

THE ECONOMIST

"Were all nations to follow the liberal system of free exportation and free importation, the different States into which a great continent was divided would so far resemble the different provinces of a great Empire. As among the different provinces of a great Empire the freedom of the inland trade appears, both from reason and experience, not only the best palliative of a dearth, but the most effectual preventative of a famine, so would the freedom of the exportation and importation trade be among the different States into which a great continent was divided."—ADAM SMITH.

National Health

THE National Health Campaign, which was inaugurated by a speech by the PRIME MINISTER on Thursday evening, is a novelty in British politics. This is not, of course, the first time that the State has concerned itself with health matters; on the contrary, the first great Public Health Act is more than sixty years old. But Disraeli's contemporary motto of *Sanitas, sanitas, omnia sanitas* shows how greatly the conception of public health has changed since then. The victories of sanitation are mostly won, and the present campaign registers the new concern of the State not merely with the prevention of disease but with the active promotion of good health.

The campaign has received and deserved a general welcome. There have been cynics who have objected that this sudden concern with bodily fitness is of military origin. The imputation is probably false; but even if it were not the campaign would deserve support. A healthier potential soldier for the future is also a healthier citizen in the present. And, in any case, whatever the origin of the enthusiasm, the new campaign needs a general interest and approval if it is to be prevented from falling too completely into the hands of the drill sergeant.

The specific objectives of the campaign are twofold: to encourage the general public to make full use of the various health services which the central and local authorities provide; and to give an initial impetus to the physical fitness movement inaugurated by last year's Physical Training and Recreation Act. Both these are excellent objectives. Physical fitness has never been so much of a gospel for the people at large as for the

highest layer of British society. The ordinary working people probably have fewer opportunities of muscular exercise here than in many other countries. It is also true that excellent public health services are not adequately used by those for whom they are intended. Various reasons can be given for this. In part it is, no doubt, due to the Englishman's invincible dislike of submitting his private concerns to official inspection. In part it is due to the traces of the old Poor Law stigma which still cling to many of the services taken over by the county councils eight years ago; in wide circles of the British public it is still something of a disgrace to go to hospital. In part it is due to a certain apathy which follows the success of public health policies. Thus, smallpox has virtually been stamped out and, perhaps as a result, less than half of the babies now born are vaccinated. But, in the main, the failure adequately to use the health service is due to mere ignorance, and an educative campaign can hardly fail to do good.

While we praise the Government's campaign, however, we may be allowed to ask why it should not be given a much wider scope. National health embraces many things besides free medicine and physical jerks. Relatively to their wealth the English have not, at least in the past two centuries, been an outstandingly healthy people. This is partly due, no doubt, to the accident that we had our great growth in population, in industry and in urban agglomeration at a period when notions of housing and sanitation were rudimentary and conditions of labour were barbaric. It is significant that rickets, pre-eminently a disease of poor living conditions, is known in Germany, a much poorer country, to this day

as *die englische Krankheit*. Many people have not forgotten the shock of discovering, when, during the war, virtually the whole adult male population passed under medical review, that (in the words of an official report) "of every nine men of military age in Great Britain on the average, three were perfectly fit and healthy; two were on a definitely infirm plane of health and strength, whether from some disability or some failure in development; three were incapable of undergoing more than a very moderate degree of physical exertion, and could almost (in view of their age) be described with justice as physical wrecks; and the remaining man was a chronic invalid with a precarious hold on life."

That was twenty years ago, and there has certainly been some improvement in the intervening period. Indeed, some of the vital statistics make encouraging reading. The death rate from the majority of specific diseases has been very substantially reduced. In comparison with the 1870's, smallpox and typhus have been completely and enteric fever almost completely stamped out. The fatal incidence of measles is less than a tenth, of scarlet fever only a fiftieth, of respiratory tuberculosis less than a third of the figures of sixty years ago. Perhaps the outstanding achievement is the reduction in infantile mortality of all varieties from over 150 to less than 60 per thousand live births. The rate has been halved in the last twenty-five years.

These are the triumphs of public health. But it has its failures. The rate of maternal mortality has risen and is rising. In part this is due to the fact that, with smaller families, a higher proportion of pregnancies are the dangerous first pregnancies. But the variations between districts show only too clearly that universal and adequate provision for pre-natal and post-natal care would substantially lower the number of deaths. The other black spot is cancer, the crude mortality from which has almost doubled since the beginning of the century. Here again there are explanations—rising average age and greater frequency of diagnosis—but they cannot explain away the increase. Tuberculosis, though its incidence has been reduced, is still far more prevalent than the state of medical knowledge would justify. And the group of rheumatic diseases is still perhaps the greatest single enemy of the comfort of the poor.

Obviously there is room for very great improvement

in the national health. And equally obviously the current National Health Campaign, though it will help, is far from being a direct assault along the whole front of national ill-health. Such a complete offensive would have a number of separate avenues of attack. There is, of course, first of all the overriding twin problem of improving the accepted standards of housing and nutrition. But apart from these familiar immensities, there is much that could be done. General instruction and propaganda on healthy ways of living (in a wider sense than physical exercise), such as are given on a large scale by certain American life insurance companies, would be of immense value to a public which is left without guidance in a forest of interested counsel and stenorian patent-medicine advertising. Perhaps the Government's Advisory Council could turn its attention to this. A much wider, but no less desirable, reform would be the gradual development of National Health Insurance from a mainly curative to a mainly preventive service, through the wide encouragement of frequent health examinations. These are all things that the public could be educated to do, as they are being educated in other countries. But the medical profession might also with advantage overhaul some of the details of its organisation. Is the prevailing system of general-practitioner-cum-specialist, both dependent on patients' fees, ideal from either a curative or a preventive point of view? Is our traditional hospital system as efficient as the systems of other countries? A comprehensive official inquiry into the nursing profession has been announced within the last few days; it might usefully be supplemented by parallel inquiries into other aspects of medical organisation.

This is but the merest outline of what a really comprehensive National Health Campaign might embrace, but it is enough to fire the imagination. Moreover, such a campaign has the great advantage over almost all other proposals for social betterment that it need not be costly of public money. What is needed is the State's organising power, not its taxing capacity. There are, indeed, on this purely utilitarian basis, few regions of State endeavour where the ratio of profit would be higher. Let us therefore be ready to rejoice that a beginning is being made; let us be ready to rejoice even more if it proves to be only a beginning.

Dies Irae

DAY after day Japanese aircraft have been dropping high explosive on crowded, open and largely defenceless Chinese cities. At this moment, thousands of Chinese men, women and children are being killed or maimed by Japanese air power against which they are as defenceless as they are unoffending. According to a Shanghai estimate, the death-roll of civilians caused by these bombings reached nearly eight thousand in ten days. Contemptuous of their country's good name the Japanese war-lords are devoting themselves to mass murder.

The horror with which these events have been greeted all over the world itself affords the only relief from what would otherwise be complete despair for the immediate future of human society. The annihilation of distance, which makes it technically possible for the Japanese to bomb Chinese civilians hundreds of miles behind the front, also makes it impossible for the rest of the world to remain indifferent to these dark deeds in the Far East. We are all, very rightly, afraid of the terror by night and of the arrow that flieth by day; and when we see a thousand fall at our side and ten thousand at our right

hand, we have all too little confidence that it shall not come nigh ourselves.

Indignation has been spontaneous and universal. Every one of the six Great Powers has protested to Tokyo. In the free countries the temper of popular opinion is rising. And at Geneva the Assembly of the League of Nations has unanimously adopted a resolution which "solemnly condemns" the "aerial bombardment of open towns in China by Japanese aircraft" and declares that the bombardments "have aroused horror and indignation throughout the world."

If the flame of indignation is to prevail against the blackness of this murderous iniquity, words must be backed with action. And where action is concerned, everything remains to be done. There is, of course, no need to prove that the Japanese are breaking either the existing law of nations or the common conventions of humanity. In the words of the American Government declaration, "any general bombing of an extensive area wherein there resides a large populace engaged in peaceful pursuits is unwarranted and contrary to the principles of law and humanity." The breach is flagrant.

At the same time, we have to face the fact that the law as it stands—and, *a fortiori*, the technical and political and social presuppositions of the law—are legacies from an age in which the conditions of warfare were totally different from what they are to-day.

Our present laws of war are the product of an eighteenth-century reaction against the barbarities of seventeenth-century warfare, and they are based on a theory which corresponds to eighteenth-century rather than present-day facts. The theory was that war was a conflict between Governments and not between peoples; while the liabilities of belligerent Governments were unlimited (a defeated State might forfeit its very existence), those of human beings were not, except in so far as individuals deliberately identified themselves with Governments by putting on military uniform and taking part in regular hostilities. On this theory, the civilian population's liability to war damage was limited, incidental and regrettable. Since gladiators could not fight without an arena, it was inevitable that, even in "civilised warfare," crops should be trampled, houses knocked down and non-combatants occasionally hit by shots aimed at combatants; and of course "the sport of kings" had ultimately to be paid for out of their subjects' purses. But beyond this, non-combatants had a right to be exempt from being victimised. Now, what has happened since this theory was first put into practice some 250 years ago? Latterly, the distinction between Government and people and between combatants and non-combatants, on which the theory rests, has been rapidly breaking down. The "limited warfare" of the eighteenth century has been giving place to a "total warfare" in which our progress in the art of organisation has made everybody a virtual combatant, while our progress in technique has made everybody a potential target. The facts of war have changed beyond recognition; the laws of war remain as they were. Is it possible to revise these laws in a way which will enable us to keep up the practice of "civilised warfare" under the new social and technical conditions? If not, we are now faced with the choice of abolishing the institution of war altogether or else reverting to an indiscriminately barbarous warfare which, under "post-civilised" conditions, may be suicide.

The art of flying was in its infancy when the Great War of 1914-18 overtook us. What have we done since then to define and limit the use of the air arm by contractual agreement between Governments? The answer is astonishing. Though we have now had nearly nineteen years' grace since the Armistice of 1918, the first actual step towards legislating for the conduct of war in the air was taken at Nyon the other day, when it was agreed that, for the strictly local and temporary purposes of the Mediterranean Patrol, the rules for the conduct of submarines towards merchant ships which had been embodied in the London naval treaty of 1930 should be extended to aeroplanes. As far as it goes, this step is effective, for it virtually makes it impossible for any aeroplane to sink or capture a merchant ship in any way that can count as being "legitimate" and not "piratical." But the new Nyon rule protects only shipping, and that only in the Mediterranean. At sea elsewhere and on land everywhere, the civilian population of the world has no legal protection against air bombing except an eighteenth-century code which is now being treated as a dead letter.

Other attempts that have been made so far to deal with the air menace either regionally or oecumenically have led to no results and have simply brought out the difficulties of the problem. The Anglo-French proposal, for example, in February, 1935, for an agreement, limited to five Powers and Western Europe, to provide collective resistance against (or reprisal for) unprovoked

aerial aggression by any one signatory on any other, has suffered the same fate as all other Anglo-French-German negotiations. The immediate obstacle was the failure to reconcile this regional proposal, and its accompanying propositions, with the diplomatic situation created by "the indivisibility of peace." But there remained unsolved a difficulty even deeper-seated in the technical and social conditions of modern warfare. These conditions are at the heart of the world-wide air problem with which we are now faced by the actions of Japan.

The Japanese defend their hideous use of the air arm (at any rate unofficially) on the ground that the wholesale indiscriminate bombing of civilians in the interior of China will break the *morale* of the Chinese people, make it impossible for the Chinese Government to continue its resistance, and thus bring the war to a speedy end. In short, these quick pupils in the Far East are putting into practice the ideas which have been germinating so perilously in this Europe of ours during the last ten years. In these challenging claims lies the fundamental point of difference between the eighteenth century and to-day. There is to-day an unprecedented solidarity between Governments and peoples. Your civilian behind the lines may not be a combatant; he may not even be a munition worker or a producer of the army's food and clothing; but he cannot help being a factor in a public opinion on which the war power of his Government is ultimately dependent. If you can really stampede the public, you can probably bring any modern Government to its knees. The aeroplane is a hell-sent instrument for just this purpose; and, if the Japanese were to be successful with it, could any of us trust ourselves to go to war without succumbing to the temptation to employ the same weapon in the same way? On the other hand, Japanese barbarities may have exactly the opposite of their intended effect. They may rouse the Chinese people to support the Chinese Government with a tenacity and enthusiasm that may baulk the invader of his prey. For China—unlike Abyssinia—is by no means hopelessly outmatched in modern equipment or in financial resources, while her vast population—whether engaged in active or in passive resistance—and the extent of her territory present a military problem in comparison with which the Abyssinian campaign was child's play.

If China's resistance stiffens, it may unexpectedly grant us a day of grace in which to take thought—and action—for meeting this stupendous challenge. If Japan achieves her ends by means which, however highly sponsored, remain in the most literal sense methods of barbarism, what then? It will have been proved that prostitution of the greatest achievements of science for the mass slaughter or maiming of innocent civilians is the most effective method of warfare; it will have been proved that nations are unable to restrain the aggression of one of their number who chooses to run amok; it will have been proved that the moral reprobation of the world can be flouted with impunity; it will have been proved that the prestige of the West counts as nothing in the East when once Asia has in her hands, and has learned to use, the products of Western industrialism.

The answer to all this is no mystery, but has been clearly before use for years past. Events in China are, in more emphatic terms than ever, stressing two inescapable conclusions. The first is that the world can only be saved from a disastrous relapse if the nations are prepared to take steps for the enforcement of international law and justice; and the second is that humanity can only be spared the brutalities of air warfare by the complete abolition of military aviation. Let us hope that the nations will have the wisdom and the courage to take up once again these tremendous tasks before it is too late.

Nine Months' New Capital

THE continued rise in Britain's industrial activity has, at first sight, been well and truly reflected in the returns of the new capital market this year. Only once since 1928 has the current total of new issues made by direct public offer been exceeded—as will be seen by reference to the first of the tables given at the foot of this page. If the basis be broadened to include all securities which have obtained permission to deal on the London Stock Exchange, it appears that the nine months' aggregate has increased by as much as 80 per cent. since 1935.

These comparisons, however, exaggerate the volume of new public investment. Both sets of figures for 1937 include £99½ millions of new money for the Government's National Defence Bonds, which were issued, but not fully subscribed by non-official investors, last April. The total on our New Basis also includes some £46½ millions of Tithe Redemption stock (worth just under £41 millions at its opening quotation at the end of August), which represents the funding of an old liability rather than the creation of a new one. Finally, the larger total includes some £29 millions representing a 50 per cent. issue of bonus shares by the Anglo-Iranian Oil Company, valued at the opening Stock Exchange price. These three exceptional items alone account for 42 per cent. of the total capital which has been granted permission to deal: while National Defence Bonds alone account for 46 per cent. of the total capital raised by direct public offer.

The experience of the whole market during the last few weeks, in fact, suggests that while Treasury "control" continues to limit the operations of new borrowers of trustee status, activity in the uncontrolled "industrial" sections is showing some of the traditional symptoms of a movement which has overrun itself. It is true that many of this year's company issues have been followed by the common-form announcement of over-subscription, and that the conventional hour for the closing of lists opened at 9 a.m., which used to be 10 o'clock, has been progressively put back to 9.5 and,

more recently, to 9.1. The limit in this direction must now have been reached, unless issue houses, following the example of the lady who travelled much faster than light, close their lists at 8.55. But the market has been slow to resume its normal activity after the close season last August; and certain ominous signs and portents have appeared in the last few weeks, during which dealings in Stock Exchange securities as a whole have been consistently depressed. For example, the Stock Exchange Committee has postponed permission to deal in the shares of one company, after underwriters had been compelled to take up 60 per cent. of the total offered. In another case, inadequate subscription has induced the directors to take the extreme step of returning all the money subscribed.

Only two branches of the new capital market have, in fact, been even moderately busy this year. Leaving Treasury borrowing out of account, issues by home corporations and public boards on the one hand and by domestic industrial borrowers on the other, have represented 84½ per cent. of the 1937 total on our Old Basis and 77½ per cent. on our New Basis. British corporations, counties and public boards head the list of non-Government borrowers with a total (New Basis) of £32 millions, but this figure is well below the £58 millions raised in the first nine months of 1936. Nearly one-third of this year's total is made up of a single issue of over £10 millions by the London County Council. A further £9 millions is represented by the second tranche of the Treasury-guaranteed London Electric Transport loan. These two issues together account for 59 per cent. of the total corporation and public board borrowing of 1937 so far. The remaining £13 millions is divided between a dozen borrowers.

A supplementary table, which appears on page 46, shows that among industrial borrowers (excluding the Anglo-Iranian bonus issue) the largest groups are—in descending order—mining, exploration and finance, coal, steel and engineering, and electricity. These industries, plus the residual "manufacturing and miscellaneous"

group, together account for 73 per cent. of this year's industrial total, according to our New Basis figures. No other group has itself been responsible for as much as £10 millions. Conspicuous absentees from the market have been virtually all Empire and foreign Governments (except the Kingdom of Iraq), almost all municipal corporations and public boards overseas, and all main-line railways, home and foreign.

The conclusions suggested by the latest available figures can thus be briefly summarised. Many of the gargantuan borrowers of the past appear to-day either to have lost much of their appetite for new capital or to be unable fully to satisfy it in London. Meanwhile, the British Government maintain a prior lien on the resources of the market for new gilt-edged securities. For the rest, they reserve the benefits of low long-term interest rates, first, for securities embodying their policy as expressed in Acts of Parliament; and, secondly, for a limited number of public authorities whose operations are halted at the first sign of congestion. Voluntarily or otherwise, the market is filling the more negative of the

functions which those who advocate the cyclical planning of public works would assign to it; for, during the last three months, when our business activity index has been making new high records, public authority borrowing for capital construction has been very small. In the uncontrolled areas of the market the ordinary share is still the favourite instrument of new investment, and the small rather than the large company is the typical issuing unit. Some 103 companies, with an average of only £180,000 each, have contributed to the £18½ millions raised under the heading "manufacturing and miscellaneous" by direct public offer this year. Already, however, the setback in Stock Exchange prices is leaving its mark on this section of the market. If present tendencies continue, a time may come when public disinclination to subscribe may impose a stricter censorship on the more speculative type of industrial issue than any regulations the Treasury ever devised. And if the impetus of British trade activity slackens, a perceptible relaxation of control over public authority borrowing may be the appropriate corollary.

Woolcombing—A Reply

Combing is the first important process through which wool passes on its way to the worsted industry. On page 461 of The Economist of September 4, a trade correspondent made a critical analysis of the policy of the Woolcombers' Mutual Association and of the outlook for the industry. In the following article, another correspondent explains and defends the position of the various Associations in the trade.

The worsted section of the wool textile industry is divided into three main processes—combing, spinning and weaving. As the earlier article explained, there are three classes of woolcombers, namely: commission combers, topmaking combers and spinner combers.

The woolcombing industry was affected by the post-war depression, in common with almost all other industries. The problem it had to meet was one of productive capacity which greatly exceeded requirements, combined with trade depression and consequent price-cutting. Since 1910, combing prices had been fixed by agreement between the members of the Commission section of the Woolcombing Employers' Federation. During the period from 1925 to 1930 several drastic reductions were made in an effort to meet "price-cutting" competition by outside firms. These reductions, however, did not improve the volume of trade done by commission firms, and they had little or no effect on "price-cutting." It became obvious that no permanent improvement in conditions could be effected so long as capacity to produce was abnormally in excess of maximum requirements. It was felt that two things were essential to put the industry on a sound basis. The first was the elimination of redundant plant and the second was the restoration of prices to an economic level.

In 1930, the Woolcombing Employers' Federation (whose membership is composed of commission and topmaking combers) took up the task of re-organising the industry. In 1933, a scheme was adopted which resulted in the formation of the Woolcombers' Mutual Association, Limited, with the sole object of purchasing and eliminating redundant combing plants. The members of the company entered into agreements to pay a levy on the production of tops. To provide immediate funds for the company, a public issue of debentures was made, with the levy agreements as security. Immediately on its formation in February, 1933, the company purchased and scrapped several combing plants which had been cutting prices.

Arrangements for regulating prices in the commission combing section were re-organised by the Commission Woolcombers' Association. On July 1, 1933, prices were increased to a level which, under normal conditions, provided a fair margin of profit. These prices were

definitely competitive with the prices charged in the principal Continental countries.

These schemes have now been in operation for four years. Surplus productive capacity is gradually being eliminated and price-cutting by outside firms has been materially reduced. Much remains to be done before the position of the industry can be regarded as satisfactory; but in the meantime the operations of the two Associations have brought about an ordered state of affairs, previously unknown in the industry. During the last decade much has been said and written about industrial re-organisation and rationalisation. Many industries have sought, and not a few have obtained, Government assistance by way of restrictive legislation, direct subsidy or guaranteed loan. It may be claimed that credit should be accorded to those members of the woolcombing industry who have succeeded, thus far, in putting their house in order without the aid of Parliament or of public funds.

So much for the general position and organisation of the industry. Reference may now be made to certain specific statements in the earlier article which appear inaccurately to state matters of fact, or to draw faulty deductions from them. Thus, the writer of the article stated that the funds of the Woolcombers' Mutual Association were furnished out of the surplus profits of its members, and that those in control shrewdly obtained their finance from their own customers. These statements are wholly erroneous. The Woolcombers' Mutual Association has nothing to do with prices; and its finances were provided by debentures issued on the security of the levy on production, which is payable whether a profit is earned or a loss is shown. The statement that the customer was required to provide finance for the scheme could only be inferred indirectly if the prices charged from July 1, 1933, were higher than was warranted. This, however, was not the case. The prices were fixed at an economic level, which was then competitive with Continental prices. If a commission comber, having sold his services at an economic price, decides to set aside a portion of that price for the purpose of providing funds to eliminate redundant plants, that is entirely his own affair. Thus it is quite wrong to declare that the scheme is financed by the customer.

In a reference to the machinery scrapped by the Woolcombers' Mutual Association, the writer of the earlier article said that it had been estimated that the potential output of new machinery which had been installed was equal to that of the plant already scrapped; and that commission combers were, therefore, no nearer a monopoly to-day than when the Mutual Association was formed. The facts are, however, that the productive capacity of the machinery which has been scrapped is several times greater than that of the new machinery

which has been installed since July, 1933, and that very definite progress has been made in the elimination of redundant plant. The Woolcombing Associations have endeavoured to obtain fair trading conditions for their members but they have not attempted to create a monopoly. In referring to the new combing prices of August 30th last, the writer declares that the industry can make out a good case for the advance—and this is quite true, in view of the considerable increase in production costs. The combers who have applauded this sentiment, however, will be surprised to read, a little further on, that the more commission firms "tighten the screw" now, the less wool they will receive for combing in the future. If the implication were that the advance was extortionate and unwarranted, then the commission combers, who have never applied "the screw," would take strong exception to it. Further, the argument that increased combing rates may tend to transfer an increasing share of the business of topmaking from those who have no machinery to topmaker-combers might be justified if combing charges were put at a level which was not closely related to costs. Actually, however, the respective proportions of the total tops produced in the Association for machinery-owning and non-machinery-owning topmakers during the past few years have been relatively unaltered by comparison with the preceding six years. This surely is the best justification of the prices charged.

Notes of the Week

The Mussolini-Hitler Meeting.—Externally, the Italian dictator's visit to the German dictator this week has gone off according to plan. The pageantry has been perfect, and the august visitor has duly shown himself a superman by getting a greater amount of sightseeing into a shorter space of time than any ordinary mortal could easily manage. Signor Mussolini has "done" not only Munich and Berlin, but also the German military manoeuvres and the gun foundries at Krupp's. This is all as it should be; for bustle and display are two of the strongest points of the Fascist ideology. But when we come to assess the political results of the meeting, we may find that there is as little reason for us to lament as there is for the dictators to congratulate themselves. Is Herr Hitler to hope or to fear that he has produced on Signor Mussolini the overwhelming effect of King Solomon upon the Queen of Sheba? If the Italian dictator has taken Germany's military might at its face value, may he not recoil from the prospect of playing second fiddle to so mighty a man of valour? On the other hand, if his shrewd eye has noticed the seamy side of the Third Reich, may he not hesitate to tie himself too tightly to a dubious ally? The problem of impressing his visitor to exactly the right mean degree must have given Herr Hitler a good deal of anxious thought.

Another awkward question which both host and guest have shared has been how to show adequate results for all this pomp and ceremony. For domestic consumption, each must be a man of action and not just of gestures and words. But if the meeting seemed too clearly to foreshadow further "action" in Europe, the effect might well be to consolidate Europe against the "axis." In the event the dictators have decided to roar like sucking-doves. In the toasts which were exchanged on Monday and the speeches which were made at Tuesday's public demonstration, the emphasis was all on the desire of both countries for peace, on the absence of any secret understanding for forward action, on the willingness to welcome as many additional wheels on to the Rome-Berlin "axis" as would pledge themselves to revolve in the approved direction. That the dictators have found it expedient to speak in these tones is itself significant. It is not necessarily a clear indication of what, if anything, has been decided. The

The subject of competition in the industry was discussed at some length in the earlier article. Price regulation, however, has now been in operation in commission combing since 1910 and those who have had most experience of the industry's ups and downs are convinced that its abandonment would be disastrous and suicidal. The effect of unrestricted competition would be to force rates down to such a level that commission combers could neither maintain their plants and machinery in the efficient condition essential alike in the interests of users of tops and of consumers of worsted products in peace and war, nor afford reasonable wages and working conditions. The earlier article expressed concern for the future of commission combers under the present organisation of the industry. But the abandonment of the price agreement would mean a return to chaos and the gradual extinction of the commission combers, who, as the writer recognised, are an essential part of the industry. Given the continuance of the industry's present organisation, the problems to which the earlier article referred are entirely hypothetical. The truth is that commission combers are fully alive to the importance of protecting their own and their customers' interests, and will be prepared to take all steps which new situations may warrant. They have no intention of allowing themselves to become a diminishing, much less a defunct, section of the industry, and their policy reflects their determination.

declarations that have been made commit both countries to unrelenting hostility to "Bolshevism," and they also commit Italy to support of Germany's demands for room to expand. The former might be held to cover full German support for Italy's Spanish adventure; the latter might be held to give Italian support for Germany's colonial aims. But in either case the precise degree of support is left vague. It will doubtless acquire precision as the weeks pass. In the meantime, it has yet to be proved that this outwardly impressive meeting between the two dictators has done anything to strengthen the Rome-Berlin axis. The really striking feature of international affairs during the last few days has been the effectiveness of that other European axis that turns on London and Paris.

The War in China.—Movements on land in the past week in China have been comparatively restricted. The Japanese have pushed their advance in the North as far as the capture of Paotingfu, the capital of Hopei and an important centre about 100 miles south of Peking on the railway to Hankow. They have also advanced to Tsangchow, about the same distance south of Tientsin down the railway to Pukow. But with their right and left wings in these two towns, they appear to be waiting for the centre, which has no railway transport and is hampered by the waterlogged condition of the ground, to catch up. At Shanghai there has been no decisive movement. But in the air and at sea the Japanese are pursuing a deliberate campaign of frightfulness. Nanking and Canton are the chief, but by no means the only sufferers from air-raids. Hankow and Chingyuan have also been visited. Tokyo continues to protest that Japanese airmen have strict instructions to bomb only objectives of military importance and to spare non-combatants. But not even incredibly poor marksmanship can explain what has been happening, for the attacks have been concentrated on the places where population is most dense. At sea, a German liner has picked up the survivors of a fleet of fishing junks which was callously sunk by a Japanese submarine acting in clear defiance of the rules of submarine warfare signed by Japan within the last decade. This atrocity could not be excused by any pretence of military importance, so it was merely denied, the denial extending even to the presence in those waters of the German liner, whose arrival at Hong

Kong was nevertheless reported to Lloyd's. This hypocrisy was shown up on the very next day when passengers on a British steamer were actual eye-witnesses of an attack on fishing junks by a Japanese destroyer. The officials at Tokyo are doubtless sincere in their desire to prevent such atrocities. But they are utterly powerless to restrain the Generals and Admirals who, knowing the dangers of a long war and disappointed at their slow progress, are stopping at nothing in the attempt to "beat China to her knees" quickly.

The World's Protest.—Japanese barbarism has evoked as close an approach to a world-wide unanimity of protest as this distracted planet can provide. All six of the Great Powers have made formal diplomatic protests—Great Britain, the United States and Germany through their Embassies at Tokyo, and France, Italy and Russia through their Consulates at Shanghai. The American protests, in particular, have been strong and reiterated. Whether by coincidence or not, they have been accompanied by what appears to be a modification in American policy. The recommendation to American citizens in China to evacuate the country is maintained; but it is now recognised that many of them are unable or unwilling to leave and it is declared that they will be protected. At Geneva, a resolution which solemnly condemns the acts of Japan has been unanimously adopted by the representatives of 52 nations, the majority of them insisting that Japan should be specifically named in the condemnation. In England there are all the signs of a wave of indignation such as produced such startling effects at the time of the Hoare-Laval agreement. The Archbishop of Canterbury is to preside over a protest meeting in the Albert Hall and the movement for a boycott on Japanese goods is gathering a degree of popular support which is reported to have impressed the Cabinet. The idea was publicly proposed by Sir Francis Acland in a letter to *The Times*, and the correspondence columns of that newspaper have been filled with letters from eminent persons whose political differences from Sir Francis serve merely to reinforce their agreement with his proposal. Even the Federation of British Industries, which has hitherto been a strong, almost a fervid, partisan of Japan, is uneasy, and though it shows no concern about anything but British trading interests in China, it joins in the chorus urging a stronger policy on the Government. In the United States, too, public opinion is aroused and has been shaken out of its neutrality of attitude, even though it still clings to neutrality in action. By her actions, Japan has deliberately put herself beyond the pale of civilised nations. She may find the role of outlaw dangerously uncomfortable.

Labour Party Aims.—An attempt will be made at next week's conference of the Labour Party at Bournemouth to diminish the influence of the trade

unions' block votes in executive elections. Whatever the upshot of this move by the constituency groups and the intelligentsia, it seems certain that victory will rest with the unions. Support of the arms policy, advocated by the Trades Union Congress, will be endorsed; and Left Wingers and pacifists alike will be disavowed. The first shots from the flank of the Party have been fired in the last few days by Sir Stafford Cripps and Mr Lansbury, on behalf, respectively, of the Unity Campaign and of Christian pacifism. It is well known, moreover, that Messrs Attlee, Greenwood and Morrison have only unwillingly consented to follow the lead of the majority of their parliamentary colleagues and the T.U.C. in support re-armament. These conflicts have not helped the national campaign for new voters. While a large majority of the Labour movement has belatedly agreed to support re-armament, the decision has come too late for the Opposition to share the popular favour which has accrued to the Government. The Opposition, moreover, has lost an opportunity to perform its proper political function by making constructive and critical proposals about war preparation in its social and industrial aspects. The Labour Party, overwhelmingly in favour of a constitutional programme, has never been less divided in doctrine, despite the escapades of Sir Stafford Cripps and Mr Lansbury. But it has never, in recent years, been less effective in Parliament and in the country.

Hope Renewed at Jarrow.—For two years proposals to set up steelworks at Jarrow have been obstructed and delayed. After the failure of the original scheme to establish a complete Bessemer plant, the modified plan, announced last June, to erect a plant with a capital of £1,000,000, under the auspices of the Government, the Bankers' Industrial Development Company, the Nuffield Trustees and Consett Iron Company, has regrettably hung fire. The announcement last Tuesday, however, that the Commissioner for the Special Areas has decided to acquire the dismantled site of Palmers' shipyard and steelworks for industrial development suggests that the end of delays may be near, and that the steel plant as well as other specified industrial projects may soon be realised. The tragedy is that help may come to Jarrow at a time when her workers can no longer benefit adequately from it. Long unemployment has, in many instances, wasted their skill, and unless the intensive training courses recently urged upon the Minister of Labour can be effectively set on foot, the final irony of this unhappy story may be the drafting in of labour from elsewhere.

"The Morning Post."—The purchase by Lord Camrose, some two months ago, of control of *The Morning Post* has had the sequel which was then expected. The last issue of *The Morning Post* appeared on

Thursday, September 30th, and from the next day it has been amalgamated with *The Daily Telegraph*, of which Lord Camrose has been principal proprietor for the past ten years. The departure of *The Morning Post* leaves a gap far wider than its comparatively small circulation would suggest. It was not only the oldest of the London dailies; it had always stood for a high standard of journalistic craftsmanship. Its readership was restricted by its unpopular opinions, and its appeal to a narrow class made it somewhat of an anachronism in an age of "national" newspapers. But it was the last representative of a fine tradition, reflecting the opinions and personality of its Editor and caring for circulation only as much as was necessary to keep its head above water. It was the last example in London (though there are several still in the Provinces) of the old individualism which has been replaced by industrial mass-production. The replacement is no less inevitable in the Press than in other industries; but its effects, when they lead to the disappearance of familiar names and respected houses, are no less sad.

After Nyon.—It is reported that the Paris conference between French, British and Italian naval experts has reached agreement on the methods by which Italy is to be associated in the Mediterranean anti-piracy patrol. Officially, the discussions were of a purely technical character. Actually, of course, politics could not be kept out, and the terms of the agreement will be judged by political considerations. The previous proposal to associate Italian destroyers with the British and French patrol ships has been thrown over, and definite zones will be assigned to the three Powers. The Italian zone will embrace more than the Tyrrhenian Sea, which was all that was originally proposed. It will include the Adriatic and a zone off Libya. But until the text is published it is not possible to say whether the Italian zone will stretch right across the narrows of the Mediterranean—which for political purposes is the vital point.

These "technical" discussions form part of a wider initiative which is to be made jointly by Britain and France in the next few days, in the form of a Note inviting Italy to a three-Power conference to discuss the whole question of "intervention" and "non-intervention" in Spain. Is anything likely to come of all this? Our hopes were raised a few days ago by the apparent cordiality of the Italian response to a French initiative, when M. Delbos was having his conversations with Signor Bova-Scoppa at Geneva. It is suggested that Signor Mussolini was dreading the prospect of another winter campaign in Spain, and was prepared to withdraw—on terms. It is still not proved that this interpretation was mistaken. On the other hand, it is just as likely that Mussolini has once more been fooling us. At the moment of his visit to Germany it was obviously not to his interest to seem to have broken so completely with the Western Powers as to have no alternative to playing the part of Hitler's junior partner. Now that the visit is over we may wake up to find that Signor Bova-Scoppa's show of conciliatoriness has served its turn and has become ancient history. Signor Mussolini's references, in his parting speech in Berlin, to the Italian troops in Spain are not encouraging, and it is now reported that though he is willing to negotiate about the withdrawal of volunteers in the Non-Intervention Committee at London, he will not discuss the subject *à trois* in Rome. But if one thing is clear, it is that an Italian withdrawal from Spain is more likely to be secured by a show of Franco-British firmness and solidarity (always provided that a loophole is left for saving the dictatorial face) than by a repetition of the familiar invitation to Signor Mussolini to deceive the trusting politicians of London and Paris. Signs of this firmness are increasing; the latest is the agreement of Britain and France (and all the other members of the Non-Intervention Committee except Italy and Germany) to a resolution of the League

Assembly which declares that if the withdrawal of volunteers "cannot be obtained in the near future" they will "consider ending the policy of non-intervention."

Belgium Weathers Her Crisis.—In an unsensationally worded *communiqué* the Belgian Government announced last Saturday the important and satisfactory news that the Prime Minister, M. van Zeeland, had decided, after all, to remain in office. It was stated that, in taking this decision, M. van Zeeland had "yielded to the unanimous pleas of his colleagues," and it was added that there would be no change either in the *personnel* of the Ministry or in its programme. In other words, the difference of opinion between the Prime Minister and the Finance Minister over the administration and organisation of the National Bank has been successfully overcome. This Belgian political achievement is of more than national importance; it is also a victory for the cause of democracy in Europe. For the recent Belgian Cabinet crisis was not only serious in itself. If it had come to a head, it would have played straight into the hands of M. Degrelle, the founder and leader of the "Rexists." "Rexism" is the Belgian brand of Fascism; and every Fascist Moses in the Wilderness is all the time running a race against exposure. If he cannot quickly succeed in discrediting the targets of his attack, he is going to be discredited himself. For some time past this fate has been hanging over the head of Degrelle. But Hitler's history shows how easy it is for a political adventurer to snatch victory out of the jaws of defeat. And for a moment it seemed that the difference of opinion in the bosom of the Belgian Cabinet might give the would-be Belgian Hitler a chance of attaining his object at the eleventh hour. From Degrelle's point of view the substance, as well as the fact, of the late Cabinet crisis was singularly opportune; for one of the main planks in the Rexist platform has been a general accusation of financial corruption in high places. As far as M. van Zeeland is concerned, the charge has now been rebutted, and the Prime Minister is remaining in office. This is all very disappointing for "Rex."

Hungary and the Little Entente.—Considerable progress has been made in recent weeks in the negotiations which are aimed at a *rapprochement* between Hungary and the States of the Little Entente. Indeed, at one time, it looked as if an understanding would be come to during the meeting of the Assembly at Geneva, and though this has had to be postponed there is no reason to believe that the discussions have run on to any unexpected reefs. The two chief difficulties were the questions of Hungarian re-armament and of minorities. The former has been settled with an agreement by the Little Entente to remove its ban on Hungarian re-armament in return for a pledge that the new armaments would not be directed against any of the Little Entente States. The minorities problem is more difficult. But here, also, the major obstacle has been surmounted by Hungary's willingness to demand no more for her minorities in the Little Entente States than she is willing herself to grant to the Slovaks, Roumanians and Croats within her own borders. For Prague and Belgrade this would be enough; but Roumania is at the moment passing through a phase of hostility to minorities, especially to the Jews and Hungarians in her borders, and further negotiations will be necessary. So much progress has been made, however, that the attainment of so desirable an object as reconciliation between Hungary and her hitherto irreconcilable neighbours is most unlikely to be prevented by the attitude of one of the Little Entente Powers to one of the subjects under discussion. There is a good prospect also of widening the new understanding to include Austria, which is politically disturbed by the Rome-Berlin axis, and economically disappointed with the results of the Rome Protocols. Discussions, with some appearance of urgency, have been held this week between Dr von Schuschnigg and M. Hodza, and though it is announced that only economic matters were dis-

cussed, the open disapproval of Berlin shows how clearly it is realised by Germany that in the Danube Basin political accord is not only dependent upon, but is also the inevitable sequel of, an economic understanding.

Palestine and the Gunman.—The Political Commission of the Assembly of the League of Nations has adopted, for reference to the Assembly itself, a vaguely optimistic resolution on the future of Palestine. The British Government is to have authority to proceed with its discussions, taking the Royal Commission's plan as a starting-point, but it will not have gained much encouragement or constructive assistance from the Geneva debates. The Near Eastern countries all expressed vehement opposition to partition as an injustice to the Arabs. They found an ally in Mr de Valera, who, arguing from the Irish analogy, denounced partition in principle as the greatest wrong that could be done to a people. It may, perhaps, be doubted whether he would feel so bitterly about the matter if the alternative prospect in Ireland were the influx of Protestant Scotsmen until the North had a majority. And at other points, also, the analogy fails. Nevertheless, in some ways, it is apt, and one, unhappily, seems to be the shadow of the gunman. The murder of Mr Andrews and P. C. McEwan is wholly abominable, and is bound to recoil on the heads, both of those who covertly or openly foment lawless agitation and of those who connive at it. For its effect will be to increase the reluctance of some sections of British public opinion to grant self-government in a country where the gunman still resides.

New Zealand's Budget.—The New Zealand Labour Government continues to conform to financial rectitude by budgeting for a surplus. But the trend of its policy appears plainly from the fact that expenditure for 1937-38 is reckoned at £34,728,000, compared with an estimate of £31,054,000 for 1936-37. Moreover, estimates for public works expenditure, at £17,367,000, are up by nearly £7,000,000. They are to be financed largely from capital resources under Government control, such as post office savings bank reserves—an instalment of what has come to be known in New Zealand as "costless credit," of which Mr Nash hints at further and stronger doses, if necessary. In brief the Government is making hay while the economic sun

shines. Taxation is not increased, the new ordinary expenditure being financed from the buoyancy of the revenue. It includes £2,255,000 more for social services, £349,000 more for education, and £585,000 more for defence. The unemployment relief fund, separately financed by a special levy, is already self-balancing.

Industrial Activity in the U.S.A.—Does the sharp break of security prices on the New York Stock Exchange last month herald a cyclical downswing of business activity or does it merely indicate a temporary lull in the progress of American recovery? As these questions are now widely debated on both sides of the Atlantic, we have prepared the diagram at the foot of this page to indicate the trend of industrial production in the United States over the past ten years. The diagram is based on the monthly index of industrial production calculated by the Federal Reserve Board and published regularly in the *Federal Reserve Bulletin*. The index is adjusted for seasonal variations in activity. Despite the marked expansion of industrial production since 1932, activity in the United States has barely recovered to the pre-depression level. Moreover, as the population of the United States has risen by about 6½ per cent. since the onset of the last slump, current production per head is still well below the 1929 level. In contrast, British industrial production in April-June, as measured by the Board of Trade index, was about 25 per cent. higher than in the pre-depression year. There has been a lull in American recovery since the end of last year. A similar pause occurred in this country in 1934. The index for August, the last month shown on the diagram, reflects some improvement, but the latest reports suggest that the resumption of the upward trend may be delayed. Costs have been rising rapidly and have cut into the profit-margins of the railways and other industries, which were expected to finance a further expansion in capital investments. Moreover, the sharp advance in building costs since last year has prevented residential construction from going ahead as anticipated. There is evidence, in fact, that cost and selling price relationships have been thrown to some extent out of gear. But there is nothing which suggests that this maladjustment is necessarily the prelude to another slump.

Industry and the Raw Materials Slump.—The persistent fall in the prices of imported raw materials has prompted buyers of finished goods in certain industries to hold off the market in the hope of being able to cover

their requirements later at lower prices. This tendency is particularly noticeable in the cotton industry. The price of American cotton fell from 5.58d. per lb. on September 8th to 5.24d. on September 22nd and 4.96d. last Wednesday. The decline in raw wool prices at the recent London auctions appears to have had a similar effect on the Yorkshire wool textile industry. On the other hand, the break in quotations for non-ferrous metals has had little effect on the consuming industries in this country. Iron and steel, engineering and ship-building industries are as active as ever. Incidentally, an official survey shows that about 20 per cent. of the current output of finished steel is absorbed in the manufacture of armaments, such as warships, guns and munitions, and equipment, such as aeroplane hangars, dockyard cranes and shadow factories. But the stringency in certain trades is growing less acute owing to the increase in home production and imports. The extent of this week's slump in non-ferrous metal prices is revealed by the fact that Wednesday's quotations for copper and tin, at £47 16s. 3d. and £246 5s. per ton, show a fall of £4 7s. 6d. and £14 15s. per ton respectively.

In contrast to the fall in prices of many imported raw materials, quotations for domestic materials, such as coal, remain firm. The output of coal is still expanding, having risen from 4,550,100 tons in the week ended September 11th to 4,860,400 tons during the following week, against 4,466,200 tons during the corresponding period a year ago. The striking improvement in Welsh exports is reflected in last week's shipments of 435,400 tons, compared with 299,267 tons a year ago. But our Glasgow correspondent's report, given on page 49, indicates a lull in inquiry from abroad, due to the fact that many Continental buyers are now carrying substantial stocks. Reports from other branches of activity are generally encouraging. Moreover, the value of retail trade continues to expand, but in August the increase over the corresponding month's figure in 1936, at 6.7 per cent., was below the average of 8.0 per cent. recorded between February and August. It is significant that the increase in stocks, which hitherto has lagged considerably behind the increase in turnover, was almost equal to it in August. In general, however, the outlook for business during the next few weeks remains promising.

Denmark's New Bridge.—Last Sunday, September 26th, King Christian of Denmark officially opened the new bridge over the Storstrom, with whose construction Great Britain has been closely connected. The British guests at the opening ceremony included the President of the Board of Trade, and the Minister of Transport. The bridge, which is over two miles long, and has a navigation clearance of eighty-five feet above sea level, is by far the longest in Europe. To produce this enduring tribute to the skill of modern engineers, two firms have collaborated; for Dorman Long are responsible for the steel superstructure, while the Danish firm of Christiani and Nielsen has put up the foundations and carried out all the concrete work. The construction, which cost over £1,500,000, has been partially financed by a sterling 4½ per cent. loan of £1,000,000, which was floated by the Danish Government in London in 1933, and to-day stands over par. Henceforth the bridge will be the most important physical link between Denmark and the Continent. Her Government and people may be congratulated on a thoroughly constructive achievement.

graduates training in business management; and to provide students, already experienced in business and seconded by employers for a year's course, with instruction in the principles of their practice. Any scheme to enable business firms to make the best use of educated people is worthy of support. Any plan to increase technical efficiency by reducing rule of thumb methods to a minimum is of national importance. So long as the extravagances of the less happy side of American experience are avoided, and so long as no attempt is made to impose academic status and the dignity of science on mere office routine, the department will be a national asset. The location of the department at the London School of Economics ensures a sound basis of economic science for its teaching, and there is little risk that its necessarily vocational character will be allowed to dilute academic standards in university education. A generous response to the appeal would be a sound investment, both for individual business men and the community.

Six Months' Revenue.—The returns of revenue and expenditure for the six months ended September 30th follow the pattern foreshadowed at the time of the Budget; rising revenue is swamped by rising expenditure. On the revenue side, however, there are signs that the estimates for the year will be exceeded, while the rate of expenditure is not yet up to the level for which provision was made. It is possible, therefore, that, if present tendencies continue, the deficit on the year's working will be less than was expected. But all such prophecies are vain, since the final outcome depends entirely on the yield of taxation in the crucial fourth quarter of the financial year. Over the year as a whole, an increased yield from income tax of £30 millions was expected. Although less than a fifth has been collected, the increase in comparison with last year is already over £7 millions. There is also a surprisingly large increase of nearly £5 millions in the collection of death duties, from which no more was expected this year than last. Stamps are slightly down, reflecting the change that has come over the Stock Exchange since (some would say because of) the Budget. Customs and Excise, expected to yield £12.3 millions more in the full year, have produced an increase of almost £10 millions in six months—further evidence of the welcome revival in foreign trade and maintenance of domestic purchasing power. On the side of expenditure, the service of the national debt has cost nearly £3 millions more. Expenditure on the defence forces has been £26 millions higher than in the first half of last year. But an increase of £92 millions was expected over the full year. The expenditure in the six months just finished was, in fact, slightly less than in the six months immediately preceding, and there is clearly room for a very rapid acceleration of expenditure before the estimates are realised. On the other Supply Services, where an increase of more than £20 millions was budgeted for, the actual expenditure, after adjustment for the incorporation of the previously self-balancing expenditure of the Road Fund, is down by £2 millions. Thus the indications are favourable on both sides of the account. If it were not for the burden of re-armament, the country could congratulate itself.

FOOD STORAGE FOR DEFENCE

LAST December the Government, in response to expressions of anxiety both in Parliament and the Press as to our food situation in time of war, created a new Food (Defence Plans) Department of the Board of Trade. As the responsibility for home production remains with the Ministry of Agriculture, a large part of the work of this new Department must be to consider whether the proposal for food storage on a large scale, which has recently attracted considerable attention, should be adopted, and, if so, to frame a scheme specifying the precise method and the quantities of different food stocks to be stored. The second part of the task involves many intricate factors, but as recently as July 27th Sir Thomas Inskip indicated that the main principle of food storage was still under consideration, and it is surely high time that this at least should be decided. It may be worth while, therefore, to discuss the reasons for the main proposal and the conditions of a good scheme.

Food storage is, of course, not proposed as an alternative to naval strength. No practicable provision of stocks, combined with an increase of home production, would enable us to carry on a long war without supplementing our home resources by imports. The size of our population, and the way in which our whole national economy has developed during the last century, preclude us from making that the goal of our policy. We need security against blockade in any case.

In the last war, however, our command of the sea was as complete as we can ever hope that it will be; nevertheless we were in serious danger through a shortage of ships and their destruction by submarine attack. And against this kind of danger it is possible to adopt further safeguards than we now possess.

At present our position is no better, and in some respects worse, than in 1914.

We have four million more people to feed; our merchant ships are fewer; and to the submarine menace has been added that of the aeroplane. Our home production, taking all forms of food into consideration, only meets about a quarter of our needs and is itself dependent upon imports of feeding stuffs and fertilisers to an extent which leaves its net contribution very small indeed; and our current stocks are very small, ranging from an average of a few weeks to about three months.

In the last war the prospect of starvation resulting from the absence of any reserves, especially of wheat, was so serious that, in spite of the extreme difficulty of transport, we were compelled actually to increase wheat stocks, during the war by importing beyond our current consumption. The shortage of shipping, thus aggravated, threatened all our supply programmes, and might at one period have led to panic decisions affecting the whole issue of the war.

In these circumstances the case for food storage is very strong. There is no real alternative. No increase in our naval or air forces can assure us against at least as much interference with our supplies as we suffered before. We shall indeed be optimistic if we assume that we should be able to import as much in another war. Apart from aeroplane attack near or at the ports (which probably more than offsets any improvements in our defence against submarines), we may in some cases have to choose longer routes for our shipping. Even in the last

war, for example, the danger to the merchant ship in the Mediterranean was at one period so great that it seemed better to send ships from India and the East round the Cape. We may well have, in future, to resort to the longer route for all through traffic.

Limits of Home Production

Nor can we expect any substantial help from increased home production. Lord Astor pointed out in July, 1936, that it had cost us £7 millions a year to increase our wheat production from 16 per cent. to 24 per cent., a mere 8 per cent., of our consumption. These figures are now out of date, since the wheat levy automatically falls or disappears with the increase in world prices. But it is evident that the expense of securing more than about 30 per cent. of the wheat we need by home production would be altogether prohibitive. The recent scheme for increasing soil fertility represents a more promising line of advance. It might be a real help in a long war if we "plough up" on a large scale. But the fruits of such a policy could not be gathered until eight or nine months after the outbreak, even if the date was favourable; probably it would be fifteen or eighteen months before results could be maximised, and even then they would be of limited dimensions. At the best we need considerable stocks to bridge the gap.

When we turn to meat, we find home-bred cattle and pigs make only a very small and doubtful contribution to our war problem, for the simple reason that they soon consume their own food value in imported feeding stuffs, though the present experiments in regard to grass may somewhat improve this position in future.

An incident from the last war will serve to illustrate this point. I was then engaged in the control of ship-

ping, and was suddenly faced with a demand for increased transport for maize because the Government had started a pig-breeding scheme. I was forced to refuse the ships, because less tonnage was required to bring in the pig ready for consumption as pork or bacon than to import the maize needed to convert the young pig into the mature pig. The Government scheme, designed to relieve our food situation, was in fact worse than useless and had to be stopped. This is not to say that our cattle and pigs are in no sense an asset. "Meat on the hoof" is a form of storage which could be drawn on if we are prepared to kill off on a very large scale. So long, however, as the animal remains alive, during a war, he represents an extremely wasteful form of storage. If we are to regard our cattle and pigs as provision for war, it is essential that there should be a definite and detailed scheme, prepared now and approved for immediate application on the outbreak, for systematic slaughtering on such a scale as to reduce the livestock substantially and dispense with the necessity of meat imports except for the armed forces abroad.

Stocks and Consumption

The extent of the need for storage of food, and in some degree the character of the scheme, will be suggested by a consideration in turn of the situation as regards our principal foodstuffs.

The restoration of the national defences, as is obvious but frequently forgotten, comprises more than the re-expansion of the Navy, the Army and the Air Force. There is a vital fourth department of any comprehensive defence programme—the Home Front.

This special study of one of the most pressing problems of the Home Front has been written by Sir Arthur Salter, K.C.B., M.P., whose experience during the last war as Director of Ship Requisitioning and Chairman of the Allied Maritime Transport Executive, lends particular authority to his views on the subject.

Sir Arthur Salter is not responsible for the illustrative statistics and diagrams.

As regards *wheat* we are dependent upon imports for more than three-quarters of what we consume. The Government, speaking through the Lord Chancellor in the House of Lords in July, 1936, and later through the then Mr Runciman in the House of Commons, has stated the average supply to be about three months. But this is an *average* estimate; the supply falls at times below that level. It includes an estimate of wheat assumed to be in the hands of a large number of bakers, that is, stocks which are not exactly known and would not be easily available for rationed distribution in case of acute shortage. Most of it is stored at or near the docks (London, Hull or Liverpool) and might be partially immobilised by air attack. Sir Samuel Hoare, in June, 1936, when First Lord of the Admiralty, said that our normal stocks of food supplies are only for six weeks. In this he was not really accurate—he was overstraining his argument in putting the case for an increase in naval strength. But it is perhaps true to say that we are normally, or at least frequently, within six weeks' *wheat* consumption of the point at which a Government would be compelled, by the prospect of starvation, to capitulate—for this point would be reached some time before all food had been actually consumed. It must also be remembered that we should need wheat in a greater proportion to other foodstuffs than is represented in normal consumption. The success of our rationing in the last war largely depended upon the fact that we did not extend it to bread, which remained as the safety-valve of the system. But if bread goes short, the prospect of starvation, or of such popular discontent from privation as to have important political consequences, can never be very far away.

It is possible to economise by making a loaf of a rather different composition, which incidentally secures some further economy in consumption because the bread, while giving equal sustenance, is less palatable. Further than that it is dangerous to go. Any food storage must therefore give primary importance to wheat—or its equivalent (a qualification which will be discussed a little later).

Fats are of almost equal importance. In this country the principal consumption is in the form of butter, margarine, and lard, the quantities in 1934-35 averaging 529,000 tons, 169,000 tons and 200,000 tons respectively. Of this only about 10 per cent. of the butter and lard is produced in this country, and though we manufacture margarine here the industry draws all its raw materials from overseas. Stocks are very small; those of butter fall to about two weeks in the winter and lard and margarine stocks scarcely exist at all. Margarine is made of whale oil and vegetable oils. The principal store of the former is on the Continent (mainly in Holland and Norway), so that it would be unlikely to be available in war. Vegetable oils are obtained

from imported oil seeds and such stocks as there are (and they are certainly small) are mainly at the ports. We should probably be optimistic if we put the home stocks for butter, margarine and lard at, say, three weeks' consumption.

In *meat*, we should be in a better position, except for the all-important fact already mentioned that our cattle depend on imported feeding stuffs. We get about half the meat we consume from home-rearing. About half, including bacon, poultry and rabbits, is imported. Of this only frozen beef and frozen mutton and lamb can be stored for any length of time. Chilled meat and bacon go at once into consumption. Even of frozen meat the stocks are very small. The Lord Chancellor stated in July, 1936, that "there is not at any moment a very large quantity of frozen meat in storage in this country"—perhaps a fortnight's supply would be a reasonable estimate.

Fish consumption amounts to nearly one-third of all meat; and about 90 per cent. of it is home produced. It is very doubtful, however, how far we could rely upon the continuance of supplies, since trawlers would be largely drawn on for naval purposes and those left to continue their fishing might be subject to serious interruption; there are practically no stocks.

FOOD CONSUMPTION AND HOME PRODUCTION, 1909-13* AND 1934-35

* The figures for 1909-13 include Southern Ireland.

† Includes flour in terms of crude wheat.

‡ Includes lard and margarine.

§ These figures take no account of cottage produce.

¶ In terms of refined sugar.

The figures for 1909-13 are based on the report of a committee of the Royal Society on "The Food Supply of the U.K., 1917, and those for 1934-5 on estimates of the Market Supply Committee published in the first report of the Advisory Committee on Nutrition, 1937.

FOOD CONSUMPTION AND HOME PRODUCTION

This diagram shows the pre-war and post-war consumption of certain foodstuffs, and the proportion of each derived from imports and from home production. Of each pair of rectangles, the left-hand one relates to the average of 1909-13, the right-hand one to 1934-35. The figures are in the adjoining table.

Eggs in shell are produced at home to the extent of about 60 per cent. Production is, however, largely dependent upon imported feeding stuffs and is highly seasonal. There is hardly any storage.

Of sugar we still import 75 per cent. in spite of the extravagant price we have paid, altogether out of proportion to the results secured, in order to encourage beet-growing. No figures of stocks are available, but they are apparently quite small. We were at one time reduced to almost a week in the last war. Sugar has especial importance, because it is still cheap, can be easily stored for long periods, and, as we shall see, can, up to a point, be regarded as an equivalent to wheat.

Only in potatoes—or perhaps onions should be added—do we produce the main bulk of what we need without having to import an almost equivalent quantity of feeding stuffs or fertilisers as the condition of doing so.

The general need of additional stocks has perhaps been sufficiently demonstrated by this summary of our present position. The choice of a precise scheme, however, includes a careful consideration of a number of other factors.

Wheat Storage

It is tempting to simplify the problem by putting it in terms of our principal import, wheat, and to concentrate upon the provision of, say, "a year's wheat supplies." Two years ago a number of experts, led by Lord Astor and Mr Seeböhm Rowntree, made an inquiry into the general agricultural problem and published the results in "The Agricultural Dilemma."

"If we put our annual consumption of wheat," they reported, "at £40 millions and the costs of storage at 6 per cent. per annum, the cost of storing a year's supply of wheat would amount to £2½ millions a year, a moderate sum if the object is vital. Yet if this reserve were drawn on to the extent of one quarter in each year of war, it would enable us to sustain a four years' war while adding to our available supplies more than would be added by a doubling of our annual home production. . . . To double our annual production of wheat would be so costly as to be quite impracticable."

This is an obviously very attractive proposal at first sight. If we had a year's supply of wheat in hand, we should have a margin of ships with which we could secure the imports of other foods, and we could also economise by rationing such foods, knowing that freely obtainable bread remained as a safety valve. Till recently we could have bought the wheat cheaply, and incidentally made a very profitable investment and

assisted the general world grain position. It is tantalising to reflect on the opportunities that have been lost.

The situation has now changed, however. We may still take a year's wheat supply as giving the general measure of the amount of foodstuffs to aim at. But our stocks certainly should not consist wholly of wheat. We must largely store other forms of food; and even if we have war bread mainly in mind we must secure it by providing what can be treated as the equivalent for wheat and not solely wheat itself. Wheat prices are now high, and to attempt to purchase quickly anything like a year's supply would not only be extremely expensive, it would dislocate the whole wheat market. In purchasing wheat, we shall have to go cautiously. We must look for equivalents.

Interchangeability of Shipping

In doing so we bear in mind the fundamental conditions of our problem. We must assume the continuance, but a reduction, of imports as resulting from war conditions. The primary factor, in that case, is the interchangeability of shipping for almost any purposes. A ship engaged to carry sugar can be diverted to wheat; or from either to coal. Even where the substitution is not so direct, the same result can be achieved at two or three removes. Generally speaking, and with unimportant qualifications, it is true to say that from the point of view of anyone in general control of merchant shipping, an economy in the need for transport of any commodity can be made to increase the transport of any other. One conclusion, and a very helpful one, follows at once. We need not aim at an equally balanced scheme of storage giving about the same proportion to consumption of every essential foodstuff. We can, within wide limits, store what can be most conveniently obtained and best stored, and treat it as an equivalent to a stock of the rest. If, for example, on this principle, we store more than the normal proportion of sugar, because it is cheap and stores well, we can treat it as an equivalent to wheat, because sugar tonnage can be at once and as a whole diverted to wheat on the outbreak of war. The next main factor to consider in dealing with wheat, and where and how to store it, is vulnerability. It will not do to increase stocks at the ports. We must not concentrate on large storehouses at important railway centres. We need "dispersed inland storage"; in buildings so situated and so constructed as to reduce vulnerability to a minimum, while still being convenient (with the new facilities now available by road transport) for distribution to the main cities.

SHIPPING REQUIREMENTS OF BRITISH FOOD IMPORTS

This diagram has been drawn to show the demands made on shipping by the main items of the United Kingdom's imports of food and feeding stuffs in 1934-5. These demands are a function, in part of the tonnage of food to be carried, in part of the distance over which it has to be carried. Accordingly, in the diagram, the vertical edges of the rectangles are proportionate to tonnage imported into the United Kingdom. The horizontal edges show the approximate average distance over which each commodity was shipped. The area of each rectangle therefore approximately represents the amount of shipping required.

With these considerations in mind, I think that we should store wheat or wheat flour; sugar, less in total quantity but much more in proportion to our consumption; and certain forms of fat and the raw materials required for the manufacture of margarine. The reasons for this proposal as regards sugar have just been given, and the danger of being cut off at once from some of the principal sources of our fats (apart from the grave shortage of shipping) suggest that they too should be stored. The suggestion that flour should be stored, to a certain extent, in place of wheat needs some further explanation. In recent years a great number of country mills have closed down, and a large proportion of England's milling is now done at or near the ports, which must be regarded as specially vulnerable. If, however, for the sake of security, we store foreign wheat to a large extent in small granaries in districts unlikely to be attacked, we may find that we have then to transport to and from a port for milling. In addition flour

Thomas Inskip made a statement last February which suggested that it was on this rock that the scheme might founder. "If anybody reflects," he said, "on the cost of buying—as suggested by Sir Arthur Salter—twelve months' storage of food and the cost of providing storage facilities, he would not wonder that the programme is so expensive."

I believe that the expense would be very moderate indeed in relation to the value obtained in security. No exact estimate can, of course, now be made; it must depend upon the exact selection of foods, the quantities, the price at the time of purchase, the form of storage, etc. But we can get a fairly good idea of the general order of magnitude of the expense involved. We must, of course, regard the cost of the storehouses and the initial stock as capital expenditure. It is much more truly of this character than most of the £80 millions a year defence expenditure for which we are providing by loan in the next five years. We must, of course, include the

represents a more concentrated form of food. It can be more conveniently stored in small amounts, in comparatively inexpensive buildings, more secure because they are more dispersed and, to the extent to which this is practicable, the need for the storage of wheat in large granaries, which would probably have to be built, owned and managed by the Government, would be reduced.

These are great advantages. On the other hand, flour needs to be made from specially selected wheat (such as Canadian of a strong type), and to have a smaller moisture content than is customary in much of the milling in England, if it is to keep in good condition for a substantial time. It would therefore be necessary, in part, to arrange for additional flour storage in bakers' stores where "turnover" could be frequent, and in part to secure some special milling from selected wheat. For these reasons, while flour storage can be a valuable part of our preparations, it cannot relieve us of the necessity of storing large quantities of wheat as such.

The Cost of Storage

The reader will doubtless have been wondering what all this is to cost. Will the expense be prohibitive? Sir

service of loan money in the annual cost, but that is enough. On that basis the "Agricultural Dilemma" (written, of course, when wheat prices were lower), reckoned the annual cost of buying, storing and maintaining (with expense of turnover) a year's supply of wheat, at £2½ millions. Two other independent estimates have put the figure at £3 millions. With increased prices, and with a more varied programme, we should perhaps allow for a rather higher figure, though it will be seen that what I have advocated is not a year's supply of all the food stored, but of supplies "equivalent," in the sense explained, to a year's wheat supply. If we take, say, £4 millions a year, that is only equivalent to between one and two per cent. of our present defence expenditure.

The Advantages

Against this comparatively modest cost let us consider the advantages, some of which, as will be seen, are cumulative, some alternative. A year's storage of the kind proposed would enable us to carry on through several years of war undistracted by the fear of imminent starvation. The relief to shipping would be very great.

Wheat imports alone required in the last war the equivalent of some 500 cargo ships continually employed. Shipping tonnage would thus be available in larger measure for other imports, especially munitions or the raw materials to make them. Under present conditions we should be compelled in a war (as we were in the last one) by the near danger of starvation to import more than the quantities currently consumed, i.e. to increase stocks instead of drawing upon stocks as we could with a reserve. In the last war the munitions programme was in constant competition with the food programme; and in another war the danger that it would have to be curtailed would be very great.

The relief to the Navy would be very great if routes and sources and sailing programmes could be arranged without the imperative necessity of turning round every ship as quickly as possible that exists when there is no margin of supplies or ships. (For example, we were compelled by this necessity to bring ships through the Mediterranean, even when we were losing one in every four, rather than send them with comparative safety round the Cape, and the Mediterranean is obviously likely to be more dangerous in another war.)

Food storage, whatever its exact cost, is likely to be much less than the naval cost—if it could be accurately estimated—of protecting a corresponding number of ship arrivals and of meeting the expense of the losses involved. And food already inland is obviously much safer than imports could be made by any conceivable naval and air protection at sea and the ports.

An essentially defensive measure of this kind has no offset in competitive armaments provoked by it. An extra batch of cruisers is likely to increase building by potential enemies, and the net advantage may be little or none. Food storage will give us extra security without in any way increasing the armaments race.

One of the greatest advantages would be that it would exempt those who have to take the highest decisions of policy from the panic atmosphere that must result if only a few weeks' supply separates the country from starvation. Repeatedly, during the last war, the gravest recommendations were made as to the need of closing down some of the military expeditions and changing the main conduct of the war in consequence of the shipping shortage and danger of starvation. The existence of a substantial reserve at the beginning of a war would enormously assist every problem of war, and remove the danger of panic decisions, as no possible naval and air protection of merchant ships could possibly do.

Food storage would, moreover, not only lessen our danger in war. It would greatly reduce the danger of war coming, for it would remove the temptation which our vulnerability presents to any potential aggressor.

Other measures are, of course, required. Naval protection of ships at sea and defence of ships and ports against aircraft are essential. The whole question of inland distribution in relation to home storage centres, or alternative supply from different ports as some may become too vulnerable—especially the supply of London if the port of London cannot be used—needs planning. (Fortunately, in this case road transport has eased the problem.) Other food, besides wheat, should also be stored, especially feeding stuffs, fats and sugar. Other non-food supplies might also with advantage be stored, especially oil, but also, if possible, metals. A full and objective examination of the whole of our defence problem, without the bias given by the present composition of the fighting services, would probably result in a very different distribution of the available money between the home front and the combatant forces. It would appear highly desirable that the Committee of Imperial Defence should regard itself as equally responsible for both aspects of the preparation for war, for the Home Front as well as for the military front, and pay equal attention to the main policy governing alike food storage, internal distribution, the provision of stocks of essential raw materials and oil, the evacuation of civil population and their protection, against gas, etc.

The whole problem of our supplies in war-time has not been the subject of public inquiry since the Royal Commission of 1905. The rather negative recommenda-

tions of that Commission are entirely inappropriate to the present situation. In 1905 neither the aeroplane nor even the submarine threatened our supplies. It is perhaps not generally realised that it was only after the last war had been in progress for some time that the submarine became a serious menace to our supplies; in 1914 only three merchant ships were lost through submarines, as compared with forty-two through mines and fifty-five through raiders. Moreover, the arrangements as to stocks, and the technical means for preserving, etc., have been completely changed. The problem has now an urgency and importance which could not have been foreseen in 1905 and are much greater, in view of the aeroplane, even than in 1918.

A Plan in Summary

It may in conclusion be convenient to summarise shortly the main points of a programme of immediate action as it seems to emerge from a consideration of the facts just discussed.

The following immediate steps are suggested:—

(1) The choice of sites (selected for relative immunity from attack and convenience of distribution) for dispersed inland storage of wheat, flour, sugar and fats equivalent together to a year's wheat consumption, should be at once made.

(2) Construction of these granaries or storehouses, or a very substantial proportion of them, should at once be undertaken.

(3) Wheat should be purchased gradually, with regard to the market. It should be to a certain extent converted into, and stored in the form of, flour. But large supplies of sugar, which is still cheap and stores better, should be obtained at once.

It is very important to realise that to a large extent an ample supply of sugar is equivalent to wheat. For our problem is not that of finding an alternative to imports but of *reducing* our need to import; and ships are interchangeable between wheat and sugar.

If, therefore, we have, at the outbreak of war, an ample supply of sugar, all ships engaged in peace in importing sugar can be *immediately* diverted to the carriage of wheat.

(4) It follows from this interchangeability of ships that we should *not* aim at a "balanced" storage, the storage of an approximately equal proportion of essential foodstuffs. We can afford, within a fairly wide limit, to store more of whatever stores best and treat that as an equivalent to the stocks of the less easily stored foods.

For this reason, as already suggested, sugar, which stores well and inexpensively, should be stored in a much larger proportion to its consumption than wheat. This will not, however, dispense with the necessity of storing very considerable stocks of wheat and flour, in view of the much larger consumption of the latter.

(5) A definite scheme should at once be made, and embodied in "war orders," immediately applicable when war comes, for slaughtering off and turning "meat on the hoof" into dead meat.

(6) Similarly, a definite scheme, also translated into war orders, should be made for "ploughing up" as soon as war comes.

If these steps are taken, ships with frozen space would be available mainly for supply of the forces abroad, and all suitable ships that can be made available could then, on the outbreak, be at once diverted to wheat imports; the need for feeding stuffs would be greatly reduced by the slaughtering; and the whole sea-transport situation, at once so dangerous and so vital for the whole of our supply services, would be immensely improved.

We should, indeed, have gone far to remedying our greatest weakness at an annual cost of something in the neighbourhood of between 1 and 2 per cent. of our annual defence expenditure.

Joseph was confronted with a vision of lean kine and defective harvests. He had a prospect of a serious shortage for a limited period—which is just our war problem. His policy was to meet this need, not by increased production, but by collecting and storing against the evil day. I suggest that it should be ours.

Fact and Fancy About the Future

NEW YORK, September 20.—The near-panic markets of the second week in September have given Wall Street a sombre view of the outlook for business. Some business men have come to share this opinion; but, generally speaking, the business community rates the episode as mere local hysteria. For example, reports from the steel industry expect output to be maintained at approximately the current level for the remainder of the year. If this expectation is realised, the 1937 output will substantially exceed that of 1929. In the automobile industry, the new models are just coming into production, and Detroit believes that demand will tax capacity. Prices will be about 10 per cent. higher than for the 1937 models. In the building industry, the general view is that 1937 has represented a mere lull, pending an upsurge next spring. Banking opinion is mixed; one hears of "deals called off" after the market crash; but one also hears the ever widening demand for bank loans cited as proof of expanding activity. The allegation that these loans are to carry slow-moving stocks is denied.

The latest complete data of the actual state of business are for July; but the partial indices available for August and the first half of September indicate that general production is still pursuing the even tenor of its way. The increase compared with last year is lessening, because a year ago industrial activity was climbing rather steeply.

The comparisons with last year are not wholly favourable. A year ago, it was possible to conclude summarily that the trend of manufacturing activity between April and July was "firm or rising"; for the same months of the current year, one could say no more than that it was "level or falling." This conclusion would probably not be materially altered if the August and September figures were known. A year ago, the "firm or rising" trend of the second quarter, suggested the sequel. That is, the firm to rising trend in the late spring and summer developed into an unquestionable rise in the later months of 1936 and the first quarter of 1937. This account does not wholly explain the doubts of Wall Street; but the trend is by no means so clearly indicated as it was a year ago.

Purchasing Power Policy

But there is another angle to the problem. The philosophy of our political economy has been heavily influenced, if not dominated, by the doctrine of individual consumption. Wherever a theory of consumer purchasing power came into conflict with a theory of the formation of capital, the former has prevailed. This doctrine has been consistently reflected in our tax legislation. American industry has operated for a full year under the undistributed profits tax. This tax imposed what was designed to be a prohibitive tax on undistributed corporate profits for the express purpose of forcing distributions to shareholders. It involved the assumption that if the distributing corporation actually needed more capital, it should pay out its earnings and then seek the additional capital in the market—for example, from its own shareholders. The immediate response was a large increase in dividend distributions in the late months of 1937.

The basic assumption, however, proved erroneous. Corporations which needed capital paid out their earnings in dividends only to discover that the capital market was not responsive to new issues. A few of the more popular corporations could float issues cheaply in the limited capital market; but the majority found such

financing costly and difficult. The consequence appears to be that a considerable number of corporations have been forced to consider the advisability, if not the necessity, of reducing their distributions and paying what was intended to be a penalising rather than a revenue tax, because the retention of earnings is the only feasible way of providing needed capital.

This adds to the difficulty of appraising security values. The fact that a corporation is earning profits larger than last year's is no guarantee that the present dividend will even be maintained. It may be increased, reduced, maintained or passed entirely.

The Release of Gold

This introduces a theme which has been the principal subject of conversation during the past week—namely, the intervention of the Federal Reserve authorities on Monday, September 13th. On that date it was announced that \$300 millions of gold would be released from the Inactive Fund. The bank statement showed that the policy had been put into effect promptly; the Federal Reserve Bank of New York showed an increase of \$300 millions in its holding of gold certificates, and the member bank deposits showed that already more than \$100 millions had passed into the excess reserves. As the week wore on, the response to this move was remarkably small—there was a slight firming of Government securities and a fitful and poorly sustained rally in the share market; the "psychological effect" was next to nil.

The position is this: there are now three distinct and differing opinions about the American economy. Business opinion is not unanimous, but is remarkably in accord that the outlook is excellent. Washington and Wall Street agree on a contrary opinion. Washington is apparently sufficiently perturbed about the outlook to take the vigorous action described above; even the famous "open market operation" of 1927 involved only \$80 millions, in a banking system that had no excess reserves. But Washington sees a credit problem, and provides a remedy through the credit mechanism.

Similarly, Wall Street is not so optimistic as the business community. It agrees with Washington that the process of reducing excess reserves created certain difficulties, and that the recent intervention is likely to alleviate those local pains. But its general diagnosis is fundamentally different. Where Washington stresses credit, Wall Street stresses capital; and in Wall Street the problem of the capital market is more significant and more complicated than the credit problem, which basically was no more than an unsatisfactory distribution of existing reserves. The simple fact is that our economy has neither a functioning money market nor a functioning capital market. The lack of a functioning money market may be compensated by skilful manipulations of banker's balances; but the lack of a capital market does not lend itself to such facile solutions.

France

Devaluation without Benefit?

PARIS, September 30.—The depreciation of the franc during the last twelve months has been nearly 50 per cent. This fall in the franc has diminished the gold value of the public debt, which now stands at Frs. 36,000 millions, the same as in 1914. But, on the other hand, the State must now pay 6 per cent. and more to its creditors, compared with only 3 per cent. in 1914. The benefit of devaluation in this aspect of the budgetary situation is difficult to discern.

Rising prices are producing rising fiscal receipts. In August, receipts were Frs. 3,370 millions, of which Frs. 3,000 millions were ordinary receipts, an increase of 15½ per cent. compared with August, 1936. During the first eight months of 1937, total receipts were Frs. 20,000 millions, an increase of Frs. 1,900 millions compared with the same period of 1936. But this increase is principally due to taxes on increasing imports, and indirect taxes are misleading—notably, for instance, the yield of the turnover tax, whose decline may be partially ascribed to the latest fiscal reform, but certainly also to the stagnation of business, which is again perceptible in increasing partial unemployment.

Railway receipts also show an improvement, principally in the industrial areas of the East and the North. But Government employees are demanding increased wages, which, if granted, will cause new deficits in the railway accounts and the State Budget. They are claiming an increase of Frs. 150 a month from October, 1937, a claim which will cost Frs. 300 or 400 millions in the remaining months of this year and Frs. 1,500 millions in 1938. But M. Bonnet has made no provision for this expenditure in 1937 and has only allotted Frs. 1,000 millions out of the estimated surplus of Frs. 1,500 millions on the 1938 Budget.

Paid holidays, combined with the effects of the 40-hour week, produced in August a drop in coal output from 3,210,337 tons in August, 1936 (20.4 working days), and 3,588,558 tons in July, 1937 (21.1 working days), to 2,672,580 tons in August, 1937 (15.3 working days). Average daily production was 170,040 tons, won by 238,307 workers, compared with 170,249 tons and 238,148 workers in July. The numbers employed in August, 1936, were 223,006.

The production of metallurgical coke was 320,963 tons in August, 1937, compared with 348,817 tons in July and 307,089 tons in August, 1936. An agreement has been lately reached with the Miners' Unions for four extra working days in the remainder of 1937, but in certain pits the workers refused to support this concession, arguing that the falling-off in production should be remedied by the importing of fresh foreign workers.

After Three Months

Three months have elapsed since the new Government took office, and since the franc was again devalued. The paradoxes of the French situation are still the same. On the one hand, Budget prospects have been improved by the raising of taxes and railway charges, by the economies and the rise in prices; and the Treasury position has been alleviated by fresh advances from the Bank of France and by the consolidation of Frs. 5,400 million of 4½ per cent. bonds, due for reimbursement on October 5th. On the other hand, the deficiency in production and the import surplus both remain, and will probably continue so long as no new factor appears in French politics. It may be that the results of the forthcoming cantonal elections will constitute this new factor.

Meanwhile, the fundamental disequilibrium of the French economy is only "balanced" by Government appeals for an acceleration of production. M. Chautemps has just declared that "the Government will threaten no lawful interests, impose no further charges on industry, nor revoke the social laws. But production must be increased by improvements in plant, and by increases in the number of employees or by revision of the 40-hour week." Actually, these repeated appeals are not very

effective in face of the refusal of the trade unions to follow the Government and of exporters to repatriate the yield of their sales abroad. Moreover, the Minister of Finances must now aid the Equalisation Fund by new "recommendations" to the banks in order to limit forward exchange operations.

Germany

Dr Schacht's Position

BERLIN, September 29.—The Mussolini visit has produced nothing unexpected, except the visit to Essen. The speeches of Herr Hitler and Signor Mussolini were very vague. The Press, though it contains some apposite references to Augustus of Rome and Hephaestus of Essen, and other demigods and gods, does not venture to discuss the political import of the meetings; and the public merely sees and hears, but does not think—aloud.

Such also is the public attitude towards a matter which is more important because it concerns the one prominent German politician who is at once expert, serious and active. About Dr Schacht's resignation one gets no certain information. It is variously affirmed that he has *de facto* relinquished the Ministry of Economy, and will later formally resign, and perhaps actually resign, from the Reichsbank; or that he has not relinquished or resigned his posts, but merely delivered an ultimatum—perhaps the familiar penultimate ultimatum.

In view of the fact that any resignation by Dr Schacht would publicly advertise his protest against present abuses, and would therefore be resented by the Government and Party, it is unlikely that, after giving up the Ministry, he could long retain the Reichsbank. Indeed the two are virtually one. But it seems that for weeks before his visit to Copenhagen, Dr Schacht did not attend at the Ministry. However, as nothing in the Third Reich really and effectively happens until Authority announces it, there is no clearing-house for rumours; and it is not certain that any of the above stories are true.

It is certain that Dr Schacht is not pleased with the present economic, which means uneconomic, courses; and that from him recently originated certain mild Press criticisms, which no unprotected editor would dare to print. In disapproving, Dr Schacht is probably not alone. There are other high functionaries who would agree with the Minister of Economy. But, though expert and serious like Dr Schacht, these functionaries, unlike Dr Schacht, are not active. He might resign; they would merely be resigned.

Public Extravagance

It is said that Dr Schacht has again had trouble with Dr Ley. But that, if so, is a side issue. Dr Schacht does not approve of the headlong waste of public money, which he has to supply, or of the headlong waste of materials for which he has to find foreign currency. This waste is the consequence of the lack of a firm will and a serious mind in the Nazi Party, and of the belief that government is a vast show.

Dr Schacht wants to further exports, with the praiseworthy aim of supplying hampered manufacturers with materials and indifferently fed citizens with food. But exports are hampered by the internal waste of materials. As the public finances consist largely of credit, Dr Schacht feels himself responsible for them. His spending colleagues feel themselves irresponsible for them. Of the finances the public knows nothing; and it reasons that, unlike the matrons of ancient Athens, the less one hears of them the less virtuous they are.

There is considerable contradiction between the aims and methods of the Nazi Party and the objectives of order in economic and financial organisation for which, on the whole, Dr Schacht has stood. For instance, discriminating discussion about the problems of higher

taxation and a possible slump in the near future is blocked by doctrinaire assumptions.

New Foreign Exchange Decree

Dr Schacht has taken new measures about foreign exchange. He has decreed that all foreign securities, other than certain *non-valeurs*, must be reported to the Reichsbank. Securities owned by stock companies and other corporate bodies registered abroad must be reported if they are controlled by Germans or by foreigners resident in Germany (the latter are *Inländer* for the purpose of exchange legislation). Already since 1936 such securities have had to be deposited in a German "exchange bank," or, if actually outside Germany, with the foreign agents of a German exchange bank. The Government took measures to depress their quotations on the home Bourses, in preparation for acquiring them against Reichmark compensation, and in fact, prices fell by thirty to fifty per cent. Next came a decree forbidding holders of foreign securities to sell to private persons; if sold at all, the securities must be sold to the Reichsbank. The Reichsbank, it seems, duly acquired a considerable quantity, using pressure of various kinds, and sometimes paying premiums to induce the owners to sell.

The decree can be understood only on the assumption that ultimately general expropriation is designed. Possibly the measure must be assessed in conjunction with the re-export of nearly all the gold imported early in the year. A report by the German Lloyd Company shows that the exports of German-built ships in the first seven months of this year were valued at nearly Rm. 54 millions, which is four times as much as in the same months of 1936. This value is, however, included in the foreign trade totals; and an unstated part of the exports was paid for with blocked marks.

Business Activity

Industry is at present active. In August the average daily hours worked were 7.51 compared with 7.43 in July; and the number of employed workers was 10.8 per cent. higher than in the same month of 1936, compared with a difference of 10.2 per cent. in July. The number employed in industry has risen to 7,050,000. The improvement in consumers' goods trades continued. There have been some dividend increases in steel and other leading industries. The Trade Research Institute estimates that two million persons are at present working in industry for export, which is 500,000 more than in 1934. On the basis of the prices of 1928 the volume of export in the second quarter of 1937 was 86.6 per cent. of that of 1928, compared with a lowest record of 55.5 per cent. in the second quarter of 1934. The average price of industrial exports in the second quarter of the year was 60.4 per cent. of that of 1928.

Concerning the last Rm. 200 millions credit to Russia, under which the term for orders expired in June, it is reported that 543 firms obtained orders to the value of Rm. 182 millions, of which Rm. 87 millions were for machine-tools (which Russia needs for armaments); and most of the remainder was for other machines. In view of Herr Hitler's address at Nuremberg about the ruinous practices of Bolshevism in trade, it is noteworthy that the Reich continues to finance Soviet trade.

The Reich's total debt at the end of July was returned at Rm. 16,856 millions, compared with Rm. 14,655 millions twelve months before. This figure includes approximately Rm. 500 millions for tax-credit certificates and "old" valorised loans. The foreign debt has fallen sharply, being Rm. 1,392 millions compared with Rm. 1,650 millions a year ago. The funded portion of the "new" internal debt (debts contracted since the currency stabilisation) increased during the year from Rm. 6,256 to Rm. 9,442 millions. The figures, as usual, do not include the mass of "work-creation" and armament liabilities. Late last week the money market showed signs of strain in preparation for month-end settlements. Day-loans advanced early this week to 3-3¼ per cent.

Denmark

Scandinavian Interests

COPENHAGEN, September 28.—The usual meeting of the four Scandinavian Ministers of Foreign Affairs prior to the League session, to agree on a common policy about questions of joint interest, took place in Stockholm on September 7th. The official *communiqué*, issued after the meeting, mentioned the matters on which a joint policy had been agreed and stated that the collaboration established by these meetings had been of mutual benefit and ought to be continued.

The Lord Mayor of Manchester, Mr Joe Toole, accompanied by the Lady Mayoress and suite, paid an official visit to Copenhagen at the beginning of September in response to the Prime Minister's invitation last spring. A certain significance is attributed to this visit by the Lord Mayor of that great English city, which to the fullest extent has experienced the blessings of liberalism and free trade, to a country which was happier when it was able to adhere to the same principles.

From the preliminary negotiations about revision of the Exchange Control Act, between Government officials and representatives of trade and industry, it appears that it is intended to do away with import restrictions so far as the exchange position of the country will permit. Imports amounting to about 450 million Kroner might be admitted free; at present free imports amount to only about 80 million Kroner. Moreover, such important items as coal and coke, grain and feeding stuffs, the imports of which were valued at 250 million Kroner in 1936, will be on the free list.

The Storstrom bridge, connecting Zealand and Falstria, two miles long and the longest in Europe, was opened for traffic on September 26th in the presence of King Christian and a representative assembly, including the President of the British Board of Trade, Dr Schacht and others. The bridge, which was constructed by Messrs. Dorman Long and Company, will considerably reduce the travelling time between Scandinavia and the Continent for both motor and railway traffic.

Conversion Projects

The Ministry of Finance has commenced negotiations with the leading banks for a conversion to a 4½ per cent. interest basis of the 4½ per cent. loan of 1932, amounting to Kr. 30 millions—falling due on November 1st. Further, the possibility of a conversion as from January 1, 1938, of one of the expensive dollar loans still outstanding, namely, the 6 per cent. \$30 millions of 1921, is being investigated.

The uninterrupted improvement of the National Bank's foreign exchange position week after week for months past has not been continued during the last two weeks. Nevertheless, the position on September 23rd, showing new indebtedness to foreign correspondents of only about Kr. 3,000,000 must be considered quite satisfactory.

According to the Department of Statistics, the corn crop was harvested under favourable weather conditions. It is estimated that the yield of the spring crop will be very satisfactory, while the winter crop will hardly

produce a normal yield, although it will be above last year's production. The number of unemployed has remained fairly constant during the few months, fluctuating around 15 per cent. of the total number of organised workers. This means that there are about 65,000 people unemployed.

Austria

Danubian Trade Policy

VIENNA, September 13.—When the League of Nations Union's Congress met recently at Bratislava it unanimously passed a resolution calling upon the Governments of the Danubian States to make preferential tariff agreements between themselves, and appealing to the European Committee of the League of Nations to persuade other Powers to abandon their most-favoured-nation rights in that area. This resolution is, oddly enough, a demand for the restoration in part of the economic relations that prevailed under the old Austro-Hungarian Empire. For seventy years these countries were willy-nilly part of a single open market, and their progress was only impeded by excessive agricultural protectionism. In the peace treaties an option was given for Czechoslovakia, Hungary and Austria to form an economic bloc, free for five years of the claims of the most-favoured-nation clause. But trade barriers were even then thought the indispensable prerequisite of national sovereignty and the option was not used. Policy ever since has aimed at minimising the disasters to which the loss of that golden opportunity gave rise.

The era of plans for reform opened with the Geneva Economic Conference in 1927, which denounced trade restrictions as the main cause of Europe's economic malaise. Then followed M. Briand's plan for the United States of Europe and the French Memorandum in 1929, but both were suspect politically, and economically too vague to have a chance of being put into practice. In 1931 came the abortive *Anschluss*. Almost simultaneously the so-called Layton-Lammers Report made detailed proposals for regional trade treaties. Plans of this kind were still further elaborated by the League and the International Chamber of Commerce.

The Position To-day

Since then two series of treaties, between France and the countries of the Little Entente, and between Italy, Austria and Hungary, each carefully framed to evade the most-favoured-nation clause, have resulted in the formation of two loose economic blocs in the Danubian basin. To-day, it seems that M. Hodza, the Czechoslovakian Prime Minister, has taken on the task of welding these groups into a homogeneous whole, with Bulgaria, which has hitherto stood aside, as a part. But his task is by no means easy. The creation of the two blocs dependent upon Great Powers, and the subservience of Bulgaria to a third Great Power, Germany, has even in the short time of their operation substantially reduced the mutual trade of the Danubian States. In the years before the slump, despite every restriction in force, that trade was about one-half of the total trade of the various countries. Later it fell below a third, and though world recovery has probably raised it since, through the effects of higher prices upon agriculture, it is certainly still lower than it was.

If a new Danubian bloc, giving mutual preference to its members, partly at the expense of the Great Powers is unattainable for political reasons, a start might be made by other means. Each Danubian country might give additional preference in proportion to the trade of other countries with it in the hope that a gradual reduction of tariffs might lead eventually to a less artificial economic structure.

Developments of this kind would be of the greatest value to Austria, which is more dependent upon Danubian trade than any of the other countries of the basin, with the exception of Hungary.

Foreign Trade Improvement

The official figures of foreign trade during the first seven months of 1937 show marked improvement. Imports compared with 1936 have risen in value by 150.2 million schillings to 834.9 million schillings, and exports by 151.8 million schillings to 680.9 million schillings. Compared with the corresponding period of 1936 the total value of Austria's foreign trade rose by 302 million schillings, and the import surplus fell by 1.6 million schillings. The rise in imports was mainly caused by the smaller crops of 1936, which necessitated buying grain abroad in 1937 to the value of more than 50 million schillings. Improved industrial activity caused a surplus of imports of raw materials and semi-finished goods valued at more than 80 million schillings. Exports increased in value in all lines; finished goods by about 88 million schillings; and raw materials and semi-finished goods by 58 million schillings.

The import surplus, which amounted to a monthly average of 23 million schillings during the first six months of 1937, fell sharply to 10 million schillings in July.

For many years after the war, when the economic system of Austria was broken down and permanently threatened with famine and chaos, the yearly trade deficit amounted to 1,000 million schillings, which was only partly met by invisible exports, tourist traffic or payments from abroad. Austria's foreign trade policy has since been, and is now, a perpetual struggle for wider markets abroad for her industrial goods and for improved agricultural production at home. Aided by the stability of her currency system and by the general tendencies of the world trade cycle, Austria's foreign trade in 1937 gives satisfactory proof of her success in both directions. Nevertheless, it cannot be ignored that Austria is forced to import yearly considerable quantities of foodstuffs, owing to the insufficiency of her own agricultural production; and that her means of payment for the import surplus are principally exports of finished goods—which cannot be increased *ad libitum*. Austria's economic situation, though decidedly improving, is indicated by the number of assisted unemployed, which is 280,000, compared with 192,000 in 1929. The index of consumption goods is still 40 points below the production figure of 1929, although the index of production goods for June, 1937, exceeded by two points the 1929 high water mark.

Japan

The Cost of Hostilities

TOKYO, September 9.—The short special session of the Diet in the first week of September approved supplementary estimates of 2,022,700,000 yen for military and naval expenditure in China. These, together with the estimates sanctioned a month ago, bring the total expenditure on Chinese operations to 2,548,300,000 yen. The Session also passed several emergency measures for war-time control over trade, shipping, and capital. These bills empower the Government to restrict or prohibit the import or export of certain articles; shipping and navigation, and the sale or charter of merchant vessels to others than nationals, and the establishment, re-equipment and extension of certain trades and industries, so long as the armed conflict with China continues. The import restriction will be applied, first of all, to cotton, wool, and timber, while the export embargo will be placed on steel manufactures and machinery. In order to secure an ample supply of funds for armament and allied industries, the establishment, re-equipment, or extension of textile mills, breweries, kilns, big stores, restaurants, hotels, and so forth will be restricted.

According to the half-yearly statements of the leading banks, the aggregate net earnings of the six big banks for the half-year ended in June amounted to 29,317,000 yen, compared with 28,187,000 yen in the preceding

half-year. Except in the case of Mitsui and Sanwa, there was a substantial increase in earnings at the other four banks. The most notable feature in the balance sheets of the "Big Six" was a further marked decline in investments. While deposits rose by 458,884,000 yen and loans and advances by 422,597,000 yen, investment holdings were reduced by 74,212,000 yen. This implies that the increase in lending was partly supplemented by a reduction in investments.

The Effects of War

The effect of the Sino-Japanese conflict is apparent in the August foreign trade returns. Imports were valued at 302,997,000 yen, which was 56,401,000 yen (15.7 per cent.) lower than in the preceding month; and exports, valued at 250,341,000 yen, were down by 31,966,000 yen (11.3 per cent.). Compared with August last year, however, the values of imports and exports were still higher by 111,919,000 yen (58.6 per cent.) and 20,814,000 yen (9.1 per cent.), respectively. August's import surplus was 52,656,000 yen compared with an export surplus of 38,448,000 yen last year. In the first eight months of this year the visible adverse balance of trade amounted to 747,848,000 yen compared with 213,869,000 yen in 1936. In August there was a fall of nearly 7 million yen in the value of imports of raw cotton, while one of the very few encouraging movements among exports was a further expansion of 3 million yen in the value of raw silk exported.

Other home trade statistics for August show a general setback. The Bank of Japan's index of wholesale prices for August showed a fall of 1.8 per cent. in the month. The price index for the month of August of all shares listed on the Tokyo Stock Exchange moved down again by 18.3 points, or 11 per cent., compared with a month ago. The output of cotton yarn during August increased by 516,000 lbs., or 3.8 per cent., compared with July, but rayon production decreased by 588,000 lbs., or a fraction less than 2 per cent.

The official crop report estimates that the year's actual yield of wheat for the country will be 9,950,000 koku, or about 350,000 koku above the record figure of 1935. In early September there had been no typhoon damage to the rice crop, which is distinctly promising. The spring cocoon crop was 4,111,000 kamme, or close on 10 per cent., larger than that of last year, but the outlook is not so good for the summer and autumn crop, owing partly to a long drought and partly to a shortage of labour as the result of recruiting youths for the China campaign.

Canada

The Dominion and the Provinces

OTTAWA, September 11.—The Royal Commission to investigate the financial and economic relations of the Dominion and the provinces held its first meeting in Ottawa this week. The Chairman, Chief Justice Rowell, intimated that there was no hope of producing a report in time for action at the next session of the Federal Parliament. He suggested that, since the Commission had been definitely instructed to study the British North America Act for the purpose of recommending changes to improve the relations between the Dominion and the provinces, there would probably be no attempt made to draft legislation until the report had been submitted to a Dominion-Provincial conference.

The King Ministry, when the Aberhart Ministry refused the use of the Provincial Gazette for the publication of the proclamation to give legal effect to the disallowance of its legislation, resorted to a precedent established in the time of Sir John Macdonald and published it in *The Canada Gazette*. It has thereby notified the Courts of the status of Alberta's banking legislation; and if any attempt is made to enforce it, the banks can refuse to comply with its terms and resort to the protection of the Courts.

Crop Outlook

Favourable weather conditions have enabled rapid progress to be made with harvesting in the prairie provinces; threshing is almost completed in Manitoba and Saskatchewan at an abnormally early date; but in Alberta some work remains to be done. The first official estimate of the Bureau of Statistics of the total Canadian wheat crop for 1937 places it at 188,191,000 bushels, all except some 19 million bushels spring wheat, compared with a total yield of 229,218,000 bushels in 1936. The following are the Bureau's estimates for the other principal grain crops with the figures for 1936 given in brackets: oats 282,065,000 bushels (271,778,000); barley 87,781,000 (71,922,000); rye 6,038,000 (4,281,000); flaxseed 741,000 (1,795,000). The hay and clover crop is estimated at 13,047,000 tons compared with 13,803,000 tons in 1936.

A survey of fruit crops indicates that the favourable prospects for fruit and vegetable crops in Eastern Canada and British Columbia are being well maintained; and forecasts that the apple crop will not fall far short of the record 1933 yield of 2,438,000. Since the survey was made, however, considerable damage has been done to the apple crop of Nova Scotia by a severe windstorm. The problem of feed for livestock in the West is still worrying the authorities, and Mr Gardiner, the Federal Minister of Agriculture, after returning recently from a western tour, said that although 50,000 head of cattle had already been moved with Government aid out of the drought-stricken area, 400,000 more should be transferred to better territory.

The buoyancy of the Federal revenues continues; and the total yield for August was \$38,779,370 compared with \$32,475,875 in August, 1936. But expenditure, at \$25,176,233, had increased by more than \$4,000,000. The total receipts for the first five months of the fiscal year amount to \$243,882,870, compared with \$201,616,426 in the same period of last year, a gain of nearly 20 per cent., and as there has only been a slight increase in expenditure, there has already been a gratifying improvement in the Budget position.

Continued Business Activity

During the summer there has been an encouraging decline in unemployment. The latest employment index of the Bureau of Statistics, for the end of July, was 120 compared with 119.1 on July 1 and 105.6 and 101.1 on August 1, 1936 and 1935 respectively. But unemployment is still a serious problem in the larger industrial centres.

The Bureau of Statistics, in a survey of business conditions in Canada during the first seven months of 1937, finds a marked improvement compared with the same period of 1936. During that period the index of the physical volume of business averaged 121.3

2, 3 & 4 Cockspur Street, London, S.W.1

compared with 107.0 in the first seven months of 1937 (1926=100). Only four out of 54 important indicators failed to shew gains; the increase in mineral production was 15 per cent., in the output of newsprint 18.9 per cent., and in steel production 29.1 per cent.

The outlook for the autumn has been somewhat clouded by another crop failure on the prairies, but since prices for farm products remain high and industrial operations are being maintained at a satisfactory level, the outlook is considered moderately good. The general economic index of the Bureau of Statistics, which stood at 114.8 for the week ended August 21st, fell to 113.7 in the following week, but more than regained its lost ground by climbing to 115.1 for the week ended September 4th, which was exactly the figures for the parallel week of 1936.

There has been a remarkable increase in the consumption of electric power during the year. During July the output of central power stations exceeded 1½ million kilowatts compared with a trifle over a million kilowatts in July, 1936. The earnings of the two railways systems have both risen. In the first seven months of the year those of the Canadian Pacific totalled \$9,355,614 compared with \$7,770,100 in the same months of last year and those of the C.N.R. \$7,626,847 compared with \$2,562,243.

In the manufacturing field the great majority of establishments have a satisfactory volume of orders on hand and the primary iron and steel industries are operating close to capacity. The textile industries in Quebec and Ontario have been affected by strikes for shorter hours, higher wages and rights of collective bargaining; but they have now all been settled on terms which represent substantial concessions to the workers.

In the mining industry there is renewed confidence because of the rise in the price of certain base metals and the lessening of apprehensions about the price of gold. The export demand for copper remains brisk, and exports for July amounted to 440,131 cwts. compared with 360,901 cwts. in July, 1936. The forestry industries are also faring well; the output of newsprint in July reached a new high record, being 314,529 tons compared with 310,871 tons in June and 274,627 tons in July, 1936, while exports of wood pulp amounted to 1,443,302 cwts. compared with 1,403,576 cwts. in July, 1936. In the construction industry there was the usual seasonal contraction in July, but the value of the new contracts placed at \$21,485,300, although lower by \$9,000,000 than the June figure, was \$3,500,000 above the figure for June, 1936.

Letters to the Editor

American Credit Policy

TO THE EDITOR OF THE ECONOMIST

SIR,—In your note on the decision of the Board of Governors of the Federal Reserve System to de-sterilise \$300,000,000 of gold in order to replenish the reserves of the New York Member Banks, you remark: "Sooner than was expected it is being proved that consistent monetary policy is difficult, if not impossible, when the national Budget is unbalanced."

Under certain circumstances—periods of cumulative boom—this point certainly is valid. Governments which

labour under budgetary difficulties must be suspected of tending to favour easy money even after the economic need for its maintenance has ceased.

Both as a general principle, however, and in its application to the present position in America (and, incidentally, also in this country) your observation is open to serious objections.

There are periods when the unbalancing of the Budget is a necessary element of monetary management. It is possible to hold that monetary management is always and without exception unsound and dangerous. With that view, which I believe you strongly repudiate, it is not possible to argue. Once the desirability of some method of monetary intervention is accepted, that of unbalancing of the Budget cannot *a priori* be generally ruled out.

There seems to be, however, no justification for the view that the state of the Budget was the motive for the step you criticise.

Six months ago when spirits were exuberant and the technical difficulties in the way of a rapid increase of supplies in the view of the authorities threatened a cumulative price and profit inflation, action to dampen the impetus was decided upon. It may *then* have been taken too late and too hesitatingly. The exigencies of the Treasuries (and one ought not to forget that the British Budget too was then about to be, is and for some good long time will remain, unbalanced) may then have played some rôle in this hesitation. When action came it was with a short, sharp shock. Confidence was shaken by Government statements, tax measures and restrictionist credit policies both in this country and America. The psychological impact was multiplied by the unfortunate deterioration of the already ominous international position. Little remains of the former exuberance on the central markets. So little in fact that some people already begin to clear the decks for the next slump, and must hope that another resurgence of the old spirit will permit them to "get out" on better terms. This change in the liquidity preference forebodes ill. Government spending can—as we saw in America in 1934–35—hardly counterbalance a serious deterioration of the private investment initiative.

As yet little if any damage has been done. On the contrary: the dampening of extravagant demand allowed supply to catch up and laid the foundations for a more solid broadening of the recovery movement. The revival of international trade is one of the happiest manifestations of this configuration. Rigidity in policy in the face of the changed basic psychological and technical conditions threatens to convert the healthy and necessary slowing down of the rate of expansion into actual shrinkage.

Considering that the margin on which solvency, especially public solvency, depends, has decisively shrunk; that neither the burden of public expenditure nor the terrifying international developments necessitating it are likely to be lifted from us; and that at the same time the very same factors weaken the body economic and decrease its ability to bear the strain, continued deflationary action seems to be completely out of place. It has to be hoped, on the contrary, that the measures initiated in America will be followed up both here and there. The capital markets must be enabled to fulfil their function, the maintenance of stable business activity at a high level, by stimulating long-term capital investment. No capital market, however, can satisfy this essential need when demoralised by the threat of a continuing price decline. The lifting of the monetary as contrasted with psychological pressure was the first step to consolidation. It has to be greeted the more warmly as failure under present conditions forebodes an eventual explosive inflation, the very danger you abhor.

Your obedient servant,

THOMAS BALOGH.

Old Jewry,

London, E.C.2.

[Our comment was not intended to be taken as a criticism of the action taken by the American authorities, which, on the contrary, seems to be appropriate. We were concerned merely to point the political moral that so long as the Treasury is dependent on the market, its needs inevitably become the paramount consideration, to the possible detriment of monetary policy as a whole. On this occasion, the Treasury's requirements pointed in the same direction as wider considerations. But it seems to have been the Treasury which gave impulsion to the change in policy. And the Treasury, with an unbalanced Budget, may not always be on the side of the angels.—Ed. Econ.]

America's Balance of Payments

TO THE EDITOR OF THE ECONOMIST

SIR,—I venture to question whether America's negative balance of mercantile trade is "remarkable" because, as suggested in your issue of September 25th, her currency "has been devalued by more than 40 per cent. within the four years preceding 1936."

Since, in terms of commodities, the fall in dollar purchasing power has not been outstanding in relation to that of other commodities, "devaluation" has been

mostly an illusion. If \$4,012 millions of gold reserves held at the end of 1933 became "worth" \$6,800 millions at the end of 1934, this was because gold was written up arbitrarily in terms of the dollar, and not because the dollar had suffered a corresponding fall in purchasing power.

The implications of this important distinction are various, and I confine myself to a hint of such conclusions as follow from the proposition that at \$35 per ounce gold is now on the dollar standard, and at a precariously high parity.

I am, Sir,

Yours faithfully,
ARTHUR V. BARBER.

Whitehall, S.W.1.

Books and Publications

Middletown Revisited

MIDDLETOWN is Muncie, Indiana. It was picked out in 1925 by Mr and Mrs Lynd as a very typical small American city. It is in the Middle West, dependent on industry but surrounded by the corn lands; it is large enough to be urban but not large enough to be metropolitan (its population was then 35,000); over 90 per cent. of its people are white and at least third-generation Americans. Having selected their Middletown, Mr and Mrs Lynd, with a band of investigators, lived there for eighteen months, 'discovering, dissecting and discussing every aspect of life in the city—its business and industry, its government, its religion, its morals, its amusements, its education, its philosophy. The resulting book, which was published in 1929, is a monument alike to their industry and their human interests. It will always be the most complete and typical picture of the United States in the middle of that wonderful eleven years between the Armistice and the Great Depression. It is "Babbitt" blueprinted.

In 1935 the Lynds went back to Middletown, and their new book* records their impression of change. Those changes are, of course, many. But the reader will be inclined to think that the Lynds have changed as much as Middletown since 1925. Their dissection was always done with a sharp knife; but the satirical note is more frequent now. Ten years ago it was possible to have doubts about some of the values of American civilisation. But it was so completely and contentedly accepted by such an overwhelming majority, it was so impressive in its material achievements, that the sceptic was forced into apology. Now that the American system has disappointed even its admirers, the sceptic can be much bolder. This is reflected in the subtitles of the two books. The first was called "A Study in Contemporary American Culture"; the second is "A Study in Cultural Conflicts." The culture of Middletown is not merely something objectively external to the investigator; it seems to have become something definitely alien. There are kind words for the people; but none for the system.

This comment—it is hardly a criticism—should not be allowed to detract from the praise which the second volume, no less than the first, fully deserves. The depression, in its suddenness and immensity, made a social and psychological impression on the American people comparable only to the impact of the War on European societies. In either case the sociologist hardly knows whether to marvel most at the changes or at the underlying continuity. In the case of Middletown, the clearest fact that emerges from the Lynds' study is the extraordinary toughness and resilience of institutional and traditional patterns of living. It is possible to list a great many changes due to the depression; but most of them are ephemeral, vanishing again with recovery. This is most conspicuously true of the problem of caring for the indigent—a problem which hardly existed in 1925 but became in 1931–34 the central problem of communal existence. All sorts of shifts and devices were improvised; the powerful aid of the Federal Government

* "Middletown in Transition: A Study in Cultural Conflicts." By Robert S. Lynd and Helen Merrell Lynd. (London) Constable and Co., Ltd. 604 pages. 18s. net.

had to be brought in. But the old doctrine that poverty is a man's own fault, and that the provision of a dole is fatal to public morale, was merely suspended, not changed.

This same temporary nature of the effects of the depression can be seen in other ways. Divorce declined in the bad years, but is now increasing (incidentally, there are between forty and fifty divorces in Middletown for every 100 marriages; the comparable figure in England and Wales in 1935 was only just over one per cent.). There was a great increase in use of the public libraries; but this has now relapsed. Even more striking were some of the aspects of life which showed no change. There was no perceptible revival in institutional religion. Although retail purchases of all sorts fell off sharply, the use of motor-cars did not, nor—more strangely—did the use of laundries.

Beneath these temporary changes, however, the more fundamental shifts in American society can be seen at work. Class divisions are hardening. At the upper end there is a growth of "self-conscious leisure" in forms which are only available to, and symbolical of, great wealth. At the lower end, the working man is losing his faith that he carries a millionaire's baton in his knapsack. On the other hand, "class consciousness" has not yet emerged, and the Lynds' considered judgment is that the Labour movement in Middletown is, on balance, weaker than ten years ago.

For all these changes, the book gives chapter and verse. It is not precisely bedside reading—there are too many technical terms. But it can be wholeheartedly recommended to anybody who is anxious to make the intimate acquaintance of a typical American community of the present day.

Shorter Notices

"Redressement économique et Industrialisation de la Nouvelle Turquie." By Orhan Conker and E. Witmeur: Recueil Sirey (Paris). 345 pages. 50 frs.

This is an extremely valuable summary account of one of the most interesting of recent experiments in industrialisation. Details of statistics and legislation have hitherto been more than difficult to get hold of, and this essay fills most of the more glaring gaps. It is a pity, however, that the authors did not replace some of the multitudinous photographs of anæsthetic factories and politicians by a fuller commentary on Turkish economic policy. There is a preface by the Prime Minister, M. Ismet İnönü, and a dedication to the Atatürk, but no index.

MONEY AND BANKING

The Tripartite Agreement

THE Tripartite Monetary Agreement, made originally by England, France and the United States and subsequently adhered to by a number of other countries, has this week celebrated its first birthday anniversary. One of its original objectives was to permit of the orderly devaluation of the franc from about Frs. 75 to about Frs. 105 to the pound sterling. But the franc had last July to be devalued once more to Frs. 127, and has since slid to over Frs. 140 to the pound. There have also been such new events as the gold scare, the set-back in stock markets on both sides of the Atlantic, changes in American banking policy and the enlargement of the British Exchange Equalisation Account. Even the birthday of the Tripartite Agreement is being celebrated quietly at Washington by a meeting between the American authorities and a representative of the British Treasury at which no doubt some of these matters are being informally discussed.

So far as can be ascertained, the Washington discussions have been mainly directed towards the allied questions of foreign hot money and its proper taxation. Primarily the American authorities desire to put an end to certain opportunities for tax avoidance, which now exist. They wish to ensure that foreign funds lodged or invested in the United States bear their proper share of taxation, and they also desire to check evasion by American nationals operating through agents or nominees in foreign countries. In this connection it must be remembered that the American income tax embraces profits on the purchase and sale of securities, and equally allows losses to be used as an offset.

There is also the question of hot money to be considered. It has long been known that the American authorities view its presence with some apprehension and distaste. Its influx is a leading cause of the United States' huge acquisitions of gold. Part at least of this gold has found its way into the banking system, including \$300 millions released only a few weeks ago, so that the possibility of a sudden reflux of much of this foreign hot money, and its reaction on the American banking and exchange position, must be causing a certain amount of uneasiness.

The dimensions of this problem can be illustrated very approximately by the following table, taken from the July, 1937, issue of the Federal Reserve Bulletin.

NET MOVEMENT OF CAPITAL INTO THE UNITED STATES,
JANUARY 2, 1935, TO MARCH 31, 1937
(Millions of Dollars)

	Country of Origin			
	England	France	Other Countries	Total
(a) Banking Funds :—				
(1) Foreign Funds remitted to U.S.A.	154.7	140.9	828.0	1,121.6
(2) U.S. Funds repatriated	182.5	63.0	153.8	409.3
Total	347.2	203.9	979.8	1,530.9
(b) Security Purchases :—				
(1) U.S. Securities	438.8	72.9	564.0	1,075.7
(2) Foreign Securities	140.5	22.7	155.9	319.1
Total	579.3	95.6	719.9	1,394.8
Brokerage Balances	0.8	9.4	— 6.7*	4.1
Grand Total	927.3	308.9	1,693.8	2,929.8

* Net outflow from the United States.

During the period in question a net sum of \$2,929.8 millions flowed into the United States. Nearly one-third of this amount apparently came from England, for the greater part as purchases of American and foreign securities in Wall Street. France's contribution of \$309.8

millions is smaller than might have been expected. Of the balance of \$1,693.6 millions represented by other countries, the chief contributions are :—

	Banking Funds	Security Purchases (\$ millions)	Total*
Holland	49.1	215.3	267.1
Switzerland	102.6	250.5	363.5
Latin America	355.4	— 15.2†	334.9

* Includes brokerage balances. † Net outflow from United States.

The first comment to make is that not all the funds shown as coming from England are necessarily of British origin. Part of them no doubt have come from Europe to the United States *via* London. The same is quite possibly true of Holland and Switzerland. Still, with these reservations, it is easy to see why the American inland revenue authorities should be interested in the \$438.8 millions of American securities purchased with funds remitted from London. It is also easy to see why a total net capital influx of nearly \$3,000 millions in little over two years, balanced very closely by a net gold importation of \$3,116 millions during the same period, should be of interest to the American Treasury in more ways than one.

On the taxation question, the main point is that any new arrangement must be reciprocal. The American authorities should also be invited to say whether they are thinking of a "revenue tariff" on foreign money, i.e. the prevention of tax avoidance; or a "protective tariff," designed to discourage a further influx. The danger of a protective tariff is obvious. It would not only prevent more capital from coming in, but would also induce the hurried repatriation of much of the foreign capital already in the United States. The effect of this on Wall Street, in its present frame of mind, needs little emphasis. Nor, too, is it necessary to suggest the possible effects upon the exchanges of an outflow of capital from the United States of the magnitude suggested by the table. To say the least, the American authorities would have to be prepared to part with an equivalent quantity of gold; and we and other centres would have to be prepared to receive it.

Meanwhile there is the further collapse of the franc and its bearing on the Tripartite Agreement. Obviously, the depreciation of the franc during the past year from Frs. 105 to Frs. 144 denotes a definite change in conditions, but it does not mean that the Tripartite Agreement ought to be abrogated. To begin with, France is now only one of numerous adherents to the Agreement, though admittedly she was one of the first, and is still one of the most important. Next, France has undoubtedly kept the terms of the Agreement. She has refrained from imposing exchange restriction and from competitive currency depreciation. As we showed a fortnight ago, it is to-day impossible to say whether the franc is over- or under-valued, or what is likely to be its permanent and natural rate in the ultimate future.

The suggestion has recently been voiced in *The Times* that combined international action should be taken against "financial piracy," that is, against speculative attacks on currencies. In principle, the idea is tempting, though it must be remembered that these "financial pirates" reside mainly on the Continent, and not in London. It must be remembered, however, that piratical or bear attacks on a currency can only be made when, fundamentally, that currency is in an unsound condition. In these circumstances even the strongest gold reserve becomes exhausted in time. It has also been

suggested that the Exchange Funds of the different nations should work in unison against the pirates. In a sense they do so to-day, for there has always been a measure of collaboration between the different centres. What is hardly practicable is for the authorities in one centre to be able to use the assets of the Exchange Fund of another centre. Thus the British authorities cannot lend gold to the French Exchange Fund, and then buy it back again the next day as part of their normal operations for supporting the franc. Nor can they be expected to buy and hold francs without turning them into gold.

At the moment, indeed, it is impossible to say how far the franc's *crise de confiance* is due to political and how far to economic factors—or, indeed, where the former end and the latter begin. As we go to press, the position of the Chautemps Government seems increasingly precarious. Unofficial reports from Paris suggest that M. Bonnet may resign if a Cabinet Council, to be held on Saturday, October 2nd, rejects his proposals—which, it is rumoured, will include some revision of the 40-hour week. In that case, the Socialist members are credited with the intention of proposing some form of exchange control. And where will the Tripartite Agreement be then?

The answer is that the Agreement—dupartite, tripartite or multipartite—ought to be maintained, as a monetary basis for the liberation and revival of international trade and finance, which is fundamental to recovery. Discussion at Washington and elsewhere can serve at least the useful purpose of maintaining close and constant contact between the leading financial centres.

Financial Notes

Federal Reserve Advances.—The Board of Governors of the Federal Reserve System have carried their policy of preventing monetary stringency one step further by considerably widening the definition of assets which are "eligible" for deposit by a member bank as security against an advance from a Reserve Bank. What is more, the Reserve Banks, if they think that circumstances make it advisable, are authorised to accept any asset without regard to its formal eligibility. The immediate purpose of this change is, of course, to make it still easier for member banks to borrow and thus obviate any possibility of a shortage of credit. The decision re-emphasises the reversal of official policy since the increases in reserve requirements which were imposed in the spring. But it also marks the virtual end of a doctrine which has influenced the Federal Reserve system from the beginning—namely, that a Central Bank should concern itself not merely with the quantity of credit in existence, but also with its quality—that is, with the uses to which it is put. Originally, the Reserve Banks could lend only on 90-day commercial paper and 9-month agricultural paper. This provision proved dangerously restrictive in the depression years, and the definition of eligibility has been gradually widened to include, first, Government bonds, and, later, a great variety of other bank assets. To European bankers the qualitative doctrine has never been impressive, as the security pledged for an advance may have no connection with the use to which the advance will be put. Its disappearance will remove one of the least purposeful restrictions on the freedom of the Federal Reserve authorities to pursue the credit policy which seems to them to be sound.

The Money Market.—Contrary to expectation, money has been very easy all the week, including Thursday, September 30th. Normally there should have been some pressure for funds, because the bulk of this week's Treasury bills were paid for on or before Thursday so as to mature in December, while the market had paid for no bills at the end of June, and so had no maturities this week before Friday. By Thursday this movement must have reached its height, and it is a little surprising that by then the market was not short of funds. On the other hand, there was no clearing bank

calling on Thursday, and this helped to ease the position.

	Sept. 9, 1937	Sept. 16, 1937	Sept. 23, 1937	Sept. 30, 1937
Bank rate	2	2	2	2
Clearing banks' deposit rate	1	1	1	1
Short loan rate :—				
Clearing banks	1-1*	1-1*	1-1*	1-1*
Others	1-1	1-1	1-1	1-1
Discount rates :—				
Treasury bills	1	1	1	1
Three months' bank bills	1-1	1-1	1-1	1-1

* Loans against Treasury bills and other approved bills and British Government securities within six months of maturity; 1 per cent. Treasury Bonds and other gilt-edged stocks within six months of maturity; and other collateral respectively.

This week's Treasury bills were allotted mainly at £99 17s. 6d. per cent., equal to $\frac{1}{2}$ per cent. The clearing banks were ready buyers of November and December Treasury bills at $\frac{1}{2}$ per cent. December bank bills are quoted at $\frac{1}{2}$ per cent., but next year's maturities are quoted at a full $\frac{1}{8}$ per cent.

The Bank Return.—Currency requirements over the end of the month explain the increase of £2.5 millions in the note circulation. This movement was rather greater a year ago :—

	Sept. 30, 1936	Sept. 8, 1937	Sept. 15, 1937	Sept. 22, 1937	Sept. 29, 1937
Issue Department :—	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Gold	248.6	326.4	326.4	326.4	326.4
Note circulation	449.4	489.1	488.1	486.0	488.5
Banking Department :—					
Reserve	60.3	38.9	39.9	42.1	39.6
Public deposits	49.7	12.0	12.5	15.7	21.8
Bankers' deposits	60.7	105.7	108.4	105.6	95.1
Other deposits	40.9	36.3	36.1	36.2	37.2
Government securities	80.3	107.1	109.1	106.9	105.8
Discounts and advances	8.6	5.1	5.0	5.2	6.2
Other securities	20.4	21.0	21.2	21.6	20.8
Proportion	39.8%	25.2%	25.4%	26.7%	25.6%

In the banking department, both the Reserve and bankers' deposits have been depleted by the increase in the note circulation. There has also been a transfer since last week of about six millions from bankers' to public deposits, due to this week's incidence of Treasury bills.

The Foreign Exchanges.—Spot francs have for the moment been brought under control again by the French authorities at a pegged rate of Frs. 144.60. The Paris banks have also suspended all dealings in forward francs at the request of the Banque de France. In so doing they have destroyed the main source of demand for forward francs, which has emanated from Paris banks desirous of earning a profit on selling spot and buying back forward. In consequence, the discount at once widened to 6 francs for one month, and 11½ francs for three, and business everywhere has become very narrow. By Thursday the two rates had narrowed to 5½ and 9½ francs, respectively, but the impression given by these wide rates is so bad that quite possibly the embargo upon forward dealings may be soon withdrawn. The whole market has been in a nervous condition, and there have even been rumours of a fresh devaluation of the dollar. Thus one day there were sales of francs for dollars, largely through London, while the next day the dollars were re-sold against purchases of gold, this last being on both French and Dutch account. Many of the French operations in foreign currencies are now conducted in Switzerland, where they are covered by French currency taken to Switzerland by its owners. Amidst all these cross-currents dollars have remained reasonably steady at about \$4.95. Spot belgas have been bid down this week from Bel. 29.43 to Bel. 29.37½, but forwards have been erratic at discounts ranging from 8 to 17 cpts for three months.

THE STOCK EXCHANGE

Chinese Bonds

THE Japanese hostilities in China have developed at a time when the country, chiefly by its own efforts, was fast progressing towards economic recovery and effective national government. No one can foresee what will remain of China's financial achievements when a halt is called to Japan's aggression. The London stock market, which until recently was inclined to see in each Japanese "success" at least the redeeming possibility of an early termination of hostilities, is now less sure that the war will be short and sharp.

Even at this stage, however, investors may profitably endeavour to make a preliminary appraisal of China's credit in her circumstances as a victim of war. British holdings of Chinese are more important than of Japanese bonds. Until July, when Japanese "incidents" in North China were followed by the Chinese Government's abandonment of Peiping and Tientsin, China's impressive recovery had been matched only by London's willingness to keep in step. Outstanding debt questions from the depression had been largely cleared up. Settlements had been completed for the defaulted railway loans. Though these covered only a fraction of the service originally contracted, they served to demonstrate China's recognition of responsibility. A loan of £1,100,000 in 6 per cent. bonds for the completion of the Shanghai-Hangchow-Ningpo railway was negotiated in May last year, and introduced to the London market last February, when investors had already shown increased interest in Chinese issues. And in connection with Dr H. H. Kung's visit to this country this summer, it was freely reported that negotiations had reached an advanced stage for a loan of greater amount.

Possibly London's goodwill made her estimate of China's investment status, before last July, err a little on the side of optimism. But the subsequent fall in Chinese bond prices has more than reversed that factor. The following table shows the recent course of certain Customs, Salt and Railway Loans:—

	1936		1937			Yield %
	High	Low	Mar. 30	June 30	Sept. 30	
Secured on Customs						£ s. d.
4½% Gold Loan 1898...	108½	92½	102	102½	91	4 19 0
5% Reorgan. Loan 1913	96	80	96	101½	67	7 10 0
Secured on Salt Gabelle						
4½% Loan 1908	161½	92	101	100	90½	5 1 9
5½% Loan 1912	87½	66	90½	94	82½	8 1 8
8% Vickers Notes	30½	5	36½	43½	21½	6 19 6
Railway Loans						
4½% Gold Loan 1899...	97½	85	98	100	68	7 7 0
5½% Shanghai-Nanking	79	64½	87½	90	40	12 10 0
5% Canton-Kowloon	42½	14½	56	56½	28	8 18 6

Let us examine each group in turn, relating, as far as possible, pre-War statistics to the special circumstances of war. The Customs loans are the touchstone of Chinese credit. Their service has always been regularly met, and enhanced by the presence of foreign nationals in the Customs Administration. Our table, however, shows that the 1913 loan has fallen in three months by over 30 per cent. Even the 4½ per cent. loan of 1898—China's "gilt-edged short"—is 11 per cent. lower now than three months ago.

What effect will hostilities have upon the secured revenues? There must be a severe contraction in trade during the second half of the year, accompanied by considerable interference with Customs collections. The following table, reproduced from our last issue, shows that the present theatres of war cover several of China's principal ports.

CHINESE MARITIME CUSTOMS (In dollars)

	1934	1935	1936	Percentage of 1936
Shanghai	175,363,474	149,127,439	148,869,136	46
Tientsin	41,138,710	41,089,011	35,518,115	11
Hankow	19,365,550	22,396,228	23,874,359	7
Canton	8,013,102	9,616,502	10,925,799	3
Kowloon	7,462,841	7,346,729	9,120,867	3
Swatow	5,793,706	4,760,905	6,828,894	2
Others	77,508,025	81,182,898	89,446,121	28
Total	334,645,408	315,519,712	324,583,291	100

From this table we may calculate the extent by which Customs revenues must fall before the principal loans are affected. The 4½ per cent. loan of 1898 ranks first in the list, and requires £821,419 in full service this year. Next come the Boxer Indemnities (including the service of the 5 per cent. dollar bonds of 1925, secured on the French portion and other smaller issues) which require approximately £2,300,000. Finally, the service of the 5 per cent. Reorganisation Loan requires £1,496,038. External debt charges on the Customs Revenues thus total some £4,620,000.

If one may assume that the Shanghai dollar will remain linked to sterling at rs. 2½d. in the future, a simple calculation will show the extent to which the security for these loans may be affected. The sterling equivalent of last year's revenue is £19,600,000, of which 23½ per cent. is needed for external obligations. Some 40 per cent. of last year's currency revenues, however, were absorbed by the service of internal debt. Thus, it would seem that the dollar revenue would have to fall by about 35 per cent. in currency, before the internal debt service was threatened. After the consolidation of the internal debt last year it can only be presumed that the Government would not willingly contemplate interference with the service except under *force majeure*, even although it might lose the substantial balance of Customs receipts—\$112.1 millions last year—which is available normally for revenue purposes. Assuming, however, that the internal service were to be suspended during the crisis, the Reorganisation loan would still be covered if sterling revenues fell 76½ per cent. from last year's level and the Boxer Indemnities if revenues fell by 84 per cent.; while the 4½ per cent. loan would be covered by only 4.2 per cent. of the 1936 revenue. And if the sinking funds of all loans were temporarily suspended, payment of interest could be maintained even if the revenues were still more attenuated.

These calculations provide formal proof that, granted exchange stability, the setback in China's trade would need to be substantial before the external Customs loans were affected, if the matter depended on China's goodwill alone. But are arithmetical calculations entirely apposite when bombs are falling on a country's capital city? Can the investor rule out the possibility that, at the end of the fighting, China's economic strength will be exhausted, her trade with Japan reduced, and her attitude toward the rights of foreign creditors obscured by pressing domestic problems? Investors are bound to await the latest trade figures with anxiety. In 1936 China's total trade increased by 10 per cent. During the first six months of this year it showed a further increase of 37½ per cent., and the excess of imports was further reduced. But between July and August total trade fell from \$213 millions to \$101 millions—a drop of 52½ per cent. Shanghai's share in total trade is normally of the order of 55 per cent., and her contribution to Customs rather below 50 per cent. If the August figures are followed, as they must be in to-day's circumstances, by worse returns this winter, then the internal debt service will be placed in jeopardy. With Shanghai under fire and

Tientsin occupied, the loss of revenue from smuggling in North China last year sinks to minor importance.

We may next turn to the situation of the Salt Loans. So great were the improvements effected in the salt collections after China's internal consolidation in 1927 that investors were beginning to regard the seniority of the Customs issues as a case merely of *primus inter pares*. From a gross revenue of \$54½ millions in 1928, salt collections increased almost without interruption to \$206½ millions last year. This branch of revenue requires, above all things, efficient administration: supervision of salt production and prevention of smuggling. And in a country of China's size, a certain degree of local anæmia must be looked for, however sound the heart of the administration may be. Consequently, while the salt revenues may not be directly open to Japanese attack to the same extent as the Customs, political disturbance and rising prices can seriously affect their yield.

The external charges on the Salt Revenue comprise the 4½ per cent. loan of 1908, the Hukuang Railway loan of 1911 (which receives 2½ per cent. until 1938), the "Crisp" loan of 1912, and the Vickers-Marconi Notes—apart from certain yen and dollar obligations. Settlements of certain of these loans have been so recently arranged that it seems preferable to calculate cover on the basis of 1938 service requirements. All the external charges could, in fact, be met at a cost of £965,000—equivalent to \$16 millions Chinese, or to 7½ per cent. of last year's collections. It is true that there are certain domestic obligations which have been met from the Salt Gabelle, but they are not, in fact, legally attached. *Prima facie*, therefore, the Salt Loans seem less vulnerable, so far as their security goes, than the Customs issues, unless the investor is prepared to contemplate circumstances of disaster.

Finally, we may briefly examine the position of the railway loans. While internal dissension was rife in China, damage and loss from military operations was inevitable. More recently, settlements have been concluded with bondholders which postulate steady and peaceful progress in China's economic prosperity. The intrusion of war has made the position of the railway loans anything but promising. Some lines, such as the Tientsin-Pukow, and Shanghai-Nanking, are directly exposed to damage. As the railway stocks received most speculative attention in the market earlier this year, their falls have been correspondingly severe. At present the full service is being met on the Gold Loan of 1899, while the Shanghai-Nanking bonds are receiving full current interest, subject to 18 months' arrears and seven years' sinking fund.

The future of the loans on which settlements were reached last year—Honan, Canton-Kowloon, Tientsin-Pukow and Lunghai—must now be treated as entirely conjectural. The agreements were based on the assumption that the net surplus of the Chinese railways would continue to increase—on a scale comparable, perhaps, to the vast improvement from \$8 millions in 1933-34 to \$35 millions in 1935-36. For that reason, the resumption of full coupon payments and sinking funds, as revised, was to be a gradual process. Altogether, in present circumstances, this group of bonds is quite obviously the most speculative of all China's obligations in which British investors have a substantial interest.

No one can pretend, at this moment, to assess the future of China's credit. The war may introduce immense secular changes in Chinese history, or it may be shortly succeeded—as wars have often been succeeded in the Far East—by rapid recuperation and peaceful progress. China has hitherto shown goodwill towards her creditors, and, under the most favourable conditions, she will need much capital for her development. Whether the present hostilities will modify her attitude towards creditor nations and their cash remains to be seen. But with the best will in the world, her ability to collect and transfer the secured revenues would necessarily be severely strained by a long war. The investor, in fact, may measure the potential damage to his interests—apart from political considerations, which are quite incapable of assessment at the moment—by his estimate of the possible duration of hostilities.

Investment Notes

Course of Share Values.—The past month has brought a profound change in market sentiment. Prices were definitely on the down-grade before the end of August, but reputable investment counsellors could still reconcile with their conscience the giving of advice about an autumnal recovery. To-day, such counsel, even if it were given, would be unheeded. The continued fall has left sentiment thoroughly deflated, and many speculative positions which looked healthy enough two or three months ago are a source of widespread uneasiness now. Our customary chart, given on this page, brings out the significant fact that although Wall Street has declined at least twice as fast as London, equity share values in both

BRITISH AND AMERICAN INDUSTRIAL SHARE VALUES DURING THE PAST TWO YEARS

(1928 = 100)

British: "Financial News" Index of 30 Ordinary Shares
American: "Standard Statistics" Index of 50 Common Stocks

markets are more or less where they were in the spring of 1936. A month ago, Market Enemy No. 1 was believed to dwell with the rising sun, in the East. To-day, the tendency is to locate him in the West, though whether his name is Roosevelt or Douglas or Dow is not quite clear. Actually, the fact that both markets have reached approximately the same relative point in their recession, and that both seem equally at a loss to discover a really convincing explanation for their malaise, seems to suggest a deeper cause common to both.

* * *

The suggestion that "speculative" forces, in the popular sense, are responsible hardly squares with the facts. In London, one would not look for a widely extended position after nine months of persistently declining markets. In America, the complaint is that markets are too "thin"—in other words, that there has been too little speculation. Further, the 55 per cent. margin rule in America is rigidly enforced when prices are rising and commitments are being enlarged, but the decision to close when a fall has reduced the cover below 55 per cent. is left to the discretion of individual lenders. Some of the technical factors in London's present position are discussed in the succeeding Note. Taking a longer view, it seems difficult to resist the conclusion that the stock markets—and the commodity markets—are discounting future developments in national and international trade activity whose importance is primary and not secondary. To speak quite frankly, the past month's events suggest that many people have reluctantly accepted in September what they refused to believe in

August—that a cyclical check to rising economic prosperity is likely to occur within the next few months. Fears may be liars, but the odds against complacency have lengthened.

The Technical Position.—A fortnight ago some market observers were still confident that despite Wall Street's collapse the technical position of the London market was sound. Heavy differences on international securities, it was said, were no concern of the London Stock Exchange. For reasons suggested in the preceding Note, however, the apostles of London's isolation are less in evidence to-day. Their present doubts are more reasonable than their former unconcern. No investment lesson has been more conspicuously underlined this year than the close inter-relation of the world's security markets. If Wall Street is on the verge of panic, trouble for London follows automatically. The notion that the two centres are insulated because they do not trade on the same floor will not bear a moment's examination. London's anxiety this week, therefore, is readily comprehensible. To give a single instance, U.S. Steel were taken at \$91 for the last make-up and are now no higher than \$83½. The speculative carrier of 1,000 shares must therefore find £1,500 to cover the depredations of the past fortnight alone. Losses of this order inevitably produce forced realisation of other securities, from which neither London nor Amsterdam and Paris is immune. Another unwelcome sign of the speculative aftermath is evident in the sharp break on the metal markets this week. In the spring, metals attracted the same type of operator as American securities, and much of the current weakness on the metal and stock exchanges appears to emanate from common sources. It is not surprising that rumour has played freely this week with the names of well-known broking and jobbing houses. Gossip in these matters almost invariably proves unreliable, but it is symptomatic. Clearly, technical weakness must be expurgated before the markets find a resistance point. It may well prove a matter of months rather than weeks. In the meantime, a series of delaying actions by the rearguard is all that can be hoped for.

Anglo-U.S. Taxation.—After collapsing last week-end, Wall Street has tried to stiffen its morale this week, though with no conspicuous success. In falling markets, there is no shortage of whipping boys, and Mr Morgenthau's announcement that his discussions with Sir Frederick Phillips included the possibility of a reciprocal taxation agreement added to their number. We discuss the broad implications of the talks on page 24. The market assumed that the discussions contemplated the control of "hot money" by taxation measures, and interpreted the news as a bear point. The two parties, however, would presumably also consider the prevention of tax evasions and anomalies of double taxation which now exist. The present position of Anglo-U.S. taxation, indeed, is somewhat anomalous, and a proper agreement on the lines of our agreements with the Dominions would be welcome. The Inland Revenue authorities collect tax on the investment income of aliens, merely by the deduction of tax at the standard rate at source. Any surtax payable by these non-residents is generally lost, but the bulk of the income tax due is easily collected. The U.S. Treasury, however, cannot employ this device, since no standard rate of income tax exists. Income tax is collected from the ultimate recipient of income. Thus, by establishing investment companies outside the United States, American investors can escape tax, for the authorities have never been able to force non-residents to make income and surtax returns, since the ultimate sanctions of the law could not be applied. Thus, the U.S. Treasury loses tax due from American nationals, in addition to tax upon American incomes owned by foreigners.

Mr Morgenthau has therefore introduced the withholding tax, which is analogous to the British system of tax deduction at source. From all dividends payable to non-

resident investors, a tax of 10 per cent. is deducted—a rate which corresponds to the effective levy on an income of \$21,600. Foreigners with lower incomes from U.S. investments are therefore taxed too highly. Non-residents with larger incomes are required to file an American tax return and pay income tax, surtax and capital gains tax, but this requirement is in practice inoperative. Earlier this year, Mr Marriner Eccles proposed that the withholding tax be raised to 22½ per cent. or 25 per cent., and it is possible that this rate may be imposed. If a level of 25 per cent. implied that the average non-resident had to pay a higher rate than an American citizen enjoying the same investment income, its introduction would represent differential taxation of a pernicious kind. There is insufficient information available, however, to show where the "just" level of withholding tax lies. More significant for the British holder of American securities, however, is his present liability to double taxation, since he pays British income tax upon his net American income. The gain to the British investor of a reciprocal tax agreement, therefore, would completely offset such an increase in the withholding tax. Any agreement to avoid double taxation would involve a loss to the British Treasury—perhaps £2,000,000 at most—which would be partially offset by the exchange of tax information. To the U.S. Treasury, even without an increase in withholding tax, the benefits of an agreement would obviously be substantial.

Hungarian State Loan.—An unique situation has arisen from the recent negotiations of the League Loans Committee with Hungary for a permanent settlement of the service on the League Loan of 1924. At the end of June the Committee announced the terms for future service, which were set out in our issue of July 3rd (page 26). They have been amplified this week by a memorandum outlining the future security of the loan. Interest will be reduced to 4½ per cent. on the 7½ per cent. bonds and from August, 1940, a 1 per cent. sinking fund will operate. These are substantial concessions by the creditors, in view of the status of the loan and of Hungary's greatly improved economic position. In reaching agreement on these lines, the League Loans Committee presumably felt that to accept 60 per cent. service would be more to the creditors' long-term advantage than to attempt to impose the transfer of, say, 80 per cent. of the service—a figure probably within Hungary's capacity at present. The loan, however, is secured by a general bond, under which the Council of the League of Nations appoints three trustees (Sir Henry Strakosch, Signor Bianchini and C. E. Ter Meulen). The bond provides for the deposit of sufficient cash with the trustees to cover a half-year's full service, and gives the Council power to re-establish full financial control if the service becomes endangered. Until August, 1933, coupons were met in full, with the help of the reserve fund, but since then only half interest has been paid. The trustees have issued a protest against the permanent settlement which the League Loans Committee has reached, on the grounds that it reduces the rate of interest throughout the extended life of the loan, discontinues the payment of pledged revenues to the trustees and makes no provision for payment to holders who do not accept the offer. The trustees are clearly justified in making their protest, but the League Loans Committee evidently chose to put expediency before the letter of the bond.

Preference versus Ordinary Shares.—Last week the directors of Petters, Ltd., published a scheme to reduce the dividend payable on the £200,000 of 7½ per cent. cumulative preference shares from 7½ per cent. to 5½ per cent. in return for one quarter of the equity. Their further circular, issued this week, reveals no new facts, but has two remarkable features. It openly refers to the preference dividend as a "charge." And it definitely informs shareholders that, if they do not accept the directors' terms, the company will be liquidated, in

order that its successor may have the desired capital structure. The scheme, in fact, is the latest of many which bear witness to the revolt of ordinary shareholders against the tyranny of perpetuity. Investment theory has long been sceptical of the ultimate merits of preference shares as such. The preference shareholder is debarred by his contract from sharing in the fruits of prosperity, while in adversity his dividend arrears are not merely unpaid but actually serve to whet the appetite of those who would worsen his position. But the decline in interest rates in the last five years has introduced a new and troublesome psychological factor into the equation. Preference shareholders, like ordinary shareholders, are partners in the division of industrial earnings. In no sense are they holders of a charge on profits. But they commonly have no voting rights and are tactically at a disadvantage in skirmishing with those who hold control.

Recently, there have been many schemes designed to enable redeemable debentures to be converted to lower rates of interest. In these circumstances, the finality of the preference shareholder's dividend rights are irksome to the directors of prosperous companies, and, apparently, intolerable to those whose ordinary shares are dividendless. By pure coincidence, the disclosure of the Petters' proposals came on the same day as the announcement of a conversion of the 6 per cent. debentures of another company—Tredegar Iron and Coal—to a 4½ per cent. basis. Resentment of an apparent anomaly is human, but the law of contract is a divinity which hedges all business dealings. And the anomaly is only apparent and not real. The justice of asking preference shareholders to accept sacrifices in order that ordinary shareholders may receive dividends earlier in bad times would be more apparent if ordinary shareholders were accustomed to ask their preference colleagues to join them in celebrating good times. They may naturally be impatient when they are receiving nothing and preference holders are receiving 7½ per cent.—though more often, at such times, both classes are obtaining *nil*. But if preference holders asked for a little more, at a time when ordinary dividends were 15 or 20 per cent., they would certainly be told that those who make beds must lie on them. The moral may conceivably be that the preference share is an unduly rigid instrument of company finance, particularly for enterprises whose profits are subject to extreme fluctuation. Wider adoption of the redeemable preference share might overcome some disadvantages; but there will always be an element of inexpediency and illogicality in a share which is excluded alike from participation in prosperity and from protection against adversity.

Company Notes

Obscuritas in Excelsis.—Lives there the man who still believes that no company's financial position can be unknown so long as it conforms to the accounting requirements of the Companies Act? If such there be, let him consult the report of Ranks, Limited, and hereafter for ever hold his peace. The latest balance sheet has three items on the assets side, totalling £7,813,515. One of these is shares in Joseph Rank, Ltd., "at cost"; it stands at £7,295,593, and represents 93 per cent. of total assets. Out of total receipts during the past year, some £892,275 is derived from dividends and £1,072 from transfer fees and interest—the last two items being separated with what is surely supererogatory zeal. That, the company evidently believes, is all that shareholders know and all they need to know. The profit of the operating company, of course, is higher than the dividend paid to the holding company; the latter merely covers, with £60,000 to spare, the 18 per cent. distribution which the directors are recommending. Not even the directors' fees are disclosed—presumably all are salaried directors or are possibly paid by a sub-subsidiary. Although the security for Ranks shares is the equity of Joseph Rank, Ltd., no vestige of information is dis-

closed, either in the accounts or in the report, about the operating company, save that it has made reserves which the directors consider sufficient. Can it be maintained in this year of grace that accounting obstacles prevent the publication, with the holding company's report, of the accounts of Joseph Rank, Ltd., at the very least? Other equally important concerns experience no difficulty in this respect, and an increasing number provide full consolidated earnings statements. Or is it suggested that the conditions of the milling trade are such that the leading concerns must conceal their trading and stock positions from each other? In other respects they act with effective co-operation. In any case, the competitive argument against reasonable disclosure is much blown upon in these enlightened days. And this year, in particular, there are reasons why shareholders in Ranks, Ltd., should have extended information. They have recently provided increased capital towards financing "additional interests and stocks of increased value" to the extent of £4 millions. How is this sum divided between fixed and current assets? How does the wheat market situation affect the company? And how will dividend policy be determined in future on the increased capital? Shareholders should press for answers to these questions next Wednesday, and for fuller information in future years.

Rhodesian Copper Dividends.—The Mufulira and Rhokana dividends have not enjoyed a favourable market setting this week. With copper breaking below £47 in London and the United States domestic price twice cut to 12c. per lb. on the extraordinary fall in September demand, even the best declarations would have been damped. In fact, neither distribution is exciting. Rhokana's final payment of 37½ per cent. makes a total dividend of 62½ per cent. for the year, compared with 17½ per cent. for 1935-36. But on the preliminary estimate of profits issued last July (£2,070,000) earnings of 82 per cent. were shown for the ordinary,

BREWERY UNIT TRUST

Trustees:
MIDLAND BANK EXECUTOR & TRUSTEE CO., LTD.

● Brewery Units make it possible for the first time for both small and large investors to acquire a well-spread interest in brewery undertakings.

● Brewery dividends are more consistent over periods of years than those of almost any other industry and rank among the safest shares in the industrial market.

● The fact that Brewery and Distillery Shares are tightly held and in many cases difficult to obtain, makes the facilities offered by the Brewery Unit Trust of real value to the private investor.

● The Brewery Unit Trust has been formed in consonance with the Board of Trade Report on Unit Trusts.

● Price of Brewery Units 17/6d., as at 30/9/37. Estimated yield at this price based on cash dividends alone is 4½%.

● Comprehensive booklet about the Brewery Unit Trust which forms the basis of all transactions, is obtainable from any Bank or Stockbroker, or direct from the Managers.

LONDON MANAGEMENT SECURITIES LTD

Telephone: Metropolitan 5614-7 Telegrams: Lomansec Phone Loman

and this figure excludes some £143,000 gross which Rhokana will receive from the maiden Mufulira dividend of 3s. per share—covered probably with rs. 6d. margin—on £2,988,873 of share capital. Rhodesian Selection Trust, which holds a 64 per cent. interest in Mufulira, should receive about £287,000 gross—a figure which suggests potential earnings of 11 per cent. on the increased R.S.T. capital—and a maiden dividend. The 5s. shares, however, are still quoted at 20s. which discounts the future potentialities of Mufulira to a degree. Rhokana, at 10½ after Wednesday's sharp fall are now on a dividend basis of over 6 per cent. when allowance is made for dominion income tax relief. Rhodesian Anglo-American which holds 54 per cent. of the Rhokana capital, pays 15 per cent. against 5 per cent. With copper stocks tending to rise, a weak United States market, and a maximum price, seemingly of £50, the copper outlook is clearly less encouraging. Shareholders still have one important bolt in their locker—the possible reimposition of restriction. But that may be fired before their companies' current year has run its course.

Colliery Company Results.—Accounts of coal companies published this year have sometimes made a mixed showing, but the long period improvement is clear. Where progress has occurred, it has usually been substantial. Continued expansion of industrial demand has offset the rising tendency of costs with a good deal to spare and labour troubles have died down. Despite some recovery in exports (shipments from January to August, 1937, were 26,226,000 tons, against 22,389,000 tons a year ago), export trade is still far below pre-depression levels. Its importance is dimmed, moreover, by the apparent success of the Central Selling Scheme, which commenced in August, 1936. Various companies have attributed part of their increased profits to better prices obtained under the scheme. It is significant, however, that at the Manvers Main Collieries meeting last Tuesday, Mr F. C. Hunter pointed out that the scheme depended as much on co-ordination between districts as on the work of the separate organisations. Colliery results have, at any rate, been among the more interesting of the many good reports published in the past month. The following table sets out comparative profits for a selection of companies:—

Company (accounts to June 30)	Total profits	Deprecia- tion	Earned for Ordinary	Ordinary		Present	
				Earned %	Paid %	Price per £1 share	Yield %
Manvers Main:—						s. d.	£ s. d.
1935	137,177	51,992	67,784	11.2	4½	24 6	4 9 9
1936	106,014	29,238	54,898	8.9	4½		
1937	160,323	49,078	84,391	12.2	5½		
Barrow Barnsley:							
1936	72,201	20,000	20,537	6.2	6	35 3	5 13 6
1937	116,820	25,000	58,053	19.9	10		
Hilton Main:—							
1935	19,842	*	12,843	7.9	5	42 6	6 7 0
1936	53,484	*	42,172	26.3	15		
1937	50,305	*	36,352	19.3	18½		
Cannock Assoc.: 1937†	177,568	*	141,181	11.3	10	34 9	5 15 3

* Profits shown after depreciation. † Six months only. ‡ Period from June 4, 1936.

The increase in Manvers Main dividend may seem modest, but the company spends considerable sums on modernisation, and even after providing £20,000 more for depreciation, the whole of the excess of earnings over payments (£40,391) is used towards writing off expenditure on pits. The current position, shown in the balance sheet, is somewhat improved, but the excess of liabilities still amounts to £102,000, against £141,000 a year ago. Barrow Barnsley have made an equally conservative distribution, £75,000 being set aside to start a general reserve, while as much as £43,254 has been spent during the financial year on improvements to properties and plant. A small setback in Hilton Main earnings is due to a lower output following technical troubles in the South

District, and the reserve provision, repeated at £10,000, also represents a substantial part of total profits. The first year's working of Cannock Associated Collieries has produced a 10 per cent. dividend, though the co-ordination of the different collieries which the parent company was formed to amalgamate is far from complete.

Outlook for Rubber Shares.—As the market expected, last Tuesday's meeting of the International Rubber Regulation Committee was followed by no announcement of any change in the present 90 per cent. export quota. It was, indeed, believed that it was too late to change the percentage for the current year, and that any decision regarding the quota for the first part of 1938 would be premature. But the mere fact that a reduction in the quota had been canvassed is symptomatic of the profound change that has come over markets during 1937. For the present position of rubber, the situation in the United States is held responsible. Nor is actual experience encouraging. Of the world consumption of raw rubber the United States takes over half, and three-quarters of her consumption, in turn, is used in tyres—the production of which, however, is not proportionate to that of automobiles. But from January to July, 1937, the absorption of rubber by the United States rose by only 7 per cent. compared with 1936 (the whole increase occurring in the first quarter), while British consumption rose by 20 per cent., and in other importing countries by 26 per cent. In the meantime, the rise in profits of rubber companies has been among the most striking in the whole field of investment. We show below the recent earnings record of four companies whose results have lately been published:—

Company (and Date of Accounts)	Total Profit†	Ordinary Shares			Present	
		Earned	Earned	Paid	Price and Denom.	Yield(%)
Malayalam Plantations (Mar. 31)—					s. d.	£ s. d.
1935	128,274	81,071	5.5	5	36 3	5 14 3
1936	208,820	132,740	9.4	8	(£1)	
1937	271,609	198,186	14.2	10		
Tandjong Rubber (June 30)—						
1935	8,088	6,515	2.6	2½	28 3	7 12 0
1936	17,928	15,330	6.5	5	(£1)	
1937	35,482	27,595	11.4	10		
Broome Rubber (June 30)*—						
1935	9,147	6,267	10.0	10	8 10½	8 3 6
1936	13,557	7,275	8.2	8½	(2s.)	
1937	34,390	26,717	19.1	15		
Bajoe Kidoel (Mar. 31)—						
1935	14,902	12,913	5.2	5	28 9	6 19 3
1936	5,315	3,358	1.8	3	(£1)	
1937	27,341	25,340	10.2	10		

† After estate and selling expenses. * Share capital at June 30: 1935, £81,145; 1936, £163,738; 1937, £188,378.

In two cases the profits figures understate the rapid recovery made by rubber producers, for nearly 70 per cent. of the gross sales receipts of Malayalam Plantations come from tea, and the Bajoe Kidoel results are affected by the unremunerative coffee production. Nor has the whole increase in profits been passed on in dividends, for Malayalam have placed £50,000 to reserve against £20,000, and Tandjong have allocated £6,200 to depreciation instead of £1,100. The recent trend of consumption in the United States, and this week's break in the commodity to the lowest level this year are disappointing to rubber shareholders, for current yields clearly imply hope of further improvement.

Other Rubber Results.—Rubber shares must continue heavy so long as Mincing Lane is depressed and rubber at 8½d. A summary of further rubber company reports is the only source of cheer for the rubber shareholder. Results comparable with those of the large producers (dealt with in the previous Note) are reported by Kulim Rubber, whose dividend is raised from 5 per cent. to 12 per cent. This concern shows sales and stock of rubber at £39,503 for the year to June, compared with £23,340 for the previous

period, the average price rising from 7.01d. to 8.77d. per lb., London landed terms. Bantam (Java) and Langkapoera (Sumatra) are among the larger rubber companies whose reports have been issued recently. The former company discloses very satisfactory profits of £28,996, which cover the 15 per cent. dividend (against 6 per cent.) with a good margin. The latter concern has increased its net profits steeply from £2,527 to £12,537, and the 10 per cent. distribution absorbs only two-thirds of the available earnings. Within the next six months the International Rubber Committee must communicate to the signatory Governments whether and on what terms restriction should be continued after 1938. Further market uncertainty may be revealed towards the end of this period, but on the basis of the present quota the increase in production during the current year may enable efficient companies to maintain their recent level of profits, provided that Mincing Lane soon finds a resistance point. If it fails, shareholders will begin to look for help from a tightening of restriction.

Other Company Results.—Other reports available this week include some interesting reports from industrial companies of moderate size—many of them presenting their first accounts. Our usual analysis of profit and loss accounts appears on page 48, and the results are discussed on page 37, under the heading "Shorter Company Comments." The report of Austin Motor Company discloses an increase in gross profits from £1,496,696 to £1,665,125. Net profits are £87,004 higher at £877,077, and the 50 per cent. dividend, already announced, is covered by earnings of 78 per cent. A total of £207,046 is set aside to capital and general reserve, increasing the funds to £1,100,000. Pressed Steel announces a dividend of 14 per cent., less tax, compared with 10 per cent., tax free, or 13½ per cent. gross. Some 552,545 new 5s. ordinary shares are to be offered to shareholders at par in the proportion of 1 in 5.

