SHEFFIELD.—Conditions in the iron and steel market continue very active, and are likely to remain so until the end of the year at least. Consumers of pig iron view the outlook with less anxiety, for although there is not much forge or foundry iron on offer, they are able to pick up occasional small parcels for early delivery. Some makers are accepting contracts over the first quarter of next year. The scarcity of basic pig is pronounced. Hematites are coming forward rather more freely, but special qualities are in very short supply. Although the Producers' Association have increased the quota for the loyalty rebate scheme which came into operation at the same time. The easing of the stringency in forge iron is placing makers of finished iron in a better position as regards the supplies, with the result that they are able to make better deliveries. The mills are operating at capacity, the demand for common and marked bars being very heavy. In spite of constantly expanding production it is impossible to keep up with the call for basic and acid steel billets. Fair quantities of imported billets are coming to hand, but they make no great impression in meeting requirements. Difficulty is still being experienced in securing full supplies of structural steel. Prices throughout the market are very firm. The recent rise in the price of high-speed steel scrap has brought out sellers, and the price has eased to about £100 per ton delivered, while turnings of this material are obtainable at around £40 per ton. Better supplies of iron scrap are becoming available, but prices are well maintained.

MIDDLESBROUGH.—Total shipments of pig iron, manufactured iron and steel from the Tees during October amounted to 45,793 tons, an increase of about 2,600 tons over the previous month. Shipments of pig iron during the month amounted to 6,548 tons, of which 1,000 tons was shipped to Scotland, 712 tons to other coastal ports, and the remaining 4,836 tons to foreign destinations, the largest receiver being Belgium, with 2,070 tons. Shipments of manufactured steel totalled 37,124 tons, of which 17,490 tons went coastwise, the remainder being for foreign destinations. The quantities forwarded to China and Japan were negligible. Recently a cargo of 5,000 tons of pig iron has arrived in the Tees from the United States for consumption in the local steelworks. Together with several smaller parcels from the Continent, these imports have eased the position for consumers in this area. East Coast hematite continues in full production and makers are able to keep home users well supplied in addition to releasing odd lots for shipment overseas.

No announcement has yet been made regarding alterations in prices of pig iron and steel, and this, to some extent is holding up forward business. It is understood that the rebate system to loyal consumers is being introduced for foundry pig iron, and will bring this quality into line with hematite and basic in this respect. Home demand for semi-finished and finished steel continues unabated with producers doing their utmost to fulfil existing contracts.

Good Durham blast furnace coke is firm at not less than 42s. per ton delivered at the furnaces. Business in foreign ore, apart from the existing contracts, is only for odd lots, the price being easier on account of freight reductions, at which fixtures have been arranged recently, Bilbao/Middlesbrough having been done at 12s., and Mediterranean rates tending downward. There is a steady demand for heavy steel scrap at official prices.

GLASGOW.—Supplies of raw materials are somewhat easier in the West of Scotland and it seems probable that before the end of the year it will be possible to increase production in several directions. Supplies of iron ore and of scrap should be greater and deliveries more regular and sheet makers and other re-rollers anticipate that deliveries of semis from the Continent will increase. Every branch of the industry here is busy, and requirements are such that makers find it impossible to accumulate stocks. There is a steady flow of new business, and the demand from manufacturers in this district is at the moment particularly heavy.

CARDIFF.—Work in the South Wales iron and steel industries continues active. The production of tinplates is being maintained at about 80 per cent. of allotted capacity. The minimum price remains unchanged at 22s. 6d., but merchants are able to obtain for current deliveries prices ruling between 24s. and 24s. 6d. per basis box. Exports of tinplates at Swansea last week totalled 7,704 tons, compared with 7,094 tons the previous week, and 6,208 tons in the corresponding week last year. Stocks in warehouses and vans have slightly increased, and at the end of last week they totalled 6,251 tons, compared with 9,381 tons a year ago. The operations of the International Cartel are to be reviewed at a meeting to be held in Paris at the end of the month. The blast and steel furnaces are still very active, and quotations for pig iron, steel ingots and bars are unchanged.

OTHER METALS

COPPER.—Copper prices continued their downward movement and the standard cash price closed on Wednesday at £41 5s. per ton, a loss of £1 3s. 9d. on the week and the lowest level for the current year. The reason for the new setback was mainly the apathy of consumers, who fear that the recent decline in the United States' copper consumption will be followed also by a setback in absorption on this side of the Atlantic. Offerings on the London Metal Exchange were not very large this week, but in view of the present lack of buying interest, the market is very vulnerable. In the United States demand continues at a very low ebb and further reductions in the domestic quotation are believed likely. The Northern Rhodesian September copper output, according to the British South Africa Company, showed a decline of 5,114 tons to 14,071 tons—the lowest monthly figure for the current year. This new reduction seems to confirm the view that some of the leading producers are already restricting their output voluntarily although general restriction will not come into force until December 1st.

Sales on the London Metal Exchange: 1,300 tons on Monday, against 2,650 tons last week; 1,900 tons on Tuesday, against 1,050 tons last week; 950 tons on Wednesday, against 1,150 tons last week. Domestic spot was quoted at 10-37½ cents per lb. in New York on Wednesday, against 10-57½ cents a week ago and 11-65 cents a month ago. Wednesday's official closing price for standard cash in London was £41 5s. to £41 7s. 6d. per ton, compared with £42 8s. 9d. to £42 11s. 3d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 7,786 tons, showed a decrease of 1,335 tons, while stocks of rough copper, at 17,368, were 800 tons larger.

LEAD AND SPELTER.—Both markets followed the general downward trend. Lead lost 13s. 9d. on the week, closing at £17 2s. 6d., while spelter declined by 10s. to £16 6s. 3d. On both markets this week's closing quotations constitute the lowest official levels for the current year. The basic position of the lead and spelter markets has not, however, changed during the week. The statistical position continues to be comparatively sound, but in the absence of new buying the chances of recovery are limited. There have been reports this week of the closing down of two Tunisian lead mines owing to the decline in prices. These are the first reports of this kind and indicate that high cost mines, which re-opened early this year when prices were high, are now faced with losses.

Sales of lead on the London Metal Exchange: 700 tons on Monday, against 1,700 tons last week; 550 tons on Tuesday, against 550 tons last week; 850 tons on Wednesday, against 350 tons last week. The New York quotation on Wednesday was 5-25 cents per lb., against 5-50 cents a week ago and 6-00 cents a month ago. Wednesday's official closing quotation in London for soft foreign for shipment during the current month was £17 2s. 6d. to £17 3s. 9d. per ton, compared with £17 16s. 3d. to £17 17s. 6d. last week.

Sales of spelter on the London Metal Exchange: 550 tons on Monday, against 2,900 tons last week; 950 tons on Tuesday, against 1,100 tons last week; 750 tons on Wednesday, against 825 tons last week. Wednesday's quotation in East St. Louis was 5-75 cents per lb., against 5-75 cents the week before and 6-25 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipment during the current month was £16 6s. 3d. to £16 7s. 6d. per ton against £16 16s. 3d. to £16 17s. 6d. last week.

TIN.—Tin has again shown the heaviest fall of all four metals on the London Metal Exchange. Both the cash and forward prices declined by £9, bringing the quotations in the official dealings on Wednesday down to £199 10s., the lowest level for 1937. This decline in tin must be regarded as particularly remarkable, as the October statistics, published on Monday, were surprisingly bullish. Instead of the expected increase in stocks of 2,500 to 3,000 tons, they showed, according to Messrs. A. Strauss and Company, Ltd., a decline of 79 tons on September 30th, thus bringing the

BANK OF LONDON & SOUTH AMERICA LIMITED

Affords a complete international banking service through its branches in

ARGENTINA, URUGUAY, PARAGUAY, CHILE, COLOMBIA, ECUADOR, GUATEMALA, NICARAGUA, PERU, SALVADOR, VENEZUELA, BRAZIL, SPAIN, PORTUGAL, FRANCE

Head Office: 6, 7 & 8 TOKENHOUSE YARD, LONDON, E.C.2

Agencies in: New York, Manchester, Bradford

total visible supply down to 20,843 tons. The decline was due to the fact that new supplies, at 12,356 tons (i.e. 1,134 tons more than in the previous month), were well below market expectations, while deliveries, at 12,362 tons (or 552 tons less than in September), were much higher than the market had dared to hope. It is now feared, however, that there will be a heavy reduction in new purchases and a substantial increase in new supplies this month, a fact which resulted in a serious depression on the tin market. This bearish interpretation of the excellent October tin statistics is a striking example for the present pessimistic sentiment of the Metal Exchange.

Sales of tin on the London Metal Exchange: 200 tons on Monday, against 725 tons last week; 350 tons on Tuesday, against 325 tons last week; 225 tons on Wednesday, against 240 tons last week. The New York quotation on Wednesday was 45.25 cents per lb., against 47.62½ cents a week ago and 54.37½ cents a month ago. Wednesday's official closing quotation in London for standard cash was £199 10s. to £200 per ton, compared with £206 to £206 10s. a week ago. Stocks of tin in London and Liverpool at the end of last week totalled 2,264 tons, a decrease of 24 tons on the week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted on Wednesday at £100 per ton, and rolling billets at £102 per ton. Nickel, for home and export, was maintained at £180 to £185 per ton. Quicksilver, on the spot, was £13 to £13 0s. 6d. per flask of 76 lbs., as against £13 3s. to £13 3s. 6d. last week. Chinese antimony was quoted at £82 to £83 per ton, ex warehouse, the same as last week. Chinese wolfram for "November-December" shipment was quoted at 95s. to 100s. per unit, c.i.f., as against 105s. to 110s. for "October-November" last week. Refined platinum was quoted on Wednesday at £9 10s. per ounce, compared with £9 10s. a week earlier.

TEXTILES

COTTON.—Manchester.—A featureless week has been experienced in trading circles. There has been a slight sagging tendency in prices for raw cotton. Spinners and manufacturers have met with a fair amount of inquiry, but business has not been of any importance. No particular development has shown itself in the raw cotton markets. On Monday next the Washington Government will publish a further estimate of the crop, and it is generally believed that the figure will be a record at about 18,000,000 bales. It remains to be seen what will be done by Congress at the special session on November 15th. There are signs, however, that the officials at Washington are somewhat undecided as to what policy should be adopted to maintain prices. It is understood, however, that the area under cultivation for next season will be about 28,000,000 acres, against 34,000,000 acres for the current season.

Yarn sales have been disappointing, the business done being less than the output of the machinery. The price agreements relating to medium American wefts and medium ring beams have been placed on a legal basis. It is significant, however, that the price for medium ring yarns has been reduced by ½d. per lb. This decision has caused much comment in the market. More complaints have been met with from spinners of fine Egyptian counts.

Although buying in the cloth market has not been at a standstill, very few manufacturers have had a satisfactory week, the sales being less than the production. A slightly improved demand has been experienced for India and some producers of light bleachers, prints and fancies have sold rather more freely, chiefly for Calcutta. The competitive position in the bazaars does not favour extensive purchases of Lancashire goods. Poplins and satens have moved off fairly well for South America, especially Argentina. Dress materials have attracted attention for the Dominions and the home trade. Taking the weaving section as a whole, there is a tendency at the moment for ground to be lost.

COTTON SPINNING PROSPECTS.—Since the beginning of this year the cotton spinning trade in Lancashire has experienced a distinct improvement. There has been an active demand for all counts and qualities of yarn, and spinners have been able to advance their prices and secure a remunerative margin of profit. During the last few weeks, however, demand has fallen off, partly owing to cloth manufacturers booking fewer orders. The strength of spinners has been partly due to the price agreements in the different sections. During the past week some important developments have taken place. For many months the Committee of ring spinners producing medium counts have made determined efforts to place the "gentleman's agreement" on a legal basis, but the owners of a few mills have refused to come into the movement. A month ago the demand for ring yarns fell off and since then most of the business has gone to the outside firms. At the end of last week there was considerable surprise in market circles when it became known that the Committee had decided to reduce the price of all medium ring yarns by ½d. per lb. It was also stated that the new list would be placed on a legal basis, as the owners of 93 per cent. of the spindles concerned had signed the necessary documents. The decision to reduce prices, however, has had a rather unsettling effect on the Manchester Royal Exchange and buyers of yarn and piece-goods have been more cautious in placing orders with producers. It must be pointed out that even at the lower figures spinners have an encouraging margin of profit, but whereas a few months ago there was a scarcity of ring beams, supplies are now more plentiful.

JUTE.—Dundee.—The feature of the jute trade has been the placing by the Government of orders for large quantities of sand bags, running into millions, for delivery by the end of March. Practically all manufacturers are participating in the business and the market has assumed a much brighter outlook during the past few days. It is not known what the exact quantity purchased was, but there seems to be every likelihood that further

supplies will be required later next year to complete the Defence Programme. These orders will form a sound basis on which manufacturers can work during the next five months and should help considerably to steady a market which has shown signs of weakness for some time past. They will prevent further curtailment of production, which was becoming a serious problem in the Dundee area. A large business has been done in jute yarns and prices generally have advanced, most notably for hessian descriptions, 2s. 2d. to 2s. 4d. for 8 lb. spools. Business has been done in fair quantity at the higher rates, and spinners on the whole have sold for delivery well into next year.

Raw jute has ruled somewhat irregular, but the price of Daisee-2/3 has not yet gone far away from £20 for the full group and £20 10s. for good at £20 10s., November-December. Good First Marks are quoted at from £23 5s. and Lightnings are obtainable at £22 to £22 10s., while Hearts are offered at from £21 5s., November-December.

Common 8 lb. cops are now lowest at 2s. 3d. and 8 lb. spools 2s. 3d., while twist is very steady at 4d. lowest for 3 ply 8 lb., and sacking yarns are dearer at from 2 ½d. to 2½d. for 24 lb. web and 3 ½d. to 3½d. for 8 lb. chains. Rove continues to be sold at from £21 5s. for 48 lb. and £17 15s. to £18 quality 8 lb. warp, 2s. 8d. for third and 2s. 6d. for fourth. Carpet yarns are well sold ahead at from 3 ½d. for 14 lb. warp.

The cloth market has not improved in sympathy with yarns, but there is more inquiry and manufacturers are steadier in their prices. For 10 oz. difficulty in obtaining more than the recent rates of 2½d. and 2½d., respectively, which are most uneconomical in view of the advance in expected that the resumption of deliveries to firms in the United States, next year. Heavy goods remain quiet.

Calcutta goods continued to fluctuate slightly in price, and show little change since the last report.

GRAIN MARKETS

WHEAT.—After last week's improvement, prices have again eased in consequence of increased selling pressure and bearish Southern Hemisphere crop reports. The area sown to wheat in Argentina is now officially estimated at 19,266,000 acres, against 15,772,000 harvested last year. Nevertheless, Broomhall suggests that the area harvested is unlikely to exceed 17,000,000 acres and that the crop will probably be less than the break in the drought, but there appears to be no disposition to estimate the yield at more than 160 million bushels.

On Wednesday last, "December" futures were quoted in Chicago at 91½ cents per bushel, against 95½ cents the week before and 106½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba (Atlantic), ex ship, 56s. 9d. per 490 lbs., against 59s. 9d. last week; No. 2 Northern Manitoba (Atlantic), ex ship, 55s. 3d., against 57s. last week. According to the *Corn Trade News*, total shipments of wheat and flour last week amounted to 1,491,000 quarters, against 1,260,000 quarters in the previous week and 1,520,000 quarters in the corresponding week a year ago.

FLOUR.—Prices are slightly lower than a week ago. Wednesday's London quotations (excluding quota payments) were: Straight run, delivered Home Counties, 40s. per 280 lbs., as against 40s. 6d. a week ago; patents, ex store, 39s. to 40s. 6d., as against 39s. 6d. to 41s. a week ago. Australian, ex store, 32s. to 33s., as against 32s. 3d. to 33s. 3d. a week ago.

BARLEY.—The market is steady, price alterations being unimportant. "December" futures were quoted at 57½ cents per bushel in Winnipeg on Wednesday, as against 62½ cents last week. Quotations per 448 lbs. in London on Wednesday were: "English feed," at farm, not quoted; "English malting" (new), at farm, 50s. to 65s., as against 50s. to 65s. a week ago; Californian, ex ship, 51s. 6d. to 55s., as against 51s. 6d. to 55s. a week ago; Chilean, brewing, ex ship, 45s. to 48s., as against 45s. to 48s. a week ago.

OATS.—On Wednesday, "December" futures were quoted at 30½ cents per bushel in Chicago, against 29½ cents a week ago and 30½ cents last month. Quotations in London, Wednesday: "English Black" (new), at farm, 27s. to 27s. 6d., per 336 lbs., as against 27s. to 28s. last week; "English White" (new), at farm, 27s. to 27s. 6d., as against 27s. to 28s. a week ago; mixed Canadian feed (Vancouver), landed, 26s. 9d. per 320 lbs., as against 26s. 9d. a week ago.

MAIZE.—Last week's advance has been well maintained, and the market has a steady appearance. "December" futures were quoted on Wednesday at 58½ cents per bushel in Chicago, against 58½ cents a week ago, and 61½ cents last month. Quotations in London, Wednesday: "Plate," landed, 30s. 6d. per 480 lbs., as against 30s. 6d. a week ago; "Plate," ex ship, 29s. 6d., as against 29s. 6d. a week ago; "October," 29s. 9d., as against 29s. 6d. a week ago; yellow maize meal, ex wharf, was quoted at £7 15s. per ton, as against £7 15s. last week.

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations for selected weeks in 1935-37:—

NEAREST FUTURE	Jan. 2, 1935	Dec. 31, 1935	Nov. 4, 1936	Dec. 30, 1936	Oct. 27, 1937	Nov. 2, 1937
Winnipeg (No. 1, Manitoba) —Cents per 60 lbs.	82½	84½	106½	129	124½	112½
Chicago (No. 2, Winter) —Cents per 60 lbs.	98½	101½	114½	135½	85½	91½

The visible supply of wheat in Canada amounts to 74,483,000 bushels, against 72,857,000 bushels last week and 86,548,000 bushels in the corresponding week last year.

SALES AND PRICES OF BRITISH CEREALS.—The following table gives the estimated sale of home-grown wheat during the harvest years 1934-35 to 1937-38.

	1934-35	1935-36	1936-37	1937-38
Estimated sales of home-grown wheat—				
1 week to October 30	Cwts. 368,019	Cwts. 453,933	Cwts. 435,655	Cwts. 404,865
9 weeks to October 30	4,383,990	4,292,733	3,431,708	3,557,639
Average price of English wheat per cwt.	s. d. 5 0	s. d. 6 1	s. d. 9 11	s. d. 9 2

The following is a statement showing the quantities sold and the average price of British cereals in the past two weeks, and for the corresponding weeks in each of the years from 1933 to 1936:—

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
	Cwts.	Cwts.	Cwts.	s. d.	s. d.	s. d.
October 28, 1933	275,027	493,148	48,977	4 9	9 8	5 6
October 27, 1934	368,019	428,997	46,273	5 0	9 2	6 7
November 2, 1935	453,933	521,894	51,147	6 1	9 0	6 2
October 31, 1936	435,655	503,604	70,101	8 11	9 11	6 11
October 23, 1937	418,188	714,323	71,747	9 3	12 10	8 8
October 30, 1937	404,865	676,297	70,240	9 2	12 10	8 6

OTHER FOODS

BACON.—Demand has been satisfactory and the tone of the market steady. The official quotations (per cwt. for No. 1 Sizable) which formed the basis for dealings on the London Provision Exchange this week were: English, 91s.; Canadian, 83s.; Danish, 90s.; against 91s., 83s., and 90s., last week. Arrivals in London last week included: Danish, 14,689 bales; Canadian, 6,023; Dutch, 2,158; Lithuanian, 1,396; and Polish, 3,309; as against 14,513, 5,446, 3,042, 1,451 and 3,579 bales, respectively, in the previous week.

BUTTER.—The rise in prices, due to short supplies, has continued, the market being rather quiet at the higher level. Quotations (per cwt.) on the London Provision Exchange on Wednesday were: New Zealand, finest salted, 152s.; Australian, choicest salted, 151s.; Danish, 159s. to 160s.; compared with 149s., 149s., and 150s., respectively, a week ago.

CHEESE.—Colonial makes were firm in consequence of a sustained demand. Quotations (per cwt.) on the London Provision Exchange on Wednesday were as follows: English Cheddars, finest farmers, 92s. to 94s.; Canadian, finest coloured, 73s. to 74s.; and New Zealand, finest coloured, 73s. to 73s. 6d.; against 92s. to 94s., 71s. to 72s., and 70s. to 70s. 6d., respectively, a week ago.

COCOA.—The spot quotation in New York on Wednesday was 6 cents per lb., as against 6½ cents per lb. last week. In London, on Wednesday last, good fermented new crop, Accra, "December-February," was quoted at 27s. 6d. sellers per 50 kilos, c.i.f. Continent, against 27s. 3d. for "November-January" a week ago. Last week's movements of cocoa in London were as follows: Landed, 2,047 bags; delivered for home consumption, 5,681 bags; exported, 20,922 bags; stocks, 172,065 bags, against 126,834 bags a year ago.

COFFEE.—Following the announcement of a heavy reduction in the Brazilian export tax, prices in New York suffered a sharp decline and the market became nominal. On Wednesday, Rio No. 7 (cash) was not quoted in New York, as compared with 8½ cents per lb. last week and 9 cents per lb. a month ago. Movements of coffee in London last week were as follows: Brazilian, landed, nil; delivered for home consumption, 149 cwt.; exports, 1,686 cwt., against 9,490 a year ago. Central and other South American: Landed, 127 cwt.; delivered, for home consumption, 2,138 cwt.; exported, 557 cwt.; stocks, 75,463 cwt., against 62,004 cwt. last week. Other kinds: Landed, 2,345 cwt.; delivered, for home consumption, 3,066 cwt.; exported, 496 cwt.; stocks, 68,052 cwt., against 97,596 last week.

EGGS.—A further seasonal rise in the price of certain selections occurred this week, despite a rather quiet demand. At Smithfield, on Wednesday, English (ordinary packing, Grade 1, about 15-15½ lb.) realised 22s. to 23s. per 120, against 20s. 6d. to 21s. last week; while Danish (15½ lb.) made 15s. to 15s. 6d., as against 14s. 9d. to 15s. last week.

FRUIT.—Partly in consequence of the weather, business at Covent Garden has been less active, says *The Fruitgrower*. Nevertheless, prices are generally rather above normal for the time of year. Demand for apples is well maintained and, with supplies moderate, prices are inclined firmer. Pears remain a steady trade, only moderate quantities being available. Hothouse grapes are rather inactive, with prices a point lower. Good supplies of summer oranges are still available, South African continuing in good demand. Brazilian are easier. Lemons and grapefruit, from all sources, are also cheaper than a week ago.

MEAT.—At Smithfield Market, on Wednesday last, Argentine chilled hindquarters were quoted at 4s. to 4s. 4d. per 8 lbs., as compared with 4s. to 4s. 4d. a week ago. New Zealand frozen mutton was 3s. 4d. to 4s. per 8 lbs., as against 3s. 4d. to 4s. a week ago. According to the Smithfield Market official report, supplies during last week amounted to 9,028 tons, a decrease of 397 tons on the corresponding week last year. Beef and veal accounted for 4,783 tons, mutton and lamb 2,361, and pork and bacon 1,017, as compared with 4,710, 2,648 and 1,242 tons, respectively, in the same week of 1936.

PEPPER.—On Wednesday, white Muntok, "November-December," was quoted at 3½d. per lb. sellers, c.i.f. Rotterdam-Hamburg, against 3½d. per lb. a week earlier. Black Lampong, spot, in bond, was quoted at 2½d. per lb. sellers, compared with 2½d. per lb. last week. Movements at Smithfield Market last week were as follows: Black, landed, nil; delivered, 2 tons; stocks, 1,974, against 1,798 last year. White, landed, 59 tons; delivered, 71 tons; stocks, 11,251 tons, compared with 11,874 tons a year ago.

RICE.—The spot price of Burma No. 2 cleaned was 11s. 3d. per cwt. ex warehouse, on Wednesday, as compared with 11s. 3d. per cwt. a week ago. "November-December," in singles to Continent and U.K., was quoted at 10s. 1½d. per cwt., against 10s. for "October-November" last week. Movements in London last week were as follows: Landed, 64 tons; delivered, 217 tons; stocks, 1,216 tons, against 2,278 tons a year ago.

SUGAR.—The London spot market has had a quiet tone and prices are again easier. The New York spot quotation was 3-22 cents on Wednesday, as compared with 3-17 cents per lb. last week and 3-20 cents per lb. a month ago. Wednesday's sales of raw sugar in London included "December" delivery at 6s. 1½d. to 6s. 2½d., against 6s. 2½d. to 6s. 2½d. a week ago. Movements of raw sugar in public warehouses in London and Liverpool last week were as follows: Imports, 13,418 tons, against 13,734 in the previous week and 14,380 in the same week of 1936; deliveries, 15,300 tons, against 15,062 and 18,032 tons, respectively; stocks, 167,068 tons, against 168,950 and 95,639 tons, respectively.

TEA.—The following table shows the average price (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account in recent weeks:—

Week ended	Northern India	Southern India	Ceylon	Java	Sumatra	Africa	Total
	d.	d.	d.	d.	d.	d.	d.
Oct. 29, 1936	12.99	12.12	14.61	11.61	10.03	11.62	13.24
" 7, 1937	16.33	15.59	16.85	14.71	13.19	14.22	16.36
" 14, "	16.27	15.37	17.02	15.52	13.29	14.85	16.31
" 21, "	16.14	15.40	16.95	14.86	13.14	14.88	16.19
" 28, "	15.75	15.49	16.64	15.16	13.12	14.88	15.90

At this week's public auctions in Mincing Lane, 51,126 packages of Indian and 16,859 packages of Ceylon tea came up for disposal. The market in Indian sorts was rather less active and, except for the best qualities, prices were easier. An irregular tone was displayed at Tuesday's Ceylon auctions. Plainest teas showed little alteration, mediums were occasionally easier and fine teas sold well.

VEGETABLES.—Owing to the mild weather, supplies of all kitchen vegetables at Covent Garden are abundant and prices are consequently easier, states *The Fruitgrower*. Home-grown tomatoes are now finishing, while supplies of Canary Island are only moderate. Cucumbers have risen in price on shorter supplies, while onions are also firmer. Good supplies of house-grown beans are, however, selling at lower rates. Meanwhile, the liberal supplies of potatoes on offer at London markets meet a moderate inquiry at about recent prices. At the Borough on Tuesday, best siltland King Edward again made from 6s. to 7s. per cwt.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OILSEEDS.—Oilseeds and their products are quiet and in the past few days have had a decidedly easier tendency. The decline in linseed following an undisclosed surplus of old crop in Argentina has been accentuated by the official report of the Ministry of Agriculture of an increase in the area sown to linseed of over a million acres as compared with the preliminary forecast. The area of 7,336,000 acres compares with 7,435,000 acres sown and 6,533,000 acres actually harvested last season, and should favourable weather conditions continue over the next six or eight weeks a gross yield of something like 1,900,000 tons may be expected. The yield in the season now drawing to a close appears to have been under-estimated to the extent of at least 100,000 tons, hence the balance now left available for export is much larger than recently expected, and, with what India may export, will probably be sufficient to cover current needs until the new Plate crop is ready for shipment. Exports from South America last week were larger than for some time past, while those from India were comparatively small. The quantity afloat for Europe has increased to 131,300 tons, including 35,000 tons from India. Demand from crushers is restricted despite the more accommodating attitude of shippers.

Cotton seed remains weak with very little trade. Black Egyptian to Hull has been done at £6 per ton, December loading, but rather less is now asked. Vegetable oils are on the whole easy. Linseed oil is firm for near positions, but lower forward, prices being 20s. per ton down on the week. Cotton oil is also easier and quoted 20s. less ex Hull. The demand for oil cakes is improving and prices of home makes maintained.

RUBBER.—The market has been quiet this week. After showing a firmer tone before the week-end, prices later relapsed and the early gain was lost. There is now a disposition to await the forthcoming meeting of the International Committee, when it is expected that a substantial cut in the export quotas will be agreed upon. The spot price in New York on Wednesday was 14½ cents per lb., compared with 14½ cents per lb. a week ago and 16½ cents a month ago. Wednesday's official buyers' price for standard ribbed smoked sheet on the spot in London was 7½d. per lb., as against 7½d. on the corresponding day last week. In forward positions business has been done at 7½d. to 7½d. for "December" shipments, as against 7½d. to 7½d. a week ago. Stocks in London and Liverpool at the end of last week totalled 51,826 tons, against 51,324 tons a week earlier. A year ago stocks amounted to 96,673 tons.

but the fact that the political Labour movement has followed an evolutionary rather than a revolutionary course, and is in the radical tradition of advanced liberalism rather than in that of the Marxist philosophy of the Continent, is mainly due to the temperament and upbringing of MACDONALD and his close associates.

History, however, will be chiefly interested in MACDONALD because of the decision which he took in 1931, when the National Government was formed. To some a betrayal, to others a crowning act of statesmanship, this decision certainly affected the course of history. We speak of a decision; but in truth there were two moments of vital importance. One was when the National Government was formed; the other when an appeal was made to the country to give an open mandate to the new Cabinet. The first event could have happened without the second, and if so it would have had quite different consequences. But the election of 1931, in fact, handed over the direction of the destinies of this country to LORD BALDWIN during the critical years of the trade slump, the rise of the dictatorships and the supreme testing time of the League of Nations idea. Everyone will hold his own opinion as to what would have happened if the direction of affairs during these years had been in the hands either of a Labour Cabinet, or of the first National Government dependent upon a House in which Labour and the Conservatives had about equal representation and the balance of power rested with the Liberal Party. But however that may be, it is certainly improbable that MACDONALD anticipated, when he made his decision to appeal to the country, that he would, in fact, place himself so entirely in the hands of an immense Conservative majority.

The actual transference of power to the Conservatives was not the sole consequence. It is at least as important that the events of 1931 have left the Labour Party bereft of its outstanding leaders, and handicapped by the widespread belief that Labour is incompetent to govern—at all events in times of crisis. The Labour Party might perhaps with diligence succeed in dissipating the impression, so sedulously created by spokesmen such as SIR STAFFORD CRIPPS, that there is bound to be financial panic if Labour comes into power. But it is harder to

dispel the recollection of the historic fact that both the Labour Governments have been short-lived and brought down by fright on the part of the great mass of people who, having a stake in the country, felt they had something to lose from Bolshevism or financial disaster.

Is this the inevitable fate of a Government whose programme is radical reform? Or is the history of our two Labour Cabinets due to defects of personality? It might almost be argued from contemporary history that radical reform is impossible without crisis and confusion. In recent weeks it has almost seemed that MR ROOSEVELT's New Deal has so scared capital that the American economy is degenerating into a slump; while in France the programme of the Popular Front, which in the main consists of overdue reforms which have long been adopted elsewhere, has sent capital fleeing from the country and smashed the franc. But this would be a hasty judgment. There are signs that, after suffering severe jolts, the French economy is regaining its accustomed poise; and we have yet to see whether Wall Street's pessimism will inevitably translate itself into a general setback to recovery in the United States. But perhaps a more instructive parallel is the period of sweeping reforms which occurred in this country in the eight years preceding the Great War, when the social services grew by leaps and bounds and the weapon of progressive taxation was forged. That period was one of great and increasing prosperity.

Labour's sojourn in the wilderness, to which MACDONALD's decision in 1931 condemned it, is not governed by any inability of Great Britain to undertake far-reaching and rapid reforms of its social life, but by two other considerations. One of these is the character of the leaders of the Labour Party and the nature of their appeal to the people, which has often seemed to be too high in the clouds for the practical vision of the ordinary voter. The other is the liberal tendency within the Conservative Party and the extent to which a Conservative Government will in fact adopt reforms which satisfy, for the time being, the instincts and demands of the country. MACDONALD gave Baldwinism its chance. Labour will come back when the Tories abandon Baldwinian Liberalism.

From Axis to Triangle

AT Rome, last Saturday, a new anti-Communist Pact, in which Italy has joined forces with Germany and Japan, was signed for Italy by COUNT CIANO, for Germany by HERR VON RIBBENTROP, and for Japan by the JAPANESE MINISTER accredited to the Quirinal. The government-controlled Press of the three signatory Powers has made haste to declare that the new treaty means no more than it says, and that there are no secret clauses. The assurance may be taken at its face value, since it is evident that the text, as it stands, can be made to mean whatever may suit the signatories' purpose.

The signatories argue that the new pact is inoffensive because it is not directed against any State or country—not even against the Soviet Union—but only against a subversive international organisation which already stands condemned in the eyes of most of the peoples of the world. The plea is specious but unconvincing. To our mind, the very elasticity of the objective of the new crusaders' hostility in their deed of partnership is the most sinister feature.

Who is the Bolshy? That is the crucial question; and it is already clear that in German and Italian and Japanese eyes he is an almost infinitely Protean creature who can be detected masquerading under any and every disguise. At moments, no doubt, he may take

the shape of STALIN; but his other avatar is NEGRIN, and at the present moment he is incarnate in the person of CHIANG KAI-SHEK. That is why the Japanese, in their zeal to "do their bit" in the three-Power anti-Communist crusade, have announced their intention of pressing their attack upon China until the Government at Nanking has been overthrown.

This Japanese sharpness of vision gives food for thought to the rest of us. How disconcertingly penetrating these Japanese witch-hunters have been. Here are CHIANG KAI-SHEK, and the Kuomintang Party whom he represents, convicted of crypto-Bolshevism and righteously marked out for annihilation by the Japanese sword, although, for ten years past, the Kuomintang regime in China has ostensibly been devoting a substantial part of its energies to a long-sustained endeavour to repel and repress Communism in China by force of arms. Sly dogs! But the lynx-eyed Japanese have been too sharp for them. CHIANG KAI-SHEK's pretended campaign against Communism has now been exposed as a devilishly deceitful blind. Really, he has been clasping the hidden hand all the time; and now, belatedly, he is getting his deserts.

This awful warning from China has a moral for the British Tories; for though not even the three Crusaders would accuse the Conservative Party of *malice prepense*,

there is such a thing as being a Bolshy in spite of one-self, and even without one's own knowledge. HITLER has already found the formula. The democratic countries, he propounded to us some time ago, are breeding-grounds for the Communist bacillus. Wherever you see the corruption of Democracy *festering to-day*, you can be sure of being notified to-morrow of an outbreak of the Communist plague.

This diagnosis has large implications; for our crusaders, in their public spirit, have constituted themselves a board of medical officers of health for a plague-stricken world. And how does your provident and efficient medical officer proceed? His motto is and always that prevention is better than cure. Better get to work now on slum-clearance than wait to nurse the sick and bury the dead who will be the victims of the epidemic that is certain to break out again to-morrow if the plague-spot is not resolutely cleared up. The duty of putting the Tories out of harm's way might be as painful to the crusaders as it would be distressing to the victims themselves to learn, on unchallengeable and veterinary evidence, that they were carriers of foot-and-mouth disease. But when the fell disease is stalking abroad, what medical service worth its salt would hesitate, out of a mistakenly sentimental spirit of compassion, to slaughter the wretched cattle who are on the way to spread the fatal sickness to others of their kind?

This interpretation of the new pact is by no means fantastic, as is shown by the prognostications which have already been thrown out by the crusaders' public organs. Apparently there is to be a world-wide campaign—extending Spanish-fashion to the Americas as well as to the Old World—for recruiting reinforcements for the crusade. We are to be circularised with a questionnaire containing the single question: "Will you join the anti-Communist Pact or will you not?" Let it be not a pleasant question to have to answer. Let us glance again at China's present predicament. Already the Japanese have intimated that China's adherence to the Pact may be one of Japan's conditions for granting China peace. If China refuses, she brands herself as Bolshy by her own confession; if she agrees—well, then she is giving the medical officer a doctor's mandate, and by the time she has carried out his instructions for disinfecting herself, she will find herself stripped at least of her clothes and possibly of her skin. Now China is only the first name on a list of unknown length. The next to be asked may be Czechoslovakia. "Will you prove to us, little Czechs, that

you are public-spirited citizens of our anti-Communist world-community? You can do it by adhering to our Pact, but of course that will entail, as evidence of sincerity, your denouncing your present pacts with Red Russia and Pink France." And there is Poland. The Poles no more want to line up with Germany against Russia than with Russia against Germany; but if they try now to stick to their policy of neutrality they will be in danger of making themselves odious. Neutrality in the battle between the physician and the plague! Such neutrality is an unpardonably anti-social posture. Stay neutral, little Poles, at your peril!

In the light of all these implications, it looks, after all, as though the ceremony at Rome last Saturday had been rather a momentous act. In that act, the doctrine of the indivisibility of peace, for which its advocates have not had the courage to stand fast, was officially supplanted by a new doctrine of the indivisibility of aggression, as the sign in which our oecumenical gangsters intend and expect to conquer the world. During recent years international affairs have been eddying in two distinct maelstroms round two widely separated poles—one in Europe and the other in the Far East. To-day the two poles have come together and the two maelstroms have merged into one mighty whirlpool.

If this is where we stand to-day, the position reflects upon British policy during the six years that have now passed since the present tide of aggression started to flow in the autumn of 1931. Our British policy has been, every time, to let the aggressor have his head in the expectation that he would let us live happily ever after while he browsed contentedly on his victim's carcass. This expectation has been falsified by a fresh demonstration of the well-known truth that *l'appétit vient en mangeant*. The Japan who was to have been sated by Manchuria has now opened her jaws to swallow the northern half of intra-mural China. Italy's unrepelled conquest of Abyssinia and Germany's unrepelled reoccupation of the Rhineland have been followed by the establishment of the Rome-Berlin axis. And now comes the new Triple Alliance.

Turning the other cheek sounds fine. But whose cheek is it, as a matter of fact, that we have been turning so patiently during these past half-dozen years? It has not been our own cheek, but our friends', and that is neither good Christianity nor good politics. Last Saturday's clarion call from Rome has signalled, surely, to London, Paris and Washington, that it is time—high time—for a change.

Creditor and Debtor Nations

RECENT discussions have provoked a good deal of confused thinking about the implications of foreign lending. The diversion of a part of British savings abroad, for example, has been criticised on the ground that it is responsible for the under-development of certain branches of domestic activity and particularly for the decline of agriculture. Further, that part of our imports which represents interest on foreign investments does not call for an equivalent in exports is held to be the cause of a considerable amount of unemployment in this country. Foreign investment has also been attacked for the loss of much capital (put by LORD MANROFT at £2,000 millions during the past 60 years), in some as if domestic investment were entirely riskless. In some measure, prevailing popular confusion is due to our foreign of precise information on the subject of our foreign investments—a deficiency which we shall endeavour to remedy, as far as in us lies, in a special survey in next week's issue of *The Economist*. Meanwhile, it may be

useful, as a preliminary, briefly to set out the nature of foreign investment and to compare the extent of its development in the principal creditor and debtor countries of the world.

By investing part of its savings abroad, a country merely extends the principle of economic specialisation beyond its own boundaries. In undeveloped countries, where current savings are small, the yield on new investments tends to be higher than in the older countries. The development of foreign lending, however, postulates a certain amount of freedom for the international movement of goods and capital, as well as a measure of political stability in countries which are anxious to attract savings from abroad. These conditions obtained, on the whole, before the war, when Britain rose to the position of the world's chief creditor country. In more recent years, however, the freedom of movement of goods and capital has been impaired, partly by world-wide depression, with its progeny of currency

fluctuations and restrictions, and partly by the growth of economic nationalism and political instability.

Capital exports may conveniently be grouped under three headings, according to their degree of permanence. First, there are long-term investments for development purposes, which constitute the bulk of Britain's overseas capital. Under this heading come direct investments, such as those made for the development of rubber and tea plantations in Malaya and Ceylon, or of gold mines in South Africa, and for the construction of railways and electricity works in Argentina and British India. This category also includes loans made to overseas Governments for the development of their countries. Secondly, there are investments of a less permanent character, such as the recent purchases by foreigners of American securities in order to take advantage of a temporary rise in Stock Exchange values. Finally, purely temporary exports of capital may be stimulated by the search for security rather than by the attraction of a higher return. This movement has grown enormously in recent years as a result of economic and political instability. As fugitive capital is usually kept liquid, in the form of bank balances and Government securities, this movement can hardly be grouped with investment proper, and is excluded from our analysis.

Broadly, the principal lending countries are found among the older nations whose industrialisation has permitted the accumulation of substantial savings. They include the United Kingdom, France, Belgium, Holland, Switzerland, and, since the War, the United States. According to an estimate of the League of Nations, the total amount of long-term capital invested abroad by creditor countries at the end of 1935 was about 30 million dollars (gold), equivalent to about £10,000 millions. The United Kingdom's proportion of the total overseas investments of creditor countries is put at well over one-third. Next come the United States, with about one-quarter, France, with approximately one-tenth, and Belgium, Holland and Switzerland, with an aggregate of something between 17 and 23 per cent.

The debtor countries, inevitably, are much more numerous than the creditor countries, and they comprise, in fact, practically all the remaining nations of the world. The terms debtor and creditor refer, of course, to the balance of the two kinds of items. Many debtor countries have investments abroad, and, conversely, substantial amounts are invested in creditor countries, especially in the United States.

To ascertain the total foreign investments and debts of any individual country is a formidable statistical task, into which the element of approximation enters largely. Estimates of net annual interest and dividend receipts are, however, more accessible, and they are regularly collected and published by the League of Nations. In the diagram on this page we have related the figures for various countries to the total population, and shown receipts or payments *per capita*, converted into sterling.

Belgium, Holland and Switzerland are the chief creditor countries for which, unfortunately, no recent data are available. Among the list of debtor countries, such important nations as Argentina, Brazil, South Africa and Italy have been omitted for similar reasons. We have taken the League's figures, except for the United Kingdom and the United States. The data relate to the year 1935, except those of Canada, Denmark, the United Kingdom and the United States, which are for 1936, while those of British India and New Zealand relate to the financial year 1935-36, and the Australian figures to the year ended June, 1935.

Of the creditor countries shown in the diagram, the United Kingdom is much the most important. Britain's receipts in interest and dividends on her foreign investments in 1936 exceeded £4 per head. Indeed, it has been computed that this country derives as much as one-twentieth of its total national income from interest and dividends on foreign investments. Next in importance among the countries listed comes France, followed by the United States and Sweden. Although America's share of the total foreign investments of creditor countries is as much as 25 per cent., her receipts per head are relatively low compared with the United Kingdom's.

Just as receipts per head are greatest in the case of the United Kingdom, among the debtor countries shown in the diagram the interest payments are heaviest in the case of British Dominions. Indeed, the payments per head of Australia, Canada, and New Zealand are of the same order of magnitude as the receipts of the United Kingdom. The payments of South Africa and Argentina, though they have not been computed for recent years, are also substantial on a *per capita* basis. At a considerable distance come Norway, Denmark and Germany, with payments exceeding 10s. per head.

While foreign, and especially British, investments in British India and China are substantial in the aggregate, the annual interest and dividend payments of these countries are very small on a *per capita* basis. Japan's net foreign indebtedness has been considerably reduced in recent years, and her payments for interest and dividends have fallen to an insignificant level per head of her population.

One of the most significant conclusions emerging from this analysis is the close relationship, on the capital side, between the United Kingdom and the British Empire. By habitually investing part of her savings abroad for many years, Britain has stimulated the economic development of overseas territories, and has provided the source of a substantial part of her national income. Moreover, by applying part of her savings to the development of territories better suited than herself for primary production, she has contributed in no small measure to the provision of cheap raw materials and foodstuffs for other countries—and, therefore, to the world's economic development.

