTD.—To finance the purchase of the capital of Multiple Shop Premises, Ltd., at £200,000, an issue of 800,000 5s. shareholders approved the increase in authorised capital from £150,000 to £400,000, the new issued capital being £300,000.

EXTERNAL DEBT OF HONDURAS. The Council of Foreign Bondholders have, in accordance with the arrangement of March 9, 1926, received the stipulated sum of £20,000 for debt redemption for the half year to July 31, 1937.

GILLETTE SAFETY RAZOR COMPANY. The consolidated income account for the 12 months to June 30, 1937, shows operating profit of $6,478,979, net income being $4,826,404, after depreciation $478,864 and taxes $1,173,709. Common stock earnings of $1·60 for the 12 months compare with $1·54. For the 6 months to June 30th last, net income was $2,085,334, and common stock earnings $0·87.

BULGARIAN EXTERNAL LOANS.—The League Loans Committee (London), the Council of Foreign Bondholders, and other organisations, announce that although the majority of coupons have already been surrendered in acceptance of the Bulgarian Credit Bank's offer concession, partly paid coupons of Bulgarian loans, the payments offered will remain available for a further three months, i.e. to October 30, 1937.

OTTOMAN RAILWAY HOLDING COMPANY.—Net profits of the company for the year to June 30, 1937, £30,394. After adding £1,677 brought forward, and deducting £29,528 interest, there remains £2,543 to be carried forward for future interest or redemption. Interest at 2½ per cent. will be paid on September 1, 1937, to the "A" and "B" stock holders.

OLYMPIA, LTD.—Although profits for the half-year to June 30, 1937, are practically the same as for the same period in 1936, consideration of an interim ordinary dividend is being postponed.

ASSOCIATED PROVINCIAL PICTURE HOUSES.—Net profits to May 31, 1937, £123,165, an increase of £7,929. Tax £5,499, against £6,905; depreciation £26,000 (same); preference dividend, £7,800; to reserve, £15,000 (same); carry forward, £89,475.

BRAZILIAN WARRANT AGENCY AND FINANCE COMPANY.—Mr Arthur Whitworth, at last week's meeting of the company, referred to the improvement in the position of Cambuhy Coffee and Cotton. Their own company's trading profits had been nearly stationary, but a profit on exchange had been recorded. The chairman gave his impressions of a recent visit to Brazil, and referred to possible development opportunities in future.

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

BUSINESS on the principal commodity markets was restricted by holiday influences during the past week and price fluctuations were generally confined within narrow limits. Quotations showed no definite trend.

After remaining steady for most of the period under review, wheat prices suffered a sharp relapse on Wednesday owing to the arrival in Liverpool of samples of Russian wheat; no business was transacted, however, and it is not known what supplies Russia has available for export purposes. Linseed was also easier in unison with wheat, while maize declined in response to good reports of the United States crop. No tea auctions were held in Mincing Lane this week, but the market in raw sugar was quiet with prices showing little alteration. Bacon, butter and cheese were all firm in price, but potatoes suffered a notable decline, due to heavy arrivals and a poor demand.

The receipt of further bearish crop reports was the reason for the renewed decline in cotton. Wool, by contrast, remained firm, the carry-over in Australasia being the smallest for many years. Price movements on the Metal Exchange were small, but a feature of the market was the growing premium on electrolytic copper over the standard cash quotation, the reason being the small stocks of electrolytic. Tin, like copper, was a shade dearer, while spelter enjoyed a further modest rise on the anticipation of an increase in United States imports. The rubber market was dull, and prices showed little net change on the week.

After last week's decline, prices in the United States were generally a shade firmer. Thus Moody's daily index of staple commodity prices (December 31, 1931 = 100) was 206·5 on Wednesday, against 205·2 a week earlier, 207·1 a month ago and 182·2 on the same day last year.

COAL

SHEFFIELD.—The holiday and the strikes of haulage hands at a number of pits have shortened supplies to some extent, but by the end of this week the position should show improvement. There is a strong inland demand for all industrial fuels. Demand for steams is at a high level. House coal continues very quiet, there being no reduction in prices of best and selected qualities. Gas coal requirements are on a smaller scale. Furnace coke is in very short supply, with a constantly increasing demand. Large selected patent oven coke is 30s.-31s. 6d. per ton on rail at ovens, and coke nuts are similarly quoted. Export demand has fallen away, and inquiries are negligible. For August the Midland Amalgamated District Quota Committee have arranged the following percentages: output supply and inland, 60 per cent.; export, 70 per cent.

NEWCASTLE-ON-TYNE.—The North East coal market is firm with indications that it will strengthen further by the end of the month. Northumberland steam collieries continue to work regularly and have little coal for sale after the end of this month. In Durham prime gas coals would welcome more prompt trade, but other sections are very steady, coking classes being particularly firm. Patent oven coke is firm under a brisk home demand.

GLASGOW.—Outputs are again at normal levels after the holidays. In the main they are being well taken up, and prices hold firmly to recent levels. New inquiry on export account is quiet, but contract orders absorb the bulk of available production, and only washed treble nuts and the secondary classes of steam can be had for new prompt business. In some cases the price for trebles, at around 20s., is below that for doubles and singles. Coastwise business proceeds on steady lines, and in the inland branch the resumption at the industrial works has been beneficial. Household demand is still dragging, but a beginning is now being made by the depots of the stocking of supplies for autumn needs.

CARDIFF.—Business has been interrupted this week by the August Bank holidays. The collieries were idle for three days and shipments at the docks were wholly suspended on Monday and partly on Tuesday. Exports in the coastwise and foreign trades last week further improved to 492,400 tons, and by the end of July the increase for the current year totalled nearly 2½ million tons. The Portuguese Railways have placed a contract for 35,000 tons of small coals to be delivered during the next four months, but otherwise the market has been featureless. Prices are unchanged, but they are expected to become firmer for large descriptions as a result of the week's restriction of output and the reduction of the stocks at colliery and dock sidings.

IRON AND STEEL

SHEFFIELD. The holiday has done something to relieve the pressure of business in the iron and steel market. There was, however, but a brief suspension of deliveries under contract, so that not much was accomplished in the way of catching up with arrears. Consumption continues on the up-grade. Producers have scarcely anything to offer, and are fully booked for some months to come. Forge, foundry and basic pig iron are in heavy demand, but business is on a very limited scale. A few contracts for hematite are being arranged, but the outlook for supplies continues to be rather obscure. More business is being offered in finished iron than makers are for the moment prepared to accept.

Production of all classes of steel continues to expand, and consumers are finding it difficult to place orders. Makers are still unable fully to cope with the flow of orders for basic and acid billets, in spite of the fact that there is continual expansion of output. Structural steel demands show a steady increase, and the requirements for special steels are becoming heavier. The steel scrap position is rather less harassing, but iron material not subject to control is fetching higher prices.

MIDDLESBROUGH.—The statistics covering the shipment of iron and steel from the Tees during the month of July are indicative of makers' desire to retain the export trade. Only 300 tons of pig iron were shipped coastwise, and none went to Scotland, a market which in ordinary times took thousands of tons of Cleveland foundry pig iron. Shipments of pig iron overseas amounted to 4,667 tons, of which Sweden took 2,100 tons, Japan 950 tons, and Belgium 832 tons; Netherlands 265 tons, and smaller parcels to other countries. Shipments of manufactured steel amounted to 47,474 tons, of which 29,648 tons went abroad.

Steel makers have orders on their books which will keep them well occupied into next year, and local firms have recently secured contracts for plant required in other districts which will increase the demand for constructional and other steel. Pig-iron prices are unchanged, but ferro-manganese has been increased by £2 per ton, making the price £18 15s. per ton to home users. Blast furnace coke and heavy steel scrap in good demand with prices unchanged. Imports of foreign ore into the Tees during July amounted to 199,548 tons, compared with 173,295 tons in June. Local works annual holidays will take place during the third week of this month, when the foundries and steel works will be idle for a few days, giving the opportunity for repairs and renewals.

The output of steel ingots in the first half of the year was approximately 1,385,000 tons—not 245,000 tons, as was stated last week. The latter figure related to production in June.

GLASGOW.—Business has now been resumed at practically all plants. The situation in regard to supplies of material is improving. A number of additions and improvements to plant are being carried out and, when completed, will considerably increase home production. Supplies of Continental material are also on a more extensive scale. There seems every prospect that business will be carried out under less difficult conditions than have been ruling within the past few months. Order books are well filled and work already on hand will absorb all the possible production for some months to come. At the same time there is much new business on the market and buyers are willing to place orders even when promises of delivery are quite indefinite.

CARDIFF.—All the tinplate and sheet works in South Wales are idle this week, and most of the men are receiving holidays with pay. Production in the week ended July 24th attained the exceptionally high percentage of 78·32 of allotted output capacity. Shipments of tinplates at Swansea last week totalled 8,515 tons, compared with 9,328 tons the previous week, and 4,870 tons in the corresponding week last year, and stocks have increased from 1,518 tons to 2,808 tons, compared with 9,524 tons at the corresponding period of 1936. Prices of tinplates, sheets, bars, ingots, and pig iron are unaltered.

OTHER METALS

COPPER.—Turnovers on the London Metal Exchange tended to increase this week owing to rising consumptive demand and a modest amount of speculative buying. As supplies were firmly held the cash price closed 13s. 9d. up on the week at £57 10s. The backwardation has now disappeared completely, but there is a new feature, the expanding margin between the standard price and the price for electrolytic copper. In the last few days this margin was nearly £8, against a normal level of £4 only. The unusual premium on electrolytic copper is, of course, due to the low level of electrolytic stocks in this country. In New York the export price has improved in the last few days and is again well above the domestic price, which remained at 14 cents per lb. Unless, however, London quotations and the New York export price show further rises, no increase in the U.S. domestic quotation is anticipated.

Sales on the London Metal Exchange: Nil on Monday, against 1,250 tons last week; 1,800 tons on Tuesday, against 750 tons last week; 600 tons on Wednesday, against 1,150 tons last week. Domestic spot was quoted at 14·20 cents per lb. in New York on Wednesday, against 14·07½ cents a week ago and 14·15 cents a month ago. Wednesday's official closing price for standard cash in London was £57 10s. to £57 11s. 3d. per ton, compared with £56 15s. to £56 16s. 3d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 9,323 tons, showed a decrease of 417 tons, while stocks of rough copper, at 9,524 tons, were 443 tons smaller.

LEAD AND SPELTER.—As in the preceding week, lead eased slightly, while spelter showed a certain improvement. The spelter price is now again well above the lead quotation and as the premium on forward spelter shows, this difference may widen even further in favour of spelter. The strong position of the latter is largely due to buying on the belief that the United States may import rising quantities of spelter in the immediate future. Lead on the other hand is at present somewhat neglected owing to the better supply conditions and the reduced demands of the building trade.

Sales of lead on the London Metal Exchange: Nil tons on Monday, against 500 tons last week; 1,950 tons on Tuesday, against 1,650 tons last week; 1,400 tons on Wednesday, against 1,150 tons last week. The New York quotation on Wednesday was 6·25 cents per lb., against 6·00 cents a week ago and 6·00 cents a month ago. Wednesday's official closing quotation in London for soft foreign for shipment during the current month was £22 10s. to £22 11s. 3d. per ton, compared with £22 13s. 9d. to £22 15s. last week.

Sales of spelter on the London Metal Exchange: Nil tons on Monday, against 475 tons last week; 2,350 tons on Tuesday, against 1,050 tons last week; 1,850 tons on Wednesday, against 800 tons last week. Wednesday's quotation in East St. Louis was 7·00 cents per lb., against 7·00 cents the week before and 6·75 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipment during the current month was £23 2s. 6d. to £23 3s. 9d. per ton, against £22 15s. to £22 16s. 3d. last week.

TIN.—Tin improved on balance by 15s., closing on Wednesday at £262 15s. per ton. The basic position of the market has remained more or less unchanged during the past few days, the only feature of the week being the publication of the July statistics. These show, according to A. Strauss and Company, Ltd., a rise of 2,642 tons to 23,707 tons in the world's visible supply; but this increase was largely due to the postponement of certain deliveries in the United States. Consequently, world deliveries, at 9,177 tons, reached a new low level for the current year in July and were 1,851 tons down on the month. In the United States deliveries declined in July by 1,685 tons to only 4,980 tons. On the other hand, new supplies were 2,354 tons up during the past month and thus reached 11,970 tons. The increase, however, was solely due to the rise in Straits shipments

HOTEL WESTMINSTER
Le Touquet

during July from 6,390 tons to 9,279 tons. Supplies from other sources were actually 535 tons lower in July. In spite of the large increase in stocks, therefore, the July figures were not very encouraging. They showed no fundamental change in the position, and as the postponed deliveries will be made up in August it would not be surprising to see again a reduction in visible supplies in the next statistics unless exports from non-Malayan countries show a more satisfactory trend.

Sales of tin on the London Metal Exchange: Nil tons on Monday, against 250 tons last week; 300 tons on Tuesday, against 300 tons last week; 275 tons on Wednesday, against 325 tons last week. The New York quotation on Wednesday was 59·12½ cents per lb., against 59·12½ cents a week ago and 59·75 cents a month ago. Wednesday's official closing quotation in London for standard cash was £262 15s. to £263 5s. per ton, compared with £262 to £262 10s. a week ago. Stocks of tin in London and Liverpool at the end of last week totalled 2,063 tons, a decrease of 12 tons on the week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted on Wednesday at £100 per ton, and rolling billets at £102 per ton. Nickel, for home and export, was maintained at £180 to £185 per ton. Quicksilver, on the spot, was quoted at £13 10s. to £13 10s. 6d. per flask of 76 lbs., the same as last week. Chinese antimony was quoted at £69 to £70 per ton, ex warehouse, the same as last week. Chinese wolfram for "August–September" shipment was quoted at 73s. to 75s. per unit, c.i.f., compared with 71s. to 73s. last week. Refined platinum was quoted on Wednesday at £10 5s. per ounce compared with £10 5s. a week earlier.

TEXTILES

COTTON.—Manchester.—The market has been unsettled by the further downward movement in raw cotton rates, a fresh low level being established. Since the middle of March American futures in Liverpool have declined 2d. a lb. There is no probability of any revival of demand in yarn and piece goods until there is more stability in values. In the meantime order lists of spinners and manufacturers tend to run down and contracts on the books are distinctly lighter than two to three months ago.

The raw cotton situation has been affected by persistent bearish reports with regard to the crop in the United States. Conditions in the belt have so far been ideal but, of course, the month of August is always a critical period for the plants. Great interest is being taken in the crop estimate of the United States Government to be published on Monday next. It is generally believed that market operators have discounted a forecast of fully 14,800,000 bales. The crop for the season just closed was only 12,400,000 bales. American and Egyptian yarn prices have fallen in sympathy with the decline in the raw material, but spinners have been firm at the lower quotations. Business in all counts and qualities has been within narrow limits. There has been no improvement in the turnover in cloth. Buyers for foreign outlets and the home trade have operated from hand to mouth. Occasional instances are reported of narrow looms being stopped for want of orders.

INTERNATIONAL COTTON LOOM FIGURES.—A world cotton loom census has just been conducted by the International Federation of Master Cotton Spinners' and Manufacturers' Associations; and although it has not been possible to obtain returns from Italy, Spain, Russia and one or two South American and Asiatic countries, the figures are interesting. The total number of world looms as on December 31, 1936, is given as 3,070,395, including both ordinary and automatic looms. There has been an increase in three years of 10,526 looms. Europe, however, showed a decrease of 34,378, while looms in Great Britain declined by 83,191 in three years, Great Britain possessing 504,773 looms, as against 587,964 looms in 1933. There was also a reduction in the U.S.A., the figure now being 573,452, as against 613,633 three years ago, a decline of 40,181 looms. Japan has increased her total looms from 277,343 to 332,564. These figures, however, include 109,000 looms which are narrower than 16 ins. In Europe, the proportion of automatic looms to ordinary looms has increased with remarkable steadiness. The number of automatics is now 175,852, as against 132,087 three years previously. During that period the world total of automatic looms has increased from 596,596 to 662,167. With regard to the number of looms stopped on December 31st, Great Britain had 84,780, as against 155,140 three years ago. The total number of world looms stopped was 296,332, as against 383,429 in 1933.

WOOL.—Bradford.—The position of the wool market continues healthy, all the sound factors revealed at the recent London sales remaining intact. There continues to be a satisfactory demand for both merinos and crossbreds, and stocks of colonial wools are very small. Machinery is being kept running mostly full time, notwithstanding that the holiday period is now in full swing throughout the whole of the West Riding. Values for tops and yarns remain very firm. Already some good orders have been placed for both merinos and crossbreds covering requirements for next spring, and some spinners, who cannot see lower merino values, have already covered part of their requirements for the next three months.

The position of the raw material is good, consumption satisfactory and values firm. The outlook for the new clip is satisfactory.

AUSTRALASIAN WOOL STATISTICS.—According to cabled information from Messrs Dalgety and Company, production of wool in Australia and New Zealand (including wool exported on the skin) rose by 141,649 bales (40,956,744 lbs.) from 3,844,574 bales (1,177,968,164 lbs.) in 1935–36 to 3,986,223 bales (1,218,924,908 lbs.) in 1936–37. The average price of Australian wool rose from £17 12s. 3d. per bale (14½d. per lb.) to £20 14s. 2d. per bale (16½d. per lb.), while that of New Zealand advanced from £13 6s. 5d. per bale (9½d. per lb.) to £22 6s. 8d. per bale (15½d. per lb.). Meanwhile, the carry-over of Australian wool was reduced by 28,764 to 47,069 bales, and that of New Zealand wool by 14,332 to 15,198 bales. The combined carry-over thus amounts to 62,267 bales, against 105,363 bales at the end of the 1935–36 season. This is one of the smallest carry-overs ever known.

RAYON PRODUCTION AND CONSUMPTION.—United Kingdom output of staple fibre and rayon waste in June reached the record total of 3,295,000 lbs., the previous highest month being July, 1936, with 2,976,063 lbs. Total output for the first six months of 1937 was 16,283,000 lbs., against 14,050,000 lbs. in the corresponding period in 1936; but as exports totalled 6,498,000 lbs. against 4,293,000 lbs., the amount retained at home was approximately the same in each year. Imports are negligible. The output of ordinary rayon yarn in June was 10,765,000 lbs. against 9,450,000 lbs. in May and 9,505,000 lbs. in June last year. The production was not, however, a record, being exceeded as recently as last April with 10,855,000 lbs. Output in the first six months was 59,608,000 lbs. against 58,150,000 lbs.

The excise returns give an indication of consumption and show that the off-take in June was 11,338,000 lbs. against 10,075,000 lbs. in May and 9,027,000 lbs. in June last year. The total for the first six months of 1937 was 61,318,000 lbs. against 55,071,000 lbs. last year, which indicates that the stocks accumulated last year have been sold. After deducting exports, which have shown a marked increase, actual consumption in the first six months of 1937 was 55,445,000 lbs. against 51,927,000 lbs. last year. To these figures must be added imports of 600,000 lbs. in each year.

GRAIN MARKETS

WHEAT.—After remaining fairly steady in the early part of the period under review, the markets turned quiet and easier. The news that samples of Russian wheat had reached Liverpool caused a sharp break on Wednesday; but there is no indication of the extent of Russia's exportable surplus and, if any, business has yet been transacted.

On Wednesday last, "September" futures were quoted in Chicago at 113½ cents per bushel, against 118¼ cents the week before and 125¼ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba (Atlantic) ex ship, 51s. 9d. per 496 lbs., against 53s. 6d. last week; No. 2 Northern Manitoba (Atlantic), ex ship, 51s., against 52s. 6d last week. According to the *Corn Trade News*, total shipments of wheat and flour last week amounted to 822,000 quarters, against 751,000 quarters in the previous week and 1,238,000 quarters in the corresponding week a year ago.

FLOUR.—Demand has been restricted by holiday influences and prices are again lower. Wednesday's London quotations (excluding quota payments) were: Straight run, delivered Home Counties, 41s. 6d. per 280 lbs. as against 42s. 6d. a week ago; delivered inner London, 41s., as against 42s. a week ago. Manitoba patents, ex store, 39s. 6d. to 41s., as against 40s. 3d. to 41s. 9d. a week ago. Australian, ex store, 33s. 6d. to 33s. 9d., as against 33s. 6d. to 34s. a week ago.

BARLEY.—The markets have a fairly steady tone, but business is limited. "October" futures were quoted at 60½ cents per bushel in Winnipeg on Wednesday, as against 65 cents last week. Quotations per 448 lbs. in London on Wednesday were: "English feed" at farm, 35s. to 36s., as against 35s. to 36s. a week ago; "English malting," at farm, not quoted; Californian, ex ship, 49s. 6d. to 63s., as against 49s. 6d. to 63s. a week ago. Chilean, brewing, ex ship, 46s. 6d. to 50s., as against 46s. 6d. to 50s. a week ago.

OATS.—On Wednesday, "September" futures were quoted at 28½ cents a bushel in Chicago, against 30½ cents a week ago and 39¼ cents last month. Quotations in London, Wednesday: "English Black," at farm, 28s. to 29s. per 336 lbs., as against 28s. to 29s. a week ago; "English White," at farm, 28s. to 29s., as against 28s. to 29s. a week ago; mixed Canadian feed (Vancouver), landed 26s. 9d. per 320 lbs., as against 27s. 6d. a week ago.

MAIZE.—The market has eased in response to good reports of the U.S. crop and on a poor demand. "September" futures were quoted on Wednesday at 97 cents per bushel in Chicago, against 97½ cents a week ago and 113½ cents last month. Quotations in London, Wednesday: "Plate," landed, 28s. 3d. per 480 lbs., as against 28s. 9d. a week ago; "Plate," ex ship, 27s. 3d., as against 27s. 9d. a week ago; "Plate," "July," 27s. 3d., as against 27s. 9d. a week ago; yellow maize meal, ex wharf, was quoted at £7 5s. to £7 7s. 6d. per ton, as against £7 7s. 6d. to £7 10s. last week.

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations for selected weeks in 1935–1937:—

Nearest Future	Jan. 2, 1935	Dec. 31, 1935	Aug., 5 1936	Dec. 30, 1936	July 28, 1937	Aug. 4, 1937
Winnipeg (No. 1, Manitoba) —Cents per 60 lb.	82⅛	84⅛	107⅛	129	137⅛	126
Chicago (No. 2, Winter)— Cents per 60 lb.	98⅛	101⅛	113⅛	135⅛	124	113⅛

The visible supply of wheat in Canada amounts to 33,286,000 bushels, against 35,179,000 bushels last week and 70,348,000 bushels in the corresponding week last year.

SALES AND PRICES OF BRITISH CEREALS.—The following table gives the estimated sale of home-grown wheat during the harvest years 1933–34 to 1936–37.

	1933–1934	1934–1935	1935–1936	1936–1937
Estimated sales of home-grown wheat—	Cwts.	Cwts.	Cwts.	Cwts.
1 week to July 31	131,384	57,403	43,950	110,047
48 weeks to July 31	10,212,096	13,260,332	13,127,427	10,867,673
Average price of English wheat per cwt.	s. d. 5 1	s. d. 5 4	s. d. 7 4	s. d. 9 11

The following is a statement showing the quantities sold and the average price of British cereals in the past two weeks, and for the corresponding weeks in each of the years from 1933 to 1936:—

Week ended	Quantities Sold			Average Price per cwt.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
	Cwts.	Cwts.	Cwts.	s. d.	s. d.	s. d.
July 29, 1933	15,157	8,797	6,174	6 10	6 9	5 11
July 28, 1934	131,384	7,108	16,823	5 1	7 10	6 5
Aug. 3, 1935	57,403	5,356	10,724	5 4	6 7	6 0
Aug. 1, 1936	43,950	3,112	10,052	7 4	6 10	6 8
July 24, 1937	85,334	1,911	7,464	9 9	9 2	9 4
July 31, 1937	110,047	1,421	12,628	9 11	9 8	9 4

OTHER FOODS

BACON.—Bacon continues in active demand with prices on the upgrade. The official quotations (per cwt. for No. 1 Sizable) which formed the basis for dealings on the London Provision Exchange this week were: English, 101s.; Canadian, 94s.; Danish, 100s.; against 98s., 94s., and 100s. last week. Arrivals in London last week included: Danish, 14,346 bales; Canadian, 5,233; Dutch, 2,029; Lithuanian, 1,111; and Polish, 3,332; as against 13,886, 5,275, 2,261, 954, and 2,981 bales, respectively, in the previous week.

BUTTER.—The upward movement of prices continues and market conditions are firm. Quotations (per cwt.) on the London Provision Exchange on Wednesday were: New Zealand, finest salted, 119s. to 120s.; Australian, choicest salted, 118s.; Danish, 124s.; compared with 118s. to 119s., 117s. to 118s., and 124s., respectively, a week ago.

CHEESE.—Cheese has been a steady market with prices showing little change. Quotations (per cwt.) on the London Provision Exchange on Wednesday were as follows: English cheddars, finest farmers, 84s. to 88s.; Canadian, finest coloured, 73s.; and New Zealand, finest coloured, 71s. to 72s.; against 72s. to 73s. and 72s., respectively, a week ago.

COCOA.—The spot quotation in New York on Wednesday was 8¼ cents per lb., as against 8¼ cents per lb. last week. In London, on Wednesday last, good fermented new crop, Accra, "November-January," was quoted at 38s. 9d. to 39s. sellers per 50 kilos., c.i.f. Continent, against 38s. a week ago. Last week's movements of cocoa in London were as follows: Landed, 3,204 bags; delivered, for home consumption, 3,725 bags; exported, 70 bags; stocks, 261,558 bags, against 162,778 bags a year ago.

COFFEE.—On Wednesday, Rio No. 7 (cash) was quoted at 9¼ cents per lb. in New York, as compared with 9¼ cents per lb. last week and 9¼ cents per lb. a month ago. Movements of coffee in London last week were as follows: Brazilian, landed, 6 cwt.; delivered, for home consumption, 166 cwt.; exports, 9 cwt.; stocks, 1,841 cwt., against 10,211 a year ago. Central and other South American: Landed, 443 cwt.; delivered, for home consumption, 1,989 cwt.; exported, 624 cwt.; stocks, 101,804 cwt., against 101,378 last year. Other kinds: Landed, 1,464 cwt.; delivered, for home consumption, 3,991 cwt.; exported, 796 cwt.; stocks, 102,370 cwt., against 145,933 last year.

EGGS.—Prices remain unchanged on the week, and the market is steady. At Smithfield, on Wednesday, English (ordinary packing, Grade I, about 15-15½ lb.) realised 15s. to 16s. per 120, against 15s. to 16s. last week; while Danish (15½ lb.) made 11s. to 11s. 3d., as against 11s. to 11s. 3d. last week.

FRUIT.—The holiday season has resulted in a slackening of business at Covent Garden, states *The Fruitgrower*. English green apples are now in plentiful supply, demand being fairly good and prices moderate. Imported pears continue in active demand at unchanged prices. Raspberries, though plentiful, are selling well. Red currants are more in evidence than black; the green gooseberry season is now over. Loganberries maintain their price. The demand for hothouse grapes is less active and prices are easier. Melons, peaches, and nectarines are enjoying a steady sale. There is a better supply of English plums. Oranges, lemons, and grapefruit are in good supply, but prices are fairly well maintained.

MEAT.—At Smithfield market on Wednesday last, Argentine chilled hindquarters were quoted at 4s. 4d. to 4s. 8d. per 8 lbs., as compared with 4s. 6d. to 4s. 10d. a week ago. New Zealand frozen mutton was 3s. 6d. to 4s. 2d. per 8 lbs., against 3s. 4d. to 4s. a week ago. According to the Smithfield Market official report, supplies during last week amounted to 8,994 tons, an increase of 579 tons on the corresponding week last year. Beef and veal accounted for 4,981 tons, mutton and lamb 2,883, and pork and bacon 619, as compared with 4,782, 2,529 and 655 tons, respectively, in the same week of 1936.

PEPPER.—On Wednesday, white Muntok, August-October, was quoted at 4⅛d. per lb., sellers, c.i.f. Rotterdam-Hamburg, against 4¼d. per lb. a week earlier. Black Lampong, spot, in bond, was quoted at 3d. per lb., sellers, compared with 3d. per lb. last week. Movements of pepper in London last week were as follows: Black, landed 2 tons; delivered 26 tons; stocks, 2,031, against 1,756 last year. White, landed, 87 tons; delivered, 73 tons; stocks, 11,538 tons, compared with 12,265 a year ago.

RICE.—The spot price of Burma No. 2 cleaned, was 10s. 1½d. per cwt., ex warehouse, on Wednesday, as compared with 10s. 1½d. per cwt. a week ago. "August-September," in singles to Continent and U.K., was quoted at 9s. 1½d. to 9s. 3d. per cwt., against 9s. 1½d. to 9s. 3d. last week Movements in London last week were as follows: Landed, 236 tons; delivered, 151 tons; stocks, 2,131 tons, against 2,308 a year ago.

SUGAR.—Quiet conditions still obtain on the London market, while in New York the market is firm and prices show an increase. The New York spot quotation was 3·53 cents on Wednesday, as compared with 3·45 cents per lb. last week and 3·50 cents per lb. a month ago. Wednesday's sales of raw sugar in London included "December" delivery at 6s. 8d. to 6s. 8½d., against 6s. 8d. to 6s. 8½d. a week ago. Movements of raw sugar in public warehouses in London and Liverpool last week were as follows: Imports 10,301 tons, against 8,665 in the previous week, and 8,220 in the same week of 1936; deliveries, 25,171 tons, against 11,893 and 25,152 tons, respectively; stocks, 145,791 tons, against 160,661 and 116,612 tons, respectively.

TEA.—The following table shows the average price (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account in recent weeks:—

Week ended	Northern India	Southern India	Ceylon	Java	Sumatra	Africa	Total
	d.	d.	d.	d.	d.	d.	d.
July 30, 1936	12·05	11·81	12·81	10·32	9·84	11·13	12·18
July 1, 1937	15·12	14·49	15·09	13·37	12·24	13·76	14·78
„ 8, „	15·34	14·38	15·12	14·64	12·25	13·69	14·83
„ 15, „	15·31	14·50	15·15	13·12	12·50	13·84	14·92
„ 22, „	15·15	14·55	15·33	13·44	12·38	13·52	14·92
„ 29, „	15·34	14·58	15·39	13·39	12·65	14·07	15·05

No auctions have been held at Mincing Lane this week, but the market will re-open on Monday next.

VEGETABLES.—In spite of heavier arrivals of tomatoes, prices at Covent Garden show little change, states *The Fruitgrower*; cucumbers are selling well at slightly lower prices. Supplies of runner beans show a marked increase and some difficulty has been experienced in disposing of stocks, even at reduced prices. Arrivals of marrows are heavier and prices have accordingly eased. Green peas continue to arrive in fair quantities, prices being maintained. Carrots are still on the short side, with prices firm. Meanwhile, supplies of potatoes at London markets have been heavy and, with demand only moderate, prices are again easier. At the Borough on Tuesday Sharpe's Express, Eclipse, Majestic and British Queen were quoted at 4s. 6d. to 6s. per cwt., according to sample, against 6s. to 7s. 6d. a week earlier.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OILSEEDS.—Markets opened after the holiday with a steady to firm tone, though business has since been on quiet lines. Linseed is still subject to weather and crop influences. Copious rains are wanted in Argentina to permit of seeding operations being carried on successfully, and there is some anxiety that the prolonged period of inadequate moisture may result in a smaller area being sown than might otherwise be the case. However, there are still eight weeks in which to complete sowing, including the late districts, and proportionate prospects of ample rains in the meantime. The probable outturn of the American crop is still very much in doubt as the official Government estimate and private advices vary considerably. Meanwhile, shipment of the old crop from Argentina continues on a fair scale. At the end of July the balance of the exportable surplus (including Uruguay) had been reduced to 400,000 tons as against 665,000 tons actually shipped during the last five months of 1936. Shipments of India's new crop are very small and much below a year ago. However, with an estimated balance available for export of 270,000 tons India may fill the gap in supplies to some extent, although there will still be a shortage of probably 140,000 tons in world supplies.

Generally, the market is steady and prices at the moment are inclined downward in sympathy with wheat. The quantity of linseed afloat for Europe is now 104,200 tons and for the United States 51,000 tons. Linseed oil is steady and recent levels are about maintained. Very little old crop Egyptian cottonseed now remains and new crop has been in good demand at declining prices. Cotton oil is quiet and values are about unchanged. Egyptian crude ex Hull is held for £27 10s. spot, but forward delivery is reported at £2 below this figure. Oilcakes are steady and in quiet demand.

RUBBER.—Business has been restricted by holiday influences and the market has had a quiet tone. Prices have accordingly fluctuated within narrow limits and are about unchanged on the week. Buyers are reported to be fairly active at current quotations.

The spot price in New York on Wednesday was 18⅜ cents per lb., compared with 18⅛ cents per lb. a week ago and 19⅛ cents a month ago. Wednesday's official buyers' price for standard ribbed smoked sheet on the spot in London was 8½d. per lb., as against 8⅝d. on the corresponding day last week. In forward positions business has been done at 8 13/16d. to 9d. for "September" shipment, as against 8 15/16d. a week ago. Stocks in London and Liverpool at the end of last week totalled 42,056 tons, against 41,782 tons a week earlier. A year ago stocks amounted to 113,312 tons.

FURS.—As had been expected, an easier tendency was evident at the fur sales held in London last week. Despite a good demand, South-West African "Persian lambs" declined in price by 10 per cent. compared with the spring sales. Beaver sustained a similar loss, but here the bulk of the offerings was withdrawn. Nor did mink sell well; prices eased by 15 per cent., despite large withdrawals. Fair interest was displayed in musquash, but here again prices were some 10 per cent. lower than in April. The sale was surprisingly well attended, especially by foreign buyers. Leipzig merchants made substantial purchases and, for the first time since the Abyssinian war, Italy was also a buyer. In these circumstances, the sharp reaction of prices is significant and appears to indicate at least a temporary change in the trend of fur prices.

The Soldier's Lot

IT would perhaps be an almost insulting misuse of allusion to call the Army the Cinderella of the three British Defence forces. But it is at least true that since the end of the war the Army has been the least popular of the three, certainly with the general public and possibly also with the makers of policy. Englishmen are traditionally not fond of keeping an army in peace-time. Even as recently as the last century the Army was deliberately kept out of sight lest a too ostentatious display of its numbers should lead the politicians to reduce them. All through the Victorian age, the "wooden walls of Old England" summoned tears of emotion to the national eye, while the "thin red line" was, as often as not, a music-hall joke. This attitude is perhaps to blame for the fact that there seems to be a continuing tendency for the Army to need a drastic reorganisation about every generation. CARDWELL in 1868-74 and HALDANE in 1906-12 both in their turn brought the British Army to a high pitch of efficiency. There are many signs that the time for another such instalment of reform has come.

The need for reform must not be exaggerated. There has been no such stagnation as in the pre-Cardwell era. Mechanisation has been carried through as thoroughly as restricted funds would permit. Strategical and tactical notions have been subjected to continuous review. The features of the Army which are subject to the greatest doubts are largely confined to those of organisation and, pre-eminently, of recruitment. On the side of organisation, the CARDWELL system of "linked" home and foreign service battalions has been coming under suspicion. It was designed to provide Great Britain with an efficient weapon for Colonial warfare, and it served its purpose admirably, as the feats of arms performed by WOLSELEY, ROBERTS and KITCHENER demonstrate. But it did not shine in the Boer War, and in the Great War it was perforce in complete abeyance. It might, indeed, have been abolished or modified even before 1914, if CAMPBELL-BANNERMAN (who had served at the War Office under CARDWELL) had not made its retention one of the conditions on which HALDANE was appointed. In any case, the time is now long overdue when it must be enquired whether the British Army's only rôle is that of a Colonial Police Force, and, even if it is, whether the "linked battalion" system is, in these days, the best method of achieving the aim.

Another aspect of the CARDWELL reforms, however, is at the moment much more urgently under examination. Far more important than the "linked battalion" scheme which is peculiarly associated with his name was his substitution for the old Wellingtonian long-service period of a shorter term with the colours. Until the seventies, recruits served for twenty-one years, under conditions which have been described as "a sort of penal servitude for the dregs of the population." CARDWELL substituted a short period with the colours, followed by another period in the Reserve. At present, the periods are seven and five years respectively. Since the great merit of this system, as opposed to the Wellingtonian, is that it enables a reserve to be built

up, men who have served with the colours are not allowed, save in exceptional cases, to stay in the Army, even if they should wish to.

This is the system towards whose modification MR HORE-BELISHA, the new Secretary of State, has this week taken the first tentative steps. As an experiment, men who are due for discharge are to be allowed to remain with, and Reservists to return to, the colours, and if they serve the full twenty-one years will qualify for pension. This change will have the immediate advantages that it will help to swell the depleted cadres and that it will be a test of the private soldier's willingness to remain in the Army after seven years. Moreover, if it is made permanent, it will provide the new recruit to the Army with the assurance which the Navy can already give him, that he will have a job for half his life and a pension for the remainder.

These are substantial advantages, but there are arguments to be set on the other side. It is questionable whether, after the first seven years, the soldier acquires any further military value to offset his growing age. Indeed, it may well be that, so far as the rank and file are concerned, the advantages of the professional soldier are diminishing, for in proportion as the Army is mechanised and war grows more "total," the military value of civilian skills increases. And, in any case, MR HORE-BELISHA'S changes deplete the Reserve by as much as they swell the serving units. For this reason, it is very unlikely that the Army will revert to a long-service basis for all its men. It may be, however, that in future there will be a substantial long-service element, and, if so, it might be possible to enlist the short-service remainder for even less than seven years. CARDWELL himself originally proposed three years, and such a short period would have the double advantage of attracting recruits and quickening the flow into the Reserve. These are arguments which are known to be receiving attention. Whether sound or not, they are sufficient to place this week's changes in the proper perspective and to show that they do not provide an easy solution to the whole problem. There is a great deal to be said for providing in the Army a life's career for those who want it; but there are at least as many who do not want it.

Whether as career or temporary berth, however, Army life is not at present sufficiently appealing to attract enough recruits of the right type. For some decades after CARDWELL the Army was popular among recruits, since the conditions of life and pay compared favourably with those which were available elsewhere. That is not true to-day, as can be seen from the fact that the flow of recruits tends to vary inversely with the state of trade. Young men still tend to join the Army because they cannot find anything better to do. There is indeed a vicious circle at work. Since the Army can get only the less intelligent and skilled young men, it has to set a standard of professional competence and discipline appropriate to them, and this in turn repels the better potential recruits, who go to the Navy and the Air Force. The way to a remedy of the present state of affairs can be opened only by breaking this vicious circle. That, in turn, involves an improvement in living conditions, a reduction of the more onerous and less enlightening forms of discipline, an increase in pay (even, if necessary, by raising the Army's basic rate of pay as high above those of the two other forces as is necessary to compensate for its drawbacks in the eyes of the recruit) and a much greater emphasis on the acquisition of mechanical and other skills.

In all these problems there is a chance for MR HORE-BELISHA to add his name to those of the great Liberal Army reformers. He has the energy, the suppleness of mind and the freedom from Army tradition essential to push through a great series of reforms. Since there is hardly an armed force in the world which is less of a threat to peace than the British Army, he should be wished every good fortune in his task.

France Breathes Again

AFTER stoutly resisting devaluation for four years, France has twice devalued her currency within nine months. The first blow to the franc left the French people bewildered. Nothing, either catastrophic or beneficial, seemed to result; for the constructive programme of social reform launched by M. BLUM'S Government last year masked many weaknesses in the country's financial fabric which only declared themselves a few weeks ago in the second franc crisis. When, however, the great rise in costs and prices resulting from that programme prevented the restoration of France's competitive power in trade, and thus kept the hundreds of milliards of French rentiers' francs from returning home, the BLUM Government found its revenue laggard, its trade balance adverse, its Budget becoming increasingly unbalanced, and its borrowing powers progressively restricted. An empty Treasury and a fresh efflux of gold from the country provoked the crisis of last June; M. BLUM resigned; and his successor, M. CHAUTEMPS, supported by the elements of the Popular Front, including the Communists, brought back M. BONNET from the French Embassy in Washington and made him Finance Minister with power to restore France's finances under the newly accorded system of emergency decrees.

The power of the CHAUTEMPS Government to restore Budgetary and financial order by decree expires at the end of this month; and by way of an interim report to the national shareholders, PRESIDENT LEBRUN and MM. CHAUTEMPS and BONNET delivered important speeches last Saturday. Of these speeches, that of M. BONNET was much the most illuminating. The French Finance Minister confirmed that the ordinary Budget deficit for the current year, which was expected to amount to Frs. 8,000 millions, was now covered by the new taxes, increases in railway fares, etc. He also confirmed the Treasury's other liabilities at Frs. 25,000 millions—of which Frs. 10,000 millions were required to repay the Government's three-year 1934 bonds due in October, and the sterling credit for the French railways due in December, and Frs. 15,000 millions were for the extra-Budgetary expenditures on armaments and public works which have been a disturbing feature of recent French Budgets. But he went on to admit that the balancing of the ordinary Budget, coupled with the new Frs. 15,000 millions loan to the Government from the Bank of France's writing-up profit on its gold stock, was not enough. Indeed, it falls short by about Frs. 10,000 millions of covering all the Treasury's foreseeable liabilities during the rest of 1937. But the FINANCE MINISTER threw out encouraging hints when he declared that the Government had not needed to draw on their credit from the Bank, that savings bank deposits had again exceeded withdrawals, that "gold exports had ceased and several thousand millions of francs had returned to the Bank," and that subscriptions to Treasury Bonds had been resumed. This eases the path towards new Government borrowing from the French investor, and reduces the threat inherent in that overhanging Frs. 10,000 millions of real deficit which still remains.

Yet when all these purely financial details are weighed, two features of France's present embarrassments stand out more clearly than the rest; and they are due rather to social, industrial and political than to purely financial causes. To the extent that they are operative, France is still ploughing through a *crise de confiance*; though it may now be hazarded that she is nearing the brighter side. The two features are lack of confidence in the industrial field, and lack of confidence among French capitalists in the wisdom of repatriating their funds lodged abroad. Clearly, if the franc's future at about Frs. 133 to the £1 is tenable—and we have given reasons before now for suggesting that it is—a return of confidence in the profitability of industry, trade and commerce inside France would exert a potent attraction on French funds abroad to return and participate in recovery. A return of business confidence, in fact, is the only key to unlock the French rentier's foreign safe-deposits. But here's the rub; for, while rentiers view MM. CHAUTEMPS and BONNET more kindly than they viewed MM. BLUM and VINCENT-AURIOL, M. BONNET and his Prime Minister have not dared to lay a finger on existing public works and the social reforms so dear to the heart of the working classes. Is there, then, reason to believe that France now possesses new resources of energy and skill—both among industrialists and among the much more powerful trade unions—which can, after the recent crisis, be set free to profit from the new situation?

This question was alike the keynote of M. BONNET'S peroration, and of MM. LEBRUN'S and CHAUTEMPS' addresses. What they all said was, in effect: "We, the leading authorities responsible to the State, have done our best and the situation is already safe. But we can do no more without collaboration between capital and labour, and without their co-operation with the Government. We are not out to secure victories for this, that or the other class; nor do we propose to penalise any of them. But the country has been spending beyond its means; and if the social reforms are to be retained in their pristine beneficence, then they must be paid for by increased productivity of both labour and capital. Off with your coats, both of you, and up with your sleeves! Otherwise we shall not be able to meet our commitments, at home and on international account, in 1938; and then both capital and labour will be compelled to make sacrifices."

This exhortation certainly commands much sympathy in France to-day; for the French people are not afraid to swallow large doses of unpalatable truths, and to act accordingly. But it is now a race with time. If markets abroad expand, and if French capital returns home, 1938 may not, after all, be a crucial year for France. But if the trade balance of France does not improve, if her citizens do not repatriate their capital, and if industrial relations continue in a deadlock, then the present French Government or a successor will find itself within a few months faced with a terrible dilemma over the 1938 Budget. For France as much as for Europe, therefore, we trust that French industrialists, rentiers, and trade unionists will read, mark, and learn the writing which M. BONNET has this week inscribed upon the wall.

Rail Wages and Revenues

DURING the past fortnight, when the railways have been carrying the KING'S subjects in record numbers to their holiday destinations, two decisions have been promulgated which may intimately affect the fortunes of the main-line companies in years to come. On the one hand, the Railway Rates Tribunal has authorised the increase of all rates and charges (with certain exceptions) by 5 per cent. On the other, the Railway Staff National Tribunal has recommended changes in wages and working conditions which, it is estimated, will cost the companies little short of £3,000,000 in a full year. The present moment seems opportune, therefore, for a survey of the outlook for the railways, and an attempt to value the debit and credit items in their economic balance sheet.

Recovery, on the railways, has come by *train omnibus* rather than *train express*. The fall in traffic receipts which began in 1930 was not arrested until 1934. Last year's gross takings were 13 per cent. below the 1929 level, and net receipts were as much as 30 per cent. below the Standard Revenue fixed in 1927. The railways, in fact, no longer enjoy their traditionally sheltered position. Road competition and a reduced volume of export trade have unfavourably reacted on their total earning power. But in one sense the railways still form an economic *enclave*, and the principal elements in their finance at any given moment can be fairly accurately determined.

This condition applies to the effects of both the far-reaching changes which have been announced in the last few days.

We may examine, first, the 5 per cent. basic increase in fares and freight charges from October 1st next. The higher charges will affect every railway user, unless he confines his travel within the London Transport area, or pays less than 5d. for a workman's ticket, or consigns goods at rates below 10d. per ton. Railway standard charges have remained superficially stable since 1928; but in practice they have been steadily falling; for a progressively increasing share of the total traffic has been carried at exceptional rates and cheap fares. To the average railway user, to whom an ounce of personal experience is more convincing than a ton of index numbers and market reports, the reversal of this tendency is in itself a sharp reminder of the crucial fact that industrial costs are rising decisively.

He will not, however, in all cases, be required to pay the full permissible increase. On the goods side, for example, the companies may be expected to quote exceptional rates, below the permissible maximum, where traffics are sensitive to competition by road or water. At present, the railway gross takings are running at the rate of £162 millions per annum. Five per cent. of this total would exceed £8 millions—or say £7½ millions after excluding the London Transport area fares. *But* SIR RALPH WEDGWOOD, of the London and North Eastern Railway, in his evidence before the Railway Rates Tribunal, made an "instructed guess" at the effective yield of the increased charges. His figure of £5,609,500 represents an average increase of about 3½ per cent.

This, however, is a gross and not a net total. The railways' case before the Tribunal was based on the contention—which was unchallenged by any party to the hearings—that working costs were rising steeply against them. Already, additional expenditure for wages of the order of £805,000 has been payable in 1937 from the partial wage cut restoration of August of last year, quite apart from the increased costs of handling a larger volume of traffic. This week's award of the Railway Staff National Tribunal will significantly increase the wages figure. The Unions' claim for the restoration of the final 1¼ per cent. of the 5 per cent. deduction agreed upon in 1931 has been granted. Their

appeal for the restoration of overtime conditions has also succeeded. But more ambitious demands, including a thirty-six hour week and a 50s. minimum wage, have been rejected. The full claims would have cost over £40,000,000, and would have left no surplus even for debenture interest payments. The estimated cost of the actual awards (which include smaller but welcome concessions for low-grade staff and holiday work) is put at £2,900,000 annually, to be shared among 575,000 employees.

Increased wages, however, are only one part of the railways' enhanced bill of costs. Increases in other items are more difficult to evaluate, for they depend upon the rate of exhaustion of existing stocks of materials supplied at lower prices than those now prevailing. SIR WILLIAM WOOD, of the London, Midland and Scottish Railway, giving evidence before the Railway Rates Tribunal, estimated increased costs for labour at £2,603,000 and for material at £5,017,000. These figures were based on prices " known " last June, though not necessarily paid at that time; they relate, in fact, to a species of " notional " year. They are the result of a recalculation of the prospective costs of using the same materials as were purchased in 1936; and they do not, of course, take account of this week's wages award.

So much for expenses. Railway revenues, at present, have a strongly rising trend, but they are still 20 per cent. below the 1929 level. We have summarised the information at present available, on both sides of the account, in the attached table, in which we have embodied a number of estimates for each of the four railways, for a " notional " future year. Many of these are necessarily tentative, but their general effect is clear. Even after all allowance for a further probable increase in gross receipts, higher revenues are running no great distance ahead of advancing costs.

The figures may be briefly described. The first section of the table is concerned with matters of record in 1936; the second with estimates which can be given more or less firmly for 1937; and the third with the effect of changes in rates, working costs and wages in a full year. Our estimate of total net revenues for all four companies in this hypothetical year is £38,164,500, compared with £35,730,561 for 1936—an apparent increase of 7 per cent. But its composition defies the calendar. The figure of £5.6 millions from increased charges applies, broadly, to 1938, provided that the volume of traffic is maintained. The cost of the wages award can similarly be accurately assessed. But the £7 millions allowance for increased working expenditure is an amalgam of increased wages and material costs, and so far as materials are concerned it applies present " known "

§ Includes railway receipts, gross and other receipts, net. * Based on results for first 23 weeks, which showed 4·7 per cent. increase over 1936. Latest 31 weeks' figures show 4·6 per cent. increase. †For additional working expenses, only full notional year figures available (see *post.*) ‡ Not including any estimate of prospective traffic movements.

prices to the 1936 quantities. There is scope for double error in adopting the figure for 1938. Known prices increase almost daily, and more materials are now being consumed than before.

The future trend of material costs, in fact, is the greatest unknown in the railway equation. Railway stockholders, in particular, cannot afford to ignore its potentialities. The railway user has an ultimate interest in the achievement of the standard revenues—provided they are attained by an increased volume of traffic or by greater operating efficiency. On neither ground is there any immediate prospect that the existing deficiencies will be made good. Our estimated figure, even for the Southern Railway, is 15 per cent. below the standard; our estimate for the London and North Eastern is as much as 32 per cent. below it. Last, but not least, the railway worker, who last year was virtually invited by the Tribunal to press for the full restoration of pre-depression wages and duty conditions, will have a less obvious case in future for further claims. The Staff Tribunal, indeed, has gone out of its way, in its latest report, to stress the ill-effects of rising costs on the railway position. In short, the evidence suggests that a large part of the financial fruits both of increased charges and of increasing traffic has already been effectively mortgaged, and that a return to the pre-war figures embodied in the Standard Revenue provisions of the Railways Act of 1921 cannot yet be even foreseen.

Demand for British Cars

DEMAND for motor cars has never been, in Britain, the bell-wether of industrial activity that it is in the United States of America, where some professional forecasting agencies, impressed by the experience of the last couple of decades, have gone so far as to declare that what the automobile production figures do to-day, general business will almost invariably do to-morrow. Nevertheless, close interest must needs attach to the prospects of a British industry which claims responsibility for the consumption, last year, of 900,000 tons of iron and steel, 8,830,000 square feet of glass, 2,350,000 gallons of paint, 111,000,000 board feet of timber and 5,717,000 tons of petrol and oil, and to have provided employment for more than 1,250,000 persons directly and probably another 500,000 indirectly in the provision of its raw materials. The larger of the two latter figures includes a large number of people, engaged in the sale, repair and operation of motor vehicles of all kinds, as well as those turning out new vehicles. But the importance of that basic function in the economy of the whole industry is sufficiently obvious to explain the constant anxiety of all producers to discover ways and means of estimating in advance the dimensions of future demand, and planning their productive effort accordingly. In the past, the methods of estimation used have sometimes been near the mark, but on several occasions they have seriously under- or over-stated actual demand. Is there a more excellent way? The following article is designed as a tentative and preliminary reply to this question, in the light of new information which has recently been made available.

We may begin by pointing out the obvious fact that the buyers of any given year's output of new motor vehicles fall into one of two groups: those who are purchasing a car or lorry for the first time and those who are substituting new cars for old. In the jargon of the

market, these two types of demand are said to be, respectively, for expansion and for replacement. Hitherto, it has been customary in all statistical calculations to assume that demand for expansion is synonymous with the annual increase in the number of vehicles registered. This figure is always less than the total number of cars sold (i.e. registered for the first time) during the year. The conclusion has therefore been drawn that the difference between the increase in the total fleet and the number of new cars sold during the year was an exact measure of the extent of replacement demand.

Now, it is obvious that this method of calculation may be relied on to give fairly accurate results for, say, commercial vehicles, which are normally run by their original buyers during the whole, or the greater part, of their useful working life. But where transfers from one owner to another are widespread and frequent enough to create an important " second-hand," as well as a " first-hand " market, a computation which makes no allowance for the former's existence, or its repercussions on the latter, may be liable to substantial error.

No figures are available, unfortunately, to show the extent of turnover in the second-hand market. A very approximate idea of its relative size can, however, be obtained indirectly by assuming that certain figures, giving the average ages of cars registered with the Middlesex County Council—a very important licensing body in Greater and Outer London, north of the Thames—are representative of conditions in the country generally. These figures have been obtained by the Society of Motor Manufacturers and Traders. The assumption that the Middlesex figures are representative is, of course, made *faute de mieux*. Actually, there is reason to believe that they reflect a higher purchasing power than that of the country as a whole. At the moment, however, they are the only data available, and must needs serve as a basis for provisional conclusions until the Society has obtained similar figures for other areas.

From the Middlesex returns, as they stand, we may learn, first, what proportion of the total number of cars were aged under one year, between one year and two years, and so on; and, secondly, what proportion of the total value of the whole fleet was represented by the cars in each age-group. This second computation, at best, can be only approximate. By how much does the value of a car depreciate in its first, second and subsequent years of service? In the following table, it has been assumed that depreciation takes place at the rate of 25 per cent. on the *diminishing* annual values (though this rate may well be too low in practice):—

AGE DISTRIBUTION OF MIDDLESEX COUNTY REGISTRATIONS

Age of Cars (in Years)	*Per cent of Total Number*	*Per cent. of Total Value*	*Age of Cars (in Years)*	*Per cent. of Total Number*	*Per cent. of Total Value*
Under 1	18·90	*35*	5 to 6	6·90	*3*
1 to 2	16·75	*27*	6 to 7	7·73	*3*
2 to 3	11·87	*14*	7 to 8	7·22	*2*
3 to 4	9·62	*9*	8 to 9	5·30	*1*
4 to 5	8·16	*5*	9 and over	7·54	*1*
			Total	100·00	*100*

The table suggests that cars up to three years old are less than half the total number, but account for more than three-fourths of the total value, even on the conservative allowance we have made for depreciation. Conversely, cars of six or more years old represent 28 per cent. of the total number, but only about 7 per cent. of total value. In other words, though the potential second-hand market may be extensive, the contribution which sales of the older types of car can make to the provision of finance for the purchase of new cars is much less than statistics based on mere *numbers* would imply. So far as the *value* of replacement demand is concerned, the dominant factor is the policy of first-hand owners who keep their cars for anything up to three years and then buy new ones.

Let us follow the argument a stage further. If we presume that conditions of general prosperity remain unchanged, then the expected " mortality " of first-hand cars is mainly a function of the sales effected two or three years earlier. Where the actual new sales substantially exceed the *indicated mortality* figures, the presumption is that the excess mainly represents, not replacement demand but the entry of fresh owners into the first-hand class—i.e. the true expansion demand affecting new sales. If, in fact, we express the actual new registration figures in each recent year as a percentage of the figures of similar registrations (*a*) two years before, and (*b*) three years before, we have the following figures:—

Year	Year's Sales as Percentage of Sales Two Years Earlier	Year's Sales as Percentage of Sales Three Years Earlier	Year	Year's Sales as Percentage of Sales Two Years Earlier	Year's Sales as Percentage of Sales Three Years Earlier
1926	128	158	1931	78	85
1927	114	139	1932	91	79
1928	111	114	1933	133	123
1929	107	118	1934	165	166
1930	95	95	1935	178	210
			1936	171	204

The whole calculation is, of course, tentative, but the results certainly seem to square with general facts which are common knowledge. At the beginning of the period, expansion demand was still benefiting from the introduction of the cheap popular car by firms like Morris and Austin. Thereafter, the effect diminished annually, and by 1929 it even seemed that saturation—in terms of existing models and prices—was approaching. Then came the depression, when sales actually fell for a time below the indicated replacement levels, but when new models were evolved (especially in the 10/11 h.p. group) and prices were steeply reduced. Consequently, as soon as revival liberated buying, a new and vigorous advance was made, which only began to slow down last year, when the arrears of the depression period had been fully overtaken. The figures of actual sales for 1937 may show a slight increase on those for 1936, but as they will be related, for the purpose of our index numbers, to higher basic figures two and three years earlier, the indices will probably register a further decline. Indeed, with prices tending to rise we may be conceivably entering a period comparable with the late nineteen-twenties, when saturation, *under existing conditions*, was evidently approaching. But in the meantime the ranks of first-hand owners have been so much swelled that the technical prospect for replacements is greatly improved; and saturation may still recede before the combined influence of improved roads, technical advances, more houses with garages and a further rise in prosperity.

Whether or not the above figures and the conclusions we have sought to draw from them would prove well founded in the light of fuller statistical information, they may serve to stress the need for a special inquiry among dealers into the age of first-owner cars " traded-in " against new cars, year by year. Accurate figures regularly compiled would throw invaluable light on the " cycle " of replacement demand, and greatly help manufacturers in forecasting their probable market. They would not, of course, be a conclusive pointer to future demand, for replacement is only one of the three factors which determine new sales. The others are the general trend of prosperity and the relative movement of prices or, rather, of value for money, allowing for all technical improvements which tend to make a new car more desirable than an older one. The incidence of these factors, however, lies outside the scope of this article.

So far as replacement factors go, one or two consequences of the thesis set out in the present article deserve passing notice. When the prices of new cars are lowered, demand is stimulated not only by way of the increased inducement to first hand owners to replace their existing cars, but also by the attraction of potential buyers from the second-hand to the new market. But the actual expansion in the total number of car owners among the lower salaried classes and upper wage-earning classes is much more a function of the second-hand market than of the price of new cars. Finally, it would seem that the primary effect of economic depression or revival on new sales operates largely through a lengthening or shortening of the average first-hand life of a car. Here is another argument for the collection by the Society of regular information about the average age of first-owner cars exchanged against new vehicles, despite the inherent difficulty of the task.

Aftermath in Poland

IN May two years ago, exactly nine years after he had made himself dictator of the country, Marshal Pilsudski, creator of modern Poland, died. With his dying breath he bequeathed the Inspector-Generalship of the Forces, the position he had held, to General Rydz-Smigly, a liberal-minded, cultured officer named Rydz who had shown egregious military skill in the campaign against Soviet Russia under the famous pseudonym Smigly, after the war; and last November General Smigly-Rydz, as he had so altered his name, received that peculiarly Polish symbol of civil power—a Marshal's baton—from President Moscicki. On the face of it, Poland had lost an aged, and gained a young, Marshal-dictator. The Pilsudski political system, with its dependence on " the Colonels " and Legionaries of the Russian campaign, its Government non-party *bloc* formed in 1928 and known as the " B.B.," and its exclusion of the peasants' and democrats' Opposition leaders from power and even from the country, seemed omnipotent and intact.

Yet nothing was farther from the truth. Spanish politics immediately degenerated after the death of the military dictator, General Primo de Rivera in 1930, into a tussle for predominance between personalities, parties, and programmes which unseated the monarchy, unleashed a revolution and ended in civil strife. The progress of such a tussle over a dictator's political testament —happily halted at the verge of civil strife—can be observed to-day in Jugoslavia; and the disputed title to Lenin's political testament is even now, a decade and a half after his death, the cause of civil dissension and repression throughout Soviet Russia. An assassin has now faced Iraq with the same problem. It is a *damnosa haeritas* which a dictator bequeaths; but, unlike the ancient Romans' testament, it cannot be declined.

Difficulties of this kind inexorably beset Marshal Smigly-Rydz, President Moscicki, and the various Prime Ministers of Poland in the last two years; for the Colonels and Legionaries were ardent young men in 1920 and their ambitions have waxed with the years. But within the last week the dissensions among Pilsudski's followers have become public property; and now it looks as if a much uglier monster than a cat is out of the bag. Ever since the old Marshal's death a division of opinion and outlook has been apparent between General Smigly-Rydz and a powerful group of Right-wing Colonels and Legionaries, including former Prime Ministers and the present Marshal of the Senate, with whom, it is reported, the able and extremely independent-minded Foreign Minister, Colonel Beck, was in sympathy and contact. This group in the last two years have seen power slipping from their grasp, although just after Pilsudski's death a new Constitution, inaugurated by the then Prime Minister, Colonel Slawek, abolished the " B.B." *bloc* and practically disfranchised the workers and peasants. Colonel Slawek, a Right-wing leader, was dropped soon after this; and General Smigly-Rydz talked of broadening the basis of Government by securing the goodwill, if not the political collaboration, of the peasants and democrats hitherto in Opposition. Last summer the General was reported to be considering the recall of the peasants' leader, M. Witos, from exile in Prague; and the growth of peasant and democratic support for the new Marshal, who has consistently urged the need for a broader popular basis for the Government, added fuel to the flames of the Right-wing Legionaries' discontent.

This year the inner conflict has been brought to a head by a succession of events. On February 21st Colonel Adam Koc, formerly Under-Secretary of Finance, launched a programme for a National Unity movement in a manifesto under the chilling title " A Politico-Ideological Declaration." This was the result of the charge laid on Colonel Koc by Marshal Smigly-Rydz nine months earlier: namely, to prepare a programme on which both the adherents of the old " B.B." *bloc* and the Opposition elements might collaborate in a kind of quasi-democratic, quasi-totalitarian National Government. The Right-wing Colonels and Legionaries, led by Colonels Prystor and Slawek, shied at it; Colonel Koc's concepts were more than a little vague, which perplexed the people; he lacked the platform manner; and the Marshal naturally feared to descend fully girded into the political arena and force an issue which might have lost him his own useful transcendental attributes. Upon this troubled scene burst two bombshells; one real, the other metaphorical but more disastrous. A man known to have been formerly in contact with, and employed for, certain Right-wing malcontents was blown to pieces in attempting to assassinate Colonel Koc by setting a bomb outside the latter's residence. And, secondly, the Catholic Prince-Primate of Poland, Mgr. Prince Sapieha of Cracow, removed Pilsudski's coffin from its resting-place in the crypt of the Wawel cathedral without Government authority, which was exceeding his rights. The attempt on Colonel Koc's life was almost tantamount to an attempt on that of the Marshal, who could scarcely longer stay his hand from political intervention; but the affair at the Wawel cathedral was inherently more dangerous, for it enabled the Right-wing Colonels and Legionaries to call in question the Concordat of 1925 which they regretted, since it strengthened the Church's influence, especially among the mass of the people.

The *dénouement* of the drama was reached last Sunday, the day of the annual reunion of the Pilsudski Legions, when the Legionaries in their thousands came to pay homage to Pilsudski's memory and to be reviewed and addressed by the present Marshal, by whose side stood Colonel Koc, the architect of the National Unity Plan. Colonels Slawek and Prystor were absent; so was Colonel Beck; so were many " Colonels " once the close associates of Pilsudski. The slight to Marshal Smigly-Rydz was deliberate; the challenge unmistakable; and he accepted it. In a short but unequivocal speech he called on the Legionaries and the Polish people to fulfil the old Marshal's work by collaborating wholeheartedly in the National Unity Movement, to avoid " complicated doctrines and political ideologies." He declared that he wanted to return to " simple ways and solutions." The time had come to finish with disputation and to bring the nation together on a platform of " truth and work."

Thus did the Marshal enter the political ring behind his second. The gloves are now off in Polish politics. The contest may be long and arduous, but in any case it will be crucial for Poland—indeed, for all Eastern and Central Europe. The Pilsudski regime has split within two years of its creator's death; and a great gulf between it and the Polish people has widened, is still widening, and will continue to widen, unless the new Marshal can rally the mass of the still largely disfranchised people to a new national movement whose strength will be its comprehensiveness. A peasant country whose population increases by over 400,000 a year, whose industrialisation depends on the profitability of agriculture, and against whose exports trade barriers are still working havoc, needs all the political calm and unity it can command. Against the Marshal's proposals for his country's governance stand a few jealous guardians of their own interests, too long vested in political power. The mantle which fell from a dictator's shoulders two years ago has disclosed the true face of Polish politics. Poland has now to solve the problem of the aftermath.

Notes of the Week

Japan Prefers War.—In the Far East there has been an abrupt and ominous end to the lull in operations. Japanese troops have entered Peking, Shanghai is hemmed in by a Japanese fleet of 33 warships, and both Chinese and Japanese Armies are preparing to fly at each other's throats in and around this rich but fated city. There has been no pause in the civilian flight from the cities of destruction which the great commercial centres of China are all likely to become if war does after all break out. There is a stream of Chinese refugees from Chapei, the densely populated salient of Chinese-administered territory, jutting into the International Settlement at Shanghai, which was devastated by the Japanese in the fighting in 1932. But there are Japanese refugees too. The Japanese colonies in Hankow, and in all the river ports further up the Yangtse, are being evacuated and brought down-river to Shanghai, and the Japanese colony in Tsinan is being brought down-river to Tsingtao. This evacuation of the Japanese business community from the interior of China must impress upon every Japanese mind the truth that a war would mean for Japan an immediate loss of the China market —and therewith the cutting of one of the principal sinews on which Japan is dependent if she is going to wage war with either China or anyone else. But this factor has not stemmed the fatal trend of Japanese military policy towards war. That policy, the instrument to extend Japanese hegemony over all Northern China and perhaps Eastern Asia, is driven onward by the momentum it has acquired in the last five years, in order to secure its ill-gotten gains.

* * *

In Japan an impressionable public, whose feelings the Army have been most irresponsibly working up, is now clamouring loudly for a " fundamental " solution of the problem in China that Japan has created for herself. But, as we pointed out last week, a fundamental settlement with China is perhaps the one thing that is quite certainly beyond Japan's power to attain by the methods of barbarism which she is still determined to employ. She can shear away great additional slices of Chinese territory *ad libitum*. The next slice is going, apparently, to be the section of Hopei province containing the cities of Peiping and Tientsin, with the railway connecting them; and as Japan is in military occupation of this slice already, she has herself fulfilled this particular demand upon China before she has officially presented it. But Japan will find that there still survives a living and breathing China which she cannot kill and cannot bend to her will.

* * *

Physical Training.—Last February the British Government decided to set up machinery and allocate money to assist local authorities and voluntary bodies in schemes of physical training. A National Advisory Council and a Grants Committee were set up; and in March a Bill was placed before Parliament to define the functions of these bodies, and to provide for the payment of grants and the training of instructors. On August 9th the National Advisory Council issued a memorandum setting out the powers which local authorities now possess to help in the fitness campaign. They will operate under the guidance of the Ministry of Health and the Board of Education, and will receive 50 per cent. of their approved expenditure on gymnasia, community centres, playing grounds, swimming baths and holiday camps. Contributions will also be made to the expenses of voluntary associations providing similar facilities. The plan is now less nebulous than at the outset, and merits nothing but praise in its endeavour to stimulate the provision of amenities like playing fields, swimming baths and camps. There is still, however, the danger that a great deal of uncoordinated local and voluntary effort of doubtful efficiency or usefulness will be subsidised, and that the national scheme may in fact cloak a chaos of local anomalies and misdirected energies. The whole scheme is permissive, and lays down no obligatory minimum standards. There is no guarantee, either in the admirable enthusiasm of the Council or in the scope of the advisory scheme, that the nation will derive the fullest possible benefit from the £2,400,000 to be spent in the next four years. Indeed, it may be that a less comprehensive scheme, more rigidly applied, would have been more beneficial. Nevertheless, valuable co-operation among the extraordinarily diverse agencies which now exist for social welfare will be stimulated. And, if the nutritional basis of all fitness and health is steadily borne in mind by the authorities, a fitter nation should be the result.

* * *

Labour and Prosperity.—Alarums and excursions in the coal and road transport industries have died down, and militant action has been generally forsworn by the labour movement. But the determination of trade unions to obtain maximum advantage from the present prosperity is daily more evident. " Holidays with pay " has become a general slogan: over 160,000 insured shipyard workers and nearly half a million tailors and garment workers are seeking to secure this concession, already granted to nearly 600,000 engineers. The forty-hour week also has been made the basis of new claims by coal miners, garment workers, and post-office workers. These are signs of the times, when social reform allied to rising prosperity has effected great changes in industrial conditions in many countries. There are also more specific claims. The Executive of the Mineworkers' Federation have appealed to Mr Chamberlain to co-operate in measures to secure a general reduction in hours of work, both at home and abroad, because of the increased mechanisation and speeding-up of mining and the deleterious effect on miners' health. The demand of dock labourers for higher pay has been met by the employers' offer to reorganise the industry to lessen casual work.

* * *

The Union of Post Office Workers are at present drafting a claim which will involve a minimum wage of 70s. a week, and adjustments in hours which would, they claim, make possible the absorption of 30,000 new employees from the present workless. The Transport and General Workers' Union will shortly place before the National Joint Council for road passenger transport a triple claim affecting over 70,000 workers employed by local authorities: that wages should be generally increased by 4s. a week; that schedules of duty should be improved; and that a common standard for work on trams and buses should be laid own. It is salutary that, having chosen the constitutional path, the unions should now be using the existing machinery of negotiation to the full for the welfare of their members, while the industrial background is favourable. Yet there are limits to the concessions which can be made in present conditions. The claims of the four railway unions, discussed on page 327 of this issue, have been only partially accepted by the National Tribunal. And, while new standards of remuneration and working conditions are very properly emerging all over the world, the present state of France suggests that shorter hours of work may not be a national asset when combined with an unbalanced Budget.

B

The Fair Wages Clause.—A series of complaints about the working of the fair wages clause in Government contracts led to Mr Ernest Brown's announcement last March that a committee would be set up to consider the advisability of any changes. This Committee has now been appointed, under the chairmanship of the Provost of Oriel, and consists of representatives of Government departments, trade unions and employers' organisations. At a time when the secular tendency of Government contracts to engage more and more of the nation's resources is vastly intensified by the execution of the defence programme, the Committee's task is both delicate and important. The fair wages clause, inserted in all Government contracts, rests not on any statute, but upon a resolution of the House of Commons on March 10, 1909:—

> The contractor shall, under penalty of a fine or otherwise, pay rates of wages and observe hours of labour not less favourable than those commonly recognised by employers and trade unions (or, in the absence of such recognised wages and hours, those which in practice prevail among good employers) in the trade in the district where the work is carried out.

Since then responsibility for the inclusion of the clause in contracts, and for its observance and interpretation, has rested with the Government departments concerned, advised by a Committee of the Treasury and of the Ministry of Labour. In addition, it has become customary for local authorities to insert some form of the clause in their Standing Orders for contracts. And, in the increasingly numerous cases where such contracts involve Government grants, the Ministry of Health requires that fair wages should be observed. Consequently, several million workers are affected at some time each year by the direct or indirect application of the fair wages clause.

* * *

Considerable friction has arisen about the interpretation and enforcement of the clause. On the one side it is argued that the wording is obsolete, and leaves too much discretion to departments and contractors in the determination of " commonly recognised " rates, in the definition of " good employers," and even in the definition of " a district." Moreover, trade unionists allege delay in investigating cases of evasion, and difficulties in determining the ramifications of sub-contracting for the purposes of the clause. Above all, it is maintained by workers' representatives that employers given Government contracts should be known to pay fair wages in their civil work. Governments since the War have informally approved this last principle, but have consistently held that the existing clause operated equitably. A number of recent cases, ventilated in the Commons have, however, made it clear that the unions' criticisms should be met, especially when so many workers are affected; and the first function of the new Committee will be to allay rancour and alarm. An important principle is involved. No one would deny that the Government ought properly to be a *good* employer in all cases; or that the wording of 1909 is hardly applicable as it stands to the industries of 1937. But it has yet to be decided whether the Government should set up as a *model* employer to enforce standards which have not yet been commonly accepted in particular areas. Such action might be salutary; but it would be a new departure in policy.

* * *

Germany and the Press Abroad.—On Friday of last week it was reported in London that the permits of three German Press representatives were being revoked on account of activities unconnected with journalistic reporting. It is understood that certainly not journalism, nor even espionage, but participation in a kind of administrative exarchate of the Nazi Party which involved organised supervision of German as well as non-German residents in this country—a procedure flagrantly contrary to international law and custom and an abuse of the freedom accorded by a democracy—is the ground for the British Government's action. This has not prevented the Reich Government from presenting the case as if the British Government had turned out three Nazi journalists on account of their nominal work. That this is untrue can, and should, be clearly stated; for no German Press representative in this country has ever been trammelled by intervention of the British Government in what he reports; just as no Italian journalist was ever trammelled during the war against Ethiopia, during sanctions or the Spanish conflict; and just as no American journalist was hindered from reporting whatever he liked before and during the Abdication crisis—a particularly delicate matter for this country.

* * *

Representatives of the foreign Press enjoy in London a degree of liberty scarcely discoverable in any other country of Europe, and surpassing—but not by reason of Government intervention—the liberty of the British journalist himself. On the other hand, for some time there have been complaints that German and non-German residents here were being supervised and victimised by agents of the Nazi Party, who reported each case back to Berlin. This has been a familiar phenomenon all over the Continent for the last four years; many Nazi cells are hard at work in many countries. Mr Winston Churchill and others asked questions about it in Parliament just before the recess. But the Reich Government, sedulously buttressed by the Ministry of Propaganda, have elected to try reprisals on accredited representatives of the British Press in Berlin. Their first and obvious choice was Mr Norman Ebbutt, senior correspondent of *The Times*, whose reports during the last four years have been eminently and continuously dispassionate, objective, but informative. He has been given fourteen days' notice to quit; but the Reich Government chose the almost unprecedented method of requesting the British Government to secure, from *The Times* in London, Mr Ebbutt's withdrawal before the notice to quit expired, and his replacement by someone more congenial to the Nazi Party. This is intolerably overweening power-politics. Not for the first time it has recoiled on Berlin; for the overwhelming reaction in Britain and other countries is one of conviction that negotiations with the Nazi Government by all ordinary standards of civilised international conduct may soon become impossible of maintenance. Incidentally, it may be added, there are about fifteen accredited British Press representatives in Berlin, and about eighty German Press representatives in London.

* * *

The Nazis and The Times.—On the Third Reich and Mr Ebbutt, our Berlin correspondent writes:—Quite apart from the merits of this particular case, the expulsion of *The Times* correspondent is an untimely and unreasonable measure; first, because of the extraordinary German request, reported in the official *communiqué* to the Berlin Press, that the British Government should itself take steps with *The Times* to bring about Mr Ebbutt's withdrawal (to which, it is to be hoped, the British Government replied with a firm negative); secondly, because the expulsion is described, and justified, as retaliation for the expulsion of three Germans. Even had the three Germans been expelled for unfriendly journalistic reporting, which was not the case, retaliation would have been out of place. The German Government has repeatedly expelled correspondents, including several British, and were retaliation the rule there would be very few German correspondents abroad. It is to be hoped that the British Government will never retaliate in this sense; and further that, having expelled German correspondents on other grounds than the character of their professional work, it will never expel them, or any other foreign correspondents merely because it considers their reports unfriendly or unfair.

The Reich Government's action, however, betrays confusion, because while Mr Ebbutt's expulsion is primarily presented as retaliation for the expulsion of the three Germans, the authorities try to justify it by the claim that Mr Ebbutt has been unfriendly and unfair. No impartial foreign observer could find anything unfriendly or unfair in *The Times'* reports from Berlin. The reports have been eminently fair and correct. But it is in the very nature of a correspondent's work in dictatorship countries that his reports should be resented by the authorities. Readers of daily newspapers want political news from abroad. Other sorts of news, economic, cultural, and so on (subjects, that is, which are or ought to be " neutral ") are of secondary interest to readers. But political news from a dictatorship country is mostly not good news. A foreign newspaper correspondent in London has as subject the wide and " neutral " field of democratic politics, the sessions of Parliament, elections, the struggles of political personalities, and so on; and even if he should seek to send unfavourable news, he could not neglect these " neutral " subjects. In dictatorship countries the only overt politics are " unfavourable," even if viewed from the German official standpoint; news of Church struggles, executions of traitors, and immorality trials is unfavourable news. The correspondent does not select these unfavourable news subjects: he sends the only news available. Further, he sends accurate news. He is very seldom caught in an inaccuracy. It is true, indeed, that there is much inaccurate news about Germany in the foreign Press, and that much of what is inaccurate is also unfavourable. The Third Reich, it is known, wages war against the alleged conspiracy of the international Press to defame it. But those Press statements about Germany that are at once inaccurate and unfriendly do not come from the foreign correspondents in Berlin. They are invented or are imagined outside the Reich. The German Government has hardly ever made against a correspondent in Berlin, and has apparently never once substantiated, a charge of sending a false report. Conditions in Berlin are indeed such that foreign correspondents can very seldom verify the unfavourable stories, many of them no doubt untrue, that circulate. Such unverified stories are never sent.

* * *

The Zionist Debate.—During the past week there has been a continuation of the two parallel examinations of the Palestine Commission's Report—by the Permanent Mandates Commission at Geneva and by the Zionist Congress at Zürich. The Mandates Commission is getting down to a searching inquiry into the recent past history of the mandate, in colloquy with Mr Hall, while Mr Ormsby-Gore has returned to England. On the other hand, the Zionist Congress was necessarily concerned less with the past than with the future, and its decision on Wednesday, by 300 to 158, to negotiate with the British Government on the details of the proposed partition is a notable step forward. The emotional tension of the Congress was revealed not only in the tenor of the speeches—particularly Dr Weizmann's great speech of August 4th, of which the full text has now been published. The trend of Zionist opinion had become clear as the debate went on. Under the leadership of Dr Weizmann and Mr Ben Gurion (representing Zionist Labour) the advocates of the policy of accepting partition in principle had steadily gained ground; and there is some indication that the particular application of the principle which Dr Weizmann has succeeded in getting Congress to accept will not be so far removed from what the British Government can grant as to make the agreement in principle futile. Dr Weizmann wants to be assured that the sovereignty of the new Jewish State will be genuine, and this is a wholly reasonable stipulation, since sovereignty is the pearl of great price for which the advocates of an acceptance of the principle of partition are prepared, however sorrowfully, to sell the larger part of the Palestinian field which had been earmarked for the establishment of a Jewish national home. In particular, Dr Weizmann wants immediate sovereignty in the matter of immigration, which is a question of such immediate moment to Jewry in view of present conditions in Central and Eastern Europe. In the third place, he wants the Jewish suburbs of Jerusalem to be added, as an outlying *enclave*, to the Jewish State, on the analogy of the Commission's proposal to give the Arab State an outlying *enclave* at Jaffa. This last demand may be the least easy of the three to meet; but it is, after all, a question of detail, though by no means trivial.

* * *

Church and State in Germany.—Two pieces of news throw light on the difficulties of the Third Reich in its attempts to do Christianity in Germany to death under cover of the smoke-screen which every dictatorial Government is able to put up in these days through its control of information and propaganda. On August 6th the trial of Dr Dibelius resulted in an acquittal, and on Monday it was announced that the trial of Pastor Niemöller was to be postponed. This second piece of news is particularly interesting in view of the demonstrations which had taken place the day before—last Sunday—round Dr Niemöller's church in Berlin-Dahlem. The police failed to get the demonstration under, in spite of their making a large number of arrests; and the Government seem promptly to have drawn the moral that they had better work up their case against the prisoner more thoroughly before they ventured on the hazard of another trial after their experience of the failure of Herr Kerrl's prosecution of Dr Dibelius. The latter, who is the General Superintendent of the German Evangelical Church, had been prosecuted, under the present German Law for the Protection of State and Party against Underhand Attacks, on the charge that an accusation, which he had make against Herr Kerrl in an open letter, was false and malicious. The Court (to its honour) found that Dr Dibelius had not been actuated by malevolence in making his accusation, and that there was not sufficient evidence to show that he had been guilty of either deliberate or careless misrepresentation of the words of a Minister of State. Accordingly, so far from accepting the Public Prosecutor's demand for a sentence of six months' imprisonment, the Court found Dr Dibelius not guilty, and ordered the State to pay the costs. The significance of the result of this trial is matched by the piquancy of the reason which is said to have moved the Government to prosecute—for this reason illustrates the impossibility of insulating the Protestant from the Catholic battle-front.

* * *

New Tendencies in India.—The interview between Mr Gandhi and the Viceroy fits smoothly into the story of Indian politics since the Congress gained its victories at the provincial elections and demanded terms for its acceptance of office. The heart of that demand

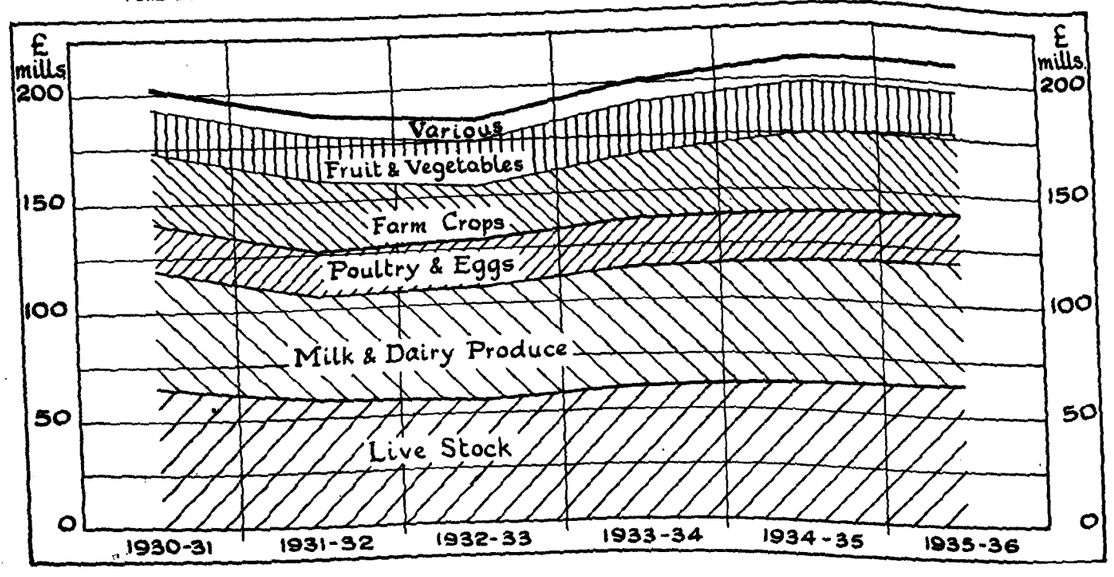
was the wish of Congress to see its newly-won status recognised and confirmed. No longer was it to be the permanent opposition, distrusted and periodically repressed by the Powers that were; instead, it was to be the authoritative government of a large part of India. Once this had been mutually acknowledged by the Viceroy's statement on the Governors' powers and by the subsequent creation of Congress Ministries—it became a regrettable anachronism that the chief representative of the Crown and the most powerful leader of the Congress had never met each other. Mr Gandhi took the opportunity of raising certain questions concerning the exclusion of the Red-shirt leader, Abdul Ghaffar Khan, from the North-West Frontier Province, and his own right of entry into that province. But the chief subject-matter of the conversation was a topic with which both men are deeply concerned, the improvement of the condition of rural India. In an article on future Congress policy, Mr Gandhi recently demanded Prohibition, the abolition of the salt tax, and other measures, and went on to declare that attention should now be devoted more to villages and the peasantry than to cities. This was in direct contrast to a speech by Pandit Nehru, in which the Congress President called for an active policy of stimulating the growth of Indian industry behind the protective tariff. Clearly, the assumption of responsibility will bring to light sharp cleavages within the Congress, and already the various provincial Ministries formed by Congressmen appear to be following different paths.

* * *

Lull in Spain.—The comparative calm which has settled down on all land fronts in Spain has not extended to the sea and air. The insurgents are once more stalemated round Madrid, at Toledo, in Cordoba and Malaga in positions slightly less favourable than a few months ago; in Teruel they have been checked; and even in the Basque territory land fighting is desultory. Meanwhile, aircraft have created more incidents by bombing French, British and Italian merchant ships off Algiers; and attacks on two ships, the "British Corporal" and the Italian "Mongioia" have been the subject of lively protests by their governments. The captain of the latter ship died from his wounds. It was at first doubtful who had bombed the ships; though the type of machines used, and their presence so far from government territory, made it appear likely they were insurgent craft. Later, when the British naval commander protested at the insurgents' naval base in Palma, Majorca, the insurgent authorities there—who house many Italian machines—admitted their craft had done the bombing, while, in another place on the mainland, Salamanca, General Franco's staff were denying that his aircraft had been off Algiers that day! After this revealing inconsistency, Sir Henry Chilton, British Ambassador to Spain located at Hendaye, was instructed to protest vigorously to Salamanca again. On the other hand, the Italian Government went one better in complicating the occurrence: they roundly asserted that the aircraft were "Red" and protested on Thursday to the Non-Intervention Committee in London. During the past week the non-intervention front in London has shared in the lull; the British plan, still faintly breathing, is to undergo a kind of half-autopsy, half-vivisection by a special committee; while from the high seas insurgent warships have battered one or two Spanish ports. Less than ever does General Franco look like being able to polish off the campaign before winter rolls up the map of Spain.



* * *

Assassination in Iraq.—On Wednesday night General Bekir Sidky, the chief of the Iraqi General Staff and dictator of Iraq, who ten months ago made a *coup d'état* in which his forerunner, General Jafar Pasha, was murdered, was in turn assassinated, together with Ali Jowad, Chief of the Air Force, on their way through Mosul to view the Turkish manœuvres. Bekir Sidky was a notorious Kurdish exponent of the iron hand—witness his massacre of the Assyrians in 1933—Turcophil, a close friend and admirer of Kemal Ataturk, and an Anglophobe. He was relatively young, an able and dashing soldier, ruthless in ambition, but as defective in political vision as he was forthright in action. The young King Ghazi has now to face something like the scramble for civil power which, as we describe in our article on Poland on page 330, has paralysed Spain and is now paralysing Polish and Jugoslav politics, after the death of a dictator.

* * *

Agricultural Output.—In the chart reproduced at the foot of this page readers can trace the development in recent years of the principal items of the value of British agricultural output. The figures have been taken from the Ministry of Agriculture's recently-published "Agricultural Statistics, 1936, Part I" (H.M.S.O., 1s. 6d.)—which, incidentally, contains considerably more statistical material than its predecessor. The total value of the output of agricultural and horticultural produce in England and Wales fell to a low level in 1932-33. It rose fairly rapidly in the two following seasons, but suffered a slight decline last year. The

VALUE OF AGRICULTURAL OUTPUT IN ENGLAND AND WALES

output of livestock, the largest single item, has not yet recovered to the pre-depression level, but milk and dairy produce, stimulated by the marketing scheme, has more than made good the ground lost during the bad years. Farm crops (which include corn, potatoes, sugar beet, hops, etc.) show the widest fluctuations in the period under review; the output of potatoes varied, for example, between £15.9 millions in 1931-32 and £8.5 millions in 1933-34. Production of poultry and eggs, which expanded rapidly in the post-war decade, has remained relatively stable in value since 1930.

* * *

The official estimates are summarised in the following table:—

AGRICULTURAL OUTPUT—ENGLAND AND WALES
(Million £)

	1930–31	1931–32	1932–33	1933–34	1934–35	1935–36
Livestock	65·0	58·2	56·4	60·7	62·1	63·2
Milk and dairy produce	55·0	49·5	52·3	55·4	56·6	56·4
Poultry and eggs	21·0	20·0	20·8	21·3	21·4	22·3
Wool	1·3	1·2	1·8	1·8	1·8	1·9
Total	142·3	128·9	131·3	139·2	141·9	143·8
Corn	9·8	9·8	8·9	9·8	10·8	10·5
Potatoes	11·7	15·9	9·1	8·5	11·6	13·8
Sugar beet	6·8	3·1	4·2	5·7	7·2	5·7
Hops	0·9	0·9	1·6	3·1	2·2	2·1
Hay, straw and miscellaneous products	4·0	3·3	2·6	3·3	4·1	3·9
Total	33·2	33·0	26·4	30·4	35·9	36·0
Fruit	7·8	5·6	7·1	8·2	10·5	4·9
Vegetables	12·3	15·1	12·9	16·8	13·3	15·0
Total	20·1	20·7	20·0	25·0	23·8	19·9
Glasshouse produce, etc.	7·1	7·1	7·1	7·1	7·8	8·5
Grand total	202·7	189·7	184·8	201·7	209·4	208·2

The slight decline in the total figure from £209.4 millions in 1934-35 to £208.2 millions in 1935-36 is accounted for by the substantial drop in fruit production last year. In livestock, the most important increase was in pigs, but sheep and lambs showed a decline in value. The output of milk and dairy products was also lower in value last year. The aggregate value of the output of farm crops was about unchanged last year, a decline in volume being offset by a rise of prices. A fall in the value of barley and oats was sufficient to counterbalance a rise in the value of the wheat output, so that corn production showed a net decline in value. In addition, British farmers received £2,730,000 in 1935-36 from the fat cattle subsidy, against £1,910,000 in 1934-35; and £5,230,000 under the Wheat Act, compared with £6,400,000 in the preceding year.

* * *

Alberta and the Banks.—Recent acts of the Alberta Government and Legislature seem remarkably like a gambler's last desperate throw. Some days ago Mr Aberhart, the Premier, addressed to the banks in the Province a letter announcing the Government's intention to pay a monthly "dividend" of $25, and demanding their co-operation. They were assured that neither they nor their depositors would suffer in consequence "any direct financial loss." A special session of the Legislature is now considering a series of Bills, wrapped in the mystical verbiage of Social Credit, which are designed to secure this enrolment of the banks in the Douglas crusade. Every bank, bankers and bank employee is to pay for a licence, and to submit to control by a local directorate on which Social Credit nominees will have a majority. The Alberta Government—over the head of its own Attorney-General, who has resigned—has sought by two means to evade the barrier that, under section 91 of the Canadian constitution, "banking, incorporation of banks, and the issue of paper money" are exclusively federal subjects. It has introduced a Bill purporting to prevent the constitutionality of provincial Acts from being challenged in the Courts without the Government's consent. And it has declared in the preamble and clauses of the operative measure that the purpose of the Act is the full enjoyment of "property and civil rights within the Province"—those forming an explicitly provincial subject under the constitution.

* * *

Constitutional Position in Alberta.—If the measures mentioned in the preceding note are passed, the legal position will be complicated. The federal Government may disallow either the operative Act or the Act to bar challenges in the Courts, on the ground that they defy the constitution. But the power of disallowance of provincial legislation has recently fallen into disuse, and Ottawa is reported to be chary of interfering. It seems to be constitutionally open to the provincial Lieutenant-Governor, under section 10 of the Alberta Act of 1905, personally to challenge his Ministers, as did Sir Philip Game when Mr Lang defied the law in New South Wales. But this could only be temporary, for the same section gives the provincial legislature full authority to revoke any powers of the Lieutenant-Governor. Other courses, however, remain open. The banks may refuse to obtain licences, and, having thus become illegal institutions, may close their doors; or, alternatively, they may defy the instructions of the Social Credit supervisors. In these or other ways they could force the Government itself to bring actions in the Courts. Even if the provincial Courts agreed that they were barred from considering the constitutional aspects of the law, an appeal would lie to the Supreme Court of Canada, which could not be so bound. It seems certain, therefore, that the constitutionality of the legislation will somehow be challenged, and in that event the plain words of section 91 must surely prevail.

* * *

Bumper Crops in America.—The star of the American farmer is in the ascendant. The caprices of Nature are this year working out, with one exception, strongly to his advantage. The official crop reports issued at Washington on Tuesday forecast very large crops of all cereals. The maize crop, for example, is expected to be more than 70 per cent. larger than last year. The yield of oats, at 31·5 bushels per acre, is more than three times last year's figure. Wheat is in a very good position, for the American yield is up by more than 40 per cent. in a year when poor harvests in Canada and Europe prevent a serious fall in prices. This is true, in greater or less degree, for most of the cereals, and the farmers' income will certainly be considerably larger this year. It is not so true, however, in cotton, where the large prospective crop has aroused fears of a sharp fall in prices. As a result, the Southern representatives in Congress have been pressing in the last few days for a resumption of the policy of making loans to growers on their cotton—a policy which in effect provides an insurance against a fall of the grower's income

THE LONDON & LANCASHIRE INSURANCE Co LTD
7, CHANCERY LANE, LONDON

below the loan figure. The figure suggested is 10 cents a pound (the present price is below 11 cents). The President already has statutory power to do this, but he has announced that he will not use any price-fixing powers unless Congress legislates for some measure of crop control. Thus the old controversy which raged round the principle of crop restriction two or three years ago looks like being revived. Crop restriction is not an appealing principle, but the President is undoubtedly wise in insisting on it if there is to be price-fixing at the expense of the Treasury. The disastrous history of price-fixing experiments which did not have this sanction is too convincing for any other course of action to be prudent.

* * *

Congressmen, however, are not interested in economics, and they are so incensed at the President's attitude that they threaten, as a reprisal, to hold up his Wages and Hours Bill. This illustrates the extent to which the long controversy and the successful revolt over the Supreme Court Bill have undermined the discipline which the President can exert over his nominal followers of the Democratic Party. The Supreme Court controversy itself has been laid temporarily to rest with the passage of the "Compromise" Bill. This measure leaves the Supreme Court itself untouched, but modifies the procedure by which Acts can be found unconstitutional. Injunctions against statutes on the grounds of unconstitutionality will not be so easy to obtain in the future as in the past, and the process of appeal to the Supreme Court in these cases will be speeded up. But though the Bill has been passed, the effects of the controversy will linger on, both directly in the suspicion that it may at any time be revived, and indirectly in the indiscipline which now reigns in Congress. The only person in the Administration who appears to be unaffected by this episode is the Secretary of State, who continues steadily to pursue his policy of concluding Trade Agreements with the whole world. The latest of the series is with Soviet Russia, and though the amount of trade involved is small, the Agreement has considerable political and commercial interest. It shows that the failure of the more ambitious attempt made two years ago to settle Russian-American differences has not led to embitterment.

* * *

Employment Marks Time.—Mainly on account of seasonal influences, the Ministry of Labour's estimate of 11,517,000 insured persons at work on July 26th shows no change on the previous month, though the increase on last year's figure is 511,000. The number of unemployed actually rose by 22,861 to 1,379,459; but the increase was chiefly due to the registration of 22,042 juveniles who left school at the close of the summer term. The unemployment position in various industries is shown in the following table; the percentage figures given are based on the insured population employed in each industry in July, 1936, the latest period for which data is available:—

UNEMPLOYMENT BY INDUSTRIES IN GREAT BRITAIN

Industrial Group	Number in thousands			Percentage	
	July 20, 1936	June 21, 1937	July 26, 1937	July 26, 1937	Change since July 20, 1936
Coal mining	234·2	169·2	146·2	16·3	− 9·8
Iron and steel	28·5	19·8	21·5	11·6	− 3·0
Engineering	56·8	37·7	40·1	5·4	− 2·3
Metal goods manufacture	37·7	27·1	29·4	6·0	− 2·1
Shipbuilding and repairing	45·3	36·9	38·4	22·5	− 7·5
Building	111·8	101·3	108·8	10·9	− 0·3
Public works contracting	116·0	98·0	102·9	35·5	− 5·9
Cotton	66·7	42·4	42·3	10·1	− 5·7
Woollen and worsted	25·0	19·3	29·2	10·4	− 0·8
Jute	8·6	6·4	21·2	69·4	+41·3
Tailoring	24·5	17·5	24·7	11·7	− 0·2
Boot and shoe	19·0	13·2	15·0	11·1	− 3·1
Hotel, boarding house, etc., service	47·0	48·2	44·5	10·2	− 0·8
Road transport services	28·5	23·5	20·2	9·2	− 4·1
Shipping service	31·9	27·7	25·8	18·3	− 4·8
Distributive trades	171·2	156·0	148·9	7·3	− 1·2
All persons registered (including other trades)	1,652·1	1,356·6	1,379·5	...	...