Company Meetings of the Week.—Reports of company meetings commence on page 38 of this issue. In his address to *City and International Trust* members, Mr Louis H. Kiek analysed the trust's portfolio. Interests in Great Britain and the Dominions had increased to 47.2 per cent., while nearly half the investments were in equities. At the *Allied Industrial Services* meeting, Mr W. H. Rhodes ascribed the higher profits to an increased demand for certain services, combined with more extensive equipment for handling a larger volume of business. Our reports include those of two rubber companies. Mr Walter Hillier told *Tangoel Rubber Estates* shareholders that the average price realised amounted to 9½d. per lb. London equivalent, while costs were moderate. It was explained by Mr H. M. Graham at the *Johore Rubber Lands* meeting that the decrease in the rubber crop was due in part to a change in their system of tapping. The increasing uses of diatomite for insulating and industrial purposes were discussed by Mr Frank S. Russell at the *International Diatomite* meeting. In particular, developments had been encouraged by recent advances in the price of coal. The importance of scrap iron to the industry of this country was discussed by Mr Joseph Ward at the *Thos. W. Ward, Ltd.* meeting. A coherent policy had at last been devised. A review of the manifold activities of *Carrier Engineering Company* was given at the annual meeting by Mr S. L. Groom, who pointed out that the fact that their business was diversified would enable their production programme to be carried out economically under any conditions of trade. The re-armament programme had so far contributed only 12 per cent. of turnover. Otherwise their business might best be described as that of thermal engineers, for apart from air-conditioning units the company's products ranged from refrigerating machines to heat distributing plants.

GOLDEN MOMENTS

Football

The whistle starts the first game of the season. Leading his side as he did in the Spring he takes the opposing backs by surprise and slams the ball into the net before the game is a minute old—the first goal scored in the season.

What a Golden Moment it must be for him! But even he cannot smoke a better tobacco at a shilling an ounce than Cut Golden Bar.—But it must be Wills's!

THE WEEK IN THE MARKETS

THE STOCK EXCHANGE

SETTLING DAYS

TICKET: OCTOBER 5

ACCOUNT: OCTOBER 7

WITH fears rather than business to occupy its hands, the London Stock Exchange has passed an uneasy week. Rumour has been rife and the market will be relieved if the next settlement is successfully surmounted. But many stocks which stood on apparently firm ground even after the N.D.C. crisis are still falling in the—apparently—bottomless pit. Wall Street's slump of one day is London's trial the next, and with signs of speculative weakness in the commodity markets, the "House" is in no mood for further ordeals, though it fatalistically accepts their possibility. Although dealings opened with signs of greater steadiness—some industrials were rather higher on Monday and Tuesday—the improvement has since been wholly lost, and nervousness is prevalent.

Even the gilt-edged section was uncertain at the close on Wednesday. The resumption of corporation borrowing may have been responsible in part, but there was, in fact, some further selling of the Funding 2½ and 2½ per cent. issues. The market's policy of switching from dated issues into "longs" in order to profit from current yields argues a conviction regarding the future of low interest rates which was not very widespread before the new issue holiday. New Zealand issues improved on the budget statement, and corporation scrips were not greatly moved by the resumption of new issues.

Interest in the foreign market was concentrated upon Far Eastern bonds. Chinese bonds (whose cover is discussed on page 26) were in short supply, and rose on persistent demand. Japanese issues reflected uneasiness regarding the financial position, and Brazilian bonds fluctuated within narrow limits, on the whole tending lower.

Home rails recovered appreciably early in the week, with rises of half a point. The group, however, was affected by the general mid-week disturbance in the market, and ignored the satisfactory traffics. London Transport "C" stock was weak on a further fall in receipts, and concern regarding future earnings prospects. An early improvement in the Argentine rail market, in anticipation of the dividends, was not maintained.

Industrial shares passed a very confused and uncomfortable week. With few intermittent exceptions prices tended downwards, with a culminating break on Wednesday. Thursday's apparent steadiness was not more than the halt of a dazed and retreating army. Last week's misfortunes have left their mark, and the extraordinary behaviour of trans-Atlantic issues is unsettling London. They slumped badly on Friday and Monday, revived on Tuesday and crumbled away once more on Wednesday, U.S. Steel leading all these movements. Cable and Wireless have been flat throughout the week. The Coal and Iron and Steel groups also proved reactionary, although particular shares improved at times, among them Ocean Coal, Firth Brown (on a higher interim), Lambeth (on hopes of a rise in dividend), Sheepbridge and a few others. Electrical equipment shares have been among the firmer groups, but there has been little business among the supply shares. Motors and aircraft were weak, together with shipping issues.

Harrods B.A. were conspicuously better among stores issues, and Marks and Spencers particularly poor. Breweries, tobacco and provision shares staged a rather hesitating rally on Tuesday, but they followed the same trend as the majority of markets on other days. Textiles and rayon shares have been definitely dull. Movements in the miscellaneous department defy generalisation. The most interesting has been the strength of Ranks on the report. The only consistently bright corner has been in the banking and insurance groups which have faithfully followed the upward tendency in gilt edged.

Some firmness has been evident in the oil market, so far as this applies to any section dependent upon American influences. Business has been small throughout. Recovery started on Monday with sharp buying of Eagle issues and Anglo-Iranian, and continued on the two following days with Paris buying of internationals, especially Shell and Royal Dutch. Trinidad Leaseholds were weak pending the accounts, now due next month. Most of the gains were wiped out on Wednesday.

Rubber and tea shares have been extremely idle and generally weak. The collapse of rubber prices to the lowest levels of the year gave rise to some precautionary marking down of quotations. The mining markets were also flat late in the week following the break in metal prices. Kaffirs and diamond shares which had done distinctly well earlier lost many of their gains, and the whole Rhodesian group fell as a result of disappointment with the Rhokana dividend.

"FINANCIAL NEWS" MARKET INDICATORS

	Sept. 23	Sept. 24	Sept. 27	Sept. 28	Sept. 29	Sept. 30
Approximate total of bargains recorded in S.E. List	6,890	7,215	7,715	8,575	7,825	6,485

Index of 30 Ordinary Shares (July 1, 1935=100)	108.0	107.4	107.4	107.6	106.4	106.4
Index of 20 Fixed Interest Securities (1926=100)	126.5	126.6	126.6	126.6	126.7	126.7

Highest 1936: Ordinary Shares 124.9 (Nov. 18); Fixed Interest 138.8 (Feb. 10).
Lowest 1936: Ordinary Shares 107.4 (Jan. 2); Fixed Interest 136.2 (Sept. 23).
Highest 1937: Ordinary Shares 124.8 (Jan. 4); Fixed Interest 136.6 (Jan. 4).
Lowest 1937: Ordinary Shares 105.6 (Sept. 20); Fixed Interest 126.0 (Sept. 8).

ACTUARIES' INVESTMENT INDEX

THE Actuaries' Index of 177 industrial ordinary share prices, standing at 80.6 on Tuesday last, showed a fall of 2.8 points from 83.4 registered a month earlier. Over one-third of the substantial decline which has taken place since September, 1936, when the index stood at 88.2, has occurred in the past month alone. Though the corresponding yields have risen—the figures are 4.52, 4.36 and 3.62 per cent., respectively—they have not increased in inverse proportion. Gilt-edged stocks, on the other hand, have been stable during the past month. The recent decline in prices has been widespread, as the selected indices demonstrate below. The usual monthly particulars of fixed interest securities are also included.

Group (and No. of Securities)	Prices (Dec. 31, 1928 = 100)			Yield (%)

OVERSEAS STOCK EXCHANGES
NEW YORK

BUSINESS closed last Saturday with industrials a fraction higher than Friday's close—the lowest level recorded this year. Prices have oscillated widely in each day's trading this week, but the general trend has been upward, with trading on a substantial scale. Monday opened with a slight advance on Saturday's close, followed by a sharp decline in the first hour, and a subsequent advance which left prices \$4-\$5 higher on the day. This movement was assisted by the Federal Reserve Board's action to widen the basis of credit by making various kinds of commercial paper, including bills issued on real estate and hire-purchase transactions, eligible for rediscount. Tuesday closed with prices above the opening but below the best, and Wednesday saw a first hour relapse followed by renewed buying and a good advance in prices. Copper issues naturally resisted the improvement since the commodity price has been reduced by 2 cents to 12 cents per lb. Several industrialists have declared that there is no justification for expecting a further industrial setback. Iron Age estimates steel mill activity for the current week at 74 per cent. of capacity against 76 per cent. for last week. Freight car loadings for the week to September 18th were the highest for any week since 1930. Most business indices bear out the warning of the industrial spokesmen against undue pessimism, though steel and tinplate are not favourable. The bond market has moved in sympathy with stocks.

By courtesy of the Standard Statistics Company, Inc., of New York, we print the following index figures of American values calculated on closing prices (1926=100):—

PARIS

PARIS has been affected, like other centres, with the break on Wall Street, but offered a fair resistance and reasonable steadiness. Domestic industrial securities were firm almost throughout the month. The various decrees issued at the end of the previous month were well received, while the reduction of the bank rate and M. Bonnet's broadcast speech also assisted the market. The franc's further slide depressed rentes, however, and a bad break occurred at the end of September. The smaller losses which had accumulated in previous weeks were, nevertheless, considerable. A good deal of interest was taken in Internationals, but the escape from monetary instability was not easy in view of the trends in New York, Amsterdam, and London. Despite the weakness of rentes, however, the Bourse showed a fairly firm tone at the end of the month.

THE SCOTTISH INDUSTRIAL ESTATE

AT NORTH HILLINGTON—NEAR GLASGOW
OFFERS EXCELLENT ADVANTAGES
TO THE MAN WITH ENTERPRISE

North Hillington Estate is situated in the heart of the Scottish Industrial Belt—near Glasgow. There is a 2,000,000 doorstep market and a 6,000,000 near-by market. Modern Clydeside docks are at hand and Firth of Forth docks are only 25 miles distant, which places the East and West ports of Scotland within easy reach. Transport facilities by air, river, road and rail are convenient. Thus distribution is assured for both home and foreign markets.

By the services and amenities placed at his disposal, the manufacturer has the opportunity

of an economic start to his business and encouragement to its growth.

Factories for either light or heavy industries can be leased. Capital expenditure for building is eliminated. Rents are low as the company does not operate for profit. Factories are heated by the estate. Process steam is available. The Estate is a free delivery and collection area for railways. Railway sidings are available if required. Insurance and upkeep of factories and upkeep of roads are paid by the estate.

For full information and particulars apply to

SCOTTISH INDUSTRIAL ESTATES LTD.

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields of fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

BERLIN

BOND and share markets in September were weak. Both reached their highest averages in late August or at about the turn of the month, and the reaction in bonds was noticeable, and in shares very considerable. The market was almost featureless, though day-to-day fluctuations followed the movements of New York and London more than usual. Interest in shares was confined largely to engineering and armaments issues, but other standard industrials changed little. Shipping shares were dull at first. Reichsbank dropped sharply to 204 in the middle of the month. Active securities sagged later, but the public bought the less active issues in the "cash" group. A substantial recovery of potash and of liner shares occurred last week. Dresdner Bank, which had been stable for weeks at 105, rose, on news of progress towards a return to private control, to around 114; but other banks changed little. The Mussolini demonstration had no visible effect on the market. The stagnation in shares seems to have been due in part to new rumours of Dr Schacht's resignation, and the weakening of bonds to the market's difficulty in digesting the new Reich loan. Young Loan was quoted somewhat lower towards the end of the month. Very little business was done in dollar bonds. A few dollar certificated public issues advanced, while industrials mostly remained nominally unchanged.

AMSTERDAM

THE demoralising influences of Wall Street and the war in China were too strong for Amsterdam's powers of resistance. For some time the vagaries of London and New York, though closely watched, left the Bourse relatively unmoved, thanks to the soundness of the domestic position. The result of the 3 per cent. N.E.I. conversion issue, however, was unwelcome and Wall Street's nerves and the Japanese campaign soon upset prices as they had in other centres. The last full week in September was characterised by great irregularity, an unprecedented wave of selling being followed by a sharp recovery and then by erratic movements. The Philips Lamps results helped the industrial section, but signs of speculative weakness were markedly evident.

CANADA

THE Canadian stock markets have been experiencing very rough weather since the middle of August, due to a sympathetic reaction to New York's nervousness. The recession gathered momentum at the beginning of September until during the week ending September 11th there was experienced the sharpest break since April, though fresh low levels were touched in Montreal later in the month. Even the most seasoned stocks lost ground heavily, the losses covering all groups. In the industrial section during the week ending September 9th many of the sub-groups in the Bureau of Statistics "Investors" Index reached their lowest levels for the current year, the most pronounced losses being experienced by mines, building materials, oils, machinery, equipment and food products. There was a slight rally about mid-September, but after a few days the downward trend became accentuated under the influence of international, metal and newsprint shares being among the chief sufferers. The month ended with a marked recovery which was, however, of small dimensions compared with previous declines. The "Investors" Index of the Bureau, which stood at 133.4 on August 20th, fell to 132.3 on August 26th, to 129.6 on September 3rd and on September 9th had declined to 123.9. The mining market has also been badly affected, with particularly severe losses in the junior gold

issues and heavy selling of base metal stocks. The bond market has been dull, but prices have remained firm and the Bureau's index of long-term Dominion bonds which stood at 115.6 on August 20th was unchanged on September 9th.

CAPITAL ISSUES

WITH the resumption of municipal borrowing this week, after a pause since the middle of August, the autumn new issue season may be said to have commenced. The terms for the £1,000,000 Hull 3½ per cent. stock, redeemable 1958-63 and issued at 101, are identical—save for one year's extra life—with the Essex loan, which stands at a small premium. Calculations of cover are not, perhaps, relevant to a British Corporation—or at least they have not been hitherto. The market, however, prefers county stocks to corporations, and it tends to appreciate corporations whose current rates are low. Trustees, again, are not anxious to wait nine months before receiving their first interest payment. For these reasons, the market was not effusive in its welcome of the Hull issue. From the preparations which are reported, perhaps a more effective curtain-raiser could have been found. Two industrial offers have also appeared this week. The mixed issue of *Masters Trading* 6 per cent. preference shares and 2s. ordinary shares (at 4s.) is based on a rapidly rising trend of earnings since 1934. As the figures are set out in the prospectus, for broken periods until the latest year, they suggest a dip in profits between the end of 1934 and the spring of last year. The capital has recently been reorganised, and the ordinary shares show the almost conventional earnings yield of 15 per cent. on the issue price. Although turnover for the first five months of the current year has increased by 25 per cent. the shares must be placed in a speculative class, and the marketability of the capital has been reduced by splitting the relatively small total of £105,000 into £25,000 preference and £80,000 ordinary—with the usual consequences and prospectus advantages of gearing for earnings calculations. The capital of *Spear and Jackson* is larger, and only half the ordinary shares are offered—again at 100 per cent. premium. In this case also recent reorganisation of the capital has been effected. The earnings record shows a large jump in profits between 1934 and 1935, and the company has long been established in the saw and implements trade. Although the earnings yield shown—12 per cent. on the issue price—cannot be regarded as excessive, it is probably more justifiable than higher yields exhibited on many prospectuses issued this year.

PUBLIC OFFERS

Hull Corporation.—Issue of £1,000,000 3½ per cent. redeemable stock at 101. Repayable at par December 1963, or from 1958 on notice. Proceeds for electricity, transport, housing, etc. Ranks with other stocks. Trading undertakings, 1936-37: gross revenue, over £1,500,000; surplus after interest and all charges, £129,214. Estimated population, 321,500; rateable value, £1,764,750; exchequer grant, £362,511; net debt, £12,871,100 (of which £4,070,597 public utilities and £4,383,346 housing).

BY OFFER FOR SALE

Masters Trading Company.—Offer for sale of 87,500 6 per cent. cumulative 5s. preference shares at par and 700,000 2s. ordinary shares at 4s. Of ordinary shares, 225,000 already applied for. Hardware makers and credit dealers. Profits, before directors' remuneration and interest, after depreciation: April 1 to November 2, 1934, £6,687; period to March 31, 1936, £14,993; year to March 31, 1937, £29,117. Net assets (including £41,000 year to March 31, 1937, £105,046 (debtors, less reserve, proceeds of a recent share issue); £105,046 (debtors, less reserve, and bills receivable, £65,525). Mr L. F. de Peyreave takes issue at 5s. per preference and 3s. 5d. per ordinary share including expenses of £18,500; Harrow Investment Trust makes offer on his behalf and pays expenses for £12,025. Lists closed 9.5 a.m. September 28th.

Spear and Jackson, Ltd.—Offer for sale of 400,000 5s. ordinary shares at 10s. (Vendor and his co-directors hold remaining 260,000 shares.) Saw and tool makers at Sheffield; established 1774. Profits, after depreciation: 1934, £30,380; 1935, £43,929; 1936, £46,545. Net assets, £250,127 (investments in subsidiaries, £20,600). Messrs. W. A. Simpson procure subscriptions and pay £10,000 expenses for £15,000.

ISSUES TO SHAREHOLDERS ONLY

British Aluminium Company.—To provide funds necessary to complete the present expansion programme this company issues to existing ordinary shareholders 1,000,000 new ordinary shares at 42s. 6d., in the proportion of one new for two shares held.

CONVERSIONS AND REPAYMENTS

Madras and Southern Mahratta Railway.—All of the £2,500,000 4 per cent. debenture stock (1938) will be redeemed at par on October 1, 1938.

Dominion Coal.—This company is to redeem on October 1st its 6 per cent. cumulative registered sinking fund debentures at par.

PRIVATE PLACING

Severn Valley Gas.—The directors have placed privately 64,130 £1 4½ per cent. cumulative preference shares.

FORTHCOMING ISSUES

Langloan Iron Cement and Chemical Company.—An issue will be made in the course of the next few weeks of the new capital of this reorganised firm. The company is being formed with a capital of 3,000,000 2s. shares, and there will also be an issue of £150,000 5½ per cent. debentures. The company will acquire *inter alia* works at Coatbridge, comprising blast-furnaces, plants for cement making and oil and tar distilling, and a power generating station. The company also acquires various leases giving a regular supply of raw materials to the furnaces.

RESULT OF ISSUE

Liverpool Corporation Bills.—The tenders for £1,000,000 bills at 12 months date were opened on September 27th at the Bank of England. The total amount applied for was £3,550,000; amount allotted, £1,000,000. Tenders at 99 7s. 1d. and above, in full. Average rate per cent. p.a. 12s. 5-30d.

SHORTER COMPANY COMMENTS

COMPANY RESULTS OF THE WEEK.—A number of concerns have this week published their first accounts as public companies: ELEPHANT TRADING COMPANY (SOUTH AFRICA) HOLDINGS have earned £106,169 for dividends and are assigning £10,000 to dividend equalisation account. Aggregate profits of the subsidiaries exceeded prospectus estimates. W. H. DEAN AND SON are paying 25 per cent., and have reduced the book cost of goodwill to £30,000. HOSEGOOD INDUSTRIES profits amount to £104,871; the report includes a consolidated balance sheet and profit and loss account. Among the older companies, MANCHESTER LINERS have raised the dividend from 5 to 7½ per cent., profits (which are struck after depreciation) having increased by £4,500 to £48,826. KIRKLEES, LIMITED, report that rayon yarn prices were lower during the past year, their increase in profits, from £27,768 to £34,384, being due to technical and administrative economies. A statement commenting on the year's results is circulated with the accounts by LEETHEMS (TWILFIT), whose slight increase in profits from £45,560 to £46,870 is due to an improvement in home trade and to internal economies, despite rising costs. The rise in cork prices due to war in Spain is the cause of substantial progress by HENRY BUCKNALL AND SONS, whose profits of £30,313 compare with £22,354 even after taking £4,000 less in special credits. CARRIER ENGINEERING have earned £80,792, some £31,000 more than for 1935-36, and are maintaining the same rate of dividend, 50 per cent., on a doubled capital. GRATTAN WAREHOUSES report a good recovery, having made profits of £116,266, against £96,177. Dividends from subsidiaries constitute by far the greater part of RANKS, LIMITED, profits, which are £893,347 gross or £667,853 net: the latter sum compares with £596,983, but comment on the presentation of the accounts appears on page 29.

MISCELLANEOUS

HEPWORTH (J.) AND SON.—Profit for year to July 31, 1937, £85,247 against £83,095. Ordinary dividend 5 per cent. as before. To reserve £15,000 against £10,000. To employees' fund £3,000 as before. Carry forward £30,003.

CITY AND INTERNATIONAL TRUST.—Gross income for year to August 31, 1937, £96,777 against £86,352. Ordinary dividend raised from 3 to 4 per cent. To debenture discount, £13,059. Carry forward, £31,151.

CALTHROPS, LTD.—First accounts show a profit of £51,768. Ordinary dividend 10-136 per cent. per annum. Carry forward £6,294.

PHILIPS' INCANDESCENT LAMP WORKS.—Profits for year to April 30, 1937, amounted to £1,974,000 against £1,406,000. An extra reserve of £1,300,000 has been created for expansion overseas. To depreciation of investments, etc., £1,000,000; to bad debts, £1,500,000. Sales for the first four months of the current year show a further rise.

ELEPHANT TRADING (SOUTH AFRICA) HOLDINGS.—First report from May 19, 1936, to June 30, 1937, shows a balance, after all expenses, of £106,169. Ordinary dividend 15 per cent., free of South African tax. To dividend equalisation reserve, £10,000. Carry-forward, £25,262.

TRANSVAAL MATTRESS AND FURNISHING COMPANY.—Net profit for nine and a quarter months since incorporation to June 30, 1937, amounted to £38,786. Dividend on ordinary shares equal to 13-53 per cent. per annum. To reserve, £6,000. To write off goodwill, £7,778. Carry-forward, £3,111.

GENERAL REFRACTORIES.—This company has acquired all the share capital of Charles Davison and Company, Ltd., Buckley, Flintshire.

NORTH BROKEN HILL.—After depreciation, tax and royalties, net profits for year to June 30, 1937, were £910,627—an increase of £273,687. The distribution on the £700,000 capital totals 120 per cent., compared with 7½ per cent. in the previous year and 45 per cent. in 1934-5.

BANK OF ENGLAND.—Profits in the six months ended August 31, 1937, after contingencies, were £655,813. In the previous half-year profits were £664,967, and in the six months to August 31, 1936, £667,302. Usual dividend of 6 per cent., payable October 5th, leaves the "Rest" at £3,023,914, compared with £3,022,993 at the end of February.

UNION BANK OF AUSTRALIA CENTENARY.—In commemoration of the foundation of the Bank on September 1, 1837, a ceremony took place on September 28th, at Launceston, Tasmania, where the first branch was opened in 1838. His Excellency Sir Ernest Clark, the Governor of Tasmania, unveiled a tablet erected by the Tasmanian Society. His Excellency and many guests were afterwards entertained to luncheon by the Bank.

PRESTON BREWERIES, LTD.—Accounts for initial period from February 5, 1936, to July 31, 1937, show loss of £1,252. Trading profit was £2,027; bad debts, £2,700; depreciation, £78. Directors have foregone fees. Balance sheet: stocks, £1,163; cash, £160; debtors, less reserves, £2,733; creditors, etc., £5,023. In August, 1936, permission to deal on the Stock Exchange was deferred until after publication of first accounts. It is understood a full explanation of the loss will be given at the annual meeting on October 5th. The prospectus estimated a net income of £13,000 on the basis of a production of 6,933 barrels.

PATERSON, LAING AND BRUCE.—To reply to criticisms of the proposed scheme, the directors have issued a circular which can be summarised thus. Accounts to July 31, 1937, are not yet complete, but a profit of about £15,000 is practically assured. In formulating the scheme, the probability of earnings not exceeding £25,000 for the current year was considered, and while it is possible profits may rise in future, the Board cannot visualise a rate exceeding £30,000 or £35,000. It was this possibility of expectations being exceeded owing to circumstances at present quite unforeseen that had been provided for by the proposed issue of deferred shares to "B" preference and ordinary holders.

COMPANY MEETINGS

CARRIER ENGINEERING COMPANY, LIMITED

RECORD TURNOVER: DIVIDEND OF 50 PER CENT.

SCOPE FOR AIR CONDITIONING

MR S. L. GROOM'S ADDRESS

The ordinary general meeting of Carrier Engineering Company, Limited, was held, on the 30th ultimo, at Caxton Hall, Caxton Street, London, S.W., Mr S. L. Groom (managing director and chairman) presiding.

The Acting Secretary (Mr H. S. Sheffield) having read the notice convening the meeting and the auditors' report,

The Chairman said.—Ladies and Gentlemen,—As the report and the accounts for the year to June 30, 1937, have been in your hands for some days, I think it unnecessary to go into them in detail.

As you know, since the last annual meeting the nominal capital of the company has been increased by 640,000 ordinary shares, of which 300,000 were issued to existing shareholders at par. This was done to enable us to meet capital expenditure and to finance our increased stocks. Our total issued capital is now £200,000 and is ample for our requirements notwithstanding the increase in turnover, which for the year under review was the highest in the history of the company.

INCREASED ORDERS ON HAND

Last year I was able to report that the value of the orders then on hand was equal to 50 per cent. of the turnover for 1935-36; you will be gratified to know that at June 30, 1937, the value of the company's accepted tenders was again equal to 50 per cent. of the turnover for the year 1936-37, and since the end of our financial year this rate of progress has been maintained.

My reference to tenders accepted at June 30, 1937, must not be confused with the balance-sheet item of work in progress. At the date of the accounts the work on these accepted tenders had not been put in hand and will, of course, form part of the current year's business. The item of £78,593 shown on the balance sheet as work in progress represents the value of work done on contracts which was not invoiced at the end of the financial year.

WORK ATTRIBUTABLE TO RE-ARMAMENT

The company's shareholders should appreciate that the increases in our turnover during the past year have been achieved in our general business. While it is true that we have been engaged upon work which might be regarded as arising from the Government re-armament programme, the value of contracts which could be attributed directly or indirectly to re-armament was only 12 per cent. of the total turnover. We have carried out several important anti-gas installations during the year covered by the accounts, but the turnover in this branch of our business was less than 1 per cent. of the total. We believe, however, that our anti-gas activities will result in substantial additions to our business in the future.

In this connection I am pleased to say that we have acquired an interest in a company manufacturing activated charcoal. This company is installing a new furnace of the very latest type for producing the necessary high-grade activated charcoal used in our poison gas filters. This will ensure regular supplies in this country to meet all our future requirements.

THE YEAR'S PROFIT

Dealing with the profit and loss account, the net profit for the year was £91,386. This includes the income from the associated company, which, for the year under review, was equal to 22½ per cent. on the balance sheet value of the shares as compared with 15 per cent. in the previous year. After bringing forward the balance from last year, and deducting the preference dividend and making provision for income tax and National Defence Contribution, the balance standing to the credit of profit and loss account is £103,663, whilst the assets of the company amount to £413,353, compared with £257,468 last year an increase in this item of £161,985.

I think the only item on the assets side of the balance sheet which calls for further comment are stock and freehold land

and buildings. You will observe that the stock has been considerably increased as compared with last year. There were, however, more than sufficient orders in hand to absorb this stock. The carrying of substantial stocks has really been forced upon us by the present-day difficulties in obtaining speedy deliveries of steel, and in view of the present situation we consider it necessary to try and anticipate our special requirements by carrying larger stocks so as to permit the company to complete its contracts without undue delay.

INCREASED FACTORY ACCOMMODATION

With regard to the freehold land and buildings, we have already increased our factory accommodation and have made provision for still further extension. This has been necessary in consequence of our increasing turnover, and it has enabled us to speed up deliveries in special sections of our business. It will always be a matter of careful study to ensure that our factory accommodation can, at all times, be economically operated under any conditions of general trade, we being fortunate in having a diversified business which permits us to arrange our programme to suit this policy.

Shareholders may be interested in a brief summary of our field of activities. Our business is best described as that of Thermal Engineers, because we provide and instal equipment to produce and apply heat or cold for any purpose at temperatures below zero up to 1,000 degrees Fahrenheit, and the demand for our equipment extends to no less than 200 different types of industry.

FEATURES OF COMPANY'S REFRIGERATING MACHINES

Your company manufactures refrigerating machines, and this section of our business has had a record year; the average size of the machines manufactured have a capacity of 200 ice melting tons per twenty-four hours. The refrigerant used in our machines—"Carrene"—offers many advantages. It is non-explosive, non-inflammable, non-poisonous, non-corrosive, practically odourless and can be carried about with safety in an open bucket. This feature makes the machines especially suitable for use in factories where tobacco or food is manufactured and where noxious fumes are detrimental to the product. The machines take up remarkably little space compared with other types for the same capacity, and the fact that the gas pressures used are below atmospheric makes the machines particularly suitable for installation in theatres, hotels, etc., where safety is the principal consideration. These machines will work efficiently with condenser water temperatures as high as 90 degrees Fahrenheit, which makes them ideal for marine purposes.

Our refuse destructor department has also made good progress during the past year, and in addition to our many installations for industrial purposes, we have recently secured large contracts from various municipalities, both home and abroad.

Another section of our business is the Aquatherm system of heat distribution. This system is extensively used for distributing heat for warming buildings or for processing materials at high temperatures. Water is transmitted long distances at temperatures up to 500 degrees Fahrenheit, which is, of course, much higher than its normal boiling point. This is accomplished by maintaining a pressure on the water which keeps it in its liquid state and prevents it from passing into steam. This system has great advantages over any other system of heat transmission.

PORTABLE AIR CONDITIONING UNITS

Last year I mentioned the addition to our business of the portable air-conditioning unit for individual rooms in homes, offices, etc. This is now on the market and the sales have been very satisfactory. We are pleased to say that customers are proving to be our best salesmen; apart from the obvious advantages in comfort and well-being possessed by an air-conditioned home or office, it has been found that sufferers from catarrh and asthma have derived much relief from being in Carrier air-con-

ditioned rooms. Clinical research work is now being carried out in order to obtain reliable data as to the effect of an air-conditioned atmosphere upon sufferers from these ailments. The distribution of our portable units is handled by Carrier Weather-makers, Ltd., in which company we hold all the shares. An attractive showroom for this section of our business has been opened in Conduit Street, Bond Street.

Many large Central Station Air-Conditioning Installations have been, and are being, completed for the purpose of health and comfort in hotels, restaurants, department stores, offices, etc., and similar plants in factories for the purpose of aiding and improving production in the manufacture of confectionery, biscuits, tobacco, artificial silk, films, printing, explosives, automobile bodies, etc.

MARINE DEPARTMENT

Our marine department has been entrusted with the air-conditioning for the sister ship of the "Queen Mary," now building. The installation on this vessel will be on a larger scale than on the "Queen Mary," for which, as you already know, we supplied the plant. Many other well-known ships are fitted with Carrier air-conditioning and we now have on hand contracts for six important passenger vessels.

High and low temperature drying plant, complete with automatic conveying, loading and unloading equipment, for foods, textiles, ceramics, chemicals, paints, enamels, etc., is also an important branch of our business.

It has been the company's policy to devote one year in every three to the developing of new ideas, improving upon existing equipment and producing new apparatus for the furthering of our business over a still wider field. The year under review has been one of these years, so that the next two years will be almost exclusively devoted to sales development.

IMPORTANCE OF AIR-CONDITIONING

Bearing in mind the important part which air-conditioning has in our business, we think it would not be amiss to give you a definition of the term "air-conditioning." Air-conditioning implies the constant control of the desired temperature, humidity, purity and movement of the air in a given space, independent of weather conditions and the number of occupants or work carried out in the space conditioned. To achieve this, the air-conditioning installation must be specially designed for its duty and must be capable of cooling, warming, dehumidifying, humidifying and cleaning the air.

As an indication of the future prospects and the possibilities of air-conditioning, it is of interest to learn of the experiments of Doctors Lagan and Kerr, of the University of California. These Professors have been trying for no less than four years to transmit to a group of people the common cold. The subjects have been living in an air-conditioned laboratory and none of them developed a cold, in spite of constant injections of cold virus, contact with others introduced into the room and suffering with bad colds and by direct absorption of their mucus. We all realise, of course, that this experiment is little more than a laboratory demonstration, but it does, I think, go to prove that there is ample scope for vision and enterprise in this important sphere of our business.

WORK OF THE STAFF

Your directors are full-time officials, each of us being in charge of his particular department, and it is due to the co-ordination of the efforts of the directors and the co-operation of a hard-working, loyal and enthusiastic staff that we are able to place before you a satisfactory balance sheet and to anticipate the future with confidence. I take this opportunity of thanking the staff and my colleagues for the support which they have given me. You will, I am sure, be pleased to know that we have adopted the policy of giving annual summer holidays with full pay to our erection and factory staffs.

Before moving the adoption of the directors' report and accounts I should refer to the allocation of the surplus. The particulars are set out in the directors' report and it only remains for me to remind you that the dividend to the ordinary shareholders is upon the basis of the issued ordinary shares at June 30, 1937. We recommend the writing off of the Stamp Duties in connection with the increase of capital and the balance to be carried forward is £26,855, approximately £2,000 more than last year.

I now formally move that the directors' report and the accounts of the company for the year to June 30, 1937, be approved and adopted.

Mr C. L. Sainty seconded the resolution and it was carried unanimously.

A dividend of 50 per cent., less tax, for the year on the ordinary shares was declared; the auditors (Messrs Hackett, Radley and Johnson) were reappointed, and a cordial vote of thanks to the chairman and directors concluded the proceedings.

THOS. W. WARD, LIMITED

A SUCCESSFUL YEAR

Mr Joseph Ward, J.P. (chairman), in moving the adoption of the directors' report and balance sheet at the thirty-fourth ordinary general meeting of the ordinary shareholders of Thos. W. Ward, Limited, held on the 30th ultimo at Sheffield, said:—

We have passed the lean and profitless years of depression without capital loss, which must be a matter of extreme gratification to the shareholders. The present balance sheet represents one of the strongest we have had the privilege of placing before you.

The remarkable result achieved is the sequel of the foresight exercised by the board in the important responsibilities committed to it, and the long-anticipated reward they had the courage to believe would ensue from their efforts when all the numerous departments were each contributing their quota of profit. The splendid success of the year had been due to a fair contribution from practically the whole of their sixty works and departments.

For many years, during the process of laying the foundations for expansion in remunerative business, they had visualised the possibility of reasonable success with the confidence that normal times would yield a fair revenue from the exertions put forward, and only the board knew how great these had been, and the close application of unique skill gained from long experience in a business of vast and wide ramifications.

For many years he had repeatedly emphasised the vital importance of scrap iron and steel products as the chief raw materials for British steelworks and the value to them of the scrap industry of the country. This had been confirmed by the subsequent scarcity of such materials, only remediable by imported scrap at very high prices. The scarcity of scrap that had arisen was explicable by the fact that the production of steel in this country during the period under review was 12,293,200 tons, an increase of 1,508,600 tons over the previous twelve months. Exports of scrap during the year, occurring principally before control was established, were 240,228 tons, as against 130,509 tons, being 109,719 tons more than the previous year, and the imports, which last year he gave as 975,573 tons, were 681,703 tons, actually 293,870 tons less.

IMPORTANCE OF THE SCRAP INDUSTRY REALISED

He had mentioned on other occasions what constituted a great oversight when the National Committee of Iron and Steel Producers failed to recognise the scrap industry as an integral part of their organisation. At last, however, this vital and important factor had been realised and its absolute necessity acknowledged. In March last this was effected by a coherent policy for the control and supply of scrap, in which their company through their joint managing director, Mr Ashley S. Ward, and assistant managing director, Mr George Wood, had taken and were taking a foremost part.

In the past year there had been some amelioration of the position in the shipbreaking industry, and their arrangements with the British Iron and Steel Corporation were on a much more satisfactory basis than hitherto. The policy they had advocated for so long had in some measure been adopted. Whether it would be sufficient to keep all obsolete British ships in the country for the purpose of our steel manufacturing trades remained to be seen. It was in their interests that arrangements should be made as will wholly secure for them this most important source of raw materials and at the same time achieve a fair remuneration for the capital invested by the shipbreaking companies in their operations.

Considering the deplorable state of the shipbreaking industry for many years up to recent times, with the consequent lack of employment for British workmen, it has been a great mistake to have allowed a million and a quarter tons of British shipping to leave the country since 1932 for demolition abroad.

With the greatly improved conditions of trade our machinery department, having the advantage of magnificent warehouses for reconditioned and new machinery, has benefited materially.

Mr Ashley S. Ward, in seconding, said they had been engaged in important work in connection with dismantling and the reorganisation and development of industrial properties.

At Marshall's Engineering Works there were now fifteen hundred employees and an order book of over £600,000.

At Jarrow they had now had official notice served upon them by the Commissioner for the Special Areas that under his powers he proposed to acquire the site compulsorily.

The report and accounts were adopted unanimously.

INTERNATIONAL DIATOMITE COMPANY, LIMITED

USES IN HEAT INSULATION

COMPANY'S GROWING BUSINESS

The second annual general meeting of the International Diatomite Company, Limited, was held, on the 24th ultimo, at Russell House, Adam Street, London, Mr Frank S. Russell, F.G.S. (the chairman and managing director), presiding.

The Chairman, in moving the adoption of the report and accounts, said:—The business of the company consists of the holding of shares in companies engaged in the exploitation of diatomite, and of fostering the use of diatomite, mainly for the purpose of providing insulation against heat losses, and for the production of a lightweight, soundproof constructional material, which keeps the buildings in which it is used cool in summer and warm in winter.

PURPOSE OF THE COMPANY

The company is not a manufacturer. It commenced by acquiring the whole of the share capital of a well-established and profitable company known as Moler Products, Limited, a company which has, in its turn, a subsidiary in Denmark which provides it with raw material from the extensive deposits there. There are no deposits of similar extent in our own country nor any from which diatomite could be produced at anything like the cost of the Danish material, even after making allowance for the latter being transported across the sea.

We formed this company as a pioneer company for the purpose of studying the diatomite business and acting as a holding company. We are continually on the watch for opportunities of improving its business either by the adoption of new processes, co-operation with others, or by other means such as the acquirement of further interests.

The success of heat insulation has been hastened by the recent advances in the price of coal, and it has been necessary to increase the productive capacity of the works, opportunity being taken to instal modern fuel and labour-saving devices at the same time, with the net result that costs have been reduced and profits increased.

Our subsidiary company has, during the year, maintained its plant in good condition, and has, in fact, provided for exceptional expenditure incurred in connection with a portion of the machinery which was due for overhaul. Ample provision has also been made for depreciation, though the works and plant stand in the balance sheet at a figure based on a low valuation made in the year 1934. I am sure that you will believe that to replace the plant, etc., at Colchester and in Denmark to-day would cost very much more than the figure at which it stands in the accounts.

Since the end of the company's financial year, the trading profits of Moler Products, Limited, have shown a substantial growth, as compared with the preceding year.

As your company is a holding company, we have thought that it would be of interest to shareholders to see a preliminary consolidated balance sheet which includes the figures for Moler Products, Ltd., and its subsidiary company in Denmark, with the figures for our own company.

INSULATION AND INDUSTRIAL USES

The use of diatomite for insulating and industrial purposes is increasing, and at the present time represents approximately one-half of the company's business. This is a difficult business, because our raw material is not easy to handle, and all the companies manufacturing from Moler diatomite have encountered considerable difficulties before getting into production. There are conflicting problems involved also in the installation of insulation materials in industrial furnaces, and these we are well equipped to tackle because of our long experience in this business and our close association with General Refractories, Limited, who now deal with our sales for industrial insulation in a very satisfactory manner.

Heat insulation is a scientific improvement, equivalent to putting a cosy on a teapot to keep the pot hot, and it is not likely that modern furnace and kiln builders will neglect this simple and inexpensive means of economising to the extent of saving something like one-quarter of the coal which they would otherwise consume and waste by radiating the heat into the atmosphere, or sending it up the chimney to be utterly lost.

The prospects for the future seem to your board to be good, and we are well equipped to deal with all the business we expect to come our way.

The report and accounts were unanimously adopted and the payment of a final dividend of 6 per cent. (less tax), making 8 per cent. for the year, was approved.

ALLIED INDUSTRIAL SERVICES, LIMITED

INCREASED DEMAND

The third annual general meeting of Allied Industrial Services, Limited, was held, on the 29th ultimo, at Bradford, Mr W. H. Rhodes presiding.

The Secretary (Mr C. Gordon Slaker, C.A.), having read the notice convening the meeting.

The Chairman said: Your directors are pleased to report that the increased demand for the Sponge Cloths Supply Service and Industrial Garment Supply Service, the two services your company provides, together with more extensive facilities and equipment for handling a greater volume of business, have resulted in a profit for the year ended June 30, 1937, of £128,467 3s. 10d.

You will notice this year that certain changes have been made in the form of the accounts; the proposed final ordinary dividend is already provided for in the balance sheet, and the profit and loss account balance is that carried forward to next year. I might also add that the capital reserve account, which represents the profits of the company earned prior to incorporation, has been debited with the income tax payable in respect of such profits.

As I have already mentioned, the profit for the year amounted to £128,467 3s. 10d., and, together with £7,952 18s. 1d., the balance brought forward from last year, after providing for ordinary share capitalisation, makes a total profit for allocation of £136,420 1s. 11d.

The report now before you sets forth the transfers of taxes reserve, general reserve, dividends already paid and the proposed final ordinary dividend, leaving a balance of £19,292 5s. 2d. to be carried forward to next year.

It has been my practice on these occasions to say a few words relating to the trading prospects of your company for the present year. During the opening months of our current trading year the amount of business done has been satisfactory, and I feel that, provided the general trade of the country remains good, we can reasonably anticipate that the business done by your company will be satisfactorily maintained.

The report and accounts were unanimously adopted and a final dividend of 37½ per cent. on the ordinary shares was approved.

CITY AND INTERNATIONAL TRUST LIMITED

FURTHER PROGRESS—INCREASED DIVIDEND

The eleventh ordinary general meeting of this Trust was held, on the 28th ultimo, in London.

Mr Louis H. Kiek (chairman and managing director), who presided, said: It is a source of satisfaction to us that at the close of another trying and difficult period we are able to submit to you an account of our stewardship, indicating further progress on the road to recovery in our revenue as well as in our capital position.

At £96,776 our gross income shows an increase of £10,424 and the net profit at £51,338, an improvement of £5,400, or nearly 12 per cent. over the previous year's figure of £45,900.

The increased revenue is mainly derived from our investments in home and foreign commercial and industrial enterprises, a number of which have either re-entered the dividend list, thus rewarding many years of patience, or have given increased—in several cases substantially increased—distributions.

If you support our recommendation to distribute a dividend of 4 per cent., less income tax, on the ordinary stock, as against 3 per cent. last year, there will remain £5,338 to be added to the £38,871 brought in from the previous year, making £44,310.

We feel justified in making this recommendation of an increased dividend, not only by reason of the past year's results, but because of the expectation, based on as cautious an estimate as it is possible to make, that given reasonably stable conditions we should be able to maintain that distribution for the current book year.

The investments, now numbering 476, appear in our balance sheet at slightly over £1,950,000.

"Priority" securities, viz. loans to governments and public authorities, debentures and preference shares, stand at 51.2 per cent., against 52.1 per cent., and "equities" at 48.8 per cent., compared with 47.9 per cent. at the close of our previous year. In the geographical distribution we have adhered to the plan mapped out some years ago, as a result of which our interests in Great Britain and the Dominions now represent 47.2 per cent. of the total, against 43.7 per cent. last year; the principal change shown in the foreign group is in a further marked reduction in Germany, Austria and Hungary to 14 per cent.

The report and accounts were unanimously adopted.

JOHORE RUBBER LANDS, LIMITED

SATISFACTORY IMPROVEMENT IN RESULTS

The eleventh ordinary general meeting of Johore Rubber Lands, Limited, was held, on the 28th ultimo, at Winchester House, London.

Mr H. M. Graham (the chairman) said:—Gentlemen, it is very gratifying to us to be able to present a statement of affairs to you showing such a satisfactory improvement in results. The net profit earned—after providing £338 17s. 8d. for depreciation—amounts to £6,888, compared with £2,231 16s. 3d. for the previous year. It gives us pleasure to recommend the payment of a dividend for the year of 5 per cent., less tax, leaving £7,856 10s. 4d. to be carried forward against £6,455 19s. 8d. brought in.

The crop harvested amounted to 417,822 lb. of rubber, which represents a decrease compared with last year's crop of 65,678 lb. This decrease is due principally to the changeover from alternate-day to A.B.C. system of tapping and also to bad weather conditions experienced. Our f.o.b. cost for the year amounted to only 4½d. per lb., and, although this shows an increase over last year's cost of about ½d. per lb., I think you will agree that it is by no means unsatisfactory in view of the smaller crop harvested.

On the question of costs I would like to explain that, although it might be expected with the heavier releases now in force that further reductions may be anticipated, this, I fear, may not materialise owing to the increased wages now payable and to the increased cost of all materials.

Turning to the balance sheet, it will be observed that our financial position is sound, as cash in hand, War Loan, debtors and rubber stocks, less creditors, amount to £19,900 19s. 3d. Compared with last year, this shows an improvement of a little over £4,000, despite the fact that in the interval a dividend was paid, that is in respect of year ended March 31, 1936, amounting to £2,743 15s.

As regards the estate, the condition is satisfactory throughout, and, according to the last report received from our visiting agent, is efficiently and economically managed. We have no forward sales, and we will, therefore, be able to take advantage of any improvement in the selling price of the commodity.

The report and accounts were unanimously adopted.

TANGOEL RUBBER ESTATES, LIMITED

SATISFACTORY CONDITION OF ESTATES

The annual ordinary general meeting of the Tangoel Rubber Estates, Limited, was held, on the 28th ultimo, at the registered offices of the company, 5 Fenchurch Street, London, Mr Walter Hilliers (chairman of the company) presiding.

The Chairman, in the course of his speech, said: Particulars as to crops obtained and estimates for the current year, as well as of the forward sales, have all been stated in the report.

The average price realised for the year can be deemed satisfactory, being equal to 9½d. per lb. London equivalent; costs are also moderate, especially considering that they include the cost of rejuvenation and of licences.

Reports as regards the condition of the estates generally are gratifying, and have been considered by experts from the experimental station as particularly so. This applies to the old gardens as well as to the rejuvenated areas, namely, the areas replanted under the scheme permissible at present. The area replanted so far is 95 acres, and the replanting of the remaining about 150 acres is also in hand.

Pests, such as mildew and root diseases, which are under constant supervision, have not caused the management any anxiety.

Our young division, Wonokerto, has certainly proved a welcome addition to our planted area.

Our appreciation is due to our very able superintendent and also to the manager and staff for their efficient work.

We hope that the current year's results will show some further improvement.

I will now move:—

"That the directors' and auditors' reports and audited balance sheet and accounts to June 30, 1937, as circulated to the members, be taken as read, and that the same be and are hereby adopted, and that a dividend of 6 per cent. on the share capital of the company be declared and paid forthwith to the members on the books of the company at this date."

Sir Edward Rosling seconded the resolution, which was carried unanimously.

The retiring director (Sir Edward Rosling) was re-elected, and the auditors (Messrs Tribe, Clarke, Painter, Darton and Company) were re-elected.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for 12 days ended September 30, 1937, amounted to £15,988,000, against ordinary expenditure of £25,231,000. After decreasing Exchequer Balances by £213,516 the operations for the period, as shown below, increased the gross National Debt by £9,276,000, to about £8,213 millions.†

GOLD MARKET

Messrs Samuel Montagu and Company write on September 29, 1937:—The Bank of England gold reserve against notes amounted to £326,406,825 on September 22nd, showing no change as compared with September 15th. Conditions in the open market were active and there was a good inquiry at the daily fixing for the amounts available, which totalled about £2,800,000 during the week. Offerings were mostly taken for holding purposes and the demand was sufficient to maintain prices at a slight premium over dollar exchange parity. The s.s. "Strathaird," which left Bombay on September 25th, carries gold to the value of about £342,000. The Southern Rhodesian gold output for August, 1937, amounted to 69,460 fine ounces as compared with 67,093 fine ounces for July, 1937, and 68,830 fine ounces for August, 1936.

SILVER MARKET

For the first four days of the week under review prices remained unchanged at 19½d. for cash and 19¼d. for two months' delivery, conditions being rather quiet and the level just above that at which American buyers were interested. On September 28th the Indian bazaars were inclined to sell and prices eased to 19½d. and 19¼d. for the respective deliveries and there was some American support at the decline. The renewal of Indian selling has made the tone of the market a little uncertain, but in view of the firmer tendency of the dollar, American interest should continue to be in evidence at or slightly below the present level.

Quotations for gold and silver are shown below:—

1937	Price of Gold per Fine Ounce	Equivalent Value of £ sterling	Price of Bar Silver in London per ounce standard	Price of Silver New York per ounce .999 fine

COMMERCE AND TRADE

LEAD AND SELLER.—Lead and spelter declined sharply in sympathy with copper. Lead lost $\frac{1}{2}$ 6s. 3d., closing at $\frac{1}{2}$ 19 8s. 9d., a new low level for the current year, while spelter lost $\frac{1}{2}$ 11s. 3d. and closed at $\frac{1}{2}$ 19 2s. 6d., which is only 13s. 9d. above this year's lowest. There was practically no change in the statistical position of the two markets, which continues to be fairly favourable. Buying, however, has declined and bear selling has been substantial. The fact that lead is again dearer than spelter is due to the disappointment of speculators in regard to spelter imports into the United States, and also to a certain amount of buying by lead

(v) May 19, 1936, to June 30, 1937.

producing interests. During the period under review the United States lead price was reduced from 6.50 cents to 6.00 cents per lb. and the U.S.A. spelter price from 7.25 to 6.50 cents. As in copper, the immediate outlook of the two metals depends mainly on the attitude of consumers.

Sales of lead on the London Metal Exchange: 1,450 tons on Monday, against 3,650 tons last week; 1,300 tons on Tuesday, against 800 tons last week; 3,600 tons on Wednesday, against 2,600 tons last week. The New York quotation on Wednesday was 6.00 cents per lb., against 6.50 cents a week ago and 6.50 cents a month ago. Wednesday's official closing quotation in London for soft foreign for shipment during the current month was £19 8s. 9d. to £19 10s. per ton, compared with £20 15s. to £20 16s. 3d. last week.

Sales of spelter on the London Metal Exchange: 1,000 tons on Monday, against 2,450 tons last week; 1,500 tons on Tuesday, against 2,400 tons last week; 2,500 tons on Wednesday, against 1,600 tons last week. Wednesday's quotation in East St. Louis was 6.50 cents per lb., against 7.25 cents the week before and 7.25 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipment during the current month was £19 2s. 6d. to £19 3s. 9d. per ton, against £20 13s. 9d. to £20 16s. 3d. last week.

TIN.—Tin suffered even more severely than the other three metals and lost £14 15s., closing on Wednesday at £246. This slump is all the more remarkable since Japan has bought substantial quantities of tin this week in anticipation of a possible blockade, and United States' buyers were also more active. In addition, the market expects a decline of about 1,000 tons in the total visible supply during September. Bear selling appears to be the main cause of the tin slump this week. Unless consumption of tin declines substantially, the recent slump in the price of the metal is of course unjustified, but compared with the present level of copper, lead and spelter, tin still appears somewhat overvalued. Further declines are, therefore, not impossible.

Sales of tin on the London Metal Exchange: 560 tons on Monday, against 405 tons last week; 300 tons on Tuesday, against 410 tons last week; 900 tons on Wednesday, against 205 tons last week. The New York quotation on Wednesday was 55.52 cents per lb., against 59.62 cents a week ago and 58.50 cents a month ago. Wednesday's official closing quotation in London for standard cash was £246 5s. per ton, compared with £260 15s. to £261 a week ago. Stocks of tin in London and Liverpool at the end of last week totalled 2,639 tons, a decrease of 337 tons on the week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted on Wednesday at £100 per ton, and rolling billets at £102 per ton. Nickel, for home and export, was maintained at £180 to £185 per ton. Quicksilver, on the spot, was steady at £13 10s. 6d. per flask of 76 lbs., as against £13 12s. to £13 12s. 6d. Chinese antimony was quoted at £83 to £84 per ton, ex warehouse, as against £82 to £83 last week. Chinese wolfram for "September-October" shipment was quoted at 120s. to 125s. per unit, c.i.f., the same as last week. Refined platinum was quoted on Wednesday at £10 5s. per ounce, compared with £10 5s. a week earlier.

TEXTILES

COTTON.—Manchester. The Lancashire cotton industry has been disturbed by the persistent sagging tendency in American cotton prices. When the quotation for American current month futures in Liverpool fell below 5d. a lb., business in yarn and cloth was forced practically to a standstill. Shippers and merchants have been content to look on pending signs of stability in Liverpool and New York. Although prices have fallen by approximately 4d. a lb. in the course of a week the trade is by no means convinced that the lowest level has been seen. Probably many operators are awaiting the publication of the next American crop report which will be issued on Friday, October 8th. Meanwhile, a policy of extreme caution is being followed. The decline in raw cotton prices was due to increased hedge selling, coupled with practically no trade support. Attempts are now being made to estimate when the peak movement of the American crop will be reached. The "into-sight" figures to last week-end totalled 2,857,000 bales, whereas the size of the crop will be much in excess of 16,000,000 bales. Last year the "into-sight" movement reached its peak on October 29th and in the previous season on October 22nd. The height of the movement will be very important this year and it should be reached during the next three weeks, when hedge selling will be less pronounced, followed by a more stabilised price level.

Cloth manufacturers have had a dull week. The slight hardening movement at the beginning of the week forced out more inquiry, but buyers have been slow in putting forward workable offers. The turnover for the outlets abroad has been extremely scrappy, and no useful purpose would be served in detailing the comparatively trivial sales recorded. The home trade has been testing prices, but not much business has resulted. Advances from all markets, however, indicate that business is waiting to be done when prices ground. Sellers remain very firm and even the slightest price concessions are difficult to obtain. Yarn business has been affected by the decline in cotton prices, but margins have been fully maintained.

WOOL.—Bradford. The fifth series of Colonial sales held in London finished last Friday with a decidedly better tone than at the opening. With greater confidence in manufacturing centres, together with rather stronger overseas advances, buyers felt justified in bidding more keenly, and this led to decidedly more competition and less withdrawals. At the same time best style merinos were 5 to 10 per cent. and medium and faulty wools 10 to 15 per cent. below July closing rates. Bulky scoureds, of which Queensland supplied some excellent clips, sold distinctly better

during the second week, although finally they were 7 1/2 to 10 per cent. below the close of the previous series. Faulty combing as well as pieces and bellies were mostly 15 per cent. lower. Fine greasy crossbreds sold throughout at a fall of about 10 per cent., medium and coarse descriptions at the finish showing a decline of 5 to 10 per cent. Scoureds were mostly 10 to 15 per cent. lower. The outstanding feature of the series was the large offering of New Zealand slipes, and these wools proved to be the best of any series this year. Half bred slipes sold throughout at a fall of 10 to 15 per cent., while medium and coarse qualities were mostly 5 to 10 per cent. lower. Cape greasies declined 10 to 15 per cent., and snow whites were 15 per cent. cheaper. The increased confidence shown towards the end of the series was very welcome, and it is to be hoped that the way has been paved for a better interval.

Altogether 69,123 bales were catalogued. About 29,500 bales were taken by the home trade and 18,000 bales were purchased by the Continent, America taking about 1,000 bales. The carry-forward is larger than the majority expected, and 42,000 bales are held over for the next series which begin on November 16th, when there should be to hand a very good selection of new clip Australian merinos.

Some improvement is noticeable overseas, and prices in Australia and South Africa are fully in line with what can be realised for wool and yarns in manufacturing areas. Selling brokers are acting wisely overseas in meeting the market, for prices are still remunerative to growers.

GRAIN MARKETS

WHEAT.—The market has again had a firm tone and prices show a further rise. An active demand, a scarcity of offers in near positions, and the continued firmness of the freight markets are the principal causal factors. Meanwhile Argentina is enjoying a spell of seasonable weather, but in Australia further rainfall is needed.

On Wednesday last, "December" futures were quoted in Chicago at 109 cents per bushel, against 105 1/2 cents the week before and 105 1/2 cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba (Atlantic), ex ship, 55s. 9d. per 496 lbs., against 54s. 9d. last week; No. 2 Northern Manitoba (Atlantic), ex ship, 54s. 9d., against 53s. 3d. last week. According to the *Corn Trade News* total shipments of wheat and flour last week amounted to 1,122,000 quarters, against 899,000 quarters in the previous week and 1,289,000 quarters in the corresponding week a year ago.

FLOUR.—The market has had a steady tone. Wednesday's London quotations (excluding quota payments) were: Straight run, delivered Home Counties, 40s. 6d. per 280 lbs., as against 40s. 6d. a week ago; delivered inner London, 40s., as against 40s. a week ago. Manitoba patents, ex store, 39s. to 40s. 6d., as against 39s. to 40s. 6d. a week ago. Australian, ex store, 32s. to 32s. 6d., as against 32s. to 32s. 6d. a week ago.

BARLEY.—Imported feeding barley is a steady market. "October" futures were quoted at 64 cents per bushel in Winnipeg on Wednesday, as against 62 1/2 cents last week. Quotations per 448 lbs. in London on Wednesday were: "English feed," at farm, not quoted; "English malting" (new), at farm, 45s. to 65s., as against 45s. to 65s. a week ago; Californian, ex ship, 45s. to 58s., as against 45s. to 58s. a week ago. Chilean, brewing, ex ship, 44s. to 48s., as against 44s. to 48s. a week ago.

OATS.—On Wednesday, "December" futures were quoted at 31 1/2 cents a bushel in Chicago, against 31 cents a week ago and 29 1/2 cents last month. Quotations in London, Wednesday: "English Black" (new), at farm, 26s. to 27s. per 336 lbs., as against 26s. to 27s. last week; "English White" (new), at farm, 26s. to 27s., as against 26s. to 27s. a week ago; mixed Canadian feed (Vancouver), landed, 27s. per 320 lbs., as against 26s. 3d. a week ago.

MAIZE.—Prices on the London market are slightly above the level of a week ago. "December" futures were quoted on Wednesday at 65 1/2 cents per bushel in Chicago, against 65 1/2 cents a week ago, and 62 1/2 cents last month. Quotations in London, Wednesday: "Plate," landed, 29s. 8d., against 28s. 6d. a week ago; "Plate," ex ship, 28s. 8d., as against 28s. 6d. a week ago; "September," 28s. 7 1/2d., as against 27 1/2d. a week ago; yellow maize meal, ex wharf, was quoted at 7 10s. to 7 12s. 6d. per ton, as against 7 10s. last week.

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations for selected weeks in 1935-1937:—

NEAREST FUTURES	Jan. 2, 1935	Dec. 31, 1935	Sept. 30, 1936	Dec. 30, 1936	Sept. 22, 1937	Sept. 29, 1937
Winnipeg (No. 1, Manitoba)..... Cents per 60 lbs.....	82 1/2	84 1/2	106 1/2	129	127 1/2	134 1/2
Chicago (No. 2, Winter)..... Cents per 60 lbs.....	90 1/2	101 1/2	112 1/2	136 1/2	105 1/2	109

The visible supply of wheat in Canada amounts to 74,507,000 bushels, against 67,452,000 bushels last week and 83,660,000 bushels in the corresponding week last year.

SALES AND PRICES OF BRITISH CEREALS.—The following table gives the estimated sale of home-grown wheat during the harvest years 1934-35 to 1937-38.

	1934-35	1935-36	1936-37	1937-38
Estimated sales of home-grown wheat—				
1 week to September 25..... Cwts.	566,800	467,232	506,972	597,908
4 weeks to September 25..... Cwts.	1,961,701	1,912,833	1,058,940	1,429,232
Average price of English wheat per cwt.	s. d. 5 1	s. d. 5 4	s. d. 7 7	s. d. 8 9

The following is a statement showing the quantities sold and the average price of British cereals in the past two weeks, and for the corresponding weeks in each of the years from 1933 to 1936:—

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
September 23, 1933.....	434,992	482,967	Cwts.	s. d. 4 10	s. d. 5 4	s. d. 5 4
September 22, 1934.....	596,600	284,021	76,372	5 1	10 0	6 8
September 28, 1935.....	467,232	472,190	74,179	5 4	9 9	6 3
September 26, 1936.....	509,972	338,738	56,314	7 7	10 3	6 8
September 18, 1937.....	415,965	533,905	49,650	8 7	12 0	8 8
September 25, 1937.....	397,908	639,219	61,048	8 9	12 0	8 0

OTHER FOODS

BACON.—No change was made in the official quotations last week-end, but the market has since had a rather quieter tone and prices have been somewhat difficult to maintain. The official quotations (per cwt. for No. 1 Sizable) which formed the basis for dealings on the London Provision Exchange this week were: English, 105s.; Canadian, 100s.; Danish, 106s.; Exchange this week were: English, 105s.; Canadian, 100s.; Danish, 106s.; included: Danish, 13,366 bales; Canadian, 4,468; Dutch, 1,973; Lithuanian, 2,036; and Polish, 3,058; as against 13,234, 4,716, 2,342, 2,132, and 3,261 bales, respectively, in the previous week.

BUTTER.—Business was active and the market has had a very firm tone this week. Quotations (per cwt.) on the London Provision Exchange on Wednesday were: New Zealand, finest salted, 128s.; Australian, choicest salted, 127s. to 128s.; Danish, 139s. to 140s.; compared with 119s. to 120s., 119s., and 136s. to 138s., respectively, a week ago.

CHEESE.—The market has had a rather firmer tone. Quotations (per cwt.) on the London Provision Exchange on Wednesday were as follows: English Cheddars, finest farmers, 90s. to 92s.; Canadian, finest coloured, 71s.; and New Zealand, finest coloured, 69s. 6d.; against 90s. to 92s., 70s., and 68s. 6d. to 69s., respectively, a week ago.

COCOA.—Prices have again declined. The spot quotation in New York on Wednesday was 6 1/2 cents per lb., as against 7 1/2 cents per lb. last week. In London, on Wednesday last, good fermented new crop, Accra, "November-January," was quoted at 29s. 9d. sellers per 50 kilos., c.i.f. Continent, against 35s. 6d. a week ago. Last week's movements of cocoa in London were as follows: Landed, 4,353 bags; delivered for home consumption, 4,748 bags; exported, 8,900 bags; stocks, 222,740 bags, against 171,997 bags a year ago.

COFFEE.—The New York market was quiet, with prices unchanged. The London spot market was quietly steady. On Wednesday, Rio No. 7 The London spot market was quoted at 9 cents per lb., as compared with 9 cents (cash) was quoted at 9 cents per lb. a month ago. Movements of coffee per lb. last week were as follows: Brazilian, landed, 37 cwt.; delivered, in London last week were as follows: Brazilian, landed, 37 cwt.; delivered, for home consumption, 65 cwt.; exports, nil; stocks, 1,714 cwt., against 9,852 a year ago. Central and other South American: Landed, 44 cwt.; delivered, for home consumption, 1,857 cwt.; exports, 251 cwt.; stocks, delivered, against 79,185 cwt. last year. Other kinds: Landed, 1,520 88,114 cwt., against 79,185 cwt. last year. Other kinds: Landed, 294 cwt.; stocks, 83,564 cwt., against 115,337 last year.

EGGS.—Prices again advanced in consequence of the seasonal reduction in supplies. At Smithfield, on Wednesday, English (ordinary packing, Grade 1, about 15-15 1/2 lb.) realised 18s. 6d. to 20s. per 120, against 18s. 6d. to 19s. last week; while Danish (15 1/2 lb.) made 14s. 6d. to 14s. 9d., as against 14s. 3d. to 14s. 9d. last week.

FRUIT.—With supplies generally moderate, prices at Covent Garden have been steady, states *The Fruitgrower*. The principal exception is apples, which have eased under the influence of larger arrivals. Pears continue in consistent demand at steady rates, but plums are now finishing. Hothouse grapes are a fairly steady trade, although supplies are rather heavier. Blackberries are doing better, and cabbages are steady on shorter supplies. Arrivals of brazil nuts are limited and prices are consequently high, but chestnuts are now cheaper. Best brands of oranges are a firm market, while best grade lemons are steady in price. Grapefruit is plentiful and cheap.

MEAT.—At Smithfield Market, on Wednesday last, Argentine chilled hindquarters were quoted at 4s. 4d. to 4s. 8d. per 8 lbs., as compared with 4s. 4d. to 4s. 8d. a week ago. New Zealand frozen mutton was 3s. 4d. to 4s. 4d., as against 3s. 4d. to 4s. 2d. a week ago. According to the 4s. 2d. per 8 lbs. official report, supplies during last week amounted to 8,798 tons, a decrease of 13 tons on the corresponding week last year. Beef and veal accounted for 4,650 tons, mutton and lamb 2,310, and pork and bacon 1,001, as compared with 4,601, 2,294, and 1,074 tons, respectively, in the same week of 1936.

PEPPER.—On Wednesday, white Muntok, "October-December," was quoted at 4 1/2d. per lb. sellers, c.i.f. Rotterdam-Hamburg, against 4 1/2d. per lb. a week earlier. Black Lampong spot, in bond, was quoted at 3d. per lb., sellers, compared with 3 1/2d. per lb. last week. Movements of pepper in London last week were as follows: Black, landed, nil; delivered, 5 tons; stocks, 1,954, against 1,777 last year. White, landed, 54 tons; delivered, 58 tons; stocks, 11,359 tons, compared with 12,023 a year ago.

RICE.—The spot price of Burma No. 2 cleaned was 10s. 10 1/2d. per cwt. ex warehouse, on Wednesday, as compared with 10s. 9d. per cwt. a week ago. "September-October," in singles to Continent and U.K., was quoted at 10s. per cwt., against 10s. last week. Movements in London last week were as follows: Landed, 1 ton; delivered, 93 tons; stocks, 1,917 tons, against 1,337 a year ago.

SUGAR.—The London market in raw sugar has been quietly steady, but an easier tone has been evident in New York. The New York spot quotation was 3.20 cents on Wednesday, as compared with 3.42 cents quotation per lb. last week and 3.50 cents per lb. a month ago. Wednesday's sales of raw sugar in London included "December" delivery at 6s. 5 1/2d. to 6s. 5 1/2d., against 6s. 6 1/2d. to 6s. 7d. a week ago. Movements of raw sugar in public warehouses in London and Liverpool last week were as follows: Imports, 19,669 tons, against 17,003 in the previous week and 17,743 in the same week of 1936; deliveries, 19,278 tons, against 18,557 and 17,805 tons, respectively; stocks, 121,302 tons, against 120,911 and 105,121 tons, respectively.

TEA.—The following table shows the average price (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account in recent weeks:—

Week ended	Northern India	Southern India	Ceylon	Java	Sumatra	Africa	Total
Sept. 24, 1936.....	d. 13-86	d. 12-04	d. 13-29	d. 10-75	d. 9-95	d. 11-46	d. 13-28
Sept. 2, 1937.....	16-97	14-88	16-03	15-12	13-09	14-32	16-27
" 16, ".....	17-63	14-98	16-30	15-72	13-10	14-23	16-67
" 18, ".....	17-36	15-14	16-47	15-83	13-12	14-59	16-77
" 23, ".....	17-01	15-26	16-66	14-54	13-16	14-51	16-60

At this week's public auctions in Mincing Lane, 55,943 packages of Indian and 19,022 packages of Ceylon tea came up for disposal. Demand for Indian teas was again active and the market ruled fully firm except for lowest kinds which were occasionally slightly easier. At the Ceylon sales, on the other hand, teas up to 1s. 4d. met a strong market, but the better qualities were barely steady.

VEGETABLES.—At Covent Garden this week tomatoes were about unchanged in price, states *The Fruitgrower* but cucumbers were dearer on short supplies. All kitchen vegetables sell better. Beans are worth more, while the good supplies of cabbage, savoys and cauliflowers clear quite well. Celery is receiving fair attention, while mushrooms are cheaper in consequence of larger supplies of field-grown. The potato trade at the various London markets has been rather better, with supplies showing a declining tendency. Thus at the Borough Market on Tuesday best siltland King Edward realised 6s. to 7s. per cwt., against 5s. 6d. to 6s. 6d. last week.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OILSEEDS.—Markets have a much more cheerful tone, and the volume of business is larger. A good demand has developed for Indian linseed on British account, and prices have advanced. Plate seed, however, is neglected in Great Britain, though Continental crushers are in evidence again at rising prices. The market is still largely governed by the new crop outlook in Argentina, and the fact that the area officially reported to have been sown with linseed is considerably less than last season and 270,000 acres below 1935-36, when the harvest resulted in a yield of 1,425,000 tons. There may be some addition by reason of late sowing in certain districts, but it is considered that this will not be extensive. The ultimate yield, however, will depend on the weather conditions in the ensuing weeks. Meanwhile, shipment of the old Plate crop continues. The balance of the exportable surplus has now been reduced to below 200,000 tons. Shipments of Indian seed are still on a moderate scale, partly owing to the reserve of growers and, as also in the case of Argentina, the difficulty of obtaining freight space. The American harvest is not likely to be quite so large as expected, and further reliance on outside sources is regarded as probable in view of the sustained demand for linseed oil. Linseed oil prices here are well maintained, but are still below the highest recorded in July, while trade demand is fair.

Egyptian cotton seed has recovered some of the lost ground and forward shipment is at a good premium over "afloat." Export demand for cotton oil is poor, and prices have dropped by 7 per ton in as many weeks. Refined ex Hull is now offered for prompt shipment at £23 10s. per ton. Trade in oilcakes is steadily improving, and prices ex mill are advancing.

RUBBER.—Prices both in London and New York have again shown a sagging tendency. Although no official communiqué was issued after Tuesday's meeting of the International Rubber Regulation Committee, it appears that no important decisions were taken. The production quota for the first quarter of 1938 will be fixed at a meeting to be held in October or November. The spot price in New York on Wednesday was 17 1/2 cents per lb., compared with 18 1/2 cents per lb. a week ago and 18 1/2 cents a month ago. Wednesday's official buyers' price for standard ribbed smoked sheet on the spot in London was 8 1/2d. per lb., as against 8 1/2d. on the corresponding day last week. In forward positions business has been done at 8 1/2d. to 8 3/4d. for "November" shipment, as against 9d. a week ago. Stocks in London and Liverpool at the end of last week totalled 49,950 tons, against 48,761 tons a week earlier. A year ago stocks amounted to 103,784 tons.

FURS.—The London autumn fur sales opened on Wednesday afternoon with a special auction of South-West African "Persian" lambs. Total offerings comprise about 200,000 skins—a particularly large supply when it is remembered that these furs were first offered in London only a year ago. The market for South-West African "Persian" lambs, which was the monopoly of Leipzig until last year, is thus well on the way to being transferred to London. This process has been supported by the formation of a special collecting agency in South-West Africa by the Hudson's Bay Company. Recently a new company, known as the Karakul (S.W.A.) Auctions, Ltd., was formed, and its operations are helping to augment London's supplies. At the present sale the new company is offering some 51,000 skins, or about 25 per cent. of the total. The special South-West African sale will be followed on Monday next by the first general sale of the Hudson's Bay Company. The general sale may occupy approximately a fortnight. The participation of foreign buyers at the new series is very satisfactory, although United States visitors are limited. The bulk of the foreign representatives comes from Leipzig and Paris. The market expects a price decline of about 10 to 15 per cent. as compared with the July and April sales, respectively.

America Takes a Hand

THE profound emotion which was stirred last week throughout the world by the news of Japan's slaughter of civilians in China has been followed this week by a sequence of events which—if the public opinion of the world responds to them—may prove to be of historic importance. At Geneva, the Assembly of the League of Nations, following up its resolution of last week specifically condemning the bombing of open towns, has adopted a resolution which declares that the Japanese invasion of China constitutes a breach of Japan's obligations to China and of her obligations to other countries under the Boxer Agreements and the Nine-Power Treaty. The resolution further expresses moral support for China and it recommends the members of the League "to refrain from taking any action which might have the effect of weakening China's powers of resistance" and to "consider how far individually they can lend aid to China." Finally, the Assembly requests the signatories of the Nine-Power Treaty to meet as soon as possible for consultation.

Meanwhile, in this country, public opinion has spoken clearly. On Monday the Labour Party Conference condemned Japan's action and called upon the British Government to mobilise the nations for the application of economic and financial pressure. On Tuesday, at a great protest meeting in the Albert Hall, the ARCHBISHOP OF CANTERBURY sponsored a resolution to the same effect, and supported it in words which were the more impressive because of their very restraint.

These demonstrations of deep feeling, these protests against aggressive barbarism coupled in every case with demands for preventive action, were at once reinforced and overshadowed by a speech made by PRESIDENT

ROOSEVELT at Chicago on Tuesday. Speaking, with almost symbolic significance, in the capital of the Middle West, and investing his words with all possible emphasis, the PRESIDENT deliberately took a hand in the defence of democracy. He drew the attention of his audience to the present alarming state of the world and left them with no doubt that he placed the blame on the shoulders of three aggressive nations. "Innocent peoples and nations," he said, "are being cruelly sacrificed to a greed for power and supremacy which is devoid of all sense of justice and humane consideration." So far the speech differed from previous pronouncements only in its greater emphasis. What gave it the character of an historical occasion was that MR ROOSEVELT proceeded to draw the practical conclusions from his analysis of the world's malaise. "If these things come to pass in other parts of the world, let no one imagine that America will escape, that it may expect mercy, that this western hemisphere will not be attacked. . . . The peace-loving nations must make a concerted effort in opposition to those violations of treaties and those ignorings of humane instincts which are to-day creating the international anarchy and instability from which there is no escape through mere isolation or neutrality." The PRESIDENT dared to be not merely positive but specific. "When an epidemic of physical disease starts to spread the community approves and joins in the quarantine of the patients in order to protect the health of the community against the spread of the disease." Similarly the contagion of war should be prevented from spreading by placing in quarantine those nations infected with the aggressive virus.

Direct attack by the President of the United States

upon the conceptions of isolation and neutrality, recently so close to the American heart, is something very new. The suggestion of something uncommonly like economic sanctions is even newer. Immediately after the speech there were grounds for thinking that MR ROOSEVELT had been too courageous, and the Berlin Press felt justified in warning him of the fate of WOODROW WILSON. But it was evident within twenty-four hours that the PRESIDENT had not been touring the country for nothing. The reaction of the American Press and public to his speech has been surprisingly favourable. And as a further indication of the PRESIDENT's purpose, the State Department on Wednesday issued a statement announcing its "general accord" with the resolution of the League Assembly, and concluding:—

In the light of the unfolding developments in the Far East the Government of the United States has been forced to the conclusion that the action of Japan in China is inconsistent with the principles which should govern the relationships between nations and is contrary to the provisions of the Nine-Power Treaty of February 6, 1922, regarding the principles and policies to be followed in matters concerning China, and to those of the Kellogg-Briand Pact of August 27, 1928. Thus the conclusions of this Government with respect to the foregoing are in general accord with those of the Assembly of the League of Nations.

The speech and the declaration, taken together, have changed the diplomatic climate. It is too early yet to say what precise form will be taken by America's altered policy. It is taken almost for granted that the United States will attend the projected Conference of the signatories of the Nine-Power Treaty, and it has been suggested that Washington would be the best place for it to meet. Beyond that the new policy is undefined, and there are at least two important unknown factors in the situation. One is the exact degree to which the PRESIDENT can carry American public opinion with him. The main objective of American policy—as of almost every Government in the world—is "to avoid involvement in war." The American public has probably moved far enough from its erstwhile love of pure isolation to agree with the PRESIDENT that the avoidance of war cannot be

secured by that route. Whether it has moved far enough to authorise him to join in "concerted action" strong enough to achieve anything in the face of determined aggression is one of the questions to which only the passage of events can supply an answer. But the PRESIDENT is reported to be sufficiently confident of his own reading of opinion to call a special session of Congress next month at which any reversal of "neutrality" and any legislative authorisation of alternative policies will have to be discussed. The second unknown factor is whether the British Cabinet, with their grave preoccupations in the Mediterranean, will be able to respond to the PRESIDENT's initiative in the right psychological key.

These considerations belong to the future and they do not detract from the hopefulness with which it can be approached. For the present, the importance of the PRESIDENT's speech lies in the psychological sphere. It should not be forgotten that though the United States never accepted the Covenant of the League it was on American initiative that that document came into existence. A new voice calling from the West for international morality and respect for treaties cannot fail to be an encouragement to everything that the League stands for. The American Government may be hesitant in implementing the doctrine of quarantine. But the idea, nevertheless, may spread throughout the world.

Even at the lowest estimate, the PRESIDENT has helped immeasurably. Within forty-eight hours of the delivery of his speech, its implications had obtained a warm welcome from the PRIME MINISTER of France and from MR WINSTON CHURCHILL at the British Conservative Party's Annual Conference. The PRESIDENT has opened up a great opportunity for constructive co-operation in securing international order and in drawing closer not merely the political but also the financial and economic relations of all the great nations who adhere to common standards of decency in conduct. Opportunities such as these do not occur often. The extremity of the world's peril provides at once the need for seizing the chance and the hope that it will not be let slip.

His Majesty's Opposition

THE constitutional conflict of parties is the very stuff of our parliamentary democracy. "The House of Commons," wrote WALTER BAGEHOT, "lives in a state of perpetual potential choice; at any moment it can choose a ruler and dismiss a ruler; and therefore party is inherent in it, bone of its bone and breath of its breath." The Opposition, no less than the Ministry, is a part of government. Its function is to oppose and, if need be, to govern; to assist by constant constructive criticism in the shaping of national policy, and to take office on the turn of the electoral tide.

The vital rôle of His Majesty's Opposition in British politics was directly recognised last April when a salary was given by statute to the Leader of the Opposition. But mere recognition of the need for an official Opposition does not automatically bring an effective Opposition into existence. The Labour Party has met in conference this week at Bournemouth under grave suspicion of failure in some of its essential constitutional duties. For some time past it has been evident that the Party is making no headway in the country—and that for two reasons. On the one hand its personnel, depleted by the loss of its leaders in 1931, has failed to convince the country that it could adequately staff an alternative Government with chiefs of political judgment and experience; and on the other

hand its Socialist programme, though too tepid to set the masses of the country ablaze with revolutionary enthusiasm, has been too much concerned with cloudy doctrinaire slogans to win the confidence of the hard-headed artisan or the shy middle classes. The Party has long been struggling to allay the fear that a Labour Government would mean financial collapse; but post-Coronation by-elections showed little evidence that the country was sufficiently convinced to be ready to give Labour its full confidence.

The recent campaign in the constituencies has done a little to stir this apathy, but the public as a whole is still sceptical; and in recent times its doubts have been increased by the equivocal and discordant attitude which the Party has displayed to the subject of re-armament.

There are millions of voters in this country who believe that the arms race would never have reached its present stupendous dimensions if British foreign policy had been firmer and more single-minded. It has not been easy—it is not easy now—for those who hold this opinion enthusiastically to entrust the task of making Britain strong to the same Government whose foreign policy they believe to have been partly responsible for the emergency. The fact that it is so clearly necessary for Britain to be strong if she is to make her voice effective for peace and democracy makes the dilemma more

urgent, but hardly easier of solution. There has thus been good reason for the long time that it has taken the Labour Party to clarify its opinion on the subject. But the task of clarification has now been accomplished. At Bournemouth this week the Party, despite the hesitation of some of its leaders, including MESSRS ATTLEE, GREENWOOD and MORRISON, has followed the lead recently given by the Trades Union Congress in pronouncing the need for a powerfully armed Britain. The safety of the population, the organisation and recruitment of the Services, the safeguarding of food supplies, the welfare of munitions workers and the control of profits ought to be peculiarly the subject of constructive proposals from the Opposition. Thus the Labour Party may now assist in the steady and detailed process of making the defence programme more effective for its primary purpose and less damaging to the normal structure of the national economy and general welfare.

Nevertheless, the weakness of the Party as a political force in the country still remains. Its belated approval of re-armament will not regain the popular favour lost by lame and halting pronouncements in the past. Moreover, the Labour Party bears too obviously the marks and scars of its origins to become easily a national party. The necessary alliance in the formative years after 1900 between the new Labour Party and the organised and wealthy trade unions has left a legacy of strain between the industrial and political wings of the Party. The constituency parties have been growing in strength of recent years, and have chafed against the domination of trade union views at the Party's annual conferences through the "steam-roller" operation of the block votes of the unions in elections to the executive and in the decision of policy. While the affiliated political membership of the trade unions has declined from 4,317,000 in 1920 to little over 2,000,000 to-day, despite the secular increase of workers in employment, the individual membership of the constituency parties had risen from 214,970 in 1928 to 430,694, even before the recent campaign for members was launched. In addition, the local parties' contributions to Party income have risen from less than 2 per cent. in 1922 to 17 per cent. in 1936. The local parties are still small numerically compared with the unions' political membership; but they are healthy and growing, and through them alone can MR MORRISON'S ambition to "invite not only the manual workers but the professional and middle classes as well" be realised.

The Middle Classes

THE evolution of British economic life is a continuous process, but its pace has been noticeably quickened in the two decades since the Great War. Nowhere have the effects of recent changes been more marked than in the social and political outlook of Britain's middle classes, whose rôle in national affairs has long been of fundamental importance.

Capital required to finance the industrial revolution came, for the most part, not from the resources of the rich landowning class, but out of the accumulated profits of the new middle classes. It was the fruit of the personal thrift of countless small men, especially the craftsmen and traders of the Midland and Northern towns. This class rapidly threw up its own dominant families of wealth and power, some of whom passed beyond their trading environment into the atmosphere of aristocratic life. The remainder, however, who were industrial but not over rich, proceeded to build a new kind of civilisation in these islands. The family—thrifty, industrious, conscientious and, on the whole, urbane—was its basic sociological unit, and the small private business was its

Accordingly, a resolution was tabled at Bournemouth to increase the constituency parties' representation on the Executive from five to seven and to provide for direct election by the constituencies' delegation without the intervention of the unions' block votes. The unions were wary; some feared the diminution of the influence of organised manual workers' interests on the making of policy; others feared the election of notorious Left Wingers to Executive office—and, indeed, SIR STAFFORD CRIPPS and PROFESSOR LASKI have now been elected. The miners and the railwaymen voted against the proposal to increase the parties' representation; the transport workers were divided. But the matter never became a real issue. The proposals were accepted and *bonhomie* prevailed. The unions' dominant position was not seriously threatened. While it is true that theirs is a vested interest and that their dominant position in the Party distracts their own attention from industrial to political questions and overweights the Party personnel with union officials, this is in all probability inevitable in the present immature state of the Party's development. And it tends to a rather unimaginative moderation.

It has been made clear at Bournemouth that, so far from being split by dissension, the Labour Party is, on both its industrial and political wings, unusually united, if only in a rather apathetic way. A constitutional and gradual policy commands the support of the vast majority. The existence of SIR STAFFORD CRIPPS' recalcitrant Left Wing, again disavowed by a very large majority, is, for all its ill-judged and disruptive activities, a sign of democratic health. Indeed, its importance has probably been magnified by vehement and often illiberal heresy hunting by the Executive themselves. And MR LANSBURY'S pacifists, impracticable though they undoubtedly are, shine like a good deed in a naughty world. What is lacking is not solidarity but a policy and popular favour. Clear-cut leadership may be lacking, but two great obstacles have now been removed; re-armament has been endorsed; and the immediate programme of the Party, described by DR DALTON as "a deliberate study in priorities," is perhaps more free from Utopian and doctrinaire elements than past programmes. Emancipated from the charges of dissension and disloyalty, the Labour Opposition may now be ready to play its proper part in British politics. All parties and the community at large will benefit if the opportunity is taken.

economic foundation. It obtained its capital privately and locally from among a class of individual proprietors.

It was, in fact, chiefly in the last third of the nineteenth century that the development occurred of the public company, the large insurance company, the investment trust and other forms of corporate capital ownership and control. On first principles, it might have been expected that this development would have effected a radical transformation of the capital structure of British industry. Actually, it failed to do so. In Germany and the United States, indeed, the forward movement of industry in the latter part of the century was financed by corporate capital holdings. In Germany particularly, the rôle of industrial banking in this period was crucial. In England, however, there was no development whatever of the tendency for industry to obtain its long-term finance from the banks. The development of the joint stock company undoubtedly enabled a certain amount of rural money to find its way into home industry, and the London capital market greatly increased its scope and its importance. But its leading function was the raising of

funds for investment overseas. The more *public* forms of capital ownership were used and widely developed, but instead of supplanting the middle class quasi-family conduct of British industry, they provided the world with railways and equipped a territorial empire with capital goods. These goods were, of course, manufactured in British workshops, but that fact in itself did not greatly modify either the peculiarly middle-class structure of industry or the traditions of family proprietorship. It merely made the middle classes richer in the old way. Meanwhile, the representatives of the old landowning classes, as administrators, soldiers and carriers of the flag, followed the joint stock company from the City of London to the ends of the earth.

The political effects of this division of constructive labour have received, possibly, less than their meed of recognition. The diversion of Tory financial energies overseas, while those of the mainly Liberal middle classes were concentrated on the ample opportunities which home industry offered, did much to effect a political and philosophical balance in British society. If both classes had been confined within a closed economy, history might have been different; but as it was, the Empire overseas, and the outside world in general, provided an arena in which rival energies could vent themselves without serious damage to either party. On the Continent of Europe, however, where the conflict was less conveniently arranged, peasants and city workers frequently found themselves on opposite sides of the barricades, in a struggle between rural and middle-class interests.

So much for the period which culminated in the Great War. What is the significance of subsequent events for the British middle classes? It is clear that the capital market is no longer a forwarding agency for exports of British capital. Its resources are now mainly consecrated to domestic development, and the home public company has demonstrably grown in stature as a consequence. It has, as it were, abandoned the foreign field and attacked the middle-class hinterland of English industrial life. In the depression of the early 'twenties there was a marked shrinkage in the foreign markets of England's staple industries. In the partial recovery of the late 'twenties, therefore, new industry could no longer call as effectively as in pre-war days upon the capital resources of the old middle class, whose private savings had been largely exhausted. Meanwhile, the overseas outlets of the City of London had been closed or ceased to be attractive to new resources. Thus, the demand for long-term capital could be met, on a large scale, only by the corporate institutions of the London market. This period reached a climax in the new issue boom of 1928. A second period of industrial recovery, through which we are still passing, has seen the deepening and broadening of the same tendency.

The adoption of public company forms by industrial concerns in this country during the last two decades is evidenced by the growing importance of salaries in the national income. This tendency has been stressed by Mr COLIN CLARK, who finds in his recent book on "National Income and Outlay" that there were, in 1911, some 385,000 persons in Great Britain earning salaries over £150 per annum, and that this number was 1.9 per cent. of the occupied population. In 1931, the number of persons earning salaries over £250 (a comparable figure, allowing for changes in values) was 1,035,000, and they comprised 5.6 per cent. of the occupied population. The number of employers and independent workers fell by approximately three-quarters of a million between 1911 and 1931.

The same change can be viewed in another way. In 1911, Mr CLARK calculates, salaries took 15.6 per cent. of the home-produced national income, while profits and interest took 33.8 per cent. and rents took 11.1 per

cent. In 1924, the respective proportions were: salaries 25.4 per cent., profits and interest 25.1 per cent., and rents 7.4 per cent. In 1932, a year of depression, salaries took 28.3 per cent., profits and interest 18.8 per cent., and rents 10.4 per cent. In 1935, when recovery was just getting into its stride again, there was naturally an increase in the relative importance of profits; for in that year, it is estimated, salaries took 25 per cent., profits and interest 25.4 per cent., and rents 9.1 per cent. of the national income produced at home. These figures illustrate in a startling way the relative importance of fixed and fluctuating incomes during depression and recovery, but they also show the long-term tendency for salaries to increase with the growth of rationalisation in depression, and increased financing through corporate channels during recovery.

There has been, in short, a progressive diminution in the number of private employers and an increase in the number of salaried directors and managers. This tendency has reacted even on the capital market itself. To-day there is an inevitable tendency for savings, corporate and private, to take on the character of provident holdings or of "reserves," in the literal sense. In turn, this implies a sharper differentiation of the market, with one section catering for risk-bearing on the fringes of enterprise, and another concerned with safe holdings in established concerns. But the consequences of the change have perhaps been most momentous for the middle classes as such. They have lost part of their old material foundation, the individual proprietorship of business, and are reconstructing themselves on a salaried basis. In the material field the change is expressing itself in a great number of ways, some of which were largely unforeseen. One of them is the stimulation of hire purchase activity; for the salaried worker is encouraged to mortgage his future income far more readily than the private small capitalist, whose future income is more uncertain. Thus, while demand for houses and other hire purchase goods has been assisted by low interest rates and the system of risk-pooling devised by building societies and other lenders, the real cause of its growth is probably to be found in deep-rooted changes in the income structure of the middle classes.

At the same time, the growth of the "salaried" has synchronised with the first appearance of the Leisure State. The salaried worker, like the wage earner, tends to divide his personality into two entirely distinct parts, appertaining to his hours of work and of leisure. How deep the consequences may go is even now unperceived. By general agreement, however, this division of the human personality is artificial, and its irksomeness is illustrated by the spiritual uneasiness of the age. In the United States the growth of the salaried class during the prosperous years between 1923 and 1929 was accompanied by a spectacular interest in "culture" and a remarkable curiosity concerning ways of living and the intellectual content of life. In Germany in the 'twenties, when the salariat was already a great deal more important than in England, the annihilation of middle-class provident savings by inflation caused first a swing in the direction of revolutionary socialism and then a neurotic mass anxiety when the issue of socialism came to be faced. In this country the middle classes are now much more of a salariat than ever before, but their provident savings and their new private houses are intact. Absence of mass anxiety in the middle classes is one of the factors ruling out Fascism in Britain to-day. At the same time, the spectacle of conflict in the external world is stimulating a deep response in the intellectual life of these classes, who are displaying a new interest in political matters and a desire for rational order and for scientific adjustment to the demands of a changed situation. The desire may be inchoate, impatient and uncertain of itself, but it is wholly salutary.

Preventing Road Accidents

In the following article a correspondent makes suggestions for alleviating a problem whose gravity increases month by month, and year by year. We publish his proposals without comment, in the hope that they may stimulate discussion on a matter of urgent public importance.

THE casualty list of British roads bears distressing testimony to the fact that the volume of motor traffic has outgrown the capacity of our highways to bear it. Clearly the modernisation of the road system must be effected with all possible speed, but many years must needs elapse before the process is complete. Meanwhile, casualties will continue, and there is a strong case for finding a complementary solution.

It is well known that the Courts are to-day overburdened with road traffic cases. In any case, few would maintain that the average local bench is the best possible tribunal for the trial of cases involving technical questions such as speed and driving skill. Public opinion does not accept a conviction for dangerous or careless driving as leaving the same moral stigma on the delinquent as a conviction for larceny or fraud. In fact, the law, like the roads, is being made to bear a burden beyond its powers.

The whole problem of road accidents and bad driving demands consideration from a new angle. Let us begin by taking out of the criminal law all offences arising out of the driving of a motor car, including dangerous or careless driving, exceeding the speed limit, driving through adverse traffic lights or over pedestrian crossings, and dangerous parking. Let us leave to the criminal law, at the one extreme, the offences of manslaughter, or of causing bodily harm, or of drunkenness; and, at the other extreme, purely technical offences concerned with licences and the equipment and up-keep of cars. Simultaneously, let us lay down that the possession of a driving licence is not a right, but a privilege, which may be granted or withdrawn by the State at will, and which involves its holder in certain obligations to the community.

The way would then be clear for the setting up of special tribunals for the investigation of road accidents, and of driving calculated to cause an accident, on lines analogous to the existing procedure for the investigation of railway accidents or of wrecks and collisions at sea. The Ministry of Transport would appoint salaried local inspectors, the cost of whose salaries and general expenses should be met by an increase in the annual fee for a driving licence. All accidents or allegations of bad driving would be reported to the local inspector, who would then decide, on the *prima facie* evidence before him, if he ought to hold an inquiry. If so, he would appoint the place and time, and would have power to compel all relevant witnesses to attend and give evidence. In conducting his inquiry, his object would be to ascertain both the immediate and ultimate causes of the accident or alleged bad driving, and he would put such questions to witnesses as he thought fit. He would inspect both the scene of an accident and the vehicles involved, and would take account of the prevailing weather and the condition of the road surface. He would consider whether a collision occurred because one driver was trying to avoid a third party, such as a pedestrian or cyclist, and would inquire into the possible negligence of the third party. He would also inquire into the more indirect causes, such as the length of time allowed for a journey, whether a driver was delayed in starting, whether a driver had been driving for an excessive time or was trying to make up time, and so on. A perusal of the Ministry of Transport's inspectors' reports upon railway accidents would throw light on the extent to which the inspector would be expected to probe into the ultimate causes of road accidents. The procedure of a railway accident inquiry would be followed in another important respect. For the proper protection of in-

terested parties, it would be laid down that if there were a possibility of subsequent criminal proceedings, the inspector would take evidence *in camera* and delay the publication of the evidence and his findings, until the criminal proceedings were determined.

What powers should the inspector exercise as a deterrent against bad driving or the careless use of the road? Obviously, his first sanction would be the power to compel the attendance of any witness. In no case would a peccant motorist be permitted to plead guilty and dispense with his visit to the tribunal. Secondly, the findings of the inspector would be published, and would be available to the local Press, the insurance companies concerned and to the acquaintances of all those who were implicated. Next, the inspector might have power to award costs to any witness and to order that any party or parties should bear the whole or part of the costs of the inquiry and the witnesses. Costs would be apportioned according to the degree of negligence of the parties involved. These sanctions, incidentally, would be applicable against all road users, including pedestrians, and not merely motorists. Finally, the inspector should have entire power over the driving licences of motorists. At the end of each inquiry he might order the endorsement and/or the suspension of a driving licence. Generally speaking, it might be deemed advisable that any case of recklessness or serious negligence should involve at least temporary suspension. If the inspector decided to exercise this power, he would first call for evidence of the driver's past record. These functions would be analogous to the powers of the Board of Trade to suspend masters' or mates' certificates after a shipwreck or collision at sea.

The arguments in support of this procedure may be briefly summarised. Most motoring offences would cease to be, primarily, the concern of the criminal law, to the great relief of the courts. A perusal of the reports of the official inquiries into railway accidents, with their wealth of careful and meticulous detail, will serve to show how much might be achieved if the examination of difficult technical questions were entrusted to expert and experienced persons. Next, the procedure would provide effective deterrents against all careless use of the roads. It might not be too much to hope that the ultimate result would be either the reform of the careless driver or his banishment from the roads.

This procedure would lead to the accumulation of a vast body of evidence on the causes of road accidents. The existence of a particular danger-spot would be quickly proved beyond doubt, and the inspector himself would recommend measures of improvement as part of his findings. The existence of any general bad driving habit, or of a tendency to allow too little time for a given journey, would be detected. A weakness in any make of car would be brought to light, and the manufacturer would be forced in self-defence to take cognisance of it. Delays or difficulties due to passengers would be discovered, and a tardy or interfering passenger would be censured in the inspector's report and might find himself mulcted in costs. The insurance companies would have all relevant evidence made available to them, and this would be of inestimable value in the task of assessing different risks. This might mean that the careful driver with a clean record would be able to obtain a reduction in his insurance premium sufficient to compensate him for the increased cost of his driving licence. Finally, there would be a reduction in the volume of civil litigation arising out of accidents, for few people, in practice, would care to go to law in the face of the inspector's findings. Last, but not least, the procedure would encourage road-users to make the best of the roads as they found them, and not as they might have been under ideal conditions; for it would provide equally against the consequences of recklessness and lack of care.

Anglo-American Trade Discussions

PRELIMINARY investigations into the possibility of an Anglo-American Trade Treaty have now been proceeding for several months. Statesmen on both sides of the Atlantic have declared themselves wholeheartedly in favour of a treaty. Within the last few weeks, indeed, Mr Eden on the one side and Mr Cordell Hull on the other have pleaded its cause with fervour and apparent conviction. Here are the two great Anglo-Saxon nations, the two most important democracies of the world, the two greatest international trading countries, who between them buy no less than 28 per cent. of the world's imports and sell no less than 24 per cent. of its exports. What bigger step forward in the sphere of international economic relations could there be than that these two countries should agree to lower their tariffs on each other's trade? No one has denied the force of this contention, but, somehow, the preliminary negotiations have failed to give the impression of smooth forward movement on ball bearings. The difficulties, in fact, are formidable, and it would be doing no good service to the cause of Anglo-American friendship to pretend otherwise.

At first sight, it is true, Great Britain appears to stand in an advantageous bargaining position *vis-à-vis* the United States, for the crude figures of visible trade between the two countries give Great Britain a heavy adverse balance. In the first half of the year, our imports from the United States were £47,041,000 and our exports of merchandise only £16,490,000, giving an import surplus of £30,551,000, which is reduced to £23,996,000 if £6,555,000 of re-exports are brought into the account. But when "invisible" items are taken into account, the balance in favour of the United States is smaller, and if American trade with British colonies is included, then, as we showed in *The Economist* of September 25th, page 618, the balance of payments becomes slightly adverse to the United States.

On a cursory view, again, the American Hawley Smoot Tariff seems to deal much more hardly with British imports into the United States than our own tariff deals with imports from America. About 45 per cent. of our exports do, indeed, enter the United States duty free, but these are mainly re-exports of raw materials. On British manufactures the American tariff is extremely high. Professor P. W. Bidwell, in the October issue of the American review *Foreign Affairs*, says that while the bulk of British goods pay from 30 to 45 per cent. *ad valorem*, rates of 45 to 60 per cent. are levied on such items as table damask, wool noils and broad silks, 60 to 75 per cent. on carpets, wool hosiery, china and porcelain, 75 to 90 per cent. on worsteds and over 90 per cent. on heavy woollens and cotton laces. By comparison, the British tariff looks most moderate with its ruling rates of 15 per cent. on most raw materials, 20 per cent. on manufactures, and 25 to 30 per cent. on luxuries and semi-luxuries (except motor-cars and certain other "McKenna" products, which pay 33½ per cent.).

Against this greater moderation of the British tariff, our American friends urge, with force, that the discriminatory duties which we impose on their agricultural products are as damaging to them as their higher, but non-discriminatory, duties on our manufactures are to us. Thus we are brought squarely to face the greatest difficulty of all—namely, the Ottawa duties. It is beyond question that these have dealt hardly with certain American agricultural exports, notably cereals, fruit, pig products and soft wood. This can be seen by comparing (in the tables given on the opposite page) the movement of our imports of these commodities between 1929 and 1936 from the United States, Canada and Australia respectively. British imports of American bacon and hams, for example, have fallen from

£7,364,000 in 1929 to £1,562,000 in 1936, while British imports from Canada have risen from £1,567,000 in 1929 to £5,536,000 in 1936. British imports of American soft wood (principally Douglas fir) have fallen from £2,109,000 in 1929 to £1,144,000 in 1936, while imports of Canadian soft wood have risen from £1,229,000 to £4,107,000. Senator McNary, of Oregon, complained in the United States Senate last August that, thanks to discriminating tariffs, the United States had in 1936 supplied only 6 per cent. of the British Empire demand for North Pacific lumber against 74½ per cent. in 1929. In some cases, undoubtedly, output restriction in America, normal fluctuations of harvest yields, and other factors have been contributory causes to the decline. But it may not be going too far to say, even at this stage, that unless Great Britain concedes a substantial modification of the Ottawa preferences, prospects for an Anglo-American Trade Treaty will be slender indeed. For it is precisely in the agricultural products, covered by the Ottawa preferences, that America is anxious to extend her export trade.

For Britain, obviously, this modification of Ottawa is a very delicate matter, for it involves asking sacrifices of third parties, the Dominions. America has made it clear—and one can hardly blame her—that any compensation which the Dominions may demand for sacrificing their preferential rights under the Ottawa Agreements must be provided not by her but by us. But it is not easy to see what compensation we can offer, in view of the extraordinary advantages we already confer on the Dominions, who, so far (let us gratefully acknowledge), have shown themselves far from unsympathetic to our claims and needs.

Once this hurdle is cleared, Great Britain need fear no position of inferiority in entering on discussions for a treaty. America, presumably, will ask not only for agricultural concessions but also for tariff reductions on certain manufactured products, including, possibly, electrical goods, machine tools and refrigerating machinery. But for every concession we can certainly claim another of equal value. What is of chief interest to us is that we should secure a lowering of the high American tariff (within the limit of a 50 per cent. reduction which the President is authorised to grant) on acceptable classes of British manufactured goods. Under American most-favoured-nation obligations any reductions granted to Britain must be extended to other countries, but there is a substantial range of goods—comprising, according to Professor Bidwell, about sixty items—of which Britain is America's principal external supplier. The list includes such articles as woollen, linen and jute goods, certain cotton goods, leather goods, linoleum, anthracite coal and tinplate. In some cases, British goods are not competitive with American goods, examples being table damask, handkerchief linens, razors and mustard, and in these instances the possibilities of securing an increased market may be limited. In other cases, however, where British goods supply only a small proportion of American consumption (e.g. inlaid linoleum, anthracite, linen yarns and thread, and tinplate), there would doubtless be a more liberal response to reduce duties.

On the whole, it might be unwise to expect too much of a treaty, if and when it were concluded. On the other hand, a patently nugatory treaty would arouse not the emulation but the derision of other countries. But why should the treaty be nugatory? Because a satisfactory treaty would require too many and too great sacrifices? But these are "sacrifices" only to vested interests. For the two countries at large the treaty would be a matter not of sacrifices but of benefits. If the negotiations were to fail, it would be rightly inferred that one side or both had allowed sectional considerations to override the common good.

THE BACKGROUND FOR AN ANGLO-AMERICAN TRADE TREATY

Notes of the Week

Political Conferences.—At Bournemouth the conference of the Labour Party has run its course without surprises. A five-year programme, including an imposing pensions scheme, has been adopted against the distant day when the party will regain office. Sir Stafford Gripps and Professor Laski have been put on the Executive in the first flush of the constituency parties' new freedom of election; but the disruptive views and practices for which they have lately stood have been vehemently repudiated. Out of the conference's proceedings Mr Morrison has emerged with enhanced prestige; and Mr Bevin has seemed more redoubtable than ever among trade unionists and politicians alike. At Scarborough the Conservative and Unionists have assembled in the main to express approval of the Government and all its works, and in particular to do honour to the new Prime Minister. There will be discussions about poultry and milk. Mr Churchill has marked his latest reconciliation with the leaders of the party by taking part in the debate on foreign affairs. Ministerial statements about population, the production of oil from coal, playing fields and the iron and steel industry are features. But the keynote will be satisfaction, and it is perhaps too much to expect that new policies will be generated in the autumnal seaside air. As at Bournemouth there will be no surprises; but neither will there be any personal recriminations.

A Disorderly March.—The moral of the disorders which attended the march of Sir Oswald Mosley and his Fascists last Sunday is clear. The meagre band of Fascists might have gone on their way unnoticed, apart from their protecting army of policemen, had not a partially successful attempt been organised to divert their progress. Barricades were built in the streets along which the procession was expected to pass, and threatening slogans were shouted in the streets which it actually traversed. Here was an opportunity for half the hooligans of London to add brickbats to menaces, and an unimportant occasion became a major disturbance. The Fascists, by provocative propaganda and methods, have courted resentful opposition, but to oppose them actively is to play into their hands and to magnify their importance. More common-sense and self-discipline would have kept both anti-Fascists and the idly curious at home on Sunday. Given no crowds, there would have been no opportunity for hooliganism; and the Fascists, being ignored, would have received the treatment which was their due.

France's Wise Choice.—Politics and finance are never very far apart in France, and the weakness of the franc in recent weeks brought a certain unsettlement into French politics. The technical position of the franc, which is discussed on another page, is still uncertain. But the political outlook has been considerably cleared by the decisions of a most important Cabinet Council held in the presence of the President of the Republic at Rambouillet last Saturday. The air has been full of rumours of an irreconcilable conflict of views between the Radical and Socialist Ministers on the methods to be adopted to save the franc. M. Bonnet was said to be for the revocation of the forty-hour week; the Socialists for its retention and the institution of exchange control. But the crucial meeting resulted in a compromise rather than a breach. The Prime Minister and the Minister of Labour were authorised to act on the conclusions of the Commission of Inquiry on Production "either by rationalisation of undertakings or by changes in labour conditions within the meaning of the Law of June 21, 1936, with regard to the forty-hour week." At the same time, the Government appealed to both employers and employed,

as citizens of the Republic, for a voluntary effort of public spirit and discipline. But it was also made clear that the Government would not hesitate to use its authority, if necessary, to prevent the recurrence of certain "manœuvres and illegalities" such as violations of collective contracts by the employers or stay-in strikes on the workers' part. Between the two wings of the coalition, it has also been agreed in advance that the present compromise shall not be affected by the results of the forthcoming cantonal elections.

Only to the extremists on either wing can this result have been unwelcome. There are, no doubt, some French reactionaries who would like to see the break-up of the French Popular Front, at almost any political cost to France and to the world. And equally there are extremists of the Left, to whom the difficulties of M. Chautemps' Cabinet appear as an opportunity to move farther to the Left. Across the Rhine, it is no secret that a forthcoming crisis in France, and the ensuing chaos in European diplomacy, have been pleasurably anticipated for many months. But the vast majority of men of good-will undoubtedly rejoice that MM. Chautemps and Bonnet are remaining in office. The result reflects the greatest credit on all the Ministers involved—and not least on the Socialists, for they have to continue in the subordinate position in the coalition and see some of their social victories of last year lost. M. Blum and his colleagues will have to face the accusation of betrayal from some of their wilder followers; but the charge is ridiculous, for if the Socialists had been guilty of bringing the present Government to the ground by refusing to make their contribution to the compromise which was necessary for keeping it in being, the franc would almost certainly have been involved in the political crash of the Popular Front, and the next move would have been the seizure of power by a virtual dictatorship of the Right parading as a "National Government." By their vote last year the electors of France demanded rapid and effective progress in overtaking the accumulated arrears of social reform. That they have been given. But the French electorate is not revolutionary and it would not measure on which the people set store—should be pushed through a *outrance* with a fanatical disregard for the general consequences. The Radicals and the Socialists were undoubtedly following the wishes of the people last Saturday. Their ability to compromise, to salvage the good at the expense of the ideal, gives the lie to those gloomy prophets who hold, after nearly seventy years, that parliamentary democracy is not natural to the genius of the French people.

Anglo-French Note to Italy.—The joint Anglo-French note to Italy on the withdrawal of foreign troops from Spain was presented at Rome on Saturday of last week. The draftsmen have evidently exerted themselves to round off the document so smoothly as to offer Signor Mussolini no finger-hold for catching it up and tossing it back in its authors' faces. The French Government are said to have wanted to warn Italy explicitly that if she does not give full and immediate satisfaction this time, then the Franco-Spanish frontier will be opened for the passage of munitions and volunteers into Republican Spain. Whether or not this statement was omitted at the British Government's wish, it certainly does not appear. Nor is there any demand for a three-Power Conference. Neither the place nor the method nor the scope nor the personnel of the proposed discussion is prescribed in advance. All that is asked for is "joint examination," "frank discussion" and "conversations." In fact, the

note would be quite an awkward present for Signor Mussolini to receive if he were likely to be embarrassed at the prospect of being shown up. But, in fact, that is hardly likely to worry him in the least. In Africa the secret of his success was his skill in playing for time. The game has gone the same way during the past twelve months on the Non-Intervention Committee. But apparently there is a limit even to Anglo-French patience. It was reported on Thursday that an urgent request was being made to the Italian Government for an answer to the invitation for a tripartite discussion. And at the Conservative Conference Lord Plymouth described the Mediterranean situation as "serious."

Spain and the League.—At Paris, on September 30th the agreement for a modification of the arrangement made at Nyon was duly signed by the French, British and Italian naval experts. Before the Paris meeting it was intimated that, outside the Tyrrhenian Sea, the French and British Governments were offering Italy a share in the French and British patrols, but not a separate area. Under the revised arrangement, the Italians have secured a zone of their own—and this, presumably, at the vital neck of the hour-glass, where the Mediterranean is at its narrowest between Sicily and Tunisia. That the work of the Mediterranean patrol will be no sinecure was shown by another submarine attack on a British destroyer, the "Basilisk," last Monday, off the east coast of Spain. Meanwhile, at Geneva, the resolution on Spain, agreed upon with some difficulty by an authoritative drafting committee and adopted by the political committee of the Assembly, has been rejected by the Assembly itself. The deciding factor was the adverse votes of Albania and Portugal. Some fourteen States-members abstained and thirty-two voted in favour of the resolution. In the preceding debate, Mr. Walter Elliot spoke eloquently and convincingly on behalf of a compromise for which he had been partly responsible on the drafting committee. The most active of the opponents were Hungary and Austria; the most vocal, Portugal and the Irish Free State.

The passages to which objection was taken were three. The first was the declaration that the Non-Intervention Committee had failed to secure the withdrawal of non-Spanish combatants. The second was a statement that "there are veritable foreign army corps on Spanish soil, which represents foreign intervention in Spanish affairs." Finally, exception was taken to a note to the effect that, if intervention could not be brought to an end in the near future, "the members of the League which were parties to the non-intervention agreement would consider ending the policy of non-intervention." There was no substance in Mr de Valera's contention that this last passage would tie the hands of States-members, and less than nothing in the Portuguese delegate's plea that the fact of foreign military intervention was not proved. It is obvious that the opponents of the resolution were considering, not the merits of the case, but their own national interests, prejudices or alignments—Switzerland her neutrality; Hungary, Austria and Albania their clientage to Italy; Portugal and certain Latin-American States their own Fascist ideology. The rejected resolution stands as a representative expression of world opinion. But the fact that, in the League Assembly, the world can be defeated by the joint efforts of Portugal and Albania gives point to one of the German criticisms of the League's constitution.

The War in China.—The campaigns in the northern provinces of China during the past week continue their story of Chinese retreats and Japanese advances. The Japanese working south down the Tientsin-

Pukow railway have now entered Shantung province, have taken Techow, and apparently do not anticipate any strong resistance north of Tsinan, the provincial capital. It is reported that doubts over the conduct of General Han Fu-Chu, Governor of Shantung, are no longer justified, and that he will stand firm with the national government. Down the Peiping-Hankow railway the Japanese have penetrated as far as Hsinle, and are threatening Chengting and Shihchiachwang, the junction for the railway running west to Taiyuan, in Shansi province. Japanese armies are in touch with each other across the Hopei plain. A third line of advance has brought the Japanese into the Shansi plain after a long circuit between the Outer and Inner Great Walls, and a flanking movement to avoid the Yenmen Pass, which is reported still to be held by the Chinese. This third Japanese army is now at Taichow and threatening Taiyuan, from which the Government of Shansi has been evacuated to Linfen. The Chinese are expected to make a more stubborn stand before the Japanese progress much further along any of these lines. In the far north, Prince Teh and his Mongols are reported to have taken Pailingmiao, their former capital in Suiyuan province. At Shanghai the warfare has been more intense than ever, but the Japanese have been unable to make progress. Air raids continue on Nanking, Canton and many other towns, including Suchow, in southern Shantung, and Haichow, in northern Kiangsu. One of the heaviest raids of the war has been made on the Canton-Hankow railway, but it is repaired as frequently as it is damaged, and munitions are reported still to be entering from Hong Kong.

The President's Tour.—President Roosevelt's tour to the West has done him political good. When he left Washington he was still under the shadow of the defeat of his Supreme Court proposals and gravely embarrassed by the allegations that his nominee to the bench, Mr Hugo Black, was a member of the Ku Klux Klan. During the President's absence from Washington Mr Black has returned from Europe and taken his seat on the Court. He made a radio speech, admitting that he had once been a member of the Klan but claiming that he resigned from it before his election to the Senate eleven years ago and had never since renewed his association with it. Attempts were made when the session of the Court opened to object to his membership on legal grounds, but the Chief Justice refused to allow them to proceed except by way of written petition to the Court. There is every indication that the agitation will die down. It is reported that the President found a complete lack of interest in the subject on his tour—this indifference sometimes extending to the Court itself as well as to the personality of the newest Justice. He is also reported to have found his personal popularity undimmed; the West at least is still ready to follow his leadership, with possible reservations.

Offering complete services to banks and firms
doing business on Norway.

Correspondence invited

on constitutional subjects. This contact with public opinion has encouraged the boldness which is never very far removed from Mr Roosevelt's practice of politics. Its results in the sphere of foreign policy were seen in the speech at Chicago. In domestic matters, he is reported to have decided to summon a special session of Congress to meet next month, possibly on November 15th. Fortified with popular approval, he would then attempt to force through some of the measures—notably crop control and legislation fixing minimum wages and maximum hours—which had to be abandoned before the adjournment in August.

Drastic Action in Palestine.—On Friday of last week the Palestine Government declared the Higher Arab Committee an unlawful association. The Mufti of Jerusalem was deprived of his presidency of the Moslem Supreme Council and of his membership of the General Waqf Committee. Four prominent members of the Higher Arab Committee, and its secretary, were to be arrested and deported. The Government pleaded the terrorist campaign in justifying its action "against certain persons whose activities have been prejudicial to the maintenance of public security in Palestine and who must thus be regarded as morally responsible for" the recent assassinations. The suppression of the existing Arab leadership, which many observers on the spot believed to be overdue, has been calmly received, at least on the surface. But the position of the Palestine and British Governments is unenviable. The proposals of the Royal Commission for the future of Palestine, which still hold the field, depend absolutely for their success upon the co-operation of both communities. Not only has Arab opinion apparently set its face against them; there is no authentic voice of Arab opinion with which alternative possibilities might be discussed. In some ways the position is akin to that in India after the repudiation of the Simon Commission by Indian nationalism; in some ways it is worse. There seems nothing to be done but to go on governing fairly and firmly, while nursing designs for the long-term future which may find acceptance when time has done its healing work.

Guerilla Tactics in Alberta.—The Alberta Cabinet's riposte to the Federal disallowance of its banking legislation was a parliamentary resolution simply denying Ottawa's right to disallow provincial laws. The Minister introducing it is reported to have claimed that the Dominion's power in this respect had tacitly lapsed, along with the Imperial Government's right to disallow Dominion legislation. This contention, however, ignores the express provisions of the Statute of Westminster that the constitution of Canada is exempt from its scope and that the powers conferred by it on the provincial legislatures are restricted to matters within their constitutional competence. The Lieutenant-Governor of Alberta seems to have been better advised. He has withheld the Royal Assent to the banking laws and also to a new Bill fathered by the Social Credit Government which would limit the freedom of the Press and compel newspapers to publish Government matter. The Lieutenant-Governor is appointed by the Governor-General in Council, to whom he is theoretically responsible for the discharge of his constitutional duties, and he is therefore well within his rights in referring the issue back to Ottawa. At the same time, the constitution gives wide powers over the Lieutenant-Governorship to the provincial Government and legislature, which might use them to defeat the latest move. It is not clear how far Mr Aberhart, or for that matter Mr Mackenzie King, will wish to pursue this legal guerilla. Only a provincial general election can pass the responsibility to the authority to which it really belongs—the people of Alberta.

Currency Depreciation Since 1929.—The accompanying diagram shows the percentage fall in the gold value of the leading currencies of the world since 1929. Among the principal countries, Germany alone has so far refrained from depreciating her currency, though the rate of exchange of the mark has been lowered below the former gold parity rate for innumerable purposes.

REDUCTION IN GOLD VALUE OF PRINCIPAL CURRENCIES SINCE 1929

Those countries which have depreciated the gold value of their currency units by about 40 per cent. include the majority of the leading trading nations. Holland, Belgium and Switzerland were able to re-establish equilibrium with a lesser amount of depreciation owing to the reduction in internal prices achieved previous to depreciation, but the gold value of the French franc has fallen by more than 50 per cent. as a result of the increase in costs due, in part, to M. Blum's social legislation. The majority of currencies, however, have now again reached a condition of temporary stability at rates of exchange, among themselves, not very different from those ruling in 1929.

Cost of Living Inquiry.—The inquiry to be undertaken by the Ministry of Labour into the expenditure of 30,000 representative working-class households on rent and rates, food, gas and electricity, fuel, clothing, utensils, fares and amusements will be doubly useful. It will incidentally furnish the Ministry of Health with valuable information about the nation's dietary; and it will provide the data for an up-to-date measurement of the cost of living, which is its chief purpose. The co-operation of selected households will be solicited to pro-

vide information about expenditure in specified weeks in October and in January, April and July, 1938. Most of those asked for information will be persons insured against unemployment, although some persons will be included who are not so insured but come within the income limit of £250. Those who co-operate will be paid for their information. The present cost of living index is based on an obsolete schedule of working-class expenditure and, at a time of rising prices, the present inquiry is warmly supported by trade unions and employers' organisations alike. As a result of the information collected, a much-needed element of accuracy will be introduced into our social statistics.

Slump in Raw Material Prices.—The last week has witnessed a further sharp decline in the price of many important primary products. The fall was very marked in the case of non-ferrous metals, quotations for copper, lead and spelter reaching the lowest levels of this year, while tin is now cheaper than at any time since last February. Quotations for cotton and rubber continued their downward trend, while wheat prices, which have been firm until recently, also registered a setback in Liverpool this week.

PRICES OF IMPORTANT COMMODITIES

	Sept. 29th	October 6th
	£ s. d.	£ s. d.
Copper, per ton	47 5 0	45 12 6
Lead, per ton	19 8 9	17 16 3
Spelter, per ton	19 2 6	17 12 6
Tin, per ton	246 0 0	233 5 0
Cotton, per lb.	0 0 4.96	0 0 4.76
Rubber, per lb.	0 0 8.8	0 0 7.4
Wheat, Liverpool, per 100 lbs.†	0 8 8	0 8 6½

† March futures.

The persistent decline in the price of primary products reflects the pessimistic view taken of consumption prospects, especially in U.S.A. Just as fears of a world shortage of raw materials prompted buyers earlier this year to lay in stocks for lengthening periods at rapidly rising prices, fears of a fall in world consumption and rising production are now causing them to restrict their purchases to immediate requirements in anticipation of a further fall in prices. For example, the decision of copper producers to resume restriction has had as little effect in stemming the headlong fall in prices as the decision to discontinue restriction earlier this year. The fall in prices of primary products, if it persists, will have far-reaching consequences, especially for international trade.

British Eggs and Poultry.—After twelve months deliberations, the Import Duties Advisory Committee has decided that an increase in the tariff on eggs and poultry imported from foreign countries would not benefit the British poultry industry. The existing scale of duties—1s. to 1s. 9d. per 120 on eggs and 3d. per lb. on table poultry—will accordingly remain in force. Meanwhile the county branches of the National Farmers' Union and the bodies affiliated to the National Poultry Council are considering certain draft proposals for a marketing scheme, prepared by a joint committee of these two organisations. The main object of the proposals, which are less ambitious than the recommendations of the Re-organisation Commission which the industry rejected some time ago, is to increase the proportion of eggs marketed through packing stations. This is a laudable objective, but its early attainment seems doubtful for two reasons. The first is the present temper of the industry, which appears to be opposed to any form of marketing scheme. The second reason is that the proposals are contingent upon some form of quantitative import restriction, coupled with financial assistance from the Government. Before anything further can be done, however, the half-million poultry keepers of this country must deliver their verdict.

A Decline in Employment.—The September figures for employment and unemployment are unsatisfactory in themselves, and, taken in conjunction with other indications, rather depressing. According to the Ministry of Labour's estimate, the aggregate number of insured persons, aged 16 to 64, at work on September 13th was 11,599,000, or 7,000 less than a month

EMPLOYMENT IN GREAT BRITAIN

before. The unemployment figures are affected by a change in the method of counting. Hitherto the count has taken place on Monday, and anyone still on the books from the previous Friday has, unless it is known that he has secured work, been counted as unemployed.

UNEMPLOYMENT BY INDUSTRIES IN GREAT BRITAIN

Industrial Group	Number in Thousands			Percentage	
	Sept. 21, 1936	Aug. 23, 1937	Sept. 13, 1937	Sept. 13, 1937	Change since Sept. 21, 1936
Coal mining	192.1	122.2	118.3	13.2	-8.2
Iron and steel	26.1	19.8	19.6	10.5	-4.5
Engineering	53.6	39.5	39.6	5.3	-2.1
Motor vehicles, cycles, and aircraft	17.4	19.8	17.4	5.5	-0.2
Road transport	28.5	21.0	20.7	9.3	-4.3
Shipbuilding and repairing	43.2	36.0	37.4	23.1	-6.4
Building	117.7	107.6	115.4	11.3	-0.8
Public works contracting	114.7	102.9	102.8	35.6	-5.3
Cotton	68.5	44.4	48.4	11.5	-4.3
Woolen and worsted	20.2	22.0	23.4	10.5	-1.4
Tailoring	29.3	29.0	30.3	14.4	-0.4
Hotel, boarding-house, etc., service	55.7	45.4	50.1	11.5	-1.7
Distributive trades	181.7	152.5	155.8	7.6	-1.7
All persons registered (including other trades)	1,624.4	1,358.6	1,339.2	...	...

Now the count is taken on the Friday, and special precautions are taken to exclude anyone who has found a job. Hence the apparent fall of 19,400 in the total of unemployed. On a comparable basis the Ministry estimate a rise of about 30,000. This is distinctly larger than the usual seasonal rise at this time of

7, CHANCERY LANE, LONDON, W.C.2

year and less than a half of it is accounted for by building, hotel service and the distributive trades. Employment has fallen off in the textile trades, shipbuilding and engineering, though it has increased in coalmining and in the motor and pottery industries. The general indication seems to be that where demand is slackening employment declines quickly, but that severe frictional forces prevent it from rising where demand is still on the upgrade.

Shipping Freights Still Rising.—The past month saw a strong seasonal advance in freight rates, reflected in an increase of 5 per cent. in *The Economist* Index for September. Compared with a year ago our Index shows an increase of no less than 70 per cent. While the construction of new tonnage is now increasing, there is no indication that the scarcity of available shipping capacity is likely to be relieved in the near future, especially as shipowners are now more cautious in placing new orders owing to higher shipbuilding costs:—

(1898-1913=100)

	Average, 1913	Sept., 1936	June, 1937	July, 1937	August, 1937	Sept., 1937
European waters	110.0	102.2	186.8	186.0	178.7	180.6
North America	113.1	95.0	120.7	119.2	125.9	146.8
South America	123.4	93.3	151.4	149.6	154.2	158.2
India	106.3	108.3	158.4	164.8	180.2	186.4
Far East and Pacific	117.4	103.9	159.3	158.5	170.6	180.8
Australia	127.9	98.8	165.5	149.2	161.1	165.0
Total	116.3	100.3	157.0	154.5	161.8	169.8
1913 = 100	100.0	86.2	134.9	132.8	139.0	145.0

As the next table shows, the movement of freight rates showed considerable variation on different trade routes:—

	Index No.	Inc. or dec. Points		Index No.	Inc. or dec. Points
Home trade	127.1	+ 5.6	South America:—	101.7	— 1.8
Bay—outwards	203.7	— 22.0	Outwards	216.7	+ 11.5
Bay—homewards	261.3	+ 9.7	Homewards	147.4	— 6.3
Mediterranean:—			India—outwards	225.5	+ 18.8
Outwards	154.9	— 8.0	India—homewards	180.8	+ 10.2
Homewards	208.5	+ 20.2	Far East, etc.	165.0	+ 3.9
North America	146.8	+ 20.8	Australia		

We append a chart showing the course of the freight index number during recent years:—

While the normal seasonal expansion of international trade favours the maintenance of strong freight markets during the next few months, the downward trend in prices of raw materials, unless arrested, augurs less well for the more distant future.

The Trend of Business.—The latest news suggests that business conditions as a whole are still fairly satisfactory. In contrast to the movement a year ago, employment between August and September showed a slight decline, and the increase in unemployment was a little more marked than a year ago. Sales of yarn and cloth in the cotton industry continued to be below current output, and order lists showed a tendency to run down. Similarly, activity in wool textiles has tended to decline. To some extent, the reduction in turnover of textiles can be ascribed to the fall in raw material prices. The seasonal improvement in coal mining con-

tinues. While the demand for coal for industrial purposes is still growing in certain districts, others report a lull in new business. Activity in the iron and steel and metal industries remains high. Consumers of steel are still pressing for delivery against contracts, and current output is passing immediately into consumption, but owing to increasing output and heavier imports the stringency of supplies is now less marked. Building activity is showing a seasonal decline and there has been some slackening in speculative construction. Prospects still favour a high level of business activity during the next few weeks, but the outlook for next year is more uncertain.

Lower Colliery Profits.—During the first quarter of this year the coal-mining industry was unable to increase its output, largely because of the influenza epidemic which increased the number of lost man-shifts. During the second quarter, conforming to the normal seasonal movement, the tonnage disposable commercially actually increased under the stimulus of an improvement in demand. The figure rose by 6.7 million tons, or 14 per cent., as compared with the corresponding period in 1936:—

Period	Tonnage Disposable (Mill.)	Costs per Ton		Proceeds per Ton	Credit Balance per Ton	Output per Man-shift	Earnings per Man-shift
		Wages	Total net				
1932		s. d.	s. d.	s. d.	s. d.	Cwts.	s. d.
2nd quarter 1932	46.1	9 1½	13 10	13 8	— 0 2	21.78	9 2
2nd quarter 1933	42.8	8 11½	13 8½	13 4½	— 0 4½	22.07	9 1½
2nd quarter 1934	46.9	8 8½	13 1½	13 2½	0 0½	22.59	9 1
1st quarter 1935	51.3	8 6	12 9½	13 6½	0 8½	23.40	9 2½
2nd " 1935	47.6	8 7½	13 2½	13 2½	0 0½	23.10	9 2½
3rd " 1935	46.6	8 8½	13 0½	13 2½	0 0½	22.93	9 3½
4th " 1935	54.1	8 4½	12 7½	13 11½	— 0 1½	23.89	9 4
1st quarter 1936	54.4	8 11½	13 2½	14 8½	1 5½	23.95	9 11½
2nd " 1936	48.2	9 3½	13 11½	14 3½	0 4½	23.26	10 0½
3rd " 1936	48.9	9 3½	13 11½	14 4½	0 5½	23.12	10 0½
4th " 1936	54.0	9 1½	13 7½	15 0½	1 5	23.76	10 2
1st quarter 1937	54.3	9 3½	13 9	15 6½	1 9½	24.00	10 4½
2nd " 1937	54.9	9 11½	14 7	15 6	0 11½	23.38	10 9½

† Excluding allowances in kind, amounting to 4.52 pence per man-shift worked in the second quarter of 1937.

The credit balance, per ton, however, as given in the latest *Statistical Summary* (Cmd. 5559), showed a sharp reduction between the first and second quarters, from 1s. 9½d. to 11d., before allowing for interest on debentures, bank loans and overdrafts and certain other items aggregating about 3d. per ton. The decline was due almost entirely to a rise in costs, for proceeds per ton fell only by a halfpenny during this period. The increase in costs per ton was 10d., of which 7½d. was accounted for by higher wages and the remainder by increases in the prices of stores, timber and other items. To some extent the fall in credits per ton is due to the fact that this item may include a balance which is carried forward, and against which higher wages may be debited in the succeeding period, any increase in earnings as ascertained being distributed between wages and colliery profits in the ratio of 85 to 15. While the sharp rise in the credit balance per ton during the first quarter, therefore, was not synonymous with a corresponding increase in colliery profits, the fall in the second quarter does not indicate a corresponding deterioration in the earning capacity of the industry.

World's Mineral Production.—The Imperial Institute's recent report* on the minerals of the British Empire is of particular interest at a time when the question of access to raw materials is the subject of political polemics and expert investigation. The following table, taken from the report, shows world and Empire production of the most important minerals in 1929 and 1935, together with the proportion of the total

* "The Mineral Position of the British Empire." The Imperial Institute, London. 4s. net.

produced in the Empire. The list is arranged in approximate order of value of world output:—

WORLD AND EMPIRE PRODUCTION OF IMPORTANT MINERALS
(In approximate order of value)

	1929			1935		
	World	Empire	Empire per Cent. of Total	World	Empire	Empire per Cent. of Total
Coal	1,540,000	327,000	21.2	1,290,000	288,000	22.3
Petroleum	203,700	3,430	1.7	225,000	4,020	1.8
Gold (a)	19,400	14,100	72.7	29,400	17,140	58.3
Iron ore	200,000	18,900	9.5	140,000	17,950	12.8
Copper ore (b)	1,920	164	8.5	1,460	410	28.1
Tin ore (b)	191	90	47.1	135	59	43.9
Silver (a)	285,000	43,000	16.2	224,000	37,000	16.5
Lead ore (b)	1,720	500	29.1	1,380	550	40.0
Zinc ore (b)	1,780	394	22.1	1,540	454	29.5
Salt	29,000	4,300	14.8	31,000	5,200	16.8
Potash	2,390	2.3	0.1	2,400	1.5	0.6
Phosphates	10,400	684	6.6	9,000	868	9.6
Sulphur	3,080	175	5.7	2,450	187	6.4
Nickel ore (b)	55	30	54.5	73	63	86.6
Pyrites	7,800	370	4.7	7,800	450	5.8
Diamonds (c)	7,430	5,071	68.3	6,190	2,501	40.4
Asbestos	423	376	88.9	374	255	68.2
Manganese ore	3,600	1,460	40.6	4,000	1,200	30.0
Bauxite	2,150	229	10.7	1,740	146	8.4
Chromite	590	377	63.9	750	255	31.3
Mica	18.3	11.2	61.2	33	8.4	25.5
Graphite	148	14.2	9.7	127	15.9	12.5

(a) Thousand fine ounces. (b) Metal content of ore. (c) Thousand metric carats.

Though the world's mineral industry had not yet fully recovered from the depression by 1935, the current output of most materials is now substantially higher than in 1929. The Empire's share in 1935 exceeded 20 per cent. of world production in the case of eleven out of the twenty-two materials listed in the table, and was less than ten per cent. in the case of only seven minerals.

Further Decline in Commodities.—The decline in wholesale prices continues, and has been accentuated in the United States by a heavy seasonal fall in the price of maize. In England the complete *Economist* index number has fallen by 0.6 per cent., while primary products have fallen by 2.6 per cent. In the United States, the *Economist* primary products index number has fallen by 7.6 per cent., while the complete Irving Fisher index number has fallen by 1.6 per cent. French wholesale prices have also fallen slightly, the world movement for the moment outweighing the depreciation of the franc. There was a rise of 1.2 per cent. in Italian wholesale prices.

† Monthly averages.

The chart shows the trend of British wholesale prices. The primary products curve has now dropped to the lowest point for the year.

Details of group movements in the complete *Economist* index number are given below:—

	The Economist Index (1927 = 100)			
	Sept. 18, 1931	Sept. 8, 1937	Sept. 22, 1937	Oct. 6, 1937
Cereals and meat	64.5	88.1	89.1	92.3
Other foods	62.2	66.8	67.2	67.7
Textiles	43.7	68.0	65.5	64.3
Minerals	67.4	108.9	106.4	101.0
Miscellaneous	65.8	85.3	84.5	83.5
Complete index	60.4	83.0	82.2	81.6
1913 = 100	83.1	114.2	113.1	112.3
1924 = 100	52.2	71.7	71.0	70.5

Cereals are firmer, while there have been increases in potatoes, tea and butter. There has been a further decline in cotton, but Australian wool has rallied after its fall. There were sharp decreases in non-ferrous metals.

Argentine Election Results.—The final results of the Presidential elections in Argentina have contained no surprises. Dr Ortiz, the National Coalition candidate, Minister of Finance under the outgoing President, General Justo, has been returned with 248 seats in the electoral college against 128 won by the Radical candidate, Dr de Alvear. The actual voting was much closer and showed some considerable gains to the Opposition. Dr Ortiz took no part in the revolution which in 1930 ejected the aged President Irogoyen, and he is reported to be one of the least reactionary members of the Government. His return, after a peaceful election by South American standards, is a tribute at once to the success of the revolution and to the good fortune of the late Government. Argentina has now returned to more democratic conditions after an interregnum of a National Government, which came to power by force, and established itself by managing the elections. The restraint of the Army and its advisers has been admirable. Army intervention was kept to a minimum even at the worst period of economic crisis and has now ceased. The extraordinary rapidity with which prosperity returned has stifled discontent and the Government, as in this country in 1935, benefits from the paucity of grave political issues. Argentina can now proceed to deal with the problems of the boom, with her relations with Spain, with South American questions, and with the whole subject of immigration without violence or over-violent controversy.

Wall Street Makes History Again

NEW YORK, September 28.—Once again "hot money" has come into the forefront of discussion. During the two weeks following the open-market operation of September 13, the share market, while still feverishly excited, showed some signs of stabilising. On September 23, however, the rumour spread that Sir Frederick Phillips, Under-Secretary of the British Treasury, was discussing with Secretary Morgenthau the imposition of new taxation on foreign investments. The immediate response was a wave of liquidation which lasted about three days. Wall Street has for some weeks been so nervous that any adverse rumour was quite sufficient to induce selling.

Since March, the average of industrial shares has fallen about one-third; but a large number of individual issues are now quoted at half or less than half the figures reached earlier in the year. The net decline since March has exceeded the reaction of 1926, and outrivalled the semi-bear market of 1923-24; it has not equalled in intensity the post-war bear market (1919-21) or the "Panic of 1907." Nevertheless, the rapidity and extent of decline since early August are sufficient to ensure it a place in American economic history.

For the fourth consecutive quarter production has been continuously sustained at a high level. Perhaps one should be more dubious about profits. Indications suggest that the second quarter of 1937 brought some reduction in profit margins. Wages and the cost of materials were increased; there was possibly some gain in technical efficiency, but it was not equivalent, and the effort to pass on the higher costs to the consumer was not entirely successful.

There has been some firming of the interest rate. This did not extend to call loans, which have remained at 1 per cent., or to customers' loans; nor has the volume of loans been reduced. Commercial loans have risen continuously over the past year up to the present. The Treasury successfully floated a long-term 2½ per cent. issue in December, 1936; it floated another in March, 1937, not so successfully; and to-day the 2½'s of 1936-55 are quoted just above par. Nine-month Treasury bills toward the end of 1936 were on about a 0.40 per cent. basis; in the summer they touched about 0.70 per cent.; and are now at about 0.50 per cent. Gilt-edge corporate bonds have moved with long-term Government securities—at a differential measured by the exemption of tax to institutional holders of Government issues. These rates are the measure of the "pressure" involved in the Reserve Bank's policy of reducing excess reserves—which are now above the \$1,000 million mark. There still remains the problem of explaining the fact that, in

spite of reduced profit margins and higher interest rates, dividend yields of 6 to 8 per cent. are not uncommon.

Conflicting Views and Indices

Opinion falls into two extreme groups. One can be stated simply and briefly: the market has completely lost touch with business; investors have become hysterical and panicky; and prices in such thin markets do not represent genuine investment appraisal but mere emotion. The other opinion affirms that the third quarter business is just "water over the dam"; that current orders are far from equal to current production; that the autumn, instead of bringing increased orders, has brought reduced orders; that the construction industry fell off in early summer, and shows no sign of recovery; that textiles have actually relapsed into depression; and that the railroads, caught between increased labour and material costs and unchanged rates, have been forced to lay off some 20,000 men—just after they had been obliged to give those same men an increase in wages. This view forecasts that, unless some new factors emerge, the fourth quarter of 1937 will show an abrupt slump in production and an equally precipitate decline in earnings. Thus, according to this opinion, the market is more or less accurately heralding an approaching depression in business. These two views cannot be reconciled.

There is, however, one other contributory factor. Not many individuals were affected by the Loophole Tax Act of August, but those few were large holders of corporate securities. This Act will, over a period of time, force the liquidation of these portfolios and the reinvestment of the funds in tax-exempt securities. If the volume were substantial, it would throw a good deal of light on recent market behaviour.

In the past a 2½ per cent. rate on long Government bonds would have indicated an abundant supply of capital available to industry. Now it merely indicates that the banks are provided with excess reserves. A 3½ per cent. rate on gilt-edge corporate investments would have implied the same thing; now it merely means that certain institutions are still able to direct the flow of a limited amount of capital into restricted channels. Neither rate is indicative of the supply of capital available to corporate enterprise, which is small and dear.

The Effects of Taxation

One major stream of investment capital has been diverted by tax-legislation from corporate securities into tax-exempt securities. That stream of capital which flows through the incomes of persons in the higher grades is now excluded from participation in corporate enterprise. This fact, in conjunction with the undistributed corporate profits tax, obviously affects the formation and flow of capital. Similarly, it is questionable if the stock market possesses the barometric capacity formerly ascribed to it. The combination of the capital gains tax and the Loophole Tax Act, with the new six-months' regulation on directors and large stockholders has the effect of inducing selling without compensatory buying. One might almost say that under the Loophole Act the rich are given strong reasons to sell corporate securities, but they are penalised if they buy them.

The August business indices of the Federal Reserve Board show that manufacturing activity has maintained the level of recent months. In August it even advanced more than seasonally compared with July; which was approximately offset by a decline in residential building contracts.

Next Year's Budget Balanced

PARIS, October 7.—The latest efforts of the second Popular Front Government against the continued depreciation of the franc included the submission of the 1938 Budget Bill accounts to the parliamentary commissions and the announcement of important Cabinet decisions at Rambouillet on the eve of the cantonal elections. The Budget Bill forecasts a surplus on the ordinary Budget of 1,600 million francs; 53,781 million francs revenue and 52,179 million francs of expenditure. The extraordinary Budget includes 13,630 million francs for armaments and public works. The Pension Fund shows a final deficit of 2,300 million francs. Thus, the Treasury will have to borrow 16,000 million francs, or 1,300 millions a month, since M. Bonnet intends to apply the surplus to the increase of civil servants' wages and to re-armament.

The Minister of Finance pointed out that his estimates had been made with a maximum of caution; that the sum to be borrowed did not exceed the possibilities of French saving; but that results would depend ultimately upon the energies of the nation, of which the money was only a reflection. Nevertheless, this statement of figures has been followed by a new fall of the franc to 150 to the pound. Many rumours are abroad of a split in the Cabinet about the claim of the civil servants for a minimum increase of 150 francs a month in wages. But a "unanimous" declaration was published after the meeting at Rambouillet stating that the exchanges would not be controlled and that the forty-hour week would be modified. Exported capital was urged to return to absorb the 12,000 million francs deficit on foreign trade account. A tighter supervision on foreigners' activities was announced; and, finally, M. Sarraut was nominated "Proconsul" in North Africa.

Cabinet Decisions and Political Reactions.

But will these good resolutions have a successful sequel? Probably they will not before the cantonal elections, which will take place on October 10th and 17th. The Commission of Inquiry on Production is awaiting the result of the elections; and their imminence explains why M. Jouhaux, leader of the trade unions, has stated that the adjustment of the forty-hour week must follow the repatriation of exported capital. How will people vote? Public opinion seems to have received the collapse of the franc very calmly—perhaps because this collapse seems the only way to "amortise" the huge public indebtedness which the war created. Perhaps also the country lives in the hope of a repetition of the 1924-26 drama—the Marne of the franc—when a catastrophic fall was necessary to bring the masses into line to support a national recovery programme. The Popular Front has wiped out the excesses of the deflation policy; the Conservatives are unable to formulate an attractive policy; and monetary depreciation has improved the public finances. Now new possibilities may be open to an authoritative Cabinet to guard against the errors of the past and foreign menaces. The Liberals in the last few days have shown some signs of independence, and perhaps they are thinking in this way. We shall be more certain about these matters after the elections and particularly after the Congress of the Radical-Socialist Party, which will take place at Lille on October 28th.

It is to be noticed, meanwhile, that the moderates are making a praiseworthy effort to support the radical programme. Thus M. Reynaud declared that the recent Cabinet decisions were a veritable *coup de théâtre*. The Government, he says, has taken up its stand before the elections. Therefore, no special political significance can be attached to the elections. The Socialists have denied their former religion. They have accepted the condemnation of the first Popular Front Government's policy pronounced by the Senate, to which hitherto they had been steadfastly opposed. The possibility of a return to the former political alignment is, on this view, ruled

out. "All is changed." M. Reynaud emphasised that the new Budget and price conditions have opened up new possibilities of a return of confidence and an improvement in the balance of foreign trade. The leader of the Employers' Union, M. Gignoux, has added his efforts to those of the moderates in favour of social peace and national recovery.

Germany

Dr Schacht Shelved?

BERLIN, October 6.—The Bourse last week was somewhat livelier, with a sharpish advance of share prices on Friday; but, in general, movements were irregular. Rumours that the profits of industry were to be in great part taxed away were denied by Dr Schacht, during the Savings Bank Congress at Essen, and by Herr Reinhardt of the Finance Ministry. The only change officially announced is the withdrawal of tax-exemption on "short-lived capital goods" of the nature of industrial machinery, which was conceded in order to encourage investment during the period of unemployment in 1934. At Essen, Dr Schacht once more called for national saving, emphasising the value of this to the Government. Dr Schacht condemned those persons who "believe that the banknote printing press has lost its terrors merely because, thanks to foreign-exchange control, the results are not daily visible in the dollar exchange."

About Dr Schacht's position nothing certain has transpired. It is confirmed only that he has had trouble with Dr Ley over the "Organisation of German Business" and the "Labour Front." It is believed that his formal resignation from the Ministry of Economy, at least, was submitted to Herr Hitler, but rejected. Herr Hitler's acceptance would have advertised Dr Schacht's protest against financial maladministration. It seems that, instead, Dr Schacht has been shelved (in German *kaltgestellt*) by the device of unofficially incorporating his department in the Four Years' Plan organisation. Apparently the Plan is to become a burial ground for the economically unco' guid in a world of bold, bad spenders. Under similar circumstances, the Labour Minister, Herr Seldte, has *de facto* disappeared, though still *de jure* a real live Minister.

Denying rumours about increased taxation, the State Secretary declares that the principle of Budget equilibrium would be maintained. In default of figures this means little. All Reich Budgets are drafted to balance, often, however, with the aid of credit or of other exceptional non-tax revenue. In 1937-38, said Herr Reinhardt,

TRADING ABROAD

The existence of restrictions in a given country may temporarily prohibit dealings in forward exchange, but up-to-date information on this and on all points bearing on Forward Exchange generally may be obtained through any branch of the Westminster Bank. For any who may be unfamiliar with the facility, a very brief outline entitled *Forward Exchange* is always available at its counters

WESTMINSTER BANK LIMITED

Head Office: 41 Lothbury, London, E.C.2

tax revenue would reach Rm. 14,000 millions, compared with Rm. 6,600 millions at its lowest in 1932-33. This estimate is plausible enough: in August tax-revenue totalled Rm. 1,080 millions, compared with Rm. 861 millions in August, 1936; in the first five months of the financial year it was Rm. 5,320 millions, compared with Rm. 4,387 millions a year ago.

A Berlin bank has issued the following estimates of the profits of joint-stock industry:—

Business Year (July to June)	No. of Com- panies	Net Profits	Net Losses	Total Profit or Loss in Per cent. of Capital	Dividend on Total Capital
		Millions of Marks			
1927-28	2,006	908.2	81.7	+ 6.54	6.63
1931-32	1,717	259.9	1,262.1	- 7.56	2.19
1935-36	1,955	580.2	48.3	+ 4.54	4.25
2nd half-year, 1936	1,249	512.8	68.7	+ 5.07	5.15

As the companies have pursued cautious dividend policies, writing down heavily, and seeking to accumulate resources for new investment, the 1935-36 figures show the position better than those for the 1936 half of that year. An instance of caution, which disappointed the Bourse last week, was the small increase—only $\frac{1}{2}$ per cent.—in the dividend of the Kloeckner-Werke A.G. Nevertheless, out of its increased profits, this company was able to invest Rm. 6 millions in expansion.

Company Restraints and State Monopolies

The Institute for Trade Research holds that the recent international decline of share values, due mainly to fear of increased wages, interest, and general production costs, was exaggerated; and further declares that stock-exchange movements have become less reliable indicators of coming business conditions since governments embarked on active trade policies. Despite the recent increase in Germany's imports of raw and half-finished materials, says the same authority, the supply still remains far below the demand of industry.

On October 1st a new company law came into force. The lowest capital for new companies is in future to be Rm. 500,000 instead of Rm. 50,000 as formerly. Existing companies with a capital of less than Rm. 100,000 must reconstruct or dissolve before 1941. The smallest denomination of new shares is to be Rm. 1,000. Executive control is now vested in companies' directors entirely, and the directors will compile balance sheets. The competence of shareholders in their periodical meetings is further restricted. They will continue to elect a council of supervision with only formal functions; but they may not discuss any profit other than that which the directorate reports, or reduce the sums written off or allocated to reserve. In principle this law follows the "Führer" theory.

Prussia's Mining Law has been amended in order to co-ordinate it with the Reich law, recently adapted to the purposes of the Four Years' Plan. Where not otherwise prescribed by law or ordinance, prospecting for and the working of coal, salt, potash and some other salts, lignite in certain provinces, and iron ore in certain districts, becomes a State monopoly.

In the last week of September the Reichsbank's credits and investments rose by Rm. 850 millions compared with an increase of Rm. 645 millions in the same week of 1936; but as deposits rose by Rm. 186 millions, compared with only Rm. 11 millions a year ago, business must have more than liberally provided for immediate needs. The note circulation increased by Rm. 588 millions, and has risen in twelve months from Rm. 6,651 millions to Rm. 7,265 millions.

Holland

The Franc, Wall Street and Amsterdam

AMSTERDAM, September 23.—The latest developments in Amsterdam in the foreign exchange market and on the Stock Exchange are noteworthy. The continued fall in the rate of the French franc was watched with some anxiety.

Although some Dutch concerns have incurred losses because of this fresh fall in the French franc and further exchange losses will have to be booked, generally speaking the fall in the French franc rate is not sufficiently important in Dutch business to influence economic conditions in Holland—unless, of course, the fall of the franc leads to other collapses in the foreign exchange market.

The Amsterdam Stock Exchange was also subject to the influence of unrest in the foreign exchange market, while the international situation and the weak tendency of Wall Street did not fail to have their effect. At first Amsterdam resisted well, and the price of local securities was maintained, but eventually a marked fall in these quotations set in. And subsequently there was a veritable collapse. This decline is all the more strange as the internal economic situation has not given the least occasion for it. Revival is in full swing and there are no indications of an approaching reversal of the trend. It follows that the causes of the weak tendency of the Amsterdam Stock Exchange have to be sought exclusively abroad.

The Amsterdam bond market, on the other hand, remained steady. The Government has come forward with its schemes for conversions. In the first place it began the conversion of all 4 per cent. Dutch Indies loans to a total value of Fls. 912 millions. The new loan was of the 3 per cent. interest type and was issued at 96 $\frac{1}{2}$ per cent. with a currency of 37 years. In view of the tendency of the Stock Exchange and prevailing international political disturbances, the issue was not suitably timed. This must be accepted as one of the reasons why the loan was not a success. At any rate the Government has proved through this loan that it is unwilling to try the experiment of a loan with a graduated or variable rate of interest. Two new municipal 3 $\frac{1}{2}$ per cent. loans have been announced; the municipality of Amsterdam is issuing Fls. 44.64 millions of 3 $\frac{1}{2}$ per cent. bonds at par; and Rotterdam Fls. 93 millions of 3 $\frac{1}{2}$ per cent. bonds at 99 $\frac{1}{2}$ per cent.

Improved Revenue and Trade

The yield of State revenue in the month of August was not maintained at the high level of July. In July the yield was Fls. 43,717,162 but there followed a reaction to Fls. 37,120,075 in August. Nevertheless, developments last month were still favourable. Compared with last August there was an increase of Fls. 5,655,939, while the estimate was exceeded by Fls. 5,976,325. For the first eight months of this year the increase, compared with the corresponding period of last year, was Fls. 54,360,108; and the yield has been Fls. 40,802,636 more than the estimate.

As in all recent months the figures of foreign trade in August make a favourable impression. In both imports and exports the increase in volume and value again considerable. Imports during August, however, compared with those of the preceding month, fell sharply both in volume and value. On the other hand, the recession in exports was on a much smaller scale. There has been an increase in the value of imports from 82 million guilders in August, 1936, to 123 million guilders in August, 1937; but it has receded from 146 million guilders in July of this year.

The three trade unions, the Roman Catholic, the Modern and the Christian, shortly after the new Cabinet took office, presented a number of requests to the Government in connection with the care of the unemployed. The Minister of Social Affairs was of the opinion that these requests could not be granted, but he has held out the prospect of a different kind of concession, i.e. an extra allowance for the large unemployed families, who suffered most during the depression and are hardest hit by the rising cost of living. There is still much discussion about the cost of living. Many people are of the opinion that, since the cost of living is largely governed by the price of foodstuffs, a reduction of the Government's crisis taxation of agricultural products is imperative.

Switzerland

Growing Trade with British Empire

GENEVA, September 22.—During the first eight months of the year, Swiss imports were valued at 1,205,301,491 francs, compared with 725,256,198 francs in the same period of 1936, and exports at 794,211,789 francs, compared with 530,729,924 francs in the first eight months of the previous year. The monthly average of exports, which was 66,341,240 francs in the first eight months of 1936, reached 99,251,473 francs this year—a figure not recorded since 1931, when the monthly average was 112,399,000 francs. Foreign trade is thus rapidly recovering, and it is with countries such as the British Empire that commercial exchanges have shown the most encouraging results. This tendency can be noticed in both directions, and though—for the British Empire as a whole—the balance of trade with Switzerland remains much the same as in 1936, the volume of trade has greatly increased, even allowing for the devaluation of Swiss currency.