INTEREST AND DIVIDEND RECEIPTS AND PAYMENTS PER HEAD IN 1935

(b) Payments of Debtor Countries

Makers of Road Vehicles

THE Commercial Motor Transport Exhibition, which has been open at Earl's Court all this week, lacks the wide popular appeal of the annual private car show. From the economic as well as the trade and engineering standpoint, however, it is an event of outstanding importance, in view of the rôle which road transport continues to play in industrial development.

The number of commercial vehicles of all kinds in use in Great Britain increased from 564,000 in 1935 to 596,000 in 1936, and is estimated at 633,000 in 1937. Much the largest part of the total is composed of goods vehicles, whose numbers have increased from 467,561 in 1936 to an estimate of 493,000 this year. There has been a smaller increase in omnibuses and motor-coaches, from 49,816 to 51,000, while the number of taxis has remained unchanged at about 38,000. An outstanding feature of the tax returns (from which these figures are mainly compiled) has been an increase from 40,260 to an estimate of 51,000 in the number of vehicles which do not pay tax at all. This movement is a corollary of the growth and mechanisation of the Army, the enlargement of the Air Force and the increased requirements of the Post Office. No manufacturer of commercial vehicles to-day can afford to ignore the importance of the State, either as a buyer and user of road vehicles or as the ultimate arbiter of road transport operating conditions.

Like the private car makers, the commercial vehicle manufacturers are very busy; and, like them, they have raised their prices during the last few months. The general increase has been about 5 per cent., though a number of manufacturers have kept their prices steady, while a few have made larger additions. Like their car manufacturing colleagues also—and perhaps with better reason—the makers of commercial vehicles hope and trust that the change will not affect replacement demand. Actually, commercial replacements usually follow a regular programme and prices in any case are still much lower than they were even three or four years ago. Demand for additional vehicles, in its turn, may be only slightly affected as a whole, but within each class a tendency to favour cheaper against dearer models will almost certainly be encouraged.

A new season is now opening for the industry, in which a continuance of Government purchases is assured, and the maintenance of existing demand for new buses and motor-coaches is well-nigh certain; but in which the making of new records for sales of commercial haulage vehicles is, to say the least, more doubtful. New registrations have, indeed, been running in recent months somewhat behind those of the last season, and there are no immediate indications of a reversal of the trend.

To put these generalisations into due perspective, it may be well to consider the figures of new registrations. For commercial goods vehicles last season the total is estimated at 81,500, compared with 78,463 in 1935-36, for new omnibuses and motor-coaches at 6,400, compared with 5,725, and for taxis at 2,000, against 1,933. The really spectacular increase has been in sales of "exempt" vehicles, which have increased from 5,311 in 1934-35 to 10,050 in 1935-36, and an estimate of 14,200 in 1936-37. Exports increased in the past season from 15,553 to 20,702, and imports from 2,428 to 3,900. Thus we reach a record total home production figure for the past season of 121,000 vehicles, an increase of 11 per cent. over the preceding year's figure of 109,000. The incidence of taxation and road traffic legislation is having a marked effect on demand. On the passenger side, the larger types of omnibus hold the field—or the road; since operators, who are restricted as to the number of vehicles they run, prefer double-decker to single-decker buses where traffic is at all heavy. The greater proportion of the new and heavier vehicles have Diesel engines, and the sales of petrol buses continue to fall off; while sales of trolley-buses seem likely still further to increase. Among goods vehicles, demand for "heavyweights" is still affected by the sharp increase in taxa-

tion, imposed in 1933, but might well recover if present speed limits were modified. Since a goods vehicle of over 2½ tons unladen weight is limited to 20 m.p.h., while a vehicle not exceeding 2½ tons is permitted 30 m.p.h., the "middleweight" manufacturer of 2 to 2½ tonners has specialised in the production of vehicles which may have an advertised carrying capacity of as much as 110 cwt., but which come just within the 2½-ton limit. At the same time, and, rather curiously, sales of "lightweight" vehicles are declining. These find their market essentially among shopkeepers, for local delivery purposes, but demand as a whole has been recently for industrial transport rather than "service."

Like Caesar's Gaul, the commercial vehicle manufacturing industry may be divided into three parts—the heavy weight manufacturers, the "Big Three"—and the others. The first group, which is engaged in omnibus and heavy lorry work, includes Leyland, A.E.C., Dennis, Albion, Scammell, Thornycroft, Bristol and Guy. At present, some of these manufacturers are busy with Government contracts in addition to their ordinary commercial production. The group accounts for about 14 per cent. of the total output by number, but a much higher percentage of total value. Next come the "Big Three": Bedford (Duxhall), Fordson and Morris Commercial. These produce, say, 67 per cent. of the total numerical output. They are especially strong in the middleweight category, and all three are affiliated with important car manufacturers. On the whole, they are increasing their share of the total market. The remaining group, which produces something like 19 per cent. of the total, includes Austin and Commer (Rootes), as well as a somewhat surprisingly large number of small manufacturing firms. In this industry the small firm is not very easily forced out of business. Even if it carries on merely "assembly" work, which consists of purchasing an engine from one specialist manufacturer and various parts from another, it may succeed in keeping its head above water indefinitely, with a modicum of profit.

Our survey of the commercial vehicle industry may fittingly conclude with a brief appreciation of possibilities in the international market. Exports of British commercial vehicles last season were only 20,702, compared with America's estimate of 130,000, but the ratio of increase was 33 per cent., against 21 per cent. for the United States. Britain's chief markets are in Australia, New Zealand, India, South Africa, Denmark and the Scandinavian countries. Sales to Empire countries account for three-quarters of the total, but, even so, the trade is more widely distributed than that in private cars. In one respect, however, the position is anomalous, for over half the total exports are produced by a single manufacturer. There is a good deal of evidence to show, indeed, that an export drive by certain other manufacturers would be well rewarded. Imports of foreign cars into this country increased by as much as 60 per cent. last season, but their total was only 3,900. They came predominantly from the United States, and consisted chiefly of "middleweights," like Dodge and Reo, which competed directly with the products of the "Big Three." There may conceivably, in future, be increased competition from the Continent, from makers like Renault and Opel. The latter is the German subsidiary of General Motors, whose British subsidiary, Vauxhall, has been so successful in developing its Bedford lorries behind the British tariff wall that to-day it has become the leading commercial vehicle manufacturer.

On the whole, the outlook for the commercial motor vehicle industry appears satisfactory, though not, perhaps, exhilarating. In view of the extent to which official policy and control affect a considerable part of its total demand, the industry may have less to gain than some others from a high level of national prosperity. On the other hand, it would have proportionately less to fear from any check to rising trade activity.

Russia's Economic Progress

LAST Sunday, Russia celebrated the twentieth anniversary of the revolution which first put the bolsheviks into power. The Soviet system and all that it stands for have since been assailed continuously—from outside by force of arms at first and by force of dialectic and propaganda later; from inside, we have repeatedly been informed, by the malice of saboteurs and wreckers. The system has itself changed profoundly in the past two decades, but it has developed far more impressive powers of longevity than many of its earlier critics were prepared to assign to it. And its tenure of power has been associated with a striking expansion of Russia's internal industry, under successive State planning schemes, whose extent would have been deemed remarkable under any regime. We do not propose, in the following article, to discuss the question whether the national economic progress would have been more or less rapid had it been made under the ægis of some other political system, but rather to endeavour to measure its actual pace by using such statistical speedometers as are readily available.

It may be well, at the outset, to enter at least two caveats. In the earliest years of Soviet rule, when Russia, and a good deal of Europe as well, were prostrate after the war, the economic system came perilously near to total collapse. If present-day figures, consequently, are compared with those, say, of 1920-21, an exaggerated idea will be obtained of the *net* progress achieved under the Soviet. Even if the comparison, however, be taken back to the last pre-war year, 1913, the picture will still lack perspective; for the end of the nineteenth century and the beginning of the twentieth were a period of phenomenally rapid advance in Russia's industrialisation under the Czarist regime. In the tables at the bottom of this page, therefore, we have supplemented the figures published by the Soviet authorities (which in many cases have themselves a 1913 figure inserted for comparison) by a number of others going back, where possible, to the 'nineties and the first decade of the present century. The two sets of data, naturally, can be contrasted only on broad lines; but the year 1913 provides in many instances a useful bridge. On the whole, it will be seen that the correspondence between the figures for that year is close, if allowance be made for the fact that the pre-revolutionary figures included a vast area of Poland and Eastern Europe, which is outside the U.S.S.R. to-day.

It is unlikely that the Soviet figures err by understatement. After all allowance, however, for the effect of this and other possibilities, it remains true to say that Russia's economic activity has increased amazingly in

the last two decades. Even if some of the more spectacular achievements, like the recent growth of gold production, be left out of account, an increase since 1913, as shown by the Soviet figures, of 47 per cent. in railway mileage, a fourfold rise in coal production, and a three to fourfold rise in output of iron and steel, are all achievements which may perhaps be discounted but cannot readily be explained away. The area under cotton has doubled in eight years, and between 1932 and 1936 the authorities claim to have increased the yield of cotton by nearly 100 per cent. On the other hand, it is clear that Russia's new rulers took over a country whose industrialisation had been proceeding apace before the war. Between 1890 and 1915 Russia's railways had grown from a total length of 28,360 kilometres to 68,760 kilometres; her coal production had doubled between 1900 and 1912-13; her pig-iron output had grown from an almost negligible figure to nearly 4½ million tons in a quarter of a century; and her cotton area had expanded from 307,000 hectares to 493,000 hectares in a mere six years. Other pre-war statistics strongly suggest that the beginnings of Russia's industrial and commercial revolution antedated her political revolution. The freight carried on Russian railways, for example, rose by 50 per cent. between 1904 and 1912. The value of foreign commerce in 1913 was 2,913 million gold roubles, as compared with 914 millions in 1886 and 1,896 millions in 1906.

The process, however, has undoubtedly been greatly accelerated under the new regime. How far is its momentum likely to be maintained in future? That progress is anywhere near its limit may be doubted, but it may well encounter successive major obstacles in the future, as it has in the past. In the period of Lenin's New Economic Policy (1921 to 1927) the backwardness of agriculture, following upon the famines, was the main stumbling-block. No large-scale industrialisation could take place until less labour was being devoted to food production and more to manufactures. All energy was concentrated, therefore, first upon reviving individual peasant agricultural productivity, and secondly upon the building of tractors and preparation for collective farming. At present there are nearly 600,000 tractors in the country, and these have replaced about 11,000,000 wooden ploughs. Agriculture is almost completely collectivised. This second agrarian revolution, in its turn, has presented the whole country with another major problem, that of housing. The constant influx of displaced peasants from the countryside into the towns puts a heavy strain upon the housing resources, which will not be relieved until agriculture is wholly mechanised.

At the present time a third, and unexpected, problem is developing. The enormous output of internal combustion engines of all kinds (tractors, automobiles, aeroplanes, tanks, etc.) is putting a very severe tax upon the oil industry of the country. It was recently pointed out by a writer in *The Times* that the production of automotive units of all kinds had increased by 208 per cent. between 1932 and 1936, while the production of crude oil increased only from 21,500,000 tons to 27,300,000 tons—i.e. by 27 per cent—though improvements in refining processes gave an increase in petrol *plus* ligroin production from 2,881,000 tons to 4,258,000 tons—i.e.

by 48 per cent. The deficiency has been made up for by a drastic reduction in the export of oil, and in 1936 the Soviet Union actually imported 46,000 tons of petrol for the first time. The energies of the Soviet planning authorities are therefore now concentrated on the "oil front," whose potentialities are enormous.

Thus the Soviet economy moves from one major problem to another. The Russians have reason for satisfaction with the achievements of their new social-economic mechanism, on the twentieth anniversary of its inception. But it has not as yet given them relief from economic anxiety.

Notes of the Week

Armistice.—There is no occasion of the national year, save only Christmas, which has deeper popular roots than Armistice Day. Formal celebration has always been kept to a minimum; even in Whitehall the central knot of ceremony is lost in the great informal crowd which comes every year to keep its vigil at the Cenotaph. Throughout the country, too, Armistice Day is celebrated by the individual with his own thoughts and not by pomp or circumstance. This fits the occasion. For pride and joy in Victory, though they still exist, have long since been overlaid with more sombre emotions. Armistice Day becomes, year by year, a sadder remembrance. For those who fought through the four years, at the front or at home, it is a time for calling the silent roll of the friends who did not come back, for recapturing in the quiet places of the mind for two minutes that subtle mixture of anxiety, discomfort and comradeship which runs through all memories. Those who remember are already the smaller half of the people. But still Armistice Day retains its solemn meaning. As memory of the past retreats, it is reinforced by hopes and fears and resolutions for the future. It is a post-war nation now which communes with itself during the Silence. It remembers the dead; but of all they died for, one hope is uppermost:

Pray God that you may never know
The hell where youth and laughter go.

The Prime Minister at Guildhall.—Mr Neville Chamberlain attended his first Lord Mayor's Banquet as Prime Minister on Tuesday evening. His speech contained no new announcements or startling changes of policy. But some of the turns of phrase with which he repeated well-worn policies have excited attention both at home and abroad. In dealing with the economic position of Great Britain, for example, there was not only the familiar belief "that we in this country may look

for a continuance of favourable trading conditions," but also the new note that "should a setback come, it will not be so severe as was the case in the depression of a few years ago." Perhaps the most striking feature of the speech was the unusual warmth of the references to the United States, repeated not only in connection with the Brussels Conference, but also in that passage of the speech which looked forward to the conclusion of a Trade Agreement "which might well bring benefits to the world far transcending the immediate advantages to the trade of our respective countries." Dealing with Europe, the Prime Minister reaffirmed his Government's attachment to the League of Nations, and he included a special word of welcome for the close collaboration with France which has been maintained in the past year. He then went on to make a statement which deserves textual quotation:—

As regards our relations with the two great Powers which are now so closely associated in what is known as the Rome-Berlin axis, I will only say this. It is the sincere desire of his Majesty's Government to see those relations established upon a basis of mutual friendship and understanding, but as we believe that that understanding, which might well have far-reaching effects in restoring confidence and security to Europe, will be more hopefully pursued by informal discussion than by public declamation, I propose to abstain from further words upon the subject this evening.

If this was a significant new departure in British foreign policy, the fact escaped the Prime Minister's British audience. But there has been a surprising—and possibly symptomatic—alacrity in Rome and Berlin to welcome the speech not only as friendly to Germany and Italy, but as marking a new initiative. There was a report on the day after the banquet that Lord Halifax had been deputed by the Cabinet to go to Germany to undertake diplomatic negotiations. Lord Halifax has explained that what actually has occurred is that he has been invited, in his capacity as Master of Foxhounds, to visit the Hunting Exhibition in Berlin and to join a shooting party. He

1905	18.7	114
1912-3 average	34.0	208

Many of the pre-Soviet figures appeared in a work written in 1919 by Dr J. M. Goldstein, professor of political economy at the University of Moscow, which contained, in addition to certain prophecies which events have completely falsified, an excellent statistical account of the economic development of Russia during the quarter of a century before the war. The figures agree closely with others which have been incorporated in these tables. The Soviet figures have all been taken from officially published sources.

explains that he has not yet decided whether to accept the invitation, but that if he does, "he would no doubt take the opportunity of making such political contacts as might be found convenient." It may be that Rome and Berlin are anxious to initiate conversations with the Prime Minister or with one of his colleagues, and that the British Cabinet does not exclude the possibility of such negotiations. But since it is made clear in Rome and Berlin that there is no change in the policy of the Fascist Powers, it needs considerable optimism to envisage any such approach having a satisfactory outcome.

* * *

Parliament in Minor Key.—The first important measure of the Session, the belated Bill to reorganise the coal industry, has appeared and is discussed on page 307. It was presented to the House on Wednesday, and earlier in the week there were rumblings in the correspondence columns of the press of the storm of opposition to come from interested parties. Pending the discussion of this measure, the time of the House has been occupied by films, wills and Scottish houses. On November 4th, the Government's Films Bill was regarded askance by many speakers because it sought the right objective in the wrong way: to improve British films by the application of a cost instead of a quality test. In turn, on November 5th, the Government was sceptical about the Inheritance (Family Provisions) Bill, the latest attempt by a private member to legislate against cruel and unjust wills. Official spokesmen approved the purpose of the Bill but feared, like many private members, that it might lead to endless litigation. Similarly, while there was general agreement on November 10th that Scottish rural housing needed drastic improvement, Opposition speakers questioned the expediency of giving subsidies for tied-houses. For the rest, the House was concerned with questions to elicit information about social conditions, the progress of re-armament and foreign policy. The appointment of commercial agents to insurgent Spain was unexpectedly pressed to a debate on November 8th; and on November 10th, when the House sat under the shadow of Mr Ramsay MacDonald's death, the indignation of Mr Kirkwood over the rising cost of living led unhappily to his suspension. The great days of the Session have still to come.

* * *

Air-Raid Precautions.—Even after a scandalously prolonged delay the dispute between the Government and the local authorities on the correct apportionment of the cost of air-raid precaution schemes has not been resolved, and the Government are to impose their view by legislation. The story of the dispute is instructive. The first official mention of air-raid precautions in what has since become the technical meaning of the words was in a speech by Lord (then Mr) Baldwin in July, 1934. In April, 1935, the Air-Raids Precautions Department of the Home Office was formed and a circular was sent to the local authorities. This circular said that the Government intended to undertake the supply of gas masks, protective clothing and decontamination apparatus and to provide facilities for training. The local authorities were enjoined to provide shelters, to enlist and train volunteers, to strengthen their fire brigades and police forces, and to organise hospital service. The local authorities refused to start this work unless the Government would foot the bill. Their case was strong, since the matter is clearly a national responsibility. But the Government were unwilling to stand sponsor for whatever work the local councils decided to put in hand. They offered 70 per cent. of the expenditure. The authorities unanimously rejected this offer. Time passed while this offer was being made, rejected, reconsidered and revised. The second offer, which was said to be final, was made on October 14, 1937. In this the Government undertook to pay the whole cost of fire-fighting appliances, stretchers, blankets, equipment for first-aid posts, etc., in so far as such articles are not needed in peace time. For the rest of the expenditure,

the local authorities were to be grouped in four categories according to their position under the Ministry of Health block-grant formula, and they were to receive grants of 60 to 75 per cent., according to the group. The highest rate of grant was to apply to all expenditure above the produce of a penny rate.

* * *

The Government estimated that this offer would amount on the average to 90 per cent. of the total expenditure being met by the Treasury. But still the local authorities demurred, claiming that the burden on the poorer areas would be very heavy. They wanted the Government to offer 90 per cent. of expenditure above a penny rate and 100 per cent. of expenditure above a twopenny rate. The Government raised their offer to 85 per cent. above a penny rate. But with this very narrow margin remaining, the negotiations reached deadlock. A Bill is to be introduced not only embodying the financial plans of the Government but imposing a statutory obligation on local authorities to produce schemes, and though it will be opposed it is hoped to have it on the statute book before Christmas. The story is a lamentable one which is beginning, not before the proper time, to stir up anger. The fact that in the course of negotiations the Government have made all the concessions suggests that their original proposals were unfair, but also that they have made the more earnest endeavour to reach agreement. The delay has not meant that nothing has been done in the matter of protecting the civilian population from air attack. But it has meant that not nearly as much has been done as could have been done and, in particular, that London, the biggest target in Europe, is the worst protected. The responsibility for this is a very heavy one indeed, and the man in the street is not a little angry that very small sums of money have been allowed to stand between him and such security as is obtainable. In the debates in Parliament both the Government and the representatives of the local authorities will be expected to explain why they permitted so long a delay. Both of them will be in the dock; and any further obstruction on either side should be very severely dealt with by a public which is all too intimately affected.

* * *

Non-Intervention.—On Thursday of last week, as was noted in the last issue of *The Economist*, Lord Plymouth was authorised by the Non-Intervention Committee to make an immediate approach to the two combatant parties in Spain with a view to securing their concurrence in the execution of the British plan; and the Foreign Office lost no time in taking action. This in itself is a substantial step in advance; and it might be wrong to take too seriously the element of uncertainty which has been left embedded in the diplomatic situation owing to the Russian reservation. The Russians have declined to undertake in advance to recognise the belligerency of the two Spanish combatants even if and when the British plan for the withdrawal of non-Spanish troops has been carried out effectively; and the Germans and Italians have declared, perhaps inevitably, on their side that they cannot commit themselves definitely so long as Russia's policy remains uncertain. The Russians, however, have merely retained a free hand, and have not gone to the length of stating positively that they do not intend for their part to grant belligerent rights in any circumstances. Meanwhile, the inquiry in Spain will go forward. The Spanish Government have already declared their willingness to agree to a reciprocal withdrawal; and the insurgents will doubtless be guided by the advice they receive from Rome and Berlin.

* * *

Agents at Salamanca.—At this manifestly critical juncture in the Spanish War, the British Government have taken a step which has delighted the rebel generals and their European supporters and disquieted the legitimate Government of Spain and their democratic friends. Negotiations have been completed for the

exchange of agents between General Franco and His Majesty's Government. Mr Eden had to explain and defend this action in the House of Commons on Monday. He said that while British commercial interests in the territory controlled by the insurgents were very considerable, British official representation was most inadequate. There were no Consuls at either Burgos or Salamanca. To appoint Consuls would have meant giving them credentials and obtaining for them *exequaturs* both of which would have implied at least *de facto* recognition of the insurgents. The device of a Special Agent had been resorted to in the past to provide a channel of communication without recognition, and the Foreign Secretary emphatically declared that there was no change in the Government's attitude towards recognition. This explanation seemed to convince the House of Commons, and there can be little doubt that it was a frank *exposé* of the motives which determined the Government's action. There was no desire to accord a favour to General Franco. Nevertheless, the action has been regarded on both sides as a favour to Salamanca. General Franco himself thought it worth the surrender of captured British ships and the release of impounded iron ore intended for England. Moreover, the effect in Paris has been to raise once again the query whether the British Cabinet would not feel itself more at home on the side of the rebels. These may be unfounded suspicions directed at what is no more than an act of commercial commonsense. But if the British Government finds its actions subjected to suspicious scrutiny, it has only its past—and present—irresolution to blame.

* * *

The Brussels Conference.—The States represented at the Brussels Conference have been taking infinite pains to starve Japan of every pretext for officially taking offence at what they are doing; and the first result of their labours has been a Note—roughed out by the indefatigable M. Spaak during the intervals of the still unresolved Belgian Cabinet crisis—which is a veritable *chef d'œuvre* of this kind of diplomacy. The Note, in its vital parts, consists almost entirely of a list of quotations from two previous communications of the Japanese Government themselves. The Japanese are reminded—out of their own mouths—that they harbour no territorial ambitions with regard to China; that they sincerely desire "to assist in the material and moral development of the Chinese nation"; that they also desire "to promote cultural and economic co-operation" with the foreign Powers in China; and that they intend furthermore scrupulously "to respect foreign rights and interests in that country." It is no doubt adroit thus to profess to assume that Japanese diplomatic statements mean what they say, when all the world knows that, in the Japanese code, they mean precisely the opposite. But this verbal fencing match does not so far look as though it were going to take us a single step towards our goal of bringing the war in the Far East to an end on the terms of justice to which the Japanese will certainly never cease to pay lip-service.

* * *

The latest event at Brussels has been the sudden withdrawal of M. Litvinov. This unexpected move is said to be connected with the raising of the question whether Russia could usefully be represented on a negotiating committee of the Conference if there were a serious prospect of persuading Japan to talk. The answer to that question is presumably in the negative. But then we have also to ask ourselves whether there is any likelihood of Japan entering into negotiations with the Conference even if Russia were to stand—or to be pushed—out of the ring. It would perhaps have been wiser not to have raised the question of the exclusion of Russia until there seemed to be a real prospect of gaining some substantial point thereby. As it is the Conference has taken no decision, and M. Litvinov, though he has departed to Moscow, has declared his willingness to return if needed. There is a persistent rumour in Tokyo that Japan inclines to the idea of accepting her new friend Germany as a go-between. If Herr

Hitler were to accept the rôle of mediator, the terms he would recommend for China's acceptance would presumably not be unfavourable to Japan, and they would also presumably include China's adhesion to the Anti-Communist Pact. There would, of course, be no democratic nonsense about justice. Whether General Chiang Kai-shek would accept such mediation is doubtful. But the Western Powers are not encouraging him to place much reliance on their ability to persuade Japan to conclude a fairer peace than Berlin could offer. His decision, if the choice is offered to him, would be a difficult one, and it would decide more than the fate of China alone.

* * *

Japan's Advance.—There has been movement on both the fronts of the war in China. At Shanghai, the Chinese, battered in front by the superior weight of Japanese metal and threatened on their right flank by a Japanese landing on the coast south of Shanghai, have retired to a new line running roughly north and south between the Yangtse and Whangpoo rivers about eight miles west of the boundary of the International Settlement. The retirement was made in good order, though some troops were cut off in the Nantao district of the city and are faced with surrender, annihilation or internment in the Settlement. The Japanese have thus achieved their primary purpose of clearing the Chinese Army out of Shanghai. In the north also they are approaching their primary objective of occupying all the territory north of the Yellow River. There has been little advance for some weeks on the main front astride the two railways which connect Peiping and Tientsin with the Yangtse valley. But the Japanese right wing is advancing fast in Shansi; and Taiyuan, the capital of the province, was occupied on Monday. It looks as if the military operations will have reached the point at which a pause is possible at about the time that negotiations, under the auspices of Brussels or Berlin, start, if they start at all. The Japanese Army may be content to halt at the Yellow River, to hold its present Shanghai front and to leave the International Settlement alone. But the Chinese commanders and the world at large would be wise to make no assumptions about the limits of the Japanese Army's territorial appetite.

Military Courts in Palestine.—The Government of Palestine is proceeding cautiously but firmly with its policy of putting down terrorism. The latest step is the establishment throughout the country of military courts. These courts, which are to come into being on November 18th, will each consist of three Army officers and

TRADING ABROAD

The existence of restrictions in a given country may temporarily prohibit dealings in forward exchange, but up-to-date information on this and on all points bearing on Forward Exchange generally may be obtained through any branch of the Westminster Bank. For any who may be unfamiliar with the facility, a very brief outline entitled *Forward Exchange* is always available at its counters

WESTMINSTER BANK LIMITED
Head Office: 41 Lothbury, London, E.C.2

will be competent to try offences relating to shooting; the carrying of arms, bombs, etc.; and sabotage and intimidation. For the first two offences the penalty will be death, and there will be no appeal from the decisions of the General Officer Commanding to the ordinary courts. It is pointed out that this is not martial law, since the jurisdiction of the military is limited. But it is clearly a close approach to martial law, and a grave step to meet a serious situation. Opinion in most countries outside Palestine will support the Administration in any measures which it deems necessary to restore order and to combat terrorism. But one day an agreement will have to be reached with the Arab population of Palestine, and it is very essential that the bulk of moderate Arab opinion should not be outraged by any attempt to combat terrorism with terrorism. The firm administration of law is the right policy; anything savouring of Black-and-Tan methods would be disastrous.

The French Socialists and the Popular Front.—The happy ending, which we were able to record last week, of the Radical-Socialist Party Conference at Lille has now been matched by an equally happy outcome of the Socialist Party conference which was held in Paris last Sunday. On this occasion, as at Lille, the issue was whether the Popular Front should be kept going by an exercise of self-restraint and moderation or should be allowed to break down as a relief to exasperated feelings. M. Blum this week had to cope with the same wrecking tactics on the part of his left wing, captained by M. Zyromski, that MM. Chautemps and Daladier had been having to face from their right wing a few days earlier. In both the principal partners in the Front Populaire, the recognised party leaders have come down boldly and decidedly on the side of continuing co-operation; and in both cases they have now won the day. The rewards of co-operation and the penalties of dissidence are no doubt so obvious that the preservers of the Front Populaire have not had an unduly difficult task. But M. Blum frankly declared that his task would, as a matter of fact, have been made impossible if the avowedly destructive resolution which was brought forward at the Radical-Socialist conference had been allowed to stand. M. Blum has thus acknowledged a debt to his Radical-Socialist colleagues, and he has promptly repaid it by obtaining from his own supporters a vote in favour of co-operation that accords with the closing resolution of the Lille conference. M. Blum was able to point to the notable and substantial gains in social welfare which the formation of the Front Populaire had already secured and which nothing but its maintenance could guarantee. But perhaps the chief justification for the policy which he successfully urged upon his supporters was to be found in his references to the international situation. On this subject M. Blum spoke as gravely and as gloomily as M. Herriot. The evidence of France's recovery is accumulating; and we may hope to see her new-found strength and self-confidence express itself in a firmer foreign policy.

The German-Polish Minorities Declaration.—On Friday, November 5th, the Governments at Berlin and Warsaw simultaneously made public the terms of an identical declaration regarding the treatment of the Polish minority in Germany and of the German minority in Poland. On the same day the leaders of the Polish minority in Germany were officially received by Herr Hitler, and those of the German minority in Poland by President Moscicki. The "guiding principles" which the two Powers now publicly recognise as being "mutually acceptable" could hardly be improved upon. No pressure is to be exercised on the young members of the minorities with a view to their denationalisation. The minorities are to have the right freely to use their mother tongue in their social and economic relations, in the press and at public meetings (there is

nothing said about their being free to use it in the law courts or in their dealings with the public authorities). They are to be assured of the right of assembly in their cultural, social and economic relations. They are to be allowed to establish and maintain schools in which the teaching will be carried on in their own languages (there is nothing said about any provision by the public authorities for education in the minority language in the districts which the minority inhabits). They are to have complete religious toleration. And in economic affairs they are to enjoy the same rights as the majorities among whom they live, especially in connection with the acquisition and ownership of property.

* * *

There are two grounds for expecting that both the minorities in question will genuinely benefit to a considerable extent by this, in itself, admirable charter. In the first place, the two minorities are both of them of considerable size and are not greatly unequal in numbers—each of them being now round about a million strong. In the second place, the two national States at whose mercy they respectively live are both of them still desirous of living on good terms with one another. In the preamble, however, there is the somewhat ominous qualification that the two Powers recognise the guiding principles "within the framework of their sovereignty"; and this phrase brings out the width of the gulf that separates the philosophy behind the present German-Polish declaration from that which inspired the minorities protection treaties that formed part of the now so much abused Versailles Diktat. The idea underlying the post-war minorities treaties was that a sovereign State's rights to sovereignty were subject to certain overriding rights of man from which the minorities were absolutely entitled to benefit. The Polish minorities treaty, and the philosophy behind it, were publicly repudiated, however, by the Polish Government as long ago as 1934, on the eve of the admission of the Soviet Union to membership of the League of Nations. Poland has now granted the German minority under her rule (but not the White Russian or the Ukrainian) a charter based on nothing more durable than her—and Germany's—sovereign pleasure.

* * *

Steel Prices Policy.—The success of central control in the iron and steel industry depends, in a large measure, on a sagacious price policy. So far the British Iron and Steel Federation has succeeded in preventing an inordinate marking-up of prices which often occurs under competitive conditions during a period of stringency. Although British prices were raised substantially at the beginning of May, the prices charged in a number of other countries were increased much more. Since prices were last raised, costs of production have advanced further. Thus, between April and October, a representative grade of coke rose from £1 11s. 6d. to £1 16s. 6d. per ton at the ovens. Similarly, freight rates for ore have shown a heavy increase. The Bona-Middlesbrough rate, for example, has risen from 10s. 6d. to 17s. 6d. per ton. In addition, wage rates have increased, though so far the advance has been relatively small. Altogether, it has been established that the cost of production of pig iron has risen by some 10 per cent. since April. Moreover, as supplies of materials have been purchased for some time ahead, the recent decline in foreign scrap and freight rates is not likely to be reflected in the costs of the industry in the near future. Wages, moreover, may tend to rise further rather than fall. Until recently it had been widely anticipated that iron and steel prices would be raised at the turn of the year. In the past few weeks, however, the demand for steel abroad, especially in the United States, has shown a marked decline. Meanwhile, lack of information concerning the future of British prices after the turn of the year introduced an element of uncertainty into business men's calculations and many plans, consequently, were held up. The British

Iron and Steel Federation was thus on the horns of a dilemma. Obviously, a further increase in prices at this stage would have precipitated a decline in demand. Despite the rise in costs since last April, therefore, the Federation has finally decided to leave prices unchanged. Last Monday it was announced that the nine associations covering the main basic steel products had decided to maintain current quotations until the end of next year. On the whole, the announcement has been received with satisfaction in the market, for the assurance of a stable price level for a long period enables industrialists to plan ahead. It remains to be seen, however, whether the industry will be able to hold prices at the current level for so long a period. Much will depend on the course of demand, both at home and abroad, and that cannot be predicted confidently at the present moment.

* * *

The Coal Bill.—The text of the Government's Coal Bill was issued on Thursday evening. It is a long and complicated measure, but interest will naturally be centred on Parts I and II, which deal respectively with the unification of royalties and with the procedure for effecting amalgamation of mines. The total sum to be paid for the royalties has already been fixed by arbitration at £66,450,000. Part I of the Bill provides machinery for allocating this sum among the royalty owners. The royalties are to be taken over by a Coal Commission of five appointed members. They will not be fully vested in the Commission until July 1, 1942, but the Bill authorises the Commission in the interim to formulate schemes for consolidating different leases of single undertakings. The Commission is empowered to borrow the capital sum with a guarantee of principal and interest by the Treasury. This operation should yield a substantial surplus of income to the Commission, since the royalties are valued at fifteen years' purchase, while the Commission's interest and sinking fund payments should not exceed 4 per cent. The Commission may use this surplus to abolish wayleaves, and to reduce individual royalties which are above the average. These provisions of Part I appear, on a hasty first reading at least, to make a workable and equitable scheme. The delay of nearly five years before it can come into full operation is regrettable, but perhaps unavoidable.

* * *

Part II is less satisfactory. It is natural to inquire first of all how much is retained of the Bill which was withdrawn last year as a result of criticism from the Conservative back benches. The defect of the 1930 Act proved to be the long list of requirements that had to be fulfilled before the Railway and Canal Commission was authorised to give an amalgamation scheme legal force. In the 1936 Bill, approval by the Railway and Canal Commission was omitted, and this was the main burden of complaint by the industry. In the new Bill a return is made to the framework of the 1930 Act. Schemes, that is to say, will have to be approved by the court before they come into force. But there is a verbal amendment of the clause providing for this which puts the onus of proof on the objectors rather than the proponents of a scheme. There are also changes in the legal requirements to be fulfilled. A scheme no longer has to be in the national interest—that being adjudged to be a political rather than a legal question. Nor does it have to be established that it will reduce costs of production. The provision that a scheme must be fair and equitable to all persons affected remains; but the clause saying that a scheme shall not be financially injurious to any constituent company is altered to read that it shall be calculated to avoid financial injury to any constituent company. The Coal Mines Reorganisation Commission is amalgamated with the new Coal Commission. The new Bill is thus much closer to the unworkable 1930 Act than to the abortive 1936 Bill. The mineowners, in fact, have won, and the new Commission is likely to prove only a few degrees less ineffective than the old.

Population Statistics.—The text of the Population (Statistics) Bill, which has been issued, does not reveal very much of the precise intentions of the Ministry of Health in collecting additional vital statistics. The Bill empowers the King to direct by Order-in-Council that certain additional facts are to be furnished in secrecy to registration officers by anyone making a registration of birth, marriage or death. Orders may call for information on any of the matters contained in the schedule to the Bill without specific Parliamentary approval. If the Order calls for particulars on any point not included in the schedule, it will require an affirmative vote of both Houses.

* * *

The information listed in the schedule includes the present or former marriages, age, occupation, birthplace, issue, dependants, brothers and sisters of the parents (in the case of a birth) or of the deceased (in the case of a death). This Bill is one to be welcomed. The precise degree of its usefulness will depend upon the contents of the Orders-in-Council to be issued. But the Bill opens the way to a very much-needed improvement of our national vital statistics. The first and most essential matter on which information is needed is the age of mothers at the birth of their children, since this is needed for calculations of fertility, on which in turn forecasts of population depend.

* * *

Commodity Prices Still Falling.—There has been a further sharp fall of the prices of primary products, though some recovery took place during the middle of the week. The price of standard copper, for example, fell from £41 5s. per ton on Wednesday last week to £36 3s. 9d. on Monday, but rose again to £39 8s. 9d. on Wednesday. Other non-ferrous metals showed similar movements. Wool, rubber, linseed oil and wheat also experienced a fall on the week, but raw cotton, after falling on the publication of the American crop forecast, recovered to last Wednesday's level. It is significant that many important primary products, including copper, lead, spelter, tin, rubber, cotton and wool, are now actually cheaper than a year ago. Even the price of wheat at Liverpool last Wednesday (December futures) was slightly lower than a year ago. While the initial decline of prices last spring was in the nature of a corrective movement, the downward trend of recent weeks may be ascribed largely to the recession in the United States, the principal consumer of primary products. If the downward trend continues much longer, and much will depend on the course of events in the United States, it can scarcely fail to have serious repercussions, not only in producing but also in consuming countries. The effect of the decline is already felt by the cotton and wool textile trades, for example, where business has shown a serious decline.

Family provision scheme

A scheme to secure a Capital Sum payable at death and a regular income over a period of years for dependants in the event of early death, at a cost which is little more than that of ordinary life assurance.

It is readily adaptable, and rates will be quoted on application for policies to suit the needs of each individual.

Too Much Raw Cotton.—The November forecast of the probable yield of the United States cotton crop, at 18.2 million bales, was about 600,000 bales higher than the estimate published a month ago. This year's harvest is likely to be the highest on record, the heaviest crop previously harvested (in 1926-27) having been about 18 million bales. A feature of this year's crop is the surprisingly high yield per acre, estimated at 258.8 lbs. The total area expected to be harvested this year is only 33.7 million acres, against 44.6 million in 1926-27. It is scarcely surprising, therefore, that the current quotation for "American Middling," at 4.63d. per lb., shows a fall of about 32 per cent. on the year. In a large measure this year's surfeit of cotton is a direct consequence of the price policy of the United States Government. The effect of this policy is illustrated graphically by the accompanying diagram, which shows the trend of cotton production in the United States and elsewhere during the past twenty years. Although changes in the yield per acre caused considerable variations in individual years, the United States regularly produced more than half of the world's cotton crop until 1932-33; but, largely as a result of the price-raising measures adopted in America, production elsewhere rose from 10.9 million bales in 1931-32 to 21 million bales this season. It was obvious, therefore, that any substantial increase in America's crop, such as has occurred this year, was bound to bring about a collapse in prices. Short of destroying part of this year's crop, the American Congress, which will meet on November 15th, will have difficulty in finding a solution to this problem, especially as world consumption this season is not likely to exceed 31 million bales while available supplies total more than 51 million bales.

Decline in Employment.—The latest unemployment returns confirm the falling off in the expansion of business activity noticeable during October. In contrast to the movement a year ago, when the number of employed persons aged 16 to 64 in Great Britain showed an increase of 21,000 between September and October, this year the number declined by 47,000 to 11,659,000. Nevertheless, the number employed on October 18th still showed an increase of 464,000 over the corresponding month a year ago. The number of registered unemployed rose from 1,339,204 on September 13th to 1,390,249 on October 18th, but fell by about 166,000 on the year. The figures for the number of insured persons in employment are based on estimates of the total number of persons insured under the scheme which are made in advance month by month from one July to the next. The ascertained figure for July, 1937, shows that the increase since the previous July was much greater than

had been estimated, and the number of insured persons in work in September was actually 11,706,000, instead of 11,599,000 as was previously estimated, the difference thus being 107,000.

UNEMPLOYMENT BY INDUSTRIES IN GREAT BRITAIN.

Industrial Group	Number in Thousands				Percentage
	Oct. 26, 1936	Sept. 13, 1937	Oct. 18, 1937	Oct. 18, 1937	
Coal-mining	176.7	118.3	114.6	12.7	-5.0
Engineering	80.5	39.8	41.1	5.5	-1.3
Road transport	32.3	20.7	24.5	11.2	-3.5
Shipbuilding and repairing	41.1	37.4	35.7	22.1	-3.3
Building	127.5	115.4	124.3	12.2	-0.2
Public works contracting	117.2	102.8	105.3	36.4	-4.1
Cotton	60.6	48.4	39.4	9.4	-5.0
Woolen and worsted	16.9	23.4	26.8	12.0	+4.0
Tailoring	20.2	30.3	24.3	11.6	-2.0
Hotel, boarding-house, etc., service	73.7	50.1	70.7	16.2	-0.7
Distributive trades	188.4	155.8	171.6	8.4	-0.8
Iron and steel	24.9	19.6	19.5	11.5	-3.2
All persons registered (including other trades)	1611.8	1339.2	1390.2		

Employment has improved in the coal-mining, shipbuilding and repairing, cotton and tailoring industries since September, the most marked increase being in cotton. Of all the industries, only the woollen and worsted trades show a decline since October, 1936.

Business Activity Steady.—While the latest employment returns are not altogether reassuring, this week's news from the principal industrial centres indicates that, apart from normal seasonal movements, business activity remains steady. Pig iron output has risen from 670,300 tons in October, 1936, to 726,600 tons in September and 769,600 tons in October this year. The October figure is a post-war record. The output of steel ingots and castings in October at 1,133,600 tons showed a reduction of 29,400 tons on September, but an increase of 73,100 over the corresponding month a year ago. The announcement that steel prices are to be left unchanged next year has called forth a considerable volume of inquiry, hitherto held up by uncertainty over prices. As the industry, however, still has a large volume of orders on hand, many manufacturers are not too anxious to add to their order books for the time being. The production of coal has increased from 4,883,700 tons during the week ended October 23rd to 4,933,200 tons during the following week, an increase of 472,500 tons over the corresponding week a year ago. Activity in the building and public works contracting industries still continues at a high level. In contrast to the active conditions in the heavy industries, new business in textiles remains small in volume, owing mainly to the sagging tendency of raw material prices.

WORLD'S COTTON PRODUCTION DURING THE LAST TWENTY YEARS

Overseas Correspondence

From Our Special Correspondents

United States

Rally in Wall Street

NEW YORK, November 1.—The strong rally in the share market after the two panic days of October 18th and 19th has been stimulated by one fact and two rumours. The fact was the reduction in margin requirements by the Federal Reserve Board. The Board had prescribed a margin of 55 per cent.—that is, of a purchase of securities costing \$100, the buyer could put up \$55 of his own money and borrow \$45; under the new arrangement, he may put up \$40 and borrow \$60. If the price of the security falls to \$99, his account is "restricted"; that is, he can buy no more, nor can he withdraw any funds. He is not, however, "called" for more margin until his cash equity falls below 30 per cent. of his debit balance—the latter provision being a regulation of the Stock Exchange, not of the Reserve Board.

One of the rumours which has affected the market forecast a sweeping revision of taxes, and specifically of those taxes which weigh directly on the capital market. The other rumour related to the price of gold, and was an echo of last spring: that, if lowering the price of gold was considered an appropriate boom control measure, raising the price of gold was an equally applicable depression control measure.

Decline in Business Activity

Much as the market is under discussion, the real centre of interest is new business. The business indices of the Federal Reserve Board for September are now available, and they show, as was expected, a marked decline.

BUSINESS INDICES 1923-25 = 100. ADJUSTED FOR SEASONAL

	Sept., 1936	Aug., 1937	Sept., 1937
Industrial production (total)	109	117	111
Manufactures	110	118	110
Minerals	102	112	115
Construction contracts (total)	59	63	57
Residential	47	40	38
All other	69	81	72
Factory employment	93.8	102.4	100.7
Factory payrolls	83.6	103.8	100.1
Freight car loadings	75	79	78
Department store sales	88	92	94

The groups in which production had fallen below the level of September, 1936, were among those producing consumers' goods: textiles, meat packing, leather and shoes, and one might add residential building. On the other hand, iron and steel, non-residential building, and the non-ferrous metals were all above the production level of September, 1936. Department store sales, although up in value, were probably down in volume, as prices are substantially higher. As late as September, therefore, the data were still anomalous; although the new capital market for corporate issues had long been moribund, the capital goods industries were relatively thriving; while the consumers' goods industries were lagging, with the conspicuous exception of automobiles.