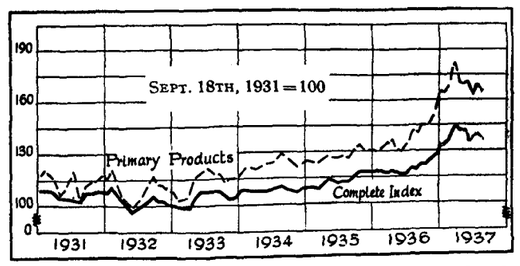
Though employment in coal mining shows improvement, the big reduction in the unemployment figures reflects the incidence on the preceding returns of the Yorkshire Mineworkers' Association annual demonstration, which took place on the day of the count. In the jute industry, trade holidays have largely increased temporary unemployment. For the rest, movements have been mainly seasonal; employment has increased in the distributive trades, hotel and boarding house service, road transport and shipping services, and been reduced in building and public works contracting, general engineering, wool textile, clothing and boot and shoe manufacture. Scotland had an additional 30,000 unemployed, largely as a result of holiday stoppages.

* * *

Anglo-Polish Coal Negotiations.—In an effort to retain overseas customers, the British coal owners, like the steel makers, are straining every nerve to maintain their exports in spite of difficulties in meeting domestic demand. In some instances, however, this is proving no easy task. As an example, we may refer to the working, under present conditions, of the Anglo-Polish Coal Pact, which was concluded in December, 1934, to mitigate competition between the two countries, particularly in Scandinavian markets. Poland has considerably extended her coal exports in the present boom, her shipments having risen from slightly over one-fifth to more than one-quarter of British shipments. Recently, Poland asked for still greater quota increases, which the British exporters declared themselves unable to grant. The agreement expires at the end of this year, unless an understanding is reached by the end of September. Further negotiations are believed to be imminent. The root of the difficulty is that the Polish coal owners are dissatisfied with the principle that their exports should be governed by the extent of British shipments, though only a few years ago they regarded this interdependence as advantageous. They have therefore drafted a modified agreement on which the British exporters have not yet expressed an official opinion. As the Anglo-Polish Pact was originally designed as the forerunner of a general agreement in the international coal trade, it may be hoped that some basis of collaboration will emerge.

* * *

The Week in Industry.—The maintenance of activity in the heavy industries is shown by the July figures of iron and steel production, issued this week. While the output of crude steel was slightly reduced, mainly owing to Scottish holidays, pig-iron production was the highest since September, 1920. The month's output of pig iron was no less than 729,300 tons, against 699,300 tons in June and 665,600 tons in July last year; while the output of steel ingots and castings was 1,059,200 tons, compared with 1,106,400 tons in the previous month and 974,100 tons in July, 1936. It is reported that a number of furnaces have been transferred from the smelting of basic iron to hematite. Despite the efforts made by the industry to cope with current demands, some consumers remain unsatisfied. Business this week has been affected not only by the inability of makers to accept orders for near delivery, but also by holidays; the markets have consequently been quiet. Meanwhile, the inland demand for industrial grades of coal and coke remains well above normal for the time of year, while shipments from South Wales have increased owing to South Africa's inability to satisfy some of her regular overseas customers. Outputs of coal in Yorkshire have again been restricted by strikes. New business in cotton textiles still hangs fire, the price of the raw material having suffered a further fall owing to the unexpectedly large estimate of the American crop. Sales are well below current production, and it seems likely that activity in Lancashire will be seriously affected unless prices soon show greater stability. The jute industry is also passing through a quiet spell, and unemployment is extremely high, but the woollen textile industry remains as active as ever. In general, the industrial barometer is still "set fair."



Further Fall in Wholesale Prices.—There has been a further small decline in wholesale prices during the past fortnight. In England the complete *Economist* index number has fallen by 0.6 per cent., and the primary products index number by 0.2 per cent. The primary products index is still above its low point of last June, but the complete index has touched a new low point for the summer. In the United States *The Economist's* primary products index has fallen by 0.4 per cent. and the Irving Fisher complete index by 0.5 per cent. They are both now at new low points for the summer. There is a slight rise in Continental wholesale prices.

† Monthly averages.

We publish below a chart showing the course of *The Economist's* two index numbers of British wholesale prices from 1931 onwards.

The chart shows that prices are still above the levels at which they stood at the beginning of the year. Details of our index number follow:—

The Economist INDEX

(1927 = 100)

	Sept. 18, 1931	July 14, 1937	July 28, 1937	Aug. 11, 1937
Cereals and meat	64·5	92·6	92·6	90·8
Other foods	62·2	67·6	67·2	67·0
Textiles	43·7	71·9	70·7	69·9
Minerals	67·4	108·1	108 6	109·8
Miscellaneous	65·8	85·8	85·6	85·4
Complete index	60·4	85·0	84·7	84·2
1913 = 100	83·1	116·9	116·5	115·8
1924 = 100	52·2	73·4	73·1	72·7

Apart from a recovery in non-ferrous metal prices, the decline was very general. It was most marked in the cereals and meat group.

* * *

Imperial Iron Ore.—The extensive dependence of Britain's steel industry on imported iron ore, and the present position in Spain and Spanish Morocco, suggest that sooner or later the question is likely to be raised of obtaining increased supplies from countries inside the British Empire. Last year, scarcely one tenth of Britain's iron ore imports came from the Empire. In many cases, high freight rates have been a deterrent to increased shipments. Nevertheless, the Empire is, even now, a substantial producer. The proportion of Empire output to world production increased from 9.5 per cent. in 1929 to 13.8 per cent. in 1935, and rose further last year:—

IRON ORE OUTPUT OF THE EMPIRE

(Tons)

	1929	1935	1936
India	2,428,555	2,364,297	N.A.
Newfoundland	1,494,452	662,441	N.A.
Unt. Malay States	809,518	1,411,636	1,654,567
Australia	852,960	1,874,418	N.A.
South Africa	37,666	299,247	359,219
Sierra Leone	Nil	433,540	577,692
New Zealand	8,043	10,646	N.A.

N.A. = Not Available.

The Wabana mines of Newfoundland, one of the world's most important deposits, are producing well below capacity. Ores from the Marampa deposits in Sierra Leone have been consumed in Great Britain since 1934. The reserves in India and South Africa rank among the largest in the world, but they are still undeveloped.

* * *

Public Trusteeship.—The recently published report of the Public Trustee recalls that the establishment of the Public Trustee Office was an epic of dogged perseverance. In 1886 Sir Howard Vincent introduced a Bill "to meet the difficulty which both public bodies and private individuals frequently experience in finding suitable trustees," but it did not secure a second reading. Between 1888 and 1894 Sir Howard Vincent and others sponsored nine further Bills having a similar object, but with the same disappointing results. At the request of Sir Howard, however, a Select Committee was appointed in 1895 to inquire into the matter, and in 1896 the Judicial Trustees Act was passed. Unfortunately, this Act proved unsatisfactory, and from 1901 to 1905 the same protagonist introduced a Bill annually "for the prevention of fraud upon widows and orphans by the appointment of a Public Trustee or Executor and the amendment of the Judicial Trustee Act." Finally, the Lord Chancellor introduced into the House of Lords a Bill which became the Public Trustee Act, 1906.

* * *

On October 1, 1907, a staff of six started to prepare for the formal opening of the office on January 1, 1908. In the year to December 31, 1908, the number of trusts in all categories administered by the Public Trustee was 325, of a total value of £2,095,900. By March 31, 1937, the staff had increased to 847; and the number of cases accepted during the year was 948, of an aggregate value, including additions to existing trusts, of £14,415,405. At the close of the period covered by the report there were 19,062 cases in course of administration, with a nominal capital value of £218,132,218—apart from landed property and cash at banks estimated at £55,800,000. The chief criticism of the Public Trustee's operations is on the ground of cost. Though he is not allowed to make a profit, his fees are well above those of his competitors.

BANK OF MONTREAL
(Incorporated in Canada in 1817 with Limited Liability)
CAPITAL PAID-UP $36,000,000

Rising Tide of Recovery Checked

New York, August 3.—The business figures for June are compared with those of the preceding five months and with June, 1936, in the following table:—

FEDERAL RESERVE BOARD INDICES

(Adjusted for seasonal. 1923–25 = 100)

	June, 1936	Jan., 1937	Feb., 1937	Mar., 1937	Apr., 1937	May, 1937	June, 1937
Industrial Production (total)	*104*	114	116	118	118	118	115
Manufactures	*105*	115	116	117	118	118	114
Minerals	*100*	109	115	128	115	116	115
Construction contracts (total)	*52*	63	62	56	53	56	60
Residential	*36*	45	47	45	44	44	43
Factory employment	*90.4*	98.8	99.7	100.9	101.6	102.2	101.6
Factory pay-rolls	*81.1*	90.6	95.8	101.1	104.9	105.2	102.8
Freight car loadings	*73*	80	82	83	84	80	78
Department store sales	*87*	93	95	93	93	93	93

Several interesting features stand out. Total business has remained virtually unchanged for six months. Building, much the most depressed of the major activities, has failed to advance, merely holding its own seasonally. Distribution, indicated by department store sales and car loadings, has remained steady. Employment and pay-rolls, after several years of almost continuous advance, gained very little ground in the last four months of the first half of the year; to some degree this is due to strikes, although the same tendency has developed in industries which have not suffered from labour troubles.

Building is the most disappointing feature of the revival. In the fifth year of recovery, total construction is only three-fifths of the prosperous, but not boom, level of 1923-25, and residential building is less than half of that level. These results are shown despite the persistent and marked rise in rents, the considerable decline in vacant premises in most areas, mortgage money rates which are low compared with the past, capacity or near-capacity operations in a number of industries, and a substantial amount of public building. These are all factors which would normally stimulate construction.

Advance in Building Costs

The cause appears to be the rapid rise in building costs, including both labour and materials. The available statistical measurements of costs agree neither with each other nor with common observation, but there can be little doubt about what is happening. Material costs have mounted rapidly, and labour costs even more so. In addition, the potential builder is confronted with very burdensome restrictions both by the labour organisations and by local building codes in many areas. And, despite much discussion and experimentation with prefabrication and new methods, little technological advance has been made—certainly not enough to offset the higher costs.

At the root of the difficulty seems to be the fact that the building industry is, generally speaking, operating at capacity. It appears to lack the ability to expand, even in the presence of conditions which point to higher volume, and so prices and costs mount. This is the result of the depression experience of the industry; while other major trades were depressed, the building industry was demoralised. To a considerable degree, therefore, recovery involves reconstruction, which is a slower process than the mere expansion of output where adequate capacities exist.

Building in this country is a local activity, probably to a higher degree than in most other nations. While large nation-wide building supply companies exist, the entrepreneurs are generally very small and have little capital. The ravages of the depression practically wiped them out of existence. At the same time, during the years when building was notable by its absence, the supply of skilled labour fell rapidly as apprenticeship ceased and building tradesmen went into other occupations.

Special Difficulties of Building

The building industry entered the recovery period, therefore, lacking capital, skill and entrepreneurs to a degree not paralleled in any other important field. When demand expanded, volume could rise but moderately despite governmental aid, so that costs have mounted rapidly. Various factors have intensified this basic problem. Substantial amounts of distress property have been on the market as a result of foreclosures during the depression; since these have been offered at low prices they have discouraged new building in some areas. Building labour has been particularly able to enforce short hours at high pay. The system of distribution of the large building supply companies, whereby they sell to small local dealers interested in high profit margins per unit, has prevented the realisation of the benefits of mass production. Labour's demands upon the local politicians have produced many extremely onerous and restrictive local regulations.

In industrial building, political and labour uncertainties have caused business men to withhold optional construction rather than to engage in projects looking some distance ahead. The pressure has rather been to obtain labour-saving machinery to offset rising labour costs, so that machinery has boomed while building has lagged. Government subsidised housing projects, although surprisingly few, have generated considerable fear among private builders that subsidised projects might damage any developments in which they might engage. Finally, the Federal Housing Administration and most lenders are imposing stricter standards than have ever before been known here, which is doubtless socially and economically advantageous over a period, but exerts a retarding influence at present.

The low level of building, and particularly of residential building, can hardly continue after this year. Shockingly few new houses and apartments are being built in proportion to the population, to say nothing of the long gap during the depression when there was no building. Government efforts to find a solution to the problem are being renewed, but whether or not they accomplish more than Washington has thus far been able to do, rising and much higher construction levels seem certain to be seen before this cycle has run its course. The danger is that the work may be done at excessive cost levels.

State of the Loan Market

Berlin, August 11.—The coming Reich Consolidation Loan and the boom in bank shares are the present topics of discussion. The Reich will apparently follow its usual practice of announcing the loan a few weeks before the end of the quarter, when, after the temporary seasonal demand for credit has passed, capital derived from interest payments is seeking investment.

The new contraction in commercial bank deposits and the very considerable decline in the circulation of Gold Discount Bank promissory notes indicate that market conditions are not quite so propitious for long-term borrowing as they were at the time of other recent Reich loans. On the other hand, two relatively substantial private bond issues have been sanctioned this month. The bonds market has been firm. Indeed, the mortgage banks have been obliged to keep down the prices of their bonds; and this has been achieved, against an abnormally heavy demand, by rationing sales on the Bourse or by temporarily striking the bonds from the list.

Bank shares last week continued to rise, although the general market tendency was weak. For some commercial banks, and in particular the Deutsche-Disconto and Commerz-und Privat, increased dividends—at present they are 5 per cent—are anticipated. There are also other favourable factors. It is stated that about three-quarters of the capital of the Commerz-und Privat Bank which remained in Reich hands at the date of the last annual meeting has since been acquired privately; and so has an unstated amount of Dresdner shares. The greater part of Dresdner Bank capital, however, still remains in Reich hands. Some Rm. 4 millions or Rm. 5 millions nominal shares in the Berliner Handelsgesellschaft Bank, acquired by American interests after the credit crisis of 1931, have returned to Germany. The shares of all the leading banks, except Dresdner, are quoted at considerably higher prices than at the beginning of this year, and those of several mortgage banks have risen by about 25 per cent.

Indirect Subsidies

Estimates of crops have not yet been published. The one official report so far available concerns only Bavaria and states that prospects for all cereals are satisfactory. The new regulation of cereal prices has involved a very complicated system of "assessments," which are really taxes imposed by the Reich on particular interests in order to subsidise other interests. This system is, of course, not new, and it has taken other forms. One form was the compulsory reduction of potash and nitrate prices to lower the cost of farming.

When the official rye price to producers was raised last spring by Rm. 20 per ton, that is, by about 12 per cent., it was decided that bread must not become correspondingly dearer. The first step was to subsidise the rye mills, which were already being given a small subsidy. In future they will get a subsidy of about Rm. 23 a ton, which will cost in all about Rm. 75 millions. To provide this sum the breweries are to be "assessed" for Rm. 34 millions and the sugar industry for Rm. 29 millions, while the remaining Rm. 12 millions will be raised from "assessments" on wheat mills, on the ground of their too advantageous "price spread." The assessment on breweries is specially designed to check the expansion of the bigger concerns by penalising any further increase of their turnover.

Measures of this kind are increasingly common. They arise in general out of the failure of the Nazi theory that there is a right, fair and providentially ordained price for everything, which former Governments failed to determine. With ever-changing conditions the right prices soon prove to be wrong; and, if they are set too low, threaten to impair production or trade. The remedy is to re-establish "price equilibrium" (*Preisausgleich*) by imposing a special burden on some trade which can for the moment bear the burden. The assessments are themselves in effect alterations in price; and the old price instability still remains.

Redundant Traders

The Government have entirely forbidden the consumption for fuel of wood that can be used for other purposes. This apparently simple measure involves an elaborate system of compensation for loss of private wood-cutting rights. The official Press hints that small shopkeepers, of whom there is indeed an inordinate number, may be sacrificed in the interest of industrial production; and it is further implied that new measures will be taken to check the increase in the number of wholesale trading firms, which in Berlin has risen by 10 per cent. since 1933. This official attitude, like the attitude towards the once favoured class of independent craftsmen, is dictated by the exigencies of the Four-Year Plan. The Government wish to mobilise for the Plan as many persons as possible and to save materials.

Industry is somewhat more active. The monthly iron and steel report speaks of a continued heavy demand from manufacturers, a very considerable part of which could not be met. The iron industry, says the report, has attempted to check exports. The trade returns, however, show that in the last few months, including June, exports of heavy iron and steel and of iron and steel goods (other than machinery) have rapidly risen. Between May and June the export of rolling-mill products rose from 210,000 to 273,000 tons. There was a slight increase in imports of iron and steel products, but the volume of these imports is only one-ninth of the volume of exports of this class of goods.

The export of machinery continues to stagnate. Exports of cutlery last year recovered to 5,830 tons, compared with 3,950 tons in 1932, which was the lowest in recent years; but the average price per unit has continued to fall, and in 1936 was only 62 per cent. of the 1929 price.

Apparently because of the Spanish civil war and heavy French consumption, German potash exports are so far this year nearly 40 per cent. higher than in 1936. The total turnover of the Potash Syndicate, which fell to 850,000 tons (pure potash content) in 1932, rose last year to 1,360,000 tons, which is only slightly below the pre-depression level. The increase is mainly due to home sales, and the cut in the domestic price has seriously affected the finance of potash concerns and depressed potash shares on the Bourse. Exports of chemicals in the first half of 1937 were valued at Rm. 401,000,000, compared with Rm. 334,400,000 in the first half of 1936.

[Our Berlin correspondent discusses on page 332 the implications of the recent expulsion from Germany of *The Times'* representative.]

TRADING ABROAD

The existence of restrictions in a given country may temporarily prohibit dealings in forward exchange, but up-to-date information on this and on all points bearing on Forward Exchange generally may be obtained through any branch of the Westminster Bank. For any who may be unfamiliar with the facility, a very brief outline entitled *Forward Exchange* is always available at its counters

WESTMINSTER BANK LIMITED

Finland

Reducing National Debt

Helsingfors, August 2.—The book value of the National Debt was reduced by 71.3 million marks during the first half of the present year. Simultaneously the conversion of the funded foreign debt into internal debt has continued, and the floating foreign debt has been entirely redeemed.

	1935 Dec. 31 Mill. mks.	1936 Dec. 31 Mill. mks.	1937 June 30 Mill. mks.
Funded debt :—			
Foreign	1,852	1,128	1,015
Internal	1,181	1,853	1,881
Short-term debt :—			
Foreign	57	57	...
Internal	76	81	152
Total National Debt.....	3,166	3,119	3,048

Notice has been given that the sterling loan of 1909 will be redeemed in November, and the foreign debt will thus be reduced still further,

Since the rapid rise ceased last March, prices have been on the whole steady, but in all cases are at a slightly higher level than a year ago.

	Wholesale price index 1926=100	Cost of living index 1935=100	Price index of consumption goods (sensitive prices) July, 1931=100
1936, June	90	99	105·3
1937, March ...	103	104	111·9
1937, June	103	104	111·1

The price index for sensitive consumption goods, which is calculated every week, indicates, however, that a slight rise in prices took place in July; during the third week of the month this index rose to 113.3 points.

According to preliminary calculations industrial output during the second quarter of the year was slightly less in volume, but rather larger in value than during the first quarter. If the comparison is extended to previous years, the indices of both volume and value display a markedly rising trend.

	Indices of Production Volume	Value
1935, II quarter	145	119
1936, II ,, ...	151	131
1937, I ,, ...	177	178
1937, II ,, ...	172	191

The falling off in the volume of industrial output since the first quarter of this year is mainly due to the lower production of the metal and textile industries. On the other hand sawmills and the manufacture of paper and cellulose recorded rising production. Building operations, which are not included in the above figures, were unusually lively. There is no unemployment worth mentioning and in some trades a shortage of labour is being experienced.

Growth of Foreign Trade

Rapidly rising figures have been reported in foreign trade this year; in June both imports and exports attained fresh records. The increase is partly due to higher prices, but there has also been a marked rise in volume. The value of foreign trade is shown by the following figures:—

	Value in millions of marks Imports June	Imports Jan.–June	Exports June	Exports Jan.–June
1935	473	2,403	612	2,375
1936	560	2,821	704	2,870
1937	898	4,128	925	3,427

There was a small surplus of exports in June amounting to 27 million marks, but in the half-year the value of imports was 701 million marks greater than the value of exports. Thus the trade balance has not proved so favourable this year as in previous years, partly because of delays in the shipment of timber.

After the tendency towards a tightening of the money market, noticeable in April and May, there was a change in June towards greater easiness. Owing to increased deposits and reduced credits the surplus of deposits in the Joint Stock banks at the end of June established a fresh record of 1,263 million marks compared with 785 millions a year ago.

The weekly statements of the Bank of Finland also reflect the greater easiness of the position. The most striking feature is that foreign balances increased in June by 142 million marks, and during the first half of July by another 62 millions, thus reaching a record figure of 2,011 million marks compared with 1,132 millions a year ago. At the same time the credits granted by the Central Bank have fallen off and the note reserve has grown. It should also be noted that, since the end of May, the Bank has sold the greater part of the gold that was booked as "gold abroad, not included in the note cover." to a book value of 176 million marks.

Poland

National Unity and Foreign Relations

Warsaw, August 7.—A recent attempt on the life of Colonel Adam Koc, former Under-Secretary of State for Finance and President of the Bank of Poland, who was charged by Marshal Smigly-Rydz a year ago to produce a plan for bringing about national unity in Poland, seems likely to have an effect quite different from what was intended. Not only did the attempt itself fail, but it has also improved the chances of "the Koc plan" (summarised in these columns on April 17th, page 147).

While most Poles appear to agree that national unity is urgently necessary and attainable, those who are free to do their own thinking are not interested in the plan if it simply means the perpetuation in office of "the Pilsudski clique" and the top-heavy bureaucracy grown up since May, 1926, when Pilsudski seized power. Through the operation of the new Constitution and the electoral laws enacted in 1935, the masses have been deprived of any effective control over the Government and the bureaucracy. The soil has been made fertile for nepotism—and discontent. Colonel Koc, like Marshal Smigly-Rydz, is liberal-minded, and he no doubt understood, when he undertook the mission, that national unity could be achieved only by broadening the political structure and bridging the gulf between the bureaucracy and the masses.

The hint which President Moscicki gave last March, that favourable external conditions for carrying out the task of national consolidation may not last much longer, has been better understood since the expiry, on July 15, of the Geneva Convention for Upper Silesia. The attitude of the German Press towards recent developments in Poland has indicated that the "friendship" which was officially introduced in January, 1934, is wearing a bit thin; and that the "certain nervousness on both sides of the frontier," which Colonel Beck, the Polish Foreign Minister, noted last December, is growing.

Minority problems are now in the foreground, and the hardships imposed on the Polish minority in the Reich, which exceeds 1,000,000, are being sharply contrasted, both in the Press and on the platform, with the position of the German minority in Poland—which, according to Polish figures, numbers less than 800,000. Only a few days ago the Sejm passed a Bill enabling the German minority in Polish Upper Silesia, as in the districts of Poznania and Pomerania, to use their own language in courts of law; but Poles in the Reich enjoy no such privilege. Recent abuses of Polish "toleration" have been brought out in court trials of batches of young Germans who have illegally received military training on Polish territory—under German instructors. It is not hard to imagine what would happen to young Poles in Germany who engaged in secret military activities.

Unsatisfactory Harvest

In consequence of the severe cold in January and February, and the drought in May and June, this year's grain harvest will be at least 10 per cent. below the average for the last five years. Accurate estimates are not yet available, but, contrary to earlier expectations, it is now believed that the yield of grain will be sufficient for internal needs until next year's harvest, and will even provide a small surplus for export. With grain prices at their present levels, the peasants will eat more potatoes and cabbage and less bread. Exports, however, are to be closely controlled by the Government, by quotas established on a monthly basis. The effect of the drought on fodder has been more marked than on grain, and difficulties are expected in the livestock industry, now an important factor in Polish foreign trade.

With population growing by nearly 500,000 a year, it has become vitally necessary for Poland that agricultural methods should be improved. Although much is heard about the pressing problems of over-population, and the need for a better world distribution of "Colonial products," it still remains true that, with adequate fertilization and the more extensive use of modern equipment, Polish soil could be made much more fruitful than it is at present. Large-scale mechanisation of agriculture, of course, would cost much money; but as money can be found for magnificent Government buildings, electrification projects, and the like, it would seem that something could be done to improve agricultural methods. There are now acute differences within the Government about agrarian policies and M. Poniatowski, the Minister of Agriculture, who is probably the most liberal member of the Cabinet, is constantly under fire from the newspapers controlled by vested interests and large landowners.

Trade and the Anglo-Polish Agreement

The lack of sizeable amounts of grain and flour for export will be felt during the next few months, the more so because the trade balance has now turned against Poland. The official figures are as follows:—

First Six Months	Imports (Millions of zlotys)	Exports	Balance
1935	416·5	442·7	+ 26·2
1936	458·8	482·0	+ 23·2
1937	594·6	582·2	− 12·4

+ = export surplus. − = import surplus.

This is the first year since 1928 when imports have exceeded exports during a six-months' period. While there has been about a 15 per cent. improvement in industrial output compared with a year ago, a large part of the increase in the value of imports was caused by higher prices for industrial raw materials, and especially for those required for armaments. The principal reason for the import surplus, however, is the decline in exports to the United Kingdom (from 90.0 to 77.5 million zlotys for the first five months of 1936 and 1937 respectively) and the increase in imports from 51.9 to 61.0 million zlotys for the same periods. Until the Anglo-Polish Trade Agreement came into force at the beginning of 1935 Poland had a very substantial surplus of exports over imports, mainly at the expense of the United Kingdom, but the full effects of the agreement are now being felt.

Greece

Debts and the Balance of Payments

Athens, August 10.—A delegation in London has failed to conclude a settlement of the Greek foreign debt service with the bondholders' committees. It is thus interesting to note the balance of payments in 1936 between this country and the British Empire, as calculated by the Bank of Greece:—

Free Exchange Received from and Paid to the British Empire in 1936

Receipts	£	Payments	£
From Exports to Gt. Britain...	1,650,000	For Imports from Gt. Britain	3,430,000
,, Exports to British Possessions	20,000	,, Imports from India	500,000
,, Emigrants' remittances, etc.	250,000	,, Imports from Australia ...	600,000
		,, Imports from Canada ...	1,220,000
Total.....	1,920,000	Total Imports	5,750,000
Deficit	6,330,000	To remittances for the payment of public debt coupons, etc.	2,500,000
Grand Total ...	8,250,000	Grand Total	8,250,000

There is a difference between the above figures and those of the British Board of Trade, which put exports to Greece in 1936 at £3,322,000, and imports at £2,166,000. To realise, by comparison, the importance of the figures given in the above table, it should be stated that total Greek receipts in free exchange from transactions with foreign countries during 1936 are estimated at £14,680,000, out of which a net sum of £6,330,000 has been paid out to the British Empire.

The State of the Budget

Equally interesting is the state of the public finances, shown in the following table:—

(In millions of drachmas)

	1936–37 (actual)	1937–38 (estimated)
Revenue :—		
I. Ordinary	11,080	11,710
II. Extra-ordinary	798	688
III. Proceeds of loans	2,592*	3,696†
Total Revenue	14,470	16,094
Expenditure :—		
I. Ordinary	14,630*	11,509†
II. Extra-ordinary		5,155
Total Expenditure	14,630	16,664
Deficit	160	570

* Including Drs. 1,194 millions, unpaid amount of interest on the foreign debt.

† Including Drs. 1,203 millions, unpaid amount of interest on the foreign debt.

It is expected that the estimated deficit of Drs. 570 millions for the current financial year will be greatly reduced before the end of the year. Meanwhile, revenue receipts for April, the first month of the current year, amounted to Drs. 676 millions, compared with Drs. 575 millions in April, 1936, and payments against expenditure to Drs. 640 millions, compared with Drs. 726 millions in April, 1936. Receipts from revenues assigned for the service of the foreign debt amounted in May to Drs. 353 millions, compared with Drs. 377 millions in May, 1936; but for the period January-May they totalled Drs. 1,862 millions, compared with Drs. 1,759 millions in the corresponding period of last year.

The Value of Clearing Arrangements

Foreign trade returns for the first five months of 1937 compare as follows with the corresponding period of last year:—

(In millions of drachmas)

	Imports	Exports	Excess of Imports
January–May, 1936	4,686	2,377	2,309
January–May, 1937	6,033	3,624	2,409
Increase in 1937 ...	1,347	1,247	100

An increase both in value and volume has occurred this year, the proportion of exports to imports having risen from 36 per cent. to 47 per cent. in volume, and from 51 per cent. to 60 per cent. in value. The increase in imports is due chiefly to higher prices and to larger imports of wheat, consequent upon the poor harvest of last year; while the increase in exports is accounted for by an almost general growth of the value and the quantity of exported articles, apart from tobacco, where the quantity exported is smaller although the value has

The
MERCANTILE BANK *of* INDIA
LIMITED
Head Office: 15, Gracechurch St., London, E.C.3
CAPITAL AUTHORISED £3,000,000
CAPITAL PAID UP £1,050,000
RESERVE FUND & UNDIVIDED PROFITS £1,249,097
Branches and Agencies throughout the East

considerably increased. The following table shows what proportion of foreign trade was conducted on a free exchange basis, and what was settled through clearing arrangements in 1936:—

(In millions of drachmas)

Mode of Payment	Free Exchange	Clearings	Consignments on Credit, etc.	Total
Imports	6,339	4,546	924	11,809*
Exports	3,126	4,245†	...	7,371
Adverse balance	3,213	301	924	4,438

* Not including war material imported.
† Included small amounts on credit or in consignment.

Whereas the import surplus was Drs. 4,438 millions, the net amount paid out in free exchange, thanks to the working of the compensation and clearing systems, was only Drs. 3,213 millions. Therefore, for a country like Greece, whose balance of trade is permanently adverse, the existence of these controls is not an unmixed evil from her own point of view though not that of her creditors.

Australia

Taxation Fears

Melbourne, July 22.—The Australian Monetary position remains easy and in addition to the greater success which attended the Commonwealth loan compared with previous issues, a number of companies continue to raise additional capital. There is, however, a desire to avoid anything of a boom character, or any excessive expansion of imports, especially as the position of London funds, though better than a year ago, still leaves room for improvement.

Stock Exchange quotations for Government securities have shown firmness, and yields have been declining in recent months, especially for the longer-term securities. Industrial shares, however, have been irregular, owing partly to movements abroad, and partly to higher wages and costs. These factors have tended to offset the more favourable balance sheets presented by many companies during the past few months.

Questions of taxation continue to arouse discussion. The total taxes raised by the Commonwealth and States amounted in early June to about £100 millions per annum. In reply to criticism, Governments point to the various classes of expenditure which have been established or enlarged during recent years, especially pensions and unemployment relief. Criticism is, however, directed to the fact that the Governments are now too prone to maintain taxation and other arrangements which were established as a means of coping with the depression, although the position has now considerably improved.

Banking Proposals

The report of the Royal Commission on Monetary and Banking Systems in Australia, apart from a recommendation by the Labour member of the Commission in favour of the nationalisation of banking, contains little of general interest. There are, however, a number of important recommendations on points of detail. One is that the Commonwealth Bank should be empowered to require trading banks to keep with it a deposit of a percentage of their liabilities to depositors in Australia. The percentage, for which no figure is stated, and which might be raised to any extent, would be subject to variation from time to time within the limit fixed by the consent of the Commonwealth Treasurer. From the business point of view the proposal is open to the objection that it would be of a hampering nature and might be used for political purposes.

The Commission recommend that a new exchange mobilisation agreement, binding for a period of years, should be entered into between the Commonwealth Bank and the trading banks. The report states that the existing agreement has worked well, but is terminable at any time and does not provide for contributions in excess of the amount required for the oversea debt service. In order to assist the Commonwealth Bank in the performance of its central bank functions, and to enable it to build up its reserves of London funds, the report suggests that additional contributions should be made by the trading banks at the rate of, say, not less than £500,000 sterling per month.

The Commission further recommend the establishment of a mortgage bank or banks to provide for limits to the amount of bonds issued and to the ratio between valuation and loan. The Commission think that if the trading banks could transfer to a mortgage bank some of their present overdrafts, which are in the nature of long-term loans, and take in exchange the mortgage bonds issued by the mortgage bank, their position might be strengthened.

Owing mainly to the favourable season and the higher prices for wool and wheat, bank deposits in Australia for the June quarter of 1937 show an exceptionally heavy increase compared with a year ago. This increase is balanced by a substantial increase in funds outside Australia and an increase in local cash holdings, while advances and Government and municipal securities show little variation on the year. Deposits within Australia amount to £313,152,044, an increase of £21,667,606 in twelve months; advances have fallen by £776,738 to £261,626,299; Government and municipal securities are £44,659,807, an increase of £374,322; and cash items are £38,441,754, an increase of £7,579,272. These figures do not include the Commonwealth Bank. The larger total of exports, including wheat and wool at higher prices, are likely to be reflected in larger imports after the usual interval.

Letters to the Editor

Czechoslovakia's German Problem

TO THE EDITOR OF THE ECONOMIST

Sir,—I have followed with great interest the correspondence between Mr Melville and Mr A. J. Toynbee, and being an old reader of your paper I would thank you for publishing the following remarks.

As a Czech with real democratic feelings I cannot help being somewhat surprised by Mr A. J. Toynbee's views about Czechoslovak democracy. Mr A. J. Toynbee says:—

> I do not agree that Czechoslovakia is a democracy for the non-Czech half of the population. I believe it to be an imperfect democracy even for the Slovaks, while I am convinced that for the Germans, Magyars and Poles—who account, between them, for more than a quarter of the whole population—the present regime in Czechoslovakia is not essentially different in character from the regimes in the surrounding countries.

I would like to suggest—without offence—that these lines show little knowledge of our political conditions. Can there be a question of imperfect democracy for the Slovaks when our Premier, Dr Milan Hodža, himself is a Slovak, a number of Ministers are Slovaks, and Slovaks may be found holding positions as plenipotentiary ministers and members of diplomatic bodies, headed by Dr P. Osusky, the Czechoslovak Minister to Paris? Slovaks can be found in leading Government posts and on the boards of commercial and industrial institutions. A *bon-mot*, very characteristic of the country, says that, if the present conditions continue, we, the Czech people, will have to ask for autonomy.

As far as the Germans and our other minorities are concerned, I can hardly imagine what Mr A. J. Toynbee means by saying that the regime in Czechoslovakia is not essentially different in character from the regimes in the surrounding countries. Could Herr Henlein of the Sudetendeutsche Partei have come to his present power otherwise than by free election? Could he publish or discuss his ideas in any country without an absolutely democratic regime? Which neighbour State in Central Europe would allow him to criticise State politics and Government institutions in the way he does?

Mr A. J. Toynbee seems to be afraid that we shall be obliged to repress the Henlein party. Why should we do this? About fifteen years ago, Communism was a far greater danger than seems to be represented to-day by Herr Henlein. Several States then decided to take rigorous measures against it. Czechoslovakia, however, as a real democratic country, did not do so, and here Communism is reduced to-day to a political party of no importance whatever, whilst in countries where Communism was suppressed, it still remains a latent danger.

In conclusion, I would like to point out that the Czecho–German problem has been discovered in England only within the last two years, and it seems to have caused some anxiety there, while we Czechs have known this problem for about 1,400 years in many different forms. It must be admitted that during that time we have had enough occasion to learn something.

Thanking you for your courtesy,

I am, Sir,

Yours faithfully,

Jiří Hejda.

Prague.

Outlook for France

TO THE EDITOR OF THE ECONOMIST

Sir,—Your leading article of July 24, 1937, entitled "Outlook for France," calls for some rejoinder. To allege that, "France, in a sense, has never fully recovered from the loss of technical ability due to the expulsion of the Huguenots three centuries ago," is a Gilbertian view, entirely divorced from reality. Since the expulsion of the Huguenots right down to the enactment of the New Deal the French have been famed for their dexterity and for the quality of their products. Since the development of the heavy industries French technical ability in machine-made products has been great, surpassing other nations; the "Normandie" was not planned and built by Huguenots.

To allege further that, "before the enactment of the New Deal, the average French worker was much worse off than his compeers in England or the United States" is also the reverse of the truth. A system must be judged by its results. Compare the physical and mental condition of the workers in France and in England either a year ago or even to-day. In France, between the industrial workers and the upper classes, there is no difference in physical condition, and very little difference in mental condition. In England the physique of the working classes is poor, pale, ill-fed, with a correspondingly restricted mental and nervous range.

The French workers have kept their original link with nature, with the land; the man, or his wife, has, or will inherit, a house, a field, perhaps even a small farm in the country; there they send their children and go at least once a year, shooting, fishing, etc.

Divorced from nature, the British industrial workers have become robots with abnormal characteristics. Adenoids is a specific English complaint. They hinder the inflation of the lungs and the oxygenation of the blood, and stop the proper development of the bones of the nose, of the upper face and of the cranium. It has been stated that the English cranium—and consequently brain—has become narrower. Pyorrhœa, with bad teeth, is another specific English complaint; you do not see so many false dentures anywhere else. British doctors have stated that the campaign to ameliorate the race by physical exercises, presupposes better food. The English working classes are reared on suet, and look it.

A nation which has indulged in excessive procreation and deserted the land for the music-hall or the cinema, and does not produce its own food on its own soil, importing stale food from afar, has to pay the penalty in the form of degeneracy.

Before the new social laws, the working classes lived better in France than anywhere else. Since the new social laws, the cost of living has gone up so much in France that even bare subsistence has become very difficult for industrial workers who have children. The working classes' standard of living depends on an abundant production, and the five-day week has naturally decreased it.

Yours very truly,

J. Sicot.

Torquay.

British Banking Trends

TO THE EDITOR OF THE ECONOMIST

Sir,—Permit me to thank you for your courtesy in finding space for my letter in your issue of July 31st, and to develop my line of thought a little further.

Everyone knows that there has been an expansion in the volume of bank credit in this country in recent years. Statistically this is apparent in the first three columns of the appended table, but not in the fourth.

Averages for each Year

	Deposits of the 10 London Clearing Banks	Reserves of the 10 London Clearing Banks	Bank of England's outside Liabilities	Bankers' Balances with the Bank of England
		(£'000,000 omitted)		
1933	1,953	212	529	100
1934	1,880	212	534	100
1935	1,999	215	545	97
1936	2,142	221	583	96
		(Percentage of the Average for 1933)		
1933	100	100	100	100
1934	96	100	101	100
1935	102	101	103	97
1936	110	104	110	96

The inferences which I suggest may properly be drawn from this table are three.

Firstly, since 1934 the deposit banks have been holding less of their reserves in the form of balances with the Bank of England and more in the form of till-money. (There is the authority of the Macmillan Report (page 36) for using the figures of bankers' balances with the Bank of England as an indication of the amount of the balances of the London Clearing Banks with the Bank of England.)

Secondly, the figures of bankers' balances with the Bank of England throw little light on the credit policy which is being pursued by the Government and the Bank of England.

Thirdly, considerable light is, however, thrown on that policy by the figures representing the Bank of England's outside liabilities, that is to say its liabilities to noteholders and depositors combined.

I am, Sir,

Yours faithfully,

The Will to Peace

It is a sad and dangerous fact that discussion of the principles which inspired many of the zealous adherents of the League of Nations in the years of hope after the war appears to-day strangely outmoded. The contrast between the order and security guaranteed by the Nation State to its citizens and the anarchy of the relations between States is once more taken for granted. The energies of statesmen are largely directed to finding empirical ways to postpone the inevitable employment of the warlike instruments which are being devised and accumulated on an unprecedented scale.

It is therefore opportune that Sir John Marriott should have essayed again* the task of expounding the historical origins of world organisation for peace, and of explaining in that light the fate which has befallen the League. The Nation State first emerged as the unit of political sovereignty at the time of the Renaissance. Sir John traces the development since then of this form of government and power; and against this background he examines the various plans and proposals which have been made from time to time to ensure international peace.

Sir John rightly insists that common to most of these projects for peace is the conclusion that they would involve the surrender by each State of some part of its sovereign power, and the transfer of this power to an effective central authority. Such transfers would clearly involve radical changes in the structure of the Nation State. There exist in each State various interests concerned in the perpetuation of that State as a sovereign entity from deeply rooted historical, social or economic motives. The possibility of establishing peace as a world institution must depend, therefore, on the extent to which these interested forces can be overpowered by an organised and effective will for peace—and for the preceding economic and military adjustments which would be necessary.

On the face of it, the forces making for the preservation of full national sovereignty appear incalculably the stronger. Yet the federation of the United States of America showed how political and military circumstances might alter decisively groups' perception of their interests. The logic of facts may equally well decide the modern world, after a further shattering experience of war, against the retention of unfettered sovereignties, though the signs are that the lesson will only be learned hardly and bitterly.

Sir John's concern, however, is not primarily with concrete circumstances of this kind, or with the major problems of current practice, the place of sanctions in collective security or the use of war to enforce the peace, but rather with the growth of a reasoned belief in the need for some supra-national authority. He depicts the League of Nations, in its fading glories, as the latest creation of the steadily growing will to peace. But he warns us that

> no scheme, however cunningly devised, can function effectively unless there has been, among princes and people, a real change of heart.

Sir John leaves us with the feeling that interested support of the League has not been nearly adequate to impart to it a full tide of life. It therefore remains abortive, and new men have recourse again to old ways. Yet the League is a witness to a silent and perhaps ultimately decisive change of heart among some men at least. Peace is willed by the people more than ever in history, and needs only the equipment of organisation and power.

There is something at once soothing and encouraging in Sir John's quietly vivid scholarship. His insistence on the nature and necessity of the will to peace is simple truth; yet his book is not quite satisfying. His approach to the starkness of modern statecraft is academic. He lingers in a world of ideas. The brutal facts of modern politics, economics and diplomacy cannot easily be set aside to reveal a world intent on peace. No ratiocination or analysis of ideas can alter the fact that, though the people of the world may want lasting peace, they are likely to be given devastating war.

Shorter Notice

"Together We Stand." By Leonard J. Reid. With a Foreword by Viscount Horne of Slamannan. Cassell and Co., Ltd. 162 pages. 5s.

Mr Leonard Reid, who is Financial Editor of the *Daily Telegraph*, has performed a real service in writing this little book with the express purpose of persuading British public opinion of the necessity for seizing the present unprecedently favourable opportunity for concluding an Anglo-American Trade Agreement. The book is intended for the man in the street rather than for the economist or business man, but even some men in the street may wish that the author had not so rigidly held to his determination to limit the number of facts and figures. Unfortunately, some of the facts that are mentioned prove to be inaccurate (e.g. the population of New York State is not twice, but two-thirds, that of Canada, Australia and New Zealand combined). But these are incidental blemishes on a book which makes no pretence to be anything but journalism within stiff covers. They will not hinder it in its task of persuasion.

MONEY AND BANKING

Rising Note Circulation

On August 4th the note circulation reached the record level of £503.9 millions. In spite of the presence in the issue department of the Bank of England of the impressively large figure of £326.4 millions of gold, the banking department's Reserve dropped to £23.6 millions and its Proportion to deposits shrank to 16.6 per cent. This is the lowest ratio touched since Christmas, 1925. Under the conditions which existed in bye-gone days so low a Reserve and a Proportion would have undoubtedly been regarded as foreshadowing dearer money. To-day there is no suggestion of any threat to the continuance of the regime of cheap and plentiful credit. How has this change come about?

Before the war the Bank was bound by statute to pay gold against its notes, both at home and abroad. Gold coin circulated freely inside the country, while any weakening of sterling beyond the export gold point meant that gold was immediately taken out of the Bank for shipment abroad. Finally, as the fiduciary note issue was low and rigid, the Bank could not expand its total note issue in the absence of sufficient gold acquisitions.

To-day, the Bank is no longer bound to supply gold on demand, nor does the Bank's gold constitute the sole gold reserve of the country. It is true that holiday pressure has temporarily reduced the Proportion to 16.6 per cent., but the Bank of England's Reserve Ratio of gold stocks to deposits and notes in circulation is as high as 50.6 per cent. Also this figure excludes altogether the gold held by the Exchange Equalisation Account. Even if the Bank had not been relieved of the obligation to supply gold, its position would be much stronger than the Proportion of 16.6 per cent. suggests. In fact, this ratio has lost practically all its traditional significance.

A second vital change is that the fiduciary note issue is no longer limited and rigid. Only last December the total was reduced from £260 millions to £200 millions, contemporaneously with the taking over by the Bank of England of some of the Exchange Equalisation Account's gold. We then pointed out that once the fiduciary note issue had been reduced below £260 millions, Parliamentary sanction would not be required for any subsequent variation, either upward or downward, so long as the datum line of £260 millions were not exceeded. At any moment, therefore, the Bank of England and the Treasury are at liberty to agree to raise the fiduciary note issue by anything up to £60 millions. All that would be required to carry such a decision into effect would be the transfer of £60 millions of securities from the banking department to the issue department of the Bank. The operation, consequently, would have no direct effect upon either the money market or the Stock Exchange. In return the banking department would receive £60 millions of additional notes, representing the increase in the fiduciary note issue, and (on the basis of the Bank return of August 4th) the Reserve could be raised to £83.6 millions and the Proportion to 58.9 per cent. Obviously, therefore, there is no technical difficulty in the way of an increase at any moment, both in the Reserve and the Proportion, to figures whose significance not even the least well-informed observer, at home or abroad, could possibly fail to appreciate.

A similar end would be achieved if the Bank bought gold from the Exchange Equalisation Account, as it has done, indeed, on many occasions in the last fifteen months. The purchase would permit an expansion in the note circulation and, consequently, in the banking department's Reserve. On the other hand, the Bank would need to pay for its gold, and the Exchange Equalisation Account would use the proceeds to take up Treasury bills now held by the banking system. The ultimate effect, in this case, would be an expansion in bankers' deposits at the Bank of England—that is, an enlargement of the credit base. It follows that further action by way of open market sales of securities would be necessary if the credit base were to be maintained at its present size.

The authorities have allowed the holiday peak of the note circulation to pass, this year, without taking action of either kind, and their inaction has been justified by results. It does not follow, however, that action will not be required between now and next Christmas. Normally, between the holiday peak at the beginning of August and the middle of November, the note circulation shrinks by between £10 millions and £20 millions, but from the middle of November onwards to Christmas it increases by amounts of the order of £30 millions. The Christmas increase was far more marked in 1936 than in earlier years, probably as a result of expanding trade and rising prices. It is fair to assume that it will be equally, if not more marked this year, though there is a possibility of some French dishoarding of British currency during the autumn. In 1936, the Christmas peak was £20 millions higher than the August holiday peak; at a rough guess it will be at least £20 millions higher this year. This points to a Christmas note circulation of a maximum of £524 millions, against the August maximum of £503.9 millions.

To-day, the Bank holds £326 millions of gold and the fiduciary note issue is £200 millions. The total permissible note issue is thus £526 millions. If by next Christmas the note circulation rises to £524 millions, and other conditions are unchanged, the Reserve in the banking department will fall to a mere £2 millions. Obviously so low a figure would be unthinkable, even under the altered conditions of to-day. Between now and Christmas, therefore, we may expect some remedial action by the Bank. Ought this action to take the form of an increase in the fiduciary note issue or of a gold purchase from the Exchange Account? Currency withdrawals by the public, it should be remembered, not only reduce the Bank of England's Reserve but also the supply of joint-stock bank cash. The currency is withdrawn by the public, not directly from the Bank of England but from the joint-stock banks, who in turn draw on their balances at the Bank of England to replenish their till-money. There is, therefore, possibly a case to be argued for the Bank of England buying from the Exchange Equalisation Account between now and Christmas enough gold to replenish joint-stock bank cash as well as its own Reserve. Any further remedial action, however, should be by way of an increase in the fiduciary note issue.

In any event, both the holiday and the Christmas expansion in the note circulation are purely seasonal movements, and should not be made the pretext for a permanent enlargement of credit. When the Christmas notes return from circulation, therefore, any hesitation in effecting a reduction in the fiduciary note issue, and even in making re-sales of gold by the Bank to the Exchange Equalisation Account, would be regrettable. Now that we have an elastic monetary system, we should be prepared to make full use of it, so long as we steer an even course between inflation and deflation. The corollary is that a variation, either upwards or downwards, in the Bank's gold stocks or in the fiduciary note issue should be effected with equal readiness, in the light of the technical circumstances of the moment. The public must similarly learn that variations of this kind, even when they take the form of gold sales by the Bank, indicate only seasonal re-adjustments.

Financial Notes

The Foreign Exchanges.— The main development of the week has been the slight growth of strength in the franc. The spot rate was quoted at Frs. 132⅞, with the three months' rate at Frs. 2¾ discount. The French authorities continue to intervene in the market, but this week they have been able to operate both ways, selling francs at Frs. 132 1/16 and buying them back at Frs. 132⅞. They are also believed to have bought a few dollars, this being the first dollar purchase by the French authorities for quite a long time. French rentes have been strong, and taking all these facts into account there is some evidence of a small repatriation movement, combined with some covering of open positions. The view is now taken that no fresh weakness is likely to develop for the rest of this month. Dollars weakened to $4.99¼, but have since come back to $4.98¾. The Japanese sales of dollars, which were previously so much in evidence, have now ceased. Guilders, belgas and Swiss francs have followed the dollar, but forward belgas and Swiss francs have perhaps been a little firmer. The Shanghai rate is so far unaffected by the troubles in the Far East and remains at 1s. 2¼d. The further rate of the Argentine peso is slightly weaker at 47.49 pesos.

* * *

July Clearing Bank Returns.—The July averages of the ten English clearing banks record a contraction since June of £5.9 millions in cash. A comparison of the Bank returns for June and July reveals a drop in bankers' deposits, which is mainly traceable to the increase in the note circulation and the contraction in the Bank's Reserve. Increases in the banking departments' earning assets have done little more than neutralise an expansion in public deposits. Therefore the shrinkage in clearing bank cash is due to the greater demands for currency by the public.

(In £ millions)

	July, 1936	March, 1937	April, 1937	May, 1937	June, 1937	July, 1937
Capital and reserves	131·8	132·5	132·5	132·5	132·5	132·5
Acceptances, etc.	101·2	122·2	126·2	125·5	124·1	122·1
Deposits (including undivided profits, etc.)	2,206·0	2,206·6	2,213·6	2,217·7	2,255·1	2,255·6

Investments in affiliated banks	25·2	23·5	23·5	23·5	23·5	23·5
Cover for acceptances, premises, etc.	101·2	166·4	170·3	169·7	168·2	166·2
Total assets	2,439·0	2,461·3	2,472·3	2,475·7	2,511·7	2,510·2

The resumption of bill purchases by the banks is reflected in the July increase in discounts, while the upward trend of bank advances has continued. In these circumstances some reduction in investments was inevitable, or else deposits would have increased sufficiently to bring the banks' cash ratios too low. As matters stand deposits are practically unchanged, while the aggregate cash ratio has shrunk from 10.5 to 10.3 per cent.

* * *

The Money Market.—Possibly because of the further small drop in bankers' deposits, money has been a little more usable this week, and while the clearing banks have had plenty available they have experienced quite a good afternoon demand for loans. At the Treasury bill tender of August 6th the market only secured 28 per cent. of the £45 million bills allotted, but nevertheless they were in fair need of money, possibly because of the absence of any maturities on Monday. According to one report, there was less outside money available against bonds, and one or two borrowers had to pay up to ¾ per cent.

	July 22, 1937	July 29, 1937	Aug. 5, 1937	Aug. 12, 1937

* Loans against Treasury bills and other approved bills and British Government securities within six months of maturity; 1 per cent. Treasury Bonds and other gilt-edged stocks within six months of maturity; and other collateral respectively.

Business in bills was naturally restricted a little by the meagre success of the market at last week's tender, but the banks were buyers of Treasury bills maturing in September, October and early November.

* * *

The Bank Return.—Since last week £5·9 millions of the holiday notes have returned from circulation, this being rather more than the parallel reflux a year ago. In consequence the Reserve has risen by £6.2 millions and the Proportion is restored to 19.9 per cent.:—

BANK OF ENGLAND

	Aug. 12, 1936	July 21, 1937	July 28, 1937	Aug. 4, 1937	Aug. 11, 1937
	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Issue Department :—					
Gold	243·0	326·4	326·4	326·4	326·4
Note circulation	450·3	493·1	498·3	503·8	497·9
Banking Department :—					
Reserve	53·7	34·2	29·2	23·6	29·8
Public deposits	17·4	17·5	10·5	9·8	19·0
Bankers' deposits	98·0	97·2	104·3	95·4	93·6
Other deposits	38·0	38·1	37·3	36·9	36·4
Government securities	89·6	107·4	114·4	110·2	111·1
Discounts and advances	8·9	5·8	5·8	6·4	5·9
Other securities	19·3	23·4	20·8	20·1	20·3
Proportion	*35·0%*	*22·4%*	*19·1%*	*16·6%*	*19·9%*

Normally bankers' deposits would also have gained the benefit of the returning notes, but there has simultaneously been a transfer of £9.2 millions of funds to public deposits. This movement has no significance, and may be due to the absence of Treasury bill maturities on Monday. The net result is a slight drop of £1.8 millions in bankers' deposits.

* * *

The Bank of New Zealand.—The annual address of the chairman of this bank at the meeting held at Wellington on June 11th last leaves behind it two main impressions. One is the strength of the bank itself and the second is the growing interference of the New Zealand Government in matters which hitherto have been of banking and commercial concern. The first example of this is the Act by which the Government has taken complete control over the export of dairy products. Mr Donnelly, the chairman of the Bank of New Zealand, admitted that the Act should prove beneficial to producers in protecting them from severe fluctuations of the market, but he equally had to point out that the New Zealand trading banks had been deprived of part of their business, and he instanced the reductions shown in the bank's latest balance sheet in London funds and bills receivable in London and in transit. Mr Donnelly also referred to the new Mortgagors and Lessees Rehabilitation Act, designed to relieve farmers and others from liabilities which by reason of reduced values and altered conditions had become unduly onerous. Comparatively few of the bank's customers had applied for adjustment of their obligations to the bank and a number of voluntary settlements had been arranged with customers. Mr Donnelly was much more severe on the arbitrary method by which the New Zealand banks were assessed for income tax. A committee has recently been set up by the Cabinet to consider the question of taxation, and the banks have submitted their case for relief.

THE STOCK EXCHANGE

Fraudulent Share-Pushing

ALONG the winding, uphill road which—so Dante informs us—is Purgatory, a glad cry resounds as each weary traveller reaches the mountain's summit. In the place, wherever it be, where departed confidence tricksters, fraudulent financiers, long firms and bucket shopkeepers congregate, this week's Report of the Departmental Committee on Share-Pushing will presumably arouse emotions of a different order. The Committee was appointed by the Board of Trade last December under the chairmanship of Sir Archibald Bodkin

> to consider the operations commonly known as share-pushing and share-hawking and similar activities, and to report what, if any, action is desirable.

The Committee's task, in fact, was to discover means of preventing the financial exploitation, for private gain, of a debased public appetite. Properly directed and controlled, the desire to improve one's lot is the secret of human progress; harnessed to the ignorance that thinks itself wise, and whipped by cupidity, it delivers the customer, ready-made, at the share-pusher's door.

To reverse a deep-seated human instinct is too formidable a task for the strongest official body, and the Committee has, in fact, confined its attention to the share-pusher, leaving the fundamental task of educating the client to the Government, the savings authorities, the Press and the B.B.C. Its report is prefaced by a painstaking survey of the entire field of share-dealing, in the course of which some significant facts emerge. There are, first, approximately 5,500 members of various "recognised" Stock Exchanges, of which the London Stock Exchange is far and away the most important. Secondly, there is a host of individuals and institutions, of all sorts, shapes and sizes, whose essential function is to act as feeders of the Stock Exchanges and whose work is fundamentally of an "agency" character. Finally, there are from 600 to 800 outside share-dealing agencies who, with few exceptions, resort to the widespread publicity and circularisation which is denied to Stock Exchange members. The great majority of these, the Committee finds, do a legitimate and useful business (including, in some instances, the placing of shares which would otherwise have no market—a rôle to which the Committee gives a somewhat complacent blessing). The minority are the subject of the Committee's investigations: the fraudulent share-pushers whose methods are endless variations on two main themes—the exchange of worthless shares for the victim's cash or sound securities, and the eventual confiscation of "margins" in a non-existent gamble for the rise.

The Committee finds that the share-hawking provisions in the Companies Act of 1929 were badly drafted, and have been largely ineffective—for the reason that they attempt to intercept the fraudulent salesman at the purchaser's door or letter box, instead of catching him in his own den. How, in the last resort, could he be prevented from coming into existence at all? The safest way would be to restrict the practice of share dealing to Stock Exchange members; but that, the Committee found, involved the question of a Stock Exchange charter, which it was not prepared to recommend. It is remarkable how many reformist bodies, official and otherwise, have come up against this charter question in their inquiries in many different fields; have been overawed by its difficulties; and, turning away, have fallen back on second- or third-best expedients. The Committee on Share-Pushing has even rejected the second-best course—licensing of share-dealers by an expert and representative body—on the ground, *inter alia*, of restraint of trade, though a precisely similar procedure has for years been applied to barristers, solicitors, clergymen, doctors, dentists and nurses.

The Committee finally decides in favour of registration, *tout simple*. After an appointed day, it is suggested, no person should be permitted to hold himself out as a stock or share dealer unless his name appears on the roll of the Board of Trade. Members of recognised Stock Exchanges or other institutions will be exempt, and the terms "stockbroker" or, where relevant, "stock-jobber," will be reserved for them. To outside persons, the term "stock and share dealer" will be applied. Every applicant for admission to the register will be required to furnish, in a statutory declaration, illuminating particulars of his identity and status—including his past and present nomenclature and nationality, his private and business addresses, his former occupations, the names of his bankers and his Stock Exchange and general references. If he or his company has not been engaged in share business for at least three years, he will be required to furnish sureties for £500. He must not be a bankrupt. Similar regulations apply to all individual partners or directors of firms or companies.

The Committee avowedly regards these restrictive provisions as the kernel of its recommendations. Recognising, however, that some fish will slip through, however small the mesh of the net, the Committee makes further recommendations to obviate abuses of their facilities by registered dealers. The City of London and the Metropolitan Police are to establish a species of joint intelligence department at Scotland Yard. The Companies Act and the Larceny Act are to be tightened up. A dealer may be struck off the register by Court order for offences against the regulations, for fraud or dishonesty, for pleading the Gaming Act in any action, and for bankruptcy. Local Justices of the Peace are to have power to issue search warrants and to order examination of banking accounts. Contracts between outside dealers and their clients are to be deemed, in all cases, to cover transactions in actual stocks and shares and, consequently, to be inapplicable to the voiding provisions of the Gaming Act. In civil or criminal actions, it may be decided that the names of witnesses are not to be published. Printers and manifolders are to be prohibited from printing circulars for non-registered dealers. The provisions of the Post Office Act, 1908, are to apply to such circulars, and copies sent from abroad for distribution in this country are to be treated as contraband.

The Committee deserves congratulation on a conscientious effort to cleanse a particularly ill-smelling Augean stable. In any evaluation of the probable efficacy of its work, however, a number of questions arise. Has the Committee's registration proposal eliminated the danger of operations through dummies and men of straw? Will the Registrar's examination be more than formal, once the required particulars have been supplied? Will the presumption that a share dealer who has furnished the prescribed information is honest until he is proved dishonest invest the fraudulent but registered dealer with a specious *cachet* of respectability, and leave the task of unfrocking him to the Courts *after* his depredations have occurred? If so, much will depend on the ability of the authorities to make a sufficiently strong case to secure conviction (and past experience in this regard is not wholly reassuring); on the zeal of the Public Prosecutor; and on the willingness of victims of bad faith to bring their grievances to the Courts. In many cases, these victims will be small people, with all the poor man's aversion from litigation. And the task of drawing up, by a multitude of legal decisions, an effective code of what is and what is not permissible in outside share dealings (where in very many cases a client may be, of his own volition, a gambler, not an investor, and

therefore presumably cognisant of the risks he is taking), will be arduous and, perhaps, disappointing in its results to many reformers. It is inherent in all legislation to eliminate a traffic in which the victim is, not infrequently, a willing (though unwitting) accomplice, that it tends less to eliminate abuses than to drive them underground.

The total amount involved in share pushing operations may easily be exaggerated—the Committee itself believes that a suggested total of £5 millions per annum is an over-estimate. As a fraction of the total sums involved annually in stock and share transactions, the figure is undoubtedly very small. But the moral and psychological effects of the traffic have always been out of proportion to its financial substance. And if the Committee's recommendations are carried into law, it may well be that their deterrent effect will depend rather on the energy with which the law utilises its new powers to punish abuses, than on the success of the proposed system of registration in checking those abuses at their source.

Investment and Company Notes

Newsprint and Bowater's.—Negotiations are proceeding between the newspaper proprietors and Bowater's on the request of the latter for an upward revision of the £10 a ton fixed a year ago as the contract price of British-made newsprint in 1938. It has been reported that the papermakers want an additional £2 per ton, that the provincial papers have agreed in principle to some concession, and that representatives of the large London papers have offered to make a supplementary payment of 30s. per ton. The ground for seeking a revision of contract prices is the increase in prices for wood pulp. On December 1st last year the chairman of Bowater's Paper Mills, Mr Eric V. Bowater, said that the entire production of mills in his group had been disposed of for 1937 at prices similar to those then prevailing; that there had been unwarranted demands for higher prices from manufacturers of wood pulp, who had formed a cartel in Northern Europe, but that the company had already covered an important part of its pulp requirements; and that the directors expected that any increase in raw material costs would be mostly covered by economies resulting from increased output and from amalgamation with the Lloyd group. It is now evident that any economies that have been made are insufficient to cover the very rapid increase of pulp prices since the existing contracts were signed last July. Quotations for the two relevant grades of pulp are tabulated below:—

	Per ton (c.i.f.) News quality Sulphite			Mechanical Wet		
Beginning of	£	s.	d.	£	s.	d.
January, 1936	6	17	6	2	2	6
July, 1936	7	15	0	2	4	3
December, 1936	9	5	0	2	8	3
July, 1937.....	16	5	0	3	13	9

The actual increase in costs incurred by the Bowater-Lloyd group depends, of course, upon the date at which their requirements were covered, and their own bargaining power. But if the full increase since last July were to be borne by the papermakers, the increase in pulp costs would come to over £4 per ton of newsprint. Roughly eight tons of mechanical wet and one ton of news quality sulphite are required to produce five tons of newsprint. The group would have to pay £2,000,000 more for a year's requirements of pulp. What proportion of this figure will actually be incurred has not so far been disclosed. The group has attempted to protect itself against future increases by acquiring control of two pulp mills in Sweden, and has signed an option to acquire timber rights in Newfoundland.

The various companies in the group, with their issued capital, are set out below:—

Bowater's Paper Mills

	£
3½% debentures ...	1,000,000
6½% cumulative preference	800,000
7½% cumulative participating preference	1,000,000
Ordinary	1,000,000

Bowater's Mersey Paper Mills

	£
3½% debentures ...	800,000
5½% cumulative preference	500,000
Ordinary (owned by Bowater's Paper Mills)	650,000

Edward Lloyd Investment

	£
5% redeemable cumulative preference	2,000,000
Ordinary (owned by Bowater's Paper Mills)	2,000,000

Edward Lloyd

	£
7% cumulative preference	1,200,000
5½% cumulative preference	1,000,000
Ordinary (owned by Ed. Lloyd Investment)	1,600,000

Bowaters and Lloyds Sales Company (formerly W. V. Bowater and Sons, 1926). Owns Bowater (Australia), Ltd., and Bowater Paper Company, Inc., of New York.

	£
8 per cent. participating preferred ord.	200,000
Ordinary (owned by Bowater's Paper Mills)	300,000

The combined issued capital of the group, with inter-company holdings of ordinary shares eliminated, shows £1,800,000 of debentures, £6,700,000 of preference issues, and £1,000,000 of ordinary. The distributable profits of Edward Lloyd are subject to preference charges of £139,000 before they reach the Edward Lloyd Investment Company, where a further £100,000 is absorbed before the stream filters through to the parent company, Bowater's Paper Mills. From Bowater's Mersey Paper Mills' profits, £55,500 is required for prior charges before they pass to the controlling company. Charges on Bowater's Paper Mills prior issues need £162,000. If the group were a consolidated unit, a total of £472,500 would be needed for all prior charges, before anything would be available for the ordinary shares of Bowater's Paper Mills, the only equity of the group in which the public has an interest. The annual report for Edward Lloyd, Ltd., for the calendar year 1936 showed a trading profit, after depreciation, of £383,000. The annual reports of Bowater's Paper Mills and Bowater's Mersey Mills for the year ended September, 1936, showed a combined profit, after depreciation but before debenture interest, of £286,000. This figure contains an unspecified amount of inter-company dividends.

* * *

Newsprint and the Newspapers.—The effect of granting an additional 30s. a ton on Bowater-Lloyd newsprint must be serious for the newspaper companies. Odhams take about 150,000 tons a year, so that they have to face an additional newsprint bill of £225,000 for 1938. Allied Newspapers take about 110,000 tons, the *Daily Express* some 70,000 tons, and the *News Chronicle* about 50,000 tons. The industry as a whole will have to anticipate an extra charge for British newsprint of £750,000. It is generally considered that it is impossible for the newspaper companies to find relief in higher prices for their papers, although it might prove that the demand for newspapers is not elastic. Relief must be sought in economies of various natures. The most "squeezable" item at present is the expenditure of from £1¾ millions to £2 millions a year on canvassing for new readers. Here is an excellent economy, but it may require co-operation between proprietors of the national dailies to achieve, and co-operation is not easily obtained. There may be savings to reap through using lighter weights of papers and through reducing the number of pages. The growth in size of papers in recent years has been the result mainly of lower newsprint costs, and it is inevitable that a rise in costs should have its effect in reducing the size of the article offered to the public. The newspaper companies may have to anticipate still further increases in their paper bills in the future, depending upon the general trend of world prices and on the condition of the American newsprint market. The investment prospects of newspaper shares do not seem particularly rosy.

Greek Public Finance.—On the breakdown of the Greek debt negotiations last week the Council of Foreign Bondholders and the Greek Government exchanged broadsides and broadsheets. The Greek bondholders will feel that the Council's case is the stronger. Its upshot is simple. The 40 per cent. offer of the Greek Government expired last March. It had been reluctantly accepted by the creditors' representatives, on the presumption that, before its expiry, determined progress would be made to secure a permanent debt settlement. Since August of last year efforts to this end had been carried on, and the arrival of the Greek delegation was expected to provide an occasion for successful discussion. But it transpired that the delegation had no authority to exceed an offer of 50 per cent. of service, coupled with other measures of relief. The Council bluntly informed the members of the delegation that the offer was quite unacceptable. From the budgetary point of view, Greece is plainly in a position to make a more realistic offer; the revenues specifically assigned to the service of the debt are more than ample to cover full payment. The negotiations, however, have ended in deadlock, and the Greek representatives are unwilling to negotiate even a new temporary settlement.

* * *

The Greek Government's reply to the Council's *communiqué* contains some unusual arguments. The proposed 50 per cent. service, it is declared, secures 3 per cent. to 3½ per cent. on the post-war loans, and "this rate of interest will in actual practice be substantially higher if account be taken of the acquisition price paid by the bondholders of these loans." This, indeed, is a strange new principle of international finance. If the reasoning is valid, why should Greece stop at 50, 40, 27½ or even 5 per cent. of the service? The greater the default the lower the price at which the bonds can be acquired. Nor is it relevant to contend that the increase in Budget revenues comes from new taxes which are oppressing the people, when by common admission armaments have played a large part in the increase of Greek expenditure. The bondholders' case rests on the yield of the secured revenues alone. Holders may reflect, further, upon the position of the Greek economy under the increasingly important system of bilateral clearing. Well over half Greece's exports are shipped to countries, of which Germany is chief, under clearing agreements. The adverse balance of free payments, therefore, leaves no opportunity for the acquisition of adequate supplies of free *devisen*. This predicament, however, is self-invited; it is an argument, not against the bondholders' rights, but against the bilateral distortion of economic relations.

* * *

Industrial Profits in July.—Although the rate of increase in profits was fully maintained in July, the usual seasonal decline is shown by the number of important results published. Total net profits of £15,260,299 covered in the July reports amounted, in fact, to about one-third of the June total, but they show a similar order of increase on the £12,756,364 total for the preceding year. The record of recent months is shown below:—

Reports published in 1936—	*No. of Companies*	Rise in Profits* %
May.....	*269*	9·41
June	*214*	13·50
July.....	*228*	15·69
August ...	*47*	14·21
September	*107*	12·32
October ...	*146*	18·09
November	*177*	13·49
December	*175*	15·49

Reports published in 1937—	*No. of Companies*	Rise in Profits* %
January...	*110*	15·92
February	*208*	8·95
March ...	*307*	12·52
April	*245*	23·36
May	*255*	14·09
June	*265*	21·19
July	*193*	19·62

* After payment of debenture interest.

Rubber results affect the rate of improvement appreciably. About one-quarter of the total increase of £2,503,935 is due to rubber companies, which show a 150 per cent. increase in profits over the previous year. Other groups showing substantial rises include iron, coal and steel, the heterogeneous finance and land group, and breweries.

* * *

New Zealand Loan and Mercantile Scheme.—The directors of this company deserve the thanks of shareholders for setting out the consequences of the reconstruction scheme so clearly. In particular shareholders will appreciate the table showing their share of hypothetical earnings before and after reconstruction. At present the share capital amounts to £2,500,000, divided into £1,000,000 5 per cent. cumulative preference stock, £500,000 6½ per cent. second preference stock and £1,000,000 ordinary stock. But the business of merchants and bankers to Dominion wool farmers has not proved stable in the post-war world. The first preference dividend was 2½ years in arrear at June 30, 1936, the second preference dividend had been unpaid for 5½ years, and the ordinary shareholders had received nothing since 1930. Under the scheme, the capital of the company is to be reduced by £250,000, and will consist of £1,000,000 5 per cent. cumulative preference stock and £1,250,000 ordinary stock. The first preference stockholders are to receive their dividends up to date from reserves. Second preference stockholders will receive £70,000 in cash and their shares will be converted into £750,000 ordinary stock. The existing ordinary stockholders sacrifice one quarter of their holdings for cancellation, and another quarter is to be handed over to the second preference holders. In effect therefore the first preference holders get their arrears paid off more quickly than they could possibly expect in the present earnings situation. The second preference holders receive a cash payment, for which they would otherwise wait many years, and the possibilities of a dividend are held before the existing ordinary shareholders. To secure these advantages the two latter classes have, it is true, to make substantial sacrifices, but on the whole

BREWERY UNIT TRUST

Trustees:
MIDLAND BANK EXECUTOR & TRUSTEE CO., LTD

● Brewery Units make it possible for the first time for both small and large investors to acquire a well-spread interest in brewery undertakings.

● Brewery dividends are more consistent over periods of years than those of almost any other industry and rank among the safest shares in the industrial market.

● The fact that Brewery and Distillery Shares are tightly held and in many cases difficult to obtain, makes the facilities offered by the Brewery Unit Trust of real value to the private investor.

● The Brewery Unit Trust has been formed in consonance with the Board of Trade Report on Unit Trusts.

● Price of Brewery Units 17/9d., as at 12/8/37. Estimated yield at this price based on cash dividends alone is 4½%.

● Comprehensive booklet about the Brewery Unit Trust which forms the basis of all transactions, is obtainable from any Bank or Stockbroker, or direct from the Managers.

LONDON MANAGEMENT SECURITIES LTD

Telephone: Metropolitan 5614-7 *Telegrams: Lomansec Phone London*

the balance has been held very evenly between them. Although the company provides, very fairly, the opportunity to vote by proxy against the scheme, all classes should have no difficulty in giving their consent.

Watney and Guinness Meetings. — A large section of the chairmen's comments at the Watney Combe Reid and Arthur Guinness meetings this week surveyed common ground, for both spokesmen were at pains to emphasise the increased costs of the brewing industry. Colonel O. P. Serocold pointed out to Watney Combe Reid shareholders that the rise of 4s. to 5s. per quarter for barley of the last harvest would probably be maintained for the new crop. Apart from this item—to which, presumably, one could add brewing sugar—the costs of fuel and petrol have an appreciable significance for the profit and loss account. Lord Iveagh informed the members of Arthur Guinness that the cost of brewing materials had lately risen considerably, and he anticipated a further increase. This common stress on the cost problem suggests, indeed, that the substantial technical improvements which have been achieved by the brewing industry generally in recent years are gradually approaching exhaustion. From this technical aspect, the investors' interest is undoubtedly concentrated upon the new Guinness brewery at Park Royal. The chairman would neither confirm nor deny various reports which have been current in the market regarding the progress of this important new venture. He did, however, emphasise that the plant had fully justified anticipations, that it supplied a considerable proportion of the English trade, and that quality had been maintained. The slight set-back in profits last year, of course, does not afford any permanent conclusion regarding the new brewery. All new plants experience growing pains, and the fuller operations envisaged for the current year may tell a different story. Watney's programme of development is different in character. For several years, the directors have applied generous sums to property improvement, and they are at present unable to set a limit to this programme. Building costs have risen by 15 per cent. during the past year, but the obligation to renew premises continues to increase. The benefits of this policy will become apparent in the long period, but at present shareholders must apparently resign themselves to the advantages of internal strength rather than hope for appreciably larger dividend warrants.

* * *

Associated British Picture Survey.—The pre-view of the future of the cinema industry in this country given by Mr John Maxwell last Tuesday is particularly opportune for three reasons: the proposed new legislation governing the quota; the completion of the Corporation's first decade; and the recent financial weakness disclosed in the film-producing industry. On the Stock Exchange, as well as in Wardour Street, the industry's future development has been viewed with increasing caution. Mr Maxwell concluded his informative survey with a note of reassurance and optimism regarding the position of his corporation. The recently published accounts, indeed, made an excellent showing. The expectations of the shareholders were satisfied by raising the dividend from 12½ per cent. to 18 per cent.; but the development of the undertaking out of profits has always been kept in sight. Especial attention was drawn to the saving of interest charges by the large reserves invested in the business. Mr Maxwell proceeded with some confidence to allay the chief fears for the future. In production, the main source of weakness—against which he himself had previously issued warnings—was, until recently, a too generous flow of money into the hands of inexperienced producers. This phase seems to be passing, and definite reasons were given for expecting substantial profits from the Corporation's production department during the current year. Redundancy of cinema building in some districts was admitted, but as far as A.B.P. itself was concerned extreme care in the choice of sites had always been exercised, the latest financial results bearing witness to the success of the policy. As for the renewal and modification of the quota provisions, no uneasiness was expressed, as Mr Maxwell believed that any legislation ultimately passed would strengthen the industry. And he concluded with a forecast of increased earnings and dividends for some time to come. It was disclosed, however, that the Corporation is now proceeding in the Courts regarding the Metropolis and Bradford Trust deal. The first part of this transaction has been completed, but the second part—affecting the controlling interest of the voting shares—has not. Comment, however, must be reserved as the matter is *sub judice*.

* * *

Coal Company Prospects. — It is now clear that the coal industry is enjoying a share of industrial recovery, but the exact way in which recovery has affected the position of different coal companies and their shareholders remains rather mysterious. Prices have risen fairly sharply during the last few months, and unemployment, though still very high, has been declining gradually for a long period. Domestic consumption is now higher even than in 1929, but export demand—though that, too, is now on the up grade—appears to have been permanently damaged by the depression in Europe. The revival of shipping has improved the position of bunker coal producers, though here also the revival has been recent and not very large. Meanwhile, despite continuing mechanisation on a large scale, costs are rising, mainly through the high costs of extensions underground and the shortage of appropriate types of labour, and there are prospects of further wages demands. Among these various forces it seems quite impossible to say which will predominate. The following table, however, which shows the results for five companies over the last three years, provides a basis for discussing possibilities:—

Company (year to March 31st)	Total Revenue	Earned for Ordinary		Ordinary Dividend	Ordinary Shares	
		Amount	Rate		Price	Yield (%)
	£	£	%		s. d.	£ s. d.
Powell Duffryn Steam Coal :—

1936‡	152,097	89,178	5·4	4	20 0	5 0 0
1937	150,080	87,800	5·4	5		

* Excluding 19 per cent. dividend received in stock. † Tax free. ‡ Comparison with previous year affected by changed method of dealing with tax.

It should be remembered that all these companies are large and well established. Their performance, therefore, may not be entirely representative of the fluctuations of the industry as a whole. Powell Duffryn, through its subsidiaries, is largely concerned with bunker and industrial coal. Its recovery is accordingly quite recent. William Cory, with a similar history, are coal and fuel merchants with large foreign interests. The other companies are big inland producers mainly for domestic consumption. Whether the domestic producers will fare still better depends largely on the maintenance of the upward trend of demand, but a further growth in profits should follow the gradual progress of technique. In other sections all depends upon the future of international trade, from which long-term prophecy recoils. Nevertheless, most of the yields shown in the table seem, superficially at least, interesting to the speculative investor.

Friary, Holroyd and Healy's.—The progress o this concern during the year to last June has been less striking than in recent years, but the accounts show that it has been well consolidated. Trading profits increased from £221,746 to £229,107, and total income, including rents and dividends received from subsidiary companies, has advanced from £266,388 to £281,730. Owing to an increase in expenses—the chief item of which is the raising of the provision for repairs and maintenance from £35,000 to £40,000—the equity earnings position shows little change. The 13 per cent. dividend is handsomely covered by earnings of 22 per cent., and £40,000 is again put to reserve, raising the total to over £290,000. The progress of the company during the past three years is analysed below:—

	Years to June 30th		
	1935	1936	1937
	£	£	£
Trading profit	195,062	221,746	229,107
Other income	43,191	44,642	52,623
Total profit	238,253	266,388	281,730
Expenses, repairs, etc.	99,697	109,406	123,346
Fees, debenture interest, etc.	13,063	20,220	19,221
Preference dividends	20,936	20,936	20,936
Ordinary stock :—			
Earned	*104,557*	*115,826*	*118,227*
Paid	65,169	77,018	77,018
Earned (%)	*19·6*	*21·6*	*22·2*
Paid (%)	11	13	13
Reserve	40,000	40,000	40,000
Carried forward	26,782*	26,619*	27,827

* Include credits of £954 and £1,029 income tax.

The company's territory is ideally placed to secure a large week-end touring business, and the board's policy of improving licensed premises, coupled with their development of catering interests, is undoubtedly wise. At 57s. ex dividend, the ordinary stock units yield £4 11s. 3d. per cent.—a return in line with that obtainable on sound brewery shares generally.

* * *

Oil News. — Foreign capitalists are becoming habituated—though not reconciled—to hard treatment from the Mexican authorities. The bondholders have gone unsatisfied for years. And the Mexican Eagle company has been harassed by a series of demands for excess taxation, expropriation of leases, and strikes. But the latest official intervention anticipates the arrival of the economic millennium in Mexico. The Board of Arbitration, set up to examine the claims of labour, finds that the profits of Mexican Eagle from 1934 to 1936 averaged 79 million pesos per annum, a figure denied by the company, which states that in 1936 alone—the best of the three years—profits amounted to only 18 million pesos. On their assumptions, however, the Board proceed to recommend a forty-hour five-day week (with pay for fifty-six hours); free life insurance and pensions up to 85 per cent. of retiring wages; paid holidays up to 30 days annually; 80 per cent. of wages during non-vocational illness; and finally—an award which reaches the heights of the preposterous—full pay while on strike, without limit of period. It is not remarkable, therefore, that Mexican Eagle shares have fallen to 15s. this week, and Canadian Eagle (sympathetically rather than logically) to the same level. The rest of the oil share market has been scarcely interesting. The market's second thoughts about the recent halfpenny reduction in petrol prices are more cautious. At first, the distributing companies' action was associated with the reduction in tanker freights from the peak earlier this year—the time of the advance in petrol from 1s. 7d. to 1s. 7½d. But it is now suggested that considerations of wider strategy may have played a part. The Bahrein field, which is being opened up by American interests, must seek a market, and fears are expressed that part at least of the production may be marketed here. Relations between the British groups and their American interests are sufficiently close to suggest that a bargaining position for an amicable compromise could be reached, but the market has rightly decided to await events.

Rhodesian Copper Statements. — After the Rhokana statement, which showed estimated net profits of £2,010,000 for the year to June last, come equally welcome figures from Roan Antelope and Mufulira Copper. Roan Antelope's net profit for the final quarter is estimated at £693,500, making a total of £1,790,000 (subject to taxation) for the year. These earnings are equivalent to a rate of 108 per cent. on the shares, which received 30 per cent. for 1935-36. For the past year, an interim dividend of 30 per cent. has already been paid, and the market's interest is now concentrated upon the prospects for the final dividend. The 5s. shares, having risen to 76s. 3d., evidently discount good things for the current year. Although the trend of costs last year appears somewhat less favourable—it must be remembered that output has been substantially increased—it seems probable that the true level is near £20 per ton. And with copper at £60, and an output of 100,000 tons in prospect, it is not difficult to toy with massive earnings prospects at, say, double the past year's rate. The Mufulira figures hold out the prospect of a satisfactory maiden dividend for the past year, during which operations at the mine have been progressively extended. Total profits for the year are put at £649,000, against which there is a debit balance brought forward of £93,545. This figure is of first interest to shareholders in Rhodesian Selection Trust, which holds two-thirds of the capital, and secondly to Rhokana and "Chartered," who are interested in the balance. If present conditions are maintained, the current year's total profits should substantially exceed the annual rate of £1,325,000 suggested by the June results.

* * *

Company Results of the Week.—Another seasonably short list of company reports appears in our table on page 364. The *Booth's Distilleries* profits have received wide comment, in view of the acquisition by Distilleries of a large part of the company's share capital. They show a fall from £107,863 to £49,634, and the dividend is reduced from 7½ per cent. to 2 per cent. The *Pearson and Knowles* and *Partington Steel* reports are perhaps less interesting from the profits aspect than from the eventual contribution which they may make to Armstrong Whitworth Securities. The chairman of the latter concern has recently stated that the preference capital should be repaid, with something to spare for the ordinary. *Fodens* have achieved a substantial recovery from a mere £206 to £45,470. The debit balance is thereby reduced to £12,562. Among this week's dividends, the *Triplex* distribution of 35 per cent. on the new capital is outstanding. The dividend is equivalent to 87½ per cent. of the old capital, compared with 60 per cent. actually paid for the last year.

The Distinctive System

of

The Scottish Provident Institution

Under *The Distinctive System* the premiums are so moderate that, at early and middle ages, the annual sum charged elsewhere for a Whole Life Assurance of £1,000, with profits, will here secure from the first as much as £1,300 or thereby with right to share in the Surplus.

THE WEEK IN THE MARKETS

THE STOCK EXCHANGE

SETTLING DAYS

TICKET: AUGUST 24 ACCOUNT: AUGUST 26

THE market has not produced its promised form this week. In fact, the progressive appearance of prices in the Bank Holiday week has been succeeded by markets so relatively uninteresting that the question arises whether last week's improvement was more than a semi-professional attempt to get matters moving once more. On the whole, the undertone of most sections of the market has remained firm, and public interest is reflected in heavier volume of enquiries reaching the brokers. But supporting orders are still too small to produce the heralded holiday boomlet.

Gilt-edged opened firm, but the dated stocks, including the National Defence Bonds, attracted the greatest attention. Continued switching was evident from the declines in the undated list, particularly in mid-week. Dominion stocks received good support, but in the Corporation market, the Blackburn scrip fell to $\frac{1}{16}$ discount in mid-week. The critical situation in the Far East depressed Sino-Japanese bonds seriously. Elsewhere, Polish issues strengthened, and even Greek loans moved higher. Brazilian stocks remained dull.

Railway stocks remained quiet pending the traffics (which were hardly up to expectations) and the wages award, which was received with satisfaction. Its import for the companies is discussed in a leading article on page 327. The stocks closed steady on Thursday, on consideration of the award. In the foreign rail market, Cordoba first debentures attracted further support, but the market obtained no impetus from the traffics.

Quiet conditions prevailed after the opening of the industrial share market. Some early support was reported for iron and steel shares, Vickers rising further at first, while T. W. Ward continued their advance. Irregularity developed later, however, and in mid-week falls of a few pence were common throughout the list. Coal shares also tended to ease after early support. Moderate business in electrical equipment shares put Siemens and General Electric higher at first, but the gains were held with some difficulty. Falls outnumbered rises in the motor group, and only Imperial Airways were slightly higher in the aircraft group. Store shares recovered somewhat in mid-week, but brewery shares were featureless. Guinness, however, improved following the meeting (discussed on page 350), although Watney, Combe Reid (whose prospects are also discussed on that page) were slightly lower. Profit-taking continued in the shipping group. Newspaper issues declined on the announcement of prospective increases in newsprint costs (outlined on page 348). Among the miscellaneous list, Murex, British Oxygen and Turner and Newall made headway. Courtaulds attracted strong support, reaching 55s. in mid-week.

In the oil market, the findings of the Board of Arbitration in the Mexican Eagle labour situation (described on page 351) caused a prompt fall in the "twin Eagles," and business in the leaders was on a small scale. The rubber and tea share markets turned quiet and dull.

The ground in the Kaffir market had been prepared last week for the return of the public on an appreciable scale, but support did not mature. The atmosphere was more subdued, and speculative "new time" buyers quickly turned out their shares. Although interest was shown for some developing mines, prices had an irregular appearance, which was heightened by the shake-out in West Wits. on Tuesday. Rhodesian copper shares took the palm in the mining market, although they, too, had a poor second day. The Roan Antelope and Mufulira figures (discussed on page 351) renewed the market's interest.

NEW YORK STOCK EXCHANGE

THE week generally has been very quiet and no major events have disturbed trading. Late last week business was dull and small declines were general. Harvester and United Steel headed the list with substantial falls. Investors were shy also of railroad issues, as uncertainty about the Brotherhood's policy is becoming general. Copper shares, however, were nearly all marked up to offset an expected rise in metal prices. On Saturday conditions as a whole were livelier, base metals rose once more, and steel more than recovered its earlier losses. After the week-end, however, conditions again became extremely slack and small losses were fairly general in the middle of the week, after some profit taking had over-reached itself. This set-back was mainly caused by the fractional decline in the *Iron Age* estimate of steel mill output to 84·5 per cent. of capacity in the previous week, from the earlier figure of 85·0 per cent.

CAPITAL ISSUES

SEASONAL quietude in the new issue market has been broken only by a county loan and an issue of shares in a new oil company. The *Essex* issue follows the recent pattern, for it is of 3½ per cent. stock at 101, redeemable finally in 25 years. The market was disposed to anticipate a small premium on the scrip, but many quarters expressed some thanks that the issue promised to be the last before the close season for corporation borrowing. The absorptive powers of the market have been fully tested in recent weeks. *Premier Trinidad Oilfields*, whose 5s. shares have been issued at par this week, in fact makes a second public appearance, for an issue carried out last year was followed by a return of subscriptions owing to the company's inability to obtain transfer of the lease. The company is developing an oilfield contiguous with the properties of Trinidad Petroleum Development, which will manage the company. The purchase consideration is satisfied almost entirely by shares, together with generous option rights. The company, at this stage, must be regarded as speculative. The managing company enjoys a good reputation, and it is largely on this account that the speculator may be attracted. Statements for information have been published this week by *Telephone and General Trust*, *Third Conversion Investment Trust*, *Mauritius Government* (in respect of £301,800 3½ per cent. stock) and *Thomas Skinner and Company (Publishers)*.

PUBLIC OFFERS

Essex County.—Issue of £1,700,000 3½ per cent. redeemable stock at 101 (a trustee stock). Redeemable at par December, 1962, or from 1957 on notice. Ranks with existing stocks. Outstanding debt £6,976,264 (of which £1,466,844 for housing). Rateable value, £9,448,281. Estimated population, 1,344,460.

Premier (Trinidad) Oilfields.—Issue at par of 540,788 5s. ordinary shares (400,000 unissued shares under option at par). Acquires Stollmeyer Concession of 500 acres in Palo Seco area. In first 12 months, 20 wells to be drilled. Purchase price to C. C. Stollmeyer, £54,800 in 219,200 ordinary shares and 3-year option on 100,000 at par; also £23,000 (in £3,000 cash and 80,000 shares and option at par on 300,000), to Scottish Caribbois Holdings, who paid that consideration for surrender of lease by C. C. Stollmeyer and granting of new 20-year lease by Governor. Expenses, £2,364, £1,000 and £20,700. Rent, 15s. per acre, and royalties (now 4d. per barrel on net crude oil). Working capital, £108,133. Lists closed at 9·5 a.m. Thursday; fully subscribed.

BY STOCK EXCHANGE INTRODUCTION

Colony of Mauritius.—Particulars of issue of £301,800 3½ per cent. inscribed stock. A Trustee stock. To finance Mauritius Agricultural Bank. Redeemable at par August, 1962, or from 1957 on notice. Secured on general revenues and assets of Mauritius Government. £200,000 sold at 105¼; balance being taken by other Colonial governments at same price.

Thomas Skinner and Company (Publishers).—Introduction of 175,000 6 per cent. cumulative £1 preference shares. Acquires for £175,000 in 700,000 5s. ordinary shares and £3,212 cash net assets, copyrights, etc., of £333,416 (goodwill, etc., £304,666), of Thomas Skinner and Company ("Stock Exchange Official Year Book" and others); and for £158,416 business of "A.B.C." owned by Sir Thomas Hewitt Skinner. Combined profits, after all expenses, years ending in: 1935, £21,571; 1936, £24,587; 1937, £26,366.

Telephone and General Trust.—Particulars of issue of £200,000 4 per cent. first debenture stock (part of £400,000 authorised). Redeemable at 102 by drawings 1957-62, or thereafter to 1967 at 101 on notice. Further stock ranking with this issue can be issued if rate not over 5 per cent., and total not over share capital plus reserves. Norris Oakley Bros. place issue at 98⅝ for ¼ per cent. commission.

Third Conversion Investment Trust.—Sub-unit holders of British Empire Fixed Trust units were invited to exchange into ordinary shares of the company, and 230,635 15s. shares have been so allotted. Acquires securities of market value of £210,454. Trustees and managers have foregone £4,239 fees for future management; £1,750 used for expenses, and balance kept as fund payable in instalments to Fixed Trust Investments, Ltd., for management.

ISSUES TO SHAREHOLDERS ONLY

Buell Combustion Company.—Offer at par to shareholders of 60,000 6 per cent. cumulative convertible £1 preference shares (convertible into ordinary shares at holder's option) and £60,000 5-year non-interest bearing registered notes (redeemable at 30 per cent. premium September, 1942, or earlier on notice, at reduced *pro rata* premium).

Assurance Finance Trust.—Shareholders are to be offered at par, in the proportion of one for nine held on July 28, 25,000 £1 ordinary shares.

Clyde and Mersey Investment Trust.—Debenture stockholders and stockholders may apply at 101 for £200,000 4 per cent. debenture stock, ranking with existing, and redeemable at 101 in 1965 or from 1955 on notice.

Ranks, Ltd.—To provide the balance of expenditure on additional purchases, it is proposed to create a further 4,000,000 5s. ordinary shares, and to issue 1,235,640 shares on bonus terms to existing ordinary shareholders in the ratio of one new for ten held.

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields of fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

COMPANY MEETINGS

WATNEY COMBE REID AND COMPANY, LIMITED

IMPROVEMENTS TO PROPERTIES

The annual general meeting of Watney Combe Reid and Company, Limited, was held, on the 11th instant, at the Windsor Castle Restaurant, Victoria, London, Colonel O. P. Serocold, C.M.G., chairman of the company, presiding.

The Chairman, in the course of his speech, said:—As you are aware, the board have asked, and the shareholders have agreed for several successive years past, that large sums should be appropriated out of the company's profits to the property improvement and contingency reserve. The directors, acting on that mandate, have on their part drawn on that reserve to an extent practically equivalent over the last five years to the amount which has been put into it.

A year ago I informed you that it was very difficult to place a definite limit on our expenditure, especially as circumstances beyond our control, involving further outlays for this purpose, are constantly arising. These factors show no signs of diminishing, but on the contrary slum clearance, street widenings, and pressure by licensing benches impose on us the obligation to incur large expenditure without remission, even at a time when building costs, which have risen about 15 per cent. in the last twelve months, continue to rise. Additionally there are the obsolescent or obsolete structures which call for replacement in the normal course.

At one time we had to deal chiefly with the licensing justices as to buildings, subject to compliance with local bye-laws. We now have to deal not only with those bodies but also with the town planning and ribbon development authorities, be they city or town or county councils, and plans, often in triplicate, have to be submitted to each authority. During the past year we received approximately 120 further notices on town planning alone, as affecting our properties, and about 200 more letters on the same subject from local authorities. As a result of the expenditure over a number of years I may say that your properties rival in condition those of any one of our competitors, and that we not infrequently receive unsolicited compliments, both direct and indirect, from the magistrates and other authorities.

RECORD SALES IN CORONATION WEEK

It may be of interest to record that in the week preceding the Coronation in May last our sales created a record so far as our books show. The amount of work imposed thereby on our brewing and delivery staff was unprecedented, and our thanks are due to them that no one of our numerous customers was disappointed. We may well be proud of an output such as this, but it must be remembered that the effort is costly and carries with it all sorts of additional trouble and expense. In spite of the general extension of the opening hours of public houses in the London area on that occasion, I am glad to say that no undesirable result appears to have followed. This reflects credit on the licensee and also on the general public, who did not abuse the privileges granted.

I trust that the rise of 4s. or 5s. a quarter for barley of the last harvest has gone a long way to satisfy the farming interest. So far as one can form an opinion at this date, it appears probable that this rise will be maintained when the markets for new barley open a month hence. Although that will entail a rise in the cost of our brewing materials, the fact that it will bring more money to agriculture is not unwelcome. In common with many other trades, our manufacturing costs are affected by the rise in the cost of such articles as coal and petrol.

DIVIDENDS

Having dealt with various balance sheet items, the Chairman, in dealing with the profit and loss account, said:—The balance carried down is £1,428,583, which after the deduction of interest on the debenture stock and first preference stock—leaving £1,089,896 which is carried to the balance sheet as the profit for the year—is £45,217 higher than was the profit a year ago.

Your directors recommend that the £1,153,397 to be dealt with to-day should be applied as follows:—To property improvement and contingency reserve, £350,000; a final dividend of 2 per cent. on the preferred ordinary stock, £63,708, making the full 4 per cent. for the year; a final dividend of 9 per cent.—making 15 per cent. for the year—on the deferred ordinary stock and a bonus of 4 per cent., £414,103. This absorbs £827,811, leaving an amount of £325,585 to be carried forward.

The report and accounts were unanimously adopted.

CABLES INVESTMENT TRUST, LIMITED

INCREASED INCOME

The second ordinary general meeting of the Cables Investment Trust, Limited, was held, on the 10th instant, at the Incorporated Accountants' Hall, Temple Place, W.C.

Lord Pender, the chairman, said that the report dealt for the first time with a full year's working; the income of £356,176 showed a very satisfactory increase on the amount referred to of £315,000 in the original prospectus.