During the first half of the year imports from the British Empire reached a value of 91.9 million francs, compared with 59.1 million francs in 1936; and exports were valued at 93.2 million francs, compared with 60.8 million francs in the first half of the previous year. Trade with the various countries of the Empire was as follows (in millions of francs):—

	Imports in the first half of the year		Exports in the first half of the year	
	1936	1937	1936	1937
Great Britain	33.6	59.2	41.9	65.2
India	6.4	10.8	6.4	9.3
Canada	12.0	9.3	3.0	5.8
Australia	4.4	8.4	4.4	4.9
Straits Settlements	1.1	2.4	1.1	1.8
South Africa	1.2	1.1	2.9	4.8
Palestine	0.4	0.7	1.1	1.4

There has been a rise in Swiss exports to all these countries, while Swiss purchases from Great Britain, India, Australia, the Straits Settlements and Palestine have increased.

During the first half-year of 1937 Great Britain has found in Switzerland a greater outlet than in the past. Swiss purchases of English skins have risen in value from 1.7 million francs in 1936 to 4.2 million francs in 1937; the value of those of cotton thread has increased from 2.7 million francs to 6.7 million francs; those of cotton fabrics from 3.6 million francs to 6.6 million francs; and those of coal from 2.7 million francs to 4.8 million francs. During the same period, imports of British motor vehicles and bicycles were valued at 1.5 million francs, compared with 1.1 million francs the previous year. Switzerland, on the other hand, has found a more ready market in Great Britain for watches, machinery, tools, aluminium, dyes, silk fabrics and shoes.

Influx of French Capital

For the first time since 1931 the surplus of imports in Swiss foreign trade is likely to be made good by invisible exports, among which banking and tourism are most important. Although general financial fluctuations have influenced the Swiss Bourses, business is good and money very abundant, mainly owing to the increased influx of foreign capital. Important funds have been deposited during recent months in Swiss banks—mainly from France. One bank in Geneva, since the beginning of June, has opened 1,500 new accounts, mostly to French clients.

The consequence is that money is cheap, and loans recently placed on the market were issued at an interest ranging from 3 $\frac{1}{2}$ to 3 $\frac{3}{4}$ per cent. Up to the end of July the total value of Swiss Government and industrial loans reached 501 million francs—compared with 228 million francs in 1936—mainly for conversion purposes. Foreign loans placed in Switzerland totalled 57 million francs. The year before there were none.

The number of visitors to Swiss hotels reached the total of 1,358,000 at the end of June, compared with 1,151,348 during the corresponding period of 1936.

Italy

Revival in Industrial Employment

TURIN, September 25.—Industrial activity is rapidly increasing. The industrial North is the chief beneficiary. The general index of employment (1929 = 100), which went down to 79.41 in 1933 and 82.99 in 1934, increasing to 93.95 and 94.90 in 1935 and 1936, was in March last 100.67 and in April 104.01. The index of number of hours worked, after touching bottom in 1933 with 75.11, increased steadily from 77.80 in 1934 to 81 in 1935, 80.99 in 1936 and 91.40 in April, 1937. As employment in industry increases, employment in public works and land reclamation is reduced: the average number of hands daily occupied decreased from 261,960 in 1935 to 241,805 in 1936. In June, 1937, the total was 217,315, against 263,551 in the corresponding month of 1936. Activity is also decreasing in the building industry: 102,691 new rooms were authorised in 1933, 173,866 in 1934, 177,860 in 1935, 91,681 in 1936 and 49,188 in the first six months of 1937.

The Changing Balance of Foreign Trade

The figures of international trade are being keenly discussed in circles concerned with economic prospects in this country. At first sight the deficit in the balance of trade seems to be increasing. Excluding trade with the colonies in 1936 and 1937, the figures for the first six months of recent years are as follows:—

First six months	(In million lire)		Imports less exports	Exports as percentage of imports
	Imports	Exports		
1929	11,937	7,599	- 4,378	63.4
1933	3,937	3,131	- 806	78.0
1934	4,079	2,635	- 1,444	64.5
1935	3,803	2,422	- 1,381	64.0
1936	2,786	1,254	- 1,532	45.3
1937	6,935	3,776	- 3,159	54.4
1937*	4,092	2,228	- 1,864	54.4

* After making allowance for devaluation.

After the slump of the sanctions year imports and exports have more than recovered the lost ground. As, in the meantime, the lira was devalued by 41 per cent., adjusted figures are given, and the resulting deficit of 1,864 million lire is then comparable with the previous deficits.

As foreign travellers have arrived this summer in unprecedented numbers, the commercial deficit is expected to be easily compensated by the excess of invisible items. The returns of the 23 clearings now in operation give the following totals:—

Date	(In million lire)		To the credit of foreign countries
	To the credit of Italy	To the credit of foreign countries	
February 26, 1937	219.3	81.1	
July 30, 1937	201.5	172.8	

The figures for the Anglo-Italian clearing, at the above dates, showed credits in the favour of Italy of 36.6 and 40.8 million lire respectively. But the real problem is not the balancing of international payments but their level. Imports and exports both remain near the lowest level of the post-War period. This seems to be the inevitable fruit of bilateral balanced agreements, monetary clearing

The MERCANTILE BANK of INDIA LIMITED

Head Office: 15 Gracechurch St., London, E.C.3
Branches and Agencies throughout the East

Correspondents in all parts of the World

WORLD-WIDE LETTERS OF CREDIT
AND DRAFTS ISSUED

and all the paraphernalia of modern protectionism. The table below compares Italian trade with her main customers in the first six months of 1936 and 1937:—

	(In million lire)			
	Imports		Exports	
	1936	1937	1936	1937
Germany	765	1,173	195	731
Argentina	100	747	63	150
U.S.A.	393	745	192	393
Austria	191	328	95	132
Hungary	113	286	56	99
France	66	241	14	245
Roumania	96	226	1	26
British India	47	222	0	51
Great Britain	30	195	3	308

Clearly, the alignment of the lira has given, quite apart from the abolition of sanctions, a fillip to exports; but the favourable effects of it are progressively vanishing in the face of the increasing cost of imports.

Recovery and the State Monopolies

The report on the State railways for the fiscal year 1935-36 gives some interesting figures concerning the financial results of the coal and metal trades monopolies, both of which are administered by the State railways. They received 240.5 million lire from direct coal sales, 16.6 millions freights reimbursement, 0.9 million miscellaneous revenue, and 23.0 millions monopoly dues from private merchants on their direct purchases, giving a total revenue of 281 million lire. The expenditure was 175.2 millions purchase price, 52.9 millions freight, insurance, etc., 1.4 millions general expenses, or 229.7 millions in all. The net profit was thus 51.3 million lire, and of this 10 millions went to reserves and 41.6 millions were paid into the State railways exchequer towards extraordinary capital expenditure. In the same fiscal year the State railways obtained a profit of 24 million lire from the metals monopoly, of which 13.8 millions went to reserve and 10.1 millions were paid to the State Railway exchequer. The railways' opinion is that these huge profits were obtained without increasing the prices which would have been otherwise paid by customers, but the truth of this suggestion is very difficult to decide since prices have changed a great deal since the monopolies were established.

Finland

Budget Prospects

HELSINGFORS, September 24.—The present favourable economic situation is reflected in the State finances. Revenue is more abundant than formerly and it is possible to increase expenditure. The Government's Budget estimates for 1938 were submitted to the Diet at the beginning of September. The principal figures were as follows (in millions of marks):—

	Budget for 1937	Budget Estimates for 1938
Current revenue	3,716.8	4,107.4
Capital revenue	966.9	304.6
Total	4,683.7	4,412.0
Current expenditure	2,912.2	3,137.3
Capital expenditure	1,768.2	1,273.6
Total	4,680.4	4,410.9
Surplus of revenue over expenditure ...	3.3	1.1

Letters to the Editor

"The Under Privileged"

TO THE EDITOR OF THE ECONOMIST

SIR,—In a letter which you published on September 25th, Mr Bruyne says a vicious circle seems to be inherent in our economic system: raising wages increases costs; increased costs mean higher prices; and higher prices nullify the effect of the rise in wages. Therefore, any considerable amelioration of the workers' position is impossible.

The current revenue is expected to increase by 390 million marks owing to the larger yield provided by customs duties, income and property taxes and the business undertakings of the State. The increase would have been still larger if some relief from taxation had not been proposed. Expenditure is to be increased by 225 million marks. The increase is due to larger grants, partly made necessary by higher prices, for cultural and social objects, for agriculture and defence, etc., while the expenditure on the service of the National Debt has been reduced. The decrease in capital revenue and expenditure is partly due to methods of accounting. The surplus of revenue is estimated at 201.1 million marks, but of this sum 200 millions are to be transferred to the Budget Equalisation Fund, i.e. they are to be set aside against bad years.

Record Foreign Trade

During the last few months foreign trade has attained record proportions.

	(Millions of marks)					
	Imports		Exports		Surplus of Exports	
	July	August	July	August	July	August
1935	487.1	457.3	712.5	723.3	225.4	266.0
1936	566.5	527.5	820.7	761.5	254.2	234.0
1937	872.7	840.4	1,132.4	1,053.4	259.7	213.0

The increased value of foreign trade is partly due to the general advance in prices which has raised the average price of imported and exported commodities by 18-19 per cent. since last year. But the volume of trade has also grown, in the case of exports by 5 per cent. and in the case of imports by 28 per cent.

The balance of trade for July and August was satisfactory. As, however, the early part of the year recorded a considerable excess of imports, the balance of trade for the whole year is not likely to prove as favourable as in recent years, when the surplus of exports varied either slightly below or above 1,000 million marks. At all events a small surplus of exports is expected for the current year.

The Money Market

The state of the Finnish money market is still very easy, in spite of general economic activity. The accumulation of capital in the joint stock banks, savings banks and funds is larger than it has been for many years. In July and August the increase was 260.5 million marks compared with only 66.8 millions during the same months last year. In the whole period from January to August this year the increase was 1,583.2 million marks compared with 663.6 millions last year and only 248.0 millions in 1935. The credits granted by the joint stock banks, which had been steadily falling since 1929, increased this year by 893.7 millions between January and August. In spite of this increase the surplus of deposits in the joint stock banks rose to 1,511.9 million marks at the end of August, compared with 1,022.5 millions a year ago and 486.3 millions two years ago.

A number of business undertakings have taken advantage of the easy money market to issue bond loans and to increase their share capital. The two biggest banks and some of the large industrial concerns have led the way. In some cases accumulated profits have been drawn in the form of bonus shares.

share may be raised by a general refusal of wage-earners to work below a certain rate of wages, or lowered by a general refusal of employers to produce below a certain rate of profit or dividend. Either of these refusals may result in unemployment and decline of production and earnings, but does not necessarily do so. From this point of view, wages are no more costs than profits and dividends are costs.

A rise in prices, unless it results from scarcity, does not as a rule reduce real wages if wage-earners get the same share as before of the earnings of industry. The only inevitable losers are owners of claims to fixed sums of money. A fall in prices brings disaster to all except these owners of claims, who benefit, but even they lose in the long run if the fall is continued long enough.

The lot of the workers (producers of services) has been bettered in the past by greater productivity and an increasing share in the earnings of industry. They have suffered (chiefly through unemployment) along with producers of goods from the failure of the controllers of money to enlarge its volume with every increase in production, and sometimes from actual contraction of the volume. If money is properly controlled in the national interest (and much more if it is so controlled in each country), if the governments see to it that the general rate of wages is such as to give producers of services a fair share of the total product, and if peace is preserved, there seems no reason why the improvement should not continue, and at a more uniform rate than hitherto; especially as, with increasing wealth and savings, the share of those who hand over or lend their money to industry is likely to be reduced by a low standard dividend and rate of interest, and that of the workers correspondingly increased.

Yours faithfully,

R. GRANT BROWN.

Hotel de Russie,
Monte Carlo.

TO THE EDITOR OF THE ECONOMIST

SIR,—The letter in your issue of last week from Mr C. V. Bruyne on the inability of our present economic system to throw off sufficient purchasing power to increase the standard of living of the masses is a matter of vital interest to those who still have faith in democracy. In my opinion the problem is entirely one of maintaining a balance between savings and investment. In the latter half of the nineteenth century, British capitalism enjoyed an expanding market. The volume of savings was barely adequate to provide the new capital goods needed for a rapidly growing population at home and for the development of Empire and South American countries abroad. Low wages and long working hours in British industry enabled this small island to accumulate capital wealth abroad aggregating some £4,000,000,000. The industrial revolution under democratic capitalism rapidly turned a world scarcity economy into one of material abundance.

To-day we live in a very different world. Economic crises are no longer due to the failure of crops but to glutted markets resulting from efficiency to produce. The volume of capital savings is already in excess of demand due to the cessation of international lending and inadequate outlets in domestic markets. Idle capital savings create a serious economic disequilibrium by reducing employment, wages and purchasing power. Declining Western populations must inevitably accentuate this disequilibrium. Democratic capitalism is unworkable in a contracting market. It can be kept going for a time by such palliatives as currency depreciation and unbalanced national budgets, but not indefinitely.

Is there no solution other than Fascist or Communist regimentation?

Yours faithfully,

DUDLEY WINDEL.

Liverpool.

Education and a Career

TO THE EDITOR OF THE ECONOMIST

SIR,—I should like to offer you my congratulations on giving space to a topic—the employment of University graduates—which is not given the attention it warrants. The part of your article which seemed to me the crux of the matter was that dealing with the question of *misfits* or *misemployment*.

More and more people go to the Universities each year. They do so because there is a general desire among parents to give their children a first-class education, and the State makes it financially possible. Yet, in a very large number

of cases, they find they would have done no worse, and probably better, to have gone straight from school to office, or to have learned some trade. Too often the jobs they do get do not make full use of their character, knowledge and talents and, worse still, are not jobs from which they can learn anything to make progress.

The State is not making the fullest use of the material at its disposal. A large amount of the community's money is being spent on training people who could be of great benefit to the community but are often allowed to rot. There is need for some method of placing the human product which the State has gone to expense to produce in a sphere where it will be of the fullest service.

The problem is large and difficult, and the work to be done appears to me to fall into three parts. Whatever body was charged with it would need to keep a watchful eye on the progress of individuals through their University courses, as well as on the general direction of University education. It would need to familiarise employers with the manner in which they could make use of the University graduate; and act as a clearing house for the placing of graduates.

The Appointments Boards of Universities do admirably what they can, but are neither equipped nor qualified to do this work. Nor, indeed, is it the work of a University. It is a task for the Ministry of Labour, who already do similar work for secondary school pupils. There is no reason why this should not be extended to University graduates for the good of the individual and the community at large.

Yours faithfully,

GRADUATE.

London.

Woolcombing

TO THE EDITOR OF THE ECONOMIST

SIR,—The author of the second article on Woolcombing may be correct in saying that the Association has nothing to do with prices. It is, however, composed mainly of commission combers, topmaker-combers, and spinner-combers; and the commission combers, through their own Commission Combers' Association, actually fix the prices. It is hardly likely that spinner-combers and topmaker-combers will object to the tariff being on a level that yields

a profit. To a considerable extent the same individual firms run both Associations.

Have the large reserve funds of the public combing companies been disturbed at all to provide the levies, or to purchase plant for scrapping? Where do the combers get their funds for the service of the debentures, or for eliminating plants? Is it not from their customers, in tariff charges which are widely believed to be a fraction of a penny higher than necessary because of the levy?

Is there any other section of wool textiles operating on a tariff that ensures a profit on 70 per cent. capacity working? Has not the reduction of price-cutting by outside firms in recent years been brought about as much by the improved volume of trade available as by the efforts of the Association? However, your correspondent's statement, in the second paragraph, that "no permanent improvement could be effected so long as capacity was in excess of requirements" is a statement for which he should be given credit. Similarly, your correspondent's claim that woolcombers should be congratulated on having put their house in order without the aid of Parliament or public funds is one which I have always upheld. The problems outlined in the article of September 4th are, however, not at all hypothetical. Even before the recent drop in price of olive oil, one comber admitted to me that his costs had not risen as much as the increase recently made in the tariff.

I should be the last to suggest a return to the old chaos of rate-cutting, though I do not agree it would exterminate commission combing. A sound industry is a national asset. But may there not be more than one way of maintaining it? Is all the redundancy outside the members of the Woolcombers' Mutual Association?

I am, Sir,

THE WRITER OF THE FIRST ARTICLE.

Bradford.

POINTS FROM LETTERS

Food Storage for Defence.—In his article on "Food Storage" Sir Arthur Salter stresses the importance of adequate stocks of sugar. The major refineries are in London and Liverpool and therefore highly vulnerable. The beet factories are vulnerable but in lesser degree. It follows that raw sugar stocks would not be a favourable medium of storage. Refined sugar is a more suitable reserve, stored inland, and of better keeping quality. Stocks are

rather low. The immediate prospect is heavy seasonal imports from the Empire; and a home-grown beet production of about 450,000 tons. The volume of offers from foreign producers is small in relation to the potential needs of Government buying. The longer action is delayed, the less easy will it be to find the necessary raw sugar. The prospect, therefore, of adding materially to the visible supply in this country is dependent upon some adjustment in the quota system.—*P. S. Wilkinson, Manchester.*

The Tripartite Agreement.—In your article on the Tripartite Agreement you state that "France has undoubtedly kept the terms of the Agreement." Is this the case? According to a Bank of France return, the notes in circulation increased by no less than 4,895,303,000 francs between September 25, 1936, and September 23, 1937, without a proportionate increase in trade. The result has been a fall in the exchange, and a steady flow of gold bullion to America.—*D. M. Mason, London.*

Wall Street and Recovery.—I beg to register respectful protest against the ominous deductions drawn from the recent declines in American share values. Even in April, 1936, equities in general were selling at over 20 times their greatly increased earnings per share. It was the expanded price structure which provided the foundation for the subsequent climactic rise of another 18 per cent. between May, 1936, and March, 1937. In all the declines since last spring it is only the greater part of this last super-imposed topmost advance which has been eliminated. The current reaction cannot be assumed to portend imminent economic catastrophe.—*A. Wilfred May, Paris.*

Preparing for the Slump.—When rearmament comes to an end, nothing would so galvanise the steel, building and heavy industries as large-scale plans of railway electrification, and for these to be carried out to the best advantage, an official inquiry should be set on foot without delay. Under a properly designed system the leading cities of the north could all be tapped by some seven or eight hundred miles of electrified line. But, without Government support on a much more generous scale than at present, the matter is likely to hang fire indefinitely. Why should progress in so vital a matter be held up for years, when the railways could be insured against all contingencies by offering them the necessary funds, not at fixed interest, but for a reasonable share, say, a quarter or a fifth, of the extra profits resulting?—*K. H. Johnston, South Norwood.*

Practical Socialism

SOCIALISTS will follow the stages of Mr Jay's exposition of their case* with some disquiet, but, at the end, much profit. With his opening statement that poverty, inequality and insecurity are evils, to be removed even though their removal may reduce the average real income per head, they will readily concur. But Mr Jay is more than a Socialist. He is an economist with no time for the slogans of loose thinking. He does not, like so many, toy with the theory of surplus value because he is a Socialist. He rejects it because he is an economist.

* "The Socialist Case." By Douglas Jay. Faber and Faber. 362 pages. 12s. 6d.

NEW BOOK

"AMERICA FACES ITS GREATEST BUSINESS DEPRESSION"

By William J. Baxter

Just out, new 50,000 word book telling why America is faced with a long serious business depression.

Price 7s.

INTERNATIONAL ECONOMIC RESEARCH BUREAU

78 William Street New York, N.Y.

Moreover, in his account of the capitalist economy, Mr Jay accepts interest, rent and profit as necessary to its working and no different in kind from wages. His definitions of waiting, saving, capital and interest are orthodox; and he distinguishes between work, waiting and risk-bearing as fundamental and necessary types of economic service. His exemplars are Professor Knight and, despite a suave philosophic skirmish, Professor Robbins. Karl Marx and John Strachey are anathema. So far, Mr Jay's friends will be vastly alarmed. Are they to be delivered, bound hand and foot, into the hands of the enemy? They need not fear. Mr Jay's faith is no less than theirs; and his attack on things as they are is the more effective for the patience with which he holds his fire. His argument ends where it started. The gravamen of his charge against capitalist society is poverty. A society and a system must be judged by their results; and the results must be tested by the twin criteria of equality and security.

The society he so honestly and fairly expounds fails lamentably to pass these tests. Chapter IV of Mr Jay's book is a useful and disturbing account of the distribution of incomes and property in Great Britain. As an economist he may explain the necessity for each part of the system; but as a Socialist he is appalled by its consequences.

What can be done about it? Mr Jay is scrupulously careful to observe Sir Philip Sidney's admonition not to confuse the abuse of a system with its proper use. In a long and learned section he shows how much of the malaise of capitalist society is due to monetary

instability, much of which might be cured without recourse to Socialist devices. But at the end his indictment is clear: the institutional framework of capitalism is productive of gross inequalities in income and security of livelihood; about nine out of ten income-receivers or families have a working-class income below £5 a week, and 12 millions out of 17.6 millions receive an income barely above subsistence level. "The case for Socialism is mainly economic and it rests on fact."

The chief causes of these inequalities are "the arbitrary effects of free exchange, the peculiar character of unearned incomes, and the profoundly anti-social consequences of the institution of inheritance." The price system is unexceptionable in principle, and would indeed be necessary in any economy. But in capitalist society its working is gravely and unfairly distorted by unequal power to demand. Mr Jay has no compunction in importing value-judgments into his economics. The present system is *wrong*; and we must evolve a policy to set it right.

In 134 pages Mr Jay describes that policy. Its object is redistribution, and its method taxation. Still moderate, he rejects confiscation; he retains much private property and compensation rights, as he would preserve the *entrepreneur*. Through death duties and income tax the control of the instruments of production will be transferred to the State. At every stage, Mr Jay debates the consequences of his programme; he is wary of State monopolies and inclined to compromise with public corporations. The burden of his argument is still honesty and moderation. It is concrete and practical and free from doctrinaire presumptions.

Few people will receive Mr Jay's book with the considerable favour it probably deserves. The *intelligentsia* of the extreme Left Wing will assail it furiously for a denial of Socialist fundamentals. The economists will curl a lip and indict the author at one and the same time for saying too much and too little on technical matters. The "intelligent man," used to less precise guidance, will find many of the economic arguments difficult.

None the less, the book is well worth the labour it clearly cost to write, and should be read. Mr Jay writes brilliantly and with sincerity. Behind the not always well-proportioned structure of this book there is a philosopher of worth, an economist of great talent, and an enthusiast for social reform. Purists, perhaps, may doubt Mr Jay's Socialism and dub him rather an enlightened democrat; but none will dispute his concern for the state of the poor and his hatred alike of complacency, academic escapes and easy ineffective shibboleths.

Shorter Notices

"The Dairy Industry in Canada." Edited by H. A. Innis. Toronto: The Ryerson Press. New Haven: Yale University Press. London: Humphrey Milford. 299 pages. 17s.

To many English people the wheat lands of the prairie provinces and the recurrent problem of drought are the outstanding features of Canadian agriculture. This substantial volume comes as a reminder that Canada possesses an important dairying industry with problems of its own. Such a work as this must of need have a specialised appeal; but for those who wish to study this aspect of Dominion economy it should prove indispensable.

"Political Behaviour. Studies in Election Statistics." Stockholm Economic Studies. By Herbert Tingsten (London) P. S. King. 231 pages. 9s.

Many contemporary political doctrines are based on assumptions about the relation between political behaviour and social status. Accordingly, Professor Tingsten's careful analysis of European election statistics is likely to be invaluable to students of politics. He sets out to discover how different people vote and why they vote. His conclusions are that women vote less and more conservatively than men; that young people vote less and more radically than the middle-aged; and that political organisation and solidarity are strongest among the well-to-do. Professor Tingsten, with this study, has embarked upon researches of the greatest importance, and is clearly capable of doing the job properly.

MONEY AND BANKING

The Franc in 1926 and 1937

At the end of last week sterling rose to over Frs. 150 to the pound. After allowing for the depreciation of sterling in terms of gold, this represents a rate of Frs. 246.74 to the gold sovereign. The previous high record was Frs. 244 to the pound, touched at the end of June, 1926, when the pound was still at par with gold. Thus, measured in gold, the franc has now touched a new level of depreciation. Since 1926, of course, most of the world's currencies have been written down in terms of gold. But this new record serves to suggest a comparison between the landslide of the franc between 1922 and 1926 and its slide of 1936 and 1937. How far are the causes and consequences the same, and wherein do they differ? More important, does the stabilisation in 1926-28 suggest any precedent for to-day?

Fundamentally, the causes of the franc's difficulties are the same to-day as they were twelve or fifteen years ago. France cannot balance her Budget or meet the current needs of the Treasury without resort to borrowing from the Banque de France; and the resulting inflation is destroying faith in the currency and driving capital abroad. Then, as now, matters are moving in a vicious circle. The Treasury cannot make both ends meet unless it can persuade the French investor to lend. Industry cannot prosper and develop unless it can draw on the French capital which is lying abroad. On the other hand, capital will not return until its owners are convinced that inflation has been stopped, and that the French economy has been restored to a sound condition.

There are obvious similarities in the consequences of the depreciation of the early 'twenties and the present day. On both occasions there was a rise in the internal price-level. Between 1922 and 1926 French wholesale prices increased by 115 per cent.; between 1935 and the present day they have risen by 78 per cent. The earlier rise was the greater and world prices were then stationary, while since 1935 they have on the whole been rising. On the other hand, the earlier rise was spread over four to five years; the later rise only over two.

We may next examine the points of divergence between the two periods. Externally France's figures of visible trade were approximately in balance between 1922 and 1926, whereas at present there is definitely a surplus of imports:—

	Imports	Exports	Balance
	(Monthly averages; millions of francs)		
1922	2,022	1,781	— 241
1923	2,738	2,572	— 166
1924	3,346	3,531	+ 185
1925	3,712	3,887	+ 175
1926	4,967	4,937	— 30
1935	1,745	1,289	— 456
1936	2,117	1,288	— 829
1937 March	3,227	1,837	— 1,390
June	3,707	1,997	— 1,710
July	3,700	1,872	— 1,328
Aug.	3,158	1,861	— 1,297

During each period the depreciation of the franc was reflected in an increase in imports, but in the earlier years French export trade was able, roughly, to keep step with it. Since 1935 it has been unable to do so. Various explanations can here be advanced. The first has been France's need for raw materials for her re-armament industries. Another has been the growth of trade barriers abroad, which prevents French exporters from taking advantage of the depreciation of the franc. A final reason has been the rise in French production costs since June, 1936, which again neutralises for French exporters the depreciation of the exchange.

So far as exchange rates themselves are concerned, in 1922-26 the franc was riding free. The gold standard was suspended, there was no Exchange Fund and no attempt to peg the franc or smooth out fluctuations. The only means of support were occasional foreign credits, granted in return for successive attempts to balance the Budget. At times, indeed, wide exchange fluctuations were almost welcomed—witness the historic bear squeeze by the French Government in March, 1923, which brought sterling down from Frs. 120 to Frs. 67 to the pound. At other times the franc was simply allowed to drift.

To-day there is an attempt at control, and also some vestiges of a relation between the franc and gold. There are no spectacular bear raids, but instead a series of more or less unsuccessful attempts is made to maintain a pegged rate. The difficulties are, first, that the resources of the French Exchange Fund must now be exhausted, and, secondly, that foreign centres are more reluctant now than fourteen years ago to grant credits. On the other hand, even if the Exchange Fund has to abandon any attempt at control, the franc will only be riding free as it was in 1922-26.

The internal situation may now be considered. In the earlier period one of the main weaknesses in the French Budget was the cost of reconstructing the devastated areas and the inability of recovering the cost from Germany. This was not a permanent burden upon the Budget. Indeed, an almost complete Budget balance and currency stabilisation came together in 1926-28 soon after this work was finished. To-day there is another burden on the Budget—re-armament—which it is hoped has a similarly temporary character. This accounts for much of the gap which M. Bonnet has so far left unfilled. For the rest, the national finances during both periods were suffering from the effects of inflation and lack of confidence; and during the more recent period from the effects of the previous deflation.

There is, however, one very important distinction. By 1926 there was a general will towards sound finance. The revelation, in March, 1925, that the statutory limits, both of Government borrowing at the Banque de France and of the fiduciary note issue, had been surreptitiously exceeded, caused an immediate feeling of revulsion which brought down the Government of the day. The average Frenchman then had the outlook of the *rentier* and was prepared for any sacrifices to restore the soundness of his currency. It is doubtful if he looks at the matter in quite the same way to-day. In the meantime, he has experienced the full rigours of deflation and a rigid adherence to gold, and for the past fifteen months he has had the fruits, both sweet and bitter, of M. Blum's social legislation. To-day he probably looks at the world more through the eyes of the worker than of the *rentier*.

To appreciate the possible consequences of this change, it may be apposite to recall the steps taken in 1926. In May, a Commission of Experts recommended that:—

- (1) The Budget must at all costs be balanced:—
 - (a) By drastic reduction in expenditure.
 - (b) By making revenue more elastic.

(2) The Banque de France must be made independent of the Government, and must be in a position to resist fresh demands from the Government for loans.

(3) Steps must be taken to fund short-term debt and to provide for maturities.

(4) Steps must be taken to stabilise the franc at home and abroad.

The last recommendation was to be carried out in three stages. During the first the franc was to be got under control. Then there was to be a period of *de facto* stabilisation, followed in due course by *de jure* stabilisation.

Two months later a Government of the Right took power under M. Poincaré, and these recommendations were duly carried out. *De facto* stabilisation began early in 1927 at Frs. 125 to the pound, and was followed by *de jure* stabilisation in 1928. By this time confidence was restored, and capital began to return from abroad. From being the weakest, the franc became one of the strongest of the European currencies.

Can a similar programme be followed to-day, by a Government of the Left? The first part of the earlier policy has already been followed in part. The independence of the Banque de France would, however, to-day imply a direct reversal of Government policy, and the most that could now be expected would probably be a limitation and regulation of Government borrowing, in fact as well as in intention. The third proposal to deal with outstanding debt depends entirely on the restoration of confidence. Obviously, to the extent that the first three points in the 1926 programme are found practicable, the fourth will be found possible.

Thus, comparison of the present day with the early 'twenties is inconclusive. Yet, the problem appeared no less difficult then than now—and France emerged triumphantly. Provided that her Government follows the principle, enunciated in the Cabinet decisions last Saturday (on which we comment in a Note on page 60) of day (on which we comment in a Note on page 60) of day (*reculer pour mieux sauter*), and is prepared to modify her social objectives in the light of current economic necessities, she will equally triumph to-day.

Financial Notes

Renewed Gold Hoarding.—During the four weeks to September 30th, gold bullion imports into England amounted to £14.4 millions, of which £6.5 millions came from South Africa and £3.9 millions from Russia. Exports amounted to £21.0 millions. £3.0 millions of this went to South America, and presumably represented the repatriation of Argentina's gold, referred to in *The Economist* of September 4th. £16.9 millions was shipped to the United States. The amount dealt in at the daily fixing in the London bullion market during the same period was approximately £9.0 millions, so that a fair amount of the gold passing through the country is being handled elsewhere. During practically all September the London price of gold was practically at par with the American shipping price, only varying from time to time between $\frac{1}{4}$ d. discount and premium. There was thus no abnormal pressure on the gold market. Since September 30th conditions have changed, for the amount of gold dealt in each day has greatly increased, while the London price has moved to a higher premium on the American shipping price. This is illustrated in the following table:—

	London Price	Premium	Volume of Dealings
	s. d.	d.	£
Sept. 13-18	140 4*	Par	316,000†
Sept. 20-25	140 4½*	½	375,000†
Sept. 30	140 7½	1½	637,000
Oct. 1	140 7½	2	1,070,000
Oct. 2	140 6	2½	716,000
Oct. 4	140 6½	3	680,000
Oct. 5	140 8	3	1,019,000
Oct. 6	140 7½	2½	487,000
Oct. 7	140 6½	2½	230,000

* Weekly average. † Daily average.

It is clear that a new and abnormal demand has sprung up, which can only be ascribed to French hoarding. The gold scare has now completely subsided, and in view of the weakness on international stock markets it is not surprising that the funds now flowing out of France are seeking refuge in gold. This new demand for gold is being met probably from official sources, as it is far in excess of normal imports into the country.

The Foreign Exchanges.—The market has been quieter this week. For the moment a further depreciation of the franc is not expected, and so there has been a disposition to avoid opening new positions and instead to cover outstanding commitments and to take a profit. Spot francs have therefore been held at Frs. 150½, and the discount on three months' francs has narrowed since September 30th from Frs. 9½ to Frs. 7½. Dollars, though subject to numerous cross-currents, have been steady at about \$11.95½. It is possible that the various Controls are holding the pound-dollar rate steady, so as to maintain at least one side of the pound-dollar-franc triangle during the present French crisis. On the whole dollars have been offered in most Continental centres, though to a less extent in London. The New York-Amsterdam cross-rate is unchanged at Fl. 1.80½, but the Swiss authorities reduced their buying rate for dollars to Frs. 4.34½ early this week. This reduction, however, proved excessive, and the rate has since come back to Frs. 4.3445-4.3450, with sterling rising in sympathy from Frs. 21.53½ to Frs. 21.53. Belgas have again been weak. The New York-Brussels cross-rate has been at the gold export point, and gold has gone to London and New York. Forward belgas have moved to wider discounts.

The Money Market.—Money has remained very easy, but there has been a fair afternoon demand for loans. The banks are not yet buying January Treasury bills, while the market is not anxious to sell December maturities. The result is that the market is now carrying more bills than usual, and so is more in need of money. Nevertheless there were occasional reports that outside bond-money was obtainable at $\frac{1}{2}$ per cent.

	Sept. 16, 1937	Sept. 23, 1937	Sept. 30, 1937	Oct. 7, 1937
Bank rate	2%	2%	2%	2%
Clearing banks' deposit rate	½	½	½	½
Short loan rate:—				
Clearing banks	½-1*	½-1*	½-1*	½-1*
Others	½-1	½-1	½-1	½-1
Discount rates:—				
Treasury bills	½	½	½	½
Three months' bank bills	½-½	½-½	½-½	½-½

* Loans against Treasury bills and other approved bills and British Government securities within six months of maturity; 1 per cent. Treasury Bonds and other gilt-edged stocks within six months of maturity; and other collateral respectively.

The easy trend of money is illustrated by the fact that three months' bank bills are quoted at little better than $\frac{1}{2}$ per cent., although they are now January maturities. In some cases offers to buy bills at $\frac{1}{16}$ per cent. have not been accepted.

The Bank Return.—Currency requirements at the end of the quarter probably explain this week's increase in the note circulation.

	BANK OF ENGLAND				
	Oct. 7, 1936	Sept. 15, 1937	Sept. 22, 1937	Sept. 29, 1937	Oct. 6, 1937
Issue Department:—	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Gold	248.7	326.4	326.4	326.4	326.4
Note circulation	450.8	488.1	486.0	488.5	491.8
Banking Department:—					
Reserve	58.9	39.9	42.1	39.6	36.3
Public deposits	24.8	12.5	15.7	21.8	18.0
Bankers' deposits	84.2	108.4	105.6	95.1	102.1
Other deposits	40.9	36.1	36.2	37.2	36.8
Government securities	79.8	109.1	106.9	105.8	106.5
Discounts and advances	9.3	5.0	5.2	6.2	10.8
Other securities	19.6	21.2	21.6	20.8	20.9
Proportion	39.3%	25.4%	26.7%	25.6%	23.1%

In the banking department Treasury bill maturities at the end of last week explain the transfer of £3.8 millions from public to bankers' deposits. This reverses the movement of the previous week. Discounts and advances have risen by £4.6 millions. The result of these two movements is an increase of £7.0 millions in bankers' deposits, which has occurred in spite of the expansion in the note circulation.

THE STOCK EXCHANGE

Wall Street and the Speculator

Wall Street's further break—leading stocks fell last Wednesday by as much as \$6 in a single session—has intensified the complaints of some market commentators that the regulations of the Securities and Exchange Commission have produced "thin," and therefore vulnerable, markets. In the following article, a Wall Street correspondent discusses this question, in the light of events during the past few weeks.

HAS Government regulation of security transactions impaired the functioning of the American security market? The predominant opinion in Wall Street may be summarised in the recent statement of the President of the New York Stock Exchange: "I am fearful that, in an effort to cure what might be termed sporadic evils, undue restraints are being placed upon normal, proper action, thus creating abnormal market conditions. Evidence accumulates that the quality of the market has been seriously affected." But this is merely the legitimate expression of a point of view, and so far neither side in the controversy has produced conclusive evidence.

The one indisputable fact is that the market is "thin" by previous standards. Dealings in large blocks of securities cannot be made with the speed or absence of price effect which formerly ruled. The Stock Exchange has published figures which show, in its own words, that "price advances and declines of equal magnitude are now brought about by relatively smaller volumes of purchases and sales than formerly," but these do not apply conclusively to the whole market. Another statistician has shown that the aggregate value of equities traded has, under regulation, been lower in proportion to the national income than at almost any period in America's financial history. Yet this does not prove that the Securities and Exchange Commission alone is responsible. At least four major factors appear to contribute to the "thinness" of the market.

First, current taxation scales substantially diminish the attractiveness of taxable securities to American nationals in high income brackets. Under the New Deal, profits realised from sale of securities are subject to both normal tax and surtax, while losses can be offset against profits plus a mere \$2,000 of other income. Profits were formerly taxed uniformly at 12½ per cent., or at normal and surtax rates at the option of the taxpayer, and losses could be offset against all income. Surtaxes on individual incomes reach 75 per cent. on amounts in excess of \$5,000,000; hence Wall Street's tag: "The investor gives the tax collector his profits and pays his own losses." Reduced rates operate if the securities have been held more than one year. Some 80 per cent. of the profits from the sale of securities held from one to two years is taxed, and only 30 per cent. of profits on securities held more than ten years. Until this year, individuals of large means operated through so-called personal holding companies, which were subject to the corporation tax rate. But the "loophole plugging" tax Act of this year has largely prevented this practice. The total effect is that such purchases of securities by individuals with large incomes have become more hazardous, and are hardly worth while as short-term holdings. And the recent tax on undistributed corporate income makes many people hesitate to assume long-term commitments in securities, quite apart from normal economic risks. The whole tendency of the tax situation is to force such individuals away from share investment into tax-exempt obligations.

The second factor arises from margin trading. Under the Securities Exchange Act of 1934 the Federal Reserve Board fixes margin requirements for the purchase and carrying of securities. At present the Board requires a buyer to provide in cash at least 55 per cent. of the cost of securities—approximately double the previous

Stock Exchange requirements. Consequently, the purchasing power of operators' funds entering the market has been approximately halved. One thousand dollars will now buy securities of a maximum value of about \$1,800; formerly they would have turned over some \$4,000 worth. This fact implies, further, that a rising market now generates additional security purchasing power at a slower rate than before. "Pyramiding" is much less effective. In a declining market, additional margin is not legally required when the cover falls below 55 per cent.; the broker decides when more funds must be provided. These margin requirements apply not only to the public in buying and holding securities, but also to Exchange members. They obviously reduce the market effect of a given fund available for the purchase of securities. Their effect upon contemporary markets may be compared with the prohibition of security purchases by a given proportion of the community. But they also imply that a much larger fall in stock prices is now necessary to dislodge a marginal holder.

Next, we may consider the consequences of the Securities Exchange Act reflected in the regulations of the Securities and Exchange Commission. These are designed to prevent manipulation of security prices, and are quite broad. Not only do they prohibit many previously acceptable security transactions, but they may raise sufficient doubts regarding others to curtail the volume of trading. One of the most important regulations specifies that profits realised by officers, directors and chief stockholders of a corporation from the sale of that corporation's securities held less than six months, shall be paid into the treasury of the corporation, and not be retained by the individual.

Finally, the volume of security transactions is restricted by fear—which may be right or wrong, but certainly exists in the mind of some people—of the effect of the Administration's policies upon stock prices. Many companies and industries are now regulated to a much greater extent than hitherto, and control may well be increased—as public utility corporations have reason to expect. In addition, the growing power of labour organisations frightens potential purchasers of securities.

That these four main factors limit the volume of trading and thus cause "thin" markets is generally agreed, though different commentators would give them different emphasis. "Thinness," in fact, results partly from action designed to regulate the market, and partly from policies directed towards certain other ends, which affect the market incidentally. Thus, the tax structure was not modified primarily to regulate security markets. Its objectives were mixed—to tax the rich more heavily, to attempt to alter income distribution, to raise revenue, to punish practices generally unpopular and adjudged "immoral," and to encompass various other reforms. Similarly, the margin requirements are imposed partly to control the market, but primarily as a device to control credit and to protect the credit structure. The various reform measures in the fourth category are not intended as direct steps in market regulation at all. And several of the powers of the S.E.C. have in mind the reform of certain corporate practices, rather than the policing of the market itself.

Any attempt to appraise the present position in Wall Street, therefore, should distinguish between factors regulating the market *per se* and government policies

which affect the market incidentally to their main purpose. Such differentiation—which Wall Street sometimes overlooks—suggests that the latter are of much greater importance than market regulation itself. But the economic significance of a "thin" market also demands the same differentiation. Is a "thin" market a depressing factor? Is there some optimum volume of stock market activity? Obviously, brokerage interests tend to feel that any factors which diminish market activity must necessarily be bad, while sympathisers with the Administration would reach the opposite conclusion with equal certainty.

It is admitted that some security transactions which were permitted before the S.E.C. was set up are now prevented. But are prices more unstable? Present margin requirements and purchase restrictions appear to limit the rise in bull markets. Does it follow that accepted rates of capitalisation of earnings on equities will be permanently altered? Does it follow, again, that liquidation now depresses prices more seriously? Or do restrictions on short selling reduce short-term operations, and higher margin requirements bring security prices more closely into line with business fluctuations and earnings prospects? Is the investor in a safer position—less likely to experience a 1929 collapse—as a result of measures designed to protect the credit structure, to improve the distribution of income through taxation, to eliminate unscrupulous market practices, and to reform the economic structure?

One conclusion, at least, stands out in this maze of—as yet—unanswerable questions. A "thin" market does preclude short-term operations on any considerable scale. Consequently, capital invested in securities now enjoys less liquidity and mobility. The investor, having acquired a security, must regard it as a more permanent holding than before. And he must acquire it after greater deliberation and with a larger proportion of his own funds. Since his interest tends to become more permanent, he will feel more closely associated with the enterprise in which his money is invested. But whether this new obligation for the investor is economically harmful is another question.

In short, the break in stock prices cannot, with any certainty, be attributed to the regulation of the markets. The decline can well be attributed to government policy affecting the disposition of capital, if it is to be laid at the Government's door. But more fundamental questions are at stake. Those observers who expect a substantial trade recession in this country during the next twelve months have been in a minority until recently, but now their number is growing. In future months, the Wall Street slump may prove to be a valid anticipation of a recession in trade and corporation earnings. And who knows if the market's political fears may not prove justified? It does, in fact, seem safer to assume that security prices will still conform fairly closely with business and earnings prospects. Those regulations which have been in force for several years have not noticeably altered this traditional market function. Investors may be forced to retain their holdings longer, but they should not assume that the market is incapable of fairly prompt response to business developments.

Investment and Company Notes

An Unstrategic Retreat.—In the middle of this week, when *The Financial News* index had fallen to 102.3 against 106.4 a week earlier, much of the selling of securities on the London Stock Exchange was of the type tersely described as "forced." The theory that the markets were not so much retreating as moving to prepared positions in the rear became obviously untenable. The inevitable rumours of financial difficulties

were whispered, muttered and cried aloud and, as usual, names were mentioned with no vestige of authority or even, in most instances, of innate probability. The phenomenon is significant, not in itself, but as a recognised psychological landmark in a bear market. It implies, first, that the downward movement has become a major affair rather than a secondary reaction; and, secondly, that lower prices are more likely to attract further selling than strong support. The immediate difficulty is that weakness in London is largely a species of "back-lash" from events in Wall Street, on the one hand, and from the commodity markets, on the other.

The trouble with Wall Street is that many people who, apparently, still consider America the safest cloak-room for transferable funds are unwilling to invest them in American equities. The official figures show that while the amount of "hot money" in America was again substantially increased in the second quarter of this year, the amount invested in Wall Street actually showed a slight decline. In the third quarter, undoubtedly, the movement into America but out of Wall Street was accentuated. The decline in American security prices has been unnervingly rapid. U.S. Steel common, for example, have fallen from a London make-up price of 91 on September 20th, to a quotation of 74½ on October 7th. British interests who have simultaneously been operating in New York and London may consequently have to abandon relatively sound positions in London to cover differences on the other side. The tocsin has been rung so often in the British market, since the beginning of this year, that speculative commitments—originally very considerable—have been greatly reduced, in more or less orderly fashion. But London is no longer its own master.

"Equality" for Corporation Loans.—Amid the troubles of less happy markets, the gilt-edged market stands firm as a rock in shifting sand. Gilt-edged borrowing has been resumed, and the practice of fitting all issues to the same Procrustean bed has also re-emerged. The type of loan favoured by the authorities is a 3½ per cent. stock with a life of approximately 20 to 25 years and a price of 101. To the authorities, but not apparently to the market, an issue on these terms by the Hull Corporation, where local rates are as much as 19s. 8d. in the pound, is indistinguishable from one of the same amount by a popular borrower, in a rapidly developing area, like the Hertfordshire County Council. The difference, actually, was probably worth something from a ½ to 1 per cent. in the issue price, and underwriters of the Hull loan counted themselves fortunate to have to take up no more than 26½ per cent. The firm tone of the gilt-edged market is, in its own way, a reflex action from troubles elsewhere. But the extent to

£1,300 instead of £1,000

UNDER The Distinctive System of The Scottish Provident Institution the premiums are so moderate that at the usual ages for assuring the yearly sum charged elsewhere for a Whole Life Insurance of £1,000 (with profits) will here secure from the first as much as £1,300 or thereby with right to share in the surplus. The additional £300 is equivalent to an immediate and certain bonus of £30 per cent. as large as can be looked for in other Offices only after many years.

FUNDS EXCEED £24,500,000

which technical extremity can be the gilt-edged borrower's opportunity is limited. Ultimately, the result of sustained liquidation elsewhere would be to dry up the springs of the capital market.

* * *

Foreign Bond Movements.—Only Egyptian bonds resisted last month's sharp setback. The Municipal and General Securities index of 110 issues shows a fall of 5 per cent. from 107.7 to 102.4 (January-June, 1934=100). Far Eastern bonds are in fact 8½ per cent. down. The month's movements are shown below:—

Average January-June, 1934 = 100

End of Month	Europe	Near & Far East	Egypt	South and Central America			Complete Index	Unde-faulted Bonds	De-faulted Bonds
				States	Pro-vinces	Total			
1936 Sept....	(32) 94.7	(31) 110.7	(4) 99.9	(36) 98.8	(11) 89.0	(47) 96.4	(114) 99.7	(60) 104.3	(54) 94.8

Sept....	101.9	87.2	99.5	116.1	111.8	115.0	108.4	95.9	109.7

Note: Figures in brackets show number of bonds.

The compilers of the index have prepared special figures for Chinese and Japanese issues. Taking the end of June, 1937, as 100, Chinese defaulted issues stood at 72.5 at the end of September, and Japanese bonds at 74.7. Chinese defaulted issues, however, had fallen to 59.7 in August and now stand at 52.3. Sino-Japanese affairs, however, should not be allowed to hide the following statement regarding the Greek debt offer: "The Hellenic Government do not intend to modify in the least the terms submitted by them for a permanent settlement of the Greek External Debt." This statement has at least the virtue of straightforwardness.

* * *

London Transport Dividend.—London Transport "C" Stock stood as high as 99½ earlier this year, but ever since the bus strike its course has been downward. Within the last few weeks its weakness has been conspicuous, and on Thursday the stock closed no better than 75½. Estimates of a 4 per cent. dividend, indeed, were regarded, if anything, as bullish. The board, however, is to pay 4½ per cent. for 1936-37—a decision which requires an additional sum of £64,250 while £28,061 remains, to be transferred to the "C" Stock interest fund. Results for the past year were more than usually difficult to foresee. A loss of £347,000 in the Board's traffics for the June quarter reduced the year's "plus" to £255,000. It was generally feared—and the evidence submitted at the strike inquiry went far to confirm the view—that rising costs had already absorbed the larger part of the gains for the first three quarters to March. It must, of course, be remembered that the pooling arrangement would give the Board its share of benefit from the traffic diverted to other forms of public transport during the strike, and in the last resort renewal policy would have a vital effect upon distributable earnings. The answer to these problems, however, must await the publication of the report. Meanwhile, the current trend of traffics is hardly auspicious. A series of losses had reduced the gain to September 25th to as little as £1,700. The last week's return shows a gain of £19,800—as generous as it is timely.

Argentine Rail Dividends.—The market wanted good news on Wednesday, and the first Argentine railway dividends scarcely come into this category. The Buenos Aires Great Southern declared a full payment on the 5 per cent. preference stock, which received one per cent. for 1935-36, and 3 per cent. on the 6 per cent. preference stock—thus resuming payments at the 1934-35 rate. B.A. Western first preference dividend is met in full, and the 4½ per cent. stock will receive 3½ per cent., compared with one per cent. for 1935-36. Optimists who had expected full second preference payments in each case showed their disappointment by marking down the B.A. Great Southern 6 per cent. preference stock by no less than 4½ points to 61, while B.A. Western, at 62, recovered its initial loss on Thursday. The B.A. Great Southern payments will require £560,000 more than in 1935-36. From a superficial examination of the sterling traffics increase—£990,728—it would appear that the company has retained well over 56½ per cent. of its gross increase net. The sterling traffics, however, are calculated at the average peso rate for each week, and the remittance rate is rather more favourable to the companies. A similar calculation for B.A. Western shows that only £63,810 out of the sterling increase in traffics (£243,337) is required for the increase in dividend. We shall consider the companies' position in detail when the accounts are available. Both companies are largely dependent upon cereals traffics, and at one remove upon price movements—which will be determined by the crop from the Southern Hemisphere. A big crop might not be an unmixed bull point for the stocks. B.A. Western, with 20 per cent. of its traffics from livestock, is particularly affected by the Anglo-Argentine trade agreement. Meanwhile, the railways this week have made further representations regarding an increase in charges. It can only be said at this stage that the completion of the elections should remove some of the political barriers which appear to have blocked earlier applications this year.

* * *

United Steel Companies Report.—The market was favourably surprised by the increase in the United Steel Companies' dividend from 7½ per cent. to 8½ per cent. on the increased capital, and the accounts prove even better than the dividend had suggested. Gross profits are up from £1,545,278 to £2,075,322, and earnings for the ordinary stock, after providing some £500,000 for depreciation and obsolescence and £560,850 for taxation, amount to 11.1 per cent. For a year in which the group's production of coal increased by only 0.2 per cent., of coke by 9.5 per cent., of pig iron by 4.5 per cent., and of steel ingots by only 3.7 per cent., this striking increase of profits is highly satisfactory. It clearly illustrates the relative invulnerability to rising costs of a highly efficient and rationalised steel concern, controlling its own supplies of raw materials. The following table sets out the rising trend of profits during the past three years:—

	YEARS TO JUNE 30		
	1935	1936	1937
Gross profit	1,243,981	1,545,278	2,075,322
Fees	6,999	5,963	5,218
Taxation	244,198	356,122	560,850
Depreciation and obsolescence	275,000	400,000	500,000
Deb. interest and red.	135,079	143,566	142,904
Pension fund, etc.	48,500	110,000	130,000
Ordinary stock—			
Earned	534,205	629,627	736,360
Paid	358,937	380,441	565,148
Earned (%)	10.4	10.4	11.1*
Paid (%)	7	7½	8½*
General reserve	100,000	100,000	167,629
Carried forward	521,305	570,491	574,064

* On a capital increased from £8,616,365 to £8,821,820.
† After adjustments of reserves.

The balance sheet is impressive. Nearly one-third of the assets is represented by interests in subsidiaries, but those items which are explicitly stated show considerable strength. There are holdings of £3,900,237 in cash, money at short notice, and gilt-edged securities, and the creditors' account is covered by the debtors'. Funds available for the financing of any new development which

the group may require thus seem ample. During the last year the capital assets have increased by £308,265, and this increase excludes the developments in Lincolnshire, which are recorded in the Appleby-Frodingham subsidiary's accounts. On the whole, the group has built up a very powerful position after an ill-omened start. The ordinary stock is certainly among the most stable of steel company securities, and the yield of 5.8 per cent. at the present price of 29s. 6d. reasonably discounts any prospective decline in profits.

* * *

The most striking feature of the present report, however, is an addendum, in which the board explains in unique detail the business of the company. A coloured map shows the geographical position of the three main units in the group—Lincolnshire, Sheffield and Workington—and the markets they supply. For each branch there is a diagram showing in simplified form the layout of the plant, the sources of raw materials, and the technical links between the various parts of the process. A description of each branch is provided, together with a list of products and their uses. This addendum is a wholly new and praiseworthy achievement. The diagrams alone, produced with an admirable use of colour, are an education in steel economics, and companies in other industries might well emulate this excellent example. The addendum, in fact, provides invaluable information for a proper assessment of the problems of industry and of investment. It explains the programme of development which the group has now nearly completed, and underlines its far-reaching character. Workington has been completely modernised; important additions have been made to the works of Samuel Fox and Company; the Appleby-Frodingham plant at Scunthorpe has been renovated and is being extended by the addition of two large blast-furnaces, a coke-oven battery, and new open-hearth steel furnaces—the last of the major developments. Both financially and technically, United Steel Companies have made good use of the steel industry's recovery, and stockholders will read this supplement with interest and satisfaction.

* * *

Record Austin Motor Profits.—The Austin Motor Company has produced results of surpassing excellence, but the market is not impressed. On the day before record trading profits of £1,665,125 were announced, the ordinary shares fell 1s. 3d. to 40s., and merely gained 7½d. on the results, as if an increase of £170,000 in trading profits had been generally expected. The fact remains, however, that only a few thousand pounds of the increase have filtered through to the equity shares. Taxation and N.D.C. require £85,000 more and maintenance of plant is again substantially increased. After these provisions, the equity earnings are slightly higher at 79.2 per cent. The increases in the capital and revenue reserve allocations, raising the funds to £500,000 and £600,000 respectively, are made largely at the expense of the generous credit balance forward, as the following table shows:—

	YEARS TO JULY 31ST		
	1935	1936	1937
Profit	1,469,144	1,496,696†	1,665,125
Income tax	150,000	165,000	250,000*
Directors' fees	2,000	2,000	2,000
Maintenance of plant, etc.	483,553	530,828	606,542
Depreciation	145,043	173,795	179,506
Debenture service	64,625	71,500	71,500
Prof. and pref. ord. dividends	189,812	187,828	185,734
Ordinary shares:—			
Earned	434,111	365,745	369,843
Paid	241,202	237,312	233,422
Earned (%)	90.0	77.1	79.2
Paid (%)	50	50	50
Capital reserve	(a)	50,320	82,046
General reserve	185,000	75,000	125,000
Carried forward	370,842	373,955	303,330

* Including provision for N.D.C. (a) £22,459 share premiums transferred direct. † Includes unstated profits on investments.

These results have been achieved through an increase of 24.9 per cent. in home turnover (based on numbers of cars) and of 38.7 per cent. of export turnover. The current financial year has opened with spectacular increases of 35.4 per cent. and 105.1 per cent. respectively for the two classes during the first six weeks.

* * *

Investors, however, continue to suspend judgment on an appreciable increase in profits this year, and they may well be right. Costs have rapidly increased, and not until July were car prices adjusted, on what seems a moderate basis. Even if turnover continues to rise—if, in short, this is to be an "Austin year"—there is no guarantee that earnings will follow the same course. The company is in excellent financial shape, with £1½ millions in net current assets, which mask a substantial rise in stocks and creditors. Perhaps part of the increase in stocks and in plant and equipment (up from £1,572,511 to £1,913,272, after deducting £1,960,759 for depreciation reserve now disclosed) may be related to the Longbridge aircraft works, which the company has erected as part of the "shadow scheme." As much as £571,309 was in fact spent last year for capital purposes. The accounts are good, and the directors' report, apart from its references to competition and costs, reads confidently. But the 5s. ordinary shares, now at 36s. 10½d. ex dividend, yield £6 15s. 9d. per cent. The cost argument has evidently impressed the investor. Will he next have to consider the future demand for cars more closely?

* * *

Gaumont-British Position.—Those in ultimate control of the Gaumont-British Picture Corporation will look back to the year ended March last with more relief than pleasure. From the accounts presented this week, indeed, it seems likely that the 'opposition, which obtained a consolidated balance sheet last year by refusing to pass the accounts, may decide to go into action again. The report is as bare of information about the group as a whole as were its predecessors. Over three-quarters of the total assets consists of loans to, or shares and debentures in, subsidiaries. The profits, including income from investments, have fallen from £715,524 to £561,702. This sum, after providing for taxation, amortisation and depreciation of properties (down from £23,883 to £13,951) and debenture service, covers the preference dividend with as little as £16,463 to spare. But the treatment of the past year's production losses is the important feature of the report. The sum of £200,000 was specially reserved for production losses in the last accounts, and £435,278 has been taken from reserve. The losses amount to £766,809, so that the balance available to be carried forward is reduced from £163,484 to £31,953. This latter sum, and the £85,000 remaining in reserve, are the only revenue reserves remaining in a balance sheet totalling £13,496,544. What, it may be argued, is of the nature of a trading rather than a capital loss has only been met with generous help from past profits. This procedure is legitimate, and the preference dividend payment was upheld in the

Courts in April against those who argued to the contrary. But it clearly involved the Corporation in deeper financial predicament, and was decided only by a majority of the directors, whose interests are determined by the retention of the present form of control through a minority equity holding.

Shareholders, conceding these bygones, will study the present earnings position with concern. A depreciation reserve of £331,776 is shown in the balance sheet, while amortisation and sinking fund provisions from revenue last year totalled £84,882. The fixed assets of the whole group were valued last October at £16,273,149. Their book value is unknown, and the subsidiaries have presumably made depreciation provisions. But taking the parent company's fixed physical assets alone—£2,077,762 compared with £2,061,167 at the end of March, 1936—a depreciation rate of 4 per cent. seems no more than adequate. The conclusion is that the preference dividend is covered with so insignificant a margin that the adequacy of the group's depreciation provisions assume crucial importance. A consolidated statement of assets and profits is thus essential. The Corporation, indeed, has reached the stage where questions affecting capitalisation and control have become urgent.

Joseph Lucas Profits.—The full report of this motor accessories concern has satisfied market expectations, for the unchanged dividend gave no inkling of a 9 per cent. increase in profits. Since these are struck after depreciation, contingencies and taxation (and N.D.C. in the latest year), the full fluctuations in earning power are unrevealed, but the inference from the steady profits record is favourable. The business is exposed to keen competition, but Joseph Lucas have been as successful as any in obtaining their share of the increased demand—which is somewhat greater than the mere car registrations suggest. Recent profits are set out in the following table:—

	YEARS ENDED AUGUST 7TH		
	1935	1936	1937
Profit	266,168	320,642	351,298
Fees and staff fund	12,500	17,500	17,500
Preference dividends	10,734	10,647	10,474
Ordinary shares:—			
<i>Earned</i>	242,934	292,495	323,324
<i>Paid</i>	189,933	224,244	220,567
<i>Earned %</i>	16.0	19.6	22.0
<i>Paid %</i>	12½	15	15
Reserve	56,007	75,000	100,000
Carry forward	74,377	66,628†	69,385

† After adjustment.

The latest rise in profits swells the reserve fund, which now amounts to £675,000. Expansion of the business through self-finance is reflected in the balance sheet. Premises, which are shown after deduction of amounts written off, are £20,000 higher at £621,981. Investments in industrial companies have risen from £17,000 to £67,000, while interests in subsidiaries are as much as £247,000 higher at £724,815. This substantial increase presumably includes the acquisition of the remaining C.A.V.-Bosch, Ltd., shares. The company's strength goes far to merit a yield of 4 17s. per cent. on the £1 ordinary shares at 61s. 10½d., but the effects of rising costs and of future motor demand must also be carefully considered.

Murex Progress.—The market did not react generously to the Murex dividend. The speculative operator is frequently disappointed when a company, having distributed a substantial capital bonus, fails to maintain the same percentage rate on the new capital as on the old. So it was with the Murex dividend. But the

long-term holder will find good cause for satisfaction in the accounts. Trading profits after depreciation have jumped by 40 per cent.—from £216,335 to £303,501—and total income (including dividends from Murex Welding) is up from £278,741 to £381,550. The ordinary capital is now £1,000,000, compared with £553,500 ranking last year; but this scale of profits comes within an ace of maintaining the previous year's rate of earnings. Seen in the light of the report, accordingly, the 20 per cent. distribution provides yet another instance of increased directorial caution. The rapid rise in profits over the past three years is analysed below:—

	YEARS ENDED JUNE 30TH		
	1935	1936	1937
Trading profit	190,391	216,335	303,501
Total income	229,323	278,741	381,550
Depreciation, etc.	22,421	40,759	12,174

* After writing off £3,269 issue expenses.

† And capital bonus: in 1935 of 100% on £270,000 and 2½% on £540,000; and in 1936 of 66½% on £600,000.

‡ After crediting £14,000 refund.

Murex has enjoyed a double equity in recent years—first in industrial recovery generally, and secondly in the development of new metal technique, including welding, and special alloys. Nor do the directors yet see a halt to the company's construction programme, despite the substantial expansion in fixed assets last year. The consolidated balance sheet, in fact, shows that land and plant together now total £648,000, compared with £263,000 at the end of June, 1936. Stock has jumped from £263,000 to £408,000. Yet the liquid position remains impressive, thanks to the cash issue last year. The £1 shares have been affected by the general *malaise* this week, and stand at 4½, ex dividend, to yield 4.6 per cent. on dividend and 8.4 per cent. on earnings. They may move with the rest of the market in present conditions, but long-term factors are in their favour.

Philips Lamps Recovery.—The announcement of an 18½ per cent. dividend, against 6 per cent., had prepared investors for a substantial rise in profits. After the disappointing 1935-36 profit of Fls. 4,064,000, the latest profits of Fls. 19,674,000 are indeed impressive—they are, in fact, the highest since 1929. The accounts are made up to April 30th, so that the benefits of the devaluation of the guilder were enjoyed for only seven months of the year. The financial position of the undertaking is strengthened in consequence. A sum of Fls. 3,000,000 is taken to a special reserve for future extensions and various reserves receive some Fls. 4,500,000. The revaluation of foreign assets provides a surplus of Fls. 10,107,000, which has been placed to "Revaluation reserve" for use against future exchange and transfer losses, without drawing upon the General Contingency Reserve. The report, as usual, is very comprehensive.

Other Company Results.—Our usual analysis of profit and loss accounts, appearing on page 92, comprises nearly forty further companies, including *Perak River Hydro-Electric Power Company*, *The Financial News* and *London Express Newspaper* profits, and the first accounts of *Horlicks, Ltd.*, as a public company. The results are discussed on page 91 under the heading "Shorter Company Comments."

THE WEEK IN THE MARKETS THE STOCK EXCHANGE

SETTLING DAYS

TICKET: OCTOBER 19

ACCOUNT: OCTOBER 21

THIS week, like its immediate predecessors, has been a very depressing one for the markets. Many factors have contributed to their gloom. Chief among them has been the continued chaos on the American markets, every day of sharp recovery being followed by two days of equally excited slump, with evidence of forced selling. The recent fall in prices has accentuated doubts about the economic outlook. The market has been cautious about the continuance of prosperity for some months, but now it appears to be becoming perceptibly pessimistic about industrial developments. And as prices fall, rumours of difficulties become widespread.

The chief consequence has been the continuous and substantial rise in gilt-edged, with undated stocks highest in favour. The partial success of the Hull issue was followed by eager application for the Hertfordshire loan. In the Colonial section Australian issues have been in demand, with rises throughout the week. Foreign bonds have, however, suffered from the general political uncertainty. German stocks have fallen without interruption. Greek and Hungarian issues also fell; and President Roosevelt's speech hit Japanese issues severely. Chinese loans have moved erratically, on the whole downwards. Among the South Americans Brazilians have slumped badly.

Home Rails were comparatively strong over the week-end, the market hoping for good things from the first traffics to show the effects of higher fares. These, however, proved very disappointing and almost all the ordinaries and many prior charges collapsed. London Transport "C" stock was sold in anticipation of the dividend. Among foreign rails, United States have tumbled down in sympathy with Wall Street, and the Argentine group has been very feeble.

But it has been the industrial markets that have borne the brunt of the week's troubles. There was at one time on Wednesday a good deal of distress selling for cash, concentrated chiefly on trans-Atlantics, which naturally crashed, but also distributed over the more speculative issues elsewhere. Following this lead the vast majority of quotations have moved downwards, save when a particularly good dividend, such as Tube Investments, has come to the rescue. Iron and steel, aircraft, motors (especially Standard), shipping, and textiles have been the most depressed groups. Bank shares have moved in sympathy with gilt-edged.

Oil shares shared the general weakness. Some early Paris selling depressed the leaders, and Royal Dutch was unmoved by share bonus rumours. Wall Street's further break was followed by fairly heavy selling, in which Anglo-Iranian, Burmah and Shell were particularly marked down. Wednesday's late recovery was hardly more than a Thursday storm, but some gain in confidence was apparent on Thursday. In the rubber share market, the week was one of the worst experienced for some time. After a firm opening, and prices of recovery in the commodity price caused disquiet, and prices sagged under slight selling for want of support. As the price of rubber broke sharply later, falling below 8d., selling pressure increased noticeably, the volume of sales being the heaviest for some months. The market steadied itself somewhat in mid-week. Although tea shares were dull, prices were firmer than in other sections.

In Kaffirs the undertone was not inherently weak, but the nervousness of markets generally restricted business and depressed prices. With the approach of a settlement that threatened to be difficult, dealers preferred to keep even books. Other factors were the closing of the Johannesburg stock exchange on Monday and slight selling pressure from Paris. Public support was absent except for a few of the re-imposition. Rhodesian copper issues were helped by the reimposition of restriction and by the recent dividend announcements, but could not resist the general depression. Base metals were consistently weak.

NEW YORK STOCK EXCHANGE

APPARENTLY Wall Street operators are unable to keep their feet off the Gadarene slope, and prices have again slumped. A slight improvement in Saturday's short session at the end of last week was forgotten on Monday of this week, and on Tuesday prices crashed as heavily as in any of the recent slumps. The causes given are as various, and individually as inconclusive as ever. The railway wages award was better than had been expected, but there was no sign of permission from the I.C.C. to increase rates, so railway shares fell. The *Iron Age* estimate of steel mill activity for the week is 66 per cent. of capacity against 74 per cent. last week, the fall being attributed to the non-appearance of new orders from the motor industry, the slackening in constructional orders, and the caution of the railways. So iron and steel shares slumped. Industrials generally have fallen heavily, and utilities have sagged. Operators profess to be troubled by the renewed talk of an emergency session of Congress in November, and by the President's strong speech on the foreign situation. The weakness of Wall Street and the fall in commodity prices have weakened London, which in turn has reacted upon Wall Street. There is no clear justification yet for the fears of an industrial slump, but Wall Street seems determined to generate its attendant conditions. On the bond market speculative obligations have followed the stock market, but government bonds have been relatively firm.

By courtesy of the Standard Statistics Company, Inc., of New York, we print the following index figures of American values calculated on closing prices (1926=100):—

CAPITAL ISSUES

THE Hull loan at the end of last week was not an impressive curtain raiser to the new issue market's reopening, and the underwriters were, in fact, left with 26 per cent. of the issue. The continued strength of gilt-edged, however, has assisted the corporation issue market particularly, and the *Hertfordshire County Council* issue on Thursday was eagerly subscribed, with the stage in full chase. The county is a good name, and its issue, on identical terms with Hull (including a full six months' interest next May), makes no allowance for the perceptible difference in credit status of the two borrowers. The city of *Salford* has placed the maximum amount of £250,000 of 3½ per cent. stock, with a single date (1957) at 101, less 1 per cent. commission. No industrial issues have been made this week, but *Thomas Bolton and Sons* have published particulars of an issue of 5 per cent. preference shares, to be subscribed by Telephone and General Trust.

PUBLIC OFFER

Hertfordshire County.—Issue of £1,000,000 3½ per cent. redeemable stock at 101. A trustee stock. Redeemable at par May, 1963, or from 1958 on notice. Ranks with existing stocks. Estimated population, 1936, 460,150; rateable value, 1937, £3,819,324; present county rate, 7s.; estimated net loan debt now £4,348,000. Proceeds: £355,523 for debt redemption; balance for county purposes. Lists closed at 9.5 a.m. October 7th. Heavily oversubscribed.

BY STOCK EXCHANGE INTRODUCTION

Salford Corporation.—Issue of £250,000 3½ per cent. stock purchased by Messrs. Pember and Boyle at 101, less 1 per cent. commission. To be redeemed at par September, 1957. Ranks with existing stocks. Proceeds to repay short term mortgage loans and for municipal purposes. Population last census 223,438. Total assets, £12,083,473; surplus assets, £6,284,695. Rateable value, £1,130,906; present rates, 17s. 2d. Net loan debt, £4,856,318 (of which £1,612,862 non-productive).

Bolton (Thomas) and Sons, Ltd.—Particulars of issue of 300,000 5 per cent. cumulative £1 preference shares. Telephone and General Trust take issue at 20s. 4½d. in cash. British Insulated Cables and Callender's Cable and Construction Company are purchasing, from the Trust, 50,000 shares at 20s. 6d. Other capital in issue: £400,000 4½ per cent. 1st mortgage debenture stock and 500,000 £1 ordinary shares.

PRIVATE PLACING

Anglo-Scottish Investment.—The directors have placed privately £20,310 3½ per cent. debenture stock, 1949–52. This brings the amount of this stock in issue up to £324,650.

BONUS SHARES

Easterns, Ltd.—Tax free bonus from capital reserve of ordinary shares at the rate of one share for 20 held to holders registered as at October 7th.

Hants and Dorset Motor Services.—It is proposed to distribute a 12½ per cent. capital bonus. The sum of £50,000 of the depreciation reserve is to be transferred to general reserve and applied in paying up 50,000 £1 ordinary shares to be distributed in the proportion of one for eight held on October 15th, and ranking as from April 1, 1937.

Monte Video Waterworks Company.—The capitalisation of £325,000 of the undivided profits and a share bonus distribution equivalent to 25 per cent. is proposed. Holders are to receive one new £1 share for £4 of ordinary stock held, to rank with existing stock, but not to participate in dividend for 1937.

ISSUES TO SHAREHOLDERS ONLY

Brynmor Steamship.—Issue of 373,750 2s. ordinary shares at 4s. to shareholders on September 30th (one new for two held).

Maryborough Mining and Finance.—Issue of 100,000 1s. shares at par.

Pressed Steel.—Issue of 552,548 5s. ordinary shares at £1 (one new share for five held on October 4th).

Singer Motors.—Issue of 473,092 5s. ordinary shares at 5s. 6d., in the proportion of one for every three preference and one for every six ordinary held on October 1st.

CONVERSIONS AND REPAYMENTS

United River Plate Telephone.—The £300,000 4½ per cent. debenture stock is to be redeemed on April 8, 1938, at 105. The International Telephone and Telegraph Corporation offers to supply out of its own holding 5½ per cent. cumulative redeemable first preference shares of United River Plate Telephone Company to any debenture holder who prefers that exchange. For each £5 of debenture

COMPANY MEETING

BAJOE KIDOEL RUBBER AND PRODUCE COMPANY, LIMITED

TEN PER CENT. DIVIDEND

The twenty-sixth ordinary general meeting of this company was held, on the 5th instant, in London.
Mr H. Eric Miller, who presided, said: For the year to March 31, 1934, prior to the agreement for international regulation, our average net price was 3.88d. per lb.; 1935, 5.88d. per lb.; 1936, 6.01d. per lb.; and to March 31, 1937, the year now under review, it was 8.39d. per lb.

On the basis of the percentages exportable during 1937 as at present officially fixed we estimate that for a crop of about a year we shall be able to account for a crop of about 2,250,000 lb. Including contracts for forward delivery we have already sold 1,050,000 lb. at an average price equivalent to approximately 9 1/2d. per lb. London landed terms. Out of the 1938-39 crop we have sold 188,000 lb. at an average of 11 1/2d. per lb. London landed terms.

The increase in the net selling price of our coffee from Fls. 10.14 per picul in 1935-36 to Fls. 13.22 per picul in the year under review is largely due to the devaluation of the guilder. Notwithstanding the better average we incurred a small loss on the coffee produced on our Java estates. We might have avoided this—a book-keeping loss—had we written more of the overhead charges to rubber and less to coffee, but the net result would have been the same.

The English company received dividends from the local companies and finished the year with a credit balance of £25,339 13s. 8d. The amount brought forward from the previous year was £37,977 9s. 3d., making available £63,317 2s. 11d.

A dividend of 10 per cent. less income tax is proposed, which will leave £38,421 2s. 11d. to be carried forward.
The estates stand in our books at the exceptionally low capital cost of £22 per acre, from which figure it would be quite proper to make some deduction by reason of the substantial nature of our liquid resources.

The agricultural policy which we are carrying out of improvement of the old areas by rejuvenation and by replanting is proceeding well according to plan, and we hope that our Kapok developments will in due time add grist to the mill.

The report and accounts were unanimously adopted.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

TREASURY BILLS BY PUBLIC TENDER

Tenders for £50,000,000 Treasury Bills were opened on October 1, 1937. The amount applied for was £84,285,000. Tenders were accepted for Treasury bills at three months dated Monday to Friday at £99 17s. 3d. about 43 per cent. and above, in full; Saturday at £99 17s. 4d. and above, in full. The average rate per cent. was 10s. 9-02d.

THE BANK OF LONDON AND SOUTH AMERICA, LTD., has received telegraphic advice from Valencia that the gold surcharge for payment of Spanish customs duties has been fixed for the period October 1st to 10th at 205.91 per cent. The previous rate was fixed as from September 21st at 201.61 per cent.

Overseas bank rates and exchange rates for South Africa, Central and South America and Australasia appeared in last week's issue on page 45.

GOLD AND SILVER

The following statistics of imports and exports of gold and silver for the week ended October 7, 1937, are issued by the Statistical Department of H.M. Customs and Excise.

IMPORTS AND EXPORTS OF GOLD (Into and from United Kingdom)

No gold movements were reported at the Bank of England between October 1st and 7th. Details of previous movements were given in last week's issue on page 46.

GOLD MARKET

Messrs. Samuel Montagu and Company write on October 6, 1937:—The Bank of England gold reserve against notes amounted to £326,406,625 on September 29th, showing no change as compared with September 22nd.

Refugee capital which for years has been seeking sanctuary from the dangers of devaluation is once again "taking cover" in gold, which it forsook so precipitately during the gold scare earlier this year. The very strong demand for holding purposes has raised prices at "fixing" as high as 3d. over the arbitrage parity for shipment to New York, and after fixing deals have shown even wider premiums. About £4,600,000 has been dealt in at the daily fixing during the week, and large amounts have been done after fixing.

The s.s. "Strathnaver," which sailed from Bombay on October 2nd, carries gold to the value of about £285,000.

SILVER MARKET

The market has ruled quiet. Offerings have been somewhat smaller in volume and modest American commercial demand, together with Continental purchases and some bear covering, have sufficed to absorb them and to impart a slightly steadier tone. India has sold on balance and speculators have resold whilst there have also been some sales on China account.

Prices, October 6th, at 194d. for cash and 19 1/4d. for forward are, respectively, the same as, and 1/4d. above those of a week ago.

News of the large shipments of silver now being made from Hongkong to London has been quietly received and with the technical position now greatly improved prices would probably respond readily to any renewal of demand from India. Such a renewal may perhaps be expected fairly soon after the close of the monsoon season.

Quotations for gold and silver are shown below:—

1937	Price of Gold per Fine Ounce	Equivalent Value of £ sterling	Price of Bar Silver in London per ounce standard	Price of Silver New York per ounce fine
			Cash	Two Months
Sept. 30	140 7 1/2	12 0 99	19 1/2	19 1/2
Oct. 1	140 7 1/2	12 0 99	19 1/2	19 1/2
" 2	140 6 1/2	12 1 12	19 1/2	19 1/2
" 3	140 6 1/2	12 1 07	19 1/2	19 1/2
" 4	140 8	12 0 95	19 1/2	19 1/2
" 5	140 7 1/2	12 0 99	19 1/2	19 1/2
Average	140 7 1/2	12 1 02	19 875	19 771
Oct. 7	140 6 1/2	12 1 07	19 1/2	19 1/2

The highest rate of exchange on New York recorded during the period from September 30th to October 6th was \$4.95 1/2, and the lowest \$4.94 1/2.

Statistics for September, 1937:—

	Cash delivery	Two months' delivery	Par Gold
Highest price	20d.	19 1/2d.	140s. 7 1/2d.
Lowest price	19 1/2d.	19 1/2d.	140s. 0 1/2d.
Average	19 889 1/2d.	19 802 1/2d.	140s. 4 38d.

APPOINTMENTS AND PERSONAL

Colonel Norman Kennedy, D.S.O., T.D., Doonholm, Ayr, has been appointed an ordinary director of the Bank of Scotland.

Mr H. A. White has been appointed chairman of Marconi's Wireless Telegraph Company in succession to Lord Inverforth, who was elected president. Mr White has also been appointed chairman of Marconi International Marine Communication Company in succession to Lord Pender, who was elected joint president.

Mr Henry John Gardiner has resigned from his directorship of the Atlas Assurance Company, and to fill the vacancy the directors have appointed Mr Cecil Hugh Falloon.

Mr Edward L. Heyburn has been appointed secretary of Industrial and General Trust and of Second Industrial Trust, in succession to Mr C. H. Thomas.

Mr William Piercy is retiring from partnership with Messrs Capel-Cure and Terry on October 18th and has become a partner with Messrs Fern and Crothwaite as from June 20, 1937.

Mr R. N. Davies has been appointed a director of the Rio de Janeiro City Improvements Company.

The Hon. D. Montagu has resigned his seat on the board of Cater & Company, and Mr Thomas Loel Evelyn Bulkeley Guinness has been appointed a director.

(s) Paid on a larger capital. † Free of income tax. (c) Also bonus of one ordinary share for each 20 ordinary shares held out of capital reserve.

BABCOCK AND WILCOX.—Interim ordinary dividend is maintained at 4 per cent. BURMAH OIL COMPANY.—Interim dividend on the ordinary shares maintained at 5 per cent.

DUNLO

The position of ordinary shareholders would not be altered, though amalgamation in England would be an advantage.

GUARANTY TRUST COMPANY.—The statement as at September 30th shows deposits at \$1,528,130,338 (against \$1,619,256,428 on September 30, 1936) and total resources at \$1,852,543,514 (against \$1,953,014,382). Cash, etc., stands at \$511,167,649 (against \$439,797,700), U.S. Government obligations at \$530,451,391 (against \$750,329,192), and loans and bills purchased \$679,155,536 (against \$603,577,723). Capital and surplus are unchanged at \$90,000,000 and \$170,000,000 respectively, and undivided profits are \$10,657,925 (against \$8,070,734).

LONDON EXPRESS NEWSPAPER.—Trading profits for year to June 30, 1937, amounted to £210,083, compared with £211,528. A sum of £50,000 is again deducted for depreciation and £10,000 for tax. Interest on loans, etc., reduced from £1,822 to £151. Net profit was £273 higher at £146,594. Dividend of 10 per cent. on ordinary shares, leaving £95,115 to carry forward, compared with £94,322.

ANGLO-TRANSVAAL CONSOLIDATED INVESTMENT COMPANY.—Net profit for the year to June 30, 1937, amounted to £302,586. Brought forward £393,106, making available £695,693. To reserve, £100,000, £150,000 to reserve for options, etc., and £25,000 for taxation. Two dividends, aggregating 100 per cent., absorbed £150,000. Carry forward £270,693.

THE FINANCIAL NEWS.—Net profit for year to June 30, 1937, £56,930, against £50,207, after £2,662, against nil, for tax and N.D.C. Amount available is £130,961, against £100,325. Ordinary dividend 10 per cent., as before, plus 10 per cent. bonus, against 5 per cent. To reserve £8,260, against nil; to reserve for libel, £926, against nil. Forward £90,228, against £74,031.

PERAK RIVER ELECTRIC.—Accounts for year to July 31, 1937, show net revenue of £339,753. This compares with £264,543 (after £40,000 depreciation). To depreciation account, £68,104, against £15,340. A non-recurring charge £16,000, against net revenue for prior lien debenture stock interest, £8,000 for staff pension fund. Ordinary dividend raised from 6 per cent. to 7 per cent. payable on a capital enlarged by the issue

last March of 358,041 new shares. There were also then issued 350,000 new preference shares. Carry forward is £8,908.

BORNEO COMPANY, LTD.—Profit for year to March 31, 1937, £76,522, compared with £20,538 a year ago, which was raised to £33,467 by a transfer of £12,929 from teak reserve. Two years' preference dividend to August 4, 1934, is to be paid, requiring £44,933. To reserve £14,000, against nil. Carry forward £23,304.

ROVER COMPANY, LTD.—Profits for year to July 31, 1937, amounted to £304,968, against £219,375. Increased allowances for depreciation and maintenance, and after £50,000, against nil, for tax and N.D.C., the amount earned for dividend is up from £127,782 to £139,563. Distribution for the year is raised from 10 per cent., tax free, to 17½ per cent., less tax, and the general reserve transfer is maintained at £50,000. New issue expenses take £1,142, leaving carry forward at £49,368.

INSTITUTE OF CHARTERED ACCOUNTANTS.—The autumnal conference of the Institute opened at Liverpool on Tuesday, October 5th, and concluded on Thursday with a luncheon on board the "Laconia." Mr Frank Lindsay Fisher presided at the opening meeting. In his address he discussed the function of the Institute in the accountant's training. In commenting on recent events of professional interest, he referred to the introduction of N.D.C. and the honesty of the British taxpayer. Papers were read by Mr H. M. Barton on "Pitfalls in the path of a professional accountant"; by Mr Frederick Cook on "Cotton importing finance and marketing."

"KEYSTONE" GROUP OF UNIT TRUSTS.—British Industrial Corporation have issued a statement referring to Mr. F. Lindsay Fisher's address to the Institute of Chartered Accountants, in which he suggested that sales by sub-unit holders prompted by a declining market would depress market values through managers having to sell underlying securities. The Corporation state that in September not one share was sold on the Stock Exchange, that their sales of sub-units were nearly ten times in volume the amount of repurchases and that underlying securities for those sales had been bought.

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

Quotations for many important primary products continued their headlong decline this week. But even at the lower level of prices there was little evidence of an increase in consumers' purchases. Consumers' stocks of many materials are now fairly low. Nevertheless, they continue to cover only immediate requirements in anticipation of a further fall in prices, partly owing to unfavourable business news from the United States and partly because of the deterioration of the international political situation. And, as supplies of many materials are now increasing, there is little likelihood of a resumption of large-scale buying in the near future.

The decision of copper producers to resume the restriction of output has failed to arrest the fall in prices. Actually, copper, lead and spelter this week touched the lowest levels this year. Current tin prices are the lowest since last February, in spite of a further reduction in the world's visible supplies during the past month. Rubber was again marked down, and textile raw materials were generally cheaper. Wheat, after advancing in recent weeks against the general trend, was also quoted lower at Liverpool, in spite of the continued scarcity of available supplies, revealed by a substantial reduction in world shipments compared with a year ago. Raw sugar followed the general downward trend.

In contrast, the market in provisions and meat was generally steady. Butter was again marked up, cheese was firm, and hams were dearer.

The general trend of quotations for primary products in the United States was also downwards. Moody's index of the prices of staple commodities (December 31, 1931 = 100) declined from 185.4 to 177.1 during the week ended last Wednesday, against 193.5 a month ago and 183.4 a year earlier. The whole of the advance over the year has thus been lost by the headlong fall of recent weeks.

COAL

SHEFFIELD.—Output of coal is increasing to meet the still growing industrial demand. Household fuel is steady, after a quieter demand due to the late spell of warmer weather. All grades of coke are readily taken up, and the rise of half-a-crown per ton for large patent oven coke and all sizes of graded coke which came into operation at the beginning of the month in the area of the Midland Amalgamated District has had no hampering effect on sales. On the export market conditions are fairly steady. Supplies for prompt shipment are not easy to obtain.

NEWCASTLE-ON-TYNE.—Whilst enquiry for Northumberland steam coal from home consumers has been slightly more active, this market is very quiet, with the exception of graded fuel, and prompt trade for large section continues firm; demand is as brisk as ever for manufacturing coals, and all collieries are comfortably stemmed. The Durham and inclined to harden further with the approach of winter.

GLASGOW.—The Scottish coal trade is still experiencing a lull in regard to the shipping demand, and as a result prices here and there are showing an easier trend. This applies especially to the Fife and Lothians districts. The Lanarkshire and Ayrshire collieries, with the benefit of a larger domestic trade, are more favourably placed. Most sizes of nuts are now freely offered, and in Fife third steam and most sizes of Scotch coal realised a profit of 1s. 4.74d. per ton, compared with 1s. 1.84d. per ton in August last year. Output showed little change at 2,601,930 tons, while realised pit-head prices rose from 12s. 5.23d. to 14s. 1.77d. per ton. Production costs were up from 11s. 3.41d. to 12s. 9.03d. per ton.

CARDIFF.—Coal shipments continue active at the South Wales ports. Last week they were between 40,000 and 50,000 tons below the weekly average total for the previous month, but there has been a sharp recovery this week, when daily loadings have exceeded 100,000 tons. Exports are almost entirely on contract account, and the provisional output quota for the December quarter is 10,200,000 tons, or about 5 per cent. above the original allocation for the corresponding period of last year. Coal prices are unchanged except to the extent of the addition as from October 1st on rail-borne coal of an amount equal to the 5 per cent. increase on conveyance rates, siding rents, demurrage on wagons, and other railway charges. Coke continues very scarce and firm, and patent fuel exports are slightly less active, with quotations firm; while Portuguese pitwood is a shade easier at 26s. 8d. to 27s. 6d. ex ship. It is understood that the suspension of the trade share provisions of the Central Control Selling Schemes, originally fixed for the period April to September, is being temporarily continued with the approval of the Mines Department of the Board of Trade.

IRON AND STEEL

LONDON.—The weekly report of the London Iron and Steel Exchange indicates that there is no relaxation in the pressure from consumers to secure delivery against contracts and that the whole of the production of the steelworks is passing at once into consumption. These conditions are likely to rule for some months to come and the majority of un-executed orders on their books. In these circumstances the volume of new business is naturally restricted, since neither makers nor consumers are anxious to add to the present congestion. In the pig iron market a more comfortable situation exists than for a long time past. The heavy home production, reinforced by considerable imports of steelmaking iron, has eased steelmakers' anxieties, and the output of British foundry iron now appears sufficient to meet the requirements of the consuming industries.

Stringent conditions continue to rule in the semi-finished steel section of the market, and although the production of the British works is pressed to the utmost it is still not large enough to supply the quantities needed by users. Imports from the Continent against the quota, however, appear to be increasing and should help to ease the situation.

The demand for finished steel is unabated; but it is almost impossible to find a works in a position to accept business for delivery before the end of this year. New business is quiet with overseas markets, but considerable deliveries are being made against old contracts.

MIDDLESBROUGH.—In the local pig iron market there is little opportunity for new business. Producers are fully sold to the end of the year. Local foundries continue to receive rationed supplies of foundry pig iron which, with the importations from the Continent, are sufficient for present requirements. East Coast hematite is being supplied to local and Midland consumers under existing contracts, and further quantities are being released for export. There have been no alterations in pig iron prices. It is an indication of the trend of events that the price of Scottish foundry pig iron has been advanced by 5s. per ton.

Rather better supplies of semi-manufactured steel have been received by re-rollers both from home producers and from the Continent, but consuming works have no stocks and would welcome larger deliveries. The reduction in the shipments of manufactured steel to the Far East, mentioned above, has not had any material effect on the position; conditions remain the same, producers having sold their output over the next few months and are running their plant at high pressure in order to reduce arrears on existing contracts.

Good Durham blast furnace coke is firm at 42s. per ton, delivered at the furnaces here, whilst foreign ore business is spasmodic with prices governed chiefly by current freights. The rate of freight paid recently from Bilbao to Middlesbrough is 13s. 6d. Heavy steel scrap is in good demand and official prices, which are unaltered, remain as follows:—69s. per ton for No. 1 quality, and 67s. per ton for No. 2 quality, delivered at the works.

SHEFFIELD.—Conditions in the iron and steel market have undergone little change this week. There is plenty of inquiry for both foundry and forge iron, but makers are too heavily committed to the end of the year to add to their contracts, and with hardly anything for current disposal odd lots for immediate delivery are few and far between. Deliveries are still in arrears, but the delays are less pronounced. Although quotations were expected to remain unchanged over the remainder of the year, there is talk of early revision in view of sharply rising costs. Business in East Coast hematite had become rather easier to arrange, but the pressure by consumers to fix up contracts is causing makers to hold off to some extent. There is not much doing in West Coast hematite, of which there is a distinct shortage. Bar iron makers are well booked and are not seeking further orders for the present. Some imported bars are available, but the price hampers sales. Basic and acid steel billets are in as heavy demand as ever, and the call for wire rods, stainless steel and steel strip is such that it cannot be fully met. High-speed steel prices are rising. This material in scrap form is fetching at least £100 per ton.

GLASGOW.—Steelmakers are still unable to meet all the demands made upon them, although output is passing into the hands of users almost as quickly as produced. There is continual pressure from consumers for supplies, and makers are unable to entertain all the business offering on account of the already congested state of order books. Whilst recently there has been some improvement in deliveries of semis to West of Scotland users, who seemed assured of regular supplies for some little time at least, there is at the moment some uncertainty concerning deliveries of near future supplies. This is causing re-rollers considerable anxiety, for programmes have been arranged and orders accepted on the assumption that supplies would be available in sufficient quantity to keep such plant as has been in operation fully employed. There is a steady demand for all classes of finished material, and in the manufacturing industries new business is plentiful.

CARDIFF.—Business in the South Wales iron and steel trades continues active. In the tinplate industry production is being well maintained. The latest official returns show an output equal to 77.18 per cent. of allotted capacity. Future commitments are heavier than they were at the corresponding period last year, but prices both for inland and export are unchanged. Galvanised sheets are quoted at £18 15s. per ton for foreign shipment, and steel bars at £7 15s., delivered. Exports of tinplates at Swansea last week totalled 7,300 tons, compared with 9,595 tons the previous week, and 6,090 tons in the corresponding week last year.

Agencies in: New York, Manchester, Bradford

MEAT.—At Smithfield Market, on Wednesday last, Argentine chilled beef was quoted at 4s. 2d. to 4s. 8d. per 8 lbs., as compared with 4s. 4d. to 4s. 8d. a week ago. New Zealand frozen mutton was 3s. 4d. to 4s. 2d. per 8 lbs., as against 3s. 4d. to 4s. 2d. a week ago. According to the Smithfield Market official report, supplies during last week amounted to 8,521 tons, a decrease of 1,195 tons on the corresponding week last year. Beef and veal accounted for 4,548 tons, mutton and lamb 2,185, and poultry 1,788.

RUBBER.—The market has again been weak, and prices have further declined. Apart from the general uncertainties of the international political outlook and the *malaise* of the stock markets, there are fears of a decline in industrial activity. Meanwhile, it is understood that the next meeting of the International Rubber Regulation Committee has been provisionally fixed for November 30th, though it is possible, in view of the further fall in prices, that an earlier meeting may be convened. The spot price in New York on Wednesday was 16½ cents per lb., compared with 17½ cents per lb. a week ago and 19½ cents a month ago. Wednesday's official buyers' price for standard ribbed smoked sheet on the spot in London was 7½ p. per lb., as against 8½ d. on the corresponding day last week. In foreign positions business has been done at 7½ d. to 8½ d. for "November" shipment, as against 8½ d. to 8½ d. a week ago. Stocks in London and Liverpool at the end of last week totalled 47,789 tons, against 49,950 tons a week earlier. A year ago stocks amounted to 103,015 tons.

WHOLESALE COMMODITY PRICES

UNITED KINGDOM: LONDON, October 6th

THE WEEK IN THE MARKETS

New York Stock Exchange	127
-------------------------	-----

the exhibition which opens this week is a disappointment, the next season's production will be at least as high as the last. There is, indeed, no sign of any serious falling-off in the purchasing power of the public, since wages are rising and the recent weakness in the commodity markets may check the rising cost of food. Some capital goods industries have suffered a diminution in new orders, but steel is well supplied with armament orders, apart altogether from the continuing demand from the motor industry.

This is the home industrial picture. In finance there is no prospect of anything but the continuance of cheap and abundant credit. The export trades, as always, are the most vulnerable sector of the national economic front. But by every test they are less vulnerable than in 1929. The primary producing countries are not now dependent for the maintenance of their equilibrium on continued loans from abroad; on the contrary, their financial position is strong. The very extent of the present barriers to trade limits the field for further restriction of our exports.

In general, then, it can be said with assurance that in every field the prospects are better, the economic defences are sounder, than in 1929. A slump of the dimensions that were experienced between 1929 and 1931 seems to be highly unlikely. But it also seems to be the case that the bulk of the better-placed industries are looking for little more than a maintenance of their present activity, while others can hardly avoid a setback. This fact, coupled with the undoubted deterioration in sentiment, seems to make it almost inevitable that there will be some decline in trade in Great Britain next year.

That decline may be slight, and is unlikely in any case to be really drastic. Just how far it will go will depend entirely on the development of the economic situation in the world as a whole. And that in its turn can be held, with a certain economy of reasoning, to depend upon two factors: the trend of commodity prices and the state of affairs in the United States. The outlook for world commodity prices seems to be very similar to that for British domestic industry. The position of some commodities is not entirely reassuring, but infinitely better than it was in 1929. In the majority of markets stocks have been reduced to normal proportions; demand will be partly buttressed by re-armament, while supply

will be held in check by restriction schemes; and all over the world Governments are committed to policies of monetary expansion. It would be a mistake to rule out the possibility of a decline in commodity prices; but it can hardly be severe.

The American position is the greatest enigma of them all. Fundamentally, all the factors seem to point to further expansion. The purchasing power both of the farmer and of the urban wage-earner is still rising, and there are large arrears of necessary capital equipment still to be made up. Both consumers' and capital goods industries would thus seem to be assured of continued demand. But if this is the truth, is it conceivable that Wall Street is so utterly misled? And even if the security market is completely wrong, is it not, nevertheless possible that its attack of pessimism may react unfavourably on the realities of industry?

This survey of the economic outlook has necessarily been summary. But everywhere it appears that the ascertainable facts of industry and commerce are either favourable or not badly unfavourable. Given a buoyant psychology, further progress in the world as a whole, and maintenance of substantially the present level of activity in Great Britain, could be predicted with some assurance. But a buoyant psychology is just what is lacking. The economic factors are very much better than in 1929. But the international political position is incomparably worse. It is questionable whether the world can afford even a minor setback to economic recovery at a time when political tension is already almost unbearable.

Relaxation of this tension thus becomes an economic as well as a political imperative. This is not merely the major prescription for maintaining recovery, but almost the only one; for, in the paradoxical state of our present affairs, the more familiar economic remedies are not immediately applicable. Money can hardly be made cheaper; nor can public works plans be put into operation while there is still a shortage of labour. Every finger, economic as well as political, thus points to the single conclusion: it should be the supreme task of Governments, in the interests of prosperity no less than of peace, to bring the present international uncertainties to an end. Any expenditure of courage and resolution to this end will be paid most directly in cash, as well as in the peace and liberty of mankind.

Mussolini's "No"

THE Franco-British invitation to Italy to take part in a three-Power Conference on the withdrawal of foreign troops from Spain has been answered by Italy with a flat rejection. Even this answer was not forthcoming until after a polite but insistent intimation from the French and British diplomatic representatives in Rome that an early reply was wanted. The texts of both the invitation and the answer have now been published. The terms in which the Franco-British document is couched turn out to be, if possible, even more conciliatory than had appeared from the semi-official summary. In language—and, in most passages, also in tone—the Italian document, too, is courteous. But, under this thin sugar coating, SIGNOR MUSSOLINI has tendered to MM. CHAUTEMPS and CHAMBERLAIN a very bitter pill. Paris and London have had the difficult task since the Italian Note arrived last Saturday of deciding whether they should swallow it.

There is no doubt that the Italian reply was a keen disappointment to the French and British Governments. The more deeply it is scrutinised, and the deeper below the surface the problems it raises are probed, the less

attractive it becomes. The Anglo-French Note of October 2nd, extending the invitation, recalled CIGNANO's recent assurances to the British *chargé d'affaires* in Rome "that there was no present intention" [in the Italian Government's mind] "of permitting the despatch [sic] of further volunteers to Spain." The Italian reply passes over this reminder in complete silence. Again, the Franco-British Note recalled SIGNOR BOVA SCOPPA's recent assurances to M. DELBOS at Geneva that Italy had no intention of making the smallest change in the territorial status of Spain; that she had no designs upon the Balearic Islands; and that the integrity of the continental and insular territory of Spain would be strictly respected. In this context, the Western Powers, in their Note, drew a distinction between territorial integrity and political independence, and expressed the opinion that the latter must be respected no less than the former. The Italian reply opens with an undertaking to respect Spain's political independence "and consequently" [sic] her territorial integrity. But it does not take much subtlety of mind to see that the same words are being used by the two parties in Europe with

different meanings, and that the differences are of vital importance. The Anglo-French meaning of "independence," in respect of Spain, is the preservation of a Spanish Government that is genuinely free from all foreign control or influence. The Italian meaning of "independence" is government by—or in the name of—GENERAL FRANCO. The Anglo-French meaning of "integrity" is that no foreign Power shall obtain any hold on any piece of Spanish territory either by cession, by lease or by occupation. The Italian meaning of "integrity" is that every piece of Spanish territory shall be brought under the rule of FRANCO—or of the Powers behind FRANCO's throne.

The core of the Italian Note is a flat refusal to take part in a three-Power Conference. Italy suggests that the question of withdrawing foreign troops from Spain should be referred back to the London Non-Intervention Committee—which has, of course, already stuck fast in the mud. She goes on to declare that she will not take part in conversations, meetings or conferences to which the German Government have not been invited and in which they do not participate. And, finally, the Note, in its most ominous and least courteous passage, expresses the "doubt whether the difficulties in question can be overcome by way of ingenuities or devices of procedure, and, above all, by that proposed" in the invitation to a three-Power Conference.

SIGNOR MUSSOLINI, then, looks forward to overcoming the "difficulties" in Spain in some other way. What is in his mind? The ostentatious reinforcement of the garrison of Libya looks as if he were hoping to play the same card of the threat to Egypt as in the Abyssinian game, in the hope that England once more will stay her hand. If he is really hoping to turn Spain into a second Abyssinia, this hope is rather surprising in so cool a calculator. For, to an onlooker, SIGNOR MUSSOLINI's Spanish problem would appear to differ from his Abyssinian problem in a number of important points which all militate against his prospects of success. When he attacked Abyssinia he had his hands free, whereas to-day he is still deeply involved with Abyssinia as well as with Spain. Again, the Spanish Republicans are vastly more competent and more determined and better armed than the poor Abyssinians were. In Abyssinia the easy and showy first chapter of the war, which culminated in the occupation of Addis Ababa, was over in seven months; in Spain, Italian divisions have now been fighting for longer than that already, and anything that could even be represented as a decision seems as far off as ever. In the third place, Italy could occupy Abyssinia without jeopardising any vital French and British strategic interests. Indeed, the Italian "Empire of Ethiopia" was—and still is—a hostage to Anglo-French sea-power. On the other hand, this same Anglo-French sea-power will have been dealt a very

severe blow if the continental and insular possessions of Spain are to fall, in their "integrity," under Italian control. On the day when that happened, France would be cut off from French Africa (which is already full of unrest); Great Britain would be cut off from Malta, Cyprus, Palestine and Egypt; and even the long line of British Imperial communications via the Cape would be threatened from the Canary Islands. Under these conditions, does SIGNOR MUSSOLINI believe that France and Great Britain are going to acquiesce in the establishment of an Italian control over Spain, as they have acquiesced in the occupation of Abyssinia?

These objective facts are equally clear to SIGNOR MUSSOLINI and to the French and British Governments. Ordinarily, the manifest vital interest of Britain and France in Spanish independence, and the equally manifest superiority of the force they could deploy in the Western Mediterranean, should have convinced a man, of SIGNOR MUSSOLINI's shrewdness that he cannot pursue an Italian conquest of Spain to a successful conclusion. But it looks as if the hesitations of London and Paris have encouraged him to think otherwise, to believe that sufficient truculence will lead the Western Powers to surrender even their own vital interests.

We are convinced that, if the DUCE is harbouring any such conviction, he is wrong. France and Britain would not, in the last resort, tolerate Italian domination of Spain. But every hesitation encourages him to go further, to pour in more troops, to pour out more blood and treasure, to engage his prestige still more inextricably. A time will come when he can no longer withdraw.

The seriousness of the present position thus arises from the fact that it is a race against time. London and Paris have to show sufficient firmness to recall SIGNOR MUSSOLINI to the realities before he goes altogether too far. With every day's delay the action which Britain and France will ultimately have to take becomes more drastic. But in spite of all these facts, which are clearly visible to the French and British Governments if they would only have the courage to turn their eyes to them, London and Paris have decided this week for further delay. Ignoring the ominous contempt in the Italian Note for further "ingenuities and devices of procedure" they are clutching at the straw of the DUCE's approval of discussions in the Non-Intervention Committee. That body is to meet on Saturday of this week, and even the proposal of setting a definite time-limit to its deliberations has been dropped.

It looks, in short, very much as if SIGNOR MUSSOLINI had won another trick. At the very best, this makes it necessary for London and Paris to play the aces in their hands with skill, promptness and determination. At the worst, it means that Britain and France are throwing in their hands as first-class Powers and guardians of the peace.

British Motor Cars

THIS year's Motor Car Show, which opened last Thursday, is noteworthy in two ways: it is being held for the first time in the new Earl's Court Building, and it has for its background an industry and a nation prosperous beyond all precedent. What fresh records has the past season set up to be broken, and what are the industry's prospects of breaking them? Registrations of new cars have, inevitably, shown a further satisfactory increase. For the twelve months to September 30th the total is estimated at 329,000, against 302,057 in the preceding year. Exports are put at 70,000 (against 59,589) and imports at 19,000 (against 9,955). The total

British private car production for the season was 389,000 and showed an increase of 11 per cent. over the previous record figure of 352,000 in 1935-36.

Increased turnover has been unaccompanied by any vital change in the general trend of demand. The average horse-power of cars sold in the past season was 12.2, compared with 12.0 in the preceding season and 11.9 in 1934-35. The slight increase has been due in the main to the popularity of the 14 h.p. car, whose share of the total market rose from 8.7 per cent. to 11.2 per cent. The season has been remarkable, nevertheless; for it has seen the first general increase in selling prices that

23-6
23-0
23-8

made since the War. The rise, common to all important manufacturers, has varied considerably between one model and another, but has averaged about 5 per cent. It became effective, for the most part, last July, and does not seem, as yet, to have had any noticeably unfavourable effect on sales. The manufacturers, however, are awaiting the coming season with a certain anxiety. The industry lacks any experience whatsoever of the effect of rising prices either on total demand or on the relative position of the more and the less expensive cars. Given a continuance of national prosperity, the trade hopes that the volume of total purchases will be unaffected, but fears that demand will shift somewhat from the dearer to the cheaper models of individual makers. Price lists are so closely graded that psychology may have a considerable influence on the individual buyer. Rather than pay £265 for a car which cost him £250 last time, many a purchaser may choose a slightly lower model in the same general class, whose price was formerly £235 and is now £250.

The industry is reasonably confident, nevertheless, that the increase will not bring the elusive "saturation point" of demand any nearer: That skeleton has been temporarily consigned—perhaps a little optimistically—to a dark and dusty cupboard. The old arbitrary conception that an income of at least £400 was indispensable for the potential car owner has been discredited by events in the last five years. To-day, it is estimated, there are 800,000 incomes of over £500 in Great Britain, and 1,500,000 incomes between £250 and £500. But this summer as many as 1,825,000 cars were believed to be in service in the United Kingdom (compared with 1,505,000 in 1936 and 1,505,000 in 1935). When every allowance is made for families which own more than one car, and for vehicles used entirely for business purposes, the evidence strongly suggests that ownership has penetrated well below the £400 income level. The motor-car of to-day, indeed, tends to become increasingly a family rather than a personal chattel, and many families have more than one wage- or salary-earner. If and when "saturation" is reached, as it obviously must be some day, its causation may be more physical than economic. Already the increasing congestion of the roads in and around many large British towns and cities is robbing car-ownership of some of its attractions for the average man. At the same time, there is reason to believe that the present total is sufficiently close to the maximum to render its future movements increasingly sensitive to fluctuations in national prosperity.

So much for the industry as a whole. We may next examine the prospects of the leading producers, who fall into three main groups according as they are large, small or specialist manufacturers. In the first category there are six names:—Morris (including Wolseley and M.G.), Austin, Ford, Standard, Vauxhall and the companies under the ægis of Rootes. These companies are often described as mass-production manufacturers, but some of them object strongly to this description and, in fact, some of the models turned out by these firms, such as Humber and Talbot, do not belong to the cheap and popular class. That they supply much the largest part of the market is, however, undoubted. In 1935-36 their cars accounted for 86 per cent. of new home market registrations and 95½ per cent. of exports. In the past season they have probably lost a little ground, owing to the expansion of imports; but they have maintained their virtual monopoly of the export trade.

The policy of individual producers in this group deserves a word of explanation. Each manufacturer tries to last reduce a sufficiently diversified range of models to cater for a large segment of popular demand, and the number doubtless models actually turned out has tended proportionately to the firm's increase. Competition between different models is keen, and success in any one season e problems it raises

may turn on the extent to which the appearance of new models accords with changed and changing fashions in popular taste. Here, the pace is being set more and more by American cars. At the moment the chief problem of the large manufacturers is to secure adequate supplies of the right quality of steel at a suitable price. This, naturally, means more to them than to producers of more expensive cars, whose purchasers are prepared to pay a higher percentage for labour and selling costs.

In the category of small manufacturers we may include Rover, Riley, Triumph, Armstrong, Alvis, S.S., Singer and Jowett. Some of them have recently undertaken Government work in connection with re-armament on an increasing scale. All of them, normally, are exposed to the possibility of wide annual fluctuations in sales, which may decisively affect the profitability of their operations in a single year. Among the individual firms, Singer are active in the export trade, but the other makers concentrate their energies mainly on the home market. Recently, they have benefited owing to the greater number of people who have been able to pay more for their cars. They have suffered, on the other hand, from the growing interest which some popular manufacturers have shown in the "intermediate" market, by the improved quality and increasing competition of the popular car, and from the tendency of some purchasers to expend their increased resources on American cars or cars of American type.

Finally, the luxury manufacturers, properly so-called, include Rolls-Royce (with its subsidiary, Bentley) and Daimler (with its subsidiary, Lanchester). This group of producers turns out only about 1.3 per cent. of the total number of new cars sold in the home market, but its percentage of the total value is, naturally, much more considerable. Though Government work occupies a fair proportion of this group's capacity at the moment, its sales of cars have nevertheless been maintained. Its capacity for expansion, in any case, is limited. The high-grade American car has recently strengthened its position in the semi-luxury market, and the best type of car made by some popular manufacturers, such as Humber or Talbot, would be another potential competitor if the so-called luxury producers endeavoured to extend their sales into the stratum of the market lying immediately below them.

In the export trade the outlook is still relatively favourable. British exports, estimated at 79,000 cars last season, remain far below the American total of 208,000, but substantially exceed the figures of 38,000 and 35,000 from Germany and Canada, respectively. The German export drive, it is true, has now assumed considerable proportions, but it is largely directed against Continental and other markets in which British manufacturers have few important interests.

Altogether, the barometer for the coming season stands as near to "set fair" as producers in a highly competitive industry have any right to expect. Given a maintenance of public prosperity—the tacit assumption underlying all favourable commercial forecasts—production and profits should reach new high figures in 1937-38. If there is a cloud on the horizon, no bigger than a man's hand, it is the possibility that any further advance in selling prices might disproportionately affect the total demand. In recent months there has been a noteworthy increase in imports into Great Britain of two foreign makes of car—the 11.3 h.p. German Opel (a product of a General Motors subsidiary), and the 6.7 h.p. Italian Fiat. The manufacturers of these cars are large-scale manufacturers in their own countries. Will their example be followed, now that the franc has been devalued, by French producers like Renault, Citroën and Peugeot? An attack on the British lightweight car in its own stronghold would emphasise the wisdom of conservatism in making future increase in selling prices, however strong the temptation.

A Quarter's Industrial Profits

GRAND-STAND spectators of the profits steep-chase have lately been much concerned with a dark horse called Rising Costs. But our latest computation of the earnings of British companies—based on a sample of 337 concerns whose reports were issued between July and September this year—reveals no evidence of the displacement, as yet, of the progressive tendencies which have made the running since the end of 1933. The September quarter's figures are, normally, the least representative of each year, and the latest totals apply to no more than 15 per cent. of the companies and 11 per cent. of the profits included in our sample during the past twelve months. It is satisfactory, nevertheless, to record that they register an increase in total earnings (after debenture interest) of 19.2 per cent. by comparison with the aggregate for the same companies in their preceding financial year. A year ago a similar calculation showed a rise of 14.3 per cent. The 2,226 companies whose reports have been examined in the twelve months to September 30th last disclose an increase in their total profits of 16.1 per cent. in their latest financial year. Thus the rate of growth has, if anything, received fresh impetus in the last few months.

The detailed results of our most recent analyses are tabulated at the foot of this page, and supplementary figures will be found on page 140. It is clear that prosperity has enabled a large number of British companies to come near to achieving the remarkable feat of eating their cake and having it. The rise in profits has been so generous that shareholders have received increased dividends at a time when industry as a whole has been financing its capital growth out of its own resources to an unprecedented extent. This feature of British company finance is strikingly illustrated by the chart on this page. The upper line shows the total earnings of each year's sample of Third Quarter companies expressed as a percentage of their total issued capital. To make our survey the more comprehensive we have included the principal of outstanding debentures in our figures of total capital. We have proceeded to show the total amounts paid in debenture interest and preference and ordinary dividends, cumulatively, as percentages of total capital. Thus, in the latest period shown on the chart (i.e. according to the reports issued by these Third Quarter companies in 1937) debenture interest was equivalent to just under 1 per cent. of aggregate capital, while debenture interest and preference dividends together were equal to a little less than 2½ per cent. of total capital. The addition of ordinary dividend payments

raised the total of distributed profits to a little over 7 per cent., out of aggregate earnings of 9½ per cent.

The chart affords a convenient epitome of the profits history of Third Quarter companies for the last seven years. Their requirements for fixed interest have, *ex hypothesi*, been fairly constant throughout, though the inability of a minority of the total companies to pay their preference dividends (and to a less extent their debenture interest) in the worst period of depression is evidenced by a dip in both curves in 1932. Even so, total earnings, which had covered debenture and pre-

PROFITS AND THEIR DISTRIBUTION
Based on reports published in the third quarter of each year.
All figures are percentages of total subscribed capital, including debentures

ference requirements 3.3 times over in 1930, covered them only 2.3 times in 1932. To-day, however, these requirements are covered as many as 4.0 times. The balance, available for ordinary shareholders, was equal to 10.7 per cent. of the ordinary capital of all kinds in 1930, 4.5 per cent. in 1932 and 14.8 per cent. in 1937. But conservatism in the distribution of profits has gone hand in hand with the growth of earnings. The decline in profits in the first phase of depression was so steep that the directors of the companies included in our sample, taken as a whole, deemed it expedient to temper the wind to the shorn lamb by drawing on accumulated

TABLE I.—NET PROFITS (AFTER PAYMENT OF DEBENTURE INTEREST)

1937				
First quarter ...	£ 94,733,138	£ 53,609,355	£ 18,775,915	£ 22,347,878
Second quarter ...	£ 100,690,626	£ 52,707,571	£ 17,922,841	£ 30,060,120
Third quarter ...	£ 28,575,020	£ 15,897,651	£ 4,757,159	£ 8,120,210

reserves to pay dividends which, in the aggregate, exceeded the year's earnings. In the next two years, though no further drafts were made on reserves, profits were distributed up to the hilt. During the subsequent recovery, however, the amounts put back to reserves have exceeded, many times over, those taken out during the depression. In the latest year, indeed, the amounts thus used to increase the effective working capital of the businesses concerned were slightly greater than the whole of the companies' payments for their debenture interest and preference dividends combined.

The policy of setting aside large reserves has added an important super-charging element to company profits in recent years. Accurate measurement is impossible, since the constituent companies in our sample vary from year to year. On the basis of the results shown in our chart, however, it would appear that in the last four years alone the cumulative total added to reserves has been equivalent to approximately 7 per cent. of an aggregate issued capital averaging, in our various samples, about £350 millions. Much the greater part of the new money thus made available has gone, not into gilt-edged securities, but into active and immediate employment in industry at an increasingly high rate of return.

Whether the percentage of profit on each unit of

effective capital will continue to rise much longer is, to judge from the present pessimism of Stock Exchange investors, a question which seems to admit of a less positive answer now than twelve months ago. A rapid decline in industrial ordinary share prices, at a time when gilt-edged values have been standing firm, seems to argue a readiness on the part of voluntary sellers to discount, not a rise in general interest rates, but a forthcoming check to the advance of industrial earnings. On this point, our latest figures afford no direct evidence. The majority of the companies included in our sample made up their accounts at various dates between the end of 1936 and the middle of this year. In other words, the bulk of their profits were earned before the rise in costs became accentuated, early in 1937. So long, however, as the volume of business as a whole is well maintained, it is unlikely that higher costs will produce any positive setback in profits. Since *The Economist's* index shows that business activity as a whole has recently been running at record high levels, the conclusion would seem to be either that "forced" Stock Exchange selling has driven the prices of many industrial shares below a reasonable level under present conditions, or that more or less well informed investors are budgeting for a definite recession in trade activity in the near future.

Australia at the Polls

THE three-year Parliament of the Commonwealth has run its full course, and Mr Lyons, who was confirmed in office at the last election, makes a new appeal to the electorate on October 23rd. Six years is a fairly long life for a Ministry in a country as noted as Australia for the rhythm of its swings of the political pendulum. The Government of Mr Lyons is therefore tactically on the defensive. Before the election of December, 1931, the United Australia Party occupied 23 seats and the Country Party 11, against 35 held by Federal Labour and 5 by State Labour—that is, by the Lang Party. The election more than reversed the position. Federal Labour lost 11 seats, and State Labour one; and the United Australia Party, with 39 members, commanded an absolute majority over all others. Another general election three years later made the United Australia Party dependent on the support of the Country Party. Federal Labour and State Labour each gained four seats, mostly at the expense of the United Australia Party. Dr Earle Page and other Country Party Ministers were drawn into the Government, and the coalition was founded which faces the electors to-day. The Opposition has similarly been consolidated during the last Parliament, through the reconciliation of Federal Labour with the Lang group, under the leadership of Mr Curtin.

At present, the United Australia Party hold 32 seats, the Country Party 14 and Labour 28. A turnover of 10 seats must therefore take place if Labour is to regain a majority. That this contingency cannot be ruled out is suggested by the result of the election of 1929, when Mr Bruce was defeated as a result of an increase in the Labour representation of no fewer than 15—from 31 to 46. The political prophets to-day, however, are scouting the idea of any such dramatic reversal of fortune. Among other reasons, they point to the discrediting of the Lang regime and to the barely healed disunity of the Labour forces. On the other hand, various straws in the wind have caused uneasiness among Government supporters. Certain amendments of the Constitution, dealing with marketing and civil aviation, were rejected at a referendum last March, and most observers attributed their defeat not only to dissent from their actual terms but also to popular dissatisfaction with the Government that sponsored them. Small incidents like the mishandling of the Mrs Freer case, and larger questions like the unprofitable trade war with Japan, have aroused a certain measure of discontent. The position is complicated, moreover, by the alliance of the United Australia and Country Parties. In Victoria, the second of the States in population, a Country Party Ministry has been main-

tained in office only by the support of the Labour Party, with which it has a working arrangement. In the Victorian elections a fortnight ago Labour increased its hold, and now has more members than the Country Party itself. The way in which second preference votes are cast by Country Party supporters in Victoria may be of considerable importance in the Federal election.

The Lyons Government's greatest electoral asset is the record of economic progress achieved during its terms of office. The percentage of unemployment among trade unionists, which reached a peak of 30 per cent. in the second quarter of 1932, has since fallen to 9½ per cent., and available statistics indicate that the proportion of all wage-earners unemployed is less than 6 per cent. to-day. More than half a million workers have been added to factory pay-rolls since 1931-32. This industrial improvement is, of course, largely a reflex of conditions in Australia's primary producing industries, and these, in turn, are dependent in large measure upon the prices and volume of her exports. The export price index, in Australian currency, almost doubled between the middle of 1932 and April of this year, when it was actually higher than in 1928. Since then, however, it has fallen, in sympathy with the general downward movement of world prices. Meanwhile, the overseas trade position has greatly improved. In 1931-32 imports totalled £44.7 millions and exports £85.3 millions (in sterling values). In 1936-37 imports totalled £90.5 millions and exports £126.2 millions. Of the credit balance of £35.7 millions in the latter year, some £22 millions were required for interest on Government and local authority bonds. After allowing for other debit and credit items, a balance of something like £20 millions was added to the Australian banking system's reserves of London funds.

A by-product of economic recovery has been a striking improvement in public finance. In 1930-31, the aggregate deficit on State and Commonwealth budgets was over £25 millions (in Australian currency). In 1935-36 and again in 1936-37, the aggregate result was a surplus of about £1,000,000. But there is, even now, a striking difference between the position of the Commonwealth Government, which has had a substantial surplus in each of the past three years, and that of the States, some of which still have difficulty in making ends meet. Between December 31, 1931, and June 30, 1937, the public debt of the Commonwealth fell by £11 millions, while the public debt of the States rose by over £91 millions. The States, nevertheless, have been able to profit, under the Financial Agreement, by the high credit standing of the Commonwealth. Since October, 1932, over £210 millions of Australian debt has been converted

to lower interest rates, at an annual saving of about £4 millions. Next February, further loans totalling £11,410,000 mature in London, and as much as £72,700,000 of internal debt is due for conversion before December, 1938. That, in brief, is the record of progress under the Governments of Mr Lyons. That the improvement owes much to forces beyond Government control—like the depreciation of sterling, the rise of world prices, the failure of wheat crops in the northern hemisphere—is probably of minor electoral importance.

The Opposition has chosen its own campaigning ground. It has singled out two particular issues—defence and the nationalisation of banking—and on these the election is mainly being fought. Labour stands for the nationalisation of the central bank and for its use in a way which would put the trading banks under its thumb. The Government has deflected criticism by announcing its acceptance of the main recommendations of the Banking Commission; which, according to expert

opinion, would bring about much the same result as the Labour plan, by sapping the strength and independence of the trading banks. On the re-armament issue, similarly, the difference between the two sides is mainly one of method. Labour agrees on the necessity for large financial provision for defence, but demands that the money be spent on a local land and air force, and not on a navy conceived as an element in the defence of the whole British Commonwealth. The official Labour platform, in brief, while not opposed to the Commonwealth connection, is isolationist in foreign policy and defence. Labour, however, is split on this issue; for the trade union movement leans towards internationalism and collective security. Moreover, the Far Eastern trouble has cut much ground from beneath the feet of the isolationists. On the whole, therefore, Mr Lyons' team appears to be facing the bowlers on a batsman's wicket, but Australian wickets are proverbially sticky after rain—even after showers of blessing.

Notes of the Week

The Prime Minister's Speech.—On October 8th Mr Chamberlain made his first appearance as Prime Minister before his Conservative supporters, when he addressed the Scarborough Conference. Though he failed to make history, as he might have done had he followed more boldly the lead given by Mr Roosevelt in foreign policy, he made an excellent impression on the assembly. He welcomed the President's "clarion call" and promised co-operation, but declined to commit the Government to any specific action. He expressed abhorrence of the consequences of indiscriminate bombing in China, but refrained from passing judgment on Japanese aggression. About home affairs, the Prime Minister was more definite. He welcomed the Labour Party's conversion to the arms policy, and reported in detail the progress of the defence programme, stressing in particular the high quality of the war planes being built and the swift rate of their production. He had no use for fears and anxiety. Re-armament, despite rumours, was progressing smoothly and well. Trade, despite pusillanimous talk, was still booming. Our tariffs had not impeded world trade or our outflow of exports. The cost of living was still below the level of 1929, and wages were substantially higher. The present rise in prices was healthy. In brief, the Prime Minister contended, like Sir John Simon at the Mansion House two days before, that the facts of our present prosperity would "take a great deal of shifting." The next slump was not even in sight. It is always dangerous for a politician thus to stake out a claim on prosperity. He should remember President Hoover, and at least prepare measures against the day when the tide may turn. Mr Chamberlain appears to have instilled courage into the hearts of his hearers, but the slump in the Government poll at the Islington by-election shows that so far his policy has failed to strike a spark of enthusiasm in the electorate.

Conservatives at Scarborough.—Before the Prime Minister spoke at Scarborough, the Conservative Conference's distrust of Italy and concern for British interests and colonies had been made evident. Indeed, the acceptance of Sir Henry Page Croft's motion opposing the surrender of colonies, ostensibly directed against opposition groups, was by implication a word of warning from the Right to Mr Chamberlain himself and to his colleagues. Similarly Mr Morrison's plea that milk was dear for hospitals and cheap for manufacturers in order to save the milk market from collapse did not prevent the Conference from setting on record its concern about the present position. And fear lest lack of money should debar worthy candidates from seeking election inspired a decision to set up a commission of inquiry into Party finances. Thus, there was general agreement on most matters, but no slavish unanimity. An attempt,

for instance, to brand all schoolteachers as dangerous Reds was very properly frustrated.

Labour's Decision.—The Labour Party Conference at Bournemouth spoke its mind about re-armament with no uncertain voice. Only 228,000 votes were cast against the motion for a powerfully armed Britain, which was supported by 2,167,000 votes. The minority included one trade union and fewer than one-quarter of the constituency parties, and was split again between pacifists and Left Wingers. The remarkable accord thus achieved, and anticipated earlier by similar votes against the United Front, was not allowed to conceal the difficulties which lie ahead of the Party. On the whole, there was a readiness at the Conference to let bygones be bygones, and to look hopefully to the future rather than resentfully to the past.

Rooseveltian Statesmanship.—President Roosevelt has returned to Washington from his tour to the Pacific Coast convinced of the necessity and of the political wisdom of demanding further progress with his policies both at home and abroad. He has emerged from the attempt to embarrass him with the record of Mr Justice Black's association with the Ku Klux Klan much more easily than his adversaries hoped. Mr Black has taken his seat on the Bench and the Court has refused to consider the petitions to unseat him. The episode can be regarded as finished, with rather less discredit to the President than to the all-too-obvious personal animosity with which his antagonists seized the opportunity to fling mud at him. On Tuesday the President issued the official summons for a special session of Congress to meet on November 15th, and in a broadcast talk on the same day he gave his reasons for this step. He has a heavy programme of contentious legislation, of which crop control, industrial hours and wages and administrative reorganisation are the chief items. Congress would in any case have met early in January, but 1938 is an election year, which means that an early adjournment will be necessary, and Mr Roosevelt wishes to run no risk of being beaten by the calendar. But the special session has more significance than merely the provision of some seven extra weeks of Congressional time. It is a formal notice served on Congress that the President is unabashed by his defeat over the Supreme Court issue, that he is confident he can re-establish his ascendancy over Congress and is determined to do so.

The broadcast speech was more than a mere announcement of impending legislation. It was a plea for the long view such as democratic politicians all too rarely have the courage to make. At home, he refused to believe that the American people wanted the Government to stop

governing simply because prosperity had come back a long way. "It is refreshing to go out through the country and feel the common wisdom that the time to repair the roof is when the sun is shining." Similarly, in the international sphere it was the President's duty to think "not only of keeping us out of war to-day, but also of keeping us out of war in generations to come. . . . We seek peace, not only for our generation but for the generation of our children. . . . I want our great democracy to be wise enough to realise that aloofness from war is not promoted by unawareness of war. In a world of mutual suspicion peace must be affirmatively reached for. It cannot just be wished for. It cannot just be waited for." This is the language of statesmanship. President Roosevelt now has, beyond question, the leadership of world democracy. He certainly has the courage, and he may well hope to have the moral support, to make good use of it.

* * *

The Nine-Power Conference.—Objection has been taken by Japan to the fact that the first summons to a conference of the signatories of the Nine-Power Treaty was sent out by the League of Nations, which is not a party to the Treaty. But this is the merest quibbling. The Treaty has clearly been infringed; its first article "engages the parties to respect the sovereignty, the independence and the territorial and administrative integrity of China, and to provide the fullest and most unembarrassed opportunity to China to develop and maintain for herself an effective and stable government." Further, Article Seven provides that whenever a situation arises that, in the opinion of any one of them, involves the application of the stipulations of the Treaty and renders desirable a discussion of such application, there shall be full and frank communication between the parties. The affirmative votes at Geneva of several of the signatories can be taken as an adequate expression of their opinion of the need for discussions. The nine original signatories were the United States, the British Empire, China, Japan, France, Italy, the Netherlands, Belgium and Portugal; and five other states have since adhered to the Treaty, namely, Sweden, Norway, Denmark, Mexico and Bolivia. Moreover, the British Empire for these purposes resolves itself into six parts, the United Kingdom, Canada, Australia, South Africa, New Zealand and India. This makes a total of nineteen states which could attend. The last paragraph of the Italian Note of October 9th declaring that Italy "will not participate in conversations, meetings, or conferences to which the German Government have not been formally invited and in which they do not participate" can be taken as a refusal in advance, and it may be guessed that Portugal will follow the Italian example.

* * *

The Japanese refusal to attend was published last week-end, simultaneously with the Italian refusal of the Anglo-French invitation to a three-Power conference on Spain. The Japanese reply declares that the present action of Japan in China contravenes none of the existing treaties which are in force, on the ground that this action is "a measure of defence to which she has been impelled to resort by premeditated and provocative acts of China." The certainty that Japan will be absent is outweighed in importance, however, by the knowledge that the United States will attend as a full member of the Conference and not merely as an "observer." American participation has seemed likely from the start, for the move at Geneva was made after the delivery of President Roosevelt's Chicago speech last week. Since then, the presumption has been specifically confirmed by the President, who lent point to his acceptance by referring to American participation in the Conference as part of his policy of "actively engaging in the search for peace." The Conference, which is probably to be held in Brussels, will thus be almost completely representative of the peace-loving nations of the world. With such a wide membership it has an opportunity to make its mark on the history of the world.

Japan's Rapid Advance.—News from the Northern front in China comes entirely from Japanese sources. In default of evidence to the contrary, however, it seems to be established that the Japanese have secured an important advance during the last week, and that the Chinese retreat has become more involuntary than strategic. The Japanese advance along the Tientsin-Pukow railway has temporarily been halted some distance north of the Yellow River in Shantung, probably in the hope that General Han Fu Chu, the Provincial Governor, will desert the National cause. But on the Peiping-Hankow line the Japanese claim to have taken Shihchiachwang and to be advancing rapidly south. The capture was achieved by a conjunction of a frontal attack along the railway, a flanking movement which crossed the Puto river west of the railway junction, and a long advance which started out from Tientsin at the end of September, and followed the rivers across the Hopei plain until junction with the Peiping-Hankow railway was made south of the concentration of Chinese troops. The latter, demoralised by previous reverses, and surprised in their flank and rear, are reported to be in confused flight south. The capture of this railway junction will enable the Japanese to advance west on Taiyuan in Shansi province, which is already threatened by troops from the north. The Japanese are apparently advancing without effective opposition in Suiyuan. The opening of the third month of warfare at Shanghai finds the Japanese still unable to break down the Chinese resistance, and in the last few days there have been reports that the Japanese have used poison gas, and are planning a new landing north of the present extremity of the lines. Japanese aeroplanes are making every attempt to destroy the Canton-Hankow railway, and are continuing certain bombing operations on other important cities.

* * *

Nuffield College.—On the eve of the Motor Show there comes, appropriately, the announcement that Lord Nuffield has offered the University of Oxford a sum of £1,000,000 and a site worth £100,000 for the endowment and erection of a new college. Besides filling an unæsthetic gap in the western approach to Oxford between Pembroke and Worcester Colleges, the new foundation is intended to end the unfortunate hiatus which Lord Nuffield rightly believes to exist between social studies and the practice of business men in commerce, industry and the professions. Lord Nuffield is more than a munificent donor. As his gifts to the Special Areas and to the progress of medicine have proved, he is a great innovator. His latest offer has been accepted in all but formal legislation, and to Keble, Hertford, and St. Peter's Hall, the most recent adjuncts to Oxford's collegiate society, will succeed, presumably, Nuffield College, the newest and most daring of them all. It will be a place for research and discussion, embracing among its fellows both dons and business men, and both men and women. Economists, historians, philosophers, lawyers, anthropologists, administrators, legislators and business men will meet in this catholic assembly which may well be the power-house for peaceful and beneficial revolutions in the ordering of our public affairs. Research workers, amply endowed, will pursue the details of practical change to their logical and scientific ends. Lord Nuffield's new vision is of the future; but he has not forgotten the past. He will enter into the quiet and ageless tradition of Oxford studies; he will install a chapel and endow a chaplain. If those who are elected to launch the new venture are rightly chosen, the cause for which it stands will not be a lost cause.

* * *

Cost of Air-Raid Precautions.—On July 19th the local authorities rejected the Government's offer to pay 70 per cent. of the total cost of air-raid precautions. Sir Samuel Hoare has now modified this proposal, and the new scheme, which in outline apparently represents the Government's final decision, is to be considered at a conference on October 24th. Formerly, the cost of gas masks, which are being provided direct by the central

authorities, was included in the 70 per cent. payment. Now apparently it is to be excluded, together with the whole cost of fire-fighting appliances, rescue and decontamination equipment, stretchers, blankets and first-aid stations, which are all to be borne entirely by the Exchequer in so far as they exceed normal peace-time costs. On the other hand, the expenses of essentially local services, such as structural changes in public buildings, the building of refuges, organisation, training, etc., are to be met by percentage grants. Local authorities are to be graded in accordance with their financial needs into four classes, with grants of 75, 70, 65 and 60 per cent. respectively. It is not expected that local expenditure will amount to more than the proceeds of a penny rate, but when it does the excess will be eligible for a grant at the maximum rate. A Bill will be introduced embodying these proposals and defining the duties of the authorities. The grants will be paid on all approved expenditure incurred this year. All this is much in advance of the old scheme. The cost to the rates seems likely to be large enough to ensure careful administration, and small enough to cause no undue economy, though some of the local costs may prove unexpectedly large. Presumably the scheme will, deservedly, be accepted. The work can then go ahead with no further dangerous delays.

* * *

Sir Oswald Mosley Injured.—The folly of opposing violent words with violent deeds was demonstrated on October 3rd, when an unimpressive Fascist procession was given an undue importance by the reckless hurling of brickbats. Folly became criminal at Liverpool on October 10th when Sir Oswald Mosley was stoned and wounded. Violence has no part in British politics. The ideas and practices of the British Union of Fascists may be founded on force, but to seek to extirpate them by riot and disorder is to betray the constitutional methods which are our safeguard. Sir Oswald's unpopularity does not excuse attacks on his person. It vests him with unwarranted prestige. Fascism is not least dangerous to democratic ways when its opponents, abetted by hooligans, resort to assault and battery.

* * *

Belgian Neutrality.—On January 30th last Herr Hitler stated his willingness to declare inviolate for all time the territory of Belgium. Since Belgium's official policy is now a return to her former neutrality, so far as that is compatible with her League obligations, a German declaration of non-aggression would clearly be welcome. Negotiations have consequently been continuing for some months, and have now reached a successful conclusion. The resulting document takes the form of a simple unilateral declaration by the German Government that "in no circumstances will they impair the inviolability and integrity" of Belgium, and "they will at

all times respect Belgian territory, except, of course, in the event of Belgium's taking part in a military action directed against Germany in an armed conflict in which Germany is involved." The Note concludes:—

The German Government, like the British and French Governments, are prepared to give support to Belgium in the event of her being subjected to an attack or an invasion.

The document also takes note of the Belgian Government's expressed resolve to defend Belgian territory if attacked and to refuse to allow it to be used either as a passage-way for the troops of other countries or as a base for operations by land, sea or air.

* * *

Belgium would thus seem to have effectively re-established the regime of the Treaty of 1839, in that her integrity is recognised and guaranteed by all three of her large neighbours. But the parallel itself is ominous, for it was this same Treaty of 1839 which became the famous "scrap of paper" when it stood in the way of German ambitions. There is another major difference between the pre-War position and that of to-day, since Belgium is emphatic in her declarations that her obligations under the League Covenant are in no way affected by her new policy. This attitude has been reinforced within the last few weeks by Belgium's election to the League Council. But the extent to which the obligations of the Covenant might require military action, or assistance to the military action of others (such as the provision of air bases), has never been defined, and so long as it is uncertain what action Belgium would take in the event of Germany's being declared an aggressor by the League, the new Declaration must be accounted a reinforcement of German security in the west. Nobody, of course, would grudge Germany this greater security if it were not for the suspicion, which Germany has done nothing to allay, that she will use security in the west only to strengthen her hand for adventures in the east. This same suspicion makes it difficult to welcome with any enthusiasm the formal declaration in the Note to Belgium of Germany's continued desire to conclude a Western Pact to replace the Treaty of Locarno.

* * *

South Africa and Germany.—The renewal of the campaign in Germany for the restitution of the former German colonies is exercising South African minds, and this for two reasons. The more pressing, but narrower, reason is that South Africa herself holds one of these territories under mandate. The Nazi agitation has already thrown the German population in the South African mandated territory of South-West Africa into a ferment. And behind these German pioneers—at present under South African rule—stands "the Third Reich," a community of 65 million white men, as against South Africa's own one and a half millions. At present this enormous

disparity of strength is redressed by the sea-power of the United Kingdom. But can she count for ever on this protection? Moreover, South Africans have another remoter but much broader consideration in mind. Acutely race-conscious as they are, they are wondering whether the white man in Africa will be able to hold his own against the black man's one day inevitable counter-attack if Europe cannot bring herself to act, in Africa, with her united forces. The mere absence of Germany weakens Europe in Africa seriously enough. But supposing that an obstinate refusal to re-admit Germany into Africa were to produce another fratricidal European War. What would be the prospects of the 1½ million white South Africans then? These thoughts have found expression in three important public statements: one by Mr Pirow, the Union Minister for Defence, who is himself of German origin, in Natal on the 7th; another on the same date at Johannesburg by Mr Strydom, the leader of the Transvaal branch of Dr D. F. Malan's Afrikaner Nationalist Party; and the third on the 10th by Dr Malan himself.

Mr Pirow—speaking in a district of Natal where the population is partly of German origin—pleaded for a relation of live-and-let-live between South Africa and the Reich. Might not the Nazi propaganda in South-West Africa be dropped in exchange for a suppression of the South African Jewish anti-German boycott? He also advocated a fair and satisfactory solution of the colonial problem as between Germany and—not South Africa, but the British Empire. Mr Strydom, on the other hand, boldly grasped the South-West African nettle. His party, he said, did not want to remain in possession of the mandated territory without Germany's consent, and he made the odd declaration that they would neither hand the territory back nor lift a finger to prevent Germany from retaking it. Evidently Dr Malan felt that his lieutenant's formula needed revising, for in his statement on the 10th he made it plain that he and his associates did not differ from other South Africans in their determination to keep South-West Africa in their hands. His solution was one which was hinted at by Mr Pirow on the 7th. "We must, through the League, and by other means, give moral support to a scheme that will satisfy Germany's colonial needs." These three statements do not by any means represent South African opinion as a whole. But there is no doubt that, if there were a means of satisfying Germany's claims without cost to South Africa, it would be eagerly seized. On which of their neighbours, we wonder, are the South Africans hoping to be able so conveniently to disstrain for Germany's benefit? On the United Kingdom and France? Or on Belgium and Portugal?

The French Cantonal Elections.—Last Sunday the first ballot in the French cantonal elections was taken throughout France except for the Department of the Seine. Judgment on the significance of the results must, no doubt, be reserved to some extent pending the final ballot. In view, particularly, of the working of the agreement which is at the basis of the Front Populaire, the final results are almost certain to be a good deal more favourable to the Governmental coalition than these first returns; but in any case the voting at this first stage is already distinctly more to their advantage than the first ballot in the parliamentary general election of May, 1936. Thus last Sunday the parties represented on the Front Populaire polled in the aggregate 62 per cent. of the votes cast, as against not more than 55 per cent last year. This aggregate gain, however, is all to the credit of the Radical Socialists, since their Socialist and Communist partners have each dropped votes this time—though this not in serious numbers. The moral seems to be that the electorate, while approving M. Blum's new deal in general, feels that, for the moment, at any rate, the Government have bitten off as much as they can chew. The pause inaugurated by the reconstruction of the Front Populaire Government

has, in effect, been endorsed. In fact, these provisional election figures bear out, in retrospect, the wisdom of M. Blum's action in gracefully ceding the premiership to M. Chautemps at the end of June, and in refusing to lend his aid a fortnight ago to those who would have dissolved the partnership. And, if we look towards the future, we may feel greater confidence than ever that the Front Populaire Government as at present constituted, with the Radical-Socialists in command and the Socialists loyally supporting them, is going to disappoint its adversaries, at home and abroad, by showing a remarkable solidity and staying-power.

King Carol's Responsibility.—The four-year term of the Roumanian Parliament ended on Friday this week. According to the Constitution, the Chamber should have held its last sitting on this date, and the postponement of the dissolution by, at the most, another month is permitted only in exceptional circumstances. This year the exceptional circumstances arise out of the fact that the pre-electoral manoeuvres of the parties have not yet been concluded. In Roumania elections do not make Governments; Governments make elections. But contact with the democratic process has been maintained in the past by the resignation of the incumbent Cabinet some time before the elections and the nomination of a new Cabinet, in accordance with the trend of public opinion, to "make" the elections. In practice, this has meant a fairly regular alternation of the Liberals and the Peasant Party. But the system clearly imposes a very heavy responsibility on the King, who has to decide the composition of the incoming Cabinet. The latest indication of popular feeling was in the recent communal elections, which showed gains for the Peasant Party and losses for the parties of the extreme Right. The present Liberal Cabinet, which stands between the two, but has hitherto leaned, in domestic policy at least, to the Right, shows no signs of willingness to resign, nor is the King apparently willing to dismiss it. There are, indeed, indications that the Liberals are bargaining with both the other sections for support. The Peasant Party are being offered places in a coalition Cabinet and alternatively threatened with an even stronger inclination to the Right. Whether they will accept this, when past history gave them some right to expect a Government of their own, remains to be seen. Formally, these manoeuvres concern only internal politics. But the Fascist leanings and German sympathies of the Right groups are so pronounced that a move towards them could hardly fail to have some reflection in Roumanian foreign policy, while the Peasant Party would strongly reinforce what is the official policy of the present Government, co-operation with the Little Entente and France. King Carol will have to make his decision very soon; it will be important both for Roumania and for the whole of the Danubian area.

Jugoslav Opposition United.—The agreement for common action reached by the Opposition parties in Yugoslavia on October 9th is undoubtedly the most important event in the troubled politics of that country since the death of King Alexander, if only because it represents the realisation of what many experienced observers have always held to be impossible—namely, the union of Serbs and Croats in opposition to the semi-dictatorial regime proclaimed by King Alexander and enshrined in his Constitution of September 3, 1931. It is probable that Dr Stojadinovitch, the present Prime Minister, has contributed more to this result, by his foreign policy of friendship for Italy and his domestic religious policy of pushing through the Concordat with the Vatican, than the party leaders themselves. But, however this may be, the fact remains that the Radicals, the Democrats and the Agrarians, the three largest Serb Opposition groups, have formed, with Dr Matchek's Croat Agrarian Party, a new "Agrarian-Democratic Coalition" with a definite constitutional programme. This programme calls for the proclamation of a new pro-

visional fundamental law, to replace the Constitution of September 3, 1931. This law should restore the system of parliamentary government and provide for the working out of a new permanent Constitution by a constituent Assembly, to be elected under a new democratic electoral law. The coalition Government to carry out these reforms should consist only of those parties which "have their roots in the people," a phrase which is intended to exclude any participation by Dr Stojadinovitch's party or his person. The new Constitution is to be adopted only if it is separately approved by a majority of the Serb representatives and by a majority of the Croatian and Slovenian representatives. Finally, the parties bind themselves to act henceforth in unison and to forswear any separate negotiations with the Council of Regency.

These terms of coalition have emerged from very lengthy negotiations, in the course of which earlier plans to secure the support of Prince Paul, the First Regent, by pensioning off his two fellow-Regents and extending the minority of the young King, were dropped. But the attitude of Prince Paul will be none the less decisive for the future development of the new coalition, since it rests ultimately with him to decide whether the country shall have the opportunity of making a choice between the present Government and the Opposition. The Government has, of course, been at pains to minimise the importance of the agreement. But it is no coincidence that the conclusion of the negotiations between the Opposition parties was marked by the decision of Dr Stojadinovitch to go no further with the ratification of the Concordat and to change the *personnel* of his Cabinet. In a country which has had no recent free elections, it is naturally difficult to gauge public opinion. But if, as seems probable, the new coalition could create a strong democratic regime, that would be by many degrees the best solution of Yugoslavia's fundamental problem. No Yugoslav Government will be inherently stable unless it is supported by a majority of the people, unless it unites the nationalities of the country, and unless it can stand on its feet without the ostentatious support of the external dictatorships which the country and the army distrusts. Dr Stojadinovitch's Government fulfils none of these conditions; a Government based on the new coalition might, at least for a time, fulfil them all.

Drugs in North China.—Japanese action in the Far East embraces more than economic penetration and armed aggression. Just short of a century ago, the British Navy was instrumental in opening certain Chinese ports to, among other commodities, the product of the Indian poppy. To-day the report of the Fifth Committee of the League of Nations on the drug traffic affirms that the chief centres of the production and distribution of opium and similar trade lie in Manchukuo and those parts of North China where the Japanese writ *de facto* runs. Yet the penalty imposed by the Chinese authorities for the use and sale of drugs is—as in 1840—death. The degradation of the Chinese inhabitants of the districts which house this sinister traffic is not the whole story, though the state of Harbin and Fuchiaten, with their 100 licensed opium saloons and 1,000 heroin dens, is hideous enough. The large-scale production of narcotics, which is alleged to be increasing with the connivance and protection of the Japanese authorities, requires an expanding market. Not only are the Chinese efforts to stamp out the trade made ineffective, but the success of the wider campaign of the League is endangered. North America, Egypt and Europe are menaced by illicit imports. The Committee strongly urge an appeal to Japan. Peace has her atrocities no less deplorable than war. Is Japan, heir to one civilisation and adopter of another, determined to surrender the virtues of her past to make profit from these vices?

The Population Inquiry.—Sir Kingsley Wood, speaking to the Conservative Conference last week, gave encouraging evidence of the thoroughness with which the official inquiry into the population problem is approaching its task. The Minister for the first time officially recognised the possibility that the population of England and Wales "would fall in 30 years to some 30,000,000 and in 100 years to 5,000,000." But he also took note of the fact that the birth-rate has shown a slight rise since 1933, which might be taken as showing "that forces exist in this country with an upward direction that might well provide a basis for a constructive policy." The first step, however, was to collect more information, and the Minister announced that Parliamentary sanction would be sought for the collection through the registration system of information on such matters as the ages of parents, the date and duration of the marriage, and the order of births. It is the intention that this information shall not be published in the public registers, but treated as confidentially as census returns. It is to be hoped that this reform in the registration system will be effected as soon as possible. This country is well behind many others in the amount of information available which bears on the problem of population, whose vital importance is now beginning to be appreciated.

Ontario Supports Mr Hepburn.—Political prophets derive little power from the results of the Ontario provincial elections. That the Liberals under Mr Hepburn should be returned with their huge majority scarcely impaired was not widely forecast. Business interests and the comfortable classes were reported to have been antagonised by Mr Hepburn's repudiation of the power contracts and the forces of labour by his violent hostility to Mr Lewis's Committee for Industrial Organisation. To judge from the election results, however, the business interests appear to have overlaid their memory of the hydro-electric affair by the nearer one of the Oshawa strike; and labour—whose views about the C.I.O. were in any case divided—seems to have been placated by Mr Hepburn's trenchant attacks on vested interests and moneyed men who evade taxation. The Co-operative Commonwealth Federation—the Labour Party of Canada—polled but a handful of votes and lost its only seat. It must not be forgotten that one of the decisive factors in Mr Hepburn's original victory—which replaced a Conservative majority of four to one by a Liberal majority of three to one—was his denunciation of shady finance in high places. Mr Hepburn has a vigorous and emphatic personality which his opponents cannot rival. The Federal Liberal Party at Ottawa, having waited to see which way the cat would jump, has lost no time in reconciling itself to the victors in Ontario, from whom it parted, over the trade union issue. No one could be less like Mr Hepburn than Mr Mackenzie King, but we may yet see a seasoning of Mr Hepburn's views in Dominion politics as a result of last week's elections.

Family provision scheme

A scheme to secure a Capital Sum payable at death and a regular Income over a period of years for dependants in the event of early death, at a cost which is little more than that of ordinary life assurance.

It is readily adaptable, and rates will be quoted on application for policies to suit the needs of each individual.

Changes in Wholesale Prices since 1929.—A diagram given in last week's *Economist* on page 62 showed the percentage fall in the gold value of the leading currencies of the world since 1929. Corresponding changes in the general level of wholesale prices for the most important countries are illustrated graphically in the accompanying diagram. It should be remembered, however, that the indices for the various countries are not calculated on a uniform basis.

INDICES OF WHOLESALE PRICES
(Latest available Figures)
(1929=100)

Like the reduction in the gold value of the leading currencies since 1929, the change in wholesale prices since then has been approximately similar in the principal countries of the world. But there has been no rise in wholesale prices corresponding to the fall in the gold value of the leading currencies. While the gold value of the currency units of the majority of the leading trading nations has depreciated by about 40 per cent. since 1929, the wholesale price indices for these countries are still below the level of the pre-depression year. Exceptions are some of the primary producing countries where heavy currency depreciation during the depression has been followed by a remarkable rise in the prices of raw materials and foodstuffs.

Oil from Coal.—Replying to suggestions at the Conservative Conference that more should be done to encourage the production of oil from coal in the interests of national defence, Captain Crookshank adjured patience until the Falmouth Committee had reported. True, we produced little more than 5 per cent. of our oil and petrol at home, compared with a domestic production of 50 per cent. of supplies in Germany; but light oils already received a rebate of 8d. per gallon, compared

with an import price of 4d. "It was all a question of economics." The report of an inquiry into the economics of manufacturing oil from coal, made for the Australian Government by Sir David Rivett and the Dominion Hydrogenation Committee, throws light on this problem. On July 21, in the Lords' debate on Lord Mottistone's motion to set up an oil-from-coal plant, Lord McGowan said that the costs were too high for private investment and initiative, despite protection. The Government accepted the motion, and announced an agreement to set up a low-temperature carbonisation plant in South Wales. Questioned later in the Commons, however, the Minister for Defence stated that the Government's main concern was with foreign-borne supplies. In the view of Sir David Rivett and his colleagues, a hydrogenation plant to produce 150,000 tons would employ 2,000 men directly—and its total costs would be, translated from Australian to British currency and conditions, from 10.5d. to 12.5d. per gallon, according to the period of amortisation fixed. This represents from 2½ to 3 times the cost of imported petrol at Western European ports, equivalent in Britain to a subsidy of over £280 per man employed. No sane investor, the report declares, would put his money into the manufacture of oil from coal by any process without a subsidy much higher than 8d. in Australia—or much higher than 6d. in this country. Thus, this Australian survey suggests, in short, that unless the command of the seas in a future war is likely to be precarious or storage problems are likely to be insoluble, the Government's policy of regarding oil-from-coal production as a supplementary issue is the right one.

Anglo-American Trade Prospects.—In last week's issue of *The Economist* we discussed the advantages of an economically significant Anglo-American trade agreement, and emphasised the justice of the American view that it was for Great Britain to make such concessions to the Dominions as would be necessary to secure modification of the Ottawa agreements. The British Government has expressed its desire for an agreement, and it has been assumed that the negotiations now proceeding at Washington are on the way to a solution of the problems involved. Unfortunately, it is difficult to obtain really satisfactory evidence that the British Government is prepared to make the necessary concessions. The matter is becoming urgent, and hopes of a happy end will be endangered if the conversations are allowed to drag on indefinitely. For one thing, part of the attraction which a policy of lowering trade barriers has for Mr Cordell Hull is concerned with their contribution to the encouragement of peace. If, by her other actions, Great Britain fails successfully to oppose the growth of militarism, the use of the economic method of securing peace will lose its appeal to the American Secretary. Further, internal conditions in America may increase the difficulties of successful negotiations the longer they continue. If a special session of Congress, this autumn, passed such measures as the Wages and Hours Bill, a trend towards a closed American economy might well be expected. If Mr Hull's policy, urged with all his enthusiasm and determination, breaks down on the short-sighted selfishness of the British Empire, it may be discredited in the eyes of America, and so be shelved indefinitely. The need for accelerating the negotiations is the greater because 1938 will be a year of Congressional elections, the atmosphere of which can hardly be friendly towards a programme of freer trade which has never really caught the imagination of the American public.