The probable explanation is that, in the inflation-minded sellers' market of last winter, corporations drew heavily upon such funds as depreciation reserves, working capital, cash, etc., and this gave a spurt in demand that could not be maintained in the absence of an issue market. The relatively unfavourable progress of consumption industries is most easily explained by the fact that a year ago the \$2,000 millions Veterans' Bonus was an influential factor. At all events, the anomaly has now disappeared; in October there was a conspicuous slump

in the capital goods industries; but oral reports still assert that retail trade has been little affected, except in distinctly luxury items.

Imports fall, Exports rise

Another series which throws some light on these questions is the table of imports.

	MERCHANDISE IMPORTS (\$'000,000)		
	1935	1936	1937
January	167	187	240
February	152	193	278
March	177	199	307
April	171	203	287
May	171	192	285
June	157	191	286
July	177	195	265
August	169	193	246
September	162	216	233
October	189	213	
November	169	196	
December	187	245	

In no series does the sellers' market of last winter show more distinctly. Beginning in December, 1936, imports showed a phenomenal increase until the end of March; and then began a recession which has persisted. There was a fall in both volume and price; and it is not greatly affected by seasonal considerations. Nor can one describe this decline in terms of the autumn break in the stock market; goods imported in September had presumably been ordered in early summer. This series illustrates the fact that orders began to recede rather sharply in the spring, while production was maintained against unfilled orders until September, and to some extent until October.

Our export trade shows a similar cyclical appearance, except that as late as September it showed no sign of recession:—

	MERCHANDISE EXPORTS (\$'000,000)		
	1935	1936	1937
January	176	199	222
February	163	182	233
March	185	195	257
April	164	193	269
May	165	201	290
June	170	186	265
July	173	180	268
August	172	179	278
September	199	221	297
October	221	265	
November	270	226	
December	223	230

CAPITAL & SURPLUS.....£260,000,000

NEW YORK PARIS BRUSSELS HAVRE ANTWERP

While the spurt in imports appeared in December, 1936, and culminated in March, the spurt in exports did not appear until February, and has persisted. The effect on the merchandise balance shows rather distinctly in these months:—

MERCHANDISE BALANCE			
(\$'000,000)			
(+ = Excess of exports.		- = Excess of imports)	
September, 1936	+ 5	April, 1937	-18
October, 1936	+52	May, 1937.....	+ 5
November, 1936	+30	June, 1937	-21
December, 1936	-15	July, 1937	+ 3
January, 1937	-18	August, 1937	+32
February, 1937	-45	September, 1937	+64
March, 1937	-51		

The persisting decline in imports and the persisting rise in exports cannot be ignored.

In the price structure, in merchandise imports, in the unadjusted index of production, and in what little is known about orders, one can see clearly the waxing of the sellers' market early last winter; its persistence during the winter; and its waning in the spring, with its continued appearance in actual production until the autumn. One can fit this to the stock market: the strong winter market; the decline from March to June; the July rally when heavy industry showed less than the expected summer recession; and the August decline when elation about summer activity faded into disappointment as orders placed months before in the sellers' market were worked off and new orders failed to materialise. As far as it goes, this is a rational and not unsatisfactory explanation; and it is becoming what might be called the standard version. It recognises that the full decline in production not only was not shown in the September data, but will not be fully reflected in October. Projected, it becomes an anticipation of a severe, sharp, but very brief depression—the "V-shaped" depression of the cyclical theorists.

Germany

The Pact and the Powers

BERLIN, November 10.—The entry of Italy into the Anti-Comintern Pact has been greeted with over-jubilation. Sticklers for logic and consistency are hardly so well satisfied as are mere politicians. To the latter the new Triangle is an instrument for strengthening Reich diplomacy in world affairs generally. The former believe that this aim might have been attained by less self-contradictory means. Even in the light of German official and inspired Press statements the Anti-Comintern League contains elements that are inconsistent with one another. One main official thesis is that Bolshevism is specially and exclusively Asiatic; behind this is the demand that Russia should be excluded from Europe. But the Reich's first ally against this "Asiatic" system, it is noted, was Asiatic.

Again, the National-Socialists profess to believe that all democracies, as distinguished from authoritarian countries, are threatened by Bolshevism; and they appeal to these countries to join the Pact. But it is simultaneously asserted that democracy is itself the inevitable stage towards Bolshevism; and even that all democratic countries (with the curious exception of certain "neutral" small countries, some of which, it happens, have actually had "Marxist" Governments) are already Bolshevik. This assertion is not confined to Czechoslovakia or even to France, but extends to Great Britain. The British re-armament programme, in its day, was described under fat headlines as a Bolshevik enterprise, and to-day readers of a solid Berlin newspaper learn that the object of the British Government in taking to broadcasting in foreign languages is to dis-
 seminate Bolshevik propaganda. The mere stickler for logic might ask: If London is asked to join the Anti-Comintern, why should not Moscow also be asked?

The cost-of-living index for October was 124.8, compared with 125.1 in September. Average weekly earnings from wages in industry in June, 1937, are reported to

have been 0.4 per cent. higher than those of December, 1936. Negotiations have led to official reductions of from 5 to 10 per cent. in the prices of proprietary articles, such as domestic electrical goods, radio parts and loud-speakers, cosmetics, pharmaceutical preparations, photographic materials, office articles and fuel oils. The annual estimated saving to consumers is, however, only Rm. 100 millions, of which Rm. 76 millions will be saved in the prices of chemists' goods. Where these proprietaries compete with non-proprietary articles the prices of the latter may be forced down. Since the beginning of the year the decreed or agreed price reductions have brought a saving to consumers estimated at between Rm. 277 millions and Rm. 321 millions.

Dr Schacht and the Four Year Plan

The exact position of Dr Schacht is still a matter for conjecture. The public is not told anything. The Nazi Party's own economic journal which, without admitting any crisis, published an account of intended changes in organisation was confiscated. According to this journal, the Ministry of Economy, together with the other Ministries which are to be subordinated to the Four-Year Plan organisation, will remain. In his statement to the Swiss Press Dr Schacht said merely that he had "requested to be relieved." It would seem that if his request has been formally accepted a new Minister of Economy must be appointed. This can hardly be done without letting the public know that Dr Schacht is no longer Minister. So far as opinion abroad is concerned, publicity has been easier to manage. The gradual filtering through by way of rumour, denial and half-admissions softened the shock of what, had it been suddenly divulged, would have created an international sensation.

The Four-Year Plan is being pressed forward vigorously. Large investments are announced by the Mansfield Copper Company, the Salzdetfurth Potash Company (for the new light metal magnesium), and other concerns. In general these investments are self-financed, new issues being inconsiderable. House-owners are now finding difficulty in getting metal for small repairs; and though dwellings must be painted outside, they may not be painted inside. Certain kinds or dimensions of wood, rope and other necessities cannot be had. As the new restrictions mostly concern goods used in insignificant quantities, the saving effected by this rationing of materials is small.

Busy Industries

Industry is still active; and Christmas trades are reported to be doing well. The Institute for Trade Research estimates that the quantity of the world's production of agricultural and industrial goods in 1936 was 13 per cent. above the high level of 1928-29; of industrial goods alone it was 18 per cent. above the 1928 output, and in the present year will probably be 30 per cent. higher than in 1928. Germany's percentage of the combined agricultural and industrial production of the world is about the same now as it was in 1928-29. The same authority finds signs of a change in the distribution of German foreign trade. Whereas up to now the tendency has been towards reduction of active and passive balances with individual countries and continents, the balances now seem to be increasing.

The goods traffic of the Reich Railway Company in September was 13.94 per cent. higher than in September, 1936. The length of Reich motor roads open for traffic rose in September to 1,559 kilometres. The increase in the employment of women is continuing: out of 931,000 persons added to the number of employed between June, 1934, and June, 1937, some 467,000 were women. The steel syndicates report that manufacturers have now less trouble in getting their rations of materials. In September the export of heavy iron and steel goods again declined considerably, while imports increased. The export of machinery in the first nine months was 303,600 tons, which *pro rata* is 22 per cent. higher than in 1936.

A law promulgated on November 5th deprives persons who have already been deprived of German citizenship (mostly political refugees) and their children

of their rights of inheritance. Such persons may not be given presents, under pain of imprisonment. Persons of German blood are authorised to deprive descendants who have married Jews of their shares in their estates.

Reich receipts from taxation in September were Rm. 1,470 millions, compared with Rm. 1,134 millions in September, 1936. In the first half of the financial year receipts were Rm. 6,790 millions, compared with Rm. 5,521 millions in the first half of 1936: of this increase Rm. 1,052 millions came from direct taxes, and Rm. 216 millions from Customs and Excise. The municipal Citizens' Tax (in reality, an income tax) has been amended mainly in the interest of large families. The income up to which reductions for children are allowed has been raised from Rm. 12,000 to Rm. 25,000.

Latvia

The State in Banking, Trade and Industry

RIGA, October 26.—The Director of the Credit Bank of Latvia recently gave an account of the activities of this State institution, which was founded only a few years ago. He explained how the bank had become a dominant factor in Latvia's economic life. The tasks allotted to the Credit Bank by the Government were of a very extensive character. Besides the granting of short- and long-term loans, the bank was given the right to liquidate independently those private concerns which found themselves in difficulties, to found new commercial and industrial undertakings and to acquire real estate for State requirements. In executing these tasks, banking in Latvia assumed a new character. At the time when the Credit Bank was founded, there were 15 joint-stock banks in Latvia with a total capital of 22.5 million lats, some 68 per cent. of this being foreign capital. To-day, according to the Director, only 7 banks operate with a total capital of 56 million lats, and foreign participation only amounts to 6 per cent. The Credit Bank alone has a capital of 40 million lats.

State monopoly is also to be seen in trade and industry. The following branches of industry have more or less been taken over by the State: heavy industry, building material, electricity, tobacco, brewing, confectionery and textiles. The method is to form limited companies financed by the State, with the intention of distributing part of the shares among private investors. The idea is not so much to found new enterprises as to take over already existing ones, including those working with foreign capital. This policy is doubly justified in official circles: first, it is asserted that it is in the Latvian national interest to suppress the overruling influence of the alien, i.e. of Jewish and German as well as other foreign capital in Latvian trade and industry; and, secondly, it is emphasised that the new undertakings which have been founded with State capital are able to safeguard common interests and not simply the interests of the individuals who founded them. They are alleged to produce better quality goods at regulated prices.

The process of industrialisation which is strongly evident in Estonia is also notable in Latvia. Thus the unemployment of the crisis period has been replaced by a shortage of labour, and particularly of skilled artisans. The employment index for all industries stood at 150 in June, 1937, compared with 135 in June, 1936. The index of production of producers' goods has risen in the same period from 148 to 174 (1930-33=100).

Favourable Price Situation

In the first nine months of the current year goods to the value of 179.2 million lats were exported, while imports were valued at 170.1 million lats. The total value of foreign trade in the first nine months of the current year was 349.3 million lats, compared with 170.5 million lats during the first nine months of 1936. In comparing these figures, however, it must be remembered that the lat was devalued at the end of September,

1936, which caused a considerable rise in some prices. The index of wholesale prices in Riga in July was 105 for imported goods, compared with 82 in July, 1936; and it was 145 for exported goods, compared with 83 (1913=100). The export surplus is partly accounted for by this favourable trend in prices, although the exports of certain commodities, such as timber, considerably exceed those of the previous year in quantity as well as in value. The exchange position has accordingly improved, and exchange for imports has recently been granted with increased leniency. Thus during recent months 45 million lats were granted in cash for imports. It has also become easier to import goods because the Government has lately lowered various customs duties to check the continued rise in prices.

As far as can be ascertained, this year's harvest is on the whole satisfactory, so that the agricultural position, also due to favourable prices, may be considered good. The harvest of rye is estimated at 410,000 tons, compared with 280,000 tons last year, and that of wheat 90,000 compared with 80,000. The harvest of barley and oats was average, while hay showed a slight decrease. The increased purchasing power of landowners can be seen from the fact that the turnover of artificial manures was 20 per cent. higher than last year, and the demand for agricultural machinery was so large that the domestic industry had difficulty in coping with it. Indeed, it was necessary to import additional machinery from abroad. The shortage in labour has made it necessary in rural districts to introduce foreign immigrants, and everything is being done by the Government to speed up the mechanisation of agriculture.

China

War and Flight Capital

SHANGHAI, October 10.—To the economist the Sino-Japanese War presents a unique aspect, since both belligerents up till now have maintained their currencies at par. For Japan the maintenance of the yen at its level of 1s. 2d. has been not very difficult; for her ample currency reserves are used to maintain the equilibrium of her balance of payments, while a close system of exchange control measures—e.g. the limitation of remittances abroad, import control, etc.—is employed to restore an equilibrium already dangerously disturbed before the outbreak of hostilities.

For China more complicated problems arose, as soon as events in North China took a serious turn. In sharp contrast with the wave of patriotism pervading the Chinese middle class, many of the richest Chinese families living in Shanghai displayed a tendency to remove both their capital and their persons from danger. Varying estimates are available of the flight of capital from Shanghai, and it is likely to have carried away more than £10 millions sterling during the first two months of the undeclared Sino-Japanese War.

To cope with this situation the Chinese authorities were unable to fall back on the new-fangled exchange control system *à la Schacht*. Given the extra-territorial status of foreign individuals and foreign banks, any such system would have been ineffective. Accordingly they have developed a system of banking restrictions akin to exchange control. When hostilities broke out in the Shanghai area Chinese banks were enjoined by emergency decree to close their doors. When the banks were re-opened a few days later, restrictions were imposed upon the withdrawal of funds, such withdrawals

BRITANNIC ASSURANCE COMPANY LIMITED

Chief Office: BROAD STREET CORNER, BIRMINGHAM

being limited to 5 per cent. per week of the total amount due from the bank on August 12th, such 5 per cent. not to exceed 150 Chinese dollars. In other words, the flight of capital was stopped by immobilising the liquid resources of the nation. These measures may be likened to the partial bank holidays held in Germany in the summer of 1931, before the standstill agreement with Germany's creditors had been arranged.

At the same time, the banks controlled by the Chinese Government refused to sell foreign exchange unless cash was offered in payment. "Blocked" accounts with Chinese banks could therefore not be used for the purchase of foreign exchange. The result of these measures was an artificial stringency of cash, leading to sales of foreign exchange to the Government banks which used the strong position they had secured to raise the exchange value of the Chinese dollar. With large cash disbursements at the end of August, the market situation was again reversed and a fresh demand for foreign exchange developed which was fully met by the Government banks, though at rising prices. With the end of September approaching the demand for Chinese cash resulted in a strengthening of the dollar exchange.

Effects of the Bank Restrictions

While, as a measure of exchange control, the partial bank holidays have thus been fully successful, internally there are now two currencies: cash, i.e. notes issued by the Government-controlled banks; and "clearing" money, called by the Chinese name "Wei-wah" or "Hui-hua." Clearing money is affected by the restriction on its uses and by the uncertainty about its future, since nobody can foresee what emergencies may arise and what further restrictions may be imposed upon this secondary Chinese currency. In view of this a tendency has developed, on the one hand, to sell "Wei-wah" balances at a discount, and, on the other hand, for the Government to find additional uses for "Wei-wah" money, to reduce the discount to a low figure. Thus "Wei-wah" money may be used in certain commercial transactions and for the payment of export duties. While the discount has at times exceeded 5 per cent., it was reduced by the end of September to 3 per cent.

This measure of exchange control, first put into force in Shanghai, has been later extended to Tientsin and other places. The artificial stringency in the money markets which has thus been created has naturally led to serious difficulties for the business which is still left in China. Chinese merchants have found themselves deprived of cash and unable to fulfil their commitments. As a result, foreign importers have been unable to pay cash for their forward exchange settlements, etc. But now business is slowly developing on a cash basis.

A serious situation might arise if the Shanghai area were to be evacuated by the Chinese troops. In that case, the Chinese Government and banks might decide to freeze all Shanghai accounts and thus to isolate Shanghai financially from the rest of the country. To some extent such isolation has already begun, and it is significant that, in contrast with the artificial stringency in Shanghai, the Government-controlled banks in no less than fifteen important cities in the interior of China have already created special credit facilities, in order to replace the banking facilities which have normally been provided by the Shanghai banks.

Canada

Albertan Legislation

OTTAWA, October 22.—The Federal Cabinet has now under consideration three measures, two dealing with the banks and the third with the Press, to which the Lieutenant-Governor of Alberta withheld assent. They have also in their hands a brief submitted by the Alberta Ministry in which it is contended both that this legislation is valid and that the Federal power of dis-

allowance cannot be exercised. The Alberta Ministry proposes that their validity should be referred to the Supreme Court. In August, when two earlier Bills which were disallowed were the subject of controversy, the Aberhart Ministry rejected the proposal of the King Cabinet to refer them to the Supreme Court. In Alberta the Aberhart Ministry has suffered a rebuff by the decision of a judge that the Order-in-Council, laying down that permission must be secured to challenge the validity of its legislation in the Courts, was invalid.

Mr Cordell Hull, the American Secretary of State, has been visiting Ottawa, and it has been taken for granted that he would discuss with Canadian Ministers the project for a triangular readjustment of the trade relations of Britain, Canada and the United States. Since the negotiations were launched very little progress of any value has been made at the Canadian end, and it is an open secret that at least one influential member of the Cabinet is vigorously resisting any abatement of Canada's preferential privileges on apples and other fruit in the British market. On the eve of Mr Hull's arrival, Mr Cahan, an ex-Minister, delivered a bitter attack on behalf of the Conservative party upon the idea that Canada should make any sacrifice of her preferential position for the sake of a country which had penalised Canadian producers by a series of extravagantly high tariffs, like the Fordney-McCumber and Smoot-Hawley measures.

Business Still Active

The approach of winter finds the business community in rather a puzzled frame of mind. The severest stock market slump since the debacle which ushered in the great depression has just taken place, and yet most indices of business activity remain reasonably encouraging. The stock market slump is chiefly responsible for the sharp recession in the Bureau of Statistics' general economic index during the first half of October; standing at 110.6 for the week ended October 2nd, it fell in succeeding weeks, first to 109.1, and then to 106.5. The figures below of comparative data show the general trend.

Week ending	Car-loadings	Wholesale Prices	Bank Clearings	Economic Index
October 17, 1936	77.2	77.1	103.0	113.9
October 2, 1937	84.4	85.2	103.8	110.6
" 9, "	81.6	84.8	101.7	109.1
" 16, "	78.7	84.7	93.4	106.5

In the country districts the sale of the new crops at profitable prices is increasing rural purchasing power; and the movement of miscellaneous merchandise is rather greater in volume than it was a year ago, although the mildness of the autumn has retarded the normal seasonal buying of warm clothing and other goods. The summer tourist traffic, which is estimated to have been about 18 per cent. more valuable to the Dominion than in 1936, has left a great deal of cash at the holiday resorts; and the number of wage-earners is larger than in the autumn of 1936. Figures recently published by the National Employment Commission show that the number of employable persons out of work had in July been reduced to 158,000 compared with 206,000 in September, 1936, a fall of roughly 25 per cent.

The activity of the mining industry is well maintained. During September exports of copper, nickel and zinc were 364,890, 186,605 and 253,146 cwts. respectively, compared with 326,501, 159,485 and 299,099 cwts. in September, 1936. The production of gold was 354,308 fine oz. compared with 316,904 fine oz. a year ago. The volume of new construction for September was also encouraging; the value of new contracts was \$21,715,000 or about 5½ million dollars above the figure for September, 1936. The heavy industries also remain very busy; and the outputs of iron and steel for September were 114,622 and 77,180 tons respectively, compared with 86,077 and 77,180 tons in September, 1936.

Danger Signals

There are, however, certain danger signals which cannot be ignored. For one thing the stock market slump is already beginning to operate as a brake on the purchase of luxury goods, and manufacturers of motors and radios foresee a possible curtailment of their operations. Again, the business community in British Columbia foresees a curtailment of its export trade through the heavy tariff increases which have been applied by the Japanese Government.

Letters to the Editor

Are We Living on Capital?

TO THE EDITOR OF THE ECONOMIST

SIR,—Sir Robert Kindersley's view, with which you concur, that "Great Britain is in danger of eating into her financial patrimony by not keeping her total of overseas investments intact," is very much a "national" view having little regard to the attitude of debtor countries. If a lower interest outgo on the Australian Budget means less investment income on the British Balance of Payments, then what the British rentier loses in income the Australian taxpayer gains.

But you also assume that the reduction in overseas indebtedness means an absolute reduction in investment. Whether investment is absolutely reduced or not depends on the opportunities for profitable reinvestment: in an upward phase of the trade cycle the repayment of overseas investment can be regarded as a preference for investment in Great Britain to investment abroad. The new investment at home could lead to an expansion in exports, which would be met by a willingness on the part of overseas countries to buy, since the income of their nationals would be higher, and foreign exchange formerly required for interest transfers would be available for additional imports.

It comes to this: Shall accumulation lead to investment overseas or to investment in Great Britain? Shall overseas rentiers receive income or shall British rentiers receive income? Investment will be made wherever investment is profitable: it would be a wrong Governmental policy that prevented overseas investment when there was no field for investment at home. The precise significance of a repayment of capital will depend on the trading relations between the countries concerned, the use to which the repaid capital is put, and the effect of the repayment on the debtor country.

Yours faithfully,

G. O. HOSKINS.

Withdean,
Brighton.

The American Constitution

TO THE EDITOR OF THE ECONOMIST

SIR,—It has been suggested that the British public has completely failed to comprehend the American situation. If I may be permitted to say so, this impression is continually given by your comments on American affairs.

It is significant that well-informed people in America, both conservatives and liberals, have been practically unanimous in opposing the President's Supreme Court proposal, and have regarded the battle against that proposal as fairly comparable with the outstanding battles for freedom in the course of English history. There is the same unanimity among thinking Americans in regarding our Constitution as the prime source of American happiness and prosperity.

Yet your editorials and contributed articles would lead an Englishman to think that the American Constitution is an impediment to American progress and American liberties, and that the opponents of the Supreme Court proposal were visionary neurotics, battling over unimportant details of procedure. And your comments on American politics suggest that you would recommend an Alcibiades to deliver America from its Anglo-Saxon traditions.

Let me add that I am far from being a hide-bound conservative; on the contrary, I have long been a Democrat and am one of the immense army of liberals who voted for Roosevelt in 1932. We have suffered shocking disillusion-

The newsprint industry, which has had all its plans laid to secure a substantial increase in the price of newsprint—up to \$50 per ton—for 1938, has become alarmed at the possibility of over-production; and to avert this one of the largest newsprint corporations has cut the working time in its plants from six to five days per week. Meanwhile, the price of \$50 per ton has been put into effect, and the one company which declines to conform to it immediately has agreed to raise its price from \$48 to \$50 in the last half of 1938.

ments as the visionary and totalitarian policies of the New Deal have been gradually disclosed and steadily carried forward, and we do not understand how you could fail to be equally shocked.

Yours very truly,

CHARLES A. ROBERTS.

New York.

[If Mr Roberts will look back on *The Economist's* comments on American affairs since March 4, 1933, he will find a very large admixture of very stiff criticism of the New Deal. If *The Economist's* judgment on the Roosevelt Administration has had a balance on the favourable side, this has been due, as has repeatedly been stated, to the complete failure of the Opposition to propound a viable alternative.

On the specific issue of the Constitution, *The Economist* cannot fairly be accused of failure to point out the supreme importance, as a political issue, of the Constitutional conflict. We also take the liberty of believing that we do fully understand the grounds of opposition to the President's proposals for Court reform; but we happen to disagree with them. It is not so much American progress and liberties which we believe to be obstructed by some clauses of the Constitution in its present interpretation, as any form of effective government. And we are, with regret, unable to

consider the Anglo-Saxon tradition as identical with a document largely influenced by French political scientists. That *The Economist's* opinions on American affairs do not always coincide with those of all its American readers is a matter for regret. Where the opinion is based on inaccurate or inadequate information, we have always been glad to publish the correction. But we do not believe that our readers would wish us either to conceal or to alter views which are arrived at with the help of as much information and impartiality as we can contrive.—ED. *Econ.*]

British Banking Principles

TO THE EDITOR OF THE ECONOMIST

SIR,—Mr S. Herszberg states in his letter in your issue of November 6th that the clearing banks do not show separately the figures for current and deposit accounts, but these are in fact made available month by month, and are reprinted in the Bank of England Statistical Summary. Since 1932 the proportion of current to total accounts has shown a tendency to rise to the 1928 level, the average percentages being 49.5 in 1932, 51.3 in 1933, 51.8 in 1934, 53.8 in 1935 and 54.9 in 1936. The percentage for September, 1937, was 55.2.

The statistics suggest that the percentage of deposit accounts rises in depression and falls in prosperity. There

seems little reason why advances should be closely related to deposit accounts. The truth is that "traditional percentages" are not nearly as traditional as they are sometimes thought to be—as an inspection of any pre-war bank balance-sheet would show. Again, the belief that the banks "can so adjust the withdrawal of advances as to coincide with the expiration of the term of their saving deposits" has, one imagines, no real basis in fact.

It may also be asked whether advances are, in fact, illiquid, as Mr Herszberg states, or even whether they are not as liquid, as a group, as investments. Advances are never made for more than six months or a year: a considerable proportion of them must therefore be turned over every month. On the other hand, the capital loss which the banks sustain every time they sell Government securities at the present juncture must militate against the liquidity of their still enormous holdings.

Lastly, Mr Herszberg refers to the temptation to maximise profits. Banking, reduced to its simplest terms, consists, of course, in achieving a balance between liquidity and profitability. Experience shows, however, that the clearing banks have seldom hesitated to prefer liquidity in the last resort (cf. the big increase in 1935 and 1936 in money lent unprofitably at call, with the object of maintaining liquidity).

Yours faithfully,

Peterborough.

A. M. ALLEN.

Books and Publications

Indian Markets

THIS book,* by the Lecturer in Commerce in the University of Lucknow, was written for the degree of Doctor of Philosophy of London University. It was a pity that it could not have been re-written before publication. The information which the author has collected and his own conclusions from it should receive the attention of all who have an interest in Indian policy, while there are a number of descriptive passages to attract the more general reader. But, as the book stands, it has all the appearance, and the disadvantages, of a hastily completed thesis: sentences and paragraphs which distract instead of enlightening the reader; repetition—especially in Chapter V; and a first chapter on the subject of world agriculture, which would have been safer left to the bibliography. The greatest disadvantage

is in the manner in which opinions and policy have been mixed with fact and criticism. Admittedly there is a difficulty when the foreknown conclusion is for a policy operating "along the whole agricultural front," but this conclusion depends entirely upon a clear understanding of the available information; and Dr Husain's case would have been greatly strengthened if Part II ("Present Conditions") had contained analysis alone—including Chapter XI on "Co-operation"—and all his proposals for the future had been left to Part III on "Problems and Policies." It would then have been easier, too, to distinguish between what is considered vitally necessary and what is merely useful suggestion.

As a book, Dr Husain's work is open to several criticisms, but it is as a piece of research that it must be finally judged, and by its conclusions. The research occupied five years and included a number of personal visits to the various markets for agricultural products in Northern and other parts of India. The result is to be seen in the chapters on marketing procedure and finance, which make most interesting reading, and in Chapter VIII, where the particular problems attached to the staple commodities of Northern India—wheat, rice, sugar-cane, oilseeds, cotton and jute—are carefully examined.

For a long time to come, Dr Husain argues, expansion of Indian industry will mostly provide increased scope for specialised and labour-saving machinery: the solution of the population problem will have to depend upon agricultural developments. Improvement of methods, he continues, though very necessary, will, alone, be inadequate: marketing is an integral part of production, especially when, as at present, there is no market for improved products even when they are forthcoming. Indeed, he goes on, all the agricultural problems of India—indebtedness, poverty, unorganised production, inefficient distribution—as well as production and marketing, are interdependent. Therefore, the patchwork methods of the past must be replaced by a co-ordinated and continuous policy dealing directly with the peculiar problems of Indian agriculture and of Indian peasant psychology. In his view, an extensive programme of education, propaganda and reform is required which will include improvements in cultivation—seeds, implements, fertilisers, irrigation schemes; the development of road and rail transport; the abolition of octroi duties; the imposition of uniform weights and measures; and the standardisation and grading of agricultural produce. Even this, he urges, will not alone be sufficient. The provincial legislatures, backed by the

central authorities, will have to establish new regulated markets and a whole network of godowns and licensed warehouses, before controlled movement of agricultural produce from the farm to the wholesale markets and consuming centres can take the place of the present feverish seasonal activity.

Dr Husain is an optimist, envisaging the time when the problem of India's lost wheat exports will be solved by home consumption, and many will cavil at his slight handling of the question of finance, at the number of boards, committees and inspectorates which he proposes, and at his ideals of co-operation. But his book will remain a challenge—to action or to refutation.

Shorter Notices

"Afterthoughts: A Sequel to Back from the U.S.S.R." By Andre Gide. Translated by Dorothy Bussy. Martin Secker and Warburg, Ltd. 1937. 120 pages. Price 2s. 6d.

The prompt appearance of an English version (excellently translated, as was the preceding volume) of Gide's second book on his experiences in the U.S.S.R. is very welcome. It is, in the main, a reply to criticisms provoked by his earlier book, which, as he remarks, was received by the Left very much as his book on the French Congo had been received by the Right. As in the Congo, so in Russia, it was only after he had escaped from official guides and official statistics, "and decided to travel on foot and alone, so as to fill six months in which to get into direct contact with the natives" (he was accompanied during the whole time by friends who knew Russian), that he began to see things clearly. In spite, however, of his distrust of statistics (for which he has often been reproached), he produces several well-chosen and well-authenticated ones, which—particularly on the subject of education—will probably be as unwelcome to his critics as "justice" was to Shylock when it finally came to him. What disturbed him most was to discover, not merely the persistence, but the perpetuation of what he had hoped (and mainly because of that hope had called himself a Communist) that Communism was abolishing—privilege and inequality.

"Dieci anni di Economia Fascista: 1926-1935." *Annali di Economia*, Volume XII. Cedam, Padua. 577 pages. 100 lire.

This is a series of lectures on Italian economic policy in the last decade, some expanded into substantial essays and some not, delivered by well-known Italian economists. Some contain a great deal of valuable information, others are fascinating simply as studies in propaganda. Professor Masci's essay on agricultural policy belongs to the first group; and Signor Luzzato-Fegiz' rhapsody about population to the second. The book as a whole is to be recommended as a collection of evidence about Fascism and Fascists.

THE ECONOMIC POLICY OF FRANCE

BY

THE HON. GEORGE PEEL

AUTHOR OF "THE FINANCIAL CRISIS OF FRANCE," ETC.

8/6 net

THERE is more than one reason why the British Public should be closely informed as to the economic policy now being pursued by France. Since the War, the fiscal relationship of France and Great Britain has grown much more intimate than before, and there is every sign that this will be the case increasingly in the future.

Next, owing to political developments on the Continent, the stability of the French Republic is steadily becoming of more consequence to ourselves. But the stability of that Republic reposes ultimately upon the soundness of its economic system.

MACMILLAN & CO., LONDON, W.C.2

MONEY AND BANKING

Gold and the Dollar

DURING recent weeks the bullion and foreign exchange markets have taken a new turn. No longer is the franc subject to pressure, but instead the dollar has persistently weakened, until a few days ago the sterling rate was over \$5 for the first time for more than a year. Simultaneously a new demand for gold in the London bullion market sent the sterling price up early this week to a premium of 17d. per ounce over the New York shipping price. And a shipment of gold has been arranged from New York to Paris—a movement which only a few weeks ago would have appeared incredible. Gold is also coming to London, while there have probably been other gold transfers from the American Stabilisation Fund, made under ear-mark.

The recent course of events is illustrated by the following table:—

	New York Exchange	London Bullion Market			
		Amount of sales	Price per oz.	Premium	
	\$ to £	£'000	s. d.	d.	
October 28	4.95½	697	140 7	3½	
29	4.96½	436	140 6½	4	
30	4.96½	297	140 4½	5	
Nov. 1	4.96½	317	140 5½	4½	
2	4.96½	337	140 6½	5	
3	4.96½	424	140 7	6½	
4	4.97½	464	140 6½	9	
5	4.99½	473	140 6	11	
6	5.00½	829	140 4	15	
8	5.02½	1,085	140 0½	17	
9	5.01½	1,043	140 0	16	
10	4.99½	590	140 2	13½	
11	4.99½	440	140 1½	11	

It will be seen that the depreciation of the dollar and the widening of the gold premium have proceeded *pari passu*, while the volume of gold dealings in London has also risen to much above the normal. There is a direct connection between these movements, ultimately traceable to the recent collapse of American share prices and the downward trend of business in the United States. These developments have inspired fears on the Continent that President Roosevelt may be tempted to devalue the dollar in terms of gold still further in the direction of the present statutory lower limit of 50 per cent. of its pre-1933 gold parity. This would leave room for a new American price of gold of anything up to \$41.40 an ounce, against the present price of \$35 per ounce.

The result has been a sudden flight of hot money out of dollars and into gold. As the United States authorities do not sell gold to all and sundry, but only to the central banks or Exchange Funds of other countries, it is not possible to buy gold for dollars in New York. The main demand for gold has thus fallen upon the London bullion market, and dollars have been sold for sterling to pay for the gold. The widening of the gold premium to 17d. per ounce is due primarily to this new demand, but it also reflects the efforts of the British and American authorities, working in co-operation, to keep this new movement under control. Their position may be readily appreciated. The present demand is far in excess of the current supply of new gold and can be satisfied only out of existing hoards or by sales of gold by the authorities. The latter, evidently, were prepared to sell it, though they have demanded a premium. Presumably they fixed their price so high in order definitely to discourage the movement out of dollars into gold, and to give as much support as possible to the dollar.

Is there any conceivable substance in the rumour of an impending fresh devaluation of the dollar? There

are many reasons for thinking such a move by President Roosevelt unlikely. Devaluation of a country's currency in terms of gold may be undertaken for any one of several reasons. First, the national gold reserves have been exhausted by a long-continued drain of funds abroad. Such an explanation would be absurd in the case of the United States, which is the largest gold holder in the world. A second reason might be a desire to write up the country's stock of monetary gold so as to enlarge the credit base. This again seems inapplicable to America's case. The whole trend of American policy until recently was to narrow the credit base and to eliminate redundant credit by increasing the minimum reserve requirements of the member banks. Even so, member banks' excess reserves still amount to \$1,000 millions, while rediscounts at the reserve banks are only \$24 millions. The credit base certainly seems wide enough for most purposes, even if the downward trend of business inspired the authorities with a desire to enlarge it. The simplest course of action would be for them to revise their recent policy and reduce the reserve requirements of the member banks; a course which might be equally effective and far less disturbing than a fresh devaluation of the dollar.

A final cause of devaluation is the over-valuation of a currency in terms of other currencies. There is no evidence whatever that the dollar is over-valued to-day. Even if it were, devaluation would be contrary to the Tripartite Agreement, since it would be tantamount to competitive currency depreciation. There is no ground whatever for suspecting Washington of such a breach of faith, which would injure America in the first place. For it would destroy the whole basis of her growing desire to co-operate in world economic affairs and, incidentally, would aggravate the problem of fugitive "hot money." Altogether it seems as safe as anything can be in this world to dismiss the rumour of a fresh devaluation of the dollar as groundless.

The new gold rush, however, following as it does the gold scare of last summer, makes one thing clear. Gold, like the dollar and the franc, seems likely to have its own ups and downs and to be, like them, from time to time the victim of the ebb and flow of hot money. The authorities already seem to have realised that, as they are the main holders of the world's available gold supplies, they both can and should intervene in the bullion market no less than in the foreign exchange markets. When gold was offered during last summer's scare they bought freely. When gold was in demand this month they sold, but only at a stiff price. By thus off-setting sudden movements into or out of gold they may claim to have done their best to minimise fluctuations in the exchanges. Every purchase of gold involves a sale of currency.

The moral of the episode, if it has one, is that sudden rushes into or out of gold are one of the irritants due to the instability of currencies and the world's economic affairs generally. To eliminate them we must exorcise their causes and absorb excessive supplies of liquid and fugitive capital into the normal channels of investment. International lending has now been practically at a standstill for nearly ten years. If confidence could be restored investment would revive both at home and abroad, and this problem of hot money would disappear. Meanwhile, gold's present vagaries have nothing to do with its intrinsic value or its suitability as the world's ultimate currency basis.

Financial Notes

Treasury Bill Issues.—The steady increase in tender issues of Treasury bills from £573 millions in September to £612 millions to-day may appear to call for some comment, but actually it is a perfectly natural movement. Since the end of September the floating assets of the departments, consisting of Ways and Means advances and tap issues of Treasury bills, have shown little net change. They fell from £332 millions on September 25th to £310 millions three weeks later, but have since risen again to £328 millions. The real explanation of the increase in the tender issue over the whole period is the expansion in the floating debt, which since September 25th has risen from £907 millions to £940 millions. This in turn is purely a seasonal movement, for during the same period the revenue deficit has increased from £93 millions to £127 millions, or by almost the same amount as the increase in the floating debt. Over the financial year to date, the nominal floating debt has increased by £242 millions, but £200 millions of this represents last June's addition to the Exchange Equalisation Account. Apart from this, there has only been an increase of £42 millions, the reason being that most of the deficit to date has been offset by the May issue of £100 millions of National Defence Bonds. A year ago the deficit to November 7th was £104 millions, or only £23 millions less than the current deficit. Thus the bulk of the money raised in National Defence Bonds has so far not been required to meet this year's greater discrepancy between revenue and expenditure. Instead, it has been used to lessen the normal increase in the effective floating debt.

October Clearing Bank Returns.—The October returns of the ten English clearing banks show a reduction since September of £3.6 millions in cash. Call and short loans, on the other hand, have risen by £2.3 millions and discounts by £15.4 millions. All these movements are traceable to the steady growth in the volume of Treasury bills issued by tender. Part of the proceeds of these new bills were during October accumulated in public deposits at the Bank of England. Hence the decline in clearing bank cash, while the month's increase in discounts shows that the banks have taken their share of the new bills:—

	Oct. 1936	June 1937	July 1937	Aug. 1937	Sept. 1937	Oct. 1937
Capital and reserves.....	131.8	132.5	132.5	132.5	132.5	132.5
Acceptances, etc.....	102.9	124.1	122.1	116.1	114.2	115.6
Deposits (including undivided profits, etc.)...	2,243.3	2,255.1	2,255.6	2,245.9	2,249.8	2,275.2
Total liabilities.....	2,478.0	2,511.7	2,510.2	2,494.5	2,496.5	2,523.3
Cash.....	223.6	237.7	231.8	231.0	234.3	230.7
Cheques, balances and items in transit.....	80.4	73.0	63.7	64.6	60.1	62.9
Money at call.....	158.9	166.2	157.9	156.7	157.4	159.7
Discounts.....	349.2	257.5	280.7	275.8	279.2	294.6
Investments.....	640.0	638.2	631.7	630.4	626.0	624.6
Loans and advances.....	872.9	947.4	954.7	952.6	957.5	967.3
Investments in affiliated banks.....	25.2	23.5	23.5	23.5	23.5	23.5
Cover for acceptances, premises, etc.....	147.8	168.2	166.2	159.9	158.5	160.0
Total assets.....	2,478.0	2,511.7	2,510.2	2,494.5	2,496.5	2,523.3

October witnessed a further increase of nearly £10 millions in advances. This expansion, together with the decrease in cash and the increase in discounts, obviously limited the banks' powers to hold investments, and so it is not surprising that this item is slightly smaller than in October. Deposits have increased by £25.4 millions, so that the aggregate cash ratio has fallen from 10.4 to 10.1 per cent.

The Foreign Exchanges.—The market this week has been overshadowed by the movements of the dollar. For reasons discussed in the leading article on the previous page, the dollar steadily depreciated until on Monday sterling momentarily rose to \$5.03. This movement continued in the face of official support for the

dollar. Gold shipments from New York of \$10 millions to France and \$5 millions to England have officially been announced, and according to a New York estimate, the total losses of the Stabilisation Fund whether through shipments or ear-marking, amount to \$150 millions. London regards this estimate as an exaggeration, but it is conceivable that the total American gold losses have been considerable. Since Monday, however, the dollar has rallied, until by mid-day Thursday sterling fell to \$4.99½. Simultaneously, the premium in the London bullion market has narrowed to 11d. per ounce, so that it is clear that the pressure is subsiding. President Roosevelt's conciliatory attitude towards the American utilities on Wednesday did something to hold the dollar, while the action of the authorities on both sides of the Atlantic must have had a steadying influence. Meanwhile, French francs have remained very steady, at about Frs. 147. The arrival of gold from New York will have a good psychological effect, but it is questionable if there is much improvement in the franc's underlying conditions. Other continental currencies have remained steady. The belga is slightly weaker, but on the whole has maintained its strength in spite of the absence of any government in Belgium.

The Bank Return.—This week there is a slight contraction in the note circulation, and a still smaller increase in the reserve. These movements are due to the return of currency after the end of the month, but they are smaller than might have been expected, and there has been a net increase in the note circulation during the past fortnight.

	BANK OF ENGLAND				
	Nov. 11, 1936	Oct. 20, 1937	Oct. 27, 1937	Nov. 3, 1937	Nov. 10, 1937
Issue Department:—	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Gold.....	248.7	326.4	326.4	326.4	326.4
Note circulation.....	446.6	484.3	483.1	485.9	485.6
Banking Department:—					
Reserve.....	62.9	43.7	44.9	42.1	42.4
Public deposits.....	14.9	29.8	32.2	30.3	30.7
Bankers' deposits.....	98.0	89.3	87.7	89.4	90.9
Other deposits.....	41.6	36.3	36.6	36.6	36.1
Government securities.....	80.4	99.6	100.2	103.4	103.9
Discounts and advances.....	8.6	6.5	8.1	7.8	8.4
Other securities.....	20.3	23.2	20.9	20.7	20.7
Proportion.....	40.7%	28.1%	28.6%	26.9%	26.8%

Movements in the banking department are also unexpectedly small. A week ago the absence of any drop in public deposits was due to the absence of Treasury bill maturities on November 1st and 2nd, but this week there was only the usual Monday absence of maturities, and so this explanation no longer applies. Even so, public deposits have fallen by less than £2 millions, while bankers' deposits have also risen by very little.

The Money Market.—The Bank Return shows that bankers' deposits are little higher than a week ago, and on several days of this week there was calling by one or other of the clearing banks. This occasioned a fair afternoon demand for loans, but conditions remain fundamentally unchanged. Christmas currency withdrawals will only begin to make themselves felt in three weeks' time, and until then the usual ease is likely to continue.

	Oct. 20, 1937	Oct. 28, 1937	Nov. 4, 1937	Nov. 11, 1937
Bank rate.....	2	2	2	2

Others.....	1½	1½	1½	1½
Discount rates:—				
Treasury bills.....	1½	1½	1½	1½
Three months' bank bills.....	1½-1*	1½-1*	1½-1*	1½-1*

* Loans against Treasury bills and other approved bills and British Government securities within six months of maturity; 1 per cent. Treasury Bonds and other gilt-edged stocks within six months of maturity; and other collateral respectively. The banks have been keen buyers of Treasury bills, for all dates up to and including the first three days of February. Last week's tender rate was practically unchanged at a fraction over ½ per cent.

THE STOCK EXCHANGE

Argentine Railway Prospects

ARGENTINE railway results for 1936-37 have surpassed those of any year since pre-depression times. True, the dividendless ordinary stockholder might still greet this statement with a wry face, for recovery so far provides no assurance of an immediate—much less permanent—re-establishment of his stocks to the dividend list. Yet, measured by the semi-depression standards which have been typical of recent years, each company registered a striking advance last year. How far can this improvement be regarded as a decisive change? Have the companies solved their depression problems? What prospects does the current year hold for the marginal shareholder?