The capital remained unchanged and the capital reserve had been increased by profits on sales during the year and now stood at £144,300. Debenture stock purchased and cancelled in accordance with the Trust Deed, during the year to June 30, 1937, amounted to £15,000. In addition, they had redeemed £100,000 during the year, which was available for re-issue. After payment of management expenses and making provision for debenture interest the profit for the year amounted to £229,349, and the directors recommended a final dividend of 3 per cent., making 5 per cent. for the year, on the ordinary shares.

The fact that the valuation of securities held on June 30th last was in excess of their book value was cause for satisfaction in view of the considerable fall which had taken place in the value of most securities over the last year. The redemption of high-yielding bonds referred to in his speech last year had continued and notice of the repayment of further bonds in the near future had been received. As at June 30th the distribution of the securities was:—37¾ per cent. bonds, 14¾ per cent. preference shares and 47½ per cent. ordinary shares, with a large preponderance of holdings within the British Empire, where the prospects of increasingly prosperous trade remained good.

Provision had been made for their liability under the N.D.C. in respect of the year ending June 30th last, but that figure would be increased when a full year's tax was levied. However, the directors were able to put before the shareholders a very satisfactory report of the year's working and, in the absence of any unforeseen occurrence and a continuance of the peaceful development of trade, they could look forward to a steady improvement in the future.

The report and accounts were unanimously adopted, and a hearty vote of thanks was passed to the chairman, directors and staff.

ASSOCIATED BRITISH PICTURE CORPORATION, LIMITED

PROSPERITY IN ALL BRANCHES

The tenth ordinary general meeting of this Corporation was held, on the 10th instant, in London.

Mr John Maxwell (chairman and managing director), in the course of his speech, said:—That they would all be pleased with the increase of £339,000 in the Corporation's trading profit for the year, bringing it to the record figure of £1,265,829. Ten years ago their Corporation first became a public company (British International Pictures, Ltd.), with a relatively insignificant share capital, but with a definite policy to build a successful and creditable undertaking. Notwithstanding many difficulties, the Corporation had, he thought successfully, built a strong and comprehensive structure embracing the three main branches of the industry. The ten years' life of the Films Act being on the point of expiry, the Government had announced their intention of renewing the Act for a further period of ten years, and had outlined the proposals which showed their intention that, in its second decade, the Films Act would aim to develop and broaden the basis of the film industry and give it protection for achieving more ambitious objectives.

He was glad to say that the film production department of their business was functioning in good shape, and would, in the current financial year, yield substantial profits. That estimate was based on the fact that their film distribution department had shown an increase in turnover in the last six months of more than 50 per cent., while production costs had been coming down to a rational basis. From the point of view of saturation and redundancy of cinema building, moreover, it had always been the policy of the board to choose with extreme care the neighbourhoods in which they decided to extend, and the results achieved showed they had not erred in their choice. He felt that shareholders need have no qualms regarding the proposed legislation affecting the film and cinema industry, and, with all three departments of their business now showing increased profits, he could confidently predict both for the current year and for some time to come an increase in prosperity, in which the shareholders might reasonably expect further to participate.

The report was unanimously adopted.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended August 7, 1937, amounted to £16,080,000, against ordinary expenditure of £19,585,000. After increasing Exchequer Balances by £241,225, the operations for the week, as shown below, increased the gross National Debt by £3,976,000, to about £7,999 millions.†

No gold movements were reported at the Bank of England between August 6th and 12th. Details of previous movements were given in last week's issue on page 318.

GOLD MARKET

Messrs. Samuel Montagu and Company write on August 11, 1937:—The Bank of England gold reserve against notes amounted to £326,406,625 on August 4th, showing no change as compared with July 28th.

In the open market the amount of bar gold disposed of at the daily fixing during the past week was about £920,000, which was absorbed by a general demand. Prices ruled at or slightly below dollar parity, but touched lower levels owing to the firmness of sterling against the dollar; the price of 139s. 4d. fixed on August 9th is the lowest quotation so far recorded this year.

Gold shipments from Bombay last week amounted to about £332,000; the s.s. "Ranchi" carries about £249,500, and the s.s. "President Adams" about £82,500.

The Southern Rhodesian gold output for June, 1937, amounted to 66,330 fine ounces, as compared with 68,448 fine ounces for May, 1937, and 67,729 fine ounces for June, 1936.

The Transvaal gold output for July, 1937, established a new monthly record at 996,545 fine ounces; this compares with 979,069 fine ounces for June, 1937, and 967,993 fine ounces for July, 1936.

SILVER MARKET

There have been only small movements in prices during the past week and the market has been quiet, but with the Indian Bazaars limiting their buying orders to prices slightly under those current the tendency was inclined to be dull.

Sales on China account have been small, but yesterday offerings, which included re-selling from India, were made rather more freely and prices dipped to 19⅛d. for cash and 19⅛d. for two months' delivery, at which prices India both bought and sold. Cash regained ⅛d. today, 19⅛d. being fixed for both deliveries.

Although the market may be steady at about the present level, no marked recovery is anticipated until demand from India shows some improvement.

Quotations for gold and silver are shown below:—

1937	Price of Gold per Fine Ounce	Equivalent Value of £ sterling	Price of Bar Silver in London per ounce standard: Cash	Price of Bar Silver in London per ounce standard: Two Months	Price of Silver New York per ounce ·999 fine

The highest rate of exchange on New York recorded during the period from August 5th to 11th was $4·99⅛ and the lowest $4·97½.

OTHER STATISTICS

SHORTER COMPANY COMMENTS

APPOINTMENTS AND PERSONAL

To fill the vacancy created by the death of Sir Gerald H. Ryan, the directors have appointed the Rt. Hon. Lord Hutchison of Montrose, P.C., K.C.M.G., C.B., D.S.O., to the board of the Phœnix Assurance Company, Ltd.

MISCELLANEOUS

CORNBROOK BREWERY COMPANY has agreed to buy all preference and ordinary shares of Phœnix Brewery Company of Heywood, for about £450,000, subject to acceptance by 90 per cent. of holders of each class. The price offered is £7 per £5 preference share and £6 10s. for ordinary share, plus £13,550 to officials, staff, etc.

FODENS, LTD.—Trading profit for the year to June 30th was £45,192, against £469, or £46,383 net profit, against £264. Debit balance is now reduced from £58,032 to £12,563, and the directors hope to consider declaring an interim dividend at an early date.

IMPERIAL CHEMICAL INDUSTRIES and **A. REYROLLE AND COMPANY** have acquired a predominating interest in Pyrotenax, makers of fireproof cables.

PEARSON AND KNOWLES COAL AND IRON COMPANY (controlled by Armstrong-Whitworth Securities).—For the year to June 30, dividends, etc., received totalled £37,710, against £56,527 for the previous 18 months, chief holdings being in Lancashire Steel Corporation and Wigan Coal Corporation. Net profit, after £6,509 loan interest and £8,955 tax, is £20,979, against £33,388. A payment of 2½ per cent. for the year will be made on the income debenture stock and bank loan. Carry forward, £1,642.

PARTINGTON STEEL AND IRON (controlled by Pearson and Knowles).—Receipts for year to June 30th were £97,745, against £59,812 for previous 18 months (chief holding is in Lancashire Steel Corporation). Net balance, after £13,184 loan interest and £19,768 tax, is £63,777, against £59,812. Full payment for year will be made on 6 per cent. income debentures, against 4 per cent. £20,000 applied to reduce loan.

INTERNATIONAL NICKEL COMPANY.—Interim financial statement shows a net profit for the second quarter of 1937 of $14,199,395 (or 94 cts. per common share after preferred dividend), against $9,070,187 in 1936 (59 cts. per common share). For the half-year to June 30, 1937, net profit is $25,914,352, against $17,456,974 in 1936, or $1·71, against $1·13 per common share. Total earnings were $18,934,618 and $35,772,486 for the 3 and 6 months respectively, against $13,264,026 and $25,165,888 in 1936.

‡ Tax free. (a) On smaller capital. § Second quarterly.

ELECTROLUX CORPORATION.— A quarterly dividend has been declared of 40 cents regular and 10 cents extra, payable September 15th.

FIRST PROVINCIAL FIXED TRUST "A" SERIES.—A seventh distribution will be made on August 20th at the rate of 6·7834d. net per sub-unit (including 2·6984d. realised from sale of Gaumont British Picture Corporation first preference shares eliminated from the investments.)

PASS AND JOYCE.—It has been decided to postpone for the present a preference dividend, although profits are more than adequate for the purpose.

WHITWORTH AND MITCHELL.—Final ordinary dividend of 4 per cent., against 2½ per cent., making for the year 6 per cent., against 4½ per cent.

HARRODS, LTD.—Ordinary interim dividend at the rate of 10 per cent., per annum (the same).

SCOTTISH AND NORTH COUNTRY INVESTMENT FUND.—Half-yearly distribution on coupon No. 3 for September 1, 1937, of 3·60d. per unit, tax free.

SECOND BRITISH FIXED TRUST.—Payment for half-year to August 7th of 7·60d. per sub-unit tax free.

SCOTTISH BANK INSURANCE AND INVESTMENT TRUST UNITS.—The first half-yearly distribution on August 16th will be at the rate of 2–8622d. per unit, tax free.

PROVINCE OF BUENOS AIRES.—Erlangers, Ltd., announce that they are instructed to pay, on and from September 1, 1937, coupons due on that date of 4½–4⅜ per cent. External Readjustment S.F. $ Bonds of 1935.

Trust of Insurance Shares, Ltd., announces that a branch office has been opened at 5 St. Andrew Square, Edinburgh.

The following appointments by the Southern Railway Company are announced to date from October 15th: Mr J. B. Elliot, to be assistant general manager in succession to Mr G. S. Szlumper, who succeeds Sir Herbert Walker as general manager; Mr R. M. T. Richards, development officer, to be assistant traffic manager in succession to Mr J. B. Elliot; Mr E. F. E. Livesey, deputy-Continental assistant, to be development officer in succession to Mr R. M. T. Richards.

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

THE commodity markets have shown few new features and trading generally has been on quiet lines. In a number of cases, prices have displayed a rather easier tendency.

The event of the week was the publication on Monday of the official estimate of the United States cotton crop. At 15,593,000 bales, the estimate was well above market anticipations, the yield per acre, according to present indications, being the highest ever recorded. Prices reacted sharply on receipt of this estimate, but a firmer tone was subsequently manifest on the news that the Senate Agricultural Sub-Committee had voted in favour of a Bill providing for a ten-cent loan on cotton. Jute was also a shade cheaper this week, but other textile fibres were generally unaltered. Oilseeds were easier under the influence of crop reports.

Speculation in metals is beginning to revive and the London Metal Exchange was consequently more active. Although earlier gains were not fully held, quotations show a net advance on the week. News of drought in Malaya contributed to the firmness of tin, while spelter advanced in response to rumours of a shortage in the United States. If hopes concerning American imports are not realised, spelter prices are likely to fall to a lower level.

Wheat has been a quiet market and is now a shade cheaper than a week ago; maize prices, however, show little alteration. Sugar was also unchanged in price, but at the Mincing Lane tea auctions competition was brisk and quotations showed a hardening tendency. On the London Provision Exchange, bacon was marked up on shorter supplies, but Colonial makes of butter and cheese were reduced.

An easier price tendency in the United States is reflected in the movement of Moody's index of staple commodity prices (Dec. 31, 1931 = 100), which declined from 206·5 to 205·7 in the week ended Wednesday. The index stood at 208·7 a month ago and at 182·2 on the corresponding day last year.

COAL

SHEFFIELD.—Output and delivery are still being affected adversely by the recurrence of strikes at various South Yorkshire collieries. Demand for coal on inland account remains strong, a prominent feature being the call for locomotive hards. Industrial fuel is also moving freely. Demand for house coal has fallen to a low level. Small coal continues difficult to secure and is in rather shorter supply owing to the reservations for colliery use during the present disputes. There is a big demand for slack for electricity generating stations. Blast furnace coke is becoming more difficult to obtain. Patent oven coke for industrial use is strong. There has been a falling off in the demand for export fuel and inquiries for prompt shipment are somewhat restricted.

NEWCASTLE-ON-TYNE.—The general tone of the North-East coal market remains firm, the feature being the active demand from home consumers. Northumberland steam collieries are working regularly, and apart from odd parcels through vessels going out of position there is little coal available. In Durham, best steams are heavily sold both for home and export, whilst coking coals are just as difficult to obtain. All classes of bunkers are in better request and are not too plentiful. Patent oven coke remains firm under a brisk home trade.

GLASGOW.—Foreign enquiry has not yet opened up to any notable extent, but the collieries in the shipping areas are mostly comfortably booked, the usually favoured brands especially being well taken up. Washed treble nuts are, however, still fairly plentiful, and of other grades

(*Continued from page* 363)

LANCASHIRE AND CORBY STEEL MANUFACTURING COMPANY.—This private company, with a nominal capital of £1,000, has been formed in connection with the agreement last year between Stewarts and Lloyds, and Lancashire Steel Corporation, for the manufacture at Corby of rolled products.

EDMUNDSONS ELECTRICITY CORPORATION, LTD.—Results of operations of the group during July, 1937, as compared with July, 1936, show an increase of 13 per cent. of units sold.

WOLVERHAMPTON CORPORATION.—Williams Deacon's Bank announce that to prepare interest warrants due September 1st on the 3 per cent. stock, 1924–54, the books will be closed August 18th–31st inclusive.

ROYAL MAIL STEAM PACKET COMPANY.—The liquidator announces to holders of White Star Line preference shares that steps will be taken within the next few months to pay a small first dividend, though the amount cannot be fixed until it is known if there is to be an appeal against a recent judgment in the liquidator's favour. The accounts show receipts of £544,628 and payments of £5,253, leaving a £539,375 balance.

GAUMONT BRITISH PICTURE CORPORATION.—The following summarises an announcement by Mr. W. H. J. Drown, chairman of the Shareholders' Committee: In the report issued on July 20th, the names were mentioned, by way of example, of certain important shareholders who had sent supporting forms. Included were Bishopsgate Nominees, Ltd., and Princes Street Nominees, Ltd., who now state that their support forms were sent only in respect of two holdings aggregating £1,300 shares, but not in respect of all the holdings registered in their names. I desire to express regret for any misunderstanding. My committee have now received the support of over 1,000 individual shareholders, but still need further support before they can proceed.

CABLES INVESTMENT TRUST.—At the meeting of Cables Investment Trust on Tuesday last, Lord Pender gave an analysis of the Company's investments on June 30th, as 37½ per cent. in bonds, 14½ per cent. in preference shares and 47¼ per cent. in ordinary shares. A large preponderance of holdings is within the British Empire.

CLIFFORD WILLIAMS AND SON.—Preliminary figures (the first since company became public) for the year to June 30th show a profit of £35,745, or a net profit of £26,895 after fees, depreciation, and tax (£8,850). To reserve £3,000; carry forward £5,145.

* After long-term mortgage share dividend. ‡ For 15 months, against 1 year previously; after revaluation and provision of losses (*a*) No comparable figure. § Converted to annual rate.

the secondary classes of steam can also be had for prompt business. In the west the collieries are affected by the still sluggish demand for household fuel, idle time being necessary to some extent, but industrial and public utility requirements are on a brisk scale, and coastwise business is good. Navigation bunkers meet a strong demand, and very little metallurgical coke is available for export. Prices are generally maintained.

CARDIFF.—Demand for all grades was again quiet last week. Collieries' stocks have, however, been considerably reduced as a result of the loss of production over the holidays and current outputs continued to be steadily absorbed by standing business. Due to the suspension of work at the docks on one-and-a-half days, shipments from the South Wales ports were curtailed last week, amounting to 234,900 tons as against 492,400 tons in the previous week. They were, however, on a better scale than a year ago when they totalled 215,798 tons. Although buyers could usually cover their present requirements easily the amount of coal on offer was not excessive and prices were steady, while for the forward positions sellers were showing more reserve. The dry sized descriptions were particularly strong and supplies of these kinds remained extremely difficult to arrange over a long time ahead. The shortage of coal in South Africa has led to some inquiries being received locally from sources which normally take coal from this direction. Business has been concluded for one cargo for East Africa, totalling about 6,500 tons, while the Kenya Railways were inviting tenders for the supply of between 30,000 and 50,000 tons. Owing to the high cost of South Wales coals and the heavy transport charges, local shippers have received little business from this source in recent years and even despite the present shortage it was not expected that the district would benefit materially. A small inquiry for about 8,000 tons was circulating from Far Eastern buyers for delivery at Singapore, while industrial users in France asked for prices for the supply of several quantities ranging from 5,000 tons to 10,000 tons.

IRON AND STEEL

LONDON.—Quiet conditions, largely due to holiday causes, rule in the iron and steel markets, and are likely to prevail for the next few weeks, says the official report of the London Iron and Steel Exchange. Business is also limited by the inability of the makers to accept orders except for very extended delivery. Output is maintained at a high rate, but is immediately absorbed by the consuming industries. The arrangements, however, which have been made to supplement home production by imports of Continental steel should help to relieve the situation in the autumn.

Heavy quantities of pig iron are passing into consumption, but little new business is coming forward. Most consumers have covered their requirements, so far as possible, until the end of the year, and few producers have any iron and steel for delivery in 1937. Foreign foundry iron has been offered at high prices which have proved unattractive to most consumers. In the semi-finished steel department demand continues to outrun supply, although British works making this class of material are working at capacity. The demand for finished steel, particularly structural descriptions, is unrelaxed, and manufacturers are concentrating upon the execution of urgent orders. Export demand is maintained; but only a proportion can be satisfied owing to the heavy home requirements.

SHEFFIELD.—There has been little movement in the iron and steel market this week. This is in part due to the fact that the holidays are in full swing, but in greater measure to suppliers having but a minimum of material for disposal. Makers of pig iron are contracted in many cases to the end of the year, and have next to nothing for immediate delivery. The scarcity of foundry is most pronounced, although it is not easy to secure forge in any but very limited parcels. Hematite appears to be a rather less difficult market, but makers are not inclined to enter into new business of any magnitude. Makers of finished iron are booked well ahead and mills are working full time. Crown bars are coming into very much better demand. There is no easing of the pressure for basic and acid steel billets, and re-rollers are complaining of the long delay in deliveries. Wire rods continue in heavy request, and there is an expanding demand for structural steel. For the latter there is under consideration a scheme for regulating distribution.

All sections of local industry are fully engaged, and there is a continuous flow of important orders. Defence work is on an increasing scale, but this by no means accounts for all the pressure. Firms making heavy machinery report full order books, and the lighter branches have as much on hand as can easily be managed for the present. Makers of cutting and small tools are especially busy.

GLASGOW.—The steelmakers in this district are all fully employed and still unable to cope with the demands made upon them. Steelmakers are endeavouring to arrange programmes to cover a couple of months at a time. It is hoped by this means that makers will be able to meet the requirements of consumers in the matter of priority of deliveries, as, with say two months' definite specifications in their hands, production will be more easily regulated. These arrangements should eventually work out to the benefit of all consumers of steel, who will be able to arrange their manufacturing programmes for a like period, having some assurance as to quantity and class of material likely to be delivered to them within a specified time. Some fair deliveries of Continental semis have been made recently, and further shipments are expected within the next week or so. These afford some relief to re-rollers, but in this branch supplies of material are not yet equal to the requirements of users. Structural engineers in this district are now exceptionally busy, and there is much new work on the market at the moment, including a good tonnage for overseas trade.

CARDIFF.—Work was resumed in the tinplate trade on Monday after the usual August stop-week and, under the pressure of contract commitments, production was quickly restored to the level ruling a week or so ago. Shipments last week amounted to 6,206 tons against 8,515 tons in the previous seven days and 6,367 tons a year ago. Stocks were reduced to 1,442 tons from 2,808 tons in the preceding week, compared with 9,480 tons in the same period of 1936. Prices were firmly held at 25s. to 26s. per basis box, f.o.b. Galvanised sheets were quietly steady at £18 15s. per ton, f.o.b., while steel sheet and tinplate bars were quoted at £7 15s. per ton, delivered locally.

OTHER METALS

COPPER.—Copper has had a lively week. On Monday the cash price exceeded £60 per ton for the first time since the end of May. Subsequently, a reaction took place, but the price at the close on Wednesday (£58 15s.) still showed a net gain of £1 5s. on the week. While cash and forward prices showed the same level a week ago, there is now a contango of 3s. 9d. —an indication that the market expects an increase in prices later in the year. The stronger undertone was largely due to the hope that the United States domestic price would be raised from its present level of 14 cents per lb. When the increase was not forthcoming as promptly as had been expected, an easier tendency made itself felt. The immediate outlook will be largely dependent on the trend of the American market, and this seems to be promising, although some leading producers are reluctant to raise the price level.

Sales on the London Metal Exchange: 2,700 tons on Monday, against nil tons last week; 2,850 tons on Tuesday, against 1,800 tons last week; 2,550 tons on Wednesday, against 600 tons last week. Domestic spot was quoted at 14·40 cents per lb. in New York on Wednesday, against 14·20 cents a week ago and 13·70 cents a month ago. Wednesday's official closing price for standard cash in London was £58 5s. to £58 17s. 6d. per ton, compared with £57 10s. to £57 11s. 3d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 9,444 tons, showed an increase of 121 tons, while stocks of rough copper, at 9,499 tons, were 25 tons smaller.

LEAD AND SPELTER.—After rising from £22 10s. to £24 per ton, lead reacted to £22 15s. On the other hand, cash spelter maintained the bulk of its gains and closed exactly £2 up on the week at £25 2s. 6d. The difference between lead and spelter has thus widened to £2 7s. 6d. in favour of spelter. The reason for the particular strength of spelter is the circulation of reports that the United States will import spelter on a substantial scale in the near future. Speculators, who wish to share in the rise in prices under the influence of the American demand, have already acquired a substantial tonnage. Consequently, on various days during the week under review, turnovers on the L.M.E. were well above 4,000 tons. This is not the first time that reports of possible U.S.A. imports have played an important role in the rise of spelter prices. In the past these hopes have always been disappointed, and it is quite conceivable that they will be disappointed again, particularly if London prices are forced up further, thus making importation into the United States unremunerative.

Sales of lead on the London Metal Exchange: 3,250 tons on Monday, against nil tons last week; 1,650 tons on Tuesday, against 1,950 tons last week; 1,400 tons on Wednesday, against 1,400 tons last week. The New York quotation on Wednesday was 6·50 cents per lb., against 6·25 cents a week ago and 6·00 cents a month ago. Wednesday's official closing quotation in London for soft foreign for shipment during the current month was £22 15s. to £22 17s. 6d. per ton, compared with £22 10s. to £22 11s. 3d. last week.

Sales of spelter on the London Metal Exchange: 4,100 tons on Monday, against nil tons last week; 2,250 tons on Tuesday, against 2,350 tons last week; 2,300 tons on Wednesday, against 1,850 tons last week. Wednesday's quotation in East St. Louis was 7·25 cents per lb., against 7·00 cents the week before and 7·00 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipment during the current month was £25 2s. 6d. to £25 3s. 9d. per ton, against £23 2s. 6d. to £23 3s. 9d. last week.

TIN.—Tin prices moved in much the same way as copper. There was a sharp rise from £262 15s. to £270 10s. in the earlier part of the week, but subsequently the market reacted to £266 5s. Reports of increasing drought interference with the Malayan output provided the main stimulus of the market. When it became apparent, however, that the reports did not stimulate consumers' buying, the price declined. Whether prices will rise again depends first of all on a revival of buying by consumers, which is so far not yet noticeable on any substantial scale.

Sales of tin on the London Metal Exchange: 650 tons on Monday, against nil tons last week; 350 tons on Tuesday, against 300 tons last week; 250 tons on Wednesday, against 275 tons last week. The New York quotation on Wednesday was 59·62½ cents per lb., against 59·12½ cents a week ago and 60·10 cents a month ago. Wednesday's official closing quotation in London for standard cash was £266 5s. to £266 15s. per ton, compared with £262 15s. to £263 5s. a week ago. Stocks of tin in London and Liverpool at the end of last week totalled 2,079 tons, an increase of 16 tons on the week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted on Wednesday at £100 per ton, and rolling billets at £102 per ton. Nickel, for home and export, was maintained at £180 to £185 per ton. Quicksilver, on the spot, was quoted at £13 10s. to £13 10s. 6d. per flask of 76 lbs., the same as last week. Chinese antimony was quoted at £69 to £70 per ton, ex warehouse, the same as last week. Chinese wolfram for "August–September" shipment was quoted at 78s. to 81s. per unit, c.i.f., compared with 73s. to 75s. last week. Refined platinum was quoted on Wednesday at £10 5s. per ounce compared with £10 5s. a week earlier.

TEXTILES

COTTON.—Manchester.—The market has been over-shadowed by the United States Government estimate of the American cotton crop, the implications of which are discussed in the following note. At 15,593,000 bales, the estimate was nearly half a million bales larger than traders expected, and a fall in values consequently took place, equal to around ¼d. a lb. The possibility that prices might decline further has acted as a definite brake upon business in yarn and cloth. Buyers have not been in the mood to place important contracts. There has been a fair amount of price-testing from day to day, but the trade done has been within narrow limits. Reports being received from India are not very encouraging. Clearances from the bazaars are stated to be unsatisfactory, and it is to be hoped that conditions will improve so that the goods now being shipped, which are relatively high-priced, can be readily disposed of. Some attention has been given to fabrics for Rangoon and the Straits Settlements, while a little more demand has been met with in fine goods for South America. Buyers for the Dominions and the home trade have operated sparingly. Owing to the fall in prices since last March, there are fears of cloth contracts being cancelled for late delivery or on account of the quality not being up to standard. Difficulties are likely to be experienced in Lancashire failing a recovery in prices. Spinners of yarn are protecting their margins by the price agreements, but the total sales for several weeks back have been much less than the production. Most spinners, however, are well sold for two or three months ahead. Meanwhile, all traders are adopting a policy of caution. Producers, at the moment, are more concerned with keeping to delivery dates than booking fresh orders.

AMERICAN COTTON CROP.—The official announcement of the U.S. Department of Agriculture estimating this season's cotton crop at 15,593,000 bales, administered a shock to the markets, and Liverpool prices fell by about ¼d. a lb. Traders had expected that the growth would total to no more than 15,000,000 bales. The reason for the large crop on an acreage amounting to 33,429,000 is the big yield per acre, which was given as 223·3 lbs., an all time record. The condition of the plants was given as 81·3 per cent. of normal, as against 72·3 per cent. at this time last season. The Department made allowances, as in the past, for probable losses due to boll weevil, but the indications are that losses from this source will be less than average in all States, with the exception of Virginia and the Carolinas.

Although there is still a critical period of weather to pass through, traders have made up their minds that there will be plentiful supplies of raw cotton during the next twelve months, and that there is little likelihood of prices moving on to a decidedly higher level. The crop for the season which closed at the end of last month was 12,400,000 bales, and world consumption of American cotton during that period has been estimated at 13,200,000 bales. An important development in the situation, however, was the announcement that the Agricultural Committee of the U.S. Senate had authorised the appointment of a Sub-Committee to draft legislation for loans to the farmers and that the Sub-Committee had voted for a Bill providing a loan of 10 cents a lb. The present New York price is slightly below 10⅛ cents. The proposed loan would be similar in principle to the 12 cent loan granted to the farmers in 1935, on condition that they "ploughed in" a large portion of the acreage. President Roosevelt, however, stated at the beginning of this week that if there was no legislation to control the acreage by January, there would be no loan. It is likely, therefore, that the farming interests will bring all pressure to bear to pass legislation in an attempt to prevent prices falling below 10 cents a lb. Already the cotton markets have been rather steadier, and there is less fear in Lancashire that any downward movement in values will take place and thereby cause further disturbance to the textile industry.

JUTE.—Dundee.—There has now been a long spell of dull conditions in the jute trade, and buyers still show no sign of operating on a larger scale. Stocks in the hands of consumers of both yarns and cloth must be running down to a low level, but they appear to be awaiting further developments in the markets. The raw material is being maintained at a comparatively high level, due to imports into Calcutta being on a small scale, the crop this season being late. The position in India, however, is improving, and there is a more plentiful supply of steeping water. Sellers have now shown more disposition to reduce their terms, and the market is easing off a little, but buyers' ideas of price are considerably lower than those quoted by sellers. The full group of Daisee-2/3 has dropped to £20 7s. 6d. and fours quoted at £19 10s., while Tossa-2/3 is named at £21 5s. and fours at £20 10s., October/November. Spinners are receiving no encouragement to purchase at these figures, and they have bought little of the crop this season so far. From the last crop, Dundee spinners imported during the season, August 1 to July 31, 1,077,000 bales, compared with 858,000 bales in the previous season, and they have good stocks in hand, which will enable them to keep out of the market until the weight of the crop is felt in Calcutta and lower prices ensue. The total exports from Calcutta during the past season were 4,896,000 bales, against 4,133,000 bales in the previous season. The Indian jute mills are selling their products at very low and uneconomical prices, and, as they cannot afford to pay the present prices for the fibre, they are also keeping out of the market, which is dominated by speculators. Good First Marks are quoted at £23 10s., Lightnings at £22 7s. 6d., and Hearts at £21 7s. 6d., August/September.

Jute yarns are very quiet, and even though spinners have indicated their willingness to accept 2s. 1d. for common 8 lb. cops and 2s. 2d. for 8 lb. spools, buyers are still not keen to operate any more freely at these limits. Twist is quoted at 4d. for 3 ply 8 lb., and sacking yarns rule at 2½d. for 24 lb. weft and 3 1/16d. for 8 lb. chains. Rove is slow and easily obtainable at £21 for 48 lb. and £17 to £17 5s. for 200 lb., while the Rio yarns are more or less neglected. Carpet 14 lb. warp is named at 3⅛d. to 3⅜d. Business in jute cloth is confined to trifling quantities, and prices are more or less nominal at from 2 11/16d. for 10 oz. 40 in. and 2 ⅞d. for 8 oz., the ⅛d. more is required. With Calcutta goods selling at approximately ¼d. per yard cheaper, home manufacturers cannot hope to compete. Linoleum hessians and heavy goods are quiet. Calcutta hessians are quoted at 18s. 1d. for 10 oz. 40 in. and 14s. 11d. for 8 oz., August/September. 18s. 3d. and 15s. 1d., October/December, and 18s. 3d. and 14s. 11d., January/March, with Liverpool twills at 48s. 9d. and "B" twills at 43s. 3d., August/September, and 50s. and 44s. 3d., October/December.

GRAIN MARKETS

WHEAT.—Prices are again slightly lower on the week. Unfavourable weather in Argentina and Australia, and a bullish official estimate of the condition of the Canadian spring wheat crop, were stabilising factors, but prices were marked down in response to an unexpectedly high estimate of the United States crop. Weather conditions in the Southern hemisphere growing areas are likely to be of increasing importance for the market from now on.

On Wednesday last, "September" futures were quoted in Chicago at 113¼ cents per bushel, against 113¼ cents the week before and 127⅛ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba (Atlantic) ex ship, 51s. per 496 lbs., against 51s. 9d. last week; No. 2 Northern Manitoba (Atlantic), ex ship, 50s. 3d., against 51s. last week. According to the *Corn Trade News*, total shipments of wheat and flour last week amounted to 880,000 quarters, against 822,000 quarters in the previous week and 1,231,000 quarters in the corresponding week a year ago.

FLOUR.—Prices have again declined on a quiet demand. Wednesday's London quotations (excluding quota payments) were: Straight run, delivered Home Counties, 40s. 6d. per 280 lbs., as against 41s. 6d. a week ago; delivered inner London, 40s., as against 41s. a week ago. Manitoba patents, ex store, 38s. 6d. to 40s., as against 39s. 6d. to 41s. a week ago. Manitoba Australian, ex store, 33s. to 33s. 6d., as against 33s. 6d. to 33s. 9d. a week ago.

BARLEY.—Imported feeding barley has been a quiet market, sentiment being influenced by cheaper Russian offerings. "October" futures were quoted at 60⅜ cents per bushel in Winnipeg on Wednesday, as against 60½ cents last week. Quotations per 448 lbs. in London on Wednesday were: "English feed" at farm, 35s. to 36s., as against 35s. to 36s. a week ago; "English malting," at farm, not quoted; Californian, ex ship, 47s. 6d. to 60s., as against 49s. 6d. to 63s. a week ago. Chilean, brewing, ex ship, 46s. 6d. to 50s., as against 46s. 6d. to 50s. a week ago.

OATS.—On Wednesday, "September" futures were quoted at 29½ cents a bushel in Chicago, against 28⅛ cents a week ago and 38 cents last month. Quotations in London, Wednesday: "English Black," at farm, 27s. to 29s. per 336 lbs., as against 28s. to 29s. a week ago; "English White," at farm, 27s. to 29s., as against 28s. to 29s. a week ago; mixed Canadian feed (Vancouver), landed, 26s. 9d. per 320 lbs., as against 26s. 9d. a week ago.

MAIZE.—The market has had a quiet tone and prices have fluctuated within narrow limits. "September" futures were quoted on Wednesday at 100⅜ cents per bushel in Chicago, against 97 cents a week ago, and 112⅛ cents last month. Quotations in London, Wednesday: "Plate," landed, 28s. 3d. per 480 lbs., as against 28s. 3d. a week ago, and ex ship, 27s. 3d., as against 27s. 3d. a week ago; "Plate," 27s. 3d., as against 27s. 3d. a week ago; "Plate," "July," was quoted at £7 5s. to £7 7s. 6d. per ton, as against £7 5s. to £7 7s. 6d. last week.

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations for selected weeks in 1935–1937:—

Nearest Future	Jan. 2, 1935	Dec. 31, 1935	Aug. 12, 1936	Dec. 30, 1936	Aug. 4, 1937	Aug. 11, 1937
Winnipeg (No. 1, Manitoba) —Cents per 60 lb.	82⅞	84⅛	100⅞	129	126	130⅛
Chicago (No. 2, Winter)— Cents per 60 lb.	98⅛	101½	110⅛	135⅛	113⅛	113⅛

The visible supply of wheat in Canada amounts to 30,023,000 bushels, against 33,286,000 bushels last week and 70,348,000 bushels in the corresponding week last year.

SALES AND PRICES OF BRITISH CEREALS.—The following table gives the estimated sale of home-grown wheat during the harvest years 1933–34 to 1936–37.

	1933–1934	1934–1935	1935–1936	1936–1937
Estimated sales of home-grown wheat—	Cwts.	Cwts.	Cwts.	Cwts.
1 week to August 7	102,879	46,782	37,575	120,684
49 weeks to August 7	10,314,975	13,307,114	13,165,002	10,988,357
Average price of English wheat per cwt.	s. d. 5 0	s. d. 5 4	s. d. 7 6	s. d. 9 11

The following is a statement showing the quantities sold and the average price of British cereals in the past two weeks, and for the corresponding weeks in each of the years from 1933 to 1936:—

Week ended	Quantities Sold			Average Price per cwt.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
August 5, 1933	Cwts. 24,053	Cwts. 6,061	Cwts. 17,447	s. d. 6 8	s. d. 7 1	s. d. 5 10
August 4, 1934	102,879	4,314	16,563	5 0	8 5	6 4
August 10, 1935	46,782	3,863	22,240	5 4	6 7	6 8
August 8, 1936	37,575	2,532	7,506	7 6	7 3	6 6
July 31, 1937	110,047	1,421	12,626	9 11	9 8	9 4
August 7, 1937	120,684	1,476	12,205	9 11	9 4	8 11

OTHER FOODS

BACON.—All supplies have been easily disposed of and prices show an all-round increase. The official quotations (per cwt. for No. 1 Sizable) which formed the basis for dealings on the London Provision Exchange this week were: English, 106s.; Canadian, 100s.; Danish, 105s.; against 101s., 94s. and 100s. last week. Arrivals in London last week included: Danish, 14,027 bales; Canadian, 4,988; Dutch, 1,754; Lithuanian, 1,496; and Polish, 2,624; as against 14,346, 5,233, 2,029, 1,111, and 3,332 bales, respectively, in the previous week.

BUTTER.—The market has been less active, New Zealand and Australian prices having declined. Quotations (per cwt.) on the London Provision Exchange on Wednesday were: New Zealand, finest salted, 116s. to 117s.; Australian, choicest salted, 115s. to 116s.; Danish, 124s.; compared with 119s. to 120s., 118s. and 124s., respectively, a week ago.

CHEESE.—Quieter conditions have prevailed, only English descriptions having maintained their price level. Quotations (per cwt.) on the London Provision Exchange on Wednesday were as follows: English Cheddars, finest farmers, 86s. to 88s.; Canadian, finest coloured, 72s.; and New Zealand, finest coloured, 68s.; against 84s. to 88s., 73s., and 71s. to 72s., respectively, a week ago.

COCOA.—The cocoa markets both in London and New York are quiet but firm. The spot quotation in New York on Wednesday was 8¼ cents per lb., as against 8¼ cents per lb. last week. In London, on Wednesday last, good fermented new crop, Accra, "November–January," was quoted at 39s. 3d. sellers per 50 kilos., c.i.f. Continent, against 38s. 9d. to 39s. a week ago. Last week's movements of cocoa in London were as follows: Landed, 3,017 bags; delivered, for home consumption, 2,209 bags; exported, 204 bags; stocks, 262,162 bags, against 160,479 bags a year ago.

COFFEE.—The announcement this week that 30 per cent. of Brazil's 1937–38 coffee crop is to be destroyed had little effect on the London market, for Britain imports negligible quantities of Brazilian coffee. American prices were also unaltered. On Wednesday, Rio No. 7 (cash) was quoted at 9¼ cents per lb. in New York, as compared with 9¼ cents per lb. last week and 9¼ cents per lb. a month ago. Movements of coffee in London last week were as follows: Brazilian, landed 24 cwt.; delivered, for home consumption, 84 cwt.; exports, nil; stocks, 1,781 cwt., against 10,432 a year ago. Central and other South American: Landed, 596 cwt.; delivered, for home consumption, 915 cwt.; exported, 177 cwt.; stocks, 101,308 cwt., against 98,349 last year. Other kinds: Landed, 342 cwt.; delivered, for home consumption, 2,155 cwt.; exported, 72 cwt.; stocks, 100,485 cwt., against 143,508 last year.

EGGS.—The market is quiet but prices have been well maintained. At Smithfield, on Wednesday, English (ordinary packing, Grade I, about 15–15½ lb.) realised 15s. 6d. to 16s. 6d. per 120, against 15s. to 16s. last week; while Danish (15½ lb.) made 11s. to 11s. 3d., as against 11s. to 11s. 3d. last week.

FRUIT.—Business at Covent Garden has been quite active for the time of year, states *The Fruitgrower*. As a result of the warm spell, dessert fruits are much in demand and prices have been well maintained. There have been heavy arrivals of plums, while English apples are still plentiful. Cultivated blackberries are now coming on to the market; black currant and raspberry supplies are shortening, whilst the red currant season has ended. English small pears are fetching good prices, and Italian Williams meeting a steady sale. The demand for hothouse grapes continues only moderately active. Melons, oranges and grape fruit are plentiful and cheaper, but the price of peaches and lemons has hardened.

MEAT.—Trade has not been very brisk, demand being strongest for Argentine chilled beef. At Smithfield Market on Wednesday last, Argentine chilled hindquarters were quoted at 4s. 10d. to 5s. 2d. per 8 lbs., as compared with 4s. 4d. to 4s. 8d. a week ago. New Zealand frozen mutton was 3s. 6d. to 4s. 2d. per 8 lbs., against 3s. 6d. to 4s. 2d. a week ago. According to the Smithfield Market official report, supplies during last week amounted to 7,239 tons, a decrease of 466 tons on the corresponding week last year. Beef and veal accounted for 3,974 tons, mutton and lamb 2,442, and pork and bacon 460, as compared with 4,318, 2,490 and 534 tons, respectively, in the same week of 1936.

PEPPER.—On Wednesday, white Muntok, August–October, was quoted at 4⅜d. per lb., sellers, c.i.f. Rotterdam–Hamburg, against 4⅜d. per lb. a week earlier. Black Lampong, spot, in bond, was quoted at 3d. per lb., sellers, compared with 3d. per lb. last week. Movements of pepper in London last week were as follows: Black, landed, nil; delivered, 12 tons; stocks, 2,019 against 1,749 last year. White, landed, nil; delivered, 43 tons; stocks, 11,495 tons, compared with 12,195 a year ago.

RICE.—The spot price of Burma No. 2, cleaned, was 10s. 4½d. per cwt. ex warehouse, on Wednesday, as compared with 10s. 1½d. per cwt. a week ago. "August–September," in singles to Continent and U.K., was quoted at 9s. 4½d. to 9s. 7½d. per cwt., against 9s. 1½d. to 9s. 3d. last week. Movements in London last week were as follows: Landed, 3 tons,; delivered, nil; stock, 2,134 tons, against 2,627 a year ago.

SUGAR.—Both the London and New York markets are quiet, though New York prices are still moving slowly upwards. The New York spot quotation was 3·60 cents on Wednesday, as compared with 3·53 cents per lb. last week and 3·50 cents per lb. a month ago. Wednesday's sales of raw sugar in London included "December" delivery at 6s. 7½d., against 6s. 8d. to 6s. 8¼d. a week ago. Movements of raw sugar in public warehouses in London and Liverpool last week were as follows: Imports, 17,473 tons, against 10,301 in the previous week, and 11,467 in the same week of 1936; deliveries, 6,237 tons, against 25,171 and 14,465 tons, respectively; stocks, 157,027 tons, against 145,791 and 113,614 tons, respectively.

TEA.—At this week's public auctions in Mincing Lane, 20,320 packages of Indian and 26,761 packages of Ceylon tea came up for disposal. Demand for all descriptions of Indian and Ceylon teas was strong, with prices showing a hardening tendency.

VEGETABLES.—Tomatoes and cucumbers have met with an increased demand at Covent Garden, on account of the warm weather, states *The Fruitgrower*, and prices have consequently hardened. Runner beans, cabbage and marrows are in good supply, with prices slightly easier. Imported onions are lower in price, but English bunched greens are selling well. Meanwhile, plentiful supplies of potatoes at London markets have encountered a fair demand at about late rates. At the Borough on Tuesday, King Edward ranged from 7s. to 8s.; British Queen, Majestic, Eclipse and Sharpe's Express made from 4s. 6d. to 5s. 6d. per cwt., ex market.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OILSEEDS.—After an easier period a better tone appears to be manifesting itself, though buying interest is still restricted. Linseed is still subject to the influences of crop and weather reports, and until the position is clearer the outlook for trade must remain uncertain. The United States, with only a small domestic crop to look forward to, continues to import substantial quantities from the River Plate. Future calls upon this source and India depend upon the continued heavy consumption of linseed oil in America and the out-turn of the new seed. The U.S. Department of Agriculture in its latest report estimates the probable yield at 8 million bushels, or 380,000 bushels more than the estimate of a month ago, with an average yield per acre of 7·4 bushels as against 7·1 bushels. Argentina is in need of copious rains to put the soil in condition for sowing if the full acreage projected by growers is to be given to linseed. Meanwhile, the old crop surplus is being steadily reduced. The Argentine Ministry of Agriculture gives the total remaining on August 5th as 380,000 tons. The Indian new linseed is moving off very slowly, the greater proportion estimated at 260,000 tons still being available for export in the coming months. A feature has been the shipment of Indian linseed to Australia. Supplies at hand are good. The quantity now afloat for Europe is 118,800 tons (including 23,400 tons from India). Demand for linseed here and on the Continent is only moderate, while linseed oil is firmer in sympathy with seed and little changed in value. Cotton seed is easier and a fair business in new black Egyptian to Hull has been done at £7 per ton for shipment to farmers. Cotton oil remains quiet on both home and export accounts, but the quotation for Egyptian crude ex Hull is unchanged at £27 10s.

POTASH.—It is reported from Spain that exports of Spanish potash are likely to be resumed within the next few weeks. The Catalonian potash mines of Suria, Salent and Cadona, which were taken over some time ago by the State, are producing again at a fairly high rate and are about to resume exports. This re-appearance of Spanish potash on world markets will probably lead to some decline in prices. In recent months Germany has benefited substantially from the discontinuation of Spanish exports; shipments from Germany advanced from 1,390,000 quintals in the first half of 1935 to 1,930,000 quintals in the first six months of this year. Despite this 40 per cent. advance in volume, however the value of Germany's potash exports increased by only 25 per cent—a fact which shows that, in spite of the discontinuation of Spanish exports, price conditions on the world market have been disappointing. The expected resumption of Spanish competition is, therefore, followed with apprehension in cartel circles.

RUBBER.—After a quiet week, prices are fractionally lower. A fair volume of trade buying has been evident at the lower level, while in the United States manufacturers have also shown increased buying interest. Meanwhile, United Kingdom stocks showed a slight increase last week.

The spot price in New York on Wednesday was 18⅜ cents per lb., compared with 18⅜ cents per lb. a week ago and 19 cents a month ago. Wednesday's official buyers' price for standard ribbed smoked sheet on the spot in London was 8 13/16d. per lb., as against 8⅛d. on the corresponding day last week. In forward positions business has been done at 8 13/16d. for "September" shipment, as against 8 13/16d. to 9d. a week ago. Stocks in London and Liverpool at the end of last week totalled 42,253 tons, against 42,056 tons a week earlier. A year ago stocks amounted to 112,243 tons.

Shanghai

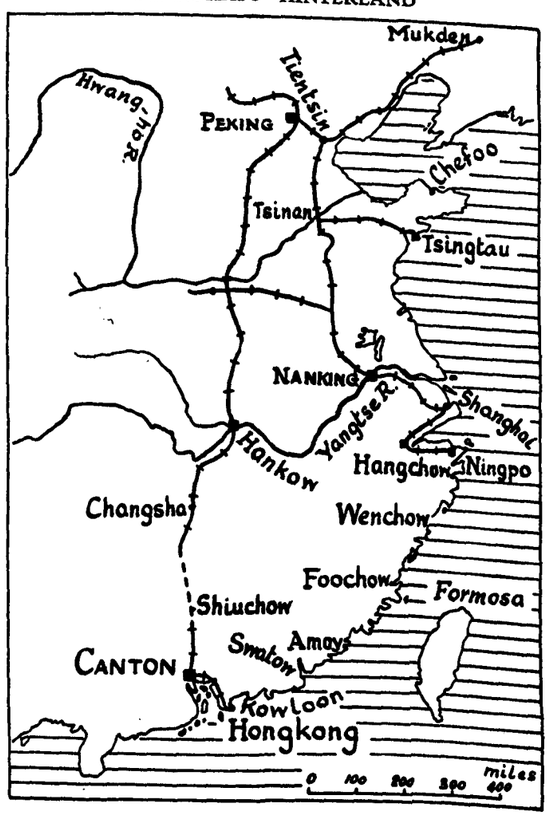
IN an age when everything is being speeded up, Poetic Justice, too, seems to have quickened her tempo. Barbarism from the air, which was brought into action no longer ago than last year by white airmen against defenceless Africans, has since been employed by white men against themselves in Spain. Now we have entered on the third chapter; for at Shanghai—where 500 people were killed by a single bomb last Saturday—the victims were some of them white, and the airmen were all of them yellow. Each time the target of this hideous progressive experiment in the destructiveness of air warfare is some ever bigger and more modern city. The day before yesterday the victim-city was Dessie. Yesterday it was Madrid. To-day it is Shanghai. To-morrow——? Shanghai is so great a human ant-heap that, if the nationalistic Moloch demands a still greater victim to-morrow, there will scarcely be more than half a dozen cities left in the world large enough to satisfy its blood-lust.

For a Londoner who steams up the Hwangpu river for the first time and lands on the Bund, the impression is that of a broader Thames wafting him into a greater metropolis than his own. Shanghai is not yet, of course, actually half as big as London; and it is possible that, if air warfare has its way with her, she may never live to attain her "manifest destiny." But the Londoner who has also travelled in America feels something when he lands in Shanghai which he does not feel in London, but feels in New York. He becomes aware of an immense hinterland—stretching away westward for hundreds and thousands of miles—of which this gigantic port is the vestibule. If the Asiatic hinterland of Shanghai were to develop economically in the twentieth century on a scale at all approaching that of the actual development of the American hinterland of New York in the nineteenth, then by the year 2000 Shanghai would probably be running neck and neck with Chicago for the prize of becoming the vastest city in the world.

Unhappily there are alternative possibilities. They can be stated most graphically in the formula: Shanghai is to China what Smyrna was to Turkey. For some four centuries ending in 1922 Smyrna was the *entrepôt* of a trade between the Western world and Turkey-in-Asia. The community of Western business men who settled at this commercial meeting-point of two otherwise mutually alien worlds succeeded in conjuring a great city out of nothing. Smyrna was a pleasant place for Westerners to live in until she was suddenly blotted out in a war between the two local Near Eastern nations. Fifteen years ago the Greeks and Turks fought each other with Western weapons; and Smyrna went up in flames. To-day the Japanese and Chinese are fighting each other round, in, and over Shanghai; and immediately the Western world is threatened with another Smyrna holocaust—only this time the whole tragedy is on a vaster scale. The city is ten times as large; the combatants twenty times as powerful; the weapons infinitely more destructive. The Greeks and Turks in 1922 had fortunately not carried their battlefield off the ground into the air.

But why should Shanghai have become a Sino-Japanese battlefield at all? If the two great yellow peoples must lacerate each other, can they not find a

broad enough arena elsewhere without roping in this patch of ground and air and waterway where there are some thousands of white people's lives to be lost, and some hundreds of millions of pounds' worth of European and American property to be destroyed? At the moment of going to press the Powers are making strenuous efforts to induce the two local belligerents to treat at least a part of Shanghai as neutral territory; but a proposal which seems, on the face of it, as reasonable as it is humane, is beset with formidable difficulties.



Shanghai is the physical heart of present-day China; and this means that nothing really important can happen to China without its happening principally in this vital organ which now pumps the blood of China's material life through all the other members. If the Japanese really mean to overcome China, they cannot afford to leave their adversary's heart unassailed. By the same token China, conversely, cannot afford to bind herself not to try to dislodge the Japanese from so crucial a point in China's own anatomy.

But if Shanghai can properly be described as China's heart, how do Japanese warships and barracks—or, for that matter, European and American forces of volunteers and police—come to be there? The answer lies in a social paradox. The material heart of modern China is not a native-born organ. It is a mechanism of foreign manufacture inserted—and that forcibly—by alien hands into the body which has now come to depend on it for keeping alive!

Shanghai is one of the five original treaty-ports—there are many more of them now—which the Chinese were compelled to open to foreign traders as part of the peace-terms that were imposed on China by Great Britain at the end of a victorious war of aggression: the " Opium War " of 1838-42. A supplementary treaty provided that the merchants who settled in the treaty-ports should be allowed to purchase plots of land there and erect buildings on them. The present " International Settlement " and " French Settlement " at Shanghai are simply two aggregates of plots which have severally been purchased, individually and privately, from their former Chinese owners by British subjects and by foreigners of other nationalities—eventually including the Japanese. These foreigners subsequently benefited by this British treaty-right either in virtue of treaties on the same pattern between their own Governments and the Chinese Government, or else by mere uncovenanted analogy. The constitutional theory on which the government of the two resulting foreign settlements rests is that of ROUSSEAU'S social contract. In theory, a few hundreds of foreign plot-holders in the treaty-port of Shanghai contracted with one another that the combined areas of their allotments should be administered as a couple of municipalities—and the result is the present administration of the International Settlement and the French Settlement, with their great staffs of officials and their correspondingly vast public services and works. Nor is this theory altogether academic. It brings out one practical point of capital importance in the present crisis: although the areas of the two settlements have ceased to be administered by Chinese authorities, they have never ceased to be under the sovereignty of the Chinese Government. And it is the Japanese insistence on their military rights in the Settlement, denied by China, which has led to the entry of the Japanese fleet into the river, the landing of Japanese soldiers in the Settlement, the air attacks, and the fighting on land. From this Shanghai explosion, war over all North China seems inevitable.

There is another paradox about the history of Shanghai. When the treaty-port of Shanghai was first opened, the population was divided, as it is now, into a foreign and a Chinese section; but the two communities were originally segregated—the Chinese living in the ancient walled city, while the foreign settlements were occupied exclusively by the foreigners who had bought the plots. But to-day, when the foreign population of Shanghai has risen to nearly 50,000 and the Chinese population to more than 2½ millions, not less than half of that immense Chinese population is living under one or other of the two foreign municipal regimes, and not more than half of it under the Chinese - administered municipality of Outer Shanghai, which covers Chapei — the suburban battlefield of to-day and of 1932—Wusung downstream, and Putung.

SHANGHAI'S HINTERLAND

The map shows the strategical location of Shanghai. From that city Nanking can be threatened. The advantages of Hankow as an alternative capital are described on page 379.

When the extraordinary facts about the history and administration and population of Shanghai are taken into consideration, it becomes evident that Shanghai's only hope of escaping disaster whenever China is at war is for the whole area of the treaty-port to be neutralised *de facto* if not *de jure*. But how is this to be done when a foreign Power which is waging a war of aggression upon China is one of the Powers whose nationals share in the privileges of the International Settlement, and when that Power abuses these privileges by making a base of military operations out of the section of the International Settlement that lies to the north of the Soochow Creek?

What the Japanese did in 1932 and are doing again to-day is calculated to make the paradoxical constitution of Shanghai quite unworkable. No man can foretell what the consequences may be for one of the greatest cities of the contemporary world. No man can tell what they may be for British, French and American trade. Still less can anyone now prophesy what they may be for Japan herself.

The King's Highway

THE tide of traffic on the roads is now at its seasonal height. The heavy volume of commercial traffic which fills the highways all the year round is swollen by the mass of private cars which do more mileage in August than in any other three months. With fine weather and prosperity, it is a safe guess that there are more vehicles on the roads this month than ever before.

Unfortunately, record traffic means record casualties. The July figures of road deaths were the highest of the year, and it is only too probable that the August total will show another increase. It is true that the figures of accidents are not increasing as rapidly as the number of vehicles registered, and some encouragement can be extracted from that fact. But it is very cold comfort indeed; it is impossible to be satisfied with an average daily death-roll of almost twenty persons. The most that has been accomplished by the great efforts made in recent years to increase safety has been to prevent the total from rising rapidly. Less than no progress is being made towards a reduction of the slaughter.

The chief reason for this lack of progress is that the fundamental factor responsible for the high totals of accidents is not being tackled. This factor is the grave inadequacy of our national system of roads for the volume of traffic they have to carry. The official statistics, owing to the method in which they are compiled, have a tendency to conceal the responsibility of the road and to exaggerate the human factor. Thus, in the last annual report on fatal road accidents, the Ministry of Transport, tabulating figures supplied by the police, blames nearly 91 per cent. of the total number of accidents on some personal mistake (the largest single error being " excessive speed ") and only 0.7 per cent. on " condition of the roadway." The comparison is fantastic.

Light is thrown on the mystery in a most interesting report recently prepared by MR G. T. BENNETT, surveyor to the Oxfordshire County Council. The police, it appears, are instructed to consider under the head of " condition of roadway " only whether the accident was due to (a) the view being obscured by a blind corner or a bend, or (b) a slippery road surface, or (c) " other cause," and being good policemen, they follow their instructions to the letter. MR BENNETT has carried out an investigation in his own jurisdiction and finds that in only 24 per cent. of the fatal accidents were there no road defects to be reckoned as a contributory cause. In as many as 40 per cent. of the cases, the provision of " major improvements," such as dual carriageways, cycle tracks or by-passes, would have prevented the accident altogether. Coming from an official who is responsible for the condition of the roads, these figures are most impressive.

The same truth can be further emphasised by a summary comparison with conditions in the United States of America. There are nearly thirteen times as many vehicles on the roads in the United States as in Great Britain, but less than six times as many people are killed each year. The same comparison can be put in another way. The number of cars per mile of road is 50 per cent. greater in Great Britain than in the United States. The number of cars per mile of *first-class* road is about the same in the two countries. Yet the number of deaths per mile is more than three times larger in this country than in America. Now the British car is slower than the American, and the British driver is, at the worst, not so much more foolish as to be responsible for the whole difference. The only possible explanation is that the quality of our roads is very much inferior.

If, then, as must be obvious to anybody who studies the matter, the state of the roads is responsible for a very large proportion of accidents, what is being done to put right this remediable state of affairs? The answer is that, in proportion to the dimensions of the problem, remarkably little is being done. Standards have, it is true, been laid down, and here and there roads are being built to these specifications. But what is being done is only a fraction of what needs to be done if the roads of the country as a whole are to be brought up to the standard. MR BENNETT estimates that the cost, in Oxfordshire, of equipping major routes with dual carriageways, cycle tracks and by-passes, and of removing ordinary defects on other roads, even with full grants from the Road Fund, would be such as to necessitate an increase in the rates of 5s. in the £1 for fifteen years. In short, the reduction of road deaths depends entirely upon the amount of money that the central Government is prepared to spend.

A recent memorandum of the International Chamber of Commerce on " Highway Administration and Finance " comes at the appropriate moment to enable a comparison to be made of highway policy in the chief countries. Definitions, and the costs of road making, vary so much from country to country that it is impossible to make any very rigorous comparison. But the main moral emerges very clearly from the figures. There is no other major country which shows the same striking contrast as Great Britain between the buoyancy of the yield from motor taxation and the stagnation of expenditure on the roads. Between 1928 and 1936 the revenue derived from motor vehicles doubled. But expenditure on the roads increased little, if at all. If account is taken of expenditure on new construction and major improvements, as distinct from maintenance, the comparison either in time or in space is even more striking. In 1930-31, £19.3 millions was spent for this purpose; in 1934-35 (the latest year for which figures are available), only £8.5 millions was spent, and though there has since been an increase, it is doubtful whether the earlier figure has yet been reached. Yet in 1935 the United States spent something like £120 millions for construction, and Germany (whose total mileage is less than ours) a sum which, at the lowest reasonable valuation of the Reichsmark, is over £22 millions. It may be that Great Britain improved at least the surface of her roads earlier than other nations. But at present, with the densest traffic of any country, we are doing almost least to accommodate it.

If this problem is ever to be resolutely solved, it will be necessary to think in large figures. On the basis of MR BENNETT'S figures for Oxfordshire, a thoroughgoing programme for the whole country would cost something like £800 millions. This is a colossal sum. But it is less than ten times the present revenue from motor taxation. Moreover, that revenue has doubled in eight years. If we were to set aside only the future *increases* in revenue from motor taxation, there would soon be a sum which would serve as the basis for a very large capital expenditure. Here the need for road safety impinges directly upon the problem of mitigating trade fluctuations. It is possible to imagine a resurrected Road Fund, endowed with the power to borrow, playing a thrice beneficent rôle—shielding the traveller from sudden death, saving the nation from the gradual hardening of its traffic arteries, and providing work for the unemployed. Judged by all the available indications of the Government's purpose, it is only an idle dream—but what a pleasant one!

The Clothing of the People—I

Cheap Clothes for All

NEARLY ninety years ago, CHARLES KINGSLEY denounced "Cheap Clothes and Nasty," on the ground that they were cheap because those who made them were underpaid and overworked. But he did not allow his generous concern for sweated tailors to blind him to the benefits of the "luxury of cheap clothes." "The public must look out," he wrote, "for some other means of procuring that priceless blessing." To-day, those other means have been largely found. A rising standard of living has brought us new luxuries. Mechanisation, factories and industrial efficiency have given us cheap and varied clothes, as well as motor-cars and wireless sets.

The cutter's measuring tape has now been brought within the reach of more and more men by mass production methods, applied with success and profit to the seemingly unpromising business of bespoke tailoring. The great increase in the demand for women's clothing, due to the wider employment and higher earnings of women, has been met by the development of large-scale methods of making and retailing ready-made articles. The demand for clothing has increased; it is cultivated by advertisement and fashion and is satisfied by the most modern industrial methods.

The magnitude of the demand for clothing can be readily illustrated. In 1934, some £319 millions were spent in this country on clothing. This total was equivalent to nearly 8 per cent. of the total national expenditure, over half of the aggregate expenditure on the upkeep of house and home, and nearly one-third of the total spent on food.

Four years earlier the Census of Production gave the value of the nation's clothing requirements, at the factory, as between £220 millions and £225 millions. The figures are remarkable for the variety of clothing to which they apply. Of the total, wholesale tailoring and dressmaking accounted for £58.6 millions, and retail bespoke tailoring and dressmaking for £21.6 millions. The value of the output of shirts and woven and knitted underwear was about £27.4 millions. The output of fancy hosiery—that is, of cardigans, jerseys, sweaters and scarves—was £10 millions; and the output of stockings and hose was worth £17 millions. Hats and caps accounted for a further £3.6 millions, gloves for £3.2 millions, and furs for £3.6 millions. The value of the production of boots and shoes was £44.1 millions.

Until the appropriate results of the 1935 Census of Production have been published, it will not be possible to say exactly what progress has been made since 1930. Such figures as are available, however, suggest that a rising trend of expenditure and production has been maintained. Indeed, the evidence seems to show that the decline in the cost of living in relation to average earned income, which took place after 1930, actually enabled a large part of the population to spend more on clothing and dress. In the case of stockings and hose, knitted underwear, fancy hosiery, hats and gloves, for instance, the value of output in the years 1933-35 was surprisingly little below that of 1930; and there were considerable increases in the quantities marketed. Over 373 million pairs of stockings and hose were sold in 1935, compared with 289 million pairs in 1930. The increase was most marked in the sales of artificial silk stockings, which rose from 80 million pairs in 1930 to 115½ millions in 1935, although sales of all other kinds of stockings and hose simultaneously increased. Similarly, sales of knitted underwear rose from 102 million garments in 1930 to 145 millions in 1934; and the production of fancy hosiery rose by about 12 per cent. in quantity over the same period. The increase in every case was much more rapid in the depressed years between 1930 and 1933, when real wages were rising, than in the following period when employment was increasing but the decline in the average level of prices was arrested.

These figures show how steadily the production and purchase of clothes have risen in recent years. The Ministry of Labour returns reveal the corollary—a considerable growth in the labour force of the clothing trades. Between June, 1923, and June, 1936, the number of insured persons in the hosiery trades rose by 32.7 per cent. In the manufacture of shirts, collars and underclothing the rise was as great as 55 per cent., compared with an increase of only 12.8 per cent. over the whole range of manufacturing industry in this country. On the other hand, in tailoring the increase in employment between 1923 and 1936 was only 9.3 per cent., and in dressmaking and millinery, and in the manufacture of hats and caps, there was actually a fall in employment. The fact that, despite these decreases, production and consumption were steadily rising, illustrates two dominant trends in the clothing trades—the increased mechanisation of manufacture, and the growth of factory work employing fewer hands per unit of output.

To-day, upwards of 5 per cent. of the working population of this country is employed in the clothing trades, apart from the manufacture of boots and shoes. These men and women, numbering more than half a million, no longer work under the appalling conditions which rightly disgusted CHARLES KINGSLEY. In this respect, progress has been continuous and has, if anything, been expedited in recent years. The retail bespoke section is controlled by a Trade Board. In November, 1936, a new national agreement was made between the Wholesale Clothing Employers' Federation and the National Union of Tailors and Garment Workers. Higher rates of pay were established in wholesale clothing factories; and the employers' organisation undertook to advise its members to grant holidays with pay. Though conditions of work and remuneration are not yet wholly satisfactory, the day is past when the clothing trades can be dismissed, in KINGSLEY's phrase, as "dishonourable" because of sweated conditions.

For the great majority of the population the "luxury of cheap clothes" has now been largely realised. We are better off, and we wear more varied clothes, thanks, in part, to the adoption by the clothing industry of modern technique and organisation. Not even industrial depression can arrest the march of fashion—witness the bewildering gamut of clothing worn by all classes of women to-day, and the steady assault upon the depressingly conventional uniforms of male English workers. The movement, however, does not end with shorts and gay shirts, pullovers, flannel trousers, bright colours and hygiene. The structure of the clothing industry is itself changing. Ready-made clothing is displacing home dressmaking; no feature of modern dress, indeed, is more striking than the increasing range and variety of women's ready-made clothes. For the male the outstanding development of the twentieth century has been the growth of multiple tailoring organisations, tapping hitherto unexplored fields of consumption. These developments will be the subject of a second article.

Expanding British Markets

THE epithet "sensational" has been freely applied to many less portentous developments than the recent rise in commodity prices and expansion in overseas trade. In three years, from mid-1933 to mid-1936, *The Economist's* index of wholesale prices (September 18, 1931 = 100) rose only 9 points from 107 to 116. Subsequently, in a little more than a year, it has advanced a net 23 points to 139. This spectacular movement has been followed, with a time-lag of only a few months, by a scarcely less dramatic revival in international trade. Imports into the United Kingdom were 14.7 per cent. higher in value, and British exports 14.6 per cent. higher, in the first three months of 1937 than of 1936. In the second quarter, the percentage increases were 25.4 and 27.8, respectively.

Clearly, despite the many remaining barriers to international trade, rising prices are rapidly creating navigable leads in the ice-pack which once supplied Mr Chamberlain with a memorable metaphor. Oversea countries, having obtained more for their products, are buying, *inter alia*, more British goods. Which nations have played the largest rôle, as suppliers or buyers, in our recent trade expansion? The answer is contained in the tables at the foot of this page (which are based on the Board of Trade's official figures), and in the accompanying two charts, which show the vicissitudes of our trade with all countries inside and outside the British Empire, respectively, in the second quarter of every year since 1929.

The first significant conclusion suggested by the figures is that whereas British countries contributed most to our trade revival in its first phase, the running is to-day being made rather by non-British countries. The value of our total imports (taking second quarter figures in every case) rose by £51 millions between 1936 and 1937, against an aggregate rise of no more than £42 millions during the three years 1933 to 1936. Of the total rise, foreign countries accounted for £30 millions

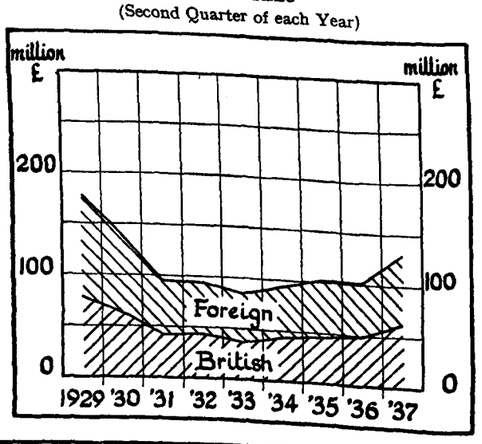
Imports	+14·3	†	−21·5	+39·8	+14·8	+16·4
British exports	+23·6	†	−46·8	−45·5	+42·4	+32·2

* Including Dependencies.
† "Sanctions" in 1936. Imports this year show rise from £36,000 to £2,009,000, and British exports from £130,000 to £1,153,000.

in the latest period, but only £19 millions in the earlier. On the export side, non-British countries have been responsible for £16 millions of a total increase of £28 millions in the second quarter of 1937, as compared with that of 1936; between 1933 and 1936 they accounted for only £4 millions of a total rise of £16 millions. Consequently, the Empire's share of our total imports, which rose, between the second quarter of 1933 (on the eve of Ottawa) and of 1936, from 38.8 per cent. to 42.3 per cent., has now fallen by a decimal point, and the Imperial percentage of our exports, after rising from 44.2 to 48.9, has declined to 47.8. In the present phase of trade recovery, obviously factors due to world prices count for more than political preferences.



I.—U.K. IMPORTS FROM BRITISH AND FOREIGN COUNTRIES

(Second Quarter of each Year)

II—U.K. EXPORTS TO BRITISH AND FOREIGN COUNTRIES

(Second Quarter of each Year)

A second—and particularly gratifying—feature of latter-day trade revival has been its universality. Our tables show separate figures for 55 States and Dependencies. Only in five instances—Portugal, Spain, Japan's Dependencies, Cuba and Colombia—was there no expansion in sales to this country in the second quarter of 1937, compared with the second quarter of 1936; and only three countries—U.S.S.R., Spain and her Dependencies, and Greece—failed to increase the value of their purchases of British goods this year. The expansion in our *entrepôt* trade has been similarly widespread. Here a rise of nearly 32 per cent., between the second quarter of 1936 and of 1937, has been shared between every important group of countries shown separately in our table.

Analysis of recovery is thus for the most part a psalm of degrees, with interest attaching chiefly to revival's varying pace in different areas. The figures admit of endless re-grouping, but some of the more significant combinations are shown in our final table. The conclusions suggested about the trend of British trade are threefold. First, despite the fact that we are paying higher prices for raw materials from abroad, the percentage rise in our exports is greater than in our imports, outside the British Empire. Secondly, although primary producing countries (including those in the Empire) are buying more from us than in 1936, the greatest percentage rise, both in imports and exports, has been in our trade with countries which devalued, or otherwise realigned their currencies last year. Finally, events and policies which have made news headlines in the last twelve months have mostly been inimical to commerce—witness the serious decline in our trade with Spain, the subnormal increase in trade with Germany, and the fact that we are still buying less from Italy, and selling less to her, than in 1933. By the same token, the outbreak of hostilities between Japan and China, both of which have largely increased their purchases from us this year, cannot but be an unfavourable factor for our trade in the Far East. For the rest, the continued expansion of international commerce seems likely to remain a function, chiefly, of the trend of world prices, and the outlook, accordingly, remains favourable for Great Britain and for other countries.

Dissensions in Prague

TO a world whose wireless news this week is almost all of wars comes news of a less deadly, but in its implications scarcely less important, war in Czechoslovakia. A Press war has broken out in Prague between newspapers representing two main divisions in the Czechoslovak Coalition Government.

The present Czechoslovak Cabinet is a coalition of Czech and Slovak Agrarians, Clericals and Social Democrats, with the support of the " Activist " German groups under the same three titles. Outside its ambit stand the minorities headed by the Henlein Germans (*Sudetendeutsche Partei*), about thirty Communists, and the National Democrats. The Prime Minister is Dr Hodža, a Slovak Agrarian, before the war a Slovak Deputy in the Budapest Parliament; and the Slovak Agrarians are more Liberal than their Czech fellows, who have contrived to secure control of the profitable Wheat Monopoly and of the key Ministries of Agriculture, Defence and the Interior. Accordingly, the once decisive bulk of the great Agrarian Party has gradually tended to split into a moderate Slovak wing, and a more and more Rightward inclined Bohemian and Moravian Agrarian wing; which has rendered Dr Hodža's political position somewhat precarious. In recent months, Bohemian and Moravian Agrarians, with an eye on the now postponed autumn local elections, have made electoral agreements with the Henlein Germans in the German districts. They are also flirting with the extreme National Democrats and Business Party, to the Right of the Government.

At this juncture it is necessary to recall that the Czech Agrarians and their new friends have been opposed to the foreign policy of the old President Masaryk and of his successor and former Foreign Minister, Dr Beneš. For eighteen years the latter have based that policy on collective security under the League of Nations, the French and Little Entente alliances, and —as provided for in the Little Entente's Permanent

Statute—a renunciation of bilateral treaties with other Powers, unless previously discussed with the other two members of the Entente. The Right-wing Agrarians became impressed by the failure of Britain and France to prevent the Fascist Powers from oversetting the League, collective security, the territorial integrity of small Powers, and democracy abroad. Now, Czechoslovakia's foreign policy has traditionally run along the Masaryk-Beneš lines, as opposed to the extreme Right-wing Opposition's, the National-Democrats', policy of exclusive political and economic collaboration with Germany. The appointment of the non-Agrarian Dr Kamil Krofta to the Foreign Ministry in 1935 placed before the Right-wing Agrarians at least one objective whose capture might enable them to effect a revolution in foreign policy and buttress their power. Their campaign in the last twelve months has therefore been dual: to nibble away at the President's and other Coalition Parties' views both on foreign and domestic policy; and to " muscle in on " the protracted Henlein trouble.

The Italo-Jugoslav Pact, hastily concluded by Count Ciano and Dr Stoyadinovitch last Spring without consulting Czechoslovakia and Roumania, strengthened Dr Hodža in his view that a Czech-Austrian-Hungarian agreement, hitched on to the apparently omnipotent Rome-Berlin axis, would be better than the inaction of the passive Western democracies, and the incalculability of the Franco-Soviet and Czecho-Soviet Pacts. But the Czech Agrarians' plan of campaign misfired last month, for it became obvious. Their loss of face among a naturally shrewd and democratic people was so rapid—with the autumn local elections looming up—that they had either to spring a mine or retreat.

The mine was a demand by the Right-wing Agrarian Ministers of Agriculture and the Interior upon the Prime Minister and (non-Agrarian) Finance Minister for higher guaranteed cereal prices under the Grain Monopoly. It did not lead to Dr Hodža's replacement, on which the Czech Agrarians had counted. Instead of being able to side-track Dr Hodža into the Foreign Ministry in a Cabinet of officials, thus achieving both supreme control and a reversal of the Beneš-Krofta foreign policy, they found Dr Hodža entrusted by the President with the task of forming a new Cabinet. He could enlist anyone who would serve under him, including the pro-Beneš Slovak Agrarians. Hastily the Agrarian breach was healed and only the Finance Ministry changed hands.

The Right-wing Czech Agrarians saw the red light; and on August 6th, the Agrarian newspaper *Venkov*, dropped a bombshell on the very Government whose leader is a Slovak Agrarian. It announced, during the absence on holiday of the Foreign Minister, Dr Krofta, that direct negotiations between Berlin and Prague were going on; and that the Czech Government only required, in return for big concessions to the Henlein Party, recognition of the Czechoslovak frontiers by Germany. The sensation in Prague was profound. The newspapers of all the other Coalition Parties than the Right-wing Agrarians at once pointed out that no self-respecting Czech Government, even if it renounced its opposition to bilateral pacts, could treat with a powerful neighbour by asking it merely to confirm what it had freely accorded—indeed, with congratulations—eighteen years before. It could not prefer a Nazi assurance to the whole *corpus* of international law and existing treaties. It could not chaffer the domestic concerns of a free democracy against an uncalled-for recognition of frontiers.

That this bombshell was intended by the Czech Agrarians for the Foreign Minister, Dr Krofta—possibly even for the President—appeared last week when the *Venkov* returned to the charge by declaring that Czechoslovak foreign policy was not the perquisite of one man or even of the Cabinet. By the political explosion thus produced in Prague the Czech Agrarians hoped to force the President, Prime Minister and Dr Krofta either to fall in with their own foreign policy —which would powerfully aid the Czech Agrarians in the Südetenland—or to deny the story, which would make the deniers look as if they scouted *all* ideas of reconciliation with the Henlein Party and with Germany. This plan has also misfired. The non-Agrarian papers have made it clear that all Parties genuinely desire an understanding with both the Henlein Party and Germany.

In these circumstances further political dissension in Prague seems inevitable. The problem of covering the necessary increases in Budgetary expenditure—estimated at Kc. 1,500 millions at least—must be tackled after the holidays; and the present Finance Minister will assuredly place that responsibility before the Government as a whole. The consequent jockeying for position between the Agrarian and other elements of the Coalition will probably lead to a reconstitution of the Government, which can only be another Coalition of many Parties. But, next time, the extreme Right-wing Agrarians may be ousted from power, losing their long and powerful hold on the key-Ministries of Defence, Agriculture and the Interior. A situation has now arisen in domestic Czechoslovak politics, the developments and outcome of which will be followed with the closest attention far beyond the Czechoslovak frontiers.

Notes of the Week

Warclouds over the East.—The-war-in-all-but-name now raging in Shanghai and North China, without any official declaration or rupture of diplomatic relations, is running true to Manchurian, Ethiopian, and Spanish prototypes. The Chinese Government at Nanking apparently did not authorise the devastating Chinese bombing at Shanghai—one bomb killed over 500 people in the International Settlement last Saturday—and the anti-Japanese feelings of the local Chinese commanders, roused to fever pitch by the entrance of a Japanese war fleet into the Hwangpu river and the dictatorial demands of Japanese military leaders and junior officers on the mainland, found explosive expression. Owing to a typhoon, two army divisions from Japan were delayed, and the first was only due at Shanghai on Thursday; meanwhile the Japanese forces round Shanghai have been hard pressed, and those around Peiping have actually suffered sporadic reverses. The conflict has become general all over North China; the Japanese Diet, inflamed with patriotic zeal, have prepared for industrial and military mobilisation; and though the same measures have not yet been carried out in Nanking, the temper of the Chinese can scarcely allow President Marshal Chiang Kai-shek to accept the humiliating terms demanded by the Japanese militarists, involving loss of administrative sovereignty over all North China.

★ ★ ★

The British authorities in Shanghai, in close touch with the Americans and French and with full instructions from the British Government, have been trying to get both sides to withdraw their " supplementary " forces to a zone some fifty miles clear of Shanghai; but the temper of the Japanese military authorities was shown by their refusal to renounce the International Settlement as a base for operations against the Chinese, by their military occupation, despite protests, of British buildings there, and by the addition to the Japanese Cabinet of military experts " for the duration." Some nervousness was naturally exhibited in the City of London this week lest the British Government's evacuation of British women and children from Shanghai under fleet protection indicated a disposition tamely to

acquiesce in all Japan could take in North China—for anything between £150 millions and £250 millions of British capital of all kinds is involved in the normally profitable China trade through Shanghai and in the revenues of the Nanking Government, mainly dependent on Shanghai and the Treaty Ports' traffic. The British Government have since categorically announced that they will protect British lives and interests in China by all possible means. Presumably this is more of a warning to Japan than to China; but, after the British attitude to the events of the last six years in North China, the Japanese may be pardoned if they elect to disregard the implied warning. In any case, the Japanese bow is bent, and no evidence is discernible among the non-Chinese Powers to do anything else but make from the shaft. The presence of Italy and Germany among the Treaty Powers consulted by the British authorities may complicate matters; for these associates of Japan in the famous anti-Communist *pacte à trois* of last year will not be able to disavow Japanese designs on China.

* * *

Aerial Manœuvres.—The exercises by the Royal Air Force over a large extent of Southern and Eastern England last week have produced reassuring results. Whether these results will encourage the inhabitants of the great focus of attack, London, depends on the attitude of the public itself to air-raids. First, the defending ground and air forces knew the attack was coming, when and whence it was timed to come, its strength and its duration. The attacking squadrons of fast bombers were intercepted, engaged in battle, picked up by searchlights and anti-aircraft batteries, with more success than hitherto; only about 30 per cent., contrasted with the traditional 70, get through. But, secondly, the main attack was on a fine, clear night; and if 30 per cent. get through in all these circumstances, 50 per cent. could get through on a cloudy night, if their advent were unheralded and continuous from all points of the compass. The attacking force apparently made no use of wireless cross-bearings for locating their objectives, as an enemy would do; nor were they shielded by their own fighters. It is clear that the authorities are not yet decided on a comprehensive policy of defence for big cities against air-raids; we hear less of balloon-barrages now, but whether the R.A.F. will increase the proportion of fighters and interceptors to bombers is open to doubt. Retaliation in kind is still alike the policy of the different national air forces, as it is the bugbear of the inhabitants of Europe's big cities. Finally, recent aerial manœuvres have done nothing to show that the killing of over 500 people in Shanghai by one bomb last Saturday may not be repeated a hundred- or a thousand-fold in Europe—even if only 30 per cent. of bombers get through.

* * *

Aerial Achievements.—Contrasting strangely with the Air Force manœuvres is a whole series of achievements by civil aircraft during recent weeks. The North Atlantic Ocean has been crossed several times and both ways for experimental purposes by the American "Clipper" class of flying-boat and the Imperial Airways "Caledonia" class of the same craft. The average duration of the crossing in either direction has worked out at about 14 hours, despite bad weather, bad visibility and head winds up to 60 m.p.h. Here, wireless directional advice from ground stations on both sides has been invaluable, reinforcing the Maybury Committee's recommendation that the use of this service for all British commercial aviation should be obligatory and under State operation. Again, the British Short-Mayo composite aircraft—a supercharged flying-boat bearing on its back a releasable lighter craft, unable to attain the necessary initial altitude with a full load of petrol and passengers—has made its trial flight successfully. The Russians, however, have captured the imagination of the Western world with their two successive spectacular flights in a single-engined machine from near Moscow, over the North Pole, practically into Western Mexico without a mechanical hitch. A third Russian flight with a multi-engined craft last week-end failed somewhere beyond the Pole, and search-parties are now looking for the crew of seven who, happily, have provisions for six weeks. It is by now well within the bounds of possibility that next summer, long before the most optimistic aerophils would have imagined it possible a year ago, regular air services over the North Atlantic, if not over the roof of the Northern hemisphere itself, will be in operation. New services to South America over the South Atlantic are heralded; and both German and French companies are exploring the possibility of regular services to the United States across the southern route of the North Atlantic via the Azores and West Indies. Girdles are being put round about the earth with a vengeance.

* * *

Death of a Shipmaster.—The death on August 13th of Lord Runciman at the age of ninety was more than the passing of the great father of a well-known son. With him departed something of the character of a bygone hardy age and much of the tradition of his own north country. Ships and shipping have been the mainstay of the north-east coast throughout the short crowded history of industrial Britain; and Lord Runciman's career spanned in time and range the whole development of this great industry. He ran away to sea at the age of twelve, and, still in sailing ships, rose from cabin boy to mate and master. Thirty-seven years old, he left the sea when the triumph of steam was assured, and, turning to ownership, became a Newcastle pioneer of the great epoch of north-eastern shipping and coal. Uncompromisingly a man of his age, his district and his avocation, he became President of the Chamber of Shipping of the United Kingdom and Chairman of the National Liberal Federation. When the War ended, his personal contribution to politics ceased. He turned again to ships, and his companies rode out the storm. In his latter years he was still unchanged: an avowed believer in individual enterprise and courage and a sharp critic of the cult of size and luxury.

* * *

Ubiquitous Submarines.—The Spanish event of the week has been, not the lightning successes of the insurgents against Santander or the lull in fighting elsewhere, but the sudden emergence of a submarine flying General Franco's colours off the Isle of Tenedos at the very mouth of the Dardanelles. There it torpedoed and sank a Spanish Government cargo ship coming from, or bound for, Russia via the Black Sea. This occurrence, 1,500 miles from any insurgent naval base, has caused a pother in French and British Government circles. The insurgents had only two submarines. In recent months these two submarines must have manifested themselves with superhuman ubiquity. They have not ceased from simultaneous fight, all round Spain, all along the North coast of Africa, in the full Mediterranean, and now in the Dodecanese and Greek Archipelago. They are still nominally only two; but their depredations may well make many European Governments pray they never become four or six. The latest incident follows the insurgents' aerial attacks on foreign shipping off Algiers. The British Government have made a further sharp protest to Salamanca over the unsettled "British Corporal" incident, saying they are perfectly satisfied that the aircraft were those of the insurgents, but, as usual, without avail. The not altogether inexplicable access of strength to General Franco's submarine force has compelled the French and British Governments (the latter after a special meeting of five Ministers on Tuesday) to instruct their warships, and, indeed, all armed craft, to use force against any submarines which attack their shipping, with or without warning, on the high seas. This step follows from the refusal hitherto of the two Governments to recognise the insurgents as belligerents capable of instituting

blockades. Clearly, if General Franco and his ubiquitous submarine coadjutors are to wage unrestricted submarine warfare against ships trading with the recognised Spanish Government up and down the Mediterranean without challenge, what is to prevent them torpedoing another "British Corporal," next time in the Mersey or the Channel?

* * *

A second surprise on the international periphery of the European war in Spain came on Thursday, when the Portuguese Government announced its rupture of diplomatic relations with Czechoslovakia because of the latter State's alleged refusal to give export licences to the Czech armaments firm Ceskoslovenska Zbrojovka for the execution of an arms contract with Portugal. The Portuguese *communiqué* says that the Czechs offered obsolete material because the Czech Government would not accept assurances that the arms would in effect be solely used in Portugal. The hitch occurred over a month ago, when the international trouble over the British Compromise Plan had ranged Portugal alongside Germany and Italy. Three things are evident: first, the contract was commercial; secondly, sovereign States have the right to prohibit arms exports even without giving their reasons—as our own has done in the past; and thirdly, the Czech Government have already refused to allow arms to be exported on Mexican account for fear they might get to Valencia or Madrid. Thus the Portuguese Government—as their resuscitation of the rather *passé* German and Italian propaganda about "Soviet aerodromes in Czechoslovakia" shows—have been hard put to it to find any reason for the unprecedented rupture of diplomatic relations. They allege that the Czech Government are "agents of Moscow," trying to prevent Portugal from re-arming, because—this last is an unwisely significant admission—the Portuguese Government are "a sure guarantee against a Communist Iberian peninsula." The dispute, luckily, need not involve the Great Powers, though it is only to be expected that the German and Italian controlled press will launch new broadsides against Russia and her alleged "Central European outpost." But the plain truth seems to be that the Czechs did not feel sure they would not be indirectly aiding one side in Spain. Hence Portugal's discomfiture.

* * *

Aftermath in Iraq.—After the assassination of General Baqir Sidqi, the chief of the General Staff of the Iraq Army, and his colleague Major Ali Jawdat, the Commander-in-Chief of the Iraq Air Force, at Mosul airport last week—which we then briefly recorded—Iraq has obtained a new Government without internal convulsions. The late Baqir Sidqi's nominal Prime Minister, Seyyid Hikmat Suleiman, resigned with his Cabinet on Tuesday, and the new Cabinet is led by Senator Jamil Midfai, who is—perhaps to give him complete control of the Army—also Defence Minister, a post he held in 1934-35. The new Prime Minister now enters on his fourth term of office; he and many of his colleagues are moderates, friendly to Britain, and on that account were forced into retirement by the dead Generalissimo. We trust that this sudden and violent rise and fall of a dictator will be no more than an interlude which will not grievously interfere with Iraq's development. In particular, we trust that there will be no going back upon the rapprochement between Iraq and Turkey, which was the one incontestably good point in Baqir Sidqi's policy; and we also still look forward to some kind of closer union between Iraq and the other Arab States that are emerging out of the former Arab provinces of the Ottoman Empire. Deplorable though these political crimes may be, they should perhaps be looked upon as part of the price for liberation which has to be paid by politically inexperienced peoples. There have been similar chapters in the history of the Balkan States and of the Latin-American Republics in the period of their political adolescence. Iraq, in her turn, may have to go through this stage, but there is no reason to fear that she will not eventually leave it behind her.

* * *

Roosevelt on the Defensive.—The news of the week from Washington has shown President Roosevelt in a less fortunate political position than at any time since he took office. It is becoming clear that the episode of the Supreme Court proposals was a first-class political error. Not only did it result in a resounding defeat for the President, but it has split the Democratic Party wide open, and the dissidents are in full revolt. The President still retains control of a bare majority of his party in the Senate—Senator Barkley, who supports his policies, was elected leader of the party by 38 votes to 37—but his followers are in a minority in the Senate as a whole. As a result, he has lost his power to control the course of legislation, and even the usually docile House of Representatives is beginning to rebel. The wrath of the dissidents was aroused this week by the nomination of Senator Hugo Black of Alabama to fill the vacancy on the Supreme Court. Senator Black's chief qualification for the post is his undeviating support for the President. He is not a great Senator, still less a great judge. Mr Roosevelt doubtless calculated that, by nominating a Senator, he could get a firmer partisan on to the Bench than by nominating somebody who could not claim the benefit of the "courtesy of the Senate" when it came to confirmation of the appointment by that body. In the past, the Senate has made a practice of confirming the appointment of one of its members without debate or question. But on this occasion there was an embittered debate, and though Senator Black was confirmed by 63

votes to 16, the mere fact that a vote was taken is a severe rebuke to the President.

* * *

The President has been compelled to endure another snub this week. He has surrendered to the Southern section of the Democratic Party on the matter of cotton loans. Until a week ago his position was the logically strong one that he would not authorise loans by the Government on the 1937 cotton crop (which would have the effect of guaranteeing a minimum price to growers) until Congress had enacted legislation for the restriction of production. But this stand was not as strong in politics as in economics, and Mr Roosevelt has given way on the vague promise that Congress will enact some measure dealing with the matter at its next session. A price of 12 cents a pound, which is above the present market price, is now being mentioned as the probable basis of loans. Finally, the Southerners have staged still another successful revolt by holding up the Wages and Hours Bill, which now seems unlikely to pass at this session. The formal ground of their opposition is that the Bill would tend to raise Southern costs of production towards the Northern level and to abolish the present regional advantage, for some industries, of the South. But behind this specific opposition lies the fact that the Southern Democrats are no longer ready to support the New Deal. Thus the Supreme Court proposal appears to have acted as a catalyst in precipitating that division of the Democratic Party into its separate parts, Southern Conservative and Northern Radical, which has long been predicted as inevitable. Mr Roosevelt's task in his remaining three years is to make up his mind whether the breach is, or should be made, too wide to heal. If so, he must try to complete the chemical reaction and find new allies for his Northern Radicals which will produce a strong and stable party for the election of 1940.

* * *

Finance and Government in Canada.—The long promised Royal Commission on the financial relations between the Canadian provinces and the Dominion has been appointed, after months of popular surmise about its personnel and terms of reference. Though its members, who are all Canadians, are neither fiscal nor financial experts, they are, *without exception*, well-known students of public affairs generally. They include Chief Justice Newton Rowell, the chairman, and Mr J. W. Dafoe, of the *Winnipeg Free Press*. The Commission's terms of reference accord with the broad interpretation of the issues that is implicit in the choice of Commissioners. The investigation is to include, naturally, the constitutional division of revenue sources and Governmental burdens, the nature of the taxes collected, the expenditure distributed, the debts incurred and the subsidies paid to the provinces by the Dominion. But the Commission is also required to consider whether the Dominion and Provincial Governments are able "to discharge their responsibilities within the framework of the present allocation of functions and powers, or on the basis of some form of reallocation." In brief, the whole problem of federal-provincial relations may be opened up. The inquiry has been rendered the more urgent by recent decisions of the Privy Council ruling unconstitutional a whole series of Acts concerned with agricultural marketing, unemployment insurance, and labour conditions. It has, at the same time, been made more difficult by the centrifugal tendencies lately displayed, not only by Quebec, the traditional champion of provincial rights, but also by Alberta under Mr Aberhart and by Ontario under Mr Hepburn. Clearly, any endeavour to redraft the constitution of Canada will be faced by determined opposition.

* * *

Ottawa and Alberta.—The Federal Government's disallowance of the recent banking laws passed in Alberta took a good many people by surprise; for the power of disallowance had lately grown rusty. Mr Aberhart was invited to give facilities for the constitutional assay of his legislation by special reference to the Supreme Court of Canada. He refused, though he promised to allow the banks to test it in the ordinary Courts after they had submitted to its terms by applying for licences, and after the Social Credit supervisors had been appointed. The issue, declared the reply from Edmonton, was "universally recognised as financial tyranny *versus* democracy." The Federal Cabinet sniffed at this red herring, but abstained from following the trail. They were unable to accept the offer of eventual reference to the lower courts, which, they said, would not suffice to avoid confusion and disturbance. Tactically, their decision was clearly well-advised. All the evidence suggests that the Alberta Government, doubtful of the validity of the new Acts, hoped to gain nine points of the law by having them in full operation by the time they could be finally ruled unconstitutional. "The law's delay would be of the greatest help," recently wrote one of their unofficial Social Credit advisers. Yet it may in the long run be regretted that Mr Aberhart, instead of being allowed to pose as a martyr on a constitutional scaffold, was not given rope enough to hang himself.

* * *

New Brooms in India.—The first budget proposed by a responsible Indian Provincial Government, which has been presented in Bombay, was also the first presented by a Ministry with Congress members. Its terms are indicative of two main directions of policy, one towards economy and the other towards agricultural aid. Retrenchment is to be achieved in Bombay largely by "super-cuts," but partly by lower Ministerial salaries and official allowances. That India has been paying, as a poor country, far too much for the overheads of Government has been in the past one of the chief complaints of the Congress against British rule. In the more distant future, the Bombay Finance Minister envisaged the public ownership of utilities and progressive taxation on large agricultural incomes. But for the moment the policy of the Ministries under provincial autonomy has revealed itself more in administration than in legislation, and particularly in respect of the release of political prisoners. Amnesties of varying scope have been granted in most provinces, but in Bengal, where the Congress is in Opposition, a motion demanding the immediate release of all *détenus* was defeated by a considerable majority. The Government's policy is progressive release as soon as safety allows. The issue has been complicated by the hunger-strike of 223 prisoners in the Andaman Islands. Though they had all been convicted of violent crimes, their cause has been espoused in the name of nationalism. The Government of India has refused to give way, arguing unanswerably that to do so would be to encourage the belief that similar methods could secure concessions in other prisons, with tragic results when authority had in the end to be reasserted. This argument must appeal to provincial Ministers who are now fully responsible for order, police and prisons.

* * *

The Real British Empire.—The Crown Colonies are the real British Empire. They are mainly administered from London, have no full tariff autonomy, and in recent years have been closely assimilated, economically, to the United Kingdom. Since 1933, Japanese products in particular have been penalised in most of the Colonial Empire (except those African territories covered by international agreements) and all non-British products have been subjected to special disabilities. After 1933, however, when the Empire Marketing Board was abolished as the outcome of the Ottawa Agreements with the Dominions, the Crown Colonies felt the loss of the Board's work most. They felt they had been scurvily treated in comparison with the self-governing Dominions who got everything at Ottawa in 1932 in exchange for giving virtually nothing—indeed, much of what they got can be shown to have been at the expense of some of the Colonies. Now, according to an announcement last Saturday, the United Kingdom Government have set up an autonomous Colonial Empire Marketing Board of about fifteen members drawn from Parliament and business. Its duty will be to promote sales of Colonial Empire products here and overseas; the Colonial Secretary will preside; and it is expected to cost £52,000 in a full year, besides the grants from the Colonial Development Fund for scientific research into Colonial products. The news is welcome; for the multifarious small Colonies export nearly £250 millions' worth of products in a year and, now that world prices of primary commodities have risen, the time is ripe to organise the trade of the Colonies in a more co-ordinated manner, especially on the marketing side. But it will be interesting to see how the new Board tackles the problems of intra-Imperial competition: e.g. British West Indies sugar and United Kingdom beet sugar grown under a levy-subsidy; Colonial fruit, United Kingdom fruit and Dominion fruit; and many other products—like hemp, coffee, metals, tea, etc.—of both the Colonies and Dominions.

* * *

China's Rail Communications.—It may be reassuring for the Nanking Government to reflect, at a time when Peiping has fallen and Shanghai is threatened, that if the worst comes to the worst they can retire, say, to Hankow in the interior and maintain railway communication north and south. It is only a year since a 250-mile gap was filled in and through communication was established with Canton. The importance of this connecting link will be apparent on reference to the map on page 370 of this issue, where it is indicated by a dotted line. Originally, a section of the Hankow-Canton line was laid down to Changsha and beyond, to a distance of about 350 miles south of Hankow. Another section ran north from Canton for about 150 miles. But for over twenty years the centre section was left unfinished, although it had been surveyed. Ultimately the Chinese Ministry of Railways undertook the building of this section and, aided by funds granted by the British Boxer Indemnity Committee, completed the line in July, 1936. The opening was not altogether auspicious; for through traffic was allowed before the permanent way had had time to settle and a series of accidents occurred through subsidence and faulty work. In the autumn the line was taken over by the military authorities for the transport of troops in connection with the suppression of the revolt in the South. To-day, however, the line is reported to be working normally. A journey between Hankow and Canton by rail, ocean and river used to take six days at least, whereas the time taken by direct rail is now less than forty-eight hours.