Colonial Cotton Quotas.—The storm that arose in Lancashire over the decision to enlarge the foreign quotas for cotton imports into Ceylon is now rumbling away beyond the horizon. A deputation which saw the Colonial Secretary and the President of the Board of Trade last week was told that Ceylon's case was unique and that no general revision of quota policy in the colonies was contemplated. The Government hopes that restored good

will may more than compensate for any direct loss of trade. When the anti-foreign (and specifically anti-Japanese) quota system was introduced in 1934, it was bitterly opposed in Ceylon, and was enforced by order-in-council against a strong adverse vote of the State Council. The progress of India towards self-government has made it necessary and right that Ceylon should be given progressively greater control over her own trade policy. When representatives of the country came to London recently to negotiate with the British Government, they were armed with the threat that Ceylon would abandon imperial preference if the quotas were retained. The Government, though not prepared to sacrifice the quotas altogether, realised that the opposition in Ceylon was national and not factitious, and agreed to exempt grey cloth from quotas and to expand quotas on other items by 50 per cent. Lancashire was up in arms, but there can be no doubt that the Government was right and that Lancashire would have lost in the long run by clamping an unpopular and selfish policy on the Singalese. It is, indeed, rather depressing that the agitation has led the Government to commit itself against revising the quota policy in the colonial empire as a whole; for on any wide view of the colonial problem that is the first contribution that Great Britain could make to a solution on a world scale.

Active Business but Fewer Orders.—The week's news shows that business activity remains at a high level. The increase in the value of imports between September, 1936, and the past month, at 22 per cent, was smaller than in August, but the rise in exports over a year ago, at 20 per cent., was the same as in August. On the other hand, reports from a number of industries, including coal, iron and steel and textiles, indicate a decline in the volume of new overseas orders. The iron and steel industry is as active as ever, but new business is limited by the reluctance of producers to add to their already heavy commitments. As both home production and imports are increasing, however, the scarcity of materials is now less marked. The output of steel ingots and castings rose from 987,700 tons in August to the record level of 1,163,000 tons in September, while pig iron production last month, at 726,600 tons, was higher than in any month since September, 1920. The production of coal declined from 4,881,000 tons during the week ending September 25th to 4,859,000 tons during the following week, but was 366,000 tons higher than in the corresponding period a year ago. Certain districts, however, report a lull in foreign business. The position of the Yorkshire wool textile industry has deteriorated, and, as our Bradford correspondent reports on page 145, spinners and manufacturers are not enjoying anything like the same prosperity as a year ago. After a long period of small turnover, inquiries for cotton yarn and cloth have tended to increase following the decline in raw cotton prices. There is evidence of a further, mainly seasonal, decline in building activity. Though the trend of business as a whole seems unlikely to take a downward turn during the next few weeks, the decline in the volume of new orders in some industries is not wholly satisfactory.

Reduction in Shipbuilding Contracts.—The latest shipbuilding returns issued by *Lloyd's Register* this week are disappointing. In contrast to the movement a year ago, the volume of new mercantile tonnage commenced during the third quarter showed a decline from 367,700 gross tons to 218,600 gross tons, an indication of the unwillingness of shipowners—recently voiced by the chairman of the P. and O.—to place orders for new tonnage at increased prices. The cautiousness of shipowners, in turn, reflects their lack of confidence in the future of international trade and, consequently, in the maintenance of the current level of freight rates over a period of years. This development, however, was not confined to the industry in this country, for the volume of tonnage commenced abroad also showed a decline,

from 596,600 gross tons in April-June to 429,700 gross tons in July-September. The current level of activity in British shipyards has as yet been scarcely affected by the reduction in new orders, the tonnage under construction having fallen only slightly, from 1,200,000 gross tons at the end of June to 1,185,000 gross tons at the end of September, against 928,600 gross tons a year ago. The proportion of the tonnage now being built in this country intended for registration abroad or for sale has increased from 8.3 per cent. at the end of June to 15.2 per cent. at the end of the past month. If allowance is made for the increase in naval work on hand, equivalent to about 1,000,000 tons of mercantile tonnage, the total volume of activity is not unsatisfactory for the shipbuilders. At the same time, the recent downward trend of new orders for mercantile tonnage is scarcely encouraging, especially as there is no immediate prospect of an early increase in orders.

Overseas Trade in September.—The trade returns for September contain no surprises. As for the last month or so, imports are increasing a trifle more rapidly than exports, but for the year so far the two are fairly even. The general trend is shown in the chart below:—

The total suggests fairly conclusively that last month's jump of 31 per cent. in imports was due to exceptional circumstances. So far nothing that has happened during the recovery suggests that our import surplus, which amounts so far this year to nearly £300,000,000, is in any way beyond our means. Details are shown in the following tables:—

MONTH OF SEPTEMBER (000's omitted)				
	1935	1936	1937	Change between 1936 and 1937
Total imports	60,822	71,896	87,809	+ 15,913
British exports	34,098	36,961	44,263	+ 7,302
Re-exports	3,811	3,915	5,206	+ 1,291
Total exports	37,909	40,876	49,469	+ 8,593
Excess of imports over exports	22,913	31,020	38,340	+ 7,320
Transshipments under bond	2,046	2,770	3,248	+ 478

FIRST NINE MONTHS (000's omitted)				
	1935	1936	1937	Change between 1936 and 1937
Total imports	539,906	607,979	741,888	+ 133,909
British exports	311,796	320,092	385,652	+ 65,560
Re-exports	40,544	45,713	59,375	+ 13,662
Total exports	352,350	365,805	445,027	+ 79,222
Excess of imports over exports	187,089	242,174	296,861	+ 54,687
Transshipments under bond	17,975	20,579	27,747	+ 7,168

Among the various categories of imports the greatest increase on the first nine months of the year in the totals by value has been in raw materials, etc., which have risen by 30 per cent.; food, drink and tobacco have risen by 27 per cent., and manufactured articles by 22 per cent. The present downward trend of the prices of these commodities is, of course, in our favour as importers, without as yet causing any fall in our exports. Eventually, however, after a long time-lag, this is an effect for which a careful watch should be kept.

Wall Street Decline Explained

NEW YORK, October 4.—Last week the stock market became sufficiently quiet to push its mere fluctuation into the background of discussion. This breathing spell permits some tentative comment. First, the highest-grade dividend-paying equities have dropped about 25 per cent. from their high levels in the spring. Secondly, a broader group of more speculative dividend-paying securities have fallen half as much again. Thirdly, non-dividend-paying equities have, in so many cases as to be almost typical, fallen about 50 per cent.

Such a decline spread over a period of months would have been serious enough. But the July rally carried prices nearly to the spring peaks; and the recent decline was compressed into about four weeks, from the middle of August to the middle of September. This decline brought prices that showed a dividend return of 6 to 10 per cent. on current yield. There is a choice of three explanations: that the long-term interest rate, evidenced by equity yields, is much higher than might be inferred from the rate on Government securities or gilt-edged bonds; that the decline has carried prices, temporarily and for reasons within the market itself, to levels which do not accurately capitalise earnings or accurately reflect the true value of capital; or that the market was discounting a future decline in earnings and, by implication, in the volume of industrial activity.

There is some validity in each of these explanations. In the past year the rate on long-term Government securities rose by something less than $\frac{1}{2}$ per cent.; but the difficulty of floating new issues implied a scarcity of capital for corporate enterprise much beyond anything that could be inferred from the movements of the gilt-edged market. There is no doubt that some liquidation has occurred for reasons not entirely clear. Sometimes this has been attributed to "European selling for European reasons," sometimes to sheer hysteria. It is certain that some liquidation was forced by the operation of the "Loophole Tax" Act passed in August.

Autumn Disappointments

Autumn business has disappointed the confident expectations of business men. In recent months it has been very difficult to interpret the significance of the indices of production, which largely reflect the steel and motor industries. In both these industries production in the first half of the year was affected by great and prolonged strikes. Consequently, the filling of orders placed early in the year was protracted to July and August, which are seasonally months of recession in both industries. As a result, the spring index of production did not rise as high as the demand for goods would have required; and in the summer the working off of old orders sustained the level of production above the level of fresh orders—at least in some lines. In short, if one could have an index of orders it would have shown a strong spring peak and a substantial ensuing summer recession; while the index of production (adjusted for seasonal) shows a flat plateau continuing from November, 1936, to the end of August, 1937.

As recently as Labour Day the business community was convinced that orders would appear in time and in sufficient volume to maintain, at least, the level of production; while financial circles were becoming increasingly sceptical. This scepticism was based on two reasons: the belief that current output was for old orders placed against lower price schedules than would apply to fresh orders; and the continued absence of new capital issues. For example, in the steel industry

both prices and wages were raised in the spring. The wage increases took effect immediately; and price increases are only now becoming the "prevailing price."

A New Price Structure

That is, a price structure in a great variety of lines, which had existed on paper for some months, is only now being experienced by the consumer. The test came in residential building much earlier, and there it had the definite effect of putting a stop to the upward trend. The consumer refused to "take it." The test in non-ferrous metals is also in process. The large copper consumers contracted for much of their 1937 requirements last December, at about 10 cents a pound. The advance to 17 cents in the spring was merely a quotation; even the 14-cent price was only partially effective. The test came when the copper contracted last December began to run out; the market dropped to 12 cents, then bounced back to 12 $\frac{3}{4}$ cents, the current figure.

That September was a month of lower industrial production than August is now apparent. Steel operations fell precipitately from about 85 per cent. of capacity at the end of August to below 75 per cent. at the end of September and to 66 per cent. in early October. Motor production was reduced, as companies switched to their new models; but production and sales of the old models were remarkably well sustained. Textile production was decidedly sluggish. On the other hand, freight car loadings in September reached a record for seven years. The outstanding question has now been answered definitely so far as the autumn is concerned. The orders that were awaited to maintain the level of production have not been forthcoming; and price has been a major factor.

Last winter this country experienced a seller's market for the first time for many years. This seller's market was pronounced in both commodities and labour. In primary commodities the seller's market expressed itself in steeply rising prices; in industry in general, by a large volume of orders; in labour, by liberal wage increases. The whole atmosphere of last winter was charged with "inflation-mindedness," and business men were persuaded that any advance in material or labour costs could readily be passed on to the consumer. The seller's market represented by rising primary commodity prices has changed; the seller's market represented by the volume of forward orders has changed. But the seller's market in labour was written into a large number of "collective bargaining contracts," which are not readily modified.

France

Communists Checked

PARIS, October 14.—The first ballot for the cantonal elections was a success for the Radicals, but a check to the Communists, whose results bore no relation to the remarkable efforts made to attract the electors by any and every means. The second ballot will change many of the provisional results. The four parties of the Popular Front have agreed to withdraw candidates everywhere in favour of their highest candidate on the list. But "republican discipline" will not always be followed. The conclusion so far is that anxiety has died down and the country has ratified the "pause."

The failure of the Communists to re-assert their strength may have important consequences, all the more because it coincides with a Radical success and the Socialists have held their ground. The way is now open for a fresh offensive by the Government on two main problems: foreign policy, notably the Spanish situation; and the modification of certain social laws, such as the

Germany

The Drive for Colonies

40-hour week, which M. Jouhaux himself has already stated at Prague must have an international application, otherwise it will favour foreign production against the interests of French labour.

The favourable results of this election, confirming, as they do, the decision taken last week at Rambouillet to speed up production, come at a time of difficulty in certain foreign markets, hitherto regarded as centres of security. This caused the franc to recover; and the atmosphere has been further cleared by a sympathetic speech made by Sir John Simon about French recovery and by the conclusion of a loan of 200 million Swiss francs to the French railways (4 per cent., issued at 99). It has also been announced that the £40 millions loan from England, which matures in December, may be renewed on favourable conditions.

It is clear that producers have recently been encouraged by the fall of the franc—which increases the competitive power of French exports—and by the resistance of the Minister of Finance to fresh claims for wage increases. There has also been an improvement in the relations between employers and workers. Never since M. Blum's first devaluation have general conditions been so favourable as they are now for a repatriation of exported capital, which would ease the position immeasurably. Prices, however, remain the great unknown factor in the situation. Rentes, on the other hand, are actually at the highest level of 1937, the 3 per cent. being quoted at 75.80, compared with 59.75 in June when the Blum Government resigned.

The Progress of Production

The directors of the new National Railway Company held their first meeting last Tuesday. The President emphasised that the first object of the new body was to restore financial equilibrium by economies and by an increase in receipts. The 1938 budget will be drawn up at once. There will be no increase in the staff.

The monthly figures published by the Statistique Générale showing industrial production in France are as follows (1913 = 100):—

	Aug., 1936	June, 1937	July, 1937	Aug., 1937
General index	93	102	100	91
Engineering	98	117	117	110
Iron and steel	73	106	104	91
Textiles	51	65	59	45
Mines, adjusted figures	87	95	96	74
Building " "	62	57	55	53
Leather " "	108	98	94	91
Paper " "	165	142	129	112
Rubber " "	949	833	872	904
Motors " "	413	433	448	438

In the motor industry, 10,195 automobiles were put on the road in August, 1937, compared with 17,306 in July and 17,011 in June.

The figures for the cotton industry are as follows:—

	May, 1937	June, 1937	July, 1937	Aug., 1937
Spinning (average per spindle in kilograms):—				
Production	1.734	1.929	1.783	1.141
Weaving (average per loom in pieces of 100 metres):—				
Production	4.16	4.90	4.88	2.86

It is to be noticed that the diminution of industrial production in August as compared with July was due to paid holidays in the summer of 1937. The recent course of prices has been:—

	Sept., 1936	July, 1937	Aug., 1937	Sept., 1937	Oct., 1937
Wholesale prices (1914 = 100)					
General index	404	579	590	617	618
Domestic products	451	584	602	630	636
Imported products	319	570	568	595	587
Foodstuffs	441	555	572	612	620
Industrial products	372	601	606	623	617
Retail prices (1914 = 100)	494	600	615	642	...
Lighting and heating (1930 = 100)	88.0	100.2	105.2	110.0	...
Clothing	61.2	93.7	96.4	101.2	...

Bankruptcies in September were 300, compared with 319 in August and 548 in July; judicial liquidations and bankruptcies were 407, compared with 438 in August and 711 in July.

BERLIN, October 13.—Anxiety about the international situation has not abated. Publicity is engaged in a great colonial drive; and has enlisted professors, who prove that Germans are good colonists and Britons indifferent; and Italians, who in the German interest proclaim the equality of colonial rights, but do not offer, in the interest of equality, to cede Abyssinia to the Reich. Charity begins at Rome.

The resolution of the British Conservatives has had a good effect; that is, it was conducive to British interests. The speeches and letters to the newspapers of Englishmen who want to solve the colonial problem in impracticable ways have had a bad effect. All these plans for admitting Germany to Mandates, giving her under conditions a part of her former colonies, international pooling, and so on, are received here with derision. The professors want to be real colonists—with virgin forests, differential calculus, and mosquitoes. With good ground they reject the arguments of the uncompromising British school that Germans are bad colonists, that colonies are worthless, and that present German trade methods are more worthless still.

The share market last week and early this week continued to sag, following the trend of foreign stock exchanges. The decline here, however, has been much smaller than in Wall Street and certain European markets. The business situation has not changed. The notion that a possible set-back to world trade would affect the Reich unfavourably is rejected in official statements. These, however, ignore the fact that the recent expansion of German exports and imports was mainly the result of world recovery, and in particular of the revival of investment.

Trade Compensation Virtually Ended

The Foreign Exchange Board has further restricted compensation deals in foreign trade. These are now expressly forbidden with 28 countries and with 26 other countries where clearing agreements exist. Nominally they are permitted in future with Palestine, Liberia, some British possessions in Africa and some Latin-American countries; but even there compensation transactions will be conditional on the impossibility of obtaining payment in exchange and on the avoidance of disturbance to buying markets. Since, in addition, the minimum value of a compensation deal is fixed at Rm. 50,000, compensation may be said to have been terminated.

The import of cereals continues to impose a strain on the exchange position. Wheat imports in September were almost at the summer level; and wheat imports in the first nine months of the year cost Rm. 133 millions. Imports of other cereals were valued at over Rm. 50 millions. Inspired Press statements indicate that foreign securities, registration of which at the Reichsbank was decreed last month, will be gradually bought up.

A declaration by the Reich Chamber of Economy has again called attention to the credit anomalies caused by the virtual disappearance of trade bills (replaced, it is true, with Reich special bills). In so far as credit is sought by industry, it is now taken largely in the shape of credits on current account at the banks for fixed terms or of book credits from deliveries. Debtors, whose credit would be badly shaken by failure to meet their bills, can treat book debts with less ceremony, and it appears

BRITANNIC
ASSURANCE COMPANY LIMITED

Motor and General Insurances transacted

Chief Office: BROAD STREET CORNER, BIRMINGHAM

that they increasingly do so. Where book debts to industrial sellers replace bills, the debtor often imposes the condition that the claim shall not be transferred to a third party. The Chamber of Economy has advised that bills shall be increasingly used as means of payment, and that the practice of forbidding the transfer of book claims shall be restricted.

Further Decline in Unemployment

The number of unemployed fell in September by 40,000 to 469,000, which is 7 per thousand of the total population. This is the lowest figure in recent years, though much larger than the lowest figure reached during the inflation period. Of the 469,000, some 157,000 were not fully employable. On October 1st the Reich Board for Labour Exchanges and Unemployment Insurance celebrated its tenth anniversary. This insurance has existed in the Reich only since 1927; and the Labour Exchange activities of the Board have very greatly increased since 1932. The Reich Finance Minister declares that the labour reserve is much larger than the registered half-million unemployed persons.

The Institute for Trade Research estimates the gross value of industrial production in 1936 at between Rm. 65,000 millions and Rm. 70,000 millions. The net value of products in their final stage of manufacture is estimated at between Rm. 30,000 millions and Rm. 35,000 millions. The values of the best pre-depression years have not yet been reached; but here again the explanation is the relative fall in prices.

The September report of the steel syndicates mentions a continued heavy home demand, without any increase of output. While export was quieter, the works had plenty of outstanding foreign orders. Gross exports of heavy iron and steel declined slightly in August for the first time since February, while imports were practically unchanged. The report of the Steel Trust for the months July to September shows slight increases in the output of pig-iron and ingot steel compared with the preceding quarter.

In the whole business year ended on September 30th, coal production was 25,898,500 tons compared with 22,319,800 tons in the preceding year. The output of pig-iron was 6,041,000 tons compared with 6,027,300 tons, and of ingot steel 6,280,800 tons compared with 6,397,700 tons. It is officially stated that the Four Year Plan insures against any decline in the demand for iron and steel. The Ruhr Coal Syndicate has reduced its assessment to Rm. 3.22 per ton, apparently because of an increase in the proportion of sales made in the "uncontested" or high price districts.

Austria

Austria and Trieste

VIENNA, October 7.—By special treaty with Italy, an Austrian State Office has been established in Trieste to facilitate the customs arrangements for the seagoing trade of Austria. There is no question of extraterritoriality, no separate jurisdiction, no *enclave* or treaty port.

Trieste, the sole exit of pre-war Austria to the sea, was favoured with differential freight rates and through tariffs on the railways and shipping lines, and with reduced customs duties for numerous colonial products. Thus, Austria's export and import trades were attracted to the port of Trieste and the hinterland of Trieste was artificially extended far north into old Austria's most industrialised provinces.

Losing the Austrian hinterland, Trieste, for a long period after the war, lost her commercial importance, being at a geographical disadvantage compared with the national Italian ports, Venice and Genoa. (The same applies to the port of Fiume in relation to Hungary and Yugoslavia.) The Italian Government has made great efforts to improve the traffic amenities of Trieste. The technical equipment of the port, both for passenger traffic

and for handling merchandise, has been enlarged at great cost. Aided by special bodies abroad, especially in Vienna and Prague, the Italian Government has been remarkably successful in reviving Trieste, especially in 1937.

Goods arriving in Trieste by sea in the first six months of 1937 amounted to 986,000 tons, compared with 698,000 tons in the corresponding period of 1936. Outgoing shipments rose from 348,000 tons in the first half of 1936 to 564,000 tons in the first six months of 1937. Trieste's natural relations with Austria are reaffirmed by the steadily increasing share of Austria in the traffic of the port. Some 192,000 tons of the imports went to Austria and 160,000 tons of the exports came from Austria, while Italy's share was only 127,000 tons of imports and 146,000 tons of exports. The old traditions of Austria's seaboard export trade are still effective in favour of Trieste, in spite of altered frontiers; the artificial attachment of Trieste to the industrial districts of Austria has been carefully maintained.

Progress since 1923

After fourteen eventful and difficult years the President of the Austrian Nationalbank has carefully examined Austria's progress, omitting as abnormal the chaotic years from the end of the war up to the reconstruction work of the League of Nations (1922), when the import of corn, condensed milk, canned meat and coal were matters of life and death. Comparing the home production and imports of the most important foodstuffs in 1923 and 1936, the figures are:—

Year	Production (In 1,000 quintals)	%	Import (In 1,000 quintals)	%
Wheat ... { 1923 ...	2,419	33	4,913	67
{ 1936 ...	3,678	63	2,181	37
Rye { 1923 ...	4,023	76	1,296	24
{ 1936 ...	4,605	81	1,061	19
Barley ... { 1923 ...	1,710	63	987	37
{ 1936 ...	2,531	85	460	15
Oats { 1923 ...	3,754	82	831	18
{ 1936 ...	4,029	94	270	6
Potatoes { 1923 ...	14,262	95	779	5
{ 1936 ...	24,994	100	76	—
Sugar ... { 1923 ...	473	31	1,037	69
{ 1934-36	1,919	99	28	1

Milk and dairy products also show improved consumption and increased home production. Exports have replaced imports.

	Excess of Imports (—) or Excess of Exports (+) in quintals*
	1923 1936
Milk	— 200,000 + 114,000
Butter	— 16,000 + 35,000
Cheese	— 43,000 + 31,000
Condensed milk	— 80,000 + 300

* Approximate figures.

The production of black coal was 3,700,000 quintals less than imports in 1923, but in 1936 only 2,400,000 quintals less. The import surplus of brown coal, which was 828,000 quintals in 1923, fell to 150,000 quintals in 1936. In 1923 the production of electric power amounted to 1,900 million kilowatt hours; in 1936 it has risen to 2,550 million kilowatt hours, and the export of electric power increased from 20 million kilowatt hours to 341 million kilowatt hours in the same period. The monthly average of production has improved as follows:—

	1923	1937 (to date)
Iron ore (in 1,000 tons)	100	134
Wood pulp (waggons)	681	807
Cellulose (waggons)	1,064	2,454
Paper (waggons)	1,275	1,934
Pasteboard (waggons)	363	446

The import surplus was 1,141 million schillings in 1932; it fell to less than 300 million schillings in 1936 and is still decreasing. Austria's debts to foreign countries are also falling. Between 1932 and 1937 they were reduced by about 2,200 million schillings, or 51 per cent., this including the reductions caused by the devaluation of various foreign currencies, but not including the considerable amount of Austrian stocks which have found their way back to Austria. The interest on Austria's foreign debt, which was 282 million schillings in 1932,

has decreased to 110 million schillings by the reduction of the capital and of the rate of interest. Gold in the Nationalbank rose from 241.4 million schillings at the end of 1932 after the crisis of the Credit-Anstalt to 341.9 million schillings at the end of 1936. The Nationalbank was able to sell *devisen* for imports, and the accounts of Austria with other countries controlling foreign payments are favourable for Austria. The *devisen* needed for the payment of foreign debts have also been granted by the Nationalbank without diminishing the gold reserve.

Estonia

The Growth of Industry

TALLINN, September 26.—M. Eenpalu, the Prime Minister, the protagonist of agricultural interests in Estonia, pointed out during a recent tour of inspection through the heavy industrial region in the Eastern part of the country, that Estonia was not only an agrarian country but was on the way to becoming an industrial State. The number of persons employed in heavy industry on July 1, 1937, was 51,953 and showed an increase of 20 per cent. over the figure for July 1, 1936, and an increase of 50 per cent. over the total of persons employed during the period of economic prosperity before the world crisis. The index of employment in heavy industry (1927-31=100) reached 140.6 in the first half of 1937, compared with 121.5 in the first half of 1936.

The increase in employment in the shale oil industry, where plant is still being considerably extended, is particularly marked. The production of crude oil, which is chiefly marketed in Germany, amounts to about 10,000 tons a month, compared with 5,000 tons a month last year, and it is estimated that production in 1938 will rise to 200,000 tons. Plant is being extended in the State works and in those owned by a Swedish financial group, while similar plans are under consideration in the concerns financed by German and British capital. The problem of the benzine deposits has recently been solved under the new trade agreement to export to Finland with a period of 10 years, about 10,000 tons of shale-oil benzine free of duty.

Problems of Industrialisation

In other branches of industry a process of rationalisation and adaptation to domestic market requirements may be observed; domestic purchasing power has considerably increased because of favourable economic conditions. A natural consequence of this process of industrialisation is the increase in imports of raw materials, semi-manufactured goods and, particularly, machinery, which has resulted in an import surplus. During the first seven months of the year, goods to the value of 62.2 million kronen were imported into Estonia, compared with a value of 46.4 million kronen during the same period of last year. Exports were valued at 51.1 million kronen, compared with 44.7 million kronen. Although exports of agricultural and industrial products show a considerable increase, principally owing to more favourable prices, this increase is completely overbalanced by the increase in imports, due partly to the heavier demand for productive machinery and partly to the poor harvest in 1936.

Although this year's harvest is better than last year's, it has caused some disappointment since the corn is very light in weight. The agricultural position may, however, on the whole be regarded as favourable, since prices are better. This is particularly so in the case of grain, butter and meat.

The labour question has recently created a difficult problem. Unemployment has for some years now been liquidated in Estonia; and a shortage of labour is making itself felt in several trades, particularly in agriculture, where wages have risen correspondingly. As a result of higher wages and more favourable living conditions,

an increased movement of workers from the country into towns and industrial regions is taking place, which has forced farmers for the first time to introduce foreign labour from Poland. The shale oil industry is in a similar plight, where, in spite of protests from local labourers, Polish miners have been employed.

In conjunction with the rise in price levels there has been for some time a corresponding rise in the cost of living. The general index of the cost of living (1927-31=100) was 97.1 in July, compared with 92.8 in July, 1936, and 81.0 in July, 1935. This rise in the cost of living has led workers in the heavy industries to demand an increase in wages. The officially instituted Settlements Commission has met these demands, thus in turn compelling the employers to instal more modern methods in their enterprises and to mechanise production.

New Zealand

The Government's Programme

CHRISTCHURCH, September 11.—The opening of the session has been delayed on account of trips to the Coronation and Imperial Conference by the Prime Minister and other members of the Cabinet. The Government has promised general health insurance and superannuation schemes, probably after the Christmas vacation, and some of last year's legislation may require revision. The Courts have recently decided that clerical work does not come within the scope of the industrial legislation, and this is likely to be amended and made to cover a wider field.

In addition, there are many complaints about rising costs consequent upon the Government's programme. Estimates of the increase in labour costs range from 20 to 30 per cent. Manufacturers complain that, in

present conditions, they cannot compete in price with imports; farmers want higher fixed prices for wheat, and better guaranteed prices for dairy produce, and complain that they cannot pay wages comparable with the rates ruling on public works. Labour complains that the cost of living is rising, and the benefits of higher wages are being lost.

Meanwhile, bank funds abroad have fallen by £NZ7 millions during the past year, despite an active trade balance of £NZ14½ millions, of which about £NZ10 millions is required for interest payments, etc. The balance of payments has therefore been against the country and there appears to have been an outward flow of investments to countries where conditions are more attractive.

Foreign Trade and Internal Prosperity

The year ended June, 1937, has been marked by a large expansion of external trade. The value of exports reached £NZ64.6 millions, a figure of £NZ7 millions greater than the highest pre-depression record, and £NZ11 millions higher than in 1935-36. Most of the increase was in wool, which realised £NZ12.8 millions for 846,374 bales, compared with £NZ12.8 millions for 918,471 bales in the previous year. Expressed in sterling, exports are now slightly higher than the average of the eleven years 1920-1930, a lower sterling price level being offset by larger quantities. Import trade has responded to the increase in purchasing power and demand consequent upon the rise in export income; imports for the year totalled £NZ50.1 millions in value compared with £NZ39.5 millions in the previous year. The increase is well spread over a wide range of construction and consumption goods and, if allowance is made for the

reduction in imports due to the suspension of external borrowing, the value of imports expressed in sterling compares favourably with pre-depression years, while the quantities are greater. In both volume and value, therefore the recovery of the Dominion's external trade appears to be complete, though there is still ample scope for further expansion.

The increase in export income is reflected in internal conditions. Average weekly bank deposits, which fell to £NZ11 millions in 1932, rose to £NZ16 millions in the June quarter of 1936 and to £NZ19.2 millions in the same quarter of 1937. The yield of the sales tax for the year ended in June was 24 per cent. higher than in the preceding year. Land transfers and building permits have increased only moderately, but savings bank deposits show a high rate of accumulation, motor and radio licences have expanded considerably, and totalisator investments are 33 per cent. higher than last year. Some unemployment remains, but, allowing for seasonal influences, has been reduced to less than half its highest level.

Public revenue is also showing the effect of this general improvement. Tax revenue for the first quarter of the financial year was £NZ900,000, or nearly 20 per cent. higher than in the same quarter of last year, while the rates of tax were unchanged. Total revenue for the quarter increased by £NZ1.2 millions, and expenditure increased by only £NZ88,000. At the present rates of taxation, it appears likely that the yield of taxes this year will be not less than £NZ35 millions, about double the total yield of taxation in 1928-1929. A committee has, however, been investigating taxation, and there are some hopes of a downward revision when the Budget is presented, probably in September.

Letters to the Editor

Germany's Claim to Colonies

TO THE EDITOR OF THE ECONOMIST

SIR,—Current discussions of Germany's claim to colonies rarely make sufficient allowance for the fact, cursorily mentioned by Mr Keynes in chapter four of "The Economic Consequences of the Peace," that the terms on which Germany laid down her arms contain a pledge that she shall retain her colonies. This pledge is to be found in President Wilson's address of February 11, 1918, which, unlike his address containing the fourteen points, was accepted without any qualification by the Allies as part of the peace terms.

In this address Wilson lays it down that transfers of territory may be made only with the approval of the whole civilised world; and he endorses more than once the Reichstag resolutions of July 19th. The relevant portion of the July resolution reads thus: "The Reichstag strives for a peace of understanding and the permanent reconciliation of the peoples. With such a peace, forced acquisitions of territory, and political, economic or financial oppressions are inconsistent. The Reichstag also rejects all schemes which aim at economic barriers and hostility between the peoples after the war." Wilson's endorsement of the principles laid down in this resolution is part of the terms on which Germany surrendered.

The non-fulfilment of our pledges is due to failure to realise the facts, not to bad faith; but it provides Hitler with a genuine grievance which has helped him to power. Colonies may have no economic value; but the lack of them wounds Germany's pride, and so prevents moral disarmament or goodwill which is the indispensable condition of peace.

Is it more reasonable to suppose that the Allies' failure to keep faith with Germany, which has engendered so much bitterness in the past, will bring about appeasement and reconciliation in future, or to suppose that if continued it will lead to even greater bitterness in future and ultimately to war? The following answer to this question is given by Messrs. R. J. Woodward and Paul Chadburn on p. 46 of their "History of Our Own Times," and is worth consideration. "The allies therefore cannot be completely exonerated from the responsibility for the Nazi revolution. By their

delays in granting overdue concessions and by their failure to carry out solemn pledges, they contributed to the hostile feeling which Hitler organised and fostered so skilfully. That being so, it would be absurd to argue that further concessions should not be made until the temper of Germany has changed. It is precisely this attitude which aggravates the trouble. To continue to treat 60,000,000 people as the pariahs of the world would be criminal folly." (The italics are mine.)

We as a nation can at least remove from ourselves the stigma that inevitably attaches to any failure to honour a pledge; for we can still carry out our pledge so far as territory mandated to us is concerned.

Yours etc.,

T. G. G. POWELL.

Moffat.

The Economic Value of Human Life

TO THE EDITOR OF THE ECONOMIST

SIR,—Mr Ernest Bevin lately welcomed the increasing interest in public health, and stressed the "actual capital value in output and gain to the community of an efficient worker." Two English economists of the seventeenth century, Sir William Petty and John Graunt, were the first to realise that the wealth of nations depends essentially on the economic value and potentialities of their populations. By calculations of the average income of a wage-earner, they tried to find out the face value of the productive capital represented by such a wage-earner, as well as by the whole wage-earning population.

When a movement was started in this country against the ruthless exploitation of human labour in the first third of the nineteenth century, human life immediately became regarded again as an asset of increasing economic value. There existed no comprehensive fund of private statistics and so, when I was officially asked in Germany at the beginning of this century to obtain concrete figures, I was compelled to rely on the methods of Petty and Graunt—avoiding their error of capitalising the average income to

find the economic value of an average wage-earner. Wages cannot be compared with interest on invested capital; they are more like annuities, paid only during an individual's normal working life.

My calculation that the capital value of an average Prussian workman at that time was about £800 aroused much interest. I had succeeded in ascertaining the approximate economic value of unnecessary loss of human life—from child mortality, inadequate hygiene, venereal disease, consumption or traffic casualties. This was a strong incentive for furthering social legislation.

Critics may argue that figures of this kind are fictitious. The same objection could be raised to estimates of national wealth or of the capital value of the world's gold stock. But I am aware of the "relativity" of my figures: they have nothing to do with ideal or moral values; and are mainly meant to remind economists and public authorities of their sins of omission.

Almost everywhere the centre of economic interest is being shifted from capital to labour; and the centre of interest of a worker's life from work to leisure. If a man is doing his job as a whole man and not as a robot, and if self-earned income and not a comfortable revenue becomes the economic ideal of man, then quite new fields will be opened for investigations of the economic value of human life.

Yours faithfully,

LEON ZEITLIN.

Food Storage for Defence

TO THE EDITOR OF THE ECONOMIST

SIR,—The article by Sir Arthur Salter on "Food Storage for Defence," two weeks ago, is one of great importance and interest, and having worked for some months on one aspect of the food storage problem I found Sir Arthur's general survey of the greatest value in giving perspective to the national problem as a whole.

With regard to the vulnerability of shipping it seems clear to me that an obvious need is the restoration of many of our minor ports. Such ports can either be general coastal harbours, such as Maryport, or inland docks, such as Gloucester or King's Lynn, which have all had adequate facilities in the past and could easily be expanded to deal with large tonnages in the future. Combine this increased number of ports with a large number of smaller vessels such as are now plying between the Continental ports and England, and the risks of loss from enemy blockade must be decreased.

There is an opportunity for re-examination of the value of our inland waterways as a means of carrying the stored foods from port to store and, if it is necessary, store to mill again. Water carriage is still the most economical means of carrying bulky goods from overside a ship to an inland destination.

Wheat seems to be one of Sir Arthur's main pre-occupations. Wheat falls into the carbohydrates group and carbohydrates are essential for manual workers, but as shown in Lord Astor and Dr Keith Murray's book, "World Agriculture," the carbohydrate requirements of this mechanical age are fast decreasing. Allowing for this decrease, however, the starch products as a group bulk large in contemporary human diet and must be counted as one of the major items of the nation's food supply. But is it necessary for the carbohydrates to be derived from one form of starch in such great preference to any other? Potatoes are much more easily produced in Great Britain than wheat, and we are such large producers already, as is shown by Sir Arthur's figures, that the industry could easily be expanded. Dried peas are another large source of starch in the national diet, whether stored in packets or in cans. Maize or cornflour is another bulk basis along with many more. Most of these can easily be rendered into flour which, as Sir Arthur rightly points out, is one of the most convenient and compact forms of storage. Given dry warehouses or silos, flours of any description, whether produced from wheat or maize, peas or potatoes, can be stored for any long periods without harm.

Sir Arthur, in dealing with storage alone, has probably not paid sufficient attention to the possibility of preserving and condensing stocks, or making them available for storage by the primary processing industries. The milling of flour is a case in point; the drying of vegetables is another; the curing and chilling of bacon is a third; and most surprising omission of all is Sir Arthur's entire disregard of the canning process. Food stored in cans is as

little altered from its original form as is compatible with the necessary sterilisation, and therefore retains a very high proportion of its full nutritional value. It has the further advantage of being so sealed that its storage life is a long one, and it is at all times protected from the external dangers of atmosphere, animals or gas.

Finally, storage is not a static matter, but involves a most complicated system of ever-revolving stocks, constantly replacing the oldest by the newest and, if possible, relating this movement to the normal flow of the trade concerned. Unless the date of the next war is known more exactly than most of us feel competent to guess, then any storage plan must include such revolving stock. For that reason a plan which, at any rate in part, provides for an increase in stocks at the normal points of storage in mills or distributors' warehouses is preferable to one that is built up in isolation from the normal flow of the foodstuff in question. There is also the problem of any increase or decrease in the total stocks that are to be held, or even the problem of a possible total liquidation when the Government feel that a pacific period of years lies ahead. In such circumstances, the greatest care will have to be exercised that the sudden increase or decrease of the consumable stock does not unduly upset the market, or react too harshly upon the primary producers of this country or of the world.

Whatever the difficulties or the multiplicity of the solutions the main point of Sir Arthur's article stands unassailed, that food storage is at least worthy of the 4 per cent. or 5 per cent. consideration in any plan of national defence that it would cost.

Yours truly,

GEORGE W. CADBURY.

World Crisis

TO THE EDITOR OF THE ECONOMIST

SIR,—In the midst of all the tumult may we suggest that the answers to three short questions will provide one way out. What settlement will satisfy Germany and Italy? How far can we go to meet their demands? Is the difference between them worth a war when we remember that the last war settled nothing?

Yours faithfully,

DAVID AND EVELYN PEAT.

Australian Banking Inquiry

MR MACDONALD appointed the British Macmillan Committee on Finance and Industry in November, 1929. It reported in June, 1931, twenty months later, and set a fashion in the Empire. Two years later Lord Macmillan went to take the chair of a Canadian Royal Commission on the same subject. Despite, or because of, his previous experience of exhaustiveness, this time he reported in a mere two months. Then, in 1934, came New Zealand's turn—Major Douglas being present the word is perhaps appropriate—which occupied four months. Last came Australia, which atoned for its tardiness by sitting longest and producing, this summer, the most lengthy report of all. South Africa, as perhaps befits the world's largest gold producer, has so far refrained from officially discussing monetary reform. But even she can scarcely resist such a demonstration of Imperial unity.

These four reports form a compact group and can with advantage be read together, and not only by those interested in the technical details. None of the last three has the fire and wit of the British report, but each has literary qualities of no mean order. Canada's report is a stately, solid piece of work. New Zealand's is earnest and regards bad theory with a repugnance usually reserved for sin: even the four commissioners who signed a minority report, though not averse from queer theory, thought banks wicked. The latest of the series is more sophisticated, and more academic in the arrangement of its full and precise survey of the Australian economy. It argues its points fully and fairly, even, in fact, a little pedantically. For example, it does not, like the British Committee, leave Major Douglas to curious searchers among the minutes of evidence, nor does it, like the New Zealanders, fill its pages with rather agitated polemics against him: it gives instead full sixteen pages to the best and soberest refutation of his ideas so far published. It is able and painstaking rather than brilliant or weighty or earnest.

But it is not only a common literary interest that gives these reports a certain unity. They are also unanimous in the general trend of their recommendations. One and all they inculcate the principle of monetary management and of the responsibility of Central Banking. They consecrate the support of these principles by public opinion throughout the Empire, and they give them their classical statement by lay authorities. Indeed, a little calculation might suggest that they record their progress. The British report of 1931 has addenda, reservations and minutes of dissent which in length equal 48 per cent. of the report itself. In the Canadian report of

1933 they take up 18 per cent.; in the New Zealand report, in 1934, 16 per cent.; and in this Australian report of the present year no more than 6 per cent., and even then they are reservations of small moment. For all intents and purposes it is unanimous.

This unanimity is all the more impressive because of the profundity of the Commission's researches. Their report is admirably documented. They, like the author of the father of all commentaries obviously destined to become a textbook, divide their subject into three parts. The first describes the Australian economy and the history of its banks with a wealth of detail. The second deals with Monetary Reformers rather than monetary reform. The third sets forth the desiderata for Australian banking, compares the actual with the ideal, and makes proposals for a *rapprochement*. These latter are discussed by an Australian correspondent from the technical point of view in an article in the Banking Supplement published with this issue of *The Economist*.

One feature of the objectives of policy may be noted in passing. The British Macmillan Report stated the object of Central Banks to be "to maintain the stability of international prices both over long periods and over short periods." This report tells the Commonwealth Bank to "make its chief consideration the reductions of fluctuations in economic activity." In both cases the ultimate aim is, of course, identical, but the alteration in emphasis indicates a change in opinion about methods, interesting as a lesson taught by the past six years as well as a reflection on the special position of raw material producing countries. The rest of the report shows clearly why the change has come about, and gives it an interest of its own. In fact, in every way this is a volume worthy of its predecessors and to be read by anyone interested in contemporary economic life.

Shorter Notices

"Elements of Economic Theory." By Erich Roll. (London) H. Milford. 276 pages. 5s. net.

Professor Roll attempts to provide an introduction to the big treatises on economic principles. He gives a summary and occasionally simplified treatment of the major problems of theoretical economics. The reader will not particularly enjoy this book—unless he likes the intellectual exercise of elementary theory—but he will enjoy Marshall and Wicksteed and Pigou more afterwards than he would otherwise have done. The only gratitude the author will get from those he is writing for will be accorded years after they have read his book. By then they will have found that Professor Roll has helped them unobtrusively over many awkward and uninteresting stiles, and guided their steps to the really interesting things in difficult theory with a minimum of unnecessary divagation.

"The Principles of Auditing." By F. R. M. de Paula. (London) Pitman. 338 pages. 8s. 6d.

This is the ninth edition of Mr de Paula's well-known work. That it should follow within a year of the eighth edition is evidence of the important position which it holds, and of the author's determination to keep his work abreast of the rapidly-changing times. Mr de Paula is an innovator in the realm of company accounts. This work, then, is not merely a leading text-book. It is also a powerful argument for more informative company accounts, on the lines which he has pioneered in his own company.

MONEY AND BANKING

Federal Reserve Policy

WITHIN the last twelve months a radical change has come over the credit policy of the Federal Reserve System. A year ago, the emphasis of the Board's policy was laid upon the necessity of reducing the superabundant supplies of credit available to the banks of the country. But this year the authorities have taken a great variety of measures with the precisely opposite end in view. In 1936 the watchword was, if not restriction, then at least the avoidance of too rapid expansion of the monetary structure. To-day the policy aims, if not at inflation, then at least at preventing any further credit contraction. The story of the events which have led to this surprising reversal is both interesting as monetary history and also instructive to students of Central Banking practice.

In the summer of 1936 there was every justification for a certain uneasiness in Washington over the rate at which monetary expansion was proceeding. It is a cardinal principle in the current economic philosophy of the United States that the miseries of the depression were directly due to the excesses of the preceding boom, and that the only way to prevent another slump is to prevent another period of inflation. There was certainly no inflation in America in the middle of 1936; on the contrary, recovery had only recently got into its stride. But on the other hand, the demand deposits of the member banks of the Reserve system had risen from about \$12,000 millions in the middle of 1933 to over \$20,000 millions in June, 1936. They were considerably higher than in 1929 and rising at the rate of about \$3,000 millions a year. Clearly, if inflation was to be avoided, the continuance of this tendency could not be regarded with equanimity. Such, at least, was the official view.

It was unreasonable, however, to expect any cessation of the rise in deposits, so long as the member banks had a superabundance of reserves. The position in the middle of 1936 was that the law required the member banks to hold reserves, in the form of balances at the Federal Reserve Banks, of a little short of \$3,000 millions. Actually, the volume of what in England would be called "bank cash" had been swollen by the devaluation of the dollar, by continued Federal deficit-financing and, pre-eminently, by the enormous imports of gold. The member banks had, in fact, reserve balances of almost \$6,000 millions. These would have been sufficient for a volume of credit almost double what already existed. Moreover, their other forms of reserve had similarly increased. "Cash in vault" in June, 1936, was more than 60 per cent. higher than in June, 1933, while the balances kept by out-of-town banks with New York City institutions had almost doubled. Low interest rates were tending at one and the same time to stimulate the public demand for credit and to put pressure on the banks to expand the scale of their operations in order to maintain their rate of earnings.

The Board of Governors of the system met this situation by using the powers conferred upon them by the Banking Act of 1935 to increase the minimum percentages of reserves required by law to be kept by the member banks. On August 15, 1936, these percentages were raised by a half, with the result that some \$1,400 millions of reserve balances were transferred from the "excess" to the "required" category. But continuing gold imports promptly inflated the excess reserves again and by December, 1936, they once more exceeded \$2,000 millions. Further measures were clearly necessary if the Board's intentions were to be realised. The first step was to ensure that excess reserves should not be further

swollen by any future gold imports; this was accomplished by the Treasury's decision to purchase for "sterilisation" any gold imported. This sterilisation policy has had the effect of stabilising the total reserves of the member banks for the first time since 1932. The second measure was to increase the reserve requirements still further in order to reduce the excess reserves to manageable proportions. It was decided to increase the required percentages to double what they had been before the first increase in August, 1936. This increase was made effective in two stages, on March 1st and May 1st, 1937.

By these measures the authorities succeeded in putting a stop to the increase of total reserves, which have been stabilised at just below \$7,000 millions. They also ensured that, of this total, \$6,000 millions should be impounded as "required" reserves against the member banks' deposits. The margin for further expansion of credit was thus reduced to rather less than one-sixth of the current requirement.

The Board had been careful to make it clear that they had no intention of forcing a contraction of the volume of credit, still less a rise in interest rates. Their sole object was to put themselves in a position to control any further expansion. They had good reason for believing that the measures they had imposed would achieve this limited object without going further and initiating an actual contraction. A margin of "excess" reserves of about one-sixth of the requirement was, it is true, much smaller than the previous figure. But before 1932, excess reserves were entirely unknown. All through the period of the 1920's, the member banks not only had no margin of excess to spare but had to borrow a varying proportion of their requirements from the Federal Reserve.

It soon became apparent, however, that the policy was having unexpected results. True, there was no contraction in the total of deposits, and the rates of interest charged by banks to their customers continued to decline. But there was an undesired reaction upon the bond market. This can be explained chiefly by the movements of funds between the different parts of the country. The first increase of reserve requirements in August, 1936, fell with particular severity on the member banks in the two "Central Reserve cities," New York and Chicago. These banks, having the highest required reserve percentages, had to meet the largest increase. The increase alone in the requirement against demand deposits was 6½ per cent. At the same time these banks were meeting with a strong demand for loan accommodation. In the second half of 1936 they had to find \$833 millions of increased reserve requirements and \$427 millions for increased loans. Of this total, \$501 millions were found out of their excess reserves. But to provide the rest, the New York and Chicago banks were compelled in the autumn of 1936 to start realising some of their swollen holdings of Government securities. By the end of the year, their total investments had fallen by \$555 millions. The effects of these sales were, however, masked by the fact that the banks outside these two cities were able to continue buying bonds. The holdings of all member banks in the six months fell by only \$127 millions.

In the second phase of the "mopping up" policy, in the early months of 1937, these effects were redoubled. The New York and Chicago banks had to find a further 6½ per cent. of reserves; the pressure for loans increased; and this time there was no offsetting factor in unsterilised gold imports. Moreover, there was a new factor

The Socialist Case DOUGLAS JAY

"Presents the case for 'democratic socialism' in a form intelligible to the non-expert public with persuasiveness and moderation. His book is one which every intelligent student of public affairs should read."—*Times Literary Supplement*.

"Douglas Jay is known as the best City Editor in Fleet Street—he has now written a brilliant book putting the Socialist Case."—*Daily Herald*. 12/6

FABER & FABER

at work. The country banks (i.e. those outside both the two Central Reserve cities and also the other Reserve cities) preferred to meet their increased reserve requirements by drawing on their balances in New York and Chicago rather than by depleting their excess reserves. This preference is intelligible; since no interest is paid on either category of deposit, a country bank might well prefer to have its surplus cash deposited in its local Federal Reserve Bank rather than in a member bank in the Reserve cities. The result, however, was to impose another strain on the financial centres. In the first half of 1937, the banks of New York City and Chicago had to find \$632 millions in increased reserves, \$462 millions in additional loans and \$542 millions in redemption of balances deposited by out-of-town banks. Moreover, the banks in the other Reserve cities were feeling the same pressure. They had to find \$459 millions, \$199 millions and \$516 millions respectively for these three purposes. The result was that the selling of bonds by the Central Reserve city banks was much heavier, and that they were joined by the Reserve city banks. Between them they sold \$1,232 millions of bonds in the first six months of 1937. The country banks were still buying; but the holdings of all the member banks taken together fell by \$856 millions of Government bonds and \$330 millions of other bonds.

The natural result of these sales was to produce great weakness in the bond market. So long as the Federal Budget is in deficit and a large part of the National Debt is in short-dated securities, the Treasury cannot well afford to allow the bond market to be undermined. In fact, during the period of these sales there was a net increase of \$1,240 millions in the total amount of Government obligations outstanding. The Government bond market had to absorb over \$2,000 millions of bonds in six months with the large banks, the biggest buyers of the last four years, turned sellers.

This weakness in the bond market was not the only disconcerting change in the outlook. The level of other security prices was affected and though Washington, under the present Administration, may profess a fine disregard for Wall Street, it must nevertheless pay attention when the market is as weak as it has been recently. Moreover, there are now signs that industrial activity itself is being adversely affected. This may not be directly due to Federal Reserve policy, but a period of hesitating industrial activity is one for expansion, rather than for contraction, of credit.

In the last two months, accordingly, the policy has been completely reversed. The bond market has been directly supported by the purchase of bonds in the open market by the Federal Reserve Banks. This will also, of course, have the effect of increasing the reserves of the member banks, primarily in New York City. The same result will follow the sale of \$300 millions of gold from the Treasury's inactive, or sterilised, account. And finally, if, after these measures have taken effect, the banks of the large cities still find themselves in need of cash, every inducement has been offered to them to meet their requirements by borrowing from the Federal Reserve rather than by selling bonds. The New York rediscount rate has been reduced to the unprecedented figure of 1 per cent., and almost all restrictions have been removed from the character of paper that will be accepted as security for loans.

These steps have already had the desired effect of increasing the reserves of the New York banks. Whether they will also stop the sales of Government bonds is more doubtful. The total investments of the "reporting member banks" (which consist entirely of banks in large cities, but are much more numerous than the New York City banks alone) have continued to decline, and are now nearly \$2,000 millions lower than a year ago. All American banks in recent years have been holding a far higher proportion of Government bonds than usual; the weakness in the market this year has alarmed them, and it seems probable that the sales will continue. Whether the reversal of credit policy will reverse the trend of the security markets and of industry is an even more fundamental problem whose answer will be eagerly awaited.

Financial Notes

The Franc's Recovery.—Early this week the position of the franc was completely reversed. A strong demand for francs set in over the week-end, and, in spite of heavy sales of francs by the French Control, the spot rate for sterling dropped from Frs. 150½ to Frs. 146½. Forward francs were also in demand, and the three months' rate narrowed from Frs. 7½ to no more than Frs. 2½ discount. The French Control was able to buy substantial quantities of sterling and dollars, and, according to one guess, its purchases of sterling alone amounted to a sum of the order of £25 millions. The reason for this rally is only too easy to see. It is all a question of relative fear. Hitherto the French have been more afraid of their own currency than of the situation in foreign centres, but early this week the break in the London and New York stock markets, accompanied by a host of unjustifiable rumours, turned the balance of fear the other way and induced a hurried repatriation of French capital. As further proof of this comes the fact that by Thursday, when steadier views of London and New York had been established, francs once more began to be offered, so that the spot rate came up to Frs. 147½, while three months' francs widened to Frs. 4½ discount.

The Swiss Loan.—According to reports from Paris, a loan for the French railways has been successfully arranged with a Swiss banking syndicate. The amount mentioned is Sw.Frs.200 millions, equal to about £9,000,000 sterling. The loan will bear interest at 4 per cent., will run for two years, and is being issued at 99 per cent. It is possible to argue that Switzerland is relending to France part of the French funds which have taken refuge in Switzerland, though if this line of thought be followed it is necessary to emphasise that the loan is granted and is repayable in Swiss francs. Thus it will come as a welcome reinforcement to France's foreign exchange resources, and the report of its conclusion may be one of the factors behind this week's rally in the franc. There is no news yet of any arrangements for the repayment or renewal of the French railways' sterling credit, which falls due shortly. Obviously the French authorities would like to renew it, but so far London has been careful not to express any opinion. It is all a question of the yield on the credit and, more important still, of the security behind its ultimate repayment. On the other hand, the French gold reserves in themselves should provide adequate security, and, in view of present international conditions, it would be undesirable to add in any way to existing French financial embarrassments.

The Foreign Exchanges.—The market was dominated by the rally in the franc, discussed in a previous Note. Dollars depreciated slightly against sterling, the New York rate rising from \$4.95½ to \$4.96½. Swiss francs, guilders and belgas were also offered against sterling, the spot rate for belgas rising from bel. 29.38½ to bel. 29.45. The reason for all these movements lies in the repatriation of French funds. The actual procedure is for francs first to be bought from the French authorities in exchange for sterling, and for the sterling then to be bought in London or elsewhere in exchange for Swiss francs or guilders. In other words, the repatriation from Holland or Switzerland to France is being made through London. Argentine pesos and Canadian dollars are unchanged, the latter being at a small premium in New York. Far Eastern rates are also unaltered.

Anglo-Italian Clearing Results.—The totals of payments to this country for the first five quarterly periods of the Anglo-Italian Clearing Agreement suggest that the end of this particularly elaborate piece of

machinery (which was explained in *The Economist* of November 14, 1936, page 313) is within sight. We have so far received £5,326,450 in all, of which £2,908,566 has come from the "new account" as payment for current exports to Italy, £2,035,324 from accounts "A" and "B," which cover various classes of arrears, and £229,560 from account "C," the little residual account which is given 3 per cent. of total lira payments and goes to dividend and capital movements. What sums British citizens might wish to transfer under account "C" it is impossible, of course, to guess: probably it is large. But it is the completion of payments in the two trade arrears accounts that is to be the signal for the negotiation of a new agreement. Transfers have now been made under these accounts for deposits into "A" made up to September, and into "B" to March. Consequently unless debtors are being very dilatory in their lira payments and unless our imports from Italy fall off suddenly, these accounts should be closed within two or three quarters at most. Already "A" is finished save for exchange differences outstanding, and the surplus over the 18 per cent of total sterling receipts, which goes automatically to this account, has been transferred to "B." When "B" is finished the whole 27 per cent. which the two together take has to be divided between "C" and the "new account" in proportions to be negotiated by the two Governments. When that happens it will be important to see that investors can get their funds out through "C" if they wish to (and realise they can) and to decide on a course of action about the sterling balances which will probably accumulate in Italy's favour.

The Bank Return.—The demand for currency over the end of the quarter has now subsided, and £1.9 millions of notes have returned from circulation. The reserve is increased by £2.0 millions.

BANK OF ENGLAND					
	Oct. 14, 1936	Sept. 22, 1937	Sept. 29, 1937	Oct. 6, 1937	Oct. 13, 1937
Issue Department:—	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Gold	248.7	326.4	326.4	326.4	326.4
Note circulation	446.4	486.0	488.5	491.8	489.9
Banking Department:—					
Reserve	63.4	42.1	39.6	36.3	38.3
Public deposits	31.6	15.7	21.8	18.0	26.1
Bankers' deposits	82.2	105.6	95.1	102.1	92.9
Other deposits	41.2	36.2	37.2	36.8	36.4
Government securities	80.4	106.9	105.8	106.5	105.1
Discounts and advances	9.6	5.2	6.2	10.8	9.2
Other securities	19.4	21.6	20.8	20.9	20.4
Proportion	40.8%	26.7%	25.6%	23.1%	24.6%

In the banking department, the week's excess of Treasury bill payments over maturities and differences in the incidence of Treasury bills explain the increase of £8.1 millions in public deposits and decrease of £9.2 millions in bankers' deposits. Government securities are reduced by £1.4 millions, a movement which largely neutralises the increase in the reserve.

Portuguese Exchanges Freed.—Last week the Portuguese Government decided to remove the last vestiges of the control which it has for long exercised over foreign exchange. The escudo has actually been free from all but merely formal restrictions since 1933, but now the whole machinery is to be abolished. It was set up thirteen years ago, after the revolution which made General Carmona President. At the time the currency was hopelessly inflated, the exchange had been depreciating steadily since 1914, from an average that year of 5½ escudos to the £ to 157 escudos in July, 1924, and Portuguese capitalists and exporters held their money by preference in London. Control took the forms of requiring exporters to hand over a percentage of their foreign currencies, and of licensing purchases of foreign currencies above a certain minimum. At one time the

percentage was as high as 75 per cent. and the minimum as low as £5. Since Dr Salazar became Finance Minister in 1928, and especially since he stabilised the sterling exchange *de jure* in 1931, restrictions have been progressively relaxed. For some time now the minimum for licences has been £100, and the percentage to be given over only 5. To-day the country's finances are in such excellent order, and the Bank of Portugal has such ample reserves, that complete freedom is possible. The new move is a tribute to the skill and orthodoxy of the only dictator who is also a professor of economics.

The Money Market.—Treasury bill issues are once more running in excess of maturities. Last week excess payments amounted to £8.0 millions, while this week they are a further £14.0 millions, so that between October 2nd and October 16th the total tender issue has increased from £573 to £595 millions. This week's heavy payments are reflected in a drop of nearly £10 millions in bankers' deposits, but money has nevertheless remained very easy, though the clearing banks have experienced a fair afternoon demand for loans.

	Sept. 23, 1937	Sept. 30, 1937	Oct. 7, 1937	Oct. 14, 1937
Bank rate	2%	2%	2%	2%
Clearing banks' deposit rate	1½	1½	1½	1½
Short loan rate:—				
Clearing banks	1½-1*	1½-1*	1½-1*	1½-1*
Others	1½-1	1½-1	1½-1	1½-1
Discount rates:—				
Treasury bills	1½-1	1½	1½	1½
Three months' bank bills	1½-1	1½-1	1½-1	1½-1

* Loans against Treasury bills and other approved bills and British Government securities within six months of maturity; 1 per cent. Treasury Bonds and other gilt-edged stocks within six months of maturity; and other collateral respectively.

Discount rates are unchanged. The banks have bought mixed parcels of December and January bills, but so far have not bought January bills alone. A line of Northern Ireland bills has been placed by tender at a rate of about 1½ per cent.

September Clearing Bank Averages.—The September increase in bankers' deposits, due to Government disbursements at the beginning of the month, is reflected in an increase of £3.3 millions in clearing bank cash. Deposits, however, have only risen by £3.8 millions, so that the aggregate cash ratio of the clearing banks has risen from 10.3 to 10.4 per cent.

	Sept., 1936	May, 1937	June, 1937	July, 1937	Aug., 1937	Sept., 1937
Capital and reserves	131.8	132.5	132.5	132.5	132.5	132.5
Acceptances, etc.	101.8	125.5	124.1	122.1	116.1	114.2
Deposits (including undivided profits, etc.)	2,219.7	2,217.7	2,255.1	2,255.6	2,245.9	2,249.8
Total liabilities	2,453.3	2,475.7	2,511.7	2,510.2	2,494.5	2,496.5
Cash	226.1	229.6	237.7	231.8	231.0	234.3
Cheques, balances and items in transit	56.9	68.7	73.0	63.7	64.6	60.1
Money at call	161.2	163.4	166.2	157.9	156.7	157.4
Discounts	342.1	242.8	257.5	280.7	275.8	279.2
Investments	632.7	641.4	638.2	631.7	630.4	626.0
Loans and advances	862.5	936.6	947.4	954.7	952.6	957.5
Investments in affiliated banks	25.2	23.5	23.5	23.5	23.5	23.5
Cover for acceptances, premises, etc.	146.6	169.7	168.2	166.2	159.9	158.5
Total assets	2,453.3	2,475.7	2,511.7	2,510.2	2,494.5	2,496.5

The growth in tender issues of Treasury bills from £548 millions on August 7th to £573 millions for the whole of September explains the rise of £3.6 millions in discounts. Advances have resumed their upward trend after the seasonal contraction in August, and are nearly back to their July level. Investments have been reduced by £4.4 millions, so that the gilt-edged market maintained its strength during September without any apparent support from the banks.

THE STOCK EXCHANGE

Stock Market Difficulties

By general consent, the past fortnight has been the most anxious since 1929 on the London Stock Exchange. Since the middle of January industrial security prices have been declining, but up to the end of August the retreat was orderly. Subsequently it became ragged, and since the beginning of this month it has threatened to become a rout. Weakness has not been confined to a few speculative favourites. The best shares, being most marketable, have suffered most. British Oxygen, for example, have fallen from 98s. 9d. to 86s. 3d. during the last three weeks. Vickers reached 39s. 1½d. earlier this year. On Monday they touched 25s. 7½d., a loss of 4s. in three weeks for a typically stable share. Such examples could easily be multiplied. When the gilt-edged market, which had hitherto stood aloof from the troubles of the equity markets, itself gave way last Monday, despondency had full rein. But while the volume of selling was substantial, it was far from being the avalanche which the day's record of prices suggested. Markets, in fact, have not been "free" in any true sense of the term. Mere inquiry, without any definite selling orders, has at times been sufficient to put prices down.

What are the underlying causes for the market's depression? Are world politics responsible? This month's news, admittedly, has not been calculated to encourage investors. But two years ago the markets were accustomed to ride over political crises with the utmost facility. To-day, it would seem that while diplomatic tension is undoubtedly a contributory factor to market distress, it is not an originating cause. Political developments may determine the state of market sentiment for a time, but when economic conditions are set fair, experience suggests that their influence is usually short-lived.

Is Wall Street responsible? Here we come nearer to the heart of the matter. It seems beyond question that heavy differences in American common stocks have been met by throwing sound British shares on the London market. But the influence of the external open position in trans-Atlantic securities, which has been known to exist for some months past, goes even further. The 55 per cent. margin requirement in New York has diverted an appreciable amount of business, both on British and American account, to London and other European centres, where the bull speculator has obtained far more comfortable terms for carrying his position. Thus, the cushioning effect of 55 per cent. margins in New York has been offset by a weaker speculative position in Europe. The headlong fall of such securities as U.S. Steel (which stood at 104½ before the Labour Day break early in September, and is now quoted at 69½), shows the effect of cumulative retreat by the speculative army.

Even this explanation, however, does not afford a convincing basis for the whispering campaign which has been the most pernicious feature of the last ten days. Calumnious rumour has concerned itself, not primarily with the Stock Exchange—where the ravages of recent weeks have produced only two insignificant failures—but with the names of institutions of first-rate status in the money market. Rumours of this sort, like crafty cowards, love the dark. However irresponsible their origin, their victims, individually, are quite helpless, since specific denial would itself frequently invest report with a dignity it does not deserve. Semi-diplomatic protests have, however, been very properly made against

the bruited of "names"—for which Paris has been to blame, no less than London. The rumours attaching to the name of one financial house of importance and standing have been given their quietus in the highest quarter as being without the slightest foundation. And the fact that the credit of the houses impeached by recent rumours is quite unimpeached in Lombard Street is a final answer to slander.

Within the market itself, however, more serious observers are concerned with the question whether the adjustment of an unsuspectedly large bull account will be achieved without serious technical strain. Next week's Stock Exchange settlement is, therefore, awaited with a certain anxiety, though actual dealings, this week, have closed on a steadier note than seemed probable five days ago. This technical problem has prevented the short-term operator from taking any view longer than a day. But if investors are given breathing space, to what use can they best apply it? Their first care, obviously, must be critically to re-examine equity share prospects—over a longer span than the market is usually willing to contemplate. There is, as yet, no convincing statistical evidence that a down-turn in industrial activity is occurring. *The Economist's* index of business activity has lately achieved new high records. Both Prime Minister and Chancellor expressed themselves confidently last week on the industrial outlook, though that, perhaps, is an obligation they owe to the State. Yet, as we suggest in a leading article on another page, there are signs for concern. To the fall in building activity is now added a decline in new shipbuilding orders. A single quarter's figures are not conclusive, but they suggest that shipping concerns are not prepared to adventure unlimited sums of money in new tonnage at the present high level of costs. And industry generally is being forced to the view that the present is not, perhaps, the best time to launch new schemes of capital expenditure. The gradual realisation of this truth has produced a reduction in the "unexpired" orders on the books of a number of concerns in the capital goods industries.

A rise in costs of raw materials and labour, however, does not affect all industries equally. Indeed, just as rising costs are unfavourably affecting certain branches of activity, so the recent fall in raw material prices may react adversely on others. A superficial examination of the tables of Stock Exchange prices suggests a close correlation between commodity price changes and share movements. This correlation is due, in part, to identical speculative forces. The species of speculator who drove copper up to practically £80 in the spring—and who remains a stale bull after its fall to £45 10s.—is likely to be similarly involved in common stocks, which have fallen 30 per cent. during the same period. But after all allowance for speculative excesses, it is true to say that concerns which were forced, by the mere pressure of business, to cover their requirements of raw materials at the higher prices ruling earlier this year, may well have to meet significant inventory losses, unless they are covered by forward "hedging" contracts. The profits of certain industries—the woollen textile trade is an obvious example—are sensitive to sharp fluctuations in the price of materials.

While the present behaviour of commodity prices is not conclusive evidence of an approaching set-back in business conditions, it is reminiscent of some recessions of the past. Last March the speculative boom was held to be justified by the low level of stocks of primary com-

modities, and by the supposed difficulties of increasing their supplies. The prevailing reaction, by contrast, springs fundamentally from the accumulating evidence of a rapid easing of the statistical position of the same commodities. The restriction screws are again beginning to turn, but buyers are still reluctant to cover their requirements, even at current prices. Such manoeuvres have been conspicuously successful in the United States, where a buyers' strike has lately forced down the price of domestic copper from 14 cents to 12 cents.

This example is the more significant since it comes from America. The course of commodity prices certainly depends, to a very significant extent, upon the future trend of American industry. Many investors would be reluctant, at this stage, to assume that the forces of American recovery had been exhausted, although they would doubtless defer their final judgment until the winter recession had been left well behind. Yet the effect of Wall Street's movements cannot be wholly ignored in this connection. There may be no essential relation between stock prices and industrial activity, yet the entrepreneur's decisions are often coloured by the level of common stocks. Moreover, the new capital market is automatically closed in a "bear" market for existing securities, although this factor, in the United States as in this country, may have less immediate importance under present conditions than in earlier times.

Falling commodity prices are necessarily a discouraging portent for such groups of securities as the sterling bonds of primary producing countries, the shares of raw-material companies and, at one remove, of companies in the export trades. There are, however, certain more favourable features which may be distinguished at the present time. The effect of higher commodity prices upon British export industries has not yet been fully felt. And even after the severe declines of recent weeks several commodities still stand appreciably higher than twelve months ago. Net rises in wool, copper, tin and spelter offset the fall in cotton and the failure of lead and rubber to improve on balance. In any case, there is invariably a time lag between improved financial circumstances in the primary producing countries and their translation into a growing demand for manufactured exports. This phase is well illustrated by the experience of Argentina, whose export surplus for the first eight months of this year amounted to 750 million pesos, compared with 247 million pesos for the same period in 1936. While Argentina's exports have increased this year by 76 per cent., her imports have risen by only 32 per cent. It is reasonable, therefore, to expect, over a period, some further improvement in Britain's traditional export industries—the more so as some of them are capital goods trades whose products can be supplied only under relatively long-term contracts.

The investor, then, may have to wait a little longer before accepting as conclusive the evidence that the fall in Stock Exchange prices is discounting a recession in business activity. In any case, the market is much less vulnerable to-day than in 1929. There has been no repetition of the orgy of foreign lending whose cessation broke the commodity markets overnight at the beginning of the Great Depression. The deflationary effects of dear money and—for the rest of the world—of sterling's abandonment of gold are not likely to arise. There are latent expansionary forces in the United States which, if given release, might carry the world economy some considerable distance. But, in the short run, a fall in security prices of this year's dimensions carries with it a warning to exercise caution. When markets are falling there are many investors to whom the preservation of capital is of greater immediate concern than any consideration of high income. These investors have, doubtless, already made substantial reductions in their equity portfolios. The dearth of first-class debenture stocks and preference shares suggests that others are consolidating their equity profits in favour of a stable income. For them, and for others who desire a temporary cloakroom for their resources, it may be relevant to point out that a number of short-dated gilt-edged stocks stand at a discount and yield nearly 3 per cent. gross, to redemption. The income which they afford is not high, but relative security of capital commands its own price.

Investment Notes

Bulls and Bears.—Probably the severest trial the Stock Exchange has to bear in time of depression is to be charged as the agent of its own undoing. To-day, as in all periods of falling prices, there is no lack of august writers to picture the City of London as a Barbary Coast where each harbour has its nest of financial pirates or, alternatively, a Bedlam whose inhabitants perversely ruin their own business by preaching depression when all is right as right can be. Admittedly, philippics against "speculation" are common form in a falling market. Most investors are familiar enough with market zoology to know that a bull pushes up, while a bear beats down; that the bull buys what he does not want, while the bear sells what he has not got. Fewer readers, possibly, are familiar with the rôle of speculation in a normal market. In the first place, bulls and bears widen a market and enable genuine buyers and sellers both to deal at closer prices, and to avoid speculation themselves, by future "hedging" contracts. In the second place, speculators cushion the force of changes by anticipating them. When the bull's special knowledge and inference is everybody's news, he sells, takes his profit and is a check on a runaway rise. Conversely, the bear will eventually be a buyer when the public is a seller. It is only when organised bull or bear operations on a large scale, accompanied by deliberately exaggerated or falsified propaganda, push the pendulum well beyond the point of dead centre, that the process qualifies for moral indignation.

The relevance of general considerations to present events is fairly clear. The chief source of danger, at the moment, is less the bear than the stale bull, who came in when the markets were good. If he is carrying his commitments on borrowed money, every fall in prices reduces his "cover" and involves the risk of "forced" selling. So far as organised bear raids are concerned, all responsible commentators have an obvious duty to reassure public opinion against the effects of irresponsible scaremongers. But these efforts will be successful in proportion as they are directed, not against the bears, but against the unreasoning public state of mind which makes bear raids possible. This argument holds whether the subject of organised manipulation be the franc, the shares of the United States Steel Corporation or the price of tin. And reassurance will be effective to the extent that it is convincing; if it be vague, unsatisfactory or merely abusive, the last state of the market will be worse than the first. Above all, expedients designed to eliminate or seriously to handicap all speculation—such as the suggestion, canvassed unofficially this week, to place all London Stock Exchange contracts on a cash basis—are likely to make price fluctuations wider rather than narrower.

Share-Pushing and the Press.—If the Government intends to include a measure against share-pushing in its programme of legislation for the forthcoming session, the authorities would do well to consider the implications of a forthright and forceful speech made by the chairman of The Financial News, Ltd., to his shareholders last Monday. The chairman classified share-pushers under two headings—plain gangsters and mushroom issuing houses with pompous names and no assets. A share-pushing Act would greatly strengthen the anti-gangster machinery and even clip the wings of the worthless issue vulture. But the law is the last line of

resistance against the share-pusher, while the Press is the first. The circulation of all the specialised daily financial journals is only a small percentage of that, say, of a large Sunday newspaper. But their voice goes out over all the world and their words unto the end of the earth. Given reasonable freedom of scope, they have the knowledge and the zeal to check ninety-nine cases of victimisation at their source for every one which comes to Court. But, as the chairman of The Financial News, Ltd., pointed out, their activities are limited in two ways. The law of libel has become so far-reaching, so uncertain in its incidence and so onerous in its potential application, that this newspaper was recently advised, by eminent lawyers, to settle a claim by a gentleman who had previously served terms of imprisonment, and finally served one more. A second danger is that newspapers, an appreciable part of whose revenue comes from advertising, may consciously or unconsciously be influenced by the fact that in the advertising world those who eat most pudding sometimes get most meat. To refuse to advertise the prospectus of a third-rate issuing house, or to persist in criticism which may lead to the erasure of one's name from the list of journals to which such advertising is offered—that, indeed, is a policy which involves immediate sacrifice for a reward which, though inevitable, is often gradual.

Yield Differentials.—A reader, who takes the view that a large part of the present trouble in the industrial share markets may be attributed to the search for a new yield basis, has invited us to extend the second chart given on page 537 of *The Economist* of September 11th over a number of years. This chart compared the yield on "Old Consols" with the average yield on ordinary shares since 1935. In the accompanying chart the story is carried back to 1928, when the Actuaries' Investment Index begins. Broadly, the chart may be regarded as covering the span of a complete cycle from the onset of depression towards full prosperity. If, as our correspondent argues, the equity shareholder is now convinced that rising costs will eat into profits so seriously as to

"ACTUARIES' YIELD INDICES—QUARTERLY."

qualify his previous dividend anticipations, some part of the recent fall in share values is evidently justified. But what is the "normal" differential between gilt-edged yields and the average return on industrial shares—which, presumably, one would expect when profits tend to become more stabilised? Our chart suggests that an appeal to history is not entirely conclusive on this point. The margin of one per cent. or less which has prevailed since the middle of 1932 is no more "normal" than the three per cent. differential touched in the autumn of 1930. "Normality" in these matters, indeed, becomes apparent long after investors have taken their profits or paid their differences. Perhaps the notional figure of two per cent.—the relic of gold-standard days—is still as safe a guide as any for the long-term investor.

In this search for the norm, however, it is desirable to examine the constituent elements in equity share yields. They are based on past dividends, and related, in turn, to present prices, which discount distributions still to come. The "true" yield on ordinary shares at a given date, therefore, may be significantly different from the yield calculated in the ordinary way, for it should be based, not on past dividends, but on future dividends yet to be declared—but discounted as far as possible in the valuation of the shares. Some impression of the "true" yield might be obtained by plotting the industrial share yield curve, say, six months earlier throughout. The yield shown at June would thus be charted at the previous December, on the argument that December prices already discounted distributions six months ahead. This method, however, is far from accurate. Between December and June share prices will have changed, and when June arrives, a new set of dividend possibilities will be discounted in share prices—with corresponding effects upon yield calculations. It is possible, with the exercise of trouble, to isolate the effect of autonomous movements in share prices from the corresponding yield figures. But such an investigation would prove the familiar axiom that investment is a continuous process, without revealing any startling conclusions regarding normal yield differentials between gilt-edged and industrials.

Industrial Profits in September.—After the declining tendency of recent months in the rate of rising profits, the September figures restore a percentage advance—27.8 per cent.—reminiscent of the early days of recovery. Total profits of the 81 companies whose reports were received amounted to £7,269,607 compared with £5,687,606 for the previous year. The trend of the past year is shown below:—

Reports published in	No. of Companies	Rise in Profits*	Reports published in	No. of Companies	Rise in Profits*

* After payment of debenture interest.

The iron and steel group, comprising 14 reports, again shows spectacular improvement. These concerns earned £2,042,963, an increase of £659,824, or 42 per cent., over the previous year. Fifteen rubber companies increased their net profits from £76,789 to £216,059, while a sharp improvement in the textile group reflected the recovery of Calico Printers.

Railway Traffic Figures.—Investors who follow the weekly gross traffic returns of the four main line British railways as indicators (within their inevitable limits) of British trade activity, will find it necessary, from now onwards, to make a weekly correction, in all comparisons with last year, for the 5 per cent. increase in charges which became effective on the first of this month. The additional amount which the railways should receive from this source cannot be precisely estimated, but if a reasonable allowance be made for a continued but moderate upward trend in the volume of traffic, the total increment for the last thirteen weeks of this year can probably be put at something under £1½ millions, divided between the four railways in approximately the following proportions: London, Midland and Scottish, 40 per cent.; London and North Eastern, 33 per cent.; Great Western, 17 per cent.; and Southern, 10 per cent. The average gain each week, for the four railways, should be in the neighbourhood of £110,000. Thus, the figures published this week—the first to which the 5 per cent. increase fully applies—show a gain of £135,000, compared with the same week of last year. Deducting

the "corrector," the balance of "true gain" comes out at £25,000. This figure is a long way below the average of £132,000 for the whole of the forty weeks of 1937, to date. The dangers of building firm conclusions on a single week's railway figures are, however, proverbial. A minimum of three to four weeks' figures under the new regime will be necessary for any conclusions on the trend of railway traffics.

Company Notes

The Motor Show and the Investor.—Show Week provides no less news for the motor share investor than for the intending car purchaser. This week, for instance, has brought a considered view of the industry from Lord Austin, at his company's annual meeting, the Standard Motor profit statement, the speech of Rover Company's chairman, and good reports from S.S. Cars and Henlys. Lord Austin expressed himself with his customary confidence. Fortified with record profits, and by a substantial increase in turnover during the opening weeks of the current financial year, such confidence is scarcely surprising. But it was qualified by a significant passage on the increased costs which the motor industry now has to face. Some classes of steel used by the Austin Motor Company have risen by as much as 46 per cent.—presumably over the past year. Wages, too, have been increased. These advances have compelled an advance in selling prices—obviously a course to be preferred to any reduction of technical standards. Yet the investor may feel that the circumstances do call for yields of the order of 6½ per cent. for the leading shares. Both Austin and Morris Motors are on this basis. Such substantial increases in costs, followed by a seemingly moderate increase in selling prices, must be followed by a further expansion in output if total profits are to be further increased. And the past record of the industry suggests that demand is highly responsive to changes in selling prices. So, although the leading producers have achieved a greater measure of profits stability in recent years in earlier years—due to a steady consolidation of technical progress and a more equal spread of demand over a range of models—the equity appeal of the best motor shares is necessarily limited. This conclusion applies even to shares like Austin, whose dividend has been stabilised at 50 per cent., and is covered with a substantial margin of earnings.

A note of caution also appeared in the chairman's speech at the Rover Company meeting. While he referred to a 50 per cent. increase in output for the first ten weeks of the current year, rising costs and competition—perhaps the chairman had in mind competing imports—were not ignored. Those motor investors who discounted a "Standard year" by taking the shares up to 176s. 3d. early in 1937, have proved right about profits, though they have lost 53s. 9d. per share of their capital. The result, before tax, is £300,746—representing an increase of £42,475 on the corresponding figures of £258,271 for 1935-36. The dividend, increased from 25 per cent. to 40 per cent. appears to be covered by earnings of some 58 per cent. It is proposed to increase the capital from £460,000 to £720,000, and 920,000 new 5s. shares are to be offered at 12s. 6d. in the proportion of two new shares for each £1 share, which are to be split into 5s. denomination. The "ex-all" basis of the new shares would be approximately 23s. 3d., but the increase in capital would have to produce earnings immediately if the 40 per cent. dividend rate were to be fully covered. And while there is good reason for encouraging the executive staff of so successful a concern, shareholders may be inclined to the view that an offer to the staff of 120,000 shares at the same terms, and at the directors' discretion, is generous. There is, indeed, much to be said for making such rewards on a cash, and not on an equity, basis.

Harrisons and Crosfield Meeting.—Mr Eric Miller's speech is invariably read by a wide circle of rubber and tea shareholders. On Tuesday, however, he had first to deal with the reasons for the directors' decision not to recommend any further increase in the deferred ordinary capital. It may be said that the explanation was frank and convincing. The origin of the deferred capital rests in the development of Harrisons and Crosfield from a private concern into a public company, which nevertheless retains many traces of the partnership principle in its financial structure. These origins were traced in detail by the chairman. The option rights—to take half of any dividend in excess of 10 per cent. in the form of new deferred stock—arose from a legitimate desire to strengthen the business through the retention of profits. But in the course of time the company's resources have become ample for its needs, and the further intake of capital would, in the chairman's word, be an "embarrassment." It is unfortunate for the deferred stockholder that the market—which always esteems a capital right more highly than cash dividends—has marked down the units. This, however, does not affect the intrinsic value of the equity. It is clear that the directors were on firm ground—both financially and legally—for their decision. Article 14 (a) states specifically that option rights apply "until the deferred ordinary shares have been issued to the extent of the whole nominal amount authorised"—and this limit is close at hand. But the effect of other articles is to prescribe a three-fourth's consent for increasing the deferred capital beyond £500,000, and if this consent is obtained the deferred capital may be increased by "the company acting by the board of directors."

In his review of the plantation industries, Mr Miller expressed renewed satisfaction at the achievements of restriction and his conviction that the schemes were still required. But he also recognised the tea restriction scheme as a mere palliative, while potential production

Chairman and Managing Director:
Sir ERNEST J. P. BENN, Bt.

runs so far ahead of consumption. An increase in consumption, indeed, is still the real aim and problem of the industry. His analysis of the rubber market during the past year might be applied in a wider context, for he administered a reproof to operators guilty of undue speculation based on assumptions which have quickly been disproved. Yet his conclusion, after the hectic price movements in rubber this year, was that producers and manufacturers had received and paid a price which gave no cause for dissatisfaction to either side. Mr Miller, however, cast his eye across the Atlantic and suggested that the outcome of the stock market's embarrassment and the current industrial recession should be closely watched—an argument which other commodity shareholders might apply with advantage. And his inferred conclusion that the restriction machinery could be used to offset changes in demand shows how far, and how quickly, the commodity outlook has been changed in recent months.

First Re-Investment Trust.—When the British Empire group of unit trusts made their first offer to convert their sub-units into the shares of a managed investment trust, the experiment was closely watched by the unit trust movement—and its critics. Since last April the problem of the fixed trust manager—committed to a portfolio which permits of little adjustment to the conditions of to-day—has become more difficult. The reasonable degree of success achieved by the British Empire group, therefore, provided other groups with an incentive to examine the opportunities for conversion offers. First Re-Investment Trust is the name adopted by a new managed trust which has this week offered its £1 shares in exchange for sub-units of National Fixed Trust Unit "A." The National group has advertised that its total sales exceeded £20 millions; a conversion offer from what must be the most successful group in the movement, judged by total sales, is therefore the more significant. The new company is similar in constitution to the managed trusts which have been formed to convert the British Empire units. It has one director in common—Mr Maurice Hely-Hutchinson—two representatives from the National group, and the chairman is Lord Kennet. If all sub-unit holders accepted the offer the issued capital would consist of 1,312,000 ordinary shares of £1. Since the sub-units are quoted at 3rs. bid the holder may erroneously assume that he will lose 1rs. per sub-unit. This confusion, if it arises, will ignore the fact that the denomination of the shares is immaterial in relation to their equity rights—although a low denomination enables the board to start operations with a healthy balance sheet.

Although the arguments for management are conclusive—that is a lesson which did not require confirmation by the fixed trusts—it must be confessed that the formation of new managed trusts *via* fixed trusts is an uneconomic process. Sub-unit holders have already paid a loading charge for the full term of the trust. In the present instance, the price of the sub-units has been adjusted down to a "closed" or bid basis. Certificate holders who convert will have an equitable interest in the escrow fund which remains for future management, but the new company must pay capital duty—analogueous to part of the initial loading charge. Again, a management company (formed as a subsidiary of National Fixed Investment Trust, Ltd.) will have the right to carry, through all security transactions, and will receive the usual return commission paid by stockbrokers to agents. In this respect, First Re-Investment Trust will be under a disadvantage (as the series of Conversion Trusts are) compared with the established investment trusts. The offer, of course, is entirely optional, although it may be regarded as an experiment which, if successful, may be followed by further offers from the same group, for it comprises ten fixed trusts, though not all of them are. Two questions appear relevant if the conversion proceeds to gather force. First, the ungeared unit price has certain advantages. Is it, therefore, essential to revert to the rigid managed trust form?

Secondly, should future offers be confined to the shares of one managed trust—or at least a strictly limited number per group? The present tendency is to form a hierarchy of managed trusts for each of the unit trusts in turn; but convenience of marketability and economies of management would seem to be available with a larger grouped concern.

British Celanese Position.—A British Celanese dividend statement has now been issued, which shows that the first preference dividend will be paid on the due date. But although the payment has been earned with "a substantial margin," the balance does not justify any payment on the second preference capital. Speculation has been aroused by the further statement that the matter will be dealt with in the directors' report. Does this form of words foreshadow a scheme to deal with the second preference position on a permanent basis? It may be recalled that, two years ago, the chairman contemplated the payment in cash of these arrears, or, as an alternative, their funding on the lines of the Canadian Celanese scheme. Dr Dreyfus has always had a robust faith in the profit-earning potentialities of his company, but achievement has still a long way to go in order to catch up with prognostication. No dividend has been received on the £4,250,000 7½ per cent. second preference shares since 1930, and the arrears now amount to £2,231,250 gross. The net earnings for the year to February, 1936, totalled £364,508, and a single year's first preference charge would require £131,250 net. But the net second preference dividend—£239,500—is barely covered by the balance. On this calculation the latest statement is not wholly encouraging. A scheme, in fact, is overdue, and its main outlines should already be clear. The first preference shareholders, whose dividend is being fully met, can hardly be asked to make sacrifices. The second preference shareholders' current dividend is, apparently, slightly short earned. The conclusion, therefore, seems irresistible that the company should undergo a major surgical operation to remove these obvious symptoms of over-capitalisation. There is every argument in favour of eliminating the second preference shares, and offering them a proper share in a reorganised equity. But two points must be observed in such a scheme. First, the substantial second preference arrears would require satisfaction by a generous participation in a new equity. Secondly, the ordinary shares, both on the facts of the balance sheet and on earnings performance can only expect a thin slice in the reformed capital.

Aeronautical Corporation Scheme.—This child of the aircraft company boom is now compelled to undertake a drastic reconstruction scheme. The scheme, which will be considered on November 2nd, calls for the reduction of the capital from £200,000 in 5s. shares to £50,000 in 1s. shares. The subscription of £20,000 ordinary capital and an advance of £40,000 on a 5 per cent. debenture has been conditionally arranged. In consideration for this new money, substantial rights to unissued shares are assigned. Existing shareholders will have the three-months' option to subscribe at par for £50,000 ordinary capital. The new subscribers will enjoy a two-year option over £20,000 ordinary capital at par, while Equity and Law Life Assurance, who are to make the advance on mortgage, will have rights over £40,000 of ordinary capital, and the option to convert their debenture into ordinary shares. The dissensions of the past year have left the company in a weak position, and the potential result of this salvage operation is far from clear. The burden of the debenture, at any rate, will be appreciable in relation to the reduced capital, and full accounts are necessary before shareholders can reach a decision. It will be recalled that, a year ago, the company announced that it was to produce parts for Hawker Aircraft Limited. The concern has now published its report—mistakenly confused in some circles with the Hawker Siddeley report, which is expected to show a considerable increase in profits. The Aircraft

company, however, discloses a fall in trading profits from £187,470 to £135,480, and the dividend, reduced from 20 per cent. to 17½ per cent., is barely covered. The Hawker concern was the first to benefit from Air Force expansion, but it is now compelled to undertake the expensive process of changing its types.

Roan Antelope Prospects.—The profits achieved by this Rhodesian concern to June 30th last reached monumental proportions. A dividend of 80 per cent. has been announced—covered by earnings of 107 per cent.—and a 200 per cent. capital bonus is proposed. This issue capitalises £3,327,390 from general reserve, but the sum, in fact, represents accumulated share premiums. Copper sales, after stock adjustments, realised £3,549,042 last year—twice the previous figure. Average sales revenue amounted to £51.022 per ton, against £34.581, but production increased to 69,560 tons of blister copper, against 50,672 tons. Total costs (including all charges except taxation) rose slightly, from £24,773 to £25,496 per ton, though net operating cost, before interest and obsolescence, increased by £1.903 to £21.880. This increase, however, was largely due to the provision of £55,000 for a new Mine Pension and Benefit Fund (equivalent to nearly 16s. per ton of blister) and to higher royalties. Restriction of output was temporarily suspended from mid-January last, and 5½ months of the latest financial year thus cover unregulated production. But it would appear that the difference between the recent level of production without official regulation and the 105 per cent. quota which was in operation up to last January, and is to be resumed from the end of November, is fairly small. Out of the 69,560 tons produced last year, production under previous quotas would account for about 33,800 tons. The remainder exceeds production at the annual rate of 75,600 tons under a 105 per cent. quota by only 1,000 tons for the period. Assuming no change in the quota, and taking all-in costs at £24 10s. (after allowance for the debenture repay-

ment), a gross profit of £1,537,000 may be estimated if average prices are taken at £45, or £1,912,000 at an average of £50. At the current price of 58s. 9d. cum dividend and rights, the potential gross earnings yield on the increased capital would vary between 8.4 and 10.5 per cent. on the two assumptions. The latest report indicates a strong financial position. The debentures have been repaid from the proceeds of last February's share issue, and over £85,000 will be saved annually. The allocation of £200,000 has again been made to general reserve and despite the increase from £150,000 to £175,000 in depreciation, etc., and a transfer of £20,000 to contingency reserve, the carry-forward is increased from £147,445 to £263,120. There is, moreover, a substantial inner reserve in the stock valuation.

West Witwatersrand Group.—Shareholders in these various undertakings have been kept so well posted regarding developments that interest in the annual reports centres almost exclusively upon the financial position. Important changes have taken place. During the past year West Witwatersrand Areas issued 100,000 new shares at £10, providing £950,000 in premiums. The purchase consideration for the mining lease transferred to the Libanon subsidiary amounted to £500,000. The Blyvooruitzicht flotation, of course, did not occur until after the close of the year. The share of the purchase consideration due to West Witwatersrand, however, amounted to £342,000, and was utilised in subscribing at par for 684,000 shares. The proceeds of the Libanon transaction account for practically the whole of the year's income. On the other side, the principal items are cost of properties sold, shown at £75,530, while drilling and similar expenditure accounts for £76,920. The net balance of £334,350 wipes out the debit brought forward and provides a balance of £143,700. At the date of the accounts, cash in hand amounted to £395,050. A summary in the directors' report gives the extent of the mineral rights owned as 13,850 morgen and of the freehold areas as 12,380 morgen. The consulting engineer

sums up results to date by stating that twenty-one boreholes have intersected the Main Reef group of conglomerates over a length of strike of twenty-five miles. Venterspost also made an issue of 700,000 shares at £2 last year. Out of the proceeds a loan of £204,000 from the parent company was repaid. The balance sheet shows further expenditure on plant of £185,680 (increasing the total to £570,740) and on shaft sinking and equipment of £257,740 (total £750,030). On June 30th the net cash resources were just short of £774,000. Libanon Gold Mining shows capital expenditure of £292,470, excluding the purchase consideration for the lease, and at June 30th funds in hand amounted to over £900,000.

Other Company Results.—This week's company reports are of general interest rather than outstanding individual importance. Our usual analysis of profit and loss accounts on page 142 covers over 35 further companies, including 11 rubber producers. The results are discussed on page 142 under the heading "Shorter Company Comments."

Company Meetings of the Week.—Reports of company meetings will be found in this issue from page 132. A discussion of Mr Eric Miller's survey at the *Harrisons and Crosfield* meeting appears in a Note on page 123, while Mr Brendan Bracken's address to the shareholders of *Financial News* is referred to on page 121. Mr Paul Lindenberg, at the *Industrial Finance and Investment Corporation* meeting, outlined the various factors in the present economic situation—in particular the "gold scare" and the French exchange position. At the *Gold Mines of Kalgoorlie* meeting, Mr P. E. Marmion referred to the company's fortune in locating so large a tonnage of high-grade ore near the surface in the Australia East lease. In his address to *Perak River Hydro-Electric Power* shareholders, Mr George Balfour referred to the policy of maintaining the equipment at a high standard to meet the increased load. In reply to a question he declared that a very serious cut in tin output would be necessary before any effect would be visible on the company's profits. At the *Murex* meeting the chairman underlined the board's wish to bring down costs, and referred to the part which the new factory would play in this policy. Prospects for the current year were reviewed at the *Malayalam Plantations* meeting by Mr H. J. Welch. An increase in net profits should be achieved since part of their crops had been sold at higher prices. Similarly, at the *Hcscote Rubber Estates* meeting the chairman explained that forward sales already made should assist in counteracting the market recession.

THE WEEK IN THE MARKETS

THE STOCK EXCHANGE

SETTLING DAYS

TICKET: OCTOBER 19

ACCOUNT: OCTOBER 21

On Monday the London Stock Exchange looked into the chasm which separates honest perplexity from headlong panic. Undoubtedly, Monday was the worst day in a tense account, for the gilt-edged market, which had until then resisted the rain of blows on the industrial markets, was itself affected in considerable degree. Tuesday's opening was no more favourable, but at mid-day the apparent realisation that Wall Street could not put London down at least on Columbus Day, was followed by a distinct, though not fully held, rally. Not until mid-week were signs apparent of really steadier conditions. Unheeding rumour subsided, and while Wall Street did its best to check the tender growth of confidence on Thursday, the market still recovered.

Gilt-edged, then, opened in highly nervous state, in which the tense political situation over the week-end was a major cause. Undated stocks fell by half a point—Local Loans being actually $\frac{1}{2}$ down. Another weak opening followed on Tuesday, but conditions improved to show net gains on the day, and in mid-week a better turnover and confident buying produced an all-round recovery, particularly in undated stocks. The Hertfordshire scrip opened at $\frac{1}{2}$ premium on Monday, reacted to par, and in mid-week had recovered to a small premium.

In the foreign market, Brazilian issues were at first affected by gloomy views regarding the debt outlook, but these gave way as quickly to optimism. Japanese issues were also depressed at first, but recovered on the argument that success in North China implied an early cessation of hostilities.

Home rail stocks had two bad days at the beginning of the week when a considerable volume of stock was sold. Great Western ordinary and Southern preferred were seriously affected, but the whole group was better on Wednesday. The traffics, however, were well below expectations, for the first full week covering the 5 per cent. increase. Argentine stocks opened unsupported, and although the traffics helped some of the ordinary stocks later, the improvement was only partial.

The discomfort recently shown by the industrial market turned on Monday into something akin to panic, which continued on Tuesday morning and only abated towards the last dealings. In mid-week the retreat subsided considerably and quotations rose far enough to wipe out most of the falls. Internationals characteristically led these changes in sentiment, though the main speculative counters, U.S. Steel and International Nickel, took less than their proper share in the recovery. In the Iron and Steel group, Monday's falls were especially heavy, Tube Investments falling 3s., and they showed no advances until Wednesday, when Tube Investments rose 2s. 6d. and John Brown 1s. 9d. Electrical equipment shares shared in the general trend, Crompton being among those well supported. Among motors, only Morris withstood the general collapse. Standard rose sharply in expectation of the dividend—and fell more sharply after the announcement. Aircraft issues were weak on the Hawker report, though they recovered after Hawker-Siddeley's reassurances. Among brick, cement and building materials, the strangest history was that of Associated Cement with a fall of 6s. 3d. on Monday, and 2s. 6d. on Tuesday, and a rise of 5s. the following day. In the miscellaneous section, Metal Box recovered sharply on Wednesday. Unilever were weak on Amsterdam selling.

The oil market was largely dominated by the rumours current on the Continent over the week-end of the difficulties of British financial houses. Foreign sales drove Royal Dutch and Shell down on Monday, and other normally less volatile shares moved proportionately. The former continued weak on Tuesday, though Shell and Anglo-Iranians came very much to the fore. Trinidad issues were depressed on rumours of fresh labour troubles. Later there was a general recovery. Business remained small in teas and rubbers throughout and quotations never moved widely, though following the general trend.

Mining shares have been the prey of much speculation. Several days of small falls preceded Monday's débâcle, when West Wits fell $\frac{1}{2}$ and Rand and Sub Nigel $\frac{1}{4}$, though after another bad day professional support caused equally sudden rises. Copper and tin issues were depressed in sympathy with the commodity prices. Roan Antelope fell on Monday despite the large increase in profits shown by the report, though Rhokana remained firm. Diamonds were also erratic: de Beers deferred were 15s. down on Monday, 2s. 6d. up on Tuesday, and 5s. up on Wednesday. Its history might indeed be taken as a motto for the week.

NEW YORK STOCK EXCHANGE

THE story continues as it left off last week: prices are falling. At the end of last week there was a slight pause, reputedly on the rumour, following the President's speech at Chicago, that the United States would embark on a new armaments programme. But even though the Saturday tendency was a little better than on preceding days, price levels were lower at the end of

the short session. Monday of this week was gloomy in London and gloomy on Wall Street. Many prices broke through their 1936 lows, and some through their 1935 lows. The movement was aided by a fall in commodity prices, by non-appearance of the I.C.C. decision on freight rates, the lower steel mill activity and by the growing European tension. On Tuesday markets were closed for Columbus Day holiday, and in the short time for thought, even Columbus may have wished he had left out Wall Street when he discovered America. Wednesday saw an early fall, followed by a rally which did not restore all the day's losses, although steel issues were notably better. There is no sign of any willingness from Washington to modify the political programme so that operators might recover some of the confidence which they have chosen to throw away. *Iron Age* estimates steel mill activity for the current week at 63.5 per cent. of capacity, as against 66 per cent. for last week, with output adjusted now to current buying, and no sign yet of substantial revival in new orders.

By courtesy of the Standard Statistics Company, Inc., of New York, we print the following index figures of American values calculated on closing prices (1926=100):—

Establish your factory — at THE SCOTTISH INDUSTRIAL ESTATE NORTH HILLINGTON

Nearly 90 per cent. of the population of Scotland lives inside the area covered by the Scottish Industrial Belt. This belt extends from the Ayrshire coast on the West to the Fifeshire coast on the East and contains Scotland's three largest cities—Glasgow, Edinburgh and Dundee.

North Hillington is situated on the outskirts of Glasgow. Manufacturers at North Hillington therefore will be within easy reach of the most distant part of the Scottish mass market and in the centre of its most densely populated section. In addition, North Hillington is a strategic distribution point to Northern England, Northern Ireland and indeed to all the world.

There are excellent transport facilities by air, river, road and rail: Skilled labour is plentiful.

FACTORIES—WITH ALL SERVICES

The rents are low as the company does not operate for profit. A factory can be leased. There is ample room for expansion of growing businesses. Factories are heated by the estate. Process steam is supplied if required. Every factory possesses a walled yard space at no extra cost. Insurance and upkeep of factories and upkeep of roads are paid by the estate.

For full information and particulars apply to

SCOTTISH INDUSTRIAL ESTATES LTD.

41 ST. VINCENT PLACE, GLASGOW, C.I.

REPUTATION

Scotland has long enjoyed the reputation as the home of tobacco blending. It is not surprising, therefore, that situated near the Grampians is the House of Rattray, famous the World over for Old Gowrie and Hal o' the Wynd tobaccos. Blended with exquisite care and skill, these Virginian blends have brought an air of contentment and tranquillity into many a home for generations past.

OLD GOWRIE
TOBACCO

Price: 20/6 per lb., post paid. Send 5/2 for sample $\frac{1}{2}$ lb. tin, post free. Export: 22/6 per 2 lbs., plus post.

Chas. Rattray

PERTH SCOTLAND

Rattray's Hal o' the Wynd Tobacco is the full-bodied strength of Old Gowrie.

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields of fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

TELEPHONE • CITY 5201

gilt-edged market, combined with stag selling, eliminated the opening premium and brought the scrip to par. Sheffield is a single-dated stock, redeemable in 1963, but otherwise identical in terms with recent issues. The increase in effective life is too slight to suggest that the authorities are making really significant adjustments to meet differences in credit status among corporation borrowers. The offer bore the signs of hurried decision, for it was not advertised, as it would normally have been, on the previous day, and applications received on Saturday will therefore be considered. *Pennmont Estates* have issued a line of 5 per cent. debenture stock at par. This company owns small residential properties in populous London areas. The prospectus shows that the stock is covered as to capital $1\frac{3}{4}$ times and as to interest $2\frac{1}{2}$ times—ratios which may be adequate but cannot be regarded as generous. A statement for information only has been published on behalf of *Western Holdings*, a company promoted by South African Townships Mining and Finance to acquire mining interests in the Orange Free State.

Sheffield Corporation.—Issue of £2,500,000 3½ per cent. loan at 101 to be redeemed in 1963. Proceeds to repay existing loans and extension of electricity and other undertakings. Population over 500,000. Rateable value £3,159,511. Total debt £26,024,691 (of which £21,079,396 for reproductive undertakings).

Penmount Estates, Ltd.—Issue of £110,000 5 per cent. first mortgage debenture stock at par. Ranks with £100,000 of this stock issued; further stock can be issued if additional property acquired worth $\frac{1}{2}$ times the further issue. Redeemable at 102½ by end of 1975 by drawings from 1938, or from 1945 on notice. Acquired in 1935 London leasehold properties; small houses, etc., on weekly tenancies, of which 76 per cent. controlled. Valued at £207,360 (net income after rates, repairs, etc., £16,569). Further properties since acquired: 75 per cent. controlled; gross income £25,984, or £12,498 net; valuation £166,170. Assets as security, £376,627. Estimated total income, £28,719, or £25,119 net for debenture interest. Investment Registry, Ltd., pay expenses for £4,700 fee. Lists closed 9.5 a.m., October 13th. Fully subscribed.

Western Holdings, Ltd.—Issued capital 2,275,000 5s. shares. Further 25,000 shares to be issued to vendors. Formed in South Africa to acquire interests and rights connected with shares accruing from disposal of prospecting options over mineral rights. Statement sets out list of interests. South African Townships Mining and Finance Corporation have taken 1,600,000 shares at par; of the £400,000 received the company has paid £56,500 as cash portion of interests acquired; vendors receive also 700,000 shares in all.

Montague Burton Estates.—The directors have placed privately £84,000 4½ per cent. first mortgage debenture stock.

South Essex Waterworks.—Offer for sale by tender of £250,000 Ordinary (1935) 5 per cent. maximum stock. Minimum price is 124. The first dividend, calculated from November 11th to December 31st, will be paid on March 1st next, and thereafter dividends will be payable on September 1st and March 1st.

West Vlakfontein Gold Mining Company (Incorporated in S. Africa).—Members of East Rand Consolidated are offered 2,895,000 2s. 6d. shares in the company at par, in proportion of one for two held on September 30th. Allottees receive option till November, 1939, to take at 5s. one further share for each share allotted. Guarantors to issue without commission (East Rand Consolidated and 4 other companies) take firm further 5,105,000 shares at 5s., and receive also corresponding option. Consideration (£350,000 cash) for claims, rights, etc., used by vendors to take 2,800,000 shares at par. Mining leases cover 5,697 claims or 3,956 morgen. Property valued at £350,000; preliminary expenses, £12,500; working capital, £987,500. Technical report estimates that in 70 per cent. of area main reef occurs at 5,250 to 7,500 feet depth.

Standard Motor Company, Ltd.—The directors propose that the 460,000 £1 issued ordinary shares be subdivided into 5s. shares. The present authorised capital is to be increased to £1,000,000 and the issued ordinary capital to £720,000, divided into 2,880,000 5s. shares. Holders at October 18th are to be offered 920,000 new shares at 12s. 6d., in the proportion of two new 5s. shares for every £1 share held. The executive staff is to be offered 120,000 new shares on the same terms.

COMPANY MEETINGS

THE FINANCIAL NEWS, LIMITED

A PROSPEROUS YEAR

SHARE-PUSHERS AND THE LIBEL RACKET

BUREAUCRATS V. INDUSTRY

"CHATTERING OURSELVES INTO DEPRESSION"

The fortieth ordinary general meeting of The Financial News, Limited, was held yesterday at Winchester House, Old Broad Street, E.C., Mr Brendan Bracken, M.P., chairman of the company, presiding.

The secretary (Mr A. E. Knock) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen, as the balance sheet and profit and loss account have been with you since October 4th, I presume they may be regarded as read.

Of our balance sheet I need say little. You will observe that we spent a moderate amount of capital on new premises for *The Investors' Chronicle*, and we have also made some provision for a much needed modernisation of our head office. Our pleasure in the growth of *The Financial News* and *The Investors' Chronicle* has been tempered by many housing problems. These have now been solved, and we are optimistic enough to believe that our gain from these operations will be rather more than the profits made by our contractors. Another of our subsidiaries, from its own resources, has built itself a new home, and its management claims to have solved all problems of accommodation. And you will notice that, in accordance with the policy outlined at our last general meeting, we have invested a part of our comparatively large cash balances in industrial debentures.

All of our subsidiary and associated companies have made fair profits. We are particularly pleased by the growth of Moodys-Economist Services, Limited. In the course of a few years that company has built up an international organisation which has outstripped all competition. By adopting the wise policy of ploughing back profits it can, from accumulated resources, finance the wide extension of business which the directors have planned.

PROFIT AND LOSS ACCOUNT

Our profit and loss statement is not unpleasing. During the past year our ordinary shares have earned nearly 47 per cent. A comparatively small part of the increase in profit came from *The Financial News*. That journal could, of course, show larger profits were it to reverse the policy of supplying the best possible news and financial services to its readers. And our gains would be greater were we to refrain from rejecting or criticising the advertisements of dubious or over-optimistic enterprises. These are costly policies. But they are the only sound long-term policies known to your directors. After a decade of experience in implementing them, we are certain that they have transformed *The Financial News*.

LIBEL LAWS AND SHARE-PUSHERS

For many years *The Financial News* and *The Investors' Chronicle*, in common with most of our contemporaries, have been engaged in exposing share-pushers and other members of the financial underworld. This repulsive and expensive task is the special duty of financial newspapers. If the losses caused by share-pushers have been much exaggerated, the psychological effects of their operations are very harmful. We were, therefore, particularly interested by the recent report of the Board of Trade Committee on Share-pushing. Though many useful suggestions were made by that painstaking Committee, the result of their labours depends upon the vigilance and candour of the public and the Press. Share-pushers may be classified under two headings—plain gangsters like the notorious Factor, and the blight of mushroom issuing houses, with pompous names and no assets, which struck the City some years ago. The loot obtained by the latter breed far surpasses the profits of the gangsters. The "issuers" are skilled in exploiting the ignorance or cupidity of certain sections of the public. In peddling shares of derelict or hopeless enterprises they manage to keep within the law and thus escape the penalty for stark swindling. The melancholy fact that there never is wanting a supply of innocents fit for plucking is only too well known to them. And the reticence of their victims is a great encouragement. It is, therefore, no easy task to eliminate share-pushing.

The members of the Board of Trade Committee generously recognised the part played by the Press in combating the pushing or hawking of shares. But they did not apparently realise the in-

creasing difficulties of the Press in exposing financial tricksters. Those persons have found invaluable allies in shady lawyers and over-generous jurors who have turned the libel "racket" into a sizeable industry. It is no exaggeration to say that newspapers must ponder deeply before they begin to expose even the most blatant forms of financial trickery. If they fall into the slightest technical error, and the libel laws abound in technicalities, they may be mulcted in heavy damages. And what is perhaps worse, the law of libel is used to silence newspapers while sharepushers complete the process of collecting and secreting their swag. If this seems an exaggerated statement I will recount one of our own experiences. A person engaged in swindling a number of small investors was exposed by *The Financial News*. A writ for libel was issued against that journal. During what one might call the "sub-judice" period this swindler obtained many thousands of pounds. He departed this country. And after a few years of exile he returned and was caught red-handed in the harder and less profitable business of thieving and receiving. After his conviction it was disclosed that he had previously served several terms of imprisonment. The irony of this story is that eminent lawyers advised us to settle this case. Their recent experience of libel actions convinced them that settlement at any reasonable price was desirable.

The truth is that libel actions have become a gamble, with the odds heavily in favour of the plaintiff, however mottled his record may be. If he wins his case the newspaper may have to pay heavy damages—if he loses the Press must generally meet most of the legal costs. If this libel racket continues to grow, all that remains for the Press to do is to run no risk of libel actions, or to build up much larger reserves against them. What an inducement to expose sharepushing and swindling! Our much-prized free Press is becoming increasingly dear to its owners.

A STRENUOUS YEAR

Your various properties made good progress during the past financial year. All that need be said about the part played by *The Financial News* and *The Investors' Chronicle* in opposing the first edition of N.D.C. is that it was finally approved by all concerned in finance, industry and investment. The only good result of N.D.C. No. 1 is that the City, industry, and the generality of investors now realise how essential it is to organise resolute opposition to half-baked schemes which injure the inseparable interests of industry, employment and investment. And let me say here, by way of a digression, that the City should keep a more watchful eye on the growing number of restrictions on investment and trading which have been recently devised by our bureaucrats without condescending to obtain Parliamentary authority.

THE OUTLOOK

Confronted as we are by depressed markets and the forecasts of some woeful economists, you will not expect me to use much of the liberty of prophesying. In matters of economics I feel the more one searches the further one is from being sure. Economics has been called the dismal science. Dismal it is, but why call it a science? A lesser name is wanted for that pile of facts and fallacies upon which the pundits crow so discordantly. From the confusion of our present economic controversies one fact emerges—whatsoever is contrary to the just interests of producers and wage earners must eventually injure all classes of investors. And so we should accept with equanimity a temperate trend of rising prices which alone can make bearable our burden of debt, maintain the living standards of our people and preserve our vast overseas investments.

This company is, of course, affected by the trend of prices. The recently announced increase in the price of newsprint is an embarrassing addition to the high production costs of newspapers. For many years the Press benefited greatly from cut-throat competition in the newsprint industry. That industry has now achieved a measure of stability, and few of its leaders are likely to encourage over-production by demanding excessive prices. It is inevitable that the new and not unreasonable price of newsprint will reduce the profits of newspapers. But as *The Financial News* consumption of newsprint is limited by the quantum of financial and industrial intelligence in this country, we shall not suffer grave injury.

We are far more concerned by the wave of depression which has recently spread through the stock exchanges and commodity markets. Those institutions showed an undaunted front to a succession of international crises which would have provoked panic in former times. How odd it is that much of the present depression is due to a temporary trade recession in America and some flocculent forecasts of the long-term prospects of our own industries! Most market depressions are as inevitable as they are transitory. If no real injury is done to confidence, markets benefit by a shaking out of stale speculation. Without confidence,

markets, and things more precious than markets, perish. As confidence is the vital lubricant of industry, sensible people should discourage attempts to chatter ourselves into a depression. We may hope that the present flow of admirable company reports and increased dividends will soon adjust the perspective of all concerned in investment.

DIVIDEND PAYMENTS

As newspapers, more especially financial newspapers, are much affected by alarms in politics, finance and industry, it is necessary for us to continue to strengthen our reserves. By distributing less than half of last year's earnings we believe that a fair compromise has been struck between prudence and the hopes of shareholders. If a dividend of 10 per cent. and a cash bonus of 10 per cent. meet with your approval, we propose to apply the balance to increasing the general reserve to £100,000, to strengthening our libel reserve and to carrying forward £90,228 7s. 1d.

Before putting the customary formal resolutions to the meeting I shall be glad to answer any questions you may desire to ask.

No questions were asked, and the Chairman concluded by moving: "That the report and accounts as at June 30, 1937, now submitted to this meeting, be and the same are hereby received and adopted."

Major-General Guy P. Dawney, C.B., C.M.G., D.S.O., M.V.O., seconded the motion and it was carried unanimously.

The dividend recommendation of 10 per cent., with a bonus of 10 per cent., was also unanimously approved.

The retiring director, Major-General Guy P. Dawney, C.B., C.M.G., D.S.O., M.V.O., was re-elected, and the auditors, Messrs Layton-Bennett and Company, having been reappointed, the proceedings terminated.

INDUSTRIAL FINANCE AND INVESTMENT CORPORATION, LIMITED

THE ECONOMIC SITUATION

The twelfth ordinary general meeting of the Industrial Finance and Investment Corporation, Limited, was held, on the 8th instant, at Winchester House, London.

Mr Paul Lindenberg (the chairman), in the course of his speech, said that during the past year they had in the normal course of their business again taken a financial interest in several industrial undertakings in this country, and he was glad to be able to report that all those enterprises with which they had been connected either as an issuing house or otherwise were doing well and had made satisfactory progress.

With regard to the present general economic situation, during the currency of their last financial year they had witnessed important developments, the effects of which had partly been superseded by subsequent happenings. It was just a year since the devaluation of the gold exchanges was decided upon and the Tripartite Agreement established. That Agreement was considered a most welcome and very hopeful step, but it had not saved the world from the upsetting influence of the "Gold Scare," nor had it succeeded in maintaining the French exchange at the level then laid down. They even witnessed the resumption on a considerable scale of gold hoarding operations.

That was only one of the symptoms of the prevailing economic unsettlement due to a large extent to political unrest, which, in spite of all the efforts made by the Government, showed no sign of abatement. There was no doubt that, together with a continued all-round cyclical improvement, the increased expenditure had led to a substantial rise in commodity prices, which, whilst the cost of living was higher, would benefit all those countries which were primary producers.

As far as Great Britain was concerned, there were many indications of prosperity. The adverse balance of trade had, therefore, increased up to the end of August to £258,735,000, as against £211,585,000 during the same period in 1936. The total adverse balance of payments for last year was estimated at £19,000,000, and it was evident, therefore, that a certain increase in the adverse balance might be expected for the current year.

The report was unanimously adopted.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8 Bouverie Street, Fleet Street, London, E.C.4.

PERAK RIVER HYDRO-ELECTRIC POWER COMPANY, LIMITED

DIVIDEND OF 7 PER CENT.

MR GEORGE BALFOUR'S SURVEY

The eleventh annual general meeting of the Perak River Hydro-Electric Power Company, Limited, was held, on the 13th instant, at Winchester House, Old Broad Street, London.

Mr George Balfour, J.P., M.P. (chairman of the company), said that the maximum load during the year was 41,600 kw., compared with 36,800 kw. in the previous year, but the minimum load had never fallen below 24,900 kw., compared with 23,400 kw., the maintenance of a high minimum load being reflected in the improved load factor, which was nearly 75 per cent., compared with a little over 66 per cent. in the previous year. The output last year was approximately 273,000,000 units, compared with 213,500,000 units in the previous year. Of that total output last year they had generated approximately 171,000,000 units hydro-electric, compared with 173,500,000 units during the previous year, from which it would be seen that they had actually generated about 1.5 per cent. units less from their hydro-electric plant, due to rather worse drought conditions on the Perak River.

STEAM-GENERATED OUTPUT

On the other hand, they generated a little over 102,000,000 units in the steam-generating stations, compared with 40,000,000 units in the previous year, an increase in output from the steam stations of 155 per cent. over the previous year's output. Those conditions were forecast by him when he had addressed them last year, and the results conformed exactly to the forward calculations upon which he had then based his remarks. The increased output from the steam stations was, of course, reflected in the increased consumption of coal. They had consumed 104,476 tons, compared with 41,242 tons, at a cost of £109,543, compared with £40,924, an increase of £68,619.

It would be gathered from the figures of increased steam-generated units that they had had to act promptly in providing extensions to the steam plants at Malim Nawar and Batu Gajah. The additional 12,000 kw. plant and additional boilers at Malim Nawar with auxiliary works were now ready for service, and additional boilers and turbine plant at Batu Gajah had been put in hand. In addition, new sub-stations and additional transmission lines and switchgear were being erected.

During the period of serious depression transmission lines had had to be forced to the limit of their capacity, and a great deal of capital work had had to be carried out during the last two years to bring the transmission system into first-class order sufficient for the requirements of the increased load. In addition, their expenditure on revenue account had increased by charges for deviating lines and generally bringing the maintenance up to a high standard.

The small Kinta undertaking was making substantial progress, and he was glad to say that they were now in a position to reduce the domestic tariff and hoped that it would be found that their charges were the lowest for any domestic electricity service in the Perak State.

As the whole of the capital was now issued and fully paid, it would be necessary towards the end of the current financial year to increase their capital, as their directors proposed to use every endeavour to avoid creating any new charge on the company's assets.

REVENUE AND DIVIDEND

The revenue from sale of current amounted to £569,414, against £398,714 in the previous account. It must be remembered, however, that last year £40,000 was deducted from the gross receipts to write down stores and plant on consumers' premises. The comparison of actual revenue from sale of current, etc., was therefore £569,414, with £438,714 in the previous year. After payment of London administration and general expenses the balance carried to net revenue account was £339,753, compared with £264,554.

The surplus for the year, after payment of the preference dividend, was £96,403, which, together with the balance of £4,379, after payment of the directors' further remuneration, brought in from last account, amounted to £100,783, which they proposed to deal with as follows:—In payment of a dividend of 7 per cent. on the ordinary shares of the company, absorbing £91,875, leaving £8,908 to be carried forward, subject to directors' further remuneration in terms of the Articles of Association.

The report and accounts were unanimously adopted.

GOLD MINES OF KALGOORLIE, LIMITED

A YEAR OF ACHIEVEMENT

The third ordinary general meeting of this company was held, on the 12th instant, in London.

Mr P. E. Marmion (the chairman), in the course of his speech, said:—Almost 19,000 tons of ore were treated during the year in the old Associated plant, which yielded, after payment of realisation charges, the highly satisfactory return of £92,255. Consequent upon the increase in tonnage treated, the cost of mining and treatment shows a reduction of 5s. per ton, but provision has been made this year, for the first time, for writing-off development expenditure by an appropriate charge per ton of ore raised.

The net profit for the year is £30,157. From this there has to be deducted the debit balance of £2,255 brought forward from last year's accounts. Your board propose that a dividend of 4½d. per share shall be paid, leaving £5,027 to be carried forward.

Bearing in mind the unescapable difficulties associated with the reopening of old mines that have remained idle for many years, and the small treatment plant at our disposal, we hope that you will regard the result of the year's work with satisfaction. We were fortunate in locating such a large tonnage of high-grade ore near the surface in the Australia East lease which, with the excellent ore from development work in the Iron Duke lease, constituted in equal proportion practically the whole of the tonnage delivered to the mill.

With the exception of a small amount of preliminary work included in the accounts under review, the whole cost of the new mill will fall to be provided in the current year and is amply covered by our liquid resources, which at March 31st amounted to more than £288,000. Ore stocks show the substantial increase of £7,944, due largely to the preparation of stopes to ensure adequate supplies for the new mill at its full capacity of 8,000 tons per month from the commencement of operations.

PROGRESS OF DEVELOPMENT WORK

During the year we have continued our programme of developing the extensions of known ore bodies with very satisfactory results. In addition we have concentrated on preparing the ore bodies for stoping on the various levels and have equipped the underground workings to handle smoothly the ore supplies for the new mill.

As a result of these satisfactory developments the proved and probable ore reserves at March 31st last were increased to 266,000 tons averaging 7.30 dwts. per ton, whilst at August 31st they were increased still further to 297,000 tons averaging 7.40 dwts. per ton. This latter figure is equal to over three years' supply for the new mill.

Our policy of development from the inception of operations has been to concentrate on those leases which appeared to offer the best prospects of success and the quickest means of attaining production, and our persistence has been amply rewarded.

THE NEW MILL

This time last year we had already ordered much of the additional power plant needed for the new mill and the design of the mill itself was approaching completion. To-day, although some units are not yet complete, the crushing section is on the point of starting, and had it not been for delays in the delivery of certain items of equipment, due to causes outside our control, I should have been in the happy position of informing you that the whole plant was in operation.

The new mill has been designed to treat 8,000 tons monthly, and it is hoped that this output will be reached as soon as any adjustments, often incidental to the starting up of a new plant, have been effected. We are looking forward to treating a grade of ore approximating that of our ore reserves, that is, from 7 to 7½ dwts. per ton, which, with the current price of gold and the expected substantial reduction in treatment costs, should yield a satisfactory margin of profit.

The year has been one of continuous effort and the achievements have been substantial. Costs have been reduced, the return from the associated mill has been highly satisfactory, justifying an initial dividend, whilst the ore reserve position has been strengthened and development work affords encouragement for the future. In addition a new mill has been erected and the mine placed in a condition to supply it with 8,000 tons of ore per month. With this record of progress before you, I hope you will share my feeling of satisfaction with the result of the year's work.

The report was unanimously adopted.

HARRISONS AND CROSFIELD, LIMITED

TEA AND RUBBER POSITION

Presiding at the twenty-ninth annual meeting of Harrisons & Crosfield, Limited, on the 12th instant, Mr Eric Miller, in the course of his speech, said:—"The company's financial position is one of exceptional strength. Our liquid resources are ample for all our present commitments, after providing for which there is a surplus available to us for employment as opportunity offers more profitably than in the gilt-edged market."

The net profit for the year of £329,014 shows an improvement of £57,372 on last year's figure, to which one should add, for purposes of comparison, the £25,000 appropriated in connection with the staff pension scheme. We now propose the payment of a final dividend of 20 per cent. on the deferred ordinary stock, absorbing £88,879, making 25 per cent. for the year, and a final dividend on the management shares absorbing £52,909 after deducting the refund of directors' remuneration. Thereafter the amount to be carried forward to the credit of profit and loss account will be £155,971, an increase of £10,957.

He then dealt at some length with the staff pension scheme recently formed for the benefit of the employees, and with the position of the deferred ordinary capital.

POSITION OF THE INDUSTRY

Reviewing the tea industry, Mr Miller said, "The past year has been on the whole a moderately prosperous one for producers in general and a good one for lower grade tea. It is most satisfactory that renewal of international regulation for a further period of five years from next March has been agreed to by the producing interests concerned, and by the Governments of India, Ceylon and the Netherlands East Indies, as this should ensure a continuation of reasonable prices. The stocks in bond in the United Kingdom at the end of August were 144 million lbs., which is 72 million lbs. less than during the corresponding period last year, but by December we feel sure the decrease as compared with the previous year will not be so large and buyers need have no fear of there not being enough tea for everyone."

RUBBER

He then said, "It is impossible for anyone to estimate even approximately the volume of outside speculation in rubber during the course of this year, but the panicky state of the market last week suggests that it must have assumed considerable dimensions. Speculators often spread their operations over several markets, and when one ninepin goes down others are apt to topple too. Producers of rubber, and manufacturers who are converting it into usable goods, have meanwhile been carrying on their respective functions in an orderly manner, and the average price which producers have received for their crop during 1937 (which corresponds, broadly speaking, to what manufacturers have had to pay for it) works out at a figure which gives cause for no particular dissatisfaction either way. Absorption has been proceeding at a rate well in excess of that during the corresponding period of 1936; available stocks, which during the first half of 1937 were in the exceptional conditions then prevailing and already described, too low for comfort, are being gradually replenished, and the latest export figures from producing countries appear to indicate that the supplies released for export by I.R.R.C. will be forthcoming. The U.S.A. are still the largest users of rubber, and we are particularly concerned to see whether automobile and rubber industries there suffer any material setback from the recent change in sentiment. Recalling our past experiences, the rubber-growing industry has every reason to be thankful for the benefits of international regulation of supplies and for the knowledge that exports can be adjusted fairly promptly to the needs of the world from time to time. As you know, the present agreement continues to the end of 1938, and producers generally will unite in desiring its extension for a further period of years with such modifications if any as seem desirable in the light of present knowledge."

Judging by the applications for new patents using rubber in one form or another, the industry is not standing still. You will recall my own repeated advocacy of the use of rubber for paving the roads in urban areas where traffic is heavy, and I am glad to record some progress in this direction, the Cornmarket in Oxford having recently been paved with the Gaisman Bramble Block. Our own City Corporation have just agreed to have Lombard Street paved with similar blocks in response to a petition from the frontagers, who have agreed to contribute towards the cost.

A dividend of 20 per cent. on the deferred ordinary stock, making 25 per cent. for the year, was declared.

MALAYALAM PLANTATIONS, LIMITED

GOOD POSITION AND OUTLOOK

The annual general meeting of the Malayalam Plantations, Limited, was held, on the 14th instant, at 19 Fenchurch Street, London.

Mr H. J. Welch (the chairman) said that the company had made a profit of £146,353 on tea and £112,885 on rubber. The directors recommended transfers of £50,000 to taxation reserve and £50,000 to general reserve, and a final dividend of 6 per cent., making 10 per cent. for the year. The carry-forward was increased to £106,616. After making the appropriations, the surplus assets amounted to £8 per planted acre, and, if deducted from the total issued capital, showed a net cost of less than £37 per planted acre of tea and rubber.

A few years ago they had transferred £320,000 from general reserve to buildings, machinery, etc., account, in order that the usual heavy depreciation charges to revenue might be avoided in the less profitable years. At that time he had stated that in good years more than the usual depreciation should be reserved.

The second point was that the board was of opinion that the company's reserve account, which was depleted by the transfer mentioned, should be gradually built up again as reasonable opportunities occurred. For those various reasons he had no doubt shareholders would approve the proposed transfer of £50,000 to the reserve, and would agree with the opinion of the board that the best interests of shareholders in plantation companies were not served by adopting the practice, which he regretted had been followed recently by many rubber-producing companies, of paying dividends up to the hilt and ignoring such important considerations as he had mentioned.

Owing to restriction, the average yield of tea was only 442 lb. per mature acre, as compared with 699 and 690 lb. in 1929 and 1930. The net prices obtained for tea were 3d. per lb. less than the average of the years 1922-29. The average profit per mature acre was £7 1s. 3d. The average price obtained for exportable rubber was 9.34d. per lb. London equivalent, and the profit per acre tapped equalled £6 5s. 2d.

THE CURRENT YEAR

For the current year the company estimated to produce 10 million lb. of tea and 6 million lb. of rubber, increases of 850,000 lb. and 250,000 lb. respectively. One-third of the crop of tea had been sold at one- and two-fifths pence per lb. above last year, and one-half of the crop of rubber at an increased price of three-farthings per lb. Consequently, the net profits for the current year should show considerable improvement.

With regard to the tea industry, the present quota should lead to the stock in the United Kingdom being raised to a reasonable figure, and should relieve buyers from any anxiety as to supplies. World absorption of tea appeared to be about stationary. The preferential duty in the United Kingdom on Empire teas continued to displace such teas on the foreign markets, and by the increasing their supply here depressed prices in this country. The permitted quotas of rubber this year would almost certainly be exported, and it was unlikely that the present percentage of 90 per cent. would be continued throughout 1938.

The recent Netherlands East Indies census of native areas had disclosed an average of nearly 350 trees per acre, of which only 4.3 per cent. were "good," 17.7 per cent. were "fairly good" and the remainder "mediocre, poor or neglected." If the census as to close planting and classification was approximately correct, it was improbable that any large yields from such areas could be maintained for any length of time, for, apart from the poor quality, the close planting alone was adverse to the growth of girth, bark renewal and to the health of the trees.

During restriction it was undesirable that the price of rubber should rise to levels which encouraged increases in the cost of production, or in the use of reclaimed rubber, or which encouraged the search for new rubber-growing regions, economies in the use of rubber, or for synthetics.

World stocks of rubber outside the regulated areas would probably be increased this year by 20,000 tons. Absorption would increase to approximately 1,150,000 tons. Uses for rubber, other than for the motor-car industry, continued to increase, and he was of opinion that ultimately its total consumption for agricultural equipment would be second only to that of the motor-car industry. The statistical outlook for the industry was quite favourable.

The resolutions for the payment of dividend and for the other appropriations were passed unanimously, and the meeting closed with a vote of thanks to the directors, agents and staff.

HOSCOTE RUBBER ESTATES

IMPROVED RESULTS

The fifth ordinary general meeting of Hoscote Rubber Estates, Limited, was held, on the 14th instant, at 1-4 Great Tower Street, London.

Mr Eric Macfadyen (the Chairman) said that the significant changes in their balance sheet were the higher balance at credit of profit and loss account of £25,483, as against £11,848, and the rise in their cash and gilt-edged investments from £30,029 to £42,343. Their larger crop, amounting to 1,585,433 lbs., was sold for £60,523 net, which compared with £34,438 realised for the 1,287,067 lbs. accounted for a year ago. The expenditure on the crop in the East was £32,031, against £24,475, practically the same cost per lb. having been incurred, while there was an improvement in the selling price of almost 2½d. per lb.

Having experienced such satisfactory results they had not hesitated again to charge profit and loss account with the whole cost incurred in the year on new buildings and plant and upon the programme of replanting and special cultivation in hand. Those items totalled £6,355, and they were then left with £21,681, which would permit of their paying a 10 per cent. dividend and raising the carry-forward by £2,293 to £6,095.

The standard production had been raised by successive stages to 2,333,799 lbs., equivalent to 494 lbs. per acre. That indicated that the assessment authorities were now satisfied that previous assessments had done less than justice to their true productive capacity. Under the regulation regime it was impossible to forecast outputs, but, if they were permitted to produce 1,900,000 lbs., as they probably might be, during the current year they would have no difficulty in doing so on A.B.C. or equivalent tapping. Forward sales of 524,160 lb. had been made for delivery during the period at 9½d. per lb., which should go some way to counteracting the recession in the market.

As to the future course of the rubber market, most of the recent weakness of the market could be attributed to conditions affecting commodity (and other) markets in general. The statistical position of rubber was sound, and they had confidence in the International Committee.

The report was unanimously adopted.

MUREX, LIMITED

INCREASED OUTPUT, SALES AND PROFIT

The eighteenth ordinary general meeting of Murex, Limited, was held, on the 14th instant, at Winchester House, London.

Mr Geo. P. Joseph (the chairman) presided, and, having dealt with the various items in the balance sheet, said that it would be seen that their profits, after providing for depreciation for the year, showed the substantial increase of approximately £88,000, and dividends received showed an increase of £15,000. Those results, he felt sure, would be considered eminently satisfactory.

The directors recommended a final dividend of 10 per cent. and a cash bonus of 2½ per cent., both less income tax at the rate of 5s., on the ordinary shares.

At the company's Rainham works very large extensions, both in buildings and plant, had been completed, but there was still heavy capital expenditure in front of them to meet the increase of trade which at present continued.

The welding industry had continued to expand, and the company's output, sales, and profits had again shown a very satisfactory increase. Naturally, competition had also increased, and the directors felt that in order to maintain the company's position and continue successfully to meet such competition they must bring costs down wherever possible. Their new factory at Freezy-water would assist to that end.

With regard to the company's interest in American Murex Corporation, the American directors had spent a great deal of time and energy on the affairs of the company, and their faith in its ultimate success appeared to him to be unabated.

The Magnesium Castings and Products company was doing well, and increasing its output. With regard to their own business in general, during the year under review extensions to their various plants had been made to cope with the increased demand for almost all their manufactured products. The new plants which had commenced operations showed gratifying results, and those others which were in course of erection should be finished and in full production by the end of the year.

He was glad to say that their new financial year had opened well, and he did not see any reason for thinking they should not be able to show the shareholders another satisfactory trading record in their next report and accounts.

The report and accounts were unanimously adopted.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for 9 days ended October 9, 1937, amounted to £19,312,000, against ordinary expenditure of £33,156,000. After increasing Exchequer Balances by £168,181 the operations for the period, as shown below, increased the gross National Debt by £14,182,000, to about £8,227 millions.†

(000's omitted)

Bank of England Advances	£ 3,500	Treasury Bills	£ 20,685
Public Department Advances	£ 33,070	National Savings Certificates	£ 300
Land Settlement (Fac.) Acts	£ 7	P.O. and Teleg. (Money) Acts	£ 450
		Tithe Act, 1936	£ 960
			£ 22,395
			£ 36,577

† Including £375 millions on account of Exchange Equalisation Account.

An approximate analysis of the National Debt as at September 30, 1937, appeared on page 41 of *The Economist* of October 2.

REVENUE	Receipts into the Exchequer from

THE BANK OF LONDON AND SOUTH AMERICA, LTD., has received telegraphic advice from Valencia that the gold surcharge for payment of Spanish customs duties has been fixed for the period October 11th to 20th at 220-96 per cent. The previous rate was fixed as from October 1st at 205-91 per cent.

CENTRAL AND SOUTH AMERICAN EXCHANGE RATES

THE BANK OF LONDON AND SOUTH AMERICA, LTD., issues the following details relative to quotations for certain of the South and Central American exchanges. All these exchanges, with the exception of those of Bolivia and Paraguay, are related to the United States dollar, and the approximate sterling rates may be obtained by applying the dollar-sterling exchange rate:—

Bolivia.*	Commercial Banks' "free" selling rate was 100 bolivianos per £ on August 20, 1937.
Colombia.*	Sight selling rate on New York was 175-77 pesos per 100 U.S. dollars on September 23, 1937. This rate applies to holders of permits buying in the "open" market.
Ecuador.	Sight selling rate on New York was 13-25 sucres per U.S. dollar on September 24, 1937.
Guatemala.	Sight selling rate on New York is maintained at one quetzal per U.S. dollar, but a commission of 1 per cent. is charged by the Central Bank for the sale of drafts.
Nicaragua.*	Sight selling rate on New York including tax and commission was 2-16 cordobas per U.S. dollar on September 17, 1937.
Paraguay.	Exchange is quoted on Buenos Aires; the sight rate was 70-50 Paraguayan pesos per Argentine "free" paper peso on September 15, 1937.
El Salvador.	Sight selling rate on New York was 2-51 colones per U.S. dollar on September 22, 1937.
Venezuela.	Sight selling rate on New York has been maintained at 3-19 bolivares per U.S. dollar since April 27, 1937.

* Exchange controls are operative in these countries.

Overseas bank rates and exchange rates for South Africa and Australasia appeared in the issue of October 2nd on page 45.

GOLD AND SILVER

The following statistics of imports and exports of gold and silver for the week ended October 14, 1937, are issued by the Statistical Department of H.M. Customs and Excise

* At current market value. † Coin which is of legal tender in the United Kingdom is entered at face value and shown in italics. Other coin is entered at current market value.

No gold movements were reported at the Bank of England between October 8th and 14th. Details of previous movements were given in the issue of October 2nd on page 46.

GOLD MARKET

Messrs. Samuel Montagu and Company write on October 13, 1937:—The Bank of England gold reserve against notes amounted to £28,406,625 on October 8th, showing no change as compared with September 29th.

Some return of confidence in the French franc has resulted in a slackening of demand for gold from those quarters which fear a further world devaluation of currencies. Consequently the amounts dealt with and the premium over the arbitrage shipping parity with New York have tended to increase. Altogether during the week under review about £2,790,000 has changed hands at the fixing and the premium has ranged from 2½d. to 1d. The s.s. "Kaiser-i-Hind," which sailed from Bombay on October 9th, carries gold to the value of about £185,000.

SILVER MARKET

The week under review opened with sellers proving reluctant and, in consequence, modest demand sufficed to bring about a slight improvement in prices to 20½d. for cash and 19½d. for forward quoted both on October 9th and October 11th. However, on October 12th, with both the American and Indian markets closed, little interest was shown here and prices declined by ½d. and ¼d. for the respective deliveries; October 13th has seen no change.

The general undertone remains steady.

Quotations for gold and silver are shown below:—

1937	Price of Gold per Fine Ounce	Equivalent Value of £ sterling	Price of Bar Silver in London per ounce standard		Price of Silver New York per ounce 999 fine
			Cash	Two Months

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

THE trend of the quotations for the principal primary products was irregular during the past week. There are indications that the general downward trend of prices has been arrested, at least temporarily. At the same time there are no signs as yet of a resumption of purchases on a large scale by consumers.

The metal markets were a little steadier. Copper prices are scarcely changed on the week, while lead and spelter were slightly dearer. Tin prices, on the other hand, continued their downward trend. The market in rubber showed more resistance at the lower level of quotations, but business in vegetable oils and oilseeds was again small and quotations generally easier. Raw cotton prices were marked down sharply on the publication of the latest forecast of the probable yield of the crop in the United States, which, at 17.6 million bales, showed an increase of 1.5 million bales over the September estimate. But the market subsequently improved, leaving quotations unchanged on the week in spite of the anticipation of a further increase in the official crop estimate next month. Wool prices, on the other hand, continued their downward trend.

Wheat, which had been firm until a fortnight ago, continued to fall in price this week. Likewise, cocoa was again cheaper, but raw sugar remained unchanged. The market in meat showed little change, while bacon was slightly cheaper and butter a little dearer.

Quotations of primary products in the United States registered a further sharp fall, and Moody's index of the prices of staple commodities fell well below the level of a year ago. The index declined from 177.1 (December 31, 1931 = 100) to 172.1 during the week ended last Wednesday, against 193.7 a month ago and 183.8 a year earlier.

COAL

SHEFFIELD.—Inland demand is steady to strong, and collieries are in full working. Steam coal serves to account for the major portion of output. Rather better business is being done in house coal, and gas coal is much more active. Small coal is in good demand and prices are firm. Demand for coke works supplies is at a high level, and electricity works are taking larger supplies under contract. Coke remains a very firm market with demand gradually expanding, partly due to the needs of central-heating. Furnace coke is moving freely, and there is no weakening of the position in any brands of metallurgical coke.

On the export market the demand remains good on the whole. Coal for immediate shipment is rather less wanted.

NEWCASTLE-ON-TYNE.—The prompt position in Northumberland screened coals is quiet and as a result a few collieries are having to accumulate this class of coal. This surplus in Northumberland screened coals at a time of the year when there should be an improvement in demand is causing some alarm to collieries, and it is being suggested that trade in the home market has been lost to Yorkshire and the Midland collieries. Other sections of the market are very steady, Durham manufacturing coal being as scarce as ever.

CARDIFF.—New business continues very restricted on the Cardiff coal market, but prices are tending to harden rather than to weaken, and this week the quotations for washed dry nuts have been increased by 1s. per ton. Other washed smalls as well as coking classes are also scarce and very firm. There are slightly increased quantities of large grades available for spot or prompt shipment, but the Central Control Board is firmly resisting the "bearish" influence of suspended orders. Contract commitments continue to absorb nearly the whole of the current output. Shipments in the foreign and coastwise trades last week totalled 437,000 tons, compared with 386,300 tons the previous week and 339,660 tons in the corresponding week last year. Coke and patent fuel are both firm markets, but pitwood is easier. The current ex-skip prices of Portuguese timber have been reduced by 6d. per load, and it is anticipated that mainly as the result of the recent fall in the exchange value of the franc the sterling c.i.f. price of French pitwood under the pitwood-coal barter agreement will also be substantially reduced.

GLASGOW.—Conditions have shown little change this week. New foreign enquiry remains on a poor scale, and the collieries in various districts, particularly on the East coast, are now in need of some prompt business. This applies to both round coal and nuts, and in both cases prices are being shaded for spot clearances. The market position on a whole, however, remains quite strong. Most of the collieries hold very good order books, and with the household trade now opening up their position should be further strengthened. At the moment a scarcity of wagons is causing some inconvenience and is a part cause of the easier trend of spot quotations. Ayrshire remains a busy district, and little coal is coming on offer from this area at the moment. Lanarkshire is in need of business in round coal.

IRON AND STEEL

LONDON.—The weekly report of the London Iron and Steel Exchange indicates that activity at the works is undiminished, but that the volume of new business is limited by the reluctance of producers to add to their already heavy commitments. Except in special cases consumers find it impossible to place orders for anything but far forward delivery. Heavy tonnages are passing to the consuming industries and the whole of the record output of steel is going immediately into consumption.

The stringency which has ruled for so long in the pig iron market has been relieved by the increased home production and by large importations, and the situation at the steelworks and foundries seems to be more comfortable than for many months past. There is, however, a scarcity of some brands, largely as a result of the concentration of productive resources upon steel-making pig iron.

In the semi-finished steel market conditions of scarcity continue to rule, although the position has shown signs of becoming easier. British works producing this class of steel are operating at capacity and imports from the Continent seem to be arriving in greater quantities and with more regularity.

The demand for finished steel is unrelaxed, and home consumers eagerly take up any tonnages which become available. Export inquiry has declined

during the past few weeks, but there are still heavy quantities to be delivered against contracts entered into some time ago.

SHEFFIELD.—Business in the iron and steel market continues at a high level. Supplies of pig iron are on a somewhat better scale, although there is still no possibility of accumulating supplies either at furnaces or works, the whole make going into immediate consumption. Producers are not accepting much new business for this year, although here and there contracts are being entered into for the first months of 1938 at quotations ruling at time of delivery. Slightly better supplies of East Coast hematite are coming forward, but they are well below consumers' needs. The position as regards West Coast hematite is unchanged. In finished iron common and marked bars are in good demand, but mills are carrying heavy bookings.

The record output of both basic and acid steel billets is still insufficient to meet all requirements, and business in wire rods, strip and bars is heavy. For all classes of iron and steel scrap there continues to be a very good inquiry. Cast iron, which is not subject to control, is coming forward in fair quantities, and the price of steelworks quality has eased to about 65s. per ton. All other prices remain at the old levels.

Orders from overseas continue to come to this district on a satisfactory scale. Both the heavy and light sections of engineering have sufficient work to keep them busy well into the new year.

MIDDLESBROUGH.—The output of Cleveland foundry pig iron is sold to the end of the year, and producers are not inclined to negotiate sales for forward delivery. Makers of East Coast hematite are able easily to dispose of their production. Prices remain unaltered. Shipments of pig iron from the Tees during the first twelve days of October amounted to 1,744 tons, compared with 5,852 tons during the same period in September.

Home demand for steel is in excess of supplies, and, even with the increased imports, there is still a shortage of semi-manufactured material. Export demand for steel is rather easier.

Larger imports of heavy steel melting scrap have been received during the last few weeks and works are more comfortably supplied. Prices remain at the official figures. Blast furnace coke is quoted at 42s. per ton, delivered at the furnaces, whilst foreign ore remains firm with the maintenance of high freight rates.

GLASGOW.—Conditions in the West of Scotland show no outstanding change this week. All classes of steel are in heavy demand and neither the steelmakers, re-rollers or producers of finished steel can satisfy the requirements of users. At the same time, intensive activity at the plants is general and heavy tonnages are passing into the hands of consumers. The position in regard to supplies of material is easier, and it is believed that regular supplies of Continental material will be available shortly in moderately large quantities. Clyde shipyards are all busy and, while the new tonnage placed during the past month or two is less than the tonnage completed, there is still much work on hand.

CARDIFF.—The position in the South Wales iron and steel trades shows no change. All branches are particularly active, and notably those engaged in the production of raw materials for armament purposes. In the tinplate trade output is being well maintained, the latest returns showing a production equal to 76.58 per cent. of allotted capacity. Shipments of tinplates at Swansea last week totalled 11,723 tons, compared with 7,300 tons the previous week, and 5,093 tons in the corresponding week last year, and stocks have fallen to the relatively low quantity of 4,108 tons. Pig iron, steel ingots, bars, sheets, and tinplates are all firm at their recent quotations.

OTHER METALS

COPPER.—Price movements have been somewhat erratic during the period under review. The tone of the market improved under a more active demand at the end of last week and prices advanced. After the week-end, however, renewed weakness was evident and the early gain was lost. Quotations at the close on Wednesday were about unchanged, compared with those ruling a week earlier. Apart from the general uncertainty of the political outlook, the market has been depressed during the past few days by the expectation of a further increase in world stocks and by the easier tendency on the New York market. Prospects for a sustained improvement must be mainly dependent on the attitude of consumers.

Sales on the London Metal Exchange: 1,550 tons on Monday, against 1,900 tons last week; 2,500 tons on Tuesday, against 2,150 tons last week; 1,700 tons on Wednesday, against 2,900 tons last week. Domestic spot was quoted at 11.57½ cents per lb. in New York on Wednesday, against 11.65 cents a week ago and 13.42½ cents a month ago. Wednesday's official closing price for standard cash in London was £45 12s. 6d. to £45 13s. 9d. per ton, compared with £45 12s. 6d. to £45 15s. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 8,799 tons, showed a decrease of 198 tons, while stocks of rough copper, at 16,668, were 778 tons larger.

LEAD AND SPELTER.—Business in lead has been on a very quiet scale and, despite some weakness on Wednesday, prices show a slight gain on the week. Spelter, on the other hand, has been active, there being a heavy volume of liquidation on Tuesday. Prices on Wednesday were a shade higher than those ruling a week earlier.

According to the *Metallgesellschaft*, world output of smelter lead (excluding Spain) amounted to 139,379 metric tons in August, compared with 139,304 metric tons in July. A slight increase in American production was about counterbalanced by reductions elsewhere, the daily rate of output being virtually unchanged between the two months. The world's smelter output of zinc, according to the same source, registered a slight decline in August, amounting to 140,235 metric tons, against 141,010 metric tons in the previous month.

Sales of lead on the London Metal Exchange: 650 tons on Monday, against 1,250 tons last week; 600 tons on Tuesday, against 1,950 tons last week; 900 tons on Wednesday, against 2,650 tons last week. The New York quotation on Wednesday was 6.00 cents per lb., against 6.00 cents a week ago and 6.50 cents a month ago. Wednesday's official closing quotation in London for soft foreign for shipment during the current month was £18 to £18 1s. 3d. per ton, compared with £17 16s. 3d. to £17 17s. 6d. last week.

Sales of spelter on the London Metal Exchange: 1,050 tons on Monday, against 1,500 tons last week; 2,850 tons on Tuesday, against 2,250 tons last week; 1,700 tons on Wednesday, against 3,400 tons last week. Wednesday's quotation in East St. Louis was 6.25 cents per lb., against 6.25 cents the week before and 7.25 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipment during the current month was £17 15s. to £17 17s. 6d. per ton, against £17 12s. 6d. to £17 15s. last week.

TIN.—After registering some improvement at the close of last week, the market became dull and easier, with prices at the lowest for about twelve months. Trading has been on a restricted scale. Apart from the

continued weakness of Wall Street, the market here has been depressed by the reduction in the activity of the American tinplate industry and by the expectation of an increase in world stocks at the close of the present month. Nevertheless, on a consideration of the statistical position alone, the fall would appear to have been overdone. A recovery might reasonably be expected if the general outlook were to show some improvement.

Sales of tin on the London Metal Exchange: 275 tons on Monday, against 375 tons last week; 325 tons on Tuesday, against 300 tons last week; 425 tons on Wednesday, against 675 tons last week. The New York quotation on Wednesday was 51.50 cents per lb., against 54.37½ cents a week ago and 59.87½ cents a month ago. Wednesday's official closing quotation in London for standard cash was £224 to £224 5s. per ton, compared with £233 5s. to £233 15s. a week ago. Stocks of tin in London and Liverpool at the end of last week totalled 2,172 tons, a decrease of 363 tons on the week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted on Wednesday at £100 per ton, and rolling billets at £102 per ton. Nickel, for home and export, was maintained at £180 to £185 per ton. Quicksilver, on the spot, was £13 5s. to £13 5s. 6d. per flask of 76 lbs., the same as last week. Chinese antimony was quoted at £83 to £84 per ton, ex warehouse, as against £83 to £84 last week. Chinese wolfram for "October-November" shipment was quoted at 115s. to 120s. per unit, c.i.f., as against 117s. 6d. to 122s. 6d. last week. Refined platinum was quoted on Wednesday at £9 10s. per ounce, compared with £10 5s. a week earlier.

TEXTILES

COTTON.—Manchester.—Following the bearish report on the American cotton crop, which raised the indicated yield from 16,098,000 bales to 17,573,000 bales, prices fell, but a recovery has since taken place. This latter development has forced out more inquiry in yarn and cloth, and traders, now having adjusted their views to the new position, are disposed to place larger contracts. Manufacturers have reported more inquiry in cloth for export and the home trade, and a useful business has been recorded. There is still a fear in some quarters that raw material rates may decline further, but it seems hardly possible for the position to become more bearish. There is a quiet confidence that if prices stabilise between the present level and 5d. a lb. business should broaden. It is known that demand for many markets has been backing up, and stability in Liverpool and New York would in all probability force out a much larger turnover in yarn and cloth. Manufacturers remain well engaged completing existing contracts. Order lists are, of course, lighter than three months ago, but the bulk of the firms are fully engaged to the end of the year. Here and there some concern has been felt at the possibility of the dealers abroad and merchants on this side cancelling orders which were booked at the higher price level earlier in the year, through late delivery. So far, however, nothing has been heard of any such unfortunate happening. Piece-goods are moving steadily into consumption. Needless to say everybody is doing all they can to see that deliveries are made to time. Spinners of American yarns have done a fair business from day to day, and prices have been fully maintained. Aggregate sales have been slightly better and it is estimated that the turnover has equalled around 80 per cent. of production. In the Egyptian section, the feature of interest has been the raising of marginal selling rates under the legalised scheme by 5 per cent. This has been done to cover increased costs of production as a result of the higher wages for coal, mill stores, etc.

WOOL.—Bradford.—The past fortnight has not brought any improvement to the wool textile world; in fact, prices have fallen sharply in sympathy with other markets. At the present time there is a complete lack of confidence in the future, and until confidence returns there is not likely to be an improvement in demand and prices.

The centre of operations is overseas where the new clip is being marketed in Australia and South Africa, and this week cables announce easier prices with a complete lack of confidence. It is very significant and worth mentioning that good warp 64's tops have fallen in Bradford 8d. to 9d. per lb. during the past two months, and the bottom may not yet have been touched. Until the international economic and political outlook clears it is unlikely that there can be any marked improvement in the wool position. Spinners and manufacturers in the West Riding of Yorkshire are not enjoying anything like the same prosperity as a year ago. Very active preparations should now be in evidence for next spring season in new cloths, but many spinners and manufacturers are finding difficulty in running machinery, and in many cases a rather slack time is being experienced. Business generally is exceedingly slow.

GRAIN MARKETS

WHEAT.—Sentiment has undergone a marked change in the period under review and the market has developed an easier tone. Weak markets in North America, Russian selling pressure and reports of good rainfall in Argentina have been the principal causal factors. Meanwhile, there has also been some rainfall in Australia, but it is not known whether this has been sufficient to offset the effects of the recent prolonged drought.