These questions may be answered, in part, from the table which appears at the foot of this page. It compares the main traffic, operating and revenue movements of the four principal lines last year with those of 1935-36 and with the last pre-depression year—1928-29. The first section of the table sets out the physical movement in traffics and the equivalent sterling receipts. The second traces the corresponding movement in direct operating expenses. For this comparison, we have excluded renewal provisions from the totals for maintenance of permanent way and rolling stock. Such provisions, of course, are included under the heading "Working Expenses" in the revenue section of the table. Exchange losses are not separated, but are taken into account in computing the sums earned for fixed charges. The earnings cover calculations are self-explanatory in principle, but are further clarified in footnotes.

The main story of our comparative table is clear. Both B.A. Great Southern and B.A. and Pacific increased their gross receipts by nearly 11 per cent., B.A. Western by 6½ per cent., and the Central Argentine, blessed by Nature's bounty, by no less than 25 per cent. Translated into net receipts, these improvements are greatly magnified. The Central Argentine net increase exceeds 56 per cent., while the other three lines show an improvement of around 25 per cent. Working costs, during a year of better traffics, have been kept surprisingly low. Here, at any rate, are positive fruits from the depression—particularly important for B.A. Great Southern and B.A. Western, whose joint management is now providing appreciable economies.

The detailed financial results of the companies have

already been reviewed in *The Economist*. But before we relate them to the current year's prospect, investors may consider two factors which will again affect dividend policy this year—exchange charges and renewals provision.

Exchange charges have fallen heavily upon the railway's profits. If exchange losses had been eliminated, earnings for B.A. Great Southern ordinary would have ranged from 1.1 per cent. to 4.1 per cent. since 1934. There is, however, some advantage in analysing the exchange problem in greater detail. The railways convert their peso operating figures into sterling on the basis of the old parity of 11.45 pesos to the £ as a first step. If they remit net revenues to purchase materials or to pay interest and dividends, at the current rate of 16 pesos to the £, more than one-third of the "parity" sterling earnings is immediately absorbed to cover the peso depreciation. If, instead, the companies had habitually translated their peso income into sterling at current rates, such book adjustments would not be required, although net profits would be the same.

Exchange differences also arise in the conversion of current peso assets and local capital expenditure into sterling. But, if an improvement of the current value of the peso occurs, past provisions against current assets become excessive. For this reason, the railways' accounts for 1934-35 and 1935-36 showed fairly substantial credits in respect of this second type of exchange adjustment. These sums, in short, can be recouped as the peso improves, while the first type constitutes a permanent accounting adjustment.

This distinction is important. Unless the peso returns to its old sterling parity, some exchange provision will always be required. In the last resort, however, the prospect of exchange relief rests with the Argentine Government, whose currency powers are sovereign. It may be argued that Argentina, bound by the Anglo-Argentine trade agreement and freed from the domestic difficulties which beset a presidential election, might well pursue the principle of "greater eligibility" in the matter of exchange facilities for British enterprises. It might be possible to prove that the control has kept the peso at an artificially low level, that the Government's exchange profits amount to an indirect tax, and that a natural rate reflecting the current trading improvement would be more advantageous to British

companies and also to the Government. The gravamen of the charge against the Argentine Government rests upon such proof; but the argument can scarcely be extended to a demand for automatic return to the old sterling parity.

The second general factor which links the past year with the present is renewals policy. Two companies—the B.A. Great Southern and B.A. Western—having disappointed the expectations of their second preference stockholders, showed that earnings sufficient for full payments had been made in each case, but had been shared between dividends and renewals provision. The companies, in fact, have made a definite approach towards "normal" renewals provisions during the past year. During the depression the available cloth made an extremely skimpy coat. We set out in the following table the renewals allocations of each company during the past three years, and for 1928-29:—

	1928-29	1934-35	1935-36	1936-37
B.A. Gt. Southern	662,292	242,987†	86,705†	282,336*
B.A. Western	274,619	81,096†	106,407†	49,072*
Central Argentine	1,195,610	314,096*	274,490*	977,409*
B.A. and Pacific	706,533	20,073*	326,000*	281,349*

* From revenue. † Not provided from revenue.
‡ Of which £120,000 from revenue.

Stockholders will approve larger renewals provisions while earnings improve, although the physical state of the companies' properties—and particularly their rolling stock—has apparently suffered less severely during depression than some observers feared. But both the exchange and the renewals factors set a limit to the marginal stockholder's prospects for the current year.

We may now discuss the broad outlook for each company, taking B.A. Great Southern first. Sir Follett Holt has stated that, after making allowance for increased costs of materials—particularly rising coal and freight charges—and assuming unchanged renewals provision, an increase of 7.4 per cent. in gross currency receipts would cover preference payments in full, while an additional 5 per cent. would produce 1 per cent. earnings for the ordinary stock. These estimates, which assume no change in exchange facilities, allow the marginal stockholder to gauge his earnings prospects from the course of traffics. To date, peso traffics have increased by 3.1 per cent., but the big wheat movements belong to the second half of the company's year. From present crop reports it is reasonable to expect a normal season in the company's district. But the crop risk is always the major factor dominating the Argentine railway market, and the falling tendency of commodity prices might attack grains next. In these circumstances the 6 per cent. second preference stock, on which a half payment was made last year, appears fairly confidently valued at 53½, to yield £5 12s. per cent., compared with a yield of £7 16s. per cent. on the first preference stock at 64. Greater equality, indeed, is shown by a comparison of B.A. Western preference stocks. The 5 per cent. issue, at 72, and the 4½ per cent. second issue (on which 3½ per cent. was paid last year) at 51½ yield respectively £6 19s. and £6 16s. per cent. Full preference cover would require an increase of 3½ per cent. in gross receipts (the increase to date is 7½ per cent.), while the relatively low-gear ordinary stock would require a further 8½ per cent. traffic increase to cover 1 per cent. earnings. Broadly similar crop conditions apply to this company, subject to the recent frosts, but its interest in maize and livestock is important.

Last year's exceptional maize carryings on the Central Argentine Railway almost prohibit a measured estimate of the current year's prospect. It is early to judge the outcome of the maize harvest, except that the area sown appears to be larger. And the market may be superficially depressed by the traffic comparisons, for the smaller maize tonnages carried-over rule out the bumper weekly returns of a year ago. The valuation of the preference stocks is further complicated by the cumulative rights of the second preference stock. The 4½ per cent. issue at 51 yield 8.8 per cent. The second, at 73½, after allowing for three years' gross arrears, yields over 10½ per cent. The market evidently recognises that such arrears can only be overtaken gradually.

B.A. and Pacific is the Cinderella of the four. Its first and second debenture interest is met, but arrears of interest on the junior stocks, and the corresponding Argentine Great Western stocks still total over £6 millions, after the arrears payments made last year. Two potential developments may be in store for the company. A Government offer of purchase might be made, although stockholders would hope that the experience of the Cordoba company would not be repeated. Or, as Lord St. Davids suggested at this week's meeting of the Argentine Great Western Railway, some capital rearrangement may be effected when the present moratorium expires next summer. But if the second preference stocks of the other lines have become, in a permanent sense, the equity stocks, in this case the Consolidated and 1912 debentures represent what equity remains, while the preference and ordinary stocks rank for purely token treatment.

In fine, the Argentine railway ordinary stockholder has watched the railways return to some degree of prosperity with no benefit to his own pocket. Making the best assumptions regarding the current year, our diagnosis suggests little improvement for him. And no one can foretell, with commodity prices falling, what fate may have in store for the Argentine. The moral is clear. In these circumstances of relative prosperity, the preference stocks are still marginal, and the second preference stocks even vulnerable. The current year may prove a fair one for Argentine preference stockholders, but it promises no speculative opening for the bulls.

Investment Notes

Unquiet Markets.—For technical reasons, if for nothing else, some modest recovery in the stock markets both of London and of New York should now be just round the corner. In fact, although the week opened badly, there was a better tone in mid-week when Wall Street read into President Roosevelt's reported attitude towards the utility companies some evidence of a change of heart in its worst enemy. But the indomitability of Mark Tapley himself would be sorely tried in a market whose environment is bounded on the one hand by an uninterrupted fall in commodity prices, and on the other by a rush from the dollar into gold. Mr Chamberlain, who fills the rôle as well as any man, himself went so far as to admit trade recession as a conceivable hypothesis, in his Guildhall speech. Meanwhile, business reports from America seem to many investors to put that contingency into the present indicative rather than the subjunctive mood. At home, steel activity is better maintained than in America, but neither the latest unemployment figures nor the railway returns make comfortable reading.

The week's triumphs, once again, all belong to the gilt-edged market. Among existing securities, there has been a certain amount of profit-taking, but the undertone of the market is still demonstrably strong. Among new borrowers, the success of the skirmishers has brought up the big battalions with, so far, satisfactory results. This week, the over-subscription of an issue of £2 millions of 3½ per cent. redeemable debenture stock at 96 by the Kent Electric Power Company has been followed by an offer of £3 millions in 3½ per cent. stock at 101 by Liverpool—a borrower whom the market likes with good reason. It is an ill wind that blows nobody good, and the mistral in the equity share markets has been a veritable monsoon for gilt-edged. Whether a satisfactory response will be forthcoming, however, if borrowing is maintained for long at this week's rate, is another question. Meanwhile, from Whitehall comes no sign. None can keep a secret better than the Treasury.

Wall Street and Washington.—During the past week common stock prices have touched new "lows." The market has subsequently experienced a change in sentiment which has levered the Dow Jones industrial average up by over 8 points in two days. It appears, too, to have some marks of permanence. We suggested last week that American economy suffered from the failure of private enterprise to take the initiative as the Government reduced "pump-priming" operations. It has been feared by Wall Street that the Government's response would be either to renew Budget deficit expenditure on a larger scale or to apply more stringent control to private business. There was also a fear, calculating in Europe more than in America, that the dollar might be further devalued. This week's news from Washington promises to change the whole atmosphere. The Ways and Means Committee is concerned at the effects of taxation—particularly the undistributed profits tax—on enterprise, though there is no sign that this tax is to be abandoned, or more than amended to ease the pressure on weaker companies. Mr Morgenthau has reiterated his desire for a balanced Budget, and has laid the dollar scare; gold is being allowed to move out of America through the Exchange Stabilisation Funds. President Roosevelt himself has suggested that if the utilities will adopt the Government's method of valuation they may expect freedom from Government competition. Just what system of valuation is desired is not quite clear; but overvaluation of assets is a fundamental cause of weakness in the utility position, and a "prudent investment" basis, although salutary, would be no easy price to pay for relief from Government competition.

It is, however, becoming daily clearer that Washington is seeking a means of encouraging a revival of the durable goods industries without antagonising private enterprise. It is not expected that tax reforms will play much part in the plan. It would seem more important to reduce the tension in the utility industry, to find ways of stimulating a building revival, to assist railway renewals programmes, to prevent excessive increases in costs, and to accompany these proposals by balancing the Budget. It is reported that the Reconstruction Finance Corporation will be used to stimulate the building industry. And further evidence of the desire of Washington to sooth the panic of Wall Street while removing its underlying economic causes is provided by an investigation by the chairman of the S.E.C. into the whole network of Stock Exchange rules, to discover their real effect upon the market. The week's news from Washington may not herald a dramatic improvement in economic conditions, but tactful intervention may heal the bruised confidence of the business community.

Brazil Defaults.—For weeks the Brazilian bond market has had an impending sense of trouble, and now the blow has fallen. Brazil has suspended "temporarily" the interest and sinking fund payments on her external debt, "pending further examination." The announcement followed the promulgation of a new constitution which apparently contemplates the abolition of the Senate and Chamber but is yet "democratic." The debt suspension, indeed, has an authoritarian ring about it, but few investors, even after the failure to reach a revised payments agreement by the end of September, had prepared themselves for such an announcement. The London market, impressed by Brazil's domestic pre-occupations of a presidential election this winter, was prepared to make full allowance for internal economic and political difficulties, and it was generally thought that expediency and rough justice would be served by extending the present scale of payments for a further year, during which a more permanent basis for the debt could be thrashed out. Actually, the over-night default ranks among the most cynical that the London market remembers. No interest payments were due until January, and preparation for their payment was clearly not pressing. And interference with the service of the funding issues is tantamount in financial behaviour to the severing of diplomatic relations. Dealers in the bonds decided, before the market opened on Thursday, to suspend business, and it is understood that a deputation attended the offices of a leading firm of merchant bankers after the meeting.

For the present, the Stock Exchange list reveals blank spaces for quotations in the whole of Brazil's debt. There is no indication when dealings will be resumed. Before that event, presumably, the British Government and the American Treasury may be impelled to make strong representations to President Vargas. His argument that old loans can no longer be paid by raising new ones is purely irrelevant. The lesson of the affair is that the fullest co-operation of creditor parties is essential, and this co-operation has not always been achieved in the past between London and New York. The course of representative bond prices since 1933 is given below : —

	1933		1934-36		1937		Nov. 5	Nov. 10
	High	Low	High	Low	High	Low		
<i>Group 1</i>								
5% Funding 1898	94½	83½	101½	63	102½	92½	92½	92½

<i>Group 2</i>								
7% Coffee Realisation	88½	64½	101½	73½	100	79	79	82½
<i>Group 3</i>								
5% 1903	49½	29	40	12	45½	29½	32x	32x
<i>Group 4</i>								
4% 1889	30½	16½	24½	10	28½	16½	16½	16½
<i>Group 5</i>								
7½% Coffee Institute...	65	24½	45½	22½	48½	26½	30	30

Recently, Brazilian bonds have been affected by the weak copper position. Failing to achieve any improvement in coffee prices by agreement among the producing countries, Brazil has abandoned her policy of regulation. Recently, a drastic reduction in the coffee export tax was decreed, and a sharp fall in coffee prices immediately resulted. This week it has been announced that Brazil is reverting to free competition in the coffee market. Between an expensive policy of regulation and a no less expensive policy of free export, Brazil has wisely chosen the latter. But although this week's communiqué refers to the Brazilian export trade returning to "normal," it seems more probable that some curtailment of capacity would be necessary to restore equilibrium, and such a policy would presumably entail expenditure on planters' relief. Moreover, Brazil's increased exports will not immediately offset the fall in coffee prices. Both factors are obviously bear points for Brazilian bonds, and coupled with the uncertain political situation in the country, they suggest that the prospects of an early and favourable offer to resume payments are not rosy.

November 13, 1937

Unit Trust Conversion.—It is somewhat remarkable that the four offers of conversion to the sub-unit holders of the British Empire group should have been received with moderate and not unfavourable comment in most quarters, while the first offer by the National group (which we discussed on October 16, page 124) has stirred up controversy. Inevitably, the issues regarding conversion have become distorted, and it is highly desirable to re-state the position as it affects the movement and the investor. There was, of course, no compulsion to accept any of these offers—and indeed the National “A” offer was made less attractive than the British Empire conversions, since it boldly offered the sub-unit holder a share of £1 nominal, in exchange for a sub-unit valued at 3s. 6d. Such conservatism, highly desirable in relation to current security prices, was obviously liable to misinterpretation by the average sub-unit holder, who may, quite erroneously, have figured a “loss” of 11s. 6d. as a bad bargain. The outcome of the offer is definitely less favourable than the British Empire conversions, for no more than 245,000 National sub-units have been converted, out of a total of 1,320,000 in issue. The group, however, proposes to offer conversion facilities in respect of other closed units, “as and when the circumstances are favourable,” though their announcement re-affirms the conviction that the unit trust has a permanent place among investment facilities. This view is apparently shared by all members of the movement, but very divergent opinions are held regarding the desirability of offering conversion facilities. The Unit Trusts Association, whose leading member has aroused this latest *furor*, has expressed its conviction that the unit trust principle is the most suitable for the small investor—a statement which bears the mark of a not unwise compromise. Individual groups have also issued statements of policy which range from uncompromising refusal to consider conversion to a more reserved attitude regarding the future. Such reservations are apparently entertained by the “15 Moorgate” group, while the British General, Brewery Unit and Keystone groups have declared against conversion. The Keystone group, indeed, has formed a new trust as a mark of faith—Keystone Consolidated—which reverts to the original principle of fixity, and has a somewhat remarkable portfolio. But a survey of the whole of the recent controversy suggests that no new point of principle has emerged which demands modification of our conclusions on October 16th—that the case for flexibility is clearly proved, and that any unfixing of the fixed trusts might well be achieved by conversion of existing fixed trusts into flexible units rather than managed investment trusts. In the last resort, the creation of new managed trusts from the ashes of the fixed trusts is hardly an uneconomic process.

Industrial Profits in October.—Industrial profits continue to advance strongly, despite the rising tendency of costs. The 26.97 per cent. increase shown for October is little below the best for the past year. Total profits of the 177 companies whose reports were received amounted to £14,884,260, compared with £11,722,574 for the previous year. The trend of the past fifteen months is shown below:—

Reports published in	No. of Companies	Rise in Profits* %	Reports published in	No. of Companies	Rise in Profits* %
1936—			1937—		
August ...	47	14.21	March ...	307	12.52
September ...	107	12.32	April	245	23.36
October ...	146	18.09	May	255	14.09
November ...	177	13.49	June	265	21.19
December ...	175	15.49	July	193	19.62
1937—			August ...	62	9.41
January...	110	15.92	September	81	27.8
February	203	8.95	October ...	177	26.97

Some 44 rubber companies, whose earnings as a whole are more than doubled, have contributed as much as 15 per cent. towards this increase, but only 6 per cent.

TRUSTEE
to the
NATION

THE Co-operative Permanent is proud of the fact that it occupies a position of trust in the regard of many thousands of people throughout the land.

Those who seek financial aid in purchasing their houses may rely implicitly upon the Society giving fair and honest treatment. During the past fifty years the Co-operative Permanent has established more than 70,000 citizens as house owners. The Society is proud of its record in the performance of this important service to the community.

In another capacity the Co-operative Permanent fulfils an equally important role as trustee for millions of pounds bestowed in the various investments it makes available to the public. The degree of safety ensured, the regular and satisfactory interest paid and other advantages and privileges afforded by the Society's investments are set forth in an informative booklet which will be sent post free on request.

ESTABLISHED 1884

CO-OPERATIVE PERMANENT BUILDING SOCIETY

**NEW OXFORD HOUSE, HART ST.
LONDON, W.C.1**

Managing Director: Arthur Webb: J.P., F.C.I.S.

Secretary: Charles Runcorn, F.L.A.A., F.C.J.S.

ASSETS : £24,800,000

500 Branches and Agencies

to total profits. Otherwise the improvement is well distributed over all industrial groups, and not unduly affected by large individual companies. Heavy industrial concerns made a favourable showing.

Company Notes

British Celanese Developments.—Much of Dr Dreyfus' speech at the British Celanese meeting on Wednesday covered familiar ground. Selling prices in the artificial silk industry have not found stability, and costs are rising. And while the volume of production during certain periods last year "was more nearly in alignment with the volume necessary to obtain profits which would satisfy the current normal dividend requirements of both classes of preference shares," abnormal fluctuations in demand at other times dislocated production and distorted normal cost levels. New products, though subject at present to technical difficulties, are expected ultimately to provide satisfactory profits. It would have been difficult to justify the brave hopes that the preference arrears position will be cleared up without sacrifice, merely on the basis of this review. But highly significant hints regarding the future of the industry were dropped in the later section of the speech. "Recently," declared the chairman "various approaches have been made to us, as a result of which there have been indications that co-operation between all sections of the industry would be welcomed and that there exists a sincere desire for collaboration." Such evidence of a desire to abandon the price-cutting tactics which have always affected the acetate branch of the industry opens up profoundly important possibilities for British Celanese. Clearly, long negotiations would be involved, in which British Celanese might not always be the strongest participant. But the suggestion is a definite pointer of hope for the patient second preference and ordinary shareholders, to whom the news that estimated profits for the current year to date are below those of last year would otherwise come as a further discouragement.

Imperial Airways' Future.—Since the Government announced the Empire Air Mails developments last May, it has been clear that Imperial Airways in future will operate on a vastly expanded scale. Sir George Beharrell's speech at this week's meeting fully explained the scope of the new working arrangements. But he did not examine the related problem which was present in the minds of his audience. What effect will this change of scale have upon future profits and future dividend policy? Clearly, the past operating conditions (which we attempted to analyse in *The Economist* last week, page 271) will be irrelevant in the future, and some time must elapse before the new organisation is operating at maximum efficiency. Moreover, examination of the subsidy proposals throws no light on the potential net results for the company, which this year must provide dividends upon £1,624,089 of ordinary capital following the £1,000,000 issue last June. The company, in fact, is in a transition stage, and for this year in particular, its subsidy arrangements are being made *ad interim*. The explanation of the curious circumstances of last June's issue unfortunately stopped short at a decisive point. The basis for the issue price of 30s. was clearly reasonable in essence, but insufficient consideration was given to the crucial market distinction between a rights and preferential allotment. Meanwhile,

the shares have fallen to 28s. 3d., and the news of a further share issue within, say, six months, has done nothing to inspire the market. In fact, any valuation of the shares must be based rather upon the directors' notion of a "fair" issue price, than by reference to any preconceived rate of dividend on the increased capital. So far, the company has been able to serve the Government, as its "chosen instrument," no less readily than the interests of its shareholders. Whether the existing scale of dividend is fundamentally fitted to an enterprise which, in the last resort, undertakes few of the financial risks which beset the private entrepreneur is open to argument—and may well be argued yet again in Parliament. In the circumstances, the revised yield basis of the shares seems eminently justified.

Hawker Siddeley Report.—The market received the Hawker Siddeley Aircraft report with mixed feelings, despite the favourable results it displayed. Trading profit increased from £501,232 to £781,607, an increase of £280,375, of which only £37,500 is attributable to the company's increased holding in Hawker Aircraft. Thus, the Siddeley group is to be thanked largely for the higher dividend. The difficulties between the aircraft industry and the Air Ministry have apparently been settled, and the present tendency of concentrating on bombers rather than fighters is working in the group's favour. The improved results are analysed in the following table:—

	Years to July 31	
	1936	1937
Gross income	502,920	783,438
Fees, interest, expenses	6,078	15,824
Income tax and N.D.C.	118,849	194,418
Preference dividend	38,809	52,938
Ordinary shares:—		
<i>Earned</i>	339,384	520,258
Paid	228,750	463,102
<i>Earned (%)</i>	44.5*	47.7‡
Paid (%)	30†	42‡§
Carried forward	5,634‡	62,790

* On a £1,000,000 capital.
† Together with capital bonus of 10 per cent.
‡ After deducting £100,000 for capital bonus, and £5,000 bonus to subsidiaries' employees.
§ On £1,452,869 capital.

Despite the report, however, the market, after a temporary advance on Monday morning, has marked the shares down. The group is expanding fast, and again requires new finance. The company has therefore announced its intention of issuing further £2,000,000 of preference shares. This issue would increase the proportion of preference capital to 70 per cent. of the total—a proportion which may in the long run prove to be somewhat high, for the group's business is inherently subject to fluctuation, since it depends upon orders for military aircraft. In the short- and medium-term, however, the prospects should continue good. Such considerations also apply to Parnall Aircraft, which is also expanding rapidly and needs further capital. Sir Louis Vaughan, at the meeting this week, announced that the bulk of the financial requirements would be met by a preference issue. Parnall Aircraft showed a maiden profit of £26,782 in its second year, and has yet to reach the dividend stage. Investors will hope that the directors will not unduly weight it with fixed dividend charges. Meanwhile, Hawker Siddeley 5s. shares, at 27s. 9d., yield 9 11s. per cent., while Parnall Aircraft 5s. shares are quoted at 5s. 9d.

Silk To-day and Jam To-morrow.—One cannot congratulate the Branston Artificial Silk Company, Ltd., on its profits record, for the company, which was formed in 1927, ceased production in 1930, had a receiver from 1931 to 1933, and, meanwhile, paid no dividends. The

company recently accepted an offer from the War Office to acquire its premises; its machinery has been auctioned, and, after all expenses and prior charges have been met, there will apparently be something like 3s. per ordinary share available in cash. The fight is done, the battle over, and normally nothing would remain but liquidation. Actually, however, the company proposes to purchase for £125,000 the undertaking and assets (including goodwill) of the St. Martin Preserving Company, Ltd., a will of the St. Martin has the jam and and bottled fruits. Since St. Martin has the jam and Branston has the money, why should not a marriage be arranged? Unfortunately, it is possible that some of Branston shareholders may prefer cash to an interest in a class of business which their company was not formed to undertake. They may wish to forbid the banns and to declare just cause and impediment at the nuptial ceremony, which is to be performed at an extraordinary general meeting next Monday, November 15th.

The union, presumably, does not come within the prohibited degrees of the Companies Act, but whether the Stock Exchange Committee ought to permit the continuance of dealings in the shares of a company which will have entirely changed its character is another matter. No earlier exponent of a useful change of identity, however, from Proteus to Sherlock Holmes, has buttressed ever, from Proteus to Sherlock Holmes, his transformation with the ingenious proposal for securing its popular approval which is being made in the present instance. The directors of the St. Martin Company have agreed to buy out cash-desiring Branston shareholders at 3s. per share, up to a total of £75,000 on the completion of the deal. To obtain the cash, however, shareholders must lodge a proxy in favour of the board. In other words, those who wish to register their opposition to the scheme in the most decisive fashion, by severing their interest with the company, can do so only by voting in its support. This seems anomalous. Altogether there are so many features to which objection may be raised that the scheme should certainly be postponed for further consideration.

Trinidad Leaseholds Progress.—The increased dividend announced by Trinidad Leaseholds a fortnight ago fortified a rather ragged oil share market, and the report fully justifies its promise. Oil profits and other revenue have jumped by 63 per cent. from £669,128 to £1,090,940, despite the strike which affected the closing days of the company's year. The throughput of crude oil produced or purchased increased from 8.7 to 10.2 million barrels, while products sold increased from 7.9 to 10.3 million barrels. These operations have resulted in a record year for the company, and after making the usual generous provision for depreciation, earnings available for the increased ordinary capital have advanced from £344,202 to £648,534. The following table shows that the 30 per cent. dividend is covered by earnings of 39 per cent:—

	Years ending June 30,		
	1935	1936	1937
Total trading profits	570,431	679,409	1,108,833
Expenses and directors' fees	31,745	36,146	46,064
Depreciation, etc.	243,552	244,061	276,735
Taxation	55,000	55,000	137,500
<i>Earned for ordinary</i>	240,134	344,202	648,534
Paid	229,523	327,891	491,835
<i>Earned (%)</i>	18.3	26.2	39.5
Paid (%)	17‡	25	30
Reserve	10,000	...	100,000
Carry-forward	70,161	86,472	143,171

Distribution policy, in fact, has been distinctly conservative, and reserve allocations are renewed by a provision of £100,000. Net capital expenditure amounted to £588,628 last year—though it leaves the balance sheet in a strong position—for new refinery and other plant. Since the chairman emphasised a year ago that these works would not make their full contribution during the 1936-37 financial year, it is reasonable to expect a further contribution to the current year's results from this new source. Indeed, the accounts suggest that the company's motor spirit market is being expanded, and while there is some reason for hesitation regarding the outlook for world oil prices, there is no apparent factor which suggests an early fall in British petrol prices. The £1 ordinary shares stand at 102s. 6d., and yield 5 12s. per cent.

Joshua Hoyle Improvement.—The first accounts of this cotton spinning concern after the capital reconstruction are satisfactory. They show the benefit of new plant and internal reorganisation and underline the consequences of agreement among cotton spinners in bringing good order, if not bumper profits, to the spinning industry. Trading profits for the year to September 30th amount to £164,542, compared roughly with £73,556 in the previous year and £56,712 in 1934-35. This is little short of the best profit for the past decade, and exceeds the estimate made when the scheme was published by 17 per cent. Some £25,000 is placed to depreciation, and if this is not at first sight over-generous, only a year has elapsed since the assets were re-valued. Tax provision requires £15,000, and interest and fees about £2,000 less, at £54,394. The result is a surplus for the shareholders of £70,148, against small deficits in the two previous years, and as the 2½ per cent. dividend absorbs only £13,594 some £56,553 goes forward.

THE STANDARD BANK OF SOUTH AFRICA LIMITED

COMMERCIAL SERVICE

The Bank has over 370 Branches in Africa, and Agents and Correspondents throughout the world. The closest touch with Trade and Industrial conditions is maintained, with special attention to Commercial and Credit Intelligence. This service is available to Exporters, Importers and others wishing to develop trade with South, East and Central Africa.

THE STANDARD BANK MONTHLY REVIEW is sent post free on application. It gives the latest information on all South, East and Central African matters of Trade and Commercial Interest.

OVER ONE HUNDRED AND TEN YEARS OF SERVICE
SCOTTISH UNION & NATIONAL
INSURANCE COMPANY
ASSETS EXCEED £16,000,000
FIRE LIFE ACCIDENT MARINE
Edinburgh: 35 St. Andrew Square
London: 5 Walbrook, E.C.4, and 45 Pall Mall, S.W.1

Earnings for the new ordinary capital amount to 12.9 per cent., or 10.3 per cent. allowing for note redemption, which will require one-fifth of net profits in future. The balance sheet is no less interesting. The preference capital has disappeared, and £1,200,000 debenture stock carries interest at 4½ per cent. instead of 7 per cent. Immediate saving of interest is, however, small, since the old stock had in fact recently received only 5 per cent., and £427,468 of 4 per cent. secured notes are now outstanding. Fixed assets stand at £1,469,777 (compared with £2,191,282 before valuation), while interests in the subsidiary have been largely amalgamated in the parent business. Although exact comparison is difficult, the current financial position appears strong, and cash in hand amounts to £467,973. Stocks are £42,000 higher at £497,048. The present tendency of cotton prices is not helpful for spinners, but the price agreement protects their margin rates from extreme competition. Assuming a dividend for the current year at the annual rate of 5 per cent., the 2s. shares at 2s. 1½d. yield £4 14s. 3d. per cent.

* * *

Other Company Results.—Our analysis of profit and loss accounts, appearing on page 340, covers nearly forty additional companies. A number of interesting engineering reports have appeared, while pastoral companies make a good showing. The results are discussed on page 339 under the heading "Shorter Company Comments."

* * *

Company Meetings of the Week.—In this issue, reports of company meetings begin on page 330. Lieut.-Col. C. A. Reid-Scott, at the annual meeting gave a detailed review of the past financial year to *Manila Railway Company* shareholders. The chairman of *Argentine Great Western Railway* explained the company's position regarding future debenture interest payments. At the meeting of *Parnall Aircraft* Sir Louis Vaughan gave interesting comparisons of the company's progress. The output for July, 1937, for instance, was six times that of August, 1936. At the meeting of *John Delaney*, Mr A. Woolley-Hart referred to improved demand from the steel industry and for agricultural purposes, which was expected to continue during the current year. Mr Percy Cross emphasised at the *London Maritime Investment* meeting the company's belief that the voluntary scheme of co-operation adopted by the British tramp shipping industry should minimise extreme fluctuations in future. At the meeting of *Prices Tailors*, Sir Henry Price emphasised the directors' decision to maintain the value of their goods and to meet higher costs of production by increasing sales. Mr H. G. Latilla declared that the *Amalgamated Banket Areas* properties would become one of the most important producers of gold, with a long "life." The decline in profits of *Lake View and Star* was ascribed by Mr John A. Agnew to the increased amount of development work, which, in turn, was reflected in an improved ore reserve position. The *Imperial Airways* meeting is referred to on page 322. Mr. W. Howard-Williams described 1936-37 as the best period for seven years for the *Central Argentine Railway* and emphasised that the tonnage handled constituted a record.

THE WEEK IN THE MARKETS

THE STOCK EXCHANGE

SETTLING DAYS

TICKET: NOVEMBER 18 ACCOUNT: NOVEMBER 18

ONLY gilt-edged stocks opened firm this week, and even they succumbed to profit-taking as the week progressed. Industrials reflected Wall Street's week-end troubles, but shared in the subsequent improvement, while commodity shares, apart from a modest rally in copper issues, remain depressed. That is the summary of the week's movements. No new trends have been revealed, and the drifting tendency is resumed as soon as support is withdrawn. Mid-week news from Wall Street stiffened the tone appreciably, for London as well as Wall Street had reason to react favourably to the idea that the President will take steps to set American industry in motion again. The probable consequences for commodity prices if the President succeeds are clearly understood in this market.

Opening firmness in the Funds was not maintained, for by Tuesday morning the presence of the profit-taker was evident in the market. Undated stocks tended to suffer most, and despite a renewal of mid-week support the best prices were not maintained. The appearance of the Liverpool issue took the sparkle from new corporation scrips, and while Dominion issues remained firm in tone, there was little mid-week support.

In the foreign market, the Brazilian default came as a devastating shock, and jobbers decided to suspend dealings in Brazilian bonds on Thursday. The position is surveyed on page 320 of this issue. Its effects spread to the rest of the foreign market, and the rising tendency of both Chinese and Japanese issues was checked. European issues continued quiet, although Polish bonds tended to improve in anticipation of a debt settlement.

Home rail stocks opened dull in sympathy with the general tone, and registered further disappointment with the traffics. Some modest buying of London Transport "C" stock brought a steady improvement in the price early in the week. Argentine rails opened with a depressing day, improved a little on Cordoba debentures were active in mid-week.

The industrial markets record an uneventful and somewhat unsatisfactory week, even when allowance is made for Wall Street's assistance, which checked the sagging tendency in mid-week. Iron and steel shares provided most interest. A moderate volume of sales on Monday on rumours of price reductions caused widespread declines. Yet later good news to the end of 1938 was announced, Richard Thomas declared the same interim dividend on a larger capital, Weardale Steel and John I. Thornycroft reported substantially increased profits, but quotations were either lower or quite unresponsive. The tone then became steadier, and though small improvements were apparent here and there, there was no general upward movement. Coal shares were uninteresting, with such leaders as Powell Duffryn weak on Monday and Tuesday and moderately supported later. Motor and cycle shares were dull, but showed similar improvement in mid-week. Ford were among the brighter features.

Conditions in the aircraft section were easy, Hawker-shares reacted on profit-taking. Imperial Airways reacted on the new issue (discussed on page 322). Electrical equipment for Crompton Parkinson, Enfield Cable and Siemens was reported. Textiles were quiet and somewhat irregular, and Joshua Hoyle failed to respond to the full report. British interest was aroused by the chairman's speech (discussed on page 322). Brewery issues followed the general trend, Ansells recovering on second thoughts regarding the profit figures. The miscellaneous group lacked special features, for Turner and Newall and British Oxygen did not escape the general marking down of P. and O. deferred on the dividend was in contrast with improvement in Furness Withy.

Oil shares were irregular. The week began dismally, but there was marked improvement later, partly on recovery in pressure from the Continent. Attock were among the brighter features, and Trinidad issues were well supported. After starting very badly, the rubber share market steadied its nerves. Monday was the worst day for some time, on renewed weakness of the commodity, whose slight recovery at least reduced the seriousness of falling share values. Tea shares remained fairly insulated from the general trend, but were thoroughly dull.

The mining market failed to maintain the expected recovery. Kaffirs started well on public investment buying, but the stimulus was short-lived and Continental selling soon depressed quotations further. The Central Mining dividend was well received, but the Sub-Nigel issue was greeted without enthusiasm. West Africans were dull despite the favourable statements at the Amalgamated Banket Areas meeting. After some Paris selling of Roan Antelope, Rhodesian copper shares improved in mid-week, while tin shares, depressed at first, staged a good rally.

Breweries and distilleries (21)	134.3	139.3	136.3	4.63	4.50	4.59

NEW YORK STOCK EXCHANGE

In the short session at the end of last week, prices sagged to the week's low, depression being caused by expectations of lower steel mill activity, by signs of weakness in automobile prices, and by anticipated lower purchasing power of farming communities owing to lower commodity prices. On Monday this week, only the last hour staged an improvement and the day's close set up a new "low" for the year. On Tuesday prices looked up on growing expectations that the Washington Administration will put aside brutal thoughts and be soothing to private enterprise. And on Wednesday prices went ahead rapidly under the lead of utilities, on the offer of the President to hold back Government competition with power companies if they would revalue their assets on the approved Government basis. There was active talk on the prospects of Government help to business, of the best method of stimulating building recovery, renewed investment by the utilities, railroads and durable goods industries. So strong was the hope of support for private industry—instead of fear of new budget deficits—that even steel issues made many substantial gains in face of lower steel mill activity. *Iron Age* estimates steel mill activity for the current week at 41 per cent. of capacity against 48 per cent. last week, and declares that the industry is living from hand to mouth on current new orders.

Owing to the closing of the New York Exchange for Armistice Day, we are unable to publish the usual Standard Statistics index figures. Last week's figures are repeated below for reference (1926=100):—

	1936		1937		Beginning of Year 1937	Oct. 20, 1937	Oct. 27, 1937	Nov. 3, 1937
	Lowest Apr. 29	Highest Nov. 10	Lowest Nov. 3	Highest Mar. 10

TO MANUFACTURERS

THE SCOTTISH INDUSTRIAL ESTATE FACTORIES AND FACTORY SITES

Establish your factory at The Scottish Industrial Estate (North Hillington—near Glasgow) where capital outlay for building is eliminated; where you can lease a factory; where rents are low and where the Estate looks after all services and arrangements.

The small manufacturer can have a modern factory of 1,200 sq. ft. floor space complete with all services for £50 PER YEAR, COST OF HEATING INCLUDED.

For full information and particulars apply to—

SCOTTISH INDUSTRIAL ESTATES LTD.

41 ST. VINCENT PLACE GLASGOW C.1

For the larger manufacturer units of 5,000 or 6,000 sq. ft. floor space are being constructed. A tenant may lease any floor space he requires based on these units. As his business grows, larger accommodation will be provided.

Process steam is supplied if required. Insurance and upkeep of factories and upkeep of roads are paid by the estate. Skilled labour is plentiful.

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields of fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption, where the stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

GREATER activity has prevailed in the new issue market this week. The delayed *Liverpool* loan was offered on Friday on the now familiar terms, but with a slightly longer average life of 25 years. The gilt-edged market had lost part of its impetus by the time the issue appeared, and the absorption of as much as £3 millions of new scrip, it was suggested, provided a fairly stiff test for the market's capacity. *Taf Fechan Water Supply Board* 3½ per cent. redeemable debentures dated 1957 were issued at the end of last week at 101. They carry trustee ranking, with a suitably shorter life compared with the basis for recent corporation issues. An electric power debenture issue is something of a rarity, and the *Kent Electric Power* 3½ per cent. debenture stock, issued at 96, attracted good investment support and opened at a premium on Thursday. The company (controlled by County of London Electric) will construct a new station, to be operated under the direction of the Central Electricity Board. The Board undertakes to

purchase the energy at cost of production, including interest on the present issue. The stock, therefore, qualifies for C.E.B. status in all but name. This week's solitary industrial issue is the first to be made by a new venture from a special area trading estate. The company, *British Coated Board and Paper Mills*, issues 370,000 5s. ordinary shares at par, and has established a new factory at Treforest and a factory at Newport. It will introduce a new technical process to this country, but at this stage the enterprise lacks a proven profits record, and must be placed in a speculative category. Particulars for information have been published by *Court Estates*.

Liverpool Corporation.—Issue at 101 of £3,000,000 3½ per cent. stock, redeemable at par June, 1968, or from 1961 on notice. A trustee stock. Proceeds for capital expenditure on waterworks transport, etc., and to replace £2,000,000 loans. Ranks with other current rates. 15s. 6d.; general Exchequer grant, £6,694,468; debt, £61,310,377; net debt, £49,319,718 (£1,154,689 Total productive). Estates produce £63,000 net, and electricity and transport £185,000 after interest.

Taf Fechan Water Supply Board.—Issue at 101 of £350,000 3½ per cent. registered debentures, redeemable at par December, 1957. (Trustee status.) All issues rank *pari passu*. Proceeds to repay loans in respect of stock redemption. Supplies water in bulk to 10 local authorities in Glamorganshire and Monmouthshire. Impounding capacity of reservoirs, 3,814 million gallons. Outstanding net debt, £1,676,365. Constituent authorities pay fixed contributions of £112,800 annually for specified minimum; right to precept upon these authorities for deficiencies in net revenue. List opened 9 a.m. November 5th and closed 4 p.m.

Kent Electric Power Company.—Issue of £2,000,000 3½ per cent. debenture stock at 96. Redeemable at par August, 1975, or from 1960 on notice. All debenture stocks and mortgages rank *pari passu*. Proceeds mainly towards construction of Littlebrook Station, for operation under C.E.B. direction. Managed by County of London Electric Supply Company. Assets, after depreciation, sinking funds, and creditors and temporary loan, £1,298,820. Units sold: 1935, 155,001,327; 1936, 193,032,904. Profits, after depreciation and sinking fund, before interest: 1934, £53,056; 1935, £53,624; 1936, £85,378. Payment of interest out of capital is authorised. Lists closed 9.40 a.m., November 9th. Oversubscribed.

British Coated Board and Paper Mills.—Issue of 370,000 5s. ordinary shares at par. Two factories to be established in Wales (at Treforest, cost not over £80,000, and ground rent £2,700 per annum; at Newport leased for 99 years from G.W.R., at £234 rental). Leasehold (without plant, etc.) valued at £259,750. Estimated output per week: Treforest, 250 tons; Newport, 270 tons. Cost of plant £80,947, plus alterations, £40,370. Estimated profit after interest and depreciation, £25,000. 110,000 further shares already taken at par. Loan capital, £80,000 6 per cent. 1st mortgage debenture stock. List closed 9.30 a.m., November 10th. Oversubscribed.

Court Estates, Ltd.—Issued capital 100,000 6 per cent. cumulative £1 preference shares, 100,000 6 per cent. participating £1 preferred ordinary shares (with rights to one-third of balance after fixed dividends), and 20,000 1s. deferred shares. A property investment company. Total assets £689,261 (of which £656,014 leasehold properties, subject to £423,985 mortgages, etc.). Net profit year to April 30, 1937, £17,129 (£46,859 gross). No loan capital. Borrowing powers, not more than five times share capital without sanction of general meeting (steps being taken to restrict to four times).

Telephone and General Trust.—There has been placed privately £200,000 four per cent. first debenture stock.

Associated British Maltsters.—Issue to ordinary shareholders of 200,000 5s. ordinary shares at par, in proportion of one new share for five now held.

British Steamship.—Issue to shareholders of 125,000 new 16s. shares at 16s. 6d. (one for every four held on October 23rd). The company is entitled to dividend for 1937.

Fisher and Ludlow.—Issue of 240,000 10s. ordinary shares at 32s. 6d., in proportion of one new share for £2 ordinary stock held on October 30th. Entitled to dividends for year commencing April 1, 1937.

House Property and Investment.—Issue of 50,000 £1 ordinary shares at £2, in proportion of one for every three held on November 2nd. Proceeds to reduce loans and complete purchase of properties.

Southbook Potteries.—Issue of 160,000 new 5s. shares at 7s. (two new shares to every five ordinary shares held) to finance purchase of Bourtreehill Coal Company.

Sub Nigel, Ltd.—Issued capital to be raised from £843,750 to £885,937 by creation of £4,375 10s. shares, which will be offered at £8, in ratio of one share for 20 held. The new shares rank for any dividend declared in December, 1937.

REPAYMENTS AND CONVERSIONS
Courage and Company.—Holders of £800,000 5½ per cent. debenture stock are offered £111 per £100 in 4 per cent. stock to take effect December 1, 1937.

Yorkshire Amalgamated Products.—This Company will redeem the outstanding 5 per cent. first mortgage debenture stock on May 1, 1938, at 102½.