* * *

Great hopes have been raised by the prospect that produce from the upper reaches of the Yangtse may be conveyed by rail from Hankow to ocean steamers at Hong Kong, instead of by river to Shanghai. At present this is impracticable, owing to pressure from Canton interests which has prevented the construction of a short line round Canton connecting the Canton-Hankow railway with the railway from Canton to Kowloon on the mainland opposite Hong Kong. Apart from commercial advantages, however, the strategic importance of the railway is obvious in existing circumstances. If the Central Government were forced back on Hankow it would, at least, be in close communication, on the one hand, with the Southern provinces and, on the other, with a portion of the territory north of the Yangtse which has not so far been occupied by the Japanese. Japan might not, possibly, have much difficulty in occupying the Southern ports from her various bases in Formosa; she might hesitate to penetrate far inland, where, apart from the Canton-Hankow railway, communications are scanty. Much, however, might depend on the successful defence of the river approaches to Canton. And then the British Government would have to do something about Hong Kong.

Facts About Road Traffic.—There is food for close study in *Basic Road Statistics*, published by the British Road Federation. Seldom have figures of so many facets of road transport been set out side by side. Revenue derived from motorists is calculated to have risen from £37,671,000 in 1929 to £75,406,000 in 1936; while the total contribution of motor taxation to the cost of roads remained steady at just over £21 millions, except in 1934 and 1935, when it rose to over £25 millions. Treasury grants for road maintenance fell from £17,015,275 in 1929 to £12,874,898 in 1936, and gross expenditure on roads (including loans and the proceeds of rates) from £57,130,000 to just over £55 millions. In the same period the number of motor vehicles increased from 2,181,832 to 2,758,346, and the number per mile on all roads rose from 12.2 to 15.5, and on classified roads from 52.9 to 62.9. The index of accidents (1928 = 100) rose from 103.9 in 1929 to 137.1 in 1936, and the total killed and injured from 177,613 in 1929 to 234,374 in 1936. These figures emphasise the conclusion reached in a leading article on page 371 of this issue of *The Economist*. The present position clearly cannot subsist indefinitely. Last month 607 people were killed on the roads of Great Britain, 18 more than in July, 1936, and 23 more than in May of this year, when the previous highest figure was recorded. Injuries number 22,728, also the highest total for any month in 1937. So long as the roads are inadequate to cope with the increasing flood of traffic and so long as the various road-users cannot adapt themselves to an almost impossible situation, so long will the danger to life and limb grow.

* * *

World Wheat Position.—With the approach of autumn in the Northern Hemisphere it becomes possible to form a reasonably accurate idea of the world's wheat position. The season in Canada has been the worst for many years and it is possible that the Dominion crop will be no larger than 160 million bushels, against 229 millions last season. The United States, on the other hand, has a bumper crop, which is estimated to yield approximately 890 million bushels. North American production, plus the carry-over, may therefore be expected to aggregate some 1,180 million bushels. If 755 millions are deducted for home requirements, this would leave a possible total of 425 million bushels for export and carry-over this season. The bulk of these supplies, however, will be concentrated in the United States, where Government policy envisages the ultimate accumulation of a reserve exceeding 200 million bushels. Actual North American exports may therefore be well below the theoretical maximum of 425 millions. Meanwhile, the area sown to wheat in Australia and Argentina is about 10 per

cent. greater than in 1936, but rainfall has been insufficient and the growing plants are showing signs of deterioration. It is too early to hazard an estimate of Southern Hemisphere production, but weather conditions in Australia and Argentina will be of increasing market importance from now on.

* * * *

In Europe, production in Hungary and the Balkans, though smaller than last year, is likely to be well above average, while the requirements of European importers will probably be smaller than last year. There remains, however, the possibility of substantial exports from Russia. This factor has tended to depress the markets during the past fortnight. It has been plausibly argued that the crisis in the Far East may induce Russia to withhold her supplies; but a certain quantity of Russian wheat has, in fact, already reached this country. Altogether, world stocks may possibly increase during the 1937-38 season, but there are too many unknowns in the equation to make any forecast of price trends reliable at this stage.

* * *

Milk Consumption.—Ever since the Milk Marketing Board for England and Wales was established, nearly four years ago, it has been troubled by the problem of a "surplus" of milk, whose dimensions are graphically shown in the chart below. By virtue of the powers conferred by the Agricultural Marketing Acts, the Milk Board has been able to fix prices at a level sufficiently high to render a substantial increase in production profitable in certain areas. But while the trend of production has been steadily rising, consumption of milk has been held in check—despite the general increase in prosperity—by the Board's high-price policy. Consequently, a large proportion of the output (almost 50 per cent. in the period of peak production) has been sold at low prices for conversion into dairy products, which could have been obtained more cheaply abroad. In recent months, it is true, milk consumption has shown a welcome increase. The quantity sold for liquid consumption in July, for instance, exceeded 50 million gallons for the first time, and was some six per cent. above last year's corresponding figure. But this tendency will hardly be encouraged by the decision, taken this week by agreement between the Milk Board and the distributors, to increase the wholesale price of liquid milk during the coming twelve months by 8d. per dozen gallons and the retail price by a corresponding amount. The fundamental anomaly of the milk marketing scheme remains; and our chart shows the latest increase in consumption in proper perspective. While *per capita* consumption in England lags so far behind that of many other countries with a comparable standard of living, the dictators of the milk market can have no grounds for complacency.

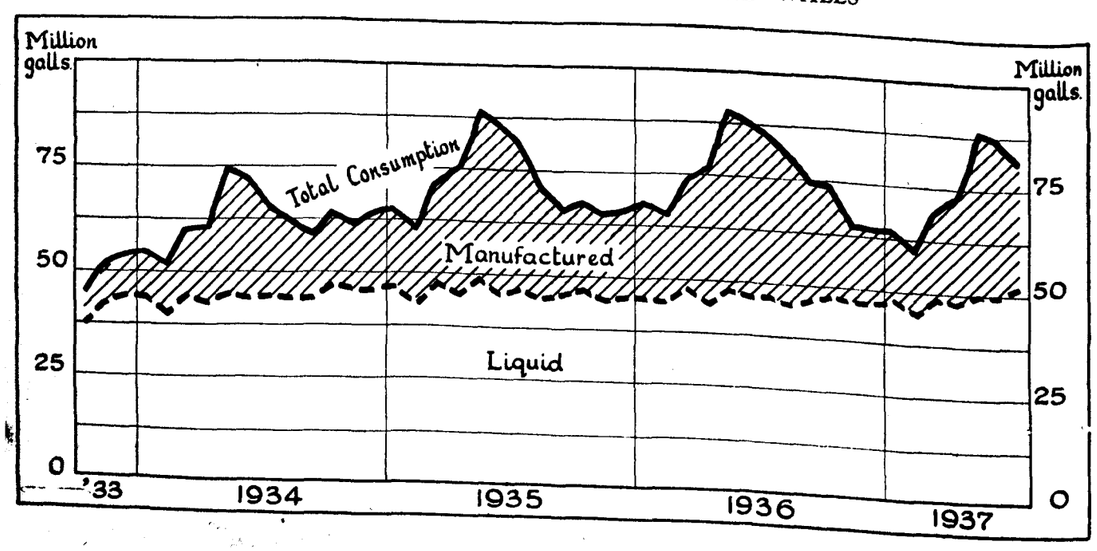
* * *

Overseas Trade in July.—Expansion is once more in evidence in the July returns of Britain's overseas trade. Total imports of £85,505,039 were, it is true, slightly lower than in June, when they reached the highest level since December, 1930. But British exports at £47,569,834 were greater than in any month since July, 1930. The trend of re-export trade remained satisfactory. The returns are summarised in the following tables:—

MONTH OF JULY

(000's omitted)

	1935	1936	1937	Change between 1936 and 1937	
	£	£	£	£	%
Total imports	61,764	68,735	85,505	+ 16,770	+ 24·4
British exports	36,443	40,086	47,570	+ 7,484	+ 18·7
Re-exports	3,961	5,042	6,803	+ 1,762	+ 34·9
Total exports	40,405	45,128	54,373	+ 9,246	+ 20·5
Excess of imports over exports	21,359	23,607	31,132	+ 7,524	+ 31·9
Transhipments under bond	2,015	2,486	2,629	+ 143	+ 5·8



FIRST SEVEN MONTHS

(000's omitted)

	1935	1936	1937	Change between 1936 and 1937	
	£	£	£	£	%
Total imports	420,442	471,044	568,338	+ 97,294	+ 20·6
British exports	242,874	247,986	298,900	+ 50,933	+ 20·5
Re-exports	32,588	37,442	47,346	+ 9,904	+ 26·4
Total exports	275,462	285,408	346,246	+ 60,837	+ 21·3
Excess of imports over exports	144,980	185,636	222,092	+ 36,457	+ 19·6
Transhipments under bond	13,784	15,242	21,585	+ 6,343	+ 41·6

Practically all classes of imports showed an increase compared with July, 1936, the most substantial advances being made by non-ferrous metals and manufactures (108 per cent.), grain and flour (49 per cent.) and wood and timber (45 per cent.). Among British exports, manufactured goods still lead the field, though the increase in coal shipments last month (37 per cent. compared with a year ago) is most encouraging. Part of the rise in the value of our overseas trade must be discounted in view of the rise in prices. This applies particularly to imports, though the extent to which exports are being affected by the same factor is increasing.

MILK CONSUMPTION IN ENGLAND AND WALES

Trade by Commodities.—The following tables show quantitative changes in the main items of imports and exports during the last three years:—

RETAINED IMPORTS

Month of July

Items and Measure	1935	1936	1937
Wheat '000 cwts.	8,401	8,542	8,215
Beef and veal '000 cwts.	1,333	1,327	1,355
Mutton and lamb '000 cwts.	636	560	465
Sugar, unrefined '000 cwts.	4,099	3,464	2,924
Iron ore and scrap '000 tons	469	616	668
Raw cotton '000 centals	701	1,295	779
Sheep's and lambs' wool ... '000 centals	420	173	259
Flax, hemp and jute tons	18,124	11,406	15,407
Crude petroleum '000 galls.	33,179	45,509	64,700
Hides, wet and dry '000 cwts.	133	120	142
Wood pulp '000 tons	190	209	152
Rubber '000 centals	212	– 17	238
Unwrought copper tons	21,594	26,102	38,925
Pig lead tons	19,876	29,270	30,961
Tin: ore and concentrates tons	4,175	4,542	2,528
Tin: blocks, ingots, slabs and bars...tons	618	223	787
Iron and steel manufactures ... '000 tons	90	170	201
Machinery tons	6,121	8,738	13,949

The principal increase compared with a year ago occurred in metals and iron and steel materials. Canada and Northern Rhodesia supplied the major part of our unwrought copper imports, and Canada and Australia were together responsible for 70 per cent. of our imports of pig lead. Crude petroleum imports, which fell to a low level in June, recovered last month as a result of heavy shipments from Iraq. Imports of machinery continued on a large scale, our main sources of supply being the United States and Germany.

BRITISH EXPORTS

Month of July

Items and Measure	1935	1936	1937
Coal '000 tons	3,679	3,360	4,131
Iron and steel scrap tons	11,894	12,866	11,899
Pig iron and ferro-alloys tons	12,930	12,813	12,462
Railway materials tons	21,755	31,306	26,550
Total iron and steel manufactures ... tons	199,274	216,129	232,171
Textile machinery tons	5,621	5,310	6,397
Total machinery tons	34,813	37,100	38,772
Cotton yarns '000 lbs.	11,935	13,305	13,421
Cotton piece-goods '000 sq. yds.	170,188	176,125	176,970
Wool tops '000 lbs.	3,987	3,730	3,075
Worsted yarns '000 lbs.	2,909	2,465	2,308
Woollen tissues '000 sq. yds.	6,477	7,882	7,881
Worsted tissues '000 sq. yds.	4,107	4,727	4,480
Linen piece-goods '000 sq. yds.	5,550	7,049	6,164
Leather boots and shoes doz. pairs	28,598	30,367	37,108
Leather cwts.	20,210	21,214	23,738
Paper and cardboard cwts.	331,130	393,126	382,089
Locomotives, complete and parts ... tons	1,422	2,163	1,431
Motor vehicles and chassis tons	5,213	7,752	9,414

A welcome increase was shown last month in coal exports. Italian demand has now almost regained its 1935 level. Scandinavian purchases also show considerable improvement. Increased supplies of iron and steel products were taken by Argentina, China and the Netherlands. Exports of textiles were maintained at about the level of a year ago.

* * *

Corn Crops in Britain.—The latest monthly report of the Ministry of Agriculture contains provisional estimates of the yield of the principal British corn crops, based on the condition of the crops on August 1st. July brought thunderstorms and an absence of sunshine, and the yield per acre of wheat, barley and oats may well be below average and rather smaller than in 1936. In the case of wheat, increased acreage is sufficient to raise the probable outturn above last year's level, but production of barley and oats is expected to fall short of the 1936 figures. The estimates are as follows:—

	Acreage '000 acres		Production '000 tons	
	1936	1937	1936	1937
Wheat	1,704	1,731	1,378	1,385
Barley	819	823	663	588
Oats	1,420	1,222	1,080	898

The condition of the corn crops is variable, but the need of more sunshine is general. Dull and unsettled weather made haymaking more protracted than usual, but the condition of the crop is satisfactory and the yield is estimated to be above normal. Meanwhile, early potatoes have lifted well and promise an average yield. The main crop, which is also expected to give an average yield, has made good growth and is generally free from disease. Root crops, on the whole, look healthy and vigorous, but hop bines need more sun and rain to promote growth. Generally, the weather this season has not been too kind to the British farmer; but any deficiency in yield is likely to be counterbalanced by an improvement in prices compared with last year.

* * *

Activity in Iron and Steel.—Mainly in consequence of Scottish holidays, the output of crude steel in July was rather smaller than in June; production, nevertheless, again exceeded 1,000,000 tons. Pig iron output again increased, the month's total being the highest since September, 1920, when 741,000 tons were produced. Production of hematite pig iron showed a notable expansion, owing to several furnaces being transferred from the smelting of basic iron. At the end of last month the total number of furnaces in blast was 126, the same as at the end of June. The latest production figures, issued by the Iron and Steel Federation, together with overseas trade statistics, are shown in the following table:—

(In thousands of tons)

Period	Production		Foreign Trade	
	Pig Iron	Steel Ingots and Castings	Total Imports	British Exports
1913—Monthly Average	855·0	638·6	185·9	414·1
1929 " "	632·4	803·0	235·2	364·9
1932 " "	297·8	438·5	132·7	157·4
1936 " "	640·5	974·8	123·6	183·8
1936—June	644·1	965·9	110·6	173·5
" July	665·6	974·1	170·3	216·1
" August	635·8	872·7	141·8	164·0
" September	650·8	1,027·0	165·0	183·0
" October	670·3	1,060·5	101·0	194·4
" November	643·1	1,001·3	90·7	193·3
" December	671·4	1,019·2	94·8	204·8
1937—January	650·7	998·9	83·1	215·0
" February	603·7	995·9	82·9	200·5
" March	680·3	1,109·5	94·3	231·6
" April	680·7	1,080·4	88·5	239·5
" May	696·3	1,047·3	98·1	228·3
" June	699·3	1,106·4	174·8	235·4
" July	729·3	1,059·2	202·3	232·2

A feature of the past month was the further expansion of imports—principally of pig iron from India and the United States. Imports of steel billets, blooms and slabs, however, were well below last year's corresponding figure, the reduction being mainly in shipments from Germany and Belgium. Exports were rather lower than in June, but remained above the level of a year ago. Sales to China, Argentina and the Netherlands were much larger than in July, 1936, but South Africa, Canada and British India took rather smaller quantities. Meanwhile, new business in iron and steel is still hampered by the inability of manufacturers to accept orders for near delivery.

Family provision scheme

A scheme to secure a Capital Sum payable at death and a regular income over a period of years for dependants in the event of early death, at a cost which is little more than that of ordinary life assurance.

It is readily adaptable, and rates will be quoted on application for policies to suit the needs of each individual.

Established 1844 Funds exceed £26,000,000

Business Activity Maintained.—The overseas trade returns and the iron and steel production figures, discussed elsewhere in this issue, show that business activity was maintained on a high level last month. Apart from holiday stoppages, there has been no subsequent slackening, and the tenor of this week's news is encouraging. The cotton textile industry has received increased inquiries for its products, owing to the improved tone of the raw cotton markets. Business with China has, unfortunately, been interrupted by the crisis in the Far East, but manufacturers generally are hard at work keeping up to contract time with their deliveries; in view of the decline in prices since current contracts were placed, cancellation is likely if deliveries are behindhand. In the neighbouring county of Yorkshire, all the Bradford mills have been idle in consequence of local holidays, but woollen and worsted manufacturers are looking forward to a busy period after the resumption. Iron and steel production in the Middlesbrough and Stockton areas has also been interrupted by holidays. New business in the meantime is still limited by the difficulty of securing early delivery, but the stringent supply position has been partially alleviated by the increased volume of imports. In consequence of the active conditions ruling throughout British industry, demand for coal remains well above the seasonal normal. Though household demand is negligible, all industrial grades of coal and coke are in eager request. A shortage of certain qualities is being experienced in Yorkshire, where some 5,000 miners are unemployed as a result of continued strikes among the haulage hands. The possibility of a general shortage of industrial fuel this autumn is being canvassed in certain areas.

* * *

London Housing Statistics.—Throughout the building boom the monthly figures of approved building plans published by the Ministry of Labour have been used, *faute de mieux*, as an index of prospective activity in the trade, though they are based on returns of only 142 local authorities. The London County Council area was excluded owing to the provisions of the London Building Act and the consequent independent existence of the district surveyors. Much of the rural area which is now receiving short shrift at the hands of the builder is also excluded. Information recently published by the London County Council emphasises the important part which the London figures ought to play in any complete index. As many as 683,916 of the 3,328,398 houses built in England and Wales in the seventeen years since 1919 have been in Greater London. Altogether, some 12·2 per cent. of the total State-assisted and 26·7 per cent. of the non-assisted house-building has fallen within this metropolitan area, which holds 21 per cent. of the population of England and Wales. The London building figures show little sign of falling-off; the 1936 figure of 78,838 houses and flats actually exceeds the 1935 total and almost equals the record total of 80,612 in 1934. Although in 1936 the number of houses erected by private enterprise was slightly lower than in 1935, at 67,704 against 68,015, this decline was more than offset by municipal building, which was responsible for the erection of 11,134 houses and flats, against 7,662 in 1935.

* * *

Prospects for 1937 are bright. Among the municipal builders, the London County Council is predominant, for its operations account for nearly 70 per cent. of the total. Its programme for the current year envisages an increase of several thousand houses over the record figure of last year. Results of private building activity are more difficult to forecast. Actually, in 1936, some 56,864 houses were built in Outer London, mostly for sale; while of the 10,840 built in the County of London area, as many as 6,963 (against 3,588 in 1935) were middle-class flats. The rapid rise in the provision of these flats may not yet have exhausted its impetus. The problems of town-planning and transport experts [illegible] still being accentuated, rather than brought nearer solution. Incidentally, the London County Council now has an annual income of £2,921,615 from rent paid by the 354,234 persons whom it houses.

* * *

Difficulties of the Poultry Industry.—Much has been heard recently of the plight of the British poultry keeper. The industry claims that the sharp rise in feeding costs and the competition of imported eggs and egg products have made home production unremunerative. It is consequently seeking Government assistance. Almost twelve months ago an application was made to the Import Duties Advisory Committee for increased import duties on shell eggs—the present duties range from 1s. to 1s. 9d. per great hundred. Ultimately it is hoped to secure the quantitative regulation of imports together with financial assistance from the Exchequer. A private member's Bill was introduced some few weeks before the adjournment of Parliament, to amend the Agricultural Marketing Acts to permit the imposition of import quotas, even though no egg marketing scheme is in being. Before these price-raising expedients are adopted, however, it would be well for responsible leaders of the industry to consider whether the proposed remedies are in fact appropriate.

* * *

It is true that feeding costs are perhaps 30 per cent. higher than a year ago. But the price of English eggs has shown a considerable advance during the same period. In view of the reduction in total supplies, this firmer price tendency seems likely to continue; and any further levering up of prices by artificial means would damage the industry's long-term interests by curtailing demand. A more promising line of approach would be for the Government to offer some incentive to improved general efficiency. In an industry which comprises half-a-million heterogeneous producers, generalisations may be dangerous. But the vitality of the laying flocks was undoubtedly impaired during the period of rapid expansion through which the industry has recently passed. According to the National Poultry Council mortality is now three times as high as it was ten years ago. The effort to maximise both the yield and the size of the eggs; the failure properly to "cull" the flocks; and the practice of breeding from pullets have all contributed to the industry's present troubles.

* * *

Road Transport in Northern Ireland.—The Northern Ireland Road Transport Board was set up on October 1, 1935, to acquire all public road motor transport in Northern Ireland, except the undertakings of the Belfast Corporation and certain local carriers in Belfast and Londonderry. On the first of this month the Board completed its absorption of all the goods haulage concerns. The last batch of undertakings to be taken over comprised 93 haulage companies, mainly "one-man" concerns. In all, nearly 1,700 goods vehicles have been absorbed by the Board. The passenger undertakings were already completely absorbed by the beginning of 1936, and the Board is at present running some 500 buses in place of the 700 which were acquired. It is anticipated that, when reorganisation has been completed, the work of the 1,700 goods vehicles which have been taken over may be eventually carried out by as few as 500 vehicles. Much criticism has in the meantime been heard from local trading associations and business men of increases in fares and rates made by the Board. Some, however, of the earlier rates were admittedly uneconomic. The Board is the first large-scale British experiment in transport co-ordination outside London, and its fortunes will be followed with widespread interest. The Board is a statutory undertaking which has definite arrangements for co-ordination with the railways. Subject to a few restrictions at holiday times, return halves of tickets are available, for example, by either road or rail. At least one of the three railway companies operating in Northern Ireland issues bus time-tables side by side with its own. Finally, provision is made for pooling traffic revenues of the Board and the railways.

Planning and Budget Policy

New York, August 10.—Probably the most telling point which the critics of national planning ideology in this country have is the frequency of disparity between plans and the results which the planners produce. And this point is particularly well made on governmental finance. The charge that "planning" merely means "spending" looks increasingly well founded when the budget is examined.

When Mr Roosevelt campaigned for his first term in 1932, one of the strongest charges he made against the incumbent Hoover Administration was that of profligacy. The deficit in the fiscal year ended June 30, 1931, had approached $1,000 million, including sinking fund, and for the fiscal year 1932 it reached $3,148 millions. In the months just after Mr Roosevelt took office on March 4, 1933, some substantial reductions were made in government outlays, with the result that the deficit for the fiscal year 1933 was slightly reduced to $3,063 millions despite the many new activities promptly undertaken by the new Administration.

Then, sometime during the fiscal year 1934, a different conception of Government finance came to be accepted in Washington (and to a considerable extent elsewhere). The new conception was that of a "cyclical" budget, a budget to be balanced over the business cycle rather than annually. While various persons explained their espousal of the idea on different grounds, it was, and is, intimately involved with many of the meanings of planning. And most of the points advanced in its favour were, and are, plausible.

To some, the merit of the idea is that an unbalanced budget in a depression prevents a damaging deflation of the supply of money, or constitutes the machinery for "reflation" of the money supply if undue shrinkage has occurred. To others, who think less in monetary terms, the explanation is "pump priming," i.e., the activation of private industry through the stimulus of governmental expenditure, with the confidence that once industry is given this stimulus it will continue of its own momentum. Others comprehend the purpose to be the maintenance or revival of the private income stream and velocity until private business can proceed on its own power. Still others justify the excess of outgo over income if assets, subsequently to be liquidated to repay the debt incurred, are acquired. And some view the process as a necessary expenditure of national capital for relief purposes, the capital to be replaced as soon as emergency has passed.

These concepts all have one point in common. As soon as recovery occurs, the debt incurred by these deficits is to be reduced. To all this is a necessity of prudent finance, and to many it has the additional merit of putting a brake on or against the development of a boom through restriction of the growth of the money supply, through the restriction of consumption by the amount saved through debt retirement, or otherwise.

Theory and Practice

The emergence of the cyclical budget concept during the fiscal year 1934 therefore was, and continues to be, well rationalised. If some were sceptical that the spring of perpetual prosperity had been found by a latter-day Ponce de Leon, the only strong objectors were the bankers, but they were anathema after the revelations of 1931-33 and were ignored. And if some politicians privately felt that an excellent job of stream-lining the pork-barrel had been done, they did not object. And so the era of deficits has proceeded with $3,989 millions in the fiscal year 1934, $3,575 millions in 1935, $4,764 millions in 1936, and $2,811 millions in 1937, all inclusive of sinking fund. And the national conscience has, on the whole, been easy.

Now, however, some concern is beginning to be felt. Business, if it is not booming, has at least recovered and is at a level of some prosperity. For the calendar year thus far the average of the business indices has been about the same as in 1928 and 1929. The supply of money is moderately above that reached at the peak of the last cycle. Business has been activated, and appears to have some momentum of its own. The national income for last year was estimated at $63,000 millions, and is already being forecast at $70,000 millions or better for this year, as against a little more than $80,000 millions for 1929. The figures are even closer if adjustment is made for the lower price level now prevailing. While the relief rolls still contain some millions of individuals (the number, of course, remaining in dispute as well as the necessity) an emergency hardly exists, and relief, it can be argued, should be paid from current income at present levels. And the assets acquired to cover the debt incurred in earlier years are being liquidated on a considerable scale, and the proceeds are being used, not for debt retirement, but for additional expenditures. The question is arising with growing emphasis as to when the cyclical budget is to be balanced, a process which obviously requires not merely equality between income and outgo, but as well the retirement of previously incurred indebtedness.

The Budgetary Position To-day

The latest revised official budget estimate for the fiscal year to June 30, 1938, forecasts a deficit, exclusive of sinking fund, of $418 millions. The revenue estimates made last December had to be revised downward during the spring, and there are still considerable doubts that the existing tax rates will bring in as much as the revised figure. The deficit for July, the first month of the fiscal year, was $249 millions exclusive of sinking fund, as compared with $123 millions in July, 1936.

Two qualifications, or explanations, should be made about the present figures. First, in July this year, the liquidation of assets provided only $2 millions, as compared with $216 millions in July, 1936; since proceeds from this source are treated as a credit against expenditures, the deficit in July, 1937, stands at $251 millions, as compared with $338 millions for July, 1936, if these are eliminated. But this merely emphasises the fact that previously acquired assets are being liquidated and used, not to reduce the debt, but to cover new expenditures. Secondly, while an accounting deficit is contemplated for this fiscal year, a cash surplus will result because a large volume of trust funds is accumulating for investment. But, to some extent, this is to argue that the reserves for future liabilities are current income. A final fact might be added: currently considered or expected supplementary appropriations for such items as housing may add items of expenditure for this fiscal year not contemplated in the latest budget estimates. Cyclical budgeting threatens to become permanent deficiteering.

France

Nearing the Last Decrees

Paris, August 19.—As the 31st August marks the term fixed by Parliament for the procedure of the decrees, one or several councils of ministers will be held previously in order to take the measures which have been foreshadowed for the reorganisation of the railways, the revival of the economic activity and the balancing of the 1938 Budget.

Meanwhile, public opinion and the Stock Exchange are showing the greatest calm. The latest quotations have been affected by the Chinese conflict, but Government issues have been stable despite the heavy tone of industrial shares. The Fund for the support of the rentes has had an opportunity to prove its efficiency.

In a recent speech, M. Chautemps remarked with satisfaction on the appearance of a real " appeasement " in the country. The word is not exaggerated. Workers are enjoying their second paid holidays, and this innovation, which is accompanied by great facilities on the railways, constitutes a veritable revolution in the life of many. The efforts of the French Cabinet for financial recovery have been accompanied in a few weeks by a rise in the rentes of 15 points, and this is felt to be equally satisfactory by another part of the nation. Finally, M. Chautemps announced new measures to encourage a greater activity and productivity in industry. And it is known that negotiations have begun between the representatives of the employers' and workers' organisations with the approbation of a great portion of their respective troops. A new spirit is apparent in the social negotiations. Thus the taxi drivers have protested against an excessive increase of their tariffs; the workers of the Port of Dunkerque protested on the same lines against an excessive rise of the duties; and the miners proposed on their own initiative new qualifications to the 40-hour week, allowing extra work on four days in order to increase production and diminish the passive balance of trade. The Government's struggle against the rise of prices is thus being assisted by important groups of the community.

Put briefly, the political situation to-day is as follows: The first decrees which followed the fall of the Blum Cabinet and the immense prosperity of the tourist industry have provided an indispensable breathing-space in which a more fundamental reconstruction may be attempted. Such a reconstruction already has the support of a few capitalists who are equally alarmed by the restrictions on free enterprise and the small returns on capital, but it might be hindered by political events. It seems that the Left extremists are making great efforts to obtain new successes in the October elections to the Senate. But it appears also that public opinion is very disturbed by the rise of prices and by some of the more severe obstacles placed in the way of industry, and especially of the smaller industrialists, by the new social legislation. This opinion may support the resistance to further immediate legislative activity of the Radical-Socialists and of certain Socialists under the guidance of a Prime Minister who is famous for his electoral skill. The formation of the Chautemps Cabinet appears more and more like a first attempt by Parliament and Liberal opinion to assert themselves against the tendency towards autarchy.

The results so far obtained by M. Bonnet are little by little bringing this Cabinet new support from the Left and the Right. And now that M. Chautemps, though in obscure terms, has warned his possible opponents from the Left that the participation of the Radical-Socialists might be refused if the present Cabinet were overthrown, better hopes are entertained for the probable longevity of the present Cabinet.

Prices and Production

In the motor industry, 17,011 automobiles were put on the road in June, 1937, against 15,206 in May and 15,483 in April. Unemployment on August 7th was 312,473, against 313,533 on July 31st, and 421,736 in the corresponding week of 1936. The figure of bankruptcies in July is 548, compared with 576 in June and 545 in May, 1937. Bankruptcies and judicial liquidations were 711, against 757 in June and 744 in May.

The Statistique Générale has just published its monthly indices of industrial production in France (1913 = 100):

	June, 1936	April, 1937	May, 1937	June, 1937
General index	98	105	104	102
Engineering	101	118	118	117
Iron and steel	78	104	105	106
Textiles	60	69	66	65
Mines (Adjusted figures)	94	103	98	95
Building " "	66	62	61	58
Leather " "	108	101	101	98
Paper " "	166	144	141	143
Rubber " "	970	781	801	833
Motors " "	425	459	423	433

The figures for prices in July are also now available:—

	July, 1936	May, 1937	June, 1937	July, 1937
Wholesale prices (1914 = 100):				
General index	383	529	537	579
Domestic products	427	552	565	584
Imported products	304	486	488	570
Foodstuffs	415	515	529	555
Industrial products	356	541	545	601
Retail prices (1914 = 100)	461	586	590	600
Lighting and heating (1930 = 100)	84·4	93·4	100·2	100·2
Clothing (1930 = 100)	57·6	93·7	93·7	93·7

If compared with June, prices in July—a month after the last devaluation—show an increase of 4 per cent. to 7 per cent. for wholesale prices and 1 per cent. to 2 per cent. in retail prices. If compared with July, 1936, the rises are respectively 48 per cent. and 30 per cent. The increase of wholesale prices between June and July is notably larger in the case of imported products, at 16 per cent., than for domestic products at 3 per cent. The rise of retail prices over the last year is 26 per cent. for foodstuffs (excluding fruit or vegetables), 18 per cent. for heating and lighting, 61 per cent. for clothing, and 33 per cent. for furniture. The cost of living index was 581 for the first quarter of 1937 (1914 = 100) and 606 for the second, as against 497 for the second quarter of 1936.

Nevertheless, the effects, particularly on retail prices and the cost of living, of the social laws, of the rise of world prices and the two devaluations do not yet appear to have reached their maximum. The likelihood of an increase in the price of wheat and the seasonal rise in the prices of several foodstuffs in the autumn may well create new difficulties to the Government at the end of the year.

Germany

New Reich Loan

Berlin, August 17.—A Reich Loan of Rm. 700 millions, to be used for the consolidation of re-armament and work-creation short-term debt, was announced to-day. This is the third Reich loan of the year, the two former totalling Rm. 1½ milliards. The interest rate is, as before, 4½ per cent., the price to subscribers 98¾ per cent., and the form, as customary, Reich Treasury bonds. The bonds have an average life of twelve years, one-sixth of the debt being repayable in each year 1947 to 1952. Rm. 100 millions of the total has already been placed; the remaining Rm. 600 millions will be marketed by a syndicate under the leadership of the Reichsbank. Subscription will be between August 25th and September 9th; payment in instalments between September 21st and November 5th. This loan was expected; but the announcement came rather earlier than was anticipated. The present condition of the money market is considered favourable, the recent slight tightness and the accompanying smallness of credit repayments to the Reichsbank in the first fortnight of August being attributed to the demand for money for the quarterly property and citizens taxes. The loan will bring the total sum consolidated since the beginning of 1935 to some Rm. 6,500 millions, this including Rm. 500 millions issued by the Reich Railways Corporation.

The Technique of Price Control

A decree by General Göring as Commissioner for the Four-Year Plan and an executive ordinance by the Reich Prices Commissar introduce important changes into the price regulation of imported goods. The " stop price " regulations of last winter, which professed to establish absolute stability, were not applied without qualification to imported goods. The first seller at home was allowed to charge not only the varying, and in general rising, foreign price paid, but also his own expenses and his profit in the form of percentages of this varying foreign price. Henceforth these two supplements will be independent of the price paid to abroad, and will as a rule be fixed. They will be the " economically justified expenses and profit supplements," and will not in general exceed the expenses and profits charged in 1936. The aim is to limit the rise in internal prices of imported goods to the absolute increase in world market prices. The Supervision Boards, already existing for the regulation of raw materials, will administer this system. They are given power to depart from the principles above described. An important change in the opposite direction is that the " replacement price," i.e. the price which will pay for a new import of equivalent quantity, may be charged instead of the price actually paid to abroad. This, however, is to apply only to goods dealt in on commodity exchanges and therefore having a determinate world market price. So long as the price that might be charged at home could not exceed that paid to abroad, plus expenses and a reasonable profit, an importer risked the gradual loss of his capital if world market price rose. Imported coal is outside this system, its price being fixed by the Reich Commissary.

Growing Shortage of Labour

The labour shortage continues to cause trouble. The number of unemployed in July sank to 563,000 (86,000 fewer than in June), as against 1,170,000 in July, 1936. The shortage is no longer confined to skilled workers. Of the 182,000 registered unskilled unemployed in July only 94,000 were employable in full sense. The shortage of skilled workers in several branches seems to have increased. Consequently questions have been raised involving Party principles, including that of wages, and therefore to some extent of price stability and also the question of the employment of women in industry, to which the Party was always inimical. A general or permanent labour shortage seems to be (at least in peace time) an economic anomaly. A complaint that a country has not enough workers is virtually equivalent to a complaint that it has not a larger population.

But though Germany is at peace, the vast Reich public works and armaments schemes have produced something like war conditions. The re-employment of women in industry is disapproved of by the President of the Reich Unemployment Board, who sees the solution in technical improvement and mechanisation, which would replace human hands by machinery. But already, though some 700,000 women were removed from industry by grants of marriage loans, 1,200,000 more women are working in the various Social-Insurance occupations than in 1933. This development, as a semi-official journal says, " is not favourably regarded " by the Government, which sees itself " compelled to surrender a part of the success which it had attained in its struggle against female work in industry." But " the pressure of economic necessity " has compelled the Government to accept the development, and even to encourage it by abandoning the former condition that marriage loans should be dependent on the retirement of women from industrial employment. In the first years of National-Socialist administration, when unemployment was still heavy, the Government was not only against the employment of women, but also against excessive " mechanisation "; and both these prejudices were proclaimed to be principles. To-day there are no principles, but only " economic necessities." The wages question has become very difficult. The right to " individualise " wage rates, which, despite the veto on increases of the general (collective-agreement) wage, was conceded to business, is now so much used in order to entice and retain workmen, that the whole system of wage-stability is threatened. An undertaking with its books full of urgent Government orders can easily afford to pay higher wages, the extra cost of which is counter-balanced by savings derived from the full utilisation of plant and the reduced incidence of fixed charges. In authoritative utterances it is declared that the high so-called " enticement wages " now being paid will drive up the general price-level, which is against official policy; and further that they will benefit a limited number of concerns at the expense of others. The apparent anomaly of a shortage of labour therefore involves practical questions that may be difficult to solve.

The Four-Year Plan at Work

In a speech at the opening of the Königsberg Eastern Fair, Herr Funk, the Secretary of State, attacked the criticism of the Four-Year Plan by " an international clique which never tires, and which spares no cost, in inciting the nations against National-Socialist Germany." Herr Funk denied that the Plan is aimed against international commerce. In fact, foreign criticism of the Plan is very often unreasonable and one-sided. The Plan is only, in an extreme form, the same autarky which most other nations, including the British, pursue. Soviet Russia, which is much better off than Germany from the viewpoint of self-sufficiency, had begun to produce synthetic rubber and to force cotton and copper production before Germany. The Four-Year Plan works are now proceeding actively. The Reich Railways Corporation mentions the carriage of heavy materials for the Plan as a reason why freight traffic has greatly increased. The shortage of materials has affected house building. In the first quarter-year the number of permits for the construction of dwelling-houses declined 23 per cent. below the corresponding 1936 level; but permits to construct non-dwelling buildings increased in cubic dimensions 22½ per cent. The number of new dwellings completed in 1936 was 332,370, of which 15 per cent., however, represented divisions-up of large flats, as against 263,810 and 19.2 per cent. respectively for 1935. The number of new dwellings was about twice as high as in 1932; and the new non-dwelling buildings increased in the same proportion. New dwelling construction now just about keeps pace with the increase in the number of households; but the existing deficit of 1,500,000 dwellings has still to be made good. Pig-iron output in July was 1,345,500 tons, as against 1,304,200 tons in June. Coal exports have greatly increased, totalling 18,962,000 tons in the first half-year, against 13,569,000 tons in the same half of 1936; while coke exports were 4,478,000 tons, against 3,297,000 tons. The export of coal briquets and lignite briquets has also risen. Coal imports were almost stable, being 2,217,000 tons, against 2,188,000 tons, and coke imports declined. The balance of payments for coal (including coke, briquets and lignite) was: 1937, first half-year, exports

BRITANNIC
ASSURANCE COMPANY LIMITED
(Established 1866)
Annual Income £6,400,000
Funds £28,000,000
All classes of Life, Fire, Accident, Motor and General Insurances transacted
Chief Office: BROAD STREET CORNER, BIRMINGHAM

Rm. 275,398,000, imports Rm. 42,057,000, as against Rm. 179,482,000 and Rm. 42,884,000 respectively in 1936; active balance Rm. 233,341,000, as against Rm. 136,598,000. The average export price (not counting subsidy) is stated to have risen only from Rm. 10.09 to Rm. 10.28 per ton. Imports of British coal are given as 1,595,000 tons.

Sweden

Business Active

Stockholm, August 5.—Business activity in June and July continued its upward trend, and reports from the principal branches of industry were favourable. Following a larger supply of timber from Canada and from Balkan countries, demand for Swedish wooden goods has lately shown a slight decline. Yet the situation is viewed with calm by the Swedish timber exporters, and an increased demand is expected in early autumn, when stocks will be used up in the main timber importing countries. On July 15th about 700,000 standards of wooden goods, corresponding to 80 per cent. of the current year's production, were sold.

The situation on the pulp market is also satisfactory, and the entire sulphate pulp output of the current year, as well as most of the sulphite pulp output, has been placed. Of the 1938 output, about 80 per cent. of the sulphate and sulphite pulp production has been disposed of. Iron works report a slight reaction in output due partly to the summer holidays of their workers. Foreign demand for Swedish iron and steel has not, however, diminished, and prices remain firm.

Foreign trade continues to expand, and the value of imports during the first six months of the current year showed an increase of about 31 per cent. over the corresponding period of 1936, compared with an increase of 28 per cent. in the value of exports. Figures for Sweden's foreign trade, and for trade with Great Britain, are shown in the following table:—

Foreign Trade
(In million kronor)

	1936 January–June	1937 January–June
Imports	755·6	998·8
Exports	657·6	840·7
Import surplus	98·0	158·1

Trade with the United Kingdom
(In million kronor)

	1936 January–May	1937 January–May
Exports to U.K.	126·5	145·2
Imports from U.K.	116·4	146·1

Of exports to Great Britain valued at Kr. 145.2 millions, goods consumed there amounted to Kr. 134 millions, and the balance represents goods in transit. Of the latter, by far the largest items are pulp and paper, valued at Kr. 44.6 millions, followed by timber to the value of Kr. 24.8 millions, and iron and steel products to the value of Kr. 17.3 millions. Of the goods imported from U.K., valued at Kr. 146.1 millions, goods produced in Great Britain represent Kr. 101.2 millions. The largest items were textiles to the value of Kr. 33.7 millions, and coal and coke valued at Kr. 22.7 millions.

Prices and the Sterling Rate

Prices, which during the first five months of the current year had shown a gradual rise, became steady in June under the influence of the international decline in commodity prices. At the same time the cost of living index of the Bank of Sweden rose from 104·2 to 104·7 (September, 1931=100.)

The marked easiness of the Swedish money market did not diminish in June, and the supply of money continued to exceed demand for fresh credit accommodation. Since the growth of bank deposits was far faster than the increase in bank advances, the surplus of advances over deposits fell between June, 1936, and June, 1937, from Kr. 163 millions to Kr. 11 millions.

The rise in bank advances is chiefly due to the general rise in prices, and only to a very small extent to new loans, since industrial enterprises take advantage of their accumulation of liquid funds to redeem their liabilities to the banks. A characteristic feature is that the accumulation of idle money is largest in the four big banks.

Some influx of foreign capital can also be noticed, partly from foreign subsidiaries of Swedish companies, and partly from private investors speculating on the possibility of an appreciation of the Swedish currency. Though for the time being the question of lowering the present sterling rate does not arise, any inflationary development in Great Britain, which would necessarily affect the price level in this country, would certainly induce the Swedish authorities to reconsider their policy, lest other measures should fail to arrest a rise in retail prices.

Roumania

Democratic Victory at Polls

Bucharest, July 30. — The general elections are proving that the masses do not want to experiment with the semi-dictatorial parties, but are pinning their faith on the two constitutional parties, viz., the Liberals and the National Peasant Party. Out of 71 districts 43 have cast their votes, and more than one million votes were given for these two parties compared with slightly fewer than 450,000 for the two extreme right parties. The result is likely to show an even greater majority for the constitutional parties.

The Liberals, however, would be unwilling to be entrusted with the formation of a government. The National Peasant Party in power would ensure continuity in foreign politics with greater stress on friendship with France and possibly a little less flirtation with Poland. The attitude of France towards Roumania has lately been more than the rôle of spectator. The calling to power of any outsider would imply a change in the foreign policy of Roumania, and France would stint both financial support and technical help for armament purposes. The crux of the situation is that King Carol II dislikes several of the leaders of the National Peasant Party, whose austere constitutionalism runs counter to his endeavour to secure more initiative for himself in public affairs.

The economic situation continues to improve. During the first three months of the current Budget year (April-June) total revenues for the ordinary Budget were 6,100 million lei, compared with 5,300 millions in the corresponding period of 1936. All taxes show an increased yield.

Business life is running at high speed. The cement industry hopes to exceed the record 1936 figure of 37,000 carloads by 10-15 per cent. The production figures of one leading colliery for the first six months are about 5 per cent. higher than the corresponding figures for the year 1936. The sales of tobacco products have realised in the first six months 2,250 million lei, compared with 2,300 millions in the first half of 1936.

Difficulties in Oil and Agriculture

The situation is less satisfactory in the oil industry, and agriculture has suffered from drought. The production of crude oil in the first six months of 1937 was 3,650,000 tons, or about 700,000 tons less than in the first half of 1936; the average daily output has fallen from the peak figure of 2,522 car-loads in June, 1936, to only 1,850 car-loads in June, 1937. The total output of the year will probably not exceed 7 million tons, compared with 8.7 millions in 1936. The adverse effect of this reduced output is felt less by the producing and refining combines than by the refineries, who cannot obtain the necessary crude oil on the home market and are gradually slowing down activity.

The drought is a serious menace. In most parts of the country wheat may still be harvested before the hot dry weather can damage the crop, and estimates of the surplus available for export are as high as 90,000 car-loads, compared with 61,000 car-loads exported in 1936 and 87,000 in 1935. On the other hand the surplus of barley for export will not exceed 15,000 car-loads, compared with exports during the two preceding years of 52,000 and 18,000 car-loads respectively. The oats crop will hardly suffice to meet domestic needs; and estimates of the maize crop have fallen from 500,000 to 300,000 car-loads. This accounts for the embargo imposed in the second half of July on the exportation of maize.

Trade Restrictions Reduced

The large export surplus in foreign trade during the first six months of the year has led the Government to reduce exchange restrictions and to loosen the chains of the quota system. Exports in the first six months of 1937 were valued at 15.3 milliards of lei, compared with 7.4 and 6.6 milliards respectively in the first half of the two preceding years. The export surplus was about 7 milliards, compared with 1.9 and 1.4 milliards in the middle of 1936 and 1935 respectively. Consequently the quota restrictions have been practically removed for a number of commodities, mainly iron and steel products. Together with similar measures taken previously for a number of raw materials, this concession has exempted about two-thirds of total imports from quota restrictions.

Moreover, the use of blocked lei for financing of exports will shortly be permitted. The step has not yet been taken because the National Bank hesitates to make this exception to the rule that no foreign debts should be repaid if they originated before May, 1932, when exchange restrictions were first introduced in Roumania.

Japan

Industrial Shortages

Tokyo, July 9.—The capital goods industries are still experiencing a shortage of skilled labour and raw materials. In many cases the problem is rendered more acute by a scarcity of new machinery. As the result of large-scale re-equipment and extension of the capacity of Japanese industry, the need for new machinery is rapidly growing; but home industry is not in a position to satisfy all requirements, while there is increasing difficulty in supplementing them by imports from abroad. To meet the situation the Government is contemplating the organisation of a semi-official company, in co-operation with the leading manufacturers, to produce machine tools to the value, in five years' time, of 130–140 million yen yearly. The Government proposes to establish training schools for mechanics in the principal industrial cities throughout the country, and also to give encouragement to apprentice schools attached to engineering works.

Steep Rise in Value of Trade

Japan's foreign trade still continues to display a much greater buoyancy of imports than of exports. In each of the past six months of this year the increase in imports considerably exceeded that in exports; and the import surplus in the same period mounted at an alarming rate to 618,301,000 yen—the largest since 1924, when the rebuilding of the capital after the great earthquake necessitated unusually large imports of building and other materials. Comparisons of the value of foreign trade in June and the first six months of this year and last are as follows.

(000's omitted)

Month of June

	1936 Yen	1937 Yen	Increase in 1937 Yen	Increase in 1937 %
Imports	229,303	382,318	153,014	66·7
Exports	208,499	281,195	72,695	34·9
Total	437,892	663,513	225,711	51·5
Import surplus	*20,804*	*101,123*	*80,319*	*386·1*

First Six Months

	1936 Yen	1937 Yen	Increase in 1937 Yen	Increase in 1937 %
Imports	1,489,821	2,145,927	656,105	44·0
Exports	1,217,967	1,527,626	309,618	25·4
Total	2,707,788	3,673,553	965,765	35·6
Import surplus	*271,854*	*618,301*	*346,487*	*127·5*

The growth in imports is mainly accounted for by raw materials; textile materials alone are responsible for over two-fifths of the total increase. There are also notable increases in imports of iron and steel and other metals and machinery. On the export side, the expansion spreads over the whole list, with the exception of wheat flour, refined sugar, and vegetable oils. Among staple exports, cotton piece-goods rose in value by 40 million yen and raw silk advanced by 36·9 million yen. Higher prices are largely responsible for the rise on both sides of the accounts.

Population Problems

Other home trade statistics for last month show a continuance of the trend in recent months. The output of cotton yarn in June reached a new record of 136,684,000 lbs., an increase of 2,607,000 lbs. compared with May; but rayon production during last month amounted to 27,879,000 lbs., a decrease of 79,000 lbs. compared with the preceding month. The price index for the month of June of all shares listed on the Tokyo Stock Exchange fell further by 2.3 points to 160.9 (January, 1921=100) compared with 163.2 a month earlier.

According to the vital statistics recently published by the Bureau of Statistics, the growth of the Japanese population last year fell very far below the one million mark; and the birth rate was the lowest since 1899, with the single exception of 1906. The natural increase in 1936 was only 871,523, or 12·40 per 1,000 of the population, the number of births and deaths being 2,101,920 (29·92 per 1,000) and 1,230,397 (17·51 per 1,000), respectively. In 1935 the natural increase was 1,028,623 (14·85 per 1,000), and the birth rate and death rate were 31·63 and 16·78. The decline in 1936 is thus accounted for both by a lower birth rate and a higher death rate.

The military authorities have given a warning against the physical deterioration of young recruits, to which considerable attention has been drawn, and the Government is contemplating the creation of a Ministry of Health.

Letters to the Editor

India and her Gold

TO THE EDITOR OF THE ECONOMIST

SIR,—In the concluding paragraph of his article on "India and her Gold," published in *The Economist* on June 19th, Professor P. J. Thomas raised an important issue. What should be the attitude of India towards a possible inflow of gold in the near future?

Gold imports into India may recommence as a result of the revival of liquidity and commodity demands for the metal. Rich countries hoard during depression, while poor countries hoard in prosperity. So far as gold inflows are caused by this factor, it would be neither desirable nor practicable to stop them wholly. Given the psychology of our people, if gold is not available, they will hoard silver or currency, which is worse. Even a moderate import duty on gold does not seem feasible; it might seriously disturb confidence and the value of present hoards of the metal. Moreover, so long as gold movements serve as one of the most important means of settling international balances, it will not be wise, with the rupee-sterling exchange fixed, to widen the margin between the prices of the metal in terms of the two currencies.

But all this does not necessarily imply a return to the full-blooded barbarism of olden times. Everything possible should be done to combat the commodity and liquidity demands of our people for gold. I would suggest a freer inflow of commodity imports especially of the cheaper variety, and State measures to extend facilities for liquid investments in forms that may appeal to the hoarder.

Besides the import of gold for the purposes mentioned above, it may flow in as a result of returning exported capital. There might also take place larger lending by foreigners to us. Should we allow this capital to enter our country in the form of gold or in the shape of commodities including productive assets?

A high level of revenue and protective duties and a high price of the rupee in terms of sterling would encourage the inflow of gold at the expense of goods, and conversely. But these are exactly the policies that find favour with the vocal section of the public and with our monetary authorities. The choice before the country is thus between a more liberal foreign policy in economic matters and a return to primitive ways in currency and social affairs.

Yours faithfully,
D. GHOSH.

University of Bombay,
Bombay.

Monetary Technique

TO THE EDITOR OF THE ECONOMIST

SIR,—In denouncing the U.S.A. Government's gold sterilisation policy the members of the Banking and Currency Committee of the House of Representatives demanded that a portion of the gold stocks be utilised towards paying off the public debt.

A corresponding increase in the reserve proportions of the banks would prevent the money being used for speculation because, under the Federal Reserve Act, the banks cannot draw on their "required" reserves except to meet existing liabilities, and cannot make new loans or pay dividends until such drafts have been repaid. The use of gold for the purchase of securities in the open market would therefore increase the funds available for investment by creditors only; and might result in loss, but not in general bankruptcy; the funds would tend to be transferred abroad because of the reduction of the volume of securities in the home market.

The banks would have to call in loans or sell securities to meet such transfers—thus reducing their deposits, and the Treasury would surrender its proportion of such reduction—thus reducing its gold stock.

A better method would be to allow the banks to draw on their impounded reserves, at a rate of interest above the current yield of long-term bonds, to be varied by the Treasury as circumstances might require. The banks would then lend freely at higher, but not at all at lower rates.

The further use of the gold reserve in redemption of debt would cease to be profitable when the Treasury was threatened with having to borrow from the banks, at a rate higher, *ex hypothesi*, than the yield of long-term securities, in order to maintain the reserve at a level sufficient to meet maturing obligations. But, meanwhile, the burden of debt would have been reduced and the yield of taxes increased.

Short-term rates of interest would then be permanently higher than the reduced long-term rate—thus putting an end to an anomaly of long standing. The readiness of governments to guarantee to pay a higher rate of interest for long than for short terms implies either a defeatist view of the State's solvency, or a serious acceptance of the Gilbertian notion that to increase the national debt is a desirable way of increasing individual wealth.

The restoration of international trade and amenities, so urgently needed in the case of peace, would follow quickly on such an injection of the gold reserves of creditor countries into international circulation—enabling outstanding debts to be paid off and the burden of the remainder to be reduced.

The U.S.A. clearly holds a key position, but is unlikely to amend her monetary practice in a way that would lead to the investment of American money in French rentes and other European securities unless France agrees, in the first instance, to resume her obligations in respect of her war debt. But, if the considerations suggested above have any substance, it should not tax the resources of British statesmanship to indicate, by example, a solution of the monetary difficulties of her partners in the Tripartite Agreement, and to negotiate an extension of that agreement in the direction indicated.

Yours faithfully,
A. C. DOBBS.

Co. Dublin.

The Price of Gold in U.S.A.

TO THE EDITOR OF THE ECONOMIST

SIR,—May I point out what appears to be an inaccuracy in your understanding of American laws relating to the price of gold and the weight of the dollar? In your issue of June 12, page 624, you remark that "President Roosevelt cannot at present reduce the dollar price of gold by more than a fractional amount without new legislation."

The Gold Reserve Act of 1934, which is our basic law on this subject, provides (by amendment of the "Inflation Act" of May 12, 1933) that the "weight of the gold dollar" shall be fixed by Presidential proclamation at a point somewhere between 50 and 60 per cent. of the former weight. President Roosevelt subsequently proclaimed a weight amounting to 59·06 per cent. of the former weight. This was taken as establishing a "price" of $35 an ounce, and this is the price which the Treasury has been paying.

This same Gold Reserve Act, however, makes a clear distinction between "weight" and "price," for Section 8 declares that:—

> With the approval of the President, the Secretary of the Treasury may purchase gold in any amounts, at home or abroad, with any direct obligations, coin, or currency of the United States, authorised by law, or with any funds in the Treasury not otherwise appropriated, at such rates and upon such terms and conditions as he may deem most advantageous to the public interest; any provision of law relating to the maintenance of parity, or limiting the purposes for which any of such obligations, coin, or currency, may be issued, or requiring any such obligations to be offered as a popular loan or on a competitive basis, or to be offered or issued at not less than par, to the contrary notwithstanding. All gold so purchased shall be included as an asset of the general fund of the Treasury."

Under almost identical powers (Section 9) the Secretary of the Treasury may sell gold.

From the foregoing, it appears that the Treasury may buy and sell gold at any price it pleases. The weight of the gold dollar seems to be little more than an abstraction. It would, of course, become a great deal more than that if the price were moved back to, say, $20·67 an ounce, whereupon the question would arise whether foreigners having dollar balances in this country, and wishing to withdraw in gold, were entitled to buy gold as a commodity, at a price, or to have their dollars redeemed as money, by weight.

Respectfully yours,
S. PALMER HARMAN.

Books and Publications

Industrial Assurance Attacked

WHATEVER work Professor Levy undertakes is sure to be carried out with thoroughness and ability, and this book on Industrial Assurance* bears all the marks of his unfailing industry. In covering his ground he has read voluminously and on every page of the book footnotes testify to the researches which preceded its writing.

This form of insurance is one of the strangest social phenomena of the nineteenth century, for it had its origin and found its adult strength in the fear of a parish funeral and in the passion of working folk to be "buried respectable." From this simple instinct it has built up a premium income of over £60,000,000 a year in weekly payments. Burial benefits are not, of course, the only objective of industrial policies, but they are the foundation on which the vast structure rests, though to most men of education this pre-occupation of the working classes with their own obsequies is simply unintelligible. What does it matter what happens to my body when the breath is out of it? But the passion for a respectable or a showy funeral is there and cannot be neglected. As Mr Mould said at the funeral of old Chuzzlewit: "The laying out of money with a well-conducted establishment where the thing is performed upon the very best scale binds the broken heart and sheds balm upon the wounded spirit." Plumes and horses after death are often deemed a solace worth saving for throughout a life-time.

The authors of this book plainly dislike the whole business. They hold that if the funeral-complex must be recognised the duty of providing for it should be undertaken by the State. In their view the State ought to incorporate an insurance against death in the national health insurance, thereby making it a compulsory instead of a voluntary business and guaranteeing the certainty of every insured person dying with enough money in the offing to bury the corpse. The most obvious advantage of this plan is that the cost of collection would be reduced by the abolition of the army of agents who now develop new business and collect weekly payments on existing policies. Make insurance compulsory and you get rid of the cost of canvassing. Collect the premiums at the source and you get rid of the cost of the weekly visit to the insured person's house.

Of all the complaints against the present system the high expense ratio has always been the most weighty. The Prudential years ago recognised its force when, by an extraordinary successful reorganisation, it reduced its ratio from 39 per cent. of its premium income in 1910 to 24.5 per cent. in 1931. Many of the other companies and most of the collecting societies have, however, been very much less successful. The ratio in too many cases is still almost grotesquely high.

However, Sir Arnold Wilson and Professor Levy, in their lengthy attack on the present system, are not content to base their case on expense only. They criticise almost every feature of industrial insurance as it is now carried on. They denounce the methods of agents. They assume that "life of another" policies, which are commonly nothing more than a sporting chance on the life of a relative, are wholly bad (though there is really much more to be said for them than for the ordinary burial policies), and they hold up to scorn the lessons in salesmanship which are provided for canvassers (though they probably do not materially differ from the advice to salesmen which every modern selling organisation finds essential to its business). But the heart of the problem lies here: is it better to have a State scheme that is compulsory, universal, uniform and comparatively cheap, or a private competition system which leaves the individual with freedom of choice to insure or not to insure, and probably costs a good deal more to run? We shall all answer the question according to our own bias.

Shorter Notices

"Youth in British Industry." By John Gollan. Gollancz. 344 pages. 6s.

Mr Gollan has made a thorough attempt to describe comprehensively and objectively the working conditions of young people in Britain. Although his comments are occasionally tendentious, he has on the whole succeeded in giving an impartial survey, and the facts he has collected from reliable sources are not calculated to make us satisfied with current industrial conditions. Mr Gollan makes telling use of the strictures of Factory Inspectors about the neglect of safety precautions; and the most recent reports have done nothing to allay the anxiety which this book expresses. Proper standards of remuneration, hours, health, safety and amenities are sparingly observed; and the various remedies which Mr Gollan suggests will accordingly arouse readers' interest. Educational reform, planned apprenticeship, the regulation of hours and conditions more stringently, and special care for the young unemployed are included in the "Charter of Youth Rights" which he proposes.

"Cacao Fermentation." By Arthur W. Knapp. John Bale, Sons and Curnow, Ltd. 171 pages. 10s.

Not since 1913 has any comprehensive work on the fermentation of the cacao seed or bean appeared, despite the importance of the process in cocoa and chocolate manufacture. From time to time papers have been contributed to various journals and societies, but it has hitherto been impossible to find the results of current research and practical experience in a single volume. Mr Knapp has filled this gap, and his book is likely to remain the standard work on this subject for many years to come.

MONEY AND BANKING

American Banking Problems

The American banking system is at present confronted by a major dilemma, which involves questions of banking organisation, monetary policy and even politics. This condition is due to certain recent developments which directly affect the level of future banking earnings. In the following article, an American banking correspondent discusses these developments and their probable short-term and long-term effects.

Although the fact is often overlooked in quantitative monetary considerations, a bank is a corporation organised and operated for profit. The profit consideration bulks large in the determination of policies of the individual institutions, and therefore of the institutions regarded in the mass. When the banking system consists of thousands of individual institutions, poorly integrated and diversified, as it does in the United States, profits inevitably are a more important consideration than they would be if only a few large, well-integrated and highly diversified banks were involved. The lack of training, education and experience traditional in the American banking system means that the profit motive is not offset by caution to the extent that might be desired. History attests this fact. Every student is familiar with the extent to which low-grade securities have been purchased and questionable loans have been made to obtain a high interest rate in the past.

The Federal Reserve Board compiles figures covering the earnings of all of its member banks. These tabulations recently became available for the latter months of 1936. Analysis of the figures shows that the Federal Reserve member banks (6,376, holding 67 per cent. of all American bank deposits on December 31, 1936) had earnings of $465 millions in 1936, compared with $557 millions for a larger number of banks in 1929. Thus prosperity has in a large measure been superficially restored. But the figures also show that, to an unprecedented extent, recent earnings have arisen from recoveries on doubtful debts and other items previously written off, and from profits on the purchase and sale of securities.

The following table summarises the figures for all Federal Reserve member banks during recent years:—

Millions of dollars

	Recoveries and Profits from Security Trading	Total profits*	Capital†	Total Assets†
1927	− 17	+ 447	5,341	44,888
1928	− 37	+ 504	5,899	48,935
1929	−115	+ 557	6,709	48,843
1930	−197	+ 307	6,593	47,058
1931	−447	+ 12	5,999	39,688
1932	−623	− 255	5,409	36,260
1933	−431	− 356	4,962	33,876
1934	−541	− 224	5,054	40,077
1935	−102	+ 212	5,145	44,122
1936	+147	+ 465	5,275	48,718

* Net, including recoveries and security profits.
† End of each year.

The improvement in business activity in 1935 and 1936 meant that many loans formerly considered worthless or doubtful regained quality, and that lower-grade bonds rose rapidly in price. Furthermore, given the steady and rapid easing of monetary conditions, the price of high-grade bonds also rose rapidly. Conservative standards permit none of these items to be considered as current income. The larger banks generally followed these standards, but this was not true of many of the smaller banks, which not only counted security profits and recoveries as current income, but paid them out in dividends.

Income of this character is, of course, non-recurring, and apparently has fallen off sharply this year. The bond market has declined somewhat and turned stagnant, and though general business continues at high levels, most of the recoveries which are possible have already been realised. Operating income this year has advanced only very little, if at all; the average income on all assets during the first six months of 1937 showed slight change as compared with that of 1936, and the volume of earning assets, as indicated by the weekly reporting member banks, has fallen a little lower than a year ago. Consequently, the aggregate earnings for all banks must now be running substantially below last year, and there will be a substantial decline for the whole of this year if present trends continue. This is not true, of course, of certain individual institutions, but conversely, others are showing no earnings at all.

There can be little doubt, therefore, of the existence of growing pressure in the American banking system to increase earnings. In the absence of the non-recurring items present last year, the achievement of an increase means that either the volume of earning assets must increase or the yield on earning assets must rise or expenses must fall. It is thus that the dilemma rises.

Expenses can hardly be reduced appreciably, as these have been cut to the bone during recent years. Interest on demand deposits has already been abolished by law, and interest on time and savings deposits has been reduced so far that little, if any, further reduction is practicable. Other operating expenses can hardly be reduced appreciably. Nor are the prospects for a higher yield bright. Monetary policy continues to favour easy money, and the activities of the monetary authorities suggest that easy money involves a continuance of existing low rates. Further, the very pressure of the banks to obtain a greater income means that they are and will be competing for earning assets, and competition for loans and investments does not point toward higher rates. Meanwhile, excess reserves continue to total between $800 millions and $1 billion. Furthermore, competition for assets is not confined to the banks, but exists also between the banks and other lenders (e.g. insurance companies) who also have a large volume of idle funds. Only if monetary policy were altered would there be the likelihood of a substantially better return, and there are no indications that the monetary authorities are thinking of any alteration.

The prospects for an increase in earnings assets sufficient to bring about earnings as high as last year—to say nothing of a higher level—are similarly open to question. In the first place, assuming that operating earnings continue at the same level as last year, a very rough calculation indicates that assets would need to be increased by something like $7,000 to $9,000 millions merely to offset the decline in the non-recurring income. Assets of $7,000 millions at 3 per cent. would produce $210 millions, less any operating expenses entailed. But such an increase would be greater than present excess reserves would permit. Average reserve requirements are about 20 per cent.; consequently, with excess reserves of $800 millions, additional deposits of only $4,000 millions would be possible without recourse to borrowing from the Reserve banks. During the past year reserve requirements have been raised to double the level since the World War; these higher cash requirements limit the outlook for banking profits.

Further, such a rise in assets—which would, of course, involve a similar rise in deposits—would apparently meet with the opposition of the monetary authorities. The Board of Governors of the Federal Reserve System, in a message to the Senate in February this year declared:—

> The present volume of deposits, if utilised at a rate of turnover comparable to the pre-depression levels, is sufficient to sustain a vastly greater rate of business activity than exists to-day. In order to sustain and expand recovery, the country's commerce, industry and agriculture, therefore, require a more complete and productive utilisation of existing deposits rather than further additions to the amount now available. The excess reserves . . . eliminated as a base of further credit expansion . . . could support an increase in the supply of money in the form of bank credit which beyond a doubt would constitute an injurious credit expansion.

And Mr M. S. Eccles, the Chairman of the Reserve Board, in a recent address, observed that "America had reached the stage in recovery at which it was no longer desirable to have additions either to banking reserves or substantially to the volume of deposits."

In any event, it is doubtful whether the banks could acquire any spectacular volume of assets. The expansion of assets for several years past has resulted largely from the sale of Government bonds to the banks in order to finance the Budget deficit. A small deficit is indeed contemplated for the fiscal year 1938, but Government departments, including the Social Security reserves, will purchase an amount of Government securities several times greater than its anticipated amount. While an expansion of private borrowing is likely, it will in all probability fall far short of what the banks apparently need to maintain their earnings.

The final conclusion is that if these conditions persist they may inaugurate a period of bank consolidations. Willingly or unwillingly, the banking authorities may find themselves faced with an inescapable need for widespread mergers, even in the face of much political opposition. Easy money policies, high reserve requirements, and the present organisation of the American banking system appear to be in conflict. The easy money period at the end of the last century brought consolidation of the banking system in England. The present period may well bring it to the United States.

Financial Notes

Shanghai War Risks.—Ten days ago cargoes could be insured against war risks to Shanghai at 2s. 6d. per cent. above the normal rate and to ports north of Shanghai in China at 5s. per cent. above the normal rate. Thus if a cargo were shipped to Shanghai from London the war rate was 7s. 6d. per cent.—no risk after discharge from steamer. If to North China 10s. per cent. On August 12th both rates were increased by another 5s. per cent. But the events of last week-end had an immediate effect and the market rate both for Shanghai and Northern China was pushed up to £3 per cent., no risk after discharge from steamer, and £10 per cent. if the risk was covered right through to the warehouse. Those are the rates to-day at which cargoes are being insured, but whether they will ever reach Shanghai is at least doubtful. Some cargoes, it is known, are to be discharged at Hong Kong. One or two hulls have been insured at Shanghai at £3 per cent. per month. The interest of the insurance market on land is small, thanks to the agreement of last year not to accept war risks on property ashore. A few insurances are still running, and one of a considerable size will expire early in September. Shanghai has proved again the wisdom of last year's agreement.

★ ★ ★

The Foreign Exchanges.—The Paris Exchange rate was quiet early in the week, with the spot rate held by the French authorities at Frs. 132⅝, but spot francs came on offer on Wednesday, and the rate eased to Frs. 132⅛-133. The market is beginning to look ahead to the end of the tourist demand for francs and to the cessation of the present good revenue receipts. Moreover, the offer of 4 per cent. Treasury bonds, to replace Frs. 5,000 millions of maturing 4½ per cent. bonds, has had to be kept open for a week longer than was intended, so that subscriptions appear to be coming in very slowly. Three months' francs at one time widened to Frs. 5 discount, but have since returned to Frs. 4½ discount. This weakness is partly technical, as many open positions are now maturing and are being extended for a further three months. Dollars are weak at just over $4.99, mainly because of the absence of any demand, commercial or otherwise. Belgas, guilders and Swiss francs continue to follow the dollar, but three months' belgas have stiffened from one to 2½ cents premium. Hong Kong and Shanghai dollars are a shade firmer at 1s. 3 1/16d. and 1s. 2⅛d., respectively. The Hong Kong dollar is reacting to transfers of money from China, but the firmness of the Shanghai dollar is not easy to understand. Still, the Shanghai rate has hardly moved at all, and business now is very limited.

★ ★ ★

The Money Market.—In spite of this week's temporary reduction in bankers' deposits, explained in the Note on the Bank return, the clearing banks had no difficulty in meeting a fair afternoon demand for loans. There are, however, further signs of a growing shortage of outside money available for borrowing against bonds. Early in the week up to ⅞ per cent. was paid for loans against bonds, but by Thursday the rate had eased to ⅝ per cent.

	July 29, 1937	Aug. 5, 1937	Aug. 12, 1937	Aug. 19, 1937
	%	%	%	%
Bank rate	2	2	2	2
Clearing banks' deposit rate	½	½	½	½
Short loan rate:—				
Clearing banks	½-⅝-1*	½-⅝-1*	½-⅝-1*	½-⅝-1*
Others	½-⅝	½-⅝	½-¾	½-⅝
Discount rates:—				
Treasury bills	½	½	½	½
Three months' bank bills	17/32-⅝	17/32-⅝	17/32-⅝	17/32-⅝

* Loans against Treasury bills and other approved bills and British Government securities within six months of maturity; 1 per cent. Treasury Bonds and other gilt-edged stocks within six months of maturity; and other collateral respectively.

On August 13th, the market secured 46 per cent. of the Treasury bill allotment of £45 millions. This was a better result than the previous week, and so business in bills has been a little brisker. The clearing banks, however, were only moderate buyers of bills.

★ ★ ★

The Bank Return.—A further £6.9 millions of notes have returned from circulation, and the Reserve has now been restored to £36.8 millions. The bulk of the holiday notes have now returned, and the reflux during the past fortnight was rather greater than a year ago.

BANK OF ENGLAND

	Aug. 19, 1936	July 28, 1937	Aug. 4, 1937	Aug.11, 1937	Aug.18, 1937

Owing to the Coronation and Whitsun, there were no Treasury bill maturities on August 12th, 16th or 17th, and so the market had more to pay out for new Treasury bills than it received in repayment of old bills. In consequence, there has been a temporary transfer of funds from bankers' to public deposits. Meanwhile, the increase in the Reserve has been off-set by a drop in Government securities, which during the holidays had been kept on the high side. The result of all this was a drop of £5.1 million in bankers' deposits, but this should be rectified when the present inequality between Treasury bill payments and maturities has worked itself out.

THE STOCK EXCHANGE

Investing in Motor Shares

AN article in last week's issue of *The Economist* (page 328) argued that the " expansion " demand for new private cars should not be measured—as it commonly is—by the annual increase of vehicles on the road. As the annual mortality of cars (on an average life of, say, eight years) would correspond roughly with the number of cars first registered eight years before, it would follow from this usual assumption that replacement demand would merely equal the sales recorded in an era of development long past. We suggested, instead, that the proper replacement demand for new cars should be more accurately related to a cycle of about three years.

If this argument be correct, it suggests that the replacement element in the market (which must necessarily be more stable than the expansion element) represents a larger proportion of the total demand than has hitherto been supposed. It would follow, therefore, that motor manufacturers should enjoy a more stable market than investors generally are disposed to assume. It was, perhaps, no accident that, during the depression, sales were maintained remarkably well. Nor is it to be expected that, in any ordinary circumstances, expansion demand will be suddenly reduced from a large to a negligible figure. The results of our analysis strongly suggest that if the decline in expansion demand were to occur, say, over a period of one-and-a-half to two years from start to finish, sales recorded only three years earlier would then be providing replacement demand, just when the lack of expansion demand was being seriously felt.

It is possible to obtain some rough measure of the movements from year to year in the turnover of the private car industry. For 1930-34 the Census of Production and " Import Duties " figures give precise information. During this period interesting movements occurred. By applying the Society of Motor Manufacturers and Traders' index of prices to an index of output, investors may obtain a fair guide to fluctuations in the value of annual turnover during the period. The result of these calculations for 1934 gives a figure of 115, against 119 for the " Import Duties " figures. The following figures, therefore, can be taken to indicate approximately the movements of turnover, based on 1930 = 100:—

TURNOVER OF PRIVATE CAR MANUFACTURERS (1930=100)

Year	Index	Year	Index
1929	118	1933	116
1930	100*	1934	119†
1931	83	1935	144*
1932	88	1936	160§

* Census of Production figures. † " Import Duties " figure. § Estimate, approximate only.

Owing to the technical nature of the S.M.M.T. price index (which records a fall if the horse-power offered for a given price rises), this index is probably a better indicator of turnover for the years 1929 and 1931-33 than an index similarly calculated for 1934-36. But the figures show that for the first part of this period the fall in total turnover, though great enough to be uncomfortable, was far from disastrous.

The probable sequence of events during a phase of falling turnover may next be examined. In the first place, maturing replacement demand (as measured by our suggested three-year cycle) would be capable of some postponement if necessary. Alternatively, replacement might be effected, but with cheaper models. Under such circumstances, price reductions for a given model might help to some extent to maintain output. But a more important method of maintaining sales was evolved during the depression, when, under the lead of Standard Motor, a new class of 10-h.p. car was produced which offered much of the economy of the older " baby " car, coupled with accommodation approaching that of popular models in the 12-h.p. class. It is conceivable that, under pressure of falling sales, the industry might produce some analogous technical advance.

Apart from the fortune of producing a model to fit the times, however, the normal effect of depression is to divert replacement demand from more expensive to less expensive models—the exact converse of the situation during recovery. It follows that the producer of higher quality cars must expect greater fluctuations than the popular makers. The following indices of profits (1930 = 100) show the combined profits of Morris, Austin and Standard as a " popular " group, while the " more expensive " group includes the profits of Rover, Riley, Humber and Alvis. The Ford company's profits are excluded from the popular group, for the period included a transition from one conception of Dagenham to another, and Continental profits are now excluded from the British company's accounts. But even if the Ford figures were included, the popular index would remain much the more stable of the two:—

PROFITS INDEX—1930=100

	" Popular "	" More Expensive "
1929	98	79
1930	100	100
1931	68	(*a*)
1932	75	(*a*)
1933	58	123
1934	79	273
1935	115	263
1936	142	N.A.

(*a*) Combined losses recorded for these years.

Two obvious conclusions may be drawn from these figures. First, the manufacture of more expensive cars, though not necessarily less profitable over a period than the manufacture of popular cars, is doubly speculative from the investor's point of view. Not only do the fortunes of the group as a whole fluctuate widely during the course of the trade cycle, but also the fortunes of individual makers must move even more widely, compared with the group average. The shares of the smaller manufacturers are thus emphatically reserved for the specialist with inside knowledge. On the other hand, the shares of typical " popular " producers are now weighted with little more than normal industrial risks. They can, at least, be treated in this way by a substantial investor who can afford to hold a balanced selection of the shares. Individually, all motor shares suffer appreciably from the risk that a given year's model may fall behind its competitors—though experience suggests that even this hazard is tending to diminish for the popular makers.

As may be seen from the table of prices and yields on the opposite page, the market is not settled in its mind regarding the proper valuation of motor shares. The spread between a yield of over 6 per cent. on Morris shares and of little over 3 per cent. on Standard is manifestly large. Is it not, indeed, too large? Austin yields over 5½ per cent., and Ford about 4⅝ per cent. On Morris, Austin and Ford combined the average yield is almost 5½ per cent. In view of the relative stability enjoyed by these popular leaders, a mixed holding of their shares is probably the best investment which the industry has to offer. Among the other companies, quotations in some cases reflect confident hopes, in others the caution embodied in 8 per cent. yields. Yet it is surely inevitable that depression would bear heavily on the smaller makers as a whole, and for some concerns profits would be converted into losses.

A very different basis of valuation might thus be found

if the industry's output began to fall. The shares of smaller companies, we repeat, are best left to the specialists. Among the rest, diversification may be advised. But even diversification would be only a safeguard, tending to limit losses rather than prevent them if circumstances became adverse. It would be untrue to say that circumstances are becoming adverse in a positive sense; a glance at the favourable registration figures of recent months should reassure the pessimist on this point. During the present phase of prosperity, the car purchaser appears willing to pay a few extra pounds, and by their decisions to increase prices, manufacturers should be able to cover a considerable part—if not all—of their prospective increases in costs. Nevertheless, the cost-price relationship may present a more acute problem in the future. It is possible, in brief, to make out a case for diversified investment in carefully selected motor shares. It is quite another matter to credit the group with possibilities of large-scale capital appreciation at this stage.

Investment and Company Notes

A Stock Exchange Charter?—The Report of the Departmental Committee on Share-Pushing (reviewed in *The Economist* last week) has raised, as a by-product, an issue normally reserved for perennial discussion by reputable financial journals in the dead season—namely the expediency of granting a charter to the London Stock Exchange. The Committee mentions the possibility only to reject it, on the ground that the Stock Exchange " is by no means wholly in favour of being in any way controlled." It is, in fact, nearly sixty years since a Royal Commission recommended, by a majority, that a Royal Charter should be granted, but the suggestion has remained in the dusty limbo of forgotten conclusions. The case for a charter is, in itself, fairly obvious. The Stock Exchange—whose scope and importance have been greatly increased since 1878—is an indispensable part of the machinery of the world's greatest financial centre. The status of a private club, with an anomalous system of dual internal control, is not quite consonant with the House's dignity and responsibilities. However its members may value " the glorious privilege of being independent," the policy of those in control has been and must continue to be based on a progressive interpretation of the demands of public opinion and the requirements of public policy. By the same canon, even the most conservative of Stock Exchange members would acquiesce in a change of status if they were convinced that it would increase the usefulness of their institution.

★ ★ ★

The question of a charter should, in fact, be decided not by sentiment but by need. Should the Stock Exchange (and the Provincial Stock Exchanges) be given a monopoly of share dealing? The Share-Pushing Committee's Report brings out one fact which has not, perhaps, been universally realised—that the London Stock Exchange with its 4,100 members, and the other recognised stock exchanges with their 1,365 members, already include the great majority, by numbers, of those whose profession is dealing in stocks and shares. The " outside " stock and share dealers number, according to the Committee, no more than 600 to 800. The majority, by the Committee's showing, do, on the whole, a reputable and useful business, and there would be only one fundamental bar to their ultimate inclusion as members of a chartered stock exchange—their facilities for advertising, which, presumably, they would be unwilling to relinquish. This has been the real rock on which efforts to secure support for a charter have hitherto split. Sooner or later, however, the powers that be will have to decide whether the abuses of the present system outweigh the inconvenience of an enforced choice between advertising by all or by none.

★ ★ ★

Markets and the Far East.—The City this week has taken a serious view of the Shanghai fighting upon the British interests involved in the area. Despatches suggest that the personnel of the public utilities, banks and large mercantile concerns are safe, but that losses through the bombardment of Chapei and the mercantile districts are already heavy. Many Stock Exchange observers are pessimistic, in view of the scale of Japanese preparations, but all regard the protection of British interests—promised in Tuesday's official *communiqué*—as imperative. It is estimated that British interests are involved in China to the extent of some £250 millions, of which £200 millions consist of commercial investments. An appreciable part of this sum is represented by the assets of private houses of long standing in Shanghai and the East. But there are also a number of banking and trading concerns whose shares are listed on the London Stock Exchange, which have also suffered appreciably. The effect upon Chinese and Japanese bonds has inevitably been serious. In theory, cover for Chinese Customs and Salt loans may still be adequate, even on the worst assumptions about Shanghai, and there is a fairly widespread view that the foreign debt service of Japan is so small that default need never be envisaged. But such conclusions are barren while a state of war exists, and meanwhile the quotation of increased rates for certain classes of Japanese bills is evidence of deterioration in Japan's short-term credit. Finally, the diversion of cargo from Shanghai to Hong Kong and other ports must react adversely upon shippers and shipping companies.

★ ★ ★

Effect on Prices.—Although domestic fixed-interest and industrial shares have tended slightly to revive after the first impact of the week-end news, there are few signs of recovery among the Sino-Japanese securities

OVER ONE HUNDRED AND TEN YEARS OF SERVICE
SCOTTISH UNION & NATIONAL
INSURANCE COMPANY
ASSETS EXCEED £16,000,000
FIRE LIFE ACCIDENT MARINE
Edinburgh: 35 St. Andrew Square
London: 5 Walbrook, E.C.4, and 45 Pall Mall, S.W.1

immediately affected. In the following table we compare the prices of such securities at the beginning of the year, immediately before the Peiping incidents, and at successive stages of the Shanghai hostilities :—

	Jan. 7, 1937	July 8, 1937	Aug. 12, 1937	Aug. 16, 1937	Aug. 19, 1937	Fall from July 8
Chinese Bonds						
Boxer	102	105	92	89½	92½	12½
5%, 1912	83	95½	80	73½	70½	24¾
Pukow Rly., 1908	55½	78	59	50	45	33
Nanking Rly.	74½	90½	67	60	50	40½
Japanese Bonds						
5%, 1907	78½	83¾	72½	67½	60½	23¼
5½%, 1930	81½x	86	75	70½	65½	20½
Commercial Securities						
Hong Kong & Shanghai Bank	110½	118	110½	101½	98	20
Chartered Bank of India, A. & China	15⅞	15 9/16	14 9/16	13¼	13¾	1 7/16
British American Tobacco	6 31/32x	6¼	6¼	5 15/16	6 1/32	7/32

During the first half of the year, China's credit rating was helped by evidence of greater national consolidation, and by her readiness to settle debt problems in a reasonable way. Further financial assistance had been afforded her for railway construction, and the possibility of a large loan was being canvassed at the moment when hostilities broke out. The extent of the subsequent decline in the railway bonds reflects the market's estimate of their vulnerability to war damage, in the widest sense of the term. Meanwhile, the market can find no answer to the question why Japan, with her vulnerable finances, has chosen war rather than peaceful penetration. Acting on the only possible inference, it has continued to mark down Japanese bonds.

* * *

Tithe Stock.— A stranger, in a garb of clerical cut, was introduced to the gilt-edged market of the Stock Exchange this week. The nomenclature of many gilt-edged stocks bears picturesque testimony to their origin. "Consols," War Loan, and Victory Bonds are samples —not to mention less familiar securities like Egyptian Government Guaranteed Loan, Irish Free State Land Bonds, and Turkish Guaranteed Loan, which dwell below the line dividing the Treasury's own children from its adopted family. On this occasion the powers have chosen a rather colourless title (3 per cent. Redemption Stock 1986/96) for their latest child. The stock has been created, under the Tithe Act of 1936, to provide compensation for the extinction of tithe rent charge. The first "quotation" for the new stock appeared in last Wednesday's *Supplementary List*, but no dealings were effected and the market had difficulty in finding a basis for an official price. The closest parallel to the new stock is offered by 3 per cent. Local Loans stock, but the latter has no fixed redemption date, whereas Tithe Stock has a long but closely defined life, and carries a sinking fund from 1942 onwards. Its duration, on the other hand, is considerably longer than the many British corporation redeemable loans which bear interest at 3 per cent. Perhaps the closest parallel of all is Metropolitan Water Board 3 per cent. "A" stock, whose final redemption date is 2003.

* * *

The upshot of Wednesday's cogitations was an initial "nominal quotation" for the newcomer of 86-88, against 85-86 for Local Loans (which include about 10s. less accrued interest), and 86-89 for Metropolitan Water Board "A." Dealings were recorded on Thursday on the basis of 87⅞. Whether the new security will have a really active market is doubtful. It will be placed, from the outset, in what are technically called "strong hands"; for the greater part of it will go to Queen Anne's Bounty and to the Ecclesiastical Commissioners, and the remainder to the Welsh Church Commissioners, universities, colleges, churches, and other owners of other lay tithe rent charge. No part will be issued directly to individual incumbents or ecclesiastical corporations. Possibly this condition may not be wholly displeasing to the members of a recent Board of Trade Departmental Committee.

* * *

Wall Street Outlook.—By last week-end Wall Street's two-month recovery had brought prices within sight of the peak touched early in the year. This week prices have drifted steadily downward. It seems generally agreed, at least outside New York, that the industrial prospect in America would justify greater confidence than Wall Street has demonstrated. The market has been dominated by fear of Washington and by the firm hand of the Securities and Exchange Commission. Consequently, the difficulties which now confront the President have encouraged professional operators, who await anxiously the adjournment of Congress. The hand of the S.E.C. is not so easily avoided. The annual report of the New York Stock Exchange attacks restrictions on the ground that they reduce the volume of business and affect liquidity. New charges are being suggested to compensate for the shrinkage of business. It is doubtful if protests against the operations of the S.E.C. will have much effect, and the British investor would do well to assume that regulation will continue along its present lines. While the economic prospect in America may seem better to the British investor than it appears to Wall Street, a special obstacle may be ahead for the outsider in the shape of higher taxes. The Special Joint Congressional Tax Committee recommended that both normal and sur-taxes should be levied on non-resident aliens with incomes of over $21,600, who were to be required to file income tax returns. Above this income the rate of taxation on American schedules would exceed the 10 per cent. withholding tax now in force. The House Ways and Means Committee has reported favourably on a bill which follows the joint tax committee's proposals, and this tax bill may possibly be passed by both chambers before the adjournment. But it should not be taken as the last word in the matter, since the necessary sting to the bill is lacking. Mr Marriner S. Eccles had proposed that the withholding tax should be raised to around 25 per cent. to compel non-resident aliens to file returns. The bill, as now proposed, does not include this essential element, and if, as is highly probable, aliens continue to ignore the present taxes, as they did in the past, further steps may be taken by the Administration to tighten up control. But this is not a development which need be anticipated in the near future.

* * *

Are Shipping Shares Too High?—There has been appreciable profit-taking in shipping shares in the past fortnight. The two Realisation issues, after touching 55s. 6d. for E.D. and 54s. 6d. for R.M., are now quoted at the common level of 52s. P. and O. deferred reached 34s. 1½d., and has reacted to 31s. 6d., but Royal Mail Lines and Furness Withy have held their position more successfully. Undoubtedly, technical considerations have contributed to the decline, for the advance was too hot to last. But some quarters in close touch with the industry appear to be doubtful whether present levels are themselves justified in relation to probable dividend expectations. The course of shipping freights in recent months has not been conclusive on the point, although conditions of boom are being experienced in certain markets. With the growth of British exports—particularly of coal—more remunerative outward cargoes may well be secured. But such considerations apply mainly to the tramp companies. The cargo liner concerns experience smaller fluctuations in depression and recovery. To measure the share prospects of such companies solely by reference to published freight rates is to exaggerate their prospective share in the improvement of the

industry. Further, their costs under the headings of wages, bunkers and stores, have significantly increased. There has, indeed, been a certain over-eagerness to discount increased future dividends, but this is no guarantee that the market's appetite will not again revive. The forthcoming distribution of the Union-Castle ordinary stock by the two Realisation companies may provide a test for the bulls, who hold that in due course the stock will command an appreciably higher price than the 27s. 6d. per £1 indicated by the present quotations for the Realisation issues. The test of a higher price will come later still.

* * *

Cotton Share Prospects.—The past few days have produced further information which provides the basis for a revised view regarding the situation of the cotton textile trades. Two important companies have published encouraging results. Tootal Broadhurst Lee (whose accounts were discussed in *The Economist* a fortnight ago) showed an advance in net profits, from £155,000 to £205,000. This week, Calico Printers announced a net profit of £116,174, against a net loss for the year to June, 1936, of £47,247. The profit does not cover a full year's preference dividend (which requires £150,805), but a half-year's dividend to December, 1935, is to be paid, and the credit balance of £83,351 is almost doubled. Although the ordinary shareholders are still some way from receiving dividends, the results of the company are of particular interest, since they reveal the big advance made last year in the exporting branch of the industry, which had hitherto tended to lag behind. The total value of cotton manufactures of all kinds exported in the first seven months of the year, according to the latest returns, rose to £40,722,000, an increase of £5,455,000, or 15.5 per cent. over the same period of 1936, which had been rather less favourable than 1935. Nor do the latest statistics bear out the common assertion that the greatest gains have been made, not by piece-goods, but by yarns. The reverse is true of the latest figures. The immediate future, however, depends largely upon the possibility of a further expansion of exports, and this, in turn, is associated with the general trend of prices for primary commodities. War in the Far East may provide adventitious benefit for Lancashire. At present, unemployment in the industry slightly exceeds 10 per cent. after a continuous fall for some months, and a further decline, which would reduce the percentage below the national average, is not unlikely, if and when the present uncertainties are removed. From the point of view of profits, however, another factor enters: the break in cotton prices after the publication of the biggest United States crop estimates since 1932. This may entail some appreciable inventory losses for concerns which hold large stocks. Investors should continue to confine their speculative interests to the large spinning concerns and to the defaulted preference shares whose prospects are improving.

* * *

Simms Motor Units Scheme.—In 1935, this concern earned its first net profit—of £6,252—since 1930 before writing off £11,998 for development of new products. Last year a net loss of £701 was recorded after providing £12,000 for the same purpose. No dividend on the £100,000 7½ per cent. preference shares has been paid since 1931, and no ordinary dividend since an interim of 2½ per cent. was distributed in 1930. In view of the existence of an accumulated debit balance of £59,092 and of qualifications on the accounts regarding the value of fixed assets, a reconstruction scheme has been indicated for some time. It may be doubted, however, if the prospective earnings outlook is sufficiently clear at the moment to justify irrevocable capital charges on the lines now proposed to shareholders. Altogether some £109,657 is to be written off fixed assets and goodwill, and the total is raised to £168,750 by the inclusion of the debit balance. The ordinary share capital, accordingly, will be written down by this amount to £81,250. Preference shareholders are asked to sacrifice claims to £37,500 of dividends, and to consent to a permanent reduction in their dividend rate from 7½ per cent. to 5 per cent. In return they will receive 75,000 5s. ordinary shares out of 325,000 shares to be issued. This might well have been offered as equitable compensation for the cancellation of dividend arrears, but as a return for the partial abandonment of preferential rights in perpetuity it appears wholly inadequate. It would imply that net profits of £15,000 approximately would be required to provide the cash return to which preference holders are at present entitled on earnings of £7,500—and this on the assumption that profits were fully divided. It is no part of the duty of preference shareholders to make sacrifices whose results inure wholly or mainly to ordinary shareholders. Circumstances suggest, on the whole, the expediency of postponement and presentation of a revised scheme when the earnings prospect is clearer.

* * *

Henry Briggs Son and Company.—Although sharp recoveries in coal-mining earnings have been frequent this year, the 60 per cent. rise in profits of this West Yorkshire colliery company is one of the most satisfactory improvements recently announced. Before the first signs of recovery in 1935-36, profits had varied within a comparatively narrow range for six years. This stability may have been only superficial, since total profits throughout exceeded ordinary dividends by only a trifling margin. More recent earnings are shown in the following table. Although the report brings good tidings, it is by no means expansive upon details of revenue and expenditure. Profits are analysed on the following page.

COMMERCIAL SERVICE
The Bank has over 370 Branches in Africa, and Agents and Correspondents throughout the world. The closest touch with Trade and Industrial conditions is maintained, with special attention to Commercial and Credit Intelligence. This service is available to Exporters, Importers and others wishing to develop trade with South, East and Central Africa.

THE STANDARD BANK MONTHLY REVIEW is sent post free on application.
It gives the latest information on all South, East and Central African matters of Trade and Commercial Interest.

	Years ended June 30		
	1935	1936	1937
	£	£	£
Profit	52,607	65,143	103,271
Directors' fees	1,694	1,672	1,450
Ordinary shares—			
Earned	*50,913*	*63,471*	*101,821*
Paid	49,181	49,181	65,575
Earned %	*7·8*	*10·4*	*17·4*
Paid %	7½	7½	10
Investment depreciation	...	10,000	10,000
Overpaid mine rents	2,000	...	8,000
Reserve account	...	5,000	20,000
Carry forward	48,988	48,278	46,524

The directors underline their warning regarding the possible future effects of rising costs by treating the increase in dividend as a cash bonus. The main feature of the accounts, however, is the much wider margin between earnings and distribution. A reserve for overpaid mine rents is revived with an allocation of £8,000 (against £2,000 in 1934-35); the allocation of £20,000 to reserve (making a total of £150,000) represents four times the previous year's provision; and £10,000 is again set aside for the depreciation of investments. These stand in the balance sheet at £406,871, or nearly 24 per cent. of all assets. The nature and value of these investments is of some relevance to the liquid position, which, if the investments are omitted, again shows an excess of current liabilities. This situation, however, is but an imperfect guide to the liquidity of the company for trading purposes, for current liabilities include debts owing by the company and an unknown amount of credit balances. The more important changes in the balance sheet include an increase from £34,000 to £62,000 in stock, and from £59,000 to £137,000 in cash. The latest accounts, coupled with the maintenance of a 7½ per cent. dividend throughout a series of difficult years, are a good augury for the near future. The £1 shares are only available on the Yorkshire Stock Exchanges.

★ ★ ★

Store Dividends and Prospects.—Within the past fortnight seven London department stores have declared interim dividends—in six cases at the same rate as a year ago. The fact that there have been few changes is not significant by itself, but it invites shareholders to review prospects for the complete year. Harrods and their subsidiary, Dickins & Jones, with a progressive profits record in recent years, are each paying 5 per cent. D. H. Evans also pay 5 per cent., which compares with 15 per cent. on a capital since increased by a bonus of almost 200 per cent. Both this business, and that of John Barker, who repeat a 5 per cent. dividend, have been affected latterly by rebuilding operations, which may increase profitability in the long run, though investors have often been reminded that improvement in amenities is sometimes necessary to preserve an existing position. The repetition of a 10 per cent. interim payment by William Whiteley is even less of a pointer than the other distributions, since the Selfridge & Co. guarantee of an annual dividend of 25 per cent. has not yet expired. Whiteley's, however, have been able to earn a gradually increasing proportion of this distribution. Another store that has been paying the same dividend throughout a number of years is Frederick Gorringe, which declares the usual 3½ per cent. interim payment. The recent consolidation of the finances of Peter Robinson is followed by a resumption of interim dividends, with a payment of 1 per cent. It is to general considerations, however, rather than to recent dividend announcements that the shareholder must appeal for an interpretation of this apparent stability.

HOTEL WESTMINSTER
Le Touquet

The theme of rising costs, which throughout this year has been continually stressed by company chairmen, was not prominent in the speeches of department store chairmen earlier this year, although Mr Purkington, at the Frederick Gorringe meeting, spoke of increases in certain indirect expenses. A store whose wares cover a vast range of prices is less handicapped in readjusting selling prices than a dealer in a single commodity. But it is a matter of observation that selling prices in department stores are rising, and this suggests that store companies are not escaping the common experience. The outlook for the ordinary shareholder is therefore highly dependent on the ability of the stores to increase their turnover. Judging from the Retail Distributors' Association's index of retail trade activity there are reasonable prospects of a moderate increase in the volume of trade, though it is impossible to separate growing turnover from increasing prices. From February to June the average index of total sales for Great Britain was 121 against 112 in 1936—a satisfactory increase of 8.2 per cent. For Central London, however, the increase was only 7 per cent. Taking May alone, the discrepancy between London and the country as a whole is very pronounced, the improvement over 1936 being 3½ per cent. against 13½ per cent. respectively. The bus strike appears to have offset the benefits of the Coronation, although it seems that a certain amount of lost ground was made up in June. Owing to the importance of Christmas trading for London stores, there is perhaps some room for a modest increase in profits for the current year, but in view of the possibility of " consumers' resistance " to sharp price increases, investors should not take larger earnings for granted.