On Wednesday last, "December" futures were quoted in Chicago at 97½ cents per bushel, against 106½ cents the week before and 104½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba (Atlantic), ex ship, 55s. 9d. per 496 lbs., against 57s. 6d. last week; No. 2 Northern Manitoba (Atlantic), ex ship, 54s. 3d., against 56s. 3d. last week. According to the *Corn Trade News* total shipments of wheat and flour last week amounted to 1,448,000 quarters, against 1,157,000

Two New Features for THE FINANCIAL NEWS

In response to the expressed desires of its readers for weekly reviews and comments on the major current developments in the Industrial and Financial fields, to supplement the detailed news and comment appearing daily, THE FINANCIAL NEWS this week is introducing two new special features. Saturday's and Monday's issues, respectively, will contain comprehensive editorial reviews of all the major events and developments in the Industrial and in the Financial-cum-Investment spheres. These new and important features will commence this week-end.

INDUSTRY

Every Saturday's issue will contain a full scale review of the important Industrial events and developments of the week. Sometimes, these will be matters which have been front-page news in the daily papers; sometimes, matters which, far-reaching though they may be, have gained no publicity or attention worth the name. In every case they will be put into their proper perspective, their industrial and investment implications noted, and their real meaning and importance assessed. Every article will take the reader beneath the surface of bare financial details and formal announcements, and show him the real trends and problems as they affect—and will affect—Industry and the City.

This review will be written for each Saturday's paper by our Industrial Editor.

FINANCE & INVESTMENT

The physical progress of industry is not everything—as the recent slump in Markets and break-down of City confidence has taught many people to their loss. Every Monday's issue will contain, under the title of "This Week and Last," a review of important topical matters in the general Financial and Investment fields. Market trends, the relations of Finance and Commerce, City topics and technicalities, and all the varied matters which every City man and every Investor is called upon to think about, will be dealt with from week to week. The review will look forward to the future as well as backward to the events of the past week, and will supplement the Industrial Review of the previous Saturday by seeking to put the Industrial scene in its financial perspective.

This review will be written for each Monday's paper by The Editor.

THE FINANCIAL NEWS

is on sale at all railway bookstalls and through good newsagents everywhere, price 2d. daily.

The certain way to avoid disappointment is to place a standing order with a newsagent today.

quarters in the previous week and 1,304,000 quarters in the corresponding week a year ago.

FLOUR.—Prices have eased on a continued quiet demand. Wednesday's London quotations (excluding quota payments) were: Straight run, delivered Home Counties, 40s. 6d. per 280 lbs., as against 41s. 6d. a week ago; delivered inner London, 40s., as against 41s. a week ago. Manitoba patents, ex store, 38s. 9d. to 40s. 3d., as against 39s. to 40s. 6d. a week ago. Australian, ex store, 32s. 6d. to 33s. 6d., as against 32s. 6d. to 33s. 6d. a week ago.

BARLEY.—The market in imported feeding barley has ruled steady, despite the weakness of other cereals. "October" futures were quoted at 64½ cents per bushel in Winnipeg on Wednesday, as against 65½ cents last week. Quotations per 448 lbs. in London on Wednesday were: "English feed," at farm, not quoted; "English malting" (new), at farm, 46s. to 65s., as against 46s. to 65s. a week ago; Californian, ex ship, 45s. to 58s., as against 45s. to 58s. a week ago. Chilean, brewing, ex ship, 45s. to 48s., as against 45s. to 48s. a week ago.

OATS.—On Wednesday, "December" futures were quoted at 29½ cents a bushel in Chicago, against 30½ cents a week ago and 30½ cents last month. Quotations in London, Wednesday: "English Black" (new), at farm, 27s. to 28s. per 336 lbs., as against 27s. to 28s. last week; "English White" (new), at farm, 27s. to 28s., as against 27s. to 28s. a week ago; mixed Canadian feed (Vancouver), landed, 26s. 9d. per 320 lbs., as against 27s. a week ago.

MAIZE.—The undertone of the market remains steady, although prices are a shade lower. "December" futures were quoted on Wednesday at 58½ cents per bushel in Chicago, against 61½ cents a week ago, and 63½ cents last month. Quotations in London, Wednesday: "Plate," landed, 29s. 6d. per 480 lbs., as against 30s. a week ago; "Plate," ex ship,

28s. 6d., as against 29s. a week ago; "Plate," "October," 28s. 3d., as against 29s. a week ago; yellow maize meal, ex wharf, was quoted at £7 10s. per ton, as against £7 12s. 6d. to £7 15s. last week.

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations for selected weeks in 1935-1937:—

Nearest Future	Jan. 2 1935	Dec. 31 1935	Oct. 14 1937	Dec. 30 1936	Oct. 6 1937	Oct. 13 1937
Winnipeg (No. 1, Manitoba) Cents per 60 lbs.	82½	84½	114½	129	128½	121½
Chicago (No. 2, Winter) Cents per 60 lbs.	98½	101½	116½	135½	106½	97½

The visible supply of wheat in Canada amounts to 74,135,000 bushels, against 74,858,000 bushels last week and 80,843,000 bushels in the corresponding week last year.

SALES AND PRICES OF BRITISH CEREALS.—The following table gives the estimated sale of home-grown wheat during the harvest years 1934-35 to 1937-38

	1934-35	1935-36	1936-37	1937-38
Estimated sales of home-grown wheat—				
1 week to October 9	Cwts. 547,666	Cwts. 495,987	Cwts. 306,492	Cwts. 409,570
6 weeks to October 9	3,158,013	2,915,023	2,173,893	2,254,092
Average price of English wheat per cwt.	s. d. 5 1	s. d. 5 11	s. d. 8 3	s. d. 9 3

The following is a statement showing the quantities sold and the average price of British cereals in the past two weeks, and for the corresponding weeks in each of the years from 1933 to 1936:—

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
October 7, 1933	Cwts. 392,971	Cwts. 458,285	Cwts. 64,316	s. d. 4 11	s. d. 10 7	s. d. 5 5
October 6, 1934	517,666	423,192	66,973	5 1	9 9	6 7
October 4, 1935	493,987	587,548	58,078	5 11	9 7	6 3
October 10, 1936	306,492	453,111	63,853	8 3	10 0	6 10
October 2, 1937	415,290	427,225	70,954	9 1	12 2	8 6
October 9, 1937	409,570	492,114	74,085	9 3	12 7	8 7

OTHER FOODS

BACON.—As foreshadowed a week ago, prices have now been reduced. The market is subsequently been quietly steady. The official quotations (per cwt. of No. 1 Sizable) which formed the basis for dealings on the London Provision Exchange this week were: English, 100s.; Canadian, 2s.; Danish, 99s.; against 105s., 100s., and 106s. last week. Arrivals in London last week included: Danish, 13,187 bales; Canadian, 3,929; Dutch, 2,337; Lithuanian, 1,799; and Polish, 3,342; as against 13,446, 4,025, 2,160, 1,929, and 3,973 bales, respectively, in the previous week.

BUTTER.—The tone of the market continues firm and Colonial butters are dearer than a week ago. Quotations (per cwt.) on the London Provision Exchange on Wednesday were: New Zealand, finest salted, 134s.; Italian, choicest salted, 134s.; Danish, 140s.; compared with 130s., 1 and 140s., respectively, a week ago.

MESE.—The tone has been generally steady, though Dutch has been C demand. Quotations (per cwt.) on the London Provision Exchange Wednesday were as follows: English Cheddars, finest farmers, 90s. to 100s.; Canadian, finest coloured, 70s. to 72s.; and New Zealand, finest coloured, 69s. 6d.; against 90s. to 92s., 71s., and 69s. 6d. to 70s., respectively, a week ago.

COCOA.—The spot quotation in New York on Wednesday was 6½ cents lb., as against 6½ cents per lb. last week. In London, on Wednesday, good fermented new crop, Accra, "November-January," was quoted 28s. 3d. sellers per 50 kilos, c.i.f. Continent, against 29s. a week ago. Last week's movements of cocoa in London were as follows: Landed, 8 bags; delivered for home consumption, 5,222 bags; exported, 5,360 bags; stocks, 216,859 bags, against 152,892 bags a year ago.

COFFEE.—Demand in London has been on a limited scale this week. The New York spot market has been quiet, with prices unchanged. In Wednesday, Rio No. 7 (cash) was quoted at 9 cents per lb., in New York, as compared with 9 cents per lb. last week and 9 cents per lb. a month ago.

EGGS.—Demand has been checked by the recent advance in quotations, but prices are about unaltered. At Smithfield, on Wednesday, English ordinary packing, Grade I, about 15-15½ lb. realised 18s. 6d. to 19s. per 120, against 18s. 6d. to 19s. last week; while Danish (15½ lb.) made 4s. 6d. to 14s. 9d., as against 14s. 6d. to 14s. 9d. last week.

FRUIT.—Business at Covent Garden has not been particularly brisk, but all the leading seasonal lines are meeting a steady sale, says *The Fruitgrower*. A good inquiry for apples continues and prices for all the home grown varieties are steady. Imported supplies sell at easier rates in consequence of increased quantities. Pears sell well, but only moderate supplies are available. With heavier arrivals of imported descriptions, English house grapes are easier. Peaches, on the other hand, are limited. A fair showing of English walnuts is now on the market, but coconuts are in rather shorter supply. Blackberries are finishing. Oranges have eased in price owing to heavier imports from South Africa, while lemons are cheaper for a similar reason. Grape fruit, however, is not so plentiful and prices accordingly have a steadier tendency.

Italy's Last-Minute Offer

THE fear that the wrangle over Spain might at any moment drag the Great Powers into active intervention has hung like a pall over the Chancelleries of Europe during the last two weeks. On Wednesday, the fear was, for the moment at all events, dissipated. Reaction from this state of tension was largely responsible for the sharp recovery in the stock markets, which had fallen into a state bordering on panic; and for the relieved tone which marked even the Opposition speeches in Thursday's debate in the House of Commons. It is sincerely to be hoped that this optimism is justified; and it is, indeed, not altogether impossible that in the sequel this third week of October may prove to have been the turning-point in the miserable story.

But it is never safe to count chickens before they are hatched. Beneath all the diplomatic phrases, the realistic clash of policies in the Spanish affair has been between SIGNOR MUSSOLINI's desire to see Spain controlled by his nominees and the desire of France and Great Britain to keep Spain out of the DUCE's orbit. It is just possible that this week's events are the first sign of SIGNOR MUSSOLINI's willingness to compromise on this basic issue, or at least to remain in a position which does not exclude compromise. If so, it is a portent which the whole world will welcome.

It must, however, be admitted that the proceedings at the Non-Intervention Committee would lend equal colour to the opposite view that SIGNOR MUSSOLINI is merely playing for time without modifying his ultimate determination. The chairman's sub-committee has held three meetings, on Saturday, Tuesday and Wednesday. On Saturday the French representative, with the support

of Great Britain, put forward the latest of the plans for keeping alive the unlovely compromise of Non-Intervention. The salient points of this plan were an immediate "token withdrawal" of volunteers from each side in Spain, "account being taken of the disproportion between the number of effectives serving on either side"; the appointment of commissions to organise a complete withdrawal; the grant of belligerent rights when this withdrawal was sufficiently advanced; the rein

the Committee should consider the French plan or the very similar British plan of last July. No progress whatever was made on the central difficulty: whether belligerent rights should be conceded before or after the start of the withdrawal of volunteers. When the Committee adjourned the feeling was general that the final deadlock was at hand.

On Wednesday morning, however, there was a dramatic change. COUNT GRANDI, with German concurrence, offered a concession. His speech was in studiously unprecise terms, but no objection was offered to MR EDEN'S summary of it as agreeing to the following time-table: "token" withdrawals; a report by a Commission on the number of volunteers in Spain and on the technical methods of evacuating them; withdrawal proper; and, in the course of withdrawal, grant of limited belligerent rights. It is not yet quite certain as we go to press whether this is exactly what has been agreed, for it is reported from Rome that the exact timing of the grant of belligerent rights is still a difficulty, while all that DR WOERMANN, the German representative on the Committee, said was that there was no need to discuss the matter until after the "token" withdrawal. But if this obscurity can be satisfactorily removed, the position is that the British plan of July, including its much-disputed time-table, has now, three months later, been accepted by all the Powers, with the possibly significant exception of Russia, on whose behalf M. MAISKY announced that he would have reservations to formulate in due course.

Wednesday's decision by SIGNOR MUSSOLINI has been greeted as a welcome concession. And so it is if his words can be taken to mean what they say, for in that case the way would seem to be open for the withdrawal of volunteers and the return of Spain to the Spaniards. But experience compels a certain scepticism. Words, as we have

discovered, can have one meaning in English and another in Italian. Moreover, even their Italian meaning seems to have the capacity of fading in the course of time. (What, for example, has happened in the last month to COUNT CIANO'S disavowal of any intention of sending further volunteers to Spain?). It is possible that SIGNOR MUSSOLINI is in earnest. The announcement this week of a levy of 10 per cent. on the capital and reserves of Italian joint-stock companies and the introduction of "war bread" have lifted one corner of the veil from the very serious economic and financial situation which faces the DUCE within Italy. But until words are made good by deeds many of his more obstinate critics will wonder if his concession (which could have been made three months ago) is not one more manoeuvre to gain time, to keep the Franco-Spanish frontier closed, to keep Britain and France tied to non-intervention while General Franco is helped to victory by the Italian army in Spain.

So long as there is a possibility of SIGNOR MUSSOLINI'S sincerity, his overtures should not be rejected. But the test of his sincerity now is a matter of time. If the Commission reports quickly and genuine withdrawal starts before many weeks are past, well and good. But the French and British Governments should be very keenly on guard against any unnecessary delay. Procrastination will be a sure sign of insincerity, and it should be answered by the resumption of full liberty of action. MR EDEN, speaking in the House of Commons on Thursday, showed himself at least verbally conscious of this imperative necessity. He emphasised that progress must be made within the next few weeks. And he repeated the distinction he drew at Llandudno between non-intervention in the Spanish war and indifference to its result. The best chance of deriving the greatest benefit from this eleventh-hour opportunity is to hold the British Government firmly to these words.

Trade and Politics

PARLIAMENT this week has re-assembled, debated the international situation and been prorogued. The session which bore the unique title "1 Edw. 8 & 1 Geo. 6" is dead, and its successor is to be inaugurated by a State opening on Tuesday. The division of the legislative year is of more than usual significance this time. For the Parliament elected in 1935 is reaching its watershed. Two years old, it has, at the very most, only three, and more probably only two, years still to live. Moreover, this stage in its career, when the memory of the last General Election is becoming less distinct than the anticipation of the next, appears from all the available signs to be about to coincide with a change in the economic outlook of the country. Beyond doubt, the new session will be a turning-point.

At the moment the Government's prestige is still very large and its position very strong. If a General Election were called to-day it is probable that the Government would win at least as many seats as in 1935. There would not seem to be the slightest possibility of Labour being returned to power. Indeed, it would be necessary to search a long way back into political history to find a Cabinet which, in the middle of its second consecutive Parliament, was as firmly in the saddle as this one.

Much, nevertheless, can happen in two or three years. Leaving aside the eventuality of war (this grim proviso has nowadays to be attached to all speculations about the future), there is the possibility, not to say the probability, of a recession in trade. We attempted last week to assess the immediate economic prospect. There is plenty of dispute among the prophets about the probable severity of the next depression and the probable moment

of its incidence. But it would be foolhardy in the extreme to deny the probability of a setback of some degree occurring at some time in the next three years. Before the General Election the Government will almost certainly be faced with the necessity of explaining away a mounting total of unemployment.

This prospect has an important political bearing, for the fortunes of governments nowadays are very intimately affected by economic conditions. To-day, although unemployment is considerably larger than in 1929, there is nevertheless a far more widespread recognition of prosperity than there was in that year, when the Government in office was defeated on the economic issue. The comparison in the average voter's mind is not with 1929 but with 1931-32, and it is undeniably favourable. Economic conditions are very much better than they were when the present Government took office, and the Government inevitably derives a great deal of its support from the fact. There is room for endless argument about the parts which the Government's merit and its good fortune have played in producing this result. But in politics *post hoc ergo propter hoc* is not a fallacy; it is the foundation of all wisdom. Whether by merit or good fortune, the National Government has come to be associated in the public mind with rescue from crisis and with steady industrial recovery. The Conservative Party has not hesitated to capitalise this public conviction; Ministers have taken personal credit for recovery; they have deliberately made the employment figures their main party asset. If in the future they suffer from the tendency of the electorate to hold its rulers responsible for the trade cycle, they will have

only themselves to blame for having encouraged such an idolatrous belief in their supernatural powers.

The most recent example of an English-speaking political part which nailed its colours with equal confidence to the prosperity mast is that of the Republican Party in the United States. PRESIDENT COOLIDGE escaped from office, like LORD BALDWIN, while business was still active and prosperous. His Cabinet colleague and successor, MR HOOVER, encouraged the belief that his own continuance in office was the surest guarantee against depression, and in the election of 1928 the electorate virtually declared the Opposition unfit to govern. But the rest of the story is hardly comforting to those Conservatives who would accept the parallel; for the fate of PRESIDENT HOOVER is a political byword.

The strategists of the Conservative Party must, if they are realists, already be considering how to adjust their programme to a period of recession. Hitherto Ministers have adopted the not altogether prudent line of denying that a recession is at all likely while they remain in office, and even of rebuking those who are under no similar obligation to prefer optimism to balanced judgment. It is arguable that it is the duty of Ministers to radiate optimism. But it would surely be more productive of confidence if the Government, instead of dismissing the whole possibility of a decline, were to declare that they were ready with plans to halt it at the first sure sign of its approach. But even this much sounder policy is largely prohibited to the present Government. They cannot boast of their preparedness unless their plans have been laid, and none of the specifics which they prescribed in execution of their doctor's mandate six years ago is applicable to present circumstances. Balancing the Budget is almost an impossibility. Depreciation of sterling (which, by a queer trick of political memory, has become one of the Government's achievements) can hardly be tried a second time without immediate and severe reprisals and ensuing chaos. There is no gigantic conversion operation available now to bring about a dramatic fall

in rates of interest. Increases of tariffs would run counter to all the language which the Government have been talking about freer trade, and not even the protectionists advocate further restriction as a means of heading off a recession in trade. The Government's bolts are shot.

There is a striking unanimity among economists on the desirability of preparing plans for public works; even those who are least disposed to accept the theory of public works in its unqualified entirety agree that in present circumstances—or, more accurately, in the circumstances which would arise if unemployment were now to increase—the case for them is very strong. But public works are the one thing against which the present Government has persistently hardened its heart (unless, of course, they are weapons of destruction). A change of heart is not impossible; but it is likely to be a gradual process and to take considerable time even after it becomes clear that the next depression has arrived.

It is thus by no means impossible that the opening of the new session finds the Government at the peak of their popularity. It is, of course, to be hoped that the inevitable recession of trade will be delayed—a wish which only the most perfervid partisan will disown—but whenever it comes the Government may be in a difficult position to defend itself against the automatic loss of popularity which goes with mounting unemployment. How strongly the tide will flow against it depends not least upon the statesmanship of the Opposition. If Labour meets an economic crisis with immoderate or confiscatory proposals, the net effect might well be to stampede the great mass of middle-class voters into the arms of the Conservatives. Thus it is not only the Government whose capacities will be severely tested in the remainder of the life of the present Parliament. British politics will not return to reality until the Opposition can meet the Government on equal terms. Distant though the prospect of that happening seems to-day, it is not beyond the power of economic forces to bring it about.

World Economic Prospects

NOT many months ago the rapid advance of world industrial activity, trade, and prices aroused anxiety lest the movement should pass beyond control. Since last summer, however, expansion has lost momentum, and public opinion, in Great Britain and elsewhere, is now concerned rather with the opposite possibility of a renewed slump. The time is obviously opportune for a survey of the progress of recovery since 1932 in the world as a whole and in individual countries. Under what conditions has recovery been achieved? And what tendencies are likely to influence world production, trade and prices in the near future?

The material necessary for an informed answer to these questions has been brought together in an admirable fashion in the League of Nations' latest report on World Production and Prices and in the League's World Economic Survey for 1936-37.* The extent of recovery in the world as a whole is illustrated graphically in the first of the two charts overleaf, which is based on indices calculated by the League of Nations. The index of primary production includes crude foodstuffs and raw materials of agricultural and non-agricultural origin. The figure for stocks of primary products comprises twenty-four foodstuffs and raw materials included in the index of production. The index of world industrial production includes the U.S.S.R. The volume of inter-

national trade is calculated by adjusting values by means of an index of prices.

In any appraisal of the extent of world recovery a sharp distinction needs to be drawn between primary and industrial production on the one hand, and international trade on the other. By 1936 the world's primary production had again reached, and its industrial production had considerably surpassed, the pre-depression level. But the volume of international trade was still 13½ per cent. smaller than in 1929.

The divergence in the rate of recovery between primary production and manufacturing activity is due, in a large measure, to technical differences in conditions of supply. While manufacturing operations normally respond fairly rapidly to changes in demand, at the cost of unemployment of men and machinery during depression, the output of primary products, such as crude foodstuffs and raw materials, cannot readily be adjusted. The area under crops, for example, can be varied only from year to year. Moreover, reductions in prices frequently lead not to immediate curtailment but to an increase in acreage when farmers offset lower unit prices by increased sales. Until the last depression the same tendencies were noticeable in the output of certain important raw materials, like non-ferrous metals. Consequently, the decline in the output of primary products was much less marked than in that of industrial activity, and this tendency helped to bring about an accumulation of unsold stocks and a collapse of prices. Conversely, during the recovery

* "World Production and Prices, 1936-37." 136 pages. ss. net. "World Economic Survey, 1936-37." 261 pages. 6s. net. Allen and Unwin, London.

movement, manufacturing activity increased much more rapidly than the output of primary products. Part of the increased demand for these products was met from stocks, which, by the end of last year, were actually 10 per cent. lower than in the period immediately before the depression.

The relatively small improvement in the volume of international trade achieved in 1936 needs no special explanation. But apart from the many impediments to an expansion of international intercourse, foreign trade normally does not gather momentum until the later stages of recovery. By that time the rise of prices of primary products has percolated to primary producers, and the tendency of production to approach the limits of its capacity encourages a greater interchange of manufactures between industrialised countries.

A comparison of the League's figures shows how far these forces have carried the world along the road to recovery. But while the volume of world production has regained its pre-depression level, the extent of the improvement in individual countries has been anything but uniform. This is revealed by our second chart, which is based on the indices of industrial activity for the principal nations. In Japan and Russia, it will be seen, the volume of industrial activity last year was far higher than in 1929. The United Kingdom and Germany were also producing at a higher rate than ever before. In France and the United States, however, industrial output

regions are still far from satisfactory. Mr J. B. Condliffe asks pertinently, in the League's World Economic Survey, whether the expansion in world economic activity is likely to be checked by the necessity for making adjustments in countries where recovery has developed into something approaching boom conditions, or whether there is any likelihood of an extension of international economic co-operation which will spread prosperity more widely.

At the moment opinion is divided on these fundamental questions. The recent behaviour of the commodity and security markets in many countries seems, to some commentators, to herald a recession in general economic activity, but few serious economists have threatened a long-suffering world with another major slump. Actually, despite the uneven progress of recovery so far, the present economic position of the world differs fundamentally from that obtaining in 1929.

In the first place, the position of primary producers and countries exporting raw materials and crude foodstuffs is much stronger. For example, there has been no such accumulation of stocks as occurred between 1927 and 1929, when the prices of primary products were falling consistently. Moreover, the difficulty of bringing about a rapid adjustment between supplies of raw materials and demand for them has been partially overcome by the inception of control schemes, though this factor, naturally, applies much more to metals than to crop

WORLD PRODUCTION AND TRADE

1929=100

in 1936 was still a good deal less than in 1929. Among the smaller countries industrial activity was greater last year than before the slump in Denmark, Estonia, Finland, Greece, Hungary, Latvia, Norway, Roumania, and Sweden. It was less, however, in Austria, Belgium, Canada, Italy, Holland, Poland, and Czechoslovakia.

The reasons for these differences are not far to seek. The countries which have shown most progress are mainly those which early joined the sterling area and pursued an expansionist monetary policy. In the countries of the former gold bloc recovery was delayed. In the United States it was hampered between 1932 and 1935 by social legislation which restricted profits, capital investment and industrial activity. After the adjustment of the cost structure, however, recovery made rapid headway. In France, where the depression was prolonged by an attempt to maintain the gold value of the franc, the improvement which was expected to follow the suspension of the gold standard last autumn has not so far been impressive. As in the United States, social legislation has raised costs and impaired profit margins.

Perhaps the most striking aspect of the recovery hitherto achieved is its uneven character. The world as a whole has emerged from depression, but conditions in certain branches of activity and in certain geographical

INDUSTRIAL PRODUCTION IN LEADING COUNTRIES

1929=100

products, which have provided some of the most conspicuous failures among control schemes. Even now, the prices of most raw materials and crude foodstuffs—with cotton the most notorious exception—remain fully profitable to producers.

A second important difference between conditions today and in 1929 is that industrial expansion in a number of countries, including the United States and France, has not as yet been accompanied by excessive capital investment. Nor are international debtor and creditor relationships in the state of chronic disequilibrium that they were eight years ago. All this does not exclude the possibility of a minor industrial recession, but it increases the unlikelihood of a catastrophic setback. Finally, a slowing down of activity in one country is unlikely to spread to other countries as rapidly as it did in 1929, when the currencies of the world were linked up by fixed gold parities and when contraction of activity in one automatically caused a slowing down in all the others. Thus, provided the world can avoid a serious break in political conditions (which are obviously much less promising than they appeared to be at the end of the 'twenties) there is every reason to hope that the next recession will not usher in a major slump of anything like the dimensions of 1929-32.

Slump in Lead and Spelter

LEAD and spelter have taken a fully representative part in the bacchanalian revels of the metal markets this year, with their typical sequence of inebriation, reaction and sheer depression. As recently as 1934, the London price of lead averaged £10 18s. 8d. per ton. In 1937, the price opened at £27 2s. 6d., rose to £36 7s. 6d., and last Thursday stood at £18 6s. 3d. The price of spelter averaged £13 13s. 2d. in 1934, opened at £19 18s. 9d. this year, touched £37, and now stands at £17 7s. 6d. Last Tuesday, selling of spelter on the London Metal Exchange was particularly heavy, some 3,000 tons being dealt in at the morning session alone. It is pertinent to ask why the range of prices this year has been so wide, and whether the omens promise a period of less distressing fluctuation in the near future.

The answer to the first question can be readily stated. The extraordinary rise in lead and spelter prices earlier this year was primarily due to widespread fears of an early shortage of supplies. The subsequent slump has resulted from disappointment over the absence of the expected shortage, coupled with the fact that large-scale bull speculation left the market in a vulnerable technical position. The answer to the second question is more difficult to discover on a short view, but can be stated with reasonable confidence on examination of the statistical background of the two metals.

Since the beginning of economic recovery in 1933, the consumption of lead and spelter has risen more rapidly than production. In the four years from 1933 to 1936 inclusive, the world's lead smelter output, according to the Metallgesellschaft estimate, totalled 5,321,800 metric tons. Consumption during the same period, at 5,606,200 metric tons, exceeded production by 284,400 metric tons. The same authority puts the world's smelter output of spelter in that period at 4,969,900 metric tons, and consumption some 107,500 metric tons above it, at 5,077,400 metric tons. These figures reflect increased demand from the automobile, building, electrical and armament industries, and in the case of spelter, the die-casting industry. During these years consumption increased more rapidly outside than inside the United States. In 1936, indeed, extra-American consumption (as is shown by the table on this page) reached a new record for all time, and exceeded the high level of 1929 by a handsome margin. In the United States, on the other hand, consumption recovered strongly from the depression of 1932, but remained last year well below the level of 1929. Naturally, the rising trend of consumption has had decisive repercussions on the development of new production, but these have been complicated and intensified by the fact that, as a market, the United States is more or less isolated from the rest of the world. Extra-American producers and smelters have made strenuous efforts to adapt their capacity to the increased demand. In the case of spelter, these efforts were so far successful that last year production had fully caught up with consumption; but in that of lead they were insufficient to enable supply fully to overtake demand.

During the first seven months of this year, however, the ability of producers of both metals, outside America, to meet all the requirements of consumers, with a fair margin, has been convincingly demonstrated. Extra-American consumption of lead (according to the American Bureau of Metal Statistics) increased by 6 per cent. and spelter consumption by 7.9 per cent. But the smelter output of lead (according to the Metallgesellschaft) rose in the first eight months by 14.6 per cent. and that of zinc by 9.5 per cent. The production figures for August were respectively 21.7 and 15.0 per cent. higher than those of August, 1936. Now, an appreciable part of this increase in output has come from countries whose costs of production are high. It has been directly stimulated by the high prices of the latter part of 1936 and the first few months of 1937. Its continuance depends not only on a continuance of these high prices, but also on the maintenance of a considerable volume of world consumption. If the latter condition is satisfied, there must be a bottom to the present slump in prices—and, quite possibly, there may be an early recovery. For the present level of demand can only be met if prices are sufficiently attractive to bring out supplies from the high-cost countries. And under present conditions this probably means a minimum price of £20 for lead and spelter alike. So far as countries outside the United States are concerned, therefore, the key to the problem of future prices seems to be the ability of trade and industry to maintain the present level of activity.

Dependence on general economic contingencies is even more direct in the American market. Here, in contrast to other countries, reliable estimates of stocks of the two metals are available. As a result of the relative unresilience of American production this year, stocks have declined heavily. America's present supply of lead is equivalent to less than two months' consumption, and that of zinc to only five days' consumption.

These figures are undoubtedly low, but it would be dangerous to deduce from them the likelihood that America will become a substantial importer of the two metals in the near future. Her reserves of capacity which can be brought into production are substantial.

The number of zinc retorts in operation at the end of August was 50,163, against 40,285 as recently as last January. The August figure was the highest since 1929. Simultaneously, the chief spelter mining districts in the United States are reporting an increase in their ore supplies. Thus, a substantial improvement in zinc output may be expected by the time the normal seasonal rise in consumption occurs, early next year. And every fall in prices increases the deterrent effect of the present specific duties on imports.

Altogether, the evidence suggests that prospects of a striking recovery in lead and spelter prices are unimpressive, unless consumption shows a new and unexpected rise. A moderate revival, however, may be recorded if the present rate of consumption can be maintained in the world outside America.

Violence in Palestine

THE period of comparative calm in Palestine and of comparative hopefulness that a solution of the country's problems could be found on the basis of partition has been rudely ended in the last few weeks by a renewed outbreak of Arab outrages. Violence, indeed, never entirely ceased, but until recently it was legitimate to hold that it would not again reach the dangerous proportions of last year. Moreover, the fact that a definite plan of settlement had been evolved by the Royal Commission, accepted in principle by His Majesty's Government and at least not disapproved by the League of Nations, made it possible to disregard the continuance of minor disorders without incurring the criticism so strongly and rightly expressed by the Commission against the planless optimism of the authorities both in Jerusalem and in Downing Street before last year's rebellion.

Such forbearance is no longer possible. Indeed, it must now be recognised that since the end of July the disorders have been *crescendo*. It may also be suspected that the movement has been organised and designed from the beginning with a view to sabotaging any settlement that does not allot to the Arabs the whole of the Palestinian loaf in lieu of the proffered four-fifths.

The new series of outrages began with sporadic Arab attacks—some of them murderous both in design and in result—against fellow-Arabs whose offence was a supposed treachery, or in some cases no more than a lukewarmness, towards the national cause. These attacks soon extended to Jews, and there was a sharp deterioration in the atmosphere in Palestine after the passage, on February 8th, of a resolution rejecting the Royal Commission's plan by an Arab congress which was in session, outside Palestine, at Bloudan, near Damascus. On September 24th two Arab landowners—accused of having sold, or having contemplated selling, their land to the Jews—were murdered near Nazareth and Acre respectively. And at Nazareth on the 26th the district commissioner for Galilee and with him a British police constable were murdered at the door of a church.

It is perhaps no accident that the scenes of all these four murders lay in the principal Arab-inhabited districts which the Commission has suggested incorporating into the proposed Jewish State. On October 1st the Government of Palestine replied by dissolving the Higher Arab Committee, deporting four of its leaders, and dismissing the MUFTI of Jerusalem from both the presidency of the Palestinian Muslim Supreme Council and the chairmanship of the General Waqf Committee. The first effect of these disciplinary measures has been inflammatory. On the night of October 14th-15th a force of seven carloads of British police was ambushed between Bethlehem and Hebron when they were on their way to evacuate British women and children from Hebron to Jerusalem. During the week-end there were a number of fresh cases of shooting and incendiarism. And simultaneously it became known that the MUFTI—who, since his deposition from his two other offices, had taken sanctuary in the Haram-ash-Sherif in order to make sure of avoiding arrest—had escaped in disguise by sea from Palestine into the Lebanon. He is under surveillance there by the French authorities, while discussions proceed between Paris and London about the disposal of his somewhat embarrassing person. Except for there being no strike, the situation in Palestine has unmistakably reverted to what it was last year. The Arab population is in a state of virtual revolt again. How does this grave fact affect British policy?

Fortunately, we are not without experience to guide us; for the situation in which we now find ourselves in Palestine has much in common with the one through which we have already passed in India. And the moral of the Indian precedent is plain. The one hope of a happy issue out of present afflictions lies in pressing on steadily with the plans that we have in hand. If our opponents' tactics are sabotage, our tactics must be counter-sabotage. If our opponents dread to see our plans carried out, that must be because they expect that the Commission's scheme will take the wind out of their own sails if once it is fairly launched. And this, after all, is just what we believe ourselves. The reason why both the public and the Government in this country have overcome their aversion to partition and put themselves behind the Commission's scheme is because they think that it promises to give both the Arabs and the Jews the substance of what they each need. If this is our conviction, then our policy must be to put the plan into effect as quickly as possible without allowing ourselves to be diverted from our course.

What, in the changed circumstances, should be the next step in this programme? Hitherto we have been hoping to secure in advance the concurrence of both the Jews and the Arabs in an application of the scheme which was to be worked out on the spot by negotiation between representative Jewish and Arab bodies and a new Royal Commission. This would be the ideal procedure; but it is also in our power, if we are driven to it, to demarcate the proposed three areas by ourselves; to inaugurate a new mandatory regime in the residue of the mandated territory; and to hold ourselves ready to hand over authority, in the areas respectively earmarked for a Jewish and for an Arab State, to any national authorities who can demonstrate their ability to establish and maintain an effective national government there.

If we press on to this point, we can be sure of seeing a Jewish national State in being before long. There is no difficulty about finding representative Jewish leaders or assuring ourselves that they will be able to fulfil all the functions of government—except one; and here is the crux; for the function which no Jewish Government can perform for the proposed Jewish State out of its own resources is to make provision for defence. A Jewish State in Palestine will have to be defended by British bayonets unless it can reach a friendly agreement with an Arab State in its hinterland.

It will, therefore, in any case be necessary, either before or after the inauguration of partition, to secure an agreement with some accredited representative of the Palestine Arabs. If the MUFTI and his friends decide, as is likely, to remain intransigent, this necessity may prove awkward. Fortunately, however, there is another alternative. We might invite the Governments of the Arab States—Saudi Arabia, Egypt, Iraq, Transjordan—to act as the representatives of the Arab nation. They all have interests in Palestine in addition to their natural sympathy with their co-religionists. It is very probable that beneath this sympathy they have a strong desire, in the interests of their own security, to see a permanent settlement in Palestine, and it would be difficult for the Palestine Arabs to hold out against any local arrangement endorsed by the Arab kings. It is by no means impossible that the key to the whole perplexing problem can be found by an earnest effort to take the counsel and secure the approval of these independent and responsible Arab States.

Notes of the Week

Climactic Markets.—The recent declines in the Stock Exchanges and commodity markets, which were already startling enough, reached what we may hope is at least their temporary climax early this week. Wall Street was again the ringleader. There was a very sharp fall on Monday, carrying the averages down by more than ten points, and the turnover of securities was very large. This, however, was eclipsed on Tuesday morning when in two hours the volume of transactions exceeded that of the whole of Monday and there were further collapses of prices. At noon on Tuesday, however, there was a sharp rally which has continued since. The commodity markets, especially those in copper, tin and rubber, were weak in sympathy, and the London Stock Exchange, which has kept its equanimity very well, had some anxious hours on Tuesday. All these developments are discussed in detail elsewhere. Do they provide any reason for modifying opinions on the general economic outlook? In a leading article last week we reached the conclusion that some recession in trade was probable in Great Britain and possible in the world at large, but that there was no reason to anticipate another depression and world crisis like the last. But prices such as those which have been quoted in Wall Street this week can be justified only on the assumption of a slump fully as severe as the last. Can the markets be so badly wrong? The wise man will admit the possibility of a severe slump. But he will also refuse to allow his reading of the fundamental economic facts to be affected by a market panic. This week, as last week, it is undeniably true that basic economic conditions are very much sounder than they were in 1929. On the other hand, every collapse in the markets undermines confidence still further. If we get to the stage when economic fears and political anxieties reinforce each other and each swells without regard to any factor except the other, basic economic conditions will cease to be relevant. But that stage is a long way off yet. For the moment it is hardly possible to resist the conclusion that the markets have greatly exaggerated the unfavourable factors in the prospect. It is only if the exaggeration continues that the possibility of its converting itself into reality will arise.

The Far Eastern Conference.—The move made at Geneva for international action to deal with the Sino-Japanese conflict has rapidly fructified. On the 15th it was announced at Brussels that the Belgian Government had decided to invite the parties to the Washington Nine-Power Treaty to meet in conference in the Belgian capital at an early date. The Belgian invitations—sent out "at the request of the British Government and with the approval of the Government of the United States"—have now been issued for the 30th of this month. Portugal and Italy have rather surprisingly decided to attend, and the chief American delegate is to be Mr Norman Davis. The object of the conference, as stated in the letter of invitation, is "to examine the situation in the Far East and to study peaceable means of hastening the end of the regrettable conflict which prevails there." President Roosevelt has stated explicitly that the first move of the conference will be an attempt at mediation. At the same time, he has declined to give in advance any indication of what the next step will be likely to be if this mediation unfortunately fails. It is, no doubt, premature to undertake any public commitments on such questions until we have greater light than we have at present on the Japanese attitude. Japan objects to the conference for two separate reasons, which are not of equal gravity. The first is that it is convened on the initiative of a League of Nations which has, for the second time, denounced her as an aggressor. The second, and less tractable, objection is

that she will not tolerate any intervention of third parties between herself and China. This very practical application of "The Japanese Monroe Doctrine" is almost as intolerable for the British Empire, the United States, France, Germany and the Netherlands as it is for the Russians, Chinese, Filipinos, Annamites, Javanese and other Far Eastern peoples whose own home territories are directly affected by it. The odds are consequently still in favour of Japanese absence from the conference. It is, however, just possible that she may be moved to compromise by the already visible effects of her aggressiveness upon her trade. Quite apart from politics, private men of business all over the world are beginning to fight shy of granting their Japanese customers commercial credits or implicating themselves with them in any other way at a time when Japan's future seems so dark. Will this automatic warning bring the Japanese militarists to reason?

The Campaign in China.—Fighting around Shanghai continues as fiercely as ever, and there has been no break in the Chinese resistance. Under strenuous Japanese pressure the line swayed west, for a time, at Tazang, a few miles north of Shanghai, but the Chinese claim to have successfully counter-attacked. In the northern provinces the week's news has been more encouraging for the Chinese than at any time since the Japanese started their rapid advance. In Shantung the Japanese have retreated along the railway, partly because the Shantung provincial armies are being concentrated near the Japanese advance guard and partly because strong Chinese pressure in Northern Shansi threatens their lines of communications. On the Peiping-Hankow railway the Japanese advance appears to be halted, and opposition may be stronger than anything the Japanese have so far met in the north. On this front Central Government troops are being used, and territory has been reached in which it is understood that the Central Government prepared special defences some time ago. In Shansi the Chinese claim to have surrounded fifty thousand Japanese troops. Attacks on the communications of the Japanese seem, in fact, to have been much more extensive, and the Japanese armies may need reinforcement to avoid a setback. In Suiyuan province the Japanese claim to have advanced beyond the railroad and to have reached the Yellow River. There have been rumours in Japan that the Outer Mongolian Republic may decide, under Russian advice, to align itself with the Nanking Government.

Cotton Reorganisation.—In July last the President of the Board of Trade invited the cotton industry to prepare a comprehensive scheme for the improvement of conditions in the industry. The invitation was accepted by the Joint Committee of Cotton Trade Organisations and their proposals have now been published in a pamphlet. They follow the general lines which have come to be known as "self-government of industry." The Government is to be invited to pass an Enabling Bill setting up a Cotton Industry Board representative of the industry and an Advisory Committee of three independent persons; the duties of the Board and the Committee would be to examine schemes brought forward either by sections of the industry or by the industry as a whole. The Board, though consisting of two spinners, two manufacturers, one dyer, one bleacher, one printer, two merchants and three operatives' representatives, is, in the first instance, to be appointed by the Board of Trade. The schemes may cover any question of the reduction of surplus capacity, the limitation of excessive competition, the regulation of production or sale, the fixing of minimum prices or

margins, the institution of pools and quotas, the imposition of levies, the regulation of new entrants to the industry, the enforcement of labour agreements—in short, any of the manifold devices of industrial regulation. The Board and the Committee shall not approve a scheme unless it is supported by a "substantial majority" of the section directly concerned, unless they are satisfied that it will not adversely affect other sections of the industry, the employees of the industry or the public interest. They are also enjoined to see that it does not handicap new firms or prevent the expansion of the industry, and that it will tend to assist the export trade. When a scheme has been approved by the Board, the Advisory Committee and the President of the Board of Trade, it shall come into force by Order, provided that neither House of Parliament objects within twenty-five days.

The cotton industry has been one of the most depressed in the country for many years past, and there will be general agreement with the Prime Minister that, in working out a satisfactory plan of reorganisation for the industry as a whole, the Joint Committee "deserve the ungrudging help and full co-operation of every section of the industry"—Mr Chamberlain might have added "and of the community." From the technical point of view, the plan has many merits. It leaves plenty of room for elasticity, but at the same time faces the central point that if Lancashire is to be reorganised, compulsion will have to be applied to recalcitrant minorities. There can be little doubt that if some form of central control such as that adumbrated in the Joint Committee's proposals had been in force in the post-war years, Lancashire would be far more prosperous than she is. It is also worth while to list the safeguards provided for the public interest: the appointment of an independent Advisory Committee; the provision that there must be no discrimination against new firms and no prohibition of expansion; and the ever-present necessity to face fierce competition in the export trade. But when all this has been said, it is still true that the proposals are the latest example of a vicious principle which is slowly spreading over British industry. In one trade after another, the logic of events is compelling the abandonment of unrestricted free competition. But if *laissez-faire* is ruinous in one way, private monopoly is ruinous in another. The community is betraying its own interests if it lends its aid to private industrialists in the creation of legally watertight monopolies and yet leaves them in unrestricted control of their industries and their profits. The examples of steel and milk (to quote no others) show how inadequate as a public safeguard are advisory committees or even independent chairmen. We may need to be on guard lest, in the effort to organise industries and yet avoid Socialism, we should slowly drift into Unsocialism. Let there by all means be "reorganisation" of industries. Let industry also by all means remain independent of political control. But the community has the right to insist, before its aid is sought, on two principles: that there shall be a limit to the enlargement of profits; and that the public shall be directly represented in the day-to-day management and control of the industry. The cotton scheme, even without these provisions, might well be innocuous and even beneficial. But it would be a bad precedent for other industries where the same natural safeguards are not present.

South Wales Trading Estate.—The evidence submitted on October 20th on behalf of the Board of Trade to the Royal Commission on the Geographical Distribution of the Industrial Population adds point to the chronic need of the Special Areas for new industries. Nearly 2,700 new factories were opened between 1932 and 1936, but two-fifths of the employment provided was in Greater London and only a negligible proportion in Special Areas. It is not enough to argue, as the Board of Trade did in their memorandum, that industry is most efficiently located when its distribution is left to the

individual decisions of manufacturers. Few manufacturers make such decisions on the basis of all the relevant economic facts. And, in any case, it is socially desirable that as many enterprises as economically possible should be placed in the Special Areas. The effect of undoubted recovery in these areas has been only to stress this need for new industrial undertakings to absorb redundant resources of men and facilities. The Treforest Trading Estate, which was informally visited on Wednesday by the Duke of Kent, is an example of what is being done in the Taff Valley. Some 7½ miles from Cardiff, it is a Government-assisted enterprise, designed to provide sites and convenient factories on lease at reasonable rentals. The Treforest Estate is at an earlier stage of development than its counterpart at Gateshead-on-Tyne; it is less compact, less organised as an industrial community and less ambitious. Some 600 men are engaged in constructional work; fifteen factories are practically completed, and ultimately over fifty are contemplated, to employ some 5,000 workers. The finished enterprise will cost some £800,000, and already many varied and important enterprises have been attracted, including a large and imposing paper mill, a gas for breweries, bottlers and refrigerators, and a factory already in production to make steel mesh for from the mining valleys, and the nature of this estate's development will differ from that of the Team Valley scheme, inasmuch as there is in the district a deficiency rather than an abnormal supply of female labour.

New Industries and Old.—Though the Treforest Trading Estate will do little more than scratch the surface of South Wales's problem of redundant labour—estimated in the Second Industrial Survey at 80,000 for the whole industrial region—it is a welcome beginning. In the long run, however, the salvaging of the Special Areas by new industries can only come from a very considerable extension, if not of trading estates, then of the trading estate method; and the Treforest Company have undertaken the clearing of sites for the Commissioner in other parts of South Wales. New industries may do a good deal for the Special Areas, but only if they are developed *pari passu* with the reorganisation and revival of basic industries. It is, for instance, of great importance in the rehabilitation of distressed Tyneside that the Commissioner has arranged to lease the Palmer's site at Jarrow to a new company for the manufacture and rolling of steel, with a capital of £1,000,000 subscribed by the Treasury, the Nuffield Trust, Consett Iron Company, and the Bankers' Industrial Development Company. The new company will benefit from the contributions in respect of rent, rates and income tax permitted by the Special Areas Act of this year. Such undertakings, if combined with the policy of freer trade through bilateral agreements and a liberal tariff policy, which was advocated last week by the Association of British Chambers of Commerce, will provide the indispensable supplement to the development of new, light industries in effecting a real recovery in the Special Areas.

M. Bonnet's Progress.—The second ballot of the French cantonal elections last Sunday reinforced the lessons of the first ballot a week earlier and clinched the outstanding victory of the Front Populaire. The allied parties as a whole have gained 45 seats in the Conseils Généraux from the Opposition and now hold 864 seats out of 1,525. Moreover, the results make it possible for each of the two major partners in the Government to claim an especial success. As compared with the last communal elections in 1931, the Socialists have gained 71 seats and the Radicals have lost 42. But if the comparison is taken with the voting in the Parliamentary General Election of last year, the Radicals have increased their proportion of the total vote, while the Socialists and Communists have lost ground. In any case, the net effect is considerably to strengthen the Government as a whole. The events of the last few weeks

have tended to re-establish a certain degree of confidence in the financial position. There has been a steady demand for francs, and the rate has been allowed slowly to rise. This confidence was disturbed, but not badly shaken, by a decision taken by the Cabinet on Tuesday to devote the whole of M. Bonnet's prospective surplus for 1938 of Frs. 1,600 millions to increases in the salaries of Civil servants. M. Bonnet had intended to devote Frs. 1,000 millions to this purpose, so that the new decision only involves a sum of Frs. 600 millions. But the knowledge that the *fonctionnaires* are not satisfied and that a section of the Cabinet wished to go further shows that it will be difficult to make economy outlive the severe crisis. Another departure from the strict letter of Budget balancing appeared on Wednesday in the shape of authorisation to the Crédit National to raise a loan of Frs. 1,000 millions for public works. Thus there are signs that the old conflict between the need for economic expansion and the need for fiscal retrenchment has not yet been resolved. But M. Bonnet's success in finding his way between the two extremes is slowly reaping its reward.

Czechoslovak Anxieties.—The campaign for the Czechoslovak communal elections on November 14th is well under way. The prospects of Herr Henlein's Sudetendeutsch party have been very considerably affected by the arrest of several of its leaders, including Herr Rutha, who holds the party's membership card No. 2, on criminal charges of a nature which have not been unknown in the Nazi Party in the past. This weakening of the party which enjoys Herr Hitler's favour has been the occasion for a sharp revival in the German Press campaign against Czechoslovakia. Herr Henlein's adherents have been appearing at meetings in the illegal grey uniforms, and the consequent arrests have been described in Germany as brutality which is a challenge to the whole of "Deutschum" and a threat to the peace of Europe. It would be an error to take seriously every use of violent language in the German Press, even when it is in defence of democracy and parliamentarism—in other countries. But at the same time it is true that if Germany were to attempt to imitate the technique of the Spanish revolt in Czechoslovakia, this is precisely the way in which it would start. The Prague Government is fully capable of maintaining order within its borders. But it is hardly surprising that certain of its Agrarian supporters are looking with some envy on the position of Belgium and wondering whether it would not be worth while trying to secure a similar guarantee from Berlin of the Czechoslovak frontiers. To make such an attempt would be to ignore all the obvious differences between the situation of Belgium and that of Czechoslovakia. It would also mean exchanging firm alliances for confidence in Germany's word. Those who are in control of policy at Prague are cool calculators, and they are not in the least likely to drop the bone for the shadow.

An Unusual Libel Case.—An action for libel which was fought out in the High Court last week has some unusual features of interest. The defendants in libel cases nowadays are very frequently newspapers, and the state of the law, as interpreted by the judges and applied by the juries, is such that libel has become the chief occupational hazard of the Press. In this case the defendant lost and was mulcted in damages, but the big newspaper in the case appeared as plaintiff. The action was brought by The Daily Telegraph, Ltd., and by Lord Camrose, proprietor of the *Telegraph*, against the editor, printers and publishers of *Action*, a weekly newspaper devoted to the advocacy of British Fascism of the Mosley brand. The subject of the action was an article which stated that Lord Camrose was a Jew, that *The Daily Telegraph* was owned and controlled by international financiers and could not be trusted to defend British interests. These charges were found by the jury to be completely untrue and the damages were assessed at £20,000. The allegations about Lord Camrose and

The Daily Telegraph are typical of the unsubstantiated statements about other organs of the Press which have originated with similar recklessness from the same source. It is supremely important that the full truth should be known about the ownership and control of the great organs of the Press, more especially in this country where their number is so small. But it is equally necessary that persons and movements who find public opinion unsympathetic to them should not be allowed to blame this perfectly explicable fact upon totally non-existent occult forces which are supposed to control the Press. The case, in short, demonstrated the need for a strong law of libel. Whether respect for that law will be increased by the punitive damages inflicted is a much more questionable matter. The case might be held to demonstrate with equal clarity the urgent need for relating libel damages to the loss actually incurred.

Developments in Education.—National expenditure on education still hovers on the brink of £50 millions; and every year new and important ways are found of spending money. The report of the Board of Education for 1936 records an estimated expenditure in 1936-37 of £48,065,726, and calls attention to three departures in policy. The first was the Education Act of 1936, which raised the school-leaving age from 14 to 15, but at the same time allowed exemptions for children going into "beneficial" employment. How far the exemptions will stultify the raising of the age—as is widely feared—is not yet known. As the report rightly points out, the result will largely depend on the principles laid down by local authorities for the granting of exemptions. At the worst, exemptions may apply to over 80 per cent. of children between 14 and 15. At the best, the proportion may be as low as one-third. The second step taken in 1936 was further to reorganise the elementary schools, ostensibly on the lines of the Hadow Report, to improve school premises and to reduce over-large classes. Here again, appraisal must be tempered with criticism. Reorganisation, as at present carried out, often contains "little of the letter and less of the spirit of the Hadow Report." There remain 1,000 schools in use, which have been condemned as unsuitable; and there are still nearly 50,000 classes with 40 or more pupils. The third feature of policy in 1936, on the other hand, merits an ungrudging welcome. Circular 1445, issued in January, was designed to assist local authorities and others to prepare schemes of physical education. Circular 1450, issued in October, dealt with clothing and gear, and a memorandum, issued in April, with gymnasia. These steps were not taken simply to set physical training and recreation in their proper and important place in school education or to provide for the adequate instruction of physical training teachers and organisers. They were to serve, as the Physical Training and Recreation Act of this year has revealed, as the basis and starting point of a campaign to improve the physique of the whole nation.

Cinema Trade News Reel.—It was announced last week-end that Mr John Maxwell, on behalf of the Associated British Cinemas, Ltd., had acquired a controlling interest in Union Cinema Company, Ltd., and had thereby become responsible for the destiny of nearly 500 cinemas in the United Kingdom, and one of the largest circuits of cinemas in the world. Though the terms have not been disclosed, there is ground for believing that the deal took the form of the acquisition of the large block of Union shares held by Mr Fred Bernhard, the managing director, who is said to have intimated his intention to resign, and of his father, Mr David Bernhard, who was chairman until his death a few weeks ago. The Union shareholders will doubtless find satisfaction in the knowledge that control has now passed into hands which have successfully demonstrated their capability of earning increasing profits and distributing increasing dividends, in recent years, on a steadily increasing volume of capital. Already the market for Union shares has shown a satisfactory response to the news. A reversal of the Union policy of acquiring a number of cinemas in the same town or district is likely to be taken in hand immediately. In some quarters it is believed that this policy, which aimed at forcing the renter to sell films at buyers' prices, recoiled on the cinemas by creating a demand for a larger assortment of films than the market could supply.

Meanwhile the rival cinema circuit, the Gaumont-British, has held its annual meeting, at which the chairman has again assured the shareholders that while there was no jam yesterday, and there is no jam to-day, they might look forward to jam to-morrow. In view of the confident statements which his predecessor in the office of chairman made two years ago, the shareholders would seem to have deserved a fuller explanation of the decline in the company's profits than the mere statement that no net revenue had accrued from their American adventure of three years ago. These major events in the development of the British film industry should not blind the public and Parliament, however, to the importance of the new Film Bill which the Government intend to introduce next month. The White Paper, upon which we commented recently, set out the new proposals in some detail. As we forecast, these proposals have failed to reconcile differences of opinion within the trade, and considerable criticism from many quarters is

sure to be voiced during the second reading, Committee and report stages, both in the Commons and the Lords. It is possible, indeed, that the time required for other important legislation may make adequate consideration of the Government's scheme impossible. If so, we venture to suggest that, in view of the fact that the renters' quota expires next March, an interim measure should be framed continuing the existing Act for a year. Such a measure alone would afford time for drawing up and thoroughly debating a well-considered scheme for the industry. The recognised importance of films in the social, political and economic worlds would amply justify prolonged deliberation on this difficult and controversial subject.

Changes in British Coal Consumption.—The accompanying charts throw significant light on changes in the disposal of Britain's output of coal during the past ten years. The first shows home consumption of coal by five leading industries, as estimated in the latest annual report* of the Secretary for Mines. The industries for which separate information is available include gasworks, electricity generating stations, railways, iron and steel and collieries. After falling from 77.2 million tons in 1927 to 61.6 million tons in 1932, the aggregate consumption of these industries rose again to 76.9 million tons in 1936. During the past ten years, it will be seen, the decline in coal consumption by the railways, the iron and steel industry and collieries has been practically offset by the heavier takings for the manufacture of electricity and gas. The second chart shows the trend of coal consumption in these five industries as well as of other domestic uses and exports, inclusive of coal shipped for the use of steamers. The aggregate consumption of the five industries shown in the first chart is less than half of the total domestic consumption. Consumption for other purposes fell from 102.3 million tons in 1927 to 87.9 million tons in 1932 and, at 99 million tons in 1936, was still slightly below the level of ten years ago. Unfortunately, no separate estimates are available of the quantity of coal used for domestic purposes in private houses, public buildings and institutions. According to an estimate made shortly after the war, consumption for these purposes then amounted to about 40 million tons per annum. While domestic

* H.M. Stationery Office. 4s. net.

CHART A: COAL CONSUMPTION BY BRITISH UTILITY AND STEEL INDUSTRIES

CHART B: PRODUCTION AND CONSUMPTION OF BRITISH COAL

consumption in 1936, however, was almost as high as in 1927, the volume of exports and coal shipped for the use of steamers declined from 71.9 million tons to 50.3 million tons during this period.

Road Transport Co-ordination.—The report of the Transport Advisory Council, set up under the Road and Rail Traffic Act of 1933, was published last Monday. It deals with the co-ordination of transport by rail, road and canal. A separate report on coastwise shipping is promised later. The present report seeks to achieve co-ordination by means of control of rates, and not through any direct rationing of traffic. More than half of its total length is devoted to a scheme for the regulation of road haulage rates. The determination of rates in each traffic area—following prevailing modes of "industrial self-government"—is to be left to Committees of the hauliers themselves. These rates are to be enforced by officials appointed by the Ministry of Transport. A central body, the Road Rates Tribunal, which will include representatives of the traders as well as the hauliers, is to deal with appeals and matters affecting more than one area. The relationship between road charges and railway rates (the real root of the present road-rail problem) is to be left to voluntary agreement between the parties concerned.

Memoranda submitted to the Council by the interested parties—railways, canals, coastwise shipping and the road—are published as appendices to the report. Of these documents, the submission of the British Road Federation is a particularly valuable contribution to clear thought on a highly controversial matter. It recognises, for example, the fundamental importance of the distinction between road charges, which are based primarily on cost, and railway rates, which allow also for the value of the goods carried. We have already discussed the consequences of this distinction (see *The Economist*, July 29, 1933, p. 219). The memorandum also asks the pertinent question why prices should be fixed in a business like road haulage, where active competition is the rule.

Seasonal Increase in Coal Output.—Coal production showed a marked seasonal increase during the past month, when the estimated quantity of saleable coal raised in Great Britain was 8.6 per cent. higher than in the corresponding month last year:—

The improvement over a year ago, though due mainly to increased home consumption, was helped by heavier exports, chiefly to France, Italy, Sweden and Argentina. Total exports in September, at 3,657,000 tons, showed an increase of 20½ per cent. over the corresponding month last year. Though seasonal influences favour a further expansion of output this month and domestic consumption is likely to remain buoyant, the recent lull in new export orders is not encouraging.

Record Steel Production.—Efforts made since last year to increase the capacity of the iron and steel industry are reflected in a further expansion of the output of both pig iron and steel ingots and castings during the past month. The output of steel last month was higher than ever before, while pig iron production reached its highest level since September 1920.

BRITISH IRON AND STEEL PRODUCTION

In contrast to the movement a year ago, British exports showed a decline between August and September. On the other hand, imports continued to increase in volume during September, when they were considerably higher in quantity than British exports.

(In thousands of tons)

Period	Production		Foreign Trade	
	Pig Iron	Steel Ingots and Castings	Total Imports	British Exports
1913—Monthly Average	835.0	638.6	185.9	414.1
1929 " "	632.4	803.0	235.2	364.9

" September	726.7	1,163.0	226.2	193.6

The combined effect of increased production, higher imports and lower exports, has been to alleviate the stringency of supplies in the home market. The improvement in imports is largely due to reduced purchases by other importing countries discussed below.

International Steel Exports.—The period between the autumn of 1936 and early summer of this year witnessed a remarkable expansion in the demand for iron and steel by the principal importing countries, and provided the exporting countries with a golden opportunity

to increase their overseas sales, whose recent extent is indicated in the following table:—

EXPORTS OF IRON AND STEEL (In thousands of tons)			
	1936	1937	Percentage Increase
Belgium (January-June)	760	1,958	158
France (January-June).....	760	985	30
Germany (January-July)	2,047	2,244	10
U.S.A. (January-July).....	653	1,818	178
U.K. (January-September) ...	1,613	1,977	23

The increase, as will be seen, was most marked in the case of the United States and Belgium. France was in a less favourable position to take advantage of the improvement owing to the hampering effects of social legislation, while Germany and this country had to meet the exigencies of rising domestic requirements. As the Continental members of the International Steel Cartel were able to obtain higher prices elsewhere, their sales to this country were relatively less profitable. Consequently, their deliveries to the United Kingdom fell into arrears, thus increasing the stringency of domestic supplies. Some examples of the extent to which Cartel prices were pushed up are given in a recent issue of *The Engineer*. For instance, bars and angles, which in September, 1936, were sold at £2 14s. 8d.-£3 15s. gold, per ton, f.o.b., are now quoted at £6-£6 7s. 6d. gold. The quotation for joists, which was £2 17s. 6d.-£3 15s. gold per ton, now stands at £5 7s. 6d. per ton, f.o.b. Last summer, however, the volume of new export business tended to decline. How far this set-back was due to the inordinate rise in prices and how far to the accumulation of stocks in importing countries and international political developments, it is difficult to say. As a result, however, the Continental members of the Steel Cartel were glad to find British demand still buoyant, and their deliveries under the Quota arrangement have recently shown a definite increase. This has tended to relieve the stringency of supplies in this country, and the moral is that it's an ill wind that blows nobody good.

Smaller British Crops.—The Ministry of Agriculture's latest Monthly Report contains revised estimates of the yield of the principal crops in England and Wales. The latest forecasts, which are still provisional, are as follows:—

	Acreage ('000 acres)		Production ('000 tons)	
	1936	1937	1936	1937
Wheat	1,704	1,731	1,378	1,308
Barley	819	823	663	573
Oats	1,420	1,222	1,080	904
Potatoes	457	455	2,814	2,935
Turnips	177	182	1,945	1,864
Swedes.....	255	243	3,461	2,916
Mangolds.....	245	207	4,684	3,565

Corn crops generally are free from disease, but production is expected to be below last year's level. Wheat is of good quality in most parts, but the yield per acre is estimated at only 15 cwt., or 2½ cwt. below the ten-year average. Barley, with an estimated yield of 14 cwt. per acre, is also 2½ cwt. below average. This grain is generally of good quality, although it is frequently short in the straw. The quality of oats is variable; winter oats are generally fair, but spring sown are light. Here again, the yield per acre, at 14½ cwt., is somewhat below normal. The potato crop, on the other hand, is yielding rather in excess of the long-term average, and the lifting of the crop is progressing satisfactorily. The output of other root crops is expected to be well below last year's level.

Hesitancy in New Business.—The latest news of the current level of industrial activity remains satisfactory, but the lull in the volume of new orders continues. The figures for many raw materials show a further decline this week. Prices of copper, lead, spelter and tin are all lower on the week, the price of standard copper having fallen from £45 12s. 6d. per ton to £43 7s. 6d. per ton. Raw cotton prices, on the other hand, have shown some improvement which stimulated inquiry for cotton goods. An important development in

Lancashire was the publication by the Joint Committee of Cotton Trade Organisations of proposals for the reorganisation of the cotton industry (discussed on page 155). New business in wool textiles remains at a low level and the market in Dundee jute goods is almost idle. Production of coal remains well above the level of a year ago. Home demand continues buoyant, but foreign inquiry has shown some hesitancy. Similarly, current activity in the iron and steel industry continues at a record level but, as in the case of coal, export demand is less strong. In contrast to the returns of preceding months the September figures of the value of building plans passed by 146 local authorities are almost equal to those of the corresponding month a year ago. The easier tendency in the shipping freight markets is a reflection of the decline in the prices of primary products and of the hesitancy in world economic recovery. Consequently, the decision of British tramp ship owners to adopt a scheme of voluntary co-operation, announced on Wednesday, is of considerable significance. Provided that 90 per cent. of the tramp ship owners sign the scheme, it will come into operation at the beginning of next year.

Commodity Prices Still Falling.—The lull in world economic expansion, due mainly to the recession in the United States, is reflected in a further decline of the prices of many internationally traded commodities, especially raw materials. Despite the almost continuous fall of prices for primary products since last March, the British and American wholesale price indices, shown in the table below, still stand at higher levels than a year ago. The indices for Italy and Germany have also shown a slight decline recently, but in France a further increase of prices for domestic products has raised the index still more:—

† Monthly averages.

The extent of the fall in prices since last March is illustrated by the following chart, which shows the trend of the complete *Economist* index and of the index for primary products:—

Details of group movements in the complete *Economist* index number are given below:—

The Economist Index (1927 = 100)				
	Sept. 18, 1931	Sept. 22, 1937	Oct. 6, 1937	Oct. 20, 1937
Cereals and meat	64.5	89.1	92.3	91.0
Other foods	62.2	67.2	67.7	67.4
Textiles	43.7	65.5	64.3	63.6
Minerals	67.4	106.4	101.0	98.9
Miscellaneous	65.8	84.5	83.5	83.2
Complete index	60.4	82.2	81.6	80.7
1913 = 100	83.1	113.1	112.3	111.0
1924 = 100	52.2	71.0	70.5	69.7

The decline during the past fortnight has been fairly general, and has affected all the group indices. It has been most marked in the minerals group, which includes non-ferrous metals.

Plight of the Jute Industry.—In a survey of Dundee's jute trade in *The Economist* of June 5th, page 557, we drew attention to the changes as a result of which the industry has not only lost its pre-eminence in the world but is now fighting a losing battle even in the home market. British imports of jute piece-goods from India rose from 48.8 million square yards in January-September, 1935, to 105.0 millions in the corresponding period in 1936 and 131.9 millions this year. Similarly, imports of sacks and bags from India have risen further, from 699,531 cwt. in the first nine months of 1936 to 752,330 cwt. in 1937. Having found representatives of the Indian industry unwilling to curtail their exports to this country at a recent conference, British jute manufacturers turned to the Secretary of State for Scotland with a request that he should receive a deputation. But as the restriction of imports from India is hardly a matter for the Secretary of State for Scotland, this request was refused. The industry now appears to place its last hope for concessions on the official negotiations for a new Anglo-Indian trade agreement.

A Surfeit of Cotton.—Raw cotton is among the few commodities which are now substantially cheaper than a year ago. The current level of quotations for American Middling is 4.75d. per lb., compared with 6.86d. per lb. a year ago and 6.51d. per lb. on the corresponding date in 1935. The decline in prices is a direct consequence of the policy of the United States Government, which, by limiting domestic production in recent years, encouraged an increase of cotton growing elsewhere. During the seasons 1934-35 to 1936-37, when production in the United States was substantially below the average of former years, the increase in output elsewhere did not prevent an improvement in prices. But when America's crop not only reached, but even surpassed, that of former years, as it did this season, the market was bound to collapse. In recent months the cotton position deteriorated steadily with each increase in the official forecast of the yield in the United States. The latest estimate published last week forecast a yield of no less than 17,573,000 bales, against 16,098,000 bales a month ago. Moreover, it is now expected that the next forecast, to be issued next month, is likely to show a yield of no less than about 18 million bales, against 12.4 million bales in 1936-37, 10.6 million bales in 1935-36, and 9.6 million bales in 1934-35. With the carry-over of 6.2 million bales from last season, the total supplies of United States cotton in 1937-38 may reach 24.2 million bales, against 13.1 million bales actually consumed in 1936-37. And, as production in Egypt, Brazil, China and the U.S.S.R. is also expected to be higher this season, world supplies are likely to exceed 50 million bales this season, against a consumption of 30 million bales in 1936-37. As there is little likelihood of a corresponding increase in demand even at the lower level of prices, the outlook for raw cotton prices is scarcely encouraging.

Trade by Commodities in September.—The general figures of overseas trade given in last week's issue of *The Economist* may now be supplemented by the two following tables, showing quantitative changes in Britain's principal imports and exports in September, compared with the same month of 1935 and 1936:—

RETAINED IMPORTS—MONTH OF AUGUST				
Item and Measure	1935	1936	1937	
Wheat	'000 cwt.	7,287	7,580	6,425
Beef and veal	'000 cwt.	948	1,118	1,186
Mutton and lamb	'000 cwt.	413	571	446
Sugar, unrefined	'000 cwt.	3,619	3,347	4,152
Iron ore and scrap	'000 tons	468	582	710
Raw cotton	'000 cwt.	569	929	965
Sheep's and lambs' wool	'000 cwt.	215	250	255
Flax, hemp and jute	'000 cwt.	11,630	15,607	9,191
Crude petroleum	'000 galls.	46,137	49,469	43,386
Hides, wet and dry	'000 cwt.	134	169	177
Wood pulp	'000 tons	192	212	156
Rubber	'000 tons	251	251	351
Unwrought copper	tons	25,639	22,260	42,069
Unwrought lead	tons	18,641	30,006	21,459
Tin, ore and concentrates	tons	3,728	4,304	3,694
Tin, blocks, ingots, slabs, bars	tons	283	803	*
Iron and steel and manufactures	'000 tons	89	165	226
Machinery	'000 tons	5,623	9,038	12,048

* Net export of 592 tons.

Apart from fortuitous month-to-month changes, imports of foodstuffs have recently been well maintained. Increased imports of iron ore and scrap, and of iron and steel manufactures and machinery serve as a reminder that Britain's heavy industries remain very busy. Imports of unwrought copper were also substantially larger than a year ago, but purchases of unwrought lead showed a decline. Among textile raw materials, cotton imports showed some recovery, and wool imports were again larger than a year earlier.

BRITISH EXPORTS—MONTH OF AUGUST				
Item and Measure	1935	1936	1937	
Coal	'000 tons	2,929	3,031	3,657
Iron and steel scrap	'000 tons	9,912	17,658	9,881
Pig iron and ferro-alloys	tons	12,914	10,837	16,157
Railway materials	tons	17,092	7,243	10,428
Total iron and steel manufactures	tons	183,785	183,023	193,615
Textile machinery	tons	5,191	3,616	6,654
Total machinery	tons	29,878	32,059	36,866
Cotton yarns	'000 lbs.	10,123	11,825	11,919
Cotton piece goods	'000 sq. yds.	150,259	153,553	156,827
Wool tops	'000 lbs.	3,717	4,572	2,877
Worsted yarns	'000 lbs.	2,482	2,237	1,880
Woolen tissues	'000 sq. yds.	6,419	6,856	6,437
Worsted tissues	'000 sq. yds.	3,057	2,915	3,275
Linen piece goods	'000 sq. yds.	4,965	6,788	5,675
Leather boots and shoes	doz. pairs	32,918	31,454	35,008
Leather	cwt.	20,827	17,764	21,090
Paper and cardboard	cwt.	332,401	406,177	368,032
Locomotives and parts	tons	827	329	545
Motor vehicles and chassis	No.	5,723	7,065	7,828

British exports of pig iron, railway materials, iron and steel manufactures and machinery were all higher than in September, 1936, despite the pressure of domestic demand.

Output and Values Decline

NEW YORK, October 11.—Early in August steel operations were about 85 per cent. of capacity; the Dow-Jones average of industrial shares was as high as 190. In the first week of October, steel operations were 66 per cent. of capacity and the Dow-Jones averages were close to 140. The declines both in steel operations and in stock market prices in September were almost unprecedented in their abruptness.

It is still impossible to say definitely whether the decline in the stock market represented a shrewd and prompt appraisal of a suddenly weakening business structure, or whether the decline in the market unsettled business opinion, and caused an abrupt decline in industrial demand. Statistically, of course, one can say that the gap between orders and production has now been closed by the decline in production; but realistically it should be remembered that forward ordering has at no time for many years, with the exception of a few weeks in the winter of 1936-37, been characteristic of American corporate practice. Hand-to-mouth buying has been the prevailing practice.

Even now, it is not clear if the September decline in steel operations was typical of heavy industry in general or peculiar to that one industry. Its counterpart in non-ferrous metals is the drop in the price of copper from 14 to 12 cents—but this decline was patently inaugurated in London. Moreover, much of the decline in steel demand is attributable to a single cause—the railroads have been obliged to cut their purchases to a minimum. The rise in railway wages negotiated this summer, applied to last year's payrolls, would represent an increased labour cost of about \$150 millions. There has been some increase of traffic; but not enough to compensate for the increased cost of labour and materials. Probably the greatest single cause of the decline in steel operations is the suspension of railway buying. It was expected that railway wages would be raised; but most people hoped that at the same time a rate increase would be authorised which would offset the increased wages and permit the roads to continue their habitual expenditures. A rate increase is still expected; but the delay has already been costly to the American economy.

Recession in Heavy Industries

A second factor affecting steel demand is the almost complete collapse of the new issue market. This market has at no time this year been robust; but within its narrow confines it was still in being. The chaotic markets of September arrested even this limited activity, and issues offered several weeks back are still unplaced. To date, therefore, such recession as has appeared in business is still capable of isolation for observation. There has been an abrupt decline in steel operations, largely traceable to conditions in the railroads, which in turn depend

upon administrative decisions in Washington. There has been a less conspicuous suspension of other corporate ordering, which in turn is more or less traceable to the state of the new issue market, which in its turn has been paralysed by the disconcerting behaviour of the stock market. In other words, the malady is at present confined to the heavy industries.

As yet, there is no evidence that the consumer industries have been similarly infected. Retail trade in September appears to have been fairly good. The data also suggest fairly strongly that the volume of consumer demand is now limited by the stiff increase in prices. Another significant item of consumer demand is shown in the statistics of deliveries of motor cars to retail dealers. These were exceptionally high in September, as in August; but in some measure they are attributable to the announcement of increased prices for the forthcoming new models.

Is the Setback Temporary?

To sum up the business situation in the first week of October: there are evidences of a material reduction in corporate demand, its incidence falling on the heavy industries; and there are evidences that consumer demand, while still maintained, apparently ceased to expand some time back. To explain the former, one may refer to factors which influence the formation and flow of capital funds. To explain the latter, one may refer to the rise in prices. The first distinct check came in residential building, when would-be home-builders could not meet the steep mark-up in costs; the data suggest that something of this sort is now appearing in retail trade generally, although on a less pronounced scale.

It must be remembered that these changes have occurred so abruptly that opinion is still divided about the significance of the data. The last month for which statistics are available is August—and that showed the level of prosperity was being still maintained. Even in September, only two really alarming indices could be detected (apart from the capital markets themselves). These were the decline in the rate of steel operations, and the accompanying fall in commodity prices—both becoming most marked after the middle of the month. The decline in primary commodity prices has now obliterated all last winter's rise, and brought them back to something like the level of a year ago. The whole episode of higher primary prices was so brief that it would be hard to say to what extent they became incorporated in the economic structure. Furthermore, in the case of agricultural commodities, there is the compensation of larger crops. For example, at current prices, our cotton crop of 17,500,000 bales is worth (with the subsidy) more than last year's. In some industrial raw materials, the higher prices were written into the wage structure.

The implications of the sudden decline in steel operations are largely conjectural. As was said earlier, the decline in steel demand is attributable to a considerable degree to two specific causes, both of which may or may not be more than temporary. Otherwise, the current level of steel operations would be indicative of a sudden depression in the capital goods industries. On any interpretation, it is now clear that our economy underwent an abrupt and severe, although perhaps temporary, change in September; and that this change involves two fundamental considerations. One is associated with changes of relationship within the price structure—a change in process over some months, in which primary prices fell while prices of goods to the consumer rose under the influence of higher labour costs. The second is associated with the processes of the formation and flow of capital, and involves questions of profit margins and of the incidence of corporate and individual taxation.

France

The Franc Rallies

PARIS, October 21.—The second ballot in the cantonal elections, as expected, was in favour of the "pause" recommended by the Government. This expression of public opinion, coming at a time of strong depression in foreign markets, had a favourable effect on the franc. The holders of flight capital are being impressed by the less favourable reports from New York and London about economic prospects in both countries; and the opinion is expressed that—unless the slump becomes too violent—France could take advantage of these difficulties, as she did at the beginning of the great depression. Political and social conditions seem more and more stabilised at home, and the Government is now ready to amend the recent social laws. Accordingly, the franc has appreciated steadily to 146½, compared with 151 before the elections.

The moral of these elections is that the 1936 voting was primarily a reaction of injured interests against the deflation policy, but in no sense a revolutionary movement. This has previously been evident in the lack of progress of the Communists, whose success lasted no longer than the acute crisis. High prices for farm products have calmed the farmers, paid holidays have placated the workers, and a general desire for peace and security has done the rest. The signs of this new state of affairs are the beginnings of a return of capital and a better feeling in the Conservative Press.

The rise in the prices of French products which continues (the index rose from 636 to 644 last week) is again compensated by the slump in the prices of imported products (this index fell from 590 to 576). The general index remains stable at 620, compared with 619 a week ago.

Increased Import Surplus

But there remains the import surplus. Foreign trade in September shows an increase of 327 million francs in the value of imports and of only 213 million francs in the value of exports.

	Aug., 1937	Sept., 1937
	Francs ('000 omitted)	Francs ('000 omitted)
Imports:—		
Foodstuffs	780,327	841,398
Raw materials	1,861,102	2,113,027
Manufactured goods	516,820	531,193
Totals	3,158,249	3,485,618
Exports:—		
Foodstuffs	229,272	269,387
Raw materials	668,483	771,991
Manufactured goods	963,603	1,032,927
Totals	1,861,358	2,074,305
Import surplus	1,296,891	1,411,313

Figures of volume, however, show that the increase in exports is greater than the increase in imports. The increases were 162,000 tons and 91,000 tons respectively. Moreover, exports to foreign countries were 18 per cent. more in value than last month, while imports from foreign countries were only 11½ per cent. more. It appears that the increase in the import surplus mainly arises from trade with colonies. The import surplus in trade with foreign countries seems to have been nearly stabilised for three months at about 1,000 million francs.

For the first nine months of 1937 the import surplus was 13,000 million francs, compared with 6½ millions in 1936. Imports were valued at 30,000 million francs, compared with 17,400 millions in the same months last year; exports were valued at 16,800 million francs, compared with 10,600 millions. Figures of volume show an increase of 23 per cent. in imports and of only 4 per cent. in exports.

Inadequate Invisible Receipts

France cannot continue for long with a monthly commercial deficit of 1,000 million francs when her other sources of revenue cannot cover such a sum. The balance of accounts in 1936, just published in the *Revue*

d'Economie Politique of Professors Rist and Pierre Schwob, is as follows:—

	Credit Francs ('000,000 omitted)	Debit Francs ('000,000 omitted)
Foreign trade	...	11,675
Freight	1,680	...
Insurance	120	...
Transport	260	...
Remittances of foreign workers	...	940
Tourism	1,190	...
Interest	5,375	...
	8,625	12,615

The deficit was thus 3,990 million francs, compared with a net credit of 12,000 millions in 1927 and 1928, 8,000 millions in 1929 and 5,000 millions in 1930, and a net debit of 2,000 million francs in 1931, 5,000 millions in 1932, 2,850 millions in 1933, 1,140 millions in 1934 and 700 millions in 1935.

Most of the items of the balance were improved in 1936 as a consequence of the devaluation of the franc and an increase of 20 or 25 per cent. in the number of tourists. But the import surplus (colonies included) was doubled for the first time between 1935 and 1936, and almost doubled again between the first months of 1936 and 1937. So that it seems that, in spite of the improvement of tourism and other sources of revenue, due to devaluation, the balance of accounts has again deteriorated. Such a situation can only be corrected by a return of expatriated capital at once, and in the future by an improvement of economic conditions in France.

Germany

Weak Share Market

BERLIN, October 20.—The share market recovered temporarily on the announcement of the German-Belgian neutrality agreement, but for five days of last week was reactionary or undecided. The Belgian agreement failed to foster any general optimism about international affairs; and, it was noted, attracted relatively little attention abroad. Foreigners sold German securities. Among the weakest was Reichsbank, which is largely held abroad. These shares dropped temporarily to 200, which was the more remarkable because there was fresh talk about the distribution of the impounded dividends for which the Reichsbank is one of the chief claimants.

Latest official statements about the progress of the Four-Year Plan are favourable. According to the General Staff Officer who is head of the Office for German Raw and Workshop Materials some 30 per cent. of the capital so far invested in Plan undertakings was provided out of the existing resources of industry, about 50 per cent. by means of new debenture or share flotations, 8 per cent. by credits from bank syndicates, and perhaps 12 per cent. out of public funds. "The first year of the Plan," says this authority, "has been 100 per cent. successful." Only for large Plan undertakings is the capital market now open. The director of the Nazi Party's Commission for Economic Policy has come out against the taxing away of industrial profits

in order to reduce prices with the tax-yield; and urges rather an automatic reduction in prices by increasing the volume of output.

The chief change in prices is a sharp fall in non-ferrous metals. The Food Minister estimates this year's potato crop at 52½ million tons, which is 6 million tons more than in 1936. This crop has been satisfactory in all recent years, though rather smaller than in 1932. Before the War the potato crop, in the present area (excluding the Saar District) averaged 38 million tons. The large crop this year will materially alleviate the food and fodder problems.

Changing Trade Trends

The foreign trade return for September shows an active balance of Rm. 32 millions, compared with Rm. 59 millions in August, and Rm. 75 millions in September, 1936. This is the fifth successive month with a less favourable balance than the corresponding month of 1936. As compared with the first four months the balance has much deteriorated; and the movement in this respect has been contrary to that of 1936.

(Millions of Marks)		
	1936	1937
	Export Surplus	
January-April	87	206
May-September	234	105
Totals	321	311

The shrunken active balances were intentionally brought about by granting "exchange certificates" more liberally to importers. It is in the Reich's interest to replenish the home stock of raw materials and food-stuffs rather than to accumulate gold or exchange, which is no longer needed as currency cover, and which, indeed, when it does temporarily accumulate, is not booked to the Reichsbank's reserve. The September return shows a new outflow of gold; and of the Rm. 146 millions of precious metal imported in the first nine months, nothing now remains. Indeed the gold export exceeds the imported sum by Rm. 9 millions. This loss is not shown in the Reichsbank's return. The Reichsbank keeps its stable Rm. 70 millions of gold as an ornamental fig leaf of unchanging exiguity, while other gold-holding departments often have whole cupboards of gaudy garments, and sometimes, as the new trade return implies is now the case, have not even the fig leaf.

In September, compared with August, both import and export values declined. The decrease of 4 per cent. in imports was only in slight measure due to falling prices; and the decrease of 9 per cent. in export values occurred in spite of a slight rise in prices. The decline in imports was seasonal; the decline in exports, contrary to seasonal precedent; but one factor was the abnormal rise in exports in the two preceding months. In September a factor was the suspension of the export of ships. The value of exports, Rm. 494 millions, nevertheless, compares favourably with the Rm. 412 millions of September, 1936. Exports to Europe were better maintained than to America and Asia; to Italy they rose sharply.

On June 30th the total debts of the states were returned at Rm. 2,328 millions, of which Rm. 208 millions were in foreign hands. The debts of the Hanse cities were Rm. 578 millions, of which Rm. 76 millions were in foreign hands. Of the states debts, 51.2 per cent. are at long-term. Both state and Hanse debts continue to decrease slowly. The divulged Reich debt in August was Rm. 16,926 millions, which is Rm. 1,500 millions more than in August, 1936. After affirming that the Budget is balanced, the *Deutscher Volkswirt* adds that this is due to the booking of extraordinary revenue, which has involved short-term borrowing.

It is added as some compensation for the ever increasing interest burden that re-armament has now progressed so far that an alleviation of the Budget can be foreseen. The need for really repaying the Reich's bill debts out of the increased tax revenue, which has always been the ostensible programme, is emphasised.

Czechoslovakia

Prospects of Increased Expenditure

PRAGUE, October 8.—Political uncertainty in the Mediterranean and the Far East is exerting a marked influence on the economic situation. On August 18th diplomatic relations between Portugal and Czechoslovakia were severed owing to differences arising out of deliveries of arms. In August the Chinese Finance Minister, Dr H. H. Kung, concluded a credit agreement with the Skoda Works for the purchase of goods amounting to Cz.Kr.420 millions.

President Masaryk's death stifled economic and political controversy. The most important question now is the Budget. Parliament has just been presented with the balance of State revenue and expenditure for 1936, which shows a deficit of Cz.Kr.760 millions. The budgeted expenditure amounted to Cz.Kr.846 millions, and the non-budgeted expenditure to Cz.Kr.3,525 millions. State indebtedness rose in 1936 by Cz.Kr.5,603 millions to Cz.Kr.45,527.4 millions, including foreign debts to the value of Cz.Kr.7,495.3 millions. The increase was due partly to expanded expenditure, especially for defence purposes, partly by the consolidation of State debts and the devaluation of the Czechoslovak crown. Despite the economies proposed by the Finance Ministry and the Parliamentary Saving Committee an increase of more than Cz.Kr.1,000 millions is expected in the forthcoming Budget because of necessary expenditure on arms. This increase will be balanced partly by increased revenue from direct taxes, including especially the extraordinary profits tax, and partly by the introduction of some new consumption and indirect taxes.

In the autumn the money market tightened a little owing to growing demand, and deposits rose. The Stock Exchange responded, soon after the improvement of quotations in the summer, to the world situation by a substantial decline in share prices. This was directly due to the decline in the price of raw materials, the disquieting international situation and uncertainty about the Government's intentions in financial matters. In the second half of September a sharp decline in share quotations set in; and the Stock Exchange index declined between July and September 24th from 132.3 to 138.5.

Progress of Agriculture and Industry

The index of wholesale prices in September stood at 755, and shows a slight decline compared with the July figure of 763; a year ago it was 693. The wheat harvest was poorer than last year. The yields of other crops were slightly better than last year. It is expected that next year there will be no surplus, whereas last year 23,000 trucks of wheat and 3,200 trucks of flour had to be exported at a loss. The timber market shows a declining tendency and some accumulation of stocks. Industrial activity is satisfactory; the August index was 99.2 (1929 = 100).

The output of coal in August amounted to:—

	1936	1937
	(in '000 tons)	
Coal	921.4	1,567.8
Lignite	1,250.0	1,495.9
Coke	158.0	302.6

The production of pig iron was 149,923 tons, compared with 97,408 tons a year ago, and the output of raw steel was 199,856 tons, compared with 139,312 a year ago.

The beetroot harvest is expected to yield a smaller percentage of sugar this year. The area under cultivation has been increased by about 14 per cent.; the yield is estimated at 7 million quarters of raw sugar, of which 3.4 million quarters is destined for export. The heavy demands and from new investments, renovations and modernisation of plants in other industries. Building is unusually active. The position of the export industries has improved substantially and is reflected in the increase of foreign trade.

Foreign trade improved greatly compared with last year. Imports from January to August amounted to Cz.Kr.7,060.5 millions, compared with Cz.Kr.4,616.8 millions a year ago; and exports to Cz.Kr.7,499.5 millions, compared with Cz.Kr.4,764.7 millions a year ago. The export surplus (excluding precious metals) was Cz.Kr.430.0 millions, compared with Cz.Kr.147.8 millions in the same months of 1936. New commercial agreements with Jugoslavia, Belgium and Germany have come into force, and a new agreement has been concluded with Hungary. New adjustments in commercial intercourse will shortly be negotiated with the United States, Germany, Poland, Italy, France, Latvia, Lithuania, Mexico, Ecuador, Peru and Paraguay.

Sweden

Will the Boom Last?

STOCKHOLM, October 1.—Will the boom last, or has Sweden passed the peak of the exceptional business expansion of the last few years? This question is anxiously put by producers, wholesalers, retailers, employers and employees. The general world outlook is uncertain. But in Sweden there are no signs of any slackening of the upward trend. Nevertheless, developments in other countries, particularly in Great Britain, chief buyer of Swedish products, determine the business trend in this country, and no efforts have been spared by the business world in Sweden to be prepared for a period of depression. The country is far better prepared now than in 1929 to meet less prosperous conditions.

The only symptom of a change in the present boom is the marked decline on the Stock Exchange. On the Stockholm Bourse there was a decline of the index of share values from 180.5 at the beginning of August to 172.7 in the middle of September (100 = par value). There are no domestic reasons for such a fall, and the reaction must be entirely ascribed to the weakness of the London and New York stock exchanges.

On the whole, economic conditions continue to be satisfactory. The general index of industrial production, which steadily rose during 1936 and 1937, remained unchanged at 119 in July. Foreign trade in August, in spite of a slight fall in exports, showed a considerable export surplus. Trade figures for the first seven months were as follows:—

FOREIGN TRADE (In million kronor)		
	1936	1937
	January-August	
Imports	1,013.9	1,355.2
Exports	924.7	1,214.9
Import surplus	89.2	140.3

TRADE WITH THE UNITED KINGDOM (In million kronor)		
	1936	1937
	January-July	
Exports to U.K.	191.9	234.3
Imports from U.K.	171.2	219.9
Export surplus	20.7	14.4

Of exports to the United Kingdom, valued at Kr.234.3 millions, goods consumed in the United Kingdom were valued at Kr. 218.6 millions, and the balance was goods in transit. Of the retained exports valued at Kr. 218.6 millions, pulp accounted for Kr. 68.8 millions, timber for Kr. 57.7 millions, and metals for Kr. 25 millions.

Prices, Wages and Costs

The rise in prices, which at the beginning of the year aroused fears of coming inflation, has for the time being come to an end. The Silverstolpe index of wholesale prices, which rose steadily after May, 1936, remained unchanged in August at 143 (100 = 1913). The general index of prices for consumption goods has practically not changed since June, and at present stands at 104.6 (100 = September, 1931).

Of the main staple articles pulp is in good demand, with rising prices; and of the 1938 production of chemical pulp about 80 per cent. has already been placed. Not quite so satisfactory are reports from the timber trade. Demand from the United Kingdom has lately been smaller than was expected, because of increased sales of Russian goods. Iron and steel works continue to run at full capacity, and have orders for at least another eight months. Nevertheless, imports of iron and steel to Sweden increased during the first seven months of the current year by roughly 50 per cent. compared with the corresponding period in 1936.

A question of outstanding importance for the future development of industrial production and trade is the labour question. This is now entering a decisive stage: agreements affecting about 200,000 workers in the main Swedish industries expire at the end of this year, and notice of their cessation must be given during September and October. While some of these agreements will simply be renewed after revision and modification, others will probably be denounced. Because of the rise in the cost of living since the present agreements were reached two years ago and the increased profits of industrial concerns in general, workers will certainly press claims for higher wages. Employers on their side point out that increased production costs will necessarily entail higher prices, which will weaken the competitive position of Swedish goods and precipitate a decline in industrial production and trade.

Unemployment has practically disappeared, and the number of unemployed now stands at 10,000, compared with 21,500 at the corresponding date in 1936. In addition, the usual shortage of skilled labour demands for hands in agriculture and the building trades cannot be satisfied; and the Government is considering the import of workers from other Scandinavian countries.

Argentina

Parliamentary Arrears and the Railways

BUENOS AIRES, October 12.—Public interest in politics which was aroused by the Presidential election has subsided. Nevertheless, the country is faced with a grave issue. The Government lacks a majority in the Federal Chamber of Deputies. Elections for the part replacement of the Chamber are due to take place next March. If the election is free, the result is likely to increase the number of Opposition deputies. Should the polling be what has come to be known as "regulated," there will be at least public resentment, and possibly crisis. The newspaper *La Prensa* recently announced that in circles close to the Government the possibility of modifying the electoral law had been discussed. It added that since 1929 the country had endured successive violations of the electoral law, in consequence of which a solution of the problem was now far from simple.

Many important bills, including next year's Budget, remain unsanctioned. A serious complication has arisen in connection with the Córdoba Central Railway. On June 19th the Government restored cuts in salaries and wages at its own expense until the end of September, by which time it was hoped that Congress would have

THE COMMERCIAL BANK OF SCOTLAND LIMITED

Incorporated by Royal Charter and Act of Parliament

PAID-UP CAPITAL - - - £2,250,000

RESERVE FUND - - - £3,050,000

ESTABLISHED 1810

dealt with the bill for the purchase of the railway. The wage cuts have again been enforced, and the workers threaten to strike. Both the company and the men have a strong case, and only the failure of the parliamentary machine to function is to blame.

Negligible Wheat Shipments

In September, exports for the first time this year were lower both in volume and in value than in the corresponding month of 1936. They were 1,305,054 tons compared with 1,649,800 tons last year, and the value was 158,109,336 pesos compared with 160,968,202 pesos. This decline is mainly due to negligible wheat shipments last month, there being scarcely any old wheat available for export. There was a great increase, however, in exports of frozen beef, which totalled 11,349 tons compared with only 2,846 tons in September, 1936. The volume and value of exports during the first nine months of 1937, together with the corresponding figures of the last two pre-depression years, were as follows:—

Year	Tons	Pesos (Market value)
1928	13,571,544	1,882,869,652
1929	13,683,817	1,671,378,230
1937	15,053,750	1,871,048,961

Compared with the same period of last year, exports in the first nine months of this year rose by 52.8 per cent. in volume, and 65 per cent. in value. That last month's exports were lower than the same month of 1936 can be understood when it is recalled that this time last year the Argentine export boom had already begun. The outlook for exports remains promising. The high prices of cereals which have ruled during the last fifteen months seem likely to last as long as the political situation in the Old World remains undisturbed. The trend, in fact, is upward. On October 9th, wheat was quoted at 15.80 pesos, maize at 6.83 pesos, and linseed at 16.20 pesos spot per 100 kilos compared with 14.25 pesos, 6.55 pesos and 15.90 pesos a month earlier.

Declining Export Surplus

Imports show a definite though irregular upward tendency, and in August the favourable visible trade balance was very small.

(In Argentine pesos)

Month	Exports	Imports	Export Surplus
May	180,218,650	108,442,346	71,776,304
June	153,924,793	122,235,467	31,689,326
July	155,932,952	149,536,067	6,396,885
August	147,114,738	144,042,845	3,071,893

The shrinking of the export surplus need not be viewed with pessimism. There is reason to expect that exports will soon rise again. The prospects for the coming Argentine crops are, on the whole, quite good, and with the high prices at present ruling for cereals there is promise of another prosperous season. In the next six months Argentine economy is more likely to be influenced by events abroad than by anything that can happen here.

Imports for the first eight months of the year were 32.6 per cent. higher than in the same period of 1936. The biggest positive increase has been in iron and iron goods, which rose 44,887,336 pesos in value, or 53.2 per cent., followed by machinery and vehicles, which rose 35,534,009 pesos in value, or 54.5 per cent. Textiles showed proportionately the smallest increase of all imports with only 12.3 per cent., the actual rise in value being 20,910,967 pesos. This is mainly due to the exceptional time-lag between the order for textiles and their sale to the consumer.

Canada

Politics in Ontario and Alberta

OTTAWA, October 9. — The provincial election in Ontario resulted in a sweeping victory for the Liberal Ministry of Mr Hepburn. Mr Hepburn, two of whose Ministers were beaten, will have to alter his Cabinet; but he now has a decisive mandate to go ahead with his power policy and his investigation of the succession duty frauds. He has made his peace with the King Cabinet, but how long it will last is another matter. Meanwhile

the Aberhart Ministry has been busy at Edmonton passing a series of Bills which constitute a fresh challenge to the authority of the Federal Ministry. In addition to the Bill which proposes to mulct the banks in a special levy of \$2,100,000 per annum, what is virtually a replica of the Banking Bill disallowed some months ago by the Federal Government has been passed; in the new Bill the words "credit institution" is substituted for "bank" and there is no provision for licensing bank employees.

An Astounding Press Law

An even more daring adventure in Alberta's legislation is a Bill described as "An Act to ensure the publication of accurate information," which empowers the chairman of the Social Credit Board to compel any newspaper published in the province to print statements explaining, clarifying and defending the policies of the Government. The chairman will also be able to demand from any newspaper the sources of information, with names and addresses, on which any statement published in its columns is based and the names of the writers of any editorials, articles or news items.

Heavy penalties, and even suspension of publication, are proscribed for infractions of this extraordinary law. It was vigorously opposed by the Opposition, who denounced it as a barefaced attempt to muzzle the Press and imitate methods of dictatorships. But Ministerial spokesmen declared that it was needed to secure truth and accuracy in the Press. It has evoked a barrage of indignant editorials from the whole Press of Canada. In all, eleven Bills were passed by the Legislature, and the Lieutenant-Governor withheld his assent from the two banking Bills and the Press Bill, presumably on the advice of the Federal Government whose appointee he is. The three challenged Bills are now before the King Cabinet, which has promised to hear representations from the Alberta Ministry about them, but is certain to disallow at least the two banking Bills.

The Aberhart Ministry is evidently determined to have no further dealings with Ottawa, as it got the Legislature to pass a resolution to the effect that it should not submit any case to the Royal Commission on Dominion Provincial Relations because its personnel was hopelessly biased against any unorthodox monetary experiments. The Commission is to begin its public hearings at Winnipeg early in December and will also sit at Edmonton, where arrangements are being made for briefs about the situation in Alberta to be submitted by various organisations.

Trade Agreements and Prosperous Business

The King Government has recently renewed and amplified its trade agreements with Australia and New Zealand. The main alterations in each take the form of concessions in the Canadian tariff schedules designed to meet the complaints of the two Antipodean Dominions that the balance of trade against them with Canada was inequitable.

In the business world there still continues the curious paradox of stock markets badly depressed and the level of business activity well maintained. The general economic index of the Bureau of Statistics, which stood at 113.0 for the week ended September 19th, fell sharply by more than 3 points in the following week to 110.4, but for the week ended October 2nd recovered slightly to 110.6.

Autumn business is satisfactory, and the belated start made with the buying of seasonal clothing and other goods owing to fine weather is now being made up. Retail sales are about the same as a year ago, but merchants are cautious about accumulating heavy stocks of goods. The heavy industries continue to be very busy, and there are few manufacturing plants which have not a reasonable amount of orders on hand, but in some lines signs of a recession are seen ahead. The latest employment bulletin of the Bureau of Statistics shows a further gain in employment in August; and the employment index on September 1st stood at 123.2, compared with 120 on August 1st and 107.1 and 102.7 on August 1, 1936, and August 1, 1935, respectively.

Letters to the Editor

"The Under Privileged"

TO THE EDITOR OF THE ECONOMIST

SIR,—Mr Grant Brown writes in your issue of October 9th: "A rise in prices, unless it results from scarcity, does not as a rule reduce real wages if wage earners get the same share as before of the earnings of industry." This may be true, but does not carry us much further. If prices rise and real wages are to remain at the same level money wages must also rise, and if money wages rise prices tend to rise further. There is an intimate connection between the rate of wages and prices. One cannot escape the vicious circle.

The question whether a greater or smaller volume of money ought to be created to facilitate the exchange of goods and services appears to obscure the real issue. You cannot produce social justice by tinkering with the medium of exchange. This is where the advocates of social credit have gone off the rails.

There are two partners in production, the worker, including all who work with brains or muscles, and the investor. Neither can do without the other. Both partners run risks. The investor may fail to win dividends or may lose his capital. The worker runs the risk of unemployment or of physical injury or sickness. The risks run by the worker create for him a greater feeling of insecurity than those run by the investor create for him.

Turning to economic rewards we find an essential difference between the two partners. Once the worker's capital is worn out he gets no further reward. When he can no longer work his wages cease. When the investor's capital is worn out his reward does not necessarily cease. It may continue indefinitely. His dividends may have mounted to a total many times larger than his original contribution, but the claims of himself and his successors to future dividends may still live. The cause of this is that our system makes one partner the sole owner of the organisation created by the joint efforts of both. In this difference of treatment lies one of the roots of injustice in our present system and the cause of our entanglement in the vicious circle.

Yours faithfully,

C. V. BRAYNE.

Industrial Profits

TO THE EDITOR OF THE ECONOMIST

SIR,—The article in your last issue, and the diagram illustrating the division of company profits, were most interesting. The diagram and text would have been more interesting if you had carried your analysis further back. The theories which it would prove or disprove are that during the last three years industrial financial policy has differed from that of the years prior to 1925–30 in two respects. There has been a tendency, particularly in the industries most susceptible to boom and slump, to broaden the capital structure—that is, to reduce the proportion of earnings which is taken by debenture and preference capital; and there has been a tendency to be more conservative, in the same industries, in the division of earnings.

The degree to which the purchasing power of raw material producers has over the last four years been devoted to improving the external liquidity of those countries, rather than to an immediate increase of purchases, does not seem to have been sufficiently emphasised. This increased purchasing power, which the recent fall in commodity prices has served to diminish but by no means to extinguish, is likely to show fairly soon in a substantial increase in exports of manufactures from this country. Commentators have, in general, glossed over the relatively greater increase in United Kingdom imports than United Kingdom exports disclosed by recent figures. The consideration raised here does help to explain it, and, I think, makes it seem probable that before long the relative tendencies of export and import trade will be reversed.

The period over which re-armament expenditure will act as a stimulus to home production is, I think, generally exaggerated. Many of the learned say that they cannot imagine a substantial industrial recession while re-armament expenditure unbalances the Budget to the present degree. Surely the greater part of the stimulus has operated, not through the greater circulation of the money to be spent by the Exchequer, but by capital equipment laid down by

industry to meet this demand. There are signs already that this capital expenditure is tapering off; and obviously to maintain the tempo of the capital expenditure, the rate of expenditure by the Exchequer must go *semper accelerando*, and while *semper accelerando* may eventuate, it is not yet generally predicted.

Yours faithfully,

GEORGE WANSBROUGH.

London, E.C.

Dissensions in Prague

TO THE EDITOR OF THE ECONOMIST

SIR,—After my return to Prague from a long journey in Europe, I had occasion to read your article "Dissensions in Prague," published in *The Economist* on August 21st. As the author of the article in "Venkov" mentioned in your article as a "sensation" and a "bombshell," may I be allowed to state my views in a few words.

Our intentions were not to make a sensation or even less to direct a bombshell against the Foreign Minister. We simply expressed our opinion on a serious point about our relations to Germany in the present European crisis. We did not propose to ask Germany to recognise the frontiers of the Czechoslovakian State. Recognition of this boundary was already stipulated in the Versailles Treaty. But we suggested the inclusion of this recognition in a new convention with other articles as a reinforced security between the two countries. That is a very different thing.

We are not, and cannot be, opposed to the policy based on collective security and even less to solidarity with the Little Entente. Our aim is only to supplement the existing guarantees by some sort of agreement—as England is trying to do with regard to Locarno—in which Germany could participate in the appeasement and conciliation of Central Europe.

Yours sincerely,
"GIRIUS."

Books and Publications

A Confession of Faith

Even more conspicuously than in his recent book "Economics in Practice," Professor Pigou demonstrates in these nine short essays* his remarkable talent for combining sobriety of thought with graceful popular writing. A mute inglorious Cobden, one feels, has long been hiding his light under the thicket of the differential calculus.

"It is not the business of an academic economist," Professor Pigou believes, "to stand advocate for or against any political programme." But it is his business to "set out in an orderly way the dominant considerations, so far as they are academic, which are relevant to the argument." Socialism, Professor Pigou first points out, means to some people the public ownership of property incomes, and to others the "planning" of production. He thinks, however, there is a logical connection between the two, because steeply graduated death duties and income tax, the appropriate democratic remedy for inequality, could more safely be applied by a Government which held the more important economic controls.

Professor Pigou observes that inequality of income, imperfect competition, and particularly advertisement, so distort the working of the price system as to prevent an allocation of resources in any close correspondence with needs. This consideration "provides a valid argument for extending the range of socialisation." Again "for tackling the problem of unemployment, a Socialist system, with central planning, has definite advantages over a capitalist one." On the score of "profits and technical efficiency," Professor Pigou doubts whether the public joint stock company has much advantage over the Socialist public board; but the private company definitely encourages enterprise more keenly. Here "the comparison must turn on the detailed circumstances of each case." About the "problem of incentive," he concludes—perhaps rather surprisingly—that "Socialism should be allotted, I think, some more marks than its rival."

Finally, Professor Pigou tackles the problem of costs, interest rates, and the allocation of resources in the Socialist State. He shows here how a theoretical solution could be found by the calculation of an "accounting" wage, salary and interest rate for costing purposes, and the simultaneous payment of equal wages. He evidently does not, however, think this very practicable. Summing up, the author remarks that the issue cannot be finally decided by pure demonstrative argument. We must "take the plunge and judge." For this, practical experience and instinct are necessary, which "the present writer, like most academic persons, does not possess"; though "unlike some academic persons, he is aware he does not possess them."

* "Socialism versus Capitalism." By A. C. Pigou. Macmillan. 139 pages. 4s. 6d.

SOCIAL JUSTICE FIRST

by C. V. BRAYNE, C.M.G.

Outlines a way to social justice without the sacrifice of our liberties.

Its suggestions merit the serious consideration of every thinking man and woman.

3s. 6d. net

GEORGE ALLEN & UNWIN LTD.

To say nothing, however, is "to declare ourselves in advance opponents of any change." So a "confession of faith" must be offered.

If then it were in the writer's power to direct his country's destiny he would accept, for the time being, the general structure of capitalism, but he would modify it gradually. He would use the weapon of graduated death duties and graduated income tax, not merely as instruments of revenue, but with the deliberate purpose of diminishing the glaring inequalities of fortune and opportunity which deface our present civilisation. He would take a leaf from the book of Soviet Russia and remember that the most important investment of all is the people. To advocate "economy" in this field would, under his Government, be a criminal offence.

All industries which affect the public interest, and capable of wielding monopoly power, he would subject at least to public supervision and control. Some of them, certainly the manufacture of armaments, probably the coal industry, possibly the railways, he would nationalise, not, of course, on the pattern of the Post Office, but through public boards or commissions. The Bank of England he would make in name—what it is already in effect—a public institution.

If all went well, further steps towards nationalisation of important industries would be taken by degrees. In controlling and developing these nationalised industries, the Central Government would inevitably need to plan an appropriate allocation for a large part of the country's annual investment in new capital.

Finally, in his "political testament," Professor Pigou would recommend the "path of gradualness." But he would "add, in large capitals, a final sentence, that gradualness implies action, and is not a polite name for standing still."

Shorter Notices

"Adam Smith." By W. R. Scott. (Glasgow) Jackson, Son and Company. 445 pages. 30s.

To celebrate the two-hundredth anniversary of Adam Smith's matriculation at the University of Glasgow comes Professor Scott's long-awaited documentation of his life and work. The account of Adam Smith's successful if unexciting career makes most interesting reading; but the main interest of this handsome and expensive book lies in its 300 pages of documents. Legal and university papers, letters, lecture-notes, an early draft of "The Wealth of Nations," and handwriting facsimiles, make a fascinating collection. In all, we gain a new insight, not merely into the daily round of the father of Political Economy, but more especially into his life and times as shown in the many-sided activities of academic Scotland in the 18th century—when academic England was in decline and a fit target for Rowlandson and a thousand detractors.

Co-operation of Rural Reconstruction in India. By M. Karamullah Khan, B.A., L.B.

This book is a very useful addition to the rapidly growing literature about rural regeneration in India. The author deals with the historic background; the evolution of the Indian villages through the ages in the Hindu, Islamic and British periods; their present condition; and the importance of the ancient *Panchayat* system in contributing to the cohesion and solidarity of the village communities in the past and its potentialities for the future. Mr Khan emphasises the part that co-operation must play in India's rural reconstruction. He stresses the crying need for a band of willing voluntary workers and for financial assistance, governmental and otherwise.

MONEY AND BANKING

Property and War Risks

EXCEPT in certain parts of the American Continent, no company or underwriter will insure a building against war risks. The property market in this country is slowly realising the significance of that fact.

The history of war insurance since 1914 may be briefly summarised. When the Great War broke out the Government produced immediately its scheme for the insurance of war risks at sea, and the staff work done before the war was of incalculable value to our commerce in the unsettled days of August and September, 1914. All cargo in British bottoms could be covered at the Government's war risk office at a flat rate; and throughout the war it had to be taken by the Government at whatever rate was current at the time of shipment. But the scheme was not a business proposition in the money-making sense; for the marine market was at liberty to compete as it willed with the State, while the State had little or no power to compete in the market. Everything went to the Government when the risk was heavy and nothing when the risk was light. As a natural consequence, the Government account closed at the end of the war with a heavy loss, and the lesson is not likely to be forgotten if ever war breaks out again.

Before the last war had gone very far the public realised that war risks were not confined to the sea. Inquiries, accordingly, came to the insurance market for cover against damage by hostile aircraft, and for this risk, in the early days, the Government was not a market. As the tariff offices did not feel justified in quoting, the whole of the business was concentrated on Lloyd's, which soon began to suffer from a congestion of orders which forced rates up to a high level. The Government then intervened, and by a clever device arranged with the tariff offices that they should act as agents for the Government and issue policies against aircraft damage on which the liability would be not theirs but the State's. Business was both brisk and profitable, and in November, 1918, the Government was left with a substantial credit balance. By a curious coincidence, the rate of premium finished at 2s. per cent., the exact figure that Lloyd's underwriters had first quoted in the early months of the war.

From 1918 to 1936 the market pursued a normal course. It quoted, if it chose, for whatever risks came its way, and made, on the whole, a steady profit, which left many insurers satisfied, but a number of companies and underwriters became increasingly concerned at the possibilities of disaster inherent in the business. With the outbreak of the civil war in Spain, this concern became general. Given the new weapons of destruction and the new recklessness of combatants and politicians, where would the business end? So acute was the anxiety that something almost miraculous happened—an agreement was arrived at between British and foreign companies, between tariff and non-tariff insurers, and between underwriters and offices, to exclude altogether from their business all war risks on land. Sea-borne traffic (where the limit of any one loss is limited by the value of one ship and cargo) might still be insured; but buildings and property ashore have for nearly twelve months been uninsurable. So they will remain until the outbreak of the next war, when insurers will probably regain their liberty of action—if they care to use it. To the market in general the agreement has brought a great sense of relief, which grows daily as old insurances run off without being renewed. At Shanghai, incidentally, one large warehouse of great value had been covered on a three years' contract which

expired last month. Three days before the expiry a shell hit it, went through several stories, and failed to explode.

Property owners did not at first take the change very seriously—probably because they took for granted that the Government had a scheme in a convenient pigeon-hole and would offer to take the business in this country the moment the need was urgent. But last May that belief was shattered by the then President of the Board of Trade, who, in reply to a question, declared in effect that the Government had decided to do nothing, being of the opinion that the most effective protection lay in re-armament. In this reply there was perhaps some confusion of thought, for protection against a risk is not the same thing as insurance against loss caused by a risk. Our aeroplanes may rise in their hundreds to meet the enemy, but some raiders will get through; and it is not a comforting thought to property owners that the damage the raiders do must be borne by the owners of the buildings destroyed. It is satisfactory to know that the raiders will have their work made more difficult; but it would be still more satisfactory to be assured that, if and when they score a hit, the loss will be made good by a reliable insurance policy.

When Mr Runciman gave his enormously important answer in the House of Commons surprisingly little notice was taken of it. But as policies have subsequently run off, one by one, and as talk of war has grown louder, the general public has begun to feel a certain disquietude. Indeed, the anxiety felt by cautious underwriters while the risk was being written transferred itself to the minds of property owners and mortgagees as the risk ceased to be written. One attempt has certainly been made to start a scheme of mutual insurance, but the funds appear not to be proportionate to the risk. This month, a life insurance company, the Equity and Law, which is widely interested in mortgages, took the unusual step of forwarding to the Prime Minister and to the Press a resolution passed by the board which should bring the dilemma unmistakably home to all merchants, property owners and mortgagees. The resolution ran thus:—

The Society [the Equity and Law] has from time to time made advances on mortgage of freehold and leasehold property in London and elsewhere upon such risks (acts of war) being covered as has hitherto been the case by insurance; and in the absence of such cover the Society has felt compelled to postpone consideration of certain applications for such loans upon property in areas more particularly liable to the risks in question. The Society submit that as war and its consequences concern the whole nation the Government should assume the responsibility for damage caused by acts of war or that owners of property should be enabled to insure against such damage by a national insurance scheme as was the case during the Great War.

The plea is powerful, and it concerns not only great insurance companies like the Equity and Law, but all the banks and building societies, all stores, merchants, manufacturers and shopkeepers, all investors, small and large, in bricks and mortar, whose aggregate interests compare in size and importance with all the investments of the Stock Exchange put together. Indeed, property figures among the assets of many companies and authorities whose securities are quoted on the Stock Exchange. That property interests cannot hope for an indemnity from the insurance market is clear, but it is very difficult to believe that a scheme of insurance is beyond the resources of the State, which has the double advantage of its supreme credit and of its power to apply

compulsion and bring everyone whose wealth is at risk into the scheme. It is to be hoped that the somewhat perfunctory treatment which the suggestion of State insurance received from Mr Runciman last May will be reconsidered, and that a plan for the compulsory insurance of all property in Great Britain against war risks will as quickly as possible be prepared. A flat rate chargeable on all buildings, wherever situated, would not be an inequitable arrangement.

Financial Notes

Midland Bank's New Capital.—Happy is the institution which can simultaneously increase its ratio of capital and reserve to deposits, and present its shareholders with a *bonne bouche*! The Midland Bank will achieve this dual result by its decision to offer one new £1 share at a price of £2, for every £20 of paid-up capital held by the proprietors on October 15th. As the existing £1 shares were quoted at 86s. 9d. on the eve of the offer, the issue represents a bonus of 2s. 3d. per share. At present the bank's fully paid capital totals only £7,075,314, out of an issued total of £41,504,262, the remaining £34,429,948 being in £12 shares, £2 ros. paid. Shareholders of all classes will have the right to subscribe to the new issue, which will consequently raise the total paid-up capital by £712,000 to a total of £14,960,000, and will yield additional resources of approximately £1,425,000. It is seven years since the bank made the last offer of this character, when 671,649 £1 shares were issued to shareholders, also at £2. Presumably, as the bank's deposits last month were shown as £488,422,000, the securing of new resources is not a primary objective of the new issue. At present, the capital and disclosed reserves total a little under £26 millions, and represent some 5½ per cent. of deposits. The ratio in the case of Barclays and Lloyds is 6½ per cent., while the National Provincial and the Westminster have ratios of a little over 5½ and 5½ per cent. respectively. This particular ratio, however, can always be increased, if desired, by additions to reserves without any enlargement of share capital. It may be assumed, therefore, that the decision is the precursor of an increase in the total amount paid out annually in dividend. Last year the dividend of 16 per cent. was covered by earnings of 22½ per cent. The new resources will not substantially increase the bank's earning power, but there is an ample margin for the maintenance of the present dividend rate on the increased capital.

The Franc and the Exchanges.—The strength of the franc has dominated the foreign exchange market throughout the week. There was some hesitation towards the end of last week, but on balance the rate moved in favour of Paris. On Monday and Tuesday, on the other hand, the buying pressure on the franc was very strong and the volume of transactions was considerably enlarged. Several factors contributed to this, external and internal, political and economic. The extreme weakness in Wall Street on Monday and in the first part of Tuesday's session encouraged a repatriation of French funds to Paris; the success of the Government in the cantonal elections, and particularly the strength of the Radicals, postponed the prospect of a political crisis; and there was a noticeable movement on the part of bear speculators to cover. The rate rose from a closing figure of Frs. 147½ on Saturday to Frs. 146½ on Monday. The further rise on Tuesday was confined to 25 centimes, but only because the control was selling francs more consistently on that day than on Monday. The forward rates showed the greatest improvement on Tuesday, the three-months' rate contracting by Frs. 1½. Thus the French authorities continued their policy of last week of allowing a slight appreciation of the franc each day to encourage the repatriation of capital; but at the same

time selling francs to a sufficient extent to prevent too sudden a rise. By this means quite a substantial volume of foreign exchange has been accumulated, amounting to perhaps half the Stabilisation Fund. There was some reaction on Wednesday, since Wall Street had recovered and the concessions to the *fonctionnaires* raised doubts about the balancing of the Budget. Until late in the day the international outlook was also very depressing. For these reasons the control had to support the franc from time to time, but there was no substantial change in either the spot or the forward rates. The dramatic change in the diplomatic atmosphere late on Wednesday, however, turned the tide once more and on Thursday there was further buying of francs. The rate, however, was not allowed to move by more than a trifle. These events have very considerably improved the technical position of the French authorities. The only other feature of the foreign exchange markets has been the fluctuations of the dollar within limits of \$4.95½ and \$4.95½, largely in accordance with the ebb and flow of sales and purchases of securities in Wall Street.

The Bank Return.—The most notable feature of the bank return is the drop of £5.6 millions in the active note circulation. In the same week last year the fall was £6.2 millions, suggesting that so far there has not been a great deal of dishoarding on French account.

Other securities	21.6	20.8	20.9	20.4	23.2
Proportion	43.4%	25.6%	23.1%	24.6%	28.1%

In the banking department the excess of Treasury bill payments over maturities has once again effected a transfer between public deposits and bankers' deposits. The former are up by £3.7 millions and the latter down by £3.6 millions. The increase of £5.4 millions in the reserve is evidence of the official policy of keeping the credit base stable.

The Money Market.—The money market has maintained throughout its customary easy condition, in spite of the fact that Treasury bill payments are still running ahead of maturities. Still, the drop of £3.6 millions in bankers' deposits is quite insufficient to have any effect on the market, which suffers perpetually from an excess of funds seeking employment. The cutting down of the Treasury bill tender this week by £5 millions will further deprive the market of bills, of which it has for long been short.

Short loan rate :—				
Clearing banks	1-1½	1-1½	1-1½	1-1½
Others	1-1½	1-1½	1-1½	1-1½
Discount rates :—				
Treasury bills	1	1	1	1
Three months' bank bills	1	1-1½	1-1½	1-1½

* Loans against Treasury bills and other approved bills and British Government securities within six months of maturity; 1 per cent. Treasury Bonds and other gilt-edged stocks within six months of maturity; and other collateral respectively.

Discount rates are unchanged. The clearing banks have been fairly keen buyers of bills. Mixed parcels of December and January bills in the proportion 25—75 have been brought at the customary minimum.

THE STOCK EXCHANGE

Rhodesian Copper Companies

THE publication this week of the Rhokana and Rhodesian Selection Trust reports completes the story of the past year's experience of the trio of Rhodesian copper concerns in which the British investor is interested. Tribute is due to the companies not merely for the excellence of their results, but also for the detailed manner in which they are displayed. Reports like these afford the investor scope for estimating future prospects—the more so because the companies' quarterly profits returns furnish him with a periodical check on his own arithmetic. In the following article, we propose to set out some "ready reckoner" estimates of potential profits for the three companies.

Little need be said of the results of the past year. The Roan Antelope accounts were reviewed on page 125 of our last issue. The report of Mufulira—on which the figures for Rhodesian Selection Trust and, to a smaller but very significant extent, those of Rhokana, depend—is still in the nature of an interim account rendered. It was only during the past year that the company's smelter came into operation, and naturally at somewhat high initial costs; and work is in hand for increasing monthly capacity to 8,000 tons by October next year. The Rhokana Corporation's progress is signalled by an increase in profits from £831,221 to £2,175,057. Alone among the three operating companies, Rhokana reduced its operating costs last year—even after including the provision for employees' funds, which all the companies are now providing in enlightened and progressive fashion.

The past year's results, as a whole, show that the Rhodesian copper industry is now earning a substantial return after many years of development work, which spanned the Great Depression. For nearly six months of the past year, production was uncontrolled. After the first five months of the present year, however, the companies will again be operating under restriction. The fact that control was re-introduced after the price of copper had fallen below £50 has suggested that this may represent a new "pivotal" price at which the restricting companies aim. But Mr Chester Beatty, at the Roan Antelope meeting on Wednesday, described the lowering of output as a policy for adjusting supplies to requirements. Whatever the statistical objective of output control, the investor is confronted with a problem in two vari-

ables. He must take account of variations in prices and also of alterations of quota releases. To measure the effect of simultaneous changes in both factors, Moodys-Economist Services have devised an ingenious series of charts for the principal companies. But, so far as our present survey is concerned, the difficulty arises that production for the first five months of the current year will not be subject to formal control, and cannot at this stage be precisely estimated. And even under conditions of restriction, accuracy would require a series of nice, but scarcely significant, adjustments. For example, production quotas relate to fine copper, but cost data sometimes refer to blister copper of approximately 99.25 per cent. copper content. Similar small errors result from simplified working—such as rounding off quota tonnages. Again, estimated provision for N.D.C. must necessarily be framed on broad lines. Finally, for Rhokana, a special difficulty is presented by the company's increasingly important cobalt production. Accordingly, we have endeavoured to strike a mean between the absolute and the practicable in the table of estimates for the three companies, given at the foot of this page.

We may examine the figures for each company in turn. Rhokana, last year, produced 75,254 long tons of fine copper of which 46,247 tons were blister and 29,007 tons electrolytic. For that part of the year in which restriction was operative, the allowable production has been estimated at 33,750 tons. The balance of 41,504 tons appears to have exceeded 105 per cent. quota production by approximately 8,000 tons between mid-January and June—a rate roughly equivalent to 130 per cent. of standard production. If an arbitrary rate of 120 per cent. be assumed for the first five months of the current year, and 105 per cent. production be maintained for the rest of the year, an approximate estimate of output for 1937-38 would be about 74,500 tons. What proportion of this copper will be represented by electrolytic? The question is important in estimating selling prices and costs. Production of electrolytic copper has been steadily increasing since the refinery was installed in 1934, but last year's output did not, apparently, represent operation at full capacity. We may assume an increase in electrolytic output to 32,000 tons, which would leave 42,500 tons represented by blister output. Cobalt production has shown a

RHODESIAN COPPER COMPANY ESTIMATES

† After latest issue.

substantial increase—some 1,459,237 lbs. of cobalt element were sold last year, compared with 924,842 lbs. for the preceding year. Thus, the production of cobalt increased more rapidly than that of copper. Improvements at the mine may result in a further increase in cobalt output. For conservation's sake, however, we may assume merely the maintenance of last year's output.

The next problem to consider is the relationship of prices and costs. The margin between the price of electrolytic copper and blister is normally of the order of £4.45 per ton. Last year's costs figures were £23.45 per ton for electro and £21.18 for blister—both figures including provision for employees' fund. It is not easy to analyse the composition of these figures from the accounts, but inspection suggests that other charges, including the directors' participation in profits and depreciation and development reserves, may total as much as £220,000. No cost figures are available for cobalt, and its price is determined largely by negotiated contract. On the basis of the current quotation, we may take the company's average sales price for the current year—during which demand should remain good—at 7s. per lb.

These bases of calculation, however, need to be supplemented by reference to the Corporation's 32.303 per cent. interest in Mufulira—in which Rhodesian Selection Trust, for its own part, has a 64.07 per cent. holding. Production at Mufulira for 1936-37 amounted to 37,230 long tons of blister copper. The monthly quota, at 105 per cent. of standard, will be 5,200 tons of fine copper. The past year's total production, however, appears to have fallen short of quota estimates. It may be legitimate, therefore, to apply 105 per cent. production to the whole year—which would indicate an annual total of 62,500 tons of blister. Such expansion implies some appreciable cost reductions, which should be helped by improved operation at the new smelter, and ultimately by power transmission economies. Further, following the debenture redemption, only one quarter's interest falls to be paid this year. Current all-in costs, therefore, should be lower than the £31.981 recorded for 1936-37. But by how much? Taking the known factors, and adopting a reasonable basis of comparison with Roan Antelope costs, an estimate of £27.5 per ton "all-in" should not be unduly optimistic.

Finally, we come to the basis of the Roan Antelope calculations—the simplest of the three. The past year's production suggests that during the period of free production, output did not markedly exceed the 105 per cent. rate. The company's quota, at 105 per cent., will be 5,900 tons, and on this basis it may be justifiable to take total output for 1937-38 at 71,250 tons. On the costs side, the saving on debenture interest represents approximately £1 per ton of output. All-in costs may, therefore, be taken at £44.5 per ton in view of the chairman's comment on Wednesday. Roan Antelope, by special dispensation, were quoted ex rights on Thursday, and our calculation of earnings yields is based upon the increased capital.

What conclusions are suggested by our figures? After every allowance for the breadth of estimation, it would still seem true to say that Rhodesian Selection Trust shares are valued by the market on the basis of generous promise from Mufulira. The somewhat lower prospective yield on Roan Antelope, compared with Rhokana, may be due to a conservative Roan estimate—on the September profit of £686,500, production has been probably running in excess of our figure—or to a generous estimate of Mufulira's distribution policy. Or perhaps the market put up the ex bonus price of Roan Antelope too far on Thursday. Whatever the explanation, Rhokana has decided advantages—including its electrolytic refinery and cobalt production, its third share in Mufulira, and its potential assets by way of the Nchanga mine and the Konkola deposits. Whether Rhodesian copper shares, as a whole, are over- or under-valued depends entirely upon the outlook for copper consumption, which, in turn, will determine price movements and restriction policy. Copper, like most other commodities, is fighting a rearguard action. Speculative investors would be well advised to watch copper prices and industrial movements first, and percentage estimates second.

Investment and Company Notes

Sound and Fury in Wall Street.—Not for seven years has Wall Street boxed the emotional compass so thoroughly—and so distressfully—as in the past week. Monday's trading put prices down with a rush, which continued until the end of the second hour's trading on Tuesday. By that time the Dow Jones industrial shares price index had fallen to 118.84 from 136.30, established at the end of Saturday's short session. This, however, was the turn of the tide, at least for a day or two. By the end of business on Tuesday the Dow Jones index was up to 126.80, and a further recovery to 134.56 followed on Wednesday. Changes in the price level for each hour of trading on the opening three days of the week are illustrated by the following chart:—

DOW JONES INDUSTRIAL INDEX
Hourly Fluctuations, Oct. 18 to 20.

The seriousness of the reverse was reflected in turnover as well as in prices. Monday's volume reached 3,230,000 shares, and on Tuesday 7,280,000 shares were dealt in—a higher figure than on any day since July 21, 1933. Against such a flood nothing could hope to stand firm. The movements of some of the leading issues are shown in the table below, together with the prices reached in March, when the bull market reached its turning point:—

	CLOSING PRICES	Mar. 10	Oct. 18	Oct. 19	Oct. 20
Pennsylvania R.R.	48½	22½	22½	24½	24½
North American	29½	14½	14½	18½	18½
U.S. Steel	125½	61½	61½	61½	61½
Anaconda	69½	27½	29½	30½	30½
General Motors	65½	35½	37½	40½	40½
Dupont	173½	122½	120½	130½	130½
General Electric	61½	35½	39½	41½	41½
Int. Harvester	110	87	74	79½	79½
Celanese of America	34½	20½	20	22½	22½
General Foods	43	30½	30½	32½	32½
Commercial Credit	59½	30	38	44	44

The peculiar feature of the present *débâcle* is that no satisfactory reason or combination of reasons has yet been advanced which would justify the ways of Wall Street to rational men. One of the triggers which set the market off this week was the estimate that steel mill activity for the current week was down to 55.5 per cent. of capacity against 63.6 per cent. last week and 74.2 per cent. a year ago. But it was known that this was only a temporary reduction, and did not herald a trade depression, since large automobile industry orders were beginning to come in. All the familiar reasons have been used again, and undoubtedly they all have partial truth. Trade may be anticipating a minor recession; the Washington Administration may be unsympathetic to big business; the Securities and Exchange Commission regu-

lations may have resulted in thin markets; and obviously a great deal of selling this week must have been caused by impaired margin positions. But the magnitude of the relapse is unaccountable on rational lines; it must be attributed chiefly to unreasoning panic—particularly to exaggerated fears of depression in America and war in Europe. If this view is correct, the long-term prospects of American industry and American securities may be relatively promising, though what may happen to prices in the future, nevertheless, must be unpredictable. But at least a technical rally is overdue, and its course may be as extreme and disconcerting as that of the slump itself.

Will London Recover?—The London Stock markets have played second fiddle, but not *répétiteur*, to New York in this week's strange orchestra. Wall Street's sudden break in New York on Monday took London completely by surprise, and British investors, like the spectators of another floral dance, could only stand and stare. But on Wednesday, when Wall Street took heart of grace and Signor Mussolini saw a great light, almost at the same hour, London's response was immediate and encouraging. On the whole, while British investors may possibly pride themselves on having preserved a better sense of balance than their American colleagues, it may well be that both markets were more frightened than they would have cared to admit by the boggy of a European political breakdown. If, in fact, the Mediterranean difficulty is to be resolved, then the markets may be more prepared in turn to accept the implications of the probability that the next economic depression, if and when it comes, will be only a little one. Current market evidence, in short, points to a sizeable technical rally relatively soon, but not to a major revival which would carry London prices to the levels from which they lately descended. Opinion is growing in support of the view that a wider gap is appropriate between yields on gilt-edged and industrial shares than that prevailing a few months ago.

"Hot Money" and Wall Street.—A further quarterly return from the U.S. Treasury Department enables us to bring nearer to date our record of the fate of European investment in American common stocks since the end of 1935. In an earlier note (see page 620 of *The Economist*, dated September 25th), we showed that no profits were running on purchases during 1936 and the first quarter of the current year. The latest figures show a considerable loss, not merely for these purchases, but also upon the balance of holdings as at the end of 1935. The calculation is complicated by a net sale of British and European holdings during the second quarter of the year, and it is impossible to put a firm estimate on the values at which these securities were bought. Assuming that they had been evenly spread over the previous fifteen months, however, the approximate trend of stock movements suggests that holders may have broken even on these transactions. On this assumption, we present a revised table showing the nominal purchases of United States domestic securities up to June last, and their estimated current value:—

	(In \$ millions)		All Europe	
	United Kingdom Base Value	Current Value	Base Value	Current Value
Value of common stocks held December 31, 1935	372	348	1,274	1,190
Net purchases :—				
1936 :—				
1st quarter	25	21	98	83
2nd "	15	13	77	66
3rd "	45	36	102	81
4th "	132	96	254	185
1937 :—				
1st quarter	71	49	138	96
2nd " (net sale)	— 27	— 27	— 8	— 8
Net totals to June	633	536	1,937	1,693

On British account, a depreciation of nearly \$100 millions appears to be registered, and on European account some \$250 millions. The third quarter's movements will show how far such heavy losses have been taken.

B.A. Great Southern.—The disappointed second preference stockholders of Buenos Aires Great Southern, who expected full payment and received half, will find the 1936-37 accounts more encouraging than might have been expected. The previous year was one of semi-disaster; the past year brought good crops and substantial recovery. Gross receipts rose by 10½ per cent. to £10,992,266 (taken at par). Passenger traffic increased by 7½ per cent. and merchandise by 15½ per cent. And in terms of volume, such impressive increases are recorded as 13.6 per cent. for wheat, 26.4 per cent. for maize, 42.2 per cent. for barley, and 49.2 per cent. for Government traffic. Yet working expenses are merely 1.2 per cent. higher, no less than 92 per cent. of the gross increase has been saved net, and the operating ratio is reduced from 73 per cent. to 66.7 per cent. These are solid achievements for which due credit will go to the Director-General and his staff. For the first time for some years renewals have been met entirely out of revenue—the charge of £282,336 is £42,336 more than the second and unpaid 3 per cent. on the junior preference stock. The results for the past three years are set out below:—

	YEARS ENDED JUNE 30TH		
	1935	1936	1937
Operating receipts ..	10,957,684	9,922,015	10,992,266
Operating expenses ..	7,451,296†	7,241,593	7,328,847
Operating profit	3,506,388	2,680,422	3,663,419
Dividends, interest, etc. Cr.	204,758	210,095	178,292
received			
Exchange losses, less credits	1,552,723	1,173,982	1,297,822
Working agreement charges	541,977	548,699	546,949
Interest and other fixed charges	1,085,079	1,085,079	1,085,079
Renewals expenditure from revenue	120,000	Nil	282,335
Earned for dividends ..	411,367	82,757	629,526
Preference dividends	640,000*	80,000**	640,000*
Carry forward	28,547‡	31,304	20,830

† After deducting renewals expenditure from revenue, shown separately. ‡ After transferring £70,000 from Bahia Blanca and N.W. Rly. Contingencies fund. * 5 per cent. preference in full and 3 per cent. on 6 per cent. preference. ** 1 per cent. on 5 per cent. preference only.

There are two disappointing features in the report. The first is the higher provision for exchange losses. Remittances have cost less, but this year a further charge for depreciation of currency and floating assets is required. Total cost of exchange is thus increased to £1,297,822, and the average annual cost since 1934 is calculated at £1,368,065—equal to 4½ per cent. for the ordinary stock. It is probable, indeed, that the companies would welcome better exchange facilities before increased rates. The second disappointment is the slow progress towards effective transport co-ordination. This measure was enacted last January, but the Commission is still in process of formation. Prospects for the current year depend on the harvest. Sowings are larger, and conditions, at this early stage, are favourable. But the small carry-over of fine grains from last year promises no excitement in the traffic returns for the first part of the year. The market is taking a cautious view, for the 5 per cent. preference stock stands at 67, and the second preference stock at 52.

B. A. and Pacific.—The recovery on this line is of more modest order than for B. A. Great Southern. Gross receipts have increased by 10.7 per cent. and working expenses by 6.2 per cent. Net operating receipts, accordingly, show a percentage advance of 27.8 to £1,725,277. Yet, at the end of the account, the company

still has to add a further £606,881 to the heavy debit balance already carried forward. Since additional traffic transported last year totalled 613,000 tons, while full wages were payable during the past year, compared with seven months in the previous period, a reduction in the operating ratio from 79.32 per cent. to 76.13 per cent. is satisfactory. But the exchange burden takes a heavier net toll this year than last. Although provision for remittances and capital expenditure in pesos is £327,000 lower, depreciation of currency floating assets requires £94,123, compared with a credit of £275,527 for the previous year. The results are set out below:—

	Years to June 30		
	1935	1936	1937
Operating receipts	6,239,964	6,529,274	7,228,550
Operating expenses	4,670,779	5,179,229	5,501,273
Operating profits	1,569,185	1,350,045	1,725,277

* Including interest on arrears except first debenture stocks met on due dates for each year. All arrears, plus interest paid on second debenture stocks of B.A. and Pacific and Argentine Great Western Railway during 1935-36. Three payments of six months' interest on 4½ per cent. consolidated stock and 5 per cent. debenture stock of Argentine Gt. Western Rly. in 1936-37.

With an accumulated loss of £4,184,665 and accrued debenture interest, rents, and arrears of interest totalling £6,141,710, the company's position is not happy. In June last it was announced that the moratorium for debenture stocks had been extended to June, 1938, and that the company could meet regular interest on the second debentures. That position appears, broadly, to hold good to-day. Meanwhile, the three coupons on the consolidated stock bring payments up to June, 1933. The company's problem, indeed, is to find some reasonably stable level of profits, for slow progress in wiping off arrears is possible even at the present level. If the exchange situation were adjusted in the railways' favour, a more rapid advance could be made.

United Steel Meeting.—The United Steel Companies' report was so complete that Sir Walter Benton Jones, at last week's meeting, had little of purely domestic interest to tell stockholders. He contented himself with emphasising the need for conservative allocations for depreciation and obsolescence, and gave a detailed description of the large-scale extensions which are in progress at Appleby-Frodingham. The new blast furnaces will be the largest in the country, and the whole plant is being planned on an imposing scale. Indeed, Appleby-Frodingham will take its place in the front rank of steel undertakings, not only in Britain but also in the world. Sir Walter gave an interesting refutation of the criticisms of British blast furnaces for their lack of size compared with the American; the effective daily output depends upon the richness of the ore, and the giant outputs of the American furnaces are achieved with far richer ores than those of Lincolnshire. But he also explained the importance of proper pre-process treatment of raw materials for efficient blast furnace operation. Such treatment will be carried out at Appleby-Frodingham, but in Britain as a whole, practice is not entirely satisfactory.

The most important part of Sir Walter's speech, however, was a defence of the co-operative policy of the steel industry. Co-operation is gradually extending, price control is actually preventing further advances in prices, and great progress is being made in reorganisation. These are now known facts. Investors, however, may

be less willing to accept Sir Walter's conclusion from these facts, "that the production of steel in this country is now established at a permanently higher level." Undoubtedly the British steel industry is much better equipped to meet export competition than it was ten years ago. Moreover, the import licensing system enables the industry, if necessary, to monopolise the home market. But such protection can do nothing to maintain the level of demand in the home market; indeed, if import control prevents price competition, it may reduce demand. In the last depression, output and demand fell much more sharply in the highly protected and cartelised German steel industry than in Britain. The long-term outlook for the steel industry is plainly better than it was ten years ago. But investors must still be prepared for wide cyclical movements in demand. Such movements may be reduced by the increasing use of steel in the consumption-goods industries, but nevertheless they will still be significant.

United Dairies Report.—The latest profits of United Dairies have reached the new record of £654,120. Since profits have increased by 30 per cent. in a decade and were quite unaffected by the depression, stockholders may feel some compensation for the lack of consolidated accounts. Interests in subsidiaries represent over half the parent company's total assets of £7½ millions, and fluctuations in the trading position cannot be discussed from the present form of accounts. Last year's apparent drop in profits was due more to accidents of accounting dates than to less favourable trading. The following table shows the allocation of earnings in recent years:—

	Years to June 30th		
	1935	1936	1937
Dividends receivable	286,033	250,400	269,570
Interest receivable	254,191	253,874	256,586
Other income and profits	112,679	123,899	127,964
Total income	652,903	627,973	654,120
Interest paid	6,603	6,408	7,972
Directors' fees	15,383	16,717	15,717
Preference dividend	195,000	195,000	195,000
Ordinary stock:—			
Earned	435,917	409,848	435,431
Paid	308,000	308,000	308,000
Earned (%)	19.2	17.9	19.4
Paid (%)	12½	12½	12½

Reserve..... 100,000 100,000 134,000*
Carry forward..... 90,033† 91,881 85,312
† After writing off £3,079 new issue expenses. * Includes £10,000 reserved against investments.

The ordinary stock dividend, maintained at 12½ per cent., is covered by a 7 per cent. margin. The general reserve allocation is raised to £124,000, increasing total reserve to £1,000,000. The balance sheet again bears evidence of the undertaking's steady expansion, and each report mentions new branches opened and the economies in milk processing and distributing have been achieved by the company, but its provision retailing business now represents an important proportion of total turnover. The £1 stock units are of high investment rank, and their yield of 4 9s. 3d. per cent. is essentially representative of their stable quality. Perhaps the 10 per cent. capital bonus in 1934 affords a precedent of things to come in the future.

B.S.A. Recovery.—In a preliminary statement the directors of Birmingham Small Arms announce profits for the year to July 31st which clearly break through all former levels. All preference dividend arrears have been paid off; last year four years' "A" preference arrears were paid, and now six years' "B" preference dividends are being paid. All fear of a capital reconstruction is well averted. The company's activities are diverse, and it is not yet known to what extent the armaments programme has affected results, but the

company has wholly transformed its profit-earning basis. Total profits, before tax, amount to £555,594, comparing with £315,234 or, after adding back depreciation, £699,095, against £447,049. Expenses, including debenture service, may be estimated at £127,300, against £130,500. Taking gross preference dividends of £10,157 on the "A" and £126,210 on the "B" shares, there would remain for the ordinary shareholders £291,900, equivalent to 10 per cent. actual, but assuming normal preference dividends, the latest earnings would represent about 14 per cent. on the equity. General reserve receives £151,811, and £140,088 is added to the carry forward, which has now reached the substantial sum of £204,761. The full report will be awaited with interest, and since a return to ordinary dividends in the current year is a reasonable anticipation, an immediate jump in the shares to 22s. gd. is readily understood.

Sudan Plantations Progress.—This cotton-growing company again reports a satisfactory year. Profits, at £697,994, have reached the highest level since the 1928-29 season when, of course, crop conditions were very different from to-day. The past year's increase of £108,500 results mainly from a larger crop, which amounted to 192,171 against 157,668 bales, owing to a substantial improvement in yield in the important Gezira area. Comparison with the previous year once again illustrates the see-saw effect of crop and price movements. The following table shows the recent trend of profits:—

	Years ended June 30th		
	1935	1936	1937
Total profits	457,300	589,509	697,994
General expenses	172,268	174,920	178,550
Other charges	17,168	23,617	25,487
Depreciation	10,190	12,018	17,451
Gezira reserve	50,000	60,000	60,000
Taxation provision	Nil	33,681	40,000
Shares:—			
Earned	207,674	285,272	376,506
Paid	198,000	247,500	309,375
Earned (%)	8.5	12.0	16.1
Paid (%)	8	10	12½

General reserve..... 6,294† Nil Nil
Carry forward..... 223,851 374,168* 455,084*

* After crediting in 1935-36, £112,545 reserve against tenants' advances, and in 1936-37, £13,785 profit on sale of investments.
† Also £13,706 from share premium account transferred direct.

The outlook for the current year is affected by the recent setback in raw cotton prices from which Egyptian grades have naturally not escaped. In its internal finances, the position of the company is wholly satisfactory. The last few years have been marked by a widening margin between earnings and distributions, and £81,000 was added to the carry-forward last year. The balance sheet contains no important changes, except a large rise in cash, which now stands at £2,022,000 against £848,000. This is in part counterbalanced by a drop of over £800,000 in stocks, which stand at £2,119,000. Present uncertainties in cotton are marked by a yield of 7 1s. per cent. on the £1 shares at their current price of 38s.

Abitibi Scheme Approved.—The bondholders of Abitibi Power and Paper Company have at last approved the plan of reorganisation drawn up by the Bondholders' Representative Committee and published last July, subject to two voluntary amendments. The company has outstanding \$48,267,000 of first mortgage 5 per cent. gold bonds, \$1,000,000 of 7 per cent. cumulative preferred stock, \$34,881,800 of 6 per cent. cumulative preferred stock, and 1,088,117 common shares of no par value. Interest on the debentures has been in default since June 1, 1932, a receiver was appointed in September, 1932, and a permanent liquidator on December 20, 1935. The plan which has now been accepted by bondholders and had previously been endorsed by the preferred stockholders' committee provides for formation of a new company to take over the properties by various

exchanges of securities. Each \$100 of old first mortgage bonds will be exchanged for \$50 of 5 per cent. 20 year general and refunding mortgage bonds; each old 7 per cent. preferred share for five common shares and the right to subscribe to five further common. The 6 per cent. preferred shares will have 3½ common shares and also warrants to subscribe to four additional shares; while the common shares will be reduced to one-tenth, and will have the right to subscribe for one additional half share. New capital will be provided by the issue of \$14,000,000 4½ per cent. first mortgage bonds. The two amendments adopted reduce the amount of new money to be obtained by the amount of adjusted earnings since June 30th, and secure the new debentures by mortgage.

O.K. Bazaars.—The heavy fall in O.K. Bazaars 5s. shares from 55s. to 28s. gd. has been checked this week by the publication of the report. Shareholders' uneasiness, perhaps, was less affected by profits estimates than by publicity in South Africa and this country of the ramifications of the group of which O.K. Bazaars forms only part. Pointed comparison between the stock position of the company and chain store undertakings in this country have drawn a reply in the form of an independent test of stocks by accountants, although the directors retain responsibility for values, at cost or market price. Profits, after providing for management, salaries and other expenses, have increased from £242,998 to £290,422, and the dividend, maintained at 55 per cent. on an increased capital, is covered by earnings of 68 per cent. Although the stock figure is reduced from £693,000 to £669,000, other assets show a substantial expansion. Interests in subsidiary and associated companies have increased from £239,151 to £735,799. Associated property companies are responsible for £361,684 of this increase, while the Publix and Paramount Stores interests account largely for an advance of £123,100 in shareholdings in associated and subsidiary concerns. The company, in short, is still expanding at

EVERY MAN'S AIM CAN BE ACHIEVED

How often have you wished that you could save to provide yourself with a worth-while Income when you retire?
How often have you wished that you could make certain that this income would be payable to your wife if you left her a widow?

THE RETIREMENT INCOME & WIDOW'S INCOME POLICY

is the most comprehensive plan of personal and family income provision yet devised. It provides:

- A Joint Income for life for both husband and wife from a selected retirement age.
- An Income for the lifetime of the widow should the husband pre-decease her at any time.

Thus your aim can be achieved simply and without large outlay. Incomes of any amount in units of £50 per annum can be assured. If you will quote your own age and that of your wife an illustration will be furnished for your consideration. An enquiry will cost you nothing and you incur no obligation in making it.

LEGAL & GENERAL ASSURANCE SOCIETY LTD.

Head Office: 10 Fleet St., London, E.C.4.
Established 1836. Assets £40,000,000

a rapid rate. This very speed, to investors in this country, is not an undiluted bull point. The 5s. shares at 32s. 6d. yield 8.8 per cent.—a return in line with many South African industrials.

Sub Nigel.—It was expected that Sub Nigel would a year ago establish a fresh record, and the small advance in working profits fulfils these hopes. Certain minor additions to the treatment plant permitted a further increase in tonnage crushed; and although the yield per ton fell somewhat sharply, while costs showed only a small reduction, the total working surplus slightly exceeded that of the previous year. Unfortunately, a new method of determining the company's taxable income has upset the record. Several companies were affected by this decision of the South African Inland Revenue, but none in so marked a degree as Sub Nigel, which has to provide practically £258,000 more in taxation than the expected amount. Consequently, the dividend for the second half of the year ended June 30th had to be cut by 1s. 6d. to 7s. 6d. Recent results are summarised below:—

	1935	1936	1937
Ore crushed tons	568,200	632,700	685,000
Yield per ton	112/1	107/4	101/11
Cost per ton	34/6	33/9	33/5
Profit per ton	77/7	73/7	68/6
Total working profit	£2,205,240	£2,328,320	£2,345,720
Dividends, amount	£1,350,000	£1,434,370	£1,392,190
Dividends, per cent.	180	170	165
Carried forward	£73,540	£84,030	£107,480
Development footage	109,270	119,700	120,370
Ore reserves tons	1,818,000	2,099,000	2,124,000
Average value dwts.	15.6	15.1	14.9

No material changes are shown in the ore reserve figures. During the period 147,000 shares of the company's holding in the Vlakfontein were sold, reducing that interest to 120,570 fully paid and 432,430 partly paid shares; while the realisation of a small lot of Spaarwater reduced Sub Nigel's interest to 288,420 shares. The profit on these sales, amounting to £365,240, was placed to reserve; but from the latter, £179,870 was transferred to appropriation account—representing, in effect, a substantial contribution towards the provision for increased taxation. Investment holdings now appear in the balance sheet at £104,000. Under present conditions the market does not anticipate that the dividend for the current half-year will be restored. On this basis the gross yield indicated is about 7½ per cent.

Other Company Results.—The results of some fifty further companies are dealt with in our usual analysis on page 192. The heavy industries in particular have provided two very satisfactory improvements—those of *Fairfield Shipbuilding* and *Lambert Bros.* The results are discussed on page 190 under the heading "Shorter Company Comments."

Company Meetings of the Week.—Reports of company meetings will be found in this issue from page 182 onwards. Sir Walter Benton-Jones's survey at the *United Steel Companies* meeting is discussed in a Note on page 174. The leading article on page 171 on copper shares refers to Mr Chester Beatty's address to *Road Antelope* shareholders. Sir Louis Sterling, at the *Herrburger Brooks* meeting, said that despite increasing costs, the board felt confident of maintaining its proportion of trade. At the *British Rubber Estates of Java* meeting, the chairman remarked that all three commodities, rubber, tea and coffee, had contributed to the increase in profit. Mr A. P. Hadow reported at the *Batu Rata (Sumatra)* meeting that rubber exported during the year realised 8.78d. per lb. gross, against 6.87d. *Broome Rubber Plantations* members were informed by Sir Lionel Smith-Gordon that while rubber sales had doubled in value, the total cost of production had risen by only two-thirds. At the *Gold Exploration and Finance Company of Australia* meeting the Rt. Hon. L. S. Amery pointed out that the greater part of the exploratory stage had been achieved.

THE WEEK IN THE MARKETS

THE STOCK EXCHANGE

SETTLING DAYS

TICKET: NOVEMBER 2 ACCOUNT: NOVEMBER 4

THE London market tried to show a courageous heart on Monday this week, ignorant that Wall Street was preparing its worst day, as the headlines told, since 1930. The other surprise was the unexpected announcement on Wednesday, after the "House" had officially closed, that the Italian Government had assented to the Anglo-French proposals just when all seemed lost. So the markets have presented two violent contrasts—the gloom which accompanied Tuesday's fog and followed Wall Street's collapse, and a later degree of optimism regarding the European outlook which gives, it would seem, full weight to the opportunities which may emerge from the Italian assent.

The gilt-edged market opened steady, but the disappointing result to the Sheffield issue created an inauspicious atmosphere. Yet on Monday prices were virtually maintained, and it was not until the following day that a combination of Paris selling and political tension *cum* Wall Street depressed prices. Old Consols were particularly affected with a fall of ½. Small mid-week sales met no resistance, and the Sheffield scrip went to one point discount. On Thursday, however, an appreciable, though not fully held, recovery occurred.

In the foreign market, Japanese bonds were initially depressed, but showed some mid-week recovery. Reports of disturbed political conditions in Brazil caused appreciable trading, while German bonds were offered on the setback in the trade figures.

L.M.S. ordinary made a good start among home rail stocks, but even on Monday the best prices were not held, and half-point falls were common the next day. The traffics were again below the best expectations based on the 5 per cent. increase, and the whole market again retreated, only to share in the general recovery on Thursday. The Argentine rail market was not impressive. An early demand for Cordoba debentures was based on expectations of a Government lease, although the labour situation soon checked the rise. The rest of the market was heavy, and even the encouraging nature of the B.A. Great Southern report (discussed on page 173) did not set a better trend.

The industrial market this week has produced movements reminiscent of physical exercises—up, down and sideways. The week started cheerfully with low prices tempting the buyers. A relapse in sympathy with Wall Street followed though selling pressure in London was slight. After a spell of caution the Italian acceptance of the British plan produced gains in every section. In the iron and steel group a good start was followed by slackening interest and then by small but widespread falls. Prices in mid-week were irregular, and on Thursday buoyant. Wm. Cory shares were prominent in Monday's rise and were in consequence the first to suffer in the ensuing setback. Electrical equipment shares were firm, with some temporary preference shown for Crompton Parkinson.