MATURED AND BOTTLED AT CHATEAU DE COGNAC

IMPERIAL AIRWAYS, LIMITED

DEVELOPMENT OF EMPIRE SERVICES

The thirteenth ordinary general meeting of Imperial Airways, Limited, was held, on the 10th instant, at the Hotel Victoria, London.

Sir J. George Beharrell, D.S.O. (the chairman), after paying a tribute to the services of the late Sir Eric Geddes and the late Sir Samuel Instone, said that the gross profit of £394,041 was £24,607 greater than that of the previous year. The board recommended a dividend of 7 per cent. and a bonus of 2 per cent. on the old ordinary shares. The one million new ordinary shares did not rank for dividend until next year.

The total volume of traffic carried had increased by about 7½ per cent. The rate of increase was less than had been obtained for the previous year, but that was to be expected because the previous year's rate of growth had been the result of the increased frequency of their Empire services, which gave a consequent increase in the capacity available for sale. The late chairman had informed them two years ago that they had ordered for the European services new aircraft which would be larger and much faster than the existing fleet. Unfortunately, none of those new land planes had yet been delivered, and the first was now more than a year overdue. The delay in delivery was a serious matter, definitely retarding the development of the European services, and it might delay the introduction of certain of the stages leading up to the completion of the full programme of services under the Empire Air Mail Programme. There had been no lack of foresight in the designing and ordering of the new fleet, and there had been no alternative British aircraft available.

Their new services to Singapore had operated to a twice-weekly frequency throughout the year. On the England to Johannesburg service their traffic had shown a slight increase, but, speaking of Empire routes generally, the growth of mails had curtailed the growth of passenger traffic, and clearly additional capacity was needed.

CHANGES ON EMPIRE ROUTES

A brief general review of the Empire routes for the past year and the current year would show a history of progressive substantial improvements in revenue earned and in economic operation and of very extensive planning and preparatory work in connection with the establishment of the Empire Air Mail Programme. Their Empire Trunk Routes were being changed from mainly land-plane services to mainly flying-boat services. Last year he had told them that the first of the fleet of twenty-eight of their Empire flying-boats had completed its trials with outstanding success, and that a sister ship was about to leave for the Mediterranean. Not only was that a triumph of design and construction by the builders, Messrs Short Brothers, but the subsequent delivery of the others of the fleet had been a triumph of production. Already they had had twenty-five delivered, and, taking into account the pressure of re-armament and the consequent demand for skilled labour, that was most satisfactory. Those aircraft were, he believed, the fastest commercial flying-boats in the world. The "Cambria" had to her credit the fastest crossing of the Atlantic in ten hours, thirty-six minutes, and the "Caledonia" had flown non-stop between Southampton and Alexandria in both directions.

At the extraordinary general meeting in June he had described the new agreement with the Government. He had indicated that its magnitude necessitated its being brought into operation in progressive stages, and had said that separate arrangements were being made for the interim period before the full scheme was in operation. There was nothing he could now usefully add except that the first important stage in the interim arrangements had been concluded by the execution of an agreement for the England-South Africa "all-up" mail service for the period from June 29th to December 31st next. It was hoped by the latter date the full scheme would be in operation.

After referring with satisfaction to the successful Trans-Atlantic experimental flights and to the proposed new London terminus, he went on to say that the big expansion in their service required to carry out the terms in their new agreement with the Government would, they hoped, be completed by early next summer.

Referring to the recent issue of ordinary shares at 30s. per share and the criticism of their action, the chairman said that after very careful consideration of certain fundamental matters the board had decided that that was a fair price. It would be necessary in the course of the next six months to make a further issue, the terms of which would be decided after consultation with the Treasury.

The report and accounts were unanimously adopted.

LAKE VIEW AND STAR, LIMITED

DISTRIBUTION OF 50 PER CENT.

The twenty-seventh ordinary general meeting of Lake View and Star, Limited, was held, on the 11th instant, at 20 Alderbury, London.

Mr John A. Agnew (the chairman) said that the profit for the year under review amounted to £439,905, which was £38,509 less than that for the previous year. The difference was accounted for by an increased amount of development work, which was reflected in an improved ore reserve position, and to a slight falling off in head value of ore treated. From 581,918 tons of company's ore treated the gold recovered had realised £993,124. From the treatment of 718,330 tons of tailings £126,281 had been realised, and in addition there had been a small profit on tributing operations.

Three interim dividends of 12½ per cent. each had been paid or declared during the year, and the directors had decided to recommend a final dividend of 12½ per cent., making a total distribution for the year of 50 per cent. That would leave £10,087 to be carried forward.

SATISFACTORY DEVELOPMENT RESULTS

Development work on the whole had been attended with very satisfactory results and, if some exposures had not quite come up to expectation, those had been more than offset by the better results achieved elsewhere.

The chairman referred to a cable just received from the general manager, which stated that several good lengths of ore had recently been opened up in the Hannan's Star Section on the Morrison's West Lode, in the Associated on both the Tetley Lode and the East Branch of the Cross Lode, and in the Lake View Consols on the Perseverance Lode, all of which showed values above the average grade. He also referred to a diamond drill bore which had disclosed 51 inches of ore averaging 19 dwts. per ton on the 1,200 ft. level in the Lake View Section.

The ore reserve position was again most satisfactory. At June 30, 1937, those reserves stood at 3,414,600 tons of an average grade of 5.68 dwts. per ton, representing a net increase of 217,400 tons, notwithstanding the fact that 592,926 tons had been extracted during the year, and a decrease in value of 0.21 dwt. per ton, as compared with the estimate shown a year ago.

It might be emphasised that 33,101 ft. of development was accomplished during the year, that representing an increase of 8,049 ft. over last year's figures and 5,541 ft. more than that of the previous record attained in 1934-35. That bore out the general manager's statement last year that 25,000 ft. of development should be sufficient to keep the reserves five years in this year being accounted for by the extra development work undertaken.

At the Associated Retreatment Plant, 718,330 tons of residues had been treated, an increase of 113,093 tons over the preceding year. The plant had continued to run satisfactorily, the installation of a two-stage centrifugal pump in the early part of the year having resulted in a considerable increase in the tonnage treated. Recently extra residue dumps from the North Kalgurli company had been acquired, and their acquisition was all the more useful in that they would not only prolong the life of the present plant, but provision for their treatment would entail very little capital expenditure. In the metallurgical section the benefit gained from the installation of the Van Tongeren dust collector was very noticeable.

WORKING COSTS

Working costs at 21s. 3.10d. were 7.52d. higher, the rise being more than accounted for by the increased development footage. In regard to power, the saving effected by the use of their own oil container, with consequent lower transport costs, had resulted in a decreased cost of power chargeable to treatment of over 3d. per ton of ore. The erection of that container and the provision of the necessary transport wagons had been an unqualified success.

The results of the past year made evident the truth of what he had said in the past regarding the unreasonable and short-sighted policy which imposed upon an industry of vital importance to the country a burden based on the good results being obtained from an extremely small proportion of the mines operating in the State. They could have expected to receive more sympathetic treatment for an industry which was probably worth more to the State than all the other primary industries combined. The report was unanimously adopted.

AMALGAMATED BANKET AREAS, LIMITED

SUBSTANTIAL ORE RESERVES

The ordinary general meeting of Amalgamated Banket Areas, Limited, was held, on the 10th instant, at River Plate House, London, Mr H. G. Latilla (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said that they were expending large sums of money on the development and equipment of their mines, and had already spent a quarter of a million sterling on plant and machinery, quite apart from actual mine development expenditure. It was only natural that they should spend a good deal of money because they were developing such a large area, by the exploitation of which they were learning to appreciate what they really had in the way of a mining property and could establish what the future held for them.

Their financial position was strong; they had at the moment £270,000 lying with their bankers. Last year he had endeavoured to bring home to shareholders what the extent of their holding was and had pointed out that their area covering the gold-bearing banket formation was bigger than the joint holdings on the Rand of the Sub-Nigel, Brakpan, Daggafontein, Government Areas, and Geduld companies. He repeated that with the idea of impressing on his hearers the importance of their undertaking, because in the light of their mine developments what he had told them in July, 1936, not only still held good, but results confirmed what they had always believed. It was, he thought, true that the company was an outstanding goldmining proposition.

DIVIDEND PAYMENTS

They had followed the precedent of last year by declaring an interim dividend of 5 per cent., and, although that distribution might be considered modest, they had the distinction of having paid a dividend in each year of their existence. The substantial addition to the ore reserves could not have failed to impress them. Last year they had published proved ore reserves at Abbontiakoon, Mantraim, and Pepe, aggregating 952,964 tons, whereas this year's proved total at August 31st was 1,785,230 tons, an increase of 832,266 tons.

In designing the power plant provision had been made for a second unit of the new mill, which would increase the mill capacity to 60,000 tons per month. In his view the actual economic limit to tonnage production would eventually exceed that figure, but what the ultimate plant capacity might be would depend on the results of development. In his opinion the company would become one of the most important producers of gold over a period which would run into a great number of years.

MR AGNEW'S REMARKS

Mr John A. Agnew said that in the Abbontiakoon section there were three points of interest. The first was the disclosures in Nos. 10 and 11 levels south and in the rise connecting with those levels. The lengths of ore so far opened up and values disclosed were most satisfactory, and the results to date afforded to some extent confirmation of the belief they had held for some time that in the section of unproved ground, between the Abbontiakoon and Tarquah, there existed stretches of highly profitable ore. The second was the work carried out in the north end of mine on the seventeenth level, where a length of over 520 ft. of ore had been exposed, which averaged 10.63 dwt. per ton in value. The third point was the exploratory campaign in the upper levels of the mine, clearing out some of the older workings, including stopes. That had already disclosed a great deal of ore of a highly profitable character.

On Mantraim development work had been of a most promising character, the reef showing a width of between 60 and 80 inches, and values ranging between 6 dwt. and 7.4 dwt. per ton. On the Pepe section a very considerable amount of development work had been carried out with highly satisfactory results. Big widths of ore were shown over great lengths so far developed. The general manager indicated a probable production of something like 2,700,000 tons of ore ultimately available from Pepe. While he was of opinion that a greater tonnage would be won, it would be misleading to infer that anything approaching that was at present sufficiently developed to enable a reasonably close estimate of value to be placed upon it. As regarded the Akantansi Section, insufficient work had as yet been carried out to enable them to form more than a general impression as to the possibilities that existed in that part of the property. They could confidently rely, however, upon producing a very valuable contribution to the mill from that section.

The report and accounts were unanimously adopted.

PRICES, TAILORS, LIMITED

INCREASED SALES AND PROFITS

The ninth annual general meeting of Prices, Tailors, Limited, was held, on the 9th instant, in London, Sir Henry Price (chairman and managing director) presiding.

The Chairman, in the course of his speech, said that the trading profit for the past year was £521,788, compared with £446,470 for the previous year. The preference and preferred ordinary dividends had already been paid, and they had transferred to Price's Trust Company by way of dividend upon the ordinary share capital the sum of £192,000, after deduction of income tax. He was sure it would be agreed that the past year's trading was in every way satisfactory.

The number of depôts open throughout the British Isles and Northern Ireland on June 30, 1937, was 313, compared with 290 on the corresponding date last year. Their sales had shown a consistent increase during the year.

"Rational tailoring," in the past year or so had passed into the "national class," by which he meant that the term "rational tailoring" was now synonymous with "national tailoring." This placed upon them a special responsibility and one which they had accepted. To keep the nation well clothed with good suits at a price which people could afford to pay was, in their view, to make a substantial contribution to the national health and the national wealth. Their organisation was very elastic and quite able to take charge of any change of fashion, whether in colour or style.

With regard to the increase in the price of cloth the directors had decided to maintain fully the value of their goods and to meet the increase in the cost of production by an increase in sales, and he might say that they quite expected to maintain the ratio of their profit advance during the present year.

The report was unanimously adopted.

At the third annual general meeting of Price's Trust Company, Limited, held subsequently, Sir Henry Price said that the total revenue was £192,579, compared with £162,577 last year, and the directors recommended a final dividend of 32½ per cent., making 45 per cent., less tax, for the year, compared with 30 per cent. for the previous year. He was confident that when they met next year he would have another satisfactory statement to put before the shareholders.

ARGENTINE GREAT WESTERN RAILWAY COMPANY, LIMITED

The ordinary general meeting of this company was held, on the 8th instant, in London.

The Chairman, in the course of his speech, said:—You have all received a copy of my speech at the meeting of the Buenos Aires and Pacific Railway. The relevant thing in sending you that speech is that you are then able to know the position of the system as a whole, and unless you did know that, you could not learn very much about the position merely from hearing a speech about one section of it.

I would begin by pointing out how we stand as regards the proceeds of the earnings. The interest on our first and second debentures has been paid at due dates. As regards the five per cent. debenture stock, since the last meeting three payments, each

KANSALLIS - OSAKE - PANKKI

(NATIONAL JOINT STOCK BANK)

of one half-year's interest, have been made on this stock. There was a payment last December, there was another in March, another in July, and we have given notice of the payment of another half-year's interest to be made on December 1st. As regards our preferred, our preference and our ordinary stocks, it is regretted that it is not possible to make any payment upon them.

The Pacific report shows you that losses on exchange during the last five years have amounted to over £3,200,000 and on the last year's working the losses on exchange were 40 per cent. That really accounts for the whole thing.

Last year we carried 647,000 tons of wine, the highest tonnage since 1929. The position of our goods traffic continues to improve. In 1933 we carried 1,400,000 tons, and in 1937, 1,700,000 tons. That is an increase of 300,000 tons in four years.

The report and accounts were unanimously adopted.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended November 6, 1937, amounted to £16,963,000, against ordinary expenditure of £28,758,000. After increasing Exchequer Balances by £121,398 the operations for the week, as shown below, increased the gross National Debt by £12,147,000, to about £8,242 millions.†

No gold movements were reported at the Bank of England between November 5th and 11th. Details of previous movements appeared in last week's issue on page 290.

GOLD MARKET

Messrs Samuel Montagu and Company write on November 10, 1937:—The Bank of England gold reserve against notes amounted to £326,406,625 on November 3rd showing no change as compared with October 27th.

The weakness of the dollar and the transference of funds from dollars to gold made for very active conditions in the open market during the past week. At the daily fixing the amounts available reached the substantial total of about £4,500,000, but demand was very keen and prices at the time of fixing included as much as 1s. 5d. premium over dollar exchange parity; it is believed that after fixing dealings were effected at prices about 2s. over that parity. It was announced in New York that a shipment to France of \$10,250,000 of gold had been arranged; this is the first gold export of importance that has been made from the United States of America since February, 1936.

The s.s. "Mongolia," which sailed from Bombay on November 6th carries gold to the value of about £224,000.

SILVER MARKET

An easier tendency was seen during the past week. Speculators re-sold and the Indian Bazaars were also sellers, possibly influenced by the fall in commodity prices and, with the weakness of the dollar lowering the level at which American operators were willing to give support, quotations declined gradually until 19½d. for cash and 19½d. for two months delivery were fixed on November 8th. Subsequently prices responded to a reaction in the dollar-sterling exchange and made a recovery; November 9th quotations being 19½d. for both deliveries.

The undertone is steady and for the present prices appear likely to keep in proximity to the American parity.

Quotations for gold and silver are shown below:—

1937	Price of Gold per Fine Ounce	Equivalent Value of £ sterling	Price of Bar Silver in London per ounce standard		Price of Silver New York per ounce .999 fine
			Cash	Two Months	
Nov. 4	140 6½	12 1-10	19½	19½	Nov. 3 to Nov. 9 inclusive } 45
" 5	140 6	12 1-12	19½	19½

" 9	140 0	12 1-64	19½	19½	
" 10	140 2	12 1-48	19½	19½	
" 11	140 3-17	12 1-36	19½	19½	
Average	140 1½	12 1-50	19½	19½	
Nov. 11	140 1½	12 1-50	19½	19½	

The highest rate of exchange on New York recorded during the period from November 4th to 10th was \$5.03 and the lowest \$4.97.

APPOINTMENTS AND PERSONAL

Mr A. H. Wood, deputy controller, has been appointed controller of the London County Council.

Sir William Firth has been re-elected chairman of the Welsh Plate and Sheet Makers' Association.

Messrs Winthrop Mitchell and Company, members of the New York Stock Exchange, announce the opening of an office at 22 Moorgate, London, E.C.2, under the management of Mr E. Ashley Dodd. Telephone Metropolitan 7973.

Mr K. K. Peters has joined the Board of Indemnity Marine Assurance Company.

Mr W. H. Walker has relinquished the chairmanship of the United Drapery Stores, Ltd., but retains his directorship. Sir Edward M. Mountain has been appointed director and chairman.

Mr Percy Balfour Liversidge ceased to be a managing director of British Oxygen Company on November 2, 1937. Mr William Warnock Watt was elected to the board and appointed a managing director from January 1st next.

Sir Felix Pole has been appointed to the board of Milford Docks.

Mr Chas. E. Bedaux, the chairman, has resigned from the board of British Bedaux.

The Norwich Union Life Insurance Society announce the election of Dr A. J. Cleveland, to a seat on the board in place of the late Dr F. W. Burton-Fanning.

Mr A. Comar Wilson has been elected a director of Rhodesia Broken Hill Development Company.

INVESTORS GENERAL FIXED TRUST.—Distribution of 5-50175d. net per sub-unit, against 6-19275d. a year ago, is payable on December 1st to holders registered on November 4th.

SCOTTISH FIXED TRUST CERTIFICATES.—Fifth income distribution for period May 2nd to November 1st, will be paid to holders registered as at November 1st, at the rate of 4-9341d. net per sub-unit, on December 1st. A year ago 4-475d. net per sub-unit was paid.

CENTRAL MINING AND INVESTMENT CORPORATION.—An interim dividend of 8s. a share (5 per cent.), subject to tax at 3s. 10d., i.e. 6s. 5-6d. a share net, has been declared payable on November 24th. A similar distribution was made a year ago.

JOHN DELANEY, LTD.—Mr A. Woolley-Hart, the chairman of this company, presided at the twelfth ordinary general meeting held on November 4th. He pointed out that the board were able to report an increased profit for the year ending July 31, 1937. This, although satisfactory as far as it goes, indicates but a very small gain upon the very heavy loss of profits in the years past. They could, however, look forward with confidence to some improvement in the current year, and they hoped and believed for a longer period. The demand from the steel industry had materially improved, and there was an increased demand for agricultural purposes.

ENTRE RIOS RAILWAY COMPANY.—For year to June 30, 1937, gross receipts were £966,092, against £828,023, working expenses £770,087, against £729,666, and net receipts £196,004, against £98,358. Exchange losses were £67,027, against £30,686. After charging £180,200 debenture interest (not paid), and £35,350 interest on arrears, debit balance forward is raised by £88,078 to £368,169. In April, one year's 4 per cent. debenture interest was paid, and a further 1½ years' was paid November 5.

An award in connection with the Hasenkamp lawsuit produced 1,879,553 pesos.

ARGENTINE NORTH-EASTERN RAILWAY.—For year to June 30, gross receipts rose by 665,342 pesos, and working expenses by 240,727 pesos, net receipts being 2,206,624 pesos, or £192,642 (£37,070 higher). Exchange loss, £59,742, against £53,441; debenture interest charged £126,899. Debit balance forward raised from £248,648 to £267,849.

AMALGAMATED COTTON MILLS TRUST.—In the Chancery division on November 5, this company's reconstruction scheme was approved with minor modifications by Mr Justice Simonds.

STANDARD MOTOR COMPANY.—At the annual meeting on November 10th, it was announced that a new class of car was to be produced. A new factory independently administered was to be built for the purpose, and the price would be lower than the existing range. Fisher and Ludlow, who would erect an adjacent factory, had received the contract for the bodywork of the new model.

WEARDALE STEEL COAL AND COKE.—Trading profit for year to September 30, 1937, was £110,545, compared with £78,790. The Tudhoe Colliery (including Croxdale) has been abandoned, being no longer commercially workable. From reserve to writing down assets, £100,000. Deferred dividend 12½, against 10½ per cent. To reserve £25,000, against £20,000. Carry forward raised from £27,336 to £28,402.

DALGETY AND COMPANY.—Net profit for year ended June 30, 1937, £173,044, against £145,851. Ordinary dividend 8 per cent., less tax, against 6 per cent., tax free. To staff fund £25,000, as before. Carry forward increased from £122,218 to £125,162.

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

THE downward tendency of the prices of the principal primary products continued during the past week, though most quotations closed on Wednesday above the lowest levels. Despite the further sharp decline, however, there is still no evidence of a resumption of large-scale purchases by consumers.

Among individual commodities, copper, lead, spelter, and tin are all cheaper on the week, though Wednesday's quotations are appreciably higher than those at which transactions took place on Monday. Rubber, similarly, was again marked down in price. Linseed and linseed oil were cheaper on reports that the new crop in Argentina is making favourable progress.

Quotations for raw cotton declined further on the publication of the official estimate of the American crop on Monday which showed a substantial increase over the previous forecast. By Wednesday, however, quotations had recovered to the previous week's level. World supplies of raw cotton this season exceed probable consumption by nearly 70 per cent. The course of prices during the next few weeks depends, however, largely on the action which the American Congress will take to deal with the surplus of American cotton. Quotations for raw wool continued to sag and business in the Yorkshire woollen textile trade has been seriously dislocated.

Although there were no new developments in the wheat situation, the "golden grain" declined in price during the past week, and on Wednesday was sold in Liverpool below last year's level. Raw sugar and coffee were marked down, but meat prices were steady, beef showing a slight rise. After the sharp upward movement in recent weeks, quotations for butter showed a substantial decline this week.

In the United States, quotations for primary products continued their headlong decline. Moody's index of the prices of staple commodities (December 31, 1931 = 100) fell from 156.9 to 152.3 during the week ended last Wednesday. A month ago the index stood at 173.9 and a year earlier at 186.3.

COAL

SHEFFIELD.—Export business remains somewhat disappointing. Owing to keen competition, a large inquiry from Sweden is hardly likely to be secured by this district. Inquiries for forward delivery are steady.

Inland consumption of small coal is increasing at coke and electricity works. A new battery of ovens has just been started which will increase the supply. The colder weather will have its effect on the demand for house coal, which, until now, has been below the average for the time of the year. Gas coal is moving more freely and there is a steady demand for all classes of industrial fuel.

NEWCASTLE-ON-TYNE.—The North-East coal market is without any particular feature. Northumberland steam collieries continue to be short of prompt trade for screened coal, but other grades are cleared without difficulty. The Durham position is steady. Steams and gas qualities are being shipped against contracts made earlier in the year and in addition there is a certain amount of seasonal activity. The coking market is firm under a good home trade and a steady demand from local coke makers. Whilst there is little export inquiry for patent oven coke, the home trade continues brisk.

GLASGOW.—Conditions are not greatly improved this week. Foreign inquiry remains negligible, and even contract tonnages are not being fully taken up, the slower industrial conditions on the Continent and milder weather having led to large accumulations of fuel at importers' depots. The result is that the collieries are in need of prompt orders. The various classes of coal are not uniformly affected, but in Fifehire third steams and treble nuts are freely available. Lothian producers would welcome business in the cheaper grades of steam coal, but apart from trebles, washed nuts are moving fairly readily owing to the expansion of local demand, the balance being taken by the London market. In the Lanarkshire field, industrial demand is active, but owing to the milder weather public utility and domestic needs are less than usual at this season. Ayrshire is probably best placed of the Scottish districts, a steady business being done with Ireland.

CARDIFF.—There has been a slightly better inquiry on the Cardiff coal market during the past week, and prices are firm. The volume of trade is being well maintained, and shipments in the foreign and coastwise trades last week totalled 442,800 tons compared with 440,600 tons the previous week, and 390,293 tons in the corresponding week last year. The collieries are kept well employed under contracts, but while the stocks of large classes are a little heavier than they have been probably at any other period this year, there is still a scarcity of dry, sized, and washed coals. Patent fuel is a steady market at recent quotations. Under the French coal-pitwood barter agreement the last Quarter's ex ship pitwood price of 31s. has been reduced to 26s. 3d. to cover a quantity of 80,000 tons to be delivered by the end of next February.

IRON AND STEEL

LONDON.—The weekly report of the London Iron and Steel Exchange indicates that this week's announcement of the stabilisation of home trade prices for steel until the end of 1938 has been well received in all departments of the market, and has cleared the way for the transaction of new business. A considerable tonnage of orders had been held up owing to the uncertainty concerning prices next year, but with the settlement of this question a heavy volume of inquiry was released. The position of the steelworks, however, has not been altered. Having enough work on their books to keep them employed for months to come, they are not

anxious to accept further far forward commitments. In the majority of cases they will enter 1938 with a considerable tonnage of arrears of orders to work off.

In the pig iron department supplies appear to be sufficient to take care of consumers' requirements, although neither they nor producers have been able to accumulate much in the way of reserves. Continental foundry iron is being offered at cheap rates in certain districts, but comparatively few transactions have been reported.

In the semi-finished steel department stringent conditions continue to rule and in spite of the increased production and additional imports, there is still a gap between supply and demand.

The request for finished steel is unrelaxed, and it will probably be necessary to continue the system of rationing for some time, notwithstanding the record output.

SHEFFIELD.—Business in the iron and steel market continues at a good level, with prices everywhere firmly maintained. So far as pig-iron is concerned, consumers of forge iron no longer complain of a severe shortage, and makers are a good deal less reticent about booking new contracts. A certain amount of material for early delivery is also available. There is no surplus of foundry iron, producers being fully sold, and few have even small parcels for current disposal. Hematite business is not easy to place, especially West Coast. Prices are expected to undergo revision shortly, and in the meanwhile makers show no disposition to add to their commitments. Special hematite is in very short supply, and competition is keen for anything which comes on offer. Bar iron demand is as strong as ever. The call for basic steel billets is fully maintained, and the supplies of imported billets do little to relieve the pressure. Some makers have had to close their order books until progress has been made in overtaking arrears. Acid billets are in full request, and this applies equally to wire rods, stainless steel sheets, and bright drawn steel. All prices are firmly held.

The decision of nine British steel associations to stabilise prices at the existing level over the whole of 1938 is favourably commented upon in the market as tending to keep trade on an even keel, and allowing contractors to quote firm prices.

MIDDLESBROUGH.—The market for Cleveland foundry iron is still a narrow one, owing to the limited production, but parcels of Continental iron which have arrived are easing the position. The particulars of the application of the rebate system to Cleveland foundry and forge pig iron are now available. For iron with a phosphoric content of not less than 0.75 per cent. a rebate of 5s. per ton is allowed under certain conditions. The official price of Cleveland No. 3 foundry pig iron therefore stands at 106s. per ton delivered locally and No. 1 foundry quality at £5 8s. 6d. per ton delivered locally, both subject to the above rebate. Hematite pig iron makers are delivering parcels under existing contracts to home consumers and quantities are being despatched to Continental destinations. More inquiries are being received from the Continent. The official price for East Coast mixed numbers hematite remains at 122s. 6d. per ton delivered on the North-East Coast less the rebate, but new business for forward delivery is restricted until some announcement is made regarding prices.

Basic steel-makers here anticipate that the official announcement made this week that prices of their products will remain stabilised until the end of 1938 will remove any hesitancy on the part of buyers who have been waiting for news regarding forward prices. The official price of basic pig iron is now £5 per ton less the rebate, but none of the local production comes on to the market, as there is insufficient for the requirements of the steelworks and a further quantity of American basic iron arrived in the Tees last week-end.

There has been no indication of any easing in the price of blast furnace coke, which is maintained at 42s. per ton delivered at the furnaces. Small transactions are taking place in ore from North Spain, the delivered price being lower owing to easier freights. Heavy melting steel scrap is readily taken up at official prices, which remain unaltered.

GLASGOW.—In the West of Scotland the effect of the stabilisation of domestic steel prices until the end of 1938 has been to increase demand. The volume of inquiry for every class of steel is exceedingly heavy, many consumers being desirous of covering the bulk of their requirements over the next twelve months. The situation with regard to deliveries of raw materials and semis shows signs of further improvement, but steel makers and re-rollers are not assured yet that supplies will throughout the year be regular and sufficient to enable them to keep plants fully employed. Hence, they are not prepared to accept all the business offering. Pressure for deliveries of finished material is particularly strong, but makers are unable further to increase output for the time being.

CARDIFF.—Production in the South Wales tinplate industry in the week ended October 30th reached 81 per cent. of allotted capacity. For current sales prices are a shade easier at 24s., but there is no recession in the volume of the export trade. During the week ended November 4th exports totalled 8,491 tons, compared with 7,704 tons the previous week, and 8,005 tons in the corresponding week of last year. The heavier branches of the industry are very active, and prices are unchanged.

OTHER METALS

COPPER.—After falling to £36 3s. 9d. on Monday, the cash price rallied sharply and closed on Wednesday at £39 2s. 6d., a net loss of £2 2s. 6d. on the week. There has been no major change in the intrinsic position of the metal. The extreme weakness of the United States market created a panic sentiment on this side of the Atlantic, which led to a serious setback on Friday and Monday. At the lowest levels some support was

or provision for your family should you die in harness, is guaranteed to the professional or business man normally without prospect of a pension, by the new

CENTENARY PENSION POLICY

NATIONAL PROVIDENT INSTITUTION
48 GRACECHURCH STREET, LONDON, E.C.3

SUGAR.—The London market firmed up after earlier weakness. The New York spot quotation was 3·25 cents on Wednesday, as compared with 3·22 cents per lb. last week and 3·15 cents per lb. a month ago. Wednesday's sales of raw sugar in London included "December" delivery at

RUBBER.—The market has again been quiet and easier. The weakness of Wall Street and a poor demand were the principal factors involved. Meanwhile, the gradual growth of stocks in this country continues. The spot price in New York on Wednesday was 14½ cents per lb., compared with 14¼ cents per lb. a week ago and 16½ cents a month ago. Wednesday's official buyers' price for standard ribbed smoked sheet on the spot in London was 7d. per lb., as against 7½d. on the corresponding day last week. In forward positions business has been done at 7d. to 7½d. for "December" shipments, as against 7½d. to 7¾d. a week ago. Stocks in London and Liverpool at the end of last week totalled 52,031 tons, against 51,826 tons a week earlier. A year ago stocks amounted to 94,131 tons.

which is the vital principle underlying their whole position—that the present hostilities in the Far East, and the situation which they have brought about, are “matters inevitably of concern to the countries which they represent, and—more—to the whole world.” And they sum up that “to them the problem appears not in terms simply of relations between the two countries in the Far East, but in terms of law, orderly processes, world security and world peace.”

Descending to details, the Brussels resolution takes up the Japanese affirmation that it is China whose actions and attitude are in contravention of the Washington Treaty, and it disposes of this preposterous contention by pointing out that, whereas China is engaged at this moment in full and frank discussion with the other parties to the treaty, Japan refuses to enter into any discussion with any of them. In conclusion, the Brussels Powers declare their belief that a just and desirable settlement is not to be expected from direct negotiations between the parties. And on this ground they once again propose a cessation of hostilities in order to give an opportunity for seeing whether an agreed settlement cannot be reached by negotiations between the Japanese and Chinese Governments and a committee of the Conference. China, they point out, has already accepted this suggestion; why does Japan persist in rejecting it?

Unhappily, this last question is really only a rhetorical one; for Japan's reasons for persisting in her intransigence are set forth in the Brussels Note itself, and this on the authority of the Japanese Government. “Japanese authorities have declared in substance that it is Japan's objective to destroy the will and the ability of China to resist the will and the demands of Japan.” In their statements to this effect, the Japanese have, no doubt, been telling the world what is their real policy; and such Japanese declarations are as much to the point as the rest of their declarations are beside it.

But such an exposure of the self-contradictions of Japanese words will not worry the realists who have uttered the words any more than they were worried, half-a-dozen years ago, by a similar spate of verbally damaging exposures at the time of the Manchurian affair. The Japanese will not begin to be worried by the behaviour of third parties unless and until the debate is transferred from the realm of words into the field of action. Meanwhile, they are going forward, full steam ahead, with their own action in China, with intent to present the world, this time, with a *fait accompli* which

will dwarf “Manchukuo” in the magnitude of its dimensions.

Will the Japanese succeed? In any adventure in aggression there is many a slip 'twixt the cup and the lip, and the bigger the adventure the greater the element of uncertainty. It is noticeable that, in the act of claiming a decisive success at Shanghai, the Japanese military authorities have again warned their public that the military struggle is going to last a good time longer yet. But is the outcome of Japan's present aggression to be left to depend simply on whether, on trial, she proves to have the strength to break China's will? Or is there to be some punishment for a Japanese act which has been pronounced by Japan's peers, assembled at Brussels, to be a criminal offence against international justice? This question may possibly be ignored by diplomacy, but it cannot be evaded by the conscience, or indeed by the enlightened self-interest of PRESIDENT ROOSEVELT's “law-abiding ninety per cent.” of the population of the world; and there is a hint of this in the final paragraph of the Brussels Note, where the Brussels Powers declare that they must “consider what is to be their common attitude” in the situation created by Japan's isolated refusal to recognise the operativeness of the Washington Treaty in the present case.

What is that common attitude to be? There is no doubt what it should be if conscience were allowed to be the sole director of action. The idea has been most lately and most impressively stated by PRESIDENT ROOSEVELT at Chicago, when he called for the “quarantine” of aggressors. Whether the full implications of quarantine have been appreciated and accepted by the American people is one of the questions which the new session of Congress will have to answer. But to continue as at present to trade freely with the outlaw is daily to offend against another principle which the American people holds dear—that of neutrality. The United States and the European Powers are not merely failing to help China in resisting Japan, they are helping the aggressor, since the cessation of the outside world's present trade with both parties would hamper Japan much more than China.

Though much can be done by Britain and France in encouragement and co-operation, the prospects of action depend in the last resort upon American policy. It would be very rash, however, for the Japanese or for anybody else to assume that this means no action. For the conscience of America is already stirred and her self-interest is beginning to appreciate that not even American democracy can purchase immunity by assisting aggression.

Coal Reform

A DECADE ago the coal-mining industry occupied the very centre of the political stage. But in recent years, though coal has been not far off the stage of urgent affairs, it has never been quite on it, and to-day, when still another Bill to reform the industry is coming before Parliament, the perennial problem of the coal mines has the air of advancing into the limelight again from the wings.

This absence has not been due to the solution of the industry's problems. Coal mining is still an industry working below its capacity and yielding less than a fair rate of return to either the labour or the capital invested in it. It is still by far the largest progenitor of Special Areas. All that has happened is, on the financial side, that the rot has been stopped by the 1930 Act, and, on the industrial side, that both sides have learnt to distrust their own bitterness.

The Government's Coal Bill, the text of which was issued last week and received a brief preliminary notice in the last issue of *The Economist*, has been expected

for the last two years. Nationalisation of coal royalties was promised at the General Election. The other main purpose of the Bill, the reinforcement of the powers of the Coal Mines Reorganisation Commission, was abortively attempted last year. The Bill is thus not unexpected. Nor would it be a legitimate use of language to describe it as a great step forward; the purchase of royalties has been recommended by virtually every authoritative inquiry for nearly twenty years; and Part II of the Bill merely attempts to restore the procedure for compulsory amalgamation to what it was generally understood to be under the Act of 1930. But within the limits thus marked out for it, there is much in the Bill which deserves commendation.

The opportunity has been taken to include in the Bill a number of minor matters in connection with the industry which required legislative attention. Such are, for example, the continuation of Part I of the 1930 Act and the grant of powers for the compulsory acquisition of land for pithead baths. But leaving these details

aside, the two subjects of the Bill's main concern are royalties and reorganisation. They are, of course, closely related matters, and it is good that they are to be dealt with now in one enactment and in future by a single Coal Commission, absorbing the present C.M.R.C.

There was not much room for surprises in Part I, which deals with the nationalisation of royalties. The principle was agreed, and the total price to be paid had already been fixed by arbitration at fifteen years' purchase, or £66,450,000. This part of the Bill is therefore chiefly concerned with the methods to be followed in dividing this sum between the individual royalty owners—a task which is to be entrusted to a Central Valuation Board and a number of Regional Valuation Boards. Valuation will be a lengthy task, and the royalties are not to be completely vested in the Coal Commission until July 1, 1942. The Commission is, however, given certain powers to consolidate the leases of single mining undertakings during this interim period.

The finance of the scheme follows familiar lines. Provisions, which may possibly be criticised as too generous to the owners, are made for the assumption by the Commission of the costs of registration and valuation, and the Commission is given authority to borrow a further £10 millions, over and above the arbitrated sum, to cover these, the other expenses of the interim period and the cost of acquiring any ancillary minerals. The exact outgoings of the Commission obviously depend upon the sum to be borrowed, the rate of interest payable and the provisions for amortisation. But on a fully generous estimate they can hardly exceed £3,250,000 per annum, compared with its prospective income of £4,430,000. The Commission's borrowing may (but need not) be facilitated by a full Treasury guarantee. The margin of at least £1,180,000 per annum will have to cover the Commission's own expenses and its allocations to reserve. Any balance remaining is to be used for three purposes: (a) the reduction of underground wayleaves (by general admission the least justifiable burden on the industry); (b) the reduction of individual royalty rents which are more onerous than the average of their district; and (c) a general reduction of rents in districts where the average royalty is unduly onerous.

There will thus be some alleviation for the industry almost from the start; but it will be years before it can affect other than hard cases. On the whole, however, the scheme is soundly conceived, and the benefit it will bring to the industry will be far greater than can be measured by financial relief alone.

Part II is concerned with reorganisation. The corresponding part of the 1930 Act had a curious political parentage. It was formally sponsored by the Labour Government. But the whole of the reorganisation chapter was due to Liberal insistence in the House of Commons after the Bill had been introduced. And the Conservative House of Lords inserted the clause laying down the conditions to be satisfied before the Railway and Canal Commission could approve a scheme. It was this clause which rendered the Act inoperative, for it required the Coal Mines Reorganisation Commission to provide legal proof of matters (i.e. that a scheme was in the public interest, or that it would reduce costs of production) which were not susceptible of affirmative demonstration before the scheme was put into operation.

The Bill which was introduced last year, and later withdrawn in deference to the opposition of the mine-owners, abolished the appeal to the Railway and Canal Commission, and it was this omission which was the chief ground for the industry's opposition. The new Bill reinstates the Railway and Canal Commission. It is thus a reversion to the legal structure of the 1930 Act, and there is a consequent temptation on a first reading to assume (as was assumed in *The Economist* last week) that the

majority of the improvements of procedure embodied in last year's Bill have been surrendered in this year's. Actually, such a judgment is less than fair to the Bill. Schemes of amalgamation will still have to go before the Railway and Canal Commission after running the triple gauntlet of the Board of Trade, the Lords and the Commons. But there are three substantial modifications of the 1930 Act. In the first place, the Coal Commission is no longer placed under the obligation of affirmatively proving that the scheme satisfies the four requirements—namely, that it is in the national interest; that it will result in lowering the cost of production; that it will not be financially injurious to any of the undertakings proposed to be amalgamated; and that it is fair and equitable to all persons affected. In the new Bill, the objectors must prove to the satisfaction of the Court that the provisions are not complied with. Secondly, the actual requirements are modified. The satisfaction of the national interest is left to Parliament and the “cost reduction” clause entirely disappears. The third requirement is amended to read that a scheme shall be “calculated to avoid financial injury” to the constituent companies. Only the fourth condition is unchanged. Thirdly and most importantly, the Railway and Canal Commission may amend a scheme to accord with the requirements. But a scheme may be rejected only if it is *ultra vires* or if it is incapable of amendment to satisfy the conditions.

It is very difficult to foresee how these provisions will work out in practice, since everything depends upon the precise meanings to be placed upon the words of the Bill, and it may not prove impossible for the objectors to find legal methods of obstruction and even of destruction. Subject to these reservations, however, the Bill does seem to provide a viable, though not altogether smooth, detour round all but one of the legal obstructions which brought the 1930 Act to a standstill. The one exception is the refusal of the Court to recognise as an amalgamation anything short of the complete merger of the constituent undertakings. If this attitude is maintained, the Coal Commission will be forced into a policy of “all or nothing,” but it will not be totally inhibited from action, and the compulsion of thoroughness may be a benefit in the long run.

The Bill will thus enter on its passage through Parliament with a substantial degree of goodwill behind it. The chief criticism—and it is a severe one after so many years—relates to the delays which the Bill envisages. Preparation and approval of compulsory schemes will not in any case be a speedy process. But the delay has been increased by the provision that no compulsory schemes may be presented before 1940—the fulfilment, and even extension, of a pledge given last year by LORD RUNCIMAN which might have been expected to have lapsed with the Bill to which it related. There have been too many disastrous delays in the mining industry for such further procrastination in applying reforms which are already belated to be tolerable.

Opposition from the mineowners is to be expected both before and after the Bill's passage into law. But the fact that a Conservative Government is now engaged in putting teeth into a measure whose original parentage was both Liberal and Labour should suffice to convince even such an obdurate body as the mining employers that further obstruction to the manifest will and intention of the community will do them more harm than good.

Legal obscurities, political delays and interested obstruction have conspired to postpone the inevitable for many years. If the new Bill, for all its delays and its possible ambiguities, succeeds in clearing the way for that thorough reorganisation which is almost universally accepted as necessary, it will have performed a service not only to those who earn their living out of the industry but to the whole community.

Who Buys British?

WHEN the present year is over different epitaphs will be written on it by the Prime Minister, the President of the Federation of British Industries, the Chairman of the Council of Foreign Bondholders and the investor in industrial ordinary shares. But all alike will concede credit to 1937 for a tangible and gratifying recovery in Britain's overseas trade. Between the first nine months of 1933, when trade touched bottom, and the corresponding months of 1937, the value of retained imports of merchandise into the United Kingdom increased by 51 per cent., from £451 millions to £683 millions, and the value of British exports by 44 per cent., from £268 millions to £385 millions. And more than half the total increase in imports and in exports has occurred since 1936.

The trend of economic events in recent months has been moving so rapidly that even the figures for so short a period as nine months may fail to give a true picture of the current state of overseas trade. In particular, changes in commodity prices have been almost kaleidoscopic in recent months. It may be well, therefore, to separate the figures for each of the last three quarterly periods, and to break up the increases which they show, by comparison with their counterparts in 1936, into their component elements of greater volume and higher average prices. The results are shown in a table on page 349.

The figures in this table are striking. They show that, throughout this year, so far, while the volume of exports has risen more, proportionately, than the volume of imports, import prices have been increasing faster than

export prices. The rise of prices was not perceptibly checked in the third quarter, but the growth in the volume of overseas trade, which appeared to be gaining impetus in the second quarter, lost some of its pace in the third. This slackening was more pronounced in the case of exports than of imports.

In view of the slight but perceptible tendency towards regression, shown by this analysis, it may be relevant to examine the latest available returns in closer detail. The figures in the tables at the foot of this page, accordingly, show the countries of origin of our imports and the countries of destination of our exports. The number of possible permutations and combinations of these figures is almost infinite. For example, it may be asked what part the Dominions and colonies of the British Commonwealth have played in our trade revival. The tables show that while trade with the Empire led the way in the first phase of recovery, other countries are now catching up. The value of our imports from Empire countries was 73 per cent. higher in the September quarter of this year than in the corresponding quarter of 1933, whereas for the rest of the world the increase was only 45 per cent. We are still buying largely from the Empire; our purchases in the third quarter of 1937 as compared with 1936 rose by 33 per cent. (against 21½ per cent. in our purchases from other countries). But while the value of British goods taken by Empire countries shows a rise of 59 per cent. since 1933 (taking third-quarter figures throughout), the increase since 1936 has been only 16 per cent., against an increase of 23½ per cent. in our exports to non-Empire countries.