★ ★ ★

Greyhound Racing Shares.—In the table below we give details of the earnings and dividends of five greyhound racing concerns. It will be remembered that, under the Betting and Lotteries Act of 1934, 108 days of racing were permitted, and the companies were allowed to deduct 6 per cent. of the totalisator pool for expenses. Before the Act came into force the " Tote " had been illegal for some months, following a legal decision, and much uncertainty existed whether the popularity of the sport would be renewed. The actual consequences in the two following years are graphically shown in the companies' results :—

Description of Share	1934		1935		1936		Share Price, Aug. 18
	Earned %	Paid %	*Earned* %	Paid %	*Earned* %	Paid %

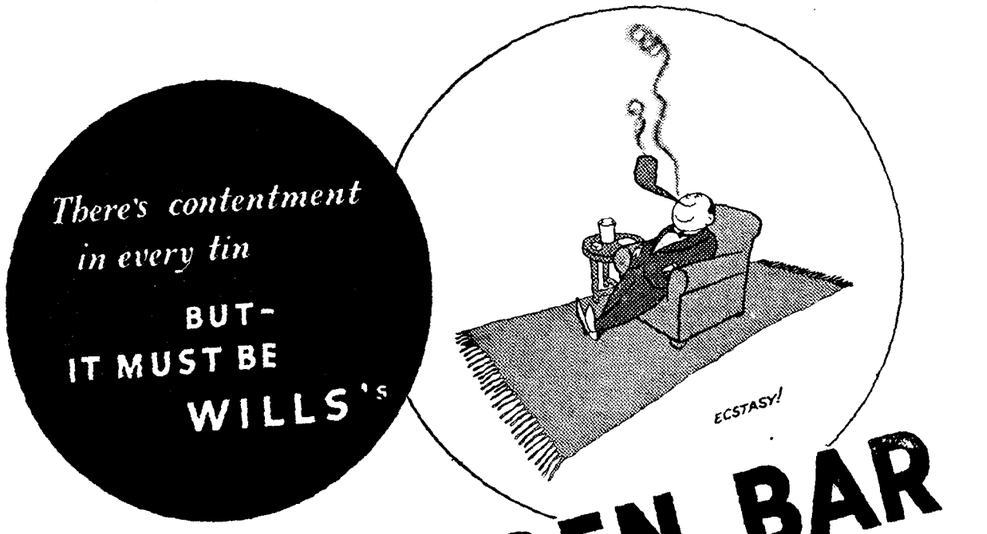
1s. deferred	*38·0*	15·0	*44·3*	30	*175·1*	80·0§	12/6



* Years from May 31. ‡ Years from February 28. † 54 weeks.
§ Capital bonus of 100 per cent. on deferred and 25 per cent. on preferred.
** Years from September 30.

In every case, earnings have increased at a very rapid rate. Expressed as percentages on the rather eccentric equity capitalisations of the companies, earnings have now attained fantastic proportions. The South London Greyhound 1s. deferred shares, for instance, are so highly " geared " that earnings were equivalent to 175 per cent. last year. It is clear that the 6 per cent. expenses deduction has enabled the companies to derive substantial profits from the immense and increasing popularity of the sport. Since it can only be reduced by new legislation—which seems unlikely at present—the only threats to profits would come from an extension in the number of licences granted (which was scarcely envisaged in the Act) from a withdrawal of licences when they come up for renewal in 1940 (which would be criticised as an arbitrary measure) or from a reduction of patronage for economic reasons. In effect, competition has been restricted by law, and unless fashion changes or incomes fall, shareholders appear to possess an interest in a highly protected industry. But they must also recognise the speculative nature of their shares, particularly in relation to any recession in trade.

★ ★ ★

Broken Hill Proprietary—The increased prosperity of this Australian undertaking is indicated in a cabled summary of the annual report. In October last year an issue of 1,482,660 shares was made to shareholders at 30s., to finance a comprehensive scheme of expansion at the company's iron and steel works in New South Wales. In their summarised report for the past financial year, the directors state that all departments were fully occupied and that production reached a new record. The increase is most impressive for steel, 783,140 tons being produced during the year, some 199,860 tons more than in 1935-36. Production of pig iron rose by 62,080 tons to 669,530 tons. From the properties at Broken Hill, where mining was resumed towards the end of the previous financial year, nearly 100,000 tons of ore were extracted. It may also be assumed that the company derived increased revenue under various miscellaneous headings. After providing £670,800, as against £615,050, for depreciation, a net profit of £1,183,170 is shown, which is £332,810 higher than for the previous year. The dividend rate is unchanged, but a substantially larger amount of capital now ranks. For complete particulars of the year's results investors must await the annual report. On the basis of dividends at the rate of 1s. 3d. per half-year, the indicated yield is approximately 4 per cent., which discounts increased payments in the future.

Company Results of the Week.—Seven additional reports are analysed on page 407 of this issue in our usual table. Two Ind Coope subsidiaries, *Alton and Company* and *Strettons Derby Brewery*, maintain their ordinary dividends. The first concern, however, shows an appreciable reduction in net profits for the past year. Precise comparison of the profits of *Ismay Industries* is difficult, since the previous profits related to a period of approximately 14⅛ months. In certain respects, however, the net profit of £52,384 is disappointing, for by far the greatest contribution to total income is still made by the company's lighting interests. The newer sections of the concern, owing to delays in building and production arrangements, have yet to provide an adequate return. The reduction in the dividend from 10 per cent. to 6 per cent. was somewhat greater than the market had expected. The report of *Tyne-Tees Steam Shipping* shows a satisfactory expansion of profits from £41,484 to £48,720, the dividend being maintained at 5 per cent. *Wilson Bros. Bobbin* and *Merchants' Warehousing* profits are slightly reduced. Declaring an interim dividend of 8 per cent., compared with 6 per cent. a year ago, the directors of *General Refractories* announce that sales have increased by over 50 per cent. and that trading profits are substantially in advance of those of the corresponding period last year, having increased by 40 per cent. during the second three months. A consolidated statement as at March 31st will be distributed with the dividend warrants. Increased profits are announced by *Wardle and Davenport*. Net earnings amount to £20,290 compared with £16,606, but the payment of a final dividend of 2½ per cent. tax free maintains the total distribution at 4 per cent. The announcement of a dividend on *Cable and Wireless (Holding)* 5½ per cent. preference stock for the half-year to June is the first interim payment since 1931.

THE WEEK IN THE MARKETS

THE STOCK EXCHANGE

SETTLING DAYS

TICKET: AUGUST 24 ACCOUNT: AUGUST 26

NOT since the "Sanctions crisis" of September, 1935, has the market taken so seriously to heart the threat of undeclared war. The bombardment of Shanghai, however, has been received with greater dismay in the City owing to the proximate nature of the British interests involved. The tale of destruction itself is sufficient to give the market pause, but the larger considerations regarding the future *modus vivendi* of the Powers in the Far East are no less discouraging. Coming so quickly after an abortive attempt by the professional bulls to get prices moving again, the effect of hostilities has been the more disturbing. The impact was felt with greatest force in the Sino-Japanese bond market, and upon shares of trading banks and other concerns directly involved. The falls are recorded on page 394 of this issue.

For the rest, the general trend has been featureless. There is some evidence of country support for War Loan at a fraction over par, but buying has been modest. It can be said of the gilt-edged market that mid-week conditions were relatively firm, but the market was not decisively tested, owing to the paucity of business. The Essex scrip touched par momentarily on Wednesday, Chinese Customs loans attracted speculative purchases on Wednesday, after severe falls earlier, on the argument that their cover would not be seriously impaired. But Japanese issues remained depressed. The adverse coffee situation acted as a further depressing influence on Brazilian issues, the Funding Loans being particularly affected.

Home rail stocks were neglected pending the acceptance of the wages adjudication by the Unions, and the traffics were not to the market's liking. Persistent small selling depressed prices, both for equity and prior charge stocks. London Transport "C" stock was affected by the traffic return, and Argentine rails remained dull.

The industrial market showed some tendency towards steadiness in mid-week, although the general effect upon the lower level of prices was almost negligible. There was no appreciable selling pressure at any time during the week, but investors refused to commit themselves further until the political outlook became clearer. Iron and steel shares showed small movements, and the trans-Atlantic group received no decisive impetus from Wall Street. Among Far Eastern shares, Hongkong and Shanghai Banking Corporation suffered most (being quoted as low as 90 at one time on Tuesday) followed by Chartered Bank of India and British American Tobacco. Electrical equipment, motor and aircraft shares remained irregular, even in mid-week, when the rest of the market tended if anything to improve slightly.

Marks and Spencer recovered, after a rather indifferent market performance recently, while textile shares were assisted by the Calico Printers results (discussed on page 395). Brewery shares received no provincial support and a considerable amount of profit-taking produced a succession of losses among shipping shares. Newspaper shares were uneasy and irregular. The miscellaneous leaders improved somewhat on Wednesday, after a series of appreciable falls. Building shares remained out of favour, on the July figures.

A sharp fall in Mexican Eagle to little over 11s. was the feature of a poor week in the oil share market. The threat that the company might have to abandon its Mexican interests came as a shock to the market, and despite speculative covering, the opening level was not regained. Hopes of a settlement of the strike were abandoned since the parties have reached deadlock. Kern River also fluctuated widely, on a succession of rumours.

The firmness at the Mincing Lane sales assisted tea shares, but buying remained selective, and only affected the Indian shares. In the rubber share market, the wheels almost stopped, and quotable movements in prices could be counted on the hand.

The mining markets commenced in dull style, but a moderate improvement was recorded as the week progressed. Most of the business was concentrated upon the developing mines, with some investment support for dividend payers. Australian and West African mines remained disappointing. Diamond shares, however, were again active, and the Rhodesian copper issues returned to life in mid-week. Beralt and Mawchi provided features in the base metal group on the rise in wolfram.

"FINANCIAL NEWS" MARKET INDICATORS

Highest 1937: Ordinary Shares 124·8 (Jan. 4); Fixed Interest 136·6 (Jan. 4).
Lowest 1937: Ordinary Shares 108·6 (July 5); Fixed Interest 126·5 (Feb. 28).

ACTUARIES' INVESTMENT INDEX

The reactionary tendency of markets is illustrated by a fall in the Actuaries' Index of 177 industrial shares to 83·8 this week, compared with 84·5 last week, and 82·6 a month ago (December 31, 1928 = 100). The corresponding yields are 4·34, 4·30 and 4·39 per cent. A selection of component indices which have fallen is given below:—

Group (and No. of Securities)	Prices (Dec. 31, 1928 = 100)			Yield (%)		
	Month ago (July 20)	Last week (Aug. 10)	This week (Aug. 17)	Month ago (July 20)	Last week (Aug. 10)	This week (Aug. 17)

NEW YORK STOCK EXCHANGE

AT the end of last week, prices of industrial issues on Wall Street were reaching towards the peak touched in the second week of March. Steels, motors, and farm implement shares were prominent in a rise whose mainspring seemed to be enthusiasm over the troubles being experienced by the President with Congress. This week there has been a general decline, with farm implement and merchandising issues alone withstanding depression. The war in China was disturbing, and there was a decline in steel-mill activity. Congress was still in session, and Senator Black, a prominent new-dealer, was confirmed in his appointment to the Supreme Court. Oils and coppers, which have been well supported recently, moved downward, railroad shares lost some of the gains they had made on the more optimistic labour position, and industrials were generally uninteresting. On the bond market, all issues associated with Japan and China were adversely affected by the war. *Iron Age* estimates steel mill activity for the current week at 83 per cent. of capacity, against 84·5 per cent. for last week, but is optimistic to the extent that the volume of new business is increasing, and new orders from the automobile industry may reverse the present shrinking trend of orders on the books.

By courtesy of the Standard Statistics Company, Inc., of New York, we print the following index figures of American values calculated on closing prices (1926=100):—

Establish your factory — at

THE SCOTTISH INDUSTRIAL ESTATE

NORTH HILLINGTON

Nearly 90 per cent. of the population of Scotland lives inside the area covered by the Scottish Industrial Belt. This belt extends from the Ayrshire coast on the West to the Fifeshire coast on the East and contains Scotland's three largest cities—Glasgow, Edinburgh and Dundee.

North Hillington is situated on the outskirts of Glasgow. Manufacturers at North Hillington therefore will be within easy reach of the most distant part of the Scottish mass market and in the centre of its most densely populated section. In addition, North Hillington is a strategic distribution point to Northern England, Northern Ireland and indeed to all the world.

There are excellent transport facilities by air, river, road and rail. Skilled labour is plentiful.

FACTORIES—WITH ALL SERVICES

The rents are low as the company does not operate for profit. A factory can be leased. There is ample room for expansion of growing businesses. Factories are heated by the estate. Process steam is supplied if required. Every factory possesses a walled yard space at no extra cost. Insurance and upkeep of factories and upkeep of roads are paid by the estate.

For full information and particulars apply to

SCOTTISH INDUSTRIAL ESTATES LTD.

41 ST. VINCENT PLACE, GLASGOW C.1

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields of fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended August 14, 1937, amounted to £12,425,000, against ordinary expenditure of £8,842,000. After decreasing Exchequer Balances by £296,095, the operations for the week, as shown below, decreased the gross National Debt by £3,879,000, to about £7,995 millions.†

(000's omitted)

	£
Treasury Bills	– 489
Public Department Advances	– 2,540
National Savings Certificates	– 150
P.O. and Teleg. (Money) Act	– 700
	– 3,879

† Including £575 millions on account of Exchange Equalisation Fund.

An analysis of the approximate position of the National Debt as at June 30, 1937, appeared on page 45 of *The Economist* of July 3, 1937.

* At current market value. † Coin which is of legal tender in the United Kingdom is entered at face value and shown in *italics*. Other coin is entered at current market value.

No gold movements were reported at the Bank of England between August 13th and 19th. Details of previous movements were given in *The Economist* of August 7th on page 318.

GOLD MARKET

Messrs. Samuel Montagu and Company write on August 18, 1937 :—

The Bank of England gold reserve against notes amounted to £326,406,625 on August 11th, showing no change as compared with August 4th.

Business in the open market has been quiet and a general demand absorbed about £960,000 of bar gold, offered at the daily fixing during the week. Prices ruled at about dollar parity and showed very little variation.

The s.s. "Comorin," which sailed from Bombay on August 14th, carries gold to the value of about £214,000.

SILVER MARKET

Movements in prices have been unimportant and conditions continued to be quiet.

Sales were made on China account and the Indian Bazaars bought, but although offerings were very moderate, the latter did not exert sufficient pressure to cause any appreciable advance, although prices recovered to 20d. on August 14th and remained at that figure until August 18th, when there was a decline of 1/16d. to 19 15/16d.

There is no change in the outlook and the market seems steady at about the present level.

Quotations for gold and silver are shown below :—

OTHER STATISTICS

SHORTER COMPANY COMMENTS

APPOINTMENTS AND PERSONAL

Owing to ill-health, Mr A. FitzHerbert Wright has resigned from the board of the Butterley Company, and Sir Ernest W. Petter from that of Westland Aircraft.

Sir George Stuart Robertson has been appointed a director of Prudential Assurance Company.

Mr Edouard Muller, the vice-president and managing director, has been elected president of Nestlé and Anglo-Swiss Holding in place of the late Mr Louis Dapples.

MISCELLANEOUS

SMITH (STEPHEN) AND COMPANY.—Total profits of these wine and spirit merchants to April 30th last are £57,640, against £55,625, or, after expenses and depreciation £53,982, against £51,179, before £16,133 tax provision. Final ordinary dividend 7½, making 12½ per cent. To reserves : general, £5,000; contingent, £3,000; carry forward, £5,331.

ALLIANCE BANK OF SIMLA, LTD. (in liquidation).—The English agents of the Indian Liquidators announce the payment, on August 16th, of a seventh interim dividend of 5d. in the £, making total distributions up to 16s. 0½d. in the £.

KERN RIVER OILFIELDS OF CALIFORNIA.—The board announce that they have concluded negotiations for the subscription of part of the unissued capital of the company on satisfactory terms. The new capital will enable the company to carry out an extended plan of development. Sir William Alexander and Sir Thomas D. Nicol, associated with the subscribers of the new capital, have agreed to join the board.

KRAMAT TIN DREDGING.—A resolution has been passed for the sub-division of present £1 shares into 5s. shares.

CITY OF BUDAPEST LOANS.—The Swiss Association of Bankers announce that in conformity with the moratorium, extended to December 22, 1937, the City of Budapest has deposited with the Hungarian National Bank the equivalent in pengos of the coupons due July 1, 1937, on the 4½ per cent. Loan, 1914, and on the 4 per cent. Sterling Loan of 1910. The Bank, however, has not consented to the transfer of these sums into the stipulated currencies, but coupons can be paid in Hungary in pengos.

COURTNEY POPE AND COMPANY.—For the first year as a public company, i.e. to May 31st, the total profit is £39,830, or £13,330 net, after £24,188 expenses, £1,535 depreciation and £777 other expenses. Preference dividend absorbs £2,240. Ordinary dividend 20 per cent. Carry forward, £3,596.

STRETTON'S DERBY BREWERY.—Trading profit to June 30th, £133,255, or £4,801 more. Net profit (after interest, expenses, and £24,150 compensation fund and tax) is £93,866, against £93,421. Final ordinary dividend, 22½, making 35 per cent., less tax. To property improvement £5,222, against £1,550; to contingencies, £1,687; carry forward, £64,477 (£1,815 lower).

IMPERIAL CHEMICAL INDUSTRIES.—It is reported that it is intended that Imperial Chemical Industries (India) should float an Indian company for making products needed for Indian industrial development.

IPOH TIN DREDGING.—Total receipts for year to March 31 are £92,910, £21,414 less. Net profit after depreciation is £43,213, against £75,287. Final dividend 2s. 6d., making 3s. 6d. per 16s. share. To plant, etc., £2,114, against £32,065, reserve £5,000 (nil); carry forward, £6,162.

ISMAY INDUSTRIES.—Gross income for year to June 30th is £68,144 (against £53,448 for the initial period) or £65,300 after expenses and fees. Tax absorbs £12,916 and preference dividend £13,750. Ordinary dividend takes £27,540. Carry forward, £12,444.

BRITISH OXYGEN COMPANY.—The Norwegian Government have granted permission to buy control of Odda Smelteverk, carbide manufacturers.

CALICO PRINTERS' ASSOCIATION.—Accounts for the year to June 30th show a profit of £116,174 (after £372,428 for maintenance, etc., and £128,000 debenture interest), against a loss of £47,247. A preference dividend at the rate of 5 per cent. per annum is to be paid for the half-year to December, 1935. Carry forward, £83,351, against £42,579 brought in.

GUATEMALA 4 PER CENT. EXTERNAL DEBT—ISSUES OF 1895, 1913 AND 1928.—The Council of Foreign Bondholders have received from the Government of Guatemala £20,000 for this debt service above. This completes the amount required for the payment of Coupons due December 30, 1937.

BUENOS AYRES LACROZE TRAMWAYS COMPANY.—A Second Supplemental Scheme of Arrangement is proposed affecting holders of 5 per cent. 1st mortgage debenture stock, extension mortgage debentures, and consolidated mortgage debentures. Formal cancellation of instalments of interest arrears is proposed, to avoid showing in accounts a loss of 50 per cent. of capital (with consequent liability to liquidation). Aggregate of interest arrears at old par rate of exchange to be paid to trustees : rank after unsecured creditors, before share capital.

EQUITY AND LAW LIFE ASSURANCE SOCIETY.—To make the society eligible as trustees for unit trusts, and as foreshadowed at the last annual meeting, a call of 7s. 6d. per £5 share is to be made now, and a further 7s. 6d. before December 31st.

GENERAL REFRACTORIES, LTD.—Progress report for the first six months of 1937 of the Genefax group of Refractories companies announces an interim dividend of 8 per cent. actual. Report now and in future refers to trading profits as a whole, not dividing General Refractories and subsidiaries. Operations have extended, and profit for the second quarter was 40 per cent. above that for the first. Sales have increased by 50 per cent. over same period in 1936. Negotiations are proceeding for established businesses to join the group. Consolidated statement of subsidiaries' position at March 31st to be sent out with interim dividend.

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

THE Far Eastern crisis, which has over-shadowed the stock markets this week, has had little influence on the majority of the commodity markets. Business, it is true, remains restricted by seasonal factors, but price fluctuations have been narrow and quotations generally are well maintained.

The main non-ferrous metals constitute the principal exception to the rule. Speculative interest in copper has waned with the deterioration of the political outlook and, with smaller consumer buying, prices are easier. Tin and lead also lost some ground and spelter was sharply reduced, following its recent speculative rise. An early recovery in these metals seems probable. Wolfram and antimony, on the other hand, were forced up in price owing to fears of a shortage of Chinese exports. But, although China supplies a high proportion of world demand for these metals, shipments are made principally from the Southern ports and this week's price rise therefore appears somewhat premature.

The recent fall in raw cotton was checked by the news that President Roosevelt is likely to agree to a growers' subsidy as well as loans, to stabilise the price. Wool remained firm, on the likelihood of short supplies, but jute was easier. Oilseeds were marked down owing to an inactive demand and a bearish estimate of the United States linseed crop; vegetable oils were easier in sympathy. The rubber market was quiet, with prices about unaltered.

Wheat was firmer after its recent decline and maize was also a steady market. Among other foodstuffs, sugar showed a weaker tendency, but competition at the tea auctions was active and quotations were consequently firm. Cocoa prices also showed a rising tendency. On the London Provision Exchange, Colonial butter and cheese were cheaper, but the official quotations for bacon were unaltered.

In the United States the tendency of prices has been definitely weak, grains, coffee, cotton, metals and rubber being cheaper than last week. This development is reflected in Moody's daily index of the prices of staple commodities (December 31, 1931 = 100) which fell from 205·7 to 201·6 in the week ended Wednesday, the latter figure comparing with 209·5 a month ago and 188·9 a year ago.

COAL

SHEFFIELD.—Certain qualities of coal have become scarce as a result of the continued trouble among the haulage hands at several South Yorkshire pits. About 5,000 miners are unemployed, and inconvenience is being caused by the redistribution of orders and the search for supplies of small coal to keep coking plants at work. On the inland market industry takes most of the supplies, household demand being virtually non-existent. Coke is a very active market. Export inquiry is dull, and shippers are showing anxiety concerning the immediate future in the light of limited supplies and high prices, combined with the developing competition from Germany and Poland.

NEWCASTLE-ON-TYNE.—Foreign inquiry for North-East coal for Autumn and Winter shipment is now steadily expanding. There have been several good enquiries from old markets and, in addition to this regular business, Northumberland steam coals have been sold for prompt delivery to South Africa. In Durham, coking classes are as scarce as ever. Gas collieries are much better placed and bunkers are only offered sparingly. The coke market maintains a strong position with all brands finding a ready outlet.

GLASGOW.—The position in the Scottish coal market is more generally firm. New inquiry from abroad remains on quiet lines, but the shipping collieries are well booked, and in some cases have secured outlets for those qualities not of late fully taken up on contract account. An improvement in trebles gives washed smalls a strong appearance all round, and in Lanarkshire the arrangement of some cargoes for Italy and elsewhere has helped the position in all coal. Coastwise business absorbs good tonnages, demand from Ireland helping the Ayrshire collieries, and industrial and public utility needs are heavy. A sluggish market continues in house coal, but with a seasonal expansion of demand at hand there is no question of any further easing of prices.

CARDIFF.—Only a very limited volume of new inquiry circulates in all the principal overseas trades on the Welsh steam coal market. Production, however, as is usual during August, is on a reduced scale, due to the number of absentees from the pits. Outputs generally continue to move off satisfactorily in respect of standing contract business. As a result, the amount of coal offering is greatly curtailed and buyers, in several instances, are finding it increasingly difficult to satisfy their present needs. Sellers, consequently, are showing more reserve and prices are steadier for prompt shipment. In view of the anticipated improvement in demand in the next few weeks the outlook ahead is more favourable. New contract business circulating is negligible. Coal shipments from the South Wales ports last week showed a good recovery after the holiday interruption. They totalled 378,220 tons compared with 234,900 tons in the previous week and 343,835 tons in the same period a year ago. Large coals move off fairly satisfactorily at late prices. Small descriptions, however, are not so freely offered as recently and washed sorts are scarce and firm. The sized kinds remain extremely difficult to arrange over several months ahead and are strong. Throughs are steadily absorbed. The demand for cokes is still brisk and high prices rule.

IRON AND STEEL

LONDON.—Business in iron and steel is moving on a limited scale, as it is difficult to place orders for steel for delivery this year, says the official report of the London Iron and Steel Exchange. Holiday stoppages in the manufacturing districts also contribute to the quiet appearance of the markets, although so urgent is the demand for all descriptions of iron and steel that, contrary to custom, few consumers are suspending deliveries. In the pig-iron market business has been principally confined to small transactions as most of the output has been disposed of until December, and neither producers nor makers are inclined to commit themselves beyond that time in the absence of fixed prices for delivery so far forward.

A severe stringency still exists in the semi-finished steel department; but lately some relief has been occasioned by imports of Continental steel and more regular deliveries from the British manufacturers. The position as regards finished materials is similar to that ruling in other departments of the steel trade. An enormous demand exists, only part of which can be satisfied, although the makers are endeavouring to ease the situation by concentrating upon urgently required work. The tonnage of material available for export remains limited in view of urgent home requirements.

SHEFFIELD.—With the holiday month drawing to an end, rather more active conditions characterise the iron and steel markets, but the volume of actual business is comparatively small. Pig-iron producers are not looking for customers, as, with the full output sold for some time ahead, they have nothing of any weight for disposal. Consumers are ready to take anything which comes on offer for early delivery, but such parcels are few and far between. Some contracts are being renewed, but on a rationed basis. There are good inquiries for both East and West Coast hematite, but new business is not easy to place. Finished iron is a strong market, and makers have little for disposal. Demand for basic steel billets remains at a very high level, and no guarantee is given by sellers as to date of delivery. Wire rod business is active, and the call for stainless steel sheets is greater than ever. Prices throughout the market are fully maintained, but are without change. All iron and steel scrap material is in request, and in certain classes there is pronounced shortage. Rather more imported scrap is procurable, but prices are high.

MIDDLESBROUGH.—No market was held this week as it is being observed as the local holiday week. Several of the steelworks and rolling mills are closed down and the opportunity is being taken to effect repairs which are obviously needed after the long run of machinery at high pressure. Foundries in the Stockton and Middlesbrough districts are all taking holiday during the present week. Whilst business is in a state of suspense, merchants report that they are being supplied with quantities of foundry and hematite pig iron under old contracts for shipment as producers of pig iron have reduced demands locally owing to the holidays mentioned above. An additional blast furnace is being restarted shortly at Messrs. Pease and Partners' Normanby Ironworks. This will produce hematite pig iron and will increase the number to thirteen on this class of iron in this district.

The official prices of pig iron remain at 101s. per ton for No. 3 Cleveland foundry pig iron and 123s. per ton for No. 1 hematite pig iron, delivered locally, the latter being subject to a rebate of 5s. per ton. Basic pig iron is also maintained at 100s. per ton, less 5s. rebate, but this quotation is quite nominal as producers require the whole of the output for their own steelworks. Steel manufacturers are still meeting with heavy demands for all classes of material, but deliveries will be reduced this month on account of holidays. Good Durham blast furnace coke is steady at 40s. per ton, delivered at the furnaces, with sellers well contracted. Prices for steel scrap are unchanged. Foreign ore imports are being well maintained, although no supplies are coming forward from Bilbao or North Spain, the total quantity imported into the Tees during the first seventeen days of August being 110,000 tons, compared with 108,500 tons during the same period in July.

GLASGOW.—There is little change in the situation here. Great activity continues at the steel plants, where the demand for shipbuilding material, which at all times absorbs a large proportion of the output of West of Scotland steelmakers, is still increasing, and at the same time there is a heavy demand from all other users of steel material. There is still an urgent need for better supplies of semis. While deliveries have been on a somewhat heavier scale just recently they fall far short of the requirement of the various re-rolling industries which, in almost every instance, have accumulations of orders on books from users who are pressing for delivery. The demand for finished material is likewise very heavy, all the manufacturing industries being exceedingly busy and requiring large tonnages regularly.

CARDIFF.—A fair demand was encountered for tinplates, and shipments proceeded on a moderate scale, totalling 3,124 tons last week, as against 6,206 tons in the previous seven days, and 1,730 tons a year ago. Stocks were 1,978 tons, compared with 1,442 tons and 4,431 tons, respectively. Prices were slightly firmer at 25s. 6d. to 26s. per basis box, f.o.b. Galvanised sheets were in better demand for the home market, but export inquiry was slower. Quotations were unaltered at £18 15s. per ton, f.o.b., while steel sheet and tinplate bars were steady at £7 15s. per ton, delivered locally.

OTHER METALS

COPPER.—The slowing down of buying in the United States and the deterioration of the political situation in the Far East caused a substantial setback this week. Consumers have bought comparatively little and speculators have also lost interest for the time being. Consequently, turnovers on the London Metal Exchange were much smaller than of late and the standard cash price declined by £1 13s. 9d. to £57 1s. 3d. per ton.

The unofficial copper statistics for July reveal a fresh increase of 12,665 short tons in world stocks, which totalled 313,110 tons on July 31st. The rise was divided between the United States and the rest of the world. Nevertheless, it does not show any major change in the recent trend of copper statistics. There was also a further drop in the world's apparent consumption from 189,680 short tons to 180,600 short tons. At the same time, world output of refined copper showed a surprising decline from 200,400 short tons to 193,270 short tons, which makes it clear that the period of difficulties on the production side has not yet been overcome.

Sales on the London Metal Exchange: 1,025 tons on Monday, against 2,700 tons last week; 1,350 tons on Tuesday, against 2,850 tons last week; 1,050 tons on Wednesday, against 2,550 tons last week. Domestic spot was quoted at 13·92½ cents per lb. in New York on Wednesday, against 14·40 cents a week ago and 13·95 cents a month ago. Wednesday's official closing price for standard cash in London was £57 1s. 3d. to £57 3s. 9d. per ton, compared with £58 15s. to £58 17s. 6d. a week ago. Stocks of refined copper in British official warehouses at the end of last week at 9,923 tons, showed an increase of 479 tons, while stocks of rough copper, at 10,275 tons, were 776 tons larger.

LEAD AND SPELTER.—As the result of the deterioration in the political situation both markets met with little support. Lead declined during the week by 7s. 6d. to £22 7s. 6d. per ton, while spelter lost £1 6s. 3d., closing at £24 1s. 3d. After the recent sharp speculative rise, the fairly large decline in spelter does not come as a surprise. In spite of the setback this week the undertone of both markets (particularly spelter) remains good and early recoveries are probable.

Sales of lead on the London Metal Exchange · 950 tons on Monday, against 3,250 tons last week; 1,150 tons on Tuesday, against 1,650 tons last week; 1,000 tons on Wednesday, against 1,400 tons last week. The New York quotation on Wednesday was 6·50 cents per lb., against 6·50 cents a week ago and 6·00 cents a month ago. Wednesday's official closing quotation in London for soft foreign for shipment during the current month was £22 7s. 6d. to £22 10s. per ton, compared with £22 15s. to £22 17s. 6d. last week.

Sales of spelter on the London Metal Exchange: 750 tons on Monday, against 4,100 tons last week; 1,700 tons on Tuesday, against 2,250 tons last week; 1,400 tons on Wednesday, against 2,300 tons last week. Wednesday's quotation in East St. Louis was 7·25 cents per lb., against 7·25 cents the week before and 7·00 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipment during the current month was £24 1s. 3d. to £24 2s. 6d. per ton, against £24 2s. 6d. to £25 3s. 9d. last week.

TIN.—After an early rise tin reacted and closed on Wednesday at £265, a net loss of £1 5s. on the week. There was no change in the basic position of this market. Home warehouse stocks on August 14th were 81 tons lower at 1,998 tons—the smallest since the beginning of June. The world's tin mines' production amounted (according to *Metallgesellschaft*) to 17,964 metric tons in June against 15,346 tons in May. Production during the first half of this year aggregated 97,662 metric tons, a rise of 12,244 tons, or 14·3 per cent., on the year. Consumption in the first half of this year is estimated by the market to have increased by more than 20 per cent Consumers' buying has, however, been extremely limited in the last few days, and as there have been some of the usual hedge sales, the market was easier. This weakness, however, should be overcome immediately consumers resume buying, because there are no weak offerings at the lower levels.

Sales of tin on the London Metal Exchange: 200 tons on Monday, against 650 tons last week; 250 tons on Tuesday, against 350 tons last week; 130 tons on Wednesday, against 250 tons last week. The New York quotation on Wednesday was 59·50 cents per lb., against 59·62½ cents a week ago and 60·00 cents a month ago. Wednesday's official closing quotation in London for standard cash was £265 to £265 5s. per ton, compared with £266 5s. to £266 15s. a week ago. Stocks of tin in London and Liverpool at the end of last week totalled 1,998 tons, a decrease of 81 tons on the week.

TUNGSTEN AND ANTIMONY.—As a result of the outbreak of hostilities in Shanghai, tungsten and antimony prices showed substantial improvement. This is not fully reflected in the official quotations, which have become more or less nominal this week. There have been dealings in Chinese wolfram at over 90s. per unit, while antimony regulus (English) has been bought at £87 10s. per ton. China supplies two-thirds of the world's wolfram and 70 per cent. of the world's antimony, but this week's steep rise in prices, nevertheless, appears artificial and speculative. Practically the whole of the Chinese tungsten and antimony comes from the southern provinces and is shipped through the southern ports of the country, so that the war in Shanghai and the north will not necessarily interfere with production and shipments of the two metals.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted on Wednesday at £100 per ton, and rolling billets at £102 per ton. Nickel, for home and export, was maintained at £180 to £185 per ton. Quicksilver, on the spot, was quoted at £13 12s. to £13 12s. 6d. per flask of 76 lbs., as against £13 10s. to £13 10s. 6d. last week. Chinese antimony was quoted at £76 to £77 per ton, ex warehouse, as against £69 to £70 last week. Chinese wolfram for "August–September" shipment was quoted at 90s. to 95s. per unit, c.i.f., compared with 78s. to 81s. last week. Refined platinum was quoted on Wednesday at £10 5s. per ounce, compared with £10 5s. a week earlier.

TEXTILES

COTTON.—Manchester.—Inquiry has shown a slight improvement and some buyers have placed orders a little more freely, owing to the belief that prices, after the recent decline, are now on a more attractive level. Some customers have hesitated, however, to commit themselves, having doubts as to whether present margins for spinners and manufacturers will be maintained. On balance there has been very little change in raw cotton rates. A good deal of uncertainty exists as to what will be done by the Washington Government. It is reported that President Roosevelt has agreed to a loan to farmers if Congress will pass a resolution promising farm control legislation at an early date. Interference by the Government in cotton production in the past has not had very happy results. Quite apart from a big American crop, abundant supplies are probable from other countries, the latest advices with regard to the Egyptian growth being very favourable. Prices of American yarns have varied according to the fluctuations in raw material rates. Spinners' quotations, however, have been firm, margins being well preserved. Sales of medium American counts have been larger than for several weeks back. A little more activity has also shown itself in Egyptian qualities. Buyers of piece-goods have displayed more interest, but in most instances offers have been disappointing. There have been very few signs of increased activity for India, and trade with China has been brought to a standstill. Some very fair lines have been booked in fine mulls for Rangoon. The most promising outlet, however, has been South America and steady buying has taken place in printing and finishing styles. All manufacturers are working hard to keep up to contract time with deliveries, as there is a danger of cancellation if goods are late.

WOOL.—Bradford.—Wool continues to occupy a very sound position, and all descriptions display a slight hardening tendency. Higher prices are expected when the new Australian selling season opens at Sydney on August 30th and at Adelaide on September 2nd. There is a healthy demand for greasy combing merinos and crossbreds, and stocks are lighter than for many years. It is reported that contracts have already been booked for new clip B.A. 40–44's on a basis of 21d., clean, c.i.f. Liverpool, November–December delivery. This is unique, and shows clearly the keenness of firms to secure low preparing wools, which are exceedingly scarce. There is every likelihood of Japan being a bigger buyer next season in both Australia and New Zealand. Supplies of New Zealand crossbreds are so scarce that many firms are having to use domestic wools to satisfy their urgent needs; practically every quality of home-grown wool is lighter in stock to-day than for many years. The result is that all descriptions are very firm, with a tendency against the buyer. All Bradford mills are idle this week, but after the resumption of work machinery will be kept fully occupied until the end of the year. Already a reasonable amount of orders has been placed for next spring, and with firm values in sight wholesale fabric buyers are realising that the sooner they place their new spring business the better they are likely to fare.

GRAIN MARKETS

WHEAT—After last week's decline, prices of Manitoba wheat are now rather higher. In the United States spring wheat threshing is well advanced and good yields are general. In Canada the harvest is earlier than usual and it is possible that yields will be somewhat above recent estimates. Meanwhile, good rains have fallen in Australia, but moisture is still urgently needed for the growing crops in Argentina. In the United States wheat futures are lower on the week.

On Wednesday last, "September" futures were quoted in Chicago at 110⅛ cents per bushel, against 113¼ cents the week before and 122¼ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba (Atlantic) ex ship, 52s. 9d. per 496 lbs., against 51s. last week; No. 2 Northern Manitoba (Atlantic), ex ship, 51s. 6d., against 50s. 3d. last week. According to the *Corn Trade News*, total shipments of wheat and flour last week amounted to 818,000 quarters, against 880,000 quarters in the previous week and 1,248,000 quarters in the corresponding week a year ago.

FLOUR.—Business in imported flour is quiet, but demand for home-milled shows some improvement with prices unchanged. Wednesday's London quotations (excluding quota payments) were: Straight run, delivered Home Counties, 40s. 6d. per 280 lbs., as against 40s. 6d. a week ago; delivered inner London, 40s., as against 40s. a week ago. Manitoba patents, ex store, 39s. to 40s. 6d., as against 38s. 6d. to 40s. a week ago. Australian, ex store, 32s. 9d. to 33s. 3d., as against 33s. to 33s. 6d. a week ago.

BARLEY.—Prices show little alteration compared with those ruling a week ago. "October" futures were quoted at 56⅜ cents per bushel in Winnipeg on Wednesday, as against 60⅛ cents last week. Quotations per 448 lbs. in London on Wednesday were: "English feed" at farm, not quoted, as against 35s. to 36s. a week ago; "English malting," at farm, 60s. to 65s.; not quoted last week; Californian, ex ship, 47s. 6d. to 60s., as against 47s. 6d. to 60s. a week ago. Chilean, brewing, ex ship, 46s. 6d. to 50s., as against 46s. 6d. to 50s. a week ago.

OATS.—On Wednesday, "September" futures were quoted at 29⅛ cents a bushel in Chicago, against 29½ cents a week ago and 34⅜ cents last month. Quotations in London, Wednesday: "English Black," at farm, not quoted, as against 27s. to 29s. per 336 lbs. a week ago; "English White," at farm, 26s. to 27s., as against 27s. to 29s. a week ago; mixed Canadian feed (Vancouver), landed, 26s. per 320 lbs., as against 26s. 9d. a week ago.

MAIZE.—Despite an easier tone on United States markets, prices here are a shade higher. Fluctuations have been small and the maintenance of a steady tone appears probable. "September" futures were quoted on Wednesday at 99¼ cents per bushel in Chicago, against 100⅞ cents a week ago, and 105¾ cents last month. Quotations in London, Wednesday: "Plate," landed, 28s. 9d. per 480 lbs., as against 28s. 3d. a week ago; "Plate," ex ship, 27s. 9d., as against 27s. 3d. a week ago; "Plate," "August," 27s. 6d., as against 27s. 3d. a week ago; yellow maize meal, ex wharf, was quoted at £7 7s. 6d. per ton, as against £7 5s. to £7 7s. 6d. last week.

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations for selected weeks in 1935–1937 :—

NEAREST FUTURE	Jan. 2, 1935	Dec. 31, 1935	Aug. 19, 1936	Dec. 30, 1936	Aug. 11, 1937	Aug. 18, 1937
Winnipeg (No. 1, Manitoba)—Cents per 60 lbs.	82⅞	84⅛	102½	129	130⅜	126⅛
Chicago (No. 2, Winter)—Cents per 60 lbs.	98⅜	101½	114⅜	135½	113½	110⅞

The visible supply of wheat in Canada amounts to 29,228,000 bushels, against 30,023,000 bushels last week and 62,306,000 bushels in the corresponding week last year.

SALES AND PRICES OF BRITISH CEREALS.—The following table gives the estimated sale of home-grown wheat during the harvest years 1933–34 to 1936–37.

	1933–1934	1934–1935	1935–1936	1936–1937
Estimated sales of home-grown wheat—	Cwts.	Cwts.	Cwts.	Cwts.
1 week to August 14	85,463	137,807	14,170	70,146
50 weeks to August 14	10,400,438	13,444,921	13,179,172	11,058,503
Average price of English wheat per cwt.	s. d. 5 0	s. d. 4 7	s. d. 7 9	s. d. 9 9

The following is a statement showing the quantities sold and the average price of British cereals in the past two weeks, and for the corresponding weeks in each of the years from 1933 to 1936 :—

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats

August 14, 1937	70,146	3,889	25,934	9 9	10 7	9 0

OTHER FOODS

BACON.—Market conditions have been quicter, but prices show no change. The official quotations (per cwt. for No. 1 Sizable) which formed the basis for dealings on the London Provision Exchange this week were : English, 106s.; Canadian, 100s.; Danish, 105s.; against 106s., 100s. and 105s. last week. Arrivals in London last week included : Danish, 15,192 bales; Canadian, 4,786; Dutch, 1,652; Lithuanian, 1,251; and Polish, 2,981; as against 14,027, 4,988, 1,754, 1,496 and 2,624 bales, respectively, in the previous week.

BUTTER.—Demand continues rather inactive, and prices have declined, except for Danish. Quotations (per cwt.) on the London Provision Exchange on Wednesday were : New Zealand, finest salted, 114s.; Australian, choicest salted, 113s.; Danish, 125s.; compared with 116s. to 117s., 115s. to 116s. and 124s., respectively, a week ago.

CHEESE.—Market conditions remain quiet, but English descriptions have again increased in price. Quotations (per cwt.) on the London Provision Exchange on Wednesday were as follows : English Cheddars, finest farmers, 88s. to 90s.; Canadian, finest coloured, 71s. to 72s.; and New Zealand, finest coloured, 66s.; against 86s. to 88s., 72s., and 68s., respectively, a week ago.

COCOA.—In both London and New York the markets are firm and prices show a rising tendency. The spot quotation in New York on Wednesday was 8¼ cents per lb., as against 8⅜ cents per lb. last week. In London, on Wednesday last, good fermented new crop, Accra, "November–January," was quoted at 40s. 6d. sellers per 50 kilos., c.i.f. Continent, against 39s. 3d. a week ago. Last week's movements of cocoa in London were as follows : Landed, 2,009 bags; delivered, for home consumption, 10,753 bags; exported, 1,180 bags; stocks, 252,238 bags, against 163,379 bags a year ago.

COFFEE.—The London market is quiet; in New York conditions are irregular, being influenced by the Havana conference which has so far failed to reach agreement on the control of production. On Wednesday, Rio No. 7 (cash) was quoted at 9 cents per lb. in New York, as compared with 9¼ cents per lb. last week and 9¼ cents per lb. a month ago. Movements of coffee in London last week were as follows : Brazilian, landed, nil; delivered, for home consumption, 38 cwt.; exports, nil; stocks, 1,743 cwt., against 10,409 a year ago. Central and other South American : Landed, 926 cwt.; delivered, for home consumption, 1,946 cwt.; exported, 699 cwt.; stocks, 99,589 cwt., against 95,154 last year. Other kinds : Landed, 3,873 cwt.; delivered, for home consumption, 3,203 cwt.; exported, 422 cwt.; stocks, 100,633 cwt., against 139,019 last year.

EGGS.—The market is steady, with prices of English eggs tending to harden. At Smithfield, on Wednesday, English (ordinary packing, Grade I, about 15–15½ lb.) realised 16s. 6d. to 17s. per 120, against 15s. 6d. to 16s. 6d. last week; while Danish (15½ lb.) made 11s. to 11s. 3d., as against 11s. to 11s. 3d. last week.

FRUIT.—Although trade at Covent Garden shows some falling off and prices are easier, the general volume of business is good for the time of year states *The Fruitgrower*. There is a good supply of plums and demand is steady. *English greengages are selling well* in the absence of imported varieties. The currant, raspberry and gooseberry season is now over, but supplies of blackberries are increasing. English apples are coming on to the market fairly steadily. The demand for hothouse grapes is steady, especially English varieties. Lower prices have, however, been obtained for peaches, nectarines, oranges, melons, grape-fruit and lemons, supplies being plentiful. Kent filberts and cobnuts have made an appearance and prices are good.

MEAT.—Trade remains inactive and prices have eased. At Smithfield Market on Wednesday last, Argentine chilled hindquarters were quoted at 4s. 8d. to 5s. per 8 lbs., as compared with 4s. 10d. to 5s. 2d. a week ago. New Zealand frozen mutton was 3s. 6d. to 4s. per 8 lbs., against 3s. 6d. to 4s. 2d. a week ago. According to the Smithfield Market official report, supplies during last week amounted to 7,053 tons, a decrease of 1,685 tons on the corresponding week last year. Beef and veal accounted for 3,844 tons, mutton and lamb 2,304, and pork and bacon 484, as compared with 4,808, 2,686 and 710 tons, respectively, in the same week of 1936.

MILK.—Information relative to the operation of the Milk Marketing Scheme during July as issued by the Milk Marketing Board is given in the following table, together with comparable statistics for earlier months. The development of consumption since the commencement of the Marketing Scheme is the subject of a Note of the Week.

	July, 1936	April, 1937	May, 1937	June, 1937	July, 1937
Regional pool prices* (*per gallon*) :	d.	d.	d.	d.	d.

Liquid milk price (*per gallon, all regions*)	13	16	12	12	13
Manufacturing price (*per gallon, average*)	5·05	5·293	5·532	5·404	5·55
	Million gallons				
Total sales under contract	84·59	72·81	89·08	86·85	81·53
For liquid consumption	47·29	47·77	49 73	48·93	50·50
For manufacturing	37·30	25·04	39·35	37·92	31·03

* On account to the nearest farthing.

Accredited producers receive 1d. per gallon in addition to the above prices. Premiums for level deliveries and for Grade "A" or special services are paid to the producers concerned in addition to the pool price. Transport charges are payable by individual producers and are deducted from accounts.

PEPPER.—On Wednesday, white Muntok, August–October, was quoted at 4 5/16d. per lb., sellers, c.i.f. Rotterdam–Hamburg, against 4⅜d. per lb. a week earlier. Black Lampong, spot, in bond, was quoted at 3½d. per lb., sellers, compared with 3d. per lb. last week. Movements of pepper in London last week were as follows : Black, landed, nil; delivered, 8 tons; stocks, 2,011 against 1,748 last year. White, landed, nil; delivered, 52 tons; stocks, 11,443 tons, compared with 12,154 a year ago.

RICE.—The spot price of Burma No. 2, cleaned, was 10s. 6d. per cwt. ex warehouse, on Wednesday, as compared with 10s. 4½d. per cwt. a week ago. "August–September," in singles to Continent and U.K., was quoted at 9s. 7½d. to 9s. 9d. per cwt., against 9s. 4½d. to 9s. 7½d. last week. Movements in London last week were as follows : Landed, 245 tons; delivered, 253 tons; stocks, 2,126 tons, against 2,372 a year ago.

SUGAR.—Demand on the London market remains inactive and prices have declined slightly; in New York the market is firm. The New York spot quotation was 3·60 cents on Wednesday, as compared with 3·60 cents per lb. last week and 3·42 cents per lb. a month ago. Wednesday's sales of raw sugar in London included "December" delivery at 6s. 5½d. to 6s. 6½d., against 6s. 7½d. a week ago. Movements of raw sugar in public warehouses in London and Liverpool last week were as follows : Imports, 13,697 tons, against 17,473 in the previous week, and 25,541 in the same week of 1936; deliveries, 13,666 tons, against 6,237 and 19,940 tons, respectively; stocks, 157,058 tons, against 157,027 and 119,215 tons, respectively.

TEA.—The following table shows the average price (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account in recent weeks :—

Week ended	Northern India	Southern India	Ceylon	Java	Sumatra	Africa	Total
	d.	d.	d.	d.	d.	d.	d.
Aug. 13, 1936	12·67	11·86	12·86	10·23	9·76	11·20	12·47
July 8, 1937	15·34	14·38	15·12	14·64	12·25	13·69	14·83
,, 15, ,,	15·31	14·50	15·15	13·12	12·50	13·84	14·92
,, 22, ,,	15·15	14·55	15·33	13·44	12·38	13·52	14·92
,, 29, ,,	15·34	14·58	15·39	13·39	12·65	14·07	15·05
Aug. 12, ,,	16·04	14·73	15·49	14·46	12·68	14·27	15·25

At this week's public auctions in Mincing Lane, 42,944 packages of Indian and 27,125 packages of Ceylon tea came up for disposal. Demand for all descriptions of Indian and Ceylon teas remains strong and active, prices being well maintained.

VEGETABLES.—According to *The Fruitgrower* there is now a plentiful supply of tomatoes and cucumbers at Covent Garden market, and prices are consequently rather easier. Lettuce and spring onions have met with a steady demand. Runner beans and marrows are plentiful and cheap. The market in cabbage and cauliflowers shows some improvement. Mushrooms are scarcer and dearer. Although plentiful supplies of potatoes were again available at London markets, demand showed an improvement and prices were firmer. At the Borough on Tuesday, King Edward ranged from 7s. to 8s., the same as last week; British Queen, Majestic, Eclipse and Sharpe's Express made from 5s. to 5s. 6d. per cwt., ex market, as against 4s. 6d. to 5s. 6d. per cwt. last week.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OILSEEDS.—The tone generally is easier and there seems to be little disposition on the part of crushers and consumers to do business while holiday conditions remain. Linseed consequently is in slow demand, both here and on the Continent, and there has been some recession in prices. The official estimate of the probable yield of the United States crop at around 200,000 tons was higher than expected, but some time has yet to elapse before the plants come to maturity and the seed is harvested. Meanwhile America continues to draw upon the Plate surplus to enable the mills to carry on, and may have to still further do so. To the middle of August Argentina had exported 1,315,000 tons of which 551,000 tons was destined for the United States. India shipments show a slight improvement, but to date amount to only 125,000 tons, leaving about a quarter of a million tons of the new crop still available for export.

Attention is now turned to the progress of sowing in Argentina and although weather reports are variable all agree that copious rains are necessary if the large area projected is to be seeded. Immediate supplies are good. The quantity afloat for Europe has increased to 122,800 tons (including 26,500 tons from India). Cotton seed has sharply declined and again a fair business in new crop black Egyptians is reported for shipment to Hull. For August loading £6 16s. 3d. was conceded, but less was subsequently quoted for all positions to March next. Trade in vegetable oils is slow. Linseed oil has declined about 5s. per ton on the week and refined cotton oil has dropped £1 to £29 per ton ex Hull. The demand for oilcakes is moderate and prices are steady.

FURS.—From Geneva comes the news that the Marché International de Peaux et Fourrures S.A. is going into liquidation. The firm was founded in 1936 in order to make Geneva a leading international fur auction centre. Although the endeavour was warmly supported by the Geneva cantonal and municipal authorities it has failed completely. One sale was held at Geneva early this year, but despite active propaganda it found little support. Foreigners were hardly represented at all. Under these conditions the promoting firm found it impossible to continue its work, and, although it had originally planned to hold another Geneva fur sale in the autumn of this year, the firm is now to be wound up. This example shows clearly that the international fur trade has settled down again after the disorganisation which followed the rise of the Nazi party to power in Germany. Those former Leipzig firms which emigrated from Germany have found a new and satisfactory domicile in London or Paris, and accordingly show no inclination to support the development of new international fur trading centres.

RUBBER.—After a week of quiet trading, prices show no net change. In New York a slight decline has occurred.

The spot price in New York on Wednesday was 18 3/16 cents per lb., compared with 18⅛ cents per lb. a week ago and 18 3/16 cents a month ago. Wednesday's official buyers' price for standard ribbed smoked sheet on the spot in London was 8 13/16d. per lb., as against 8 13/16d. on the corresponding day last week. In forward positions business has been done at 8⅛d. to 8 13/16d. for "September" shipment, as against 8 13/16d. a week ago. Stocks in London and Liverpool at the end of last week totalled 42,849 tons, against 42,253 tons a week earlier. A year ago stocks amounted to 111,242 tons.

Japan's Challenge

THE return of the PRIME MINISTER from holiday to consult with MR EDEN, LORD HALIFAX, and SIR ROBERT VANSITTART on the Government's attitude to the latest international crisis emphasises the great gravity of the Far Eastern conflict. Within a few days a dispute between Japan and China has developed from a wrangle into a brawl, and from a brawl to a first-class war all over North China—without any declaration of war or rupture of diplomatic relations. Although the damage to American, French, British and other trade and property has run into tens of millions of pounds, and the naval and military forces of these Powers have had to evacuate their nationals from the zones of fighting, British proposals to separate the belligerents and minimise damage to life and property have been turned down by the Japanese authorities as "foreign intervention," and therefore inadmissible. Thus, though the Chinese Government have expressed willingness to call a halt at Shanghai, the Juggernaut of war rolls on; and it behoves all of us to ask where, by whom, and on whose prostrate body it will be stopped.

Those British and other optimists who, at all times in the last six years, have been saying that Japan would only "clean up" North China and then take a long time to digest it, have been perilously wide of the mark. Unless the tide of aggressive militarism is kept at the flood, militarist Governments are in danger of running aground in the shoals and shallows of domestic discontent. The reinforcement of PRINCE KONOE'S Cabinet by Army representatives shows that the temper of that Cabinet will not be permitted to weaken. The Japanese people's patriotism has been whipped up, and a foreign crisis has been created to stave off a domestic one.

A tragic reminder of the temper of the Japanese, as of the perilous international risks arising from their indiscriminate bellicosity, occurred on Thursday. Japanese aircraft followed, bombed and machine-gunned the BRITISH AMBASSADOR to China and his suite as they were motoring from Nanking to Shanghai for a conference with the British authorities there. SIR HUGHE KNATCHBULL-HUGESSEN received a grave spinal wound; and though the JAPANESE AMBASSADOR, military and naval authorities have expressed their most profound regrets, they excused this dastardly attack by pleading ignorance of the intended journey. If not even the person of the BRITISH AMBASSADOR is safe from Japanese attentions, it is tantamount to a declaration that no neutral citizen can be safe from aerial attack wherever Japan is undertaking a war. The event was not, we believe, intended by the Japanese Government, nor even by their military leaders; but the doctrine of frightfulness in war has been well assimilated by Japan if her soldiers, sailors, and airmen act as if they had been told not to worry about anyone else's interests while waging war. The whole affair is being investigated, but the British and other non-Japanese Governments who have interests and lives at stake in China may well be forced themselves to take warlike measures to safeguard those interests from Japanese attentions. From that to a War of the Powers in the Far East is a small step.

This, then, is what the whirligig of time has brought in the Far East. The prospects for China look grim; for

British and other traders and investors even more so; and the once Open Door, which our optimists assured us would be maintained by Japan, has only proved an ingress into China for Japan, and, it is to be feared, an ignominious exit for the rest of us. After Mukden, Tientsin; after Tientsin, Peiping; after Peiping, Shanghai; after Shanghai——?

It is precisely the answer to this last query which now perplexes the Foreign Offices and Defence Ministries in the United States, France, and this country. Doubtless, also, the Kremlin is as preoccupied as the Quai d'Orsay or the State Department. But for no country is it more crucial than for Britain. For the evacuation of British nationals from Shanghai, the destruction of British trade and property there, the dwindling prospect of future trade, and the blunt Japanese warning to this country to keep its nose out of Japan's business—even these grave events are of relatively minor importance compared with the contingency which looms larger and larger on the Eastern horizon. That contingency is the retreat of the British from the outposts of Empire.

Now, some may say, an ordered retreat to gather force for a more sustained defence is strategic. Other Empires have successfully done it. We ourselves repeated it over and over again in the darkest days of our history, yet came through firmer at the close. Others may say: Shanghai is not British; it is not Hongkong; we can stand a lot of retreating until British territory is touched; and no one will lightly touch British territory as long as we press on with re-armament as we retreat. Others again may hold that £200 or £250 millions of British investments—or an annual total of some £25 millions of trade—should not be allowed to weigh against the preservation of the peace throughout the rest of the world.

But, whatever may be our views on these things, they do not help us very much. At best they only put off the day of decision. The present war in China is eating slowly but surely farther into the Asiatic continent. This week the Japanese have declared a naval blockade of 1,000 miles of Chinese coast, as far down as Hongkong. Japanese bombers from Formosa have already attacked Canton; and from Canton runs the new railway up to Hankow along which Chinese armies, retreating like the TSAR before NAPOLEON in 1812, can now supply their needs. What will the British Government do at Hongkong if the Japanese deal with Canton, Swatow, Kowloon, as they are dealing with Shanghai and Tientsin, in an attempt to paralyse Chinese communications in the vast hinterland, and to roll up the map of China? British trade at Hongkong may be forced to go out by that same Open Door through which it is at present being bustled at Shanghai. That way we can keep peace for a long time—at the stiff price of surrendering our trade, our prestige, and our outposts of Empire. It may be worth it.

But, if so, we shall quickly be pushed back to our main bulwarks of Imperial defence. As much in our own peoples' interest as in that of the French and Dutch, we have to take up our stand at Singapore for Indo-China and the Netherlands East Indies. We may do this in the belief that, though Manchuria was not enough, all China will keep Japan busy for a long time. We may be right; and the Russians may, at this present moment, be thinking the same thing, not wishing to save British and American chestnuts from the Chinese holocaust by embroiling themselves. But Britain, France, Russia, and the United States, to say nothing of Holland and Portugal, may all be as hopelessly wrong as our optimists have been during the last six years.

Even so, in the light of the alarums and excursions during these years—and *a fortiori* of the disarrays and retreats which were their counterparts—it is hard to see what else can now be done. For the big opportunities to arrest the disintegration of world politics have been missed; indeed, thrown away. To-day the older Empires of the world are on the defensive. New ones are being forged by blood and iron. The turmoil in the Orient is but one incident of the process. There are others nearer home. The Mediterranean Sea—as much the *via* and *vita* (to use the DUCE'S words last Friday) of Britain and France as of Italy—is still the zone of contention which it became at the time of Italy's aggressive attack upon Ethiopia. The European war in and about Spain is a war for the mastery of one entrance into that sea, a mastery till now mildly exercised by Britain from one of her vital imperial outposts. At the other end and in the very middle, Italy's submarines and aircraft are running GENERAL FRANCO'S errands—and encountering ominous looks from British, French, Russian and Turkish warcraft.

The older democratic Empires may well be constrained to stay their hands in the Orient, that they may have them free for contingencies nearer home. If the already perilous "Spanish ulcer"—Napoleon's pithy phrase—is accompanied by military outbreaks in the very heart of Europe, will anyone say that a single European Great Power, Russia included, could contrive to escape the infection of general war? If it did, it would only be for a matter of weeks.

Such is the prospect the whole world faces. It is in large part a retribution for past sins of omission. It is a prospect which makes the extreme Orient seem very far away. Newer and nearer perils have crowded so thick and fast since Japan shot the first bolt just six years ago, that each has taken precedence over the one before: Manchuria, Ethiopia, the Rhineland, Spain—to-morrow, perhaps, Austria or Czechoslovakia, or both at once. In this ever nearing process of threatened aggression, another explosion in the Far East, though more intense than the first and second of its kind, and despite the grave material sacrifices it imposes on us, rouses less reverberation, even less alarm. "For where the greater malady is fix'd, The lesser is scarce felt." The malady with which Japan infected the Far East in 1931 is now fixed in Europe; and even those Powers, our country included, which then felt it most and now feel it more, cannot view the morbid state of Japan and China to-day as a thing apart from the latent morbidity of Europe to which it gave rise.

The picture of our world is, indeed, gloomy; but the gloom is not quite unrelieved. The paramount fear of the retreating democracies—that of a joint and simultaneous excursion by the three partners in last year's "Anti-Communist Front": Japan, Germany and Italy—has been exorcised by the dilemma in which the Japanese have now involved themselves. Japan's militarists have had to spring their mine ahead of their own desired zero hour. The closest possible collaboration between France, the United States and this country can, and should, now take place, with the wariest of eyes on Japan's European associates in the crusade against so-called "Communism." In the immediate Far Eastern crisis, as in its obverse European side, we think Russia should be invited to co-operate with Britain, France, and America; for if protests and reservations of rights look like retreats, they look less like them when taken in concert. And if more than protests become necessary, the quicker that concert is in being, the better.

One thing is sure: in the last few days we have only seen the opening of another act in that Far-Eastern drama which began six years ago. No one, perhaps least of all Japan, knows what the final act will bring, nor when it will come, nor even where it will be played. All we can say with certainty is: If the nations want a world free from aggression they can have it. But if it be so, those nations who aspire to pacific leadership of the whole comity must act far more effectively, and with longer vision, than they have acted since 1931.

Will Prosperity Last?

IT is reported from the coasts and the hills and the ports that this is a record holiday season. The claim is made with self-defeating regularity year by year. But this time there is reason to believe that it is true. The purchasing power of the people has been steadily expanding for five years, and the expansion has lately been taking the shape of paid holidays for those who previously either took no holiday or sacrificed wages to take it. In other directions also the business news is almost uniformly good. This is indeed the high summer of our prosperity. But summer leads to autumn, and autumn to winter. How long shall we have to wait for the first frosts? Are these summer months of 1937, like those of 1929, a peak from which the descent will be both steep and immediate? Or are we still climbing upwards to one, or two, more years of prosperity?

The materials for answering these questions can be found in the Monthly Supplement included in this week's issue of *The Economist*. But the good cook needs more than good ingredients; in what proportions are they to be combined, to give what final result? This is not an easy task, especially when there is no handy kitchen scales to determine the weight to be given to each factor.

The most comprehensive measure of present conditions is *The Economist* Index of Business Activity, which reflects the current output of the economic mechanism, in services as well as goods. The Index fell in July, but the fall was fortuitous, and may largely disappear when the provisional figures can be corrected. In any case, there is no reason to suppose that the curve will not rise again in August. Apart from this temporary aberration, the Index is rising now as rapidly as at any time since recovery began. There is no sign of that "levelling-off" which can be expected to precede a decline. The same story is repeated industry by industry as the roll is called. The metal industries are particularly active, restrained only by the impossibility of expanding productive capacity quickly enough. The textile industries are not quite so active as they were, but nobody in Lancashire or Yorkshire thinks this pause is more than a hesitation. This is not the season for company meetings, but such few chairmen as have recently been facing their shareholders have shown no diminution of optimism.

Perhaps the most encouraging feature of all is the very remarkable increase in British exports, apparently undeterred by the higher prices which British exporters are now charging. Imports, too, show no sign of any reduction in British industry's estimates of its raw material requirements. The motor-car, radio and similar consumer industries are still flourishing. Interest rates, it is true, are still rising. But they are also still low, and it could be argued with some force that the rise reflects nothing more than the return of a normal demand for money. There is certainly no tightness of credit. Nor, on the other hand, save for sporadic exceptions, is there any of the speculative excitement which characterises the dying phases of an unstable boom.

These are the favourable factors. But there are also some signals at danger. An imminent slump in the activity of the building industry has been confidently predicted for at least two years. That it has not arrived does not mean that it is never coming; on the contrary, it is impossible to imagine residential building continuing indefinitely on anything like the present scale. Moreover, in the last few months the first sign of impending decline has appeared, in the shape of lower totals of building plans approved. The significance of this indication must not be exaggerated—the figures omit London and all country districts and they take no account of Government contract work—but it cannot be ignored. On the other hand, the volume of employment in the building industries is the highest ever recorded. There is little sign that the building slump has actually arrived, and even less that it is going to take on the dimensions of a collapse. But it seems likely that the volume of building in 1938 will be less than in 1937.

Another danger signal can be found in the rise of prices. There are many industries which are stimulated by a rise in prices, which is, indeed, one of the most usual accompaniments of high business activity. But British recovery has been founded to a very large extent on the increased purchasing power of the masses and, to this same extent, a rising cost of living will necessitate industrial adjustments.

Of possibly greater significance than either a fall in building or rising prices, however, is the subtle change in psychology which has been discernible in the markets since the beginning of this year. The Stock Exchange reached its peak in January, and industrial shares have since fallen by fully 10 per cent. What is more, the symptoms of a "bear" market have appeared: bad news has invariably put prices down, while good news has been unable to rally them to an equivalent extent. It is easy, too easy, to dismiss this as merely "nerves in the City." The fact is that the Stock Exchange has an excellent record as a barometer of coming changes. It is almost impossible for a person having inside information of a company's affairs to deal in that company's shares without some member of the Stock Exchange noticing both the transaction and its significance. As a result, a change in the tone of the Stock Exchange may be one of the very earliest indications available to the public of a change in the trade cycle. That there has been such a change in the tone since the New Year must be listed as one of our most significant danger signals.

In view of all these facts, there is a case for caution rather than for pessimism. The omens point to an active autumn, with further records in production and turnover of goods. Beyond that, it is impossible to dogmatise. But it begins to look more likely than it did six months ago that next year will see some recession. Fortunately, there are good reasons for believing that any such recession would not be a disastrous slump, certainly not as the word is understood nowadays. Exports are still increasing, and the world as a whole seems to be both less mature in recovery and farther away from a reversal of trend than Great Britain, which started first and has gone farthest. Again, there is the factor of armament expenditure. The annual disbursement of £80 millions of borrowed money on this form of "public works" is almost certainly not enough to dominate the economic picture, but it is equally far from being negligible. Finally, there is no sign of a really steep rise in interest rates. So long as exports are rising, armaments are booming and interest rates are low, a severe depression in Great Britain is unlikely. It might be added that if there has to be a recession in a major industry, building is almost the easiest to accommodate, since it is widely spread across the country and its personnel are equally suitable for many other occupations.

The conclusion is, then, one of cautious confidence that, even in the worst eventuality, there is no new economic blizzard in the offing. But the outlook is unsettled, and it would be the course of wisdom to make preparation now before the clouds darken.

The Clothing of the People—II

Trends in the Clothing Trade

IN last week's issue of *The Economist* we pointed out that in 1934 some 8 per cent. of a national expenditure of £4,094 millions was spent on clothes and that not even the onset of economic depression had stemmed the steadily growing demand of the masses for cheap and varied dress. We now propose to consider, in greater detail, some of the underlying conditions of the progress recently achieved.

We may appropriately begin by setting out certain figures taken from the Bank of England's index of the value of retail sales, which is compiled from a sample of department stores, co-operative, multiple and independent shops.

PERCENTAGE CHANGE IN THE VALUE OF RETAIL SALES
(Years ended January 31st)

	1934	1935	1936	1937
Dress materials	−0·6	−3·8	−4·1	−3·3
Women's wear	+1·6	+2·1	+3·9	+4·4
Fashion departments	+2·7	+3·7	+5·6	+6·0
Girls' and children's wear	+0·8	+1·2	+2·2	+5·5
Fancy drapery	+1·1	+1·1	+3·2	+3·2
Men's and boys' wear	+3·6	+3·5	+6·8	+3·1
All goods *other than food*	+1·6	+3·2	+4·9	+4·2
All goods	Nil	+3·3	+6·5	+5·9

Sales of fashion goods and men's and boys' wear, it will be seen, have tended to increase more rapidly than the value of retail trade as a whole during the past four years. The coincidence of increased sales by fashion departments with declining sales of dress materials is evidence of the extent to which ready-made clothing is displacing the products of home dressmaking.

The story of the growth of the clothing industry in recent years, indeed, has been mostly the story of the increasing scope and diversification of ready-made women's wear, on the one hand, and the growth of multiple shops in men's tailoring on the other. Multiple shops have made much less headway in the market for women's than for men's clothing. The greater part of women's clothes are sold ready-made, rather than " to measure." Moreover, in the women's clothing branch of the wholesale trade there is a large number of competing firms of relatively small size. Fashion, by preserving the smaller firm, correspondingly limits the possibilities of mass-production. A large section of the women of this, as of other countries, takes its lead largely from the tastes of the upper class and the well-to-do, as these are depicted in the Press or on the screen. The wholesale manufacturer must meet these changes as a style spreads from duchess to housemaid; and be equally ready for a further change when the duchess alters her fashion because it has become too popular. The increasing tendency of women to wear " ready-mades" is an incentive to mass production, but these swift changes of general fashion preclude its widespread application to the industry.

In men's clothing, different problems arise, and a different organisation has been built up to meet them. The small bespoke tailor, who turns out single suits to order, without the resources of machines, factories and mass production, still survives, and is far from having been ousted by the multiple shop. The success of the latter, indeed, has been largely due to its ability to tap fields of consumption hitherto largely unexplored. The multiple tailor bridges the gap between clothes which sell for their quality and those which are bought for their price. He supplements the virtues of the cutter's scissors with the economies of mass production; and probably conflicts less with the small retail bespoke tailor (who is likely to retain a considerable part of his specialised market in any case) than with the wholesale manufacturer of men's ready-made suits and overcoats. All the three forms of organisation still control an important share of the total trade. Over 40 per cent. of the annual purchases of clothes for men is still produced by wholesale clothiers and sold ready-made by department and chain stores, by co-operatives and by small retail outfitters. Multiple tailoring organisations, such as Montague Burton, Price, Hepworth, Hector Powe and Rego, probably account for as much as 15 to 20 per cent. of the total. But a similar proportion is still supplied by the small retail bespoke tailor, employing only a few persons. Out of about 10,000 retail outlets for men's and boys' wear, not more than 2,000 are represented by branches of the multiple organisations.

The classical economists would have found matter for gratified comment in the ability of the modern clothing industry to satisfy increasing demand through the application of improved methods of technique in manufacture, organisation and marketing, and thus to bring varied fashions and pleasing qualities of dress within the range of a progressively larger number of people every year. The progress of the industry, even during the present decade, can be readily inferred from official figures. Domestic consumption of woollen and worsted cloths rose from 238 million square yards in 1930 to 299 million square yards in 1933 and, after a slight decline in 1934, reached 298 million square yards in 1935. Home consumption of cotton piece-goods rose from 991 million square yards in 1930 to 1,431 million square yards in 1935; and of silk and artificial silk fabrics and mixtures from 219 million square yards to 426 million square yards in the same period, the whole of the increase being due to the remarkable expansion in the use of artificial silk and artificial silk mixtures. It is true that cotton and silk fabrics are used for furnishing as well as for clothes; but the advance made in the latter industry is unmistakable.

Another and less well-known tendency in recent years has been the growing popularity of knitted fabrics. This is due in part to marked improvements in the quality of the material itself and also to changes in fashion. The result has been the expansion and prosperity of the hosiery trades. The output of knitted fabrics has more than doubled since 1930, rising from 7 million lbs. to 15 million lbs. Progress has been specially marked in the manufacture of knitted fabrics from mixed yarns of cotton and artificial silk—which compare favourably with woollen fabrics and cost much less.

Will this growth continue? It is difficult to give a certain answer. Probably it will; but the future of the clothing industry depends upon two things, one within and the other outside the industry's own control. If it can continue to combine reasonably good quality and up-to-date design with a diminishing *retail* price, it will go on opening up new markets. But it is also dependent on the ability of the public to spend a fairly high proportion of their income upon clothes. Up to a point, clothes are a necessity in a civilised state in the temperate zone; but the possession of many clothes, or their frequent renewal, tends to become a luxury. A rise in the cost of living which was not accompanied by an equivalent rise in the average level of earnings would, undoubtedly, tend to react unfavourably on the continued progress of the clothing trades.

Copper Supplies and Prices

COPPER stands high in the list of essential raw materials for a world which, at the moment, is simultaneously extending its industrial production, electrifying its services and re-arming. A year ago, when we last reviewed its future prospects (see *The Economist*, August 22, 1936, page 341), the world's copper producers were still grappling with the problem of preventing an excess of supplies. To-day, the position has been entirely transformed; production has fallen behind consumption, prices have risen sharply and producers are concerned rather to discover means of increasing available supplies than of limiting them.

It is now clear beyond all doubt that, in the absence of reliable consumption statistics, the leaders of the international copper restriction scheme underestimated the growth of consumption and consequently kept production at too low a level. When they eventually decided substantially to raise their quotas, in October and November, 1936, their action came too late to check a rapid upward movement in prices. When the complete removal of restriction was effected from January 14th, a formidable wave of market speculation was gathering headway, and by March the London Standard cash price of copper had been forced up to £78 per ton—a price twice as high as the average for 1936. Subsequently, the price has fallen back to £55-£60 per ton, but the technical position of the market is still strong, and the price may quite possibly be raised again in the near future.

The prolonged maintenance of organised output restriction had two far-reaching results. In the first place, it effected a rapid reduction in the world's copper stocks. At the end of last month, American stocks were equivalent to about six week's current consumption, and stocks outside America to about seven weeks' consumption. These totals are well below normal levels; for stocks in consumers' hands are not extensive.

A second consequence of the limitation of production between 1932 and 1936 is the difficulty, which now exists in securing a considerable increase of production at short notice. Last year, America's output was 400,000 metric tons less than in 1929, though American consumption was only 250,000 metric tons below the peak level of that year, In the rest of the world, production last year exceeded the 1929 figure by 206,000 metric tons, and consumption by 267,000. There has been no change in potential productive capacity in the United States, but in the rest of the world capacity has been increased by more than 650,000 tons since 1929. That substantial ore reserves are available, both inside and outside the United States, is undoubted; the problem is rather how to bring them into production with the least possible delay. In fact, all copper-producing countries have already appreciably increased their output, and total production expected in 1937 will almost certainly reach 1,900,000 to 2,000,000 metric tons—a record for all time, which may be compared with 1,699,000 metric tons in 1936, 931,000 metric tons in 1932 and 1,895,000 metric tons in 1929.

The trend of copper production and consumption in the leading countries of the world, and the course of average London prices since 1920, are set out in the annexed table and discussed on page 423.

The figures suggest that, even if a total production of nearly 2,000,000 metric tons is secured this year, the increase will scarcely do more than counterbalance current consumption, which has been supercharged by increasing industrial activity and world-wide rearmament. There will be no appreciable relief from the present shortage of marketable stocks of copper, and prices, consequently, are almost certain to remain relatively high. While consumers continue the reserved buying policy they have followed since the collapse of the market boom last March, the maintenance of a price between £55 and £60 is probable; if and when they decide to re-stock on a large scale, a rise to a price well over £60 may be expected. The average price for 1937 may well turn out to be about £30 higher than the average for 1936.

On a longer view, however, the continuance of present prices is much more doubtful. In the first place, current prices are inimical to consumption. Many of the new uses for copper developed by scientific research during the past five years have already been suspended. The process of substituting aluminium for copper has been markedly expedited, and its dimensions will be plainly evident as soon as the contemporary increase in world industrial production is checked. In the second place, the stimulus given by high prices to world copper production will increase the difficulty of future output regulation. Already the potential production of existing mines and plant is being extended, and arrangements have been made to work new deposits, the most important being the N'Changa Mine of Northern Rhodesia and the Namaqualand copper deposits of South Africa. Thus, the present temporary scarcity, due to the undue prolongation of restriction, may have far-reaching results; for the true problem of the industry has been, and is, to accommodate the large increase in low-cost production outside the United States, whose development during the last eight years has constantly threatened to involve cut-price competition and an uneconomic price level. The leading low-cost producers endeavoured to meet this danger by co-operation, by supporting a reasonable price level and by scientific research into new uses. But the trend of events during the past twelve months has undermined their policy.

Fortunately, the attitude of producers, inside and outside America, towards the immediate market situation is correct and well-advised. In the United States the domestic price was reduced from 17 to 14 cents per lb. between March 31 and April 29, and has been kept stable at the lower figure ever since, despite the danger of rising exports. The conservatism of the American producers stands in strong contrast to their past policy of raising prices to uneconomic heights. Its chief motive is anxiety to prevent the re-opening of small, high-cost mines. Producers outside America are increasing their output as rapidly as possible, in an effort to restore a more normal price level at the earliest possible moment. Thus, although powers to re-impose restriction were expressly reserved last January, the omens are against their use in the near future. If the leading copper producers fail to re-establish control of the market whenever the pace of the world's industrial activity begins to slow down, then the eventual downward adjustment of the price of copper may be abrupt and unregulated.

COPPER PRODUCTION, CONSUMPTION AND PRICES
(thousands of metric tons)

	1929	1932	1934	1935	1936
Smelter Output

Note.—Figures of production and consumption are derived from *Metallgesellschaft*; those of prices are annual averages of London Metal Exchange official quotations.

What is Germany Thinking?

DURING the last twelve months the National-Socialist Party has encountered heavy weather in home waters. By a succession of events this has been made as obvious to foreign observers as to travellers in Germany. Up to the re-occupation of the Rhineland on March 7th of last year, the first three years of the regime had carried an anxious German people (of all classes and opinions) from one astonishing diplomatic triumph over the allegedly enfeebled Western democracies to another: the building of a vast Air Force; conscription and the traditionally most powerful land army in Western Europe; the resurrection of the German Navy; the Saar; the pocketing of Danzig; and, to cap all, the challenging re-occupation and remilitarisation *vi et armis* of the Rhineland, which laid Locarno in ruins.

But after March 7, 1936, the cup of Nazi triumphs abroad was full to the brim. Henceforward, diversions from domestic discontent to foreign glory would involve head-on clashes with other sovereign Powers: Poland, Denmark, Czechoslovakia, Austria, Belgium. Neither the Reichswehr chiefs, nor even those of General Goering's new Air Force, were prepared for a little war if it were likely to be prolonged, let alone general European war. This was their view despite the favourable European terrain then, when Italy depended on Germany in the Ethiopian war and Britain and France gave repeated evidence of being unprepared to deal effectively even with Italy alone. Accordingly, during the last twelve months the Nazi Party-State's drive for rearmament and self-sufficiency has been continuously intensified, while world prices have risen and the terms of Germany's foreign trade have turned against her. This has substantially vitiated the economic, social and therefore even the political assumptions on which the Party dictatorship's few leaders dressed their military, economic and diplomatic plans of campaign. One of the first of these assumptions was that the Party would, after four years, be so all-powerful at home that no carpers, no saboteurs—still less, no opposition of any kind, even if only of the mental kind—could exist. It is just this datum, if we can judge by evidences in Germany, which has not been accorded to the Party. This, however, is far from saying that any alternative Government, or organised opposition, is even conceivable.

How else is one to explain the bitter intensification during the last nine to twelve months of the Party's drive against the following: the Jews, the Roman Catholic Church, the Protestant Church, foreign journalists, the big industrialists, Germans' private property abroad, the independent "small man" in trade (once the white-headed boy of the Party), parents who keep their children from the Hitler Youth Movement, and—finally—that symbol of subtle reason, Dr Schacht? These things have neither been hid from the public gaze nor done in a corner. The death-penalty for non-disclosure of assets abroad; the supersession of Dr Schacht by General Goering in the Exchange Control and the omnipotent Four Years' Plan, and of the German Steel-masters' steel monopoly by the new State Steel Corporation; the repeatedly minatory utterances of General Goering, Dr Ley of the Labour Front, and Herr Darré, Minister of Agriculture, against peasants or farmers who hoard anything at all, now that their all is demanded of them by the State; the vastly increased frequency of beheadings, without due trial, for alleged Communism (much of it as far back as 1930!), espionage, activities prejudicial to the safety—or even renown—of the State, etc.; and the multiplication and expansion of concentration camps and their contents: these are a few outstanding symptoms alike of criticism of the regime in a wide circle, and, at the centre, of creeping paralysis of confidence.

Now no dictatorship has ever contrived to kill criticism and opposition outright; neither in Russia after twenty years, nor in Italy after fifteen; neither in the ancient Rome of Sulla, Nero, Diocletian, nor in Nazi Germany. Education means independence and criticism. And Germany plunged into dictatorship four and a half years ago with the most highly educated middle-class of all the Great Powers and the best-educated working class. During the last few months discontent with, and criticism of, the Nazi Party-State and regime has grown very much in both these classes: among the well-to-do traders, landlords, industrialists, functionaries, bankers and professional men, and among their clerks, labourers, craftsmen, assistants and artisans. Despite the Party's endeavour to mitigate the steady reduction in real wages by sharpening the attack on industrial profits and the propertied class, the workers have shown that they want social reform, not foreign glory; better conditions at home and in the factory, not conscription ending in death on unknown battlefields; socialisation of the chief consumption-goods industries and services, not State control of them for reasons of *Wehrwirtschaft*. After the three and a half years of diplomatic triumphs, the last year has given neither employers nor workers any foreign triumph or any domestic improvements. The Reichswehr's and Party's experimentation with men and machines in the Spanish quarrel has brought no glory: only disturbing reflections for the Reichwehr and the bereaved relatives of men "accidentally killed on manœuvres" alike.

Thus a dry-rot in enthusiasm for the Party regime has developed to a point at which the local Party organisation has had to stem a return of the popular tide towards the Churches and the family circle, where liberty of expression has had a renascence. Youth, too, has begun to show signs, not of rebellion against Party drill and discipline, but of that dangerous boredom which is born as soon as none sees to what concrete achievements the drill and discipline conduces. University students, too, have recently begun to seek out the remaining tutors whose independent spirit and objective philosophy underwent no profitable sea-change with the advent of the dictatorship. Thus, the inquiring spirit of man, always highly developed among Germans, even in the very young, has begun to probe beyond the bounds laid down by the Party. This has led to a lack of Nazi-guaranteed young civil servants; for more and more of the young go cheerfully into the Reichswehr or business, the two realms within the Third Reich where the Party writs run slowest and against most obstacles. Peasants and farmers are so controlled under the agrarian self-sufficiency programme, which orders their work and commandeers the outcome, that many call the Party's system "Communism," with which, indeed, the Nazi's entire economic organisation has great similarity. The big landowners have also been safeguarding their position by retiring strategically into the Reichswehr.

Finally—most important—the German heavy industrialists, self-deluded at the outset into thinking that Herr Hitler would prove a Sulla and restore to them their senatorial power, have seen their capital restored, their works running to capacity, and their earnings trebled and quadrupled; but their dividends are restricted, undivided profits and all reserves have to be placed in new Government paper, and even their salaries have been pared down. Those with the clearest minds among them see that Germany cannot for decades, perhaps a century, become simultaneously self-sufficient in food, fodder, raw materials and manufactures. Confiscation and inflationary forced savings in the last four years have not availed to reach anything approaching self-sufficiency even in fodder, food and a few key raw materials. These industrialists opposed, and still oppose, the Four Years' Plan as "a piece of sublime mysticism and nonsense," and a costly, racketeering kind of thing at that.

These are some of the psychological circumstances at a critical juncture in the Nazi Party's and the Third Reich's existence. This autumn the harvest and the agrarian self-sufficiency plan is a failure (see the Note in *The Economist* of August 7th, page 300); much of Germany's foreign exchange resources, and of the lessened compulsion she can still exert on her small south-eastern neighbours, will consequently be needed to save the workers' already curtailed standard of living, the herds of Germany's cattle, and the hitherto uninterrupted progress of re-armament. The latter will then be at its most costly stage, for the purchase alike of food, fodder and key raw materials from abroad with limited free foreign exchange will be difficult to carry out in its entirety.

These things are not hidden from the astute German citizen. He asks himself whether the next totalitarian diversion will be a *Verzweiflungstat*, an act of desperation, within the Reich or without. If within, he wonders whether the reasonables will "put it across" the Party extremists, or *vice versa*. If without, he wonders whether the Western democracies will allow those who in the past four years have so consummately and profitably practised the art of living dangerously to bring off one more *coup*, and thus again to save their own skins at Europe's and posterity's expense. If they do, his outlook is scarcely rosy; if they do not, it is at least as unpromising. The significant thing to-day, after four and a half years of Naziism, is that this German-in-the-street may be either worker or employer, either young or old. It is the change in the last year that is both encouraging and alarming. For the question he asks the regime under which he lives is the question all foreigners ask Germany: *Quo vadis?*

Notes of the Week

North China News.—War now rages all over North China: from around Kalgan in Chahar down through the Nankou pass, to either side of Peking, in southern Hopei, and round Shanghai. Shanghai itself has been continuously bombarded from air, land and sea. Over 150 people were killed on Monday by a bomb which landed in a big store at one of the principal crossings in the Settlement. All the British have now been evacuated who are not actually required in the Settlement. The Japanese began to land reinforcements on Wednesday at Woosung, downstream from Shanghai, as a diversion. Their strategy seems to be what it was in 1932: to weaken the Chinese line by outflanking movements, to seize the railways, and then to roll the Chinese back. To this end they have been successful in the north-west in the attacks on the Nankou pass and on Kalgan; for the Chinese have now had their westernmost northern flank turned. Next the Japanese hope to drive in from Tientsin and Peking, with Manchukuo safe behind them, to the south-east and south. South-east would lead them towards Nanking and Shanghai; south towards Hankow. Already Japanese aircraft have been bombing Nanking and Canton, as well as Kalgan in the north. But if the war settles down into a long business in which the Chinese are clever enough to avoid major frontal engagements, the distances over which the Japanese must have complete control for the safety of their armies and communications will make the cost colossal.

★ ★ ★

If the Chinese go on retreating, they can embarrass Japan. As it is, the Japanese Diet has voted over £112 millions to carry the war up to the end of this year; but though this raises the military portion of the Budget to treble what it was only four years ago, it will be a trifle compared with the cost of running Manchukuo, *plus* all of North China, *plus* possibly Shanghai; holding down what they acquire; and meeting the demands of foreign Powers for damages. These latter demands on Japan were again foreshadowed this week both by the American authorities and the British; for the damage to British property in Shanghai alone is now estimated at £20 millions. Against this, the Japanese will try to seize the Customs revenues of Tientsin, Shanghai, etc.; and then the fat will be in the fire with all the foreign Powers whose trading and investors' interests are linked with these revenues.

★ ★ ★

Dearer Milk.—The late summer usually sees an open and uncompromising battle between the milk producers and the milk distributors over the price to be fixed for milk for liquid consumption during the coming twelve months. This year, however, producers and distributors have reached agreement without an open breach. They are each to have something at the expense of the consumer. The wholesale price, at which milk is sold by producers to dairymen, is to be increased from an average of 15s. 3d. to 15s. 11d. per dozen gallons. What this means in practice is that the price is raised by 1d. per gallon in eight months of the year. The retail price, however, is to be raised 1s. a dozen gallons, or ¼d. a quart, on the average of the year. The difference between the two increases—namely, 4d. per dozen gallons—goes to the distributors. These increases are related to the increased costs in recent months. The producers claim that prices of feeding stuffs have increased by 37 per cent., while the distributors complain that they are paying more for labour and for bottles. The increase, like the serving maid's infant, is only a little one, and it is perfectly true that both parties' costs have recently increased. Indeed, if the 1936-37 prices were just, an increase in 1937-38 is also just.

★ ★ ★

This reasoning, however, merely begs the main question. The consumer's costs are also rising. He has less money to spare for milk, which is already, relatively to the pre-war level, the highest item in his budget. Every increase in the price of milk, be it only ¼d. a quart, makes it more urgent to overhaul the whole system of prices in the milk industry. If the producer's costs have risen, his true remedy is to produce a smaller "surplus" of milk to be sold at a loss. His own receipts per gallon could then be increased while the consumer's price could be reduced. As for the costs of distribution, it is impossible to believe that a thoroughgoing measure of rationalisation would not reduce them by much more than 4d. a dozen gallons. The justification given for the increased price is, in short, only superficially convincing. The fundamental fact is that, once again, the sole effect of the Milk Marketing scheme seems to be to milk the consumer.

★ ★ ★

British and Foreign Steel Prices.—It is not easy definitely to answer Lord Nuffield's publicly reiterated complaints last week-end that British steel prices are maintained too high. The advance in steel prices has occurred since the beginning of 1936, and was undertaken owing to the increase in the cost of ores, scrap and fuel. It is not possible exactly to determine the incidence of these increased costs, since the cost structures of the individual steel concerns differ greatly. Some companies use raw materials of their own, whereas others have to buy them. There are considerable differences in technical efficiency and in industrial integration. A tentative calculation shows that about half the total costs of manufacturing steel (i.e. the value of gross output) is expenditure on pig iron, semi's and coal. The advance in the prices of these items has resulted in a rise of total output costs of about 19 per cent. But the prices of items forming the remaining half of total costs have not risen by the same percentage. Wages, which represent about one-quarter of total costs, have not risen by anything like 19 per cent.; and overhead charges, which represent part of the remaining quarter of total costs, have declined per unit of output—owing to greater economies from a larger volume of production. Prices for steel products such as

plates, rails and joists, however, have been increased by about 25 to 30 per cent. during the last twenty months. It can therefore be concluded that, measured by the probable trend of cost factors, this increase has been liberal to the makers. So far, at least, Lord Nuffield makes out a *prima facie* case.

* * *

Lord Nuffield's Attack on Steelmasters.—Lord Nuffield is really girding at the British Iron and Steel Federation's statutorily-conferred monopoly powers. They are able to enforce their price agreements by threats to withhold from recalcitrant member-concerns their supplies or their imports under the Federation's agreement with the countries of the Continental Steel Cartel. Such licensed imports from " quota countries " —for imports from these Cartel countries are limited by the Federation's agreement with the Cartel, and in order to avoid breaking the most-favoured-nation clause, have to be based on British imports from them in 1934—come under the Federation's thumb. On June 29th of this year, the Import Duties Advisory Committee, after being so advised by the Federation, brought duties on these " quota imports " down to a mere 2½ per cent. as a result of shortage and delayed delivery of British steels (Cmd. 5510). Imports from non-quota, non-Cartel countries and all imports from Cartel countries, *over* the quota limits have to pay 12½ per cent. duty. In effect, owing to the great shortage of supplies here, this gives the Federation power to corner all the cheaper imports up to the quota limits, to extend the quota by advising the Advisory Committee that it is essential, and still to monopolise the cheaper imports for its own members. If Lord Nuffield, or anyone else, wants to import steel he may not get a look-in for the cheaper quota imports; and if he *will* import steel he will have either to go outside the quota (Cartel) countries, e.g. to the United States, or to import from the Cartel countries, in excess of the British import quotas as fixed by the Federation and Advisory Committee. In either case he will pay a higher duty; that is the idea of protection. Here again, then, Lord Nuffield seems to have hinted at a case which lay behind his charges.

* * *

But when all's said and done, Lord Nuffield's charges will raise sardonic smiles among the critics of protection. Lord Nuffield's own industry has benefited from the British car-consumers' pocket virtually since the war, as a result of the McKenna duties which penalised the entry of cheaper and more powerful American cars. Lord Nuffield has been loud in his castigation of those who bought foreign cars. Now, only a year or so after the price of protecting a British industry, of whose products Lord Nuffield is in his turn a consumer, becomes apparent to him, he threatens to " buy foreign." And if he does buy from foreign steelmasters to spite the British Iron and Steel Federation, his cars will still rank as British for the benefits of the McKenna duties. *O tempora! O mores!*

* * *

Railway Wages—The recent awards of the Railway Staff National Tribunal, including the restoration of the final 1¼ per cent. of the 5 per cent. deduction made in 1931, have now been accepted by two of the unions concerned and are not likely to be rejected by the Railway Clerks' Association, which meets on Sunday. The National Union of Railwaymen accepted the Award grudgingly, and affirmed their determination further to pursue their claims to a 36-hour week and a 50s. minimum weekly wage. The Associated Society of Locomotive Engineers and Firemen were more militant, and at one time it seemed possible that their delegate conference might reject the Award and press for strike action. This would not have been the first time that the engineers and firemen had taken a strong and uncompromising line in isolation. Their deep resentment of the refusal of their claim for twelve days' holiday with pay found expression in the terms in which, on August 25th, they finally accepted the Award. Indeed, their final resolution was openly challenging; they questioned the methods, the statements and the reasoning of the Tribunal; and threatened that, if a similar line were taken in the future, they would have recourse to direct action to safeguard their rights and " the spirit and intention of the machinery of negotiation." The warmth of these terms—which appear to have borrowed something of the phraseology of recent international political exchanges—is disturbing. But it is solid gain nevertheless, that the locomotivemen have not carried their opposition to the point of destroying the established procedure of conciliation.

* * *

Radiolympia.—The British radio industry gains much by holding its annual exhibition in August, when London holds many visitors and rival loud-speakers are out of action in the " dead " advertising season. This year's Radiolympia show is being staged against the background of a number of new factors which may profoundly affect the outlook for the industry. For the first time in radio's short history the trend of prices is upwards. Fifteen of the leading manufacturers recently announced a 5 per cent. increase on their more expensive sets and foreshadowed further price increases during the season. From the profits angle, this rising trend may, in one sense, be favourable. The basic weakness of the industry in the past has been over-expansion and fierce price competition. Nevertheless, the suggestion that an increased measure of co-operation on price policy, which the joint announcement implied, might serve to offset the effects of higher prices in an elastic market, should be accepted with reserve. The industry remains overexpanded and the multiplicity of models is as marked as ever. Moreover, the established manufacturers are encountering increasing competition from small-scale rivals, from imported sets and from the relay services which, incidentally, are affected to only a minor extent by rising costs. The number of licences is still expanding —the total rose from 7,695,000 on June 30, 1936, to 8,223,000, in June, 1937. Emphasis, however, is now almost wholly on replacement, and designers and advertising men seem to find the task of developing a new and convincing appeal more difficult with every season that passes.

* * *

This year, on the radio side, interest is centred once more on all-wave sets. But the chief attraction of the present exhibition is not radio proper, but television. From the commercial point of view television is still largely an unknown factor. Large sums have been spent on development by nearly all the leading radio manufacturers. While receiving sets range in price, however, from forty guineas upwards, most makers can expect to tap only a relatively narrow market. Both investors and the manufacturers themselves are wisely cautious about the financial possibilities of television. Within the industry itself, the tendency of many manufacturers to extend their activities into new fields unconnected with broadcasting entertainment, and the rumour that they have reached an agreement not to expand their television interests too rapidly, are indicative of a strong desire to achieve some reasonable measure of stability. The implications of these facts for investors in radio shares are discussed in a Stock Exchange Note on page 438.

* * *

Palestine and the Permanent Mandates Commission.—The Mandates Commission has now sent its report on Palestine to the Council, which will consider, when it meets next month, both the report itself and the minutes of the long session of the Commission out of which it has emerged. Meanwhile, the Secretariat at Geneva has published a summary of the report. The report deals in three sections with the insurrection of 1936, with certain details of the administration of the mandated territory, and with the recommendations of

the Palestine Royal Commission. It is this last-mentioned section that is of the greatest practical interest. The Mandates Commission whole-heartedly endorses the Royal Commission's proposal that the Holy Places in Palestine should be placed under a permanent British mandate which will not include the provisions of the Balfour Declaration; but it merely does not reject the proposal that the rest of the territory should be partitioned into two Arab and Jewish preserves. On this point the Mandates Commission makes the shrewd observation that, if a partition scheme is carried out, its success or failure will turn on the general effect of partition upon the relations between Jews and Arabs more than on the particular convolutions of a dividing line which cannot fail, however skilfully drawn, to produce sufferings and heart-burnings.