Among motor issues, Morris and Austin were favoured, but Tuesday's depression was not overcome by good reports from the Motor Show—Standard suffering in particular. Wednesday's prices were irregular. The excellent B.S.A. results drew some response in mid-week. Aircraft shares were exceptional in remaining aloof from general trends, Bristol meeting some demand. Shipping issues improved at first on the publication of the freight index, but reacted later. On the whole, textiles were uninteresting. Among shops and stores, O.K. Bazaars received attention on the report. Woolworth, however, reacted at first satisfactory, but later Unilever were depressed on Amsterdam selling. It was not till Wednesday that United Dairies responded to the satisfactory report. Breweries and distilleries were an uninteresting market, with small scattered sales on Tuesday. International counters, after a heavy drop, especially in U.S. Steel & International Nickel, became irregular and then recovered appreciably on Wednesday and Thursday.

Oil shares opened in more convincing style, but renewed selling from the Continent on Tuesday brought a sharp reverse. Royal Dutch was particularly affected by Amsterdam liquidation, and shares with international interest were seriously affected by the Wall Street break. The Italian announcement produced a sharp recovery in the leaders, Shell maintaining an improvement to slightly over ½.

Business in rubber shares continued small, and although quotations were markedly affected on Tuesday, the pressure of selling was never appreciable. It was, however, a day of widespread losses which Wednesday's recovery only partially corrected. Tea shares, apparently, were the one market which rode the Wall Street storm unmoved.

The mining markets showed symptoms of recovery at first, and some investment demand was evident in the Kaffir group. The fear of realisations to meet losses on American stocks, however, caused an all-round fall, and Paris sold its leading favourites. Only a modest mid-week improvement was recorded. The copper company reports strengthened the Rhodesian group on Monday, but the falling metal price overshadowed the results on Tuesday. Mr Chester Beatty's speech and Wednesday's political events brought a sharp rise. Tin shares, however, were considerably affected by the falling price of the metal.

NEW YORK STOCK EXCHANGE

THIS week the market has been experiencing the sinking feeling of the switchback as it plunges into the depths, and in the gloom appropriate to the moment has despaired of ever coming out to daylight. On Monday the market opened with recollections of good investment demand at the end of the previous week, although movements had been erratic. Prices fell steadily for the first three hours of trading and finished weak. The Dow Jones industrial average fell 10.57 points on the day, with turnover at 3,230,000, of which nearly half was crammed into the last hour. Reports of lower steel mill activity were responsible for this gloomy day. By the end of the second hour on Tuesday, 3,890,000 shares had been traded and the Dow Jones index was then down to 118.84. Continued selling was attributed to impaired margin accounts. But at that point the market turned, and rose as fast as it had sunk before. At the close the Dow Jones index was up 6.76 points on the opening, and turnover totalled 7,290,000. There were reports of heavy buying by investment institutions and by a leading banking group. Wednesday's enquiries proved that even American investors were not prepared to believe that Tuesday's prices were right, and buying continued, assisted by the Italian declaration, though the best gains were not held on Thursday. *Iron Age* estimates steel mill activity for the current week at 55.5 per cent. of capacity against 63.5 per cent. for a week ago.

COMMERCIAL SERVICE

The Bank has over 370 Branches in Africa, and Agents and Correspondents throughout the world. The closest touch with Trade and Industrial conditions is maintained, with special attention to Commercial and Credit Intelligence. This service is available to Exporters, Importers and others wishing to develop trade with South, East and Central Africa.

THE STANDARD BANK MONTHLY REVIEW is sent post free on application. It gives the latest information on all South, East and Central African matters of Trade and Commercial Interest.

In calculating yields of fixed interest stocks noted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield.

[illegible]

(a) Interim dividend. (b) Final dividend. (c) 12 annas per share. (d) Including bonus of 5% free of tax. (e) Calculated on basis of 18 annas per share or Rs. 9. (f) Taken at 16 annas per share. (g) Yield worked on a 35% basis. (h) Yield worked on a 16½% basis. (i) Special jubilee bonus of 25%.

(*) Based on current annual dividend rate \$2.00 per share. (**) Free of Income Tax. (***) Yield worked on the 35% basis. (****) Total dividend 25 per cent., of which 17½ per cent. cash and 7½ per cent. taken in deferred ordinary stock, to one rupee. (v) Annas per share. (vi) Dividend on old shares, before 80 per cent. capital bonus. Yield at 25 per cent. = {8.3; 0.1.; at 18 per cent. = \$9.19. 0d. (vii) 1931-2 and 25 per cent. dividend on old shares, after 80 per cent. cash bonus. Yield at 25 per cent. = {8.3; 0.1.; at 18 per cent. = \$9.19. 0d.

CAPITAL ISSUES

ONLY one issue—and that an industrial offer—has appeared this week. Although those responsible could not have foretold what was in the Duce's mind, they hit the best market day of the week. Elsewhere, the authorities, recognising that a 10 per cent. subscription of the Sheffield loan and a discount of one point on the new scrip provided inauspicious circumstances for further issues, suggested that the Liverpool Corporation might postpone their loan—understood to be of £3 millions—until the weather is clearer. *Joshua Bigwood and Son*, whose 6 per cent. preference shares are issued at par and the 4s. ordinary shares at 5s. 6d., is a general engineering concern, whose profits have nearly doubled, taking an annual rate, during the latest period. The profits record, set out for a span of nine years, shows that the depression was weathered with four years of stable profits but at a level which would present a different earnings percentage from the 16 per cent. shown on the issue price, and based on the profits of the latest period. Statements for information only have been published by *Hardwick Colliery*, *Bazaloni Tea*, *Fourth Conversion Investment Trust*, and the *Province of New Brunswick*, which seeks permission to deal in 5 per cent. thirty-year debentures due 1962.

COMPANY MEETINGS

UNITED STEEL COMPANIES, LIMITED

SUBSTANTIAL INCREASE IN EARNING CAPACITY
INCREASED DIVIDEND ON LARGER CAPITAL
CONTINUED PROGRESS OF THE INDUSTRY
BENEFITS FROM CO-OPERATION AMONG PRODUCERS
IMPORTANT WORKS EXTENSIONS
SIR WALTER BENTON JONES'S ADDRESS

The seventh annual general meeting of the United Steel Companies, Limited, was held, on the 15th instant, in the Council Chamber of the Federation of British Industries, 21 Tothill Street, London, S.W.

Sir Walter Benton Jones, Bt. (the chairman), presided.

The Secretary having read the notice convening the meeting and the report of the auditors,

The Chairman said:—Ladies and gentlemen,—I have to move: "That the report of the directors produced, together with the annexed statement of the company's accounts at June 30, 1937, duly audited, be received, approved and adopted," and I assume that you take both the report and the statement of accounts as read.

PROGRESS IN GENERAL RECOVERY

For the last four years at these meetings I have been able to refer to continued progress in general recovery from the great depression of 1931 and 1932. Since our last meeting the industrial activity of the world has risen to a level never reached before. In this country in the industries in which we are engaged demand in the last two years has been persistent, and is producing a state of prosperity much needed to make up for the lean years of the past.

Our company began to recover a little sooner than others in the same industry. Nevertheless, it still continues its upward progress, and the accounts and report which your directors have had the pleasure of placing before you show the progress made in the last financial year. The balance of profit shown in the profit and loss account, you will see, is £1,850,330. The continued progress is due not only to a larger volume of production, and latterly to some extent to rising prices, but also to economies which have resulted from the money we have spent in recent years on improvements and extensions, which economies have substantially increased the earning capacity of the company. It is interesting also to note that no benefit has yet been derived from the increase in capital made last year.

I am afraid you may have found the report rather bulky. We attached to it an addendum giving a short account of the various branches of the company which we hope will give you a clear picture of its properties and show you the part which the company is playing in the steel trade, both in meeting the present heavy demand and in development. The outstanding features of this account are, I think you will agree, the broad basis on which our business is founded, the spreading of our activities over three industrial areas, our resources in raw materials, and the number and variety of the products which we make. I hope you have found the addendum interesting and that it will be useful to you for future reference, but I do not want you to think that we shall make a practice of inflicting upon you so large a volume.

PROVISION FOR DEPRECIATION

In the report itself, the balance of profit shown in the profit and loss account, the provisions to be made for depreciation and obsolescence, for taxation and for redemption of debenture stock, our contribution to pension schemes, the addition to general reserve, the dividend recommended and the balance to be carried forward are clearly set out. The provision for depreciation and obsolescence is larger than the amount required by the formula adopted in 1933 and is more than was provided last year, but the directors think it is wise to make a larger provision in a good year. Moreover, as plant and machinery are increased the risks of obsolescence, a thing which cannot be accurately measured, become greater, and it is necessary to make substantial provision against them.

In the profit and loss account both the interim dividend paid and the final dividend recommended are shown as debits. The

result of this change in form is to show in the profit and loss account the total sum paid in dividends and to leave as the balance taken to the balance sheet the actual amount to be carried forward to next year.

In the balance sheet all the issued capital is now on the same footing and is shown as one figure. The final payment on the shares issued in May, 1936, was made in July of that year, all the shares are therefore fully paid and they have been converted into stock. Creditors and sundry amounts outstanding are lower, due to payment of amounts outstanding on account of capital expenditure. There is an increase in amount owing to subsidiary companies. The other variations on the capital side of the account have been explained in the report.

ADDITIONS TO THE ASSETS

On the other side additions to fixed assets have increased freehold land and properties by £308,000. These additions to the assets of the company, with the additions made by subsidiary companies, amount to a total sum of £946,724. The available cash resources now appear under three heads, Government securities, money at short notice, and cash at bank and in hand. They have been augmented by the final payment on the new shares amounting in round figures to £1,500,000 and stand at £3,900,000.

Under the heading of shares in and amounts owing from subsidiary companies the reduction in the value of shares and in & Sons, Limited, of Sheffield, and the amount owing on current subsidiary companies unpaid to June 30th is larger than in the previous year. Lastly, there have been some additions to investments in associated companies.

DIVIDEND OF 8½ PER CENT.

The final dividend recommended is 6 per cent., less tax, making 8½ per cent. for the year. Not only is this an increase of 1 per cent., but it is payable upon the present capital, which is one-third or £2,205,455 greater than the capital which ranked for dividend last year.

That concludes what I have to say about the report and accounts. They are, I feel sure you will agree, the most satisfactory we have as yet presented to you and indicate a substantial strengthening of the position of the company.

We must remember that an important part has been played by our staff in obtaining these results. Our staff is highly organised, it is comprised of competent and energetic men who have the interests of the company at heart and I believe are proud of it. I am sure we shall all wish to convey to them our appreciation of their work. (Hear, hear.)

I wish also to refer to our workpeople, with whom our relations are cordial and friendly. I believe they too take an interest in the progress of the company and will like to know that we have remembered them at this meeting. (Applause.)

THE OPERATING SIDE

When I turn to the operating side of our business and our works I find difficulty in picking out matters of outstanding interest. To those of us who are engaged in the every-day work so much seems of exceptional interest that to give an account of the operations of the year would fill a large volume. To some extent the addendum will give you an idea of the work in which the company is engaged, and perhaps all I can usefully add is information about the rate at which the works have been operated and the prospects of the immediate future. I shall also say something about what is called the reorganisation of the steel

trade and I shall tell you something more about the extension at Appleby-Frodingham.

In the present state of demand there are few departments in any steelworks which have not been working at full capacity during the last twelve months. Our experience is that the increase in demand at home is general, with shipbuilding perhaps leading the way. We have also increased our export trade, especially in the second half of the year. The demand both at home and for export continues.

The quantities of coal, coke, pig iron and steel ingots produced by the company are given in the addendum to the report, and you will have seen that in each case the figures are higher than in the previous year. The finishing departments have also been well occupied.

HIGHER COSTS

Costs are higher. We have to give more for the materials which we buy and we are paying higher wages to our employees. The price of coal, which affects us as buyers as well as sellers, has risen gradually throughout the year, but the total increase of 1s. 3d. per ton recorded by the Mines Department cannot be regarded as excessive. Latterly the prices of steel have been advanced to meet the increased costs of production, but these advances assisted us only in the last two months of the year.

When trade activity rises it is inevitable that prices also rise, and when this happens it is not unusual for buyers to complain. At the present time we hear complaints of the price of steel and of other things, and there is an implication that prices are higher than need be because as a result of organisation there is now closer co-operation among producers. When we consider that the consumption of steel has more than doubled since 1932 we should not wonder so much why prices have risen but rather be surprised that the producers are able to go so far towards meeting the increased demand.

ADVANTAGES OF CO-OPERATION

In my opinion, and I am sure this is shared by all steelmakers, prices would have been higher than they are now if the present system of co-operation in the trade had not been established. I think close investigation would show that where a trade is organised and producers are co-operating, the variation in prices is less and certainly is more gradual than where individuals without any restraint are free to fix any price they may choose. I can give two examples affecting our own operations. In the coal-mining industry very large quantities of timber are used in the form of pit props. These are nearly all imported, and it is usual to buy them over comparatively short periods varying from six to twelve months. Quite recently without any warning prices have been doubled. This action has raised the cost of mining coal by several pence per ton.

Another example is the price of coke, which is not controlled and of which I may speak without prejudice because we ourselves are large producers. In some districts the price of coke has risen out of proportion to the increase in cost, that is to say, it has been increased arbitrarily, and this increase is tending to push up the prices of things in the manufacture of which coke plays an important part. I should like to say about the prices of steel that they are not fixed arbitrarily but only after consideration by very responsible persons, including the Import Duties Advisory Committee, who have the opportunity of reviewing all the circumstances which may justify an increase in price.

CRITICISM ANSWERED

A few weeks ago it was announced that the German State proposed to develop as a public enterprise low-grade iron ore in certain ore fields which had not been previously developed, and that part of the State plan was to build on these ore fields three large new works to produce annually several million tons of iron and steel.

This was made an occasion to criticise the British iron and steel industry. It was stated that this enterprise had been made possible by adopting a new British process for smelting low grade iron ores, which it was suggested was not receiving the attention it deserved in this country, and it was said that reorganisation of the British iron and steel industry had gone only a little way.

I do not object to criticism; it is stimulating; nor do I wish to be argumentative. But there are over 24,000 stockholders in our company and some of them may ask if this criticism is well founded. It is not. There is nothing new in smelting low-grade iron ores in this country. In none of our iron ore fields, with the exception of the relatively small hematite field on the north-west coast, does the average iron content exceed 32 per cent., and in North Lincolnshire it is only 22 per cent. In the Midlands

it has been the practice for many years to rely entirely upon these lean ores, and the ores which it is said the German State is now proposing to develop are certainly not leaner than the 22 per cent. ores which have been successfully smelted in North Lincolnshire for over 70 years.

QUESTION OF NEW PLANTS

When people speak about reorganisation of an industry it is not always clear what they mean. Frequently the word is used to mean the replacing of existing works by complete new works designed in imitation of works operating in some other country. But the fact that works of a particular kind or size seem to those who build them in another country the most suitable for their needs is not in itself a reason for imitation by others. In this country, when new plant is required either to replace what is worn out or to supply a new demand, there will be general agreement that it should incorporate all the knowledge and experience gained in any and every country of what is most suitable for the duty it has to perform.

It may be taken that important new installations in this country will stand this test. But the real question in this aspect of reorganisation is, to what extent and when, plants which are less modern than the practice of to-day should be replaced? Many plants no longer new have many years of life left in them and are still only a little less efficient than modern plants, which in addition to the high capital charges they have to bear require nearly full-time operation to be economical. The answer to this question surely is that the time and extent of replacement must depend on the circumstances of each case.

MACHINERY FOR CO-OPERATION

Others who criticise the industry mean by reorganisation machinery for co-operation. This question of co-operation in effect is a question of management in its broadest sense. The steel industry is what it is, and whether its shape is good or bad it cannot be altered in a moment. It consists of all the undertakings engaged in what is called the heavy steel trade, and these it should be noted are already concentrated in a small number of units, and a large number of undertakings which form the finishing end of the industry. These are managed by a number of individuals, but if at a single moment the management could be concentrated in one man or in a single governing body, there would still be the same number of units and they would still require the same number of individuals on the spot to direct them.

Without a system of co-operation the difference between these two systems of management would be that while the individual managing each unit, without a system of co-operation, would do what seemed best to himself, the individuals managing under a centralised system would do only what the governing body directed. It would answer no purpose to consider the relative merits of these two extremes because we have left the first and have not yet arrived at the second. The question which arises really is, how far towards the second we should go and at what speed? I think the answer to this question is that experience will show, and we must learn to walk before we try to run. Few indeed advocate complete centralisation, but if we look at what has been done already we find much progress has been made.

BRITISH IRON AND STEEL FEDERATION

Within the last few years complete machinery, which we call the British Iron and Steel Federation, has been designed for securing far-reaching co-operation. The machinery, which incorporated all existing co-operating machinery, brings all these bodies together and co-ordinates their activities so that they may carry on their business without hurting one another and at the same time provide the quantities and kinds of steel which are required of them. The Federation is governed by a council and an executive committee of elected representatives; Sir Andrew Duncan is a whole-time chairman and he works with a small consultative committee selected from the executive committee.

EFFECTIVE CO-OPERATION

This organisation was designed by the industry itself and has been accepted voluntarily. It may not be unreasonable to claim that except in matters of detail, which cannot be adopted without a great deal of preparation and which experience may prove are not necessary, co-operation is now as complete and as effective as in any other country. The organisation negotiates for the whole of the trade with the international steel cartel and it sells all the heavy steel which is exported abroad. Recently it has organised the distribution among its members of home-made scrap and has made collective purchases of all the pig iron and scrap required to be imported from abroad. It is in effect controlling

the prices of many classes of steel and it is consulted by all who contemplate major additions and improvements to their works.

A few months ago the Government asked the Import Duties Advisory Committee to make an investigation of the iron and steel industry. The Import Duties Advisory Committee has at all times taken great pains to understand the working and the needs of the industry and has rendered great assistance in the working out of its problems. The report of this committee does not bear out the suggestion that the steel trade is not proceeding with re-organisation sufficiently fast; on the contrary it says in so many words that great progress had been made.

WORKS EXTENSIONS

I now come to extensions to the works. The most important of these are at Samuel Fox and Company and at Appleby-Frodingham.

At Samuel Fox and Company we are developing the making and finishing of finer products, and the greater part of the extensions and improvements which we have made there and are still making are for this purpose.

The policy of developing Samuel Fox and Company as a special steel works has been fully justified by results. It will interest you to know that we find more and more that special steel development must go hand in hand with specialised research. Our central research laboratory, which is situated at these works under Dr Swinden, has assisted in the production of new products to a remarkable extent, as well as in the reduction of cost of our general products. You will also be interested to know that the new steels we are constantly producing are for the service of new rapidly developing industries making goods for consumption. Our trade with them should not be affected by fluctuations in demand to the same extent as are many of the heavy steel products which we manufacture and which are required for capital purposes.

CAPACITY OF NEW PLANT

The scheme of extensions at Appleby-Frodingham is by far the largest we have so far undertaken, and I shall therefore tell you something more about it.

Here we are building a new blast-furnace works, a new coke-oven works, we are extending the steel-melting shop, and we are adding to the rolling plant. The new blast-furnaces and coke-oven works are placed on new ground, and this part of the scheme includes a complete layout for the assembling and stocking of raw materials, additional facilities for railway traffic, and consequential alterations to the layout of the existing works. The scheme makes provision for duplicating the blast-furnace works and the coke-oven works at a later date. The present extension will increase iron-making capacity to 900,000 tons per annum, the steel-making capacity to 800,000 tons per annum, and will provide 300,000 tons of coke per annum. The provision for duplication makes it possible at some later date to bring the iron-making capacity up to 1,250,000 tons per annum, the steel-making capacity up to 1,000,000 tons per annum, and the coke-making capacity up to 600,000 tons per annum. A part of the extension to the steel-works was put into operation in May of this year. Work on the ironworks and coke-oven works was started in June, and it is expected that they will be completed in the second half of 1938. There is no present intention to proceed with the duplication.

QUESTION OF SIZE OF BLAST-FURNACES

You may have heard it said that blast-furnaces in this country are too small, and you may ask me what we are doing about this at Appleby. I can answer this question most shortly by a series of statements:—

Very large blast-furnaces are only suitable for large steelworks where large quantities of iron are converted into steel, which in turn is manipulated in large quantities.

The largest furnace in the world is in the United States of America, and it is said to be capable of making 1,400 tons of iron per day.

In the United States the opinion now is that a capacity of 1,000 tons per day is the economic maximum.

The ores used in furnaces which produce 1,000 tons per day are much richer than the ores generally used in this country.

In considering the size of a blast-furnace it should be borne in mind that the output of iron from a furnace is no real criterion of its capacity, for this depends entirely on the iron content of the ore smelted. It can readily be seen that an ore containing 50 per cent. of iron would require a furnace of much smaller dimensions for a given daily output than a furnace using ores with an iron content of 20 to 25 per cent. The lower the iron content of the ore, the more coke is required for smelting, so that in dealing with these lean ores some six tons of material has to pass through the furnace in order to produce one ton of pig iron, whereas with richer ores the quantity of material to pass through the furnace

for a ton of iron would be no more than three to three and a half tons.

The economy which has resulted from the use of large furnaces is not altogether the result of the use of large furnaces. The operating of large furnaces requires especially methodical assembling of raw materials and the blending and treating of raw materials. These arrangements contribute to the lower cost of production.

The blast-furnaces which we are putting down at Appleby will be the largest in this country. They will have all the latest arrangements for assembling, treating, and blending of materials, and it is estimated that they will produce 500 tons of iron per day. If these furnaces were fed with the materials which are fed to furnaces producing 1,000 tons per day in the United States they would produce 1,000 tons per day. It can be safely said that these new furnaces will be equal to the best American practice both in output and economy of production.

THE FUTURE

Let us now turn to a consideration of the future.

For some years I have given you figures relating to the production of steel in Great Britain, Western Europe, and the United States of America to illustrate the progress of recovery in the steel trade and to suggest that progress would continue. The demand for steel and the manufacture of steel have completely recovered. I shall not burden you to-day with these figures, which, of course, you can get from statistical records. It will, however, interest you to see in each case the present rate of production compared with the production of 1929.

Production in million tons	Great Britain	Western Europe	U.S.A.
1929	...	...	...
Lowest point reached in depression	9.6	34.2	56.2
1937 (first six months multiplied by two)	5.2	17.3	13.6
	12.6	32.8	57.5

In the first half of 1937 Western Europe had not quite regained the 1929 level, while the United States had just passed it. In Great Britain we exceeded the 1929 rate of production by three million tons per annum, or 31 per cent. We consumed steel at a rate 30 per cent. higher than in 1929. Our exports, which have been stationary for the last three years, were still only at two-thirds of the rate at which we exported in 1929, but they exceeded the rate of the previous three years by half a million tons.

The world's requirements of steel must continue to grow. In this country the regulation of imports will insure for us a generally higher level of production for home use. The raw materials we possess and the geographical advantage of close proximity to the high seas which we share with all British industries make export trade more easy for us than for many other countries. For these reasons it seems certain that the production of steel in this country is now established at a permanently higher level.

COAL TRADE IMPROVEMENT

The coal trade also has shown a marked improvement in recent months. We are now consuming as much coal at home as we did in 1929, and although exports are still only 62 per cent. of what they were in 1929, the volume of them and the higher prices realised have brought much relief to the coalfields engaged in export trade.

I referred at the beginning of my remarks to the high level to which industrial activity rose in 1936. The statistics published by Geneva also tell us that primary production, both non-agricultural and agricultural, passed the level of 1929, the previous peak. It is strange how little attention has been attracted by these records of progress and the evidence they afford of the ability of the world to provide employment and to raise the standard of life.

This great activity is all the more interesting because it follows a universal depression, the depth of which, in the experience of most of us, was unprecedented. So many changes have taken place since then that it is not easy to discover what is the new base line from which trade activity in the future is to be measured, but one thing is certain, the present level is not even yet high enough to provide us in this country with full employment for our labour and our resources. We must do all we can not only to maintain this level but to raise it higher still. (Applause.)

Captain R. S. Hilton seconded the resolution and it was carried unanimously.

The payment of a final dividend at the rate of 6 per cent. making with the interim dividend of 2½ per cent. a total distribution for the year of 8½ per cent., was unanimously approved; the retiring directors, Mr James Henderson and Mr Andrew Jolliffe, were re-elected; and the auditors (Messrs Peat, Marwick, Mitchell and Company) having been reappointed, the proceedings terminated.

ROAN ANTELOPE COPPER MINES, LIMITED

REVIEW OF THE COPPER POSITION

Mr A. Chester Beatty, the chairman, presiding in London, on the 20th instant, at the tenth ordinary general meeting of the Roan Antelope Copper Mines, Limited, said:—With an average realised price of £51 per ton for our copper, and a total all-in cost of about £25 10s. per ton, excluding only taxation, the accounts show a net profit of £1,790,308 compared with £514,487 for the preceding year. After providing for the interim and final dividends for the year, involving the distribution of approximately one million pounds net to shareholders, there still remains a balance of £263,120 to be carried forward, as against £147,445 in the preceding year.

In my review of the copper position of October last year, I pointed out that the consumption of copper was increasing. In Stocks were falling and production was being speeded up. In an effort to meet the demand, producers outside the United States increased production from August to the end of November, 1936, by 16,600 tons a month, and in January, 1937, all restriction was removed. (I am now referring to short tons of 2,000 lbs.) Likewise in the United States operating mines increased their production to full capacity, and a number of mines which had been closed down for several years resumed operations. Increased consumption both in the United States and elsewhere continued until total deliveries reached an all-time high record of 216,800 tons per month in April, 1937. The increase in production, however, eventually made available more copper than was required for the market, and since May production has exceeded consumption, resulting in an increase in world refined stocks of 45,000 tons.

Since the end of August, 1937, production has been curtailed in the United States to bring output more nearly into line with the present requirements, and producers outside the United States have also agreed to restrict as from December 1, 1937, so that their production will be equal to 105 per cent. of basic quotas.

For the twelve months ended August, 1937, consumption outside the United States is estimated at 1,250,000 tons, as compared with 1,044,000 tons during the previous year. Production during the same period was 1,320,000 tons, thus exceeding consumption by 70,000 tons. Consumption outside the United States during the months of June to September inclusive has been at an average monthly rate of 111,000 tons. An output rate of 105 per cent. of basic quota is equal to approximately 112,000 tons per month.

At the present time, world stocks of refined copper stand at 345,000 tons, which is equal to about two months' requirements at the existing rate of consumption.

I have often stated that the copper producers who are members of the restriction scheme do not favour a high price for copper, and I should like to emphasise that the high prices which were reached during February and March of this year were not brought about by any deliberate policy of the producers. These high prices were largely the result of speculative buying owing to a general idea that there was a shortage of all commodities.

The changes which have taken place in the copper industry since I addressed you last year may, therefore, be summarised in general terms thus: In order to meet an upward trend in a consumption producers continued to increase output, and in a short time arrived at a decision to produce without any restriction. In the meantime, however, consumers sought to increase their stocks in anticipation of a rise in prices, and this fact, coupled with certain speculative buying, forced up prices rapidly. Within a few months, however, producers were able to bring greater supplies to the market, and a point was soon reached when production again exceeded consumption. Producers are now, therefore, again lowering output slightly, in order to steady the market and to keep supplies adjusted to requirements.

The quarterly statement of our estimated revenue and expenditure to September 30, 1937, will be issued to shareholders with reprints of the proceedings at this meeting, and will show an estimated net profit of about £686,500, subject only to taxation. The average revenue from copper sales for that quarter works out at £58 9s. 4d. per ton, against an average for the last financial year of £51.

In accordance with the arrangement between producers to restrict output to 105 per cent. of basic quotas, the company's monthly quota, beginning December 1, 1937, will be 5,900 long tons of fine copper.

The report was unanimously adopted.

GOLD EXPLORATION AND FINANCE COMPANY OF AUSTRALIA, LIMITED

PROGRESS TO DATE

The third ordinary general meeting of this company was held, on the 19th instant, in London.

The Right Hon. L. S. Amery, M.P., chairman of the company, in the course of his speech, said:—In addition to interest on funds and loans amounting to £11,598 net, the profit and loss account this year includes a credit of £8,383 in respect of dividends on our holding in Triton Gold Mines. Transfer fees amounting to £158 bring the total revenue up to £20,139. After deducting directors' fees, and the expenses of the London and Melbourne offices, there remains a balance of £10,454. The whole of the cost incurred on the note issue, namely £9,058, has been written off, together with the balance of the expenses in connection with the formation of the company, against part of which there has been set off the amount standing to the credit of share premium account.

This tidying up of the position results in a debit balance of £788, which is carried to the balance sheet, and, together with the deficit brought forward from last year, makes a total of £21,566 to the debit of profit and loss account at March 31st last.

Our investments in the shares of subsidiary companies at the date of the balance sheet were £577,549, and in associated companies £322,636, a total of £900,185. Where quoted, some of our investments show at the present moment a considerable discount on cost price. It will not be possible to determine the value of our mining investments until we are in possession of more complete results from the extensive programme of development which has been in progress for some time on several of our more important properties. When we have this information we shall be able to determine what steps, if any, are necessary or desirable to adjust our balance sheet values.

There have been only two alterations of importance in our shareholdings during the year. One is our interest in Victoria Gold Dredging Company, which figures for the first time in this year's accounts. On our holding of 182,625 shares in this company—representing 73 per cent. of the issued shares—the sum of 4s. (A) per share had been called up at the date of the balance sheet. The other is the increase in our holding of Gold Mines of Kalgoorlie by 20,000 shares credited as fully paid.

Our cash position in London and Australia at the close of the year under review (excluding subsidiaries) amounts to £215,000, against a net debit, including loan, of £77,000 a year ago.

EXPLORATION SUCCESSES

Let me remind you that it was as recently as July, 1934, that this company entered upon the business of exploration in the hope of locating and subsequently developing and equipping profitable producing mines. The element of speculation must obviously enter into such a programme, and complete success in every item was scarcely a reasonable expectation. We have had disappointments, of which Bendigo is an example. Nevertheless, we are now in a position to say that the greater part of the exploratory stage lies behind us and that its results have, on balance, been definitely successful. You will realise that the further stage of building up and equipping big mines with all the necessary services, including housing, in relatively remote centres, involves not only capital aid effort but a considerable period of time before the full reward of enterprise can be expected.

Meanwhile Gold Mines of Kalgoorlie has just paid its maiden dividend, less than three years after its formation, and appears to be well set on a profitable career. At Central Norseman an extensive campaign of exploration has given results justifying the development and equipment of the property as a major producer. In Triton we have a large interest in a good mine. Cox's Find is yielding satisfactory profits to the Western Mining Corporation. Evanston and Waverley have definite chances, while the new find which we have under option at Mount Ida, near Leonora, looks as though it might be something out of the ordinary.

These interests, together with dividends which the estimate of our technical advisers entitles us to expect from Victoria Gold Dredging, confirm my statement that we have been definitely successful in the opening stage of our working campaign and can look forward to the future with confidence. So far as the coming year is concerned, providing that nothing untoward happens in international affairs, and there is no artificial interference with the price of gold, we should record substantial progress.

The report and accounts were adopted.

HERRBURGER, BROOKS, LIMITED

PIANO TRADE PROSPECTS

The seventeenth annual ordinary general meeting of Herrburger, Brooks, Limited, was held, on the 18th instant, in London, Sir Louis Sterling (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said: The gross profit shows an increase of approximately £1,000, but, unfortunately, this is offset by the necessity to provide for the National Defence Contribution as well as a slightly increased charge for income tax. As regards the latter, the charge represents, as usual, the sum necessary to maintain the income tax account at a figure which will cover all liability in respect of profits made up to and including the year under review. As regards the National Defence Contribution, it should be realised that so far as the accounts under review are concerned, owing to the date of commencement of the contribution, it has been necessary to provide for a quarter of the year only. For next year, therefore, assuming that the profits are maintained on the present basis, a further charge of approximately £1,500 will be necessary.

Advantage was taken by your directors during the year of re-investing in British Government and British Government Guaranteed Securities a considerable portion of cash held on deposit. These securities have been included in the balance sheet at cost, but the actual market value at June 30th last, and at the present moment, is less than the figure shown to the extent of about £3,000. As stated in the report, it is proposed that a final dividend of 9 per cent. should be paid as last year, and that the balance of £28,180, against £24,573 brought in, should be carried forward in the profit and loss account.

With regard to subsidiary companies, these are wholly owned and are in possession of assets consisting only of cash, and no profit or loss arises out of the affairs of these companies. This method of keeping the accounts of the subsidiary companies ensures that the results of all the trading of your company are shown in the accounts presented to you.

PROSPECTS OF CONSIDERABLE EXPANSION

The remarks I made last year have been justified by the results now before you, and while at the moment, owing to various influences, many trades, including our own, appear to show a little hesitancy in their progress, we feel that this is of a temporary nature and that the piano can at any rate be considered as re-established on a firm basis with, of course, prospects for considerable expansion. As I have stated on previous occasions, we are in what might be called an unfortunate position inasmuch as, being suppliers to the trade only, we can do little to influence the retail trade in any direction, but whatever that trade may be, we feel sure that we shall continue to have our usual proportion thereof. We have, however, been able to make one little contribution towards that end inasmuch as, notwithstanding the increases which have taken place over the last few months both in wages and raw materials, we have so far not increased the prices of our products. At the same time, our policy is still, and will continue to be, not only to maintain, but if possible to improve, the high standard of quality which has always been associated with our products. Given, therefore, general trade prosperity, the piano trade should undoubtedly take its share, and provided these hopes materialise your directors feel that they can view the future with confidence and optimism.

The report and accounts were unanimously adopted.

BRITISH RUBBER ESTATES OF JAVA (1932), LIMITED

LARGELY INCREASED PROFIT

The fifth ordinary general meeting of British Rubber Estates of Java (1932), Limited, was held, on the 19th instant, at 38 Mark Lane, London, Mr James Davenport (the chairman) presiding.

The Chairman, having first referred to the loss the company had sustained by the death of Mr Stanlake Lee, said:—When we met twelve months ago I expressed the hope that at our meeting to-day I should have a more cheerful story to tell. That hope has been realised. The accounts now before us are the best we have had since 1928, and the improvement shown the three commodities produced by us have all contributed. Briefly, the working result for the past year was a profit on rubber of £59,164, on tea a profit of £9,619, and on coffee £2,669, or a total gross profit of £71,452. The corresponding figure in the preceding year was £12,463, so that the improvement last year was no less than £58,989.

The balance sheet, as I have just said, shows a strong and liquid position with cash, Government securities and produce totalling upwards of £130,000. The taxation reserve of £5,136 appearing in our present balance sheet is in respect of last year's working, and provides for taxation in Java and also in this country, including the new N.D.C. tax.

I have pleasure in proposing "That the directors' report and the audited accounts for the year from July 1, 1936, to June 30, 1937, as circulated and submitted to this meeting, be and they are hereby received and adopted, and that a dividend at the rate of 5 per cent. per annum, less income tax at 5s. per £, be declared."

The resolution was carried unanimously.

BROOME RUBBER PLANTATIONS, LIMITED

IMPROVED RESULTS—DIVIDEND OF 15 PER CENT.

The fourth annual general meeting of this company was held, on the 20th instant, at 19 Fenchurch Street, London, Sir Lionel Smith-Gordon, Bart. (chairman), presiding.

The Chairman, in the course of his speech, said: The profit for the year was £32,342 11s., and the directors propose to pay a final dividend of 10 per cent., making 15 per cent. for the year, and carry forward a balance of £5,704 17s. 9d., subject to directors' additional remuneration and staff bonus.

Rubber sales at £61,262 are more than double the corresponding figure of £30,081, while on the other hand the cost of producing the exportable crop was £28,668, against £17,428, or about two-thirds more. The net average price realised for 1,725,371 lb. of rubber exported was 8.52d. per pound, which is equal to 9.3d. per we obtained for last season's crop. F.o.b. cost works out at 3.99d., as compared with 3.7d. per pound. The small increase is due to rising costs generally, and may be considered satisfactory.

Standard production for the year 1937 has been assessed at 2,476,884 pounds, of which 90 per cent., or, say, 2,230,000 pounds, may at present be exported. The output for the three months July-September amounted to 599,380 lb., so we are ahead of our already sold 680,000 lb. of the new season's crop at a price equivalent to 9½d. per pound London landed terms.

We have embarked on a steady replanting programme, so that areas which are uneconomic may be replaced with high-yielding stock.

We have started the year well, but recently the price of rubber has fallen sharply owing to causes mainly not concerned with rubber. We must not forget that the rubber regulation scheme that if our commodity remains below, say, 9d., the committee will not make a cut in the January-March exportable quota to restore the price to a fairer level.

The report and accounts were unanimously adopted, and the alterations in the articles of association were approved.

BATU RATA (SUMATRA) RUBBER PLANTATIONS, LIMITED

DIVIDEND OF 10 PER CENT.

The twenty-seventh annual general meeting of this company was held, on the 19th instant, in London.

Mr A. P. Hadow (the chairman) presided, and, in the course of his speech, said that the crop of 930,692 lb. of rubber harvested for the season was approximately 30,000 lb. more than they were permitted to export. With crops larger than anticipated the problem had been how to confine the harvest to requirements under the restriction scheme. The quantity of rubber the company was permitted to export during the year realised the gross average price of 8.78d. per lb., as compared with 6.87d. per lb. for the previous year.

The result of the year's working was a net profit of £15,678, and the total at credit of profit and loss account was £19,745. The directors had allocated £1,000 to special cultivation reserve account; the interim dividend of 2½ per cent. absorbed £3,750, per cent., which would take £11,250, leaving £3,745 to be carried forward.

In the present anxiety concerning affairs in certain parts of the world, shareholders would not expect him to express views regarding the future. He thought they all felt that the inter-

national regulation of rubber exports had operated in a fair and reasonable manner for both consumers and producers, and that it was directed with skill and efficiency by the International Committee. As producers, they had to watch very carefully their costs and the quality of their produce, and do what they could to assist the manufacturers to increase consumption.

The report and accounts were unanimously adopted.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended October 16, 1937, amounted to £12,527,000, against ordinary expenditure of £16,461,000. After increasing Exchequer Balances by £97,225 the operations for the week, as shown below, increased the gross National Debt by £4,304,000, to about £8,231 millions.†

DIVIDEND ANNOUNCEMENTS

WYMAN AND SONS, LTD.—A scheme of arrangement is to be considered at meetings on November 11th. The proposals are that preference arrears of £94,628 gross should be cancelled, and that the fixed preference should be written down by £230,395, provided as to £110,108 by assets should be written down from general reserve, and £10,287 from profit reduction of capital, £10,000 from general reserve, and £225,054 6 pence and loss account balance. Existing capital of £490,108 in £225,054 6 pence and £145,054 7 pence preference shares and £120,000 ordinary shares is to become £380,000, all in ordinary capital. Holders of 6 pence preference shares will receive £140,000, 7 pence preference £105,000, and ordinary £35,000, representing reductions per £1 share of about 5s. 6d. and 14s. 2d., respectively.

‡ Free of Income Tax. (a) Paid on a larger capital. (b) Eleven months.
(d) To date.

mills in operation at the end of September than at the end of August, and 62 more than at the end of September, 1936, and, according to the latest returns, production represents 76.97 per cent. of allocated capacity. There is a steady demand for sheets as well as tinplates, and the blast furnaces and steel works are also fully employed under heavy contracts. Prices are unchanged. Shipments of tinplates at Swansea last week totalled 6,807 tons, compared with 11,723 tons the previous week and 9,650 tons a year ago, but there has been a good inland demand, and stocks show little change compared with the previous week.

OTHER METALS

COPPER.—After considerable fluctuations, the market closed on Wednesday showing a net loss on the week. Towards the end of last week sentiment improved owing to reports of better consumption and to the fact that September's increase in stocks was less than had been anticipated. On Tuesday, however, there was a sharp break in sympathy with the slump on Wall Street and with the decline in the U.S. domestic price. Quotations in London fell to the lowest level of the year and liquidation was heavy. On Wednesday some recovery took place following the improvement in the political outlook and the firmer tendency on Wall Street. The London market in copper closed on a firm note, and a further gain was recorded on Thursday.

The American Copper Institute statistics, published last week-end, showed that world stocks of refined copper rose by 13,420 tons from 331,310 tons in August to 344,730 in September. The rise was less than expected, for apparent consumption showed a recovery from 170,180 to 183,900 tons between August and September. World output last month aggregated 197,320 tons compared with 188,385 tons in August. Sales on the London Metal Exchange: 900 tons on Monday, against 1,550 tons last week; 3,300 tons on Tuesday, against 2,500 tons last week; 3,200 tons on Wednesday, against 1,700 tons last week. Domestic spot was quoted at 10.77½ cents per lb. in New York on Wednesday, against 11.57½ cents a week ago and 12.77½ cents a month ago. Wednesday's official closing price for standard cash in London was £43 7s. 6d. to £43 10s. per ton, compared with £45 12s. 6d. to £45 15s. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 9,630 tons, showed an increase of 831 tons, while stocks of rough copper, at 16,468, were 200 tons smaller.

LEAD AND SPECTER.—After scoring a slight improvement in the early part of the period under review, lead suffered a further setback on Tuesday in sympathy with copper. Dealings were heavy and prices sank to the year's lowest. On Wednesday the market was again barely steady. Specter has also been generally weaker on poor buying interests and reports of declining activity in the galvanising industry. Heavy liquidation carried prices down to a new low level on Tuesday and, despite a fractional improvement on Wednesday, the market closed on that day showing a heavy loss on the week. Quotations are now at a level which makes production in many areas barely remunerative. While it cannot be assumed that prices will not go lower, lead and specter would doubtless both respond favourably to an improvement in copper.

Sales of lead on the London Metal Exchange: 900 tons on Monday, against 650 tons last week; 4,500 tons on Tuesday, against 600 tons last week; 1,050 tons on Wednesday, against 900 tons per lb., against 6.00 cents a week ago and 6.50 cents a month ago. Wednesday's official closing quotation in London for soft foreign for shipment during the current month was £17 13s. 9d. to £17 15s. per ton, compared with £18 to £18 1s. 3d. last week.

Sales of specter on the London Metal Exchange: 1,050 tons on Monday, against 1,050 tons last week; 3,250 tons on Tuesday, against 2,850 tons last week; 1,900 tons on Wednesday, against 1,700 tons last week. Wednesday's quotation in East St. Louis was 6.00 cents per lb., against 6.25 cents the week before and 7.25 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipment during the current month was £16 13s. 9d. to £16 16s. 3d. per ton, against £17 15s. to £17 17s. 6d. last week.

TIN.—The market has been weak during most of the period, and quotations have suffered a decline of some £13 10s. on the week. Besides the general uncertainties of the political situation and periodic bouts of weakness on Wall Street, the market has been depressed by a number of more specific factors. On the supply side, there was a substantial increase in exports from the principal producing areas last month; and though this increase was to some extent merely a reflection of the previous month's decline, it remains true that stocks in the American automobile and tinplate industries, and a certain volume of stop loss orders has contributed to the collapse of prices this week. Some recovery was evident on Wednesday, and a further rise of no less than £14 15s. per ton took place on Thursday.

Exports from the principal restricting countries amounted to 16,827 tons in September, against 14,953 tons in the previous month and a permissible quota of 18,044 tons. Shipments from Malaya increased substantially and were well in excess of the month's quota, but exports from the Dutch East Indies, Nigeria and Siam showed a decline.

Sales of tin on the London Metal Exchange: 350 tons on Monday, against 275 tons last week; 610 tons on Tuesday, against 325 tons last week; 400 tons on Wednesday, against 425 tons last week. The New York quotation on Wednesday was 48.37½ cents per lb., against 51.50 cents a week ago and 59.62½ cents a month ago. Wednesday's official closing quotation in London for standard cash was £210 10s. to £211 per ton, compared with £224 to £224 5s. a week ago. Stocks of tin in London and Liverpool at the end of last week totalled 2,320 tons, an increase of 148 tons on the week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted on Wednesday at £100 per ton, and rolling billets at £102 per ton. Nickel, for home and export, was maintained at £180 to £185 per ton. Quicksilver, on the spot, was £13 5s. to £13 5s. 6d. per flask of 76 lbs., the same as last week. Chinese antimony was quoted at £83 per ton, ex warehouse; as against £83 to £84 last week. Chinese wolfram for "October-November" shipment was quoted at 110s. to 115s. per unit, c.i.f., as against 115s. to 120s. last week. Refined platinum was quoted on Wednesday at £9 10s. per ounce, compared with £9 10s. a week earlier.

TEXTILES

COTTON—Manchester.—Some traders have been confused by the abnormal raw cotton situation and the uncertain political outlook. The opinion is gaining ground, however, that more favourable opportunities of purchasing manufactured goods are not likely to exist in the near future. Considering the big prospective supplies of raw cotton, the recovery in prices in Liverpool and New York has been fairly well maintained. Much depends upon what is done at the special session of the American Congress next month. It is understood that the plan of President Roosevelt will

provide for abundant harvests being absorbed into the national granary, supplies being released in crop failure years. Speculative interest in the article has been very limited.

A steady business has been done in the yarn market. American qualities encouraging sales have been arranged in coarse and medium count twist and weft. The pressure for the delivery of wefts is still very acute. Ring qualities are not so favourably situated as a month ago, but it is reported that the price agreement is about to be placed on a legalised basis. Rather freer buying of Egyptian yarns has taken place.

Inquiry in piece goods has shown some expansion. Some sellers have secured more orders, but others have not been able to report any improvement in sales. Limited operations have taken place for the several outlets of India, although more demand has been met with than earlier in the month. A steady business has been done for South America, the Continent and the Dominions, but home trade buyers have given out orders rather cautiously. Some difficulties are being experienced in absorbing dear goods bought a few months.

JUTE.—Dundee.—The Dundee jute trade is almost idle. Buyers appear to be waiting for lower prices, but, with the rates for raw jute so well maintained, spinners and manufacturers are unable to reduce their terms. The only alternative is to curtail production, and many establishments have stopped looms and are working short time. It is a remarkable fact that, while the imports of raw jute into up-country are several months past, spinners have been anticipating lower prices and Dundee this season to date is only about one-half of that arrived and afloat more freely, a notable increase in the exports of the fibre from Calcutta to Italy and America having taken place.

Jute goods from India are still being imported in large quantities into this country, and for the first nine months of this year piece goods to the extent of 132 million yards were received, compared with 105 million for the same period last year. Dundee interests are still hammering at the question of a quota or tariff on these goods, which are at present allowed to enter free of duty. Negotiations for a new agreement to take the matter is therefore still in abeyance.

The full group of Daisee-2/3 is offered at £19 17s. 6d. and four at £18 17s. 6d., with Tossa-2/3 at £21 and four at £20, October/November. £21 5s., October/November.

Jute yarns are slow in most cases, but Rove and carpet descriptions are best off and very firm. For 48 lb. Rove £21 5s. is now lowest, and for 200 lb. £17 15s. to £18 have been paid. Carpet 14 lb. warp has been largely sold at 3½d. and 3½d. The hessian qualities are more or less neglected at from 2s. 1½d. for common 8 lb. cops and 2s. 2½d. for 8 lb. yarns are dull at 2½d. to 4d. for 3 ply 8 lb., and sacking 39-in. is very dull at from 2½d. for 10 oz. 40 in. and 2½d. for 8 oz., with little or no inquiry being made.

Calcutta goods have ruled unchanged at 17s. 6½d. for 10 oz. 40 in. and 14s. 3½d. for 8 oz. A fair steady business has been done at the primary centre, all buying countries participating.

GRAIN MARKETS

WHEAT.—Prices generally show little alteration, except those for the best grades of Manitoba and Gulf winters, which have risen sharply. The past week, but the bearish influence of this news has been largely offset by a sustained demand. Southern hemisphere crop reports will, however, be of considerable importance for the market in the near future.

On Wednesday last, "December" futures were quoted in Chicago at 99½ cents per bushel, against 97½ cents the week before and 105½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern wheat (Atlantic), ex ship, 58s. 9d. per 496 lbs., against 55s. 9d. last week; No. 2 Northern Manitoba (Atlantic), ex ship, 55s. 9d., against 54s. 3d. last week. According to the *Corn Trade News*, total shipments of wheat and flour last week amounted to 1,365,000 quarters, against 1,448,000 quarters in the previous week and 1,308,000 quarters in the corresponding week a year ago.

FLOUR.—Demand has been quiet and prices are unaltered. Wednesday's London quotations (excluding quota payments) were: 40s. 6d. a week ago; delivered inner London, 40s., as against 40s. a week ago. Manitoba patents, ex store, 39s. 6d. to 41s., as against 38s. 9d. to 32s. 6d. a week ago. Australian, ex store, 32s. 3d. to 33s. 3d., as against 32s. 3d. to 33s. 6d. a week ago.

BARLEY.—Imported feeding barley has been in rather quiet request with prices a shade easier. "October" futures were quoted at 82½ cents a bushel in Winnipeg on Wednesday, as against 84½ cents last week. Quotations per 448 lbs. in London on Wednesday were: "English feed" at farm, not quoted; "English malting" (new), at farm, 50s. to 52s., as against 46s. to 48s. a week ago; Californian, ex ship, 51s. 6d. to 53s., as against 45s. to 48s. a week ago; Chilean, brewing, ex ship, 45s. to 48s., as against 45s. to 48s. a week ago.

OATS.—On Wednesday, "December" futures were quoted at 30½ cents per bushel in Chicago, against 29½ cents a week ago and 31 cents

last month. Quotations in London, Wednesday: "English Black" (new), at farm, 27s. to 28s. per 336 lbs., as against 27s. to 28s. last week; "English White" (new), at farm, 27s. to 28s., as against 27s. to 28s. a week ago; mixed Canadian feed (Vancouver), landed, 26s. 6d. per 320 lbs., as against 26s. 9d. a week ago.

MAIZE.—A rather firmer tone has been in evidence and prices are a shade higher. "December" futures were quoted on Wednesday at 59½ cents per bushel in Chicago, against 58½ cents a week ago, and 65½ cents last month. Quotations in London, Wednesday: "Plate," landed, 28s. 9d. per 480 lbs., as against 29s. 6d. a week ago; "Plate," ex ship, 28s. 9d., as against 28s. 6d. a week ago; "Plate," "October," 28s. 6d., as against 28s. 3d. a week ago; yellow maize meal, ex wharf, was quoted at £7 10s. per ton, as against £7 10s. last week.

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations for selected weeks in 1935-37:—

NEAREST FUTURE	Jan. 2, 1935	Dec. 31, 1935	Oct. 21, 1936	Dec. 30, 1936	Oct. 13, 1937	Oct. 20, 1937
Winnipeg (No. 1, Manitoba) Cents per 60 lbs.	82½	84½	111½	129	121½	125½
Chicago (No. 2, Winter) Cents per 60 lbs.	98½	101½	114½	135½	97½	99½

The visible supply of wheat in Canada amounts to 73,266,000 bushels, against 74,135,000 bushels last week and 87,684,000 bushels in the corresponding week last year.

SALES AND PRICES OF BRITISH CEREALS.—The following table gives the estimated sale of home-grown wheat during the harvest years 1934-35 to 1937-38.

	1934-35	1935-36	1936-37	1937-38
Estimated sales of home-grown wheat—				
1 week to October 16	Cwts. 426,155	Cwts. 462,156	Cwts. 388,877	Cwts. 480,508
7 weeks to October 16	3,584,168	3,377,179	2,562,760	2,734,600
Average price of English wheat per cwt.	s. d. 5 0	s. d. 6 1	s. d. 8 6	s. d. 9 5

The following is a statement showing the quantities sold and the average price of British cereals in the past two weeks, and for the corresponding weeks in each of the years from 1933 to 1936:—

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
October 14, 1933	Cwts. 317,238	Cwts. 527,304	Cwts. 38,598	s. d. 4 10	s. d. 10 6	s. d. 5 5
October 18, 1934	426,155	453,715	68,250	5 0	9 8	6 7
October 19, 1935	462,156	497,969	49,012	6 1	9 3	6 2
October 17, 1936	388,877	474,279	69,620	8 6	10 1	6 10
October 9, 1937	409,570	492,114	74,085	9 3	12 7	8 7
October 16, 1937	480,508	595,175	89,356	9 5	12 9	8 8

OTHER FOODS

BACON.—The market has been slow and prices have an easier tendency. The official quotations (per cwt. for No. 1 Sizable) which formed the basis for dealings on the London Provision Exchange this week were: English, 96s.; Canadian, 88s.; Danish, 95s.; against 100s., 92s. and 99s. last week. Arrivals in London last week included: Danish, 14,263 bales; Canadian, 4,528; Dutch, 2,710; Lithuanian, 1,586; and Polish, 3,519; as against 13,187, 3,929, 2,337, 1,799 and 3,342 bales, respectively, in the previous week.

BUTTER.—The firm tone has been maintained this week and prices have again been marked up. Quotations (per cwt.) on the London Provision Exchange on Wednesday were: New Zealand, finest salted, 137s.; Australian, choicest salted, 137s.; Danish, 146s.; compared with 134s., 134s. and 140s., respectively, a week ago.

CHEESE.—Cheese has been in quiet demand this week but prices, except for New Zealand, have been generally steady. Quotations (per cwt.) on the London Provision Exchange on Wednesday were as follows: English Cheddars, finest farmers, 90s. to 92s.; Canadian, finest coloured, 71s. to 72s.; and New Zealand, finest coloured, 68s. 6d. to 69s.; against 90s. to 92s., 70s. to 72s., and 69s. 6d., respectively, a week ago.

COCOA.—A further sharp break in prices has occurred this week. The spot quotation in New York on Wednesday was 5½ cents per lb., as against 6½ cents per lb. last week. In London, on Wednesday last, good fermented new crop, Accra, "November-January," was quoted at 26s. 9d. sellers per 50 kilos, c.i.f. Continent, against 28s. 3d. a week ago. Last week's movements of cocoa in London were as follows: Landed, 869 bags; delivered for home consumption, 2,887 bags; exported, 845 bags; stocks, 213,996 bags, against 149,825 bags a year ago.

COFFEE.—The London spot market was quiet, while the New York market showed a weaker tendency. On Wednesday, Rio No. 7 (cash) was quoted at 8½ cents per lb., in New York, as compared with 9 cents per lb. last week and 9 cents per lb. a month ago. Movements of coffee in London last week were as follows: Brazilian, landed, 77 cwt.; delivered, for home consumption, 70 cwt.; exports, nil; stocks, 1,834 cwt., against 9,849 a year ago. Central and other South American: Landed, 346 cwt.; delivered, for home consumption, 2,051 cwt.; exported, 281 cwt.; stocks, 80,150 cwt., against 70,578 cwt. last year. Other kinds: Landed, 524 cwt.; delivered, for home consumption, 3,882 cwt.; exported, 740 cwt.; stocks, 73,023 cwt., against 103,169 last year.

EGGS.—The tone of the market has become quiet and rather irregular. But prices generally show little alteration compared with those ruling a week ago. At Smithfield, on Wednesday, English (ordinary packing, Grade 1, about 15-15½ lb.) realised 19s. to 20s. per 120, against 18s. 6d. to 19s. last week; while Danish (15½ lb.) made 14s. 6d. to 14s. 9d., as against 14s. 6d. to 14s. 9d. last week.

FRUIT.—Business at Covent Garden has not been quite so brisk, says *The Fruitgrower*, and prices are generally rather easier. Demand for apples remains good, but with heavier supplies of imported varieties prices are lower. Pears continue in demand at steady rates, supplies being moderate. Some varieties of hothouse grapes have risen in price, while limited quantities of English melons sell at 1s. to 2s. 6d. each. Peaches are inclined dearer. The shorter supplies of cobnuts are worth more,

but English walnuts are now arriving in growing quantities. Brazils are scarce, but larger arrivals of Italian chestnuts are to hand. Blackberries are finishing. With heavier imports from South Africa, oranges have eased in price, while lemons have fallen for a similar reason. Grapefruit, on the other hand, has improved in price in consequence of lighter arrivals.

MEAT.—At Smithfield Market, on Wednesday last, Argentine chilled hindquarters were quoted at 4s. to 4s. 4d. per 8 lbs., as compared with 4s. to 4s. 6d. a week ago. New Zealand frozen mutton was 3s. 4d. to 4s. 2d. per 8 lbs., as against 3s. 4d. to 4s. 2d. a week ago. According to the Smithfield Market official report, supplies during last week amounted to 9,635 tons, a decrease of 149 tons on the corresponding week last year. Beef and veal accounted for 4,846 tons, mutton and lamb 2,858, and pork and bacon, 996, as compared with 4,939, 2,604 and 1,263 tons, respectively, in the same week of 1936.

PEPPER.—On Wednesday, white Muntok, "October-December," was quoted at 3½d. per lb. sellers, c.i.f. Rotterdam-Hamburg, against 4½d. per lb. a week earlier. Black Lampung, spot, in bond, was quoted at 2½d. per lb. sellers, compared with 2½d. per lb. last week. Movements of pepper in London last week were as follows: Black, landed, 1 ton; delivered, 7 tons; stocks, 1,973, against 1,780 last year. White, landed, 59 tons; delivered, 32 tons; stocks, 11,312 tons, compared with 11,957 a year ago.

RICE.—The spot price of Burma No. 2 cleaned was 11s. 3d. per cwt. ex warehouse, on Wednesday, as compared with 11s. 3d. per cwt. a week ago. "October-November," in singles to Continent and U.K., was quoted at 10s. 3d. per cwt., against 10s. 6d. last week. Movements in London last week were as follows: Landed, 32 tons; delivered, 167 tons; stocks, 1,651 tons, against 2,562 a year ago.

SUGAR.—After remaining steady for some days, the London market in raw sugar turned easy at the close of the period under review. New York prices were unaltered. The New York spot quotation was 3-15 cents on Wednesday, as compared with 3-15 cents per lb. last week and 3-42 cents per lb. a month ago. Wednesday's sales of raw sugar in London included "December" delivery at 6s. 4½d. to 6s. 5½d., against 6s. 5½d. to 6s. 5½d. a week ago. Movements of raw sugar in public warehouses in London and Liverpool last week were as follows: Imports, 50,928 tons, against 11,902 in the previous week and 8,720 in the same week of 1936; deliveries, 14,992 tons, against 15,009 and 19,170 tons, respectively; stocks, 160,278 tons, against 124,342 and 106,420 tons, respectively.

TEA.—The following table shows the average price (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account in recent weeks:—

Week ended	Northern India	Southern India	Ceylon	Java	Sumatra	Africa	Total
Oct. 15, 1936	d. 13-18	d. 12-00	d. 13-87	d. 11-06	d. 10-11	d. 11-30	d. 13-12
Sept. 23, 1937	17-01	15-26	16-66	14-54	13-16	14-51	16-60
Oct. 30, "	16-85	15-49	16-95	15-16	13-40	14-70	16-62
Oct. 7, "	16-33	15-59	16-85	14-71	13-19	14-22	16-36
" 14, "	16-27	15-37	17-02	15-52	13-20	14-85	16-31

At this week's public auctions in Mincing Lane, 54,861 packages of Indian and 15,394 packages of Ceylon tea came up for disposal. Demand for Indian grades was active, but the market showed some irregularity and prices were slightly easier. At Tuesday's Ceylon auctions, common and low medium teas were firm, but mediums were often easier. Fine teas sold well.

VEGETABLES.—At Covent Garden this week, tomatoes have been in shorter supply, according to *The Fruitgrower*, and prices have consequently improved. Cucumbers, too, are scarcer and dearer. Housegrown beans have improved and mushrooms are in shorter supply. The excellent quality sprouts now on the market sell well, and cauliflowers are a steady trade. Cabbage remains plentiful and cheap. Celery is now receiving more attention. Meanwhile, the potato trade at the various London markets has shown no new features and prices are unaltered. Thus at the Borough on Tuesday, best light-soil King Edward again made from 6s. to 7s. per cwt. ex market.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OILSEEDS.—Quiet, but fairly steady conditions rule in most sections of the market. Linseed maintains its comparative firmness with only small fluctuations owing to the restricted supplies available for shipment between now and the harvesting of the new crop in Argentina. Last week Argentina shipped 20,000 tons (including 13,000 tons destined for the United States) and has thus reduced the balance of the exportable surplus of the old seed. Together with that of Uruguay, Argentina's supply is not more than 125,000 tons, to which may be added a probable 75,000 tons from India before the end of the year. The total quantity of seed available is, therefore, approximately half of the quantity actually shipped in the remainder of 1936. The newly-sown seed in Argentina appears to be progressing favourably, weather conditions of alternating rains and fine days being ideal for promoting growth. This and some easing in freight rates, coupled with a restricted demand, are having a steadying influence. The latest official estimate of the yield in the United States is 191,075 tons, against 190,000 tons in the previous report. In view of the improved demand for linseed oil in America, the necessity for further imports from outside sources is apparent. Cottonseed has continued to decline, and business in black Egyptian afloat for Hull is reported at £5 17s. 6d. The forward positions, however, are comparatively steady, and for January loading £6 8s. is asked.

Trade in vegetable oils is of only moderate dimensions. In sympathy with seed, linseed oil is steady, and prices show little change from last week. Cotton oil is in better demand, and both crude and refined oils have been advanced 10s. per ton ex Hull.

RUBBER.—The general weakness of the Stock Exchanges has had repercussions in Mincing Lane, where rubber has suffered a further fall this week. The liquidation of speculative commitments in New York has also tended to depress the London market. Some recovery was, however, recorded on Wednesday following the improvement in the political outlook. The spot price in New York on Wednesday was 15½ cents per lb., compared with 16½ cents per lb. a week ago and 18½ cents a month ago. Wednesday's official buyers' price for standard ribbed smoked sheet on the spot in London was 7½d. per lb., as against 7½d. on the corresponding day last week. In forward positions business has been done at 7½d. to 7½d. for "November" shipments, as against 7½d. to 8d. a week ago. Stocks in London and Liverpool at the end of last week totalled 50,299 tons, against 50,539 tons a week earlier. A year ago stocks amounted to 99,208 tons.

WHOLESALE COMMODITY PRICES

to be a Bill to amend the penal law, with special reference to the treatment of juveniles and recidivists. There is also to be a Bill to enable free meals to be supplied to boys and girls attending junior instruction centres, and another to close the gap which has long been seen to exist between the school medical services, which for most children cease at the age of fourteen, and the beginning of National Health Insurance. The entry age for pensions for the blind is to be reduced and provision is to be made for the collection of vital statistics bearing on the population problem. The chief surprise in this section was the announcement of a Bill "to amend the financial provision for slum clearance and the abatement of overcrowding," though it remains to be seen in what direction the existing provisions are to be amended.

Finally, there is a group of legal reforms. Additional judges are to be provided for the Probate, Admiralty and Divorce Division of the High Court and Bills are to be proposed to implement certain of the recommendations of the Royal Commission on the Dispatch of Business at Common Law and the conclusions of the Law Revision Committee.

This is a long list, but its most remarkable feature is the almost complete absence of Bills which, as between the Government and the Opposition, are contentious in principle. Gone are the pre-war days when almost every sentence of a King's Speech foreshadowed impassioned debates, in which gallant political heroes would die every evening in the last ditch only to fight again with renewed fury on the morrow. It will, of course, be open to the Opposition parties, as each Bill appears, to condemn it for its pusillanimity and to declare how much further they themselves would have been ready to go. And many of the Government's Bills will doubtless fully

deserve this attack. But the main objection on principle to many of the projected measures seems likely to come from the Government's own back benches, where sit the representatives of individual industries affected. In general, the task of the official Opposition will be not to hinder the Government but to spur it on.

This surface agreement must not, however, be taken to mean that, except for the conflict of philosophies in the realm of foreign affairs, the old lines of demarcation between the parties are disappearing. The only objection of the Opposition to the Government's immediate programme is to the slowness with which agreed reforms are being put in hand. But there is a profound cleavage of opinion on ultimate objectives. The present absence of acute domestic controversies shows not that the parties are growing identical, but merely that they are growing more moderate in their differences. And this in turn is largely a product of the circumstances of the present time. It has been remarked that neither unemployment nor the distressed areas found any mention in the King's Speech. But both will eventually return to the forefront of politics and will bring with them an intensification of party differences. Adversity makes strange bedfellows; but it also sharpens latent conflicts.

Thus the superficial agreement does not reflect the absence of fundamental differences so much as a tacit consent to postpone them until necessity brings them forward. While other nations seem to be bent on the exacerbation of conflicts among their people which are fundamentally unreal, we are obscuring even those conflicts which do exist. This typically British policy of ignoring trouble solves nothing. But it does store up a plentiful supply of toleration, a human commodity which may be more precious than rubies in the years to come.

Still Non-Intervening

THE proceedings of the Non-Intervention Committee are like those of a top when it is running down. At each turn, now, it gives a lurch which threatens to bring it to a miserable standstill, heeled over on the ground. Yet each time, as we take up our pen to register its fall, it revives and gives us time to record that it is still spinning—before it almost brushes the ground again. On Tuesday of last week the Committee appeared to be in *articulo mortis*; on Wednesday it made a melodramatic recovery which was given pride of place in the last issue of *The Economist*. Before that issue had reached the reader's hands, the Committee had fallen into adversity again; and now, this Tuesday, it has achieved another rally. All that we can do at the moment is to chronicle this last rally and the preceding relapse, without presuming to prophesy how long the process is likely to go on, or even what is likely to be the state of the spinning top by the time the present issue of *The Economist* appears.

The setback on Friday of last week, October 22nd, had been prognosticated by the scepticism of the Italian Press, in sharp and derisory contrast to the optimism with which the turn for the better on the preceding Wednesday had been greeted in London. On Friday, three new rocks—each one of them sharp and hard enough to hole MR EDEN'S cockleboat—suddenly emerged in the Committee's fairway. (Rocks can emerge from the sea when they are stage rocks poking up through stage waters.) The first rock was conjured up by COUNT GRANDI'S *volte face* on the question of ascertaining the numbers of the foreign troops engaged in Spain on either side. After having himself proposed on the Wednesday that an impartial and authoritative

international fact-finding commission should be sent to Spain to arrive at the true figures, COUNT GRANDI announced on the Friday that Italy would not commit herself in advance to accepting any figures that the commission might report. At the same moment, it was stated in the Italian Press that the Italian expeditionary force in Spain amounted to 40,000 men; that Italy "peremptorily" demanded the acceptance of this figure; and that any questioning of it would be treated in Italy as a sign of bad faith and ill-will. As soon as this Italian rock had been elevated above the surface by COUNT GRANDI, M. MAISKY made haste to demonstrate that Russian hands were capable of raising up quite as big and as formidable an erection. He announced that Russia held to her previous decision not to consider the grant of belligerent rights until not merely a substantial part but the sum total of the foreign troops in Spain had been evacuated. Thereupon the Italians, with the Germans and Portuguese at their heels, rushed in to put it on record that their own last-minute acceptance of the July British plan would be voided if the whole of the plan were not accepted likewise by all States represented on the Committee.

Thus, over the week-end, the Non-Intervention Committee appeared to be heading straight for the Symplegades; yet this week the Committee, like the Argo, has just managed to slip through between the Clashing Rocks.

When the Committee re-assembled this last Tuesday, COUNT GRANDI announced that he had not really meant it when he had said, last time, that Italy would not agree to be bound in advance by the international committee's findings about numbers. All parties except

Russia agreed to a draft resolution providing for the withdrawal of foreign troops from Spain, for the recognition of belligerency when "substantial" numbers had been evacuated, and for a tightening up of the control of Spanish coasts and land frontiers. Most significant of all, M. MAISKY lowered his rock by some inches. He announced that he had referred the Committee's resolution to his Government and that Moscow, too, was prepared to accept it with the reservation that they "might perhaps" consent to consider the question of granting belligerent rights if and when they were convinced that the bulk of the foreign combatants had been withdrawn and that fresh foreign reinforcements for the insurgents had ceased to arrive.

That is as far as we can carry the chronicle this week, since the Committee will not have met again before this issue of *The Economist* has gone to press.

What are the Committee's prospects? We may perhaps see a sign of a genuine desire to keep the Committee going in the abandonment, by common consent, of the proposal for an immediate "token" withdrawal from both sides. This "token" withdrawal would not have contributed appreciably to a solution of the Spanish problem, while the question of the figures—both relative and absolute—threatened to provoke an irreconcilable difference of opinion. On the other hand, MR EDEN warningly drew the Committee's attention to three still outstanding difficulties. The first had regard to the time at which belligerent rights were to be granted in consideration of the withdrawal of troops. The second difficulty lay in agreeing upon the proposed international commission's terms of reference and status. And, thirdly, there may be difficulties over the restoration of control, since the French Government declare that they will not restore land control until the commissions have reported and a date has been fixed for the withdrawal of volunteers. Even then, the French Government appear to

make land control dependent upon a strengthening of the control of sea-borne traffic.

Each of these difficulties might be capable of shooting up with the rapidity of a beanstalk or a red-hot poker. Indeed, it is a safe prophecy that difficulties will be raised and "concessions" gracefully offered in strict alternation. It is difficult to take the proceedings of the Non-Intervention Committee very seriously. The French plan of a fortnight ago contained as one of its five points the proposal of a solemn promise by all the Powers to send no more "volunteers" while those already in Spain were being withdrawn. Nothing more has been heard of this. SIGNOR MUSSOLINI's diplomatic record during the last few years does not encourage anybody to feel sure that the steady replacement of evacuated volunteers is not his game.

In any case, there is no evidence that he has abandoned the conquest of Spain. If he is now sincerely prepared to consider withdrawal, without replacement, in the near future, it may be only because he believes he can win the war before the withdrawal takes place. There is a certain resemblance between his present concessions and the offer of negotiations with Abyssinia which was made on April 15, 1936, just a week after the victory at Lake Ashangi made it clear that the EMPEROR would be driven from Abyssinia before negotiations could start. Does the DUCE calculate on being in Madrid, Barcelona and Valencia by Christmas? That is possibly his calculation; but it hardly looks like a correct one. Government Spain is not another Abyssinia. Its lines of communications have been shortened, its new army is being trained, its munitions factories are at work, and it is, at the very least, not entirely deprived of modern weapons of warfare. We cannot be sure exactly what game the DUCE is playing. But it is certainly a dangerous one and no less surely one which bodes the Western democracies no good.

Recovery in South Wales

IT is only ten months since we wrote that South Wales had been unaffected by prosperity (see *The Economist*, December 19, 1936, page 574). To-day, the revival of South Wales, as a whole, is unmistakable; reduced unemployment, industrial reorganisation and renewed activity in the export trades, all tell the same story. But, even yet, prosperity has not penetrated far into the long valleys of the Special Area, behind the coastal towns. There the basic problems of distress still persist.

The general improvement can readily be illustrated by the course of the unemployment figures. In the whole of the Welsh Region, unemployment fell from 179,847 to 131,577 between September 12, 1936, and September 13, 1937. In coal-mining alone there was a decline of 14.6 per cent. in the number of workless against 8.2 per cent. in all British coal-mining. The total registered unemployed in the Special Area dropped from 141,771 to 98,580. The reduction is large, both absolutely and relatively; but it still leaves the percentage of insured unemployment in the area at something like 24½ against 34 a year earlier. And by no means can all the reduction be ascribed to improved industrial conditions inside the area. As many as 20,000 men, women and children have left the district, by transfer or migration, in the last twelve months. In the derelict towns and villages the same combination of better trade and fewer hands (and mouths) has reduced unemployment.

Primarily, of course, this partial mitigation of a well-nigh intolerable position is due to revival in the basic

industries of South Wales. In coal, for example, an output of 48.1 million tons in 1929 had fallen to 34.4 million tons in 1933 and 33.9 million tons in 1936, but by the end of this year will have recovered to not far short of 37 million tons. Shipments of coal to foreign countries have consistently improved in the course of 1937. Excluding bunkers, coal exports declined from 24.7 million tons in 1929 to 13.2 million tons in 1936; by the end of December exports for this year will probably have exceeded 16 million tons. Up to September 12th, coal shipments totalled 14,675,592 tons compared with 11,805,679 tons in the corresponding period of last year. By no stretch of imagination can the South Wales coal industry be called prosperous. The gap between 1929 and 1937 remains wide, and the shadow of sanctions and of the Spanish Civil War still rests upon the Special Area, though buying from France and Italy has lately improved.

In the iron and steel industry there has been a timely and much less limited improvement. At the end of September there were 15 more mills in operation in the tinplate and sheet industries than at the end of August, and 62 more than at the end of September, 1936. All branches of the iron and steel trades, indeed, have been active in recent months. Government defence contracts have undoubtedly been more influential in promoting recovery on Tyneside and Clydeside than in South Wales, but armament manufacture has, nevertheless, been an important element, directly and indirectly, in the continued expansion of iron and steel output.

Unfortunately for the Special Area, however, most of this revival has been in the coastal towns outside it. True, rapid headway has been made with the colossal scheme of Richard Thomas and Company, to construct a steelworks, continuous strip mill, sheet mill and finishing plant at Ebbw Vale, designed to cost £7½ millions and to produce one-fifth of the entire national capacity. Apart from this project, however, new plants and works extensions in the South Wales iron and steel industries have been concentrated at Cardiff and at other centres outside the Area.

The Special Area, in short, remains "special." Its problems have been alleviated, but not resolved. In the whole of Wales, some 19.6 per cent. of insured workers are still out of work (compared with 10 per cent. in the United Kingdom as a whole); and the "black spots," listed by LORD PORTAL three years ago—Blaina, Brynmawr, Rhymney, Merthyr and Senghennyd—are still twice as badly off as the rest of South Wales. Last March, in the Special Area, over 50 per cent. of the men wholly unemployed for a protracted period were over 45 years of age; and over 72 per cent. were more than 35. In 1934, LORD PORTAL made a conservative estimate putting surplus labour in the Special Area at 39,000 men and 5,000 boys. At the beginning of this year PROFESSOR MARQUAND estimated surplus labour in the whole industrial region of South Wales at 80,000—before the Government Defence Programme was announced. Clearly, much of this labour is still "surplus," and its absorption postulates something more than general recovery, re-armament and good wishes. There is clearly need both for the further rehabilitation of the basic industries of the region by reorganisation and freer international trade—and for the considerable development of new industries *pari passu* with labour transference. Recovery has not abated this need, but thrown it into sharper relief.

A start has, indeed, been made with a policy to attract new industries to South Wales. Under the Special Areas Act of 1934, a trading estate was established at Treforest between Cardiff and Pontypridd. The Special Areas (Amendment) Act of 1937 has extended the powers of the Commissioner to assist profit-making enterprises by grants in aid of rent, rates or income tax, and to set up site companies outside the Special Areas proper. The results of this policy, and of the cognate activities of the Special Areas Reconstruction Association and the Nuffield Trust, have so far been promising but inconspicuous. On October 21st the MINISTER OF LABOUR stated in the House of Commons that seventeen tenants had so far been found for the Treforest Estate, three of whom were in occupation; six new industries had been established in other parts of South Wales under the Special Areas Act; three others had been set up independently; and in all employment would be afforded for 3,000 men. The old ironworks site at Dowlais has been cleared for new industries and a telephone accessories factory to employ 150 people is being erected. A site at Cyfartha, also near Merthyr Tydfil, has been surveyed for a sewing-machine factory; and a biscuit factory is planned at Llantarnam in Monmouthshire. The building of the Bridgend armament factory has not yet begun. The munitions factory of Imperial Chemical Industries commissioned by the Government at Landore will employ largely Swansea labour. The employment afforded by the building of the Air Force depot at St. Athans is only temporary. And the oil-from-coal plant, projected by the Government in co-operation with the Nuffield Trust, will be of relatively small size. Finally, it was announced last week by the MINISTER OF TRANSPORT that work was in hand or was projected on the trunk roads of South Wales to the value of £362,000 in all. We do not

cite these examples of enterprise and expansion in order to belittle their importance; but they certainly suggest that neither new industries nor labour migration have filled the gap left by the decline in Britain's exports and the scaling down of basic trades. And industry, left to itself, is showing no keen desire to go to South Wales. In 1936, out of 551 new factories, some 261 were in Greater London, but only four were in Wales and only three, employing a few hundreds of men—a steel sheet mill at Llanelli, a munitions factory at Neath, and a brickworks at Newport—were even near the Special Area.

If, therefore, the Special Area of South Wales is to be saved from chronic distress a bolder policy is needed. The needs of the Special Areas can be simply defined: the maintenance of the greatest possible volume of staple exports by a liberal trade policy, in order to reduce the difficulties of adjustment and "liquidation" to a minimum; the reorganisation, on the widest possible scale, of the older industries, in order to raise their efficiency and competitive power to the highest possible level; the establishment of new industries to balance the economy of the areas; and, finally, the mitigation of distress. In all these ways, there is much yet to be done in South Wales. For example, that region would probably have much to gain from the conclusion of trade agreements with France and Italy on the lines of the Anglo-Scandinavian arrangement. Much has been done to reorganise the iron and steel industry, but has the operation of protection in a time of boom created an eventual legacy of surplus capacity in the event of even a moderate recession in trade? And less has been done to reorganise the coal industry than the steel industry.

There remains the need for new industries, and it is not in the Commissioner's power, at present, to satisfy it. The Government has still to decide how far inducements to new industries to settle in South Wales may be carried without impairing too much the free choice of manufacturers. And in South Wales there are specific disadvantages to be overcome. South Wales labour has been reputed to be intractable and unadaptable. There is convincing evidence to the contrary, but old fallacies die hard. With more justification, the Special Area is regarded as being isolated from centres of population by deficient communications. Even more cogently, the rate burden of South Wales is held to be a deterrent, ranging, as it does, between 19s. and 29s. in the £1 in most districts. The public assistance rate is in every case a large part of the total rate; and, although factories pay only 25 per cent. of the rate, derating applies all over the country and the relative disadvantage remains.

In this age of planning South Wales needs, above all, a plan. It may include in its measures the stimulation of new industries by means which at other times and in other places would have been called unorthodox. It may include the extension of trading estates and the trading estate method, and the allocation of greater sums of money for the assistance of new enterprises. Scientific principles of industrial localisation can be applied to the facts of the Area, as PROFESSOR MARQUAND* has shown; and a detailed scheme can be evolved. South Wales can make out a strong case for the construction of a Severn Bridge. Almost certainly, there should be some equalisation of the public assistance rate over the whole country. The task of rehabilitation and reconstruction is urgent. For if there is distress in South Wales when Britain is prosperous, what will be the harvest of any future trade recession?

* "Second Industrial Survey." 3 Vols. University Press Board. Cardiff.

Alas, Poor Printer

IF an ordinary man, in the light of ordinary common sense, had to decide an action in which one plaintiff sued three separate defendants for some injury done to him, how would he apportion the damages? He would, one may presume, say to himself that here were three people, each a party to a wrong, and that his obvious duty was first to estimate their several degrees of responsibility and then to assess the several damages accordingly. That, we may venture to hope, would be deemed by the majority of our readers a not too abstruse experiment in the practical science of straightforward reasoning.

It is, however, an experiment that English lawyers and legislators are not prepared to make, because it involves too great a breach with legal tradition. The traditional law of England is that the three defendants—playfully known as joint tortfeasors—are all equally liable for the wrong done, and that the successful plaintiff may choose any one of the three that he likes and collect the whole amount from him. He may, if it pleases his fancy, play the old English game of "Ena, Mena, Mina, Mo, out goes he," and come on the "he" for every penny that the jury have awarded against the three defendants together. To the layman the law seems to lack a certain quality of equity, and two years ago the lawyers, half-bowing to the layman's point of view, introduced a Bill now known as the Law Reform (Married Women and Tortfeasors) Act. This measure still left to the plaintiff his old right to collect the whole damages from any one of the three, but gave to the selected victim a right—which he had never had before—to bring an action against the other two and to collect from them whatever contribution the judge, in this second trial, might think fair. That is how the law stands to-day.

The effect of this curious law was brought out a fortnight ago in the libel action which LORD CAMROSE and the *Daily Telegraph* brought against the Fascist paper *Action*, against MR BECKETT, a former editor, and against the Argus Press, the printers. For the libel itself there was nothing to be said. It was a vicious and inaccurate attack for which there was no shadow of justification, and although the £20,000 which the jury awarded as damages may seem generous to a high degree, there is no doubt that, in this case, damages of some kind were called for.

Why did the jury give such heavy damages? They gave them mainly because the newspaper, instead of apologising when it found that it had made a grave mistake, attempted to justify its charge and turned an action which should have consisted of a few apologetic speeches into a preposterous mud fight. We can see the jury's minds, as day after day the case went on, veering towards heavier damages in proportion as their natural irritation increased. But one of the three defendants took no part in the affray. The Argus Press, being decent and reasonable people, acknowledged the error they had made in printing the article, did not attempt to justify, and sat quietly in Court while their co-joint tortfeasor piled up the inevitable damages to the amazing figure of £20,000 for calling a man an international Jew.

Now let us consider the result. From the evidence at the trial it appeared that Action Press, the owners of the paper, would be unable to pay the damages and the plaintiffs will be acting on normal business principles if they choose to exercise their legal right and to demand the whole amount from the Argus Press. The

latter, it is true, had no hand in drafting the article, or preparing the material, or choosing the language. They merely set up in type and ran off on their machines the copy with which they had been supplied. They had no part in the aggressive defence which ran the damages up. They had not tried to justify. If they had been left to themselves they could probably have settled the matter out of Court for a small figure and an apology; but they were chained by the leg to their joint tortfeasor and are liable for the whole £20,000, retaining only the valuable right of throwing more money into a second action against the paper and the editor. That is how the matter stands, from their point of view.

It is difficult to see how this legal anomaly can be defended. That a printer should exercise reasonable care in what he prints is undeniable, but printing is a mechanical process, carried out often under great pressure of time. One cannot properly ask either the master printer to read with an expert eye every word that he is given to print, or the compositor and proof-reader to rectify the mistakes and inaccuracies of the reporter and the leader-writer. If on some page of this number of *The Economist* there should appear (which God forbid!) some inaccurate and defamatory statistic, is it fair or reasonable that the printer, or for that matter the news-agent, should be held one hundred per cent. liable for the consequences of our mistake? The law, nevertheless, would cheerfully class them as joint tortfeasors.

It may be thought that this law, strange as it is, and unfortunate as it may be for the printer, is not a matter of public interest. That would be a mistaken view. It is a matter of public interest because the printer, with this terrifying liability hanging over him, will tend to become not merely careful but morbidly careful about what he prints. He cannot, obviously, check for libel all the copy that he receives from the newspaper or the book publisher. His only course is to take a general line and say to himself that, if a paper is of a controversial or militant cast, he will refuse to handle it, and the ultimate result of this state of mind would be that only safe, popular, colourless views would get into print at all. Some years ago, when MR LLOYD GEORGE was launching one of his campaigns, he started a monthly paper to support it. The journal was a harmless enough production, which never came within many miles of a libel action. But because it represented MR LLOYD GEORGE, and because MR LLOYD GEORGE was believed to hold extreme or unpopular opinions, the printers insisted on his taking out an insurance policy for their protection. His own risk he ran uninsured, but to cover the printers for their liability as joint tortfeasors he was forced to insure. This he did with considerable difficulty and at a cost, finally, of £150 premium for four months' cover—i.e. an annual rate of £450. How far the law, as it stands, has condemned other reformers, well or ill-advised, to remain mute and inglorious, there is, unfortunately, no means of knowing.

The whole principle is artificial and unhealthy, and the remedy is obvious. Instead of giving the plaintiff his present rights the law should arrange that what can now be done under the Act of 1935 in a second trial may be done in the original action. When the jury assess the damages, let the judge have the power at once to split them between the defendants to "find what is just and equitable having regard to the extent of responsibility." In other words, the law ought to let the most responsible party drink most of the medicine and leave the comparatively innocent printer with a reasonable teaspoonful.

Anglo-Indian Trade

THE negotiations for a new Anglo-Indian commercial agreement are in the doldrums. Of the trade delegation that came over to England before the Coronation, the unofficial members have been obliged by their business and private ties to return, and the official leader, Sir Mohammed Zafrullah Khan, has at last been recalled. The present deadlock arises out of India's denunciation of her Ottawa pact with the United Kingdom, following an adverse vote of the Assembly at Delhi last year. The pact, unlike those made with the Dominions, had only a three years' minimum term. Its provisions have been temporarily retained as a *modus vivendi*, by agreement between the two Governments, pending the negotiation of a new trade treaty.

The general Indian complaint is that the Ottawa pact has been less favourable than had been expected, and that it leaves the balance of advantage unduly on the side of Great Britain. This contention is scarcely borne out by the figures of total trade between the two countries since pre-Ottawa days. Between 1931-32 and 1936-37, India's exports to the United Kingdom rose from 42.9 crores to 61.1 crores of rupees, whereas her imports from this country rose only from 44.8 crores to 48.1 crores. Even with the advantage of the Ottawa preferences the increase of 7 per cent. in India's imports from the United Kingdom between 1931-32 and 1936-37 is small compared with the increases of 59 per cent. in imports from Japan and 19 per cent. in imports from Germany in the same period. Altogether there appears to be no evidence of undue favour to Great Britain, and the figures afford some support for the view, generally held

silk and rayon was postponed, because the Indian Tariff Board had the cotton textile industry under consideration, and because Anglo-Indian discussions on the manner in which greater use might be made of Indian cotton in the United Kingdom were still proceeding.

During 1932 and 1933 the Indian tariff on cottons suffered several changes, partly by reason of the decision to vary it to meet currency depreciation abroad, i.e. in Japan. At one period the duty on foreign piece-goods was 75 per cent., compared with a preferential duty of 25 per cent. After long-drawn-out negotiations with Japan, in January, 1934, the general rate was reduced to 50 per cent. Japanese piece-goods, however, were to be limited thenceforward by import quotas, scaled according to the quotas of Indian raw cotton accepted by Japan. The war in China has resulted in a serious falling-off of India's exports of raw cotton, and increased absorption of her cotton by Lancashire is among the most pressing of the demands made by her representatives. One of the most important features of the "gentlemen's agreement," signed in 1933 by Sir William Clare Lees and Mr H. P. Mody, under which the Indian cotton industry accepted the principle of British preference, was a pledge to promote the use of Indian raw cotton in Lancashire.

The tables on the opposite page show that exports of Indian cotton to this country have expanded in volume from 29,700 tons in 1931-32 to 107,300 tons in 1936-37. There is, no doubt, room for further expansion, provided Lancashire can retain her export market for the classes of goods for which Indian material is suitable. To a large extent that market is found in India itself, and in this

on this side, that the action of the Indian Assembly was based more on political than on economic grounds.

The main United Kingdom undertakings in the Ottawa pact may be briefly summarised:—

The United Kingdom undertook to continue to give to Indian goods, as to those of other parts of the Empire, free entry under the general tariff, and to raise or maintain the foreign duty on a long list of goods of importance to India. These included manufactures of cotton and jute, hides and skins, vegetable oils and oilseed, rice, ground-nuts, coffee, tobacco, tea, pig lead and magnesite. Foreign linseed, another important item for India, was removed from the free list. India, for her part, undertook to give a 7½ per cent. *ad valorem* preference on certain classes of motor vehicles, and a 10 per cent. preference on building and engineering materials, chemicals and drugs, earthenware and porcelain, hardware, instruments and appliances, leather manufactures, base metals, rubber tyres and other rubber goods, cycles, beer, chocolate, confectionery, canned fish and fruit, and a number of other important British products. Exception was made for commodities subject to protective duties under the "selective" Indian tariff, and for goods entering free of duty or those on which, on grounds of national policy, a specially low rate of duty had been imposed. In the iron and steel group, the 10 per cent. preference was likewise to apply only to items not subject to protective duties. In the textile group it was to apply only to articles of apparel dutiable at the revenue rate of 25 per cent., and to woollen manufactures, with certain exceptions. A decision about the tariff on goods of cotton

respect the picture, unfortunately, is depressing. In 1913-14, India imported 3,067 million yards of piece-goods from Britain. In 1928-29, the figure had fallen to 1,443 million yards, and three years later it was only 377 million yards. The new preferences and general economic recovery together caused a slight rise, but last year the distress level of 334 million yards was recorded. The fall since the war has been due partly to the rapid encroachment of Japanese trade, but still more to the development of India's own cotton industry. Whatever may happen about Japan, there will assuredly be no going back, in future, on the protection given to India's home industry.

A similar story of growing self-sufficiency applies to India's iron and steel trade. Further preferential concessions to British products are indeed possible in both these industries. But for any large-scale revival of her aggregate exports to India this country must look mainly to the newer and less staple trades into which Indian protectionism has not yet ventured on any large scale, such as electrical machinery, motor cars, instruments and appliances, and dyes and chemicals. The figures given in the tables opposite show that India has provided of recent years a steady and even a rising proportion of the market for British manufactures of these classes of goods.

The evidence suggests, in short, that it is in the miscellaneous industries that the greatest scope exists for the improvement of the terms at present granted by

India. It has been reported, however, that the Indian delegation has actually demanded wholesale curtailment—apparently by as much as three-quarters in value—of the classes of goods in which a 10 per cent. preference is guaranteed. On the British side there is no disposition, provided equivalent advantages can be secured in exchange, to cancel the arrangement whereby India shares in the freedom of Empire goods from the general 10 per cent. tariff and in the preferences on protected manufactures. One item, nevertheless, has been called in question. Between 1934 and 1936 imports of jute piece-goods from India rose from 60 million yards to 139 million yards,

and imports of made-up jute from 671 million yards to 998 million yards. Dundee is talking of a protective tariff, but India, a virtual monopolist of Dundee's raw material, will always have up her sleeve the possibility of a countervailing export duty on raw jute.

The problem is far from simple, otherwise the negotiations would doubtless have been fruitful long ago. But it may not be too late to hope that, when the discussions are resumed, they will be animated, not by a spirit of narrow nationalism on either side, but by a genuine resolve to "clear out the channels of trade" between two natural economic partners.

Notes of the Week

Shanghai Falls.—While the Western Powers endlessly debate non-intervention in Spain, Japan continues her aggressive intervention in China. From the northern provinces comes no clear news this week, but the Japanese, at least, do not claim a continuance of their rapid advance. The week's most significant development has occurred in Shanghai. On Tuesday the Japanese captured Tachang, and the Chinese deemed it necessary to evacuate Kiangwan and Chapei and to retreat to a new line running from Soochow Creek near Jessfield Station, almost due north to the Yangtze River. The Chinese are reported by independent military observers in the Settlement to have retreated in order, and to have maintained their morale. Demonstrations of courage and heroism by Chinese rearguards have delayed the Japanese advance. The Chinese line still hinges on the International Settlement, and the Japanese are reported to be concentrating on severing the connection. The retreat must be accounted a military gain for the Japanese, but its importance can readily be exaggerated. If the Chinese are able to form a new line and to continue their resistance there will be no lessening in the demand on Japanese troops and munitions. The new line will be further away from the Japanese naval guns, but if the Japanese isolate the Settlement they will cut off one source of munitions for the Chinese, who are still obtaining some foreign supplies through Shanghai. Eleven weeks of intense fighting have proved that the Chinese soldier, inadequately armed and clothed, is capable of unlimited courage in defence of his country. Japan is welding a peaceful and disunited country into a unity whose power is born of suffering.

The other side of the world, however, has not yet reconciled itself to the indefinite continuance of the Far Eastern struggle. Preparations are being made for a conference of interested powers to discuss it. The opening, at Brussels, has been postponed, on account of M. Van Zeeland's resignation, from this Saturday to next Wednesday, and Germany and Russia have been added to the list of invited powers. The conditions under which it will meet justify no high expectation of the emergence of a united policy of defence against aggression. Countries whose Governments are reluctant to take effective action can hardly expect their delegates to save the world by passing resolutions. Emphasis at the moment is being put on "mediation," which in the circumstances can only mean pressure upon the Chinese to make sacrifices to Japan. The Japanese have refused to attend the Conference, and have issued a long statement condemning the Chinese and justifying Japan, the "good neighbour." The present affair can never be settled, say the Japanese, "until the Nanking Government mend their ways, abandon once for all their anti-Japanese policy and accept Japan's policy of co-operation and collaboration between the two countries." But while the Foreign Office in Tokyo writes notes, active control of affairs remains with the Army, whose sense of China's enormities shows no diminution.

Social Policy.—The determination of the Government to make prosperity the chief plank in its programme for the coming session was writ large in Sir Kingsley Wood's review on Wednesday of the impressive record and beneficent intentions of his department. To criticism of the surprising exclusion of the Special Areas from the King's speech, the Minister of Health replied that there was "real evidence of considerable improvement." It is, indeed, true that unemployment in the Special Areas has fallen by approximately 20 per cent. since September 21, 1936; but one might have expected more anxiety about the 210,000 who are left workless than complacency about the 50,000 who have been found employment. Sir Kingsley's account of housing and slum clearance was less uncritical. A record total of 70,000 houses were under construction at the end of September; and some 650,000 slum dwellers had been moved under the five-year programme. But 300,000 new houses were needed to abate slums and overcrowding in England and Wales. There was a lack, he said, of houses for aged persons and large families; and progress in rural housing was so unsatisfactory as to make necessary Exchequer assistance in the coming session. The Minister's claim that this country led the world in nutrition policy was not so discerning; and his account of measures effected and proposed for a more plentiful supply of milk to children and mothers was not very reassuring. The programme Sir Kingsley described to improve the midwives' service is a welcome approach to the solution of a terrible problem, but the Government would do well to remember that Sir George Newman's 1932 report stated categorically that good nutrition was the best safeguard of life in childbirth and health in infancy. The campaign to popularise the health services is a credit to Sir Kingsley Wood and his colleagues; but they have insufficient laurels to rest on as yet.

Progress of Re-armament.—How far has British industry succeeded in meeting the increased load placed upon it by the re-armament programme? Much of the work hitherto has been concerned with the enlargement of productive capacity for making armaments. This stage will soon be drawing to a close, and the production of the armaments themselves has already begun in some instances. Many, though not all, of the extensions to aircraft factories have been brought into production. If first-line strength in aircraft (including Fleet Air Arm and overseas strength) may be taken as something over one thousand before expansion, and the objective of the original expansion programme be put at approximately 2,500 machines, then Sir Thomas Inskip's statement last June that 123 new squadrons had been formed and would shortly be brought up to full strength (eleven machines per squadron?) would seem to indicate that the original objective is, nominally at least, in sight of achievement. It remains to bring the first-line strength to the desired standard in quality and to meet increased replacements promptly. This will doubtless be the principal function of the "shadow" factories which have now started production in some cases. For the Army,

supplies are believed to be coming forward fast enough to introduce a certain realism into military training, but the full equipment of all branches of the forces, including the Territorials, with the new weapons will need a good deal more time. On the naval side, five battleships are under construction out of the twelve which are to replace existing vessels, but this part of the programme is less advanced than other branches of naval replacement, as the Naval Treaty did not expire until the end of 1936. Of the sixteen new cruisers still required, at the end of last year, to bring the total up to the contemplated seventy (including ten over age) some seven were sanctioned under the 1936 estimates and eight more in 1937; but some of these have not yet been even placed with shipbuilders.

The completion of the destroyer programme is proving a heavy task. Most of the nine "Tribal" class vessels ordered in 1936 have been launched, but some of the eight 1936 "Javelin" class have only lately been laid down, and contracts for eight of the sixteen destroyers projected under the 1937 programme have not even been placed. On the subject of re-armament generally, it is understood that some large construction projects, like the ordnance factories at Chorley and Bridgend, are still only in the early stages of erection. Similarly, work has not advanced far on certain of the score or more of new aerodrome sites acquired for the R.A.F. in the last eighteen months. The delivery of engineering supplies, on the other hand, is very satisfactory, but even the existing factories are having difficulty in obtaining skilled workers. It has even been suggested that reversion to wood for certain aircraft parts may be necessary in order to maintain a high rate of production. Generally, the execution of existing re-armament contracts will take a considerable time. Effort must be intensive and prolonged if anything like £300 millions a year is to be spent in the next few years.

Mr Hull's Speech.—On the 22nd of this month the United States Secretary of State, Mr Cordell Hull, delivered a notable address at Toronto on the occasion of his receipt of an honorary degree from the University. In keeping with the academic surroundings in which it was delivered, Mr Hull's speech dealt with general considerations and not, except by implication, with the immediate conflicts of the moment. But, on a long view, this characteristic of the speech does not detract from its importance, but rather enhances it, considering the public to whom the statesman-doctor was speaking. That public was no less than the whole of the English-speaking population of North America; and this is a community whose eventual action may be decisive for the destinies of the world. North America (with its Southern appendage) stands, in the last resort, in the same relation as Great Britain towards the vast Eurasian Continent.

North America, too, is an island anchored off that mighty continent's shores; and in these days of shrinking distances the Atlantic and Pacific will soon be no wider than the Channel is now. On this account, the bigger island just across the Atlantic cannot—any more than the small island just across the Channel—keep itself permanently insulated from continental affairs; and this was the essence of the message which Mr Hull, at Toronto last week, was addressing to his North American audience. He began by telling them that nations were subject to the same social law as families or individuals. They cannot isolate themselves from the rest of Mankind without lowering not only their material but also their moral and spiritual standards. For example, to-day a war anywhere adversely affects the material and moral well-being of Mankind everywhere; and you cannot escape the repercussion just by labelling yourself a non-belligerent. He touched upon the paradox that the evilness of war is advancing, neck and neck, with the progress of civilisation; but he went on, in what was perhaps the most important passage of the speech, to point to certain "seeds of hope." No more than a community or a nation could the world of to-day base its existence in part on order and in part on chaos, in part on law and in part on lawlessness. And just as, sooner or later, the outraged conscience of a community or a nation set in motion forces which reestablished order under law, so Mr Hull believed that the same would happen in the sphere of international relations. Was Mr Hull inviting his hearers to remember a famous speech in which another North American statesman once declared that his country could not remain half slave and half free? If Mr Hull was invoking Lincoln, his hearers will accept the omen.

Herr von Ribbentrop in Rome.—The German Ambassador to the Court of St. James's plays so many rôles that rumour naturally gets busy when he visits a foreign capital other than that to which he is accredited. At the end of last week he visited Rome. The visit was brief and the state of health of the Ambassador's daughter was announced as the reason. But political consequences have a habit of flowing from the private visits to Rome of Nazi leaders. The simultaneous presence in Rome of the Japanese Ambassador to Berlin gave rise to the suggestion that Italy was being persuaded to join the anti-Communist Pact, of which the two Ambassadors were the signatories. The state of the Non-Intervention negotiations is another possible subject of discussion. But what makes this visit worth recording is the report, published in a Paris paper which is known for its Italian sympathies, that the subjects of discussion between Herr von Ribbentrop and the Italians were quite different—namely, Africa and the Near East. According to this report, Herr von Ribbentrop announced Germany's intention to make a formal demand in the near future for the return to her of the Cameroons, Togoland and Ruanda-Urundi, together with the placing of large areas

of Central Africa under a joint condominium of Britain, France, Italy and Germany. The same four-power idea was to be applied in an even more startling form to the Near East, for it was to be proposed that Great Britain should share with the three other powers her present sole responsibility for Palestine. Now this unconfirmed report may be the merest moonshine. But it is certain that Germany's colonial demands are moving steadily to the forefront of her foreign policy and that Italy is doing what she can to stir up trouble for Great Britain and France in the Arab world. It would not be in the least surprising if both topics soon emerged into the open. Africa and the Near East may soon have to be added to Spain and China as focal points of the world's crisis.

Gijon and After.—Gijon, the chief port of Asturias, was entered by General Franco's forces on the 21st of the month, and simultaneously the Government forces' siege of the rebel garrison in Oviedo collapsed. This evidently spells the end of the north-western front; for though a certain number of guerrillas may hold out for some time—perhaps even through the winter—in the Asturian countries, the rebels will no longer be confronted with an organised resistance in this area. What is remarkable is not that the resistance should have collapsed, but that the Basques and Asturians should have held out so long—cut off, as they have been, from the main body of governmental Spain, while the whole weight of Signor Mussolini's "forty thousand" troops has been thrown against them. In spite of a crushing disparity in man-power and equipment, they have been moved to hold out by the intensity of their feelings—the Basques' feeling for their national autonomy, and the Asturian miners' feeling for the cause of the Spanish working class. It is hard to believe that two such ancient and ardent political forces as these can be kept under for long; and General Franco will no doubt have to leave considerable garrisons behind him to hold down these conquered enemy territories. Nevertheless, he will now be able to transfer the bulk of his north-western forces to his eastern front and concentrate on the effort to break through the Government lines. There are two obvious points for him to strike at: the Teruel salient which threatens to isolate Catalonia from the Castilian-speaking parts of the Spanish Government's present domain; and the Franco-Catalan frontier, across which the Government forces may eventually receive much-needed supplies if the lines remain uncut. Neither of these enterprises will be easy for General Franco and his Italian allies, since the two points both lie in mountainous country, where defence has the advantage over attack; and the attackers will be fighting against time, with General Winter (who can be formidable in Spain as well as in Russia) rapidly bringing up his reinforcements to the Government side. If the coming Italian offensive were to be brought to a stop, short of success, by the winter weather, then, in retrospect, the Basques and Asturians might turn out to have won the war for their side by having so valiantly prolonged their resistance. For if the war does last on into another spring, Italy will be faced with a choice between giving up the game or else sending to Spain fresh armies which would be as difficult for Italy to finance as they would be for France and England to tolerate.

Spanish Refugees in France.—The French Government have given orders that all able-bodied Spaniards between the ages of 18 and 45 who have entered France since July 18, 1936, are now to leave the country at the shortest possible notice. At first sight this order might seem severe, but on second thoughts it will appear not unreasonable. Even now, the French public authorities will have to shoulder a formidable burden in dealing with Spanish refugees who are women or children or invalids. And while a high standard of hospitality to political exiles is one of the best things in the traditional code of international politics, the scale

of the problem created by political evictions has increased, since the Great War, until it weighs heavily upon the liberal and humane countries. The able-bodied Spaniards who are now being expelled from France may not find it easy to obtain entry into any other country except Spain itself (though there are possible openings for refugees of both persuasions in Spanish America, where both the present Spanish ideologies are represented). Yet even if the majority of the men who must now leave France have to return to Spain they will at least have the choice of putting themselves in the power of whichever Spanish regime they prefer.

M. Van Zeeland.—The Belgian opposition has at last succeeded in forcing M. Van Zeeland's resignation. The campaign against him has been marked both by fury and scurrility. Hitherto he has withstood it; he has faced the electors of Brussels and won a resounding victory; he has met the Opposition in Parliament and been given a vote of confidence by a large margin. But the judicial inquiry into the affairs of the National Bank has apparently brought to light some further matters on which M. Van Zeeland feels that he must be free to defend himself. His resignation must not be taken as an admission of guilt. On the contrary, he has declared that he is not personally implicated, and it is reported that he intends to seek legal redress against his accusers. That he has felt compelled to resign is a pity, viewed from any angle. It is still hoped in Brussels that the wide basis of the National Government will be maintained, but it remains to be seen whether that can be accomplished without M. Van Zeeland's leadership. On the personal side, the retiring Prime Minister had many attractive qualities. He was young, energetic, skilful and unhampered by a political past. During his term of office, Belgium has enjoyed a substantial recovery for which he personally deserves and is given a large share of the credit; and the French and British Governments paid a high tribute to his skill as an economic statesman when they invited him to conduct an investigation on their behalf into the possibilities of reducing the barriers to international trade. It is, finally, particularly regrettable that a campaign of Nazi-like agitation and denunciation should have succeeded in a Western democracy in driving a public servant from office. Not for the first time in recent years, Belgium will be anxiously watched until it is seen how the crisis induced by M. Van Zeeland's departure is to be overcome.

Dr Schacht's Departure.—There is still no official announcement from Berlin of Dr Schacht's resignation from his office of Minister of Economics. But it has been known for some months past that he has been playing almost no part in the Ministry, which has been progressively occupied by nominees of General Goering. It is also known that his resignation was offered to Herr Hitler in September, and a meeting of the Cabinet on Tuesday is believed to have decided to accept it. Dr Schacht remains President of the Reichsbank, but his present term of office expires in April next, and there are reports that when that time comes he may decide to retire into private life. The measure of the reluctance with which the regime is giving up the prestige of Dr Schacht's name is shown by the long delay in announcing his resignation. There has obviously been an attempt by the Nazi leaders to keep him as a figure-head without any real authority, and Dr Schacht has had to force the acceptance of his own resignation by indulging in public criticisms of the economic policies pursued by the Government of which he is still a titular member. His departure must now be accepted by the outside world and announced to the German public, which is still, of course, very largely ignorant of his differences with the regime. These differences have related in the main to the scale of public expenditure and to the methods of State intervention in industry. Like many other people, Dr. Schacht finds it impossible to believe that the present scale of public expenditure in

Germany can continue for long without provoking inflation. Hitherto the Nazi regime has been living on the country's capital. The reserves of capital in liquid form are approaching exhaustion, but expenditure seems to expand rather than to contract. Dr Schacht's consistent preaching of the need for economy has earned him the hostility of the Nazi bosses and, recently, of the Army itself. The final conflict came over the Four-Year Plan, in which Dr Schacht's opponent was General Goering himself. Thus the redoubtable doctor has kept his courage to the last.

It is not easy to estimate the probable effects of his departure. It would be foolish to suppose that he is the only man in the Reich competent to direct the complicated machinery of financial autarky. On the contrary, Germany has never been short of competent administrators. But the moral effect is likely to be considerable. All barriers will now be removed from financial extravagance and from the pursuit of self-sufficiency à outrance. In the long run these policies can hardly fail to be disastrous. The German public, in so far as it is allowed to know the reasons for his departure, will see in it the disappearance of the last bulwark against inflation, for it is not forgotten that it was Dr Schacht who succeeded, where others failed, in stopping the printing presses in 1923. Abroad, feelings will be more mixed. Dr Schacht has driven very hard bargains with Germany's creditors, but he has built up for himself a very large reputation for intellectual integrity and technical skill. If there were any public indicators of Germany's credit still left, they would certainly have fallen this week, for it will seem to foreign financial centres that the last links connecting German finances with sanity and soundness have been broken. It is not so much Dr Schacht himself who is indispensable to Germany as the policies for which he stood in opposition to the theorists of the Nazi Party. It may well be that we have not yet heard the last of Dr Schacht.

Labour Activity.—Numerous important developments are in progress in British labour. The most important (apart from the deliberations of the Committee on Holidays with Pay) concern the distributive trades. As the result of a conference under the presidency of Mr Leggett, of the Ministry of Labour, representatives of the Shop Assistants' Union and the Association of Multiple Shops Proprietors have issued proposals for minimum wages for 80,000 employees of multiple grocery firms. These proposals stress the need for minimum standards of pay and conditions throughout the grocery and provisions trade, and they may be the beginning of a much-needed reform in distribution generally. In the first nine months of this year membership of the Shop Assistants' Union increased by 20,000. In other trades, prosperity and the rising cost of living have produced demands for higher wages. In the first week of November increases amounting to from 6d. to 2s. a week will become operative throughout the boot and shoe industry; advances in pay for 120,000 gas workers have been announced. Meanwhile, other important claims are pending. A 10 per cent. increase in the pay of 8,000 clerical and administrative workers has been refused by the Co-operative Wholesale Society, and a strike is threatened. So far, the recent demand of the Union of Post Office Workers for an improved minimum wage and better conditions of work has not been met. Some 80,000 operatives in the textile finishing trades have claimed increased wages; and a similar demand by the Amalgamated Engineering Union on behalf of workers in Government dockyards has been referred to a joint council.

These are the normal incidents of a period of booming trade, and they certainly afford no conclusive evidence of profound labour unrest. It is true that last week some 800 engineering apprentices came out on strike at Greenwich and Woolwich, and that apprentices elsewhere have threatened similar action, but they have been disavowed

by the A.E.U. who, now that their right to represent the apprentices has been recognised by the employers, are anxious to ensure orderly negotiation. A strike of 600 men at the De Havilland Aircraft Works at Hendon about the arrangement of night shifts was similarly restrained. Although negotiations in the Yorkshire coalfield for the new wages agreement have temporarily reached a deadlock, the outlook in the labour world as a whole remains fair. Union membership in 1936 rose by 9.8 per cent. to 5,308,000, the highest figure since 1925, and the members are now sharing to some extent in current prosperity.

Busmen's Wages.—The Joint Industrial Council of the passenger transport industry has reached an agreement which, if it is duly ratified, will give nearly 70,000 employees in municipal buses, trolley-buses and trams an increase in wages of 2s. a week, with a scale of paid holidays. This national agreement, however, does not cover workers in company-owned undertakings, the majority of whom are employed by the Tilling and British Automobile Traction group. The companies, as a rule, negotiate local agreements with the unions, which vary considerably from district to district. Many companies cater for sparsely populated areas where traffic is lighter and the driving strain less severe than in the towns. For road transport undertakings, wages are the most important item in operating costs and any upward movement in wages would be difficult to recoup from the travelling public. Hitherto, the Traffic Commissioners have normally been unwilling to sanction changes in fares, and as there has been a progressive improvement in recent years in the ratio of expenditure to receipts, they would probably take the view that a sufficient margin already exists to cover increased wages costs.

Open Air and Open Spaces.—The Government's physical fitness campaign has met with general favour. There are, however, some people who rightly believe that the road to better health is by better feeding and a free, outdoor life rather than merely by exercises. This point was strongly made by Lord Baden Powell at the annual dinner of the Camping Club on October 24th, and gives importance to the decision of the Youth Hostels Association to embark on a £50,000 scheme to establish 50 new centres. Already youth hostel activity has been assisted by grants from the King George Jubilee Trust and the Commissioner for the Special Areas, and the new programme is in anticipation of contributions from the National Advisory Council for Physical Fitness. The King himself, in his Message at the close of the Parliamentary session on October 22nd, spoke warmly of "the provision of facilities for recreation and healthy outdoor activity"; and on the same day both Lord Stanhope and Mr Walter Elliot insisted that the object of the new campaign was to bring the joy of games and personal fitness to adults as well as to children, without regimentation or compulsion. If physical training is to be so freely interpreted, many of the dangers latent in organised recreation will disappear. Moreover, if the objective is to be outdoor

activity, there will be need to examine the accessibility of moorlands, mountains, woodlands, commons and footpaths to ordinary people. A meeting of walkers and campers last week-end under the auspices of the Commons, Open Spaces and Footpaths Preservation Society, expressed alarm about the frequent denial of entry. The virtues of National Parks, such as the one projected this week by the Forestry Commission in Snowdonia, will be restricted if, elsewhere, rambles are confined to the towns and the high roads.

* * *

Juvenile Crime.—Sir Samuel Hoare, in a few brief months at the Home Office, has firmly associated his name with penal reform. Part of the new session of Parliament will be taken up by the improvement of prison conditions. Meanwhile, a dual attempt is to be made to reach the very roots of crime. The criminal of to-morrow is distressingly often the juvenile delinquent of to-day. Since the beginning of 1933 a new system of special courts and remand homes has been in operation which, incidentally, goes far to explain the apparently disturbing rise in 1935 in the statistics of youthful crime. On October 23rd, Sir Samuel Hoare announced two forthcoming inquiries. One will examine scientifically the causes of juvenile crime. The other, armed with the large knowledge of the Board of Education and its advisers about "backward" children, will estimate the correlation between "dullness" and crime in children. We have already moved some way in this country from primitive conceptions of punishment. We can even see that, at times, the doctor or psychologist is more useful in the treatment of crime than the policeman or warder. These inquiries will extend still further a movement which is based not on sentiment, but on the growth of knowledge. Meanwhile, it is essential that magistrates use the facilities of the new courts and procedure for juveniles as they are meant to be used. There is still far too great a discrepancy in practice between one district and another.

* * *

Mr Lyons Comes Back.—Mr Lyons' triumph in the Australian elections is none the less remarkable for being indifferently founded. The Government coalition suffered a net loss of only two seats in the Lower House, and will have a clear majority of 12. But a strict system of proportional representation would have produced a stalemate; for the Government candidates secured slightly less than one-half of the total

votes cast. In the Senate voting the Ministerialists were in a definite minority. Here the complicated electoral machine appears to have worked on the side of Labour, which has won the vacant Senate seats in New South Wales, Victoria, Western Australia and Tasmania. Even if the slow completion of the preferential voting system shows that the Government (as it hopes) has secured the Queensland and South Australian seats, its majority in the Upper House will be reduced to three or four. If one of those States falls to Labour, the two Houses will have opposite majorities, as happened in the reverse sense during Mr Scullin's regime. In any case, Mr Lyons will not have an easy passage in the new Parliament, and may find it necessary to trim his policy towards the Left. One matter that closely concerns Great Britain and the outside world is that of the tariff and trade agreements; for it has been popularly believed that the discussions for an Anglo-American trade pact were being held up, pending the Australian elections. The issue was kept in the background on the Australian hustings, which were occupied, above all, by the differences on defence and international policy. The results suggest that, in spite of Mr Lyons' return, the doctrine of isolationism has a strong hold on the Commonwealth.

* * *

Steel in Prosperity and Depression.—Steel has long had the reputation of being a "prince or pauper" industry. Few domestic industries, indeed, are liable to wider variations in demand. In the case of steel, these are due, in the main, to cyclical fluctuations in capital investment—accentuated, in recent years, by the operation of the tariff. These tendencies are illustrated in the accompanying chart, which shows the monthly course of domestic steel consumption and of general business, as calculated by *The Economist*, since January, 1927. The high level of steel consumption early in last year arose from the need to make up arrears accumulated during the coal strike of 1926. In 1929, the index of domestic steel consumption did not rise very much above the general level of business activity, because there was then no undue expansion of the capital equipment industries. During the depression, however, the index of steel consumption fell considerably below that of general business activity. Similarly, the expansion of steel consumption has considerably exceeded the rise in the general volume of business since 1936, an indication of the marked increase in capital investment during the past two years. Since last spring, the rate of increase in steel consumption has been speeded up by the exigencies of

THE ECONOMIST INDICES OF BRITISH STEEL CONSUMPTION AND BUSINESS ACTIVITY
(1935=100)

re-armament. To-day, however, the curve of steel consumption has risen so much above that of general business activity that it would be surprising if the recent rate of expansion were long maintained.

* * *

Austria-Hungary-Poland.—There are movements on foot in Central Europe to-day which are distinctly inimical to the Naumann-Rosenberg plan of a German hegemony. Last week-end the Austrian Bundeskanzler, Dr von Schuschnigg, visited Hungary and conferred with the Hungarian Prime Minister, M. Daranyi. The main subject of discussion between the two statesmen appears to have been the continuance of unwarrantable Nazi political pressure upon both countries. The pressure on Austria is too familiar to need description; but there is a parallel German campaign in Hungary—aiming not only at the organisation of the German minority, but also at the creation of a native Magyar Nazi party—which has latterly been creating irritation and alarm in the minds of patriotic Hungarians of all parties. The agitation made by these Magyar Nazis has now become sufficiently serious to compel the Hungarian Government to increase their police force by 2,000 additional men in order to cope with it. And, in a public speech delivered last Sunday, the Opposition leader, M. Eckhardt, spoke sharply about the persistent intervention of Germany in Hungary's internal affairs and compared it unfavourably with Italian neutrality. This Austro-Hungarian reaction against German aggressiveness is significant, because Austria and Hungary cannot be accused either of Communist leanings or of sympathies with Russia or of being "have" powers who are determined to hold on to war-loot which they have no right to possess! There is an equally significant *rapprochement* between Austria and Germany's latter-day friend Poland. The Polish Foreign Minister, Colonel Beck, recently visited Vienna, and this week the Austrian Foreign Minister, Dr Guido Schmidt, has been paying a return visit to Warsaw. Of Poland's three former masters, the Austrians alone have left pleasant memories in Polish minds, and it looks as though Poland no longer believes that she can save her own skin by throwing Austria to a Prussian wolf. It is thoroughly healthy that Germany's aggressiveness in Central Europe should evoke these widespread defensive reactions among the threatened parties.

* * *

Prague's Fears.—Austria and Hungary are not the only Central European States which are threatened by Nazi agitation. Czechoslovakia is still in the most exposed position. The clash between the police and certain followers of Herr Henlein at Teplitz was reported in last week's *Economist*. The violence of the German Press and the sharp answer returned by Baron von Neurath to Czech diplomatic protests gave the Prague Government reason to believe that they stood at the threshold of a possible Putsch to take place as a result of the communal elections scheduled for November 14th. This may or may not have been pure nervousness. But it remains true that if Germany should ever wish to make serious trouble with Czechoslovakia it would start with the provocation of clashes between Henlein adherents and the police. The Czechs can never forget that there is a Sudeten Brigade in Germany just as there is an Austrian Legion. To be on the safe side, the Government have postponed the communal elections and imposed a ban on political meetings, both measures extending to the whole Republic so as to leave no room for accusations of discrimination. Thus the Nazis have achieved one minor success in interfering with the processes of democratic government in Czechoslovakia. But since elections were due to be held in only 48 communes out of about 11,000, the damage is small. This constant vigilance in Prague is one of the best safeguards of European peace, for if the Nazi extremists are given no opportunity of provoking a Czech-German conflict except by an open clash of armies, it will probably never be provoked.

French Secret Funds.—It has long been a matter of common belief that the secret funds which the French Government, like all other Governments, has at its disposal were used to influence domestic politics. But clear proof of the way in which they are used has never before been so startlingly forthcoming as in evidence which M. Tardieu, a former Prime Minister, gave in a court of law at Lyons on Tuesday. The action was one for slander brought against Colonel de la Rocque, leader of the late Croix de Feu and of the present Parti Social Français, by one of his former adherents. One of the substantial points at issue was whether or not Colonel de la Rocque had used for his personal account subsidies given him from the secret funds. M. Tardieu gave evidence that Colonel de la Rocque had been introduced to him in 1930 by "a high military personage" and that from that date subsidies began to be made. For eighteen months the Colonel proved "a good servant," but when he "had a job to do for us in Toulouse" in April, 1931, he bungled it. The nature of this "job" can be guessed from the following remark: "In October, 1931, he did better, for M. Laval had a splendid acclamation at the Gare St. Lazare." Finally, M. Tardieu said, that he passed the colonel on to M. Laval when that statesman became Prime Minister and that the payments were continued. M. Tardieu seemed to have no compunctions about his action, which he considered to be normal and proper in French politics. If so, all the more discredit to French politics. It is the primary rule of honesty in politics that public funds shall not be used for party, still less for personal benefit. There will be less than complete confidence in the integrity of democratic government in France until the state of affairs revealed by M. Tardieu's evidence has been very radically changed.

* * *

Business Remains Active.—The lull in the volume of new business in certain industries has not yet affected the current level of industrial activity, which remains as high as ever. The iron and steel and engineering industries are working at capacity and pressure for delivery is still strong. Supplies of steel, however, are now less stringent. The output of coal declined slightly between the weeks ended October 9th and 16th, from 4,908,000 tons to 4,866,000 tons, but is still well above the level of a year ago. As a result of the decline in freight rates, reported by our Cardiff correspondent on page 247, export prices (c.i.f.) have been lowered without, however, appreciably stimulating demand. Collieries, therefore, continue to depend mainly on their contract commitments. Raw cotton prices declined again this week, but inquiry for cloth has been well maintained. Retail trade is still increasing. The latest developments in business activity are discussed in detail in our monthly Trade Supplement, published with this issue of *The Economist*.

Steep Decline in Share Values

NEW YORK, October 18.—The bear market of 1937 has now definitely established a place in history. It was exceeded by the 1929 collapse; but it approximates to that of 1920-21, and compares with the panic of 1907. About half of the shares listed on the New York Stock Exchange have fallen more than 50 per cent. in price since early in the year. The Dow-Jones averages of industrial shares have lost about 40 per cent. of their rise since the low points of 1932; rails have lost nearly 60 per cent., and utilities over 80 per cent.

Every previous bear market has been preceded by a shortage of credit, and very high money rates. In this case there was no rise in short money rates, except for a brief period when 90-day Treasury bills were quoted on a 0.70 basis before receding to below 0.50; the call rate never wavered from 1 per cent.; and customers' loan rates at banks remained at the lowest levels ever charged. At no time have the member banks had less than \$700 millions of excess reserves, and since the release of gold in September, the average has been well above \$1,000 millions.

In August the Federal Reserve Board's Index of Manufactures (adjusted for seasonal variation) stood at 118, as high as the spring peak, and with the exception of the month of December, 1936, as high as any month during the recovery. This autumn, railway car loadings have reached a volume greater than at any time since the autumn of 1930; and electric power production so far this year has reached a record high level.

Explanations of the Decline

There are now four explanations offered. The first and simplest is that the decline is a case of speculative hysteria; that the market is utterly out of touch with business; and that it took fright at the prospect of a "deferred seasonal" recession in production of prospectively brief duration and inconsequential magnitude—a necessary and even desirable "correction" of the "sellers' market" of last winter. A second view has been very ably expounded by Mr Winthrop W. Aldrich, Chairman of the Chase National Bank, who stated:—

The break in the market may or may not have significant consequences for business, but it was not initiated by change in business facts. Few informed investors, however, are free from apprehension regarding the long-run consequences of (governmental) policies already inaugurated or of policies proposed. The break

which began in mid-August is not to be attributed to current business or to foreign selling. . . . The stock market, once broad and active, once so capable of absorbing a tremendous volume of security sales with moderate price recessions, can now absorb a greatly reduced volume of sales only with very serious breaks in prices. Conversely, a very moderate amount of buying brings rapidly rising prices. What are the factors which have brought about this change? I think that the answer is clearly and definitely to be found in the cumulative effect of a variety of governmental policies, some of which are directly concerned with the activities of the Stock Exchange themselves, and others of which, designed for a different purpose, none the less restrict drastically the trading activities of the customers of the Exchange.

From that point, Mr Aldrich's argument includes the factors enumerated in "Wall Street and the Speculator," on page 76 of *The Economist* of October 9th, with some difference of emphasis on the part played by regulation of the market itself.

Wall Street and Business Prospects

The difference of emphasis between Mr Aldrich and *The Economist* article, which may be regarded as stating the third current explanation, is of the utmost importance. Mr Aldrich categorically disassociated the decline in the market from business conditions, except as the latter might be impaired by the former. *The Economist's* contributor, on the other hand, stated that:—

Those observers who expect a substantial trade recession in this country during the next twelve months have been in a minority until recently, but now their number is growing.

It is quite true, as Mr Aldrich states, that in August, when the market break began, production was excellent, but there was a "minority" that became apprehensive about the prospects of continued prosperity as early as last spring for two specific reasons: doubt whether the consumer could pay the higher prices clearly indicated for the autumn; and uncertainty about how long activity in the heavy industries could be maintained in the absence of a new issue market for corporate securities. As *The Economist's* contributor stated:—

In future months, the Wall Street slump may be a valid anticipation of a recession in trade and corporation earnings.

The fourth view, in turn, reflects mostly a change of emphasis compared with *The Economist* article. Since the labour troubles of last winter a good many persons have been increasingly concerned about profit margins. Quotations have visibly reflected this concern. The group which has had the worst market is public utilities, whose output will probably reach a new high record this year, but whose ratio of net earnings to volume of output has been conspicuously reduced. Something of the same sort is visible in rails; the year's traffic record to date is the best since 1930, but the decline in rails has been extremely severe. Their wage costs have risen; the price of their product has not been permitted to rise; and the earning margin has been drastically impaired. In short, in these two major industries it was not necessary to foresee any decline in volume of business to foresee a serious decline in earnings. It has been generally recognised that the increase in wages in the first half of this year has raised costs, but the consequence to the profit margin is still problematical. The most that can be said is that the profit margin has become so vulnerable that

even a minor recession in volume could in instances cause a major decline in earnings.

Whatever the future, the bear market of 1937 is a major economic fact. One can hardly rate as inconsequential a decline that has clipped from 40 to 80 per cent. off the total gain in the market appraisal of the equity in American corporate enterprise since the bottom of the depression. Its character is certainly complex, and analysis *in medias res* is usually subject to eventual correction. The net result is that our equity market, rightly or wrongly, appears to have capitalised a reduction in corporate earnings of close to 50 per cent.

France

Appeals for Unity

PARIS, October 28.—The cantonal elections were a check for the Communists but a success for the Radicals and the Socialists. Public opinion has ratified the "pause." But if public opinion has "changed" again since the period of "stay-in strikes," of demands for "guns for Spain" and of the attack against the Senate, the Communists are now hindering the changes which seem to be inevitable if the franc is to remain stable. After the elections, M. Chautemps, the Radical leader of the new Cabinet, and M. Blum, the Socialist leader of the first Popular Front Cabinet, both announced that there would be no break-up of the Popular Front, which still commands the confidence of the masses. Such a split could only result in a dissolution and a new general election.

Nevertheless, this joint appeal by the Radical and Socialist leaders is subtly interpreted as a manifestation of the real discord between the two parties, and even in the ranks of the Radical Party itself. This discord, it is argued, threatens to appear at the Congress of the Radical Party, which takes place this week at Lille, or at the Congress of the Socialist Party at the beginning of next month. Thus both speeches were designed to avert such an explosion. Dissension affects both foreign and domestic policy. The supporters of a policy of firmness grow every day in the Cabinet as a consequence of developments in the Mediterranean; and the rise in the cost of living has practically absorbed the entire increase in wages received during the last twelve months. Wages have been increased by from 35 to 40 per cent. since May, 1936, and the rise in the cost of living is already over 30 per cent.

Wages and the Cost of Living

The first dispute about wages was between the civil servants and the Government. This has now been followed by the demands of pensioners and of metal and building workers for higher payments. The real wages of the civil servants are actually lower now than a year ago, but higher than in 1930 and 1914. Those of the metal workers are also much higher than in recent years, though probably lower than a year ago. But it seems improbable that comparisons with the years before 1936 will be considered. Parliament will have to arbitrate the conflict between the civil servants and M. Bonnet, and the normal organisations will settle the other disputes. It is likely that the Budget and French prices will be the victims of these new claims.

These claims were not a surprise. What was surprising was the speech of M. Chautemps, which gave no real assurances about the revision of the social laws—not even modification of the 40-hour week, on which the Stock Exchange had relied after the sensational declarations at Rambouillet. The "pause" continues, and, with the promise of certain adjustments in the distant future, that is all. Meanwhile, the deficit on foreign trade account remains an actual menace; and nothing has been done to ensure a minimum profit for business in order to

accelerate the return of capital. It may be, of course, that while the Prime Minister declares the social laws "inviolable," the Government is agreeing to modifications behind the scenes. The manoeuvre is not easy, because the trade unions are on the watch, and, on the other hand, public opinion tends to rely on official declarations rather than on facts.

For the first time since the advent of the Popular Front Government (May, 1936) the general index of wholesale prices fell last week by 6 points, from 620 to 614; the index of the prices of imported products declined sharply from 576 to 563 and of domestic products only from 644 to 643.

Production of Electricity

The production of electricity in 1936 shows a slight increase of 3 per cent. over 1935. The production of thermal electricity actually fell from 8,080 million kwh. in 1935 to 7,580 millions in 1936; but the production of hydro-electrical power increased from 7,835 million kwh. to 8,940 millions, or by 12 per cent., and the proportion of hydro-electricity in the total output increased from 51 per cent. to 54 per cent. The increase of hydro-electric power has been mainly in the south-east.

New plants representing an average annual production of 115 million kwh. have been built in 1936, and the programme of 1937 and 1938 anticipates a further capacity for production of 261 million kwh. The capacity for the production of hydro-electricity is 12,000 million kwh., but the actual production is only 9,000 million kwh. a year. Capacity for thermal electricity is about 10,000 million kwh. Thus the total capacity is 21,000 million kwh., and, since consumption is only 16,500 millions, there remains an unused margin of 25 per cent.

Germany

Coming Depression Denied

BERLIN, October 27.—Taking as text the Stock Exchange declines in America and Europe, the financial Press publishes elaborate surveys of the world trade outlook; and comes in general to the conclusion that no major depression is to be feared. From the facts that prices of many important English industrials have held well, and that Amsterdam, where shares are largely in raw material concerns, has had a particularly sharp setback, it is concluded that a main cause of the decline in values was the fall of primary commodity prices. But it is argued that this fall, in view of the prevailing fear of too rapid a rise in industrial production costs, may be actually considered as a favourable factor. On German internal trade and on the balance of foreign trade the decline in the prices of raw materials and grain ought to have a good effect.

In the official journal *Der Vierjahrsplan*, General Göring publishes his own survey of state policy towards private business. Though this survey is very general in character and contains nothing new, it has a certain significance. Inasmuch as it deals with questions of "uniform direction and organisation of business," which are properly the sphere of the Ministry of Economy, the view is confirmed that the Ministry has been virtually embodied in the Plan organisation, or, in other words, that Dr Schacht has been virtually replaced by General Göring.

Limited Liability
in the U.S.A.

After an unbroken decline for six weeks the share market recovered a little last week. The chief feature was a sharp rise in loan-stock securities, including Reichsbank, which gained nearly seven points. It is expected that a new law perpetuating the loan-stock system, which originally was to last only three years, will soon appear, and that, simultaneously, a decision about the distribution of impounded dividends will be announced. On the other hand, the loan-stock system may be abandoned, and replaced by a general restriction of dividends. The Reichsbank has decreed that maturing U.S.A. Government bonds held by Germans must be delivered up. As this measure is explained by the argument that the gold clauses in these securities have been definitely repudiated, it is assumed that the holders will be compensated in marks at about the current official rate.

A new official estimate of cereal crops shows yields per hectare of rye and wheat slightly above the estimate made at the end of August; and those for barley and oats are considerably higher. In most cases the estimates per hectare are higher than the actual per hectare yields in 1936. The rye crop is re-estimated at 6,760,000 tons, compared with 7,390,000 tons in 1936; and wheat at 4,390,000 tons, compared with 4,430,000 tons. The deficit is entirely due to the decrease in the area sown. The crops of barley and oats are 584,000 tons more than those of 1936. The sugar-beet crop is estimated at 14,010,000 tons, which is 15.9 per cent. more than in 1936; vegetables 9.7 per cent. more; and hay 7.3 per cent. less, but still above the average of the last six years. A Rentenbank enquiry for the farm year 1935-36 shows a very slight decline in agricultural indebtedness. The old regional distribution of indebtedness has not changed, much the heaviest being that of East Germany.

Improving National Income

The Institute for Trade Research estimates the gross national income from wages and salaries (including official and military) in the first half of this year at Rm. 19,010 millions, compared with Rm. 17,170 millions in the same half of 1936. It fell from Rm. 44,470 millions for the year 1929 to Rm. 26,000 millions in 1932, and recovered in 1936 to Rm. 35,860 millions. The net income is reduced by deductions for wages tax, citizens' tax, and social insurance contributions, which are together put at 12 per cent. of the gross income, compared with 12.5 per cent. in 1933. On the other hand, the net income figure includes unemployment pay and cash payments by the Sickness Insurance organisation, these being classed as "derived income," but not invalid pensions and other benefits accruing to persons who have ceased work altogether.

On this basis the net income in the second quarter of 1937 is estimated to be 39 per cent. higher than in the same quarter of 1933; and in the year 1936 it was 32,666 millions. On the basis of the official cost-of-living index, the *real* net income in 1936 was Rm. 39,811 millions, compared with Rm. 32,751 millions in 1933; in the first half of 1937 it was Rm. 20,895 millions, which is more than in the boom of 1928, when, in the first half of the year, it was Rm. 20,207 millions. These figures, it is added, do not claim to be exact. They would be more convincing if the Institute, which claims to be a serious organ of enquiry, did not salt them with polemical reflections about reparations and complaints that foreign observers of Germany are always in the wrong.

A report of the Reich Bureau of Statistics shows a rapid decline in the number of limited liability companies. In six months of this year the number of limited liability companies declined from 39,249 to 33,578. The dissolved companies were mostly transformed into firms, partnerships, or "open trade companies." Coal production in the first nine months of 1937 was 136,168,000 tons, compared with 115,223,000 tons in the same period of 1936. Lignite output increased at approximately the same rate, being 134,750,000 tons, compared with 115,655,000 tons. Ingot-steel production in the first nine months was 14,553,600 tons, compared with 14,487,900 tons in 1936. Imports of pig-iron are still increasing. The export market for steel is very dull. House-building, counted by

the number of new dwellings, was 11 per cent. more active in the first half of 1937 than in the corresponding half of 1936, but the number of permits to build declined. The Reichspost's report for the operating year ended March 31, 1937, shows a substantial increase of business. Operating receipts were Rm. 1,873 millions, against Rm. 1,734 millions in the preceding year; expenditure Rm. 1,418 millions, against Rm. 1,371 millions; and contributions to the Reich Rm. 149 millions, against Rm. 104 millions.

Early this week money was in heavy demand for the month-end settlements. The Reichsbank's return for the third week of October shows repayments of 91.6 per cent. of the September month-end credits. The abnormal credit pressure already shown in the Reichsbank's return for September 30th appears also in the balance sheets of the commercial and other banks for that date. Deposits sank by Rm. 150 millions, and loans rose by Rm. 170 millions. The banks were compelled to realise liquid securities, in particular bills and non-interest bearing treasury certificates.

Italy

Corporativism in Agriculture

TURIN, October 11.—At present all the Corporations are busy discussing plans for autarky. The aim is to make the country self-sufficient by 1940. In agriculture the corporative system works mainly through intervention on the market and control of prices. It is most stringent for wheat, rice, wool, hemp and cocoons.

The agricultural year, though spoilt to some extent by insistent rains, has been generally very good. The yield of wheat, about eight million tons, is deemed sufficient for the country's needs; and foreign imports can be entirely dispensed with in the agricultural year 1937-38. As, moreover, the yield of maize and other secondary cereals, as well as of leguminous crops, was very good, a decree of September 12th authorised prefects to render compulsory the use of 10 per cent. of maize and other cereals in the manufacture of flour for bread. The object of reducing the use of wheat is to build up a stock of wheat in case the 1938 harvest should be deficient.

The grape crop was only average; but as wine stocks were everywhere exhausted the price of grapes is soaring. Accordingly, most of the comprehensive legislation enacted last April to regulate the wine industry, from the planting of vineyards to the sale of wine, is temporarily suspended. The Government is now content to promote the setting-up of public co-operatives, where growers can bring their grapes if market prices are not remunerative.

Owing to well-spaced rains fodder is plentiful. Farmers are in no hurry to bring cattle to the market and, while forage prices are lower, cattle prices are rising. Therefore, to stimulate deliveries to slaughterhouses, the maximum prices for young calves were raised. Meanwhile beef prices range near the maxima permitted by the corporative authorities, based on the average of prices in April and May.

Rising Trend of Public Prices

The olive oil yield is 220,000 tons, compared with 150,000 in 1936. No changes in price, therefore, have been sanctioned. In the case of rice, wheat, wool, hemp and cocoons, producers must sell all their output, with certain allowances for their own consumption, to public bodies. The trend of public prices is unmistakably on the increase. Wheat, for instance, must be sold at 1,250 lire per ton, compared with about 1,140 in 1936, and cocoons at 7.50 lire per kilogram, compared with about 6.5 lire.

The wheat price is remunerative, and farmers are encouraged to adopt better methods of cultivation. The

cocoon price, on the other hand, is barely equivalent, on the basis of the present gold content of the lira, to 1.20 old lire. At that price silkworm growing is a declining industry. The Government, by means of a very complicated system of levies and export inducements, is already endeavouring to maintain a cocoon price above the world market level; but to reach the equivalent of even the lowest price recorded in the century before 1914 the price would have to be raised to at least 15 lire per kilogram. To rebuild the silk industry on the basis of domestic supplies will be very expensive.

In the year 1936-37 the internal level of rice prices was more or less equal to the international level. Therefore the Rice Board did not need to spend much money to encourage exports. The current yield will probably be good and abundant. Moreover, as farmers were complaining of rising costs, and especially of wages, the Rice Board have increased the maximum price for raw rice from 780 to 920 lire per ton until January 31, 1938; it will then be raised to 940 lire by May 31st and 960 lire on September 15th. After that date the Rice Board will buy all unsold stocks at 960 lire.

The Corporative Committee have also increased, from September 20th, the price of domestic hemp delivered from public warehouses for export. The rise is justified by increasing costs. The interesting point is that the increase is higher for the best qualities. This is a move towards encouraging hemp growers to improve the quality of their product.

Jugoslavia

The Opposition and the Government

BELGRADE, October 11.—After two and a half years the Serbian Opposition parties and Dr Macek, on behalf of the Croats, have at last drawn up an agreement. They lay down that power should be entrusted to a new Government which "enjoys the confidence of the people." Such a Government would abolish King Alexander's constitution of 1931, and proclaim a temporary constitution which would recognise the Dynasty, the State frontiers, the principles of constitutional and parliamentary rule, and fundamental political, and civic rights. It would issue a writ for the election of a Constituent Assembly, which, when elected, would pass a definite constitution by a "majority of the Serbs, majority of the Croats, and majority of the Slovenes." For the achievement of this aim, all the signatories, i.e. the Serbian Radical, Democrat and Agrarian Parties, the Croatian Peasant Party and the Serbian Democrats of Croatia form one political bloc.

This agreement is without doubt one of the most important political events of recent years in Yugoslavia. The agreement has been presented to Prince Paul, but it is practically certain that he will refuse to accept a solution which might result in a federal form of government. In that case, the Opposition threaten to appeal to the nation, relying on the general dissatisfaction with the regime, which was increased by the Concordat. Whatever the effect of this appeal, it presages a winter of hard, and probably bitter political struggle.

The Government is not remaining inactive. Relying chiefly on the confidence of the Regency and the wave of economic prosperity, it is also fortifying its position by a series of political and economic measures. Dr Stojadinovic has announced that the Government does not intend to bring the Concordat before the Senate. The Cabinet has been reconstructed. The salaries of lower civil servants are being restored to the pre-1935 level. The interest charged by the State Mortgage Bank is reduced from rates varying between 7 and 10 per cent. to a uniform 6 per cent., an important measure because a large percentage of town houses are built by means of mortgage loans. Other minor concessions

include the lowering of import duties on cars and spare parts from 30 to 15 per cent. *ad valorem*, the rescinding of the luxury duty on cars and the cheapening of petrol. The journey of Dr Stojadinovic to France and England is also expected to repair his prestige.

Production and Trade Advance

The economic boom still continues. A bumper maize harvest is expected to yield 53.3 million quintals. Among industries, timber, transport, leather and hides, quarrying, textiles and clothing, and the heavy metal trades are doing especially well. The index of mining output is 140 for June, compared with 107 last year. The number of insured workers has risen to 713,835, some 73,000 more than in June, 1936. The level of wages is also slightly higher at 22.73 dinars per day compared with 21.56, and the total wage bill has risen from 339.9 to 405.5 millions. Savings deposits rose from 10,602 to 11,690 million dinars between August, 1936, and August, 1937. The indices of savings, employment and mining output are the highest for six years.

Foreign trade is also prospering. Exports during the first eight months were 2,497,000 tons valued at 3,959.9 million dinars compared with 1,665,600 tons valued at 2,333.7 million dinars in the same period of 1936, an increase of 88.22 per cent. in volume and 69.68 per cent. in value. Imports improved to 692,500 tons valued at 3,294 million dinars from 614,400 tons valued at 2,587.6 million dinars in the first eight months of 1936, an increase of 12.61 per cent. in volume and 27.30 per cent. in value. An active balance of 665.9 million dinars has so far been achieved compared with a passive balance of 250.9 in the same months of 1936.

Norway

Buoyant Revenue and Easy Money

OSLO, October 2.—According to estimates the Budget for the fiscal year ended June 30th will be balanced with a comparatively substantial surplus, probably somewhere between 30 million and 50 million kroner. This amount will be used to pay off part of the National Debt, which will consequently be reduced from about 1,500 million kroner to 1,450-1,470 million kroner. Revenue for the first two months of the current fiscal year is also considerably above estimates.

The money market continues easy. Deposits in private banks have increased during the eight months ended August 31st by about 80 million kroner to 888 million kroner, while loans have risen during the same period

NATIONAL BANK OF GREECE Established in 1841

Head Office: Athens

Branches and Agencies throughout Greece

Branch in Egypt: ALEXANDRIA

Affiliated Bank:

HELLENIC BANK TRUST COMPANY
51 Maiden Lane, NEW YORK

Capital paid up and Reserves Drs. 1,205,000,000

by about 70 millions to 995 million kroner. The note circulation of the Norges Bank, with the continuous rise in prices, has increased steadily and is now nearly 30 million kroner higher than a year ago. At the same time loans and discounts have fallen by 84 million kroner, and the exchange reserve of the Bank has increased from 159 million to 232 million kroner.

At the annual meeting of the Norwegian Bankers' Association held in September the President, Mr Sandberg, expressed uneasiness about the present policy of taxation which, if not amended, might lead to the diversion of capital from its natural course through the banks. Mr Sandberg also discussed the lending policy of the banks, which had been conducted to avoid unhealthy speculation. Mr Sandberg did not foresee any imminent fall in world prices with a consequent reversal of the present upward movement of trade and industry; but at the same time he called attention to the fact that a continued rise in the cost of production, building, etc., would inevitably lead to recession sooner or later.

Resumed Business Activity

While there was a set-back in business activity during May and June last, and a halt in the rise in prices, the third quarter of the year has been characterised by returning activity in most branches of industry and trade. This is shown by a rise of three points in the wholesale price index from June to July-August, but is more strikingly reflected in the trend of foreign trade. The rise in imports has been a conspicuous feature in foreign trade statistics since the beginning of the year, but was particularly marked in July by the fact that preceding years have regularly registered lower import figures in July than in June.

Total imports for the first seven months of this year exceed exports by about 304 million kroner, compared with 134 million kroner in the same period last year. The figures for August show a slight reaction; the value of imports is about 96 million kroner compared with 105 millions in July, and exports have also fallen by about 4 million kroner. In imports ships show a substantial increase compared with last year from 33 million to 95 million kroner, chiefly because of the heavy rise in prices. Apart from ships, the greater part of the rise in imports represents heavy buying of raw materials for industrial purposes, the increase being about 58 per cent. compared with a rise of 38 per cent. for consumption goods. Most groups of exports show appreciable increases, with metals ranking foremost. Great Britain is unquestionably our best customer. During the first half of 1937 Norway's imports from England were valued at 157.6 million kroner, or 24 per cent. of total imports, compared with 109 millions, or 25 per cent., during the same period last year. Norwegian exports to England were valued at 105 million kroner in the first half of this year and 84 millions in the first half of 1936, representing in each case about 20 per cent. of total exports.

Palestine

Disorders and Public Finance

JERUSALEM, October 5.—The Government of Palestine recently issued its Annual Report on the financial transactions for the year ended March 31, 1937. The troubled events of the year were reflected both in public and private finance. The surplus balance of the Government, which had risen at the beginning of 1936 to £P6,250,000, declined to £P4,830,000. Palestine was called upon to make payment to His Majesty's Government of £P1,180,000 in respect of the excess cost of the military forces despatched during the disturbances. There was a marked fall in the revenue of the year, the receipts from Customs duties alone declining from £P2,750,000 to £P2,000,000; and expenditure exceeded the estimates by over £P1,000,000.

Private investment during the year fell 50 per cent. below the figures of the previous year. The amount invested in building decreased from £P8,000,000 to £P4,500,000. The number of new companies registered fell from 294 to 168, and the capital of the new companies from £P2,375,000 to £P1,030,000.

Since the beginning of this year, however, there have been signs of recovery. Government estimates of revenue and expenditure for the current fiscal year show a Budget almost completely balanced. The estimated revenue is £P5,014,000, nearly £P400,000 more than the actual revenue of last year; and the estimated expenditure is £P5,077,000, some £P1,000,000 below the actual expenditure of last year. The estimated revenue from Customs duties, licences and taxes, and, indeed, from almost every other item, is greater than that realised in the preceding year; and there is a diminution in the estimated cost of defence of nearly £P1,000,000. The expenditure of the Department of Police and Prisons shows a significantly large rise.

The projected Government Loan of £P2,000,000, additional to the existing loan of £P4,500,000, has still to be issued. The administration has already spent nearly £P1,200,000 on capital works, on account of the loan, and the programme for the current fiscal year includes items which will bring capital expenditure up to nearly £P1,500,000. Whether the British Treasury will be willing, in the present uncertainty about the future of Palestine, to guarantee the loan for which the authority of Parliament was obtained years ago remains to be seen. In the meantime the money for capital expenditure is provided from the surplus balances of the Government.

Recovery in Foreign Trade

The improvement in foreign trade during the first half of 1937, compared with the corresponding period of 1936, was appreciable and encouraging. The value of imports amounted to over £P8,000,000, which represents an increase of more than 20 per cent. compared with the 1936 figure, and is only 5 per cent. below the 1935 peak. A striking feature is the increased import from Germany, which for the first time exceeds imports from the United Kingdom. Germany exported merchandise to Palestine to the value of £P1,300,000, or 16 per cent. of the total; while the United Kingdom took second place with 15 per cent. of the total, compared with nearly 20 per cent. last year. The special transfer arrangement, by which German Jewish emigrants can bring out a small part of their capital through the proceeds of the sale of German exports to Palestine, is the cause of the increased entry of German goods.

The increase in the value of exports during the period is even more striking. The total value was over £P3,750,000, some 65 per cent. more than during the first half of 1936, and 16 per cent. more than in the first half-year of 1935. The main part of the increase was due to a much larger shipment of citrus fruit during the earlier part of the year. The fruit was not marketed very profitably. It is perhaps more encouraging that, during the later months of the period, when the export of citrus ceased, the figures continued to show a steady rise. The local industries and the mineral products of the Dead Sea are steadily becoming of increased importance to the balance of Palestine trade. Exports to the United Kingdom amounted to nearly 60 per cent. of the whole, and were in value nearly double those of 1936.

Another interesting sign of recovery is the continued steadiness and stability of credit enterprises in Palestine. The investment of fresh capital in the form of new companies has likewise approached the figures in the year before the outbreak. It would be optimistic to infer that all is well in the economic life of Palestine, and that the setback of 1936 has been entirely wiped out. The rigid restrictions on immigration, which are likely to bring down the figure for 1937 to half the figure for 1936, and one-quarter of the figure for 1935, are a great handicap. Renewed unrest, and still more uncertainty about the future of Palestine, stand in the way of a return of general confidence.

Letters to the Editor

Anglo-American Trade

TO THE EDITOR OF THE ECONOMIST

SIR,—I have just read with great interest the article in your issue of October 9th on Anglo-American Trade Discussions, and am glad that you point out that it would be unwise to expect too much of a treaty if and when it were concluded. This should certainly have the effect of checking the uninformed enthusiasm which has pervaded certain quarters.

At the same time, I am a little surprised at the somewhat severe criticism of the Ottawa duties, because after all, it is not unreasonable that members of the same family should take steps to conduct their transactions with one another. But what surprises me still more is that you should exaggerate the alleged grievances of the United States of America as to the extent to which trade has in fact been transferred.

For example, you say that the Agreements have dealt hardly with certain American agricultural products, amongst them pig products. According to the table which you publish on page 59, imports of bacon into the United Kingdom from the United States of America fell by 90 per cent. between 1929 and 1932, that is to say, by 90 per cent. before the Ottawa Agreements could possibly have produced any result. In respect of hams, again the greater part of the fall took place prior to the Ottawa Agreements. In the case of wheat 80 per cent. of the fall took place before the Ottawa Agreements operated, and 50 per cent. of the decrease in respect of soft woods. A study of the trade statistics also reveals the interesting fact that in respect of a number of commodities such as wheat, barley, maize and raw cotton, the displacement of U.S.A. products in this country has not been so much by Empire products as by the products of other foreign countries.

Yours faithfully,

Victoria Street, S.W.1.

HERBERT G. WILLIAMS.

[Nobody contends that the Ottawa duties produced the decline in international trade before 1932. But they have impeded the natural recovery in trade between the United Kingdom and the United States which might otherwise have been expected to occur. They are, therefore, one of the chief reasons why our imports of American commodities make a poorer comparison with 1929 than our imports from the Dominions. We are surprised that Mr Williams should question that the Ottawa duties have diverted trade from the United States to the Dominions. That was part of their purpose, and since the protectionist party never tires of proclaiming their success, that must be assumed to have been their effect.—ED., *Econ.*]

Cotton Reorganisation

TO THE EDITOR OF THE ECONOMIST

SIR,—All who are engaged in, or concerned for the welfare of, the Lancashire cotton industry must have appreciated your friendly comments on the reorganisation proposals now before the industry. Many of us, as life-long Liberals, share your regret that such schemes should be necessary, but would echo your conclusion that, "in one trade after another, the logic of events is compelling the abandonment of unrestricted free competition." You rightly point to the equal danger that lies in private monopoly. "Unrestricted free competition" has cost Lancashire many millions of pounds, and an even more serious social and moral loss over the last fifteen years.

Lancashire can safely afford to accept a limitation of the "enlargement of profits," and although the public is not represented in the day-to-day management and control of other industries which have never approached Lancashire's achievement of supplying 98 per cent. of its home market without the aid of a tariff, by all means let the public be associated, as you suggest, with the management and control of the cotton industry. But I fail to see why the cotton industry's scheme which, even without these provisions, you are willing to regard as innocuous, and possibly beneficial, should be held up because it might be a bad precedent for other industries where the same safeguards were not present. A precedent, after all, comes at the head, not at the tail of a procession.

Yours faithfully,

Burnley.

JOHN H. GREY.

"The Under-Privileged"

TO THE EDITOR OF THE ECONOMIST

SIR,—Mr. Brayne replies to my letter with two statements which I deny. "If money wages rise, prices tend to rise further." This statement can be neither proved nor disproved in a short letter. "You cannot produce social justice by tinkering with the medium of exchange." Mr. Brayne means, I think, that real wages cannot be raised by controlling the volume of money in such a way as to maintain a constant price-level as production increases. This statement also is not true, but cannot be briefly refuted.