Who are our suppliers? Which countries are our best customers? In the third quarter of this year we drew nearly 33 per cent. of our total imports from five countries or groups—the United States, India and Ceylon, Australia, Argentina and New Zealand—in that order. Our imports from these countries rose in value by 35½ per cent. as compared with a year ago, while our imports from all countries rose by 26 per cent. On the export side, our five best customers, in order, were South Africa, India and Ceylon, Australia, Canada and the United States, who between them took 34 per cent. of total exports. The value of our exports to these countries, however, increased, by comparison with the third quarter of 1936, by less than 15 per cent., against an increase of nearly 20 per cent. in our exports.

The majority of these countries are producers of raw materials, and the higher value of their overseas sales now may have, as a corollary, increased purchases by these countries later. How far is the latter tendency already visible? Is Britain's trade growing less or more rapidly with primary producing countries than with industrial countries? The figures show that, in fact, Britain's total imports from ten primary producing countries* have risen, between 1936 and 1937, by 11 per cent., while imports from ten manufacturing countries† have risen by 22 per cent. Our exports to the primary countries have grown by 16½ per cent. and to the manufacturing countries by nearly 19 per cent. The demarcation between the two groups is admittedly vague—the United States, for example, is the world's largest primary producer as well as the greatest of industrial nations. Broadly speaking, however, the figures suggest that up to the present the prosperity of the industrial countries has been at least as important a factor in our overseas trade revival as the higher prices which the primary countries have secured for many of their products.

Further analysis shows that a significant share of the total increase in demand for British goods has come

* India, Australia, South Africa, Canada, New Zealand, Argentina, Brazil, Denmark, Norway and Egypt.
† Germany, Belgium, France, Japan, the United States, Czechoslovakia, Sweden, Switzerland, Holland and Poland.

from those countries which recently re-aligned their currencies. Our exports to them were 36 per cent. greater in value in the third quarter of 1937 than of 1936, against an increase for all countries of 20 per cent. A more surprising feature brought out by the tables is the fact that countries whose trade is regulated by different forms of exchange control, clearing, etc., have shown more than the average increase in their trade with us. In the latest quarter, our imports from eight of these countries rose in value by 23½ per cent. and our exports to them by 27 per cent.

A detailed study of the latest available figures of the distribution of our foreign trade is thus at least partially reassuring. Current recovery is well distributed over

TRADE IN EACH QUARTER OF 1937 COMPARED WITH CORRESPONDING QUARTER, 1936

	Value £ millions	Value %	Volume %	Prices %
Retained Imports:—				
First quarter	+26.3	+14.3	+3.4	+10.5
Second quarter	+46.2	+24.8	+7.5	+16.4
Third quarter	+47.5	+24.7	+5.8	+17.8
British Exports:—				
First quarter	+15.0	+14.2	+10.0	+4.0
Second quarter	+28.3	+27.7	+18.6	+8.1
Third quarter	+22.1	+19.8	+8.4	+10.4

the face of the globe, and is not dependent on the fortunes of any single group of countries. It is not governed primarily by our fiscal policy; for its present impetus is coming from countries outside rather than from those inside the British Empire. It is not confined to our trade with those countries which, as primary producers, have been the initial beneficiaries of rising prices, and may be the first to take the impact of declining prices. The improvement has, in fact, been the result of increased prosperity the world over, and its maintenance, consequently, is bound up with the state of world trade as a whole. The future course of commodity prices and the possibility or otherwise that the recent recession in American business may spread to other countries—these questions hold the key to the future of Britain's overseas trade.

French Railways

ON November 13th M. Bonnet announced that the sterling credit of £40 millions granted by a group of bankers to the French railways would be repaid next month. This is the latest of a series of steps to restore order and confidence in French national and railway finances. One very important item in this programme was the institution in September of the National Railway Company of France, to operate from next January. The immediate purpose of the company was to balance the Budget, but on a longer view it marks another stage in the historical trend of French railway administration towards unification and State control. The British railways from the first were developed by private enterprise, because the Industrial Revolution in this country preceded the Railway Age. There was an accumulation of capital in private hands to finance the new mode of transport. In most other countries, however, where railway building was a means to industrialisation, it was necessary for the State to participate in the early stages of development. In France, a compromise between State control and private management has been tried for a hundred years.

The principles of railway development in France, which began in 1823, were first laid down in 1842. The State undertook to provide the land and track, while the private companies were to be responsible for the permanent way and rolling stock. In the crisis of 1848, however, many of the companies failed; and between 1852 and 1857 some twenty-eight concerns were merged into five great companies: the North, the East, the Paris-Orleans, the Midi and the Paris-Lyons-Marseilles.

These arrangements, unfortunately, were short-lived. Two years after the crisis of 1857, the railways were

divided into two categories. One-half of the profits of the main lines was to be paid out to the shareholders. The other half was to provide a fund to make up the deficit on the lesser lines. In effect, the interest of the shareholders was guaranteed by the State, because the Government was pledged to assist if one-half of the profits was inadequate for the needs of the secondary lines. In 1878, a State Railway Company was set up to acquire the lines of small bankrupt companies; and in the following year the Chamber adopted the so-called Freycinet Plan to construct 181 new lines.

A new situation was created by the Freycinet Plan, and a new definition of the relations between the State and the railway companies was drawn up in 1883. The State was to control the companies, whose concessions might be revoked. The State was to make advances to the companies, and guarantee the payment of interest and dividends to shareholders. The movement towards State control and unification was thus accelerated, though private ownership was still retained. Under the arrangements made in 1883, the railways prospered.

The Great War was, however, the beginning of a new period of chronic financial difficulties. The wear and tear entailed by wartime traffic, the devastation of the areas occupied by the enemy armies, the slump in exports after the war, and the rise in prices, wages and pensions—all these combined to produce a deficit of 5,000 million gold francs. A new financial and administrative arrangement was made in 1921. Again the trend of legislation was towards further State control and more complete unification of the French railway systems. Administrative fusion was effected by the establishment at the Works Department of two boards: the *Conseil National des Chemins de Fer* and

the *Comité de Direction des Chemins de Fer*. Some degree of financial unification was secured by the creation of a joint fund into which were to be paid the surpluses of the profit-making companies, which were to be used for the assistance of the less successful lines.

This new scheme did not work particularly well in practice. Its details were not clearly defined, and, moreover, the working deficits of the companies were much greater than had been anticipated. The financial position of the companies was further confused by the growing practice of Government borrowing under the name and on the security of the railways. In annual Budgets only the yearly charge for interest on these loans was included and not the nominal capital value. The following table summarises the financial results of the companies, under these conditions, since 1929:—

FINANCIAL RESULTS OF FRENCH RAILWAYS
(Million Francs)

Year	Receipts	Expenses	Financial Charges	Total Expenditure	Surplus or Deficit	Deficit of Joint Fund
1929	15,873	12,485	3,090	15,575	+ 298	- 187
1930	15,790	13,982	3,123	17,085	- 1,295	- 1,784
1931	14,359	13,987	3,275	18,942	- 2,583	- 3,041
1932	12,241	12,611	3,214	15,825	- 3,574	- 4,094
1933	11,584	12,021	3,408	15,424	- 3,840	- 4,388
1934	11,088	10,978	3,508	14,487	- 3,419	- 3,958
1935	10,030	10,430	3,350	13,882	- 3,852	- 4,393
1936	10,211	10,887	3,425	14,189	- 3,977	- 4,809

The figures show that the situation grew steadily worse after 1929. The economic recovery, which came to many countries after 1933, was delayed in France. To crown all, the institution of the 40-hour week in 1936 entailed an increase of 80,000 in railway personnel, and wage-cuts were restored. By then the accumulated debt of the companies was 27,000 million francs, and this year it seemed likely to reach 35,000 millions. Meanwhile the sums charged on the Budget to meet the deficit on the railways rose from 60 million francs in 1931 to 120 millions in 1932, 359 millions in 1933, 622 millions in 1934, 915 millions in 1935, and 1,100 millions in 1936. State receipts from taxes on transport were exceeded in 1935 and 1936 by State expenditure on the payment of interest on railway loans. Borrowing for the railways added to borrowing for ordinary budgetary needs rendered the Treasury's task impossible.

It was clearly evident this year that railway reorganisation had become an essential part of any

programme to balance the State Budget. The Socialists demanded nationalisation, but, in the provisional solution worked out by M. Chautemps' Radical Cabinet, State ownership was once again avoided. Under it, a National Railway Company was created, to operate, officially, from January 1, 1938. The State will hold 51 per cent. of the company's capital of 1,500 million francs. The companies' 49 per cent. of shares will be blocked until 1955, when they will be given to the companies' shareholders in exchange for their present holdings. The new company, administered by a board in which the Government has a majority and whose president is appointed by decree, will remain in existence for 45 years. In 1983 the whole of its assets will revert to the State, and a trend of 150 years of French railway history will be complete.

Meanwhile, the finances of the railways are to be set in order. The general accounts must be balanced by 1944, and the working accounts five years earlier. Rates and fares will be raised when necessary. A 25 per cent. increase from January 1st is being mooted. The State will also guarantee minimum dividends and interest. But, most important, the State finances and the finances of the new company are to be entirely separated: the Government will no longer be able to borrow on the security of the railways; and if fresh State advances are made to the new company the capital amount must appear in the Budget statement.

Railway expenditure in 1937 is estimated to reach 14,000 million francs, compared with 10,687 millions in 1936, an increase due to increased costs and wages and shorter hours. Receipts last year were 10,210 million francs. This year a 10 per cent. increase in receipts is expected, to which must be added the yield of the recent 25 per cent. increase in rates and fares. Thus, receipts and expenses will probably balance at the end of the year. But some 5,000 million francs of annual financial charges will still remain uncovered. And to meet this deficit would require a rise in general economic activity to about 20 per cent. above the boom level of 1929.

The outcome of this scheme is, therefore, uncertain. The railways are still unable to meet their liabilities out of income, and they will continue to work at a loss unless and until business recovery produces a significant increase in net receipts. Railway problems in France cannot be separated from the more general problems of restoring Governmental authority and reviving trade and business confidence.

Notes of the Week

Mr Chamberlain at Edinburgh.—On Friday of last week Mr Chamberlain followed up his Guildhall speech with one at Edinburgh, which has also been well received in Berlin and in Rome. This time the Prime Minister made his transition from home to foreign affairs in an odd passage, which seemed to imply that the management of this country's foreign relations—described as "problems beyond our control which arise outside of these shores"—were an unwarrantable and vexatious burden which the Government would not carry if it had any choice about it. After that he named three objects of the present Government's foreign policy in descending order of importance: first, the protection of British interests and the protection of the lives of British nationals; second, the maintenance of peace; third, the cultivation of friendly relations with other nations who are prepared to co-operate with us in keeping the rules of international conduct. If Object Number One is more than sufficient to tax the Government's courage and energy, it is a bad look-out for Objects Two and Three. When British Ambassadors are being machine-gunned, British ships seized, British cargoes impounded, British buildings battered down, and British trade paralysed, we cannot, if Mr Chamberlain's programme be taken literally, expect much from His Majesty's Government on behalf of wider interests. There is an illogicality in Mr Chamberlain's policy, and it might well be fatal. The

Prime Minister refuses, like all his followers, to face the perhaps formidable but certainly incontrovertible fact that, considering "our tremendous world interests," there is really no means either of protecting British lives and interests or of keeping the peace effectively, short of seeing to it that "those rules of international conduct, without which there can be no security or stability in this world," are properly observed by all parties.

Halifax and Perth.—Mr Chamberlain, in his Edinburgh speech, did not perhaps make a very searching diagnosis of the causes of re-armament when he spoke of fears only, without mentioning ambitions. There remains his concluding appeal to human nature; and we sincerely hope that this will be met by a constructive response, in Berlin and in Rome, to the British overtures that are now to be made in the two butt-ends of the Axis by Lord Halifax and Lord Perth respectively. The prospects of Lord Halifax's exploratory mission have not, after all, been spoilt by a mischievous prognostication, on this side of the water, that Herr Hitler intended to offer him a ten years' German silence Germany's meanwhile taking a free hand for herself in Central Europe. The anger with which this private

British conjecture has been greeted in a public organ of the Nazi Party may equally well mean that the conjecture does, or that it does not, hit the mark. Alternatively, the anger in Berlin may have nothing at all to do with the question of what is the truth about Herr Hitler's intentions, but may simply register the displeasure of an extreme chauvinistic school of political thought in Germany at the idea of making any concessions to British desires, even on a basis of give and take. In any case, this storm in a tea-cup has not postponed Lord Halifax's journey, but has actually hastened it on by twenty-four hours, and the conversations from which so much appears to be hoped are being held as we go to press. It is amusing to observe that a *canard* which has aroused some resentment in Berlin has produced something like consternation in Rome, where the Axis is valued above all for a symmetry which would be irretrievably destroyed if Germany were to use it for her aggrandisement while Italy obtained no more from it than she does to-day. This concern for symmetry, however, is the Duce's business, if anybody's. At least, it is neither Lord Halifax's concern nor Lord Perth's.

Defence of the People.—On Tuesday the second reading of the Air Raid Precautions Bill was carried. While the Opposition and representatives of local authorities still believed that the Government ought properly to bear the whole cost of these delayed measures, and that the cost was likely to exceed official estimates, they had no wish, in the words of Mr Morrison, "to sabotage or obstruct the Bill." The Government's view, expressed in the Bill and in Sir Samuel Hoare's apology, was that the cost of ideally satisfactory schemes would be prohibitive; but that local authorities might, in equity and to ensure responsible administration and finance, be required to bear some of the cost of the compromise schemes. The Government will contribute 100 per cent. of the cost of fire-fighting and other appliances; up to 75 per cent. of other costs; and 85 per cent. of the cost above the produce of a penny rate. Moreover, if the average cost is more than the produce of a penny rate, the arrangement may be amended, and will in any case be revised after three or four years. The Government have gone a long way to end this unseemly wrangle; and interest now rests in the adequacy of the precautions proposed—which are admittedly not ideal—against explosive, gas and incendiary bombs.

The staples of defence are to be public refuges, gas-proof shelters, decontamination plans, hand-pumps, cheap shovels, boxes of sand and auxiliary fire-fighting machines—apart from gas masks and anti-aircraft provision, which has still made seriously little progress. Plans for the evacuation of London in emergency are in hand; and the President of the Board of Trade has decided to create a shadow organisation to control food supplies in each local area, as part of plans being prepared to control the supply and distribution of food and feeding stuffs in war-time. These problems are at last being tackled. The protection of the persons, food, morale and property of the civil population are as important in modern warfare as the manufacture of arms, and it is in precisely these respects that hitherto we have fallen behind. It is to be hoped, not only that Sir Samuel's shovels and boxes of sand will prove as effective as his gas masks are claimed to be, but also that the major problems of anti-aircraft defence and food storage will be thoroughly and successfully solved. The urgency of these needs is a sad reflection on our civilisation.

Imperial Airways Inquiry.—On October 28th Mr W. Perkins launched an attack on Imperial Airways, Limited, in the House of Commons, alleging victimisation of pilots and deficient planes and equipment. Un-

convinced by both the Government's reply and that of the company, last Wednesday he returned to the charge, after a series of skirmishes in the Press. He moved that an inquiry be made forthwith into the position of British civil aviation. On the one hand, he accused the Air Ministry of subsidising competing companies on the Paris route and of neglecting the development of up-to-date civil machines; the expensive airports provided by municipalities were left virtually derelict. On the other hand, turning to the Government's "chosen instrument," Mr Perkins repeated his previous charges against Imperial Airways: their subsidy had been doubled in two years and their dividends and directors' fees had been augmented; but the salaries of their servants had been cut and their machines and equipment were obsolescent. Their Continental services were "a laughing stock," and were not even so safe as their foreign competitors.

Although Mr Perkins may have overstated his case, none of his critics in debate destroyed the validity of his brief. It was variously stated that, since inquiries had been held in 1934 and 1936, another might be redundant; that the defence programme had delayed deliveries of aircraft; and that Imperial Airways' flying boats were excellent. None of these replies could be seriously disputed; but, as the tone of the debate showed, they were not enough to allay the widespread feeling that no heavily subsidised concern should fail so patently to satisfy the demands of its employees and the requirements of a nationally important public service. The proposal of the Under-Secretary for Air to set up a Departmental Committee to investigate specific charges went straight to the point. Anxiety within and without Parliament will only be dispelled when it is made quite clear both that Imperial Airways is fully discharging its plain duty to be efficient, and that the Government's narrow interpretation of the responsibility which should go with the subsidy is not likely to imperil the proper use of taxpayers' money.

Film Matters.—Many last-minute proposals, involving drastic changes, are being made for amending the Cinematograph Films Bill, whose Committee stage opened on Thursday. The Government's new scheme for a Film Council, in place of the Films Commission recommended by the Moyne Committee, has now been published. The Council takes the form of a considerably enlarged Advisory Committee—on which trade interests will be a permanent minority—with powers to initiate recommendations to the President of the Board of Trade over a wide area of problems and matters relating to the film industry, and to consider and investigate also any subject to which his attention has been drawn from authoritative quarters. This is

probably as far as a Government Department can be expected, under present conditions, to go in relaxing its administrative control of the industry. Another subject to which much attention has been given during the past few days is the proposal to split the renters' and exhibitors' quota and make them independent of one another. Any last-minute proposal is not necessarily unsound; but its tardiness necessitates the closer scrutiny. The present proposal was never before the Moyne Committee or any of the trade organisations, or the Board of Trade, until a few days ago. The first impression it suggests is that it will definitely create monopoly values for inferior pictures. This is the kind of protection which might prove seriously harmful to national interests. A second impression is that under it any possibility of building up an independent industry, for the production of pictures which would have world-wide circulation on their merits, would disappear for ever. A final impression is that it would render impossible any scheme of reciprocity with America, which leading impartial authorities regard as indispensable for creating an independent industry. The price, altogether, seems heavy and the benefits doubtful. It may well prove that splitting the quota is as difficult as splitting the atom.

Anglo-American Trade Agreement.—Simultaneous announcement was made in London and Washington on Thursday, shortly before we went to press, that the first stage of the lengthy negotiations for a Trade Agreement between the United States and the United Kingdom has been successfully accomplished, and that the two Governments "feel able to announce that negotiations for such an Agreement are contemplated." The actual state of the matter is more advanced than such cautious terminology would indicate. The Act of Congress under which the President is acting imposes on him the obligation of giving formal notice of his intention of concluding an Agreement. But the two Governments would clearly not commit themselves so far unless they were already well assured of ultimate success. The formal negotiations, in fact, may be expected to be no more than a formality, and the final conclusion of the Agreement may be hoped for before long. The supreme importance, both in the sphere of commercial policy and of wider international relations, of such an Agreement between two countries which are both the world's biggest traders and its most powerful democracies, as been so often emphasised in these columns that there is no need to set it out once again. It remains to hope, firstly, that there will be no more unnecessary delays and, secondly, that the scope of the Agreement will turn out to be wider than seemed possible when it was first mooted.

Congress and President.—The special session of Congress summoned by President Roosevelt for the purpose of passing those New Deal measures which were postponed in the summer, began its meetings on Monday. Since the summons went out, however, the political atmosphere has been changed by the sudden onset of unmistakable business recession, and some people allowed themselves to believe that the task of the special session would turn out to be not the continuance but the undoing of the New Deal. The business community has to a considerable extent persuaded the country that the recession is the work of the Administration, and that what Washington has done, Washington can undo.

A speech by Mr Morgenthau, the Secretary of the Treasury, last week, with its emphasis upon the need for encouraging private capital, encouraged Wall Street to believe that its main demands had been admitted and conceded. After this, the Message which the President sent to Congress on Monday was a severe disappointment. True, the President repeated his subordinate's concern for the active use of private capital, but it was

coupled with a threat of Government action to "take up the slack" if private enterprise did not respond. He held out hopes of tax modifications, but only in so far as they did not encourage tax evasion or speculative profits and did not lower the revenue. Moreover, there was a general warning against "the growing concentration of economic control and resultant monopolistic practices which persist to-day in spite of the anti-trust statutes." Relief from their burdens was promised to the railroads and the public utilities, but "because of thoroughly unsound financing extending over many past years, solutions will frankly be difficult." The President is thus in no hurry to apply for the job of businessman's darling. But the acute disappointment felt in Wall Street seems to reflect considerable naivety of anticipation. Judged not by the desires of businessmen, but by the past declarations of the President, his speech shows a considerable change. It is at least clear from it that the present recession in trade is not going to be made the occasion, as was feared only a week ago, for an intensification of the radical tendencies of the New Deal.

Nanking in Danger.—In contrast to the position of a month ago, it is the Shanghai front which is now witnessing the most rapid Japanese advance in China. In the North there has been comparative quiet, except for the capture by the Japanese of the town of Tsiyang, which brings their left wing to the banks of the Yellow River. The last Chinese resistance in the Shanghai area was overcome at the end of last week by a savage bombardment of Nantao, the crowded quarter in which the Chinese remnants were caught between the Japanese, the foreign concessions and the river. Since the front moved westward from Shanghai, the Japanese have been able to use their great superiority in mobility. One Chinese line has already been successfully outflanked by rapid advances from the coast south of Shanghai. Soochow is now in the battle area and has been heavily bombed. The Chinese have not yet got back to their "Hindenburg line," which is heavily fortified all the way from the Yangtze to the sea. But observers on the spot seem to have little doubt that this line will soon be reached and possibly turned by Japanese naval superiority. Nanking is less than a hundred miles behind it. The capital has suffered regular air raids for some time, but it may soon be within reach of the guns. The National Government is therefore evacuating Nanking and removing to inland cities, some as far distant as Chungking in Szechwan. It has long been expected that the Japanese would defeat any Chinese army sent to stop them, and a retreat of the Government into the interior has been an acknowledged part of Chinese strategy. But these evidences of the aggressor's overwhelming superiority of armament nevertheless make unpleasant reading.

A Soviet Concession.—With the war in China obviously reaching a crucial stage, with the Brussels Conference in session, with the excitement aroused by Lord Halifax's visit to Germany, and with the other preoccupations of a distracted world, the latest development on the Spanish Non-Intervention front has not received the welcome it deserves. At Tuesday's meeting of the Non-Intervention Sub-Committee, M. Maisky announced that the Soviet Government now accepted the resolution of November 4th, embodying the British plan, in its entirety and without any reservations. This does not mean that Soviet Russia is now ready for belligerent rights to be granted to the insurgents, for M. Maisky went on to say that his Government would reserve their interpretation of the term "substantial withdrawal" of foreign volunteers—which is to be the condition for the grant of belligerent rights—until the matter came up for consideration. The road is thus by no means entirely clear. But the Soviet concession does at least remove some of the preliminary obstacles. Moreover, by postponing the almost inevitable difference of opinion until a time when it will be the grant of

belligerent rights, and not the withdrawal of volunteers, which will be up for decision, Russian diplomacy has placed the Germans and Italians in a position where their insistence on unanimity may work to their own disadvantage. Thus very slowly the plan for reinstating non-intervention makes progress. In recent weeks the military development of the war has been equally slow, but as we go to press an insurgent offensive on the North Aragon front, where the long battle-line meets the Pyrenees, is almost momentarily expected.

The Coup d'Etat in Brazil.—On November 10th the reigning President of Brazil, Dr Getulio Vargas, carried out a *coup d'état* of which the political effects may in the long run overshadow the financial and economic. The latter (dealt with elsewhere in this issue) have been immediate—for the modification of foreign debt services and the nationalisation of banks is now-days almost *de rigueur* for dictatorships without distinction of ideological colour. Such gestures have, indeed, not been unknown in Latin-America during the century which elapsed between the achievement of Latin-American independence and the emergence of the post-war totalitarian regimes in Europe. And the declaration that Brazil is now to become a corporative State need not mean much in itself—for, after all, it has not meant much in Italy, where the formula was invented. The crucial question is that of how much weight is to be attached to President Vargas's public statement on November 13th, when he declared that "Brazil was not interested in the anti-Comintern Pact because her attentions were concentrated on a Pan-American policy." This assurance was obviously intended to ease the anxieties of the United States, which has been studiously trying not to mind what is now happening in Brazil, and of the Argentine, which has been ostentatiously not caring if she does reveal her displeasure.

Assuming that Dr Vargas is sincere, however, is it likely that he will really be able to tread a different path from his European counterparts? Before the new dictator had had time to say his sedative words, the Brazilian Embassy in London, in a statement issued on the 11th, had let the Bolshevik bogey out of his rabbit hutch. The doctor, they explained, had been compelled, to his own regret, to take his mandate owing to "subversive theories which were being imported into Brazil with the hope of realising a Bolshevik experiment on American soil." A "Bolshevik experiment" will be a perhaps irresistibly attractive bad name for Dr Vargas to give to that revolt of his personal opponents against his personal adherents, which is to be expected in a country as difficult to keep under any effective central control as Brazil. Brazil is so huge, and the clusters of population are so widely scattered over the vast expanses that the outlying States are perpetually taking the law into their own hands. Supposing that the President's opponents were to rise in arms in, let us say, Para or Pernambuco, would Dr Vargas be able to resist an offer of help from Signor Mussolini? The anti-Comintern aeroplanes would quickly hop over from the Canaries or from Fernando Po. And when they had settled the hash of the Bolsheviks on the Amazon, they might as well make another hop and rescue Mexico both from Bolshevism and from its elected President. Is the day coming when the United States Monroe doctrine about Latin-America will go the same way as the United Kingdom Monroe doctrine about the Iberian Peninsula?

Parliamentary Brethren in Unity.—For more than a week there has been remarkable accord in the proceedings of Parliament. All parties have welcomed, and all have criticised, the Blind Persons Bill, designed to lower the pensionable age of blind persons from 50 to 40. The same reception has been accorded the Juvenile Health Insurance Bill, which purposes to fill the gap in

the public provision for the medical care of 1,000,000 boys and girls between their leaving school and coming under the National Health Insurance Scheme on employment after the age of 16. These are necessary and overdue reforms. Once the pensionable age of blind persons was reduced from 70 to 50, the way was open for a further recognition of the fact that it is blindness, not age, which is, in these cases, the pensionable disability. Indeed, as many speakers pointed out, the age limit is still arbitrary and illogical; there is no reason, since, in fact, this is not an old-age pension, why the limit should not be lowered to 18. Some 65,000 of the 78,000 blind persons registered in Great Britain are over 40 years of age; and, happily, fewer than 2,000 are under 16.

The complaint that a good measure had not been carried far enough was also made about the Juvenile Insurance Bill. Young persons in employment between the ages of 14 and 16 are to be entitled to medical benefit, but not cash or, at first, dental services, on payment of a weekly contribution of 2d. A similar sum will be paid by employers, and the balance will be met by the State. The grave gap between the school medical services and the National Scheme, coming as it does at the most important stage after infancy in the physical and medical history of boys and girls, is in part closed. Some anomalies, however, remain. One of them is the difference between the benefits given by different approved societies. Another is the absence of dental treatment in these formative years, and this disadvantage is only partly offset by the fact that membership of the new scheme will enable persons over 16 to qualify for dental benefit at 17 instead of 18½. The latest reform will enhance the patchwork appearance of our health services: provision for infants, school children, juveniles and young persons is in the hands of different doctors and under different administrations, and continuity is lacking. Moreover, it was well argued in the Commons that, since employers now pay the whole of the contributions to Health Insurance in respect of adult low-wage earners, they might well do the same in the case of juveniles, who will all be low wage-earners.

Poles Apart.—"L'Etat c'est moi" is not its French inventor's copyright. What Louis XIV once said about France under the *ancien régime* might equally well have been said by Lenin about post-war Russia and by Pilsudski about post-war Poland; and in the two Slav countries the death of the ruler who embodied the State in himself has been followed by symptoms of disruption at a much shorter interval than the three-quarters of a century which elapsed between the death of Louis XIV and the outbreak of the French Revolution. The post-Leninian dissensions in Russia are too flagrant to require perpetual mention in a weekly chronicle; but the moment

has perhaps come for mentioning the first symptoms of corresponding post-Pilsudskian dissensions in Poland. Under the leadership of Pilsudski's Caliphah Smigly-Rydz, the late marshal's suite are apparently not strong enough to govern Poland effectively without allies, and at the same time they cannot agree among themselves on the vital and controversial question of the quarter in which they are to look for support. The left wing will not countenance the right wing's inclination towards an alliance with the anti-Semitic and at least semi-fascist National Democrats, while the right wing, for their part, will not tolerate an alliance with the peasants. The latter, who are after all the backbone of the Polish nation, have now sent a deputation to the President of the Republic, and they have been given an audience, in spite of the fact that their petition had a spice of ultimatum in it. They have told the President that if constitutional government is not restored, they mean to know the reason why. If the Poles were to fall out among themselves, with Germany and Russia craning their necks over the wattle fence on either side of the Polish paddock, Spain might soon be driven out of the headlines of the world's press.

— **And Germans Ungermans.**— While Poland's neighbours in the Reich are beginning to ask themselves again whether Poland may not, after all, be no more than a *Saisonsstaat*, they are also apparently wondering whether Austria may not have come to stay. And the second thought is as annoying as the first is gratifying to Nazi minds. Hence the present wave of openly expressed hostility towards Dr von Schuschnigg in the German Press. Austria, it is being said in the Reich, is not fulfilling the terms of the agreement of July 11, 1936. While that agreement recognised Austria's title to independence, it also put on record the fact that Austria was a German state; and in Nazi eyes being German means being germane to the Third Reich, or, in other words, being ripe for "Gleichschaltung" as that process has been so successfully applied in Danzig. Dr von Schuschnigg, however, has made it clear that he does not intend to let Austria go Danzig's way; and this is now driving the press of the Third Reich to indignation. It would not be surprising if to-morrow the medical officer at Berchtesgaden were to schedule his compatriot in the Ballplatz as a carrier of the Bolshevik plague. And when a country has promised to be German, it is intolerable that it should allow itself to become a breeding ground for the bacillus. Like the British Tories, the Austrian Bundeskanzler is coming into danger of being "put on the spot."

INDUSTRIAL PRODUCTION IN FRANCE
(1913=100)

Cabinet-Making in Rumania.—The Rumanian political crisis has been resolved in a manner which will be as unsatisfactory for Rumania as for her friends. The solution dictated both by Rumanian political practice and by the facts of the actual situation was that King Carol should entrust the Government, and with it the Party. But the King imposed a number of conditions, the chief of which was that M. Mihalache, the National Peasant leader, should secure the collaboration of M. Vaida Voevod's semi-Fascist "Rumanian Front." Oil and water naturally refused to mix, and M. Mihalache abandoned his task. The King has therefore reappointed the outgoing Liberal Premier, M. Tatarescu. The Liberals, however, after four years in office, have insufficient support to govern alone. Professor Iorga's National Democrats have, consequently, been admitted into the Cabinet, and an electoral pact has been concluded with the Rumanian Front. It is almost unknown whether the Government will be able to secure a Parliamentary majority, so that another four years of Liberal rule must be expected. At its worst, this will mean a steady drift towards the extreme Right. At its best, it will mean a Government which, internally, has no adequate basis in public opinion and, externally, professes a policy of co-operation with France and the Little Entente in which its sincerity will be suspect. King Carol may well be playing a dangerous game.

Trend of Business in France.—In contrast to other important countries, in France industrial activity has as yet shown no recovery. Indeed, the official index of industrial production, traced in the chart below since January, 1927, indicates that the volume of activity this summer was no higher than five years ago. Unlike most other countries, France was not immediately engulfed by the depression. Industrial activity, helped by favourable exchange ratios between the franc and other currencies, rose rapidly between the autumn of 1927 and 1929. Activity was maintained at a high level during the next twelve months, but turned downwards in the autumn of 1930, when adverse external developments began to be felt. From the autumn of 1930 to the middle of 1932 the course of activity in France followed that of other countries. As in the United Kingdom and America, the stage was set for recovery in the summer of 1932, and industrial activity rose sharply during the next twelve months. From the summer of 1933 onwards, however, France began to feel the effects of her Govern-

ment's attempts to maintain the gold standard in the face of falling world prices measured in terms of gold. There was an improvement in the autumn of 1935, but in the summer of the following year activity again took a downward turn as a result of numerous industrial disputes and M. Blum's social legislation, which increased the costs of production. Following the depreciation of the gold value of the franc in the autumn of last year, industrial activity again advanced, only to turn downwards once more last September, when the stimulus of exchange depreciation had exhausted itself and when the effects of M. Blum's legislation began to make themselves fully felt in industry. To-day, activity in the capital equipment industries remains subnormal, except in the iron and steel and engineering industries, which have benefited from the improvement in export demand and increased armament expenditure. The current volume of building activity is less than half of what it was in 1929. In the textile trades activity reached a new low level this summer, largely because the benefits of exchange depreciation were more than offset by the rise in costs. Since September, however, business activity has shown some improvement, but whether or not this will prove to have been the beginning of sustained recovery or merely another false start, time alone can show.

The Nation's Health.—The forward-looking activities of the health and fitness campaigns have not prevented Sir Arthur MacNalty, Chief Medical Officer of the Ministry of Health, from taking a pardonable pride, in his Report for 1936, in the revolution which has been effected during the past hundred years in preventive medicine. Not only have comprehensive health services been built up *pari passu* with the reconstruction and democratisation of central and local government, but remarkable concrete results have been achieved in declining mortality rates. The crude death rate just under a century ago was 22.4 per 1,000; in 1936 it was 12.1. The infant mortality rate has fallen in the same period from 153 per 1,000 to 59. Less than half the number of infants under one year of age who would have perished thirty years ago died last year. The death rates for tuberculosis have fallen since the fifties of last century from 3,476 per million to 657, a record low level. The maternal mortality rate of 3.80 per 1,000 live births is the lowest since 1923, though it is still disturbingly high. These are solid achievements. Yet there are still gaps in our health defences. There is need for greater knowledge and use of our health services; and the national campaign now in progress will have achieved much if it only removes finally from these services the stigma of charity inherited from the old Poor Law days. More serious, because not in the same way susceptible to solution by propaganda, is the problem of nutrition. Sir Arthur MacNalty refers to the work of the League of Nations and the Advisory Committee on this subject, and stresses the importance of cheap milk; but in the last resort this problem is economic, and, until it is solved beyond all peradventure, the health and fitness of a considerable minority of the population are liable to be undermined. Nor has the elimination of old scourges prevented the growing incidence of new ones; heart diseases, cancer and, as demonstrated at Bourne-mouth last year and at Croydon in recent weeks, typhoid and enteric are a challenge to the good record of this country in medicine and health provision. There can be no rest for the doctor and the Department of Health.

Foot- and - Mouth.—The epidemic of foot-and-mouth disease which has been raging in the eastern counties since early October has not yet been stamped out. Up to November 15th, 15 counties had been affected this year, and 74 outbreaks had been confirmed by the Ministry of Agriculture, of which 52 had occurred since October 6th. The total of animals slaughtered now includes 3,423 cattle, 5,980 sheep, 3,522 pigs and three goats. Some idea of the direct

loss involved may be gleaned from the fact that the sums paid by way of compensation this year amounted to £106,705 by Monday of this week—of which over £72,000 had been paid out since October 6th; and these figures do not, of course, take account of the indirect losses incurred by the unfortunate farmers whose beasts must be destroyed. The present epidemic seems likely to prove the most costly since the disastrous outbreak of 1923, when almost 130,000 animals were slaughtered at a cost of no less than £2,206,615. There is little doubt that the infection in the present instance has been brought from the Continent, where foot-and-mouth disease has been causing serious trouble this autumn. There is, however, no general agreement as to the way in which the disease may be transmitted. In the circumstances, the Government's policy of destroying all animals which have been in contact with infected stock seems wise and certainly appears to be justified by results. This view was ably argued by Professor G. H. Wooldridge, of the Royal Veterinary College, in a letter to the *Sunday Times* last week-end. Whereas the number of outbreaks in Great Britain during the five weeks ended November 15th was no more than 52, outbreaks in certain Continental countries, according to Professor Wooldridge, were as follows:—

France, six weeks to October 15th	38,758
Belgium, month of September	4,090
Holland, month of September	11,444
Germany, month of October	3,295

Even if allowance be made for the possibility that these figures are not compiled on a basis comparable with our own, there seems little doubt that the slaughter policy is the most effective means of stamping out the disease. It would be disastrous for our export trade in pedigree cattle if British herds were allowed to become infected with this scourge.

The Australian Elections—Final Results.—The final results of the Australian Federal elections of October 23rd are an astonishing example of electoral vagaries. In the elections to the House of Representatives the Government had an even greater success than its supporters had hoped for. Though some individual majorities were dangerously small, the Government lost only one seat to Labour. The United Australia Party now holds 28 seats, and the Country Party 17, against 29 held by Labour and one by an Independent. The Government thus has a clear majority of 15. On the other hand, of 19 contested Senate seats the Government could secure only three, those of South Australia. Half the Senate must retire every three years, and on this occasion there was a by-vacancy also. Thus, although the 17 non-retiring Senators are all Government supporters, Mr Lyons' majority in the Upper House will be only four, including (presumably) the President of the Senate, the existing incumbent of that office having been among those defeated. It is small wonder that there is to be an investigation into alternative methods of election to the Senate. Since elections to both Houses are on the alternative-vote system, the contrast between the two results arises chiefly from the difference in the size of the constituencies. The whole of each State forms one constituency electing three Senators, whereas the

Lower House is elected on the single-member local-constituency system. The anomalies of the results are, in one light, an illustration of the very even balance between the Government and Labour in the Australian electorate as a whole. In another, they are a warning that only a very small swing of the pendulum to the Left will give Labour command of both Houses in three years' time. Labour has but to win a single State's seats in order to gain a majority of one in the Senate, not counting the President. The constitutional powers of the two Houses, it should be noted, are equal, except that the Senate may not amend—though it may reject—money Bills or increase the tax burden. In the event of deadlock there must be a general election, and if the deadlock persists then the two Houses vote together.

National Savings Comes of Age.—The Albert Hall has housed in these troubled times many great assemblies which have met to express in the most solemn way the nation's response to events at home or abroad. It has also, in its time, been a setting for the revelries of the young in age or mind. Late last week it was filled by a meeting which had come together for a festival in which the solemn and the cheerful were mixed. Over 7,000 of the vast army of voluntary workers who constitute the National Savings Movement came together to celebrate its coming of age. They did not dance, nor did balloons descend in hundreds from the dome. But they heard a deservedly congratulatory address by the Duke of Kent, and other cheerful speeches were made by the Chancellor of the Exchequer, Lord Mottistone and Sir Robert Kindersley, who were at pains to emphasise that the movement's propaganda urged not parsimony but wisdom; not a hatred of spending, but a love for wise spending. The excellent results obtained by the 38,000 savings groups at work give ample testimony that this claim is not exaggerated. As we showed in an article in *The Economist* of May 22nd last, the National Savings Movement has advanced steadily ever since the war. The strength and adaptability of its direction augur excellently for growing strength in the years of its manhood.

Employment Underestimated.—The Ministry of Labour's widely-quoted monthly estimates of the number of insured persons aged 16 to 64 employed in

Great Britain (exclusive of persons within the agricultural scheme) are obtained by deducting the numbers recorded as unemployed from an estimate of the total number insured. Allowance is made in these calculations for workers absent from work as a result of sickness or trade disputes. The total number of insured persons, however, is ascertained only once a year on the basis of the general exchange of unemployment books in July. The figures of variations in employment between one July and another have to be based, therefore, on estimates of changes in the number of insured persons. The results of the general exchange of books last July, which are now available, show that the Ministry of Labour has considerably underestimated the increase in the number of insured persons since July, 1936. Consequently, its estimates of the number of persons in employment have been too low. Actually, the number of insured persons in Great Britain and in the United Kingdom increased, between July 1936 and 1937, from 13,050,000 to 13,400,000, and from 13,338,700 to 13,697,000, respectively. The unforeseen increase in the number of insured persons in Great Britain has necessitated the following revision in the Ministry of Labour's estimates of employment:—

EMPLOYMENT OF INSURED WORKERS AGED 16-64 IN GREAT BRITAIN
(In thousands)

	Original Estimates	Revised Estimates		Original Estimates	Revised Estimates
1936			1937		
July	11,006	11,011	Feb.	11,187	11,250
August ...	11,072	11,091	March ...	11,242	11,310
Sept.	11,082	11,110	April	11,394	11,472
October...	11,103	11,141	May	11,387	11,473
Nov.	11,120	11,166	June	11,517	11,613
Dec.	11,132	11,182	July	11,517	11,623
1937			August ...	11,562	11,672
Jan.	11,106	11,163	Sept. ...	11,555	11,662
			Oct. (a) ...	...	11,659

(a) New basis of enumeration.

As will be seen, the discrepancy between the two sets of estimates increased steadily from July, 1936, onwards, and, last September, amounted to no less than 107,000. Despite the difficulties of estimating the number of insured persons a year ahead, the Ministry of Labour's figures, nevertheless, provide a useful indication of the trend of employment.

NEW BOOK ON AMERICA

REMAKING THE BOOM IN AMERICA

By **Major Angas**

Author of "The Coming American Boom," July, 1934

This Challenging Pamphlet

- States the 5 causes of the recent market slump.
- Names forces making for further falls
- Points the *real danger* of new cyclical collapse.
- Tells how collapse can and should be prevented.
- Sounds a warning which must now be heeded.

HOW ROOSEVELT CAN REMAKE THE BOOM

Overseas Trade in October.—The trend of our overseas trade, measured in value, remains upwards, though the increase between September and October was largely seasonal. Imports last month reached the highest level since the depression, but were still 12.8 per cent. smaller than in the corresponding month of 1929. The value of exports did not quite reach the figure for last July and was 27 per cent. smaller than in 1929.

The increase in the value of trade over a year ago, however, has shown a decline, especially in the case of British exports. Thus exports last month showed a rise of only 13.1 per cent. over October, 1936, against an advance of 19.6 per cent. during the first ten months of this year. The excess of imports over exports, consequently, is still growing and, in October, was £43.2 millions, compared with an average of £34.0 millions during January-October. Movements in October and during the first ten months of this year are analysed below:—

	1935	1936	1937	Change between 1936 and 1937	%
October					
Total Imports	73,375	80,532	96,085	+ 15,553	+19.3
British Exports	38,865	41,764	47,216	+ 5,452	+13.1
Re-exports	4,732	4,560	5,699	+ 1,138	+25.1
Total Exports	44,597	46,325	52,915	+ 6,590	+14.2
Excess of Imports over Exports	48,778	34,207	43,170	+ 8,963	+26.3
Transshipments under bond	2,501	2,736	3,233	+ 497	+18.2
Ten Months					
Total Imports	612,396	688,109	837,941	+ 149,832	+21.8
British Exports	351,643	361,786	432,859	+ 71,073	+19.6
Re-exports	45,255	50,270	65,022	+ 14,752	+29.5
Total Exports	396,898	412,056	497,880	+ 85,825	+20.8
Excess of Imports over Exports	215,497	276,053	340,061	+ 64,007	+23.2
Transshipments under bond	20,461	23,310	30,976	+ 7,666	+32.9

There are no indications of an early change of trend, though a continuance of the fall in the prices of primary products is bound to find reflection in the course of our foreign trade next year.

Trade by Commodities.—An analysis of quantitative changes in our foreign trade between October 1936 and 1937 shows that the increase in value cannot be wholly attributed to the rise in prices. As the following table shows, our imports of many of the leading commodities last month were higher than a year ago.

RETAINED IMPORTS
Month of October

Item and Measure	1935	1936	1937
Wheat	'000 cwt.	9,840	8,811
Beef and veal	'000 cwt.	966	1,224
Mutton and lamb	'000 cwt.	318	392
Sugar (unrefined)	'000 cwt.	3,942	4,305
Iron ore and scrap	'000 tons	384	554
Raw cotton	'000 cwt.	1,320	1,391
Sheep and lamb's wool	'000 cwt.	202	348
Flax, hemp and jute	'000 tons	11,911	23,765
Crude petroleum	'000 galls.	45,127	26,991
Hides, wet and dry	'000 cwt.	174	145
Wood pulp	'000 tons	201	207
Rubber	'000 cwt.	71	2
Unwrought copper	tons	27,405	26,452
Pig lead	tons	13,830	25,431
Tin: Ore and concentrates	tons	3,553	3,688
Blocks, ingots, slabs and bars	tons	999	243
Iron and steel manufactures	'000 tons	100	101
Machinery	tons	7,196	10,307

There was a marked expansion in crude petroleum imports, while the increase in the import of iron and steel and machinery reveals the high level of activity in the metal-using industries. The volume of exports, too, was generally higher, with textiles an important exception. As with imports, the improvement was pronounced in the case of iron and steel and machinery. The recovery of coal exports, after a year of stagnation, is gratifying, though the renewed decline in the volume of orders in recent weeks is less encouraging.