* * *

This observation, however, surely militates against the second most important finding of the Mandates Commission in this section of its report. Having countenanced the idea of partition in principle, the Commission deprecates the corollary that a partition should be followed by the immediate creation of two independent states. It would like to see either a provisional " cantonisation " of Palestine under a single mandate, or else the administration of a partitioned territory under two separate mandates which would not both necessarily terminate at the same date. In this matter we suggest, with all respect, that the Mandates Commission has not shown as good an understanding for Jewish and Arab psychology as the Royal Commission. The latter has perceived—and this is one of the ablest strokes in its handling of the Palestine problem—that both parties might conceivably be induced to accept a line of partition that must be far from satisfactory to each of them, if, through making this sacrifice, they can look forward to obtaining straight away a house of their own in which to live as they like. Immediate independence is the sugar-coating on the Royal Commission's pill; and, if this *douceur* is withdrawn, we do not see much likelihood of the patients agreeing to swallow the nasty medicine neat. Surely the better way is to give both states their independence—which is, after all, the *raison d'être* of partition—at the earliest possible date, but at the same time to go further than the Royal Commission has gone in its report in making the grant of independence conditional upon the acceptance, by both sides in advance, of stipulations for close co-operation between the two new bodies politic. Independence within a treaty-framework seems the most promising line of advance.

* * *

Congress in Recess.—The first session of the Seventy-fifth Congress adjourned last Saturday. The session lasted longer, and accomplished much less, than usual. This was due entirely to the fact that its time was absorbed with the President's plans for reform of the Supreme Court; and the defeat of those proposals meant that control of Congress passed, for the time being at least, from the President to his opponents within the Democratic Party. As a result, the President lost not merely his Court proposals but also the rest of his legislative programme. The Bill to control wages and hours, the reorganisation of the executive departments of the Government, and crop control were all abandoned; and the Housing Bill passed in a form so emasculated that its author refused responsibility for it. All that the President obtained from eight months of Congressional debates was a tax avoidance measure, a Coal Act and the first instalment of his campaign to convert farm tenancy into farm ownership.

* * *

These defeats add up to an impressive setback for Mr Roosevelt. But he has not lost all along the line. The threat of his Court reform plans induced the Supreme Court to make a radical alteration in its attitude towards New Deal legislation. Moreover, the President has made it quite clear that he will now counter-attack against the dissident Democrats. The closing hours of the Senate session were embittered by an open threat, uttered by Senator Guffey, one of the President's most " regular " adherents, to consign the rebels to political oblivion. This is no idle threat, since the magic of the Roosevelt name, and the Roosevelt machine, is largely undiminished. Moreover, the rebels must win their battles within the Democratic Party, since apostasy is almost unknown in American politics and the foundation of a third party is almost impossible. Each of these rebels is now to be pursued into his own constituency. If these battles go in the President's favour, he has already served notice that he will bring up the matter of the Supreme Court again in order to defeat what he calls " the veritable conspiracy on the part of many of the most gifted members of the legal profession to take advantage of the technicalities of the law and the conservatism of the courts to render measures of social and economic reform sterile and abortive." As for the other Bills which have now been abandoned, the President will, if he finds enough support in the country, call Congress back into special session in the autumn to drive them through. Mr Roosevelt has lost a battle. But the campaign is only beginning.

* * *

New York Politics.—As pretty a comedy is currently being played out in the municipal politics of New York City as even that veteran political circus has ever witnessed. The city has to elect a new Mayor this autumn. The incumbent Mayor, Mr La Guardia, is a titular Republican, but actually a faithful adherent of the Democratic President Roosevelt. On the other hand, Tammany Hall, the old Democratic machine of the City, is in the hands of Mr Al Smith and other " Conservative " enemies of the President. Now Mr Roosevelt would be glad enough to see Mr La Guardia continue in office, so far as New York City is concerned. But he is even more interested to establish his sway over the Democratic machine of the City, since that machine will nominate a majority of New York State's delegates to the Democratic Convention of 1940, which will nominate the Presidential candidate of that year. Consequently, the " New Deal " Democrats have organised a revolt within the Democratic Party against Tammany Hall, and since Tammany's writ only runs on Manhattan Island, which is nowadays only one out of five boroughs of the City, it is quite likely that the rebels will win. But as a measure of self-defence, the Tammany candidates for the various City offices have entered the Republican " primary " in the hope of being able to secure enough Conservative Republican votes to wrest that party's nomination from Mr La Guardia. This manœuvre will probably not succeed, but if it does, Tammany Hall will have become a Republican, and a Conservative, institution, while the control of the Democratic machine will have passed, for the first time in a

century, out of its hands. There are thus three candidates, Mr La Guardia, the New Deal Democrat, and the Tammany nominee, who has not yet made up his mind whether he is a Republican or a Democrat; and is sure only that he is opposed to the President. There will clearly be much political diversion before the votes are counted.

* * *

Nazi Extra-Territoriality. — Arising from the German Government's expulsion of Mr Ebbutt in revenge for the British Government's virtual expulsion of three German journalists for non-journalistic activities, the chief of the Nazi Party's Foreign Organisation, Herr Bohle—who is also chief of the Foreign Office's department responsible for Germans abroad—has been busy. Herr von Langen, one of the three expelled Germans, was formerly an important servant of the Nazi Party's Foreign Organisation; and he is now billed to appear as guest of honour on the platform of the Nürnberg Party rally next month, to which is now to be given another name than the Rally of Unity. The Nazi Party's Foreign Organisation, under Herr Bohle, who will also be on the platform at Nürnberg, intends to clarify, at the Stuttgart conference of the Organisation next week, the German Government's view of the status which must be accorded to cells of the Organisation in foreign countries. An inspired article in the *Berliner Tageblatt* last week-end goes so far as to claim that, now the Party and State are one, as shown by the parallel administration of the Organisation and the official Foreign Office, the agents of the Organisation in the various foreign capitals to which the representatives of the German Reich are accredited must accompany the representatives to all diplomatic functions in those capitals, and must be accorded, both in their work and private lives, the status of diplomats.

* * *

No better parallel to this remarkable claim could be found than to imagine that the Comintern, in its wildest days, had presumed to claim diplomatic immunity, under the plea that its agents abroad were agents of the Communist Party-State, for their operations and personalities. The Russians never made such a claim. They said the Comintern was no concern of the Russian State; and if its members were caught in activities against the law of the land in which they operated they were left to suffer. That, indeed, is the international law of diplomatic status. The country receiving diplomatic representatives from abroad receives them in order that relations between it and foreign countries can be regulated. Indeed, while diplomats' persons are immune from the law of the land receiving them, *so that they may freely engage in all their diplomatic duties,* if they abuse this scope, they can be arrested and expelled—as was Bernardino de Mendoza, Spanish Ambassador in London in Elizabeth's time, for intriguing against the Crown. That is a clearly established principle in international law. For example, a diplomat cannot spy with impunity; he cannot murder one of his own compatriot employees and plead immunity from arrest; and he cannot deprive even his own compatriots resident or domiciled in the receiving country of the rights and liberties—nor exempt them from the duties which the law of that country affords them. If a diplomat could do these things, every legation and embassy would rule an extra-territorial exarchate of its mother-country, extending over a population of citizens of that country in the receiving country. Such a chaos would ensue as has not obtained in the Western world since feudal times. Herr Bohle, the Nazi Party's extreme zealots, and the *Berliner Tageblatt* must think twice before seriously and officially putting forward such a claim. They forget that, as the receiving country's *agrément* and *exequatur* must be given for each accredited diplomatic representative, they may, in pushing extreme claims, make an irreparable breach in Germany's relations with every civilised State in the world.

Spain and Mediterranean Piracy. — General Davila's advance troops entered Santander on Wednesday before the promised British warship could evacuate the Basque Government and the British subjects. Santander was untenable, first because the Basques were hopelessly outnumbered on land and in the air by Italian, German, Moorish and Spanish contingents, and secondly because sympathisers with the insurgents seized control in Santander itself. President Aguirre and other Basque Ministers escaped by air to Bayonne. In Aragon, Catalan Government forces have advanced between Huesca and Saragossa; elsewhere on land the week has been quiet. Not so, however, on the sea. Too late for comment in our Note last week on General Franco's ubiquitous submarines, a submarine torpedoed a second Spanish Government ship, laden not with contraband but with wheat from Russia, in Turkish waters near Tenedos, at the mouth of the Dardanelles. The French instructions to their Navy and Air Force to attack marauders of their shipping were earlier and less equivocal than those of the British Government last week. The new Tenedos incident, two more aerial bombing attacks on British ships off the Catalan coast, and obstinate passivity on the part of Salamanca in refusing to return three detained British cargo ships, have now goaded the British Government into something which begins to look like a firm attitude. This week there has been a somewhat tardy discovery in official circles and the semi-official daily newspapers of a traditional British attitude to piracy on the high seas and in other Powers' waters. This discovery was doubtless facilitated by a claim put forward from Salamanca that British merchantmen should conform to markings laid down by the insurgents and be subject to verification by visit. Signor Mussolini's speech in Sicily last week-end after the manœuvres there emphasised the possibility of peace and collaboration between Italy and Britain. It will not be easy to achieve this if the whole Mediterranean, from Gibraltar to Tenedos, is ranked by the Duce as Italy's *vita* and anyone else's mere *via*.

* * *

South-Eastern Signposts.—Despite alarums and apprehensions in South-Eastern Europe there are some good auguries in that incalculable region. The rupture by Portugal of Portuguese-Czech relations, noted last week, has led to embittered partisanship among the political parties in the Czechoslovak Coalition Government. The split between the Right-wing Agrarians, the extremists of the biggest Government party, and the moderate elements in the Coalition has been rent right open by their newspapers. The Right Wing have espoused the Portuguese allegations, to the scandalisation of Czech patriotism. As we pointed out in our leading article last week ("Dissensions in Prague," page 374), this division in the Czechoslovak Cabinet can scarcely now be healed. Happily, despite the ready anti-Czech polemics of Italian and German newspapers, which claimed to discern the "hand of Moscow" behind the interruption of an ordinary commercial contract, the dispute has remained a bit of a damp squib. It is greatly to be hoped that no Great Power will start a fire beneath it.

* * *

Meanwhile in Roumania the results of the departmental and communal elections show that the National Peasant Party, which yielded to the present administration by the so-called Liberals a few years ago, has regained ground. It has 28 per cent. of the poll, against 30 per cent. by the Liberals. The "Roumanian Front," the Fascist Party led by the ex-Peasant Party member, M. Vajda Voevoed, and the equally Fascist Party of MM. Goga and Cuza, received fewer votes than the latter alone last time. This leaves with the Liberals the necessity of an agreement with the Peasant Party; for they can no longer safely flirt with Fascist parties which the country has decisively rejected. Whether the Germanophil Right-wing leader of the Peasant Party, M. Mihalache, will enter the Liberal parlour, or whether the Left-wing leaders, MM. Maniu and Lupu, will stand out for a Peasant administration, is a crucial question for Roumania. In any case, the next Government will need to be more liberal than the Liberals. In Bulgaria, thanks to the untiring energy of King Boris since the Georgiev *coup* against parliamentarianism in May, 1934, a step back to democracy is being made by the new Electoral Bill. Deputies will be reduced to 120 chosen by universal secret suffrage, and 30 nominated by professional organisations. It is expected that elections will take place in October; and the former danger of splinter-parties representing splinter-interests is to be met by making candidates show a long residential qualification in their constituencies. This is to obviate representation of private interests by absentee deputies domiciled in Sofia. The only gloomy news this week is from Poland, where the discontent of the peasants with their virtual disfranchisement (described in our article "Aftermath in Poland," August 14th, page 330) has exploded in strikes and bloodshed.

* * *

The Dominions and Defence.—One of the more interesting sections of the Summary of Proceedings of the Imperial Conference was the statement of Australian defence policy. Australian opinion had been sharply divided between those who favoured concentration on air and land forces and those who wished to continue Australia's generation-old policy of maintaining a navy designed to co-operate with the Royal Navy in the event of war. The Imperial Conference report showed that the Commonwealth Government adhered to the traditional "extra-territorial" view as against the "local" and more isolationist view, which had been adopted by the Labour Party. Mr Lyons this week delivered in Parliament a vigorous defence of his policy. The growing strength of the Australian air force and field army was, he said, a valuable insurance against invasion. But a big invading force needed a fleet of ships, which would be vulnerable to naval attack. The Government held that the first line of defence against invasion was therefore naval defence. If naval defence were impotent, land and air defence could not prevent Australia from being brought to terms by blockade. Mr Lyons praised defence co-operation with Great Britain as being necessary to Australia, without injuring her sovereignty. In South Africa, where defence issues have also come to the fore recently, the problem of Commonwealth co-operation in defence is quite different. The Simonstown agreement, whereby in effect the Union supplies the base and Great Britain supplies the ships, places the naval aspect beyond controversy. Co-operation concerns the air, and well-informed opinion, with an eye on the Union Defence Minister's air survey of neighbouring British territories, foresees a pooling of aircraft and joint arrangements for the construction, maintenance and use of aerodromes. It is possible that in the future Australia may come to look upon her own air defence in the same light.

* * *

Moratorium in Alberta.—The Federal Government's disallowance of Mr Aberhart's banking Bills seems to have thrown the Alberta camp into some confusion. Mr Aberhart fumes, appeals to the will of the people, denounces Ottawa for subservience to the banks, but praises the British Constitution, which is apparently more favourable to his cause than the Constitution of Canada. In the same breath, however, he denies that Alberta has any wish to secede from "our great Dominion." The Provincial Ministers and their Social Credit advisers are laying their heads together. Meanwhile they have proclaimed a six-months' moratorium on all debts in the province, with the ostensible aim of checking the flight of capital. A leading banker, incidentally, has proposed a flight of the banks from Alberta if an attempt is made to enforce Social Credit laws. Such a move might actually play into the Social Creditors' hands; for the Federal prerogative of legislating for banking and currency could hardly be enforced against a province which, deprived of all other banking machinery, set about creating its own. However, provincial and Federal officials are now negotiating, and as Mr Aberhart is suspected of being no enthusiast for his own laws we may take it that the gage has not yet been taken up. The Alberta Premier has a genius for fending off the evil day, and the moratorium may well be merely another device to that end.

* * *

Indian Troops for the Far East.—Two battalions of Indian troops are being sent to Singapore and Hongkong to fill gaps caused by the despatch of reinforcements to Shanghai. The cost of their maintenance out of India will fall, according to convention, on British military funds. But the anxieties of Indian nationalists are not thereby satisfied; for what they denounce is the alleged use of India as a "Salisbury Plain for the Empire." India, they say, is compelled to support a vast military establishment which acts as a reserve for Imperial purposes. There was some outcry at the despatch of Indian troops to Shanghai in 1927, and even of the extra Legation Guard to Addis Ababa in 1935. The British Government and the Government of India have repeatedly denied that any such interpretation can be placed upon Indian military policy. On this occasion the Viceroy and Commander-in-Chief discussed with party leaders at Simla the decision to send troops abroad. The subsequent statement by the Congress representatives betrays a certain conflict of views. They complained that they had been told of the decision only after it had been taken, and railed against this alleged proof that Indian troops were being used for Imperial purposes. But in so far as the troops were to be used for the protection of Indian nationals abroad, Mr Satyamurthi and Mr Desai recommended their despatch. There are 2,400 Indians in Shanghai, more in Hongkong, and 50,000 in Singapore. On the other hand, the Congress spokesmen were opposed to the use of Indians in a struggle between Japan and China. Nevertheless, Indian sympathy—they declared—was with China, which was being subjected to Japanese imperialism. This crochet-work of qualifications suggests that, on the whole, the Government of India's decision is unlikely to meet with violent political criticism.

* * *

Copper Production and Consumption.—In a leading article on page 417, we discuss the outlook before the world's copper industry. Since 1929, far-reaching changes have occurred in the industry, both on the supply side and the demand side. An idea of the importance of these changes is afforded by the attached charts, which show the composition of world supply and demand in 1929 (the pre-depression year), 1932 (at the bottom of the ensuing slump) and in 1936. It will be seen that, on the supply side, American

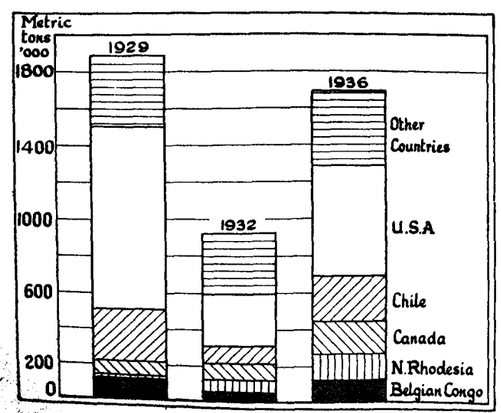
output is still well below that of 1929, and the same condition applies in Chile; but the output of the Belgian Congo has largely regained its 1929 proportions, while that of Canada has more than doubled in the interim, and Northern Rhodesia's contribution has grown from a negligible figure to 8½ per cent. of the world's aggregate production. On the consumption side, the United States absorbed less copper in 1936 than in 1929, but the United Kingdom took 67 per cent. more. Germany, however, used less copper in 1936 than in 1929, thanks to the large-scale substitution of aluminium, which is estimated to have displaced copper last year to the extent of 40,000 tons—a figure which will be increased, probably, to about 70,000 tons this year. Japan and the U.S.S.R. more than doubled their aggregate consumption last year, as compared with 1929. The general conclusions suggested are threefold: First, the world is using more copper to-day than in 1929, despite the development of substitute products, like aluminium. Secondly, consumption has appreciably exceeded world production recently. Thirdly, the rôle of countries outside the United States, both as producers and consumers, is relatively more important to-day than before the great depression.

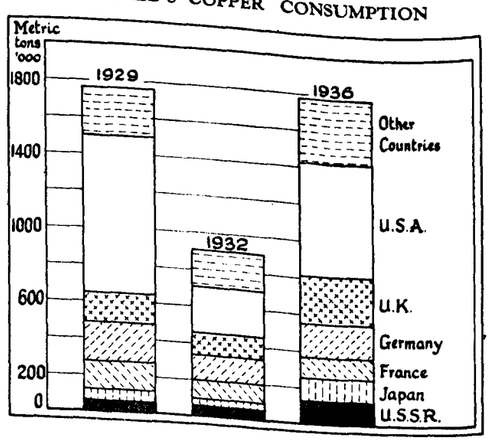
* * *

A Shipping Event.—In Agricola's time, Tacitus tells us, the sun in the neighbourhood of the Orcades (which we now call the Orkneys) did not rise and set, but merely passed across. This may explain why, seventeen centuries later, Pope declared that the North, which meant the Tweed to a Yorkshireman and the Orcades to a Scot, was " the Lord knows where " to an Orcadean. But navigational doubts and fallacies have no meaning for the officers of the fine ship of 23,390 tons which, flying the Orient house-flag on her single mast and bearing the symbolic Orcadean hoop on her straight stem, started on her maiden cruise from Southampton last Saturday. Her departure was, in its way, an outstanding event in recent British shipping history; for the R.M.S. " Orcades " embodies very much else beyond the best modern shipbuilding practice. She typifies the far-seeing courage of her owners, who laid down an extensive new building programme in the depths of depression—and, incidentally, carried it through at considerably lower prices than those prevailing to-day. Her tonnage of just over 20,000 and her speed of a little over twenty knots probably mark the economic limits for passenger liners on Eastern routes—perhaps on any route except the North Atlantic ferry. And while these limits undoubtedly make for a comfortable ship, they allow full scope for taste in internal decoration and ingenuity in the provision of accommodation. Air-conditioning equipment, for example, may be costly in money and—more crucial still for a commercial vessel—in space. But if future generations of passengers demand it as a *sine qua non* on routes which cross the tropics, history may deem it worthy of record that the first ship with conditioned air in any of its state-rooms was put into commission in August, 1937.



* * *

High Shipbuilding Costs.—The events of the last twelve to eighteen months have put an unexpectedly high premium on the acumen of shipowners like the Orient line, who decided to build when the building was good. Less than a week after the sailing of the " Orcades," Lord Craigmyle, chairman of the Peninsular and Oriental group (with which the Orient Company is associated) politely but publicly expressed a doubt whether shipowners, except in a few special trades, could treat ships built at present prices as a paying proposition. More than once recently, Lord Craigmyle declared, a calculation of probable depreciation and working costs, including repairs, had suggested the imprudence of laying down a new ship. Lord Craigmyle's speech was avowedly an answer to that of Mr J. D. Christie, chairman of Swan, Hunter and Wigham Richardson, who, two days before, had vigorously defended the policy of the shipbuilders. Mr Christie had declared, in forthright terms: first, that there was little likelihood of a reduction in new tonnage prices for some years; secondly, that shipowners must balance recent increases against the favours they had received in the past, when builders frequently accepted unprofitable orders merely to keep their establishments together; and, thirdly, that given a continuance of good trade and higher freights, owners could order ships even at present prices with every prospect of making them pay. All industrialists are wont to avail themselves, on public occasions, of the right of preaching from their own book. That certain contemplated tonnage orders have, however, been withheld recently is a matter of admitted fact. The contention of the chairman of Swan Hunter is doubtless correct *if* present freight rates are maintained for the next fifteen or twenty years. But the barometer of many ships carries a message which their owners, mindful of the rapidity of the recent rise, are unlikely to overlook: " Long foretold, long last; short notice, soon past."



* * *

Onslaught on Litter Louts.—After long preliminary skirmishes—during which polite requests, provision of refuse-baskets, and finally the passing of local by-laws have been invoked—an official onslaught has been launched against the " litter-lout." At Arundel Police Court on Monday last the bench convicted 38 out of 40 persons summoned for throwing litter about in scheduled areas, despite notices and baskets prominently displayed. The fines imposed were small—from 5s. to £1—but, as Sam Weller said, " Hurroar for the principle!" Only three defendants had the grace to turn up in Court;

I—WORLD'S COPPER PRODUCTION (Smelter Output)

II—WORLD'S COPPER CONSUMPTION

one of these, and another who did not appear, got off on the plea that they were feeding the birds. The litter lout has only really become a disfiguring pest in our countryside since the advent of cheap communal traffic: the light car, bus, char-à-bancs and motor-cycle and sidecar. Before the war, the bicycle brought no real litter louts; but to-day, and especially in the last five years, the menace has grown in costly and alarming fashion. It is pettifogging, silly, unnecessary, and so easily remediable, if only the citizen-traveller would stuff the litter from his repast into one receptacle and either take it back home to the dustbin, or put it in the litter-basket. No; it is easier to strew it about; so strewn about it is; and our beauty-spots in the light of Monday's dawn look like a Titan's paper-chase, a refuse-heap after a high wind, or the morning after Tannenberg. It is too much to expect the local authorities who proudly administer our many beauty-spots to police them. The cost, and the petty espionage, rule that out. But it might well be possible to enlist responsible voluntary observers, who could warn offenders at the time, and whose evidence might be taken in the event of future offences. The internal combustion engine on our roads has brought us death, noise and disfigurement of our countryside; yet not one of these three evils is necessary, if only a little individualism be sacrificed for the common weal, and if quick and cheap travel be used as a boon for which some meed of courtesy is required. In default of this, we may live to own that what might have been a boon became a bane.

* * *

Favourable Industrial News.—As the holiday season draws to its close, the pulse of industry is quickening. In the iron and steel markets, in particular, the usual increase of activity in the autumn is beginning earlier than usual. But new business in iron and steel materials is severely limited by the fact that practically all the steelworks have sold their output for the remainder of this year. Business in the coal markets is also stirring, and our correspondents' reports, given on page 450, indicate a high level of activity and firm prices in most districts. Shipments at South Wales ports last week, for example, were 426,800 tons, against 333,292 tons during the corresponding week last year. Even the house coal trade is tending to expand again. While the wool textile trade remains active in the expectation of firm and rising raw material prices, the Lancashire cotton trade has been upset by the heavy fall of raw cotton quotations and the uncertainty of American Government policy. The British jute industry is suffering from the growing flood of untaxed imports from India, which it is trying to stem by asking the Government for appropriate measures. On the other hand, the rayon industry is producing at a record rate. With a few exceptions, this week's news is encouraging, since it suggests an early expansion of activity in most branches. The business trend is reviewed in greater detail in the Trade Supplement published with this issue of *The Economist*, and discussed in a leading article on page 415.

* * *

Britain's Expanding Markets.—Our review of the direction of Britain's expanding overseas trade in the second quarter of this year (on page 373 of last week's issue of *The Economist*) may be supplemented by the figures for the full half-year to June 30th, which are contrasted with those of earlier periods on page 450 of this number. The detailed returns are a veritable mine of information for students of trade tendencies. They disclose, for example, that British imports from Empire countries were actually higher in value in the first half of this year than in the corresponding part of 1929, whereas imports from European countries were still only 71 per cent., and imports from extra-European " foreign " countries only 66 per cent., of the pre-depression level. On the export side, comparing the values of 1937 with those of 1929, the percentages were: British Empire, 75; European countries, 71; and other countries, 59. In view of recent discussions on the possibility of concluding an Anglo-American trade agreement, it may be relevant to point out that although the value of our merchandise imports from the United States in the first half of this year (£47,041,000) was nearly three times as large as that of our visible exports (£16,490,000), the latter have suffered a smaller net decline, since 1929, than the former. The value of our imports from America, in the first six months of this year, was only 47 per cent. of the corresponding pre-depression figure, while the value of our exports to America was 75 per cent. of that of the first half of 1929.

* * *

Age Distribution of the Unemployed.—The July issue of the *Ministry of Labour Gazette* contained a special analysis of the age distribution of unemployed men and women on the registers of Employment Exchanges in Great Britain in May, 1936 and 1937. The results are tabulated below:—

Sex and Age Group	Numbers Unemployed May 18, 1936	Numbers Unemployed May 3, 1937	Percentage of Total May 18, 1936	Percentage of Total May 3, 1937
Men:—				
18–20	62,237	41,536	4·6	3·7
21–24	166,602	121,210	12·2	10·9
25–34	337,668	260,658	24·8	23·4
35–44	274,443	227,987	20·2	20·5
45–54	256,701	219,415	18·8	19·7
55–59	141,314	125,273	10·4	11·2
60–64	118,517	114,656	8·7	10·3
65 and over	3,724	3,430	0·3	0·3
Total	1,361,206	1,114,165	100·0	100·0
Women:—				
18–20	33,360	24,676	12·5	11·1
21–24	54,405	41,970	20·5	18·9
25–34	74,059	61,776	27·9	27·8
35–44	48,217	41,867	18·1	18·8
45–54	34,240	30,954	12·9	13·9
55–59	12,914	12,403	4·9	5·6
60–64	8,366	8,575	3·1	3·8
65 and over	145	141	0·1	0·1
Total	265,706	222,362	100·0	100·0

As will be seen, the decline in the total number of unemployed since May, 1936, has been accompanied by a significant change in age distribution in favour of the younger. In the case of men, the proportion of the total unemployed formed by those whose age does not exceed 34 years has declined, while that of each of the older age groups has increased. The analysis for women shows a similar tendency. This development was not unexpected owing to the preference given by employers to younger persons, who are more adaptable than the others, especially as many of the latter have lost in skill through prolonged periods of unemployment.

* * *

Agricultural Returns for England and Wales.—Early in June each year the Ministry of Agriculture takes a census of the acreage under various crops, and the number of livestock on agricultural holdings above one acre. The 1937 returns, issued last week, are summarised with comparable data for earlier years in the table below. They show that the area of arable land continued the decline, which had been interrupted in 1935 and was 1.1 per cent. smaller than in 1936. An

BANK OF MONTREAL
(Incorporated in Canada in 1817 with Limited Liability)
CAPITAL PAID-UP $36,000,000

Financial Agents of the Government of the Dominion of Canada in London.
The Bank undertakes banking business in all parts of the world, and with its numerous branches offers special facilities in Canada, Newfoundland and the United States

additional area of about 10,000 acres was returned as permanent grass, but the remainder of this year's reduction (91,000 acres) represents land which has gone out of cultivation or has been taken for other purposes:—

	1929	1931	1933	1935	1936	1937*
	Thous. Acres	Thous. Acres	Thous. Acres	Thous. Acres	Thous. Acres	Thous. Acres
Arable Land	9,948	9,582	9,250	9,398	9,120	9,018
Permanent Grass	15,490	15,701	15,870	15,559	15,743	15,753
Wheat	1,330	1,197	1,660	1,772	1,704	1,731
Oats	1,854	1,652	1,495	1,419	1,420	1,222
Barley	1,120	1,029	751	792	819	823
Potatoes	519	447	519	463	457	455
Sugar Beet	230	233	364	367	349	307
	Thous.	Thous.	Thous.	Thous.	Thous.	Thous.
Cattle	5,958	6,065	6,620	6,541	6,540	6,614
Sheep	16,106	17,749	18,090	16,477	16,648	17,183
Pigs	2,367	2,783	3,069	3,813	3,894	3,632
Horses	999	939	903	874	865	858

* Figures for 1937 are provisional.

The area under wheat rose by 1.6 per cent., and thus regained part of the ground lost last year. The acreage under barley slightly increased, while the area under oats, after varying only slightly from 1934 to 1936, fell by almost 14 per cent. Although the area under first early potatoes fell by 2 per cent. this year, the main crop showed little change. The area devoted to sugar beet, which declined by 12.1 per cent., is the smallest recorded since 1932. Meanwhile, the number of cattle and sheep was larger, but the pig population was further reduced. The number of horses, which has declined continuously since 1918, fell by a further 0.9 per cent.

★ ★ ★

Industrial Production Index.—The official Index of production for April-June, published in last week's *Board of Trade Journal*, was the highest ever recorded, showing an increase of 2.3 per cent. over the first quarter of 1937 and of 9.1 per cent. over the corresponding period last year. The movement of the various group indices is indicated below:—

INDEX OF PRODUCTION
(1930=100)

Group	1935	1936	1936 June quarter	1937 March quarter	1937 June quarter
1. Mines and quarries	91·7	94·4	88·4	99·6	100·7
2. Iron and steel	125·6	150·1	149·5	158·1	165·6
3. Non-ferrous metals	137·3	143·8	140·9	154·4	166·7
4. Engineering and shipbuilding	104·8	123·1	122·4	136·3	137·4
5. Building materials and building	147·0	157·1	157·8	148·5	156·9
6. Textiles	119·1	126·4	124·9	130·3	135·2

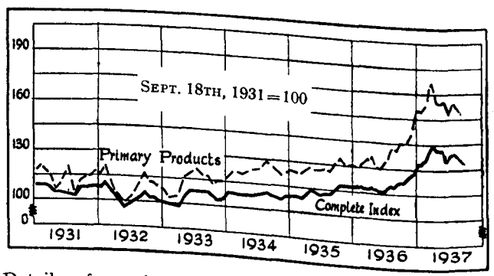
8. Leather and boots and shoes	116·0	120·7	121·0	120·6	121·4
9. Food, drink and tobacco	107·6	114·5	114·5	111·2	122·1
10. Gas and electricity	132·6	148·2	(a)	(a)	(a)
Total of manufacturing industries (2–10)*	117·1†	129·4	129·2	137·0	140·2
Total of all groups (1–10)*	113·6†	124·7†	123·5†	131·7	134·7

* Includes also various industries not specified above.
† Revised figures.
(a) Quarterly particulars of gas production are not available and complete information in respect of the year 1936 cannot yet be given; a provisional estimate of the quantity made has been used for the calculation of the group index for the year 1936. The available data for electricity have been included in the general index numbers for the four quarters of 1936 and the first two quarters of 1937.

The movement of the official index of production thus confirms that of *The Economist* index of Business Activity which reflected sustained business recovery in the second quarter of this year and is given on page 11 of this week's *Trade Supplement*.

★ ★ ★



Further Decline in Prices.—This fortnight there has been a further drop in wholesale prices on both sides of the Atlantic. In England the complete *Economist* index number has fallen by exactly 1 per cent. and the primary products index by 1.4 per cent. In the United States primary products have fallen by 3.4 per cent., but the complete Irving Fisher index is unchanged. Sterling prices are now little above their New Year level, and the total drop since the March peak is 4.4 per cent. for all commodities and 9.6 per cent. for primary products. Even if it is fair to assume that the summer declines are only the natural reaction from the early spring sudden advance, in part due to re-armament, the fact remains that the price curve has flattened out completely since the New Year. The past fortnight has witnessed a further small advance in French wholesale prices, so that the effects of the franc depreciation are still working themselves out. There is a slight drop in German and Italian prices.

† Monthly averages.

We publish below a chart showing the course of *The Economist's* two index numbers of British wholesale prices from 1931 onwards.

Details of our index number follow. It will be seen that the fortnightly decline is common to four out of the five groups:—

The Economist INDEX
(1927 = 100)

	Sept. 18, 1931	July 28, 1937	Aug. 11, 1937	Aug. 25, 1937
Cereals and meat	64·5	92·6	90·8	89·0
Other foods	62·2	67·2	67·0	66·7
Textiles	43·7	70·7	69·9	68·7
Minerals	67·4	108·6	109·8	108·1
Miscellaneous	65·8	85·6	85·4	85·6
Complete index	60·4	84·7	84·2	83·3
1913 = 100	83·1	116·5	115·8	114·7
1924 = 100	52·2	73·1	72·7	72·0

Among food prices there were declines in meat, bacon, potatoes and coco-oil. Wheat, barley, tea and butter were firmer. The decline in the textile index was mainly due to lower prices for cotton, hemp and jute. All non-ferrous metals were cheaper. In the miscellaneous group there were advances in hides and leather.

Prosperity Without a Boom

NEW YORK, August 17.—While there has been some slackening of industrial activity this summer, it has been less than was generally anticipated in the spring; just as the spring activity failed to go as high as had been predicted in the winter. In short, for about ten months our economy has jogged along at a level somewhat higher than the average of 1928, which was rated a very good year. Allowing for the growth of population, this level would be described as prosperity, but not as a boom. It probably represents a slightly lower rate of advance than in England and Germany, which are both occupied more nearly at capacity. Such a generalisation must include the fact that some important elements of our economy have been operating at capacity; and that the economy as a whole is sufficiently near capacity to retain a seller's market in labour and to make prices sensitive to upward pressure. The outstanding characteristics of the American system for almost a year have been the steadiness of production and the marked rise in prices.

The absence of the summer recession is being explained away by the same reasons that were advanced to account for the absence of the spring upturn. Then it was labour troubles that damped down the usual expansion, and now it is their relative absence (for, since the middle of June, such interruptions, although numerous, have been smaller) which has maintained the continuity of demand. The net effect, apparently, has been to spread the volume of production over a longer period instead of concentrating it in a spring boom and a summer recession. Some weight also must be given to the official "boom control" measures of the early spring, which included warnings from high quarters, and positive measures of credit control.

Rising Cost of Living

The rise in commodity prices over this period is easy enough to report statistically, but not easy to evaluate. In the past year the wholesale index of the Bureau of Labour Statistics has risen about 10 per cent., from 79 in June, 1936, to 87 in June, 1937, a percentage rise smaller than that of the Board of Trade index for England and, of course, much smaller than those of France or Holland, whose currencies were devalued in the period. The official index of retail food shows only a negligible increase from 84 to 86; and the cost of living about the same—say 3 per cent. On the other hand, a very elaborate study worked out by the National Industrial Conference Board found an increase of over 7 per cent. in the cost of living between March, 1936, and March, 1937; and although the wholesale index has not risen since March, many, if not most, retail prices have advanced in that time. Whatever the statistical measure of the advance, it has been sufficient to be a source of continuous comment in domestic circles.

To some extent this pervasive rise in prices to the consumer may be attributed to the higher cost of primary commodities. But a larger factor has certainly been the increase in labour costs, since for most consumer goods the primary material is quite a small element in final price. For a large part of the population the increase in industrial wages has more or less offset the rise in prices; this statement is also true of the agricultural group whose income is estimated to be more than 15 per cent. higher than last year. That it is true of the population as a whole is questionable, as is emphasised by the mediocre statistics of retail trade. From June to June, department store sales rose from 87 to 93, and much of this advance must be attributed to price. Current comment on retail sales generally strikes a note of disappointment, and in some specific lines it is said that the actual volume of goods sold is lower than a year ago. Of course, a year ago we were spending the Veteran's Bonus, although that never could be positively identified in the data. Furthermore, in summer, a good deal of consumer income goes into channels not covered by statistics. The vacation or recreation industry is entirely non-statistical, and its growth has been one of the outstanding phenomena of the post-depression period. It is not an unplausible conjecture that more persons are employed in various phases of the recreation industry than in any other single vocation in the United States, except agriculture. Still, taking into account the comprehensive rise in prices and the partial increase in individual income, one can hardly avoid the conclusion that the aggregate of consumer real income, if it has risen at all in the past year, must have risen chiefly from whatever increase there has been in the number of persons gainfully employed; and that for those continuously employed, the feature of the past year has been a redistribution of consumer income rather than a conspicuous net increase.

Confidence and the 40-hour Week

The past year has brought some test of the forty-hour week, but nothing conclusive. During the depression many industries dropped below forty hours; the National Recovery Administration generally specified a forty-hour week; and after N.R.A. a considerable number of large industries continued the practice. In many of the collective bargaining contracts written in the past year the forty-hour week has been incorporated as standard. So widespread has the forty-hour week become in conspicuous industries that the impression has gained ground that the United States has "adopted" the forty-hour week; and that the proposed Hours-Wages Bill would not much affect an existing *status quo*. This is far from a fact. A comparatively small fraction of all persons "gainfully employed" are on the forty-hour week, and those mostly in highly mechanised industries. In these industries, as far as statistics are available, it appears that mechanisation has compensated for the reduction in the work-week, and that output per worker has been maintained. But this affords no test whatever of the economic consequences of the general establishment of the forty-hour week; and very little evidence of the effect of such a shortened week on the number of persons employed. The tendency in Wall Street to minimise the consequences of the imposition of a blanket forty-hour week is due to the fact that Wall Street is much better acquainted with big business than with industrial conditions in general, and that at present the forty-hour week is mostly confined to the type of industries represented on the Stock Exchange.

France

Completing the Recovery Programme

Paris, August 26.—The last of the Government's decrees is in sight. Monetary decrees have established the "floating" franc and brought 15,000 million francs in new advances from the Bank of France to the Treasury. Fiscal decrees have furnished 10,000 million francs from higher taxes and charges. A Fund has been created to support public funds by the revaluation of the Bank's gold. Economy measures have reduced the charges on the Treasury by 6,000 million francs in 1937 and 25,000 millions in 1938. And now it remains to stimulate economic activity and production.

Public credit has been put on a sounder footing, because the needs of the Treasury for the present year can now probably be covered. Rentes have risen 20 per cent. in a few weeks, as the result of this effort to balance the Budget. The stability of the franc has been greatly assisted by the activity of the tourist industry. In spite of "paid holidays," new deposits in the public savings banks exceeded the withdrawals in the first fortnight of August; and subscriptions to the bonds of the Pensions Fund have increased steadily from 56 millions in the first week of July to 72 millions in the first and 103 millions in the second weeks of August.

In order to accentuate this favourable trend, M. Bonnet has decided to annul a decree made by M. Laval, placing an exceptional 10 per cent. tax on Rentes. M. Bonnet's decision was followed by a new advance in Rentes, the progress of which appears in the following table:—

	Lowest 1937	July 2nd	August 24th
3%	59·85	70·75	74·75
4% 1918	59·70	69·25	74·40
4% 1925	84·25	95·65	103·45
4½% 1932 "A" ...	65·80	73·80	78·60
4½% 1937	90	98·60	100·50

The Government has fixed the price of wheat for the 1937 crop at 180 francs compared with 140 francs in 1936. The price could not be fixed by agreement between the representatives of the wheat growers, who demanded a price of 200 francs, because of the devaluation and the rise of prices, and the representatives of the Government and the consumers, who objected that this price would be followed by a fresh rise in the cost of living and inevitably by claims of higher wages.

The last decrees, which will be published before August 31st, will concern the railways. The four systems will be merged in a National Company, in which the State will hold a controlling interest.

To stimulate production, one of the principal measures will be to expand mortgage credits in connection with building through the Crédit Foncier, which will mobilize its reserves for this purpose. Middle-term credits would also be given to manufacturers to recondition their plants. It is also possible that new exceptions to the 40-hour week will be made in certain industries.

The following table shows that prices are still rising.

Wholesale Prices	June, 1936	June, 1937	August 21st
General index	372	537	586
Home products.....	415	565	592
Imported products	296	488	573

The rise is still most marked in the prices of imported goods.

Falling Import Surplus

The value of foreign trade in July was 5,072 million francs, compared with 5,704 millions in June and 2,968 millions in July, 1936.

Imports and exports have both declined, in spite of further franc devaluation. Imports having fallen more than exports, the surplus is lower. Nevertheless, it still represents an annual deficit of something like 16,000 million francs. In present circumstances this is intolerable, even if it is balanced to some extent by receipts of 4,000 million francs from tourists and 4,000 millions from interest payments. This deficit, which constitutes a permanent menace to the franc, is widely discussed in the technical Press. It is generally held that the French balance of accounts cannot stand a commercial deficit much higher than 7 or 8,000 million francs.

	Value (Frs. 000,000 omitted) June, 1937	July, 1937
Imports:—		
Foodstuffs	845	776
Raw materials	2,166	1,878
Manufactured goods	695	544
Totals	3,707	3,199
Exports:—		
Foodstuffs	245	246
Raw materials	741	658
Manufactured goods	1,010	967
Totals	1,997	1,872
Import surplus	1,709	1,327

In the first half of 1937 the quantity of exports was 14,797,000 tons, compared with 14,660,000 in the same period of 1936, but the value increased by 50 per cent. from 7,205 million francs to 11,035 millions. Imports, on the other hand, showed an increase of 40 per cent. in value, but also of 25 per cent. in quantity, principally because of imports of industrial raw materials, partly in anticipation of a revival in business, but also in fear of a fresh rise in prices and a falling off in production. The decline of imports in July suggests that stocks have been replenished, or that private resources are temporarily exhausted. If this is so, and if new arrangements in the coal industry should bring about an increase in production, the deficit on the balance of accounts may diminish in the next few months.

Unemployment this year is still falling, whereas last year it was already rising according to the seasonal trend. In the week ended August 14th, there were 310,592 unemployed, 217,965 men and 94,627 women, compared with 312,473 in the preceding week and 418,293 a year ago.

Germany

Loans and the Capital Market

Berlin, August 24.—Preparations last week for the Reich loan of Rm. 700 millions caused some selling of stocks and fixed-interest securities and a considerable stiffening in the money market. Home bond prices had already declined slightly before the loan was announced. The liquidity in the money market has apparently ceased for the time being. Nevertheless, some new private debenture issues have been allowed, and have so far been successful. Fifteen such flotations have taken place this year, to a total (omitting conversions) of Rm. 278 millions. About half of this sum was raised for liquid fuel enterprises by Western heavy industry concerns.

It seems that industry is again drawing upon banking. The July balance sheets of the five chief Berlin banks show a decline in deposits of Rm. 81 millions. This includes a fall of Rm. 60 millions in customer deposits proper ("other creditors"). The recent increase in loans to business, though in itself small, is significant, because loans had been declining for months. The banks disposed of Reich and other public securities, but their holdings of bills increased.

According to an authoritative estimate, the total of new Reich loans between the beginning of 1935 and June 30th this year was Rm. 6,992 millions. Owing to the inclusion of numerous small borrowings, mostly Treasury certificates, which did not appear in the schedule of publicly marketed loans, this total is considerably higher than the total obtained by merely adding together the large consolidation loans, while consolidation borrowing has led to a large increase in the funded debt. There has been no corresponding decline in the officially returned short-term debt. This decreased by only Rm. 20 millions in the two financial years 1935-36 and 1936-37, when most of the consolidation loans were issued. The returned total of short-term debt takes no account, however, of the "special bill" debt.

Prices and Food Supplies

The index of wholesale prices for August 18th was 106.7, compared with 106.9 on August 11th. This decline is due to falls in the prices of non-ferrous metals and rubber. The list of imported commodities for which, under the ordinance of August 10th, the first seller at home may charge a "replacement price" sufficient to finance a new import, has now been issued. It contains a great many products, but nearly all of them are ores, metals and alloys or textile materials.

The reports for root crops are, in general, satisfactory and show the improvement made last month. In particular, the condition of the potato and sugar beet crops improved; the latter is now estimated to be about the same as in 1936. Potatoes are actually better than in 1936, which produced a record yield. The condition of meadows and pastures has deteriorated. In the north and east maize has been increasingly grown, contrary to the old belief that it would not grow there. Production has more than doubled in the last four years, though the absolute quantity still remains small. Sheep in June numbered 5,363,800, compared with 4,996,500 a year before.

Gold Movements

The export surplus in July was Rm. 30 millions, compared with Rm. 63 millions in July, 1936; this decline was due to heavy imports. Exports, valued at Rm. 530 millions, exceeded all records since March, 1932. It is noteworthy that gold to the value of Rm. 31 millions was exported. In the first seven months of 1937 the value of gold exports was Rm. 103 millions, so that the greater part of the year's imports of gold (Rm. 143 millions) has now disappeared. These gold movements do not appear in the Reichsbank's weekly returns. According to an unofficial Press statement, the gold imports and exports shown in the monthly trade returns are administered by the "trade supervision authorities," and in their hands, probably on deposit in the Gold Discount Bank, lies the imported gold. Hence the Reichsbank's gold reserve figure remains stable, and it plays a negligible part in settlements with abroad. The foreign trade figures are:—

	June	July	Jan.–July
	Millions of marks

Reconstructing Waterways

Important works on the canal system of North Germany are in progress. The chief undertaking is the establishment of direct water communication by heavy barge canal between the Rhine and Berlin. The central part of this constitutes the Mittelland Canal, which will join Central North Germany to the Rhine via the Dortmund-Ems Canal. Opposition to this project by the Agrarians caused a convulsion in domestic politics nearly forty years ago. The Mittelland Canal, since sanctioned, will reach the Elbe next year. It will take 1,000-ton barges. As an independent undertaking its eastern end will be at the New Plauer Canal which connects the Elbe north of Magdeburg with Brandenburg on the Havel, which is in turn connected by river-canal with Berlin. But, as this latter system takes only 500-ton barges, it will have to be enlarged to the dimensions of the Mittelland system. This work, and the reconstruction of bridges and locks has already been begun. The result will be through traffic for 1,000-ton barges between the Rhine and Berlin. At first this will connect only with West Berlin. Later the Teltow Canal, which joins the western Havel system with the Spree in the east of the city, will have to be similarly enlarged.

The Elbe River is also being regulated. In order to prevent Silesian coal being driven from its present market in North Central Germany by Ruhr coal over the Mittelland system, the canal dues on a section of the new canal have been doubled. Further projects are the creation of an "Adolf Hitler Canal" to link up with Silesia, and the regulation of the Oder.

Belgium

Problems of Government Finance

Louvain, August 20.—Taxation receipts have remained very satisfactory this year despite certain reductions in the rate of tax. The figures are as follows for the first six months of recent years:—

	Frs.
1934	4,070,000,000
1935	4,060,000,000
1936	4,280,000,000
1937	4,830,000,000

The Budget has been considerably reduced by the diminution of the grant to the unemployed. This amounted to more than 1,000 million francs in 1934 and is now only half of this figure, although the basic rate of these allowances and the benefit conditions have been improved. The conversion of public debt has also reduced the Budget. The Government has saved about 600 million francs in this way.

Government securities can now be offered for subscription at the rate of 3½ per cent., and Treasury bonds are sold by auction at or about ½ per cent. In 1913 it was practically impossible to issue Government securities, even at 7 per cent. Treasury bills could only be placed if they bore a clause guaranteeing repayment in gold and were 4 per cents.

It will not be easy to balance the 1938 Budget, which is now being drafted. The effect of several reductions in the rate of tax will be fully felt for the first time in 1938, and a decline in receipts is probable. On the other hand, certain items of expenditure will be increased; for instance, old-age pensions will cost 120 to 150 million francs more than in 1937. The Belgian system of social pensions is the most generous in Europe, if not in the whole world. The Government has to raise about 650 million francs annually for this purpose; and the burden will ultimately reach about 800 million francs.

Taxation Reform Proposals

Nevertheless, the buoyancy of taxation receipts suggests that the 1938 Budget may be balanced without new taxes. But this is not enough, and the remission of taxation ought to be steadily continued. This, at any

RESERVE FUND - - - £3,050,000

ESTABLISHED 1810

rate, is the conclusion of Mr Coart-Frésart, the royal commissioner appointed to report on the simplification of taxation, considered necessary by everybody. Mr Coart-Frésart is of the opinion that the burden of taxation should be reduced to make some simplification possible. He advocates the abolition of the luxury tax and the revision of the sales tax. These proposals would cause a loss to the Treasury.

Although the financial position of Belgium has been stabilised, it would not be correct to conclude that no mistakes in administration have been made. On the expenditure side, there are faults in the pension system. The Parliament has also passed a Bill levying an excess profits tax on the profits of the devaluation of the franc in 1935, made by the buyers of gold, pounds and dollars. The Act instituting this tax, which impounds 50 per cent. of the abnormal profit, was passed this summer, that is, two years after the devaluation. Belgian economists have unanimously regretted this measure, which shows the misunderstanding of Parliament about the devaluation of 1935. If the country then lost gold this was primarily due to mistakes in parliamentary policy.

Nevertheless, this tax is being levied. It is forecast that difficulties will arise and that this measure may even prove prejudicial to the credit of Belgium. For the Treasury, the financial results will probably be disappointing. Most of these operations were executed through foreign banks, so that the Department of Finance will in many cases know nothing about them.

Mixed Industrial Recovery

The industrial situation of the country has remained satisfactory. Business trends have, however, been markedly divergent. Collieries and the steel industry have still been operating at capacity and have enjoyed large profits. On the other hand, industries producing consumers' goods have been less affected by the upward swing. The home market has provided an inadequate demand for their products. In the textile industry a reduction in export business was experienced. The linen and woollen industries, as well as the cotton trade, have operated normally, but the orders obtained and waiting for execution are less abundant.

Purchasing power has increased. Another advance in wages of 2½ per cent. was made at the beginning of August in the coal-mining and metal industries. In Belgium wages are promptly adjusted to the cost of living, as indicated by the monthly official index. It is encouraging that these adjustments are performed automatically and without any discussion. They were more difficult to make during the crisis, but even then contractual reductions in nominal wages were made in the textile industry.

It is estimated that the total amount of wages paid out has increased 50 per cent. compared with the pre-devaluation level. The cost of living has risen about 15 per cent. to 17 per cent. A comparison of these two figures suggests how much purchasing power has been increased.

Denmark

Trade, Politics and Public Finance

Copenhagen, August 10.—A separate trade agreement between Holland and Denmark, under the multilateral agreement of May 28th between Belgium, Denmark, Finland, Holland, Norway and Sweden, will shortly come up for ratification. This agreement will mean increased Danish exports of beef, fish and various industrial products, and increased imports of Dutch flower bulbs and various raw materials and semi-manufactured products.

The long foreshadowed Royal Commission to consider a change in the Constitution began its deliberations on July 10th. A change has taken place in the Cabinet. The Minister of Finance, Mr H. P. Hansen, has retired and has been replaced by the Director of Taxation of the City of Copenhagen, Mr Buhl.

It is expected that the State will have to raise an internal loan of considerable size in the autumn. It is believed that the present easier conditions of the money market are due to the preparations of the National Bank for this contingency. The rather conspicuous veto of the Minister of the Interior on the flotation of a 20 million kroner 4½ per cent. bond issue by the city of Copenhagen must be viewed in the same light. The bonds in question were to be offered at a price which would give an effective yield of 6.27 per cent., but the Minister found this too dear. The city needed money, however, for various building schemes, and the result was that a loan of half the original size was agreed on at about the same issue price as originally planned.

Rise in Value of Trade

The foreign exchange position improved in July by about 2 million kroner. This was partly because of the current prosperity of shipping. As will be seen from the table below, the import surplus for the first six months of 1937 was 95.3 million kroner (compared with 17.8 million kroner for the same period of 1936).

	Imports		Exports	
	In million kroner	Comparison with first six months of 1936	In million kroner	Comparison with first six months of 1936
Total for 6 months ending June 30, 1937	846·9	+ 168	751·6	+ 91
Trade with :—				
Great Britain ...	334	+ 67	385	+ 30
Germany	200	+ 45	131	+ 7
Norway	33·4	+ 10·9	12·6	+ 6·1
Sweden	47·5	+ 4·6	50·2	+ 10·3

The considerable rise in imports is due to an increase of 52 million kroner in the value of corn imported and a 22½ million increase in the value of coal and coke. The value of imports of pig iron and steel rose by 19.3 million kroner, of piece goods by 9.6 millions, and of machinery and motor cars by 9.5 millions. Exports of agricultural produce rose by 30 million kroner in value, and of vegetable oil products by 12 million kroner.

Applications for import permits for the last licence period of the year, commencing on September 1st, are now being considered by the Exchange Control Office. Arrangements to facilitate the administrative working of the import control will come in force in the new period. A committee is considering a revision of the present Exchange Control Act upon its expiration at the end of the present year.

Distribution of National Income

The Department of Statistics has published an interesting analysis of the incomes earned and fortunes owned by taxpayers. There are now 1,286,568 taxpayers in this country, and the distribution of income among them is as follows:—

	No. of Persons
Income up to Kr. 5,000 per annum	1,192,659
,, ,, Kr. 30,000 ,, ...	90,543
,, ,, Kr.100,000 ,, ...	3,041
,, above Kr.100,000 ,, ...	325

There are 318,190 persons who own a "fortune" subject to taxation. Their distribution is as follows:—

	No. of Persons
Fortune up to Kr. 50,000	281,700
,, ,, Kr. 500,000	35,026
,, ,, Kr.2,000,000	1,301
,, above Kr.2,000,000.....	153

A more detailed examination of the figures reveals that about 57 per cent. of taxpayers have a taxable income of less than 2,000 kroner per annum, numbering some 732,386 persons.

The outlook for the corn harvest is favourable. The latest estimates of August 2nd foreshadowed a normal crop. This will mean a better crop than last year, when it was below normal, but the final results this year may still be considerably influenced by adverse weather. The wholesale price index for July stands at 148, 2 points higher than in June. The index of export prices has risen by 11 points to 152.

Palestine

Check to Business

Jerusalem, August 4.—Palestine is in the throes of political controversy, and the population wavers from day to day between optimism and pessimism.

The present economic condition of the country is somewhat below the 1936 level, but not below the level of the beginning of 1935. The currency circulation may serve as an index. This reached a peak in October, 1935, and then declined until July, 1936, from £P7,545,000 to £P6,041,000. Because of the lack of adequate investments during recent years, while the currency in circulation declined, banking deposits increased. Deposits, held by six foreign banks, 68 local banks and 95 Jewish credit-co-operatives, amounted to £P17,364,000 at the end of March and somewhat less at the end of April. The March level is the highest ever attained.

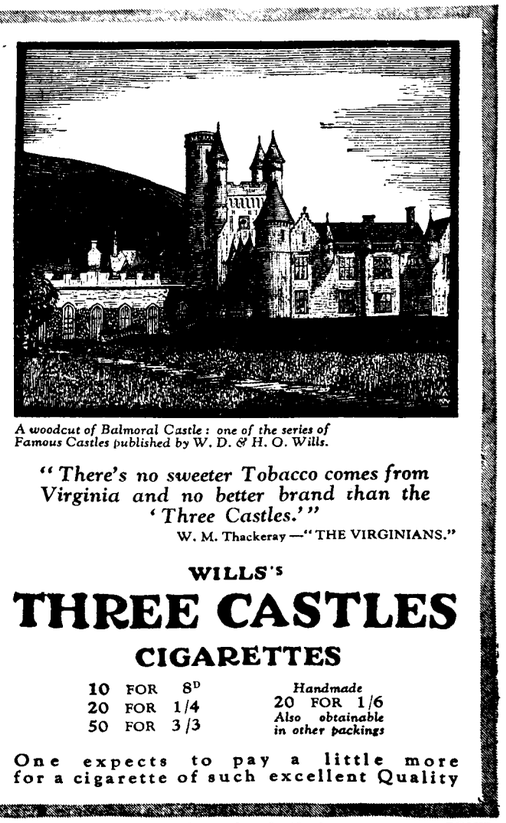
About £P13.25 millions were advanced by these banks and banking institutions to their customers. A new banking ordinance lays down that banks in Palestine shall have a subscribed capital of not less than £P50,000 and a fully paid-up capital of not less than £P25,000 two years after the ordinance has been enforced. The majority of the 68 local banks have less capital than is required and are unlikely to increase the present figure. The small banks, most of which were opened in the boom period between 1930 and 1933, with limited capital and insufficient means, have fulfilled an important task. They have supplied small undertakings with credits of between £P50 and £P100, such credits not always being granted by foreign or other banks.

Increased Exports

Palestine's trade figures for the first four months of 1937 show an upward trend. Compared with the figures for the same period of 1936, which was not yet affected by the disturbances but still influenced by the Italo-Ethiopian crisis, imports in the 1937 period, valued at £P5,674,000, were £P80,000 higher than those of the 1936 period, and exports rose to £P3,498,000 compared with £P2,168,000 in 1936. Thus imports are only £P98,000 below the boom figures of the corresponding period in 1935, while exports have actually increased by £P390,000 since that date. This is due to the increased citrus shipments in the past season, and to larger exports of many other goods, i.e. potash, bromines, wearing apparel, artificial teeth, etc.

Special arrangements for the transfer of German-Jewish money to Palestine may be given as some reason for the improvement in import trade in 1937. In the first four months of 1937 these arrangements led to a decline of the British share in Palestine imports from 19 per cent. in 1936 to 14.1 per cent., while imports from Germany rose from 15.4 per cent. to 16 per cent. For the first time, Palestine bought more from Germany than from the United Kingdom.

Sales of electric power supplied by two producers, i.e. the Palestine Electric Corporation and the Jerusalem Electric and Public Service Corporation, amounted to 70 million kilowatt hours in 1936 compared with 53.7 millions in 1935. About 18.4 million kilowatts were sold during the first four months of 1937, over a million more than in the corresponding period of 1936.



The business of the Palestine Railways in the first four months of 1937 was larger than in 1936. Gross revenue rose by 35 per cent. from £P273,000 to £P368,000. The number of passengers, however, declined from 874,000 to 776,000, while the tonnage of goods carried increased by 60 per cent. from 309,000 tons to 496,000 tons.

Cargo discharged at the ports of Haifa, Tel Aviv and Jaffa amounted to 323,000 tons in the first four months of 1937, a figure similar to that for the same period in 1936, while cargo loaded in these ports went up from 142,000 tons to 287,000 tons. The share of the new port of Tel Aviv is rising monthly; about 12,000 tons were handled there in June.

Total Post Office receipts increased in the first four months of this year to £P175,000 compared with £P145,000 in the same period of 1936. About 24,000 wireless receiving sets are now licensed, and the number has rapidly risen since the Jerusalem Station was opened at the end of March. About 75 per cent. of these sets are owned by Jews, 10 per cent. by Britons, and some 15 per cent. by Arabs.

Recession in Building

Following the decline in immigration, buildings under construction fell considerably below the level of 1935, and even below that of 1936. The index number for the period from January to May, 1937, is 176.5 compared with the previous year's average index number of 237.1 and with 374.8 in 1935 (1931=100). Industrial activity in the first six months of 1937 was affected by the slackness of the building market, since a third of local industry is connected with building. Most other industrial enterprises suffered only a small decrease of their turnover compared with the first half of 1936. During the past few weeks, however, a more significant setback has taken place, since there has been a decline in the power of consumption. Owing to the departure of many thousand important consumers, there is a slight standstill every year in the summer, which may be greater this year on account of the transfer of highly-paid building workers to less well-paid agricultural work.

South Africa

Gold *Canards* and Proposals

Johannesburg, August 1.—With the Stock Market still in the doldrums because of a variety of causes, not the least being the failure of fancied equines to run home in the Durban July Handicap, we have had time to be momentarily frightened by phantoms conjured up in the British House of Commons. The Private Member who asked Sir John Simon whether South Africa had suggested temporary limitation of the output of the gold mines, or made any proposals for retaining in South Africa and sterilising a quantity of gold, had an audience here quite out of proportion to the significance of his remarks.

Hollard Street has seen so many apparitions lately, however, that this latest one found the Exchange incapable of any reaction but laughter. It would be impossible for South Africa to agree to any suggestion for a voluntary restriction of gold output, because the whole country is maintained by the gold industry. No government dare make the suggestion, which would be suicidal. Why should South Africa, in any case, be selected as the sacrifice? Other gold-producing countries would certainly not participate in the voluntary immolation; and South Africa could never countenance any policy other than the unrestricted development of her chief industry.

Professor R. Leslie, of the University of Capetown, addressing the Economic Society of South Africa in Pretoria, dealt with the suggestion that an attempt should be made to persuade Britain, France and the United States to return to a gold standard with gold coinage at an early date. Sir Ernest Oppenheimer had said that if this attempt was successful the Union should stabilise independently on the basis of 140s.

As against the first proposal and also against some interpretations of Sir Ernest Oppenheimer's plan though not, I think, of the plan itself, it might be urged that they appear to regard the monetary system as existing for the benefit of the gold industry, not the gold industry as being worth its cost because of the benefits it might still yield in controlling the monetary system (said Professor Leslie). Another difficulty is that the level to which prices must rise to prevent redundancy in gold stocks is far from being a definite level. The gradualness of the proposal, too, involves some danger. The longer statesmen can hide the real costs of their policies under the cover of a rise in the price level, the less willing are they likely to be to welcome the re-introduction of a monetary system which checks that power. Obviously if the price of gold is allowed to rise with the price of commodities, gold stocks may always be redundant. This danger at least is avoided in Sir Ernest Oppenheimer's scheme.

An immediate worldwide return to the gold standard did not seem practicable, in Professor Leslie's view, partly because of these difficulties, and partly because statesmen in Britain and some other countries appeared to regard the gold standard as incompatible with their policy of cheap money, in the sense of an interest rate below the equilibrium level.

Sir Ernest Oppenheimer's proposal had been criticised because it would prevent a fall in the price of gold to a level at which gold would cease to be redundant; but it would appear to be equally directed against any further inflation beyond that necessitated by a price of 140s. The scheme would be worth striving for if it seemed likely to prevent additional inflation, and could guarantee some stability in monetary conditions.

Building Boom Maintained

Building activity in Johannesburg continued unabated at the higher levels established since the beginning of the year. Last month nearly 1,000 plans were passed by the municipality to a value of £902,215. This brings the total of plans passed during the financial year of the municipality to 11,522 with a record total value of £11,420,353. This is no less than £2,675,552 more than the previous record established in 1935-36.

The building boom has reached a new peak since January with an average value of more than £1,000,000 of plans a month. The following official table reveals the steady annual rise:—

	£
1932–33	1,707,903
1933–34	3,928,738
1934–35	5,840,155
1935–36	8,744,801
1936–37	11,420,353

Some idea of the extent to which the activity is adding to the number of buildings in Johannesburg may be gathered from the fact that the plans for the year alone include 3,307 new homes, 12,982 rooms in new flats, 1,465 additions to houses, and 3,645 new shops, stores, warehouses and factories. Since July 1 of last year increased accommodation has been provided in the city for 29,000 Europeans and 16,000 natives. Since 1934 additional accommodation has been made for 61,000 Europeans and 18,000 natives.

Letters to the Editor

Monetary Policy

TO THE EDITOR OF THE ECONOMIST

Sir,—Hot on the heels of the denunciation of the gold sterilisation policy of the U.S.A. by Republican Senators come advices of the intention of the administration to seek international co-operation to discourage the importation of "hot" money and establish a permanent type of gold sterilisation.

You kindly allowed me to suggest, in your issue of August 21st, a means of reducing the "temperature" of the money market, in so far as it is due to cheap money, without restricting the use of gold for the settlement of international balances of investment, trade, and debt. The chief value of gold lies in the universal acceptance of its transfer in discharge of such balances—as the standard by which credit is maintained; and the absurdity of borrowing in order to prevent such transfers is surely obvious.

On the contrary, let us discharge our debt to the U.S.A. when we may, and meet any protests by offering to borrow for a short term, at a lower rate of interest, as much as we can profitably use for the purpose of redeeming our internal debts. For the rest, our co-operation should be confined to restricting the use of the credit so created by an equivalent increase of the proportion of deposits held by the banks in reserve against loans.

Yours faithfully,

Co. Dublin. A. C. Dobbs.

The King's Highway

TO THE EDITOR OF THE ECONOMIST

Sir,—It is a pity that the Press gives so much prominence to the remarks of Mr G. T. Bennett, for most motorists who are not "fans" know them to be fundamentally wrong; although, admittedly, the present roads could be improved.

The railroads are made for speed and an enormous amount of money is spent to keep them in a sound condition for speed. Nevertheless, if a locomotive driver or the motorman of an electric train causes loss of life through taking a curve too fast or coming to a junction at an excessive speed he is rightly charged with manslaughter. He must drive according to his rule of the road which is laid down by the physical conditions of that road.

In like manner, motorists must drive according to the conditions of the road *as they find it*, or accept the consequences.

So long as motorists wish to have the use of the carriageways of the King's highways they must drive with especial regard to the rights of other users. As "other users" include two-year-olds, blind, deaf and maimed people, "other users" must, indeed, be given preferential rights.

Yours truly,

London, E.C.3. H. Lattimer.

Books and Publications

The Cradle of Co-operation

The romantic story of the growth of the co-operative movement from humble beginnings to its present position as the world's "biggest big business" is told by Mr Sydney R. Elliott in a recently published book.* In less than a hundred years the movement's annual turnover has risen to the amazing total of £300 millions. Its 15,000 retail stores with their 7½ million customers are supplied by 300 warehouses and factories, whose products range from bacon to bedsteads and from millinery to motor cycles. Almost 15 per cent. of Britain's food expenditure is paid over the counters of co-operative shops. The co-operative societies are the greatest distributors of tea. Co-operative mills produce one-third of the country's flour, and co-operative bakeries bake one in every five loaves consumed in this country. One-tenth of the nation's meat, one-seventh of its milk and a similar proportion of its domestic coal are handled by the co-operative societies. Co-operators have their own bank, their own insurance company, their national newspaper—and their own political party.

This vast movement is regarded by Mr Elliott as a monument to Robert Owen, who conceived the idea of "taking the profit out of price." His conception was first realised when 28 Rochdale weavers opened their humble store in Toad Lane in 1844. George Jacob Holyoake and John Stuart Mill became the movement's self-appointed propagandists, and progress was rapid. With the foundation of the Co-operative Wholesale Society the movement was extended to the wholesale markets; and the wholesale society soon entered the field of production. The Co-operative Insurance Society was formed in 1867, and the Scottish C.W.S. a year later.

The remarkable development of this most democratic of all big businesses was not accomplished without internal growing pains; nor has the movement escaped attack from without. Co-operation has aroused the resentment of private trader and multiple store alike. It has fallen foul of monopolistic producers, and has been snubbed by the Government. With the recent growth of subsidies and restriction schemes, and the abandonment of free trade, the economic climate has become increasingly favourable to monopolistic practices, and the attack on co-operation has been accordingly intensified. Mr Elliott sees in the movement the only effective means of breaking the modern price-ring and cartel; and he cites *inter alia* the example of soap manufacture, of milling, and of insurance to reinforce this view. Within the movement democracy controls a great volume of capital.

What is the secret of co-operation's continuous growth? The answer is probably that it returns to its consumer-members the bulk of the profit of its world-wide operations. Besides distributing £30 millions annually in the form of dividends on purchases, it makes generous provision for the depreciation of its capital, contributes substantial sums for educational purposes, and provides automatic death benefits for its members. Its treatment of its employees is in advance of contemporary standards and its financial position is one of great strength. Small wonder that Mr. Elliott looks forward to the future with optimism. His enthusiasm might perhaps have been tempered by more criticism, but for the most part his abundant array of facts and figures speaks for itself.

This book is an appropriate monument to a great movement which, though it has now spread to the corners of the earth, was cradled in industrial Britain. Mr Elliott shows skill and patience in expounding both the scope and direction of co-operation since its earliest days. He handles a great mass of statistical material ably, and, despite his obvious predilection for co-operative methods, is remarkably objective in his judgments. It is only a pity that, for lack of data, the remainder of retail and wholesale trade cannot be similarly treated by the historian.

* "England: Cradle of Co-operation." By Sydney R. Elliott. Faber and Faber. 287 pages. 8s. 6d.

Shorter Notices

"Women Must Choose." By Hilary Newitt. Gollancz 288 pages. 7s. 6d.

To Miss Newitt the choice before women in the future is threefold, between the status of women in Fascist, Soviet and democratic countries. She describes very clearly what these respective statuses at present involve, and her book carries conviction through the sheer weight of documented evidence. The fruits of suffragism and feminism have yet to be reaped. Where are they to be found? Or must they be abandoned as sour grapes? This is a book all democrats should read.

"Institute of Chartered Accountants. Library Catalogue." 2 vols. 256 and 259 pages.

Both in arrangement and typography these two volumes form an admirable bibliography. Volume One is a subject and author catalogue of the Institute Library, and a worthy successor to the earlier editions of 1903 and 1913. The second volume is claimed to be the largest list of works ever published on bookkeeping, rich with the treasures of the Kheil collection, which the Institute acquired in 1913. The Institute librarian and committee deserve congratulation upon their excellent work.

MONEY AND BANKING

Chinese Banking

Hitherto the outside world has considered the development of the Chinese banking system exclusively from the point of view of Chinese international balances and currency. This, however, is only one side of the story, for the internal aspect of the recent changes demands careful consideration. Some of these internal changes are outlined in the following article by a correspondent in China.

CHINESE society is almost entirely rural. Until the advent to power of the Kuomingtang Government ten years ago the dominant rôle in political and social life belonged everywhere to what the Chinese themselves call by a technical term equivalent to the English term "gentry." The gentry ruled the village almost in veiled opposition to higher authority, they financed the village economy and controlled every branch of trade. Though their outlook often did not extend beyond the confines of a county ("hsien"), they were the link between the village and the outside world.

The revolutionary outbreak of 1925-27, although crushed by General Chiang Kai-shek, hit the gentry hard. Not only did they lose face, but they became aware that the rural idyll which they had taken for granted was precarious. Moreover, a new type of landlord and farmer has begun to replace the old gentry. This new type includes merchants with a knowledge of commerce extending to an acquaintance with the new methods of trade as evolved in China's treaty ports. It also includes military officers and civilian officials who make use of their ill-gotten gains to develop a farming business on more modern lines, but who have no intention of leading the secluded life of the old-time gentry. In short, bright young upstarts are taking the place of old-established families.

This change of China's social structure was greatly facilitated both by revolutionary unrest, and by the impact of the world depression. Land was cheap, even well-to-do families were obliged to borrow, and there was a wave of change of land-ownership all over China.

Simultaneously the attitude of the modern Chinese banks towards rural credit underwent a rapid change. Nothing could show that change more clearly than the rapid spread of bank branches all over the country. This is illustrated by the following table, which shows the increase in the number of branches of the Bank of China alone:—

Province	No. of branches at end of 1930	1936	Province	No. of branches at end of 1930	1936
Kiangsu	11	120	Szechuan	4	23
Chekiang	13	140	Shensi	0	4
Anhwei	3	45	Shantung	2	15
Kiangsi	1	35	Shansi	2	8
Hupeh	0	15	Fukien	0	55
Hunan	1	9	Kwangtung	1	18
Honan	4	14	Kwangsi	0	17

Although the progress of other sound modern banks has been less spectacular, their tendency towards expansion is alike. There are county towns in China where a decade ago no modern bank was even known by name, while to-day it contains no less than six branches, each belonging to a different bank. Again, only if the importance of the new banking system of China is properly appreciated, can the steps taken in preparation for the currency reform be understood. The most important of these was the acquisition by the Government of a dominating influence over the two largest modern Chinese banks, namely, the Bank of China and the Bank of Communications. Simultaneously, the Government subsidised heavily three or four other modern banks which a few years ago were facing grave difficulties and without such assistance would probably have had to close down. Though in the crisis of the summer of 1935 the native banks were assisted as well, such assistance was far less thoroughgoing and effective than that given to the modern banks. In fact, while China's modern banking system was deliberately steered through the depression without any failure, native banks perished wholesale. It is also true to say that this spread of modern banking throughout China alone made possible the 1935 currency reforms.

The next fundamental point to consider is the way in which the banks have established themselves throughout the countryside. This was not in itself an easy matter. The development of banking came at a time of agricultural depression, and the banker quickly found that land was a doubtful security for a creditor not resident in the village where the land was situated. In fact he soon discovered that the new Civil Code of China was scarcely applicable in the countryside, and that there were wide variations between village and village in the old common law. Finally it was doubtful if a non-resident creditor could secure any bids at a forced sale of land after foreclosure.

To overcome these difficulties the banks quickly learned to make use of the co-operative societies as their instrument. The rapidly spreading so-called co-operative movement in China cannot be properly understood, if this link between the societies and the banks is overlooked. Indeed, most of the foreign experts who were called in by the Chinese Government for advice about matters of co-operative organisation went astray on this point. They were accustomed to stress the idealistic side of co-operative organisation, and to underrate its business importance. The banks left the idealism of co-operative spirit, etc., to the foreign advisers, to Chinese and foreign politicians and journalists, and to the Government. Meanwhile, the banks knew precisely what they wanted. Only by degrees have people in China begun to realise that the new co-operative societies are not a means to fight usury, or to achieve any other aim of social reform. On the contrary they are the means by which China's modern banks are able to extend their financial domination over the countryside. In fact, in certain provinces and counties, bitter competition between the banks could be observed to establish and finance co-operative societies. Conversely, the membership of really poor peasants is of insignificant influence.

This modern Chinese banking system is a very strong factor in the process of unification through which China is passing. It is again the influence of "barbarians" which is helping China along. Granted that the effective and lasting *political* unification of China dates from the days of Chengis Khan, her *economic* unification is the work of the much despised returned student and the much hated foreign financier, who, in involuntary co-operation, imported the idea of foreign branch banking into China and have since seen that idea carried towards realisation at an amazing speed.

The development of the banking structure has been so rapid that throughout the last decade the modern Chinese banks have suffered from a surplus of funds. That explains why so many of them have embarked on the dangerous sea of Shanghai real estate speculation, and also why the Chinese Government, even before it acquired a dominating share-holding interest, could always borrow from the banks. It also explains the vital importance of a balanced budget to the banking system. No Government can borrow indefinitely from its banks without a break, unless it be willing to impair permanently the credit standing of the country. There have been two well-marked periods in Chinese Government finance. These run from 1926-1933 and from 1933-1937. A third period has just begun. During the first period, while the national finances were managed by Dr T. V. Soong, a new revenue organisation was created, and China's public finances were brought near to a balanced budget. By contrast, during the second period, military expenditure, especially for the anti-Communist campaign, the air force, and the building up of a huge fortified district around Nanking, grew by leaps and bounds, and so did the budget deficit. Now, in 1937, repentance is being shown, and definite steps towards a balanced budget were to be taken. Were it not for the outbreak of hostilities with Japan, China's national accounts might at least have been balanced to the point where new borrowings and old debt repayments were equal to each other.

The achievement of this last objective is important, if only because the new Chinese banking system throws a heavy responsibility on the Government. Just as in other countries, Chinese modern banks have grown so big that their risk has become a public risk. No large-scale bank failure was allowed to happen in 1935, although the "man in the street" knew very well which banks were facing a crisis, while notes issued by some of the banks were occasionally refused by shops. From to-day onwards every failure of any of the bigger banks would be considered as indicating the inability of the Government to assist, and the immediate consequence would be a run on all the banks. No Government carrying such a risk can afford an unbalanced budget year after year.

Finally, a new distinction of economic classes is slowly emerging from the spread of modern banking. This is the distinction between those who have a bank account, and those who have not. It is a difference familiar to all the West, but difficult to associate with whatever conception the West has formed from literature and the arts about "unchanging" China.

Financial Notes

Underwriters and War Risks.—Events in Shanghai and the strange activities of mysterious submarines in the Mediterranean have led to a rapid raising of marine war-risk insurance rates for each of these areas. Rates for ships to Chinese ports are unchanged from those mentioned in *The Economist* of August 21 (page 391), but new schedules were issued at the end of last week for goods before shipment from China or for fifteen days after discharge in China. Underwriters, wherever possible, are exercising their right to make new agreements under the "forty-eight hour cancelling clause." Fortunately, since much can happen in two days, the decision last December not to insure for war risks on land, except in the United States and Canada, leaves only policies agreed before then in operation, and these are now few in number. The new rates on journeys through the Mediterranean should make interesting reading in Italy. The limit of the Western Mediterranean area of greatest risk has been moved east from the line running between Marseilles and Tangier to a line roughly from Rome, through Pantellaria, to Tripoli. West of that line rates are four times as high as to the east, but the whole level has been raised and rates double those on ordinary cargo vessels have been imposed on tankers. A further surcharge has been put on vessels calling at French ports on their way to the East. In the light of recent developments, the most startling feature of these changes is their moderation.

★ ★ ★

The Foreign Exchanges.—M. Bonnet's speech created a good impression, and the discount on three months' francs has narrowed from Frs. 5 to Frs. 3¼, in spite of the absence of any support by the French Control. The French authorities, however, have had to give some support to the spot rate at Frs. 132⅞, mainly because of rumours that the French Government were not entirely agreed over the proposed railway reforms. Dollars at one time depreciated to $4.99½, but the rate has since come back to $4.98. There are reports of occasional support by the American authorities, but the market has also been helped by the cessation of Japanese selling. As regards the outlook, official American returns show the presence in the United States of $171 millions of "Far Eastern" balances, but the vital question of their distribution between Japanese and Chinese ownership is left unanswered. The Shanghai rate has been firmer, while Hongkong dollars have retained the strength imparted to them by transfers of Chinese funds to Hongkong. Argentina has decided that her exchange position is strong enough to justify the repatriation of her gold previously held under ear-mark in London.

★ ★ ★

The Money Market.—Money has been comfortable this week, partly because of the replenishment of bankers' deposits explained in the following note. There has been a fair afternoon demand for loans from the clearing banks, but there is no longer any suggestion of a reduction in the supply of outside money. The clearing banks have been ready buyers of bills at the rates previously in force, but although the market obtained an allotment of 43 per cent. at last week's tender, they were not ready sellers. This result is better from the market's point of view than some of the recent results, but is still not regarded as entirely satisfactory.

	Aug. 5, 1937	Aug. 12, 1937	Aug. 19, 1937	Aug. 26, 1937
	%	%	%	%
Bank rate	2	2	2	2
Clearing banks' deposit rate	½	½	½	½
Short loan rate :—				
Clearing banks	½–⅝–1*	½–⅝–1*	½–⅝–1*	½–⅝–1*
Others	½–⅝	½–⅝	½–⅝	½–⅝
Discount rates :—				
Treasury bills	½	½	½	½
Three months' bank bills	13/32–⅜	13/32–⅜	13/32–⅜	13/32–⅜

* Loans against Treasury bills and other approved bills and British Government securities within six months of maturity; 1 per cent. Treasury Bonds and other gilt-edged stocks within six months of maturity; and other collateral respectively.

The supply of Treasury bills is increasing, the total of tender issues having risen since July 31st from £543 to £573 millions. This is partly because of the seasonal revenue deficit and partly because of a reduction in the volume of "tap" Treasury bills.

★ ★ ★

The Bank Return.—A further £2.7 millions of notes have returned from circulation, and the reserve has risen now to £339.6 millions. This brings the Proportion back to 25.6 per cent., contrasted with 16.6 per cent. only three weeks ago.

BANK OF ENGLAND

	Aug. 26, 1936	Aug. 4, 1937	Aug. 11, 1937	Aug. 18, 1937	Aug. 25, 1937
	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Issue Department :—

Discounts and advances	9·2	6·4	5·9	6·2	4·3
Other securities	17·8	20·1	20·3	21·6	19·6
Proportion	*40·0%*	*16·6%*	*19·9%*	*23·9%*	*25.6%*

Public deposits have fallen this week to £25.4 millions, after having been raised last week to £28.5 millions by the absence on three days of Treasury bill maturities. This contraction is a normal movement, as this week there were maturities on every day except Monday. There is a small reduction in the Bank's earning assets, which offsets the increase in the reserve, but owing to the release of funds from public deposits, bankers' deposits have risen by £4.3 millions.

THE STOCK EXCHANGE

What Is Capital?

SOME fallacies, like old soldiers, never die; they simply fade away and re-appear disconcertingly, like giants refreshed. In the field of investment, informed opinion has lately been coming increasingly to the view that the capital of a business ought to be measured in terms of earning power rather than past expenditure, and that debentures differ from other capital obligations only in having a higher nuisance-value. Yet British industry this year narrowly escaped the levy of the original National Defence Contribution, which was based on a computation of capital at adjusted original costs, from which debentures were expressly excluded. This version of N.D.C. is dead, but lest the fallacy it resurrected should go marching on, it may be well to examine the rights and wrongs of the question: What *is* Capital?

Accountants, who differ on many things, are agreed on two: that capital must be differentiated from revenue; and that for practical purposes it may be sub-divided into working capital which is constantly circulating and being consumed, transformed and renewed; and into fixed capital which is used up much more gradually in the process of earning profits. Cash, trade debtors (less creditors) and stocks of materials *ex natura* call for a current valuation, but assets like buildings, plant, machinery and holdings in subsidiary companies are not meant to be realised while a company remains a going concern. It will be time to value the "Queen Mary" at a break-up figure when she goes to be broken up. But in the meantime, what figure shall we put on her? Shall we enter her at cost, allow, say, a twenty-five year life, and keep back enough of the annual earnings to reduce her book value to nil on her last voyage? If so, we shall finish with exactly the amount of capital with which we began; in technical jargon, we shall have preserved our capital intact.

This method of valuing long-lived but not immortal assets at "cost *less* depreciation" is almost universal. It is objective in conception and convenient in practice. But it has one disadvantage—it does not wholly fit the facts. A trading company is not formed primarily to return its members' subscriptions, like a slate club or an endowment insurance, at the end of a period. Its object is to earn profits and to go on earning them; and the keeping intact of its capital is only incidental to the main revenue-earning process. If an asset ceases to be profit-earning, its capital value is nil, whether it has served two or twenty-two years of its estimated working life; and if accumulated resources are insufficient to replace it, when replacement is necessary, by another asset which *will* earn profits, then by no stretch of imagination can "capital" be said to be "intact."

The position of debenture holders must needs be judged by the same ultimate test of earning power. Though they may apply for a receiver to take possession of the assets when their interest is unpaid, potential ownership of old iron is a right of no particular value. What distinguishes one railway from another is not the steel of which its rails are composed, but the question whether it runs through prosperous country to a busy port, or through bankrupt territory to a derelict terminus. Foreclosure, as a rule, is the penultimate certification of the impairment of true capital value. The real security for debenture holders is their priority over other capitalist risk-takers in the annual share-out of profits. Their foreclosure rights have a value mainly psychological; for the interests in charge of a business, who are normally ordinary shareholders, may be relied on to move heaven and earth before they will allow control to pass into other hands, by failing to earn and pay their debenture service.

It is precisely this distinction between the "physical" and the "earning power" conception of capital which makes exact valuation difficult. Clearly, the worth of an asset is relative and not absolute. If by "goodwill" we mean the likelihood that profits earned in the past will be maintained, reduced or exceeded in the future, then an element of goodwill attaches to all capital valuation. But this goodwill element is clearly of greater moment for fixed assets than for floating assets; for the former are expected to be profit-earning, possibly, for a generation or more, while the latter pass quickly into other hands, and the accuracy or otherwise of their valuation is determined, once and for all, by the "ordeal of the market." Now, the proportion between fixed assets and floating assets and, consequently, the risk of error in any conventional valuation, varies enormously between different companies and different groups of trades. In some industries—notably railways, public utility industries like gas, electricity and water, and the "heavy" steel and engineering trades—fixed assets must, from the nature of things, represent a high proportion of total assets. For example, the United Steel Companies at June 30, 1936, valued its fixed assets (as defined earlier in this article) in its balance sheet at a net figure of £8,566,000, while its surplus liquid assets were only £2,903,000. For Dorman Long and Company, at September 30th last, the figures were respectively £8,603,000 and £1,197,000; and for Stewarts and Lloyds at December 31st they were £10,311,000 and £2,445,000. In many other industries, however, capital is "turned over" more rapidly, and floating capital, consequently, plays a larger part. In the balance sheet of Patons and Baldwins, a wool textile company, at April 30th last, fixed assets were valued at £2,529,000, while the liquid assets were as much as £2,727,000. The Imperial Tobacco Company, on October 31, 1936, showed fixed assets of £26,497,000 (including £9,423,000 for goodwill, etc.), and net liquid assets of £32,037,000. In businesses wholly or mainly engaged in retail trade, floating assets are necessarily large. The banks are an extreme example of a different type of business, which obtains the bulk of its effective working capital not from shareholders but from the deposits of customers. Last December, the Midland Bank's fixed assets—i.e. its buildings, etc.—were valued at only £8,891,000 out of a balance sheet total of £532,712,000. Its shareholders' capital was £14,248,000, but its deposits totalled £479,767,000.

There is yet a different type of enterprise whose capital consists predominantly of skill and reputation. A group of popular newspapers, for example, may or may not own its offices and printing machines; but in either case its crucial asset is the goodwill of its readers. The chief asset of the vendors of other proprietary articles, such as patent foods or medicines, is the willingness of the public to buy their products. The business of E. Griffiths Hughes, Ltd., which manufactures and markets Kruschen Salts and other products, had fixed assets, at March 31st last, of only £142,000 against net liquid assets of £479,000. All merchanting concerns, again, must necessarily have a large proportion of their total capital invested, not in land or buildings, but in stock-in-trade. Even so, their most productive asset, in a business sense, is their knowledge, experience and trade connections.

The conclusions suggested by this review may be briefly expressed. If we set out to measure capital, for fiscal or any other purpose, we may employ various devices, none of which is wholly satisfactory. We may separate short-lived assets and value them at the price they will fetch in the market, because they are destined to be sold there. We cannot value long-lived assets on the same basis, because they are not sold but are gradually exhausted in the process of creating saleable assets. If we value them at the price we originally paid, we may be recording, not their capital worth, but the goodness or badness of our bargain; and if we reduce their subsequent value by amounts based on estimates of their working life, our calculations may turn out wholly wrong. Even the unhonoured draughtsmen of the original National Defence Contribution tacitly recognised that capital which was intangible might nevertheless be real, for they allowed "goodwill" to figure in a capital valuation when someone had transferred it to someone else for a financial consideration. Goodwill in fact, valued or unvalued, is present in capital assets of every kind. Business genius, situation, and opportunity make fixed assets out of bricks, mortar and iron. Even floating assets have a goodwill component, for a piano is worth less to a breeder of horses than to a piano-dealer.

The one trait common to all assets is ability to produce profits. Whenever a transfer of capital rights is made from one party to another, its value is invariably assessed in terms of estimated earning power. This holds good when a new business is being offered to the public; when a fractional part of the ownership of Imperial Chemical Industries is being sold from one shareholder to another through the Stock Exchange; and when the Inland Revenue is not planning N.D.C. but collecting Death Duties. Probable future profits are the determinant of the price paid for ownership of capital. Conversely, when a business has suffered a permanent reduction in its earning power, it very properly forgets what it originally paid for its capital assets, and writes them down to a figure based on their profit-earning potentialities under the new conditions.

It would have been a matter of regret if the State had lent the weight of its influence to the perpetuation of a misleading idea of the nature of business capital. It is not merely that any valuation which omits the intangible factors will bear hardly on companies and trades in which these intangibles are most important. In the past, accountants and business men have deliberately refrained from making any adequate valuation of goodwill when they were drawing up annual accounts, though they have invariably allowed for them when they were selling a business or offering new shares for cash. But this conservative illogicality has, in practice, made for increased liquidity and trade expansion; for goodwill can only be written down, or written out, normally, by withholding earned profits and ploughing them back into a company's business. The object of the capital valuation required under the original N.D.C., however, was not to retain but to remove profits. The upshot would seem to be that the present system of excluding goodwill from "capital" (so long as capital is not being transferred) may be praiseworthy when the owners of a business employ it for their own satisfaction, but it would be largely inequitable if the Treasury were to employ it for the Exchequer's enrichment.

Investment and Company Notes

Cheerfulness Under Difficulties.—In the early part of the week the security markets continued to play the rôle of Sir Despard Murgatroyd, the victim of circumstances. Their attitude towards possibilities in Shanghai and China generally was wholly pessimistic. Though Far Eastern bonds naturally suffered most, home industrial shares and the speculative markets generally were dull and dispirited. The rally which occurred before the close of business on Wednesday may have been due to a belief that Japanese military tactics would quickly remove actual hostilities from the immediate neighbourhood of Shanghai or merely to the hope which, springing eternal, makes every depressed market "oversold," sooner or later. At any rate, Far Eastern bonds finished three to five points higher on Wednesday and the *Financial News* index of home industrials showed a net gain of nearly a point. The week's home railway traffic figures were adjudged unexciting but satisfactory, and the decision of the locomotive men to grumble, but to accept the Tribunal's wages award, removed the fear of strike action at which the Union's earlier *communiqué* had broadly hinted. Most significant of all, the gilt-edged market became perceptibly firm—a phenomenon which may portend an early resumption of the new corporation borrowing which was unwillingly suspended during the holiday period.

* * *

Far Eastern Prospects.—Investors must needs welcome the ability of the market to find bottom fairly quickly after every decline in prices. But the current investment outlook, unfortunately, depends less on "sentiment" than on external circumstance. As we suggest in a leading article on page 415, the decline in home industrial securities may have a wider significance in the light of future prospects for trade as a whole. And so far as the immediate cause of contemporary depression is concerned, it is clear that no early end to Far Eastern troubles can be forecast. Japanese control at Shanghai would bode ill for Chinese Customs revenue, some 70 per cent. of which is normally collected there. The Japanese coastal "blockade" announcements and the decision of well-known British steamship companies to avoid the area of hostilities are anything but cheerful omens for trade with China. In Japan's case, it may be true that about three-fifths of her sterling obligations are Japanese-owned, and that nothing short of a revolutionary change of government would be likely to threaten the willingness and ability of the authorities to make annual oversea payments running only into a few million pounds. But Japan, by all appearances, is embarking on a long adventure, and experience shows that there is no bottom limit to a potential fall in foreign bond prices when no limit exists to a debtor's future commitments. The course of prices for representative Far Eastern securities is shown by the following table:—

	Highest 1935–37 to Aug. 24	Highest 1937 (Jan. 1 to Aug. 24)	July 8, 1937	Aug 12, 1937	Aug 26, 1937	Fall from Highest 1935–37	Fall since July 8, 1937
Chinese Bonds							
Boxer	105⅜	105	105	92	92	13⅜	13
5%, 1912	97½	95⅜	95⅛	80	65½	32	30⅛
Pukow Rly., 1908	78⅜	78⅜	78	59	40	38⅜	38
Nanking Rly.	90¼	90¼	90¼	67	45	45¼	45¼
Japanese Bonds							
5% 1907	86	84½	83⅜	72½	61	25	22⅜
5½% 1930	91½	88⅜	86	75	63½	28	22½
Commercial Securities							
Hong Kong & Shanghai Bank $125	£140¾	£122	£118	£110½	£97	£42¾	£20
Chartered Bank of India, A. & China, £5 fully paid	17	17	15⅝	14⅛	13½	13½	1⅛
British American Tobacco (£1)	6⅛	6⅛	6½	6½	6	⅛	½

That the market was taking, on the whole, a hopeful view of Far Eastern possibilities before the present trouble broke out is clearly suggested by the fact that on July 8th quotations for Chinese and Japanese bonds alike were at or near the highest points of the last few years.

* * *

Wall Street Hangs Back.—Wall Street's depression continues and prices are still drifting downwards in a narrow market. The end of the Congressional session has not brought the relief expected, and market men have a new fear of an emergency session before the end of the year. The last hours of the dead session saw the passage of the Tax Bill, which closely followed the

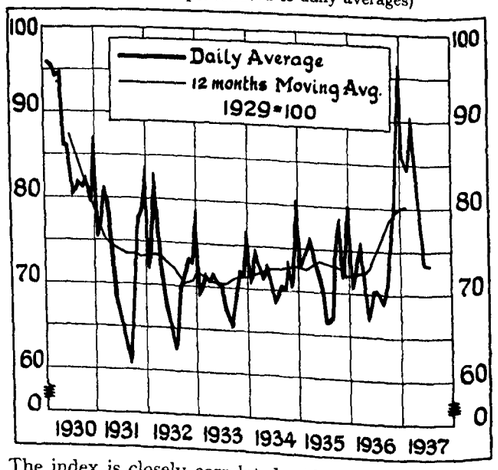
lines of the Committee's report; but the event had no influence on the markets. The effect on the vast majority of foreign investors in Wall Street will be negligible, since the 10 per cent. withholding tax is to be continued as at present for incomes from American sources up to $21,600. The main object of the Bill seems to be to catch those Americans who had formed personal holding companies and adopted other methods to avoid taxation. The dominant influences in Wall Street at the moment are threefold. The first is dislike of the New Deal, which has been reinforced by the apparent success of the conservatives in Congress in defeating the Supreme Court proposals, and by the President's recent statement that the fight must be continued. The second derives directly from the controls imposed by the Securities and Exchange Commission, and indirectly from the strong dislike of operators for the Commission and its works. The third influence is the war in China and the potential "damage" to American business if the neutrality law is applied.

* * *

With so much to trouble its mind, Wall Street is unable to find comfort from the state of trade, which, according to most reports, is thriving. Farm income is still growing, the total for July being higher than for any July since 1929. The cotton growers are apparently to have their economically unjustified cash dole from the Treasury, and their purchasing power will be substantially increased. The Federal Reserve Banks of Atlanta and Chicago have reduced their discount rates from 2 per cent. to 1½ per cent.—an action whose significance is symbolic rather than practical. But the dourness of Wall Street is shown by the thorough way in which it ignores such symptoms and seizes rather on the estimate of *Iron Age* that orders in the steel industry are not coming forward quite so rapidly as had been hoped. And as yet there is no sign of any change in the market's mood.

* * *

Radio Share Prospects.—The blaze of publicity which surrounds the annual Wireless Exhibition at Olympia usually has only a faint reflection in the market for Radio shares. This year, for a number of reasons (which are discussed in a Note of the Week on page 420), investment interest is definitely subnormal. The trade is obviously trying to achieve some measure of stability, external and internal, after suffering, in large measure, the growing-pains of a new industry. The goal, however, is not yet in sight and in the meantime the choice of the ordinary investor without specialised sources of information naturally tends to fall on those companies which have shown some success in negotiating their difficulties in the past. *Electric and Musical Industries* falls into this class; in certain respects, indeed, it stands alone. Radical changes have been effected, more than once in the past, in the nature of the company's principal product, but each time a substantial interest has been maintained in the superseded products. But while E.M.I. is the largest concern in the industry, it has never left far behind its younger, and sometimes more vigorous, rivals. In television the company now holds the leading place, and if television is eventually to become a sound, paying proposition E.M.I. may be expected to obtain its fair share of the resulting profits. The recently inaugurated household appliance business is doing well, and the revival of demand for gramophone records (most marked in the United States) should be an important source of additional revenue. Moreover, the company is reputed to have a small—but potentially large—armament interest which is at once an added attraction and a certain safeguard. At current prices E.M.I. 10s. ordinary shares offer a yield of 4½ per cent., which is about half the average rate for the radio group.



* * *

The shares of the other wireless set manufacturers are rather more speculative. Despite, or perhaps because of, their high yields of 8 and 9 per cent., most of them are unsuitable for the investor who is not prepared to watch developments closely. *Pye*, which now has a fairly long and successful history, may be expected to maintain earnings in the immediate future. There appears to be some justification for the view that the recent fall in the shares of *E. K. Cole* has been overdone. The company is energetically developing the bakelite side of the business, which may help to compensate for fluctuations in radio profits. For the more adventurous investor there are the newer concerns, such as *Philco*, which as a public company has made a promising start. But, taken by and large, the long-term investment outlook for the radio set manufacturing industry is as obscure to-day as ever in the past.