I agree, however, with his third paragraph. Until wages are high enough for the wage-earners to insure themselves, it is for the community to see that the worker does not suffer from circumstances not under his control, and our community has already begun to do so. In his last paragraph Mr. Brayne surely overlooks the fact that the payment of dividends will cease when the means of production are worn out, unless money has been set aside for renewal instead of being distributed in dividends. If it has, dividends will be smaller, but will continue longer, and in many cases, no doubt, beyond the lifetime of the shareholder.

But the standard rate of dividend may be gradually reduced in another way, if production of things consumed by the people continues to increase without check, as it should do with peace and proper management of money. The workers may claim and secure an ever-increasing proportion of the earnings of industry, leaving an ever-declining proportion, though not necessarily a smaller amount absolutely, to the shareholders.

It is a mistake, I think, to suppose that investors generally will spend their capital on consumables if they get only a small return on it. What they want is security, and a smaller return will make many of them, at least, save not less, but more. And every penny saved by an individual benefits the rest of the community, if money is properly controlled, even though the saving may have the effect in itself of reducing the volume of money and therefore the amount exchanged for things; for in that case it enables more money to be created, without a rise of prices, for State expenditure, which must be presumed to be for the benefit of the people.

Yours faithfully,

2B, Belsize Lane, N.W.3.

R. GRANT BROWN.

POINTS FROM LETTERS

Empire Exhibition at Glasgow.—Our annual sales of goods to Empire countries have risen by over £50,000,000 in the last five years. The time is just ripe for that visual exposition of what we and our fellow-countrymen overseas can do which is to be staged at Glasgow. The great majority of our import trade is done through London and Liverpool, and a very small proportion enters this country through Glasgow and our other ports. The Empire Exhibition should increase our trade with Empire countries, and may have the effect of directing some of that increase to the port of Glasgow itself. I would, therefore, suggest that a series of Empire exhibitions might well be held in various centres throughout the country over a number of years. There is a great deal of trade now done with foreign countries which might well be transferred to Empire countries.—*Sir Patrick Hannon, M.P., House of Commons.*

Violence in Palestine.—In the article about Palestine in your current issue, it is postulated that the Jewish State in Palestine will have to be defended by British bayonets unless it reaches agreement with an Arab State in its hinterland. But the hinterland State (presumably Transjordan), for obvious reasons, will itself be in a state of dependence much longer than the contemplated Jewish State. The future stability of these Arab States may depend largely on the degree and rapidity of development of the Jewish State. Clearly, it will be necessary to enlarge the area of the proposed Jewish State to enable it to absorb comfortably a minimum of 2,000,000 Jews within a comparatively short period.—*James A. Malcolm, Kensington, W.8.*

Books and Publications

The Third Reich

DR ROBERTS is a professor of modern history who was granted eighteen months' study-leave by the University of Sydney to examine the character of the new German State. Already he knew and liked the country and its people; and he came to its problems with a tolerance limited by the integrity of his academic purpose and by his own faith in liberal democracy. He was given every facility for his researches by the German authorities. The result is this full, lively, shrewd and very readable book.*

Fortunately, Dr Roberts has not felt himself obliged to offer an "interpretation" of what has happened in Germany. This book is neither a doctrinaire thesis nor a treatise in the psychology of great men. The theme is exciting, and he does it justice; but there is no gratuitous attempt to be sensational. The object of the book is simply to describe: the men who made the movement which created the State, including Heinrich Himmler of the Black Guards, whom Dr Roberts believes may succeed Adolf Hitler; their creeds and philosophies; the course of their political victory and the details of the changes which they have effected in government; the economics of dictatorship and re-armament; the achievements of the Third Reich; and its obvious failures. Dr Roberts paints a full canvas. His brush is not consistently apt: he confuses mere enumeration with information in his account of the National Socialist Party and the Civil Service, which still leaves the system of administration a little obscure; and his very readable analysis of Dr Schacht's policy in trade and finance is sometimes more ingenious than illuminating—though, in general, this section is a most valuable summary of the consequences of *autarky* in economic policy, industry, agriculture and politics.

In the end there is practically nothing the author has left untold: the use of culture, education, law and the radio to create a common mentality, and the barrier of the Churches; the many foreign policies in ruling circles and their implications for the world outside; the problems of the "lost" 15 million Germans and the "stolen" colonies; the danger zones of Austria and Czechoslovakia; the "Bolshevik dagger" and the Baltic "pressure points." In the chapters on labour, the book is disappointing. The fervour of Nazi youth, and the regime's strenuous and calculated programme to capture their loyalty, are vividly described. Yet we are not told what has happened to Social Democracy. Has it been swept entirely away? Or does it, with Communism, lie underground? Have Weimar and the great German working-class movement left no trace behind? And what is the influence of capital and the great industrialists?

Dr Roberts has not always been able to see beneath the surface, but on foreign policy he writes brilliantly; and nowhere is he more incisive and convincing than at the end, when, fresh from his survey of Europe in the

shadow of Hitler, he answers the question we are all asking: What will be the end of it all? Dr Roberts' answer is twofold: "The New Germany is becoming the Old Germany" . . . the Army is coming to rule; and, secondly, "the success or the failure of Hitlerism brings war in its train." "The nation may be reborn, it may be a new Germany, but unless it learns the habit of political and economic collaboration in international matters it is a nation confronted by ultimate ruin and disillusionment."

That is the burden of Dr Roberts's story: "A nation has been duped." The powerful appeal of many Nazi achievements cannot be denied. On many sides there are signs of a renaissance people; but the policy of their governors is one of erratic uncertainty, the programmes of their leaders are piecemeal and *ad hoc*, the spiritual basis of their creed is primitive and heathen, and the end of it all may be war. "A nation has been duped. . . . If only one of the boys I saw in the most impressive Hitler camps would have questioned the propagandist lectures to which they were listening, if only one of them had asked a penetrating question I would have felt more hope for the future of Germany."

Shorter Notice

"National Defence Contribution. Law and Practice." By Ronald Staples and Roy E. Bomeman. (London) Jordan. 124 pages. 7s. 6d.

N.D.C., second version, is "a simpler tax with a greater yield" according to the ex-Chancellor of the Exchequer. Its difficulties, however, are considerable, both in understanding and interpretation. The authors recognise the existence of many problems which, in the last resort, will fall for decision to the courts. But they have made a valuable contribution towards the solution of these problems. They examine the legal position closely, and add any number of practical examples—which go far to simplify the complexities abounding in this "simpler tax." Lawyers, accountants and business men will find the book of great value.

MONEY AND BANKING

Are We Living on Capital?

SIR ROBERT KINDERSLEY has done much to further our knowledge of Britain's capital overseas and of the national balance of payments. Rarely, however, have his statistical disclosures come with greater force than those he gave last week at Leicester to the East Midland Savings Conference. He revealed, in effect, that to-day Great Britain is living on her capital. His main theme was the need for keeping intact our national savings in the form of overseas investment as an essential contribution to the country's re-armament effort. Re-armament, declared Sir Robert, was putting a great strain on the national balance of payments. Last year the adverse balance of merchandise trade was £347,800,000; in the first nine months of 1937 it amounted to £296,800,000, compared with £242,000,000 in the corresponding period of 1936. How has this vast trading debit been financed? Thanks to the "foresight, diligence and adventurous spirit of past generations," we receive an immense income from overseas investments, which in 1936 paid for over half the adverse balance of merchandise trade.

Our total investments abroad to-day amount to at least £3,764 millions, said Sir Robert, and in 1936 they yielded £184 millions in income. This was £34 millions more than in 1933, but only about four-fifths of the total in 1929. British investments are widely spread throughout the world, and the products of British companies abroad enter into the consumption of almost every country. Thus, despite the gradual upward trend in world trade, a restoration of investment income to its former level seems unlikely, unless some real progress is made towards the reduction of tariff barriers and other trade restrictions.

How was the rest of the gap made good? Sir Robert did not speak of the £95 millions of shipping income or the £30 millions of income from short-term investments, commissions and so on, included in the Board of Trade's balance-of-payments estimates for 1936. (The latter, incidentally, show a figure of £195 millions for *net* investment income, including the yield from "direct investments" and other forms of capital not covered by Sir Robert's inquiries, as well as the income of British companies brought home but not distributed.) But he did lay stress on one item which in the past was almost forgotten until his own researches gave it statistical shape—repayments and redemptions of existing capital. This factor has always been important. A study recently made by *The Economist* suggests that the average repayment ratio over a period of years may be approximately 1½ per cent. per annum. In addition, there are losses of capital through bankruptcies and defaults, which may account for another ½ per cent. This total wastage rate must be annually made good by new investments if our aggregate capital abroad is to be maintained unimpaired.

In 1932, for the first time since the war, subscriptions to new issues for overseas fell short, by £11 millions, of the total of repayments and redemptions, which in that year amounted to £48 millions. In 1933 and 1934, in spite of the restrictions on new issues, we kept on the right side of the book, though not by a large margin. In 1935, however—as Sir Robert Kindersley revealed for the first time in his address last week—while we lent £51 millions of new money, we received in the shape of repayments on outstanding capital no less than £81 millions. Thus, apart from losses, our total capital abroad was depleted by £30 millions. For 1936, the figures are even more striking. Repayments totalled no less than £107 millions, while new lending amounted to only £61 millions. Thus in two years the repatriation of capital formerly invested abroad provided £188 millions of credit gross, and £76 millions net, towards

the balancing of the debit of £609 millions on merchandise account. Our national capital overseas was apparently curtailed by that net sum.

Sir Robert rightly describes this as an unwholesome development; "for apart from permanently reducing our income from abroad it is apt to nurse us into a sense of financial security which is not justified." There are, however, certain considerations which soften the picture of national prodigality. In the first place, the figures of new issues on the London market need to be supplemented by those of various other forms of exported capital, notably the purchase of American securities. The figures published by the United States authorities show a net influx of \$484 millions of long-term capital from the United Kingdom in the course of 1935 and 1936. Sir Robert may be correct when he characterises this purchase as "purely speculative," but the fact remains that, in so far as the securities have been actually paid for, their acquisition represents an addition to our capital abroad, which yields income and can be realised, if need be, at a later date. The "adventurous spirit of past generations" may have been a "purely speculative" spirit in its time.

In the second place, as Sir Robert himself points out, "the remarkable jump in the volume of repayments during the last few years was due to a combination of circumstances which may not be repeated for many years." The strength of the gilt-edged market stimulated conversion and refunding operations by Dominion Governments which would normally have been spread over a long period. This tendency was also helped by the large volume of sterling balances held by Dominion Governments or central banks. No less than £75 millions of Dominion loans were repaid in 1936. In times of uneasy exchanges, strong demand for new capital at home, and scarcity of credit-worthy borrowers abroad, the stream of fresh overseas investment cannot be expected to rise and fall in exact correspondence with the forces that make for large or small redemption payments. Its more even course is not in itself discreditable or dangerous. Moreover, large sterling balances, from the Dominions' point of view, are a form of insurance cover against a sudden reduction of their credit balances of trade; while from our point of view they are a buffer against a sudden curtailment of British exports in order to correct such a reduction. It may be argued that, if they had been dissipated through increased Dominion imports, our merchandise balance would have looked better now, but would look much worse at some future date when our own means might be more straitened than they are to-day.

Nevertheless, the main lesson of Sir Robert Kindersley's figures is undoubtedly sound. Great Britain is in danger of eating into her financial patrimony by not keeping her total of overseas investment intact. The danger is the more serious because the conversion operations and the defaults of the past few years have inevitably lowered the average return on our investments abroad. Four millions less outgo for interest on the Australian Budget means four millions less income from investment on the British balance of payments. If our national income from investment were to fail, not merely should we have difficulty in pursuing re-armament without grave impairment of the standard of life; the whole structure of British trade and industry would be shaken. Dividends and interest on our capital abroad are a vital part of our national income; they are the fund that enables us to have both guns and butter. Personal and national economy now, pursued with the aim of keeping that fund unimpaired, will give us reason for thankfulness in years to come.

Financial Notes

The Outlook for the Franc.—Although francs tended to come on offer early this week, during the present month as a whole the franc has undoubtedly had a breathing-space, and the French authorities have been able to replenish their depleted reserves of foreign exchange. There has also been some repatriation of French capital, due, probably, as much to apprehensions of conditions abroad as to even partial restoration of confidence in French economic affairs. M. Chautemps, in a speech at Châteauroux last Sunday, declared that the Front Populaire must continue, and warned the Radical Party of the serious consequences that would follow its break-up. He was presumably concerned to forestall any attempt that might be made at the forthcoming Congress to create a breach in the Front Populaire. If, indeed, a breach were to occur the reaction on the franc would be complex. On the one hand, a Government move towards the Right might be welcomed by many French investors and might lead to an increased repatriation of French capital. But the political consequences of a break-up would be far reaching, both at home and abroad, and might well expose the franc to new—and even dangerous—cross currents. All this, however, looks unduly far ahead. Sufficient for the moment is the franc's recovery, which has lasted longer than any similar movement for some time past.

Wall Street Margins.—Among the many explanations which have been advanced for the present behaviour of Wall Street, prominence has been given to the narrowing effect on market activity of the Securities and Exchange Commission's regulations, Federal Reserve Board margin requirements, and taxation methods. This fact may not account for the violence of the month's depression, but it certainly tended to give undue influence to relatively unimportant political and business developments. The Administration in Washington has apparently come round to this opinion, for on Wednesday the Federal Reserve Board announced that as from November 1st the margin for the purchase of securities would be reduced to 40 per cent. from the present level of 55 per cent. which has been in force since February 1, 1936. This is not to be interpreted as a reversal of the official policy of damping down speculation, for it is also announced that a margin of 50 per cent. will be required on short sales. There has been no Government regulation on this point hitherto, but the New York Stock Exchange has itself required short sellers to put up a 10 per cent. margin. The double change is obviously designed to relax the restrictions on an upward market, and to tighten them in a falling market. The gambling desires of the penniless public will find less outlet in the Stock Market. But it is doubtful if the modified rules will prove sufficient to cure the market's present unease; nobody but the market itself may be able to do that.

The Foreign Exchanges.—The change in the political atmosphere over the week-end was immediately reflected in the franc, which, from an opening rate of Frs. 146½, was forced sharply down to Frs. 147½. The closing rate was slightly better, but on Tuesday the adverse pressure was accentuated and the day's depreciation amounted to one franc. Forward rates moved in unison, the three months' discount finishing up at Frs. 6½. The French Control offered little resistance to this movement, intervening occasionally only to prevent too rapid a fall. On Wednesday, however, a masterly bear squeeze was engineered by the authorities, and by heavy purchases the rate improved to Frs. 148. This recovery completely changed the temper of the market, and on Thursday francs were bid throughout, finishing up at Frs. 147½. During this phase, the French Control was able to acquire foreign exchange through sales of francs.

The future is still obscure, but the franc's display of strength has been most heartening. Belgas have been sold heavily following the Cabinet's resignation, and a good deal of gold has gone to Switzerland. On Wednesday and Thursday there were large sales of dollars against purchases of gold, again on Swiss account apparently, and the rate fell to \$4.95½ on Thursday. Generally speaking, the lack of confidence in currencies which this gold hoarding betrays is wholly unjustified, but rumours of impending devaluation of the dollar continue unaccountably to emanate from unknown sources. Needless to say these have no foundation. On the contrary there has been some evidence that during the uncertainties of the past two months, the pound-dollar exchange rate has been held at about \$4.95 in order to provide some basis for the franc and other currencies.

The Bank Return.—The only movement of significance in this week's Bank return is a reduction of £1.2 millions in the active note circulation. With the end of the month approaching, it was expected that this week there would be an increase as in the corresponding week of last year, when the circulation rose by £2.6 millions. Evidently the dishoarding of notes on Continental account has been an active factor over the past week, and will probably continue to be so for some time.

		BANK OF ENGLAND			
		Oct. 28, 1936	Oct. 6, 1937	Oct. 13, 1937	Oct. 20, 1937
Issue Department:—		£ mill.	£ mill.	£ mill.	£ mill.
Gold		248.7	328.4	326.4	328.4
Note circulation		442.7	491.8	489.9	484.3
Banking Department:—		1936	1937	1937	1937
Reserve		66.9	36.3	38.3	43.7
Public deposits		27.6	18.0	28.1	29.8
Bankers' deposits		86.5	102.1	92.9	89.3
Other deposits		41.4	36.8	36.4	36.3
Government securities		80.2	106.5	105.1	99.6
Discounts and advances		6.6	10.8	9.2	6.5
Other securities		19.5	20.9	20.4	23.2
Proportion		43.0%	23.1%	24.6%	28.1%

The only other change is a small one between bankers' and public deposits. As in the previous two weeks this has been due to the excess of Treasury Bill payments over maturities, which is causing a temporary disequilibrium. Next week, dividend payments on certain Government stocks are due to release about £11.0 millions in cash. Public deposits should therefore be reduced to a more normal size, with a consequent replenishment of bankers' deposits.

The Money Market.—Once again there is no change to report in the money market. The clearing banks have been fairly keen buyers of bills at the usual minimum, and have been taking mixed parcels of December and January maturities. The market, however, is not keen to part with the few bills it has, being still at starvation level:—

	Oct. 7, 1937	Oct. 14, 1937	Oct. 20, 1937	Oct. 28, 1937
Bank rate	2%	2%	2%	2%
Clearing banks' deposit rate	1½	1½	1½	1½
Short loan rate:—				
Clearing banks	1½	1½	1½	1½
Others	1½	1½	1½	1½
Discount rates:—				
Treasury bills	1½	1½	1½	1½
Three months' bank bills	1½	1½	1½	1½

* Loans against Treasury bills and other approved bills and British Government securities within six months of maturity; 1 per cent. Treasury Bonds and other gilt-edged stocks within six months of maturity; and other collateral respectively.

Discount rates are unchanged. A poor afternoon demand for money is reported by the clearing banks, but nothing out of the ordinary. This continued ease may appear strange in face of the drop of nearly £15 millions in bankers' deposits during the past three weeks. The truth is that even at its present level bank cash is fully adequate for market requirements.

THE STOCK EXCHANGE

London Transport Finance

THREE weeks ago the London Passenger Transport Board gladdened its depressed "C" stockholders by announcing a total dividend of 4½ per cent. for the year to June 30, 1937—the fourth of the Board's operations—against 4 per cent. for the preceding year. A long series of cheerless traffic returns and the reiterated complaints by the Board's officers against the burden of rising costs had dashed all market hopes of an increased distribution.

The Board's report, issued this week, is as well produced and socially interesting as its forerunners. It is, indeed, a model among annual reports in every sense but one; for it is presented to the Minister of Transport, and stockholders must pay 1s. for official news of their investment. This seems regrettable, since its financial schedules are as revealing to the "C" stockholder as its text, illustrations and charts are interesting to the intelligent Londoner. The report, in fact, suggests the need for a revised view of the Board's financial potentialities.

Investors, of course, have treated the past year as exceptional owing to the Central 'bus strike, and they have been right—within limits. At the beginning of the strike we stressed the importance of the pooling arrangement in the London Transport area, and made certain estimates which showed, paradoxically, that the Board might even make a "profit" from the strike. Broadly, this suggestion has proved to be accurate. For the fifty-two weeks to June 26th last the Board's own receipts, before pooling, showed an increase of £255,100. But for the year to June 30th the total pool receipts increased by £771,590, while the Board's passenger receipts, after pooling, increased by £544,282. London Transport, in short, has obtained the benefit of approximately 62 per cent. of the increase in the area traffics of the main-line railway companies, and has passed on to them nearly 38 per cent. of the adverse effects of the 'bus strike.

This point is not only essential to an understanding of the Board's relatively favourable experience in a year of operating difficulty; it has consequences of long-term importance to which we shall revert later. We may, however, proceed first to analyse the main heads of revenue and expenditure during the four years of the Board's operation:—

	YEARS TO JUNE 30TH			
	1934	1935	1936	1937
Revenue:—				
Total traffic receipts	27,379,351	29,016,085	29,724,723	30,247,378
Working and general exes.	21,583,744	22,515,889	23,515,821	23,917,085
Renewals	2,020,500	2,526,000	2,300,000	2,400,000
Net traffic receipts	3,775,107	3,974,196	3,908,902	3,930,293
Other receipts	1,520,408	1,500,014	1,563,214	1,623,539
Miscellaneous charges	Dr. 338,824	Dr. 347,939	Dr. 298,077	Dr. 293,779
"C" Stock interest fund	...	...	28,632	30,843
Available for appropriation	4,956,691	5,126,271	5,202,671	5,290,896
Appropriation:—				
Tramway debt fund and interest	35,895	26,158	20,337	16,339
"A" stock interest	2,891,537†	2,893,169	2,894,955	2,894,955
"B" stock interest	1,181,694†	1,183,506	1,185,492	1,185,492
"C" stock interest	874,664†	1,015,192	1,027,952	1,092,199
Ditto rate %	3½	4	4	4½
Payments under guarantee interest to London Electric Transport Finance Corp.	21,275	8,246	8,246	1,731
"C" stock interest fund	...	...	35,050	212,646†
Transport Finance Corp.	...	...	30,639	28,061
Total appropriation	4,956,691	5,126,271	5,202,671	5,290,896

Note.—The figures for the first two years are not strictly comparable with those of succeeding years.
† Less £48,374 charged to capital cost of new works. † Less £140,527 charged to capital.

The total sum available for appropriation has been increased, in the past year, from £5,202,671 to £5,290,896—an improvement broadly comparable with that of the preceding year. For the "C" stockholder,

importance attaches to each stage by which this result is reached. First, the total traffic receipts—including certain relatively small amounts for goods and miscellaneous receipts—have increased by £522,655, as a result of pooling. The second main item, working and general expenses, shows an increase of just over £400,000, to £23,917,085. But when detailed analysis of this total is made, the result is certainly not unsatisfactory in a year of rising costs and disrupted services. The adjustment of staff conditions, accruing from the previous year, was estimated to cost £155,000 annually, and revisions during the past year will further require £188,000. The strike, it is true, "saved" £215,343 in busmen's wages, and the Board covered a major part of 'bus overhead expenses by allowances from the pool. But wages charged to running expenses on the other three sections of the undertaking absorbed three-quarters of the amount which the busmen lost. The rise in working expenses of trolley 'buses is £80,000 greater than the fall in the operating costs of trams; but this is justified by the already satisfactory results of trolley 'bus operation. The Board's operating expenses under all headings, indeed, are responsible for only £179,653 of the total increase in expenditure. The main culprit is general expenditure, where an increase of £221,611 is chiefly attributable to increased provision for rates, to cover any conceivable increase of liability arising from the new rating valuation now in progress.

It is fair to say, therefore, that an appreciable part of the extra cost of operating in 1936-37 lies outside the Board's direct control. The detailed schedules of working expenses show, further, that the Board's high standard of maintenance has been in no way relaxed. Somewhat to the general surprise, provision for renewal has been increased from £2,300,000 to £2,400,000. Moreover, during the past year net allocations to maintenance reserve totalled £98,262 (split up among the operating costs of each section of the undertaking) against a net credit of £2,255 brought in from maintenance reserve in the preceding year. Thus, £100,000 of the increase in expenses bears no strict relation to traffic operation during the year, but is intended rather to smooth out exceptional maintenance burdens.

The relationship between maintenance and renewal policy is set out in our next table:—

	Buses and Coaches		Trams		Trolley Buses		Total
	£	£	£	£	£	£	
Renewal Provision:—							
1933-34	763,796	823,028	418,144	15,532	2,020,500		
1934-35	843,727	1,054,883	507,732	19,858	2,526,000		
1935-36	865,668	934,858	442,812	56,662	2,300,000		
1936-37	859,636	997,818	393,309	149,237	2,400,000		
Total Provision, 4 years	3,432,827	3,810,587	1,761,997	241,089	9,246,500		
Balance of Reserve at June 30, 1937							8,302,780
Total Capital Expenditure at June 30, 1937	76,850,280	11,235,864	8,521,363	2,780,737	99,388,244		
Rolling Stock Maintenance:—							
1933-34	429,832	1,537,550	668,467	17,482	2,653,331		
1934-35	445,345	1,568,472	639,658	22,623	2,676,098		
1935-36	430,547	1,720,554	652,685	35,001	2,838,787		
1936-37	467,105	1,831,272	519,869	90,427	2,908,673		
Total, 4 years	1,772,829	6,657,848	2,480,679	165,533	11,076,889		
Capital Expenditure on Rolling Stock Assets	8,250,575	8,088,148	1,875,567	1,457,758	19,672,048		

This elaborate analysis has direct relevance for the "C" stockholder. It shows, first, the provision which is being set aside towards the eventual replacement of the Board's assets as their working life expires. How far is £2,400,000 an appropriate amount for this purpose? The Board still has a legacy of replacements bequeathed by the conditions of its inception. It has brought its 'bus fleet up to date, but it has now to

replace 400 railway vehicles. If maintenance allowances are required merely to keep vehicles in efficient working order and renewal allocations to replace them, then the appropriations of the past year would correspond with the following average working lives:—

	Years	Years
Railway Rolling Stock	9.6	Trams 4.8
Buses and Coaches	8.1	Trolley Buses 9.8

Renewal provisions, of course, cover more than rolling stock, but the Board has hitherto discussed renewals policy solely in this context. The figures do not seem inconsistent with the suggestion that the relationship between renewals and maintenance is designed to reinforce prudence by conservatism.

What, then, is the outlook for the "C" stockholder? His net traffic receipts were £22,000 higher last year, while his other receipts increased from £1,563,214 to £1,623,539. The "C" stock is a marginal stock, and for its own marginal dividends it feeds on the financial *animalculæ* which swim into the Board's net. Net income from advertising and rents and the Treasury grant more than provide the whole of last year's 4½ per cent. dividend, yet they are not directly related to the Board's operating position.

For the current year, the Board must pay 5½ per cent.—the standard dividend—or suffer the risk of an application to the Courts by 5 per cent. or more of the "C" stockholders for the appointment of a receiver. To avoid this, the Board must increase its available revenue by £321,000 during the current year. We should hazard a shrewd guess that the money will be found; but whence will it come? The working of the pool suggests one contributory source. The Board has considerable unfructified capital of its own, which should earn a satisfactory revenue in future years. It also has a 62 per cent. equity in the London area main line net receipts—to which the Southern Railway's contribution, in particular, is substantial and expanding. This is a factor whose importance "C" stockholders may not, perhaps, have wholly realised in the past. It clearly means more to them than the week-to-week variations in the Board's own unpooled traffics.

In the second place, if our interpretation of the Board's operating figures is correct, some part at least of any shortfall might be made up by relatively small adjustments of the provision either for working expenses or renewals. In the last resort, the Board might draw attention to a mutual conflict of aims within the very first section of the 1933 Act, by which it is charged to provide "most efficiently and conveniently" for the transport needs of its area, and on the other hand "to conduct the undertaking in such a manner . . . as to secure that revenues shall be sufficient to defray all charges required" by the Act. To disclose publicly that a smaller renewals provision had been necessitated by the triennial right of the "C" stockholder to his standard dividend would seem to admit at least a partial failure to provide for the public need. Meanwhile, costs are still tending to rise, though not to a degree which can successfully be passed on to the public. Finally, as the Board's excellent discussion of changing London shows, London Transport serves an area in which depression, if it came, would in all probability, and by all precedent, be shallow rather than profound.

Judged by the latest report, in short, the future for the "C" stockholder seems more promising than it did six months ago. In the short run, the London area pool tends to keep revenues relatively stable in face of trouble. On the longer view there are factors applying to the Board (and, in parenthesis, the Southern Railway) which promise a steady, though not a spectacular, expansion of future revenue. It has been conventionally assumed that the "C" stock is a 4 per cent. equity with a 1½ per cent. bonus every third year. Perhaps, in the light of the current report, this notional valuation might be raised to at least 4½ per cent. for the two years when the Board rather than the Act determines the dividend. And there may be a case for expecting the margin between "equity" and "standard" dividends gradually to close. That, in brief, is the argument for retaining the stock at 79, and even for expecting an eventual appreciation of the price.

Investment and Company Notes

Time for Reflection.—Though Wall Street has this week given no immediate intimation of recovery, its movements have been far less erratic and have broken no new "lows." London, consequently, has had an opportunity to reflect on matters present and to come. In spite of the heavy fall in prices, it would be an exaggeration to say that all investors accept an extensive trade recession as imminent and inevitable. But that is not to say that nothing now stands in the way of a sharp recovery. The market agrees that a present purchase of sound ordinary stocks may be advantageous in the long run, but shows no disposition to buy them. Meanwhile, the King's Speech, this week, has come as a reminder that State encroachment on the former preserves of private enterprise is increasing, and that, whenever it occurs, it is likely to result in limitation of the capitalist's return. The legislature's attack on the share-pusher will cause no tears, particularly as prison conditions are, apparently, to be simultaneously improved. The absence of any mention of a Unit Trusts Bill, however, raises the question whether the Board of Trade has accepted the movement's tidying-up of its own house, and its admittedly reassuring experience, so far in adversity, as evidence that external control is unnecessary. Incidentally, it may be hoped that the Share Pushing Bill will include some provision against unsound property societies. The investor, however, is most concerned with the most controversial of the Government's new measures. Holders of coal shares will benefit in proportion to the reasonableness of the terms for buying out the royalty owners, and the strictness (if any) of the Government's determination to enforce amalgamations on the industry for its own good. Whatever form of reorganisation is adopted in the electric supply industry, however, it seems likely to impose a limit on the profits of many companies. Here, the investor must bow to the public interest.

Capital Market Prospects.—An inevitable consequence of the weakness of the Stock Exchange has been a recent dearth of new prospectuses. Companies which have issued new securities to their existing proprietors have generally secured a satisfactory response, but the course of corporation borrowing has not been smooth and the flow of new issues has ceased. Meanwhile, the speculative type of new industrial offer is in eclipse, as the following table suggests:—

RECENT NEW ISSUES

* Public offer. † Shareholders only. ‡ Stock Exchange introduction. § Permission to deal. || Acquired by the British Shareholders Trust.

The check to the more speculative offer is salutary. The persistence of issuing houses under conditions remarkably like these, in 1929, involved the market in some of the worst scandals of under-subscription and weak underwriting. The suspension of borrowing by corporations and public authorities, however, is a different matter. It is increasingly difficult to see what end is served by an official policy which insists on squeezing the last half-point out of gilt-edged borrowers and, after each subscribers' strike, closes the market until the accumulation of investment resources makes extortion again temporarily feasible. If credit-worthy borrowers cannot and the rest dare not borrow, the capital market is likely to remain in a state of suspended animation.

A British Columbian Precedent?—The City of Victoria (British Columbia) has worked out a scheme which affords an excellent example to other equally distressed but more impatient authorities in Canada. Some time ago a representative Debenture Holders Committee was formed, and its plan envisages the acceptance by all Victoria's debenture and stockholders of Refunding Debentures, which will mature in 1966 and will have the same face value as the securities they replace. They will bear the same rates of interest as the old debentures until the date when the latter would have matured; thereafter they will bear interest at 4½ per cent. The plan makes provision for a new sinking fund, and economies will be made in the City's administration. It will be seen that the Plan varies not the *present* but the *future* rights of holders. In the ordinary way, as each security matured, holders would have had the option to take cash or to convert into a new security based on interest rates, etc., ruling at the time. Instead, they are asked to agree, in advance, to convert at 4½ per cent. Obviously, this is a proposal whose acceptance could never be urged on general principles, but may be a far-sighted act of clemency in Victoria's special case. To disclaim it as a precedent, however, seems very necessary. There are many companies and authorities, of unquestioned financial strength, whose obligations mature in some years' time, when interest rates will not necessarily be what they are now. Doubtless they would welcome an opportunity to convert in advance; but there could be little attraction for investors in a heads-I-win-tails-you-lose transaction.

Property Society Failures.—Within the past fortnight, two property societies have been put into liquidation and a receiver has been appointed for a third. This is sufficient evidence of the dangers to which the small investor can be exposed under the Industrial and Provident Societies Acts, although they were designed for his protection. Societies registered under these regulations are able to offer securities to the public without observing the requirements to supply accurate and adequate information which attach by law to an ordinary prospectus. And the grossly misleading forms of advertisement employed by certain property societies has been doubly reprehensible where they have pursued wholly unsound trading methods. Naturally, there are exceptions; but the extent of the evil is indicated by the fact that, of thirty applications for membership of the Association of Property Societies, only eight were found acceptable. The rank over-trading which characterises so many property societies is sharply illustrated by the records of the three recent failures. The General Mortgage Society was formed in September, 1931, with a share capital of £104. As late as December 31, 1935, it had done no business whatever, and its statutory

return then included this pitiable travesty of a balance sheet:—

Sheet :—

		December 31, 1935				
		£	s.	d.		
Share capital	129	0	0	Preliminary expenses	23	5 6
Audit fees paid by a director	6	6	0	Furniture	6	0 0
Printing	25	0	6	Balance of loss	131	1 0
	160	6	6		160	6 6

During 1936 certain changes took place on the board and the society's operations were so transformed that only twelve months later its balance sheet included the following principal items:—

December 31, 1936			
	£	£	
Share capital	1,004	Freehold properties	42,584
Mortgages and bonds	216,616	Leasehold properties	253,958
Other secured loans	75,215	Debtenture issue expenses ..	9,275
		Cash	6,044

A change of management and the subscription of an additional £875 of share capital thus enabled the society to acquire in one year properties valued at nearly £300,000. Mushroom growth on only slightly less stupendous scale is shown by the other two casualties:—

LONDON AND PROVINCIAL PROPERTY SOCIETY							
		Dec. 31, 1935	Jan. 31, 1937			Dec. 31, 1935	Jan. 31, 1937
Share capital	2,425	2,733		Land and buildings	52,402	190,322	
Mortgages and bonds	52,200	166,303		Deposits, etc. on properties in course of acquisition	2,574	11,237	
5½ per cent. income bonds		34,420					

CITY HOUSING TRUST							
		Dec. 31, 1934	Dec. 31, 1936			Dec. 31, 1934	Dec. 31, 1936
Share capital	12,387	15,273		Land and buildings	32,952	168,205	
Mortgages and interest	64,411	93,173		Cash	37,320	29,747	
Loans and interest		83,860					
Management expenses	789	5,474					

A disquieting feature of the history of some societies is the exploitation of "names" as an attraction for the small man's savings. After the exposure of the high risks of failure, it will be hoped that this least desirable precedent of the 1928-29 new issue boom will be dropped. It will also be hoped that legislation to stop share-pushing will cover the present abuses of the Industrial and Provident Societies Acts.

WINTER CRUISE..

JANUARY 19 • FEBRUARY 22
By s.s. RANCHI 17,000 tons

A thirty-four day cruise from London to the West Indies and Panama calling at MADEIRA, CURAÇAO, COLON (Panama), JAMAICA, HAITI, PORTO RICO, and CASABLANCA.

FARES from 58 guineas

AUSTRALIA HOUSE, STRAND, W.C.2, OR LOCAL AGENTS

B.A. Western Report.—There is much similarity between the B.A. Western and B.A. Great Southern reports. Both railways have achieved a significant increase in gross receipts with a comparatively small addition to working costs. And both have provided sums for renewals out of net revenue which would have been more than sufficient to cover full payments on their second preference stocks. The B.A. Western gross receipts are 6·7 per cent. higher, but working expenses show an advance of only 1·7 per cent. Operating profit thus increased from £581,053 to £763,647, but exchange differences for the latest year absorb £299,488—an increase of £25,000—while miscellaneous receipts from rentals, dividends, and interest have fallen by £48,000. For the latest year, moreover, £49,072 has been provided for renewals from revenue, whereas for 1935-36 net expenditure (not provided from revenue) amounted to £106,407. The improvement in distributable profits is set out below:—

	Years ended June 30		
	1935	1936	1937
Operating receipts	3,513,204	3,502,899	3,735,632
Operating expenses	2,948,921	2,921,846	2,971,985
Operating profit	564,283	581,053	763,647
Exchange differences (loss)	310,544	273,755	299,488
Rentals, divs., etc. received	<i>Cr. 246,749</i>	<i>Cr. 261,542</i>	<i>Cr. 213,775</i>
Working agreement pay- ments	70,027	77,320	70,401
Renewals from revenue ...	Nil	Nil	49,072
Debenture interest	470,774	457,774	457,774

Earned for dividends	<i>Dy. 40,313</i>	18,295*	100,687
Preference dividends	72,428†	40,523†	104,332†
Carry-forward	55,433	33,205	29,561

† In each year, payment on 5 per cent. preference stock in full; on $4\frac{1}{2}$ per cent. preference stock, $2\frac{1}{2}$ per cent. in 1934-35, 1 per cent. in 1935-36, and $3\frac{1}{2}$ per cent. in 1936-37.

The Director-General's report stresses the economies of co-operation with the B.A. Great Southern management. Competition from the provincial railway and from road transport continues, but stockholders will welcome the indications that traffic is being regained from the roads. Prospects for the company's principal traffics—maize and wheat—are satisfactory in the eastern province, although the final result of the harvest will not be known for several months.

Railways in Argentina.—At the B.A. Great Southern meeting this week, Sir Follett Holt gave an encouraging account which, owing to the close connections of the two companies, will not be ignored by Western stockholders. He declared that an increase of 7·4 per cent. in the former company's gross peso receipts would cover all prior charges, while a further 5 per cent. would provide 1 per cent. for the ordinary stock. This calculation was based on the maintenance of the existing exchange position. The fact that the Government had obtained \$325 millions profit from exchange control up to the end of 1936 (of which \$70 millions was derived from purchases by the railways) suggests clear justification for improving the exchange facilities granted to British enterprises, for which Viscount St. Davids also pleaded at the B.A. and Pacific meeting on Thursday. A sovereign government is alone responsible for its currency, and is not responsible for heavy book-keeping losses if foreign companies keep their accounts on a parity basis. But the Argentine Government, bound by the trade agreement, is in effect imposing a revenue tariff on "imports" of railway goods and services if it maintains a controlled peso rate below its natural value. Stockholders will hope that, with the elections past and a vastly improved trade position, the Argentine Government will reconsider its exchange policy.

United States Steel Dividend.—On the eve of the United States Steel dividend announcement, operators were estimating, not the sum itself, but the potential market effect of different sums. It was generally agreed that a \$2 dividend would represent a bull point, while

payments below this level would reflect directly the directors' view of the outlook. The first common payment since 1932 is, in fact, \$1 per share—better indeed than nothing, but well below the best estimates. The market's response has been sluggish—United States Steel themselves have remained unmoved—but the third quarter earning figures appear reasonably satisfactory in view of the decline in operations from 88.4 per cent. to 73.6 per cent. of capacity. For October the average to date is no higher than 54 per cent. Net earnings for the nine months total \$95,353,000, compared with \$29,874,000 for the corresponding period of 1936, but to the end of August this year \$9½ of preference arrears were met. In fact, the \$1 dividend is comfortably earned on the nine months' results, for if a full year's preference dividend and arrears are provided, the net balance available for the common stock would be equivalent to about \$4½ per share. From the managerial changes announced this week, it may be presumed that further technical reorganisation is in contemplation. The Corporation has already achieved much in this direction, but so vast an organisation requires special managerial capacity. Whether the common stock, at \$60½, is too high or too low depends upon the estimate of future steel operations. As we show in the following Note, the effect of the collapse in railway re-equipment demand has been profound. Any hope of return to the high scale of operations in the second quarter clearly belongs to the remote future.

U.S. Rail Freight and Wages.—The consent of the Interstate Commerce Commission to increased freight rates on such traffic as soft coal, iron and steel has only partly solved the American railroads' cost problem. Wall Street's estimate of these difficulties is reflected in the fall of 50 per cent. in the Standard Statistics Bureau's index of railroad stocks from the high level of March, compared with 35 per cent. for industrials. Such movements are vividly particularised by New York Central, which reached 256½ in 1929 and fell during the depression as low as 8½. And though the present price of 20½ is above this year's "low," it is 63 per cent. below the 1937 "high." The freight increases just granted will provide additional revenue estimated at \$47,500,000 annually, while special concessions granted earlier this year should yield \$10 millions. But an increase of 5 cents in hourly rates was granted in August to the 13 non-operating unions, and early this month the National Mediation Board in Chicago brought agreement between the railroads and the 5 operating brotherhoods for an increase in wages of 5½ cents per hour, against an original demand of 20 cents. The compromise rate is estimated to add 6.6 per cent. to the employees' annual earnings, and in a full year may cost the companies \$30 to \$35 millions. Together with the earlier award, an increase in pay-rolls by some \$135 millions in a full year is probable, quite apart from the burden of rising costs of materials. It is scarcely surprising that railroad stocks remain depressed. Their record is compared with the improvement in gross earnings and net operating income in the following table:—

Railroad	Common Share Prices, 1937						% inc. Jan. Aug., 1937, over 1936 in	
	Highest	May 28	June 30	Aug. 25	Sept. 29	Oct. 28	Gross earnings	Net opng. income
Atchison, Topeka, etc.	93½	83	76½	75½	58½	41	16	51
Chesapeake and Ohio	68½	55½	52	49½	39½	27½	—	—
New York Central	55½	45½	36½	37	39½	20½	7	12
Pennsylvania R.R.	50½	42½	36	36	30	24½	12	3
Southern Pacific	63½	53½	43½	42½	32½	21	21	3
Baltimore and Ohio	40½	32½	26½	26½	17½	13½	8	2

Recent wage increases, it is true, do not affect results for the first eight months of this year, but already operating costs had outrun the advance in gross revenue on most lines. The latest I.C.C. award will not reverse the cheerless outlook, and it is understood that application is to be made for a blanket increase in rates. The stockholders' prospects are dependent on the I.C.C. to an

October 30, 1937

uncomfortable degree, but they are not the only section of the community to suffer from falling net operating incomes. The railroads are important consumers of steel, and their sudden reduction of orders to meet deferred maintenance is largely responsible for the prevailing setback in American steel activity.

Mitchells and Butlers' Record.—The prosperity of the brewing industry in the Midlands is clear in every item of the Mitchells and Butlers' report to September 30th. Profits, after providing for depreciation, taxation and N.D.C., have advanced by 5 per cent. from £719,119 to £754,412, while the amount earned for the ordinary capital is increased from £612,895 to £649,024. Yet the market was disappointed with the 23 per cent. less tax dividend, and marked the £1 stock units down sharply from 103s. to 98s. Indeed, the dividend position is somewhat complicated by the change-over from a net to gross basis. This year, the ordinary shareholders will receive £510,651, after deducting tax at 5s. in the £, compared with £518,052 after deducting tax at 4s. 9d. in the £. The corresponding gross sums are approximately £680,000 for the latest dividend and £670,000 for the previous year. It may, in fact, assist investors if the earnings and dividend record for the past three years is set out on a tax-free and less-tax basis:—

	Tax-free Basis		Less-tax Basis	
Years to	Earned	Paid	Earned	Paid
Sept. 30	%	%	%	%
1935	19.1	17	24.6	21.9
1936	20.7	17½	27.2	22.9
1937	21.9†	17½	29.2‡	23

† Or 20.2 per cent. after allocating £50,000 to property reserve.

The company's earnings record is progressive, and shareholders will probably approve the directors' wisdom in setting aside the special sum to property reserve. At their current level, the £1 stock units yield £4 17s. per cent. They represent an equity in a sound brewery in a prosperous area.

Bad First Reports.—It has been remarked that new companies often promise more than they achieve, but first results like those of the Aeronautical Corporation of Great Britain and B. and F. Carter, published this week, are rare. The Aeronautical Corporation report comes with satisfactory promptitude after a valuation made as at October 18th, but it reveals a position of real gravity. A capital reorganisation scheme is to be submitted on Tuesday next, while the creditors' winding-up petition stands over till November 8th. The accounts chiefly indicate how £150,000 required to write down various losses is to be allocated. For the 17½-month period to September 30th last, trading losses totalled £44,714, and £72,224 in all after debiting £28,938 further expenses and crediting £1,428 other receipts. This result is in dismal contrast with the prospectus estimate of £40,000 profit for a normal working year. Then £18,862 is required to reduce fixed assets standing at £80,019 to the valuation figure, and an investment deficiency of £1,590 has to be met. There remain £16,419 preliminary expenses to be written off, while trade marks, etc., now standing at £48,813 are to be reduced by no less than £40,905. The present board, of course, has held office only since last May, but these figures are so seriously at variance with prospectus estimates, and the market valuation of the shares in the aircraft boom, that an investigation of the prospectus basis seems essential. The results of B. and F. Carter, a small company which makes cable and braiding machinery, are of little market interest, but they also are seriously below estimates, and come as a complete surprise. Last year the company issued a statement "for information" relating to its capital of £60,000 in 2s. shares. The opening price of the shares was about 45s. Profits for the half-year to July 31, 1936, were given as

£7,603, the figure for the previous full year being £7,233. Orders in hand were stated to be 150 per cent. higher than a year earlier, and the statement declared that the managing director fully anticipated that profits for the then current half-year would be well in excess of the latest results. After deducting the appropriate expenses, annual earnings based on a 5½-year average were shown at 6.87 per cent. on the capital and at 21 per cent. based on the most recent profits. Such prospectus arithmetic has now proved wholly erroneous. Trading profit for the year to July 31st amounted to £2,254, of which £263 was absorbed in fees and £1,040 for depreciation. The trifling sum of £951 has been earned net, and of this £335 consists of profits earned before incorporation. Shareholders thus enjoy a balance of £616. The report which accompanies the accounts is bare of information, and the meeting yesterday was held at Bolton. Such summary treatment of the shareholder is inappropriate in the light of the results.

J. Mandleberg Scheme.—Though not wholly ideal, the Scheme of Arrangement put forward by J. Mandleberg and Company for consideration on November 17th should escape serious criticism. Gross profits for 1936 showed an improvement to £30,830, but dividends on the £70,000 7 per cent. preference capital are four years in arrear, while nothing has been paid on the £150,000 8 per cent. non-cumulative preferred ordinary capital since 1931. Holders of £494,243 ordinary capital have gone without dividend since 1930. The present capital thus amounts to £714,243 and it is proposed to write this total down by £277,121. The ordinary shareholders provide £247,121 by a cut of 10s. per £1 share. The preferred ordinary capital is to be reduced to £120,000, by the sacrifice of 4s. per share, although the capital value of the holdings on winding up will be maintained by allowing each new £1 share to rank for 25s. Moreover, full dividend rights are contingently restored by granting the new shares a further 2 per cent. participation after payment of 8 per cent. on the ordinary. No change is proposed either in nominal value or rate of dividend on the preference capital, but one of the four years' arrears is to be entirely sacrificed, and the remainder (less tax) satisfied by the issue of £11,025 5 per cent. Funding Certificates. In 1936, the sum of £17,898 was earned for dividends, and though the course of profits has been so erratic that no estimate can be made of future earnings, we show below the effects of the Scheme at various levels :—

Earned for divs. ↑	Prefce. and Prefd. ord. fixed dividend	Total payable to prefd. ord.	Available for ord.
£	£	£ %	£ %
10,000	10,000	5,100 4½	Nil Nil
20,000	14,500	9,600 8	5,500 2½
30,000	14,500	9,600 8	15,500 6½
40,000	14,500	12,000 10	23,100 9½

† After £550 service on 5% funding certificates, but before £4,900 dividend on 7% cum. preference shares.

Approximately £36,700 would be required before the preferred ordinary ranked for a full 10 per cent dividend, but some dividend, even if small, is within sight for the new ordinary capital. It is, however, difficult to explain why the preference shareholders should be asked to sacrifice, once and for all, a quarter of their arrears, particularly since the participating rights allotted to preferred ordinary shareholders do give them some prospect of regaining their full rights. This, surely, is a small matter which can and should be rectified. But for the rest, the scheme seems both expedient and equitable.

Imperial Smelting Recovery.—After its slow progress in recent years this company, which, with its subsidiaries, supplies our entire home production of zinc, has experienced a sharp recovery. Subsidiary companies' operations must indeed have been remunerative, for it appears that despite the rise from £15 3s. 11d. to £20 2s. 1d. per ton in the average price of spelter and an increase from 61,529 tons to 65,755 tons in production, the results of zinc smelting were again unsatisfactory. But in fact the consolidated trading profit rose by 56 per cent., from £285,789 to £446,479. After providing for taxation and expenses and £126,573 for depreciation (an increase of £28,000), net profits advanced by 82 per cent. to £266,430. For the Corporation itself £122,554 is available for the ordinary shareholders, which just covers the 5 per cent. dividend, the first to be paid since the initial period ended in 1930. The balance sheet position is, on the whole, more satisfactory. In the consolidated statement fixed assets of £3,795,407 are higher by £110,000, and the cash position is greatly improved. The principal changes in the Corporation's own balance sheet are an increase from £39,018 to £169,774 in investment reserve and a rise in advances to the National Smelting Co. Since the end of the financial year on June 30th, arrangements have been made for that company to purchase the remaining capital and debenture stock of Improved Metallurgy, Limited. The undertaking's liquid resources will not thereby be depleted, as the purchase price is being used to subscribe for 112,500 ordinary shares of the Corporation, with a two-year option on a further 10,000 shares. The £1 ordinary shares yield £7 3s. per cent. at the current price of 15s.

Tin Outlook and Results.—The decision reached at last Monday's meeting of the International Tin Committee was unusual in form and apparently tactful in compromise. The current quota of 110 per cent., in operation since last April, has not been changed, but the Committee express the view that the quota for January to March, 1938, "should be" 85 per cent. A definite decision, however, will not be made till December 10th. What cannot be proved by current statistics may be inferred from the adverse trend of the metal. Up to August this year tin production amounted to 126,270 tons, and showed an increase of just over 12 per cent. compared with 1936. But this is no more than the rise in world consumption during that period, from 107,684 to 123,564 tons. This country and the U.S.A. between them absorb from 50 to 60 per cent. of world supplies, and in both countries the rise in consumption has accorded with the general trend. Stocks are tending to rise; and supplies in this country and afloat amounted to 3,137 tons at the end of September, against 1,187 tons a year earlier. Such figures, however, are not necessarily too high, unless consumption trends have changed. Tin company reports are still encouraging, judging from the results of *Pahang Consolidated* and *Kamunting Tin Dredging* issued this week. In both cases net profits are the highest for 10 years. Total receipts of *Pahang* have risen to £455,656, against £367,100, while the net working profit of £212,731 is £29,000 higher. The participating preference shareholders again receive the maximum dividend of 15 per cent. and the ordinary shareholders get 50 per cent., though it is barely covered by earnings of 46.7 per cent. This creditable result has been achieved partly by an increase in production of black tin, of which 2,780 tons were produced, against 2,298 tons, and partly by a rise from £142 2s. 4d. to £162 12s. 5d. in the average price realised. Costs were £6 higher at £83 5s. 7d. per ton. A similar degree of improvement is recorded by *Kamunting Tin*, whose total profits reached £344,720, against £250,786. Net profits are £40,000 higher at £127,684, equivalent to 25.4 per cent. earned for the 22½ per cent. dividend. Production increased by 13 per cent. to 2,519 tons, realising £136 2s. 10d. per ton, against £126 19s. 2d., but costs were reduced by over £4 10s. to £40 6s. 3d. Increased production has contributed materially to the higher dividends paid, and since Malaya alone has been exporting her full allowance under the Scheme,

any reduction of the quota (even though it would affect half of these companies' current year) would adversely affect shareholders' prospects. The accumulated under-export of Bolivia alone exceeds 22,500 tons. The price of tin has fallen about £100 from its highest to £210 London standard cash, but the relative low costs of Malay producers offer some protection during a period of falling prices.

Consolidated African Selection.—The substantial increase in the revenue of this West African diamond concern appears largely attributable to its interests in Sierra Leone and in Cape Coast Exploration, although operations at the Gold Coast mines are stated to have proceeded satisfactorily. Revenue has jumped from £384,610 to £616,430. A reduction in the amount required for taxation was rather more than offset by amortisation and other expenses, and a divisible balance of £466,370 remains, as compared with £232,470 in 1935-36 and £177,790 in 1934-35. The cash dividend has been raised to 90 per cent. In the previous year a 70 per cent. dividend was accompanied by a 50 per cent. share bonus. An extraordinarily strong cash position is revealed by the balance sheet, and after the transfer of £100,000 to reserve, against £25,000, a slightly increased balance of £31,520 is carried forward. On the basis of last year's dividend the shares yield approximately 6½ per cent., tax free.

Other Company Results.—Our usual table on page 238 analyses the profit and loss accounts of over 40 further companies. The *Birmingham Small Arms* accounts are now available, while the more important results include those of *Burberrys, Limited*, and of *Atkinson-Oates Motors*. A number of concerns have recently issued their first accounts as public companies. A discussion of the results appears on page 239 under the heading "Shorter Company Comments."

Company Meetings of the Week.—Reports of company meetings commence on page 230 in this issue. In his address to *Rhokana Corporation* members, Sir Auckland Geddes drew attention to the extraordinary fluctuations in the price of copper during the past year and to the fact that despite increases of production and the removal of restriction the average price in June last was over £55. This position he ascribed mainly to increased consumption in the United States. At the *Modderfontein East* meeting Mr R. S. G. Stokes emphasised the continued increase in the scale of operations and forecast a heavy programme of capital expenditure. The grade of ore milled was likely to be lower during the current year. Mr C. L. Read, at the meeting of *Consolidated Main Reef Mines and Estate*, struck the same note and also pointed out that since the beginning of July the rate of development had been slowed down by the shortage of labour. Mr William E. Pennick explained to the shareholders of *Goode Durrant and Murray* that if the authorities stabilised the Australian exchange at the present level, a reserve could be created from the fixed asset valuations to save recourse to profits. Unanimous approval was given by *Allied Bakeries* shareholders to the increase in capital. The businesses to be acquired were described by Mr W. Garfield Weston. At the *Assam Railways and Trading* meeting Mr E. A. A. Joseph stressed the growth in motor traffic in India, but declared that the company had met such competition by keeping their services frequent, convenient and cheap. Sir Follett Holt's comments at the *Buenos Aires Great Southern Railway* meeting are discussed in a Note on page 222. Viscount St. Davids, at the *Buenos Ayres and Pacific Railway* meeting, declared that they anticipated better consideration from the new Government, and stressed the large burden of exchange differences. It was reported by Sir Harry Foster to members of *United Tin Areas of Nigeria* that, following the installation of a new gravel pumping plant, increased production might be expected from the Gurum Areas, which provided the bulk of the company's output.

THE WEEK IN THE MARKETS THE STOCK EXCHANGE

SETTLING DAYS

TICKET: NOVEMBER 2 ACCOUNT: NOVEMBER 4

RECOVERY, tempered by reflection, is probably the best summary of the week's markets. The opening was marred by a bad hang-over from Wall Street and renewed disquiet regarding the European political situation. Then London began to test its emancipation from Wall Street with some small buying, and was gratified to find it hold against rather uncertain movements in New York. Towards the end of a rather featureless week, the Federal Reserve Board announced a cut in margin requirements from 55 to 40 per cent. and a new move to limit "short selling"—a margin deposit of 50 per cent. International stocks immediately responded, and the tone of Thursday's market was generally more cheerful.

Gilt-edged opened quiet, but demand expanded, and in mid-week small investment support—some based on the view that a downward industrial trend had been reached without a money crisis—was reported. The Sheffield scrip improved slightly to ½ discount. Australian issues were firm, though not active, on the victory of the Lyons Government, and the expectation of a further conversion operation shortly.

In the foreign market, Brazilian issues reflected growing impatience at the lack of any scheme to control future interest payments, although prices became steadier as the week progressed. German issues were unaffected by the resignation of Dr Schacht, but a sharp rise occurred in Japanese bonds on Wednesday on the news that the Chinese defence of Shanghai had been broken. Yet Chinese Customs issues were still receiving attention.

Home rails opened with two dull days, despite early efforts on Tuesday to set the market moving. The traffics this week, however, appeared to include at least part of the 5 per cent. increase and Wednesday's prices were firmer. The Argentine rail market made little response to the B.A. Western report (discussed on page 222) nor to the encouraging speech at the B.A. Great Southern meeting. A recrudescence of speculative buying of Cordoba debentures appeared willingly to discount the rumours that the Government would, at long last, purchase the concern, despite the delays and recent disturbances on the line.

Although the industrial markets remained quiet, the tone showed some perceptible improvement. Erratic movements in international securities gave way to irregular fluctuations, and a rather lifeless reception to the U.S. Steel dividend. The entire iron and steel list was down on Monday, and there were no marked changes until Thursday, when the market was more active. Electrical equipment issues improved after a poor start, and were carried higher by a steady demand for British Insulated in mid-week. Motor shares were in small demand, although a few orders provided a fairly good background for some shares. Brewery and tobacco issues picked up after the resumption of investment buying, but the Mitchells and Butlers dividend (discussed on page 223) depressed the stock units. Store shares, particularly the fixed price issues, tended to improve, while Unilever, initially depressed by Amsterdam, recovered an appreciable part of its losses. Textile issues were uninteresting. Shipping issues became steadier, while the miscellaneous industrial leaders showed reasonably good recovery after a poor beginning.

Conditions in the oil market were dull, but not unsatisfactory. Small declines were experienced on Monday in sympathy with Wall Street's week-end setback, but the next day the tone was steadier though business was small. Small rises were fairly common in mid-week with some investment demand for the leaders. Activity in rubber shares was at low ebb, and prices sagged owing to the continued weakness of the commodities. Sales, however, remained small, and the market on the whole stood up well to Wall Street's influence. The tea market lived up to its recently acquired independence of general movements, and the tone was firm on investment buying.

Despite satisfactory mining reports, the mining market at first took Wall Street's behaviour and renewed political uncertainty very much to heart. Some improvement occurred later, but it was a dull week on the whole. Kaffir prices fell heavily in Monday's gloomy session, and though the market steadied itself in mid-week partly with the help of Paris and Cape buying, lack of public support prevented any marked turn for the better. Business in copper issues was dominated first by the irregular movements of Roan Antelope, due to Paris selling on the announcement that tax would in some cases be payable on the bonus shares. Tin shares were affected by the wide fluctuations in the metal price and the uncertainty regarding the January to March quota.

GOLDEN MOMENTS

Football

The whistle starts the first game of the season. Leading his side as he did in the Spring he takes the opposing backs by surprise and slams the ball into the net before the game is a minute old—the first goal scored in the season.

What a Golden Moment it must be for him! But even he cannot smoke a better tobacco at a shilling an ounce than Cut Golden Bar.—But it must be Wills's!

ACTUARIES' INVESTMENT INDEX

The Actuaries' index of 177 industrial ordinary share prices, standing at 77.5 on Tuesday last, shows a fall of 3.1 points from 80.6 a month ago, though there has been a recovery of 1.7 points from the low point reached on October 12th. A year ago the index stood at 90.4, by far the greater part of the decline having occurred in recent months. The corresponding yields are 4.69, 4.52 and 3.54 per cent. The rise in yield over the past year has not been as great as the decline in the index, but during the last few weeks the index and the average yield have tended to move in inverse proportion. The following table shows a selection of the separate indices, and the usual monthly particulars of fixed interest securities:—

Group (and No. of Securities)	Prices (Dec. 31, 1928 = 100)			Yield (%)		
	Year ago (Oct. 27, 1936)	Month ago (Sept. 28, 1937)	This week (Oct. 26, 1937)	Year ago (Oct. 27, 1936)	Month ago (Sept. 28, 1937)	This week (Oct. 26, 1937)

NEW YORK STOCK EXCHANGE

In the last day or two conditions on Wall Street have been somewhat quieter, but the market is still a broken reed; New York has its Windy Corner as well as Shanghai. Last week closed with further liquidation, assumed to be due in part to closing of bull accounts on the I.C.C. award of railway rate concessions estimated to yield \$47,500,000 a year. Monday began badly, but a rapid change came within the first hour, and prices rose substantially, the Dow Jones industrial index closing 7 points higher on the day. The sensation of the day was a temporary suspension in dealings in Chrysler, which holders refused to sell. The stock closed \$10 above the day's lowest. The rise was helped by rumours of a U.S. Steel common dividend of 2 to 3 dollars, although the steel position continued to frighten operators. Tuesday's dealings were firm for most of the session, and not until the last hour did weakness develop. Lower steel operations depressed steel shares, and rails sagged. On Wednesday the turnover fell to just over the million mark, with prices falling at first, but closing above the worst in a last hour rally. The U.S. Steel dividend stimulated no enthusiasm, and motors did not benefit from the Motor Show. Thursday's dealings had the benefit of a wholly unexpected reduction in the margin requirements from 55 per cent. to 40 per cent., and a new margin of 50 per cent. on short-selling operations, designed to check the bear raider. Government bonds were firmer, on the promise of open market support by the Federal Reserve Board. Iron Age estimates steel mill activity for the current week at 51 per cent. of capacity.

By courtesy of the Standard Statistics Company, Inc., of New York, we print the following index figures of American values calculated on closing prices (1926=100):—

	1936		1937		Beginning of Year 1937	Oct. 13, 1937	Oct. 20, 1937	Oct. 27, 1937
	Lowest	Highest	Lowest	Highest	Apr. 29	Nov. 10	Oct. 27	Mar. 10

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields of fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

COMPANY MEETINGS

CONSOLIDATED MAIN REEF MINES
AND ESTATE, LIMITED

GREATER QUANTITY OF ORE MILLED

MR C. L. READ'S STATEMENT

The annual meeting of the Consolidated Main Reef Mines and Estates, Limited, was held, on the 27th instant, in Johannesburg.

Mr L. C. Read, the Chairman, in moving the adoption of the report and accounts, said that the quantity of ore milled had been 163,500 tons greater than that of the previous year and, with a decrease of 0.242 dwt. in gold yield per ton milled, revenue per ton had fallen by 1s. 9d. to 26s. 7d., although gross revenue, by reason of increased tonnage, had been £69,562 higher at £2,551,367.

Working costs per ton milled had been 4d. lower than in the previous year, but in the aggregate—again owing to the increased tonnage handled—had been £139,316 higher at £1,934,581. Working profit of £616,786 was £69,754 less, having been at the rate of 6s. 5d. per ton milled compared with 7s. 10d. for the previous year.

CAPITAL EXPENDITURE

After reviewing the accounts as detailed in the report, the Chairman said the amount remaining to be spent on capital account at June 30th on authorised votes was £20,366, as was indicated by the consulting engineer in his report, additional capital expenditure was called for in the current year and new votes had been authorised to the amount of £96,712, making, with the unexpended authorisations at the close of the year, a total of approximately £117,000. That expenditure would not all be made during the current financial year owing to the ever-lengthening period required to obtain imported machinery and plant and for the reason that some of the work contemplated could not in any case be completed within one year.

The increasing depth of Main Reef and Main Reef leader workings necessitated heavy expenditure on ventilation, particularly in the western section of the mine, and on the provision of fourth stage hoisting in No. 3 shaft. Those two major schemes were estimated to require expenditure of slightly in excess of £50,000 over the current and next succeeding financial years.

ADDITIONS TO PLANT AND BUILDINGS

New workshops and buildings were required and improvements to reduction and treatment plants were in progress at an estimated cost of £20,462. Owing to an increase in tonnage last year the plant had been operated at maximum capacity and consequently no improvement in residues had been obtained. Additions now to be made, when brought into effective use, should result in a drop in value of residues.

Continuing, he said:—It will thus be seen that our capital expenditure programme is of a heavy nature. The items which I have mentioned will, however—so far as we can at present judge—cover essential capital works up to June 30, 1939, and average annual expenditure thereon, spread over two financial years, will not exceed that of the past year.

FEATURES OF THE YEAR'S DEVELOPMENT

The Chairman summarised the chief features of the year's development as follows:—

- (1) The payable ore developed on all reefs at 3,355,000 tons was 172,500 tons greater than the previous year's tonnage, the average value being practically unchanged.
- (2) Between No. 3 shaft and the eastern boundary values exposed on Main Reef leader showed a slight decline.
- (3) Between Nos. 3 and 4 shafts satisfactory tonnage of Main Reef leader was added to reserve, but in the lowest levels of these shafts little payable ore was disclosed.
- (4) In the north-west section of the mine Main Reef the Main Reef leader and south reef all yielded encouraging results.
- (5) East of No. 2 shaft favourable prospects were disclosed of opening up a payable south reef.
- (6) On Bird reef, between the ninth and fifteenth levels, development was satisfactory, but no payable exposures were made on the twenty-third level. Sinking of a new incline shaft (No. 10) was begun on this reef to explore the area to the east of that controlled by No. 9 shaft.

THE ORE RESERVES

Referring to the available ore reserves, which showed an increase of 1,465,600 tons, the Chairman said:—This very substantial ore reserve is highly gratifying, especially at the present time when the supply of native labour, after a long period of plenty, has fallen below the complement required for full maintenance of all departmental operations. Since the close of the year the rate of development has been slowed down in consequence of the decreased native labour force.

The report and accounts were adopted unanimously.

MODDERFONTEIN EAST, LIMITED

STEADY PROGRESS AND EXPANSION

MR R. S. G. STOKES ON THE FAVOURABLE
OUTLOOK

The annual general meeting of Modderfontein East, Limited, was held, on the 27th instant, at Johannesburg.

Mr. R. S. G. Stokes, the Chairman, in reviewing what he described as "a period of steady progress and expansion," referred to heavy increases in the amounts levied upon the company in respect of taxation and lease consideration, the increases having been due primarily to adjustment of factors upon which amortisation allowance is based. The taxation and lease consideration, together amounting to £304,902, represented, he said, an unjustifiably heavy burden of over 47 per cent. of the company's working profit.

A further marked increase in the scale of operations had been recorded during the year, the tonnage milled having been raised from the average capacity of 105,000 to 112,000 tons per month. There had been a satisfactory reduction in working costs from 19s. 2d. to 18s. 8d. per ton milled, in spite of a small increase in the percentage of surface sorting. Since June 30, 1934, the fall in costs had been 2s. per ton. The consequent lowering of the pay limit had resulted in a satisfactory improvement in the company's mining prospects, which were influenced, in increasing measure, by the successful exploitation of low-grade ore.

DEVELOPMENT RESULTS

Discussing development results, the Chairman said the general tendency towards a decline in grade upon the easterly extension, to which he had referred last year, continued. Subsidiary development in the western section served by No. 3 Shaft and in the central portion of the mine had given gratifying results, but the percentage of payability disclosed by advanced development from No. 1 and No. 5 Shafts had been generally low. The tonnage of payable ore developed, amounting to 1,371,680 tons, valued at 4.7 dwt., had been somewhat less in quantity and value than the results obtained in the previous year. The available ore reserve at the end of the year showed an increase of 384,800 tons and a decline of 0.1 dwt. in value.

The Chairman continued: A strong ore reserve and good prospects of developing large additional resources have warranted a policy of further expansion up to the maximum capacity of our mine and shafts. This programme involves heavy capital expenditure. It is estimated that the bulk of the work will be finished before the end of the current financial year.

PROVISION FOR EXTENSION OF MINING AREA

After summarising the work in progress, which included installation of larger electric winders at Nos. 1 and 5 Shafts, sinking of a new sub-incline shaft, the Clover Incline, and installation of electric compressors at Nos. 1 and 5 Shafts, the chairman continued:—Provision has to be made not only for the increasing scale of operations but also for the rapid extension of our mining area. Moreover the gradual exhaustion of No. 2 Circular Shaft section will necessitate the hoisting of larger tonnages at shafts serving other areas, and consequently greater hoisting capacities at those shafts.

The advanced workings are to-day two miles from the nearest vertical shaft, and in a few years' time should be nearly three miles distant, representing a length of underground haulage between the development ends and the shaft unequalled upon the Witwatersrand. The need for sinking a new vertical shaft has been advantageously obviated by the programme outlined.

In addition to the new plant erected at the reduction works during the past year it was now proposed to instal two more tube mills and an extra slime treatment plant in order to bring the milling capacity up to 120,000 tons per month.

CAPITAL REQUIREMENTS

The programme would involve an expenditure of approximately £150,000 as from the close of the last financial year. A circular had been issued to the shareholders stating that in the opinion of the board the best interests of the shareholders would be served by the issue of a certain number of new shares so that the bulk of the company's capital requirements could be provided out of new funds and cash in hand without serious encroachment upon the distributable profits. It was therefore proposed that the capital of the company be increased from £930,805 to £950,000 by the creation of 19,195 new shares of £1 each, and that these should be issued to the best advantage of the company at the discretion of the directors. The proposal would be submitted to the shareholders for their sanction at an extraordinary general meeting on November 15th.

The Chairman stated that the company's application to the leases board for the consolidation of the two different lease scales under which it had been operating had been accepted.

The Chairman concluded:—The grade of ore milled during the current year is likely to be slightly lower than that for the past 12 months, but with the prospects of increased mill tonnage and assuming the maintenance of present industrial conditions the current outlook for the company is very favourable.

The report and accounts were adopted unanimously.

RHOKANA CORPORATION, LIMITED

PROFITS EXCEED £2,000,000

The fifteenth annual ordinary general meeting of the Rhokana Corporation, Limited, was held, on the 27th instant, in London.

The Right Hon. Sir Auckland C. Geddes, P.C., G.C.M.G., K.C.B. (the chairman), said that the profit and loss account showed a final figure of profit of £2,019,866 carried to the balance-sheet. They had decided to recommend the payment of a final dividend of 3½ per cent., less tax, on the ordinary and A shares. The balance to be carried forward would be £231,507.

Looking back at the financial year as a whole, he thought its outstanding feature was the series of extraordinary changes in the copper markets of the world. The average price for cash standard copper on the London Metal Exchange had risen from £34 18s. 11d. per long ton for the year ended June 30, 1936, to £50 9s. 8d. for the year ended June 30, 1937. In spite of various increases of production by the copper producers and the final removal of all restrictions on January 14, 1937, the price of copper had continued to rise until it had reached its peak of £78 2s. 6d. on March 11. After an average of £72 9s. for March it had gradually fallen until the average for June was £55 15s.

Various causes had been ascribed for the high prices, but the fact remained that the real consumption of copper outside the United States over the whole year had shown a substantial increase over the preceding year.

Turning to their mining operations at Nkana and Mindola, there had been a substantial reduction in their operation costs. The total tonnage of ore hoisted during the year was 2,663,100 short tons, compared with 1,766,174 short tons in the previous year, and the production of fine copper in the form of blister and electrolytic totalled 75,254 long tons, as compared with 50,399 long tons for the previous year.

He had often said that they regarded their investment in Mufilira Copper Mines as a potential source of large profit. Their expectations were now beginning to be realised. Its net profit had risen from £142,189 for the year ended June 30, 1936, to £649,998 for the year ended June 30, 1937. As a result it was able to pay a dividend in September last of 3s. per share, of which the Rhokana proportion taken into the profit and loss account for the year amounted to £144,826. They looked forward to satisfactory dividends in the future.

The report was unanimously adopted.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to:—

UNITED TIN AREAS OF NIGERIA,
LIMITED

HOPEFUL PROSPECTS

The twelfth ordinary general meeting of the United Tin Areas of Nigeria, Limited, was held, on the 27th instant, in London.

Sir Harry S. Foster, J.P., D.L. (the chairman), dealing with the items in the balance sheet, said that their holding of 152,552 shares in Gold and Base Metal Mines of Nigeria, Limited, was proving a valuable asset and had again brought them a dividend during the year amounting to £727. That dividend, according to their information, would be at least repeated during the current year, with the prospect of a material increase.

The Gurum areas continued to provide the bulk of the output and they might look for an increased production from that sector from now on owing to the installation of an 8-in. gravel pumping plant. In that connection he would read to them the general manager's remarks in his annual report. He said: "The installation of the plant at Gurum would materially add to the production and enable a better use of the water supply to be made. In spite of the greater demand for labour, we have managed to hold ours satisfactorily. A successful year may be anticipated with every confidence."

Their Nasarawa areas were situated approximately 100 miles due south of the Gurum areas and had been pegged during the early part of 1936 upon their engineers' reports that indications were favourable. He was glad to say that the engineers had not been mistaken and, although the deposits were not considerable, they were informed that the area was opening up satisfactorily.

Their remaining areas, purchased a couple of years ago from the United Africa Company, Limited, were spread rather widely over the Nigerian Plateau, but, owing to their close association with the Gold and Base Metal Mines of Nigeria, Limited, and to the fact that that company's organisation was at their disposal, they were able to operate those areas economically. The general manager informed them that they would come into fuller production during the coming dry season, which must be about commencing. They had every reason to look forward to a satisfactory year, and he saw no reason why they should not at least maintain their dividend distributions.

The report was unanimously adopted.

ALLIED BAKERIES, LIMITED

CAPITAL PROPOSALS APPROVED

An extraordinary general meeting of Allied Bakeries, Limited, was held, on the 26th instant, in London, at which a resolution increasing the authorised capital to £2,250,000 in £1,000,000 five-and-a-half per cent. cumulative preference shares of £1 each and 5,000,000 ordinary shares of 5s. each was carried unanimously.

Mr W. Garfield Weston (chairman of the company) presided and explained that since the last meeting the board had acquired, or were in the process of acquiring, old-established businesses of proven merit and progressive growth in Stoke-on-Trent, Manchester, Liverpool, Glasgow, and Edinburgh. Each of these businesses fell in with the plan the board had mapped out for developments in certain areas that would enable their control to operate with due regard to economy and for the best interests of the organisation as a whole. The names of those businesses were Handley Bakeries, Limited, of Manchester, G. Embrey, Limited, of Stoke-on-Trent, Thomas Scott and Sons (Bakers), Limited, of Liverpool, Martins Bakeries, Limited, of Edinburgh, and Walter G. McAulay and Sons, of Glasgow and Greenock, and each individual business had a long record of earnings and profits, and in every case the same management that had made the business successful had been retained.

He would assure the shareholders that the total assets of their company would bear a higher ratio to the preference capital in issue than that shown in the last balance sheet, and the profits, based on the current earnings of the companies being acquired, would be maintained on the high level the board had been able to report for the last year.

As showing their confidence in the company the vendors of the companies in question were taking the bulk of the purchase price in preference and ordinary shares at substantial premiums; the balance of the shares to be issued to provide the necessary cash had been placed privately on terms more advantageous to the company than could have been obtained from the shareholders or by means of a public issue.

He thought he could say that from the figures already available there was every prospect of an increased ordinary dividend for the coming year, and would state that an interim dividend would be declared shortly.

GOODE DURRANT AND MURRAY, LIMITED

CONTINUED IMPROVEMENT

The thirty-ninth ordinary general meeting of Goode Durrant and Murray, Limited, was held, on the 25th instant, at Winchester House, London.

Mr William E. Pennick (the chairman) said: The accounts show a considerable improvement on last year's result, and enable us to recommend a further payment on account of arrears of the preference dividend. This result has been achieved in spite of a continuance of somewhat difficult trading conditions, and the lot of the wholesale warehouse has not yet reached the same point of prosperity which is being enjoyed by some other sections of the community.

Australia continues to make a very excellent recovery from the dark days, and, provided the ruling prices for their primary products are maintained at a fair level, there is reason to expect even more prosperous times, in which we should share.

The profit for the year amounted to £38,447, as against £24,409 last year. All sections in Australia and the operations of our London office in buying for clients in all parts of the world contributed to this result.

The question of exchange as between London and Australia has been referred to again in the report, and, if the authorities should decide to stabilise the exchange at its present high rate of £125 10s. Australian for £100 sterling, we could then create an exchange reserve from the valuations of our fixed assets, which are considerably higher than the book values, without having recourse to the profit for the year.

In April last we decided to make a payment of one year's dividend on the 165,000 preference shares, and to-day we are recommending the payment of another one and a-half year's dividend on the same shares, and one year's dividend on the 110,000 preference shares issued to D. and W. Murray, Limited, and this will bring the dividends paid up to the amount due in April, 1935.

With regard to the current year, our trade is increasing in a satisfactory manner, and the latest telegrams from our branches are generally of an encouraging character.

The report was unanimously adopted.

BUENOS AYRES GREAT SOUTHERN RAILWAY COMPANY, LIMITED

MORE ENCOURAGING RESULTS

The ordinary general meeting of this company was held, on the 27th instant, in London.

Sir Follett Holt, K.B.E., M.Inst.C.E., the chairman, in the course of his speech, said: We are fortunately able to present to you to-day more encouraging results than were possible at our meeting last year. The outstanding feature of the present report to my mind is that the increase of £1,070,000 in receipts entailed an increase of only 8.15 per cent. of that amount in working expenses, this low ratio being attributable in a great measure to the success of the plan initiated four years ago to combine the working of the Southern and Western systems.

There is another and a good feature of the report. To those proprietors who may have lost heart, and not without some cause, it will be encouraging to know that the total amount of business handled by the railway during the year when measured in ton miles was a record in its history. I say to them that the Great Southern continues to be a very virile undertaking with only one trouble, a major one it is true, namely, that it does not receive at present a living wage for its services.

The results of the year leave, in effect, £36,000,000 of our capital unremunerated, or, in other words, in round figures, 50 per cent. of our total capital receives full remuneration and 50 per cent. receives no remuneration at all. We are, as you must be, completely dissatisfied with this result.

Apart from the crop failures the special calamity from which we have suffered since 1934, as you too well know, has been exchange. Our railway and business were built up in the main on the basis of 11.45 pesos being worth £1. Last year, based on actual remittances, the company required 15.94 pesos to purchase each £1, this being 3.2 per cent. better than in the previous year, but even this rate of 15.94 represented a loss on our remittances of 28 per cent. The effect upon the company is referred to in the report before you, but in any event we shall continue to press our claim for special consideration and for other measures which are urgently required.

The report and accounts were unanimously adopted.

BUENOS AYRES AND PACIFIC RAILWAY COMPANY, LIMITED

HEAVY LOSS ON EXCHANGE

The ordinary general meeting of the members of the Buenos Ayres and Pacific Railway Company, Limited, was held, on the 28th instant, at Winchester House, Old Broad Street, London.

Viscount St. Davids (the chairman) said that during the year full interest on the first and second debentures had been paid on the due dates, three payments being made in December, March and July, each of one-half year's interest on account of arrears of interest on the Buenos Ayres and Pacific 4½ per cent. consolidated debenture stock and the Argentine Great Western 5 per cent. debenture stock. Payment of a further half-year's interest would be made on December 1st next on account of arrears of interest on the Buenos Ayres and Pacific 4½ per cent. consolidated debenture stock and the Argentine Great Western 5 per cent. debenture stock.

Their total profit for the year to June 30, 1937, came to £1,120,513, and their loss on exchange was £752,348. Had exchange been at par during the year, it was obvious that the results to their company would have been exceedingly different. The loss on exchange they had suffered amounted to 40 per cent. of their total profit.

As to the general situation, they had seen the peso go down in sterling value from 11.45 to the £ to 17 to the £, and they had hoped for better times—increased production, more traffic and a lessened wages bill, and they had waited nearly four years. These facts had been recognised by responsible people in Argentina. The Government had named a National Commission way circles had stated, with justice, the company's case, so, on Argentine authorities had to take a decision which vitally affected the future of their country. It was, briefly: Could they afford to allow their railways to sink into a state of starvation and neglect? It was a matter for statesmen in Argentina to deal with, and it was with every hope that they looked forward to the new Government with which they were hoping to be able to work wholeheartedly towards the better development of this great country, but they wanted help. As to the prospects of the current year, they might have as good a year as last year, but they would be very lucky indeed if they did very much better.

The report was unanimously adopted.

ASSAM RAILWAYS AND TRADING COMPANY, LIMITED

MOTOR COMPETITION

The fifty-seventh annual general meeting of the Assam Railways and Trading Company, Limited, was held, on the 27th instant, in London.

Mr E. A. A. Joseph (chairman of the company), who presided, said that the directors shared the disappointment probably felt by the shareholders at the results of the year's work, but what he would say later might qualify their disappointment a little. He visited India again last winter, and the change since he last saw the country nine years previously which had impressed him most was the amazing development of motor traffic. For almost the whole length of their railway there was now a metal road on prices to the bone and subject to little or nothing in the way of taxation and regulations.

To meet that intensive competition they had to keep their services as frequent and convenient and as cheap as they could, and in that they had not been altogether unsuccessful. The two railways of which he had spoken last year would be shipped within a week or two.

He knew of no reason to expect a falling off in oil traffic, and the tea trade was now doing well, which should mean more money spent in Assam on goods moving over the railway. Colliery prospects were, he thought, better, and the smaller departments—timber and veneer mills and brickworks—had all done well. They had given notice to pay off the 6 per cent. notes at the end of £3,600.

As to the year under review, the general revenue account showed only a balance of £74,000. That was sufficient for the preference shares but left no margin for the "A" stock. The report was unanimously adopted.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended October 23, 1937, amounted to £18,365,000, against ordinary expenditure of £10,374,000. After decreasing Exchequer Balances by £452,748 the operations for the week, as shown below, decreased the gross National Debt by £8,444,000, to about £8,223 millions.†

(No increases)	£
Treasury Bills	5,694
Public Department Advances	2,450
P.O. and Tele. (Money) Acts	300
	8,444

† Including £575 millions on account of Exchange Equalisation Account.

An approximate analysis of the National Debt as at September 30, 1937, appeared on page 41 of *The Economist* of October 2.

* At current market value. † Coin which is of legal tender in the United Kingdom is entered at face value and shown in italics. Other coin is entered at current market value.
 No gold movements were reported at the Bank of England between October 22nd and 28th. Details of previous movements were given in the issue of October 2nd on page 46.

GOLD MARKET

Messrs Samuel Montagu and Company write on October 27, 1937:—
 The Bank of England gold reserve against notes amounted to £326,406,625 on October 20th, showing no change as compared with hands at the daily fixing during the week. There was a large general demand and prices were maintained at a premium over dollar exchange parity ranging from 1 1/4 to 3/4. The a.s. "Cathay" which sailed from Bombay on October 23rd, carries gold to the value of about £128,000.

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

WHILE there has been no evidence as yet of a resumption of large-scale buying, the movement of the prices of primary products has been irregular this week, some markets registering recovery, while others showed a further decline of quotations.

Among non-ferrous metals, for example, lead and spelter are slightly dearer on the week, but copper and tin were marked-down. Tin fell further in price, despite the decision of the International Tin Committee to reduce quotas next year in the absence of an improvement in demand. Linseed was cheaper on a poor demand, easier freight rates and reports that the quantity of unsold seed still available in Argentina had been underestimated. Rubber prices, too, took a further downward turn in the absence of support.

The market in wheat, on the other hand, was firm, quotations in Liverpool showing an appreciable rise over the week. The market in tea was less buoyant and raw sugar was marked down in price. At Smithfield, there was little change in meat prices. Quotations for bacon were reduced, but butter was again dearer.

In the United States, the trend of the prices of many primary products was again sharply downwards. Thus, 1931=100 fell from 166.9 to 160.2 during the week ended last Wednesday. A month ago the index stood at 188.8 and at 182.3 a year earlier.

COAL

SHEFFIELD.—The position of the coal market is strong, and collieries owing to the mild weather and stocks are being accumulated. Industrial coal for coke and electricity works is in strong demand, and coke requirements are unabated, blast furnace qualities being especially active. Business on the export market is not so good, and inquiries are disappointing owing to keen competition from the Continent, prices in this country being too high.

NEWCASTLE-ON-TYNE.—The North East coal market shows little prompt trade for screened, but it is generally thought that a spell of cold weather would put this position right. Graded steams are a good market, being little surplus coal of any description, and everything points to active trade over the winter. Gas collieries are well booked, and coking coal is as scarce as ever. Inquiry for coke from abroad is slow, but home demand is as high as ever, and producers are working at capacity.

WORKINGTON.—The coal trade is exceedingly brisk. Landsale is reviving and there is still the same clamour for industrial fuel, notably for smalls for coking. The surplus available for Ulverston and the Free State is seldom more than 5,000 tons weekly. Coke is in heavy request by Cumberland and North Lancashire iron smelters. Prices are firm. Best round stands at 23s. 6d.; washed doubles at 22s.; washed singles at 21s.; round nuts at 20s. 6d.; smalls are 15s. 6d. Best house coal is 35s. 8d.; house nuts, 34s. at station. Gas coal is 27s.; local coke, 15s. 6d. to 16s. 6d.

CARDIFF.—The outstanding feature of the export market during the past week has been the weakness of freight rates for the Mediterranean, the Plate, and other far destinations. Since the beginning of the month the voyage rate for the Plate has dropped from 14s. 9d. to 12s., for Alexandria from 11s. 4d. to 8s. 9d., and for Marseilles from 12s. 9d. to 11s. The only important direction in which the September rates have been maintained is that of the coasting trade. This slump in the shipping position has lowered the c.i.f. prices of coals to foreign ports, but it has not stimulated demand to any appreciable extent, and collieries continue to depend mainly on their contract commitments. At the South Wales ports last week shipments totalled 442,000 tons, compared with 430,600 tons the previous week, and 366,422 tons in the corresponding period last year, and the increase in the volume of the foreign and coastwise trades for the current year to October 24th was nearly 3.4 million tons. Quotations for all classes of coals are unchanged, with, however, those for sized and washed grades relatively firmer than for large classes. Coke is also scarce and firm. Ex-ship pitwood prices are unaltered, and the differences between the collieries and the French exporters over the price of timber to be delivered in the December quarter under the coal-pitwood barter agreement are still unadjusted.

IRON AND STEEL

LONDON.—The weekly report of the London Iron and Steel Exchange indicates that although in some departments of the iron and steel markets supplies are easier than for many months, the general situation remains tight and the pressure from consumers to obtain deliveries is unrelaxed. Little new business is being transacted at the moment, for producers are concentrating upon reducing their overcrowded order books, and most consumers are waiting until information is available regarding the prices which will rule next year. The quiet period may be expected to continue for a time, but this will afford relief to the steelmakers, who are provided with sufficient work to keep them busily occupied over the first quarter of 1938, and in some cases beyond.

The situation in the pig iron market is much less difficult than a few weeks ago. Consumers of foundry iron are now receiving regular supplies, and in most cases have covered their requirements until the end of the year; producers having sold their output for as far forward as they care to go, and not inclined to accept fresh commitments.

The demand for semi-finished steel shows no sign of shrinking, and the heavy production of the British works, however, combined with larger supplies from abroad, promise an improvement in the near future.

Business in finished steel has been quiet, but substantial deliveries are being made to the consuming industries. Export demand remains dull, but a good tonnage is still due against contracts.

SHEFFIELD.—Conditions in the iron and steel market are unchanged. New business is not being entered into by producers with any alacrity. Few odd parcels of forge or foundry are on the market, and producers have no opportunity of replenishing their exhausted stocks. Arrears of delivery under contract are to some extent being overtaken. In hematite, apparently managing to accumulate some small reserves. Makers of finished East Coast business is easier to place than is West Coast. Makers of finished iron are in some cases booked to the end of the year. Plenty of new orders await acceptance, buyers preferring home-produced in strong request, and variety. Both basic and acid steel billets continue in strong request, and in numerous cases sellers' books are closed, pending the working off of heavy arrears. Stainless steel sheets, wire rods and steel strip are as active as ever.

Official returns show that the production of Yorkshire and Derbyshire pig iron is well in advance of a year ago, while Sheffield's production of steel in September has set up a fresh record with a tonnage of 115,200.

MIDDLESBROUGH.—The general position regarding iron and steel in this area is unchanged, with the exception that imports of foundry pig iron and semi-manufactured steel from the Continent have provided better supplies for local foundries and re-rollers. Two further cargoes of basic iron are expected in the Tees shortly from America, and this will be used entirely in the local steelworks, whose production of this class of iron is insufficient to meet the enormous demands of the steelmakers. Actually there are 21 furnaces in this area producing basic pig iron. It is understood that the price of basic iron in this country has been fixed for a further six months at 100s. per ton, less 5s. rebate, but none of the iron produced locally comes on to the market, being all consumed in local steelworks. One furnace continues to produce Cleveland foundry pig iron in this area, whilst there are 13 in operation on hematite pig iron and two on other kinds. The total, therefore, now operating is 37. So far, there has been no indication of any change in the price of hematite pig iron, and producers are keeping consumers here and in the Midlands well supplied against old contracts.

Steelworks are exceptionally busy, having orders on their books which will cover outputs for several months ahead. Prices are unchanged.

Good Durham blast furnace coke is not available in large quantities, and the price is well maintained at 42s. per ton delivered at the furnaces. Foreign ore business is being transacted in odd lots, freights from the Mediterranean continuing to ease, whilst Bilbao/Middlesbrough remains at 13s. 6d. per ton.

The scrap market is steady, with plenty of demand for local supplies of heavy steel scrap at official figures.

WORKINGTON.—The hesitancy in the North-West Coast hematite pig-iron trade is due to the awaiting by makers of the revision of prices that is imminent. Until the new figure is announced, makers are not prepared to extend their commitments over the first half of next year. That six months' production will be marketed quickly is not doubted here. Consumers will accept all the hematite pig-iron they can get, and in fact the output of another furnace or two would be welcome. Consumers are especially short of the special qualities for high-class steel making, but the scarcity will continue, for current maximum production does not satisfy needs. Of the seven furnaces on hematite only two are exclusively on low-phosphorus iron, and some part of this is being shipped overseas. Sixty-five per cent. of what is being smelted by five other furnaces is absorbed locally, so that the spill-over for the market is small. And it remains impracticable to change over two furnaces at Ulverston from basic to hematite. Prices are firm. Bessemer mixed numbers stand at £6 3s. per ton at Glasgow; £6 8s. 6d. at Manchester; £6 11s. at Sheffield; and £6 14s. 6d. at Birmingham, with an additional 5s. 6d. to 16s. 6d. extra for special brands. Malleable is £8 delivered at Birmingham, and, like ferro-

manganese at £18 15s. home, is a keen market. Steelmakers have on their books orders that will require another eight months for completion. Workington is rolling rails, billets, bars and slabs, and Barrow is on rails, hoops and strip. Native ore is in short supply at 24s. 6d. f.o.t. There continue to be heavy importations of Swedish, North and West African ore.

GLASGOW.—Steelmakers in the West of Scotland continue to work at high pressure, but are unable to satisfy all the requirements of consumers. There is a great deal of business offering, but steelmakers are unwilling to make further contracts in view of their already heavy bookings which will practically absorb total output for some months to come. In regard to semis, while supplies are still insufficient for comfortable working arrangements, the Continental deliveries of material have eased the situation considerably so far as immediate needs are concerned. Demand for finished material is steady and, since it has been agreed that prices will remain unchanged for the home trade for sheets booked for delivery after December 31st, a number of buyers are endeavouring to fix contracts to cover their requirements for next year.

CARDIFF.—There has been a further slight increase in the volume of production in the tinplate industry, and there was also an improvement in the quantity exported, the official returns giving a total of 7,494 tons, compared with 6,607 tons the previous week and 4,540 tons in the corresponding period last year. In recent months the expansion in the exports of the United States, however, has been at a greater pace than that of the other members of the Cartel, and prices of Welsh tinplates are easier at from 24s. 6d. to 25s. per basis box. There has been no change, however, in the quotations for sheets, and pig iron, steel ingots and bars are firm at the current fixed prices.

OTHER METALS

COPPER.—After an early recovery, the cash price relapsed and closed on Wednesday showing a net loss of almost £1 on the week. Apart from the general nervousness, the deterioration of the copper position in the United States must be regarded as the chief reason for London's weakness. U.S. sales during October seem likely to be little more than 20,000 short tons, against no less than 178,801 short tons in the same month of last year. In consequence of this striking collapse of demand, American producers lowered their domestic price from 13 to 12 cents per lb. on Tuesday. The customs smelters are, however, already selling below that level, and it therefore seems unlikely that the reduction will result in an immediate revival of demand. The possibility of growing exports of copper from the United States is accordingly overshadowing the London market.

Sales on the London Metal Exchange: 2,650 tons on Monday, against 900 tons last week; 1,050 tons on Tuesday, against 3,300 tons last week; 1,150 tons on Wednesday, against 3,200 tons last week. Domestic spot was quoted at 10-57½ cents per lb. in New York on Wednesday, against 10-77½ cents a week ago and 11-92½ cents a month ago. Wednesday's official closing price for standard cash in London was £42 8s. 9d. to £42 11s. 3d. per ton, compared with £43 7s. 6d. to £43 10s. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 9,121 tons, showed a decrease of 509 tons, while stocks of rough copper, at 16,568, were 100 tons larger.

LEAD AND SPELTER.—Although closing on Wednesday well below the week's best, both lead and spelter showed a net gain on the week. There was no change in the basic position. The worst of the selling pressure seems to be over, but on the other hand consumers' interest is lacking. Although the statistical and technical position of both metals may be regarded as satisfactory, neither is likely to be able to resist the psychological influence of a possible further reaction in other commodities, especially in copper and tin.

Sales of lead on the London Metal Exchange: 1,700 tons on Monday, against 900 tons last week; 550 tons on Tuesday, against 4,500 tons last week; 350 tons on Wednesday, against 1,050 tons last week. The New York quotation on Wednesday was 5-50 cents per lb., against 5-50 cents a week ago and 6-00 cents a month ago. Wednesday's official closing quotation in London for soft foreign for shipment during the current month was £17 16s. 3d. to £17 17s. 6d. per ton, compared with £17 13s. 9d. to £17 15s. last week.

Sales of spelter on the London Metal Exchange: 2,900 tons on Monday, against 1,050 tons last week; 1,100 tons on Tuesday, against 3,250 tons last week; 825 tons on Wednesday, against 1,900 tons last week. Wednesday's quotation in East St. Louis was 5-75 cents per lb., against 6-00 cents the week before and 6-50 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipment during the current month was £16 16s. 3d. to £16 17s. 6d. per ton, against £16 13s. 9d. to £16 16s. 3d. last week.

TIN.—After fluctuating widely, the cash price closed on Wednesday showing a further loss of £4 10s. per ton on the week. Consumers' interest was again lacking, and there was a report that certain American tinplate manufacturers were actually liquidating some of their tin stocks. According to the *Metallgesellschaft*, moreover, production from the world's tin mines showed a striking increase from 16,980 metric tons in August to 19,096 metric tons in September. The latter is the highest monthly figure so far recorded and brings total production during the first nine months of this year to 150,698 metric tons, against 130,464 metric tons in the corresponding period of last year. The concern felt by the principal high cost producers at the recent slump in tin prices was reflected in Monday's meeting of the International Tin Committee, called at the request of Bolivia.

A communiqué issued after the meeting stated that, although no definite decision would be taken until December 10th, the Committee had on the basis of present information come to the conclusion that the quota for the first quarter of 1938 should be 85 per cent. of standard. The effects of this decision, if it is enforced, will be by no means so drastic as might at first sight appear, for most of the restricting countries have recently been producing well below their present quotas. But, since exports have exceeded consumption since the end of March, the cut in the quota is unlikely to cause a contraction of stocks. On the contrary, it is expected that stocks will increase to not much less than 30,000 tons at the end of this year, and that they will remain at that level during the first few months of 1938. The fact that the International Committee resisted the temptation to impose an immediate curtailment of output suggests that it is still adhering to its more liberal policy, despite the drastic fall in tin prices.

Sales of tin on the London Metal Exchange: 725 tons on Monday, against 350 tons last week; 325 tons on Tuesday, against 610 tons last week; 240 tons on Wednesday, against 400 tons last week. The New York quotation on Wednesday was 47-62½ cents per lb., against 48-37½ cents a week ago and 55-62½ cents a month ago. Wednesday's official closing quotation in London for standard cash was £206 to £206 10s. per ton, compared with £210 10s. to £211½ a week ago. Stocks of tin in London and Liverpool at the end of last week totalled 2,233 tons, a decrease of 979 tons on the week.

On sale at all railway bookstalls and good newsagents everywhere

FINANCIAL NOTES

of peace, MR EDEN said that to get it he "would travel not only from Geneva to Brussels, but from Melbourne to Alaska." And finally, on the general issue of the Government's whole attitude of mind towards the problems of peace and war, the FOREIGN SECRETARY accepted to the full the doctrine of collective security: "we shall not get an enduring peace . . . until all nations accept to be bound, as we accept to be bound, by international law, and until the force against any potential aggressor is overwhelming." No British Foreign Secretary in office has ever gone further.

This was without question an effective Parliamentary speech. But it really shows very little progress. There were many firm words; but no signs of firm action. There was no hint of a change in a policy which, as can now be clearly seen, has developed into one long retreat from a position in which the pacific powers had ample means to secure the peace to one in which aggression is rampant and security almost dead. The speech had a *succès d'estime*, not because it said anything new, but because it said it uncommonly well. MR OLIVER STANLEY, on the other hand, was disappointing for precisely the opposite reason. He said a great deal; but with so many reservations and with so much emphasis upon the difficulties that it was hard to believe in his resolution. There was nothing in public life, he said, which he took so seriously or for which he would strive so hard as the possibility of an Anglo-American Trade Agreement. But what he had to say on the subject consisted far too largely of an array of the delays there must be, the difficulties that would arise and

the narrow scope within which such an Agreement would be possible.

In dealing with the main subject of the Liberal Amendment, the need for a forehanded policy to combat a recession of trade should one appear, MR STANLEY was greatly helped by an exaggerated statement from MR GREENWOOD that "there was bound to be a trade depression as bad as anything within living memory," and he had no difficulty in disposing of an assertion which nobody but MR GREENWOOD has made. But the evidence from both sides of the House of genuine and sober preoccupation with the industrial outlook was too impressive for the PRESIDENT to ride off with the airy and sweeping reassurances of the CHANCELLOR OF THE EXCHEQUER. There was even a hint that local authorities might do well to prepare schemes of public works for use in a depression. But as for the Government itself, he could only say that "they had constantly in mind the necessity for taking whatever practical steps were necessary to prevent a recurrence of the tragic years of 1929 to 1933."

Thus, in economic policy as in foreign affairs, the Government shows a tendency to deny the existence of dangers rather than to face them. But the debate also showed that the private member, on whichever side he sits, reacts quickly to manifest changes in the external atmosphere of affairs. Throughout the session he will serve as the medium through which the pressure of events as they develop will modify the inevitable tendency of a six-year-old Cabinet to linger in the contemplation of its present political security.

France's Popular Front

DURING the past two months the Popular Front in France has shown signs of cracking. It was inevitable that the transfer of the Premiership from the Socialist M. BLUM to the Radical M. CHAUTEMPS should cause heart-searching on the Left Wing. Indeed, some of the Socialist leaders are believed to have toyed with the idea of a fusion between the Socialist and Communist parties. But as in England, so in France, the vested interest of those professionally engaged in the working-class movement has proved a powerful obstacle; and in any case this change would have involved a definite break-up of the Popular Front, seeing that it would reduce the Radicals to a permanent minority group in a Left *bloc*, instead of being, as at present, the second among three. It is a sign of the temporary unsettlement that such a proposal should have been seriously canvassed. On the other hand, many of the Radicals were gravely disturbed by the renewed collapse of the franc in August and September and the halting of recovery attributed to the over-hasty application of M. BLUM's reforms.

Clearly, however, an internal upheaval in France, with disappointed workers ranged in angry opposition to the Government, would once again leave France in a condition of impotence at a time when it is most important that she should be strong. The democratic countries have, therefore, been watching with anxious interest to see whether the French Communists would make further progress at the cantonal elections and what the recent party conferences would reveal as to the attitude of the partners of the Popular Front. The results have been definitely re-assuring to all save those who would welcome France's disintegration.

The results of the cantonal elections a fortnight ago showed, not that France was swinging to the Left, but that her people were taking a realistic view of the situation and approved the swing back towards moderation

represented by the transfer of power from M. BLUM to M. CHAUTEMPS. They afforded no support whatever for those who fear that France is on the road to revolution. This evidence has been reinforced by the course and outcome of the conference of the Radical-Socialist Party at Lille on Friday and Saturday of last week. The note on which this party conference ended was one of restraint; and this marked disinclination to follow the heart rather than the head, when that could only have been done at a cost of pushing things to extremes, is impressive considering that moderation has been displayed at a moment when the Radical-Socialist Party as a whole is itself tending to swing to the Right.

This Right-ward drift is in part due to the uneasiness of the French provincial at the fall in the franc and the industrial difficulties so much advertised in the Press. But it is also due to the fact that the Radical-Socialist Right Wing is being reinforced nowadays by an influx of younger recruits who might formerly have joined one or other of the Right-Centre parties, but who now feel that these "fractions" are impractical and that the politics of MM. LAVAL and FLANDIN have been tried and found wanting. These new adherents of the Radical-Socialists look forward to seeing the party continue to play the dominant part in a coalition; but the Front Populaire is not the alignment of their choice. They would prefer to see the Radical-Socialists governing France with support from the Right rather than from the Left. The issue was raised at Lille on the first day; but when it came to the point everybody shrank from throwing the Front Populaire into a melting-pot in which it is just possible that the Radical-Socialist Party itself might suffer unexpected and unpleasant experiences.

The Socialists, naturally, are unwilling to surrender any of the social reform won last year or to postpone further progress indefinitely. Some of the reforms have been immensely popular—notably the holidays with pay,

which have enabled hundreds of thousands of workers to see the holiday resorts of their own country for the first time. But even the labour leaders have realised that the sudden application of the forty-hour week has made heavy weather for French industry. The Socialists are no keener than the Radical-Socialists are to see the forty-hour week reduce the economic life of France to chaos or to paralysis; and in the Popular Front Government, as at present constituted, there is likely to be agreement on a policy of introducing elasticity into the forty-hour week in detail—without impugning the principle—to whatever extent this may be necessary in order to make the wheels of French industry and commerce start turning again with reasonable smoothness and despatch.

In this the Socialists are partly moved by a common-sense conviction that half a loaf is better than no bread. They do not want to jeopardise the whole of their New Deal by giving their opponents a case for denouncing it as completely unworkable. They are also, doubtless, influenced by the patriotic feelings which found expression at Lille, where the Foreign Minister, M. DELBOS, declared in positive terms that France would come to the assistance of Czechoslovakia if she were the victim of aggression; and M. HERRIOT made a speech, in MR LLOYD GEORGE'S vein, which was an immense success, and which seems likely to carry M. HERRIOT back to his former commanding position in the party counsels. The conference throughout was skilfully handled by M. DALADIER, and survived a dangerous moment on the first day, when the Right Wing tried to take a snap vote on a motion which was evidently designed to make it impossible for the Socialists not to denounce the present alliance. But this manoeuvre was foiled; and the same afternoon saw the passage of a non-provocative resolution on general policy which was adopted unanimously and which was followed up next day by a declaration on domestic and foreign policy that avoided party polemics and was thus entirely innocuous to the whole Front Populaire.

This declaration did, however, take a rather decided

line on the colonial question, which is at the moment in the forefront of international controversy. The Socialist-Radical Party declared its readiness to consider the examination of international markets and the opening to all peoples of equal and easy access to essential raw materials; indeed, it went so far as to add that it would be for the honour of France to raise this particular point and to take the initiative in calling an international conference on the subject. At the same time, on the territorial aspect of the question, it laid down that it "seems inconceivable and also useless to accept even the hypothesis of a redistribution of colonial mandates." This clause of the declaration was in line with the resolution that was unanimously adopted in this country at the Conservative Party conference a few weeks ago. It is not easy to discern what such resolutions really mean. Are they intimations that France and England will never disgorge their African acquisitions from Germany under pressure? Or do they imply, on the other hand, that they are unwilling to move until the pressure has become unpleasantly severe?

Assuredly these will not be the last words that will be spoken on the colonial question in Europe. But, whatever may be thought of what was done at Lille in detail, there can be no doubt that the general effect of recent happenings has been to strengthen the Popular Front and to show that under its present direction it faithfully reflects the opinion of the country. After the excitements of the BLUM administration France has regained something of her accustomed poise. The immense success of the Paris Exhibition, much ridiculed at the start, has given to millions of Frenchmen and thousands of foreigners a sense of confidence in French initiative and French enterprise. It remains, as M. PAUL REYNAUD insisted on Wednesday, for her industrial and political leaders to seek ways of increasing the national production. That is the only means which will enable her to solve her Budget problem—with its heavy burden of armaments—and to raise the standard of living of her people.

Economic Outlook in America

WHILE in Great Britain politicians and economists argue whether a recession in trade is imminent or not, in America, always quicker to move, the advent of a recession has passed beyond argument. The upward trend of recovery, which was previously strong and consistent, has been first interrupted and then definitely reversed.

The rapidity with which the reversal has occurred is an added argument for its careful analysis. Some of the materials for such an analysis have been collected in graphic form on the two following pages. But apart from the perennial difficulty of selecting from the mass of statistical material available those series which are most illuminating, the suddenness of the change has added its own difficulties, since many of the series are only available monthly and after some delay. It is difficult, therefore, to carry the analysis later than August when the recession began. But the seeds of the sudden reversal must have been present then and if they can be discovered the task of diagnosis is largely accomplished. In some of the charts, however, it has been possible to include weekly figures up to a much more recent date.

The first chart is designed to indicate, in the broadest outline, the industrial history of the United States in the last decade. It shows the trend of manufacturing production (i.e. excluding minerals) according to the

Federal Reserve index, and the official division of the total of production into durable and non-durable goods. It should be remembered that the chart is concerned only with manufacturing production, and omits both the distributive trades and all forms of services. But its merit is that it shows very clearly the large part played by the collapse of the durable goods industries in causing the depression. ("Durable goods," it should be noted, are not the same as "producers' goods," since one of the largest constituents of the former category—and one of those most responsible for the recovery since 1933—is automobiles, which, though more or less durable, are bought by the consumer.) It can be deduced from the diagram that the renewal of recovery depends upon two factors: the maintenance of current purchasing power for non-durable goods and the further increase of demand for durable goods.

The next three charts are directed towards the former of these two points. The curve marked "Payrolls" is an index of the amount of money paid out in wages in factories. It is thus only a partial guide to the total of wages of all kinds, but it is probable that wages in other industries vary rather less than those included. It will be noticed that payrolls have this year overtaken the cost of living. This can be taken as an indication that the real purchasing power of the urban population (which is, however, several millions larger than ten years

ago) is now once more as high as in 1929. Chart III shows that the farmers' real income has made a similar recovery. And Chart IV suggests that the volume of retail trade (after allowing for the fall in prices) has also risen to approximately pre-depression levels. Rural sales, indeed, are higher.

The conclusion from these facts is inescapable. On the score of the income available to consumers for the purchase of goods there is nothing to justify a recession of production and everything to justify further sound expansion. The farmers' income will almost certainly be higher, except perhaps in the South, in the coming twelve months than in the past. Industrial payrolls may decline; but only as a consequence, not as a cause, of trade recession.

The capital goods industries, however, tell a very different tale. Chart V compares the volume of employment in the production of durable goods with the amount of new money (i.e. excluding refunding issues) raised on the market by domestic corporations. The two curves are not by any means exactly the goods on which money raised by new issues is spent. But the two lines are sufficiently comparable to suggest that the recovery in the capital goods industries has been financed from some source other than the borrowings of corporations. The two chief sources have undoubtedly been the expenditures of the Federal Government and the reserves and profits of the corporations themselves.

Chart VI shows what has been happening to the largest of the capital goods industries. The volume of construction contracts awarded, even when swollen by public works, is only about half the 1929 level. And the reason is suggested by the fact that rents, though nearly back to the 1929 figure, have been quite unable to keep pace with the rise in construction costs. Building is still an unremunerative business.

At midsummer, then, the position was that current consumption was healthy and flourishing, but that the capital goods industries were still flagging, hindered by a dormant new issue market. The next two charts show in more detail what has happened since. Chart VII shows the *New York Times* weekly index of business activity, which is heavily influenced by the capital goods industries. Although the index did not reach its actual peak until August, there had been virtually no rise since May. The fall since August has been steep and has brought the index below last year's figures. Chart VIII (based on the Iron and Steel Institute's figures) shows what has been chiefly responsible. Steel activity, which was reduced by the strike in May, never fully recovered, and has been declining rapidly since August.

Thus the capital goods industries were not only in the more vulnerable position earlier in the year, but they have, in fact, started the downward movement. There can be no one explanation for this change in trend. Part of the responsibility can be placed upon the depressing effects in the bond market of the Federal Reserve's policy of raising the reserve requirements of the banks (v. *The Economist*, October 16, 1937, page 117). This undoubtedly put a stop to the incipient revival in the new issues market. Simultaneously, the heavy tax on undistributed profits made it more difficult to finance capital extensions out of profits. In some industries, notably the railways and building, rising labour costs, either directly instigated or at least encouraged by Government action, prevented expenditure on capital goods. And finally, the effort made in Washington to balance the Budget severely reduced the Government's own expenditure on capital goods. It might almost have been a concerted programme to discourage capital investment.

The decline in the volume of new business for the

heavy industries naturally reacted on the Stock Exchange. Security prices, as shown in Chart IX*, had risen less rapidly than corporation profits since the bottom of the slump. But though the level of prices was not, in this sense, too high, it seems to be true that the regulatory action of the last few years has made the market very vulnerable to selling pressure. Comparatively small sales produced drastic reductions in quoted prices. Sharp falls in security prices turned industrial hesitation into pessimism and pessimism into alarm. Psychologically, they affected the confidence of business men throughout the country. Not only that; every individual and corporation whose credit depended upon Stock Exchange collateral found his borrowing power reduced. As always, deflation in one part of the system spread to others.

If this analysis is correct, what is to be done? This is not a 1929; fundamentally the position is much less unsound. The consumer's purchasing power, on the one hand, is well maintained; and, on the other, the country is under-supplied rather than glutted with capital goods. The railways and the utilities are behindhand with their renewals of plant, and there is a very large potential shortage of residential buildings. There are thus no far-reaching adjustments to be made before production can increase. It would be difficult to find an industry which is producing at a rate which is greater than can be justified by its long-term prospects; on the other hand, many could be cited which have still not yet recovered to their secular normal level. In so far as the American economy is still out of equilibrium, it is on the side of under-production and depression, not on that of over-equipment and inflation. The difficulty seems to lie in the main in the nexus of finance and confidence which links the need for capital equipment with the industries which are ready to supply it. It is a stoppage of circulation, not a distortion of structure.

It follows that the main line of remedial action should be a direct attempt to remove the obstructions to activity in the capital goods industries. There are many forms which this action could take, all of which are familiar to the authorities at Washington and could be applied if the decision on policy were taken. Something has been done to reverse the depressing influences in the bond market and to improve the technical position of the stock market. Much could be done to lower the cost of capital construction and to raise the margin of income of some industries, notably the railroads, which are at present unable to afford the re-equipment they require. Much could also be done by the adjustment of taxes which at present discriminate against capital expenditure.

If action is taken along these lines, there is no reason why the upward trend of recovery, which had certainly not reached a mature stage last summer, should not be resumed. The last of the accompanying charts suggests a certain parallelism between the events of the last few years and those of the preceding decade. In 1927 a recession was cured by cheap money. The same may happen in 1937, if cheap money is allowed to have its normal effect. But the chart is a warning as well as an encouragement. One thing that has been clearly demonstrated this year is the inherent instability of the American economy, its bewildering ability to suffer sudden changes of trend. If in curing the recession of 1937 policies were adopted which led to a repetition of the wild expansion of 1929, the net result would certainly be more harmful than beneficial. The supreme task of the American authorities is to avoid all extremism in policy.

* This chart goes no further than August. The lowest figures of October would carry the curve down to about 45. A chart on page 269 of this issue carries on the story to the end of October, in terms of the Standard Statistics daily industrial share index.

Policy for Films

PRIDE of place in the Government's legislative programme this session has been given to the new Films Bill, the Second Reading of which was taken on Thursday. This priority is presumably due less to the Government's estimate of the measure's intrinsic importance than to the relentless march of time. The Government has been disappointed of its hope that the various sections of the trade, left to themselves, might come together, settle their loudly advertised differences, and thus make possible an agreed non-contentious Bill. Meanwhile, some of the main provisions of the existing Act are due to expire on March 31st next, and the interval is uncomfortably short for Parliament to prescribe the precise form of the measure which will direct the development of the film industry during the next ten years.

When Sir Philip Cunliffe-Lister (as Lord Swinton then was) introduced the first Films Bill in 1927, he followed the Imperial Conference in urging that the film, apart from its primary purpose of entertainment, was an important instrument of propaganda for British culture, British policy and British industry. This objective appears to have been obscured in recent years, and even Lord Moyne's Committee seems to have overlooked it. Somewhat belated amendments are now provided by the setting up of a Films Advancement Council, consisting of members of both Houses and presided over by Lord Bledisloe. And on Thursday the President of the Board of Trade declared that he regarded films as nothing less than a part of the national defences. These are brave words. But it is a fair criticism of the text of the new Bill, as it stands, that it includes no effective and express provision for promoting the national interests, in the sense envisaged by the Government ten years ago.

It cannot be denied that the Act of 1927 contributed materially to the establishment of a British production industry. Ten years ago, less than 5 per cent. of exhibitors' screen time was devoted to British films, whereas the Board of Trade has recently stated that no less than 29.4 per cent. was so used last year. The few modest stages available for British productions in the earlier year have been replaced by about eighty sound stages, of which fifty to sixty are of the highest class, and a large number are equal to the best in Hollywood. The cost-value of pictures produced in British studios in 1936 is authoritatively estimated at not less than £4½ millions, compared with less than £250,000 ten years ago. In the same period the number of cinema seats in the country is believed to have increased by about 750,000 at a cost of not less than £10 millions. Scarcely less than five million persons have been added to each week's regular *clientèle* of the cinema. These are very definite advances, yet the Government has concurred in the conclusion of the Moyne Committee that production could not survive the withdrawal of the protection which the quota system now provides. Unrestricted competition from American films, it has been declared, would quickly overwhelm the British industry in all its branches. From this point of view, therefore, the Government's Bill is a measure designed to give security to domestic vested interests in the trade.

An analysis of the Bill may well begin by searching for proposals embodying the Government's determination to safeguard the nation's vital interest in the future of the industry. Thus, the introduction of the principle of minimum cost may be partly justified on the ground that this will eliminate the "quota quickie," and with it the type of film which mocked British attempts to make quality films. But minimum cost films are not of a kind that are likely to find any appreciable export market. To obtain a foothold abroad we must produce pictures which will be as attractive to cinema audiences everywhere, and especially in America, as those coming from Hollywood. Before reaching American audiences, however, British pictures must surmount an

almost impassable barrier, in the shape of the control which American production companies exercise, through their respective distribution exchanges, over the first-run theatres in their own country. By giving special quota privileges to films costing several times the minimum amount, the British Government obviously desire to overcome the first obstacle—that of quality, workmanship and entertainment value—to the entry of British films in the American market. Many experts believe, however, that the according of double quota rights to films costing upwards of about £40,000, and the proposal for reciprocity for any film which can be sold for not less than £20,000 to America will not overcome the difficulty. There is no confidence that American companies will acquire more than one or two British pictures from independent British companies on these terms. It is difficult to see any effective solution of this vital problem which does not impose an obligation on American companies, trading in the United Kingdom, to secure an American release for a certain proportion of their quota pictures which may be held to have special merit. Action on these lines, in short, may have to be compulsory and not merely voluntary.

The proposal to establish a Films Commission, though it was the most striking and original of all the recommendations of the Moyne Committee, finds no embodiment in the Bill which the House of Commons debated this week. Hitherto, the Board of Trade has seen no justification for any relaxation of its administrative prerogatives, and it claims the right to reserve for its own consideration every aspect of the administration of the Films Act—subject to the reference of minor matters from time to time to the Advisory Committee which will be reconstituted under the Act. In view, however, of the complex structure of the film industry and the difficulty of comprehending all its technical problems, there would seem to be a strong case for creating some special form of administration—perhaps on similar lines to the Import Duties Advisory Committee—which could devote itself continuously to film problems, subject to proper safeguards against any abuse of its power. Whether the sympathetic reception given to an influential deputation which visited the President of the Board last Wednesday presages a modification of official policy will doubtless be made clear when the Bill reaches the Committee stage.

Finally, the quality *versus* cost controversy seems likely to be strenuously maintained up to the moment when the new Act receives the Royal Assent. Should eligibility under the quota system be restricted to films which reach a minimum standard of quality, or should it be conceded automatically when a minimum cost has been incurred? There would be much to be said for a quality test if standards of quality could be defined or measured. But experience throws doubt on their practicability. In any case, a film must be produced before any quality test can be applied; and it is tolerably certain that the stream of finance available for the production of British pictures would dry up suddenly and completely if the contingency of rejection on the ground of quality had to be contemplated. The cost test admittedly does not guarantee good pictures, but at least it places a limit on the number of thoroughly bad ones. And it postulates a certain seriousness of purpose on the part of the producer, which will contrast favourably with the light-hearted way in which much of the business has been conducted in recent years. But perhaps the most decisive objection to rigid insistence on a quality test is that, given conditions as they exist to-day, it would abruptly check the development of the British film industry. That the industry is still in a position where the best may be the enemy of the good is probably the most telling criticism of its unsatisfactory progress and organisation, after ten years of protection by the State.

German Motor Roads

(From Our Correspondent in Berlin)

THE State motor roads in Germany were not designed to meet any immediate traffic needs. In so far as their purpose was not military or to demonstrate National Socialist vigour, they were built to provide employment. Indeed, this aim even affected the technical methods employed in the construction of the roads. The use of machinery was discouraged; local stone, which meant local labour, was used; and much avoidable expense was incurred. To-day, when labour and materials are scarce, policy has changed.

The *Reichsautobahnen* have fulfilled their primary aim of reducing unemployment, although the labour employed per mile has lately fallen off, because of the increasing use of machinery. Including ancillary employment in the production of materials at a distance, the estimated number of workers on the road schemes has at times been as high as 250,000. Since the roads were begun in September, 1933, the number of hours worked up to September of this year was 82 millions. Employment has varied seasonally, but the maximum number at work was in 1934 some 84,000, in 1935 over 115,000, and in 1936 over 124,000. This year the highest number of employed on the roads has been 101,000.

Thus the roads have served their first purpose. Whether they will ever be really needed to carry German traffic is uncertain. In July, 1933, there were 497,000 private cars, 152,000 lorries and 819,000 motor bicycles. In July of this year there were 1,126,000 private cars, 322,000 lorries, and 1,327,000 motor bicycles. Traffic is increasing rapidly, but outside of a very few big cities, which are crowded only at holiday times, nothing like congestion is experienced. The old main roads—the *Landstrassen*—have a total length of 220,000 kilometres, and with only slight improvements could probably meet any likely traffic requirements quite easily. At present, even the cheapest car is far out of the reach of the bulk of wage earners.

The main interest of the roads, therefore, apart from the employment which they have afforded, lies in the technique and cost of their construction. In September of this year 1,553 kilometres of the new roads were open to traffic; some 1,650 kilometres were under construction; and a further 2,014 kilometres were fully planned. It is proposed to open 1,000 kilometres annually until a total length of some 10,000 kilometres has been achieved. The original plan was to cover the Reich with a "grid" of motor roads running north to south and east to west; but work has actually been piecemeal, and the longest continuous stretch runs from Leipzig to Nuremberg, a distance of about 265 kilometres, and others are very much shorter. The roads consist of three strips: two carriage-ways 8 metres wide for traffic in opposite directions, with a grass strip between them. There are parking bays at intervals, petrol stations uniformly designed, patches of garden and other amenities. Being intended exclusively for motor traffic, they cross the old roads and the railways nowhere except by bridges; but at intervals of between 15 to 20 kilometres feeders join the new to the old roads. Gradients and curves are only slight though, in general, the roads follow the lie of the land. Concrete surfaces, like those of the American motor roads, are almost universal; and out of 1,553 kilometres now opened only 60 kilometres are tar or asphalt. Every 750 metres there is a bridge or culvert. These bridges, commonly small and usually constructed of stone, now number over 4,000, and the complete plan envisages between 10,000 and 14,000 of them. The largest bridge of all, the Elbe Bridge, which is 1,170 metres long, is made of reinforced concrete; but the Saale Bridge at Jena, which is 751 metres long, and the Elster Valley Bridge, which is 680 metres long, are both built of stone.

In the work so far only 397,000 tons of iron and steel

have been used, compared with three million tons of cement, which is some 12 per cent. of the total national output. Vast quantities of stone, sand, pebbles and earth have been used; and the carriage of materials for the motor roads is officially mentioned as one reason for the recent rapid expansion of goods traffic on the railways. It is also probably one cause of the shortage of goods wagons in the coal and iron centres of West Germany.

The character and scale of these methods of construction have attracted a good deal of attention in other countries where traffic problems are more acute than in Germany. A party of experts, politicians and interested persons recently visited the Reich to inspect the roads and their construction. The most important question which they raised was the cost of these operations. What the complete scheme will cost has not been stated, but the outlay to date is known. Up to 1937 the sum paid out on capital account was Rm 1,739 millions. Of this amount Rm 1,407 millions have been paid to the private contractors who have actually built the roads. Some Rm 580 millions were spent on earth and rock works; just over Rm 400 millions on the road bed, bridges and culverts; about Rm 307 millions on surface work; and Rm 113 millions on the provision of workers' camps, other social amenities and miscellaneous works. The balance of some Rm 332 millions of Reich expenditure was used to pay for the carriage of materials, to compensate landowners, and to meet interest and amortisation charges.

The money has been raised in various ways. Capital expenditure has, in general, been provided by short-term operations: with the help of a Reichsbank rediscount credit in 1934 and 1935; and by loans from other sources, including the Reich Unemployment Board. Railway Corporation credits were raised for motor-road construction, and were later funded. On November 11, 1936, the import and excise duties on petrol and benzol were increased, and the price of motor fuel was raised accordingly. Further, the traffic tax was extended to include motor passenger and goods services conducted for gain. There is a small operating revenue, derived mainly from petrol stations. No tolls are collected for the use of the roads; and it is believed that the higher petrol prices will be counterbalanced for the motorist by the saving of time, fuel, and wear and tear, which the new roads will afford.

In the construction of the roads, the relations between motor traffic and older forms have had to be taken into account. In 1936 it was estimated that the railways were losing some Rm 600 millions of traffic annually to the roads, but that to counterbalance this in part the motor industry was bringing new traffic to the railways to an annual value of some Rm 150 millions. The gross revenue of the railways in 1936 was Rm 3,985 millions, and the net loss was thus considerable; and, in 1935, the Nazi Government, intent on the development of the motor industry, had refused to give a monopoly of commercial motor transport to the Reich Railway Corporation. To-day, local road transport for gain, if conducted entirely within a radius of fifty miles, is unrestricted; but outside that radius all long-distance carriers are compulsorily amalgamated in a *Reichskraftwagen-Vertriebsverband*.

Such in outline is the purpose, character and economics of these new State roads. They have provided work for the unemployed, and have cost over a million marks per kilometre to construct. While they may not be needed for German traffic and may, in some cases, divert the use of good agricultural land, they are a source of pride to the German people. And they are a pattern and example for road engineers in other countries.

Notes of the Week

Brussels Conference and the Far East.—The Conference of Powers which have signed or adhered to the Washington Nine-Power Treaty of 1922 duly opened at Brussels on Wednesday of this week, in spite of the short delay caused by the Belgian Cabinet crisis. The meeting place was the American Government's choice, and the full participation of the United States is the outstanding feature of the Conference. But at the moment of going to press it is too early to guess how far the governments represented will be able to go beyond the mere demonstration of their common concern over the new Japanese war of aggression in the Far East. Japan herself has declined the invitation to attend, on the double ground that the other parties have pre-judged the issue and that in any case Japan means to settle accounts with China *à deux*, without the intervention of any third parties. Germany, too, has declined, in polite language, on the ground that she is not a party to the treaty in virtue of which the Conference has been convened. Italy has not refused to take part; but on the eve of the Brussels meeting she has shown her colours by adhering to the German-Japanese "anti-communist" pact of last year; and at the opening session of the Conference she did what was expected of her by appearing as the spokesman of the new *triplice*. The probable limitations of the Conference's action are indicated in a statement made on Tuesday at Washington by the Assistant Secretary of State, Mr Sumner Welles. In speaking to the press, he said that the United States would be represented at Brussels for the purpose of sharing in the common task of finding some pacific solution of the present situation in the Far East within the provisions of the Washington Treaty and in accordance with the principles repeatedly enunciated by the United States Government.

Mr Norman Davis's speech at the opening session was in fact on these lines; and it left the Japanese no excuse for maintaining that the Conference was being handled in a fashion that would make it morally impossible for them to take part. The other two notable speeches on the first day came from Mr Wellington Koo and from the Italian delegate. Mr Koo put China's case with his customary ability. Count Aldrovandi-Marescotti put Japan's, by submitting that it was impossible to identify the aggressor and that therefore the two parties to the conflict ought (as the Japanese insist) to be left to settle it together! It looks as though all idea of restraining the aggressor were ruled out in advance. On the other hand, it seems hardly likely that the Brussels Conference will go out of its way to give the aggressor diplomatic assistance by launching a new Hoare-Laval plan for draping his crime under a gauzy vestment of legality. The real issues seem to be: Can Japan stop the war after she has bitten off as much as she thinks she can chew at the moment? Can she afford to leave even the remnant of a now roused and awakened China to its own devices? And, if not, can she bring the whole of China under Japanese control? It still seems, unfortunately, more likely that these questions will be settled by the soldiers in China than by the diplomats at Brussels. But a military solution still seems remote. The Chinese have been forced back at Shanghai by sheer weight of metal. But they have retired stubbornly and in good order; the Japanese have gained territory but not the decisive result they sought. In the North, the main front on the railways running southwards from Peiping and Tientsin seems to be at a standstill, while the fighting on the right wing in Shansi is confused and, as yet, indecisive.

Labour Gains in Boroughs.—The latest returns of the municipal elections held on November 1st in London and the provinces show gains for the Labour party, which now controls the administration of 17 out of 28 metropolitan boroughs and 43 cities and towns elsewhere in England and Wales. A similar advance is suggested by the earliest returns of the Scottish elections, held on November 2nd. In London there was a net gain for Labour of 52 seats, and Hammersmith and Lambeth were won. In the provinces (with several results still to come) Labour secured a small net gain of 20 seats; while Wednesbury and Birkenhead were lost, Bristol, Coventry and Whitehaven were won, and in South Shields and West Hartlepool, where the opposing parties are now roughly equal in strength, the Labour party will probably rule. The discrepancy between this continued advance in the boroughs, and Labour's lack of success in national politics is easily explained. Despite striking defeats in the number of seats secured, the Labour party at the last two general parliamentary elections obtained 30.7 and 38.0 per cent., respectively, of the total votes cast, and Labour's share of the polls in municipal constituencies was even larger. It is true that the abstention of large numbers of municipal electors on November 1st was probably slightly more favourable to Labour's chances than to those of their opponents, but it is certain that there is not in local politics the same distrust of the competence and programme of the Labour party in administrative and, especially, financial matters that there is in national politics. Labour has already held power with success and efficiency in several boroughs, and Mr Morrison's administration of London County has testified to the ability and moderation of his party. In many places, the opposition to Labour has been conducted on professedly non-party lines; and, at least in London, the latest defeats have inspired an outcry among Right Wing supporters that the sore lack of a central organisation should be remedied, and a Conservative Association be formed to meet party with party in the next contests.

Broadcasting in Foreign Languages.—On October 29th the Postmaster-General announced in the House of Commons that the Government had decided to make broadcasts in foreign languages. This statement is a reminder both of the national character and ultimate control of the British Broadcasting Corporation and of the concern which has been felt by persons of all political parties about the misrepresentation of our institutions, policies and personalities in certain foreign wireless programmes. In particular, anti-British propaganda has been spread among the natives of Palestine and Africa and in South America. Hitherto, the Empire programmes, designed largely for the Dominions and delivered in English, have apparently been no safeguard against this insidious danger. The Rome station, for instance, diffuses a number of news bulletins daily in as many as nine languages, including English, Arabic and Spanish; and, to say the least, these bulletins are not panegyrics of Britain and British policy. Russia, Germany and Spain have contributed in various ways to this wordy wireless war. Major Tryon has announced that "when we send out news, it will be straight news, and not propaganda." While the new departure of the B.B.C. is inevitable and, on balance, desirable, it would be well to remember that one man's news is another man's propaganda. The B.B.C. has a high standard of integrity and we trust that the conditions of its new venture will do nothing to impair it, directly or indirectly.

Hours of Labour.—A motion in the House of Commons on November 3rd, calling for a substantial reduction in working hours, raised three points of importance. The mover, Mr Paling, asked for the ratification of the general 40-hour week Convention of the International Labour Office or, at least, for a sharp reduction of the excessive hours worked by children between the ages of 14 and 18 in laundries, brickmaking, printing, the leather, bakelite, garage and wireless industries, and by van boys, errand boys and porters. In principle he approved the determination by the State of the length of working hours. In reply, on the Government side, it was urged that the introduction of a 40-hour week was impracticable, and that decisions about working hours were best left to the established machinery of negotiation between employers and workmen. None of these answers covered adequately the deplorable cases, cited by Mr Paling from official reports, of hours ranging between 50 and 70 a week worked by youths in miscellaneous trades. The motion was defeated; and an amendment in favour of reducing hours by agreement where possible without reducing existing earnings was adopted. It remains a fact, however, that hours of work have been very little reduced during the past 16 years. It is probably true also that, at this stage, labour's most useful policy is to seek shorter hours rather than higher real wages. But most of the worse abuses quoted by Mr Paling occur in unorganised trades or among unorganised workers where agreed reforms are impracticable and strict legislation is desirable.

Scotland Keeps its Horses.—The matter of the Royal Scots Greys, which has been agitating Parliament this week, is of no great moment in itself. But it has two aspects which lend it a certain significance. The question is whether the regiment is to be deprived of its horses and mechanised. There is some dispute about whether this reform was ever intended, but in any case the Secretary of State for War says that the grey horses are to be retained. It was made perfectly clear, however, that if he wanted to mechanise the regiment he would be prevented by the outraged protest of the majority of Scottish Unionist M.P.s. The grounds of the opposition are not related in the remotest degree to the military efficiency of this body of soldiers but purely and simply to sentiment. Nobody would wish to deny that sentiment—and pageantry—have their distinct uses in connection with the armed forces of the Crown. But that grey or any other horses should be allowed to override the dictates of efficiency—as they clearly would have done in this case if the question had arisen—is a very different and much more serious matter. The nation is continually being told of the sacrifices it must make for the restoration of the defence forces, but there are some sacrifices which Conservative members are apparently not prepared to make. Another aspect of the matter which has aroused comment is that members of Parliament were apparently circularised in the matter by serving officers of the Army and invited to oppose what the officers believed, though mistakenly, to be the policy of the War Office. This intervention is being investigated, and it would be improper to comment at this stage; but it clearly deserves the most searching inquiry.

Election Day in America.—The "Tuesday after the first Monday in November" is the constitutionally appointed election day of the United States. This year, apart from a few Congressional by-elections, there were no Federal elections to be held. The chief interest, in fact, was municipal and centred in New York. The contest for the mayoralty of New York City was a far more important affair than a European politician would imagine. Not only is the population of the city larger than that of many sovereign states, but the powers of an American mayor are very wide. Moreover, the contest this time in New York was to some extent a fight between good

and indifferent government. Mr La Guardia's victory by 1,344,016 votes to his opponent's 889,591 has been represented as a crushing defeat for Tammany Hall. That is hardly true, for though Tammany formally supported Judge Mahoney, he was a candidate only because he had snatched the nomination from Tammany in last month's primaries. The fight was really between Mr La Guardia, who has given New York four years of good government, and a "machine" which happens to support the Roosevelt-Farley wing of the Democratic Party rather than the Al Smith-Tammany wing. Mr La Guardia is a titular Republican; but his election is in no sense a defeat for President Roosevelt, since the Mayor is an outspoken supporter of the New Deal. Politics and policies, in short, as often happens in America, are at cross-purposes. What the President chiefly wants he has obtained: undisputed control of the Democratic party in the largest city of the largest state. Whether that party is in office or not is a relatively minor consideration to him. From the wider point of view, Mr La Guardia's easy victory and the fact that in his second term he will not have to contend, as in his first, with a hostile Board of Estimate may mark the end of the long reign of Tammany. The Hall has often been beaten before. But never twice running and never so completely as this time.

The Week's Non-Intervention.—The Non-Intervention Committee has once more evaded, without settling, the difficulties which threatened to bring it to a standstill. Two meetings have been held since the last issue of *The Economist* went to press; one on Friday of last week and one on Tuesday of this. As is becoming the regular practice, difficulties which were made to appear insurmountable on Friday were surmounted on Tuesday. The difficulty this time was the Russian decision to abstain from voting on that part of the British plan which contemplates the grant of belligerent rights to the insurgents before the evacuation of volunteers is completed and the Italian, German and Portuguese decision to demand a unanimous affirmative vote before going further. In the end it has been decided to proceed with the selection and appointment of investigating Commissioners before determining this thorny question of unanimity, and the full Committee on Thursday afternoon approved the procedure and time-table agreed upon. Progress is thus very slowly being made, and as a token of it, the British Government have agreed to send a special consular agent to Salamanca, though without diplomatic status. But the pace is so slow that it will take a very long time before any volunteers are withdrawn. The longer Signor Mussolini can combine delay with the appearance of co-operation, the better he will be pleased. The substance of the famous letters which were exchanged between him and Mr Chamberlain at the end of July has now been revealed by the Prime Minister in

reply to a question in the House of Commons. They contain many fine words, but the subsequent course of events shows all too clearly that they have buttered no parsnips. Signor Mussolini evidently believes that time is on his side in the Mediterranean. If so, it is hardly on the side of collective security and settled peace.

The Colonial Question.—An almost formal notice of intention to raise the Colonial question has been given in two recent utterances from authoritative mouths in Italy and Germany. At Rome on October 28th, in a public speech in celebration of the fifteenth anniversary of the Fascist march on the city, Signor Mussolini himself declared that "certain glaringly absurd clauses of the peace treaties must be revised" and that "the German people must regain the place which is due to it and which it used to have under the African sun." Next day General von Epp—who is head of the Nazi Colonial Political Office besides being Statthalter of Bavaria—spoke, in an address to the Colonial Law Committee of the Academy of German Law, of "impending action" on Herr Hitler's part which was to "provide a satisfactory solution of the colonial question." The General also took occasion to denounce "the colonial guilt lie": that is to say, the Allied Powers' assertion that they were depriving Germany of her colonies because she was unfit to govern them. And he made the counter-charge that the Allies had violated the Congo Act of 1885, which had laid down that a large area in Central Africa was to be neutral in war time; for this area included part of the German territories in Africa that were conquered and annexed by the Allies in the war of 1914-18. Signor Mussolini's intervention was severely, but most deservedly, castigated by Mr Eden in the House of Commons on Monday. It was indeed an impudent gesture, considering that one of the most glaringly unjust provisions of the peace treaties was the annexation of the German-speaking South Tyrol by Italy, and that in Africa Italy was offered—and accepted—slices of French and British colonial territories as "compensation" for the acquisition, by France and Great Britain, of mandates over the former German colonies. Signor Mussolini will be in no position to talk about territorial injustices until he has disgorged the South Tyrol, the Dodecanese and Abyssinia. But the Italian intervention does not affect, one way or the other, either the gravity or the difficulty of the colonial issue as between Germany and the two Great Powers of Western Europe. With or without irruptions from Rome, it is clear that the problem will have to be directly faced before long. It is not a problem for which a solution can easily be found. But on the discovery of a solution much that is fateful for Europe depends.

Belgian Cabinet Crisis.—The seriousness for Europe as well as for Belgium, of the resignation of M. van Zeeland is indicated by the difficulty of finding an alternative government. M. de Man, the Socialist, who was M. van Zeeland's Finance Minister, has tried and failed; and it is difficult to think of any effective alternative that would not involve a considerable risk of bringing to the surface certain dangerous antagonisms that have long been latent in Belgian politics. There are barely restrained conflicts ready to burst out between Flemings and Walloons, between Catholics and Socialists and between Westerners and Germanophiles; and the cross-division between these different segments of parties might make it all the easier for an adventurer like the Rexist leader, M. Degrelle, to take advantage of the momentary confusion in order to seize and hold a commanding position in the political arena. There is a feeling in the air that Belgium is at the cross-roads, and that the old Belgian tradition of smooth-working parliamentary government can now no longer be taken for granted. The crisis may pass on this occasion; but its underlying causes will remain, and the situation is distinctly uncomfortable. As we go to press, the crisis is in its tenth day and a fourth attempt to form a new

Ministry has just failed. Yesterday it was the turn of M. Pierlot, the Catholic Minister for Agriculture in the last cabinet. To-morrow the thorny task may be offered to M. Spaak, the late Foreign Minister.

Palestine and Morocco.—The present difficulties of France and Great Britain in some of the Arab countries under their control have been illustrated during the last few days by the resignation of one administrator and the appointment of another. In French North Africa, M. Albert Sarraut, a former Resident-General in Morocco and Minister of State in the present French Cabinet, has been appointed to a new Ministerial post with the task of co-ordinating French policy in Morocco, Algeria and Tunisia. In Palestine, Sir Arthur Wauchope has resigned from the High Commissionership. It is no wonder that six years of grappling with what is now acknowledged to have been an impossible task should have been too much for the High Commissioner's health; and there has not been any suggestion in any quarter that the retiring High Commissioner is to be saddled with the blame for the breakdown, during his period of office, of a regime which was not of his making. Meanwhile, the present recrudescence of outrages in Palestine has not abated. On October 27th a large part of the Balfour Forest, in Galilee, was burnt down by an act of incendiarism. On the 29th three Jews were shot and wounded, one of them mortally, at Jerusalem; and in the same city, on the 31st, a Jew was seriously and an Egyptian mortally wounded by an unidentified gunman. At the other end of the Arab world, in Morocco, the recent disturbances have been more formidable, and they have reached their climax at Fez, where the heart of the old city has been for a time out of the control of the police. This fastness of Moroccan nationalism was, however, reoccupied by French troops last Friday; about 200 prisoners have been sentenced to terms of imprisonment; and for the moment Morocco is quiet. At the same time, it is not likely that the new wave of Arab nationalism will yield, either in Morocco or in Palestine, to sheer repression, for its impetus does not come merely from bad times or even from anti-Semitism. What we are witnessing is the spread, into the more backward or outlying Arab countries, of an infection of European nationalism that has long since taken hold of Egypt and Syria. As a result of modern means of communication, the Arab world is acquiring a new sense of solidarity; and the achievement of national independence in one Arab country now has an immediate repercussion upon public feeling in other Arab countries that are still under European rule. Italian propaganda may be aggravating this unrest among the Arab peoples, but it has not been the cause of it, and it seems improbable that the malady will be cured in the long run by any remedy short of the grant of self-government.

Germany on the Danube.—The longer that France, Italy and Britain are preoccupied in the Mediterranean, the stronger becomes the German pressure on Central Europe. For the moment, that pressure is directed towards the prevention of any co-operation between the Danube States which, by being non-German, might become anti-German. But it is impossible to predict with confidence that the German *Drang nach Südosten* will not shortly pass to a more active stage. No country is exempt from the pressure. In Czechoslovakia the Government is watching with the closest scrutiny the actions of Herr Henlein's Sudeten party, whose affiliations with Germany have never been clearer. In Austria, Captain Leopold, the current leader of the Austrian Nazis, stands ready to double the rôle of Herr Henlein, and Dr Schuschnigg's Government is made to feel the wrath of Berlin whenever it even talks politely to the Czechs. In Hungary, the local Nazi Party, as well as the German minority, is doing what it can to embarrass the Government's policy of reconciliation with the Little Entente. In Roumania, German diplomacy is playing a part in the political manoeuvres which are preceding the

formation of a Cabinet to "make" the elections. The eventual decision will rest with the King, who has not yet made his choice. But he seems to be unwilling to admit the Peasant Party, who stand for democracy at home and abroad, to sole power, and they refuse to enter a coalition, more particularly one in which they would play second fiddle to the Liberals. The Liberals, who form the present Government, may therefore turn to the parties of the Right, whose collaboration would be made dependent upon the obstruction of the agreement between Hungary and the Little Entente (for which Prague, Belgrade and Budapest are ready). Future developments in the Danube basin need very careful watching. For Germany alone of the Great Powers is free to meddle there, and may use her advantage to the full.

Imperial Airways and Parliament.—On October 27th the Under-Secretary of State for Air was asked to explain the recent dismissal by Imperial Airways, Limited, of ten pilots. The Minister denied the Government's responsibility for a matter wholly within the company's commercial discretion. The question was again raised on the adjournment on the following day. Mr Perkins, Vice-President of the British Air Lines Pilots' Association, alleged that the pilots had been refused the right to collective bargaining; that some had been unjustly dismissed; that when the dividend to stockholders had been raised from 8 to 9 per cent. (the company's latest report is discussed on page 271) wages had actually been reduced; that very few of the planes were equipped with de-icing and blind-landing apparatus; that the machines on the Paris service were out of date; and that those on other European routes were definitely unsuitable. On behalf of the Government, it was stated that unless the Fair Wages Clause was being infringed the pilots' grievances were not within the official purview; and—somewhat irrelevantly—that Imperial Airways' flying boats were safe, comfortable and efficient. A statement by Imperial Airways on October 30 affirmed that disclosure of the reasons for the dismissals was "impracticable"; collective bargaining would be recognised if the Association were "representative"; salaries were adequate; all the machines were "airworthy"; and de-icing equipment was not yet satisfactory. From a company, heavily subsidised from taxes and thereby enabled to pay a large dividend, these replies were not altogether convincing. There has clearly been some opposition from the company to the Pilots' Association, representing 79 per cent. of Imperial Airways' pilots; and salaries, however adequate comparatively, have been reduced. Similarly, certain of the company's machines have admittedly been longer in use than was intended, owing to delayed deliveries of new craft, and this must be the cause of some concern. Imperial Airways is, in effect, a public service, and should be beyond question both a good employer and a safe and efficient purveyor of air travel on all its lines.

Scandal at Wandsworth Prison.—The Home Secretary has done another good service to the cause of prison reform. On September 27th it was brought to his notice that two prisoners who had escaped from Wandsworth Prison and been recaptured had subsequently been assaulted without provocation by prison officers. An inquiry by the Prison Commissioners was ordered, and in consequence three warders were dismissed, and in consequence three warders were dismissed. Sir Samuel Hoare expressed the view in the Commons on October 28th that dismissal was a more serious punishment than prosecution, and assured the House that there was no reason to think that there had recently been any other case of the kind. It is easy for warders, like policemen, to abuse the power and responsibility entrusted to them, and, in spite of the claim made by the dismissed Wandsworth warders and their colleagues that they were only doing their duty, there can be little doubt that Sir Samuel's prompt action was a contribution to the equitable and humanitarian administration of justice.

The affair came to the Minister's notice by a curious accident, and, although Sir Samuel doubts it, similar incidents may possibly pass unnoticed on occasion. The lubricant of justice, like the price of liberty, is eternal vigilance.

Industrial London.—The annual report of the London Passenger Transport Board, which was published last week, contains, as usual, a section on the wider economic problems of the area whose transport services the Board are under obligation to provide. London is not now, and never has been, an industrial city. But nevertheless almost a third of its gainfully occupied persons are in manufacturing industry and their number has increased by nearly a quarter in a dozen years. The total population insured against unemployment in Greater London has risen by 8 per cent. in the four years of the Board's existence, and the number actually in work by more than 16 per cent. Factories have been growing in numbers and settling in the "outer ring." These shifts in the working population create very difficult traffic problems for the Board. There is an enormous peak-hour traffic from the suburbs to the centre and local peaks when the new factory areas (e.g. at Park Royal or along the Great West Road) are drawing their labour supply from the working-class residential areas. Much of this traffic is carried on workmen's tickets, and the report contains some figures on the volume of this cheap traffic. At two stations, Morden and Burnt Oak, which adjoin large L.C.C. estates, 43.3 per cent. and 38.5 per cent. of all traffic is concentrated in the workmen's hours, making the biggest peak of the day at 7.30 a.m. To abolish workmen's fares would flatten the peak, but at a heavy cost to the poorest section of the population. To extend the hours of workmen's tickets would merely tempt more people to take them and crowd still more passengers on to the trains in the quarter-hour before the cheap fares end. "The special problem of accommodating workmen's traffic," says the Board, "appears well-nigh insoluble." So it does in a London which is allowed to grow without any form of co-ordinated forethought either in the shape of town-planning or in that of "staggering" working hours. In the outer suburbs the Board believe that it is not yet too late to achieve results by planning, though the inner suburbs are beyond redemption.

Cotton Reorganisation.—The first annual report of the Spindles Board [Cmd. 5579] was published at the end of last week. The Board, it will be remembered, was appointed under the Cotton Spinning Industry Act, 1936, in order to purchase and put out of use cotton spinning mills and machinery and thus to eliminate surplus capacity in the spinning section of the cotton

7, CHANCERY LANE, LONDON, W.C.2

industry. During the first year the Board has acquired, or agreed to acquire, 3,265,000 mule equivalent spindles, involving the purchase of the plant and machinery of 48 mills at a cost of £842,776. Of these, 1,900,000 mule equivalent spindles have already been scrapped and practically all the land, buildings and machinery appertaining to them have been disposed of. During the twelve months ended September 14, 1937, Lancashire's spindle capacity, expressed in terms of mule equivalents, declined from 45,875,251 to 42,492,717. As the acquisition of spindles by the Board coincided with a substantial improvement in the industry, the number of unemployed spindles was reduced from 10.6 millions in September, 1936, to 3.9 millions two months ago. The proportion of the industry's capacity in full operation rose from 77 per cent. during the six months ended September 14, 1936, to 90.8 per cent. during the corresponding period this year; moreover, the quantity of cotton yarn produced rose from 555.4 million lbs. to 591.7 millions during this period. As the volume of surplus capacity is a function of demand for cotton yarn, which cannot be foreseen, the Board finds it impossible to say how far the process of elimination can be carried. That it is not yet at an end, however, is indicated by the fact that the Board has been entering into negotiations for the purchase of further mills since September 14th. While the problem of surplus capacity is now much less serious, the Board rightly points out that the scheme which it has to administer is only one step in the task of putting the cotton industry on a better basis.

Mechanisation of Coal Mining.—There were few branches of activity which expanded as rapidly as the coal industry in the 19th century. But while other industries all went through an "Industrial Revolution" during which the process of manufacture was mechanised, coal mining methods remained practically unchanged until the beginning of the Great War. As the accompanying chart shows, the proportion of the total output of coal cut mechanically was of very small dimensions in 1913. Since then, however, and especially during the past few years, the mechanisation of coal mining has made rapid progress. The proportion of the total output of coal cut mechanically rose from 13 per cent. in 1920 to 28 per cent. in 1929 and 55 per cent. in the past year. Mechanisation, moreover, has not been confined to coal-cutting. In 1936, 48 per cent. of the total output of coal was conveyed mechanically below ground, compared with only 14 per cent. in 1929. So far, however, the use of pneumatic picks has been practically confined to the Durham, Lancashire, Yorkshire, Cheshire, South

Wales and Monmouth districts, which, in the past year, were responsible for about 90 per cent. of the coal cut by this means. There are no indications that the process of mechanisation is complete. While the improvement in the efficiency of the industry brought about by mechanisation must not be under-rated, the scope for further economies is still considerable. If the forthcoming Bill dealing with the nationalisation of royalties is supplemented by effective provisions designed to speed up amalgamation, the industry will at last be able to exploit more fully the modern means of production and organisation which science has put at its disposal.

The Activity of Industry.—While industrial activity remains at a high level, the decline in the volume of new orders received by a number of important industries has persisted this week. The present dearth of new business is especially noticeable in the coal industry. In South Wales, for example, stocks of large coals are again accumulating. Output, however, remains at a fairly high level, the quantity raised during the week ended October 23rd, at 4,884,000 tons, showing an increase of 205,000 tons over the corresponding week last year. In the iron and steel industry producers are taking advantage of the lull in new business to reduce the accumulation of orders. To some extent the decline in new iron and steel contracts is due to the uncertainty concerning prices after the end of this year; but, as Mr Oliver Stanley pointed out in the House of Commons on November 2nd, an announcement concerning prices is expected to be made in the near future. Sales of cotton goods have again been disappointing; indeed, they have now fallen below the current level of output. The jute trade, on the other hand, has experienced a marked improvement as a result of the Government's large order for sandbags for delivery by the end of March. The majority of consumption goods trades, ministering mainly to the home consumer, remain very active. For example, the output of beer in September was 1,507,000 standard barrels, an increase of 2.7 per cent. over the corresponding month a year ago. Despite the downward trend of new orders, present indications point to a maintenance of a high level of industrial activity during the next few weeks.

Reorganisation in the Trawling Industry.—The Minister of Agriculture and Fisheries presented to the House of Commons on Wednesday the Sea Fish Industry Bill, designed to implement the recommenda-

tions of the Sea Fish Commission for the betterment of the white fish industry. The industry's present troubles are largely the result of past over-fishing in the North Sea. The consequent reduction in the quantity and quality of the fish obtainable there has driven the trawlers to distant fishing grounds. Costs have accordingly risen, while prices have been depressed by larger landings of coarse white fish. The Bill provides for the setting up of a Fish Industry Development Commission, composed of persons independent of the industry and armed with wide, but rather vaguely defined, powers to improve the organisation and efficiency of the industry. The efficacy of the present measure will clearly be dependent upon the personnel of the Commission and upon the interpretation which this body places upon its powers; but the proposal is a step in the right direction. A suggestion that imports of white fish should be limited by quota is of minor practical value, since imports are relatively unimportant. The Bill was promised as long ago as last February, and it is to be hoped that it will secure a speedy passage through the House.