BRITISH EXPORTS
Month of October

Item and Measure	1935	1936	1937
Coal	'000 tons	3,286	3,226
Iron and steel scrap	tons	13,381	13,604
Pig iron and ferro-alloys	tons	14,715	9,844
Railway materials	tons	15,699	13,408
Total iron and steel manufactures	tons	219,447	194,360
Textile machinery	tons	6,342	4,207
Cotton yarns	tons	36,304	32,565
Total machinery	'000 lbs.	12,577	13,948
Cotton piece goods	'000 sq. yds.	161,095	177,917
Wool tops	'000 lb.	5,945	4,620
Worsted yarns	'000 lb.	2,954	2,650
Woollen tissues	'000 sq. yds.	6,271	6,209
Worsted tissues	'000 sq. yds.	3,250	2,990
Linen piece goods	'000 sq. yds.	5,675	7,097
Paper and cardboard	doz. pairs	44,564	41,577
Leather boots and shoes	doz. pairs	18,476	21,922
Leather	cwt.	345,359	397,966
Locomotives and parts	tons	1,580	892
Motor vehicles and chassis	No.	7,907	9,294

In general, current reports from industrial centres indicate that new export business is less satisfactory than in the early autumn. In the case of textiles, this unfavourable tendency is mainly a consequence of falling raw material prices. Whether or no the decline in new orders is temporary, remains to be seen. Meanwhile, most exporters still have a substantial volume of orders on their books.

Can We Pay for Higher Imports?—The rising scale of Great Britain's imports and exports (discussed in a leading article on page 348), though satisfactory as a general economic index, is causing anxiety on the score of our ability to sustain the enlarged adverse balance of trade. In the first ten months of this year the visible excess of imports over exports was £64 millions more than in the corresponding period of 1936. As the rate of increase of this debit is now some £9 millions a month, it would be unsafe to count on having to pay for less than £80 millions more in the whole of 1937 than in 1936, in the way of excess imports. Last year the total trade debit of £347 millions was financed—as to all but £17 millions—by £95 millions from shipping income, £195 millions from net earnings in overseas investments, £30 millions from net receipts in the short-term finance market, and £10 millions from miscellaneous invisible income.

The two latter items in the balance of payments are fairly stable, and are unlikely to yield very much more in 1937. Income from shipping and overseas investments, however, will show a considerable improvement. Tramp shipping freights are well over half as high again as in 1936, and although liner receipts move more slowly it is reasonable to expect gross national shipping earnings to advance by, say, 30 per cent. of last year's figure. Income from overseas investments is less flexible, owing to the high proportion of fixed-interest securities in the total, but an improvement of £20 millions in the total is not unlikely. The supplement on British Capital Abroad, on page 359, draws attention to the vital part played by this form of national income in the whole economy of the country. In sum, we can see our way clear to covering at least £50 millions of the extra visible balance. That still leaves room for questioning, but not, as yet, for apprehension.

Steel Production Lower.—In contrast to the movement a year ago, the output of steel ingots and castings declined between September and October. Pig

iron production, on the other hand, reached a post-war record last month.

Imports of iron and steel materials in October, though slightly lower than in September, were more than double those of a year ago, and again exceeded British exports in volume. Exports showed some improvement during the past month, but remained below the level recorded earlier this year.

(In thousands of tons)

Period	Production		Foreign Trade	
	Pig Iron	Steel Ingots and Castings	Total Imports	British Exports

British consumption of iron and steel remains at a high level and pressure for delivery is as strong as ever. But the stringency of supplies, though still noticeable in the case of semi-manufactured materials, is now less acute.

Heavy Industries Still Active.—This week's batch of industrial news reveals some striking contrasts. On the one hand, the decision of the British Iron and Steel Federation to maintain current quotations throughout 1938 has called forth a large volume of inquiry, and a certain amount of new business has been transacted for forward delivery. Most steel works, however, still have plenty of orders on hand and are not anxious to accept further business at this stage. Meanwhile, the pressure for deliveries remains strong. Home demand for coal has tended to increase with the persistence of the cold spell, but export business has so far failed to improve. The position of the majority of textile trades, unfortunately, is steadily deteriorating. Sales of cotton goods remained below current output, and as order lists are running down it is becoming increasingly difficult to maintain profit margins. The Board of Trade index of industrial production showed a decline of 3.1 per cent. between the second and third quarters of this year, from 135.4 (1930 = 100) to 131.2. This decline, though mainly seasonal, was slightly more marked than a year ago. Compared with the third quarter of 1936, the index shows a rise of 7.1 per cent. All the group indices, with the exception of that relating to building materials, are higher on the year.

Further Decline in Prices.—Wholesale prices continue to fall both here and in the United States. The *Economist's* complete index number for Great Britain

is 1.7 per cent. lower than a fortnight ago, and is now little higher than it was in November, 1936. The primary products index has fallen by 3.5 per cent. during the past fortnight and is now below its level of a year ago. The past fortnight's decline is equally marked in the United States, where *The Economist's* primary products index has fallen by 3.8 per cent. and the complete Irving Fisher index number by 0.9 per cent. French and Italian wholesale prices are slightly higher than a fortnight ago, but the German wholesale price index number has fallen by 0.4 per cent.:

* These figures relate to November 10th.
† Monthly averages.

We publish below a chart showing movements in British wholesale prices since the depreciation of the pound in the autumn of 1931:—

Details of group movements in the complete *Economist* index number in the three most recent fortnights, with the figures for September, 1931, are given below:—

The Economist INDEX (1927 = 100)

	Sept. 18, 1931	Oct. 20, 1931	Nov. 3, 1931	Nov. 17, 1931
Cereals and meat	64.5	91.0	90.6	89.8
Other foods	62.2	67.4	67.5	65.5
Textiles	43.7	63.6	62.0	60.6
Minerals	67.4	98.9	97.5	96.4
Miscellaneous	65.8	83.2	81.7	80.6
Complete index	60.4	80.7	79.7	74.4
1913 = 100	83.1	111.0	109.6	107.8
1924 = 100	52.2	69.7	68.8	67.7

The past fortnight's fall, though general, was most marked in "other foods" and textiles.

BRITISH CAPITAL ABROAD

A man who has invested, outside his own household and his own stock and tools of trade, a sum roughly equal to his annual income is not a bloated capitalist, but a typical "small saver." A nation of which the like may be said, as it may of Great Britain, is a dominant creditor country. Great Britain, indeed, with her £4,000 millions odd of overseas investment, is still the greatest creditor country in the world. In round figures, something like one-twentieth of the national income of Great Britain is derived from the interest and dividends on her investments abroad. This "unearned income" is clear gain to the national economy. It is to be compared, not with the gross turnover of home industries, but with the net increment of value that they add to the cost of their raw materials, fuel and capital depreciation. Foreign investment as a whole is the nation's greatest single industry. What is the character of this vast national asset, and how has it been built up? How does it fit into the general national economy? What is its future, and what should be public policy towards it? These are some of the questions that the following survey sets out to answer.

The statistics relating to British overseas investment are incomplete, intermittent and, in many respects, unsatisfactory. Apart from the Inland Revenue returns, which show a certain portion of investment income from abroad, official statistics are almost totally lacking. A great debt is owed by economic students and the general public to those who have recently devoted their time and resources to this field of research, particularly to Sir Robert Kindersley and Professor L. H. Jenks, whose work has been freely used in the writing of this Survey. Some of the technical difficulties in the way of compiling statistics on overseas investment are indicated in the tables, given in the course of this Survey. Here an emphatic warning must be laid against uncritical comparisons between sets of figures compiled by different hands for different purposes and on different statistical bases.

Table I, for instance, which contains estimates of the amount of British capital abroad at different dates, must be used with the greatest caution as any but the roughest guide to the growth of our overseas investments, since the scope of the various estimates differs widely.

The chief categories of overseas investments are:—

Stocks, shares, bonds, etc., issued in the London market.

Stocks, etc., purchased from holders overseas.

Assets acquired abroad by British companies.

Assets acquired abroad by private persons or concerns, etc.

It is almost impossible to obtain statistics of "direct investment"—that is to say, investment which takes place without the mediation of a security issue, e.g. by way of the private purchase of plantations, or the overseas assets of trading, insurance or other companies operating both at home and abroad. It is generally allowed that such direct investment overseas totals at least £500 millions. Allowing for this, the total of British capital abroad may now be as high as ever it was.

RECENT CHANGES

Before dealing with the economic and policy problems involved, we may briefly survey the trend of recent changes in the amount and character of our overseas investments.

Even before the slump of 1930-33, the rate of re-accumulation of capital, to replace the £1,000 millions odd lost or sold during the war, was clearly much lower than the rate at which the total had advanced before 1914.

Geographical Distribution

Moreover, the geographical distribution of the capital, as the figures in Table II show, was also changing before the Great Depression.

In the first half of the nineteenth century, something

like one-fifth of the British investment abroad *via* the London Stock Exchange went into the United States, and this proportion was maintained right up to the war. Then vast numbers of American securities were sold off, and the United States became a creditor country. By 1929 the proportion of our total investment in the United States (not counting direct purchases through Wall Street) had fallen to less than 3 per cent.

There were equally striking changes in other geographical groups. The earliest available estimate shows a very high proportion of investment in Continental Europe, but by the outbreak of war Europe's share in the total had fallen below 6 per cent. Post-war reconstruction revived interest in the Continent as an area for long-term investment; recent experience, however, would seem to have destroyed that interest once more.

Latin America has been a great field for British investment from the early nineteenth century to the nineteen-thirties, in spite of the post-war competition of the United States as an international lender. Whether it will continue to be so is an open question.

But the most striking fact of all is the growth of Britain's investment in her overseas Empire. There has been a substantial total of "direct investment" in India and the Colonies ever since the Empire came into existence. But it was the railway and steamship age that drew forth the great flood of investment through Stock Exchange channels. Nash, in his incomplete tabulation for 1880, showed, of a total of £1,150 millions, less than 20 per cent. invested in the Empire. Dr Feis's revision of Sir George Paish's figures for 1913 gave a ratio of 47.3 per cent., out of a total of £3,763 millions. *The Economist* estimated the Empire proportion at 56.6 per cent. in 1929, and the proportion has since been steadily rising, though no exact estimate has been made for later years.

Growth of Overseas Investment

While the pre-war statistics are difficult to compare with one another, they suggest at least that the average rate of investment abroad rose as the wealth of the nation and of the world expanded. This is borne out by the figures of new issues shown in Table IV. They show that overseas investment fluctuated with periods of boom and depression, but on the whole increased generation after generation. The liquidation of the Baring crisis was followed by an enormously increased flow. The war greatly depleted the fund of capital available year by year, and at the same time diminished the opportunities for attractive investment abroad. Then came the period of world depression, when there were no creditworthy borrowers, even if there were the funds to lend. The movement of capital overseas became so feeble that it was more than offset by the return of old capital redeemed or re-sold. Great Britain became, for the moment, a borrowing country at long-term as well as at short-term.

Wastage of Capital

This question of the return of old invested capital is vital to any true estimation of the position in respect of British capital abroad. Losses, re-sales to citizens of other countries, and bond redemptions and repayments together make up what we may call the wastage of capital abroad. A rough idea of its magnitude may be obtained by comparing the gross total of new issues for overseas with the apparent rise in the nominal value of British capital abroad. Thus, from 1885 to 1908, Hobson's figures of new issues total £1,495 millions. The same investigator shows a net increase of only £1,037 millions in total capital abroad between his estimates for 1885 and 1909. This indicates an annual wastage of approximately £20 millions. The more accurate investigations made in recent years suggest that this would probably be lower than the true figure.* Sir Robert Kindersley has shown (see Table V) that in the five years 1930 to 1934 redemptions and repayments alone averaged £44.5 millions per annum. New issues in the

long-term assets abroad, however, was partly if not wholly offset by additions through other channels than new issues, notably by purchases of American securities.

Experience since 1934 can hardly be regarded as normal. As a rough average over a long period of years it seems reasonable to suggest a rate of 1½ per cent. per annum for redemptions and repayments, and an extra ½ per cent. for defaults and other capital losses, making a total wastage rate of about 2 per cent. The rate of loss may seem expensive, but it is doubtful whether a much better experience could be shown to apply to capital invested at home if we exclude British Government securities, on which the rate of return is scarcely comparable. The figures do suggest, however, that the nation must invest or re-invest at least £50 millions to £60 millions a year in overseas securities (not counting direct investment) merely in order to keep its capital abroad intact. The suggested figure is, of course, gross, and the bulk of it is required to offset redemptions and repayments which supply their own capital fund for re-investment.

I.—THE EXPANSION OF BRITISH CAPITAL ABROAD

Date	Estimates	Source	Scope and Qualifications
1854	195-230	Jenks (a)	Does not include "direct investment" or investment in the British Empire.
1880	1,150	Nash (b)	Omits commercial investment (chiefly mines) other than railways.
1885	1,302	Hobson (c)	Obtained by capitalisation of Inland Revenue figures of investment income.
1895	1,600		
1905	2,025		
1907	2,694		
1909	2,339	Paish (d)	Stock Exchange securities only.
1913	3,763	Hobson	See above.
1929	3,391	Feis (e)	Publicly issued capital only.
		<i>Economist</i> (f)	Stock Exchange securities and other securities of British companies only. Omits estimate of £50 million for nominee holdings.
1929	3,438	Kindersley (g)	Stock Exchange securities and other securities of British companies only.
1930	3,424		
1931	3,410		
1932	3,356		
1933	3,385		
1934	3,414

(g) Sir Robert Kindersley, in *The Economic Journal*, December, 1936, and earlier issues. The full scope and qualifications of Sir Robert Kindersley's estimates are clearly laid down in his articles.

same period exceeded them by only £43 millions. As the estimates of total capital at the end of those years showed a reduction of £24 millions, the wastage through net re-sales, defaults and bankruptcies appears to have averaged roughly £13 millions per annum—a remarkably small figure in a period of extreme depression.†

After 1934, the rate of return of capital was accelerated. The strength of the gilt-edged market, and the accumulation of sterling reserves by Dominion central banks and Governments, caused the latter in particular to press forward with refunding operations that would normally have been spread over a long period. Sir Robert Kindersley estimates total repayments and redemptions in 1935 at £81 millions and in 1936 at £107 millions.‡ New issues for overseas in those two years appear to have fallen short of the opposite movement by no less than £76 millions. This depletion of British

* Whenever Hobson's figures for new issues can be checked against those of other investigators they appear to be on the low side. They must be increased, moreover, by additions of capital made otherwise than through the new issue market.

† It must be remembered that, since the capital estimates are based on nominal values, a defaulted security disappears from the total only when the default is complete and final, and commercial capital does not disappear until the concern is liquidated. Hence the true ultimate rate of loss would presumably be rather higher.

‡ Address to the East Midland Regional Savings Conference, October 22, 1937, quoted in *The Economist* of October 30, 1937.

II.—GEOGRAPHICAL DISTRIBUTION OF BRITISH CAPITAL ABROAD

(For notes, see Table I)

A.—Jenks's Estimate for 1854 :—

	£ millions
United States	50-60
French, Belgian, Dutch and Russian Government securities	45-55
Spain and Portugal	35-45
Latin America	35-40
French railways	25-30
Belgian railways	5
Total	195-230

B.—Nash's Estimate for 1880 :—

	£ millions
Foreign Government loans and guarantees	500
Railways in Europe, United States and South America	240
United States Debt	200
Indian railways	90
Indian debt	70
Colonial Government loans	50
Total	1,150

ANNUAL INCOME

If our experience with regard to capital losses is not unfavourable, what of our experience with regard to income? Here we are faced with many statistical difficulties. Capital goes out for the most part in large traceable sums; income returns in the shape of many thousands of small payments to individual investors, and a good deal of it escapes the statistical net. But not much income escapes the fiscal net, and, in so far as the Inland Revenue can distinguish overseas from home sources of investment income,* its returns are the foundation of our knowledge in this field for the earlier periods.†

A warning should be entered here against comparing the earlier income estimates with the estimates of total capital abroad in the same years in order to discover the average rate of return. The scope of certain of the capital estimates is entirely different from that of the income estimates. Some of the capital estimates, on the other hand (notably Mr Hobson's), were arrived at by capitalising the income estimates at so many years' purchase; and comparisons based upon these would

* See footnote to Table III.

† They are the basis of Mr C. K. Hobson's estimates for the period from 1870 to 1912. But they are necessarily incomplete, and Mr Hobson's method was to add for each year an estimated fraction representing unidentified income from abroad.

merely reproduce the original estimator's conception of what the average rate of return probably was.

The income estimates given in Table III show a national total from investments abroad fluctuating about a flat level from 1870 to 1880, rising steeply in the 'eighties and then stagnating again, and finally almost doubling between the end of the century and the outbreak of war. By that time the Inland Revenue figure had reached £180 millions per annum. The actual total of income from all forms of investment abroad was certainly much higher. It may be noted, nevertheless, that £180 millions represents only 4.8 per cent. of £3,763 millions, which was Dr Feis's estimate for the total of British investment abroad in 1913 in the form of publicly issued capital only.

The first Inland Revenue return for the post-war period shows a figure of £209 millions for 1920-21. The reason for this rise compared with the pre-war period, in spite of the loss of investments during the war, was the phenomenal prosperity of certain overseas commer-

of certain foreign and Dominion enterprises in 1929-30 resulted in a record total for that year, but the income from British concerns operating abroad never regained its level of 1925—a boom year for rubber and for not a few other commodities. The average total of overseas investment income recorded by the Inland Revenue for the whole pre-slump decade was over £200 millions a year. Although enough has been said to discourage any precise comparisons, it certainly seems as if Britain's foreign investments, though seriously depleted by war-time sales and losses, were a more profitable asset, on the whole, after the war than before it.

Average Return

It is only for recent years that estimates exist of capital abroad, and of income from it, which are so framed that they may be brought into relation to each other in order to arrive at the average rate of return on the nominal capital. *The Economist** for 1928, and

cial and industrial interests in the post-war boom. The figure for Group II in the returns (which refers mainly to income from businesses controlled in the United Kingdom but mainly carried on abroad) was £91 millions in 1913-14. In 1920-21 it was £124 millions, but by the following year it had dropped calamitously to £70 millions. In 1921-22, indeed, the figure for total income, recorded by the Inland Revenue, had fallen by more than a quarter, to £150 millions. It must be noted, however, that the income recorded in Group I (interest and dividends paid, or coupons encashed, through paying agents, etc., in the United Kingdom) was sustained remarkably well through and immediately after the war. (This, incidentally, was the only group recorded from 1915 to 1920). Most of the assets requisitioned in order to provide dollar exchange fell in this group, which also suffered through the obliteration of much investment in Central and Eastern Europe and in Russia. Yet from 1914-15 to 1918-19 the recorded income fell only from £91.8 millions to £84.0 millions. After rising just after the war, it fell again to £80.1 millions in 1921-22. Thereafter it rapidly recovered, and two years later had almost been restored to the maximum pre-war level. New investments had, of course, been made by that time, and, by virtue of the general rise in the rate of interest, every conversion increased the average return on the outstanding capital.

After 1923-24 the income in both groups rose steadily until 1926-27, when it exceeded by over £50 millions the highest pre-war total. The abnormally high profits

(a) Based on Inland Revenue returns. (b) For scope, see note below. Fiscal years.
Note.—The Inland Revenue Commissioners now divide "income arising abroad to British residents" into three groups: I. Dominion and foreign interest and dividends paid through paying agents in this country or received by the encashment of coupons through bankers, coupon dealers, etc., in this country. II. Income arising from business controlled in this country but mainly carried on abroad and with assets situated abroad, interest and dividends payable abroad (not included in Group I) and income from other foreign possessions. III. Income arising from trading operations carried on abroad by British concerns trading mainly at home but partly abroad. Group I is identifiable. Group II is in part identifiable, and certain data exist on which an estimate of the aggregate amount can be made. Group III cannot be identified.

Sir Robert Kindersley for 1929 and later years, estimated income independently of the capital estimates, but within the same classification and scope. *The Economist* estimated that the share capital of British companies operating abroad returned an average dividend of 6.83 per cent. on the nominal amount, and their loan capital an income of 4.67 per cent. The amounts of British capital to which these percentages applied were £746 millions and £308 millions respectively. The corresponding percentages (applicable to some £423 millions of share capital and £529 millions of loan capital) for corporations registered abroad were estimated at 7.9 per cent. and 4.4 per cent. Sir Robert Kindersley for the same year arrived at a total of £61.9 millions for the interest paid on £1,400 millions (nominal value) of Empire and foreign Government and local authority bonds—an average return of 4.4 per cent. For all classes of capital covered by the two inquiries (that is to say, excluding "direct" investments and securities not officially known to the London Stock Exchange), the average rate of return worked out at 5.4 per cent. on a nominal capital of approximately £3,400 millions.

From 1929 onwards, Sir Robert Kindersley's estimates are available. They are shown in the table at the top of the next page.

The outstanding impression gained from these figures is the wide variation in the average return from year to year, in accordance with the phases of the trade

* Issues of November 1 and November 15, 1930.

INCOME FROM BRITISH CAPITAL ABROAD

(Amounts in £ millions)

Year	Share Capital	Average Dividends	Loan Capital	Average Interest	Total Capital	Average Return
1929	1,238	8.9	2,200	4.6	3,438	6.2
1930	1,206	7.5	2,218	5.3	3,424	6.1
1931	1,188	4.7	2,222	5.1	3,410	4.9
1932	1,160	4.2	2,196	4.8	3,356	4.6
1933	1,169	4.3	2,217	4.5	3,386	4.4
1934	1,192	4.9	2,222	4.6	3,414	4.7

cycle. Although "fixed" interest-bearing securities form roughly two-thirds of the total, the average ratio of all income to all nominal capital fell by roughly 30 per cent. of its peak amount in the course of five years.

This suggests that there is no such thing as a "normal" rate of return, applicable over long periods, on British capital abroad. No statistical inquiry can hope to do more than establish limits within which the

A word must be said about the relation of this calculation of average return to the investor's risk of disappointment or loss. The calculation represents the actual, not the nominal, return; therefore the risk of a short-fall of income on the individual investment, compared with undertaking or expectation, has already been discounted. This consideration, however, does not apply to permanent defaults, bankruptcies or capital reconstructions; for they remove the items concerned from the sum of nominal capital to which the income received is related, and thus the apparent average rate of return is correspondingly raised. In other words, the margins of 5 to 7 per cent. must bear the insurance against total failure but not against partial disappointment. It has been suggested above that a figure of $\frac{1}{2}$ per cent. per annum would cover the risk of total loss.

BALANCE OF PAYMENTS

One result of *The Economist's* inquiry, and later of Sir Robert Kindersley's, was to cause a revision of the

rate has probably varied. The portions of total capital abroad which were excluded from *The Economist* and Kindersley inquiries may be assumed to yield a higher average rate of return than the included portions, since they represent investments made directly by commercial concerns and other interests which are in a position to take advantage of special opportunities. *The Economist*, in its estimates for 1928, adopted a hypothetical rate of return of 10 per cent. for the excluded portion, which it placed at the round figure of £700 millions. The final result was to show a total income of £254 millions on a nominal capital of £4,100 millions—an average rate of return of 6.2 per cent. Taking into consideration all the evidence, including that for earlier years, we seem entitled to conclude that the average rate of income returned on British capital abroad has probably varied between 5 and 7 per cent. of its nominal amount. The variations have followed both the short-term curve of the trade cycle and the long-term curve of the changing rate of interest expected on invested capital, and there may have been minor excursions beyond those limits for brief periods.

estimates of income from British capital abroad which had appeared in the Board of Trade's annual recapitulation of the national balance of payments. The official estimate of £285 millions for the net income in 1929 (that is to say, after allowing for the outflow of income on British capital owned by citizens of other countries) was thus reduced to £250 millions. It should be noted, however, that for the purposes of the balance of payments the gross income from abroad includes not only income actually distributed, but also sums remitted home by British companies, as additions to their reserves, directors' and management fees, etc. The downward adjustment of the official estimates for the years up to 1929 showed that the financial position of this country in relation to the rest of the world was appreciably less strong than had been supposed, a fact that was borne out by the investigations of the Macmillan Committee in 1931.

The exchange difficulties that came to a head in that year brought home to a wide public the need for more complete and accurate estimates of the national balance of payments. Unfortunately a great deal remains to be

done in this field, especially in relation to the item "other services"—which includes tourist transactions outward and inward, film and other royalties, sales of old ships, and other miscellanea—and to the whole series of short-term capital items. Some of the gaps have been filled as a result of recent investigations by a study group of the Royal Institute of International Affairs. The study group's figures, and the revised figures of the Board of Trade for earlier years, are reproduced in Table VII.

The importance of overseas investment in Britain's balance of payments needs no emphasis. Income from capital abroad is a vital contributor to our national standard of life. Our industrial structure, which draws its fuel and materials from all over the world, and our consumers' standard, which depends upon cheap and abundant supplies of imported commodities, are alike built upon the fact that the nation can import a vast quantity of raw materials, foodstuffs and manufactures which do not have to be paid for by means of current exports. The toll which our previous investment enables us to levy on the rest of the world will play an increasingly important part in the national economy if the numbers of the population fall considerably after the present decade. The position will then resemble that of

services of all kinds, a large part of the national income represents the taking in of each other's washing, whereas the income from overseas is tangible and net. A truer picture is given by the statement that something like one-quarter of our total imports are delivered to us, gratis, by foreign and Empire countries as a tribute upon the capital that we have lent them.

Is Britain Living on Capital?

Since the readjustment of our external accounts after 1930 as a result of the fall in prices, the protective tariff, the defaults of borrowers and other changes, Great Britain has paid for her excess of imports over exports almost exactly with the sum of her investment income, the net earnings of her mercantile marine, and her income from the short-term money market. From 1932 to 1936 the merchandise deficit totalled £1,452 millions, while the surplus on the three other items totalled £1,385 millions. Allowing for other credits and debits, transactions on current account almost precisely balanced, and there was no credit left over for transfer to capital account, whereas in the eight years ended 1929 the net credit thus transferred had averaged £87 millions per

Source.—Board of Trade Journal; estimates for 1929 to 1935 modified and elaborated by a study group of the Royal Institute of International Affairs, in "International Investment." Estimates of new issues (1929 to 1936), capital repayment (1929 to 1936) and changes in other long-term investments abroad (1930 to 1935) are those of Sir Robert Kindersley.

a family trust whose beneficiaries are gradually declining in number. The income from the trust (assuming the capital to be kept intact) may eventually be sufficient to support all the remaining members of the family at their current standard of living without their having to add to it any earned income of their own. So—in theory—if Great Britain's capital abroad could be kept intact, one might conceive the possibility that, at some future time, the whole nation could live upon it, even though its own industry and production were at a standstill.

There is, however, another side to the picture. In the circumstances we have described, the beneficiaries of the trust would be steadily growing older, and therefore less able to supplement their investment income by their own earnings. Similarly, if the experts' promise—or threat—of our demographic future is fulfilled, a seriously rising proportion of the population will be older than the working age, and will therefore be dependent upon income from pensions or investments. Viewed nationally, therefore, our capital abroad is an invaluable standby against the time when the burden of home production will rest upon fewer and fewer shoulders.

At present, the income from that capital represents about one-twentieth of our total national income. But this is hardly a true estimation of its relative importance. Now that a high proportion of our means is spent on

annum. If we regard short-term capital movements and movements of gold as in the long run self-balancing—or else as becoming transmuted into long-term capital movements—then we may treat the credit carried down from current account as the amount available for net new investment in long-term capital overseas. Of late years, therefore, we have had nothing available for such new investment. We have, indeed, continued to subscribe to capital issues, though on an attenuated scale. But these new issues, as Sir Robert Kindersley has shown, have fallen short of the total of repayments and redemptions received over the same period.

Great Britain has, at the same time, been a repository for many millions of refugee capital from overseas countries. This capital has been roughly balanced by imports of gold. If this "hot money" were to flow out again, the balance could, of course, be restored by resales of bullion. But meanwhile interest—however low—has to be paid on any foreign capital here that has not been merely locked away in the form of cash. Moreover, some of the hot money may already have cooled sufficiently to have been invested in British gilt-edged and industrial securities. Even allowing for the concurrent British incursion into Wall Street, it seems highly doubtful whether the country's net long-term assets abroad are to-day being kept intact.

CHANNELS OF OVERSEAS INVESTMENT

The preceding discussion raises a number of highly important questions. Is the cessation of net foreign investment an ineluctable consequence of changes in other items in the balance of payments, particularly of the failure to retain our export markets? Or is it to some extent an independent factor? Was the pre-1930 surplus on current account the cause, or was it in any measure the consequence, of our lending abroad on capital account? Do exports of goods result from exports of capital? These are clearly vital issues in relation to future public policy towards overseas investment. The theoretical answers clearly depend on the general circumstances assumed to prevail. In a world of free trade and freely adjustable monetary mechanisms there can, no doubt, be smooth and automatic adjustments of trade movements to movements of capital. But we no longer live in such a world. Tariffs, quotas and rigid currency control, all make adjustments difficult and experiment dangerous.

It is not surprising, therefore, that Governments and central banking authorities have intervened in an endeavour to ensure that the adjustment is made or that transactions shall be banned for which the corresponding trade movement would be doubtful. Before considering British official policy towards overseas investment in detail, however, it may be as well to examine briefly the channels through which overseas investment has been made in the past.

Issuing Houses

Table VI classifies the various issuing institutions through which share capital and loans were floated on the London market for overseas borrowers from 1870 to 1914.* It shows that, even in the days of comparative *laissez-faire* before the war, nearly one-tenth of the total amount was issued through official or semi-official agencies. The outstanding feature of the table, however, is the dominating position, as issuing institutions, occupied by the private banks. For purposes of comparison we may exclude loans issued through official or semi-official channels, and capital floated by commercial and industrial companies either through their banks or by themselves. Of the remainder, amounting to £2,522 millions, the private banks sponsored well over one-half. The strength of this branch of the London money market has been partly the consequence, but partly also a cause, of the amount and character of British investment abroad. Although the joint-stock banks were responsible, as issuers, for no less than £157 millions of the total in the six years beginning 1909, in proportion to their size and power they have never played a large part in the foreign lending business of London.

Investment Trusts

The work of the investment trusts forms another important chapter in the story of British lending abroad. The other media of flotation listed in the table have been, with very few exceptions, only *initial* intermediaries between lender and borrower. Investment trusts, on the other hand, have been *permanent* intermediaries performing a unique function, which must be clearly differentiated from their minor rôle as issuers, upon occasion, like other financial houses. The trusts have aided overseas investment by enabling the investor of moderate means, who cannot have specialised knowledge of the various shares and bonds on offer, to invest indirectly in concerns and Governments at the opposite ends of the world.

Early statistics of the amount and character of investment trust holdings are almost totally lacking. But special investigations made by *The Economist*, with the

kind co-operation of a number of the leading trusts, lead to the conclusion that in 1890 the investment trusts together held about £50 millions of British capital abroad, which at that time amounted to about £1,500 millions. In 1933 (the basic year of the statistics compiled for *The Economist Investment Trust Supplement* of December 1, 1934) the investment trust holding appears to have been about £185 millions, out of a total of £3,385 millions invested abroad through Stock Exchange securities.

The influence of the investment trusts on the amount and character of British overseas lending is not, however, to be measured merely in terms of the total of overseas securities that they themselves have held. They have helped to give the smaller investor confidence in overseas lending. They have raised its "status," both in a psychological sense and by enlarging the market for overseas securities. For this reason great importance attaches to changes in the geographical distribution of their investments, since it not infrequently happens that "what the trusts do to-day the general investor does to-morrow." The available figures are given in Table VIII. They are, of course, samples only, since the necessary information for a number of trusts has not been made public. They are sufficient, however, to show at least the broad trends.

The first feature brought out by the figures is the fall in the holding of United States securities in the period since 1890. Part of the reason, of course, was the mobilisation of American investments during the war, but equally important was the transmutation of the United States itself from a typical borrower into a dominant lender. The tendency of the investment trusts, however, to venture into industrial equities on an increased scale has revived their concern with the American market in recent years. A smaller, but none the less noticeable, trend since 1890 has been the proportionate drop in the Latin American portfolio of the trusts. The counterpart of these movements has been a striking increase of the percentage of the trusts' funds invested both in United Kingdom and in overseas Empire securities. Making all allowances for the possibility that the sample may not be fully representative, it seems, nevertheless, safe to say that the proportion in the United Kingdom trebled, and in the overseas Empire doubled, between 1890 and 1933. The satisfactory behaviour of Dominion securities during the recent slump, the need for minimising exchange risks, and the policy of protection for home industries in Great Britain have all reinforced this tendency in the past few years.

GOVERNMENT POLICY

Apart from the indirect effect of policies like tariff protection, the British Government have directly and deliberately taken a hand in encouraging investment in home and Dominion securities. Long before the end of the nineteenth century public criticism was directed against an alleged lack of correspondence between British investment abroad and British exports to borrowing countries, and the possibility of Government intervention was then mooted. It should be emphasised, however, that the Government's part in the foreign investment story before the war was played, not primarily for economic, but mainly for political and administrative reasons. It took two principal forms: the operations of the Crown Agents for the Colonies and the passage of the Colonial Stock Act of 1900.

The Crown Agents acted as issuers for the vast bulk of loans raised by the Colonial Empire. Although the loans were secured solely upon the revenues of the borrowing colonies, the fact that they were sponsored by this centralised Imperial organ, responsible to the home Government, gave them a credit status far higher than a single colony could command. It may be noted that since the Crown Agents also acted as purchasing agents for the colonial Governments, and as agents for the larger public works contracts, they could make sure that the export of capital was to a large extent balanced by an

equivalent export of goods. The total of loans issued by the Crown Agents since 1870 has been as follows* :—

	Million £		Million £
1870-79	25.1	1910-19	22.2
1880-89	12.7	1920-29	54.1
1890-99	7.4	1930-36	37.8
1900-09	17.6	1870-1936	176.9

The Colonial Stock Act of 1900 (with subsequent amendments) gives trustee status to Dominion and Colonial stocks which comply with certain conditions and are registered under the Act. The outstanding total of securities thus registered amounted, in January, 1936, to about £858 millions—almost exactly one-quarter of total British investments abroad in the form of marketable securities. It is impossible to assess, however, the effect of the grant of trustee status. The credit of the borrowers has been high, independently of any measure of that kind. Nevertheless, the impress of trustee status under an Act of the Imperial Government has conveyed to many investors' minds a vague impression that the latter in some fashion guaranteed the loans. Although this suggestion has no legal foundation whatsoever, it was perceptibly strengthened when, in the reorganisation of the finances of Newfoundland by the British Treasury, Newfoundland's trustee issues were distinguished from her non-trustee issues and given special treatment.

The war ushered in an entirely new series of developments in Government intervention in overseas lending. As a means of conserving financial resources, the first Treasury embargo was imposed in January, 1915. Permission could be obtained for home issues and important colonial loans, but lending to foreign countries was forbidden. Though the ban was relaxed after the conclusion of peace, it was not officially removed until November, 1919. The mobilisation of foreign securities began voluntarily in 1915; later an extra income tax of 10 per cent. was imposed upon listed foreign securities, and, finally, in January, 1917, holders were obliged to sell or lend certain securities on demand. Altogether some £700 millions of overseas investments (chiefly American stocks and bonds) were realised during the war in order to provide dollar exchange.

Post-War Developments.

After the war Government intervention took three main forms, apart from measures in the field of short-term finance: (a) stimulation of special investments designed to induce additional British exports; (b) participation in League loans for European reconstruction; (c) embargoes on new issues, designed to protect the currency.

(a) The Trade Facilities Acts of 1921 to 1927 authorised the Treasury to guarantee the principal and interest of loans, the proceeds of which were to be spent in the United Kingdom. The total guarantees given for loans in overseas Empire and foreign countries, up to the completion of the scheme, were £20,290,000. The Colonial Development Act of 1929 authorised advances from the Consolidated Fund to

* The records are possibly incomplete for the earlier years. On the other hand, conversion loans are included, and some of the loans have been taken up, not by the general public, but by other colonies and by the Crown Agents themselves.

colonial governments for purposes of development. Up to March 31, 1936, the Colonial Development Advisory Committee had recommended free capital grants and direct loans totalling £4,779,000, and free grants of interest totalling £1,025,000.

(b) The only League loan to receive the actual guarantee of the British and other participating Governments was the Austrian loan of 1923. Undoubtedly, however, investors regarded the authority of the League Financial Committee, to which the various Governments had nominated members, as imparting a higher credit status than the borrowing country itself could muster. The outstanding amounts of the British portions of the various League loans total £39 millions, of which £22 millions are, to-day, wholly or partly in default.

(c) Before the return to the gold standard, after the war, the Bank of England, in co-operation with City interests, exercised an unofficial censorship upon new issues for overseas and other transfers of capital abroad. From the end of 1925 until 1930 the unofficial embargo was suspended, but currency stringency led to a resumption in the latter year. In his War Loan conversion speech of June 30, 1932, the Chancellor of the Exchequer requested that no new issues be made while the conversion was in progress. Two months later, the embargo was relaxed in favour of conversion issues for home and Empire sterling loans. After

October, 1932, it was confined to issues on behalf of foreign borrowers or issues whose proceeds would be remitted outside the Empire, and to optional conversions involving underwriting or new cash. No trustee securities could be issued without the approval of the Bank of England. The Chancellor later made it known that the purchase of large blocks of securities from foreign holders for re-sale in this country was frowned upon. In July, 1934, the embargo was conditionally relaxed in favour of sterling issues for members of the "sterling bloc," and of sterling issues calculated to expand British exports.

The Foreign Transactions (Advisory) Committee was appointed in April, 1936, and is still functioning. The terms of reference of the Committee, which is enjoined to keep

in close touch with the Treasury and the Bank of England, express the following objectives of public policy towards overseas lending:—

(a) The sterling exchange is to be protected against sudden and dislocating strains.

(b) Due allowance is to be made for new issues on behalf of Empire borrowers, and the movement of international securities between London and other markets is also to be borne in mind.

(c) Relaxation of the restriction is to be made in favour of loans to finance exports from the United Kingdom.

(d) British-owned enterprises abroad are to be favoured, rather than loans which do little for our industry and commerce; account is to be taken of the treatment accorded to British-owned enterprises by the foreign country concerned.

(e) Capital required for development in the United Kingdom should not be restricted by excessive lending abroad.

(f) Favourable consideration is to be given to applications for sterling issues by a country within the sterling area where the loan is required to increase the sterling assets of that country and so to minimise fluctuations of the exchanges.

* Our thanks are due to Professor W. A. Brown for permission to compile these figures from an elaborate table embodying the result of his profound original research.

FUTURE POLICY

It would seem that the time has now come for a re-appraisal of the motives and content of public policy towards overseas lending. The purposes set out in the Advisory Committee's instructions may be reduced to three, of which two are negative—the defence of the currency and the reservation of available funds for home development—and one is positive—the stimulation of trade, particularly of British exports. The emergency period of sterling defence is now over. The Three-Power monetary agreement of September, 1936, ushered in a period of relative stability which must be expected to continue for some time. It has, in effect, enormously increased the "sterling area." The need to protect the currency has not disappeared as a motive in overseas investment policy; but it has taken a new form, in which it is subordinate to the third motive, the stimulation of international trade.

In regard to the total volume of funds available for new investment, for which home and overseas borrowers must compete, the situation has undergone a radical change since the days before the war, and even since the onset of the world depression. Private saving has fallen off, but corporate saving is probably higher than it ever was, through the retention of profits in internal and external reserves of companies. Changes in the short-term market, as well as official policy, have resulted in the maintenance of extremely cheap money. The relationship between short-term and long-term rates of interest is not precise, either in space or in time; but the rate of interest appears now to be well established, as far as can be seen, on a new low plateau, and the market for gilt-edged securities shows no signs of immediate weakness. A longer view would need to take account of the possible falling off of capital needs at home as the population falls. On the whole, therefore, the indications are not those which point to a scarcity of loanable funds. It is true that the response of investors to a number of recent new issues has been disappointing. But this seems to be due, not to a lasting disproportion between new saving and investment opportunities, but to the general decline of stock exchange values under the combined pressure of international political troubles and fears of a business recession.

International disturbances and the fear of war naturally affect very closely the future of overseas investment. They have completely barred certain potential borrowers from the world's capital markets. Prudence dictates the greatest caution in lending money which might be lost through some international catastrophe, with its attendant reactions upon currency, trade, industry and taxable capacity. There remains, however, a large area, notably the British Empire, to which these considerations scarcely apply. Moreover, some weight must be given to the argument that the revival of world trade, which a fresh flow of international lending would stimulate, would diminish the political tension between the nations.

The most fundamental consideration of all, therefore, is seen to be the relation between overseas lending and trade. In these days of high tariffs, quotas and other interferences, it is impossible to assume, *a priori*, that a smooth adjustment of international trade will follow international movements of money, or that a debtor country—however sound its internal economy—will be able to establish the surplus of exports over imports needed to pay interest and dividends on its borrowed capital. The experience of the depression has taught us the utmost caution in the latter respect. The experience of recovery, on the other hand, has taught us that a rising import surplus may be more than balanced—to the clear advantage of the national income—by improved earnings from capital abroad and from the mercantile marine. The whole structure of British industry is conditioned by the existence of that invisible income, which is a counterpart of our import of raw materials. Unless British capital abroad is at least maintained intact, a readjustment of that structure and of the national standard of life must sooner or later become necessary. In spite of protection here and abroad, international trade is vital to British industry. Without a revivify-

ing flow of capital, international trade is liable to stagnate. The opportunities for fresh international investment to-day are limited—they may embrace only the British Dominions and colonies, India, the Near East, a single South America republic and possibly China, when the present struggle has been liquidated. But if and when these opportunities arise, it would be dangerously short-sighted to neglect them.

Even such a negative conclusion may seem foolhardy to some minds at a moment when a threat of complete default (now rescinded) by the second largest debtor country of Latin America has been piled upon wars and rumours of wars that have made almost every investor say: "There's no place like home." Here, indeed, is a field in which politics are even more decisively the master of economics than in international trade itself. In purely economic terms, the case for continued international lending is almost unanswerably strong. There have, it is true, been serious losses in the past through purely economic causes: the virtual bankrupting of the Chilean nitrate industry by the competition of synthetic nitrates is a striking example. But on the whole the wastage through economic loss has been covered by the insurance premium that is represented by the higher rate of interest obtainable on overseas investment. That higher rate of interest is itself an index—still speaking in purely economic terms—of the greater opportunities there have been for the investment of capital in the debtor than in the creditor countries, and therefore of the gain to the world by international lending.

Yet just as "in the long run we are all dead," so what happens "on the whole" is no comfort to the individual investor who has lost his money in some disappointing foreign commercial venture or defaulting foreign Government—and there is more than a germ of truth in the allegation that some issues for overseas borrowers may have been made less on account of their intrinsic attractions by comparison with home demand for capital, than on account of their financial attractions to those who immediately benefited by them. Even so, we have only to remember the fate of much of the capital floated for home industry in the new issue boom of 1928 to realise that pot may be as black as kettle. If we remember, too, the big industrial failures at home in comparatively recent years—in the heavy industries, for instance, or in Lancashire—we may be ready to believe that on the average the rate of loss on capital invested overseas, including Governmental defaults, is not unconscionably higher in peace-time than the corresponding rate of loss on home investment, and is more adequately covered by the insurance premium element in the average rate of return. In time of war in which we ourselves are involved, of course, the rate of loss through defaults and otherwise may be high. For example, default completely destroyed over £100 millions of our investments in Tsarist Russia. But in such circumstances it is almost equally impossible to tell what may happen, immediately or ultimately, to capital invested in home industries, as post-war investors in the war-expanded British steel industry learned to their cost.