* * *

Cable and Wireless Recovery.—When Cable and Wireless (Holding) reorganised its capital and started a new chapter in its eventful story, the future began to appear brighter than at any time since the world slump first played havoc with all conceptions of "standard revenue." The excellent traffic receipts of the early months of 1937 encouraged the market's tendency to adopt the view that the directors' suggestion of a 4 per cent. ordinary dividend was over-conservative; but in May, Mr Denison-Pender pricked the incipient bubble by foreshadowing the need for larger appropriations from revenue for special purposes. What, in fact, is the trend of current revenues? The answer is given by the attached chart, which shows movements in comparable traffic receipts for each month since 1930 (the actual figures are set out in detail on page 451), and has a supplementary twelve months' moving average:—

CABLE AND WIRELESS—TRAFFIC INDEX NUMBERS
(Monthly receipts reduced to daily averages)

The index is closely correlated with the trend of international trade. Recovery began at about the same time as general trade improvement, but proceeded only at a very slow pace until the latter part of 1936, since when it has made up in vigour what it lacked in speed. The average index for January-July, 1937, is 81.3, which is the best since 1930, and is 10 points above the corresponding average in 1936. Assuming in 1937 the same proportion between the yearly average and the January-July average as existed in 1936, the index for the year would be about 84½. Though that figure is somewhat below the 87.8 canvassed in our article in *The Economist* of June 5th last (page 574), we have no reason to revise the estimate given on that occasion of earnings of about 9 per cent. on the new ordinary stock, before allowing for the incalculable factor of special provisions.

* * *

The official estimate of a 4 per cent. distribution seems almost certain to be a minimum figure, though the actual percentage will be more than usually dependent on policy. Meanwhile, the directors have proceeded to carry out their declared intentions. Earnings arrears having been replaced by the issue of funded income stock under the scheme, interim distributions on the preference stock are being resumed, for the first time since 1931, with a half-yearly payment to September 1st of 2¾ per cent. A similar rate is to be paid by Marconi's Wireless Telegraph Company, who distributed 7 per cent. for the year 1936, but have not made any interim payment since 1928. It has been decided not to fill the vacancy on the board of Cable and Wireless (Holding) caused by the death of the Marchese Marconi, and a resolution has been passed limiting the size of the board to a membership of 15, with a minimum of 8. Clearly, the great undertaking is progressively setting its house in order, and, with the growth of world trade, its immediate prospects are brighter than at any time since the great depression.

* * *

Triplex Safety Glass Report.—Since the announcement of the dividend the market has marked down the 10s. shares of Triplex Safety Glass by 3s. 3d. to 67s. 3d. The full report does not provide any new source of encouragement to stockholders, although it reveals a position in every way sound and progressive. The trading profit has increased from £162,541 to £250,820, the 35 per cent. dividend absorbing almost the whole of the increased earnings. The balance sheet reveals no significant change apart from an increase from £47,803 to £462,983 in the holding of investments—a change balanced, *per contra*, by the increase of capital. It would appear that the company has found some difficulty, so far, in employing the new funds which it has obtained. The following table shows the changes in the profit and loss account:—

	Years to June'30 1935	1936	1937
	£	£	£
Trading profit	126,692	162,541	250,820
Other income	5,217	14,792	11,770
Total income	131,909	177,333	262,590
Fees	850	1,350	1,500
Depreciation, obsolescence	20,578	30,020	26,001
Taxation	25,000	40,000	75,500
Employees' profit sharing	...	12,763	21,802
Ordinary shares:—			
Earned Amount	*85,481*	*93,200*	*137,787*
Earned Per cent.	*55·1*	*61·1*	*36·7**
Paid Amount	46,500	91,500	131,250
Paid Per cent.	30	60	35*
To reserve	50,000	...	...
Carried forward	3,335†	6,163†	12,343†

* Capital increased from £200,000 to £500,000. † After taking profit on sale of investments of £1,023 in 1935 and £1,128 in 1936 and a loss of £357 in 1937.

The company's high prosperity is not wholly accounted for by the increase in motor output. To fluctuations in the demand for motor cars, of course, the sales of safety glass must be highly sensitive. But much of the spectacular profit increase of the last five years is due to the substitution of safety glass for ordinary glass, a substitution now partially enforced by statute. In 1936-37 the company derived a large part of its profits from the compulsory fitting of safety-glass windscreens to pre-1932 cars. Factors like this, however, are non-recurring. In future, the company's progress may depend more directly upon the trend of motor sales than in the immediate past—and that trend is not, at the moment, wholly certain.

* * *

Platt Brothers Scheme.—At the last meeting of Platt Brothers and Company (Holdings), Ltd., Sir Walter Preston promised shareholders a capital reorganisation scheme. Its terms have now been published, and seem likely to encounter keen criticism from preference shareholders. The scheme is designed to eliminate seven years' arrears of second preference dividend and (somewhat unnecessarily) to simplify the capital structure. At present the company has a capital of £3,710,160, composed of £1,236,720 of 4½ per cent. first preference shares, some £618,360 of 7 per cent. second preference shares, and £1,855,080 ordinary shares. The scheme consolidates the two preference issues into one 5 per cent. issue of equal amount. Thus the first preference shareholders gain ½ per cent. in dividend at the cost of some dilution of their priority rights, and the second preference shareholders lose 2 per cent. income but gain priority. In the last decade, the company has only three times earned enough to cover the new combined preference dividend. Unless prospects now are very much improved, therefore, the first preference shareholders are, in effect, being asked to sacrifice part of their security for the benefit of the second preference shareholders. If prospects are permanently improved, then the sacrifice of dividend on the second preference shares is disproportionately large. Indeed, only the ordinary shareholders have cause for undiluted satisfaction. Gross preferential dividends will be reduced by £6,183, while arrears of second preference dividend, totalling £302,996, are to be cancelled in exchange for the surrender of 10 per cent. of the equity to the second preference shareholders. The equity-for-arrears principle is sound in itself, but the ceded share appears to be wholly insufficient consideration for the sacrifice. Actually, the second preference holder will be worse off for *future* dividends, than before, if earnings fall below £217,000—a level which has not been approached since 1927. The Board's statement that, if the scheme is adopted, the company will be able next May to pay a small ordinary dividend, unintentionally emphasises the main objection to the scheme—that preferential shareholders are being asked to make substantial sacrifices merely to benefit ordinary shareholders.

* * *

A Russian Loan Repayment.—Some investors in pre-Soviet Russian loans are, it appears, to have their patience rewarded. Providence has appropriately favoured first those who still hold certificates of the £1,000,000 Holy Synod of the Empire of Russia 7 per cent. sterling Loan. This loan was issued with

FINANCIAL INDEPENDENCE can be every widow's INHERITANCE

Make certain that *your* widow would be free from financial anxiety. A "Widow's Income" Policy will not only ensure your own peace of mind, but will provide the comfort and security of a guaranteed income for the lifetime of your wife if she is left to face the world alone.

An enquiry for full details and for an illustration suited to your own circumstances will cost you nothing; rest assured you will incur no obligation by doing so.

LEGAL & GENERAL ASSURANCE SOCIETY LTD.

Branches & Agencies throughout the World.

the guarantee of the Russo-Asiatic Bank, in 1916, to enable the Synod to replenish its stores of candles which had been depleted by the damming of the flow of German wax. Sometime at the end of 1917—the precise date is unknown—both the service of the loan and the Russian headquarters of the guarantors ceased to exist, the surviving branch of the Bank in Hongkong being regrettably unable to meet its obligations. Now, however, it has gone into liquidation and Messrs. Glyn, Mills and Co., as vigilant guardians of the stockholders' rights, have recovered the sum of £20,535. From this they are taking the modest sum of £532 to cover their expenses in the matter over the last twenty-one years. From the balance, 2½ per cent. is to be paid to stockholders as a capital distribution, and a sum of £54 19s. 1d. will be carried forward for contingencies. Thus has bread—or wax—cast upon the waters returned 6d. in the pound after many days.

* * *

William Baird's Progress.—The latest earnings of this iron and coal undertaking show an improvement of nearly 40 per cent. The interests of the undertaking within the sphere of the heavy industries are varied. They include, besides coal and coke, pig iron, cement and certain by-products; but the general improvement has produced something much more than the stability which Mr R. L. Angus a year ago hoped in the long run for a business with varied products and a relatively small dependence on export markets. The increase in profits of over £12,000 has, as we show in the following table, been conservatively employed.

	Years ended May 31		
	1935	1936	1937
	£	£	£

† After adjustment for tax. ‡ After contingencies. * Before charging fees. § Ordinary capital £2,972,000 in 1934–35, and £1,857,625 thereafter.

Depreciation provision has been generously increased by over 60 per cent. and provision for tax (including N.D.C.) in a still greater proportion. Despite the 3 per cent. addition to the dividend, the margin of earnings over payments is doubled. As in previous years no allocation is made to general reserve from revenue, but the carry forward receives a substantial addition, and now exceeds 6 per cent. on the share capital. The balance sheet, shows only minor changes.

* * *

Braithwaite and Company.—The accounts for the year ended March 31st last of this constructional engineering and bridge-building company provide evidence of the spread of prosperity to firms which did not do particularly well in the earlier years of trade recovery. In 1934-35 profits were £5,026, they then rose to £27,328, and for the latest year have jumped to £44,103. Last year nothing was put to depreciation, since shares in a subsidiary were written down from reserves, but this year £7,325 has been allocated. Tax interest and fees reduce the remainder to £26,573. Out of this the directors propose to pay one year's preference dividend, gross, amounting to £8,437. This raises the carry-forward to £24,186, a sum nearly sufficient to pay off the three years of arrears on the preference shares, dating from 1934-37. But the company is in an apparently illiquid position, with debts to bankers and sundry creditors of over £250,000, against floating assets of £324,000; and the decision to conserve its cash is doubtless well-advised. The directors report that the order book is in a more prosperous condition than for some years, and provided the company does not suffer too much from the shortage of steel, the next accounts should show further progress.

* * *

Port of London Finances.—Except during two years of depression there has since the war been a steady increase in the net tonnage of vessels using London docks. The Port Authority meanwhile has continued to raise the quality as well as the quantity of its service. In addition to structural improvements, progress has been made with electrification in recent years, and work has now been put in hand in connection with a development scheme to be divided into six stages and costing in all £12 millions. Unused borrowing powers do not much exceed £4 millions, so, as announced last March, authority is to be sought for an increase in the present permitted total of stocks of £45 millions. The latest accounts reflect this policy of improving dock facilities generally, for in the past financial year capital expenditure was £339,116 against £288,558, and issues from the maintenance and renewal fund were £162,796, or more than double those for the previous year. The amount available (after all other expenses and redemption funds) for allocations to the maintenance fund and general reserve fell, however, from £206,166 to £99,385, and £100,000 was provided for these reserves, against £200,000. Although total revenue rose from £5,668,279 to £5,786,938, expenses increased in a greater proportion, so that net revenue of £1,533,726 represented a decline of £52,000, added to which income tax required a further £46,000. General activity in the docks is substantially more concerned with imports than with exports, but it is significant that between the latest year and 1932-33 (the worst period for the Authority) the tonnage of import goods handled increased by 15 per cent., and that of export goods by nearly one-half.

* * *

Company Results of the Week and Meeting.—For the summer season, the week has produced a good number of interesting results, and our usual analysis of profit and loss accounts on page 451 comprises some sixteen further companies. The market responded well to the *Staveley Coal and Iron* dividend announcement of tax-free payments of a 7 per cent. final dividend plus a 2½ per cent. bonus, making 12½ per cent. for the year against 9 per cent. free of tax. *Sheepbridge Coal and Iron* had previously declared an annual dividend at the same rate (10 per cent.) as before, but tax free instead of less tax. *Brightside Foundry* profits of £69,502 are almost doubled; in addition to the increase in dividend from 15 per cent. to 22½ per cent., a 50 per cent. capital bonus is payable. *Lochgelly Iron and Coal* earnings of £59,089 are £3,500 higher, but although higher prices were realised, costs of production are rising also, and the results have been adversely affected by strikes. Among companies who are newcomers, *Trojan (Holdings)* have earned £19,589 in their first fifteen-month period, but refer to difficulties in getting delivery of new plant, etc. Trading profit of *Austin Veneer and Panel* was £23,742 for the year (comparing with £15,403). Among the larger miscellaneous companies, *Carter and Company* are increasing their dividend from 15 per cent. to 20 per cent., and *Meccano, Limited*, from 2½ per cent. to 7 per cent., tax free. Net profits of the latter company are £33,668, against £27,684, but gross trading profit was some £9,500 lower. The week's important dividend announcements include the repetition by *Pinchin Johnson* of a 7½ per cent. interim, payable on a capital increased by a 1 in 10 bonus. *Debenhams* announce net profits of £580,754 against £558,263, and a dividend of 20⅝ against 16⅝ per cent. *Initial Services* have made record profits of £277,693 (a rise of £32,217) and again pay 25 per cent.; it is proposed to issue new shares to members on bonus terms (at par) in the ratio of one for five held. The expectation of growing business in electrical goods other than lamps was discussed by Mr John Ismay at the second annual meeting of *Ismay Industries*.

THE WEEK IN THE MARKETS

THE STOCK EXCHANGE

SETTLING DAYS

TICKET: SEPTEMBER 7 ACCOUNT: SEPTEMBER 9

It is holiday time in the markets, but a holiday severely disturbed by calamities in the Far East and the growing tension in Europe. The City has been none too sure of the economic outlook for many weeks now, and this fresh dose of uncertainty, added to the customary inertia of August, brought business to a very low ebb. Conditions only brightened up in mid-week when the first alarms had moderated and a series of good reports and traffics gave grounds for greater, though still very restrained, optimism.

Gilt-edged have been a pleasant contrast to the foreign bond market. The turnover has not been great, but the trend of prices under the influence of a plentiful supply of money has been satisfactory. A general rise in irredeemable stocks on Tuesday spread on Wednesday to the whole range with rises of the order of ⅛ or ¼. The new Essex scrip was restored to par, but on Thursday the trend was again easier.

The sudden collapse of Chinese and Japanese issues and their equally sudden rally which started on Tuesday are discussed in a note on p. 437. But these were not the only foreign bonds in the doldrums. The dispute with Czechoslovakia reacted unfavourably on Portuguese securities, and General Metaxas' appeal for sacrifices in the cause of armaments was badly received by investors in Greece. Both the Dawes and the Young Loans have fallen without interruption on a gloomy interpretation of the business outlook in Germany. On the other hand, M. Bonnet's speeches have left French issues very much firmer than before. Brazilians were depressed.

Home rails on a balance of forces—poor traffics and the union's acceptance, grudging as it was, of the wage award—have tended to decline. Prior charges and London Transport issues were weak at one moment, but they too joined in the mid-week rally. Among foreign rails, reports of much-needed rain caused Argentine issues to recover some earlier losses. American issues have closely followed movements in Wall Street, but in general little interest has been shown.

Industrial shares have sagged most of the week, principally under the influence of the war in China; in mid-week there was a day of improvement, but later prices turned downward again. The iron and steel group were prominent in the temporary revival, and Whitehead were consistently firm throughout. Staveley Coal and Iron shares also gained on the increased dividend distribution. The motor group were irregular, but Standard were in demand on a record order from Australia, and Morris benefited from the introduction of the new models. The Aircraft section was ignored. Electrical equipment shares were an irregular market, with a strengthening of tone in mid-week.

The stores group was neglected, but catering issues were somewhat firmer with Unilever in good demand. J. and P. Coats were supported in an inactive textile market, and the rayon group were better in mid-week, on prospects of increased rayon prices. Most of the time banking shares found an indifferent market, with individual issues affected by the China war. The shipping group were steady at first, but sagged on the warning of the Chairman of the P. and O. on rising costs. Conditions in the miscellaneous industrials section followed the general trend, without any outstanding features.

The oil market was quiet, with prices satisfactorily maintained. Interest naturally centred round Mexican Eagles, though nothing new of sufficient and definite importance emerged to alter the general trend of quotations. Early in the week, a favourable influence was the granting of two drilling licences by the Mexican Government. Prices sagged on profit-taking, but became firmer on the report that the Governments of interested companies would make representations to Mexico. Demand for the leaders, particularly Burmah Oil and Anglo-Iranian, was well sustained, and in common with other sections prices improved in mid-week. Rubber shares were quiet and uninteresting, and were only slightly affected by Wednesday's surprise rally. There was no selling pressure, holders having little inducement to realise at present levels, but buyers were so scarce that prices were unduly sensitive to the smallest degree of selling. Recovery in the tea shares market continued. The new account began briskly, and stimulated by the satisfactory auction prices, activity was at a greater level than for some months, being restricted only by occasional shortage of supplies. Ceylon issues were neglected, the market being far more interested in Indians.

Without any definite news to show which way to jump, and continuing to be faced with a bewildering assortment of international troubles, the mining market was particularly quiet. A certain amount of interest shown early in the week in West Rand issues (chiefly as a result of the favourable West Wits. borehole report) hardly served to lend colour to a drab Kaffir market. Otherwise, gold shares and base metals were alike neglected, though Rhodesian copper issues were firm. The next session was, if anything, worse, even the sporadic good features of Monday no longer being apparent. In common with other markets, a noticeably more cheerful tendency emerged on Wednesday, although it was more a question of sentiment than actual activity. Firmer prices all round were accompanied by a display of interest in diamond shares, and a renewed demand for Rhodesian copper issues.

NEW YORK STOCK EXCHANGE

Prices have moved irregularly downward this week, under the depressing influence of Wall Street's own fears of Washington, which continue unabated by the closing of the session of Congress. Criticism of the regulations of the SEC are outspoken and further cause for caution, if not gloom, is found in the war in China. Added to these troubles, the market still holds to its belief that business activity will not be maintained through the autumn. Monday saw a sharp downturn after a slight recovery toward the end of the previous

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields of fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

(a) Interim dividend. (b) Final dividend. (c) Last two yearly dividends. (g) Includes a Special Jubilee bonus of 2½ per cent. free of tax. (n) Based on current annual dividend rate $2·00 per share. (m) Including bonus of 5% free of tax. (r) Calculated on basis of 18¾ annas per share of Rs. 9. Taken at 16 annas to one rupee. (p) Annas per share. † Free of Income Tax. (‡v) Yield worked on a 35% basis. (s) Yield worked on a 16½% basis. (t) Special Jubilee bonus. (z) Highest price, 132/- and 25 per cent. dividend on old shares, before 50 per cent. capital bonus. Yield at 25 per cent. = £5 12s. 0d.; at 16 per cent. = £3 12s. 0d. (w) Paid on £500,000 more capital than in preceding year.

(*Continued from page 441*)

week, but later the issues which led in the retreat recovered. Steel issues were prominent in this movement, but in mid-week they became weak again on the indications, reported by *Iron Age*, that buying in the steel industry was not as good as had been hoped. Steel mill activity was estimated at 83 per cent. of capacity, the same as last week. There were not lacking numerous signs of sustained business activity, but the market is still blind in its optimistic eye. The railroad wages dispute is not being settled so easily as had been hoped, and it is the market's expectation that an emergency session of Congress will be summoned before the end of the year to pass legislation insisted on by the President.

COMPANY MEETING

ISMAY INDUSTRIES, LIMITED

FURTHER PROGRESS

The second ordinary general meeting of Ismay Industries, Limited, was held, on the 26th instant, at Southern House, E.C.

Mr John Ismay (chairman and managing director) said: Our total interests in subsidiary and associated companies come to approximately £1,050,000, against our issued capital of £862,000, and we propose to adjust the capital position by making an issue of shares later in the year.

Our interests are divided into two main groups, the lighting industry and the other electrical activities. In the lighting industry we have roughly £450,000 invested, from which we received an income of £57,000. The other interests stand in our books at £600,000. Most of them have progressed quite satisfactorily. Our hire-purchase Corporation had a largely increased turnover and their profits will be substantial. The gas refrigerator which we are putting on the market will, we hope, produce substantial results.

The dividend of 6 per cent. which we are paying for the year under review has, I understand, caused a little disappointment, but in my opinion the report is really a very satisfactory one. Some criticism has been expressed about our issuing shares at 7s. 6d. each in December last, but, considering the real value of our two groups of interests—the dividend-producing one in the lamp trade and the non-dividend-producing one in the other activities—there is no doubt in my mind that the equity in each group would represent at least 5s. a share. Therefore, taking the two together, how can one say that they could be worth less than 7s. 6d. a share? We are quite confident that we shall have no trouble in maintaining the present dividend of 6 per cent. even on any increase of capital which we may make this year.

The electrical industry is still in its infancy, and I am sure that we shall get our share of the increasing trade. Our lamp business has possibilities for increased profits in the future, and I am convinced that in time our return from our other interests will be at least equal to that which we are at present obtaining from our electric lamps.

The report was unanimously adopted.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended August 21, 1937, amounted to £17,852,000, against ordinary expenditure of £11,965,000. After increasing Exchequer Balances by £131,765, the operations for the week, as shown below, decreased the gross National Debt by £5,526,000, to about £7,990 millions.†

The Portuguese bank rate is now 4 per cent., to which it was reduced on August 11th. Other overseas bank rates appeared in the issue of August 7th on page 317.

Exchange rates for South Africa, Central and South America and Australasia were also given in the above issue.

GOLD AND SILVER

The following statistics of imports and exports of gold and silver for the week ended August 26, 1937, are issued by the Statistical Department of H.M. Customs and Excise.

IMPORTS AND EXPORTS OF GOLD

(Into and from United Kingdom)

No gold movements were reported at the Bank of England between August 20th and 26th. Details of previous movements were given in *The Economist* of August 7th on page 318.

GOLD MARKET

Messrs Samuel Montagu and Company write on August 25, 1937 :—

The Bank of England gold reserve against notes amounted to £326,406,625 on August 18th showing no change as compared with August 11th.

In the open market about £1,700,000 of bar gold was disposed of at the daily fixing during the week. With a continuation of the firm tendency of sterling against the dollar, a fresh low record for the year was established on August 19th when the price was fixed at 139s. 3½d. Prices have ruled at about dollar parity and some of the offerings were taken for shipment to America, but there was also a fair general demand.

The s.s. " Kaisar-i-Hind " which sailed from Bombay on August 21st carries gold to the value of about £235,000.

SILVER MARKET

After remaining unchanged at 19 15/16d. for both cash and two months' delivery for four days of the week under review, a slightly easier tendency developed on August 24th owing to re-selling by the Indian Bazaars and on August 25th the respective prices declined to 19 13/16d.

There have been sales on China account, but these have been made with some reluctance and the steadiness of the market during most of the week was due largely to sellers holding back, as buying orders were limited to lower prices.

The tone of the market appears steady at the moment and even should Indian re-selling continue, support from America for trade or other purposes might be expected at or slightly under the present level.

Quotations for gold and silver are shown below :—

SHORTER COMPANY COMMENTS

APPOINTMENTS AND PERSONAL

Lt.-Col. H. C. B. Hickling, D.S.O., has been appointed a director of Apex (Trinidad) Oilfields.

MISCELLANEOUS

BRIGHTSIDE FOUNDRY AND ENGINEERING COMPANY.—For year to June 30, 1937, trading profit was £89,787, against £43,229 for 1935–36 and £21,069 for 1934–35. Ordinary dividend and bonus, 22½ against 15 per cent. for previous year. To loss on investments, £1,042; staff fund, £1,000; general reserve, £40,000 (against £19,000). Carry-forward, £20,957.

DORMAN LONG ACQUISITION.—The purchase has been completed of the Linthorpe plant of the Linthorpe-Dinsdale Smelting Company of Middlesbrough. The price has not been stated, but is understood to be a considerable sum.

MOZAMBIQUE COMPANY.—Earnings for 1936 jumped from £79,384 to £96,258. Amortisations absorb £12,223, compared with £12,217, and £4,813 is placed to statutory reserve. The State receives 2½ per cent., or £2,406, and the balance of £76,816 is put to " special reserve fund."

AERONAUTICAL CORPORATION OF GREAT BRITAIN, LTD.—Shareholders, who met on August 20th, to consider the voluntary winding-up of the company, unanimously agreed to adjourn the meeting for 14 days, after Major C. A. R. Warren had announced that offers had been received which might make the step unnecessary.

CABLE AND WIRELESS, LIMITED.—INDEX NUMBERS.—The index numbers are all shown upon a comparable basis. Monthly figures reduced to working day average. Working day average of comparable receipts; year 1929 = 100.

	1930	1931	1932	1933	1934	1935	1936	1937

October	82·5	77·8	73·2	72·1	73·6	78·8	75·9	
November.....	80·4	79·0	73·0	71·8	71·3	72·7	80·5	
December	87·1	83·6	78·8	76·7	80·7	80·1	96·4	

WARDLE AND DAVENPORT.—Net profit for year to June 30, 1937, was £20,290, against £16,606. Ordinary dividend is maintained at 4 per cent., tax free. £2,500 (against nil) to additional depreciation, leaving £25,952 to go forward.

LOCHGELLY IRON AND COAL.—For year to May 31, 1937, trading profit, after depreciation, was £65,284, comparing with £50,792. Ordinary dividend raised from 7½ to 10 per cent. To reserve, £20,000 against £15,000. Carry-forward increased from £11,706 to £15,827.

CORNBROOK BREWERY COMPANY, LTD.—Holders of a majority of Phoenix Company share capital have accepted the offer made by Cornbrook Company. The latter have, however, extended the date for acceptance by their shareholders until September 4, 1937.

ABITIBI POWER AND PAPER COMPANY.—Member companies of Dominion Mortgage and Investments Association holding Abitibi first mortgage bonds support the bondholders' plan for reorganisation. Member companies were recommended to support the plan of sale of assets and reorganisation dated July 21, 1937.

KRAMAT TIN.—For year to March 31, 1937, profits amounted to £99,104, an increase of £18,701. Dividends and bonuses amounted to 50 per cent. against 25 per cent. Depreciation raised from £16,752 to £32,227. After £3,000 against £4,500 to a replacement reserve, carry-forward is £39,369 against £57,991.

ARMSTRONG SHOCK ABSORBERS.—Second report, for year to June 30, 1937, shows net profit of £12,007, against £27,245 for period from July 2, 1935, to June 30, 1936. Final dividend 15 per cent., making 20 per cent. (same); nil to general reserve against £15,000; carry-forward, £1,471 against £761.

DANZIG LOANS.—The League Loans Committee announce that the Danzig Government now propose that the reduced rates of interest on the Municipality 7 per cent. mortgage loan, 1925, and Free City 6½ per cent. tobacco monopoly loan, 1927, shall not come into operation until immediately after the payment of the next due coupon. Thus the September 1, 1937, coupon of 1925 loan, and the October 1st coupon of the 1927 loan will be paid at the full rates, but subsequent coupons at 5 per cent. and 4½ per cent., respectively.

CORRECTION.—We regret that, owing to a printer's error in our issue of August 7th last, the price of Old Gowrie Tobacco advertised on page 304 was given as 20/- per 8 lb., post paid. This should have read 20/8 per lb., post paid.

MECCANO, LTD.—For year to end of February, 1937, trading profit was £197,306, against £206,728. Other income £11,498, against £12,934. To depreciation £11,609, against £16,991. Carry forward raised from £49,273 to £63,560.

AUSTIN VENEER AND PANEL COMPANY.—Trading profit for year to June 30, 1937, £23,742 (comparable with £15,403). To writing down goodwill £4,000. Ordinary dividend 10 per cent. actual, equal to 17 per cent. per annum, absorbing £7,500. Carry forward £2,068.

* Revenue from gold based on a price of £6 19s. 0d. per fine ounce. ‡ The tonnage milled includes 11,300 tons from low grade surface dumps accumulated during the development period.

TRANSVAAL OUTPUT, EMPLOYMENT AND WORKING PROFIT.—Gold output, July, 1937: Witwatersrand, 971,574 fine ounces; outside districts, 24,971 fine ounces; total, 996,545 fine ounces. Value for purposes of declaration, £6 19s. 6d. Total output, June, 1937: 979,069 fine ounces. The number of natives employed at end of July was: Gold mines, 292,618; coal mines, 15,652; total, 308,270. Total estimated working profit for July, 1937: Witwatersrand, £2,650,479; outside districts £9,723; total, £2,660,202. Comparable figures for June, 1937: Witwatersrand, £2,619,460; outside districts, £9,151; total, £2,628,611.

OIL OUTPUTS

ANGLO-IRANIAN OIL COMPANY.—Production in Iran for June amounted to 879,000 tons, making 4,749,000 tons for the first six months of 1937.

THE ATTOCK OIL COMPANY, LTD.—Production for July, 23,617 barrels.

BRITISH CONTROLLED OILFIELDS, LTD.—Production for July, 59,930 barrels; shipments for July, 57,517 barrels. Production for week ended August 7th, 12,844 barrels. Production for the week ended August 14th, 12,743 barrels. Production for the week ended August 21st, 12,255 barrels.

DHULIAN.—The third deep test, reported at the Annual General Meeting on 25th June last as being at 6,307 ft., has obtained a fairly good show of black oil at 7,203 ft. Production is not being taken meantime and the well is being deepened for more definite information as to its position on the structure.

THE KERN RIVER OILFIELDS OF CALIFORNIA, LTD.—The total production during the month of June amounted to 127,290 barrels, or approximately 18,184 tons. Production in Trinidad has been affected by the closing down of operations during the oilfields strike. The company's men returned to work on July 5th and both production and drilling have been resumed. To total production during the month of July amounted to 152,361 barrels, or approximately 21,766 tons.

LOBITOS OILFIELDS, LTD.—The production of the Peruvian Company for June is cabled as 27,950 tons.

THE MEXICAN EAGLE OIL COMPANY, LTD.—Production for the week ended June 19, 1937, was 653,000 barrels. Production for the week ended June 26, 1937, was 664,000 barrels. Production for the week ended July 3, 1937, was 648,000 barrels. Production for the week ended July 10, 1937, was 667,000 barrels. Production for the week ended July 17, 1937, was 645,000 barrels. Production for the week ended July 24, 1937, was 468,000 barrels. Production for the week ended July 31, 1937, was 312,000 barrels. Production for the week ended August 7, 1937, was 302,000 barrels. Production for the week ended August 14, 1937, was 260,000 barrels. Production for the week ended August 21, 1937, was 307,000 barrels.

TAMPICO OIL, LTD.—Total production from the company's properties in Mexico during July was 12,001 barrels, in respect of which the royalty due to Tampico Oil, Ltd., amounted to 900 barrels.

(c) Paid on £175,000 more capital. ‡ Free of income tax.
(t) Free of Burman income tax. (m) Paid on increased capital.
(n) Paid on a capital of £135,000 against £75,000 a year ago.
(s) Paid on a larger capital. (r) 17 months.

EASTMAN KODAK.—Interim dividend of $2 per common share (same) is payable October 15th.

J. SEARS AND COMPANY.—The previous year's interim dividend of 5 per cent. tax free, has been repeated.

THOMAS TILLING.—Interim dividend of 5 per cent. (same) is payable October 1st.

WRIGHT'S BISCUITS.—As the audit was not completed when the fixed dividend on the 5½ per cent. cumulative participating redeemable preference shares was declared, the board were unable to recommend a participating dividend. But they anticipate that the profits will enable payment of such dividend at the rate of 2 per cent. per annum for the period from November 1, 1936, to June 30, 1937.

COATS (J. AND P.), LTD.—Quarterly interim ordinary dividend maintained at 2½ per cent.

MECCANO, LTD.—Tax free ordinary dividend raised from 2½ to 7 per cent.

NORTH BROKEN HILL.—Dividend of 40 per cent. for quarter on £700,000, comparing with 25 per cent. For year to June 30, 1937, dividends and bonus were 120 per cent.

SHEEPBRIDGE COAL AND IRON.—Final dividend on ordinary and preference of 7½ per cent. tax free, against 7½ per cent. less tax, making 10 per cent. tax free against 10 per cent. less tax.

RANKS, LTD.—Final dividend for year to July 3, 1937, 12 per cent. on existing shares, making 18 per cent. for year, against 15 per cent.

VAUGHAN BROS. DROP FORGINGS.—Initial dividend 10 per cent. actual (equivalent to 20 per cent. per annum), less tax, for six months from incorporation to June 30, 1937.

A. W. GAMAGE.—Interim dividend again 2½ per cent. on increased capital.

MAPLE AND COMPANY.—Interim dividend unchanged at 2½ per cent.

PINCHIN, JOHNSON AND COMPANY.—Interim dividend maintained at 7½ per cent. on larger capital.

NORTH-EASTERN ELECTRIC.—Interim unchanged at 2½ per cent.

UPSONS, LTD.—Interim dividend maintained at 5 per cent.

STAVELEY COAL AND IRON COMPANY.—Final ordinary dividend, 7 per cent. plus 2½ per cent. bonus, making 12½ per cent. tax free, for year to June 30, 1937, against 8 per cent., making 9 per cent., tax free.

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

On the principal commodity markets trading has again been on quiet lines and prices are frequently easier. Thus, cotton suffered a further sharp decline after last week's recovery. The details of President Roosevelt's scheme for the assistance of American growers are not yet available, but it cannot be assumed that its effect will be encouraging from the viewpoint of the world market. Flax, hemp and jute were also easier this week, but wool remained a firm market.

On the London Metal Exchange, copper and tin were lower in price owing to the uncertainty occasioned by the crisis in the Far East. Lead and spelter were a shade lower in sympathy, but Chinese wolfram was again marked up. The undertone of the metal markets is steady and an early recovery seems probable in the absence of further political complications. Meanwhile, rubber remains a quiet market, and quotations have fluctuated within narrow limits.

Among foodstuffs, wheat was cheaper in response to better crop reports from Australia, and growing Russian exports, but other cereals were about unchanged. Sugar was also lower in price, but competition at the tea auctions was active and quotations were firm. On the London Provision Exchange, butter was dearer, cheese irregular, and bacon cheaper than a week ago.

Prices were also generally easier in the United States. Thus, Moody's index (December 31, 1931 = 100) declined from 201·6 to 197·0 in the week ended last Wednesday, compared with 207·7 a month ago and 184·3 on the corresponding day last year.

COAL

SHEFFIELD.—Supplies of steam coal have become rather more plentiful and are being well taken up. There is not much doing in households, and stocks are rising. All the same, there is talk of higher prices next month, September now being regarded as a "winter" month for house-coal purposes. Small coal is scarce, and more coking coal is required. On export account there is a paucity of prompt business, but forward inquiry makes a much better showing. German and Polish competition is retarding the recovery of export trade through Humber ports. Prices are unchanged and firm.

WORKINGTON.—The revival of the demand for house coal has begun, and coke makers accordingly find difficulty in obtaining full supplies for their ovens. Round coal is being crushed and small coal from Wales is being imported. Yet the position is one of unease, and it will become more acute in winter. Irish consumers are being rationed, the cross-channel shipments seldom being above 3,000 tons weekly. Prices are steady. Best round stands at 23s. 6d.; washed doubles at 22s.; washed singles at 21s., all f.o.b. Smalls are 15s. 6d.; best house coal, 35s. 8d.; house nuts, 34s., at station. Gas coal is 27s.; local coke 15s. 6d. to 16s. 6d. per ton.

NEWCASTLE-ON-TYNE.—The North-east coal market remains firm. Forward inquiry from Scandinavian countries is well sustained, and the ban on South African coal exports is bringing new business to this district. Northumberland steam collieries are working regularly and, being well sold ahead, are only interested in new business at full current prices. Apart from prime gas qualities the Durham market is very firm and there is likely to be a shortage of all classes of manufacturing coal this winter. Patent oven coke is firm under a persistent home demand and steady export.

GLASGOW.—Foreign inquiry remains slow, but the collieries nevertheless contrive to secure good outlets for production. They are well booked in most qualities, and have only odd parcels to offer for new prompt business. Steam coal is in general well taken up, although available to a limited extent in the Lothians and, as regards Dysart main, in Fifeshire. This is partly due to a tightening up of the supply of steamers now that the English holidays are over. Washed smalls are also heavily sold, but owing to the larger coal output trebles remain in excess of demand. Heavy tonnages are being absorbed in the home market, in which house coal remains about the only dragging feature; but there are signs of a seasonal revival in this branch, the cheaper qualities being now slightly more active.

CARDIFF.—Apart from the seasonal slackness in the demand for house coal the market continues to show considerable strength. Export trade is being well maintained at a higher volume, and with deliveries in excess of allocations, the Executive Board under the control scheme is contemplating an immediate application for a supplementary quota of approximately 750,000 tons for the September quarter. For current sales large and small coals are available, but sized descriptions are scarce while cokes and coking coals are very strong. Merchants have been informed that the minimum prices for house coals will be increased by 1s. 8d. per ton as from September 1st, and that advances are probable also in the prices of locomotive, gas, and other grades. Patent fuel is steady, but pitwood prices, ex ship, are easier. The Kenya Railways have placed orders for part of their contract for 50,000 tons. There are tentative inquiries in the market for supplies to the East, and it is anticipated that the embargo on the export of South African coal will have favourable reactions on South Wales. Shipments at the South Wales ports last week totalled 426,800 tons, compared with 333,292 tons in the corresponding week last year, and for the current year to date the increase over the corresponding period last year exceeds 2·6 million tons.

IRON AND STEEL

LONDON.—The weekly report of the London Iron and Steel Exchange indicates that although the markets are still under the influence of holiday conditions, the volume of inquiry has increased of late, there being indications that the usual autumn revival in activity will make itself felt earlier than usual this year. New business in iron and steel, however, must be limited since practically all the steelworks have sold their production until the end of the year, and in many cases will carry over into 1938 a heavy tonnage of orders.

In the pig iron department the situation has become somewhat easier, and for the time being consumers of hematite and basic iron appear to be receiving enough supplies to meet their immediate needs, whilst in the foundry section of the market the demand has declined somewhat.

Consumers of semi-finished steel are working on hand-to-mouth supplies. Production is at a high rate and more regular deliveries of British material are being made; whilst at the same time rather larger imports of Continental steel are becoming available for the consuming industries.

Demand for finished steel is unrelaxed, but makers are concentrating upon completing work in hand and are unable to accept any orders but those of an extremely urgent nature. Inquiry on export account is becoming increasingly active, but only a proportion can be placed owing to the heavy requirements of the home market.

MIDDLESBROUGH.—Local foundries and steelworks restarted operations this week after the holidays, and deliveries of semi-finished and finished steel will now be resumed. There are still considerable arrears to overtake, but owing to the increase in the import of semi-manufactured material, re-rollers are now better supplied, although they could take still larger quantities. The blast furnaces continued in operation last week and the opportunity was taken to ship parcels of pig iron to Scotland, and against export orders which are still considerably in arrear. The total quantity of pig iron shipped from the Tees from August 1st to August 24th amounted to 7,315 tons, compared with 4,862 tons to the same date in July. Shipments of manufactured steel are being well maintained. The market for pig iron is strong, whilst numerous inquiries are being received, makers are almost fully sold, so that actual business is limited to small lots. Consumers are prepared to buy for delivery further ahead, but in view of the possible revision of prices, makers are not anxious to negotiate.

Demand for blast-furnace coke continues to increase, and whilst nominally the price indicated is 40s. per ton, delivered at works, the market is firm and higher prices are expected to be realised. Imports of foreign ore are being well maintained, and although there have been no arrivals from Bilbao so far, it is expected that permits will shortly be granted for cargoes to be shipped from that port. The scrap trade is very active, and there is a big demand for all classes of material. Heavy steel scrap is quoted at 69s. per ton, delivered works.

SHEFFIELD.—The iron and steel market has undergone but little change this week, although the drawing to an end of the holiday period is bringing more buyers into the market. Producers, however, have hardly anything for disposal for early delivery, and many of them are disinclined to make any further contracts for the present year. Foundry pig is most sought after, but it is not easy to place new business for forge. Both East and West Coast hematite makers are disinclined to sell far forward, although some easing of the position is looked for over the next month or two. Finished iron makers are fully booked for the present, and are not seeking fresh orders. The call for common and marked bars is very strong. Basic and acid steel billet demand is still far ahead of supply, although imported billets give some relief. More business is offering in wire rods than can be accepted, and stainless steel requirements are on a record scale.

There is a continuous flow of new orders to firms, both from this country and abroad, and some firms will require twelve months to clear present orders off their books. Sheffield's output of steel ingots and castings in July is officially returned at 133,800 tons, making 986,900 tons for the first seven months of the year, and an excess of 73,800 tons over the corresponding period of last year.

WORKINGTON.—There has been some reduction of the pressure of demand this month in the North-West Coast hematite pig-iron market, but inquiry has not slackened a great deal and it will be renewed briskly as holiday influences wane. Production is still at its maximum, though there would be a little more iron available if foreign ore was in sufficient supply for the two furnaces at Ulverston which it is desired shall change over from basic to hematite. The local steelworks are getting all the iron they want, but consumers in the Midlands, South Wales and Scotland are going short, and exports are on the smallest scale. Prices remain at the fixed minimum, but they are expected to be raised in November. Bessemer mixed numbers are quoted at £6 0s. 6d. at works, with an additional 5s. 6d. to 16s. 6d. per ton for special qualities. Malleable iron is in firm request at £8, delivered at Birmingham, and a like statement applies to ferro-manganese, at £18 15s., home. The steel trade is strong. Makers possess orders that will keep their mills in engagement during the whole of next year. Workington is on rails, billets, bars and slabs, and Barrow on rails, hoops and strip. Native ore, at 24s. 6d. per ton, f.o.t., is in exceptional request. The Barrow Hematite Steel Company is to develop its royalty under Cleator Moor if it can gain leave from the Railway and Canal Commission; the United Steel Cos. propose to work more fully their Bigrigg ore, and Kennedy Bros., of Ulverston, are to explore for ore in the Frizington district. Importations of North and West African ore are heavy, but the strike at Bona arouses anxiety as to their continuance.

CARDIFF.—Production of tinplates has not yet been restored to the pre-holiday volume. In the week following the August stoppages the output was 67 per cent. of allocated capacity, but it has since improved. Shipments last week were considerably below the recent average figures, totalling only 4,964 tons, compared with 6,400 tons in the corresponding period last year, but there has been no lull in foreign demand. Prices of tinplates as well as of sheets, steel bars, ingots, and pig iron are unchanged.

OTHER METALS

COPPER.—In consequence of the tense political situation and reports of easier conditions in the United States, demand was poor and prices easier. But, since offerings were also sub-normal, the net fall amounted only to £1 2s. 6d. per ton. The undertone nevertheless remains favourable and, in the absence of a further deterioration of the political situation, a

HOTEL WESTMINSTER
Le Touquet

rally appears likely in the early autumn. Last week's rise in home warehouse stocks by 2,450 tons to 22,648 tons did not unduly influence the market; for the development was due to the scanty demand rather than to an improvement in the supply position.

Sales on the London Metal Exchange: 900 tons on Monday, against 1,025 tons last week; 1,950 tons on Tuesday, against 1,350 tons last week; 1,050 tons on Wednesday, against 1,050 tons last week. Domestic spot was quoted at 13·77½ cents per lb. in New York on Wednesday, against 14·15 cents a week ago and 14·07½ cents a month ago. Wednesday's official closing price for standard cash in London was £55 18s. 9d. to £56 per ton, compared with £57 1s. 3d. to £57 3s. 9d. a week ago. Stocks of refined copper in British official warehouses at the end of last week at 11,255 tons, showed an increase of 1,332 tons, while stocks of rough copper, at 11,393 tons, were 1,118 tons larger.

LEAD AND SPELTER.—Both metals were slightly easier, mainly in sympathy with copper and tin. Meanwhile, according to the *Metallgesellschaft*, world output of smelter lead, excluding Spain and the United States, rose by 74,101 metric tons (13·6 per cent.) during the first half of this year to 593,224 metric tons. The world's zinc smelter production, excluding the United States, was 43,700 metric tons (8·7 per cent.) higher at 544,619 metric tons. In both cases the increase in production was larger than the rise in consumption, though it was not great enough to have much effect on current offerings. The immediate future of both lead and spelter will be largely dependent on the trend of business in the United States.

Sales of lead on the London Metal Exchange: 950 tons on Monday, against 950 tons last week; 1,350 tons on Tuesday, against 1,150 tons last week; 600 tons on Wednesday, against 1,500 tons last week. The New York quotation on Wednesday was 6·50 cents per lb., against 6·50 cents a week ago and 6·00 cents a month ago. Wednesday's official closing quotation in London for soft foreign for shipment during the current month was £22 to £22 1s. 3d. per ton, compared with £22 7s. 6d. to £22 10s. last week.

Sales of spelter on the London Metal Exchange: 775 tons on Monday, against 750 tons last week; 1,500 tons on Tuesday, against 1,700 tons last week; 725 tons on Wednesday, against 1,400 tons last week. Wednesday's quotation in East St. Louis was 7·25 cents per lb., against 7·25 cents the week before and 7·00 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipment during the current month was £23 15s. to £23 16s. 3d. per ton, against £24 1s. 3d. to £24 2s. 6d. last week.

TIN.—The cash price showed a net loss of £2 10s. per ton during the week ended Wednesday, though the basic position of the market shows little alteration. Exports from the six leading restricting countries amounted to 13,582 tons in July, 4,462 tons below the permissible quota, but about sufficient to satisfy current consumption.

During the week Hawthorn brand tin, produced by the British Tin Smelting Company at its Liverpool smelter, was listed on the London Metal Exchange. The entry of this new company on to the London market is warmly welcomed.

Sales of tin on the London Metal Exchange: 240 tons on Monday, against 200 tons last week; 425 tons on Tuesday, against 250 tons last week; 150 tons on Wednesday, against 130 tons last week. The New York quotation on Wednesday was 59·12½ cents per lb., against 59·50 cents a week ago and 59·12½ cents a month ago. Wednesday's official closing quotation in London for standard cash was £262 10s. to £262 15s. per ton, compared with £265 to £265 5s. a week ago. Stocks of tin in London and Liverpool at the end of last week totalled 2,387 tons, an increase of 389 tons on the week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted on Wednesday at £100 per ton, and *rolling billets* at £102 per ton. Nickel, for home and export, was maintained at £180 to £185 per ton. Quicksilver, on the spot, was quoted at £13 12s. to £13 12s. 6d. per flask of 76 lbs., the same as last week. Chinese antimony was quoted at £77 per ton, ex warehouse, as against £76 to £77 last week. Chinese wolfram for "August–September" shipment was quoted at 97s. 6d. per unit, c.i.f., compared with 90s. to 95s. last week, with c.i.f. quoted at 100s. to 105s. Refined platinum was quoted on Wednesday at £10 5s. per ounce, compared with £10 5s. a week earlier.

TEXTILES

COTTON.—Manchester.—Market conditions during the past week have not been conducive to active trading. The attitude of buyers has again been affected by the sagging tendency of raw cotton prices, a new low level having been reached. Bearish sentiment has again been pronounced. Considerable interest has shown itself in news from Washington with regard to the proposed loan and crop control for next season. Congress has authorised a subsidy fund of 68,000,000 dollars. New legislation dealing with crop restriction will be dealt with next session. There have been rumours that the loan will be 9 cents per lb., with a subsidy to farmers of 3 cents per lb. The authorities, however, will no doubt avoid, if at all possible, any scheme which may result in substantial quantities of cotton being left on the hands of the Government.

Spinners have had to give way in price in sympathy with the decline in raw cotton rates, but sellers have continued to quote firm. Sales of American spinners have been of fair extent. There is still considerable pressure for the delivery of medium wefts. Irregular operations have occurred in Egyptian descriptions.

Inquiry in the cloth market has continued more encouraging, but a large part of it has been for the purpose of finding out the position of manufacturers and the price concessions possible in view of the fall in the price of raw cotton. Makers have complained that buyers have been slow in making firm offers. Irregular operations have taken place for the several outlets of India, the turnover being comparatively small. News from Shanghai has been watched very closely. There seems to be a possibility that Lancashire may gain some advantage as a result of the hostilities in the Far East. Rather more demand has been reported for Hong Kong, Java and the Straits Settlements. Isolated cases have been mentioned of contracts being cancelled owing to late deliveries.

COTTON SPINNING REORGANISATION.—For some time the leaders of the Lancashire cotton industry have pressed the Government for assistance in reorganising the trade, and it is understood that proposals of an important character are about to be placed before the Government. In the meantime, as a result of a joint meeting held in Manchester this week between representatives of the Master Cotton Spinners' Federation and the Operative Spinners' Amalgamation, a serious attempt is about to be made by the trade itself to reorganise the internal working of the spinning mills. After a discussion on the general situation at the meeting last Tuesday, it was resolved unanimously that a joint sub-committee should be established for the purpose of considering seriously and in a spirit of mutual co-operation the present problems concerning the industry, with a view to evolving a system of reorganisation so far as working conditions and other factors are concerned. It was agreed that this sub-Committee should meet on September 15th.

This movement has been due to the understanding that when the advance in wages was conceded by the employers last December, an attempt should be made to reorganise the internal working in the mills. The Operative Spinners' Amalgamation made a demand for better wages for little piecers. This was refused by the Masters' Federation, but it was suggested that there should be an extension of the system of joiner minding in the spinning mills in other districts outside Oldham. It is certainly time that something was done to change some of the working conditions in the spinning mills. Pressure for action is partly due to the present shortage of labour, especially young persons. If the two sides are prepared to co-operate, there is no reason whatever why beneficial alterations should not be agreed upon.

JUTE.—Dundee.—Sellers of raw jute are still very reluctant to reduce their prices, even though imports of the fibre into Calcutta are now on a bigger scale. During July, the first month of the new season, only 240,000 bales were imported into Calcutta, compared with 347,000 bales in the previous season, and 454,000 bales in 1935. Exports were 296,000 bales in July this year, 301,000 bales last year and 313,000 bales in 1935, while the Indian jute mills received 99,000 bales, 149,000 bales and 247,000 bales, respectively. It is satisfactory to observe that exports were being more or less maintained, but this may be due to the fact that there will be a second increase of 5s. per ton on freight rates on October 1st next, following the first on July 1st. Trade in most European countries continues on a fair scale, however, but that of the United Kingdom is being seriously affected by the huge imports of both cloth and bags from India at prices with which home manufacturers are unable to compete. Indeed, there is a difference of nearly ¼d. per yard between Calcutta and Dundee hessians of the ordinary makes. Efforts are being made to induce the British Government to impose a quota system on the goods imported from India. They are at present allowed to enter this country free of duty, and for the first seven months of this year imports of jute manufactures totalled 104,673,000 square yards, compared with 83,175,000 square yards during the same period last year, in addition to which there were 562,942 cwts. of sacks and bags imported this year, against 516,510 cwts. last year. In the whole of 1928, on which year it is requested a quota should be based, imports into the United Kingdom from India were only 27,952,150 yards of cloth and 45,846,900 bags. The whole question is being considered by representatives from India and the Board of Trade, but negotiations have been suspended until Parliament resumes next month.

The price of Daisee-2/3 is £19 15s. per ton for the full group; fours are quoted at £18 7s. 6d., while Tossa-2/3 is named at £20 12s. 6d. and fours at £19 15s., October/November. Good First Marks rule from £22 12s. 6d., Lightnings from £21 5s., and Hearts from £20 7s. 6d., August/September.

Jute yarns are still quiet, though spinners have reduced their prices to 2s. for common 8 lb. cops and 2s. 1d. for 8 lb. spools. Twist is now obtainable at 3¼d. for 3 ply 8 lb., and sacking yarns are steady at 2⅝d. for 24 lb. weft and 3¼d. for 8 lb. chains. Rove is a firm item at £21 for 48 lb. and £17 5s. for 200 lb., while the Rio yarns have been sold at the lower rates of 2s. 9d. for second quality 8 lb. warp, 2s. 5½d. for third, and 2s. 3½d. for fourth. Carpet yarns are in some demand at from 3⅜d. for 14 lb. warp.

Cloth is still rather slow at from 2⅛d. for 10 oz. 40 in. and 2¼d. for 8 oz. Buyers have shown a little more interest and inquiries are on an extended scale.

Calcutta goods have been more or less maintained in price, with only slight variations taking place.

GRAIN MARKETS

WHEAT.—Prices have eased under the influence of Russian offerings, increasing pressure from North America, and the break in the Australian drought. In the latter country, rainfall has been heavy and widespread throughout the wheat areas, and crop prospects have correspondingly improved. In Argentina, however, good rainfall is still urgently needed.

On Wednesday last, "September" futures were quoted in Chicago at 105½ cents per bushel, against 110¼ cents the week before and 118½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba (Atlantic), ex ship, 50s. 3d. per 496 lbs., against 52s. 9d. last week; No. 2 Northern Manitoba (Atlantic), ex ship, 48s. 3d., against 51s. 6d. last week. According to the *Corn Trade News*, total shipments of wheat and flour last week amounted to 959,000 quarters, against 818,000 quarters in the previous week and 1,296,000 quarters in the corresponding week a year ago.

FLOUR.—The market is quiet and prices are lower. Wednesday's London quotations (excluding quota payments) were: Straight run, delivered Home Counties, 39s. per 280 lbs., as against 40s. 6d. a week ago; delivered inner London, 38s. 6d., as against 40s. a week ago. Manitoba patents, ex store, 37s. 6d. to 39s. 3d., as against 39s. to 40s. 6d. a week ago. Australian, ex store, 32s. to 32s. 6d., as against 32s. 9d. to 33s. 3d. a week ago.

BARLEY.—The market is firm. "October" futures were quoted at 56⅜ cents per bushel in Winnipeg on Wednesday, as against 56¾ cents last week. Quotations per 448 lbs. in London on Wednesday were: "English feed," at farm, not quoted; "English malting" (new), at farm, 60s. to 65s., as against 60s. to 65s. a week ago; Californian, ex ship, 47s. 6d. to 60s., as against 47s. 6d. to 60s. a week ago. Chilean, brewing, ex ship, 46s. 6d. to 50s., as against 46s. 6d. to 50s. a week ago.

OATS.—On Wednesday, "September" futures were quoted at 28½ cents a bushel in Chicago, against 29⅝ cents a week ago and 30¼ cents last month. Quotations in London, Wednesday: "English Black," at farm, not quoted; "English White," at farm, 26s. to 27s., as against 26s. to 27s. per 336 lbs. a week ago; mixed Canadian feed (Vancouver), landed, 25s. 3d. per 320 lbs., as against 26s. a week ago.

MAIZE.—Prices are a shade easier both here and in the United States. "September" futures were quoted on Wednesday at 98½ cents per bushel in Chicago, against 99¼ cents a week ago, and 97½ cents last month. Quotations in London, Wednesday: "Plate," landed, 28s. per 480 lbs., as against 28s. 9d. a week ago; "Plate," ex ship, 27s., as against 27s. 9d. a week ago; "Plate," "August," 26s. 9d., as against 27s. 6d. a week ago; yellow maize meal, ex wharf, was quoted at £7 2s. 6d. to £7 5s. per ton, as against £7 7s. 6d. last week.

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations for selected weeks in 1935–1937:—

Nearest Future	Jan. 2, 1935	Dec. 31, 1935	Aug. 26, 1936	Dec. 30, 1936	Aug. 18, 1937	Aug. 25, 1937
Winnipeg (No. 1, Manitoba) —Cents per 60 lbs.....	82⅞	84⅜	97½	129	126⅜	122⅛
Chicago (No. 2, Winter)— Cents per 60 lbs	98⅜	101½	115⅜	135½	110⅞	105½

The visible supply of wheat in Canada amounts to 30,769,000 bushels, against 29,228,000 bushels last week and 60,434,000 bushels in the corresponding week last year.

SALES AND PRICES OF BRITISH CEREALS.—The following table gives the estimated sale of home-grown wheat during the harvest years 1933–34 to 1936–37.

	1933–1934	1934–1935	1935–1936	1936–1937
Estimated sales of home-grown wheat—	Cwts.	Cwts.	Cwts.	Cwts.
1 week to August 21	71,825	337,193	14,219	102,339
51 weeks to August 21.....	10,472,263	13,782,114	13,193,391	11,160,842
Average price of English wheat per cwt.	s. d. 5 1	s. d. 4 5	s. d. 8 1	s. d. 9 2

The following is a statement showing the quantities sold and the average price of British cereals in the past two weeks, and for the corresponding weeks in each of the years from 1933 to 1936:—

Week ended	Quantities Sold			Average Price per cwt.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
	Cwts.	Cwts.	Cwts.	s. d.	s. d.	s. d.
August 19, 1933	263,433	21,384	33,138	5 4	10 4	5 4
August 18, 1934	71,825	21,556	23,715	5 1	10 6	6 7
August 24, 1935	337,193	27,899	41,399	4 5	9 0	6 2
August 22, 1936	14,219	1,557	10,976	8 1	7 3	7 0
August 14, 1937	70,146	3,889	25,934	9 9	10 7	9 0
August 21, 1937	102,339	6,008	23,052	9 2	12 2	8 8

OTHER FOODS

BACON.—Prices were marked down last week-end and trading has since been steady. The official quotations (per cwt. for No. 1 Sizable) which formed the basis for dealings on the London Provision Exchange this week were: English, 101s.; Canadian, 94s.; Danish, 100s.; against 101s., 94s. and 100s. last week. Arrivals in London last week included: Danish, 15,840 bales; Canadian 5,073; Dutch, 1,736; Lithuanian, 1,341; and Polish, 3,151; as against 15,192, 4,786, 1,652, 1,251 and 2,981 bales, respectively, in the previous week.

BUTTER.—The market has shown an improved tone following last week's decline. Quotations (per cwt.) on the London Provision Exchange on Wednesday were: New Zealand, finest salted, 116s.; Australian, choicest salted, 116s.; Danish, 130s.; compared with 114s., 113s. and 125s., respectively, a week ago.

CHEESE.—Dutch has been rather quiet this week, with other descriptions firm. Quotations (per cwt.) on the London Provision Exchange on Wednesday were as follows: English Cheddars, finest farmers, 88s. to 90s.; Canadian, finest coloured, not quoted; and New Zealand, finest coloured, 66s. 6d. to 67s.; against 88s. to 90s.; 71s. to 72s. and 66s., respectively, a week ago.

COCOA.—Prices have suffered a sharp reaction. The spot quotation in New York on Wednesday was 8⅛ cents per lb., as against 8½ cents per lb. last week. In London, on Wednesday last, good fermented new crop, Accra, "November–January," was quoted at 37s. 9d. sellers per 50 kilos., c.i.f. Continent, against 40s. 6d. a week ago. Last week's movements of cocoa in London were as follows: Landed, 516 bags; delivered, for home consumption, 6,163 bags; exported, 511 bags; stocks, 246,080 bags, against 160,683 bags a year ago.

COFFEE.—The spot markets in London and New York have had a quiet tone. On Wednesday, Rio No. 7 (cash) was quoted at 9 cents per lb. in New York, as compared with 9 cents per lb. last week and 9¼ cents per lb. a month ago. Movements of coffee in London last week were as follows: Brazilian, landed, 294 cwt.; delivered, for home consumption, 30 cwt.; exports, 2 cwt.; stocks, 2,005 cwt., against 10,267 a year ago. Central and other South American: Landed, 385 cwt.; delivered, for home consumption, 1,769 cwt.; exported, 187 cwt.; stocks, 98,018 cwt., against 93,252 last year. Other kinds: Landed, 270 cwt.; delivered, for home consumption, 2,785 cwt.; exported, 717 cwt.; stocks, 97,401 cwt., against 135,695 last year.

EGGS.—The tone of the market has been firm, and imported descriptions are generally dearer. At Smithfield, on Wednesday, English (ordinary packing, Grade I, about 15–15½ lb.) realised 16s. 6d. to 17s. per 120, against 16s. 6d. to 17s. last week; while Danish (15½ lb.) made 12s. to 12s. 3d., as against 11s. to 11s. 3d. last week.

FRUIT.—As usual at this season of the year, business at Covent Garden was slow during the past week, according to *The Fruitgrower's* report. With supplies well up to requirements, prices were generally easier. Heavy arrivals of plums were a feature of the week and quotations were consequently lower. Increasing supplies of apples encountered a steady demand at the lower rates ruling, while pears remained a steady trade. With supplies abundant, hothouse grapes were very slow, but English peaches and nectarines were short and dearer. Cobnuts improved in price but blackberries were easier at 3d. to 5d. per lb. Business in oranges was not very active and prices were generally lower. Grape fruit also declined on heavier arrivals, and lemons were a point easier.

MEAT.—At Smithfield Market on Wednesday last, Argentine chilled hindquarters were quoted at 4s. 4d. to 4s. 8d. per 8 lbs., as compared with 4s. 8d. to 5s. a week ago. New Zealand frozen mutton was 3s. 6d. to 4s. per 8 lbs., against 3s. 6d. to 4s. a week ago. According to the Smithfield Market official report, supplies during last week amounted to 7,931 tons, an increase of 129 tons on the corresponding week last year. Beef and veal accounted for 4,303 tons, mutton and lamb 2,505, and pork and bacon 703, as compared with 4,296, 2,503 and 554 tons, respectively, in the same week of 1936.

PEPPER.—On Wednesday, white Muntok, August–October, was quoted at 4½d. per lb., sellers, c.i.f. Rotterdam–Hamburg, against 4⅝d. per lb. a week earlier. Black Lampong, spot, in bond, was quoted at 3½d. per lb., sellers, compared with 3¼d. per lb. last week. Movements of pepper in London last week were as follows: Black, landed, nil; delivered, 24 tons; stocks, 1,987 against 1,758 last year. White, landed, 6 tons; delivered, 45 tons; stocks, 11,404 tons, compared with 12,140 a year ago.

RICE.—Rice has recently been a firm market, in response to the crisis in the Far East, and futures are higher in price. The spot price of Burma No. 2 cleaned, was 10s. 6d. per cwt. ex warehouse, on Wednesday, as compared with 10s. 6d. per cwt. a week ago. "August–September," in singles to Continent and U.K., was quoted at 9s. 9d. to 9s. 10½d. per cwt., against 9s. 7½d. to 9s. 9d. last week. Movements in London last week were as follows: Landed, 22 tons; delivered, 47 tons; stocks, 2,101 tons, against 2,101 a year ago.

SUGAR.—The London market has been quiet and easier. In New York prices show little alteration. The New York spot quotation was 3·60 cents on Wednesday as compared with 3·60 cents per lb. last week and 3·45 cents per lb. a month ago. Wednesday's sales of raw sugar in London included "December" delivery at 6s. 2¾d. to 6s. 3½d., against 6s. 5¾d. to 6s. 6¼d. a week ago. Movements of raw sugar in public warehouses in London and Liverpool last week were as follows: Imports, 9,818 tons, against 13,697 in the previous week, and 23,268 in the same week of 1936; deliveries, 20,949 tons, against 13,666 and 19,372 tons, respectively; stocks, 145,927 tons, against 157,058 and 123,111 tons, respectively.

TEA.—The following table shows the average price (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account in recent weeks:—

Week ended	Northern India	Southern India	Ceylon	Java	Sumatra	Africa	Total
	d.	d.	d.	d.	d.	d.	d.
July 15, 1937	15·31	14·50	15·15	13·12	12·50	13·84	14·92
" 22, "	15·15	14·55	15·33	13·44	12·38	13·52	14·92
" 29, "	15·34	14·58	15·39	13·39	12·65	14·07	15·05
Aug. 12, "	16·04	14·73	15·49	14·46	12·68	14·27	15·25
" 19, "	17·55	14·88	15·55	14·53	12·79	14·36	16·22

At this week's public auctions in Mincing Lane, 47,126 packages of Indian and 25,095 packages of Ceylon tea came up for disposal. Demand for Indian grades was strong and prices were fully firm to occasionally dearer. The market in Ceylon descriptions was firm, with prices showing little alteration.

VEGETABLES.—According to *The Fruitgrower's* Covent Garden report, tomatoes and cucumbers were a dull trade throughout last week, but showed some signs of recovery this week. Demand for lettuce showed an improvement and green onions were inquired for. Marrows, however, were plentiful and very cheap. Good green peas and runner beans were in short supply, the bulk of the arrivals being of poor quality. Plentiful supplies of good cabbage were on the market. The potato trade was quiet with prices rather easier. Thus, at the Borough on Tuesday, King Edward ranged from 7s. to 8s., the same as a week earlier, while British Queen, Sharp's Express, Eclipse and Majestic made from 4s. 6d. to 5s. per cwt., against 5s. to 5s. 6d. last week.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OILSEEDS.—Trade continues quiet. Linseed has fluctuated slightly in sympathy with wheat and on reports of Argentine weather being favourable to sowing operations, but on the whole remains steady. Buying is restricted and appears likely to continue so until the crop outlook is better defined and there is a seasonal revival of demand for oilcakes. Shipments from the River Plate continue at a fairly substantial level and include a large proportion destined for the United States. The exportable Plate surplus has now been reduced to a round 300,000 tons. The estimate of the quantity of the new Indian linseed which will be available for export to the end of the year has been reduced to 150,000 tons, leaving 50,000 tons for January–March shipment. News of slight rains in the northern districts of Argentina is to hand, but really heavy and general precipitation is needed if the soil is to be made ready for seeding to the extent projected. The quantity now on passage to Europe is 107,300 tons (including 18,000 tons from India), a reduction of 17,000 tons on the week. That afloat for the United States is returned at 44,100 tons, compared with 47,600 tons a year ago. So far this year no less than 558,000 tons of linseed has been shipped from Argentina to the United States and Canada as against 215,000 tons in the same period last year. Cotton seed after a sharp fall has rallied somewhat and a good business in black Egyptian for shipment has been done around £6 10s. per ton. Trade in vegetable oils is slow. Linseed oil remains steady and unchanged on balance. Refined cotton oil has eased considerably and now offers at £28 per ton naked ex Hull. Oilcakes are steady and in moderate demand as is usual at this season of the year.

RUBBER.—The market has again been quiet and prices have fluctuated within narrow limits. In the United States prices are fractionally higher.

The spot price in New York on Wednesday was 18¼ cents per lb., compared with 18⅜ cents per lb. a week ago and 18½ cents a month ago. Wednesday's official buyers' price for standard ribbed smoked sheet on the spot in London was 8⅛d. per lb., as against 8⅛d. on the corresponding day last week. In forward positions business has been done at 9d. for "October" shipment, as against 9d. for "October–December" a week ago. Stocks in London and Liverpool at the end of last week totalled 44,023 tons, against 42,849 tons a week earlier. A year ago stocks amounted to 109,461 tons.

WHOLESALE COMMODITY PRICES

The People's Food

NUTRITION is in some danger of becoming, like Mesopotamia, a blessed word. After the spate of pronouncements on the subject in recent years, the average member of the public is ready to presume that our national standard of feeding is much less satisfactory than he had been wont to believe; he is ready to agree that something should be done about it. There is a considerable accumulation of goodwill for "nutrition policy." But the layman still asks in some bewilderment to be told exactly of what a sound nutrition policy would consist. And hitherto he has received only the vaguest of answers.

Some part of the vagueness will be removed by the publication of the Final Report of the Mixed Committee of the League of Nations, which was appointed, with LORD ASTOR as chairman, by the Assembly of 1935 to study the nutrition problem both in its health and its economic aspects. This report is a most useful document, the most authoritative and the most nearly complete exposition of the subject which has yet appeared. It will serve for some time to come as a source-book for all those interested in the subject.

The foundation of any nutrition policy must necessarily be the recent physiological advances, starting with the discovery of vitamins by SIR FREDERICK GOWLAND HOPKINS in 1906. The present state of medical knowledge on the subject is clearly set out in the Report; it may be summarised as enjoining the consumption not only of sufficient calories to generate energy but also of sufficient "protective foodstuffs" to provide the necessary minimum of minerals and vitamins. In short, not merely a minimum quantity but also a minimum quality of food is essential for health.

Judged by this standard, there have been great improvements in the nutrition of most Western peoples in recent decades, due not only to rising standards of living, but also to the great growth in the availability of imported supplies of meat, dairy produce and citrus fruit for the industrial populations of Europe. But in spite of this improvement, the average standard of nutrition is still very poor. The greater part of the evidence in support of this statement comes from Great Britain, the United States and the Scandinavian countries. And if in these countries, where average incomes are relatively high and food prices (except for the United States) relatively low, such high percentages of malnourished families can be found, the situation in other countries must be very unsatisfactory indeed. Strangely, the interest taken in the problem of nutrition seems to be least in the countries where conditions are worst. By a similar paradox, in every country, it appears to be the rural population, the food producers, who are worst fed.

The Report reaches the centre of its subject when it tackles the intricate relationships between food consumption, prices and incomes. The treatment of the subject is scientific and careful, taking nothing for granted, but it succeeds only (like so much that is scientific and careful) in giving an elaborate endorsement to common sense. It needs little more than a glance or two at the figures reproduced in Notes on page 467 of this issue of *The Economist* to show that the consumption of food, and therefore the degree of nutrition, is first and foremost a matter of price. A most striking illustration of this obvious truth can be found in the case of milk in England. Generally speaking, this country shows up

well in comparison with other industrial countries. Our prices are as low as, and our consumption of high-quality foods is greater than, those of most comparable countries. But milk is the conspicuous exception; our average consumption per head is much lower than in many other countries—only about one-third, for example, of that in Finland, a much poorer country. The reason can be found in the fact that the price of milk in this country is the highest in Europe.

It is when the Report moves from exposition to recommendation that the reader will find precision giving place again to vagueness. But it is hardly fair to blame the Committee. They were working with inadequate data, especially in respect of some countries which have an avowed preference for guns over butter. An official, still more an international, committee is debarred from direct criticism of the policies of Governments, although one of the largest single reasons for inadequate nutrition is to be found in agricultural protectionism. And anybody who attempts to make recommendations on the subject can be excused for being overwhelmed with its immensity and for falling back on such sweeping ideals as the general raising of the standard of living of all the world's peoples. That is, in truth, the only ultimate remedy, and it is a useful corrective to the fashionable delusion that "Science" has solved the problem of production to be told that the world cannot yet produce enough of the most elementary necessity: food for its millions.

Immensity, nevertheless, cannot be allowed entirely to swamp practical policy. There are some clear immediate lessons to be drawn from the Report. One obvious beginning is to lay it down as a sacrosanct principle of policy that no governmental action shall be taken which will have the effect of making the cost of food greater than it would otherwise be. This might seem a truism. But the Committee have only been able to find one governmental action in the world which was undertaken with the deliberate intention of cheapening food, while even in this country, with its comparatively favourable record, there are such nutritional absurdities as the Milk Marketing scheme. Milk should, indeed, be the first objective of a British nutrition policy, since it is not only the most valuable food but also the one of which our consumption is most inexcusably low. The cost of milk to the British consumer must be drastically reduced.

Guidance can be extracted from the Report not only on the objectives but also on the methods of nutrition policy. Much can be done in a general way by increasing the efficiency, and lowering the costs, both of the production and of the distribution of foodstuffs. But a warning is uttered against any hope that the problem can be easily or completely solved by such means. If we really wish to improve the standard of nutrition of the people the problem must be attacked directly. One direct attack would be the provision of family allowances, since it is the families rich in children which are poor in food. An even more direct method would be what the Committee calls the "social provision of essential foods to particularly exposed sections of the population." Translated into technical terms, this means the subsidisation of differentially low prices of essential foods for defined categories of the public. A small, very small, beginning has been made on these lines in the Milk-in-Schools scheme, but a very much greater extension of the same idea will be needed if the problem in its entirety is to move appreciably nearer to solution.

These are large and far-reaching suggestions. But they are intended to meet a large and far-reaching problem. In the past hundred years the community has thought it expedient to supply education, housing and medical services to the poor at prices below their cost of production. Any one of the arguments used to justify this action would apply with added force to the question of food, especially the food of children. The problem of nutrition differs from what are already accepted as social services chiefly in its immensity. Properly regarded, that is a challenge, rather than a barrier, to policy.

Britain's Note to Japan

THE clouds in the East are gathering so fast that a single week has added a number of new touches to the sombre picture which we painted in the last issue of *The Economist*. This week has seen the presentation of a British Note to Japan about the wounding of the British Ambassador.

The two conspicuous features of the British Note are its *piano* tone and the impersonal basis of its protest. The Note calls for three things: a formal apology to be conveyed by the Japanese Government to the British Government; suitable punishment of those responsible for the attack; and an assurance by the Japanese authorities that the necessary measures will be taken to prevent the recurrence of incidents of such a character. These eminently reasonable desiderata are presented as requests, not demands; *a fortiori* not as demands with a time limit or a threat of resort to force. The protest is based on the fact that, in machine-gunning and bombing SIR HUGHE KNATCHBULL-HUGESSEN'S car, the Japanese were making a deliberate attack upon non-combatants. "The foreign, even the diplomatic, status of the occupants is irrelevant." The Note appeals to "one of the oldest and best-established rules of international law" by which "direct or deliberate attacks on non-combatants are absolutely prohibited," whether inside or outside the area in which hostilities are taking place. The Note does not fail to point out that there were no Chinese troops in the neighbourhood of the scene of the outrage. It was remote from any theatre of hostilities. And the attack was committed by Japanese on the territory, and might have been directed against the head, of a foreign country against which they have not even yet declared war.

The Note is skilfully drawn; for while on the one hand it takes its stand on ground which cannot be traversed by any conceivable excuse that the Japanese may trump up, it is careful on the other hand to avoid committing MR CHAMBERLAIN'S Cabinet to any action which might bring this country into collision with Japan in the event of the Japanese Government's unwillingness to accede to some or all of these "requests." Thus the Note appears to secure that Japan shall stand convicted of a shameful barbarity which she cannot deny, without any risk of involving Great Britain in hostilities.

But that is not all. A critic might say that the British Cabinet has once again affirmed the sanctity of international law on paper while taking care not to let itself in for any obligation to vindicate the outraged law. It is little good declaring that "aircraft are in no way exempt" from the rule that non-combatants ought not to be made the targets of deliberate attack, if no sanction is going to be applied against Powers on the warpath which trample the rule under foot. The moral of the story is not, of course, that civilians must be given over to massacre. It is that, in an age when war has become synonymous with frightfulness, the reign of law in international affairs must be carried to the length of "steady and collective resistance to all acts of

unprovoked aggression." But if this is the true moral of the British Note, how does it square with the policy which is being followed by the Government? That policy has allowed our inchoate post-war system of collective security to be smashed to pieces in the hope that the British Empire may purchase immunity for itself.

The indiscriminateness of our present instruments of warfare has been illustrated again, within the past week, by the bombing, on the high seas, of an American liner. Like the British Ambassador's car, the "President Hoover" was proceeding on its lawful occasions. In this case, the number of civilian lives endangered was 577, and one member of the vessel's crew has since died of wounds. The Chinese airmen who committed this outrage were less guilty than the Japanese airmen who wounded the British Ambassador; for the "President Hoover" was not their target; they bombed her by mistake when they were attacking a convoy of Japanese troop-transports. Moreover, they are to be court-martialled and punished, and the Chinese Government agreed, without any formal American request, to pay compensation. The United States Government replied by banning their shipping from entering, or even sailing near, Shanghai. But they, like the British Commonwealth, will assuredly find out sooner or later that our present state of international anarchy cannot be dealt with simply by refraining from bad behaviour oneself and keeping out of the gangster's way.

Such a policy might perhaps work if the anarchy could be localised. But the essence of modern civilisation is its ubiquity. Anarchy travels round the globe as swiftly as aeroplanes and radio. If any English-speaking statesman still imagines that he can localise the Far Eastern conflict by a studious exhibition of non-intervention under provocation, he had better read the signs of the times in the Russo-Chinese Pact.

This pact, signed on August 21st, is, in itself, as unexceptionable as the British Note to Japan. It is simply a pact of non-aggression in fulfilment of the mutilated (Briand-Kellogg) Pact of Paris. There is no reason to suppose that it is really supplemented by the secret military clauses which the Japanese profess to suspect. But it does mean that China, for her part, has made up her mind not to adhere to the notorious Japanese-German "Anti-Communist Pact" concluded last year. This is important; for the forcing of China into the anti-Russian camp is one of the war-aims which Japan has in mind supposing she succeeds (in the Japanese PRIME MINISTER'S words last week-end) in "beating China to her knees." The new Sino-Russian Pact thus emphasises that the conflict which has again broken out in the Far East cannot be insulated from that other conflict already raging everywhere but on the surface in Europe. Russia has a front on the Niemen, as well as on the Amur. Nor is Russia the only Power involved in both areas. Great Britain and France are in the same predicament. One reason, no doubt, for the studious peaceableness of the British Note to Japan is the Cabinet's awareness that an Anglo-Japanese clash in the Far East would play into SIGNOR MUSSOLINI'S hands in the Mediterranean and the Bay of Biscay.

One event after another points the same truth. There is a solidarity about the modern world which cannot be evaded by ignoring it. It is not just a technical solidarity. It is moral as well. If we persist in refusing to acknowledge and act upon it, we shall draw upon ourselves a retribution which will be spiritual as well as material. We shall lose the world and our own soul into the bargain.

Earnings and Hours

THERE is a widespread impression that the industrial wage-earner is now earning a bigger income and working fewer hours than ever before. How far is this true? The recent publication of the results of an inquiry by the Ministry of Labour into average earnings and hours of labour in October, 1935,* goes some way to supply an answer to the question.

The inquiry covered all the manufacturing and certain non-manufacturing industries. It excluded agriculture, coal mining, railway services, shipping, domestic service and the distributive and catering trades. In the cases of coal mining and the railways, however, statistics are regularly collected and published. In the second place, the whole investigation was carried out on a voluntary basis. Forms were sent to all employers with more than ten workpeople and to about 20 per cent. of the smaller firms, taken at random. Altogether 126,000 forms were issued, and the number of effective returns was approximately 76,000—a highly satisfactory response. These returns provide a trustworthy indication of the average earnings and hours of labour in particular industries. The general averages, however, are affected by the fact that some industries are less completely represented than others, and in certain cases adjustments have been made to allow, where possible, for this factor.

We may first discuss the question of earnings. In the inquiry, employers were asked by the Ministry to state the number of wage-earners at work in the week ended October 12, 1935, and the total wages paid to them, giving separate particulars for men (21 years and over), youths and boys, women (18 years and over) and girls.

* *Ministry of Labour Gazette*, February, March, April, May and July, 1937.

The results are summarised in Table I, which gives the average earnings (as distinct from wage rates) of workpeople, with comparable figures for 1924 and 1931, where possible. The amount of the *average* earnings of all workpeople, irrespective of their age and sex, is, of course, largely dependent on the relative numbers of males, females and juveniles. The separate averages shown for men, males, women and females are not substantially affected by the variation in the proportions of returns received from different industries. But owing to the under-representation of the building trades and the relative over-weighting of textiles, women's earnings have an undue influence on the averages for all workpeople. These averages, accordingly, have been adjusted upwards, but the comparison between 1924 and 1935 is not affected.

What the table brings out clearly is the remarkable stability of money earnings. Between October, 1924, and October, 1931, the average earnings of all workpeople declined by some 2 per cent., part of which was due to an increase in short-time working. Between October, 1931, and October, 1935, a recovery occurred, which brought the average back to a level slightly above that prevailing in 1924. If coal mining and the railway service are included, the average fell by 1 per cent. between 1924 and 1935—or, roughly, from 50s. 6d. to 50s. As one would expect, there were declines in nearly all industries between 1924 and 1931. But these declines were moderate. Even in shipbuilding the fall was not more than 13 per cent.

Recovery was general in the four years after 1931. On balance, over the whole period, earnings rose in some industries and fell in others. The most important

movements were a drop of 5 per cent. in average earnings in textiles and a rise of 3 per cent. in the metal group. In coal mining, the net fall was 8 per cent.

The statistics do not reveal any significant tendency for the industrial population to shift from the less to the more remunerative occupations. Before the war this sort of labour mobility was always a factor tending to increase the income of the working classes, but it has not been perceptibly operative in the last decade. The conclusion is, indeed, that changes in the cost of living and the risk of losing his job have been much more important to the British worker than variations in his money earnings. Between October, 1924, and October, 1931, the cost-of-living index number fell by some 16 per cent. After October, 1931, it declined further, and then regained its 1931 level in October, 1935. If this index number is applied to the changes in the average money earnings of all workpeople, we find that real earnings increased by something like 17 per cent. between 1924 and 1931 and by a further 3½ per cent. between 1931 and 1935. The Ministry of Labour's inquiry suggests, in short, that there is sound basis for the view that the real income of the working classes was bigger than ever before in October, 1935.

We may note, incidentally, that the 1935 inquiry made it possible for the first time to calculate the average earnings of adult men and women. The general average for men was in the region of 64s. 6d. and for women of 31s. 3d. Among the principal groups of industries the average earnings of men were lowest in mining and quarrying (other than coal) at 53s. 4d., and highest in paper and printing at 83s. 8d. Activity in the metal industries was reflected in an average of 67s. 7d. Women's earnings averaged 32s. 8d. in the clothing trades, 30s. 3d. in textiles, and 32s. 1d. in food, drink and tobacco.

So much for earnings. What of hours? In 1935, employers were asked to give particulars, first, of normal weekly hours; and, secondly (for a specified week), of hours lost by workers on short time and of additional hours worked by those on overtime. In Table II this information is summarised for all persons covered by the inquiry. The figures for short time and overtime are liable to a small margin of error. It is obvious from the figures that recognised hours of labour have changed little since 1924. In almost every important group of industries average normal weekly hours have remained unchanged at about forty-seven. A week of forty-seven to forty-eight hours is still worked by about two-thirds of those employed, but forty-seven hours are now more common than forty-eight. At the extremes, a smaller proportion of workpeople has a normal week of forty-four hours or less and a larger proportion has a week of more than forty-eight hours.

It is a striking fact that as much as one-tenth of the workpeople covered by the inquiry in 1935 were working more than forty-eight hours in a normal week. In some industries, such as the making of bricks and tiles, the proportion was as high as 30 per cent. In mining and quarrying (other than coal) it was 16 per cent., and in food, drink and tobacco 13½ per cent. Plainly, the movement for shorter hours has achieved but limited success in the last decade. There are still many British citizens to whom the idea that leisure presents problems of its own must appear as an ironic pleasantry.

Moreover, while normal hours of labour have changed very little, the figures show that the hours actually worked rose on the average from 46.0 in October, 1924, to 47.8 in October, 1935. At the latter date approximately 27 per cent. of all workpeople were working overtime. In the metal industries the proportion was 41 per cent.; in paper and printing it was 30 per cent., and in the leather industry it was 33 per cent. In 1924 the majority of the principal industries worked less than normal hours; in 1935 all but textiles and the clothing trades worked more than the normal week. Moreover, there is every reason to suppose that overtime has become not less but more common since October, 1935. If recovery continues at its present rate, excessive hours of labour may well become an urgent problem.

Let us sum up the conclusions which emerge from the Ministry of Labour's admirable survey. In 1935, the industrial worker in employment was earning a bigger real income than ever before. His money income had been extraordinarily constant, even in the depth of depression, and the enlargement of his real income between 1924 and 1935 was wholly due to the decline in prices. But the cost of living had already begun to rise again in 1934 and in recent months its pace has been accelerated. Money wages have also risen and overtime has been extended, but whether money earnings will exceed, or even keep pace with, the rising cost of living may be doubted. It is more than possible that 1935 and 1936 may prove to have been peak years for the real incomes of British workers.

To obtain a larger real income in 1935, the average worker was engaged for longer hours than in 1924. Since October, 1935, it is true, recognised hours of labour have shown a decline for the first time since 1919 and 1920. But overtime has undoubtedly been extended simultaneously. It is certainly not true that the British worker is working fewer hours than ever before. On the contrary, his position has slightly worsened in the last fifteen years. In this respect, it is not too much to say, Great Britain must regrettably be numbered, to-day, among the backward nations of the world.

BRITISH EARNINGS AND HOURS.—TABLE I.—AVERAGE EARNINGS OF LABOUR

	October				
	1924	1931		1935	
	Amount	Amount	*Oct., 1924 = 100*	Amount	*Oct., 1924 = 100*
Average weekly money earnings of :	s. d.	s. d.		s. d.	
Men (21 years and over)	...	...	...	64 6	...
All males	56 11	55 8	*98*	57 11	*102*
Women (18 years and over)	...	...	...	31 3	...
All females	27 6	27 0	*98*	27 7	*100*
All workpeople (unadjusted)	48 3	47 4	*98*	48 11	*101½*
(adjusted)	48 6–9	...	...	49 6	...
Cost of living	...	...	*84*	...	*84*
Average weekly real earnings of all workpeople	...	...	*117*	...	*121*

TABLE II.—HOURS OF LABOUR

	October 1924	October 1935
Percentages of workpeople whose normal weekly hours were :—		
44 or less	13·7	10·7
Over 44 and under 48	40·8	46·0
48 or more	45·5	43·3
Average normal weekly hours	47·1	47·2
Proportion of workpeople on short time	9·8	12·2
Average number of hours lost by those on short time per week	11·0	8·4
Proportion of workpeople on overtime	...	27·0
Average number of additional hours worked by those on overtime, per week	...	6·1
Average hours actually worked	46·0	47·8
Excess of average hours actually worked over average normal hours	− 1·1	+ 0·6

The Woolcombing Industry

Combing is the first important process through which wool passes on its way to the worsted industry. For the last few years an organisation has been operative for the purchase and scrapping of redundant woolcombing plants, its resources being furnished out of the surplus profits of its members. The following article embodies the views of a trade correspondent on the work of this organisation and the outlook for the industry itself.

THE worsted branch of the wool textile industry has a number of clearly defined processes: combing, spinning, weaving and, as the ultimate stage, dyeing and finishing. The process of wool combing converts the raw material into a main product, tops, and a chief by-product, noils. The tops are converted into yarn by worsted spinners.

The woolcombing industry itself has three branches. The commission combers work solely for wool importers, who are known as topmakers. The topmakers possess no machinery of their own, but are said to be responsible for over half the tops available for sale to spinners. The second branch comprises the topmaker-combers, who, working their own wool imports, make tops for sale. The third branch includes the spinner-combers, who work their own wools into tops for their own spindles. Actually, the average topmaker-comber endeavours to run his own plant full time and gives out to the commission comber any surplus above its capacity. And it is not unknown for spinner-combers, when they have no wool of their own, to work as commission combers for anyone who requires their services.

In the recent depression wool combing suffered from over-abundant capacity in the same way as iron and steel, shipbuilding and many other trades. Consequently, an organisation known as the Woolcombers' Mutual Association was formed, and endeavoured to bring the majority of combers under its ægis. Its operations resulted in an increase of combing charges, which had been subject to ruthless cutting by individual firms. The new charges not only turned losses into profits, but provided a surplus which was available for purchasing and scrapping redundant and semi-obsolete plants. Although many woolcombers, despite the slump, were wealthy and had large reserves, these were not drawn upon for the purposes of the scheme; for those in control shrewdly obtained their finance from their own customers, who complained, with some show of reason, that they had been required to provide the rod for their own backs.

The Association deserves credit for its initial contribution to recovery in the woolcombing industry, which succeeded in regaining a sound position without any extraneous assistance either from the Government or from the banks. But to-day, when the new regime has been in operation for a full quinquennium, some combers are beginning to be doubtful whether its long-term effects are likely to be wholly beneficial. Increased combing charges have encouraged the installation of combs by firms outside the ring and the extension of plant by existing firms who are non-members of the Association. It has been estimated, indeed, that the potential output of the new machinery is equal to that of the plant already scrapped. The commission combers as a body, therefore, are no nearer a monopoly to-day than when the Mutual Association was formed, but the latter is entitled to reply that to obtain a monopoly was never an essential part of its policy. It may fairly claim, further, that its members are much better placed now than they were in the depression, since outside competition to-day comes from other firms and not from financial institutions who, during the slump, were prepared in some cases to operate at a loss plant which fell into their hands.

The difficulties of the present position are due rather to factors outside the direct control of any trade association. A well-known public company, engaged in commission woolcombing, recently called attention to the problem of rising costs in its report, which accompanied a balance sheet showing reduced profits. The commission combing tariff is being raised from the beginning of September, and the industry can make out a convincing case for the advance. They are supported by the topmaker-combers because that section of the industry, normally running full time, stands to gain more from the advance than the commission comber, who must take bad months with good throughout the year and cannot run full time consistently. Incidentally, there is a widespread impression in the industry that the commission combing tariff is so graded as to yield a profit to those firms whose output is about 70 per cent. of the maximum.

Now, the higher the charges for woolcombing (and/or the greater the profits which can be earned) the more plant the spinner-comber and the topmaker-comber will be tempted to instal and the less work they will give out on commission. In other words, the more the commission firms tighten the screw now, the less wool they will tend to receive for combing in the future and the more outside machinery with which they will have to contend. It is easy to envisage conditions under which no "scrapping fund" would be large enough to buy out competitive plants, even if competitors were willing to sell. Increased combing rates, again, may tend to transfer an increasing share of the business of topmaking from those wool importers who have no machinery to topmaker-combers who, having occasionally in the past been compelled to work for a combing profit only, without a topmaking profit, will be capable, if necessary, of again adopting that procedure. Thus, in times of bad trade, undercutting in the selling price of tops, by firms possessing their own combs, may become a progressively serious factor. If, as is still claimed by some, there is even now too much commission woolcombing machinery, then the effect of the present system is to transfer the balance of advantage from the importing topmaker to the topmaker-comber. If all machinery were competing freely, the former would benefit from keenly cut rates, as he did before the formation of the Woolcombers' Mutual Association. To-day, however, when the major part of any potential surplus of machinery is precluded by the "ring" agreement from free competition, rates are kept high and the topmaker-comber correspondingly benefits.

How can the commission comber, who is an essential part of the industry, cope with this difficult problem? There seem to be four courses open to him.

First, he may use his reserves, as well as the resources of the Mutual "scrapping fund," to buy up competitors. This policy, however, scarcely seems wise, since if woolcombing, as an industry, earns good profits, the introduction of new plant cannot be prevented. Secondly, the commission comber might use his reserves to buy wool on joint account with topmakers who possess no combs. This is a well-known practice on the Continent, but it would involve him in the risks inseparable from fluctuations in wool prices, from which he is at present free. Thirdly, he might choose to cut combing rates below cost, if necessary, and draw on his reserves in order to discourage topmaker-combers or spinner-combers from running their own plants. This, however, would mean a return to the war of attrition which the "ring" was formed specifically to prevent. A final alternative would be to use the "scrapping fund" to break up machinery already held by commission combers, which, even in the last year or two, has been so under-employed as to be definitely uneconomic. If the remaining plants were able to run full time, costs would be reduced, combing charges could be lowered, and the further growth of competition would be discouraged. It is for those members of the industry most closely concerned to decide in which direction their long-term interests lie.

P. & O. Centenary

ONE hundred years ago, the Peninsular Steam Navigation Company began to operate a mail contract, which had been signed on August 22, 1837. Some two or three years earlier the firm of Willcox and Anderson, of the firm of St. Mary Axe in the City of London, had inaugurated a line of small steamers; but the obtaining of this contract from the British Admiralty, in the face of formidable difficulties, was a turning point in the firm's history. The first monthly list of the Peninsular Company, in September, 1837, advertised weekly sailings from London and Falmouth, maintained by a fleet of five steamships of 500 to 900 tons each, and fortnightly sailings from Liverpool, maintained by two ships. In addition, a branch service between Lisbon and Madeira was run by a single vessel. To-day, the "P. & O." and its subsidiaries control 311 ships, aggregating over 2 million gross tons, and conservatively valued at £22 millions. It is the second largest tramp owner in Great Britain and its lines circle the world. The story of its growth is one of the most fascinating chapters in the history of British merchant shipping.

History awards chief credit for the founding of the parent firm to Arthur Anderson, who was born in the Shetlands in 1792, given a scrappy education, and, while still a child, set to the heart-breaking work of a beach boy. Anderson first made his mark on the brokerage side of the business, which involved him, incidentally, in Iberian adventures, in the course of which he supported the cause of Donna Maria of Portugal against her uncle, Miguel, and later espoused the claims of the Queen Regent, Isabella of Spain, against Don Carlos. Contrary to popular belief, Anderson made little money from these connections, but he gained an invaluable insight into the business possibilities of Spain.

The first extension of the new company's service took its steamers from Gibraltar to Egypt, where it organised transport from Alexandria to Suez, already partially developed by Lieutenant Waghorn, the indefatigable pioneer of the "overland route." In 1840 the company was incorporated by Royal Charter as the Peninsular and Oriental Steam Navigation Company. The departure of the "Hindostan" (1,800 tons and 500 h.p.) from England to the East was, in its way, a national event. When the Treaty of Nanking opened five Chinese ports to European trade, the "P. & O." quickly seized its opportunity. By 1845, it was operating mail services from England to Alexandria, from Suez to Ceylon, Madras and Calcutta, and from Ceylon to Penang, Singapore and Shanghai. In 1852 Australia was linked to the Mother Country for the first time, and a year later the company took over the Bombay-Suez route from the Indian Navy.

As early as 1843, Arthur Anderson, then, as always, a generation ahead of the public opinion of his time—had published a pamphlet warmly supporting the project of a Suez Canal, in the face of the almost unanimous opposition of British shipowners. The "overland route" extended for 90 miles across the desert between Cairo and Suez, and for another 160 miles along the Mamoudeih Canal and the Nile. As many as 4,000 camels were frequently employed to transport merchandise, mail and baggage in a trade whose value reached £40 millions per annum. But steady progress with the Suez Canal's construction warned Anderson (who had become chairman of the P. & O. in 1862) and his fellow directors of the coming of revolutionary change. In 1869—a critical year for the company—some 100,000 tons of shipping were scrapped and replaced by tonnage capable of carrying freight and passengers under the new competitive conditions, due not only to the Canal but also to the introduction of the compound engine.

Some years before this crucial period, Thomas Sutherland—a name famous in P. & O. annals—had joined the company's service. In 1854, at the age of twenty, Sutherland had gone out to Bombay, and had quickly distinguished himself by his ability and commercial acumen. With the opening of the Canal, freight charges on the overland route were reduced by 75 per cent. and passenger fares by 50 per cent. In 1881, Sutherland obtained complete control of the company and proved himself a far-sighted iconoclast. He changed the company's English terminal from Southampton to London, and improved its second-class accommodation, to the immense satisfaction of eastward-bound junior military and civil officers, planters and missionaries. He met the heavily subsidised competition of French and German companies by further improvement in the standard of his mail steamers. In 1887, the first of the "Jubilee" class of steamers, with a tonnage of over 6,000 and a speed of 17 knots, was made for the company by Harland and Wolff. The capital structure of the P. & O. was reorganised in 1889, when the paid-up capital was reduced by repaying cash to shareholders and the balance was sub-divided into preferred and deferred stock, with a moderate amount of debenture stock employed in the business. This type of capital structure has been maintained to the present day. Alone among British securities, P. & O. stock rose in value during the three-day financial crisis of 1890. The stock has remained a leader among shipping equities through all the vicissitudes of the industry.

Subsequently, the company has contrived, almost without intermission, to extend its interests and widen its economic scope. The fusion with the British India Line—the outstanding development of the period before the Great War of 1914—brought in Sir James Mackay, the first Lord Inchcape, on whom fell the mantle of Sir Thomas Sutherland. Mackay, like Anderson, had scanty schooling, and found early employment in a humble capacity with a rope-maker and canvas manufacturer at Elgin. Like Sutherland, he first made his name in the East. He rose rapidly in the British India Company's service at Calcutta. In 1902 he negotiated on the British Government's behalf a new commercial treaty with China at Shanghai. After the War, Lord Inchcape preserved his predecessor's policy of amalgamation and extension, and on his death in 1932 his son-in-law, the Hon. Alexander Shaw (now Lord Craigmyle) became chairman and managing-director of a company owning or controlling more than 2,000,000 tons of shipping which (within the limitations of size imposed by the Suez Canal) challenged comparison with any afloat for efficiency, comfort and profitability.