Czech Financial Policy.—The recent re-appointment of Dr Kalfus to the Czechoslovak Ministry of Finance is not only the outward sign of the Government's decision to pursue a firm financial policy, but also a political event of some importance. Dr Kalfus resigned in the summer because he was not allowed to refuse the demand of the Agrarian wing of the Government coalition for higher expenditures in the farmers' interests. His re-appointment, after lengthy negotiations behind the scenes, is a sign that the Agrarians have been forced to give way, and the fact that they cannot dominate the Cabinet is of importance for the foreign, as well as for the financial, policy of the country. Czechoslovakia is in the middle of a re-armament programme which is to cost Kr. 15,000 millions (about £106 millions). Of this, Kr. 5,000 has already been spent, and the remainder is to be provided in the next two years. Sums as large as these can only be raised by borrowing, but Dr Kalfus insists that to facilitate the borrowing the rest of the Budget must be balanced in reality as well as in form. For this purpose a gap of about Kr. 1,700 millions must be bridged in next year's Budget. Dr Kalfus proposes to do this partly by new taxes, partly by the increased yield to be expected from the existing taxes and partly by economies. His re-appointment is taken to mean that extravagances such as the expenditure of Kr. 300 millions—instead of the intended Kr. 100 millions—on the so-called "iron reserve" of cereals (expenditure which, of course, is of direct benefit to the Agrarians) will not be repeated. The proposed new taxes are a special tax on munition profits and a capital levy. This latter is not yet decided; but it is under serious consideration, and Czechoslovakia is almost the only Central European State without a tax of this nature. The national capital was assessed some years ago at Kr. 450,000 millions, and after deduction of public property and allowance for changes in prices, the taxable corpus would certainly be no less than from Kr. 200,000 to Kr. 250,000 millions (from £1,420 to £1,780 millions). Even as low a rate as 1 per cent. would thus bring in the useful sum of Kr. 500 millions. Once the Budget has thus been balanced, it is intended to assist the money market, and prepare for the defence loans, by purchases by the National Bank for its own portfolio. This can safely be done, since the National Bank's reserve exceeds 40 per cent. and the recent outflow of exchange to pay for heavy advance purchases of materials has come to an end. Czechoslovakia offers an example to other countries not only in the tenacity of her attachment to democracy, but in the soundness with which her finances are conducted.

Fall in Shipping Freights.—After a long period of almost uninterrupted advance, shipping freight rates have experienced a sharp setback during October. The

decline reflects the persistent fall in the prices of primary products and the lull in the expansion of international trade. Moreover, it is significant that the capacity of idle shipping laid up at British ports rose from 61,225 net tons on July 1st to 99,496 net tons at the beginning of October. A year ago the volume of unemployed shipping tonnage showed a substantial reduction during this period.

The Economist INDEX OF FREIGHT RATES
(1898-1913=100)

	Average, 1913	Oct., 1936	July, 1937	August, 1937	Sept., 1937	Oct., 1937
European waters	110.0	113.0	186.0	178.7	180.6	181.3
North America	113.1	109.7	119.2	125.9	146.8	143.5
South America	123.4	109.6	149.6	154.2	159.2	148.6
India	106.3	110.6	164.8	180.2	186.4	177.9
Far East and Pacific	117.4	109.1	158.5	170.6	180.8	171.5
Australia	127.9	103.6	149.2	161.1	165.0	158.8
Total	116.3	105.9	154.5	161.8	169.8	163.6
1913=100	100.0	91.1	132.8	139.0	145.0	140.7

As the next table shows, freight rates declined on the majority of trade routes:—

	Index No.	Inc. or dec. Points		Index No.	Inc. or dec. Points
Home trade	131.7	+ 4.6	South America:—		
Bay—outwards	211.0	+ 7.3	Outwards	99.4	— 2.3
Bay—homewards	254.8	— 6.5	Homewards	197.8	— 18.9
Mediterranean:—			India—outwards	143.0	— 4.4
Outwards	136.1	— 18.8	India—homewards	212.9	— 12.6
Homewards	222.8	+ 13.3	Far East, etc.	171.5	— 9.3
North America	143.5	— 3.3	Australia	158.8	— 6.2

We append a chart showing the course of the freight index number during recent years:—

Despite the recent setback, however, the current level of freight rates remains considerably above the level of a year ago. Mr Oliver Stanley's announcement in the House of Commons on November 2nd that the tramp shipping subsidy will not be continued, therefore, is of little practical significance, especially as the industry has agreed on a scheme of voluntary co-operation from January, 1938, onwards.

Value of Overseas Trade.—As a result of rapid price movements this year, the declared value of our overseas trade no longer provides an indication of quantitative changes. The official estimates of changes in the volume of trade between the third quarters of 1935,

Newfoundland and the United States

1936 and 1937, published in last week's Board of Trade Journal, therefore, are of particular interest:—

VOLUME AND VALUE OF IMPORTS AND EXPORTS

Period	Retained Imports				Exports of Domestic Produce			
	Declared Values £ Million	Index of Average Values 1935 = 100	Values in terms of 1935 Values £ Million	Index of Volume 1935 = 100	Declared Values £ Million	Index of Average Values 1935 = 100	Values in terms of 1935 Values £ Million	Index of Volume 1935 = 100
Years								
1936	957.1	128.4	745.2	106.3	570.8	116.6	489.6	115.0
1935	700.7	100.0	700.7	100.0	425.8	100.0	425.8	100.0
1934	788.5	105.0	751.2	107.2	440.7	101.9	432.4	101.5
Third Qr. of								
1935	168.4	100.3	168.0	95.8	105.4	100.3	105.1	98.7
1936	192.1	105.0	183.0	104.4	112.3	102.4	109.6	102.9
1937	239.6	123.7	193.7	110.6	134.4	113.1	118.8	111.6

Between the third quarters of 1936 and 1937, the average price of retained imports rose by no less than 18 per cent., a reflection of the sharp advance in prices for primary products and semi-finished materials. In view of the fact that British exports consist mainly of manufactured goods, the rise of 10½ per cent. in their average price is substantial, and suggests that industrialists in this country have been able so far to pass on the rise in costs of production. Significantly, the volume of British exports, with an increase of 8½ per cent., has risen faster than retained imports, which, in July-September, 1937, were only 6 per cent. higher than a year ago. While comparison of quantitative changes between the second and third quarters of this year is vitiated by seasonal movements, the average prices of both retained imports and domestic exports showed a further increase during this period.

* * *

Further Decline in Prices.—Wholesale prices have continued to fall, both here and abroad, during the past fortnight. In England the complete *Economist* index number is 1.3 per cent. lower than a fortnight ago, while *The Economist* primary products index number has fallen by 2.2 per cent. The decline is equally marked in the United States, where *The Economist* primary products index number has fallen by 3.3 per cent. and the complete Irving Fisher index number by 1.4 per cent. Even French wholesale prices have followed the world movement, though to a more limited extent. German wholesale prices, which are largely under control, have preserved their customary stability, but Italian prices show a slight rise over the past month.

† Monthly averages.

The chart shows the recent movement of British prices. Primary products are now at their lowest level for 1937, but both British index numbers are still higher than a year ago. American prices of primary products, however, show a net decline during the past twelve months.

Details of group movements in the complete *Economist* index number are given below:—

<i>The Economist</i> INDEX (1927 = 100)				
	Sept. 18, 1931	Oct. 6, 1937	Oct. 20, 1937	Nov. 3, 1937
Cereals and meat	1931	1937	1937	1937
	64.5	92.3	91.0	90.6
Other foods	62.2	67.7	67.4	67.5
Textiles	43.7	64.3	63.6	62.0
Minerals	67.4	101.0	98.9	97.5
Miscellaneous	65.8	83.5	83.2	81.7
Complete index	60.4	81.6	80.7	79.7
1913 = 100	83.1	112.3	111.0	109.6
1924 = 100	52.2	70.5	69.7	68.8

The decline continues to be most marked in the textiles and minerals groups, but this fortnight there are also declines in hides, linseed oil and rubber. Wholesale food prices show little change on the average.

* * *

Co-Operative Trade and Constitution.—The sales of the Co-operative Wholesale Society for the half-year ended July 10th, compared with the corresponding period of last year, increased by 11½ per cent. to £56,272,764. The improvement of 14 per cent. in the output of the co-operative mills and factories has encouraged the directors to sanction the expenditure of nearly £2½ millions on the extension of productive enterprises during the present year. The value of the supplies of C.W.S. products to the retail societies is 36 per cent. of the value of the total trade of the society, the highest proportion since the C.W.S. was founded in 1863. The directors have recommended an interim dividend of 4d. in the £ on the trade of the society-members, plus an additional 3d. in the £ on the society's own productions. This means the distribution of approximately £1,137,000, much of which will be used to meet the National Defence Contribution. The distributive co-operative societies in membership with the Co-operative Wholesale Society have had a referendum on the proposed changes in the constitution of the directorate outlined in *The Economist* on August 7th. The result has been the adoption of the main innovations. Candidates, selected on account of their local work and worth, will now be submitted to national election—instead of the present district polls. This constitutes a most important change in procedure, and should secure really representative candidates for the national directorate. The societies have pronounced against the reservation of four seats for women on the board, and have also refused to raise the directors' salaries, which will remain at £750 per annum, rising to a maximum of £1,000. Sites for productive developments have been acquired at Birmingham, Worksop, Manchester and Pelaw. The new enterprises will include a cabinet factory, a shirt factory, a glass-works, a tinplate factory and a tannery.

Extent of Equity Revaluation

NEW YORK, October 26.—It would appear that the bear market of 1937 culminated in the two days of panic on October 18th and 19th. On the 19th, with a turnover of more than 7,000,000 shares, the market collapsed and then rallied vigorously. Within three days average prices had recovered almost one-third of the entire ground lost since early August—which represents merely retracing the ground lost in seven market hours on Monday and Tuesday.

This revaluation of the equity in American corporate enterprise can be variously assessed. From the top prices of 1937, the average prices of representative shares fell nearly 50 per cent.—industrials rather less, and rails rather more. A numerical majority of all shares fell more than 50 per cent.; and declines of more than 60 per cent. were not uncommon among non-dividend paying stocks. In early August the very few highest grade equities were selling to yield about 3 per cent. on actual dividends. On October 19th those same equities had fallen to about a 5 per cent. basis. The falls in other dividend-paying shares were similar, that is, from a 5 per cent. to an 8 per cent. basis, or from a 6 per cent. to a 10 per cent. basis, and so on. Thus, in spite of hysteria and panic and the appearance of demoralisation, there ran through the decline the pattern of a capital rate structure in process of realignment. From the high prices quoted in August to the extreme low prices of October 19th, the measure was that of a readjustment from 3 per cent. to 5 per cent.; the final rally immediately lifted these issues to about a 4 per cent. basis.

Another assessment relates the present level of security values to the lowest prices of the depression period. On October 19th utilities were quoted at about the low levels of 1932, rails at double the 1932 lows, and the industrial average still at three times the 1932 lows. The current level of the Dow-Jones industrials is approximately that of the memorable third week of September, 1931.

Corporate Earnings

It is not practicable to relate market valuations to current earnings. The third quarter's earnings are now appearing, and they are good. This gives some support to the theory that the profit margin was shrinking. The decline in earnings is likely to be very diverse, and it is not yet worth while to attempt any accurate estimate of earnings.

The October bulletin of the National City Bank publishes a table of corporate net income during the past ten years.

MANUFACTURING CORPORATIONS IN THE U.S. (\$000,000)

Year	Net Worth	Net income as percentage of Net Worth
1926	42,366	7.38
1927	46,273	5.58
1928	48,050	7.00
1929	50,017	7.72
1930	52,695	1.52
1931	52,122	— 1.90
1932	47,640	— 4.00
1933	43,976	— 0.01
1934	43,342	1.65
1935	38,152	3.80
Average	46,463	2.80

The 1936 figures are not yet available, but they would show a substantial increase in net income, especially as

a function of a much written-down net worth. But the corporate net income of 1936 was nowhere near the corporate net income of 1928, although the production index of the two years was comparable. A fair estimate of the relation of net income to net worth in 1936 would be more than 5 per cent. and less than 6.

Hourly wage rates rose above the 1929 level in 1935; factory employment and pay rolls approximately reached it in 1937; but in spite of the large percentage increase in corporate profits, they do not seem to have risen correspondingly. In part, this is attributable to taxes. In 1929, corporate income, after deduction of taxes, was \$3,862,000,000 and taxes were \$1,161,000,000; in 1935 corporate net income, after deduction of taxes, was \$1,449,000,000, but taxes are estimated at \$922,000,000.

Railway Profits and Recession

Few major industries have suffered such a diminution of their profit margin as the railroads. It is well known that railway traffic does not bear the same relation to industrial production as it did a decade ago. In the current year, with the index of production about 15 per cent. above that of 1923-25, freight car loadings have been more than 15 per cent. below. There has also been an almost continuous tendency to reduce rates; and early this year the so-called emergency surcharges were allowed to expire, reducing gross income by about \$100 millions a year. The railroads petitioned for rate increases to replace this lost revenue. In the summer there were substantial increases in wages, adding about \$150 millions a year to labour costs.

Last week the Interstate Commerce Commission granted a series of increases in rates estimated to produce an increased revenue of about \$50 millions a year. Until the beginning of October traffic was heavier than in 1936; now it is about the same. The companies will ask for a further increase in rates. The year to date shows a net increase in labour and material costs; a large reduction followed by a small increase in freight rates; and for the first three quarterly periods a moderate increase in traffic, which will probably shrink in the final quarter.

It is impossible to form a comprehensive picture of current business operations. Steel production continues to decline; and operations are now about 52 per cent. of capacity, compared with 85 in late August. On the other hand, the motor industry has been running almost at capacity throughout October; except for one large producer who has not begun quantity production of his 1938 model. Nevertheless, it is hard to assess consumer demand, because current production is for show-room stocks. Rumour suggests that the business community recognises that a very sharp recession is in progress, the full impact of which is not yet statistically recorded. Almost without exception the expectation of business men is that this recession will be brief, representing a corrective adjustment after two years of very rapid advance.

The Popular Front Continues

PARIS, November 4. — The Congress of the Radical Socialists at Lille was the chief event of last week. It preceded the Congresses of the Socialists and of the Moderates (the Alliance Démocratique Républicaine led by MM. Reynaud and Flandin) which take place on Saturday and Sunday next. The Chamber will reassemble on November 16th.

The Radicals have spoken very clearly. They remain the great national and social party, which dominates the political life of this liberal country. The leaders, MM. Herriot, Chautemps and Daladier, have again spoken the Republican words and sentences, which go right to the heart of their compatriots. But even these vocal manifestations could not entirely mask a lack of accord between the Right and the Left (Socialist) of the party. The discipline urged by the Prime Minister at Chateauroux: "There must be no rupture with the parties which have the confidence of the masses of the workers" was obeyed, and was further confirmed by the decision: "No alliance with the Right." Yet, the break in the Popular Front is more and more perceptible. The improvement of the financial and economic situation since the last devaluation, by creating an atmosphere of respite, has only just prevented an actual cleavage.

M. Bonnet stated that, since July, the return of many milliards of expatriated capital had far more than compensated for the deficit on foreign trade account. France would soon hear of imports of gold from America. This forecast has just been confirmed by New York. The control of exchanges could be condemned in a financial motion at the Congress, because it has now, temporarily at any rate, been rendered superfluous. In the general declaration of the party, reference could be made to the need for producing more—in order to prepare the way for the payment of pensions to old workers. The disturbances created abroad by the dictatorships, which are troubling the Conservatives themselves, led the Radicals to include in the same declaration a demand for a firm foreign policy, which will be very agreeable to the Communists.

The Popular Front has thus been preserved. The advent of a centre bloc, which the Moderates want, has been averted. The task of M. Blum in rallying his party to the support of the Cabinet at the next Socialist Congress is thus rendered easier. The outstanding questions are how long the financial respite permitted to M. Bonnet will last, and how long the demands for increased wages can be staved off. Will new social troubles or a further rise in prices upset the equilibrium which has been re-established after so many difficulties?

Improvement in Production

For the time being, the indices of economic activity are certainly encouraging. The latest fiscal receipts were the best for a long time. Indirect taxes in September yielded 2,389 million francs, or 385 millions more than in September, 1936. The turnover tax and special taxes produced 236 million francs more than in September, 1936, and 76 millions more than the estimates. For the first nine months of the year, receipts were nearly 500 million francs higher than the estimates, which was, however, principally due to the rise in prices and increased taxation. The rise in prices, on the other hand, or at least of wholesale prices, seems now to have been arrested. Thus the latest troubles caused by claims for higher wages may be mitigated.

Coal production at last showed an improvement in September, when 3,767,374 tons were produced in 21.6 working days, compared with 2,672,580 tons in August, when owing to paid holidays only 15.3 days were worked, and 3,567,111 tons in September, 1936. The average daily production was 175,070 tons in September compared with 170,043 tons in August. The number of men employed was 240,057 at the end of September, compared with 238,307 at the end of August and 222,875 at the end of September, 1936. The production of coke in the colliery coke plants was 348,849 tons in September,

compared with 320,963 tons in August and 314,020 tons in September, 1936. The increase in the production of coal in September was due principally to the fact that the paid holidays came to an end. But it is noteworthy that, in spite of a small increase of one per cent. in staff, daily production rose from 170,000 tons in August to 175,000 tons in September, which shows an important advance in the yield of production.

In the metal industries, the production of pig iron was 687,000 tons in September, compared with 645,000 tons in August and 699,000 tons in July, and 492,000 tons in September, 1936, and 465,000 tons in August, 1936. The production of ingot steel was 662,000 tons in September, 1937, against 559,000 tons in August and 685,000 tons in July, and 545,000 tons in September and 460,000 tons in August, 1936.

Unemployment, however, increased rapidly in October, as the result of seasonal factors and perhaps also of the closing-down—for budgetary reasons—of numerous great public works. The number of unemployed was 317,447 on October 23rd, compared with 314,436 on October 16th, 305,341 on September 25th, and 409,195 a year ago.

Germany

The Affaire Schacht

BERLIN, November 3. — Elderly students of Continental politics remember the *Affaire* Witte in Russia, and the tortuous procedure adopted for getting rid of a Minister who had grown too big to be comfortable. There is a certain parallel with the *Affaire* Schacht. The stage is the same. Pre-war Russia, like post-war Germany, was ruled by a single will which could not err or falter. But everyone knew that beneath the smooth surface there were ambitions, hatreds, jealousies and intrigues. A Minister of the Interior could suppress a journal for mildly criticising his colleague of Finance, but could himself circulate a revolutionary pamphlet against the same colleague. A victim of this system—and sometimes a practitioner of it—was Count Witte. The parallel with Dr Schacht is not exact. Count Witte was overthrown, among other reasons, for doing big things which he thought were right; Dr Schacht for opposing big things which he thought were wrong.

A nation of philosophers must always excel a nation of dancers and fiddlers in mystery-making. When Count Witte went he went, and everyone knew it; when Dr Schacht went he stayed, but no one knew that he had done either, much less both. It is true that foreign correspondents discovered that, at least as Minister of Economics, Dr Schacht had formally resigned. But a formal resignation is meaningless unless it is announced. A Minister's functions are legally defined, and many things can only be done with his individual sanction. The public, short of the announcement of a change, must look to Dr Schacht as Minister with legal authority. And his *de facto* degradation is no permanent solution, unless he is willing to remain titular Minister and to endorse all measures submitted to him by his new superiors. As a permanent solution, even that is improbable. For supposing that Dr Schacht were willing to become a compliant and passive figurehead as Minister of Economics, as President of the Reichsbank he would have to support actively, by his credit and currency measures, policies which he condemned. In the way of any formal announcement of his resignation, however, there stand considerations of government prestige. In view of Dr Schacht's reputation and his known condemnation of government methods, his resignation would be a protest against the whole Nazi system. It seems, nevertheless, that even as *de jure* Minister Dr Schacht will disappear in the course of time, and soon afterwards as President of the Reichsbank. It was as President of the Reichsbank that he became Minister of Economics. In present conditions the two positions are probably inseparable, or, at least, could not be held by persons of definitely opposed views.

The Minister's Enemies

The full truth about the campaign against Dr Schacht is not likely to emerge. Probably it is not known to all of Dr Schacht's enemies. To be enemies of Dr Schacht does not necessarily mean to be friends of one another; and Dr Schacht may have as many sorts of enemies as he has sorts of Reichsmarks. Again, the method of his displacement does not accord with its motives. It has been alleged that he has lately opposed with more than usual vigour policies and measures which he considered injurious. That was likely enough in view of his known aversion to waste, to the excessive drain of capital, to exaggerated expansion of the Four-Year Plan, and to the prejudicing of foreign trade. It has naturally been suggested that he came into direct conflict with General Goering. But the campaign against Dr Schacht dates from the time of his appointment as Minister.

Dr Schacht was *de facto* deprived of his ministerial functions months ago. It was known that the Ministry of Economics was being insensibly incorporated in the Four-Year Plan. The elaborate Party explanation of this process, which has now been published, is not convincing. It denies that there have been any differences with Dr Schacht over matters of policy, and does not admit any personal rancour. The change is described as entirely administrative. According to the chief Nazi economic journal it became necessary to unify the whole economic organisation of the Reich. A particular charm of the Four-Year Plan, when it was originally announced, was that it would require no new organisation at all. But "circumstances . . . compelled the construction of special and very comprehensive departments of the Four-Year Plan, which are authorised to intervene radically in business." This explains why the Four-Year Plan is to-day capacious enough to swallow up Dr Schacht, but in no wise explains the getting rid of him.

Economic Dictatorship

What is ostensibly aimed at is a kind of economic dictatorship. "Over all will be the Supreme Chief of the Four-Year Plan . . . holding supremacy in decisions and in executive power." This is supposed to be merely a change in organisation, but actually it seems to be a cumbersome device for getting rid of Dr Schacht. For if it is necessary to co-ordinate industry, trade, finance, and so on, it should be remembered that until very recently this co-ordinating power was supposed to be in the hands of Dr Schacht. Dr Schacht was an economic dictator, and abroad he was generally described as such. Within the competence of his Ministry were industry, trade, capital, credit, the Bourse, Foreign Exchange, and everything else economic that counted. So long as public expenditure and investment were covered largely by borrowing, Dr Schacht, as Reichsbank President, had the final decision. But Dr Schacht's powers, on paper, went even further. Under an older law, which seems to be still in force, the Minister of Economy was empowered to take any steps whatsoever in economic affairs that he considered necessary, even if that step were contrary to law.

It is therefore plain that there was no need whatever to create a new framework for the co-ordination of the different economic departments; and that had there been no differences of policy or personality Dr Schacht would have remained in office and in power. The real question was obviously whether he should be economic dictator or be replaced. It is not suggested that General Goering desired to replace him. The precedent is the transfer of Foreign Exchange from Dr Schacht to General Goering a couple of years ago. That transfer was not due to any desire of General Goering to deprive Dr Schacht of his functions. Foreign Exchange was a domain in which the opposition to Schacht was particularly strong. If Dr Schacht was to go, then General Goering seemed to be the one person who had sufficient authority to keep the conflicting interests in order.

There is naturally surmise about whether Dr Schacht will ever return to power. Outside the circle of his declared enemies judgments of Schacht are various. His

utterances have not always appealed to reasonable men; but perhaps that is because he has himself been too reasonable to expect reasonable audiences. He lacks the ruthlessness of a dictator, and his attitude towards those who have impeded him has been injudiciously placable. He has merited the reproach of Goethe: "Du bist nicht der Kerl, den Teufel fest zu halten!"

U.S.S.R.

Harvest Fluctuations

Moscow, October 27. — The 1937 grain harvest in the Soviet Union has been officially estimated at 111,384,000 tons. Final figures are not yet available, and exact details of harvest yields, like figures about gold and aeroplane production, are being increasingly regarded as military secrets. This estimate, however, which is higher than any previous yield in Russian history, is generally believed by foreign agricultural observers to be close to the actual figure.

Figures of the 1936 harvest have never been published. A recent official study of yields per hectare planted to all grain crops made possible a computation of the harvest last year at 76,800,000 tons. This figure is considerably less than the harvests of the preceding three years, and confirmed widespread reports that last year's drought had caused serious crop failures in the Volga, Central and Ural regions. These were further confirmed when M. Ivan Vermenichev, head of the Central Statistical Administration, admitted last week that the 1937 harvest "exceeds last year's harvest by more than one-half."

The grain harvest reaped in 1913 on the territory now included in the U.S.S.R. and the harvests of recent years are shown in the following table:—

Year	Metric tons	Year	Metric tons
1913	80,100,000	1933	89,800,000
1929	71,700,000	1934	89,400,000
1930	83,500,000	1935	90,100,000
1931	69,400,000	1936	76,800,000
1932	69,800,000	1937	111,384,000

The area sown to grain has increased from 94,400,000 hectares in 1913 to 103,900,000 hectares in 1937. But in 1931 the Soviet Union already claimed to have 104,400,000 hectares sown to grain crops, and the marginal land at present available for extension of the grain belt appears to be sharply limited in extent. The population of the U.S.S.R. is now about 35 millions more than that of the same territory in 1913. Drastic changes in Russian export policy have reduced the need for export supplies of grain, but the Red Army's standing strength of 1,300,000 men, and its present policy of building up substantial grain reserves for wartime contingencies, have added to the pressure on Russian agriculture.

The New Agricultural Programme

It is against this general background that the Kremlin has recently released the first concrete indications of the newest phase of its agricultural programme. This is apparently to be a concentration of national energy on increased yields. Scientific agronomy, large-scale

irrigation projects and the conversion of some of Russia's consuming provinces into producing regions are now certain to be three of the leading features of the third Five-Year Plan, which is scheduled to begin on January 1, 1938.

Communists regard the first phase of their agricultural revolution—collectivisation—as substantially completed. Official sources claim that 92.4 per cent. of all peasant households, and 99.2 per cent. of all individually-held agricultural land, have been collectivised. The second phase—mechanisation—is still in process. But with 356,800 tractors, 96,300 combines and a steadily increasing supply of other machinery, the Soviets have realised that machines do not necessarily grow bigger crops. There is little doubt that the productivity of Russian agriculture can still be sharply increased through introduction of better farming methods. Average grain yields have exceeded the 1913 figure of 8.4 centners per hectare in only three years since the war. In 1933, after the disastrous 1932-33 famine, an average yield was reported of 8.8 centners per hectare. In 1934 and 1935 the figures were 8.5 and 8.7. Drought reduced the yield last year to 7.5 centners per hectare. Communists now state that an increase of average grain yields to more than 10 centners per hectare will be the most important agricultural objective of the third Five-Year Plan.

Seed Reserves and Anti-Drought Measures

A recent decision of the Communist Party has provided for the establishment over the next three years of a 1,500,000 ton seed reserve. Government purchasing agencies have been authorised to pay substantially higher prices this autumn for grain which meets the requirements of selected seed. Crop rotation, adequate provision of fallow land and increased sowing of winter wheat have been made compulsory for collective farms using the machinery of the motor tractor stations, through which the Government maintains its effective control over Russian agriculture.

Together with scientific agronomy, irrigation and roads bulk large in the new campaign. At Quibishev (formerly Samara), on the Volga River, work has been started on what will be the world's largest hydro-electric power station, designed principally to provide cheap irrigation for the arid steppes of the lower Volga, where drought at present withers one crop in every three. An effort is being made to diminish the perennial curse of drought by shifting many provinces north of the black soil belt, which have lower but more stable yields, from consuming to producing regions. The present shift of the Soviet tractor industry from light wheeled models to caterpillar machines equipped with Diesel engines has been planned to facilitate this invasion of wheat and rye into the former forest belt.

Present Soviet plans for disposal of this year's record harvest are unknown. Most of the crop is expected to meet growing consumption needs and the appreciable change from black bread to white bread in the Russian diet. Present military reserves, believed in Moscow to be nearly a full year's supply, are likely to be replenished. Exports are expected to increase from the low 1936 figure of 321,311 tons to a level more closely approaching the 1935 figure of 1,606,092 tons. This prediction excludes shipments to Spain. The annual pre-war export of Russian grain, which averaged 10 million tons, is not likely to be repeated in this generation.

Japan

War-Time Control

TOKYO, October 7.—A large measure of war-time control is now being extended over a wide range of finance and trade. The emergency measures of State control of trade, capital and shipping, passed in the last session of the Diet, and the Munitions of War Act of 1918 have been in force since the latter part of Sep-

tember. Import restrictions have been placed on textile materials and timber, and some 270 articles, principally food and drink, textiles, toilet goods, and jewellery, have been listed as contraband goods; a scheme of capital rationing has been adopted to restrict capital expenditure not essential for war purposes; all the shipping available is to be brought under official control to ensure its most economic employment under war conditions and for war purposes; and munition works are being mobilised, including all ancillary processes and services involved in munition production. In order to prevent a scramble for labour, a shortage of which has become increasingly acute, the Government is also contemplating the regulation of employment through labour exchanges, giving priority to controlled establishments.

The Department of Agriculture and Forestry estimated the rice crop for the country on September 20th at 66,992,000 koku, a decline of 319,000 koku (0.5 per cent.) from the actual yield of last year, but 5,446,000 koku (8.8 per cent.) more than the quinquennial average. The Korean crop is estimated at 24,752,000 koku, an increase of 5,341,000 koku (27.5 per cent.) compared with last year's actual yield. The total yield of wheat and allied grains for Japan, excluding that of Hokkaido, amounted to 22,365,000 koku, an increase of 1,687,000 koku (8 per cent.) compared with last year, and 1,469,000 koku (7.9 per cent.) more than the average of the last five years.

The Course of Business and Trade

According to Mitsui Gomei Kaisha's half-yearly analysis of the profit and loss accounts of Japanese joint stock banks and industrial joint stock undertakings, the aggregate net profits of 250 banks in the first half of this year were 78,176,000 yen, a decline of 973,000 yen compared with the second half of last year. The total net earnings of 1,000 industrial companies for the half-year ended in June amounted to 513,846,000 yen, an advance of 57,103,000 yen on those earned by the same concerns in the December half of 1936. With the exception of public utilities and a few other groups, the great majority of trades, and particularly iron and steel, mining, machinery and tools, rubber, textiles, and stock and produce exchanges, show considerable increases in profits. The ratio of net profits to capital was 12.5 per cent., and that of sums put to reserve was 1.87 per cent. In the preceding half-year the profits percentage was 11.7 per cent., and the reserve percentage was 1.58 per cent. The following table gives comparative profits in the last three half-yearly periods:—

	(In thousand yen)			
	No. of Co's.	First Half-year 1936	Second Half-year 1936	First Half-year 1937
Banks	250	79,527	79,149	78,176
Industrial companies	1,000	419,776	456,743	513,846
Total	1,250	499,303	535,893	592,023

The trade returns for September show that, compared with the corresponding month of 1936, imports valued at 263,081,000 yen increased by 73,289,000 yen (38.6 per cent.); while exports, valued at 292,300,000 yen, rose by 48,581,000 yen (19.9 per cent.). For the first time this year there was an export surplus of 29,219,000 yen. The output of cotton yarn during September totalled 139,978,000 lbs., an increase of 4,019,000 lbs., compared with August, whilst rayon production amounted to 27,000,000 lbs., a decrease of 1,879,000 lbs. The Bank of Japan's index of wholesale prices for September recorded an advance of 1.6 per cent. during the month. The price index of all shares listed on the Tokyo Stock Exchange moved down in October by a further 3.3 points to 142.6 (January, 1921=100).

With the outbreak of the armed conflict with China the wave of strikes has almost subsided. The number of trade disputes involving stoppages of work, which reached a record total of 1,455 in the first six months of this year, was only 70 during August, compared with 129 in July and 166 in June.

New Zealand

The 1937 Budget

CHRISTCHURCH, October 7.—The annual financial statement was presented to Parliament on September 28th. The results for 1936-37, which showed a surplus of £472,000, had already been published. Their comparison with previous years and with the estimates for 1937-38 illustrates the dependence of public finance upon the general prosperity of the Dominion. The figures are as follows:—

	BUDGET FIGURES (£NZ millions.)			
	1934-35	1935-36	1936-37	Estimate 1937-38
Taxation	20.18	21.56	26.94	30.34
Other revenue	5.95	4.61	4.21	4.43
Total revenue	26.13	26.17	31.15	34.78
Expenditure	24.50	25.89	30.67	34.73
Surplus	1.63	0.26	0.48	0.05

The striking increase in tax revenue in the past two years is due mainly to expansion in the national income. Comparing the yield in 1935-36 with the estimate for 1937-38, the increase is 41 per cent. Excluding land and income taxes, whose rates have been increased, the expansion in the yield of other taxes is 32 per cent. Comparing the years ended June, 1935, and June, 1937, exports have increased from £NZ42.95 millions to £NZ64.6 millions, and total production from £NZ97 millions to probably £NZ135 millions (estimated).

Expenditure Still Increasing

It was anticipated that, since taxes had been increased heavily to meet the difficulties of the depression years, they would be reduced when those difficulties were past.

Revision of taxation has been promised, and a Committee is investigating the matter. But expenditure has increased very rapidly and promises to increase still more. The greatest expansion is in social services, which cost £NZ7.75 millions in 1935-36 and are expected to cost £NZ12.16 millions in 1937-38. These include pensions, which have nearly doubled in amount since 1935, but exclude unemployment relief. Including unemployment, the expenditure on social services this year is estimated at £NZ17.34 millions, all defrayed out of taxation, an amount only slightly less than the total of all taxation, £NZ17.83 millions, collected in 1928-29. The cost of departmental services has also increased very considerably, owing mainly to the restoration of salary cuts, increased personnel and expanding state activity.

Capital expenditure on public works and development, which averaged £NZ6 millions to £NZ7 millions annually in the years 1922-31, was heavily reduced during the depression. Now it has increased again, and this year promises to achieve a new high record. £NZ4.07 millions was spent last year, and the estimate for the current year is £NZ9.20 millions. Last year the money was lent mainly by Government departments, chiefly the Post Office Savings Banks, and it is anticipated that sufficient funds will be available from the same sources this year. For housing purposes, up to £NZ3 millions is to be advanced by the Reserve Bank. During 1936-37 the public debt showed a net increase of £NZ5.11 millions to £NZ287.67 millions, new loans totalling £NZ8.50 millions and redemptions £NZ3.39 millions.

Judged by its record, the Government's financial policy is one of heavy taxation, heavy borrowing and lavish expenditure on both current and capital account. High public expenditure encourages the rapid circulation of money and stimulates business activity. But it is dependent on very heavy taxation and the using up of capital reserves accumulated in the past. The real test of this policy must come when revenue falls and money becomes tight and dear.

Letters to the Editor

British Banking Principles

TO THE EDITOR OF THE ECONOMIST

SIR,—Banking resources consist of liquid assets such as cash, money at call, earning little or nothing, semi-liquid and semi-earning such as discounts and investments and earning non-liquid assets, principally advances. As the banks are anxious to earn the maximum profit, it is understandable that they lend the greatest part of their resources in advances and keep the balance in liquid and semi-liquid form to meet any contingency. Traditionally, the banks distributed their resources roughly as 50 per cent. in advances, 40 per cent. in discounts and investments, and 10 per cent. in cash and money at call. The Great Conversion coinciding with a trade depression changed the balance of banking assets in favour of investments at the expense of advances, but the increased demand for accommodation from industry and commerce is slowly restoring the old proportion.

But it may be asked whether the distribution of banking resources as traditionally accepted is the ideal one. The omnibus item, "Deposits," is not a uniform kind of liability, but is an amalgam of two divergent kinds of debts: one with a fixed period of repayment or saving deposits for which the banks pay some interest; the other withdrawable at a moment's notice or current deposits which cost the banks nothing and are partly of their own creation. They can so adjust the withdrawal of advances as to coincide with the expiration of the term of their saving deposits, but they must be constantly prepared to meet the claims of current deposit holders. Despite the temptation to maximise their earnings or the amount of advances these should not exceed the amount of saving deposits.

The principle of a division of banking resources as of 50 per cent. to 50 per cent. in note liquid assets to the others holds good only so long as the deposits are similarly divided. It must not be argued that a slight change in the equality of advances with saving deposits is likely to upset the banking structure, but a steady tendency in this direction must ultimately affect unfavourably banking stability.

The Macmillan Committee's Report recommended the separation of current deposits from saving deposits in the returns of the clearing banks. Up to now the banks have not shown these separate figures. British commercial banking has every reason to be proud of its achievements. Surely it need not fear to reveal the position of its deposits.

Yours faithfully,

Lodz, Poland.

Are We Living on Capital?

TO THE EDITOR OF THE ECONOMIST

SIR,—To increase investment abroad presumably means increasing exports of goods without allowing these to be paid for by current imports. At the present time, we are devoting an unusually large proportion of our productive capacity to making capital goods in the shape of armaments. We are thereby limiting the resources available for producing more houses, food, and clothing, etc.

Yet, to maintain our total foreign investment intact, we are, you argue, to "pull our belts tighter," employ still more people on producing goods which are to be sent out of the country without any immediate return, and accelerate (through increased employment) the demand for consumption goods without increasing the supply. Surely now if ever, we are entitled to make a cushion of our existing foreign investments.

Stands foreign investment where it did? Our tariff policy rather indicates a lack of willingness to accept the fruits of previous self-denial.

Yours faithfully,

Headingley.

M. A. CAMERON.

["Tightening our belts" means decreasing not "accelerating" the demand for consumption goods; and we should do this by saving more and thus increasing the demand for capital goods. If we cannot maintain our overseas capital intact in prosperous years, we certainly cannot in bad years. We agree that our tariff policy does not encourage the payment of interest on our invested capital.—ED. *Econ.*]

"The Under-Privileged"

TO THE EDITOR OF THE ECONOMIST

SIR,—I am surprised that Mr Brown denies my statement that if money wages are raised prices tend to rise further. If miners' wages could be raised or their hours reduced without the price of coal tending to rise, why subsidies? Wages are one of the chief items in costs of production. Mr Brown has misunderstood my second statement. I meant that you cannot produce a fair division of wealth by increasing or decreasing the volume of the medium of exchange. I do not deny the possibility of maintaining a constant price level by controlling the volume of money. This is exactly what, in my opinion, we should aim at doing.

Under our present system, there is no limit to the economic reward of investors. The workers have no inducement to increase output because they cannot thereby directly increase their own reward. The workers should be paid their wages and the investors a fair economic reward; and everything over and above this should be calculated as true profits and of these the workers should get their share. The capital should, once the original investors have reaped their fair reward, pass in course of time to the workers who would thus automatically become investors.

There are two main roots of injustice in our present system. Rent, the tax laid on the resources of Nature, goes into private pockets. Investors, as sole owners of the organisations of industry, are enabled to exact an excessive reward. The result is that no improvement in the standard of living of the masses of our people at all commensurate with the improvement in our technical efficiency is possible.

Yours faithfully,

Wolverley,

The Morals of Margins

TO THE EDITOR OF THE ECONOMIST

SIR,—Do high margins in stock market trading create crises or prevent them? The margin of 55 per cent. until recently required in New York provokes the question. Wall Street opinion is inclined to blame high margins in part for the slump; and that the figure has now been reduced to 40 per cent. may be a concession to criticism.

The first point to be considered is not whether high margins are good or bad, but to what extent the 55 per cent. level in New York was effective, because those who take stock market dabbling seriously can, and do, borrow in London either in sterling or dollars for their ventures in

American stocks. The procedure is simple: a sterling loan can always be hedged by a forward sale of dollars, and the extent of such borrowing has been extensive.

Over here the conventional margin on that class of business is 20 per cent., or in some cases 25 per cent. But within the last two years loans against first class mixed American common stocks have been offered on a 10 per cent. margin. These figures are so far removed from the 55 per cent. which prevailed until recently in New York, and was loyally observed by the Canadian banks, that one wonders whether the recent weakness in New York was not aggravated by under-margined accounts in London. If it did, then a moral responsibility rests with the London Clearing Banks. They inevitably set the standard for rates and margins, and a Clearing Bank lending on a 10 per cent. margin may well force other non-clearing banks to do likewise.

It is therefore possible that the low margins required in London torpedoed Roosevelt's effort to make speculation difficult. If that is the case, recent events prove neither that high margins are bad, nor low margins good, but only that under a free economy speculation flows to the lowest level.

Yours faithfully,

London, E.C.2.

BANKER.

Anglo-American Trade

TO THE EDITOR OF THE ECONOMIST

SIR,—I have read your Editorial Note to my letter in your issue of October 30th with some interest and a little surprise. Of course, the object of the Ottawa Agreements was to increase the transactions between Empire countries, and it was realised that this would involve some diversion; but the increase in the trade between Empire countries has by no means resulted merely from diversion. The trade with foreign countries has also increased since the Ottawa Agreements. The Empire is now buying substantially more foreign goods than it did prior to those Agreements.

The main object of my letter was to point out that the statistics you published purporting to show the diversion of trade due to the Ottawa Agreements did not represent the situation adequately, because the bulk of the change had taken place before the Ottawa Agreements had been negotiated. Much that has taken place since has been the displacement of American products by the products of other foreign countries in the United Kingdom market.

Yours faithfully,

London, S.W.1.

HERBERT C. WILLIAMS.

POINTS FROM LETTERS

Home Produced Spirits.—If alcohol used for power purposes is included in the industrial consumption of home-produced spirits, a curious anomaly has come to my notice. An allowance of 5d. per proof gallon (8.77d. per absolute gallon) is made from the Inland Revenue on spirits used for making industrial methylated spirits—including spirits intended to be used in generating mechanical power, which are, of course, exempt from the 8d. per gallon duty on imported motor spirit. The one spirit, used for the same purpose, is thus given a fiscal advantage over the other of 1s. 4½d. a gallon. The loss to the revenue has been estimated by the Chancellor of the Exchequer at a little over £100,000 per annum. This twofold subsidy of a particular source of power could be justified if it were an encouragement to the production of molasses from home-grown beet, but it is not. More than 90 per cent. of this subsidised spirit for power purposes is produced from imported molasses.—H. E. Crawford, Bush House.

A Check to the Declining Birth-Rate.—Some weeks ago you drew attention to the fact that England's birth-rate has lately shown a slight rise, and you seem inclined to draw a somewhat optimistic conclusion. It was quite obvious that after the world depression a rise in the marriage rate would check for a limited time the drop in the birth rate. But, as the marriage rate is bound to fall rather rapidly in the near future, the birth rate also will then show a sensational decline—other conditions being equal. In the forthcoming improvement of British vital statistics, the correlation between marriage and birth rates should be taken into consideration, as was suggested by Edwin Cannan.—Ernest Kahn, Jerusalem.

Books and Publications

The Age of Education

"No change," wrote Marshall in 1890, "would conduce so much to a rapid increase in material wealth as an improvement in our schools." Less than half a century has elapsed, and in every country in the world schools and universities have been multiplied in their thousands. The enrolment of pupils and students has increased far faster than population. Indeed, the declining rate of growth in the populations of many countries has accelerated rather than retarded this trend, because education is more easily provided for small families than for large.

Dr Kotschnig has made a world-wide survey* of the revolution in higher learning. He has set it down in hard-won statistics, citing figures for practically every country in the world. The figures are incomplete, inconclusive and ill-sorted, but their general implication is clear.

Behind the dry figures of our statistical tables... there lies the misery of a whole generation... the utter despair of thousands of parents who saved and slaved a lifetime to give their children an education, only to see them at the end unemployed... the impotent wrath and the slow demoralisation of promising men and women, loaded with degrees and certificates, to whom society denies the opportunity to use their gifts and their knowledge.

How has this come to be? The industrial revolution has created a demand for experts in industrial processes and organisation, in business and in banking. The growing scope and complexity of government has led to an increasing need for trained administrators and technicians. The highly articulated civilisation of to-day is only possible when an adequately skilful and adaptable personnel for public and private enterprise is forthcoming. New democracies and new states need and seek education. Schools and colleges are opened to the middle and lower classes. Peasants and women are emancipated. Whole nations become "college-minded." New social ideas; the concept of equality; the longing to escape from common tasks; the wish to enter into the tradition of culture; the quest for gain; the "fetish of diplomas"; and the competitive salesmanship of universities; all these have swollen the spate of students.

"There is a danger in modern times," wrote Ernest Barker in 1922, "of what may be called the clericalisation of society." Five years later, Lucien Benda launched his attack on *La Trahison des Clercs*, arraiging the system of university education, which was so far adapted to the material interest of contemporary society that the cause of truth was abandoned. These are the dangers which emerge from Dr Kotschnig's remarkable analysis of the increase in the numbers of students of higher learning. On the one hand, the old standards of a liberal education tend to be diluted and changed. On the other, country after country, saving only Great Britain and Italy, records unemployment among its graduates, and overcrowding in its professions; and the recent world economic depression, because of the elastic demand for intellectual labour, cruelly accentuated this problem.

What is the remedy? Dr Kotschnig enumerates the devices which have been tried in various countries. Entrance examinations have been made more difficult; fees have been raised; courses have been lengthened; and the number of entrants to courses or colleges have been strictly limited. Graduates have been set to work in camps or on public works; or they have been given further periods of more vocational training to relieve the market of surplus labour. Foreigners, Jews and women have been debarred from the professions to make room for male nationals; and the retiring age has been lowered. More positively, organisations for vocational guidance have been set up; and the correlation of supply

and demand has been facilitated by private agencies, professional bodies, student organisations, university employment bureaux and appointments boards, and Government exchanges. Attempts have been made to stimulate new demands: to place architects in the building trades; to secure the appointment of graduates in local administration; and to persuade business corporations to look more to the universities for their higher staff.

These positive measures win Dr Kotschnig's approval; but devices to restrict student enrolments are rightly denounced as "futile." It is true that in Germany, where intellectual life has been devalued and "old man warrior resuscitated and held up as an ideal to strive after," the rising tide has been successfully stemmed. Elsewhere it is still believed that restrictive measures are a counsel of despair. What else can be done? Dr Kotschnig maintains that a new education is needed, adapted to the changing needs of a changing society, and based on occupational planning. Whatever the validity of his proposals may be, Dr Kotschnig has written an excellent and valuable book; and in the course of his labours he has come very near to the heart of our civilisation.

Shorter Notice

"Fisiologia e Patalogia Economica negli scambi della Vicchezza fragli Stati." By Attilio Cabiati. Giappichelli, Turin. 663 pages. 70 lire.

The fourth edition of Professor Cabiati's ample treatise on the theory of international trade includes a number of new chapters which bring his historical account up to 1937 and fit new developments into his abstract frame. The result is a brilliant and suggestive study in the great tradition of Italian economics. It is a pleasure nowadays to find a book on foreign trade which at the same time attacks both over-subtle theorising, and sub-intelligent policies.

MONEY AND BANKING

British Insurers in the United States

If a reasonably knowledgeable person were asked off-hand which British industry had done most to spread over the world an idea of the British character, and which had most largely contributed to foreigners' conceptions of British character, the answer he would probably give without hesitation would be: Shipping. But the more sophisticated could argue, and argue convincingly, that insurance has at least an equal title to that proud position. There is scarcely a country in the world in which some British insurance office has not established a branch or a subsidiary, more or less closely connected with its London parent and contributing a greater or less proportion to the office's annual revenue. And particular offices have in many cases policies current from one end of the world to another. One chairman at a centenary meeting this year wondered whether his oldest predecessors could "have anticipated the vastness of our world-wide operations; that our protection should embrace, among many other items, the most northerly cinema in the world, in Greenland; the most southerly cinema, in South Georgia, on the verge of the Antarctic; that we should be insuring property two miles above sea-level, in the Andes; and nearly 700 ft. below sea-level, in Palestine . . ."

Unfortunately, the data for an accurate and quantitative survey of the extent of our overseas insurance are not available. Very few offices give much information about their foreign interests and it is impossible to make reasonable guesses. In some countries, however, returns of the essential figures are officially published, and of these countries the United States is much the most important. In the tables at the foot of this page we give comparable figures for the last few years, which show

the experience of British offices in that country. They include the statistics for subsidiaries as well as branches, and are adjusted to the British practice of allowing for an unexpired risk reserve of 40 per cent. of the premium income. The exchange is taken at \$4.86½ to the £ throughout.

Tables 1 and 2 show results for fire insurance, a branch in which British offices have a particularly high prestige, dating from the days in which they paid up in full after the San Francisco earthquake. It should be remembered, however, that the term fire insurance in the U.S.A. covers a wider range of risks than in the United Kingdom. The aggregate figures show with remarkable clarity the way in which the trade cycle affects insurance business. The favourable experience of 1935, in particular, reflects the tendency of an upward movement of prices and national prosperity to improve the "moral risk." It is officially estimated that fire losses in the first half of 1937 were 3 per cent. below those of 1936. The results of 1937 may thus be expected not to differ widely from those of last year, allowing for the tendency of rate reductions to offset the reduction in fire losses. The individual results for the last two years show, however, the difficulties of generalising about particular companies.

Tables 3 and 4 relate to the miscellaneous branch, and show a smaller variation of profits. Despite a considerable improvement last year, due to better motor and workmen's compensation insurance, the miscellaneous branch remains much less profitable than fire insurance. Among individual offices, two converted losses into profits, in this branch, the Sun Insurance office having an especially happy change of fortune.

These results may be taken as illustrative of the

experience of British houses in most foreign countries, but with certain important qualifications. British offices transact about one-fifth of the total fire and casualty insurance of the United States, whereas in some other countries the proportion is probably higher. But at the same time we receive about half our total premium income in these branches from America; and no other overseas clients are, naturally, of a comparable importance to us. Another point of difference is that the American insurance industry is less highly protected than that of other countries, though the fact that each of the component States makes its own insurance laws adds immensely to the administrative difficulties of our offices there. There has never been any likelihood, however, of foreign offices deciding to close down, as they did in Mexico, in despair over the vagaries of the legislature. Nor have they to surmount the additional barriers of exchange restrictions, forced loans to Government and the like. In the United States, British offices compete with the local offices on grounds of something like equality; elsewhere as a rule that is definitely not the case.

Depression, autarky, currency depreciation and trade restrictions, in the last few years, have greatly added to the difficulties of insurance business abroad. The task of British offices has not been made any easier by a spate of insurance legislation in foreign countries. Nevertheless, the return of even moderate prosperity has been helpful, and the offices have emerged with their own position as sound as ever. It is well for Britain's balance of overseas payments that this should be so. Though it is most unlikely that the offices will ever undertake much life assurance, their fire and accident profits should continue to fill an important role among the "invisible" items of British exports.

Financial Notes

Banking Law and Practice.—Mr R. A. Wilson, the new President of the Institute of Bankers, made during the course of his Presidential address on Wednesday some interesting and constructive suggestions on the relations between banker and customer. He instanced the anomalous position of local authorities who still deal with their bankers through the medium of their treasurer. The present law of bankruptcy presented another danger to bankers. Furthermore, the risk to the banker of loss through forgery became greatly accentuated if a customer failed to examine his pass-book. The dangers confronting the collecting banker were well illustrated by the Savory case in which even the House of Lords could only reach a decision by a majority of three to two. Mr Wilson therefore made the suggestion that the committee appointed by the Lord Chancellor to consider revisions of the law should extend its labours so as to consider and recommend non-controversial codification, with a view to simplifying the law governing the conduct of banking and similar business. We entirely agree with the need for undertaking that work, and both by past tradition and present knowledge and experience the Institute of Bankers is well able to give invaluable advice to those who undertake this task. The remainder of Mr Wilson's address was concerned with the qualifications of a modern banker. Mechanisation had accelerated promotion and also emphasised the need for a proper selection of recruits to the profession. Simultaneously the growth in banking activities and the complexity of modern economic and financial affairs meant that the present-day bank officer required a far wider knowledge than his predecessor.

The Foreign Exchanges.—The main development this week is the further depreciation of the dollar, the week's movement being from \$4.95½ on October 28th to a peak this week of just over \$4.98. By Thursday the rate had recovered to \$4.97½. The cause of this move-

ment is partly psychological, for there is a rumour on the Continent that in order to arrest the American business recession President Roosevelt may decide upon a new devaluation of the dollar. The result has been Continental offerings of dollars, coupled with a renewed demand for gold for hoarding. This demand has driven the London price of gold up from a premium of 4d. to one of 9d. over the New York shipping price, and it looks as if the authorities in London are deliberately selling gold at this high premium in order to discourage transfers of floating funds from dollars into gold. French francs have remained very steady at about Frs. 147, with little movement of funds either into or out of France. Swiss francs have also remained steady at about Frs. 21.51. The Swiss authorities are no longer buying dollars, and so the Swiss franc has ceased to follow the dollar. The Belgian spot rate has remained at about Bel. 29.33, but forward belgas are slightly stronger, partly because of sales of spot belgas covered by purchases of forwards. Guilders are quoted at Fl. 9.00. Hitherto the Netherlands Bank has operated only in dollars, but this week it is reported to have bought sterling. It looks as if the pound has strengthened its position as the chief international currency, as the result of the dollar's new weakness.

The Bank Return.—Currency requirements over the end of the month explain the small increase of £2.8 millions in the note circulation. In the absence of any change in the Bank's gold, the reserve is reduced by the same amount.

BANK OF ENGLAND

	Nov. 4, 1936	Oct. 13, 1937	Oct. 20, 1937	Oct. 27, 1937	Nov. 3, 1937
Issue Department:—	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Gold	248.7	326.4	326.4	326.4	326.4
Note circulation	447.1	489.9	484.3	483.1	485.9
Banking Department:—					
Reserve	62.5	38.3	43.7	44.9	42.1
Public deposits	27.2	26.1	29.8	32.2	30.3
Bankers' deposits	85.3	92.9	89.3	87.7	89.4
Other deposits	41.8	36.4	36.3	36.6	36.6
Government securities	82.0	105.1	99.6	100.2	103.4
Discounts and advances	7.7	9.2	6.5	8.1	7.8
Other securities	20.0	20.4	23.2	20.9	20.7
Proportion	40.4%	24.6%	28.1%	28.6%	26.9%

In the banking department, the decrease in the reserve has been offset by an increase in Government securities. In spite of the Government dividend payments at the beginning of the month, public deposits are only reduced by £1.9 millions, the explanation of this small reduction being the absence of Treasury bill maturities on Monday and Tuesday. Bankers' deposits consequently have only risen by £1.7 millions.

The Money Market.—While conditions remain easy, the clearing banks experienced a fair afternoon demand for loans. As August 2nd was a Bank Holiday, there were no Treasury bill maturities on either Monday or Tuesday of this week, and so the banks were not keen buyers of bills early in the week. Later in the week they bought special dates in January and also mixed parcels of December and January bills.

	Oct. 14, 1937	Oct. 20, 1937	Oct. 28, 1937	Nov. 4, 1937
Bank rate	2%	2%	2%	2%
Clearing banks' deposit rate	1½%	1½%	1½%	1½%
Short loan rate:—				
Clearing banks	1½-1* 1½-1*	1½-1* 1½-1*	1½-1* 1½-1*	1½-1*
Others	1½-1 1½-1	1½-1 1½-1	1½-1 1½-1	1½-1
Discount rates:—				
Treasury bills	1½-1½	1½-1½	1½-1½	1½-1½
Three months' bank bills	1½-1½ 1½-1½	1½-1½ 1½-1½	1½-1½ 1½-1½	1½-1½

* Loans against Treasury bills and other approved bills and British Government securities within six months of maturity; 1 per cent. Treasury Bonds and other gilt-edged stocks within six months of maturity; and other collateral respectively.

Last week the market obtained 62 per cent. of the £45 millions of Treasury bills allocated, but the minimum price paid had to be raised from £99 17s. 4d. to £99 17s. 5d. per cent. The average tender rate has thus fallen from 10s. 4.97d. to 10s. 1.55d. per cent.

THE STOCK EXCHANGE

Government and Gilt-Edged

GILT-EDGED stocks, which stood like a rock while ordinary share values were falling, have this week been sufficiently firm and strong to prompt market rumours of coming Treasury operations, ranging from a fresh issue of National Defence Bonds to the pre-conversion of 5 per cent. Conversion Loan, 1944-64. Which, if any, of these essays of market imagination has any substratum of truth, time will show. It is clear, nevertheless, that events are emphasising the importance of the double option which the Government holds on prosperity. Though a possible recession in trade would damage the Government's prophetic reputation, its secondary effects on the gilt-edged market might assist, rather than hinder, the Treasury, in financing its programme of re-armament borrowing.

There is already evidence of a transfer of investment resources from equities to gilt-edged stocks, at a time of active trade, when the national savings must needs be considerable. The Treasury has a well-filled armoury of tactical weapons for the prosecution of any borrowing campaign. Its control of the foreign issue market is complete and its regulatory powers over domestic gilt-edged borrowing can be made one-hundred-per-cent. effective whenever it chooses. It cannot, by a "request," maintain any particular level of market prices, but it may decisively affect their tenor by employing considerable financial resources, which are at its disposal under modern conditions, for the purchase of Government stocks. The extent and the strategic importance of these powers have hitherto received less than their due recognition in the market itself, and the present moment seems particularly opportune for examining them in some detail.

The Government's position as a large investor in its own stocks is not an entirely new development. The Post Office Savings Bank has been in existence for over 75 years, and the bulk of its funds have always been invested, through the National Debt Commissioners, in British Government securities. But the recent extension of the system of self-financing social services, of which the Unemployment Insurance Fund may be taken as typical, has greatly increased the Government's investment in its own wares. Professor N. F. Hall, who has made an important contribution to the study of these Public Funds, and has measured their complexity, questions, for example, the adequacy and honesty of our present system of national accounting in the presentation

of these large "extra-budgetary" Funds. The latest returns showing the total amounts involved in the principal Funds, whose investments are managed by the National Debt Commissioners, are summarised below:—

Fund	Approximate Amount
Post Office Savings Bank	£451,000,000
Trustee Savings Banks	130,000,000
National Health Insurance Fund	122,000,000
Unemployment Insurance Fund	43,000,000
Treasury Pension Fund	19,500,000
Post Office Fund	3,500,000
	769,000,000

This list of "Funds" is not exhaustive. It omits, for example, the balances in the custodianship of the Supreme Court and certain smaller funds administered by the National Debt Commissioners. The inclusion of these items provides a compact mass of some £800 millions, and this sum is invested by officials of the Government in the Government's own securities. We might, indeed, add to this total the £200 millions which represent the fiduciary portion of the Bank of England note issue, although it is generally assumed that part of this backing consists of Treasury bills, which fall outside the scope of this analysis. If these items were included, however, the total sums which are Government-invested in Government investments would reach £1,000 millions, equivalent to, say, one sixth of the total net internal debt of the British Treasury.

Two questions immediately suggest themselves. First, in what securities are these funds invested? Secondly, on what principles are they invested? The answer to the first question, so far as information is available, will be found in the table at the foot of this page. The figures have been compiled from the statutory returns in which the National Debt Commissioners show the investments held on behalf of the various funds. Several remarkable features are disclosed in the table. The huge holding of Local Loans 3 per cent. stock—£134 millions in nominal amount—on account of the Post Office and Trustee Savings Banks and National Health Insurance Fund is remarkable. This combined total represents no less than 31 per cent. of the Local Loans Stock now outstanding. How is it that so large an amount of this stock—which is, incidentally, redeemable only at the Government's option—has found its way into these funds? Partly, one

Investment and Company Notes

Course of Share Values.—It is too early to talk of recovery on the Stock Exchanges either of London or of New York. Prices in both centres were lower at the end than at the beginning of last month, and in New York, in particular, the net decline was considerable. Nevertheless, the chart given on this page suggests that for the first time since the late summer the downward movement has been stayed. The last week or two, indeed, has seen a perceptible strengthening of the technical position, particularly in London, and the cessation of forced selling is an essential condition precedent to even a most limited recovery. But the purge of bullish sentiment has been drastic and complete, and the economic outlook seems unlikely in itself to provide

BRITISH AND AMERICAN INDUSTRIAL SHARE VALUES DURING THE PAST TWO YEARS (1928 = 100)

British: "Financial News" Index of 30 Ordinary Shares
American: "Standard Statistics" Index of 50 Common Stocks

anything to take its place. Even those who deny the probable imminence of any recession in industry and trade are no longer hardy enough to maintain that the economic curve will go much higher. The corollary (as we show in a leading article) has been a movement of funds into gilt-edged stocks and a canvassing of the view that general interest rates may not be destined to rise much, if at all, above their current levels. However this may be, it seems increasingly unlikely that a resumption of the bull market in equity stocks can be brought about in the next few weeks or months. The near future, however, may throw valuable light on the question whether current yields running up to 8 or 9 per cent. on seasoned industrial ordinary shares express new ideas of what is fitting in the way of income, or discount a fall in earnings and dividends of which there is no sign on the immediate horizon.

* * *

Wall Street and Margins.—The new margin regulations were well received by Wall Street at first, and it was estimated that they would free about half the accounts then restricted for want of margin. Apparently in some quarters the new regulations were interpreted as evidence of a trend to the right in the Administration's policy, but Washington soon removed such misconceptions, and there seems little prospect of any softening of the tax burden for the benefit of Wall Street operators. Mr Aldrich's diagnosis of the stock market trouble as due entirely to market regulations has naturally attracted support among Wall Street observers who dislike the Government; one moral drawn from this attitude is that

may assume, because it was found convenient, when fresh issues of Local Loans stock were necessary, to father upon the Savings Banks a substantial portion of the new issues. If the Local Loans conversion, for which the Chancellor of the Exchequer took powers a couple of years ago, had proved practicable, the Savings Banks, in deference to the national interest, would doubtless have subordinated their presumed desire to maximise the income on their deposits by accepting any reduction of Local Loans stock interest which might have been proposed.

Another interesting feature disclosed by the table is the holding of nearly £30 millions 1 per cent. Treasury Bonds by the Unemployment Insurance Fund. It was believed that this issue was not fully taken up by private investors in December, 1935, and the Unemployment Insurance Fund thus becomes identified as one of the "Public Departments" which can, on occasion, be called upon to take up unsubscribed portions of new Government issues.

So we approach the second question: On what principle are the Funds invested? Obviously, they are not invested—if our inferences regarding the holdings of Local Loans and Treasury Ones are accepted—in complete adherence to the principle which governs investment of private trust moneys, namely, in the paramount interest of the beneficiaries under the terms of the trust. These public Funds have thrown up a second, and what may be a conflicting, principle—that those entrusted with the investment of these extra-budgetary Funds may take into account the general national interest and need not confine themselves solely to safeguarding the interest of the beneficiaries of any particular Fund. In particular, the Funds may be used to promote the success of new Government loans, whether these loans are made to convert existing loans or whether they represent "new money."

In recent years, indeed, it has become increasingly common to offer new loans at a price above the current market level in the knowledge that, if public support is insufficient, the lists can be "helped out" by subscriptions from the extra-budgetary Funds. This policy was very successful up to 1935, when the trend of fixed-interest stocks was upwards. The "suggestion" contained in the issue price of the new loan that gilt-edged prices in general would again rise was frequently sufficient to make the rise a reality. Latterly the policy has been less successful. Large portions of new loans, taken up in the first instance by "Public Departments" (though not necessarily by the Funds which are the subject of this discussion) have been resold to the public at big discounts on the original issue price. Whether successful or not, the practice raises considerations of principle which must ultimately be resolved. Is it legitimate that the Government, admittedly seeking to act in the highest public interest, should resort to devices and expedients which if adopted by any of its subjects would be deemed a little discreditable, and might even be illegal? These columns are not devoted to moral philosophy, and the question must remain unanswered here.

But one practical point may be made. Thanks to re-armament, the Government is once more a borrower on balance. The power of controlling the gilt-edged market through the extra-budgetary funds, therefore, must be correspondingly diminished. The power of control which the Funds provide is, of course, to be measured rather by their annual rate of growth than by their actual accumulative size. This rate of growth is at present of the order of about £75/£80 millions annually, which represents, directly or indirectly, a very acceptable contribution towards the defence borrowing programme of £80 millions a year for five years. Granted this absorption, there is not, under present conditions, a substantial net surplus which can be projected on the gilt-edged market when required. It is surely unnecessary under present conditions to labour the consequences of this factor. But although this rough equilibrium may set a limit to the more positive forms of market control in the future, annual accretions of this order have undoubtedly played an important part in maintaining the mystique of cheap money.

the Government should stop its so-called meddling, balance its Budget and leave private enterprise to its own resources. And yet one factor in the present situation is the success of the Government in nearing budgetary equilibrium. The pump-priming expenditure from Washington has been severely contracted, to the extent that there will probably be a cash balance in the current financial year; yet the pump still refuses to work of itself. Obviously rising costs of production and of living have slowed down the response of private industry to the priming. But it is doubtful if the Government will react to the situation by relaxing its regimentation of what it regards as the evils of speculation.

Should "C" Stockholders Pay?—The publication of the London Transport Board's accounts (discussed in a leading article last week) raises a point of principle. The manner of publication of the Board's accounts is determined by Section 48, paragraph (3), of the Board's Act of 1933. Under this section, the Board must send a copy of its report to the Minister of Transport "and shall publish the accounts in such manner as the Minister shall direct, and shall place copies thereof on sale at a reasonable price." It is understood that the Minister's directions do not require the Board to issue a copy of the report to "C" stockholders as a matter of right. Instead, they are required to pay their shilling in the same way as the general public. It may be argued that the Board's report is something more than a financial record of the undertaking. Undoubtedly, it is devised as a "public relations" document, but it contains the only official financial record of the Board. And since the "C" stockholder—unlike the stockholder in public boards such as the Port of London Authority or the Metropolitan Water Board—is, for all practical purposes, an equity stockholder, it is important that he should have the opportunity of studying the progress of the Board towards standard dividends. No other equity stockholder, however, is compelled to pay for his information. And while the cynic might regard it as a good thing that the "C" stockholder should buy the report and thus make some contribution towards his dividend, the Board's report is evidently an expensive document to produce and well worth the shilling to the general reader.

Perhaps it may be apposite to cite the experience of an even greater undertaking—the London, Midland and Scottish Railway. For some years past, that company has distributed to its stockholders, not the complete report, but a summary of financial results. But it has furnished the full accounts—gratis, of course—to all who have applied for them. It is understood that less than one-half of one per cent. of the stockholders have exercised their prerogative. Perhaps a similar expedient might be adopted by the Board under the Minister's direction. Legalists may question, doubtless, whether nothing is "a reasonable price," but it seems desirable in principle that stockholders should have access to official information whose bearing on the prospects of their investment is vital, without being compelled to pay for it. And perhaps, ultimately, other large statutory undertakings will be spurred to commendable emulation in the production of informative, detailed and pleasing annual reports; and will measure their success by the number of applications they receive from stockholders who will not be happy till they get them.

Foreign Bond Movements.—Greatly reduced trading, two undeclared wars and a break in Brazilian bonds have been responsible for the further fall in foreign bond levels during the past month. The Municipal and General Securities' total index is again 1.3 points below the average for the base period—January to June, 1934. But a surprising exception to the falls of the sectional indices is a slight rise in the Far Eastern group, due to bear covering in Chinese issues. The month's movements are set out in the next column.

Average January–June, 1934=110

End of Month	Europe	Near & Far East	Egypt	South and Central America			Complete Index	Under-forecasted Bonds	Over-forecasted Bonds

Note: Figures in brackets show number of bonds.

Widespread falls in the South American group have produced a drop of 9½ per cent. in the South American "States" index—the largest fall in any month since the index started. Such are the consequences of continued silence regarding the renewal—or replacement—of the Aranha plan for Brazilian bonds.

Capital Issues in October.—The new issue market in October succumbed completely to the prevailing market depression. The amount of new money subscribed is below the same month in 1936, and only exceeds the holiday month levels by a small margin. Figures for recent months follow, on both "old" and "new" bases:—

(000's omitted) Excluding Conversions

† Includes £40,804 for Tithe Redemption 3 per cent. Stock.

Industrial offers have been at low ebb, for of the £6,915,000 involved in public issues in October, over £4,500,000 is represented by the Sheffield, Hull, and Hertfordshire loans. Calculations on the "new basis" show an equally unimpressive result, despite the contribution made by issues to existing shareholders.

Whither British Celanese?—Hopes are insubstantial substitutes for dividend warrants, but the junior shareholders of British Celanese have long lived on them. Prosperity for the company has always been round the next corner, and the directors have certainly not hidden their optimism under a bushel. They do not hide it in the latest report. Artificial silk production has reached new records; but the company's profits are reduced from £2,306,107 to £2,195,760, for reasons which have an unwelcome but familiar ring. Price stability has not yet been reached in the industry. Changing political conditions produced abnormal fluctuations in demand—consequently the relative manufacturing conditions

were not favourable to the most economical production." Additional research on new products is expected to produce its fruits in the future. An analysis of the latest profits follows:—

	Years to June 30 (approx.)		
	1935	1936	1937
Trading profit	2,350,491	2,306,107	2,195,760

Carried forward	260,692††	302,235	295,536

* 2½ years' arrears. † 3 years' arrears, bringing div. up to date.
‡ Year to April 30th. § Half-year to October 1930.
†† After writing off £25,000 underwriting commission.

The recent dividend announcement lent itself to the inference that a scheme might be presented with the report to deal with arrears on the second preference capital, which now amount to £2,071,875. But instead the board still hopes to deal with these arrears without inflicting sacrifices upon any class of shareholders, when earnings show a margin over the regular dividend requirements of both classes of preference shares. The past year's record shows, in fact, that even the half-year's dividend on the second preference capital was not fully earned. In such circumstances, it is more than courageous but a little less than convincing to insist that preference rights will be fully satisfied without sacrifice. Taken literally, such determination would postpone the ordinary shareholders' prospect of dividend to the Greek Kalends. There is, as we have previously insisted, a clear case for capital reconstruction. The company is certainly a profit-earner, but its present capitalisation is out of relation to its proved earning power. Thus, even at the low level of 4s. 7½d. the ordinary shares seem generously valued.

Electric and Musical Industries.—Although the 10 per cent. dividend is unchanged, an increase of nearly £107,000 in the income of Electric and Musical Industries is in welcome contrast to the previous year's disappointing setback. The latest profits have not shown a full recovery, but comparison is necessarily imperfect owing to the undertaking's conservative practice of debiting development and research expenditure before striking the balance of profit. Some greater earnings stability can, however, be detected, and may be continued. The company's policy is more settled and its range of products increased. It was compelled to change from gramophones to radio business (which it did much to consolidate) and has introduced a range of household appliances. The Rudge-Whitworth acquisition introduces motor and pedal cycles, and in television the company has obtained a leading position. Perhaps the future course of profits may be more regular than that shown in the following table for the past three years:—

	Years ended September 30		
	1935	1936	1937
Gramophone cos'. dividends	445,603	254,446	361,280

Carry forward

† After crediting £114,544 special dividends, being profits on sales of securities.

Owing to an increase in expenses and tax (the previous year's provision was abnormally low), the advance in the amount available for the ordinary shareholders is about two-thirds of the total increase. The margin of earnings over dividend, however, is larger than at any time since the company was formed, and as there is no reserve fund, the surplus is added to the balance carried forward, which now amounts to nearly 10 per cent. of the ordinary capital. The principal balance sheet change is a rise from £864,959 to £1,324,837 in stocks of the combined businesses, while the liquid position of the parent company naturally shows a contrary tendency. The accounts do not show the effects of the Rudge-Whitworth acquisition, since negotiations were not completed at the balance sheet date. But a wider spread of overhead expenses should result from the deal, with, in due course, a satisfactory contribution to profits. On the television side, there is no accumulation of development expenditure to write off. At the current price of 18s., to yield £5 11s., the 10s. shares appear fairly valued.

Imperial Airways Report.—The Imperial Airways report gives shareholders a modicum of information, but leaves them with a keen appetite for more. At first sight it seems surprising that an increase of 7.7 per cent. in traffic ton-miles should have produced an advance of £25,000 in trading profit, while the previous year's 37 per cent. increase in traffic service was accompanied by a rise of only £3,000 in trading profits. But the company, although it has a straight equity capitalisation, is technically so highly geared that the ordinary share earnings are more than doubled at £134,736. Obsolescence is a large "prior charge" which again absorbs half the total income, but relatively important savings have been effected on depreciation, income tax and staff provision. The analysis appearing on the following page shows that the 9 per cent. distribution is covered by earnings of 19.4 per cent.

BREWERY UNIT TRUST

Trustees:
MIDLAND BANK EXECUTOR & TRUSTEE CO., LTD.

● Brewery Units make it possible for the first time for both small and large investors to acquire a well-spread interest in brewery undertakings.

● Brewery dividends are more consistent over periods of years than those of almost any other industry and rank among the safest shares in the industrial market.

● The fact that Brewery and Distillery Shares are tightly held and in many cases difficult to obtain, makes the facilities offered by the Brewery Unit Trust of real value to the private investor.

● The Brewery Unit Trust has been formed in consonance with the Board of Trade Report on Unit Trusts.

● Price of Brewery Units 17/6d., as at 4/11/37. Estimated yield at this price based on cash dividends alone is 4½%.

● Comprehensive booklet about the Brewery Unit Trust which forms the basis of all transactions, is obtainable from any Bank or Stockbroker, or direct from the Managers.

† After crediting recoveries of claims not attributable to year of accounts: 1935, £31,593; 1936, £12,229; 1937, £7,487.

The company, pursuing its past policy of reticence, reveals neither the total traffic receipts for the year, nor the amount received in Government subsidy. Investors, however, who wish to look behind the scenes may be interested in the revision of a calculation which we made a year ago on the basis of the 1935-36 results. We then suggested that the company failed to balance its operating account by some £66,000, compared with £225,000 for 1934-35. The latest calculation starts from eleven months' traffic receipts to February last of £1,678,125. Making an estimate for March, total traffic may be taken at £1,825,000 for the year. It would appear from the Air Estimates for 1936-37 that the company was due to receive £383,000 in subsidies. Its computed total income, therefore, amounts to £2,208,000. Since the trading profit amounts to £394,041, it must be inferred that operating expenses absorbed £1,814,000. On last year's working, therefore, the company's operating account provided a surplus of about £10,000 towards meeting obsolescence, general expenses and the increased dividend.

After the confusion which surrounded the new issue last June—the only explanation of which seemed to be that high quarters regarded the earlier level of the shares as too optimistic—there is some need for care in assessing the company's dividend outlook. As the "chosen instrument" of the Government, the company will operate the new Empire Air Mail Services from January next on a revised subsidy basis. It is impossible to gauge the outcome of this change for the shareholder. To judge from our estimates, the company has made considerable progress during the past three years towards the most efficient operation of its fleet. But the scale of its operations in future will be vastly expanded, and its operating conditions wholly different from those of recent years. While the new subsidy arrangements have been left purposely elastic, they do not, of themselves, carry any guarantee in respect of a particular rate of dividend upon the capital. The scheme envisages an allowance of 10 per cent. on the capital, under certain conditions, to cover "return on capital and provision of reserves not specially provided for in the estimates." These, however, are the terms which might reasonably be granted by the Government to its chosen instrument. They are not incompatible with the suggestion that the higher yield basis on the shares which now obtains should become permanent.

Central Argentine Railway.—By a trick of Nature, the Central Argentine Railway last year jumped into a state of high prosperity. It was an exceptional maize-carrying period—the Argentine had a large carry-over, the United States' crop failed, and the maize crop this year was again good. Hence the "persistent demand" for the company's transport services, which has increased the line's gross receipts from £9,777,638 to £12,217,048—a jump of 25 per cent. Working expenses have increased from £7,370,191 to £8,460,156, but this increase of 14.8 per cent. includes additional provision for renewals, and direct operating expenses were, in

fact, only 5.1 per cent. higher. It is clear, therefore, that the surprisingly good preference dividend payments have been conservatively earned, for renewals and replacements totalled £977,409 (charged in operating expenses) compared with £274,490 for the previous year. The effect of the recovery is shown below:—

	Years ended June 30th		
	1935	1936	1937
Gross receipts	9,865,160	9,777,638	12,217,048
Working expenses	7,158,446	7,370,191	8,460,156
Operating profit	2,706,714	2,407,447	3,756,892
Income from investments	33,592	34,816	32,077
Exchange losses	1,228,623	1,021,079	1,320,123
Debt interest	1,019,996	1,037,280	1,049,638
Other interest charges, etc. ...	316,326	270,042	222,969

Preference stocks:—

Earned	175,362	113,862	1,196,239
Paid*	Nil	339,350	1,036,307

Contingencies Reserve	—	—	157,434
Carry forward	673,747	448,260	450,757

* On 4½ per cent. preference stock, £339,350 or 3½ per cent. in 1935-36, £436,307 or 4½ per cent. in 1936-37; on 6 per cent. cumulative preference stock, £600,000 or 12 per cent. in 1936-37, being for 2 years to June 30, 1934.

Second preference stockholders, who are at least senior to the first preference stockholders in that their dividend rights are cumulative, will find definite encouragement in these figures. Both classes, however, would be still more hopeful if the Argentine Government were to adopt a more generous basis of exchange control. Some exchange charge there must be, except in the unlikely event of a return of the peso to parity with sterling. But the Argentine railways are on firm ground when they demand that the exchange system should not be converted into an apparatus of indirect taxation. The control, in short, should be prepared to let the peso find a more natural level, or to give the British companies the special benefits to which the Anglo-Argentine agreement referred. Meanwhile, the traffic returns of the company show a relatively small fall when allowance is made for the bumper business of a year ago. But the stockholder has to take a fairly long crop risk since maize—the company's most important source of revenue—is harvested later than wheat. The first preference stock stands at 54 to yield £8 6s. 6d. per cent. on full dividend, while the second preference stock, after allowing for three years' arrears, yields £10 10s. per cent. at 75.

From the Chair.—Any investor with a well-diversified portfolio will find the proceedings at this week's company meetings of more than ordinary interest. Tin restriction policy, milk marketing, the aircraft shadow scheme, and the outlook for spelter—these are some of the topics which have been discussed. Mr D. J. Ward is a fitting successor to Mr Henry Frisby as chairman of *Pahang Consolidated*. At this week's meeting he proved a no less vigorous critic of the incidence of restriction upon Malaya, and declared that Malaya alone would feel the effect of the expected 25 per cent. cut in output with full force. Since Malaya is allowed to produce only 73 per cent. of the international allowance, under-assessment severely increases the effect of quota cuts, and for a lode mine like *Pahang* the resulting effect upon costs is important. An interesting point on changes in social behaviour and distributive costs was brought out by Mr J. H. Maggs at the *United Dairies* meeting. Ten years ago the company delivered an average of 1.680 pints per day to each customer. The present figure is 1.433 pints. Hence distribution costs have increased, and Mr Maggs declared that, although the distributive margin had been increased by one-third of a penny per gallon, the company "was left with a lower net margin." Sir Alexander Roger's speech at the *Birmingham Small Arms* meeting commented favourably on each branch of the company's manifold interests. Progress in the motor section was reported—the company has lately developed new commercial vehicles. The

"shadow factory" has produced its first batch of aero engine components, which have been assembled with satisfactory results. The B.S.A. Guns subsidiary is occupied with substantial Government contracts, and shareholders will recall that last year's results included no profit from this source. Finally, the group which manufactures machine tools and small tools still has healthy order books. The company, in short, has pulled itself into recovery, and its prospects for the current year seem satisfactory. At the *Imperial Smelting Corporation* meeting, Lord Horne expanded the comment in the report that zinc smelting profits were again unsatisfactory, and dwelt at length on the question of protection for the industry.

Rhodesian Anglo-American Accounts.—The accounts of "Rho-Anglo" are a reflection of the prosperity of Rhodesian copper producers disclosed by recent reports. Thanks to the remarkable advance recorded by Rhokana, Rho-Anglo's total revenue for the year to June 30th, has risen from £250,972 to £867,899. The amount earned for the ordinary shares is thus nearly 240 per cent. higher, at £600,733, a result which covers the 15 per cent. dividend by a small margin. Owing to the issue of reserve shares in connection with the Nchanga flotation and the exercise of options, this dividend is payable on a larger capital, while a further exercise of options and the Loangwa Concessions exchange of shares have increased the capital from 9,929,784 to 10,490,770 ros. shares since June 30th. The provision of £400,000 raises the general reserve to £1,600,000, including the balance of depreciation reserve no longer required, but this provision represents in effect share premiums credited to the appropriation account. The balance sheet illustrates alike the transformation of the earning capacity of Rhodesian copper producers in a space of two years and the extension of the company's interests. At June 30th, holdings in Rhokana amounted to 1,340,288 shares, but the market values of all investments exceeded book values of £8,172,424 by 130 per cent. at that date. The most interesting feature of the balance sheet, however, is the rise from £251,034 to £1,312,757 in the book value of other investments, reflecting the subscription of 1,002,914 shares of Nchanga Consolidated Copper Mines. Further, although at the date of the balance sheet, only 25 per cent. of Loangwa Concessions capital was held, arrangements have been made to acquire the remainder by an exchange of shares. At a current price of 23s. Rhodesian Anglo-American ros. shares yield £6 10s. per cent. This yield may at first sight seem generous, but it appears lower than the potential return of the producers themselves during the current year.

Luipaards Vlei.—Notice is given with the latest report of a resolution authorising the directors to borrow an additional sum of £300,000. Additional finances were provided at the end of 1934 by an offer of £275,000 convertible notes. At June 30th last, this issue had been reduced to £209,230 by conversion into shares. Premiums amounting to £57,880 had been received, and the issued capital was increased to £282,170. The balance sheet shows that a loan of £70,000 has already been secured in London. Including this sum, the cash position at the date of the balance sheet showed a short-fall of £39,740, without including the £70,550 required for the final dividend. Minor extensions to the plant have just been completed. The new borrowing is to permit the exploitation of the property on a scale commensurate with its size and the grade of ore available. Little change is shown in the latest operating results, although the working profit shows a reduction of £27,000 to £213,000. A substantially increased development footage produced only a trifling expansion in the ore reserves, but the value is higher. The current price of 21s. 3d. for the 2s. shares obviously takes account of larger distribution possibilities in the future.

Lake View and Star.—Owing largely to additional expenditure on development, last year's profits declined by £38,500 to £439,900. Hence the company was unable to repeat the bonus of 2½ per cent., which raised the distributions in respect of 1935-36 to 52½ per cent. The fruits of the additional underground work are shown in an expansion of 217,400 tons in the ore reserves to 3,414,600 tons, the average value being slightly lower than before at 5.68 dwts. The tonnage represents nearly six years' supply for the mill. A combination of the gold scares and recent unfavourable developments on various West Australian gold mining properties has depressed the price of Lake View 4s. shares to 17s., some 8s. below the best of the year. At this quotation the yield on the 1936-37 dividend is as high as 11½ per cent. The report for the September quarter shows that the company is maintaining its rate of earnings.

Other Company Results.—Nearly forty further reports are included in our usual analysis of profit and loss accounts on page 292. Apart from a number of investment trusts, the week's results consist mainly of smaller industrial concerns. The results are discussed under the heading "Shorter Company Comments" on page 291.

Company Meetings of the Week.—Reports of company meetings commence on page 281 of this issue. Points from speeches at the *Pahang Consolidated*, *Birmingham Small Arms*, *United Dairies* and *Imperial Smelting* meetings are discussed on page 272. The unduly heavy burden of taxation under the new system was emphasised by Mr R. S. G. Stokes at the *New Modderfontein* meeting. More than 40 per cent. of the company's working profits was paid in taxation and, despite the declining grade of ore, the charge was unlikely for some years to fall below 37 per cent. Addressing the members of *Nourse Mines*, Mr Stokes referred to the increase in tonnage milled, the decline in yield and working profits—balanced by a reduction in taxation—and to the maintenance of ore reserves at over 4,000,000 tons. At the *Buenos Ayres Western* meeting Sir Follett Holt emphasised that in the best interests of Argentina, a greater share of the present general prosperity for the railways was merited. Mr A. Chester Beatty had the pleasant task of discussing before members of *Consolidated African Selection Trust* the largest profits which the company had made, and announced a free bonus issue of three new shares for one old. At *Horlicks* meeting, the chairman described the present rate of sales as most encouraging. The chairman of *Singapore Para Rubber* explained that the new share issue would enable the company to begin gradual replanting. At the *Jantar Nigeria*, Mr Percy Tarbutt reported that the American buyers of Columbite had exercised their right to renew their contract.

£1,300 instead of £1,000

UNDER The Distinctive System of The Scottish Provident Institution the premiums are so moderate that at the usual ages for assuring the yearly sum charged elsewhere for a Whole Life Insurance of £1,000 (with profits) will here secure from the first as much as £1,300 or thereby with right to share in the surplus. The additional £300 is equivalent to an immediate and certain bonus of £30 per cent. as large as can be looked for in other Offices only after many years.

THE WEEK IN THE MARKETS THE STOCK EXCHANGE

TICKET: NOVEMBER 16 ACCOUNT: NOVEMBER 18

This week's market feature is undoubtedly the strength of gilt-edged. It would be difficult to find a feature in any other group. In general, the markets have lacked vitality. Ordinary shares, where changed, are fractionally lower, but fixed interest issues, under the lead of gilt-edged, remain firm. There is a scarcity of first-class debentures and preference shares, but first class equities are less impressive.

The gilt-edged market hummed merrily to the tune that a conversion operation was planned for the 5 and 4½ per cent. Conversion issues, or that a new instalment of defence finance was on the way. Although some signs of "preparation" had been recently discerned, both rumours seemed less reliable than the broad fact that the market is obtaining strong support, partly on the lines indicated in a leading article on page 268, and partly on the argument that cheap money can be kept cheap. Local Loans were especially prominent in mid-week, when War Loan reached 101 bid.

A strong movement in Australian issues was followed by a halt for profit-taking in mid-week. Home corporation scrips staged an improvement to coincide agreeably with the successful Wakefield issue on Thursday.

The foreign bond market gave most attention to Japanese issues, on hopes that the Nine Power Conference would assist a settlement of the war. But Chinese Customs issues were also in favour. German bonds reacted, and Brazilian issues continue to reflect uncertainty regarding the future of the debt service.

Home rail stocks opened in poor style, but after the Funds had assisted prior charges, distinctly better traffics helped the ordinary stocks. Business, however, remained small. Argentine issues were idle. Cordoba first debentures reacted on the news that the Government would operate the line for a year, while the Central Argentine results (discussed on page 272) brought no assistance.

Small and irregular days in the industrial markets have resulted from the closing of Wall Street and Paris, from revised ideas regarding political appeasement, and from reluctance to commit any sizable funds into equity shares until the industrial outlook becomes clearer. The American market has again depressed the trans-Atlantic favourites, and domestic issues for the most part were slightly down. The heavy industrial group, apart from occasional support for Vickers, closed generally lower. Electrical equipment shares have proved uncertain in their movements, Crompton Parkinson, as usual, falling most. Small losses testified to a complete absence of support in the motor group.

British Celanese were flat on the profits (discussed on page 270) and the investment groups, like brewery and tobacco shares, enjoyed little of the support which usually marks the new account. Bank issues tended to improve and insurance shares were steady, but the leading miscellaneous industrials were easier without exception.

Conditions in the oil market were dull in the early part of the week, the general tendency to quietness being increased by the closing of the Paris Bourse and Wall Street. Late on Monday, Trinidad Leaseholds rose on the dividend announcement, the improvement spreading to other issues. Continental support for Royal Dutch then stirred the market a little, and small gains were common. In the rubber market, the week was one of the quietest and least interesting for some time. An initial marking up of quotations on a temporary recovery in the commodity price was short-lived. Falls were small, but the amount of business shrank as the week progressed. Tea shares were more inactive than in recent weeks, though prices were fairly well maintained.

The mining market was hardly less dreary, interest reviving a little in mid-week when the Paris and New York Stock Exchanges re-opened. There was also a disposition to wait upon political events, and prices reacted through lack of support. The main feature of the Kaffir market was the appearance of some investment buying, and quotations for the producing mines hardened. Business in Rhodesian copper issues was poor, while tin shares were consistently marked down.

PRIVATE BANKING HOUSE wishes to engage additional Dealer for its Foreign Bonds Department. Offers, stating experience and connections, to Box 48, The Economist, 8 Bouverie Street, E.C.4

OVERSEAS STOCK EXCHANGES

NEW YORK

THE immediate response to the new margin rules was a sharp rise which was held practically to the end of business last Saturday. Hopes gained currency that relaxations would be announced in the capital gains and undistributed profits taxes. On Monday of this week trading was quieter, and the estimate of lower steel mill activity for the current week created a depression in steels which spread round the market. Tuesday was closed for the municipal elections. Wednesday saw a general fall in prices which carried the Dow Jones industrial index down to 130.14, against Saturday's close of 138.17. Steel shares were lower on the estimate of Iron Age that steel mill activity for the current week will be 48 per cent. of capacity against 51 per cent. for last week. Motor and railroad shares were among the groups most affected, and oils were weak on the reductions in gasoline prices. Gold shares rose against the trend. On the bond market, Treasuries were firm, but the more speculative issues moved in sympathy with the stock market.

By courtesy of the Standard Statistics Company, Inc., of New York, we print the following index figures of American values calculated on closing prices (1926 = 100):—

PARIS
In common with other centres, Paris in October was in uncertain mood. Preoccupied by the irregular movements of Wall Street, by the fate of non-intervention, and latterly by M. Van Zeeland's resignation, the Bourse could find no basis for a definite trend either up or down. The world-wide fall of security prices in the early part of the month was mitigated by the resistance of domestic issues—industrials, rentes, and bank shares alike—though internationals were sensitive to political news and to fluctuations in the franc. Towards the middle of the month, a marked recovery occurred, but price movements were subsequently erratic and the volume of business poor. The cantonal elections were not on the whole an encouraging market factor. At the close, Belgian political uncertainty exercised a depressing effect, but the news of revision of Wall Street margin requirements, and the consequent belief that activity in New York would revive, was of some assistance.

BERLIN
THE share market was dull throughout October, the average quotation in nearly all groups declining. The month opened with a substantial general advance, but the end of the first week saw speculative selling and a sharp net decline. Commercial bank shares were, exceptionally, higher, but Reichsbank were very weak. Later, foreign selling was reported, and Reichsbank touched 200—the lowest price since April. Speculative dealings in copper shares anticipated the forthcoming dividend announcements, and copper shares advanced slightly. The third week of the month was generally featureless, but individual industrials in the loan stock group were well supported, and gained between five and eleven points, Reichsbank recovering to 208. Commercial

banks and shipping shares continued weak. Uncertainty about the impending official price-cutting measure and about Dr Schacht's position induced a new decline at the end of the month, particularly affecting high-priced issues in the electrical, chemical and textile groups. The month closed with an irregular recovery, from which shipping and certain potash issues benefited. The market for fixed-interest securities was quiet but firm, and at times it proved necessary to ration mortgage bonds among buyers. Young Loan was practically unchanged. The official shares index (1924-26 = 100) for October was 113.24, as against 114.84 for September; bonds, 99.44, as against 99.33.

Lloyd (New)			

AMSTERDAM

THE irregular tendency on the Amsterdam Bourse during October naturally resulted from watching which way New York would move. Wall Street and foreign political influences produced sagging markets for the earlier part of the month, and the extent of price falls looked serious indeed. A sharp recovery in mid-month was not maintained, but the ensuing weakness seemed less marked than before. An unobtrusive recovery set in towards the end of the month, and prices closed mostly above their lowest levels. Hopes of improvement in Wall Street were damped by the Belgian political crisis. Though they did not escape general movements, home industrials were the steadiest group, but considerable fluctuations in plantation issues marked the falling trend of commodity prices.

CANADA

THE Canadian stock markets during October suffered their severest slump for several years. A steadier tendency towards the middle of the month was followed by a fresh break, but since then prices have been irregular, but tending to recover. Most quotations closed well above the worst. There is, however, no evidence of a renewed upward trend. The chief cause of the slump is attributed to the delicate international situation and to industrial fears. The influence of the United States Government's stock market regulations was a contributory factor. The "Investors' Index of the Bureau of Statistics, which stood at 122.3 on September 16th, fell to 116.3 for September 23rd, then to 112.2 for October 8th, and to 105.4 for October 14th, at which point it compared with a figure of 128.7 recorded for the corresponding date of 1936. The mining market was also affected, and particularly base metals, but the decline was interrupted by temporary bursts of recovery. The bond market has registered a small volume of business, but prices have been relatively steady and the Bureau's index for the price of long-term Dominion bonds, which was 115.5 for the week ending September 15th, had only fallen to 114.7 for the week ending October 14th.

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields of fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

CAPITAL ISSUES

AGAIN the week is barren of industrial new issues, but corporation borrowing has been resumed—not with the post-porporation Liverpool issue but with a much smaller operation by *Wakefield Corporation*. The offer, in fact, follows familiar lines. It consists of £500,000 stock, dated 1958–63, issued at 101, and carrying the first full interest payment on July 1st next year. The firm tendency of gilt-edged stocks assisted the issue, but the authorities still refuse to adopt one feature which would obviously appeal to trustees—the payment of corporation stocks in full within a comparatively short period, and a first interest payment less than eight months distant. *Weymouth and Melcombe Regis* has placed the maximum total of £250,000 in 3½ per cent. stock, redeemable in 1958, at £100 1s. 3d. per cent. net. The stock does not carry trustee status, since the population of the borough is less than 50,000.

PUBLIC OFFERS

Wakefield Corporation.—Issue of £500,000 3½ per cent. stock at 101. (A trustee stock.) Redeemable at par July, 1963, or from 1958 on notice. Ranks with other loans. Proceeds to replace £330,000 short-term mortgage, balance for housing. Estimated population, 59,746; rateable value, £370,464; rates, 18s. 9d. Net debt, £4,169,034 (of which 32 per cent. trading and 47 per cent. housing). Lists closed 9.5 a.m., November 4th. Oversubscribed.

BY STOCK EXCHANGE INTRODUCTION

Borough of Weymouth and Melcombe Regis.—Particulars of issue of £250,000 3½ per cent. stock, redeemable at par January, 1958. Messrs. Grieveson, Grant and Company take issue at £100 1s. 3d. Proceeds to replace loans of £100,820, and balance for new capital purposes. Corporation owns electricity and harbour undertakings and properties with rent roll of £8,000. Estimated population 34,000. Rateable value, £288,850; current rate, 10s. Net debt, £759,956, of which £321,831 housing; £276,919 productive undertakings; and £161,206 other services.

BONUS SHARES

Consolidated African Selection Trust.—It is proposed to distribute three 5s. shares for each share held. This will raise the issued ordinary capital from £377,029 to £1,508,000.

ISSUES TO SHAREHOLDERS ONLY

Britain Steamship Company, Ltd.—Issue of 125,000 new 16s. shares at 16s. 6d. (one new share for four held on October 23rd).

Colonial Gas Association.—Issue of 62,136 8 per cent. £1 preference shares at 23s. English, or 28s. 9d. Australian, and 62,136 £1 ordinary shares at 20s. English, or 25s. Australian currency, on the basis of six preference and six ordinary shares in respect of every 100 shares of the total holding of each shareholder.

Lever Brothers, Ltd., and Unilever, Ltd.—Associated Enterprises, Ltd., invite offers from preference and preferred ordinary stockholders of Lever Brothers, Ltd., and the preferred stockholders of Unilever, Ltd., for the purchase of £302,529 20 per cent. cumulative preferred ordinary stock in Lever Brothers, Ltd., at 20s. per 5s. unit, free of stamp duty and transfer fees. The yield on the stock is £5 1s. 3d. per cent. (allowing for accrued net dividend). Dividends are payable on January and July 1st, and the stock carries a full half-year's dividend payable on January 1, 1938.

Lightalloys, Ltd.—Issue of 29,000 5s. shares at 12s. 6d. (one for every 10 held on October 22nd). A further 1,000 shares will be offered at 12s. 6d. to senior members of the staff, other than directors.

BY TENDER

Bournemouth Gas and Water Company.—Sale by tender of £50,000 maximum dividend 7 per cent. stock at a minimum of 161. Proceeds required for extensions. Capital receipts, £2,235,614; profit, after interest, etc., 1936, £92,065. Number of consumers: gas, 71,019; water, 34,297.

South Staffordshire Waterworks Company.—Sale by tender of £350,000 5 per cent. consolidated preference stock at a minimum of 128. (A trustee stock.) Proceeds to repay £400,000 5½ per cent. preference stock; holders may convert into £78 new stock per £100 old. Ranks with existing £350,050 in issue. Supplies 214,000 houses, with population of 963,000.

REPAYMENTS AND CONVERSIONS

American Telephone and Telegraph.—The issue of \$12,923,000 4½ per cent. convertible bonds due in 1939 has been called for redemption on January 3, 1938.

General Mortgage Bank of Palestine.—An amount of £P48,000 6 per cent. debentures out of all eight series of 20 years have been drawn for redemption on April 1, 1938. The bank will in due course make an offer for conversion into 5 per cent. debentures.

National Shipbuilders Security, Ltd.—The £5 per cent. first mortgage debenture stock will be repaid on February 1, 1938. Stock selected by drawing will be repaid at par, the remainder at 103.

OFFERS ABROAD

Japanese Government Bonds.—It is announced that 200,000,000 yen 3½ per cent. Government bonds (redeemable in 17 years) will be issued at 98 on November 16 in connection with the war in China. Another 500,000,000 yen will be issued in December.

Canadian Internal Loan.—The new \$100,000,000 (£20,000,000) loan was oversubscribed on November 3rd and the books were closed after two hours.

RESULTS OF ISSUES

Singer Motors, Ltd.—The issue of 473,092 5s. shares at 5s. 6d. has been oversubscribed by shareholders. Applications from over 3,300 shareholders were received.

ECONOMIC RECOVERY IN AUSTRIA

Further Economic Progress and Monetary Stability

A GENERAL survey of the current year's financial position of Austria shows that the country has succeeded definitely in overcoming the financial crisis through which it had to pass during the years 1931-1932 and from the consequences of which it had to suffer for some time afterwards. In the autumn of the year 1936, the Council of the League of Nations lifted the financial control introduced in 1931 and terminated the activity of the representative of the League of Nations in Austria, as well as that of the Adviser to the Austrian National Bank. The economic and financial development during the past year has, indeed, proved that this decision of the League of Nations was justified and well founded. Especially the year under review has shown what degree of stability the Austrian currency has regained. In spite of the uneasiness and uncertainty caused by devaluation measures adopted by the gold-bloc countries, Italy and Czechoslovakia, in the autumn months of last year, the stability of the schilling was not affected.

The Position of the Austrian National Bank

The consolidated position of the Austrian currency is reflected in the following table showing the development of the status of the Austrian National Bank:—

	AUSTRIAN NATIONAL BANK			
	Sept. 30, 1936	Dec. 31, 1936	June 30, 1937	Sept. 30, 1937
	(in Millions of Schillings)			
Notes	944	944	896	914
Deposits	262	204	245	272
Total	1,206	1,148	1,141	1,186
Gold and foreign exchange...	375	342	343	385
Bills discounted	213	208	190	190

The gold and foreign exchange holdings include a cash reserve of 243 millions of gold, affording a considerably ampler cover for the notes in circulation than provided for in the statutes of the National Bank.

The growth of the bank's foreign exchange holdings is due to the favourable development of Austria's balance of payments which, in turn, was influenced by the rising exports and the impetus given to the tourist traffic.

The Development of Foreign Trade

Austria's foreign trade, which has been on the upward grade ever since 1933, has, especially during the current year, known how to profit from the general revival in world economics and the increase in world trade, although the development of commercial relations is still greatly handicapped by the foreign exchange restrictions enforced by various countries. While this remains to be a regrettable feature, it has, nevertheless, been possible greatly to develop the interchange of goods with Western Europe and overseas. The following table shows that, compared with the preceding year, exports have advanced at a greater ratio than imports and that the surplus of imports has been considerably cut down:—

AUSTRIA'S FOREIGN TRADE (NOT INCLUDING BULLION)

	January 1936 to September 1937	
	1936	1937
Imports	885	1,063
Exports	689	889
Excess of imports	196	174

Despite this auspicious development, the favourable results of Austria's foreign trade in the years 1929-1931 and the more intensive use of economic capacity this increased activity entailed could not yet be equalled.

	(in Millions of Schillings)			
	1929	1930	1931	1932
Imports	3,318	2,739	2,208	1,403
Exports	2,220	1,880	1,341	784
Imports	1,933	1,934	1,935	1,936
Exports	1,190	1,173	1,220	1,266
Imports	818	880	907	967

An investigation made by the Austrian "Institut für Konjunkturforschung" as regards the period January to July, 1937, has shown that both in imports and exports the share of those countries decreased with which Austria's interchange of goods is based on compensation and clearing agreements. This fact is due to the restrictions the clearing and compensation system imposes on foreign trade and to

prosperity having made greater progress in countries without transfer restrictions where consequently demand is better than in countries subject to clearings. Austria herself has long since ceased to enforce similar restrictions in her commercial intercourse with foreign countries, excepting in cases where the respective countries themselves still adhere to these strictures and self-protection demands a certain reciprocity. The payments of interest and capital on foreign debts, too, are subject to no restriction whatever.

Once more, this year, the developments of the country's tourist traffic has been of considerable help to the foreign trade balance. The number of visiting foreigners has again exceeded that of the preceding year. The Salzburg Festival Plays, the Grossglockner Alpine Highway, the cultural treasures of the Federal Capital, and the natural beauties of the country, have, quite obviously, lost none of their power of attractions in recent years.

The Budgetary Position

The stability of the schilling continues to be firmly supported by an official financial policy aiming at the strict maintenance of the equilibrium:—

	1936 Closed Accounts	1937 Budget Estimates	1938 Draft Budget Estimates
	(in Millions of Schillings)		
Ordinary Budget:—			
Expenditure	1,987.5	2,062.7	2,012.7
Revenue	1,989.0	1,954.3	1,951.7
Deficit (—) or surplus (+)	+ 1.5	—108.4	—61.0
Investments	35.6	37.0	32.1
Total deficit	34.1	145.4	93.1

The 1936 ordinary budget closes, for the first time since 1929, with a surplus. This surplus amounts to 1.5 millions, and is almost exclusively due to the favourable development of receipts. These receipts as compared with the budget estimates have resulted in a surplus of 97.2 millions, receipts from taxes yielded a surplus of 67.7 millions, whilst expenditure increased as against the budget estimates by 61.7 millions.

The deficit foreseen in the 1937 Estimates amounts to 108.4 millions, part of which (69.0 millions) is to be covered from the proceeds of the 1937 Investment Loan (nominal amount 180 millions). The tendencies of receipts and expenditure seem to justify the assumption that the deficit in the ordinary budget not thus covered will be met by increased revenues and economies in expenditure. The provisional results of the first seven months of 1937 show a surplus of 14.7 millions on the ordinary budget. This favourable result is chiefly due to the increase in the yield of taxes and railway receipts.

The draft Budget Estimates for 1938 show on the ordinary budget a deficit of 61 millions to be covered as to 17.8 millions from the proceeds of the Investment Loan not expended in 1937. Considering that the estimates of receipts and expenditure have been made prudently, it would seem possible to cover the remainder by economies and increased revenues if the present economic conditions continue.

Expenditure for investments in 1936 and 1937 was financed from the proceeds of the 1937 Investment Loan; investments in 1938 will be covered as to 15.8 millions from the remaining proceeds of this Loan and the Post Office Credit; in order to meet the remaining 16.3 millions new credit operations are envisaged if need be, without however having recourse to the market.

The deficits of the last two years are largely due to the investment activity of the State, inaugurated by the Government in support of an economic revival. This economic revival has progressed gratifyingly in the course of the current year, aided by the investment activity and increased exports, so that in some of the more important industrial lines the production figures of 1929 have already been reached or even surpassed.

No further untoward events have disturbed the steady development of the financial situation. In addition to steady working towards an economic and financial consolidation, the Government pays particular attention to the establishment and maintenance of political and social order as provided for in the Constitution of May 1, 1934, and has announced its intention of holding elections for constitutional offices as early as the middle of the year 1938.

COMPANY MEETINGS

IMPERIAL SMELTING CORPORATION, LIMITED

CONSIDERABLE INCREASE IN NET PROFIT

ZINC PRODUCERS' DIFFICULTIES

LORD HORNE ON NEED FOR PROTECTION

The eighth annual general meeting of the Imperial Smelting Corporation, Limited, was held, on the 4th instant, at the Chartered Insurance Institute, 20 Aldermanbury, London.

Viscount Horne, of Slamannan, P.C., G.B.E., the chairman, said:—The net profit for the year amounted to £257,092, compared with £159,836 in the preceding twelve months. With a balance of £69,314 brought forward we had £326,406 available for distribution, out of which the full preference dividend has been paid, absorbing £134,538 and leaving a balance of £191,868. We have recommended for your approval that a dividend of 5 per cent. on the ordinary share capital should be declared. The accounts as a whole show a distinct improvement compared with the previous year, profits being substantially better and the balance sheet undoubtedly stronger.

ZINC SMELTING

I come now to deal with the operations of our group of industries. As you were told in the directors' report, the results from zinc smelting were again unsatisfactory. While the reasons for this state of affairs have been made clear to you at previous meetings, I think the importance of the subject to our employees and shareholders as well as to the nation justifies a further note.

We are Customs smelters, that is, we buy in open competition with foreign smelters our raw materials in the form of zinc concentrates from mines in the United Kingdom, Newfoundland, Australia and other places, paying for the zinc content according to the ruling price of zinc and receiving a charge for conversion into metal—known as a returning charge—out of which we have to pay for all wages, fuel and other supplies, transport, distribution, etc. In the result we hope to have a surplus which will give us some reward on the capital employed.

These are the reasons why the price of zinc is to us of less importance than the cost incurred by us in producing it. When you remember that it takes 4½ to 5 tons of coal and 4½ to 5 man-days to produce a ton of zinc by the methods which it is necessary to employ in this country, you will recognise how high is the percentage of labour cost involved in converting zinc in concentrates into marketable metal. It is because of the greater cost of fuel, higher wages, dearer transport and more burdensome taxation in this country that our industry requires some safeguard from external competition. Except that we use more British labour and more British coal per unit of production, we are in a similar position to that of a host of other British industries which are receiving adequate safeguards through the tariff. We, by some curious political tangle, are asked to carry on a vital industry with a degree of protection which is only sufficient to proclaim its insufficiency.

As the needs of the zinc smelting industry in this country are being investigated at the present time by a Government Committee, I forbear to say more. I prefer to leave the question, confining myself to an expression of confident hope that the Committee will not fail to support what in the last war proved to be one of the most important of the key industries of the nation.

THE NATIONAL SMELTING COMPANY, LIMITED

The National Smelting Company is, as you know, our chief subsidiary, the whole of its capital being owned by us. Besides its extensive zinc and acid works at Avonmouth and Swansea Vale, this company now possesses the whole of the debenture and share capital of Improved Metallurgy, Limited, which operates vertical retort and high grade zinc refluxing units, as well as of the Northern Smelting & Chemical Company, Limited, with acid and zinc works at Scaton Carew and of the Delaville Spelter Company, Limited, owning residual zinc works at Bloxwich. It also owns interests in Aluminium Sulphate, Limited, National Alloys, Limited, Cuprinol, Limited, and other less important investments. The works of the National Smelting Group are under the able direction of Mr Stanley Robson, the works

director, and his assistant, Mr A. Sanders. The year has been one of steady metallurgical progress.

SULPHURIC ACID

The National Smelting Group continues to expand its production of sulphuric acid. The output from concentrates, pyrites and sulphur during recent years is shown in the following figures: 1932, 106,600 tons; 1933, 92,700 tons; 1934, 106,700 tons; 1935, 126,000 tons; 1936, 171,800 tons; and 1937, 202,100 tons.

The output is expressed in 70 per cent. acid. Equipment for the further increase of the company's acid business was erected in the last financial year, and was brought into commission last week. The capacity of our plants is now approximately 220,000 tons per annum, which, with our highly trained staff in charge of the operations, makes a great addition to the defence of the country. The costs of production, however, as in all other branches of our industry, are increasing as a result of higher wages and of additions to the price of fuel and transport charges.

NATIONAL FERTILIZERS, LIMITED

After dealing with other activities of the company and its associated companies, the Chairman continued:—The authorised capital of National Fertilizers, Limited, is £1,000,000, of which £900,000 has been issued in the form of £500,000 4½ per cent. redeemable cumulative preference shares and £400,000 ordinary shares. Of the ordinary share capital 49 per cent. is owned by The National Smelting Company, Limited, and the balance by our friends, Fison, Packard and Prentice, Limited. The trade of National Fertilizers, Limited, in the last year showed satisfactory expansion. The superphosphate sales approximated to 50,000 tons, while about 17,500 tons of compound fertilisers and over 70,000 tons of ground basic slag were dealt with. The interests of the company are being steadily extended.

A number of other fertilizer and associated companies operating in the Western area have been acquired by National Fertilizers, Limited. These purchases have increased the company's trade and extended the range of its products. The complete co-ordination of all these businesses will naturally take time, and until it is completed we cannot expect to receive the full reward of our enterprise. We are entitled, however, by the results already achieved, to regard with satisfaction our investment in the fertilizer trade and the association it has given us with Fison, Packard & Prentice, Limited.

PRICES

I now turn for a moment to a question which necessarily agitates many minds—the question of the prices of our products. Our shareholders must have observed with anxiety the extraordinary fluctuations which have taken place in recent months with regard to the market quotations for zinc. There is no reason in the nature of things why the price of zinc should not have stood at a fair and reasonable level over this period. The commodity has a steady demand for the work that is going forward in the world combined with the armament programmes of the various nations, and the stocks of the metal are reasonable in amount. Yet when I addressed you a year ago the market price of zinc was £16 10s. per ton; in March this year it rose to £37 5s., and yesterday it was £16 7s. 6d.

These are disconcerting fluctuations which add seriously to the difficulties attending the output of zinc-concentrates by the mine; the production of metal by the smelters and the consumption of the product by manufacturers.

I have no desire to indulge in profuse condemnation of speculation and the speculator. Indeed, contrary to the view of many purists, they often perform a useful function. But when speculation becomes so irresponsible as it was in the early part of the year, it does great detriment to all concerned. On those who are in control of the marketing conditions governing the sale of metals in this country, rests the responsibility of making such modifications as would set up suitable deterrents to reckless speculation and I cannot help thinking that it could be done without impairing any legitimate facility which a free market requires.

Of the future I can only say that I believe our prospects to be encouraging on the whole. Our operations and the profits from them depend on world factors which are beyond our control; but if there be peace between nations and no recurrence of any deflationary action either here or in the United States, I am confident that there should be no serious recession. If my views are correct, I would expect to give you a favourable account of the current 12 months' operations when I meet you a year hence.

The report and accounts were unanimously adopted, the retiring directors and auditors were re-elected and a hearty vote of thanks was passed to the chairman, directors and staff.

HORLICKS LIMITED

INCREASING DEMAND FOR ALL-BRITISH PRODUCT

The first annual general meeting of Horlicks, Limited, since the company assumed its public status was held, on the 29th ultimo, at Slough, Lieutenant-Colonel J. N. Horlick, O.B.E., M.C., presiding.

The Chairman, in moving the adoption of the report and balance sheet, said:—This is the first opportunity we have had of meeting you since we became a public company, and both on my own behalf and my co-directors, I have much pleasure in welcoming you here to-day.

ACCOUNTS FOR 15 MONTHS' PERIOD

As you will no doubt recollect, the company's financial year was changed to terminate on March 31, and the accounts which are before you therefore cover the extended period of fifteen months ended March 31, 1937.

Turning to the balance sheet and profit and loss account, which you have received, I think you will agree that the figures disclose a satisfactory position. In particular, I would direct your attention to the additions to general reserve account and the dividends equalisation reserve account, bringing these up to a combined total of £150,000.

Special mention may also be made of the conservative figure of £144,248, at which your company's valuable freehold land and buildings and plant and machinery are shown.

The satisfactory position of the company's liquid assets, which show a total of £745,288, as against the low figure of £162,108 representing outstanding liabilities, leaves the healthy liquid balance of £583,180 at the close of the 15-month period covered by these accounts.

You may like to know that all subsidiary interests are fully owned by the company and conservatively stated in the balance sheet. They include a manufacturing and selling company in Australia, a distributing company in Belgium, and a maltings plant in Norfolk.

The present closed-door policy governing international trade and the high tariffs imposed on imports have forced many manufacturers, like ourselves, to set up factories in foreign and overseas markets in preference to exporting supplies from this country.

It may be of interest to note that the provision for income tax covers the profit for the period under review, although the actual liability will not arise until 1938. You will also see that after making all the allocations we are left with a balance of £19,198 to be brought forward into the current financial year, against a sum of £9,044 brought forward at the commencement of the period.

DIVIDENDS AND INTERIM DECLARATION

In accordance with the statement made in the offer for sale, the board does not propose to effect any further distribution for the financial period under review. It is our intention to consider dividends in relation to the capital required for the future development of the company and by adopting a long view policy to conserve our resources.

I have pleasure in informing you that, as foreshadowed in their report, the directors have this morning declared an interim dividend at 6½ per cent. (4d. per 5s. stock unit) for the year ending March 31, 1938, to be paid less income tax at 5s. in the £ on November 18 next to all stockholders registered in the company's books on October 29, 1937.

As stated in the report, it is hoped to pay a further interim dividend in 1938, to be followed by a final dividend after our next annual general meeting.

For the future, it is hoped to pay one interim dividend and a final dividend following each annual general meeting. During the current financial year it has been decided to pay two interim dividends in order to avoid any inconvenience which might be occasioned to stockholders were they not to receive any income from their holdings until April, 1938.

Our present rate of sales is most encouraging, and we look forward to maintaining these high levels throughout the winter. On the other hand, it should be borne in mind from the profit aspect that the cost of both labour and raw materials has shown and continues to show a rising tendency.

Overseas Markets:—Despite the unfavourable condition of world affairs, our foreign and colonial sales are on the whole being steadily maintained. The universal distribution of Horlicks and its proved beneficial effects tend to strengthen its hold and popularity from year to year.

The report and accounts were unanimously adopted.

UNITED DAIRIES LIMITED

RECORD PROFIT

The twenty-second ordinary general meeting of United Dairies, Limited, was held, on the 29th ultimo, at the Connaught Rooms, London.

Mr Joseph H. Maggs (Chairman and managing director), in the course of his speech, said: The net profit is £630,431, and the total available is £722,312, out of which the full dividends on the preference and an interim dividend of 5 per cent. on the ordinary stock have been paid. It is now proposed to pay a final dividend on the ordinary stock of 7½ per cent., making 12½ per cent. for the year, to transfer £124,000 to reserve, bringing that fund up to the round figure of £1,000,000, and to add £10,000 to our reserve against outside investments. The final balance, being the net profit for the year, is £630,431, an increase of £25,584 and the highest figure yet recorded by United Dairies. In order to earn this we increased our turnover by £1,000,000. Our milk purchases, thanks to the new businesses acquired, increased by three million gallons.

MILK DISTRIBUTION

As regards our milk distribution side, the retail company is serving more customers than ever; there is, however, one disquieting feature of our retail milk sales. Although milk consumption has increased substantially, the quantity delivered per customer has consistently fallen, as will be appreciated when I tell you that ten years ago our average delivery per customer was 1.680 pints per day, it has fallen to 1.443 pints in 1936-37. The effect on the cost of distribution is, of course, adverse to us in two ways: it means a lower gallonage per roundsman and more bottles per gallon of milk, due to the increased demand for half pints.

The reputation which the engineering section of our company has established has, during the year, been satisfactorily reflected in the number of important contracts awarded to us in the face of the keenest competition, both at home and abroad.

All the products marketed by your company are subjected at all stages to an increasingly rigorous scientific control. This control is carried out by the chain of country laboratories and by the Central Research Laboratory at Shepherd's Bush, which continue to work smoothly and to give valuable service to the company, with the guidance of our Research Advisory Council. On the research side our activities have been devoted, not only to solving immediate problems which have arisen in our business, but also to accumulating a sound body of information which, sooner or later, will undoubtedly be of value to us.

GOVERNMENT'S MILK POLICY

The Government's announcement of its Milk Policy in a recently issued White Paper is, necessarily, on broad lines, and until the Bill is in print it would be premature to express a definite opinion on all its proposals. I may say, though, that we welcome the policy of encouraging the production of milk of higher standard of purity.

Producers of tuberculin-tested milk have now been brought into the Milk Marketing Scheme, and I am rather doubtful whether the premium of 1d. per gallon over the price of accredited milk will be sufficient to prevent these producers from reverting to the production of lower grade milk if they are unable to find buyers at an enhanced price, that is, as tuberculin-tested milk.

We are, of course, glad to see the principle of compulsory pasteurisation endorsed by the Government, and sincerely hope that the legislation dealing with this will prove to be on bolder lines than foreshadowed by the White Paper. Surely on such a vital matter there can be no excuse for making pasteurisation a question of local option.

The position which may arise in London with its multitude of local authorities acting independently has only to be visualised to reveal the absurdity of such a proposition. Again, if the Government believe pasteurisation to be desirable, why delay two years before enforcement? Twelve months would seem to be ample notice. The White Paper announces the Government's intention to include in its legislation "provision to facilitate the improved organisation of the distributive service." I do not know what is intended, but I can assure the Government of United Dairies' sympathetic co-operation in achieving its declared purpose.

The steps already taken by the Government for the improvement of our grassland, and for investigation of cattle diseases, mark a forward and cumulative advance in farming economy. Much of our grassland to-day is impoverished and under-cultivated whilst the shortness of the useful life of our dairy cattle is a reproach to our farm management. These measures, if effective, should make for increased production of milk and at a lower cost.

The report was adopted.

NOURSE MINES LIMITED

FUTURE CAPITAL EXPENDITURE

MR R. S. G. STOKES ON THE YEAR'S RESULTS

The annual general meeting of Nourse Mines Limited was held, on the 29th ultimo, in Johannesburg.

Mr R. S. G. Stokes (the chairman), in moving the adoption of the report and accounts, referred to the provision for taxation, which at £75,634, equal to 26 per cent. of the working profits, showed a gratifying reduction compared with the heavy amounts paid annually during the previous four years.

Some increase in taxation might be expected for the current year, resulting from adjustment of the factors upon which the amortisation allowance was based.

During the current financial year capital expenditure would be comparatively heavy on account of the installation of a more powerful hoist at No. 2 A Incline Shaft, completion of hoisting and pumping equipment at No. 3 C Shaft, and cutting and equipping of two engine chambers to serve the new No. 3 D Incline Shaft being sunk south of Goch Dyke.

CAPITAL CHARGES

The rate of capital expenditure would be influenced in some measure by the availability of native labour, but it could be assumed that capital charges for the current year would exceed £55,000. In the following year, when the work should be practically completed, capital expenditure was likely to approximate £40,000.

The scheme involved providing for permanent service of an important area of over 200 claims, representing a practically independent deep level section which was cut off by dykes some 350 ft. in thickness from the workings to the north.

When those major expenditures had been completed it was estimated that future capital requirements would be of a moderate amount.

The question of financing part of the unusually heavy expenditures of the next two years by disposal of a number of ex-enemy shares, of which the company held 44,157, had been receiving the consideration of the board.

FEATURES OF OPERATING RESULTS

Outstanding features of the year's operating results had been an increase in the tonnage milled, a decline in the yield per ton, and working profits—balanced by the reduction in taxation—and the maintenance of ore reserves at over 4,000,000 tons, in spite of the considerably smaller development of footage accomplished.

The current milling rate, which had been 242,000 tons for the quarter ended September 30, 1937, was below the standard for the past year on account of the shortage of native labour and a small change in recent practice at the treatment plant. The effects of the lower mill tonnage had been partly offset by an improvement in the percentage of gold recovery.

The yield per ton had fluctuated during the year from 4.2 pennyweights to four pennyweights, and was now standing at about 4.1 pennyweights. Very large tonnages of profitable ore were being drawn from outside the ore reserves. Outside stopping sources and development faces had contributed 51 per cent. of the tonnage mined.

ORE RESERVES

Referring to a small decrease of 131,300 tons in the available ore reserves, the Chairman said it was particularly gratifying that the ore reserve had been practically maintained, in view of the retardation of development on the reef consequent upon the heavy work and delay involved in the establishment of an additional incline shaft system to the south of Goch Dyke.

Results of development to date south of the Dyke encouraged hope that large new ore reserve tonnages would be created during the current year. Development on the reef to the end of September in the new area and south of Goch Dyke could be summarised as follows:—

Main Reef Leader:—
Footage on Reef, 1,735; Footage Payable, 405; Percentage Payable, 23.3; Inch Pennyweights, 183.

South Reef:—
Footage on Reef, 4,870; Footage Payable, 3,495; Percentage Payable, 71.8; Inch Pennyweights, 362.

The Chairman added:—These results are more favourable than were anticipated, and a falling off in percentage of payability is to be expected. Prospects are, however, satisfactory. It may be estimated that under present industrial conditions a greater part

of the South Reef in the south-eastern claims will be profitably mined, and that the less promising Main Reef Leader will also contribute substantially to the mining resources of the area.

The report and accounts were adopted unanimously.

NEW MODDERFONTEIN GOLD MINING COMPANY, LIMITED

HEAVY BURDEN OF TAXATION

MR R. S. G. STOKES ON THE COMPANY'S FUTURE

The annual general meeting of the New Modderfontein Gold Mining Company, Limited, was held, on the 29th ultimo, in Johannesburg.

Mr R. S. G. Stokes (the chairman), in moving the adoption of the report and accounts, referred to the dividend distributions, which, at 35 per cent. and 30 per cent. for the two half-years, compared unfavourably with the previous year's distributions.

The Chairman continued:—The rapid decline in the rate of distribution was very largely attributable to the incidence of the new system of mining taxation, which came into force as from January 1, 1936. Some further reduction in dividends year by year must be expected as a result of the falling grade of ore mined, but, assuming the maintenance of present industrial conditions, the decline should henceforth be moderate.

Provision for taxation at £668,494 represents an unduly heavy charge of 41.1 per cent. of working profits. I regret that there appears to be no early prospect of any alleviation of this excessive burden. It is pointed out in defence of the present system that the rate of taxation falls helpfully with the ratio of profits to income.

In spite of the steadily declining grade of the company taxation is unlikely for some years to fall below 37 per cent. of the working profit, unless the scale is modified in response to an insistent demand for a liberal and far-seeing policy of mine taxation.

RATE OF PRODUCTION

Production had reached the maximum economic rate at which it should be maintained unless the present shortage of native labour became more acute. The fall in yield of 0.42 pennyweight per ton compared with a fall of 0.49 pennyweight in the previous year. The rate of decline in the yield per ton should now be gradually retarded, although the value of ore yet to be developed upon the Upper Reefs was unlikely to average more than 2.75 pennyweights per ton. Such ore was, however, substantially profitable.

Expectation of further large tonnages of ore from those low-grade sources had been responsible for the maintenance during the past year of a high rate of development. The company's development footage would now show a declining tendency. It was probable that the total advance for the current year would approximate 50,000 feet, but part of that decline would be attributable to the current shortage of native labour. The final results of development and exploration upon the South Reef and the Upper Leaders could not be closely estimated.

Those ore bodies did not possess regular features characteristic of the Main Reef Leader, upon which all primary development was nearly finished. Owing to the general impoverishment of the overlying reefs in the easterly direction, only the western portion of the property could be considered worthy of further systematic development, and in the case of the South Reef and the Leaders A 3 to 7, payable area was likely to be restricted to the north-west corner of the mine.

ORE MINED FROM ORE RESERVES

Commenting upon the higher percentage of ore mined from ore reserves, the chairman said that the increase in working costs for the year had necessitated the exclusion from profitable mining of certain low-grade sources of ore supply outside the reserves. A further increase in the percentage drawn from ore reserves was now to be expected in all circumstances. There had been a further steady increase in the proportion of ore drawn from the South Reef and Upper Leaders.

A heavy increase of 10d. per ton milled in the working costs reflected a combination of adverse factors, some due to temporary circumstances and others to permanent changes in working conditions. Unusually heavy expenditures had to be incurred in the maintenance and repairs of incline shafts.

Stopping, shovelling and tramming costs had been higher, owing partly to increased tramming distances and partly to a large

percentage of waste rock sorted and packed underground in the Upper Leader stopes.

Further increases due to underground conditions were not anticipated so long as the two mills were working at full capacity, and it was hoped that working costs would average about 15s. per ton milled for the current year.

MANAGEMENT'S POLICY

The decline in the available ore reserve, at 299,700 tons, had been substantially less than the fall in the total reserve, owing to the transfer of ore previously classified as "unavailable" to "available" tonnage with the commencement of stoping in No. 1 Circular Shaft Pillar. In accordance with sound, accepted principles the management was aiming to stope out the Main Reef Leader Round Shaft slowly and systematically over a period of three to four years, rather than leave the ground intact for a more hurried recovery at the end of the life of the mine. In the light of the experience now being gained at No. 1 Circular Shaft, preparations would be made for similar extraction of No. 2 Circular Shaft Pillar over a number of years.

The Chairman added:— Under the industrial conditions of to-day the company should be able to continue payment of substantial dividends at a slowly declining rate for several years to come. The stage has not yet been reached when it may be possible to give shareholders an estimate of the probable life of the mine with an adequate assurance of its fulfilment. Both in the general industrial position and in the progress of operations upon the mine itself too many factors of uncertainty remain.

The report and accounts were adopted unanimously.

CONSOLIDATED AFRICAN SELECTION TRUST LIMITED

RECORD PROFIT

The thirteenth annual general meeting of this company was held, on the 3rd instant, in London.

Mr A. Chester Beatty (chairman of the company), in the course of his speech, said: The profit and loss account shows a net profit of £582,406, comparing with £335,953 for the previous year. This expansion was due mainly to the increased revenue received from our subsidiary company, Sierra Leone Selection Trust Limited. We also received a larger dividend on our holding of shares in Cape Coast Exploration Limited.

The investments in the balance sheet stand at about £224,000, and have a value largely in excess of that amount. We feel that the time has come when the book figures for certain of our large shareholdings should be increased to amounts less out of alignment with their values. We propose that the surpluses arising from the appreciation in value of these capital assets should be credited to the general reserve, and that out of that reserve such sum be capitalised as will permit the issue to shareholders of three fully-paid shares of 5s. each for each share held. In this way the nominal amount of the issued ordinary capital would be increased from the present figure of £377,029 to about £1,508,000.

Operations at our mines on the Gold Coast have continued satisfactorily. The recent addition of four units of plant permits greater flexibility in the rate of output. I am glad to say that the volume of developed reserves on the Gold Coast has been more than maintained.

In Sierra Leone two further units of plant are to be erected. In the past year the production of diamonds from Sierra Leone increased substantially, and the product found a ready market.

In regard to the diamond market, sales of uncut goods continued to increase. The relative strength of the diamond market gives grounds for confidence.

As to the general position and outlook for our company we are gratified at being able to report by far the largest profit which the company has hitherto made. The business is now financially stronger than at any time in its history.

The report and accounts were unanimously adopted and the proposed final dividend of 2s. 9d. per share was approved.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to:—

PAHANG CONSOLIDATED COMPANY, LIMITED

RESTRICTION AGREEMENT UNFAIR TO MALAYA

The thirty-first ordinary general meeting of the Pahang Consolidated Company, Limited, was held, on the 2nd instant, at Winchester House, London.

Mr D. J. Ward, the Chairman of the company, in the course of his speech, said: The mine's profit for the year amounted to £212,731. The credit balance on profit and loss account is £232,510. We propose to pay the balance dividend on the preference shares and 30 per cent. on the ordinary shares, making 50 per cent. for the year and an extra 8 per cent. on the preference shares, to which they are entitled under the articles of association, leaving £12,287 to be carried forward.

During the last two years, owing to the incidence of the Buffer Pool, we have paid an extra interim dividend in January or in March. The board now intend to revert to the former practice of paying one interim dividend only about June if profits permit.

The Chairman, referring to the working of the new Tin Restriction Agreement, after pointing out that the first nine months disclosed a deficiency in the production of the other signatory countries of 36,443 tons, continued: Malaya, on the contrary, has over-exported 157 tons. So that the past nine months' working of this agreement has meant restriction for Malaya alone, and should the proposed 25 per cent. cut take effect in January, 1938, Malaya will be the only country, with one possible exception, and that in a very minor degree, to bear its full force. It should be remembered that countries which have failed to produce their permissible export at December 31, 1937, can carry forward 8½ per cent. of their permissible export.

Under this Restriction Agreement we have the spectacle of most countries striving their utmost and failing to obtain their permissible export allowance; whereas Malaya has 22 dredges lying idle: some of these dredges are, however, obsolete. The position will probably right itself in time as regards some, but not all, countries, but at the moment Malaya is unfairly treated. The unfortunate omission in arriving at the basic figure for the standard tonnage of 1929 as set forth in the first Restriction Agreement was not corrected in the second Agreement and individual mines in Malaya are still only allowed to produce about 73 per cent. of the international allowance, so that Malaya is now on a quota of 80 per cent., which will be reduced to about 62 per cent. if this 25 per cent. cut comes into force. Tin at £210 per ton and a 62 per cent. release is the same from a revenue point of view as tin at £163 per ton with an 80 per cent. release, a difference of £47 in the price.

It would, therefore, be fairer to allow the present rate of release to continue so that the price would act as a restriction agent and be borne by all countries instead of the proposed cut, which would practically throw the whole burden, in the initial stages, on Malaya. Voting-power of signatory countries of the Restriction Agreement has some relation to the standard tonnages allotted; but apparently a country still retains its full voting-power when unable to produce its quota. It is argued in responsible quarters that Malaya is not being unduly penalised as the short production by others has resulted in an increased international allowance. This line of argument simply exposes the weakness of the agreement and becomes very thin if the 25 per cent. cut, in prospect, as a temporary measure until consumption became normal. It may be still a temporary measure, but it is with us till 1941, and as regards Malaya's position with other countries, and, secondly, as regards the potentialities of the individual mines in Malaya.

The report and accounts were unanimously adopted.

MOODYS

MANUAL SERVICE

Each of these five yearly manuals covers a separate field, viz.: Governments, Banks and Finance, Railroads, Industrials, Public Utilities.

The Governments and Railroads have a complete world-wide coverage, and the other three sections include all American and the leading Continental companies. All Manuals are kept up-to-date by twice-weekly supplements, sent to the subscriber direct, on the fast boats from New York. Any of the five sections can be subscribed to individually.

JANTAR NIGERIA COMPANY, LIMITED

RECORD RESULTS

The annual general meeting of this company was held, on the 4th instant, in London.

Mr Percy Tarbutt (the chairman) said that the net profit for the year was £91,650 and they recommended a final dividend of 50 per cent., making 65 per cent. for the year. The results for the year were again a record in the history of the company as regarded output, profit and dividends. Their production was 560 tons.

Apart from the known reserves of tin, there were some 2,164 tons of low-grade tin concentrates on their Kuru III property, which, subject to the continuation of their contract, would be won in the course of Columbite production, and should be included in the reserves. The reserves of low-grade tin concentrates on that area alone would last ten years. On Kuru I the reserves would last for approximately ten years also.

For the past two years they had concentrated their efforts on close drilling Kuru III in order to ascertain what Columbite reserves were available. They had proved to date 6,394 tons, which, on the basis of the tonnage extracted during the past year, would last for fifteen years. For the previous ten years, during which time a total of 1,450 tons of tin was extracted from reserves, the total reserves at the end of that time was reduced by only three tons.

With regard to Columbite, the American buyers had duly exercised their right to renew the company's contract on May 1st on the basis of 30 tons per month at a price which gave the company £130 per ton for its concentrates. With the area they had proved of a comparatively low-grade product, it was essential for the company to mine and ship regular quantities each month to ensure a reasonable profit, and shareholders would readily see that without their contract it would not be an economic proposition to work the property trusting to intermittent shipments and sales of odd lots even at higher prices. They must also bear in mind that in mining their Columbite concentrates they obtained a certain amount of tin, which would not otherwise be payable.

The report was unanimously adopted and a vote of thanks was accorded to the chairman, directors and staff.

BUENOS AYRES WESTERN RAILWAY, LIMITED

DIFFICULT CONDITIONS

The forty-eighth ordinary general meeting of the Buenos Ayres Western Railway, Limited, was held, on the 3rd instant, at River Plate House, London. Sir Follett Holt, K.B.E., M.Inst.C.E. (the chairman), presiding.

The Chairman, in moving the adoption of the report and accounts, said that there was a distinct improvement in the results of working the railway as compared with the previous two years, but it was much to be regretted that the preference charges could not be met in full, and that no dividend was possible on the ordinary stock. In fact, no less than 57 per cent., representing £18,000,000 of the capital of the company, remained without any remuneration.

Argentina was now enjoying an era of prosperity, and it was a hardship that in the past year the company had received such a small share of that prosperity. In his view that was also undesirable in the Republic's best interests. Great Britain had backed that country from the first and throughout its history with money and skilled men, and still remained by far the best customer for its produce, and he submitted that such friends and such customers were deserving of the fullest encouragement and consideration.

Over an average of years the railways could not serve the country efficiently under the present position of tariffs and exchange. They knew that immense sums were required to keep a great railway going, and what a bad day it would be for Argentina, dependent as she was on transport, if the railways fell into decay.

This company's total requirements of fuel oil for burning in their steam locomotives last year were 45,000 tons, and the whole of that amount had been covered by their share of the production of the Comodoro Rivadavia oilfield. In regard to competition by the neighbouring railways and the roads, the Provincial Government were alive to the unfairness of running the Provincial State Railway at a loss, and negotiations to end that were progressing. Railway action to meet road competition was now a clear-cut proposition.

The report was unanimously adopted.

BIRMINGHAM SMALL ARMS COMPANY, LIMITED

INCREASED TURNOVER AND PROFIT

The ordinary general meeting of the Birmingham Small Arms Company, Limited, was held, on the 2nd instant, at Birmingham.

Sir Alexander Roger (the chairman), in the course of his speech, said that the profit amounted to £555,594, compared with £315,234 for the last year and £152,712 for the previous year. The turnover of the group showed an increase of 22 per cent. over last year, which itself was the highest of recent years. The directors recommended the payment of the dividend on the "A" cumulative preference stock for the half-year to July 1st and the payment of six years' dividend on the "B" cumulative preference stock, wiping out all arrears.

The progress of reorganisation of their motor car and bus manufacture had steadily continued. Their Daimler and Lanchester cars continued to enhance their reputation and their sales testified to that. In the motor show which had just closed their new range of cars had met with high approval and the sales resulting had been most satisfactory. There had been a steady demand for the Daimler bus chassis, and orders had increased by 34 per cent. The design of the new Daimler trolley-bus had also proved very successful. Orders for cars and bus chassis for export had increased by 84 per cent. The company maintained its outstanding position in the motor-cycle industry and sales had increased by 16 per cent. The trade and public continued to recognise that B.S.A. cycles were of the highest quality and reliability. Orders and sales in the "tool group" were more than doubled and the order books continued in a healthy condition, whilst the steel side of the group had been extraordinarily busy, achieving an increase in turnover of approximately 33 per cent.

Last year he had been rash enough to make the statement that the board felt with confidence that the company had turned the corner. That turned out to have been justified. In spite of fluctuations and increases in cost of raw materials and rise in wages they had been able to make more profit than for many years and, unless any major political disturbances appeared on the horizon they felt that the prospects for the coming year were good.

The report was unanimously adopted.

SINGAPORE PARA RUBBER ESTATES, LIMITED

DIVIDEND OF 10 PER CENT.

The twenty-eighth ordinary general meeting of this company was held, on the 4th instant, in London.

Mr R. V. Bannon (the chairman), who presided, said that it was satisfactory to report a substantial improvement in the profits which, for the past year, showed a total of £14,702, as compared with £8,059 for the previous period. They recommended the payment of a dividend of 10 per cent., less income tax, leaving the sum of £5,129 to be carried forward.

In addition to the 67 acres now being replanted there were approximately 450 acres suitable for replanting. Their policy would be gradually to replant that area, and for that purpose they had offered to shareholders 313,334 shares of the unissued capital at par. Up to the present 209,309 shares had been applied for, and the balance would be dealt with by the directors as circumstances dictated. When the balance of those shares was issued, the company's total issued capital would stand at £135,000.

Allowing for a reduction of, say, 10 per cent. in the exportable percentage as from January 1st next, their exportable crop for the current year would be in the neighbourhood of 1,120,000 lbs. Results, of course, would depend upon the price of rubber, which, in common with all other commodities, had suffered a sharp setback during the last two months. They all wanted to see a clearer political outlook and more stable conditions in America, and if those two conditions obtained, he saw no reason why the price of their product should not recover from recent slump influences.

The report and accounts were unanimously adopted.

GOLD MARKET

Messrs Samuel Montagu and Company write on November 3, 1937:—The Bank of England gold reserve against notes amounted to £326,406,625 on October 27th, showing no change as compared with October 20th.

In the open market about £2,500,000 of bar gold was available at the daily fixing during the week. Although offerings were fairly substantial, they were readily absorbed by Continental demand sufficiently strong to cause prices to rule at a good premium over dollar parity, ranging from 3½d. at the beginning of the week to 6½d. on November 3rd. The s.s. "Viceroy of India" which sailed from Bombay on October 30th, carries gold to the value of about £210,000. The Southern Rhodesian gold output for September, 1937, amounted to 68,781 fine ounces, as compared with 69,460 fine ounces for August, 1937, and 67,040 fine ounces for September, 1936.

SILVER MARKET

A quietly steady tone has been maintained during the past week, during which the cash quotation varied only between 19½d. and 19½d., whilst that for two months remained unchanged at 19½d.

Sales were made on Continental and also on China account, and the Indian Bazaars and speculators both bought and sold.

In the absence of buying for shipment to India and with prices ruling slightly too high to attract American buying, silver for prompt delivery has not been in demand, and as a result prices were quoted level on three days of the week.

The figures given below show a large import of £3,078,000 in silver coin from Hongkong, and this is the first shipment to arrive of the Chinese Government-owned silver which is being sent to London for safe custody.

Quotations for gold and silver are shown below:—

1937	Price of Gold per Fine Ounce	Equivalent Value of £ sterling	Price of Bar Silver in London per ounce standard		Price of Silver New York per ounce .999 fine
			Cash	Two Months	
Oct. 28	s. d.	s. d.	d.	d.	1937 Cents

* Free of income tax. (a) Paid on larger capital. (c) Third interim dividend making total to date 15 per cent.

ARGENTINE GREAT WESTERN RAILWAY.—The company is paying a half-year's interest on the 5 per cent. debenture stock, which will bring payment up to April 1, 1934.

AUSTRALIAN MERCANTILE LAND AND FINANCE.—Ordinary dividend 5 per cent., also bonus of 1 per cent., against 4 per cent. without bonus.

BRITISH INDUSTRIES FIXED TRUSTS—THIRD PORTFOLIO.—Income distribution 5½d., tax free, against 5d., tax free, a year ago.

MISCELLANEOUS

BRITISH OXYGEN COMPANY.—Interim ordinary dividend again 7 per cent., but payable on larger capital. In making this declaration, the directors desire to state that the results for the year to date are again a record and would justify them in increasing the interim distribution, but they have decided to hold over the question of increased distribution or capital bonus until the final results for the year are available.

CHRYSLER CORPORATION.—A dividend of \$3 is announced, making a total of \$12 (the amount for the whole of 1936). For the first nine months the total was \$40,424,000 (\$9-29 per share), against \$41,975,000 (\$9-63 per share in 1936).

CHURCHILL MACHINE TOOL.—Interim ordinary dividend 20, against 12 per cent., payable on a capital of £197,820, compared with £65,040.

ENFIELD CYCLE.—Ordinary dividend raised from 7½ to 8½ per cent.

ENO PROPRIETARIES.—Interim ordinary dividend 4, against 5 per cent.

GENERAL MOTORS.—Quarterly dividend of \$1-50 per common share, the same as for December quarter last year. The total distribution for 1937 is \$3-75, compared with \$4-50 for 1936.

GILLETTE SAFETY RAZOR.—For the third quarter net profit was \$1,339,000 (48 cents per share), compared with \$1,187,000 (40 cents) for the third quarter of last year.

INTERNATIONAL NICKEL.—Dividend 75c. for fourth quarter, including an extra of 25c. A year ago the dividend was 40c. Total distribution for 1937 is \$2-25. Last year's total was \$1-30.

JOSHUA HOYLE, LTD.—Trading profits year to September 30, 1937, £164,541, against £73,855. Ordinary dividend 2½ per cent., the first since 1929.

LONDON COUNTY FREEHOLD AND LEASEHOLD PROPERTIES.—Second interim dividend 2 per cent. on ordinary stock. The comparable revenue balance for half-year to September 30, 1937, exceeds the figure for corresponding half-year.

NATIONAL FIXED TRUST.—Eleventh income distribution upon unit "A," for period April 16th to October 15th, will be paid at rate of 9-45275d. net per sub-unit. For same period last year, payment was at rate of 9-45275d. net per sub-unit.

SMETHWICK DROP FORGINGS.—Interim ordinary dividend raised from 8 to 12½ per cent.

TRINIDAD LEASEHOLDS, LTD.—Final ordinary dividend 20 per cent., making a record payment of 30 per cent. for the year to June 30, 1937, paid on £327,890 more capital. This compares with a final dividend of 17½ per cent., making 25 per cent. for year.

UNION CINEMAS, LTD.—First accounts for period ended March 31, 1937, will be issued to shareholders shortly, with interim accounts (including a consolidated balance sheet) as at September 30, 1937. At a meeting of the new board it was decided that the quarterly dividend on the preference shares due on December 31 will not be paid.

YORKSHIRE AMALGAMATED COLLIERIES.—Tax free, interim ordinary dividend 2, against 1½ per cent.

TRUST OF RUBBER AND TIN SHARES.—An initial distribution of 1d. net per unit for the period June 24, 1937, to October 4, 1937, is payable on November 15th.

ROYAL BANK OF SCOTLAND.—Dividend maintained at 17 per cent. per annum making 16, against 14 per cent.

TOWN INVESTMENTS.—Final dividend 9 per cent. cash and 2 per cent. scrip, making 16, against 14 per cent.

J. LYONS AND COMPANY.—Interim unchanged at 8½ per cent.

ENGLISH, SCOTTISH AND AUSTRALIAN BANK.—Final 3½ per cent., making 7 per cent., less tax, against 5 per cent., tax free.

SHORTER COMPANY COMMENTS

COMPANY RESULTS OF THE WEEK.—This week the heavy industries are represented by only one company, SAMUEL OSBORN AND COMPANY, the Sheffield steel makers. Improving conditions are reflected in a rise from £39,764 to £60,153 in net profits. Owing to the reflected in a rise from £39,764 to £60,153 in net profits. Owing to the heavy debit balance brought in, PARNALL AIRCRAFT are still unable to pay a dividend, although a satisfactory profit of £26,782 compares with a loss of £48,848. The balance sheet includes a suspense account of £20,000 in respect of an interim payment by the Air Ministry for patents assigned. VIKING TANKER have issued the first accounts covering a full year since formation as a public company. Net profits are £125,533, against £2,634 for the initial 25-week period, but owing to an accounting change, this sum includes roughly £10,000, which is properly attributable to the previous period. The paint manufacturers LEWIS BERGER AND SONS have increased their profit by £10,000 to £157,057. In view of exchange and labour difficulties in France, a special reserve is set up by the provision of £50,000. The 16 per cent dividend is unchanged, but in the previous year surplus profits were added to the carry-forward. The first accounts issued by DICTOGRAPH TELEPHONES as a public company show net profits (before £12,755 provision for taxation) of £27,059, which exceeds the comparable figure of £25,012 indicated in the offer for sale. MARLEY TILE (HOLDING) COMPANY, who report the satisfactory maintenance of sales but increasing costs, have earned slightly lower profits of £75,375. Earnings for the ordinary shares are unchanged at 15½ per cent., though the dividend is increased by 1 per cent. to 8½ per cent., and reserve provision reduced from £30,000 to £25,000. PRICES TRUST has paid a 45 per cent. dividend, against 30 per cent., owing mainly to a substantial increase (from £446,470 to £521,788) in the trading profits of PRICES, TAILORS, LTD. Apart from paying £192,000, against £162,000, in dividend to the Trust, depreciation provision is £11,500 higher, and £10,000 is placed to a special reserve. Higher costs of cloth have been met by increased sales. A number of investment trust reports have recently been published, showing for the most part satisfactory improvement. SCOTTISH NATIONAL, SECOND SCOTTISH INVESTMENT, and SOUTHERN STOCK-HOLDERS have, for instance, raised their dividends besides setting aside substantial sums to reserves or writing down investments. Two of the larger rubber companies issuing reports this week, LEDANG BAHRU and TANJONG MALIM, show that latest profits are more than double those for 1935-36. In each case higher dividends are payable.

APPOINTMENTS AND PERSONAL

Mr Arthur Bevington Gillett has been elected a vice-chairman of the board of Barclays Bank (Dominion, Colonial and Overseas).

Mr W. P. W. Ker has been appointed a director of the Alliance Assurance Company.

Sir Herbert Walker, K.C.B., and Mr. Charles F. Whigham have joined the board of the United Steel Companies, Ltd.

The Right Hon. Viscount Runciman has joined the board of David MacBrayne, Ltd., and MacBrayne's Trust, Ltd.

Mr Duncan A. Stirling has been appointed deputy chairman of The British Overseas Bank in succession to the Right Hon. Lord Aberconway.

Mr A. Levine has been elected a member of the council of foreign bond-holders in place of the late Sir Arthur Worley.

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

THE steadier tendency of commodity prices was short-lived, for during the past week quotations for many important primary products were again marked down sharply. Nor are there any indications of a resumption of forward buying on a large scale in the near future.

Copper, lead, spelter and tin all declined in price during the past week in the absence of an improvement in demand. Domestic sales of copper in the United States, for example, declined from 28,935 short tons in September to 22,889 tons in October. The unexpected decline in "visible supplies" of tin during the past month failed to stem the downward trend of prices. Rubber quotations failed to recover in view of the reduction of output by American tyre manufacturers.

The majority of textile raw materials are lower on the week. Cotton was marked down in anticipation of a further increase in the official estimate of America's crop to be issued on Monday. Wool prices were barely steady, and quotations for flax and jute were lower. The market in linseed and linseed oil was easier on the increase in the Argentine Government's estimate of the area sown this year.

The market in tea was irregular, and wheat prices were reduced on heavier Russian shipments, North American

selling pressure and an increase in the official estimate of the area sown to the "golden grain" in Argentina. Meat prices were steady, but bacon was cheaper. Butter prices continued influences.

Quotations for primary products in the United States also registered a sharp decline. Moody's index of the prices of staple commodities (December 31, 1931 = 100) fell from 160.2 to 156.9 during the week ended last Wednesday. A month ago the index stood at 185.8 and a year earlier at 181.3.

COAL

SHEFFIELD.—On the export market inquiries for new business are scarce, but contracts are responsible for a fair tonnage of coal being dealt with. There is still no improvement in bunker coal business, and orders coal is increasing and enquiries for gas coal are good. The call for household steam coal is insistent. Coke requirements are being met with difficulty, and blast-furnace qualities are all taken up under contract. Small coal that there will be a rise in prices before the end of the winter.

NEWCASTLE-ON-TYNE.—The North-East screened steam coal market remains weak; coastwise shipments are less than a year ago. Fortunately, there are two substantial inquiries for delivery over the early part of next year: one from the Norwegian Railways for 100,000 tons

SUMMARY OF COMPANY PROFIT AND LOSS ACCOUNTS

Company	Year Ending	Balance from Last Account	Net Profit After Payment of Deben-ture Interest	Amount Available for Distribution	Appropriation					Corresponding Period Last Year

and another from the Swedish for about 300,000 tons, of which no doubt a good share will come to this district. In other respects the market is very steady. Durham manufacturing coal is in good demand, and gas collieries are now experiencing their seasonal activity. The coke market displays no weakness despite the fact there is so little enquiry from abroad, but on the other hand home trade is just as active.

GLASGOW.—Conditions in the Scottish coal trade generally have undergone little change. The market trend remains easy, particularly as regard prompt or early orders, for which fairly sharp concessions have been made in various directions. The mild weather, both at home and on the Continent, is apparently a main contributing factor for the present dullness. Consumers' stocks remain heavy, and are not being reduced at the rate usually experienced at this season of the year. The slowing-down of foreign enquiry is particularly disappointing, although it remains to be seen whether or not this will prove to be a temporary phase. In the meantime, the majority of the collieries are working steadily on contracts booked some time ago, but practically all classes are now quoted on easier terms for prompt business.

CARDIFF.—Comparatively quiet conditions continue on the Cardiff coal market. The collieries are fairly regularly employed under their contract commitments, but they are feeling the dearth of new orders and stocks of large coals are accumulating, although they have not yet reached anything like last year's dimensions. The approved prices are governed by day-to-day conditions, and while for some of the large classes quotations are slightly easier, those for smalls, and particularly for washed and sized steam and dry grades, are very firm. The volume of trade is being well maintained. Shipments in the foreign and coastwise trades at the South Wales ports last week totalled 440,600 tons, compared with 442,000 tons the previous week and 332,033 tons in the corresponding period last year. The increase of shipments over 1936 for the ten months ended October amounts to nearly 3½ million tons.

IRON AND STEEL

LONDON.—The weekly report of the London Iron and Steel Exchange indicates that activity in the iron and steel industry remains at a high level and that producers are taking advantage of the lull in new business to reduce the heavy accumulation of orders on their books. It is evident, however, that most of the steelworks will carry over the end of the year a very large tonnage of work for delivery in 1938. Consumers of pig iron are more comfortably situated than for a long time, although there is still a scarcity of certain brands and after existing contracts have been satisfied there is not a large surplus for new sales. The steelmakers are receiving sufficient hematite and basic iron to fill their current needs and appear to be less nervous regarding the future. Foreign iron is offered at comparatively cheap rates; but without attracting much business. Although tight conditions continue to rule in the semi-finished steel department, supplies are showing a tendency to expand. Increased imports are expected over the next few months, whilst production is being pressed to the utmost at the British works.

The demand for practically all descriptions of finished steel material is unrelaxed and although the makers are not anxious to add to their commitments a certain amount of business has been accepted for delivery over the first half of next year. Export business remains quiet but the British works have considerable tonnages to deliver against existing contracts.