For a hundred years, the P. & O. has held mail contracts, obtained and retained in public competition and retained by the merit of its services. The value of the assistance it has rendered to British commerce overseas is incalculable. Like all successful shipping concerns, it has endured many vicissitudes of trade and prosperity—not least the depression of 1931-35. But the group has emerged from this searching test with a financial position whose strength is only partially indicated by its consolidated, general and contingency reserves (according to the last balance sheet) of £13,504,500 and consolidated surplus liquid assets of £14,867,000. During the worst year of the depression the group carried over 11 million tons of cargo and 1,800,000 passengers. The present revival of international trade and the sharp rise in freight rates should further strengthen the group's position—though, as the chairman has pointed out, higher ship-building costs are the reverse side of the medal. To-day, the company begins its second hundred years at a moment when high traditions, sound finance and reviving international trade provide the best possible background for the enhancement of its reputation as a characteristically useful and profitable British institution.

Notes of the Week

Scientists Assembled.—The British Association for the Advancement of Science is in session at Nottingham. No announcement of an epochal discovery is likely to startle the world in these days, when the diurnal labours of scientists are common knowledge, and the splitting of the atom is followed in the Press like a timeless test match. The giants and their works are too well known: no Faraday, no Dalton, no Darwin, no Lamarck, no Mendel and no Kelvin will raise the curtain on a world yet unexplored. We take our scientists for granted, and sometimes, as at Shanghai to-day, we use the fruits of their labours with reckless negligence and malice. Yet science has still lessons for the chaotic communities of post-war politics, and straight words to speak about the progress we seem to squander. Fifty-six years ago, Mr Edward Poulton attended the British Association at York, when the dust of the Darwinian controversy was scarcely laid and the conflict about the mechanism of evolution was still to come. On Wednesday, Sir Edward, now President of the Association, surveyed the growth of evolutionary thought in those crowded decades—the disputes about inheritance and heredity and the battle about geological time. Against the background of natural selection in millions of years the pains of our own social changes may seem slight, but Sir Edward was encouragingly optimistic. Men, he declared, may control their own destinies, abolish wars and make their own progress without the waste of blind trial.

> With all the terrible disappointments there has been great progress, and a time will surely come, and may it come quickly, a time which shall prove that the visions of the young and the dreams of the old were prophetic of a glorious reality.

With these words ringing in their ears, the scientists turned to their sectional discussions, which cover the whole field of science and society, and are much concerned this year with the ordinary problems of the layman's world.

★ ★ ★

Economists and Industry.—The proceedings of the Economics Section of the British Association are peculiarly relevant to the practical problems of business men and the State. Papers and discussions have so far covered labour transference and the relations between business practice and economics. Next week they will include retail distribution and industrial location. The same realistic note was appropriately struck in the presidential address on September 3rd, when Professor Sargant Florence asked how economic research could help to determine the most efficient site, size and scope of industrial organisations. Economists, he said, were learning to measure industrial location, which was of great importance when the State was trying to locate industries in depressed areas and, perhaps, to control the growth of Greater London. Thus, economists might help to determine the best distribution of industry between urban and rural areas and the most efficient siting of particular trades. In that way, the State might plan the most desirable location of industry without the wastage of private trial and error. Similarly, the size of plants and firms was fundamental in planning. Economic research could analyse the factors, such as mechanisation, which made for growth in industrial units.

★ ★ ★

Professor Florence forecast that the increase in the size of plants was likely to persist, although many mechanised industries were scattered in small plants to be close to the consumer, while many highly localised industries were medium-sized in scale of plant, and small shops with small clientèles seemed to survive in retail distribution. In the last resort, however, the unit of planning was the firm, the controlling business unit on which depended economies of marketing and finance. Economic research, by measuring profits and costs, might suggest the optimum size of firms. Already the prevailing tendency was for plants to specialise on a narrow range of products within wider and wider areas of business control. Generalisation between industries and trades was, however, impossible; and the economist could only be helpful in industrial policy if his statistical material were complete, precise, relevant and well-defined.

★ ★ ★

Army Recruits.—The War Office announced on August 30th that the upper age limit for recruits in combatant units of the army would be raised from twenty-five to twenty-eight. The age limit for combatant regiments was twenty-five before the War, during which it was raised by stages to forty; for non-combatant units it is thirty. The announcement marks the second stage of Mr Hore Belisha's recruitment campaign. His first step was to permit serving soldiers to extend their service to twenty-one years and qualify for a pension, and reservists to rejoin the Colours on the same basis. As we suggested in *The Economist* on August 14th, this drastic change is not likely in itself to be wholly satisfactory since the military value of a soldier is not increased by long service. It is now credibly reported that the new long-service element in the Army will be limited and that a substantial number of men may be recruited for periods of less than seven years. This dual system would, on the one

hand, provide an army career for those who wanted it, and, on the other, a quick flow of short-period recruits. In the last resort, however, the all-important task is to stimulate recruiting immediately. The number of Army Reservists who have intimated their desire to rejoin the Colours under Mr Belisha's new scheme is 3,100, and 800 are already back in the army. Recruiting figures in most districts are steadily rising, and in London have reached a record level for recent years. Nevertheless, there is much leeway to make up, and it may still be doubted whether the soldier's present lot is sufficiently happy to encourage a rush of recruits to the Colours.

* * *

Penny Post.—In a recent speech at Aberdeen, the Postmaster General stated that the return to the penny post for letters and the halfpenny post for postcards, after allowing for a slight increase in these services, would reduce the Post Office revenue by £7½ millions a year. His conclusion, therefore, was that this reform, so much sought by business men, was not feasible. Perhaps Major Tryon considered that this pronouncement could most appropriately be made in a great city whose caution in matters of business is proverbial. We pointed out in *The Economist*, on March 20th (page 632), that the contribution of the Post Office to the Exchequer (which has been fixed, since 1933, at £10¾ millions annually, or about 13 per cent. of the gross income of the Post Office) was more than enough to cover any net loss of income caused by a reversion to the penny post. Major Tryon's figures amply confirm this statement ; if the penny post were restored there would still, on his own computation, be over £4 millions to hand over to the Exchequer, since the usual Post Office annual surplus exceeds the Exchequer contribution by between £1 million and £2 millions. The trouble is that Postmasters General habitually regard the millions paid annually to the Exchequer as a proper charge, almost as a legitimate cost of service; and to some people Major Tryon's obdurate statistics at Aberdeen suggested that the restoration of the penny post would involve the Post Office in a net annual *loss* on operation of £7½ millions—which is absurd. The function of the Post Office is to provide an efficient service as cheaply as possible, having regard only to the proper costs of service. To use the Post Office as a large and regular source of national revenue is, as *The Economist* has held for ninety-four years, " an unfortunate, regressive and clumsy method of taxation." Moreover, while the demand for the carriage of letters is probably much more inelastic that it was ninety-eight years ago, when the penny post was instituted, it is not entirely inelastic, and over a period of years the revenue of the Post Office would probably suffer much less than is commonly estimated from a return to the penny post.

* * *

Spain and the Mediterranean.—The fall of Santander has coincided with another of those efforts by the Spanish Government's forces to drive wedges into other insurgents' positions while the latter's strength is concentrated elsewhere. This week in Teruel and Aragon Government forces have advanced, and Huesca is said to be surrounded. Meanwhile the focus of all attention has been the relations between Italy and the two West European Great Powers; for Signor Mussolini last week-end, apparently counting on further diplomatic paralysis in Britain and France as a result of the Far Eastern crisis, sent a vivid telegram of congratulation to twelve regular Italian generals commanding the Italian divisions which captured Bilbao and Santander for General Franco. In making this operatic gesture he seems to have over-reached himself; and the news that he is to visit Herr Hitler at Berchtesgaden in the third week of this month may be a way of reinsuring his prestige. These gestures accompanied a recrudescence of indiscriminate bombing and torpedoing by submarines in the Western Mediterranean. This week a Russian steamer, totally unconnected with affairs in Spain, was sunk off the Algerian coast, without warning, when proceeding with coal from Cardiff towards the Black Sea; and more British merchantmen have been bombed. The Turkish Government have cancelled their fleet's visit to Italian ports in order to patrol the Dardanelles and Sea of Marmora where submarines " of an unknown Power " have been operating.

* * *

The climax came in the night of Tuesday–Wednesday, when a torpedo was fired at H.M.S. " Havock " without warning. This was the second time that this destroyer, one of those on the still active British–French naval patrol of the insurgents' coastlines, has been fired at; and the third, but most serious, time that a British warship has been attacked without warning. On this occasion, acting on the belated Admiralty instructions of a fortnight ago, the destroyer at once dropped depth charges and two more destroyers steamed from Gibraltar to engage in the search. It was announced in London on Wednesday that more destroyers would be sent to the Western Mediterranean. The French Government have gone one better than the British. They have called for a meeting of the Non-intervention Committee at which they will officially protest and accuse Italy of duplicity all along, intervening in Spain and preaching non-intervention. They have reinforced their navy in the Mediterranean and given it unlimited powers to cope with " unknown submarines." They have proposed, and the British Government have accepted, a conference of Mediterranean Naval Powers at Geneva next week. And they are talking earnestly and seriously, since M. Blum's six months' law of last January to stop volunteers from going into Spain expired on August 21st, of opening the Spanish-French frontier if Italian intervention and piracy continue. Kindly Mr Neville Chamberlain recently tendered an olive branch to the Duce. The Duce seems likely to impale it on an Italian bayonet.

* * *

Pirates, Potentates and Politics.—The moral of these piratical depredations from end to end of the Mediterranean is gravely disturbing. It is now established beyond any reasonable doubt that the overwhelming bulk of the aerial bombing and naval torpedoing in the Mediterranean is not being done by the insurgents' warcraft. The air and surface craft have been repeatedly recognised; a submarine has been recognised; and Signor Mussolini's telegram last week-end shouts to the skies that Italian divisions and generals are fighting Franco's " rebellion " for him. In other words, the war in and about Spain is not a civil war; it is European. Italy has been and is levying war-without-declaration on the Spanish Government in its own territory, and abetting piracy against everyone else on the high seas of what the Duce hopes to make both *mare clausum* and *mare nostrum*. Are our ships, merchantmen and warcraft, to be sunk by night or day, without warning? If not, we shall have to convoy them; for we cannot catch a tithe of these submarine pirates after the event. A special meeting of British Ministers was held on Thursday to consider what action is appropriate. The Nemesis of French and British weakness in the Ethiopian affair has come fast upon us. It has brought Far Eastern methods to our doors—indeed, within our walks. Is the Duce coolly calculating that the British will stomach any treatment at all, after their meekness in the last five years? It is a natural, but fearfully wrong, conclusion, if he is. *Quem ad finem sese effrenata jactabit audacia?*

* * *

China and Japan.—The undeclared war in the extreme Orient has now become general all over the eastern half of China. The Japanese, acting on the Prime Minister's declared intention of " beating China to her knees," have been bombing Chinese cities as far apart and inland as Nanking, Hankow, Kalgan, and Canton;

while their northern forces have occupied Kalgan, capital of Chahar, and the Nankou pass, and are now driving south to turn the northern Chinese forces' left flank. The Chinese Government has handed out a pretty backhanded compliment to the League of Nations, by merely regularly informing it of Japanese aggression and warlike progress. China knows that, after her betrayal by the Western Great Powers in 1931–1933, there is no salvation in appeals to the League. But her leaders must be grimly chuckling at the rapidity with which Nemesis has overtaken the Western Great Powers' interests in the extreme Orient. At Shanghai this week, apart from the accidental Chinese bombing of the " President Hoover," operations have not greatly affected the neutrals or the International Settlement. Last Saturday and Sunday, Japanese airmen practised the doctrine of frightfulness in bombing railway stations whence refugees were fleeing from the city. Many hundreds were killed, and the combined Western Christian missionary churches sent telegrams to their countries urging them to protest against such conduct. The Japanese reinforcements have been landing during the past week just outside Wusung, near the coast, and latterly at Yangtsepu in the Settlement—this last being an attempt to turn the Chinese right flank and force a retreat. The Chinese have been stubbornly refusing both direct battle and a retreat; accordingly the Japanese landings have been held up and their progress has been slow. As we go to press there is still no reply by Japan to the British note, the excuse being that " inquiries " have not been completed. The note made it clear that on the British side no need for any inquiry was recognised: *res ipsa loquitur*. The Japanese dilatoriness contrasts unfavourably with the despatch of the Chinese Government in apologising for, and offering to punish those responsible for and to compensate those suffering from, the accidental bombing of the " President Hoover."

* * *

America and the Far East.—The American neutrality policy, as expressed in the Act passed by Congress last April, is being subjected to a severe test by the Far Eastern crisis. Under the Act, the President is obliged to declare that a state of war exists when hostilities, civil or international, have broken out; thereafter, it is illegal to export any munitions of war. If the President declares, further, that the peace and neutrality of the United States are endangered, it is illegal to sell anything to the combatants except on the " cash and carry " principle. Japan and China are undoubtedly at war; yet no declaration has come from the President. One party in America demands immediate application of the full neutrality policy; another urges cautious procedure and the protection of American interests. The Administration does not seem to favour the isolation policy. On July 16th Mr Cordell Hull, Secretary of State, said that there could be no serious hostilities anywhere in the world which would not affect the interests, rights and obligations of America. Marines have been dispatched to Shanghai, and it is assumed that they will co-operate with the forces of other nations in the event of a general attack on the International Settlement. On August 24th a further statement of American policy was made. This declared that although America did not believe in political alliances or entanglements, she had co-operated with other parties for the purpose of maintaining international standards of decency through pacific methods. The American Government was endeavouring to keep alive its fundamental pacific principles in the Pacific area and in all the world. The language of these statements has been carefully phrased to avoid offending isolationist sentiment within America; but there seems evidence that the Administration is not willing to see the short- or long-term interests of the American people go by default in the Far East. Public opinion may strengthen this attitude, for sympathy lies with China. But for the moment the neutrality attitude seems to be the stronger among the public.

France Emerges from Emergency.—The emergency powers conferred on M. Chautemps' Government by the French Parliament just before the recess in June, expired on August 31st. To mark the return to governmental normalcy, M. Bonnet, the Finance Minister, reviewed the financial and economic situation of the country to *The Times* correspondent on Wednesday, and summarised the Government's achievements. There would still be a deficit on the ordinary 1937 Budget, but it had been halved; revenues both of old and new taxes were rising; and the 1938 ordinary Budget would balance, on conservative revenue estimates and not-too-conservative expenditure estimates. The 1938 extraordinary Budget had been severely pruned, notably for defence and public works; but the principal reform was the amalgamation of all railway companies in a single Corporation of which the State is to hold 51 per cent. of the shares. The decree establishing this Corporation, the last issued under the emergency powers, was signed by President Lebrun at a Council of Ministers on August 31st. The merger Corporation—Société Nationale des Chemins de Fer Français—is to begin on January 1st next; it is to co-ordinate road and rail transport with a view to abolishing those cumulative deficits of the railways which, covered by borrowing like the borrowing for the British Unemployment Fund's deficits in 1930-31, have amounted in the past four or five years to about Frs. 33,000 millions. (We discuss the implications of this for the English investor in a Note on page 482.

* * *

M. Bonnet pointed out that the reduction of Government borrowing, the rise in rentes, and the steadiness of the exchange were lowering money rates; and he said that the effects of the 1936 social reforms had by now either been absorbed into the French economy or offset by the devaluation. France could henceforward compete with other countries as long as French prices did not move up faster than others; and this the Government could control by supervision. Flexibility was their watchword; and they could adjust their tariffs strictly by reference to the movements in French prices. M. Bonnet paints a better picture than anyone has been able to do in France for some time. Whether the obvious increase in political stability and business activity will lure back the vast sums of fugitive capital is more doubtful; its return will be slow. But the Chautemps Cabinet are showing a firmer grip both in domestic and foreign affairs; and the Socialists' decision last week-end not to accept the Communists' offer of a common organisation must be taken as a bull point both for M. Chautemps and for France's political stock.

* * *

Political Manœuvres in Belgium.—The Belgian Cabinet, a Coalition of Liberals, Socialists and Catholics, has again been marked out for an onslaught from the Right. This time, however, the Rexists and Flemish Nationalists did little more than utilise the occasion offered them by the difference between the Prime Minister, M. van Zeeland, a former Vice-Governor of the National Bank of Belgium, and his Socialist Finance Minister, M. de Man, over the nature of the future relations between the Government and the Bank

THE BRITISH LINEN BANK

under the latter's revised statutes. These powers have long been under discussion; but the matter came to a head last Monday at an extraordinary general meeting of the Bank's shareholders. The Rexist and Flemish Nationalist leaders got in by having become shareholders; and the trouble centred not round the Bank's alleged future subordination to the Government, but round a much more personal matter. The Press hostile to the Government had criticised the Prime Minister for still receiving payments from the Bank; but the Prime Minister officially denied this in Parliament, and the Finance Minister also published a Cabinet denial of the allegations. The Prime Minister was still attacked, however, and declared last Saturday that the only sum he had received, even remotely connected with the Bank, was in 1935 when he retired from the de Brocqueville Cabinet in which he held no portfolio. He then received a payment out of a common fund belonging to the Bank's directors. As M. van Zeeland entered that Cabinet by leaving his high position at the Bank, and left that Cabinet only to become Prime Minister, it is not surprising if compensation were paid to him then. That is very different from the Right Wing's accusations. The crisis has passed for the moment; but Parliament is to meet next week, when the criticisms will be fully met.

★ ★ ★

Luther's Heritage.—In nothing is the Third Reich so palpably defeating its own ends as in its treatment of the churches. After four and a half years of it, the spirit of the Christian people of Germany under persecution is stronger than it was at the beginning. The Protestants started under the double handicap of being divided in organisation and of being made the first target of the Nazi attack—perhaps just because they were expected to be easier prey. But last Sunday the unity and the courage of these German Protestants under pressure were both displayed in the reading of an important proclamation from the pulpits of the churches. This proclamation is the outcome of a Protestant conference held at Cassel on July 5th and 6th; and the signatures show how representative it is. It expresses the present attitude, not only of the fighting wing of the Confessional Church, but of the whole of German Protestantism save for the misnamed "German Christians." This document calls in question the whole basis of the Nazi policy and *Weltanschauung*. "Can proper homage be rendered to people, blood and race, only by setting them in place of the Living God?" Here the German Protestants have put their finger on the same error—the idolisation of the human tribe—which was castigated by the Pope in the encyclical relating to Germany issued earlier in the year. The Protestants also denounce, in the present proclamation, "a false pride" which "forces humanity to belie itself" by denying the fundamental fact of sin—a denial which is at the bottom of other forms of modern paganism besides the Nazi variety. They go on to protest against the State's denial to them of certain lawful and indispensable liberties: freedom of spiritual discussion, freedom to work among the young, and even the freedom of conducting church services. The Protestant Church in Germany has asked Herr Hitler to give its members an opportunity of presenting their case directly to the Government of the Reich, instead of being left, without appeal, at the mercy of government departments. This request has not so far been granted. If the Führer persists in turning a deaf ear, he may live to regret it.

★ ★ ★

Conference at Sinaia.—The Sixteenth Little Entente Conference was held at Sinaia from August 30th to September 1st. Since last year's Bratislava meeting, Czechoslovakia has drawn closer to Austria and Hungary; Roumania has refurbished her alliance with Poland; and Jugoslavia has concluded the Ciano-Stoyadinovitch pact with Italy. The latter pact has not availed to secure the three States' recognition of the Italian conquest of Ethiopia; and Poland's domestic troubles have confirmed Roumania in her halting attitude to Poland. The outstanding event at Sinaia was the united agreement that the time had come to allow Hungary the right to rearm. This is a most welcome, perhaps epoch-making, development in Central European politics. The conference declared it was unnecessary to alter the League Covenant, and finished with a proclamation of fidelity to the Entente's established principles. To-day this means more than it says; for the Roumanian Government is at last seeking an understanding with Russia, and the Jugoslav Government is incensed at German activity in the domestic Jugoslav ecclesiastical split. The president of the conference even went so far as to announce that the Czechoslovak-Soviet pact was not only prepared and concluded with the express concurrence of the other two Entente States, but that it made Roumania even glad that Czechoslovakia was on the best of terms with Roumania's great neighbour to the East. It will be interesting, after this important conference, to see whether Italy will begin once more to favour and assist the solidifying process between the Little Entente, Austria, Hungary and Bulgaria.

★ ★ ★

Mr Aberhart's Intransigence.—While a gentleman from Tonypandy, in South Wales, has been losing a moral victory on points, in a bout of fisticuffs with a coloured gentleman in New York this week, another type of challenger has been maintaining, north of the Canadian border, his determination to fight to the bitter end. Mr Aberhart, Premier of Alberta, has rejected all counsels of compromise in his struggle against orthodox banking and currency conceptions, against the Dominion Government, against Canadian constitutional law—indeed, against all principalities and powers of a world that knows not Social Credit of the Albertan type. Mr Mackenzie King, at Ottawa, is threatened with a nice dilemma. The removal of a duly elected Provincial Government is an unheard-of step; but if Mr Aberhart's plans are allowed to come even temporarily into effective operation, it may be difficult and expensive to unscramble the crazy omelette. The position of the Ottawa Government to-day might have been easier if the Ministry had been more ready to use its right of disallowance against the power legislation of the Hepburn Ministry in Ontario and the anti-Communist legislation of the Duplessis Ministry in Quebec, or had taken a firm stand when Mr Aberhart issued his famous "prosperity scrip" a year ago—a move generally regarded as a violation of the terms of the Bank Act. Possibly, however, time will solve the Ottawa Government's difficulties. Opposition in Alberta is being mobilised, and an appeal to the electorate of the Province might show whether Mr Aberhart, who has not succeeded in holding together the whole of his original ministerial team, has been more successful in retaining popular confidence. Mr John L. Hugill, K.C., who recently resigned his position as Attorney-General, was the fourth Minister to be discarded in two years. Mr Hugill, in a public statement, declared that he could not countenance any policies savouring of confiscation or repudiation, and that as a lawyer he could not accept responsibility for measures which threatened the solidarity of Canada's constitution. Mr Mackenzie King would doubtless give much to know how many others in Alberta share this view.

★ ★ ★

Australia in the Boom.—Australia, like this country, has escaped from depression to a level of prosperity higher than any previously attained. And Australia, like this country, is unwilling to use the opportunity to balance her budget, and pleads the same cause—the overriding necessity for a rapid expansion of armament expenditure. The Federal Treasurer, Mr R. G. Casey, in his speech last week, proposed to budget for a total revenue of £85,190,000, a sum only £3,400,000 in excess of receipts last year. Expenditure is put at a figure which will permit a trifling surplus, but will not include £3,000,000, the balance in the Defence Trust Funds, and £2,500,000 to be raised on Treasury bills in London, both of which are to be spent in the course of the year on armaments. Since expenditure for that purpose is raised from £8,067,000 to £11,500,000, the Commonwealth is in effect borrowing to pay her rearmament bill. The rise in wages granted in a recent award and the small concessions to pensioners proposed in the budget, would in themselves provide a case for increasing taxation, quite apart from the now widely accepted argument for such a policy in time of boom. Instead, the authorities have chosen the easier path of expansionism: though they could no doubt point to the rising balance of their London funds as a proof that they have not slipped so far along this path as they might have done.

★ ★ ★

Nevertheless, the economic situation of the Commonwealth as a whole indicates that "sound finance" might have been a wiser policy. Unemployment is at a low level, more men are employed in factories than ever before, and the export trade balance has reached a total of £35,700,000, only £22,000,000 of which is needed for debt service. But this happy state of affairs is almost wholly the result of rising demand and rising prices for wool and wheat. It can last only so long as the present demand for Australia's exports, whose prices are now about 75 per cent. higher than in the worst phase of the depression, and in some cases are higher than they were in 1928. Whether they will indefinitely maintain these levels is another matter. Apart from the disruption of trade by war in the Far East, and from the possibility of a serious recession of trade, rising world production in a year or so may be inevitable; the Commonwealth's policy, as a whole, in the last few years, has been sound, but there may be something in the recent Royal Commission's complaint that it has sometimes been belated. Meanwhile, current news continues to be favourable. The Sydney wool sales opened on Wednesday with prices a quarter to a third as high again as those of last year. The country is concerned less with future uncertainties for the primary producer than with the contemplation of old records broken in the good times of to-day.

★ ★ ★

Food Consumption Statistics.—The Final Report of the Mixed Committee of the League of Nations on Nutrition, which is discussed in a leading article on page 457, contains a large number of figures on the consumption of various important foodstuffs in the different countries. As these figures are somewhat scattered through the volume, an attempt has been made in the following table to bring them together, so far as eight important countries are concerned. The figures in every case are those of annual consumption per head of population.

ANNUAL PER CAPITA CONSUMPTION OF FOODSTUFFS

	Wheat	Sugar	Meat	Fish	Eggs	Butter	Cheese	Citrus fruits & Bananas

* Figure not given. † British Isles. ‡ England. § Approximate.

The most remarkable feature of these figures is the very wide range of variation from country to country. The average Englishman, for example, finds it possible to consume nearly five times as much sugar as the average Italian, as well as nearly four times as much meat, over three times as much fish, and nearly ten fimes as much butter. The statistics of milk consumption are too scanty to be susceptible of tabulation, but it is stated that consumption per head in Great Britain is about 100 litres, compared with something like 150 litres in the United States and nearly 300 litres in Finland.

Retail Food Prices.—The Report also contains a table of urban retail food prices in twenty different countries in October, 1936. In the original form, the quotations are given in Swiss francs, but in the following table they have been converted, for each commodity, into percentages of the average for all the countries. A column has also been added giving the average for each country of all eight commodities. It must be borne in mind that this final column is only the roughest indication of the actual relative cost of food in the different countries, as the proportions in which the different commodities go to make up the national diet vary considerably.

* Quotation not given. † First quality. ‡ Excluded.

Here, again, the chief observation to be made is on the variation of the figures. The high average of Germany is partly due to the fact that quotations have been converted at the official rate of exchange for the Reichsmark. But the application of any other reasonable valuation for that currency would not avail to make Germany a cheap country.

★ ★ ★

Industry and Rising Costs.—The progressive rise in costs is perturbing many British industrialists. Rising prices are, of course, a normal concomitant of economic revival. As the demand for raw materials approaches the margin of current output, sellers are able to obtain more for their wares. Similarly, as the volume of unemployment decreases, wage-earners profit from increased competition for their services. Lastly, as the operation of industrial plant nears the limit of capacity, profits tend to increase. So long as the resulting upward movement is slow, it is not necessarily dangerous to recovery. But when it involves an unduly rapid marking-up of prices and brings inefficient plant into service, a serious maladjustment may occur which is usually the forerunner of a collapse. The present movement has certainly not reached such a stage, but hardly a day passes without the announcement of an increase in the prices of some manufactured product or other, which is usually explained by reference to higher raw material quotations and labour costs. Motor-car prices were advanced only a few weeks ago. The published prices of metal goods and machinery are steadily increasing and delivery dates are lengthening. Consumers of steel are

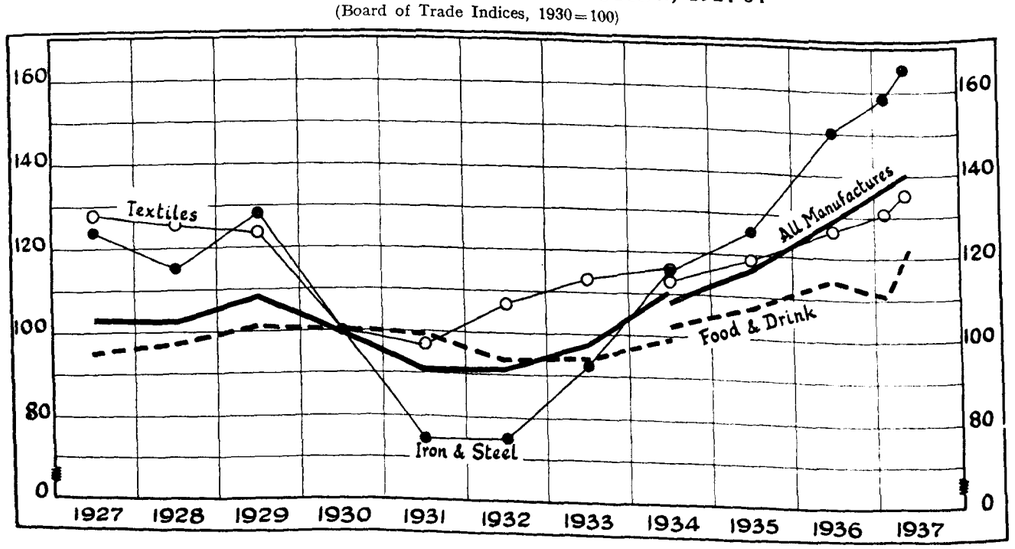
apprehensive of a further upward revision. Cotton yarns were marked up at the end of last week; a few days ago a cargo vessel, built twenty-two years ago for £47,000, changed hands at £51,500. The Board of Trade's indices of prices for basic materials, intermediary products and manufactured articles in July showed increases of 32 per cent., 21 per cent., and 16½ per cent., respectively, as compared with a year ago. The pace obviously cannot be maintained for long without endangering recovery.

* * *

Britain's Industrial Progress.—Every quarter the Board of Trade publishes indices of production for the main branches of British activity. In *The Economist* of August 28th, page 426, we gave the latest of these quarterly statistics, which cover the April-June period. As the Board of Trade indices are now available for a period of ten years, we have reproduced some of them in the chart below. The series, however, is not continuous, for in 1934 the figures were revised in the light of changes in the structure of British industry. But indices for 1934 are available both on the old and new bases, and we have, accordingly, shown both figures on the chart at the foot of this page, with the necessary break—except in the case of iron and steel, where the discrepancy is very slight. In no case, it will be seen, is the difference serious enough to disturb the long-term trend which the chart shows. The output of food, drink, etc., showed correspondingly little variation during the ten-year period. The index has a secular tendency to rise with the increase of population. The output of the iron and steel industry, after many vicissitudes since 1927, is now far above the pre-depression peak owing to the large-scale renewal and extension of Britain's industrial equipment. The current level of production in all manufacturing industries, it will be seen, is some 30 per cent. higher than in 1929.

* * *



Seasonal Expansion in Industry.—While the Sino-Japanese conflict has dislocated trade at Shanghai, signs of the usual revival of new business in the autumn are not lacking this year. The iron and steel and metal-using industries are experiencing growing pressure for delivery. As the output of many firms during the remainder of this year is already sold, little new business can be undertaken for delivery this year. Business in iron and steel and metal goods for delivery next year is already brisk. The scarcity of semi-finished steel is still acute, and although bigger quantities of Continental material are now being delivered, these are not sufficient entirely to relieve the shortage. New business in coal has not yet increased very much in some districts, but an early revival of house coal demand should give a fillip to the trade. Incidentally, as our Cardiff correspondent points out on page 501, the average profit of Welsh collieries fell from 3·52d. per ton in February–April to 2d. per ton in the three months ending July this year, mainly as a result of the increase of 10d. per ton in labour costs. The market in cotton goods has been quiet, for the uncertain future trend of raw cotton prices, which suffered a sharp fall this week, is holding up new orders. Most other consumption goods trades are active, and satisfactory orders are reported from Radiolympia.

* * *

Loans on Cotton.—One of the subjects which embittered the closing days of the last Congressional session in Washington was the proposal that the Government should, as in the worst years of the depression, make loans on the cotton crop and grant subsidies to the growers. The subject became urgent when the official crop report forecast a bumper crop with correspondingly low prices. But the whole matter is highly charged with politics, since it is precisely the representatives of the cotton-growing States of the South who are leading the rebellion against President Roosevelt within the Democratic Party. The President refused to countenance loans until he had exacted a promise of the enactment at the next session of Congress of legislation to restrict the 1938 crop. Even with that promise, he has not gone as far as was hoped in the South. Loans are to be made at 7¾ to 9 cents a pound, according to the grade. The receipt of a loan on his cotton virtually guarantees the return which the grower will receive, for if the market price falls below the loan price he will leave the cotton with the Government. In addition, however, growers are to be given outright subsidies of 3 cents a pound. But this subsidy will only be given on 65 per cent. of the total production, and even then only to growers who promise in advance to abide by the 1938 restriction programme. These terms have proved a disappointment both to growers and to the cotton markets. The whole philosophy of restriction is repugnant to many people inside and outside the cotton-growing areas. But price bolstering is an absurdity without some control of production. If the growers want the one they must stomach the other. It may be hoped that the position of the United States in the world cotton market will be a guarantee against any excessive use of this dangerous double-edged weapon.

Credit Control

New York, August 24.—Just a year has passed since the Federal authorities, deciding that the time for reflation was ended, undertook measures of control or limitation over the expansion of bank reserves and of bank credit. This control took two forms. First, on August 15, 1936, the cash requirements of the member banks were increased by 50 per cent.; and in two instalments dated March 1 and May 1, 1937, these requirements were increased another 50 per cent. Secondly, in December, the Inactive Gold Fund was established.

At the time the programme was inaugurated, required reserves amounted to about $3,000 millions, and excess reserves (that is, bankers' balances at the Reserve Banks over and above the required percentages) stood at about an equal figure. After August 15, 1936, excess reserves amounted to about $1,800 millions. Between August 15th and the end of the year, however, gold imports were large enough to offset in part the action of August 15th, and the so-called gold sterilisation policy was adopted. As a result the expansion of member bank reserves ended in December; gold sold to the Treasury was no longer monetised.

The completion on May 1st of the programme of increasing reserve requirements left the member banks with something under $900 millions of excess reserves, which statistically was a more than comfortable figure; in the 20's, even in periods of extremely easy money, excess reserves rarely, if ever, reached the figure of $50 millions.

This series of manœuvres checked the expansion of bank credit. On August 11, 1937, the total loans and investments of all reporting member banks were $22,331 millions and had only risen $7 millions in the year; the increase in loans almost precisely equalled the decrease in investments. For these banks also, both time and demand deposits were only slightly higher, mostly because of a decline in Government deposits. After three years of rapid and extensive credit expansion (or reflation), the total of bank credit in the reporting member banks has been stabilised for a year, approximately at the level of bank credit in 1929.

Difficult Adjustments

These totals, however, mask certain problems of adjustment, which fell principally upon the banks of New York City. The total of excess reserves was abundant, but the proportion in New York was relatively small; and from July, 1936, the New York banks felt apprehensive about their position. There was an increased demand for loans and a withdrawal of bankers' balances, and these banks sold investments heavily, particularly Governments. The following table shows this:—

The New York City Reporting Member Banks

($000,000)

	July 1, 1936*	Dec. 2, 1936†	Aug. 11, 1937
Reserves with F.R. Banks...	2,004	2,547	2,342
Demand deposits	6,215	6,417	5,968
Total loans and investments	9,063	8,680	8,323
U.S. securities.....	4,036	3,722	2,921

Reporting Member Banks Outside New York City

($000,000)

	July 1, 1936	Dec. 2, 1936	Aug. 11, 1937
Reserves with F.R. Banks...	2,483	2,824	2,780
Demand deposits	8,464	9,047	8,946
Total loans and investments	13,556	13,779	14,008
U.S. securities.....	5,474	5,451	5,288

* Shortly before announcement of increased reserves.
† Shortly before announcement of Inactive Gold Fund.

Between July and December, incoming gold increased reserves in both groups, but the New York banks were apprehensive of their reserve position or feared an increased commercial demand. They sold some Governments, their total earning assets declined, but their demand deposits increased. Outside New York, total loans and investments, as well as deposits, increased, although there was no increase in the holdings of Government securities. For the first time in many years, the financing of the Budget deficit fell on the public market.

Since December, with the stream of incoming gold shut off, the New York banks have continued to lose reserves to the interior, and at times their margin of excess has been uncomfortably small. On the other hand, banks elsewhere have kept just about an even reserve position. The consequence was that the New York banks accelerated their sales of Government securities, and although there was an increase in commercial lending, both their total loans and investments and their deposits fell rather substantially.

The Inactive Gold Fund is now about $1,250 millions, which, without sterilisation, would have been added to excess reserves, and would have all but cancelled the control policy of the Reserve Board.

The Burden of Public Debt

This transition from reflation to stabilisation occurred, however, in the presence of an increasing public debt. Over the period, the public debt rose by about $3,000 millions, of which approximately one-third was attributable to one of the control measures, the Inactive Gold Fund. The commercial banks took none of this increase ($96 millions was bought by the Reserve Banks). The necessity of absorbing $3,000 millions of new Government securities *plus* something over $1,000 millions sold by the banks, imposed some strain on the capital markets, for hitherto a large part of Federal financing had been carried by the banks. There has thus been a strong demand for commercial credit accompanied by a continued expansion of the public debt. The reporting member banks sold investments and increased their commercial loans by almost equal sums. The liquidation of securities, however, was concentrated in the banks of New York City, which found themselves under some pressure for reserves. Although the aggregate of reserves was abundant, the internal balance of payments was adverse to New York City, which was obliged to adjust its position through the security markets, in the absence of a functioning money market. This combination of a heavy demand from the Treasury and liquidation by the New York banks depressed the bond market, raised the long-term interest rate, and impeded the issue of new securities. Considering the scope of the undertaking, it was carried through with remarkably little disturbance; but the experience has emphasised two

obvious point: that while the Federal deficit was a help in a programme of reflation, it is a hindrance to a programme of control; and that credit management in the United States is handicapped by the absence of a money market, in that it throws upon the bond market and the long-term interest rate functions of adjustment for which they are by no means suited.

France

Railway Reorganisation

Paris, September 2.—The last Decree has set up the National Railway Company, which will absorb all French railways from January 1, 1938, and manage them until 1982, when all the assets of the companies will pass into the hands of the State. The capital of the company will be about 1,500 million francs, 51 per cent. of which will be held by the State. The other 49 per cent. will be held by the companies, but remain blocked until 1955. This new body will reorganise the railways and attempt to eliminate the deficit, which would have reached 7,000 million francs this year but for the recent increase in charges expected to produce 2,000 or 2,500 million francs in new receipts. Last year the cumulative deficit was 27,000 million francs.

This company is the conclusion of laborious negotiations with the private companies. It is a success for the Radical-Socialists, principally for M. Chautemps, who has led them and discarded the nationalisation schemes again advocated by the Socialists.

Another Decree authorises the State to take steps to convert foreign loans contracted by public undertakings, notably by the cities and the railways. Another extends to the debentures of the post, telegraph and telephone services, the Caisse Autonome, the Crédit Foncier and the railways, the abrogation of the 10 per cent. emergency tax decreed by M. Laval. This remission was previously confined to Rentes possessed by "physical" persons.

Social and Political Calm

The political atmosphere remains very calm; and financial confidence has improved. The fixing of the price of wheat at 180 francs has been welcomed by the farmers. The enjoyment of paid holidays, and the postponement of the revision of hours of work, have removed any motives for conflict between the Government and the workers. The Socialists have rejected the proposal of the Communists to hold periodical joint meetings. Socialists and Communists will go separately to the first ballot for the Senatorial elections on October 10th. The question now is how well the Radical-Socialist Party has organised this impending election and how the country will vote.

A committee of experts has now been appointed to investigate the various industries and to make suggestions to increase production, either by extending factory plants or by making new exceptions to the 40-hour week. The conclusions of this inquiry must be laid before the Government on September 30th, and action should be promptly taken. Cheaper credit facilities will be given by the Crédit National to industrialists in order to improve their plants, in the same way as credits will be given by the Crédit Foncier to building to stimulate this industry after the abandonment of the greater part of the public works programme.

Increased Production

French coal production in July was 3,588,558 tons for 21.1 working days, compared with 3,569,867 tons in June (21.1 working days) and 3,972,468 tons in July, 1936 (23.9 working days). The average daily production was thus 170,100 tons, compared with 169,200 tons in June. The number of men employed was 238,148 at the end of July, compared with 237,636 at the end of June and 223,380 at the end of July, 1936. The production of coke was 348,817 tons in July, compared with 366,263 tons in June and 349,521 tons in July, 1936.

Production of pig iron was 697,000 tons in July, compared with 685,000 tons in June and 519,000 tons in July, 1936; ingot steel production was 680,000 tons, compared with 685,000 tons in June and 542,000 tons in July, 1936. For the first seven months of the year, pig iron production reached 4,516,000 tons, compared with 3,619,000 tons in the same period of 1936; ingot steel production was 4,611,000 tons, compared with 3,899,000 tons; production of these commodities thus shows increases of 897,000 and 712,000 tons respectively. Production of iron ore was 3,135,000 tons in July, compared with 3,035,000 tons in June and 2,726,000 tons in July, 1936.

Fiscal receipts in July, 1937, were 4,186 million francs, of which ordinary receipts were 3,891 million francs. This is the most favourable monthly yield since the beginning of the year. Compared with the yield of July, 1936, the improvement has been as follows:—

Increase in Fiscal Receipts
(July, 1937, compared with July, 1936)

Direct taxes	+	37 million francs
Indirect taxes	+	484 ,,
Estate duties	+	1 ,,
	+	522 million francs

Total receipts for the first seven months of the year were 19,680 million francs, compared with 17,817 millions in the same period of 1936. The yield is naturally higher because of the two devaluations and the important rise of prices. The latest figures show, unhappily, a decline of 139 million francs in the yield of the turnover tax, while the increased yield of the indirect taxes is principally due to Customs.

The index of wholesale prices has risen this week from 586 to 589. This was mainly due to the rise in the price of food products from 557 to 572 because of the increased price of wheat. The price of imported goods actually fell from 573 to 568.

Germany

Germany and the Far East

Berlin, September 1.—Developments in the Far East are having a crippling effect on shipping, export and the Bourse. Ships for the Far East have left without a great part of already-booked cargoes, while new freight business is paralysed. Exporters fear, among other unfavourable developments, a new depreciation of Japan's currency. Home-bound freight traffic is stated to be still satisfactory, and tramp tonnage must ultimately profit from the withdrawal of Japanese ships from commercial transport. Nervousness prevails not only about the loss of future export business to China, but also about German claims for past deliveries.

The value of German exports to China has lately risen, and was Rm. 78 millions in the first six months of this year, compared with Rm. 132 millions in the whole of 1936 and Rm. 96 millions in 1935. The former balance against Germany has disappeared: in the first half of this year there was an export surplus in German trade with China of Rm. 36 millions, in the whole of 1936 an export surplus of Rm. 19 millions, and in 1935 an import surplus of Rm. 7 millions. This movement has been associated with the granting of longish credits, though no figures are available of the net liability.

From the commercial viewpoint, as well as from the political, Germany has every interest in the restoration of peace in the Far East. The present *de facto* war has brought her face to face with a political dilemma, which, it seems, cannot be escaped. This expresses itself in a generally impartial attitude towards the immediate Sino-Japanese dispute. In regard to this dispute, the same policy is pursued as in regard to the Abyssinian War while it was in progress. Since its termination Germany has been compelled by her association with Italy to adopt Italy's viewpoint that the Abyssinian war was the healthy, justified, undertaking of a Have-Not. China is a harder problem. An anti-Japanese attitude is, of course, not to be thought of; but, equally, China, where there are commercial opportunities, must not be alienated by pro-Japanese agitation. In addition, the Germans are convinced that Japanese success will not favour European commercial enterprise.

But these grounds for official and Press impartiality are only one facet of opinion. The increasing distrust of Japan in Great Britain and in the United States must automatically tend, it is apprehended, to bring these Powers nearer to Russia. That is what Germany, whose immediate aim is the detachment of London from the Paris-Moscow combination, fears most. In accord with this German interest, the Press sought to minimise Japan's attack on the British Ambassador to China as an unfortunate blunder; and expressed the hope that London would not take the matter too gravely.

At this juncture the Moscow-Nanking non-aggression pact introduced a new and undesirable factor. Owing to the unlucky, and indeed unfounded, if not unreal, Russo-German antagonism, the pact would tend to alienate Germany from China. In consequence, it is asserted that Nanking has made a disastrous mistake, from which only Communism can profit. But if the pact foreshadows increasing Russian support of China against Japan, then in certain conditions it might make also for joint Anglo-American-Russian pressure on Japan, and therefore for the general co-operation of these three Powers. That is what Germans fear.

Reich Financial Policy

Subscription to the Reich Treasury Certificate Loan was opened last week, the banks, as usual, taking up large amounts temporarily for the sake of the interest gain. The circulation of the Gold Discount Bank's promissory notes had fallen to Rm. 700 millions (about half the recent highest) by the last week of August, and the repayments have since continued. Therefore the immediate money market position, in general somewhat strained, has been alleviated. As proof of the increasing ability of the public to subscribe to Reich loans, the Trade Research Institute emphasises the fact that the recent loans were almost entirely offered in the market, whereas earlier loans were in part arranged directly with (in fact imposed on) savings banks, insurance corporations and banks. Of the total Rm. 6,700 millions borrowed for consolidation since early 1935, Rm. 3,900 millions was publicly subscribed.

The *Deutscher Volkswirt* (supposed to voice Dr Schacht) has published a warning article. Owing to short-term borrowing (says the *Volkswirt*) the credit apparatus is strained. By the end of July the currency circulation had, for the first time since the inflation, passed the Rm. 7,000 millions limit. The foreign exchange position is unsatisfactory, and "if the stock of exchange declines, the public will feel it." For defence a certain reserve is indispensable. "Expenditure by public authorities, and, correspondingly, the currency circulation" must be reduced. About the fever of demonstrations and decorative building, the journal asks whether "the heroic aspiration of our age to embody its aims in convincing artistic symbols of stone and iron" can be reconciled with "the expected caution and thrifty reserve."

Favourable Autumn Outlook

The Leipzig Autumn Fair opened favourably, with an instructive show of the new materials; and the industrial outlook is promising. In July the number of industrially employed was 10.2 per cent. higher than in the same month of 1936, and slightly exceeded 7,000,000; but the average time worked declined compared with June—heavily in the consumers' goods trades.

Department stores sales in the first half of the year were nearly 8 per cent. higher than in the same period of 1936. This, being nearly as much as the increase of the total retail turnover, indicates that the Nazi war against department stores is no longer effective.

Ingot steel production in July was 1,656,600 tons, which, per day worked, showed a sharp fall; in the first seven months of 1937 11,202,900 tons were produced, compared with 11,035,500 tons in 1936. In the first half of 1937, exports of pig-iron and semi-products were 7.5 per cent. of the total export, compared with 16 per cent. in the same half of 1936; but joists, bars, and bands were 42.6 per cent. compared with 35.1 per cent., and tubes 16.2 per cent. compared with 13 per cent. The increased exports went exclusively to European countries. Coal output in January-July was 105,179,800 tons, against 88,881,900 tons in 1936, and of lignite 103,067,600 tons against 88,744,300.

Turkey

The Second Five-Year Plan

Istanbul, August 14.—The Government continues to devote its energy to the rapid improvement of the Eastern Provinces, the enforcement of the second industrialisation plan, the increase of Turkish exports, the building of ships in Turkish dockyards and, to no small extent, to the equipment of the Turkish Army with the most modern means of warfare.

The process of carrying civilisation from Western Turkey to Eastern Turkey is perhaps the most remarkable. The new Agrarian Reform Bill, calculated to break up the large landed estates and distribute them among the peasants, is expected to bring about the end of the feudalism still existing in those provinces. Exactly as in Western Turkey, factories, formerly an unknown thing, will contribute to make the east self-supporting and afford employment to several thousands of men. The building, besides, of roads, railways, bridges, hospitals and schools is in full swing.

While the first five-year plan is nearing completion, the second, mainly connected with mining and electricity, is in full development. Power stations producing current at low cost are being erected at various points, and estimates forecast that Istanbul will be induced to purchase her current from Kutahya at about one-half of the present Istanbul cost price.

Shipbuilding is a new aspect of Turkish industrial activities. That one of the first Turkish-built vessels should be a submarine illustrates the active encouragement shipbuilding is sure to receive from Turkey's military-minded leaders. Thus the various boats recently ordered in Germany will not represent a mere means of recuperating Turkish funds blocked in Germany. They are expected to become the nucleus of an up-to-date commercial fleet.

Trade Restrictions Modified

Turkish exports continue to be on the up-grade. During the first five months of the current year they

£71,000,000

H. O. LEACH
(General Manager for Gt. Britain)
2, 3 & 4 Cockspur Street, London, S.W.1

totalled £T 0,145,000, by far the highest figure reached since 1931. Imports, too, rose, but only slightly, reaching a total of £T38,020,000, compared with £T35,724,000 and £T36,533,000 in the same period of the two preceding years. The increase has been mainly in grain, tobacco, rye, canary seeds and barley.

It is this favourable position that has probably encouraged the Turkish Government to modify the regulations governing imports and to discard certain restrictions. All kinds of goods may now, without any restriction, be imported from the United States, Egypt, Syria, Palestine, as well as from all countries whose clearing agreements with Turkey stipulate in favour of the latter a margin of payment in free foreign exchange of not less than 20 per cent. But the readjustment of the tariff has simultaneously provided for a protective wall behind which Turkish existing industries may develop. Although the reform was meant as a tentative step towards the removal of foreign trade obstacles, it has not been concerned with the main difficulty hampering trade, that of payments. Private compensation, considered as a corrective to clearing, means considerable formalities and, on an average, an additional 25 per cent. to the c.i.f. price of imported goods.

National Income and Taxation

Turkish national income per head is steadily increasing. Before the world crisis in 1927-28, it amounted to £T117, and the Bulgarians were the only nation in the Balkans worse off than the Turks. After the catastrophic slump and the remarkable recovery that followed, the Turkish national income per capita last year reached £T82, that is £13 4s. 6d., compared with £T76 in Jugoslavia, where in 1927-28 *per capita* income was £T172.

Of the £T1,336,000,000 (or £215,000,000) making up Turkey's yearly income, some £T435,000,000 are derived from agriculture, £T215,000,000 from industry, £T62,000,000 from immovable property, £T104,000,000 from services, and £T514,000,000 from trade. There has been an increase of about 20 per cent. in income from agriculture and industry since the two previous years. The collection of taxes has been favourably affected by this advance in income. The Government decided to increase the amount of the Budget to £T229,676,000 on the basis of figures for the first eight months of 1936-37, but the receipts for the four subsequent months were so favourable that the total expenditure was raised to £T231,017,776, which figure is 10 per cent. more than in the last Budget. The actual increase in expenditure will amount to £T20,150,000, and of this only £T3,200,000 will be spent on National Defence; the bulk will go to public education, to agricultural reform and similar objects. No additional taxation appears to be contemplated.

Argentina

Foreign Trade in Prosperity

Buenos Aires, August 14. — Argentine exports, although not comparable with the figures attained in the early months of the year, nevertheless continue at a high level. In July they amounted to 1,255,521 tons valued at 155,708,250 pesos, against 1,021,341 tons, valued at 121,136,881 pesos, in the same month last year. During the first seven months of the present year exports were 77.7 per cent. higher in volume than in the same period of 1936, while in value they were up 85.3 per cent. For the purpose of comparison details are given in the following table:—

Exports January to July inclusive, in Pesos

	1936	1937	Increase
Pastoral	364,127,548	452,308,382	88,180,834
Agricultural	439,343,899	1,058,135,978	618,792,079
Forest	20,853,209	28,290,358	7,437,149
Mining	5,449,549	10,310,719	4,861,170
Hunting and Fishing	3,141,605	3,721,796	580,191
Miscellaneous	11,523,838	12,239,556	715,718
Total	844,439,648	1,565,006,789	720,567,141

During the first seven months of this year prices of nearly all products were considerably higher than in the corresponding months of 1936. Wheat was 19.5 per cent. up, maize 34.2, linseed 6.2, unwashed wool 47, washed wool 53.4, and cow-hides 49 per cent. higher.

The rise in imports—a natural consequence of the boom in exports—is now becoming more pronounced. During the first half of 1937 imports were 24.2 per cent. higher than in the same period of 1936 (by market value), while exports were 94.8 per cent. up. The figures for foreign trade during the first half of this year and last year are as follows:—

Year	Imports	Exports	Balance
	(Pesos)		
1936 (first half)	538,940,336	723,302,767	+ 184,362,431
1937 (first half)	669,146,045	1,409,047,103	+ 739,901,058

Iron and steel, machinery and vehicles still record by far the biggest increases among imports. Next come textiles with a rise of 13,203,815 pesos, or 11.3 per cent. over the corresponding figure for the first half of last year. Competition from Great Britain's chief competitors shows signs of increasing. The United States, Italy and Japan have bought more from Argentina than in previous years, and thus feel entitled to some reciprocity Italy is now able to obtain "official" exchange for practically all her exports to Argentina, whereas before Argentine importers of Italian goods were called upon to pay the surcharge of 20 per cent. It is expected that concessions in this respect will be made to Japan in the near future. It is unlikely, however, that any appreciable advantage will be accorded to the United States until that country ratifies the Sanitary Convention with Argentina, which grants concessions for the import of Argentine meat into the United States. British textile exporters are experiencing fierce competition from both Japan and Italy. Japanese prices for cotton-piece goods have recently been reduced by 20 per cent. following the fall in the price of raw cotton. Exporters of Italian woollen cloth are quoting prices which in some cases are as much as 40 per cent. below that of their British rivals, as the result, it is said, of subsidies.

Politics and the Business Outlook

Owing to the Presidential election campaign no parliamentary business is being done. Most of the Senators and Deputies are away in their respective provinces, and Congressional sessions have had to be adjourned owing to lack of a quorum. When the election is over only three weeks will remain before the end of the ordinary sessions which finish on September 30th. It is, therefore, very possible that some important bills, including those for the purchase by the Government of the Córdoba Central and Argentine Transandine Railways, may have to be postponed and extraordinary sessions called later.

As the consequence of the increased movement of crops, receipts of all the British-owned railways are appreciably higher than at this time last year. Since the beginning of the economic revival there has been agitation among the railwaymen for the cancellation of the award of the President of the Republic of 1934 regarding wages. The award, however, can be cancelled only by agreement of the companies as well as of the workers. The two railwaymen's unions, La Fraternidad and La Unión Ferroviaria, have announced that they will call a stoppage of five minutes on all the railways simultaneously at 9.30 a.m. on August 20th, except on the State Railways, the Provincial Railway of Buenos Aires, and the Midland Railway. The unions state that they do not wish to inconvenience the public authorities but only to demonstrate their dissatisfaction at the refusal of the companies to annul the presidential award.

Among evidences of the satisfactory state of Argentine finances is the decision to repatriate the dollar loans of the Municipality of the City of Buenos Aires amounting to 11,737,000 United States dollars.

Prospects for the coming crops are not altogether satisfactory. Complaints of lack of rain have been coming from many parts of the cereal zone for many weeks past. In some parts, and notably in the Provinces of Santa Fé and Córdoba, and in some districts of the Territory of La Pampa a state of semi-drought exists.

Rain fell over a large area a week ago, but was very light in those regions where it was most needed. The next few weeks will be the critical period.

On the whole, the economic outlook of the country is bright. It is true that the present prosperity is largely due to crop failures in other countries—a factor which cannot be counted upon to repeat itself. On the other hand, there is reason to suppose that the high prices of cereals and wool will continue as long as the industrial nations of the world devote extraordinary expenditure to the increase of armaments and preparations for war.

Canada

Mixed Crop Prospects

Ottawa, August 13. — Harvesting is now in full swing in all parts of Canada and is proceeding under very favourable conditions. The latest general crop survey of the Bureau of Statistics reports that the crops in Eastern Canada, in Manitoba and British Columbia are very satisfactory and that the farmers of Ontario are garnering one of the best crops within memory. In Alberta good rains have helped the crops. But in Saskatchewan over a large area the crops are not worth harvesting; and the Bureau reported that the condition of the province's wheat crop at the end of July was at the amazingly low figure of 15 per cent. of the long-period average. It also placed the condition of the whole spring wheat crop on that date at 35 per cent. of the long-period average, which is the lowest figure in thirty years of continuous records.

The feed situation in the prairie country has been materially relieved by the breaking of the drought, but the relief problem for indigent farming families is more serious than ever. The Bureau puts the carry-over of Canadian wheat at the end of the crop year on July 31st at 36,850,700 bushels compared with 127,362,598 and 213,852,118 bushels respectively on the same dates in 1936 and 1935. Since the beginning of August Eastern Canada has been suffering from an unpleasant heat-wave, but business conditions remain quite satisfactory, especially in view of the shortness of the Western wheat crop.

Business Confidence

General business conditions remain satisfactory and, despite the shortage of the western grain crop, there is increasing confidence about the outlook for the autumn and winter. One encouraging factor has been the comparative stabilisation of most commodity prices, and many raw materials are now lower in price than they were in the spring. Three months ago many price lists were carrying the caveat that, owing to unsettled market conditions, they were subject to change without notice, but now the situation permits manufacturers to plan production ahead.

The general economic index of the Bureau of Statistics has fluctuated from week to week; after standing at 112.3 in the week ended July 24th, it fell to 110.1 in the following week, but in the week ended August 7th moved upward again to 111.7. Given below are data of three major components of the index:—

Week ending—	Car-loadings	Wholesale Prices	Bank Clearings	General Index
July 24, 1937	81·78	87·6	103·7	112·3
July 31, 1937	81·77	86·7	93·2	111·1
August 7, 1937	83·62	86·0	99·4	111·7
August 6, 1936	75·36	76·3	99·0	111·5

Retail trade has been comparatively dull in the towns and cities owing to the absence of people on holiday, but it has been very brisk in the summer resorts and has been stimulated by the tourist traffic, which is estimated to be about 15 per cent. heavier than a year ago and likely to bring $300 millions into the Dominion during the year. Despite the recent stability of general prices there has lately been a sharp rise in the prices of some commodities; the price of pigs last week reached the highest point for eleven years and of hides and skins the highest level since 1929.

Business is generally active, but in the industrial world there is considerable anxiety about the labour situation. An epidemic of strikes to secure shorter hours, higher wages and the right of collective bargaining has been spreading. It has chiefly affected textile mills, and strikes of textile workers are in progress at Cornwall and Peterborough in Ontario and at nine plants in Quebec. In Quebec, responsibility for the strike does not lie either with the Committee for Industrial Organisation or the Trades and Labour Congress of Canada, but with the National Catholic Union of Textile Workers, a very conservative organisation, usually well controlled by the priesthood. At various places there have been riots and disorders and all attempts at mediation have failed. But the heavy industries are still busy; the sales of the motor industry are 25 per cent. higher than last year; and the fortunes of the forestry industries are on the upgrade. The increasing use of sulphite pulp in the manufacture of clothing and other goods is responsible for a great expansion of its production in Canada. Not only are certain pulp and paper companies diverting existing plants to its manufacture, but a number of new mills are being erected for this sole purpose. The augmentation of air mail services is also creating a demand for very light paper.

Royal Commission on Canadian Finance

Some divergence of opinion in the Cabinet about the scope of the Royal Commission to investigate the financial and taxation problems of Canada has caused delay in naming its personnel. Some Ministers want it to confine its energies to these special problems, but others hold that its report will be valueless, unless it examines the whole financial and economic working of the structure of Confederation and makes recommendations to be a basis for constitutional reform. It has been decided to restrict the personnel of the committee to three Canadian members. The chairmanship has been accepted by Chief Justice Rowell of Ontario, who combines a high reputation as a lawyer and constitutional expert with long political experience. The other two members will probably be a French-Canadian judge of the Supreme Court and a well-known Western editor.

Egypt

Political Stability

Alexandria, July 30.—The discussion of the Budget has been proceeding for several weeks without any major incident and the political atmosphere is singularly devoid of excitement. Criticism from the Opposition has failed to arouse much general interest. The ratification of the Montreux Convention for the abolition of the Capitulations was opposed by only two members both in the Chamber of Deputies and in the Senate. The plan for the partition of Palestine has been discussed with restraint.

Business activity has not yet recovered from the setback in the early summer but a slightly better tone now prevails on the Stock Exchange. This is due far less to French buying induced by the unpegging of the franc than to enhanced confidence in the local situation. The deliberation in drafting the law about the new taxes and in setting up the necessary administrative organisation is persuading financial circles that the change from the old to the new order of things will take place very slowly.

The negotiations for the abolition of the international Public Debt Commission have not aroused any further

BRITANNIC
ASSURANCE COMPANY LIMITED
(Established 1866)
Annual Income £6,400,000
Funds £28,000,000
All classes of Life, Fire, Accident, Motor and General Insurances transacted
Chief Office: BROAD STREET CORNER, BIRMINGHAM

concern. After a long period of aloofness there is a renewed inclination to invest in Egyptian securities, despite the absence of a large number of investors at this time of the year. Funds are abundant and bank advances on securities exceptionally low.

Record Agricultural Production

The outlook for agriculture is causing some misgivings. With an increase of 15.2 per cent. in acreage, the new cotton crop bids fair to exceed by a large margin the previous one which was the biggest ever picked. Similar conditions have developed in wheat where supply now exceeds domestic consumption by about 12-15 per cent. Tariff protection which aimed during the depression period at securing a fair price for growers and at realising self-sufficiency, has over-reached its object.

A new situation has arisen which has called for the granting of an export bonus. Thus Egyptian agriculture has come to depend on foreign outlets more than at any previous time. Those who are chiefly concerned about the problem of the rapid rise in the population cannot but view with satisfaction this very substantial jump in agricultural production during the last few years.

Foreign trade figures make an excellent showing:—

	1936 (Six months)	1937
	£E	£E
Exports	15,000,591	22,994,822
Imports	15,106,820	17,647,881

As usual, the United Kingdom heads both the export and import lists; but, while British purchases from Egypt, chiefly of cotton, increased from £E4,724,818 to £E6,214,794 in the first five months of 1937, sales of British goods to Egypt fell from £E3,367,360 to £E3,045,586.

The most striking changes were recorded by Japan and Italy. While imports from and exports to Japan amounted to £E903,688 and £E898,717 in the first five months of 1936, the corresponding figures for 1937 were £E648,831 and £E1,894,372.

Italy, on the other hand, has staged a remarkable come-back since sanctions were lifted. Italian exports to Egypt were valued at £E1,171,582 in the January-May period of 1937, against £E66,141 and £E640,630 in the corresponding periods of 1936 and 1935.

Letters to the Editor

What is Capital?

TO THE EDITOR OF THE ECONOMIST

SIR,—In your stimulating Stock Exchange Leader this week you refer to the method of capital valuation required under the original N.D.C., and claim that "the present system of excluding goodwill from 'capital' . . . would be largely inequitable if the Treasury were to employ it for the Exchequer's enrichment." You suggest that "the capital of a business ought to be measured in terms of earning power rather than past expenditure." Now it is undoubtedly true, as you point out, that the price at which a business or part of a business changes hands is determined on the basis of its estimated earning power. It is less certain, however, whether a calculation of capital on this basis is suitable for purposes such as those of the original N.D.C.

One aim of the original N.D.C. plan was to impose a higher rate of taxation of the growth of profits on businesses which were prosperous. The criterion of prosperity was the current rate of profit earned on capital, as defined for purposes of the tax. This may or may not have been a suitable criterion, and the principle may or may not have been equitable, but the fact remains that, if capital had been evaluated on the basis of earning power, the businesses which were prosperous would not have been penalised. All rates of profit earned on capital would have been approximately the same, after allowance had been made for risk and any divergence of expected from current earnings, just as yields on stock exchange securities are approximately the same after these and certain other technical allowances have been made.

The "rate of profit" on capital was also to be used in calculating the chargeable growth of profits, in cases where the taxpayer elected to be charged on the capital standard. If capital had been calculated on the basis of earning power, the "rate of profit" earned by a business on its capital would have corresponded approximately to the general yield to be obtained on money invested in similarly risky enterprises. It is doubtful whether many "rates of profit"—except those earned by companies whose future was very insecure, and whose capital value was therefore very low—would have exceeded 6 per cent., and so doubtful whether the tax would have raised much money!

If the State wishes to tax property passing at death, or to give compensation for property expropriated, it may evaluate the property concerned at its selling price—i.e. on the basis of its earning power. But if it is desired to penalise concerns which earn more than a certain rate of profit, as in the case of public utilities or excess profits duties, it is useless to choose a capital base which increases at roughly the same rate as profits increase, thus keeping the "rate of profit" approximately constant.

Yours faithfully,

G. D. A. MACDOUGALL.

The University, Leeds.

[Our correspondent does not controvert our thesis that the real determinant of capital values is earning power; his contention is rather that a "capital" basis for the original N.D.C. proposals was inherently unsuitable. In practice, however, earning power valuations of capital would be no more uniform than are *actual* yields on Stock Exchange securities. It is only in the dark that all cats are black.—ED. *Econ.*]

Copper Supplies and Prices

TO THE EDITOR OF THE ECONOMIST

SIR,—Referring to your article of August 28th I would point out some supplementary facts. Any proposed change in production takes some months to be effected, and three months may pass before the refineries actually put reduced or increased quantities on the market.

In 1936 monthly production averaged 140,000 tons. By January, 1937, it had risen to nearly 150,000 tons owing to allowances for a bigger output in the last quarter of 1936. Restriction was then abolished, and production rose slowly but steadily; it must have passed the 170,000 ton mark by now and will soon reach 180,000 tons. By the end of the year we will have to reckon with a *pro rata* production of nearly 2¼ million tons.

Consumption went ahead last year, and early in 1937 there was a buying movement which was only stopped by sharply rising prices. Then, we had under-production and stocks began to decrease. The scare in the beginning of this year—aided by over-estimates of the requirements for British re-armaments—made dealers and consumers cover their requirements. The rolling mills were booking orders on a scale not witnessed for years and hurried to cover. Dealers finding they had to wait 3 to 6 months for delivery instead of so many weeks, were forced to order three or four times the usual quantities for fear they might be stranded without adequate stocks. Political uncertainty, fear of devaluation by France and low money rates also made for a demand by the rolling mills for speedy deliveries of copper which would, however, not be needed for months. Refineries could not cope with demand and the quotation for Electro was at times £9 above standard, against a normal difference of £5 to £6.

Since then, however, conditions have changed entirely. Increased quantities have come to the market, stocks are rising and unless some unforeseen circumstances occur which will make consumption increase materially, over-production will force prices down.

Consumption has been rising and may reach its peak in the autumn. No illusions should be entertained about a further large increase of the use of copper in the armament industry. Germany, Italy and Japan have consumed huge quantities for this purpose during the last 4 years and a continuation at the same rate would put too much stress upon their finances which are going from bad to worse.

If prices should drop to a level the big producers consider too low they will not hesitate to put restriction to effect. But it remains an open question where this level will be; some think £50, others £45, or even less. And then it will take as long to reduce the supplies as it took to increase them. Consumers are, on the average, fully covered. Demand is actually slowing down. Taking into consideration the cost price of the leading producers, a drop to £45 or even £40 for standard does not seem improbable.

Rotterdam. p.p. A. KATER.

Books and Publications

America's National Debt

THE growth of the American national debt has been, with reason, one of the aspects of the period of the Roosevelt Administration in the United States to which most publicity has been given. Since 1930, the gross debt of the United States Government has more than doubled, rising from $16,185 millions to $36,425 millions. This has come about because of the policy of financing deficits. This study by the Twentieth Century Fund* of the problems raised by this remarkable increase of State indebtedness is accordingly most opportune.

Despite its enormous increase in the past seven years, the national debt of the United States is not excessive, if we are to judge it by European standards. It should be noted, however, that the comparisons on which the authors of this study base their estimate that the total Government debt was only 17 per cent. of the national wealth of the United States in 1936, compared with 48 per cent. in the United Kingdom and 41 per cent. in France, must be regarded with some scepticism. Nevertheless, in spite of these and similarly reassuring assessments, certain aspects of the recent development of the American national debt appear to contain the seeds of possible difficulties in the not far distant future.

For instance, guided by technical expediency rather than financial wisdom, the American Treasury has elected to carry out the bulk of its new financing at medium term. Consequently, nearly half of the interest bearing debt will have to be refunded during the next five years—a heavy commitment. Moreover, the proportion of Government debt held by the banking system and insurance companies has simultaneously risen from 31 per cent. in 1930 to 62 per cent. last year. Clearly, medium term securities make a greater appeal to the institutional investor than to the private investor.

The authors of this book reach the conclusion that the debt of the United States is not yet a menace to Government credit, but that a policy of substantial retrenchment is essential. This judgment will probably be generally accepted; and, fortunately, it seems reasonably certain that the United States will have achieved a balanced Budget by 1939. It is likely, therefore, that the position will be somewhat easier in the near future. What the size and nature of the American national debt will be at the end of the forties is much less easy to forecast. The compilers of this study—and here they move into the realm of conjecture—attempt to examine the probable position at the end of the next decade. They do so on three alternative assumptions: that the depression of the 1930's will be repeated; that moderate prosperity will be preserved; and, finally, that there will be a return of the prosperity of the 1920's. They conclude that, according to the assumption taken, the national debt of the United States will lie somewhere between $50,000 millions and $20,000 millions. Some reduction from the present level seems to them fairly certain, unless economic disaster or financial catastrophe intervene.

These estimates may or may not be important, though they are undoubtedly most suggestive. What is significant is the fact that all leading countries of the world, including the United Kingdom, which has embarked upon a policy of financing re-armament largely by loan, are now approaching the crest of the trade cycle in a heavily indebted condition. As Mr Henderson pointed out a short time ago, it is with the problem of budgetary equilibrium that we should now be seriously engaged. Future monetary policy will have to take the fullest account of the existence of considerable State indebtedness side by side with greatly increased budgetary expenditure. If the Twentieth Century Fund's little volume can only hammer this point home, it will have served its purpose.

Shorter Notices

"Soviet Understanding." By Richard Terrell. Heinemann. 285 pages. 7s. 6d.

This is an oddly deceptive book, giving in quick succession the semblance of a travel story and a philosophic discourse. Mr. Terrell believes he is a convert to Marxism and has been to Russia. He is anxious to tell us the truth about Soviet life and to show us the real value of Communist theory and practice. But none of us can see Russia straight because of our individual, class and national peculiarities of tradition and outlook. Mr. Terrell sets out to allow for all this and to give us an honest understanding of what clearly arouses in him a perception of goodness and justice in the making. The task is enormous, and for all Mr. Terrell's learning and lucidity his book is ill-constructed and lacks direction. The author has attempted to get down to fundamentals, and although he has not quite succeeded he has written a most interesting book.

"Business Budgets and Budgetary Control." By A. W. Willsmore. Pitman. 241 pages. 10s. 6d.

The first edition of this book, which is unrivalled on this side of the Atlantic, was based upon the experience of an electrical manufacturing concern. This welcome second edition embraces the author's experience of another and opposite type of manufacture. Nevertheless, apart from the addition of a summary of the advantages already realised in British business from the adoption of budgetary control, the work remains substantially unaltered. The objects and scope of budgetary control, budgets for sales, production, expenses and finance, administration and planning are lucidly discussed. A valuable handbook for all business administrators.

MONEY AND BANKING

Argentina's Exchange Problem

THE announcement of the repatriation of the gold previously held in London by the Argentine authorities is evidence of steady improvement in the economic condition of the Republic. As long ago as last December the recovery in Argentina's export trade and the resulting abundant supply of export bills induced the Argentine Government to reduce the selling rate of exchange in the " official " market from 17 to 16 pesos to the pound. As there was no change in the official buying rate of exchange of 15 pesos to the pound—at which practically all export bills are bought by the Exchange Control—the Government's profit was reduced from two pesos to one peso on each pound's worth of exchange sold or on its equivalent in other foreign currencies. The reduction in the official selling rate was, of course, advantageous to importers and other remitters, including the British-owned railway companies. The Central Bank charges a commission of ¾ per cent. on all sales of official exchange, which brings the effective selling rate up to 16.12 pesos to the pound. Occasionally, the " free " rate of exchange has hovered around the official rate, but it is now 16.53 pesos to the pound.

Following the events of December last, rumours have persisted in Buenos Aires that the official selling rate is to be further reduced, and this has naturally resulted in an occasional appreciation in the " free " market rate. An air of expectancy is not surprising in view of the extraordinarily high level attained by Argentina's export trade during the earlier months of 1937. Despite the decline which set in in the second quarter of the current year, Argentina's total exports for the period from January to June, 1937, reached the spectacular figure of 1,409 million pesos, against only 723 millions in the first half of 1936. Imports also expanded, but are still below the level of the years preceding the crisis. The visible export surplus for the first half of this year, consequently, was nearly 740 million pesos (say, £46 millions sterling), which not only constitutes a six-months' record, but exceeds all earlier twelve-months' figures except those of 1919, which showed a surplus of nearly 853 million pesos.

The Argentine Minister of Finance, in his recent annual report, stated that the exchange profits fund was created at a time of grave emergency following the disastrous fall in agricultural prices towards the end of 1933. Fortunately, however, subsequent improvement had made it unnecessary to utilise the fund, except to a small extent, for the maintenance of guaranteed grain prices. Meanwhile the fund had been invested in gold and foreign exchange, and its existence had rendered possible the pursuit of a beneficial monetary policy without endangering the liquidity of the national position. The report revealed that the total profits accruing from the introduction of the present exchange control system on November 28, 1933, to the end of 1936, were 325.7 million pesos. Payments from the profits fund during the period aggregated 133.4 million pesos, including: (1) expenses of the Exchange Control Fund, 525,400 pesos; (2) sums distributed to the various produce " Regulating Boards," 17.7 million pesos; and (3) exchange losses on Government remittances, 115.19 million pesos. Of the last sum, a total of 85.06 million pesos was due to remittances for the public debt services, 19.08 millions were for armaments, 3.45 millions for expenses of diplomatic and consular officials abroad, and 7.6 million pesos for other remittances. Deducting these expenses, there remained at the end of the year 1936 an unused balance of 192.3 million pesos. This was almost wholly invested for the time being in gold and foreign exchange, but was ultimately destined to be applied towards the redemption of dollar loans from the United States, the payment of a subsidy to meat exporters, and the making of a contribution to the cost of erecting grain elevators.

The Argentine Government has lately been faced with the new problems created by the enormous favourable balance of trade, the rise in commodity prices and the influx of foreign capital. To reduce the risks entailed by these factors, the Government has purchased large amounts of gold and foreign exchange. For this purpose it has drawn on the profits derived from exchange control, on the proceeds of Consolidated Treasury Bonds, and on the banks' excess funds, which have been handed over to the Central Bank for short-term investment in gold and foreign currencies. These investments by the Government have created a strong monetary reserve which has already facilitated the repatriation of high-interest-bearing American dollar loans. By these measures, an undue expansion of credit was also avoided. Indeed, the cash resources of the banks at the end of 1936 were 6.7 per cent. less than at the end of 1935, while these loans rose, during that period, by only 5.4 per cent.

The extent of the repatriation of the foreign debt of Argentina (including that of Provinces and Municipalities) is governed by the capacity of the local money market for absorbing internal loans, but considerable amounts have, in point of fact, been recently subscribed. The Municipality of Buenos Aires is now paying off its entire dollar debt of some U.S.$11.6 millions instead of issuing a conversion loan in New York. To cover this repayment the Argentine Government is supplying the necessary foreign exchange at the official rate. The exchange plethora may also be used to a considerable extent for the purchase within Argentina of properties now under English or American ownership. For example, proposals have been made for the purchase of the Cordoba Central Railway, the Argentine Transandine Railway, and the Standard Oil interests in Argentina. For the moment, however, all these proposals, with others of more immediate urgency (including measures for rationalising the working of the British-owned railway companies) are held up in Congress, pending the Presidential elections.

Under existing law the reserves of the Argentine Central Bank in foreign currencies may not exceed 20 per cent. of the gold reserves. If the supply of foreign exchange continued to be at a superabundant level, the only alternative remaining to Argentina would be to import gold or to earmark gold abroad. The balance sheet of the Central Bank does not separately show the amount of foreign exchange held abroad, which is included under the heading: " Gold Abroad and Foreign Exchange." This item has shown relatively large fluctuations. At the end of last December it was 303,247,199 pesos; at the end of May, 1937, it had fallen to 261,715,656 pesos; at the end of June it had risen to 343,537,755 pesos; and on July 15th it was 328,475,202 pesos (say, £21,900,000). Gold held at home, according to the balance sheet of the Central Bank, has remained unchanged at 1,224,417,646 pesos (equivalent to over £81 millions).

The decision to repatriate Argentine gold deposited with the Bank of England in London will, presumably, be reflected in the Central Bank's accounts, in an increase in the item representing gold held at home, and a corresponding decrease in the item " Gold Abroad and Foreign Exchange." The total gold holding, however, will be unchanged, and Argentina's note circulation will not be affected. The removal of the gold will have no effect on the London money market. The gold is understood to have accumulated partly from shipments made to London before 1933, and partly from funds which have subsequently accrued to Argentina in this country. At the current price, the gold is equivalent to over £13 millions sterling, and it obviously accounts for more than 50 per cent. of the " Gold Abroad and Foreign Exchange " held by the Central Bank. Its repatriation of the gold is ascribed to the fact that the redemption of a significant part of Argentina's external debt has obviated the necessity for the maintenance of large gold reserves abroad. Possibly the disturbed European situation may also have influenced the decision; certainly, it has been a factor in the large influx of private foreign capital into Argentina in recent months.

Argentine Government revenue from exchange profits during 1937 is expected to reach only 50 million pesos, owing to the reduction in December last of the margin between the official buying and selling rates of exchange. Congressional permission is required to utilise exchange profits for purposes other than those already specifically allowed. In view of the present size of the exchange profits fund, however, there appears *prima facie* little reason why the official selling rate should not be further reduced. The alternative of a reduction in the official buying rate below 15 pesos would present certain technical difficulties—the foreign currency holdings of the Central Bank, for example, are probably based on this rate. The authorities, however, are well aware that the prosperity of Argentina depends to a large degree on the present heavy demand and high prices offered for grains. In a depression, prices might well fall abruptly, and the building up of impregnable exchange reserves may therefore be a primary official consideration. Argentina's export prosperity can hardly continue indefinitely at its present level; she has shipped, indeed, practically the equivalent of two crops within a single year. Exports are now slowing down rapidly from the record-breaking totals of the early months of the year. Wheat shipments in July, for example, were only 92,836 tons, compared with a monthly average of 850,000 tons in the first quarter of 1937. The export surplus in June fell to 31 million pesos, against 71 million pesos in May and 185 million pesos in February. Further, the prolonged drought has held up ploughing for the next harvest, and there is little doubt that the volume of this year's wheat harvest will be appreciably below that of last year.

All things considered, therefore, Argentina may well be inclined, as a matter of precaution, to abstain from reducing either the official buying or selling rates of exchange in the immediate future. An additional motive in favour of delay is that the improved purchasing power of Argentina is now making itself felt. Imports in June were 122 million pesos, against 108 million pesos in May. A continuation of that tendency would automatically absorb a great part of Argentina's present exchange surplus.

Financial Notes

Insurance and War Risks.—In Notes on this page of the last two issues of *The Economist* changes in marine insurance rates in the Far East and the Mediterranean have been recorded. The past week has now seen further developments, less important but still indicative of the gradual deterioration of the situation. The Mutual Insurance Association has exercised its power to cancel the war risk clauses for ships going to Shanghai or any other port on the Yangtze. This means that the deviation of ships from that destination will have no effect upon the insurance policies already in force; if the clause had not been cancelled the cautious shipowner who redirected his ship to, say, Hongkong would have suffered the loss of his cover. Insurer and insured therefore both gain. At the same time, Korea and Formosa have been added to the list of places to which the Eastern schedule of war risk rates applies, but some minor revisions later reflect a lessened fear of attack on vessels away from the immediate area of war. Ships containing arms are left for special treatment. A change has also been made in the rates on cargo in passenger liners and cargo liners in the Western Mediterranean which brings the two into equality by raising the first and reducing the latter. This last move was made rather to meet the criticism of the cargo liner owners, who were encountering greater competition from the passenger liners, than because of any fear of attacks on passenger vessels. Indeed, Gibraltar and Tangier are now excluded from the danger zone, though it remains to be seen whether the attack on H.M.S. " Havock " will lead to another stepping up of rates.

A Banking Centenary in Australia.—Exactly a hundred years ago a director of a small Tasmanian bank proceeded to London to raise fresh capital. He succeeded in doing so, and on September 1, 1837, the prospectus was issued of the Union Bank of Australia. Since then the bank has made steady progress in Australia and New Zealand, and has kept pace with current developments first in the field of gold-mining and later in the production of wool, meat and wheat. It survived the collapse of 1893, and like the other Australian banks weathered the world depression of recent years. To-day it is one of the chief Australian banks. Its authorised capital, which a century ago was a mere £500,000, has now risen to £12 millions, and it carries deposits of approximately £35 millions. The London office still preserves a circular letter to branch managers, written in the early 'forties and laying down the principles of banking to be followed in the Colonies, and while Australia and New Zealand have since grown into Dominions and have developed in a way which could hardly have been then foreseen, the bank says that these principles still hold good to-day. This may be the secret of the bank's successful growth, but all will congratulate it upon the state of robust health in which it finds itself upon its hundredth birthday.

* * *

An Australian Banking View.—Mr Ashton's address to the shareholders of the Commercial Banking Company of Sydney, at the meeting held in Sydney on August 10th, contained several points of interest. Much of his speech was devoted to a review of the present upward trend of Australian trade and banking, with special reference to the importance of wool, wheat, meat and dairy produce, but at the end of his speech Mr Ashton referred to the recent report of the Banking Commission. One point made by him here calls for some comment. He cited the passage in the report stating that where a difference of opinion develops between the Commonwealth Bank and the Government, the latter's view should prevail, and he added that between this and nationalisation there would appear to be but a thin line. This raises the whole question of the relative functions of a Government and a central bank. Broadly speaking, the Government alone is responsible for financial and monetary policy. The central bank's duty is to act as the Government's banker, to execute the details of the Government's policy and to render technical advice to the Government upon matters within its province. If the Government chooses to reject that advice, it is entitled to do so, and in a democratic country the remedy lies with the electorate. A Government which interfered with matters of central banking routine would undoubtedly be exceeding its proper functions, but a Government which gave way on matters of policy would equally be failing in its duty, and in point of fact no central bank would think of going further than giving advice. If this demarcation of function is understood, there is no inconsistency in this passage in the Australian Banking Commission's report, nor is there any need to fear that this passage opens the door to nationalisation

American Bank Rate.—On August 26th the New York Federal Reserve Bank reduced its re-discount rate from 1½ to 1 per cent., an all-time world record low level. This action had been expected after previous reductions of their rates to 1½ per cent. by the Chicago, Atlanta and Minneapolis Reserve Banks. It is suggested that the main reason for the alteration is that the Government wishes to buttress the market for its own securities, which have been sold recently by the banks, whose commercial loans and reserve requirements have increased. But it is doubtful if the member banks will be persuaded to secure cash by re-discounting with the Federal Reserve Bank instead of selling securities. The re-discount rate is still high compared with the yield of short-term governments, and in any case, one of the principal links in the credit control of the American system is the dislike of the member banks to be in debt to the Federal Reserve. It does not seem reasonable to suppose that this reduction in rate is to be taken as a sign that the Administration has decided to preserve cheap borrowing for itself at the cost of discarding its recent restraints on credit expansion. Up to now the Reserve System has been concerned to increase reserve requirements, diminish surplus reserves and throttle the inflow of foreign money, in order to prevent an inflationary growth of credit. These measures were adopted at a time when American recovery was progressing rapidly. But in recent months revival has been much more sober, and the stock market and banking worlds have been persistently gloomy. It may be that the Federal Reserve Board has decided to encourage further reasonable expansion by reducing reserve rates, just as Alice attempted to control her own size by nibbling first a piece of the expanding and then of the contracting mushroom. It is to be hoped that the Reserve Board will avoid some of the consequences which Alice found so unpleasant.

★ ★ ★

The Money Market.—Money has been more usable once again this week, and, as is explained in the Note below, September 1st dividend payments have replenished bankers' deposits. The market was fortunate in receiving a much larger allotment of 62 per cent. at last week's tender, despite a slight reduction in the rate, and they were in consequence fairly ready sellers of October-November bills.

	Aug. 12, 1937	Aug. 19, 1937	Aug. 26, 1937	Sept. 2, 1937
	%	%	%	%
Bank rate	2	2	2	2
Clearing banks' deposit rate	½	½	½	½
Short loan rate :—				
Clearing banks	½–½–1*	½–½–1*	½–½–1*	½–¾–1*
Others	½–½	½–⅝	½–⅝	½–⅝
Discount rates :—				
Treasury bills	½	½	½	½
Three months' bank bills	17/32–9/16	17/32–9/16	17/32–9/16	17/32–9/16

* Loans against Treasury bills and other approved bills and British Government securities within six months of maturity; 1 per cent. Treasury Bonds and other gilt-edged stocks within six months of maturity; and other collateral respectively.

The rates shown in the table above have now been unchanged since July 6th.

★ ★ ★

The Foreign Exchanges.—Interest this week has centred upon movements in the dollar. At one point last week, under the pressure of Japanese sales, the exchange moved to $4.99½. At the end of the week it was back to under $4.97, but the bombing of the American liner at Shanghai caused a momentary recession to $4.97⅜, which in turn was followed by a further improvement to $4.96½. The main explanation of this sharp movement is, of course, the commercial demand usual at this season, though the reduction of the New York bank rate, the cessation of Far Eastern sales of dollars, and the tension in Europe have all contributed. The Control has been operating, and forward dollars for long dates are bid. The crisis in Brussels gave rise to some transfer of funds to New York, and at one point the premium on three months' dollars was 2 cents above par. This flurry did not last long. Francs have been kept steady throughout the week, though they came on offer when the Bank of France's return showed that the Government had borrowed Frs. 1,400 millions, and the Bank rate was reduced to 3½ per cent. Other rates have moved in sympathy with the dollar,

★ ★ ★

The Bank Return.—Currency requirements for the end of the month have checked the fall in the note circulation, which this week has risen by £2.0 millions. The Reserve is, in consequence, reduced by the same amount.

BANK OF ENGLAND

	Sept.2, 1936	Aug.11, 1937	Aug.18, 1937	Aug.25, 1937	Sept.1, 1937
Issue Department :—	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Gold	245·4	326·4	326·4	326·4	326·4
Note circulation	445·8	497·9	491·0	488·3	490·3
Banking Department :—					
Reserve	60·7	29·8	36·8	39·6	37·6
Public deposits	18·1	19·0	28·5	25·4	14·1
Bankers' deposits	101·1	93·6	88·5	92·8	104·2
Other deposits	38·8	36·4	36·5	36·0	36·5
Government securities	85·7	111·1	107·1	108·8	109·3
Discounts and advances	10·6	5·9	6·2	4·3	5·4
Other securities	19·1	20·3	21·6	19·6	20·8
Proportion	*38·4%*	*19·9%*	*23·9%*	*25·6%*	*24·3%*

In the banking department, a slight increase in earning assets off-sets the reduction in the Reserve. Government dividend payments on September 1st explain the transfer of about £11 millions from public to bankers' deposits.

Irish Banks' Returns.—The returns for the banks operating in the Irish Free State for the June quarter, published by the Currency Commission, are as follows:—

(£ thousands)

	June quarter 1936	March quarter 1937	June quarter, 1937		
			In I.F.S.	Elsewhere	Total
LIABILITIES :					
Capital, reserves, etc.	17,235	17,338	10,204	7,159	17,363
Notes in circulation	8,855	8,769	5,120	3,846	8,966
Current, deposit and other accounts	164,474	165,132	119,221	45,025	164,246
Other liabilities	5,928	5,232	3,238	2,631	5,869
Total	196,492	196,471	137,784	58,661	196,445
ASSETS :					
Cash and balances with London agents and other banks	14,518	12,470	5,375	7,576	12,951
Money at call and short notice	10,604	10,230	7	10,565	10,572
Bills	6,403	6,346	5,465	1,350	6,815
Loans and advances	67,849	69,047	45,316	24,324	69,640
Investments—					
(a) Government	79,605	80,086	3,580	74,159	77,719
(b) Other	9,679	10,622	3,680	7,076	10,756
Other assets	7,834	7,667	3,317	4,673	7,990
Total	196,492	196,471	66,721	129,725	196,445
Excess of assets outside I.F.S. over liabilities outside I.F.S.	72,366	72,596	...	71,064	...

The slight reduction in deposits suggests that savings are being drawn upon by the rural community, which is still suffering from considerable agricultural depression. This suggestion is borne out by the fact that the withdrawals are mostly from the country branches of the banks, while urban current accounts are increasing. The increase in the amount of loans and advances reflects the growing demand by borrowers stimulated by rising prices. Investments and cash have been slightly depleted to provide for the increased advances. The decline in the net sterling assets of the Free State banks reflects the growing adverse balance of payments, which is the result of the failure of exports to keep pace with the increase in the volume and value of imports. The total monetary circulation has increased from £15,211,342 in June, 1936, to £16,151,537 in June this year.

1837 Centenary 1937
of
The Union Bank of Australia Limited

One hundred years ago (1st Sept. 1837) saw the birth of The Union Bank of Australia Limited.

In 1837 Mr Philip Oakden, a Pioneer and a Director of the Tamar Bank in Launceston, Tasmania (then Van Diemen's Land), realising that this small Organisation could not hope to compete successfully with its rivals, proceeded to London to raise further Capital. In this he succeeded with the result that out of the ashes of the Tamar Bank, The Union Bank of Australia Limited arose.

The initial Authorised Capital was £500,000, and the Prospectus dated 1st September 1837 contained the following passage :—

> The Directors are fully persuaded that in no part of the World can Capital be more securely and advantageously employed.

A study of the progress of Australia and New Zealand from that date makes it quite clear that the optimism of the Original Directors was amply justified.

Since then these great Countries have attained the Status of Commonwealth and Dominion respectively, and it is interesting to reflect how closely the conduct of Australasian Banking Institutions has been associated with and assisted the prodigious growth of these territories.

The history of The Union Bank of Australia Limited provides romantic reading, from the description of its first Branch in Van Diemen's Land to the development of its present establishment of some 250 Branches and Agencies. One can follow the spirit of the pioneer in the rapid establishment of the Bank in Victoria in 1838 and in New South Wales in the following year.

In 1840, when British Sovereignty was proclaimed in New Zealand, the Bank's activities were extended to that Colony, which recalls the fact that The Union Bank of Australia Limited was the first of the existing Banking Institutions to operate in New Zealand.

The settlement of New Zealand was not altogether peaceful on account of the spirited opposition of the Maoris, and the difficulties experienced by Managers in establishing Branches there are shown by the following extract from the Auckland Manager's letter on his arrival :—

> I apprehend I shall have some difficulty in getting a house for the Bank as General Pitt and his Staff have just arrived and have taken every house that could be had.

Meanwhile the establishment of the Bank in New Zealand and the steady progress thereof in Victoria and New South Wales, called for further Capital, and this was increased in June 1840 to £800,000 and two years later it stood at £1,000,000.

A Circular letter from the London Board to Branch Managers at this time setting out the principles of banking to be followed in the Colonies, is preserved at the London Office of the Bank, and it says much for the soundness of banking practice as initiated by our forebears that the principles therein laid down are equally applicable to-day.

In 1850 operations were extended to South Australia where, for many years, the Bank had been in friendly relationship with the South Australia Company. Later on the Bank of South Australia was absorbed. In 1858 the first Branch was opened in Queensland, a newer Colony which was then attracting Settlers.

The penetration of the interior by Explorers, Pioneers and Settlers had been gradually proceeding and the foundation of the great pastoral and agricultural industries laid. It was the discovery of gold, however, in the fifties which brought large numbers of immigrants into Victoria and New South Wales. Branches of the Bank were established inland to meet the requirements of these developments. When the gold boom subsided, many of those who found themselves out of employment turned to wool, meat and wheat and so gave an impetus to the primary industries on which Australia's prosperity chiefly depends. The Bank followed these changes rapidly, providing the services as they were required and expanding its representation accordingly. During this period, within the space of three years the Bank's deposits rose from £700,000 to £3,700,000.

In 1878 there was expansion Westwards; Western Australia was then a young undeveloped Crown Colony, but that year saw The Union Bank established at Perth.

The Colony rapidly developed following the discovery of gold at Coolgardie, and Branches were opened in quick succession to meet the needs of the new Communities in the interior. An interesting and significant record of the Kalgoorlie Branch of the Bank is that it has handled no less than 11,000,000 ounces of gold since it was opened.

During the present Century the primary industries of wool, meat and wheat and dairy produce, the chief sources of wealth, have forged ahead and have been accompanied in more recent years by the recrudescence of the Gold Mining Industry and by the development of secondary industries in the big centres of population on the Coast. The Union Bank keeps constant pace with this expansion and with the services required of it, as may be illustrated by the provision of 14 new Branches during the past 18 months.

Thus down to the present day the Bank's records present a striking picture of the growth of Australia and New Zealand, but it would be idle to suggest that this period has been unhampered by difficult times, and one has only to recall the great land slump of 1893 when The Union Bank was happily one of those to weather the storm.

The World depression of recent years is too fresh in our memories to call for comment, but once again the Commonwealth and Dominion, aided by their Banks, have risen superior to misfortune, and can point proudly to an achievement of recovery which is founded on a solid basis.

A study of the Bank's history and figures over 100 years leaves one with the impression of sound management and of service to the community.

The Union Bank of Australia Limited

Established 1837

THE STOCK EXCHANGE

American Investment Trusts

EIGHTEEN months ago, *The Economist* reviewed the experience of American investment trusts from their relatively recent birth in the late 'twenties to the end of 1935. We then expressed the opinion that results during the six-year period 1930-35 were only moderately favourable to the managements, whether performance were judged by asset value or by income. We pointed out that one of the most important characteristics of an American investment trust was the degree of its gearing, because of the latter's direct bearing upon the break-up value, and hence the market valuation, of the common stock. At the end of 1935 stocks with a low gearing ratio stood at a discount on net asset value, while stocks with a high gearing ratio frequently stood at a premium, in the expectation that a further improvement in asset value during 1936 would bring its reward.

The experience of the last eighteen months has been peculiar, and at first sight extremely favourable for the investment trusts. At the top of a bull market, in which it would have been almost impossible for investment trust managements to go far wrong, the flow of dividends was stimulated by the Administration's tax on undistributed corporate profits. It was almost unavoidable that trust assets should increase in value.

The magnitude of the increase for a number of prominent trusts is indicated in Table I, at the foot of this page. The table classifies twenty-two trusts in the three general groups which cover the field. The largest of these groups includes the investment trusts of the " geared " type, with either bonds or preferred stock or both outstanding in the hands of the public. The second, and smallest group, are the non-geared companies, with only common shares outstanding. And the third classification includes the " mutual funds," similar in capital structure to the non-leverage type except that the market price of their ordinary shares is pegged to their asset value by an agreement on the part of each respective company to repurchase the shares from holders at a price based upon the current market price of the underlying portfolio. The funds of trusts in the last group are invested in a stated but varying list of securities, and the whole income is automatically distributed. The " mutual funds " are growing in importance as a result of special treatment afforded to them under the law imposing taxes on inter-company dividends.

The table shows the change in net assets of the companies over the seven years to December 31, 1936, and the single year, 1936. The changes in net assets have in every case been adjusted to allow for interest and dividends paid and for capital readjustments such as the retirement or flotation of securities. In the same table are shown the Dow Jones indices of the prices of seventy stocks and forty bonds, which have been arbitrarily adjusted for income at the rate of 3 per cent. per annum.