This discussion, however, brings out one important factor to the advantage of home lending—that whatever might happen to home industries, their tangible investment in factories, machinery, etc. would remain as a national asset. A bankrupt railway's tracks would still exist and could be used if the need arose, whether they were in England or in Argentina. But politically the position would be quite different, and politics (including strategic considerations) hold the field to-day.

To promote foreign lending merely for its own sake would plainly be foolish; but it would be equally foolish to oppose it merely for its own sake. These are times in which both the Government and the investor are bound to give every proposal for overseas lending the most careful scrutiny, both from the economic and from the political points of view. It is our opinion, however, that such a scrutiny—bearing in mind the dangers in connection with the balance of payments that have been mentioned—will not lead to any additional check to foreign lending, but on the contrary to its stimulation, as the need arises, within the British Empire and with some members of the foreign world.

Rumours of Tax Changes

NEW YORK, November 9.—Last week was interrupted by Election Day on November 2. These elections were country-wide, but mostly for State, county and municipal offices; although one or two vacant congressional seats were filled. The effects of the results on business or financial sentiment are still invisible. Political interest is centred on the special session of Congress to convene on November 15th. In his radio address to the nation the President presented a lengthy agenda which included nearly every topic except taxation.

As the session approaches taxation is a dominant theme in discussion, not only in New York but in Washington, where the Congressmen have begun to foregather and where a House Committee is studying tax proposals. During the summer a committee of experts made an extensive study of the whole scheme of Federal taxation. Its report has not been made public; and the stage is admirably set for rumours about the repeal or modification of the undistributed profits tax on corporations and the capital gains tax.

The undistributed profits tax has been in effect only one year and does not seem to have lived up to its revenue promise. Two facts have made it unpopular: corporations with a capital structure weakened by the depression and corporations heavily indebted with amortisable debts have clearly been hard hit; and at no time since the tax became law has the new issue market been receptive to the offerings of small or secondary corporations. Punitive as the tax was intended to be, a certain number of corporations needing capital, and having no access to a capital market, have elected to pay the tax to retain their earnings. The stronger and larger corporations, with solid financial structures, were not adversely affected by the tax; indeed, some benefited by it.

By the capital gains tax net capital gains are taxed as income of the current year, but net capital losses are deductible from income only to the extent of \$2,000. However, on capital gains derived from sales of securities more than one year from the date of acquisition, a sliding scale is provided which materially modifies the tax. The tax was aimed particularly at stock market speculators; but it has been a mediocre revenue producer, for the simple reason that speculation is not nearly so profitable as people who prepare tax Bills fondly suppose. The tax may, indeed, have acted as a direct impediment to enterprise. The suggestion that either or both of these taxes will be modified is therefore alleged to be reasonable.

Decline in Primary Prices

Common gossip in Wall Street attributes the strength of sterling to an exodus of "hot money." If so, it seems to represent transfers of balances rather than movements of investment funds. It does not appear that much European money has entered the American security markets in recent months; and there has been little evidence of European liquidation. This "hot money," when invested, seems more sensitive to rumours of taxation than to considerations of business activity or earnings.

The decline in primary commodity prices since early in the year has been an outstanding phenomenon. The

following table shows the yearly movement of the index of the Bureau of Labour Statistics:—

	UNITED STATES PRICES		
	Raw Materials	Semi-Manufactures	Finished Products
1926	100	100	100
1927	96.5	94.3	95.0
1928	99.1	94.5	95.9
1929	97.5	93.9	94.5
1930	84.3	81.8	88.0
1931	65.6	69.0	77.0
1932	55.1	59.3	70.3
1933	56.5	65.4	70.5
1934	68.6	72.8	78.2
1935	77.1	73.6	82.2
1936	79.9	75.9	82.0
May 1936	75.8	74.1	79.2
June	77.6	73.9	79.4
July	79.8	75.2	81.6
Aug.	81.5	75.6	82.4
Sept.	81.8	75.9	82.3
Oct.	82.1	76.2	82.0
Nov.	83.1	78.6	82.6
Dec.	85.6	82.6	83.8
Jan., 1937	88.1	85.4	84.9
Feb.	88.3	85.5	85.4
Mar.	90.1	89.6	86.4
Apr.	88.7	89.5	87.4
May	87.1	87.5	87.5
June	86.1	86.8	87.7
July	86.5	87.0	88.8
Aug.	84.8	86.6	89.0
Sept.	84.4	85.3	89.1
Oct. 30 (week ended)	78.7	81.5	87.3

This table shows since May, 1936, a complete cycle of raw material prices—a rise of about 15 per cent. and then an almost complete cancellation of the rise. Semi-manufactured articles have followed the course of raw materials. Finished products were slower to rise and so far have declined little.

Taxation and Security Markets

The problem of the relation of taxation to security markets is enormously complicated by our intricate system of tax exemptions and tax differentials. Local government debt (in round numbers \$20,000 millions) is wholly exempt from taxation as to income. The Federal debt is partially exempt; that is, the Federal short-term debt (in round numbers \$15,000 millions) is exempt; while the Federal long-term debt (say \$20,000 millions) is exempt for institutions, with certain minor qualifications, and exempt from normal income tax (4 per cent.) for individuals, but not from surtaxes. For the individual liable to higher surtaxes, the problem was further complicated by the legislation of last August, which in effect suddenly doubled taxation on corporate securities and made tax-exempt securities correspondingly more attractive. A large number of States impose State income taxes; so that sometimes an individual's income tax may amount to 90 per cent. of his income—and he may be able to reduce his liability to nothing by a shift into exempted securities.

The COMMERCIAL NATIONAL BANK and TRUST COMPANY of NEW YORK

Of course, such differentials equate themselves through the market in time; the price or yield of tax-exempt securities strikes a relation to the price or yield of taxable securities in such a way as to compensate for the tax differential. But in this process a high degree of compartmenting within the market results; and adjustment to such sudden and violent changes of tax status as were introduced by the loophole tax of last August may be quite difficult.

In the fiscal year just ended Federal revenues were \$5,300 millions and expenditure was \$8,000 millions. In the current year contemplated expenditure is lower and revenue higher. For the coming period the outlook is for equivalent or higher taxes imposed on a reduced national income. There is one basic fact: in the 'twenties the United States had a large national income and a small Budget; in the 'thirties the United States has had a small national income and a large Budget. In the 'twenties the United States was a lightly taxed economy; now it is a heavily taxed economy by any relative criterion. Taxation is now a major, rather than a minor factor in the distribution of the national income. With each successive change in the tax laws a larger number of persons became tax conscious; and now, with a falling national income, tax consciousness has become a political fact of such magnitude that tax revision has become the dominant subject of discussion as the special session convenes.

France

The Franc and Franco

PARIS, November 15.—French policy is dominated by two main problems: the franc and Franco. There was even rumour at Lille of a new Herriot Cabinet, supported by the Communists and the Moderates, who would have exchanged a return of expropriated capital for a closer alliance with Moscow. But the Chaumets Cabinet remains, supported by the Popular Front on a programme to maintain the *status quo*. The Socialists, in their conference, reaffirmed their belief in credit control and the nationalisation or control of industries. But there was no question of any control of the exchanges. And M. Blum emphasised that in foreign policy the essential problem was that of the relations of London with Moscow.

The Moderates of the Alliance Républicaine supported at Nice the decisions announced by the Cabinet at Rambouillet, including the revision of the forty-hour week, which the Government shows no precipitate haste to carry out. The Communists are ready to make any economic concessions so long as Franco is not recognised—all the more so because the cantonal elections have shown them that the provinces are tired of monetary depreciation. It so happens that events abroad, added to the effects of M. Bonnet's repudiation of exchange control, have produced a recovery in the franc and returns of flight capital which, two months ago, would have been impossible without further concessions being made by the Left extremists.

Moreover, there is no serious discontent in the country, where the rise of wages is keeping up with the rise in the cost of living. Most of the great companies show equal or increased profits in comparison with 1936. The present disequilibrium is principally in the Budget and the balance of payments. The first disequilibrium has been made up by the efforts of the Minister of Finance, M. Bonnet. Both the latest issued loans of 1,000 million francs and 600 million francs were rapidly subscribed; and the deficit in the balance of payments (possibly 6,000 million francs for all 1937) is likely to be rectified by the slump in foreign prices and the return of expatriated capital (more than 6,000 million francs of strong currencies were purchased by the Equalisation Fund in a few days). This reimbursement in early December of the British loan of 40 millions has been announced.

Uncertain Outlook

But so long as the forty-hour week is not adopted by other countries, a policy of "wait and see" is not sufficient. The return of capital will not continue if it is used merely to cover a persistent commercial deficit. Will recurring unemployment precipitate a change in Government? It is remarkable that after falling by 100,000 compared with a year ago, the number of unemployed has again registered a marked increase of 10,000 in a month, in spite of two monetary depreciations, the Exhibition of 1937 and the forty-hour week. France is the country with the lowest number unemployed, but also the country where devaluation has been greatest and the fall in unemployment least, which is the consequence of the effect of the forty-hour week on prices.

The index of wholesale prices has fallen to 604 from 620 on October 16th, a drop of 3 per cent. in three weeks. This decline is principally due to the fall in the price of foreign commodities. This decline, if prolonged, may facilitate for a time at least economic recovery in France; but the cost of living will continue to follow the rise in internal prices, all the more because it will be aggravated by further increases in transport fares and charges. The railway deficit will reach many milliards in 1938, but actual estimates are very divergent. One thing is sure: passenger fares and goods rates will be raised by a further 25 per cent. from January 1st; and the fares on metropolitan transport vehicles will also be raised. And these contributions to the restoration of the public finances will provoke new claims for increased wages and new protests from interested parties.

Germany

Mutual Soundings

BERLIN, November 17.—The announcement that Lord Halifax was to visit Herr Hitler was, on the whole, well received here. It would be a mistake, however, to expect too much from discussions the aim of which has not been defined. The British belief that the aim was to "sound" Germany was rejected by the Berlin Press, which claimed that Germany had repeatedly made known her policy and requirements; and added, "Berlin will enter into no compromises." A German thesis, for which much might be said, is that it is British policy that needs sounding; and if Herr Hitler succeeds in sounding Lord Halifax he will have achieved something very remarkable. For, just as before the War, the vague commitments of Great Britain in Continental affairs are a main disturbing factor; and, just as before the War, it is not understood how a Government which is plainly in opposition to certain powers and in virtual alliance with others can claim to be Europe's impartial mediator and peace-maker.

Impounded Dividends

Last week the Bourse was under the influence of surmises about the impending Loanstock Law and the manner of distribution of the already impounded dividends. The Loanstock Law of December, 1934, is about to lapse; and it will almost certainly be prolonged or replaced by a measure similar in principle, in that the payment of dividends will be restricted. The law of 1934 hardly realised its aim to provide capital (the impounded excess dividends) for public borrowing.

The sum impounded in the three years was only some Rm. 100 millions, although about 175 companies had to contribute all dividends exceeding 8, or in some cases 6, per cent. Rm. 100 millions is only one-seventieth of the sum publicly borrowed for the consolidation loans alone. The law, nevertheless, exerted a considerable influence on methods of company finance, tending to reduce the dividends declared, and therefore to strengthen the companies' finances. The form in which the Rm. 100 millions will be refunded to shareholders is not yet known; possibly in cash, possibly in negotiable certificates, or possibly by distribution of the actual securities, mostly

municipal, in which the impounded money was invested.

The Reich has taken over, for incorporation in the Reich Railways Company, the private Lübeck-Büchener and Brunswick Landes Railways, paying the nominal share value in Reich Railway Company 4½ per cent. treasury certificates. The measure was favourably received by the Bourse, and aroused speculation about the possibility of further nationalisation of the 4,000 kilometres of railways still in private hands; but it seems that this is not designed.

Favourable accounts are published of progress with the ore-mining and smelting enterprises of the Reich ("Hermann Göring") Company. Ultimately the Salzgitter Mining Company, which is a daughter concern of the "Hermann Göring" Company, will produce several times as much iron ore as the entire home output at present, which, in the first three quarters of 1937, was 6,100,000 tons. The Office for Raw and Workshop Materials reports that the increased home production of non-ferrous metals, together with various structural economies, has already mitigated the former shortage. The police have now been enlisted to control the collection of scrap metals and other materials.

Seasonal Increase in Unemployment

The number of unemployed increased in October by 33,000 to 502,000, of whom 160,000 were not fully employable. This increase is due to seasonal influences, and the number is still 575,000 below the level of October, 1936. The value of industrial production in the third quarter of 1937 is officially estimated at Rm. 18,500 millions, compared with Rm. 16,750 millions in the same quarter of 1936. Wholesale trade turnovers, returns of which are not, however, compiled for all branches, show substantial increases, mostly between 10 and 20 per cent. over the figures of 1936. Pig-iron output in October was 1,417,900 tons, compared with 1,349,500 tons in September; and in the first ten months of the year 13,184,500 tons were produced, compared with 12,788,100 tons. Iron and steel production, already heavy, shows a further slight tendency to increase; and the number of blast-furnaces in operation has risen.

The condition of winter cereals is officially described as satisfactory. Sowing proceeded in better conditions than last year. The condition of both winter rye and winter wheat is calculated to be between "good" and "mediocre." An official return of the utilisation of agricultural land brings out the fact that, compared with pre-war years, the share of arable (in the present Reich area without the Saarland) has considerably decreased. While, between 1913 and 1936, the total cultivated area fell from 29,730,000 hectares to 28,631,000 hectares, the arable area fell from 21,486,000 hectares to 19,349,000 hectares, that is from 72.27 per cent. to 67.58 per cent. of the whole. Land under meadow, pasture, and garden increased considerably. Foreign reports about the ravages of foot-and-mouth disease are officially condemned as sensational and untrue; and the number of affected farms or estates is put at 4,000.

Diminished Export Surplus

In October exports were very large, but the export surplus was smaller than in October, 1936. The export surplus for the first ten months of the year is only Rm. 370 millions. At the beginning of 1937 it was confidently expected that the Rm. 550 millions export surplus of 1936 would be exceeded. But while a large increase in exports was correctly predicted, no allowance was made for the heavy increase in imports. The total value of imports in October was Rm. 130 millions higher than in October, 1936, and of exports Rm. 112 millions higher. Since September of this year the value of imported foodstuffs has risen from Rm. 163.2 millions to Rm. 184.3 millions; but of industrial goods only from Rm. 295.4 millions to Rm. 296.2 millions. Exported foodstuffs have risen in value from Rm. 6.1 millions to Rm. 6.6 millions; and industrial goods from Rm. 488.0 millions to Rm. 537.1 millions. In fact, progress this year has been on the lines of Dr Schacht's New Plan, which stated that imports should be fully paid for by

exports, and implied that imports would be increased if exports increased.

The foreign trade returns for the first nine months of 1937 shows an increase in both the export surplus in trade with Europe and the import surplus in trade with overseas countries; the former was Rm. 772 millions, compared with Rm. 622 millions in the same months of 1936, and the latter was Rm. 451 millions, compared with Rm. 296 millions.

Nothing has lately been heard about the intention to accumulate a new gold reserve, announced at the time of the bond default of 1933. Gold imports and exports in October were inconsiderable and practically balanced.

Poland

Stabilising Disunity

WARSAW, November 5.—The national unity campaign launched last February by Colonel Adam Koc appears so far only to have added to the internal political confusion. Instead of bringing some Opposition support to the Government it has brought to the surface the fundamental differences within the Pilsudski regime which were submerged by the power and personality of the late Marshal. There seemed a possibility two or three months ago that Colonel Koc might make a deal with the National Democrats—the Right Opposition to the Government—but strong exception to any such arrangement developed among the liberal elements in the Pilsudski regime. An alternative suggestion that the much-needed broadening of the political base might be achieved by bringing the Populists (the peasant Opposition to the Government) into the National Unity camp provoked equally strong protests from the reactionary Pilsudski-ists, who also refused to consider any arrangement with the Socialists.

All efforts to give practical political effect to national unity declarations have thus served only to create discord. Marshal Smigly-Rydz, on whom the mantle of Pilsudski was placed, recently found it necessary to summon the leaders of the Legionaires to a private meeting in Warsaw in an attempt to restore harmony. All the key positions in the army and most of those in the Government and public services are held by Legionaires, and a split in their ranks might have very grave consequences. The danger of a serious split, however, is now felt to have been averted—but only at the cost of abandoning Colonel Koc's efforts to make a deal with the National Democrats. A broad understanding with the peasants would only be possible with the return from exile of M. Witos, the leader of the Populist Party, and there was never much likelihood that the Pilsudski-ists would allow him to return—except to serve his gaol sentence. On the other hand, an arrangement with the National Democrats, whose political creed is now anti-Semitism, could only have been interpreted as a step on the road to a totalitarian state. Perhaps Marshal Smigly-Rydz has chosen the only feasible way out of a dilemma by seeking to restore harmony within the regime—or, as one commentator has expressed it, by trying to stabilise disunity.

THE COMMERCIAL BANK OF SCOTLAND LIMITED

Incorporated by Royal Charter and Act of Parliament

PAID-UP CAPITAL - - - £2,250,000

RESERVE FUND - - - £3,050,000

ESTABLISHED 1810

Economic Improvement

The 1937 grain harvest, as anticipated, is estimated to have been about 12 per cent. below the average of the previous five years; but the loss has been partly off-set by excellent crops of potatoes and cabbage, the principal foods of the peasants. With wholesale farm prices still only 50 per cent. of the 1928 average, the agricultural situation leaves much to be desired, and the discontent of the peasants, which recently led to serious outbreaks in Southern Poland, may be attributed more to economic than to political causes.

The indices of industrial prices and production, in spite of a slight recession in September, are respectively 10 and 14 per cent. higher than a year ago; and industrial production has now recovered to 85 per cent. of the 1928 figure. But the population has increased nearly 15 per cent. since 1928, so that the improvement is more apparent than real. It has also been caused to a large extent by acceleration of the armament programme with the stimulus of French credits.

The improvement in the volume of foreign trade, as the following figures indicate, has been greater than in domestic trade:—

First Nine Months	Imports	Exports (Millions of zlotys)	Export (+) or Import (–) Surplus
1935	625.3	672.8	+47.5
1936	725.6	741.2	+15.6
1937*	929.5	867.6	–61.9

* Preliminary.

Although the visible trade balance, according to the published figures, is now definitely adverse, the Bank of Poland, from January 1 to October 20, 1937, was able to show an increase in gold holdings from 392.9 to 432.1 million zlotys and in foreign exchange and bills from 29.7 to 35.2 million zlotys. So far this year the "gold cover" has improved from 32.07 to 35.97 per cent.

The main reasons why the returns of the Bank of Poland have not reflected the adverse trade balance are understood to be: the curtailment of foreign debt service; the military credits obtained from France at the end of 1936; and extensive sales of food and clothing to both sides in the Spanish civil war. These sales have not appeared as exports to Spain in the foreign trade returns, although they may have been credited to transit countries. It is unofficially stated that these exports have exceeded a value of 100 million zlotys during the past year.

The new industrial zone in the "strategic triangle" between the Vistula and San rivers in Southern Poland, on which work was started early in 1937 on a four-year plan, is said to be making satisfactory progress. For the current fiscal year (which began on April 1st) 1,000 million zlotys have been provided for work in the new zone. This money is being obtained from the ordinary and extraordinary budgets passed by the Sejm, from the National Defence Fund, from local government bodies and State enterprises, and from the French credits. The new zone, apart from its strategic advantages, is transforming an "economic desert" into an industrial region.

Sweden

Turn of the Tide

STOCKHOLM, November 5.—Even in this country, which during four and a-half years has enjoyed an exceptional business expansion, there begin to appear signs of a turn of the tide. On the whole, the economic situation is still satisfactory. But adverse conditions abroad must necessarily check the upward trend in the long run. Falling prices for foreign raw materials, together with other storm signals from foreign centres, have lately brought about a shrinkage in orders to Swedish industries.

Industrial production has so far shown no signs of slackening. During August the general index of industrial production rose by one point to 121. Employment further improved, and the number of unemployed fell in September to 9,900, compared with 20,900 a year ago. The shortage of hands in agriculture is growing, which has led to an increased import of agricultural workers from Finland. The iron and steel industry is still running at full capacity. Yet there is a noticeable decline in orders for domestic requirements and a tendency for prices to weaken.

For other staple goods the future does not look too promising. Timber importers in Great Britain and Holland have considerable unabsorbed stocks and Swedish sawmill owners show great caution in completing their raw material requirements. Swedish timber sales at the end of September totalled 760,000 standards, which is below the level of 1936. The pulp market is quiet, and very few orders for delivery in 1939 have been received, since buyers are obviously afraid that extension works in the pulp industries in the United States and Canada will force prices down. About 85 per cent. of the 1938 production of chemical as well as of mechanical pulp has now been placed. As a positive factor favouring stability, it should be remembered that the mechanical pulp agreement between Sweden, Norway and Finland has been prolonged for a further period of three years.

Growth of Foreign Trade

Foreign trade is still expanding. Figures for recent periods have been:—

FOREIGN TRADE (In million kronor)			
	Jan.-Sept. 1936	Jan.-Sept. 1937	
Imports	1,156.1	1,542.0	
Exports	1,064.8	1,409.8	
Import surplus	91.3	132.2	

TRADE WITH UNITED KINGDOM (In million kronor)			
	Jan.-Aug. 1936	Jan.-Aug. 1937	
Exports to U.K.	227.4	279.9	
Imports from U.K.	197.7	256.3	
Export surplus	29.7	23.6	

It is significant that imports from Great Britain have increased by 30 per cent whereas exports to Great Britain show an increase of only 22 per cent. The Silverstolpe index of wholesale prices fell again in October by one point to 140. On the other hand, the prices of consumption goods during September and October showed exceptional stability, despite the weakening tendency of general price movements.

The Swedish money market is still suffering from a superabundance of liquid funds with new high records for the cash holdings of joint-stock banks. This has induced the banks to consider a further reduction of interest on certain categories of sight deposits. The demand from trade and industry for fresh credit accommodation shows only an insignificant growth, compared with the rise in prices and with the business expansion that has taken place during the year. Plant extensions are carried out on a comparatively small scale and are practically without exception financed out of industries' own funds. Merchants are not discounting bills, but prefer to keep them in their own portfolios. The main profits of the commercial banks will be derived this year from commissions on loan conversions and other operations, while profits from interest will probably show a decline compared with 1936 results.

The stock market has been under the influence of unfavourable reports from Wall Street and the City; and the general index of stock exchange prices declined during September from 178 to 171 (100 = par value). A contributory factor was uncertainty about the labour negotiations, the outcome of which will have great influence on the earning capacity of all companies listed on the Swedish stock exchange.

Irish Free State

Unfavourable Balance of Payments

DUBLIN, November 6.—The import surplus for the twelve months ended September, 1937, amounted to £20,690,690, compared with £16,574,562 in the corresponding period last year. It is generally agreed among bankers and economists that the invisible credit balance, though known to be very large, is insufficient to bridge this gap, and the conclusion is inescapable that the total balance of payments on current account is unfavourable. This conclusion is corroborated by the fact, disclosed in the latest bulletin published by the Currency Commission, that the net sterling assets of the Irish banks have decreased by over £2,000,000 during the last twelve months. As residents in the Free State hold considerable sterling assets outside the banks, it is quite possible that other external investments have also been liquidated to pay for part of the country's imports.

While the facts about the balance of payments cannot be disputed, their interpretation discloses differences of opinion between those, on the one hand, who regard with apprehension the depletion of the Free State's external reserves and those, on the other hand, who regard it as a matter of indifference, if not of congratulation. It is argued by the latter that many of the imports are capital goods; that such imports are non-recurrent; that imports of consumers' goods will tend to diminish as the new capital becomes productive; and that it is better to have our capital invested at home than abroad. To these arguments it may be replied that capital goods will need further imports for replacement, renewals and repairs; that the new industries will require to import much of their raw material; that the purchasing power generated by industrial development will be partly spent on imported consumers' goods; and that the desirability of investment at home rather than abroad depends upon the relative productiveness of the two localities.

Ways to Restore Equilibrium

One thing at least is certain; namely, that the external investments now in course of liquidation will not be easily replaced, and that to the extent by which they are decreased the Free State is the poorer. Everybody must therefore agree that the present position of the balance of payments cannot last indefinitely, and that efforts should be made to reduce the existing disequilibrium. Agricultural exports show a tendency to increase in value owing to the rise in the level of agricultural prices, but their volume shows no such tendency; and the decline in the numbers of livestock is beginning to be reflected in export statistics. Efforts are being made to develop industrial exports, and these efforts are being attended with success in the case of a few industries, but the value of such exports is an insignificant fraction of the total exports, which must necessarily remain overwhelmingly agricultural in character.

As regards invisible exports, it should be possible greatly to expand the receipts from tourists, and the Irish Tourist Association deserves much praise for its work in exploiting the attractions of the Free State. Doubtless the source of revenue will grow in the future, but it cannot be overlooked that the practice of going abroad for holidays is spreading among the Irish working classes; and the fact that, under the new Conditions of Employment Act, 600,000 workers will enjoy holidays with pay next year, will tend to swell the countervailing item of tourist expenditure abroad. The growth of emigration to Great Britain will probably augment the revenue derived from emigrants' remittances.

The expansion of exports is obviously a better method of restoring equilibrium in the balance of payments than the contraction of imports, but there is still one very important import, namely coal, that could possibly be considerably reduced without undue inconvenience if the country's supply of peat could be utilised for fuel. This is an old problem in Irish economics, but fresh interest has been awakened in it by an admirable paper read before the Institute of Electrical Engineers by the President of the Irish Centre, Colonel Edgeworth.

Letter to the Editor

State Contracts

TO THE EDITOR OF THE ECONOMIST

SIR,—While much unnecessary expenditure in public offices and services has been eliminated since the War, we still do not obtain a maximum return from all the State expenditure which is necessary. It is doubtful, for instance, whether purchasing departments are in a position to safeguard expenditure adequately. Firms tender for contracts, and a "fair and reasonable" tender is selected. But many tendering firms are inter-related; often suppliers are so few that contracts have to be distributed among them; and contracts are geographically spread to distribute employment. Competition is thus diminished, and the "fair and reasonable" price is determined by other than economic considerations. And, moreover, the purchaser has rarely the chance or competence to examine the figures on which a tender is based and the step-by-step process by which it is built up. I would therefore suggest an alternative procedure, already favoured in the business world, whereby, as a preliminary to the placing of an order or contract, the estimate or tender is arrived at by conference between purchaser and producer. Since the staffs of State departments have not the commercial or technical experience of production to scrutinise a quotation in this way, there is need for an intermediary between the departments and the outside contractor. This intermediary might be a permanent small commission with power to co-opt *ad hoc* temporary members of knowledge and experience. At present State purchases are made by individual departments or offices, and redundancy and waste result. The centralization of purchasing through the proposed commission would obviate this, as well as securing economic quotations for all State contracts.

Yours faithfully,

T. W. MACALPINE.

GEORGE ALLEN AND UNWIN

Books and Publications

Empty Spaces

MR ISAIAH BOWMAN, President of the Johns Hopkins University and for twenty years Director of the American Geographical Society, introduces, in an important book,* a body of experts who discuss from their several angles the possibilities of modern migration. If we still harbour any illusions about wide empty spaces awaiting settlers, Mr Bowman and his collaborators have presented a timely warning.

The outstanding conclusion of their extremely able review is that "migration is no answer to economic and social strain induced by so-called over-population." The days when the Spaniards penetrated the New World and the Russians overran Siberia in fifty years, and even the more recent pioneering era in the Americas, Africa and Australasia, have now passed away. Political or religious persecution is to-day only occasionally a major motive for emigration; and the migrant now expects higher standards of living than did his predecessor in new lands. There must be preparation, organisation and "after-care"; and the resources of science and technology must mitigate the hardships and disappointments of the pioneer. The best land is occupied. Vacant space remains; but "the population capacity of the land depends, not on its degree of vacancy, but on the total available resources that land, people, science, technology and market demand, plus transport facilities, make possible." The frontiers of the world have shrunk; migration is now less of an adventure, and more wholly an economic proposition.

In the light of this broad conclusion the case is stated. Two preliminary papers discuss the general prospects of a redistribution of population and food supplies by migration. In one, the writer actually suggests that most of the world's inhabitants are now situated where they ought economically to be. We are, therefore, pleasantly surprised to find the Canadian apologist anticipating a renewal of immigration into Canada as the result of control, organisation, intensive technological inquiries and the study of markets.

"The earth's tolerance has been vastly widened," says Mr Bowman, "by modern science"; and the "vernalisation" of seed, for instance, will vitally affect the development of northern fringes, even if not so sensationally as the Russian experiment in Arctic Siberia. Markets are essential considerations in migration, for it is generally agreed that there is no more room for the "subsistence settler." The Russian schemes in Siberia, not yet fully launched and partly strategic in purpose, are therefore of interest primarily as a laboratory experiment in completely State-controlled migration.

British experience in the past has shown the relation between migration and the flow of capital; this will be even more patently important in the new phase of "planned" settlement. The rôle of capital movements is stressed throughout this symposium, and not least in connection with the problems of China and Japan. It is in this Pacific area, where the restriction of migration is most pronounced. The Chinese are tending to return to China; and the Japanese, who are not good colonists except in the tropics, are now faced with obstacles, not only in the Pacific, but also in Brazil, where, in fact, large numbers could be accommodated. Mr. Bowman, in the last, but not least interesting, article in this book, shows that, in South America, Brazil offers the only substantial field for settlement. This at present is limited, however, by the country's "low technological level and its loose political organisation" precluding "firm central guidance."

* The Limits of Land Settlement. A Report on present day possibilities. Prepared under the direction of Isaiah Bowman, Council on Foreign Relations. New York. Royal Institute of International Affairs. 682 pages 15s.

Again, one of the main conclusions of the study of the Australian position in this region is that inadequate rainfall imposes a strict limitation on the possibilities of increased immigration. The case for a "White Australia" is strong; but here the author admits that the exclusion of Asiatics from the tropical regions may result in economic disadvantages. There is a similar problem in a very differently populated continent. Africa's millions represent a density per square mile of less than twelve—an empty continent! Yet an unsatisfactory rainfall, as in Australia, on the one hand, and other, at present severely curtail opportunities for settlement. Moreover, a changed attitude in recent times towards the native tends to restrict both the area and, where labour must be black, the means of settlement. In general we conclude, unfavourably for expansionist doctrines, that only limited opportunities for migration still exist, subject to organisation and control. Mr Bowman and his contributors have rendered a signal service in marshalling the facts. Their book contains numerous interesting map illustrations (which suffer in some cases from compression), and a notable bibliography. More important, perhaps, are the political implications of their arguments and conclusions.

Shorter Notices

"Colonial Policies of the United States." By Theodore Roosevelt. With an introduction by Walter Lippmann. 204 pages. 7s. 6d.

The history of the United States' colonies in Puerto Rico, the Philippines, Samoa, Hawaii, Alaska and the Virgin Islands is as little known in this country as the name of Roosevelt is familiar. The burden of Colonel Roosevelt's brief, racy and delightfully lucid survey is characteristically downright. At the end he says of the American colonies: "We as a nation have not profited from them and we are not, because of our type of government, fitted to carry out any far-range colonial objective. . . . The average nation, particularly in modern times, has got but little out of colonial possessions with a large foreign indigenous population." From American experience and his own knowledge as a colonial administrator he flatly denies the German and Italian thesis that colonies conduce to national wealth and strength. For Britain, too, he has by implication a word of advice: he doubts whether democracy and imperialism are really compatible. This book is very readable, and should be read.

MONEY AND BANKING

Brazilian Exchange

THE news that Brazil had announced a temporary suspension of the service of her external debt and was also intending to prohibit the operations in the country of foreign-owned banks and insurance companies, naturally created an unfortunate impression in the City. This impression was only slightly mitigated by the report that exchange dealings were to be freed, so that 35 per cent. of the proceeds of export bills would no longer have to be delivered to the authorities. The suspension of debt payments has proved merely temporary, but the new regime is proceeding to give effect to its internal economic and financial policy. So far as the banking and insurance outlook is concerned, the threatened prohibition of foreign financial activities is naturally a matter of moment for the Bank of London and South America, which is the only British bank operating in Brazil. The announcement is in accordance with Article 145 of the new Constitution. Actually, the Constitution of 1934 contained a similar article (Clause 117), which provided that all foreign companies, including banks and insurance companies, were to be nationalised. A year ago, Lord Wardington, the chairman of the Bank of London and South America, was able to state that no definite steps had been taken under the 1934 Constitution, apart from a draft measure for the creation of a Federal Insurance Institute. Even the constitutionality of that measure was then under consideration by a Parliamentary Committee.

What is the economic background of the latest developments? President Vargas, it would seem, is determined to deal promptly with the crisis with which Brazil is faced through the decline in the coffee export trade. The proclamation of the new Constitution has coincided with announcements of changes in the coffee and foreign exchange policies as well as the suspension of the debt service.

Close observers of the Brazilian situation have been of the opinion, for some time past, that the coffee industry had deteriorated to a point where either prompt action must be taken to remedy the position or delay might prove ruinous for the whole economic structure. The expensive valorisation schemes had merely artificially suppressed the price of coffee to the benefit of competitors, and Brazil's share of world markets had dwindled from about 70 to 50 per cent. Briefly, the statistical position is that about 25 million bags are delivered each year to the consuming markets by various other countries, but that Brazil alone produces slightly more than this quantity each year, and is able to sell only about one-half thereof. Discussions between Brazil and the other American coffee-producing countries, including Colombia, produced no agreement on the major points of quotas and price parities, and Brazil appears to have at last made up her mind to do what she should have done some years ago, namely, to cease to support the market for a commodity which is being produced in increasing quantities elsewhere. Since June, 1931, as many as 54 million bags of Brazilian coffee have been purchased for destruction, while 70 per cent. of the present season's output is being sacrificed at a cost of some £6 millions sterling, financed by note inflation, although this is hoped to restore statistical equilibrium by the end of 1939.

The exchange position may next be discussed. Since October, 1936, the United States dollar has been adopted as the basis of milreis quotations, and the equivalent sterling value of the milreis stood until a few weeks ago at 75 milreis per £. This caused surprise mingled with consternation among Brazilian producers, most of whose products, including coffee and cotton, cannot find a

ready market abroad when the rate is lower than 80 milreis. The low rate was equivalent to an over-valuation of the milreis, and the Bank of Brazil's reserves in London were largely drawn upon. Early this month the rate for sterling was raised to about 90 milreis per £, and indications of returning stringency were afforded by the imposition of quotas for import exchange and the prohibition of forward dealings. It was already evident that the Pan-American coffee discussions would prove a failure, and the recent lowering of the rate enabled Brazil to compete in the coffee markets on more favourable terms. The reports of a bumper United States cotton crop were a further deciding factor in favour of raising the milreis rate for sterling, cotton being an increasingly important product in Brazil.

There has also been a general and increasing demand in Brazil among planters for the removal or reduction of the heavy export duties which were the main cause of Brazilian coffee being kept at such high price levels, whereas Brazil, in fact, is the world's cheapest producer. In consequence a senatorial committee to study the coffee situation has now been appointed, while there has also been a reduction of 75 per cent. in the coffee export tax coupled with the temporary closing of the local coffee exchanges, pending an adjustment of the market to the new price basis. Of the original export tax of 45 milreis per bag, 30 milreis was used to purchase surplus coffee stocks, and 15 milreis was in guarantee of the interest on the Coffee Realisation Loan. This guarantee will now depend upon the margin of taxation, which is to remain equal, presumably, to only 11.25 milreis per bag.

The position of the foreign exchange market for the past year or two has been that, generally speaking, only 65 per cent. of export exchange has been available for commercial purposes, the balance of 35 per cent. being taken for Government requirements at a stipulated official rate. There has been persistent criticism in Brazil that this quota was too large and that more exchange could be devoted to commerce. There appears substantial basis for this argument. Thus, the official value of Brazilian exports for the first eight months of 1937 was about £30 millions gold, or say £50 millions sterling, which, on the basis of a full twelve months, would represent some £75 millions, of which 35 per cent. for Government account would be about £25 millions sterling. But official requirements under all heads, including the bonded debt, are believed to be only about £15 millions. According to preliminary reports, the 35 per cent. quota is to be abolished, although bondholders would be reassured to know that sufficient exchange will be bought by the Government to resume the service of the bonds on at least the basis of the Aranha scheme.

It is not known, as yet, whether the German Askri mark system will be affected. The United States, however, is already making strenuous efforts against this system, and as she supplies a large amount of "free" dollars for a great part of Brazilian coffee, she is undoubtedly able to wield considerable influence upon Brazilian policy both in respect to the bond service and normalisation of the exchange markets. The effect of the compensation mark system on Brazil's trade since 1934 is shown by the following official figures:—

	BRAZIL'S IMPORTS (£ gold)					
	From Germany	Per cent. of Total	From U.S.A.	Per cent. of Total	From Great Britain	Per cent. of Total
1934	3,569,000	14	6,027,000	24	4,365,000	17
1935	5,608,000	20	6,406,000	23	3,409,000	12
1936	7,065,000	24	6,651,000	22	3,385,000	11

German Aski marks have been obtainable since May, 1937, at 5 milreis, whereas the quotation for Reichsmarks is over 7 milreis. Although the "compensation" system has certain advantages for Brazil, it has various drawbacks which cannot be ignored. Chief among these is the manner in which the German market may alter suddenly, say from coffee to cotton; and the system tends to estrange Brazil's other large customers, particularly the United States. The Brazilian authorities have affirmed that the building up of balances of free international circulation is a measure which is intimately bound up with the main objects which the proposed Central Bank would have in view. Trade in compensation marks—and in other blocked currencies—would obviously be markedly detrimental to the attainment of this objective.

Although Brazil possesses enormous undeveloped natural resources, she must needs be dependent for many years to come upon capital assistance from abroad. Unlike Argentina, she is not in a position to repatriate her foreign debt, and she has not developed a local money market of any importance. For her own sake, therefore, she would be well advised to take no step reflecting undue nationalism without giving adequate thought to its repercussions upon the future attitude of foreign investors. It is essential that she should re-establish her credit, which this week has received an indubitable shock.

Financial Notes

The Fiduciary Note Issue.—Sir John Simon announced last Tuesday that the fiduciary note issue would be increased temporarily from £200 to £220 millions from now onwards to the middle of January. This increase creates little surprise, for it is designed to cover the Christmas expansion in the note circulation. Last August, it will be recalled, the note circulation rose to a holiday peak of £503.8 millions, with the result that the Bank's Reserve fell to £23.6 millions and the Proportion to 16.6 per cent. This week's Bank return showed a note circulation of £481.1 millions, and without the increase in the fiduciary note issue a Reserve of £46.8 millions and a Proportion of 30.0 per cent. On the precedent of previous years, an increase of about £29 millions in the note circulation may be expected between now and Christmas. Hence in the absence of any steps to meet this contingency, the Reserve would fall to about £28 millions. These figures would be rather too low for comfort.

To rectify this position, the authorities had two courses of action at their disposal. The first was to transfer gold from the Exchange Equalisation Account to the Bank of England, but this would have been diverting the Exchange Account's gold from its proper purpose. Quite apart from questions of principle, this might have been undesirable just at a time when capital (and gold) was tending to return to France. Much the better course is that actually adopted, namely, that of a temporary increase in the fiduciary note issue. As a result the Reserve this week is £66.8 millions and the Proportion 42.8 per cent. Assuming a £29 millions increase in the note circulation between now and Christmas, the Reserve by then will be £48 millions. This would leave the Bank ample room to move. There is incidentally a precedent for this action, for last December, when the Bank took over £65 millions of gold from the Exchange Account, the fiduciary note issue was only reduced by £60 millions, leaving a net expansion of £5 millions. This year, as the present Bank return shows, an expansion of £20 millions is needed. In sum, as we have frequently urged in the past, the authorities are making proper use of their instrument of a flexible fiduciary note issue.

Mr Norman's Nineteenth Year.—The Court of Directors of the Bank of England has recommended to the proprietors that Mr Norman be re-elected Governor and Mr Catterns Deputy-Governor for the ensuing year. Mr Norman thus enters upon his nineteenth year of office. He has already served as Governor during one of the most troubled periods in our financial history, and under him the functions of the Bank have been greatly developed to meet the growing needs of the time, and to enable it to carry out the present-day duties of a central bank. It is reassuring to know that Mr Norman is able to remain at his post for another year, and indeed it is almost impossible to envisage the gap which would be left by his departure. The country is also fortunate in having Mr Catterns as Deputy-Governor. Mr Catterns joined the Court and then became Deputy-Governor after many years of service with the Bank. He thus embodies Bagehot's argument that the Deputy-Governor should be appointed from within the Bank, and in first Sir Ernest Harvey and then Mr Catterns the precedent is so firmly established that it is safe to assume that it will persist.

French Credit Repayment.—For reasons discussed in previous issues of *The Economist* it has for some time been apparent that France has greatly strengthened her financial position since the beginning of the autumn. Over the week-end two new important pieces of evidence to this effect were forthcoming. The first was the reduction in the Bank of France's discount rate from 3½ to 3 per cent. announced on November 12th. This is the latest of a series of similar movements, which have brought the rate down from its peak level of 6 per cent. last July to its present level of 3 per cent. The other piece of news was of even greater significance, for it is officially announced that the French railways' sterling credit of £40 millions is to be repaid when it falls due next December. It is further announced that this repayment will be effected without any draft upon the Bank of France's gold resources. It is commonly believed that when the credit was granted it was accompanied by some form of guarantee, which will, of course, be released on the repayment of the credit. The actual resources out of which repayment will be made, however, consist, first, of the loan of Sw.Frs.200 millions (£9 millions sterling) granted to the French railways last month, and for the balance of the gold and foreign exchange resources of the French Exchange Fund. The fact that the Fund is able to find over £30 millions sterling shows the extent of the French financial recovery and repatriation of French capital from abroad during the past few months. Latest reports from Paris also suggest that there is now a much better feeling of confidence and a good impression was created by the news of the Bank of France's gold acquisition, referred to below. Much of the repatriation of French money is no doubt due to new apprehensions of conditions abroad, as well as to the growing feeling of confidence in France. Still, whatever the motive, the mere return of this money has greatly strengthened France's financial position, and has made it easier for her to bring about a real recovery. The impending repayment of the Railway sterling credit is the latest piece of evidence to this effect.

The Foreign Exchanges.—Dollars have remained weak, but the market has been supported by French sales of francs and purchases of dollars, whenever the Paris rate touched Frs. 29.41½ to the dollar. All dollars bought by the French authorities are promptly turned into gold, and gold continues to be shipped from the United States to France. The latest Banque de France return shows a gold influx last week of Frs. 3,000 millions. Gold has also gone from New York to Belgium, for the belga, which is still on the gold standard, at one time rose to the gold point of 17.08½ cents, falling back later to 17.08 cents. In spite of the steady influence of

these gold shipments to France and Belgium, sterling appreciated this week from \$4.98½ to \$5.02, though by Thursday the rate had come back to \$5.00½. The gold premium in London on Thursday was 12d. per ounce, which is lower than at the beginning of last week. Francs have been fairly steady at just over Frs. 147, with three months' francs on Thursday at Frs. 3½ discount. The French dollar purchases have prevented any appreciation in the rate. Guilders and Swiss francs have followed the dollar.

The Bank Return.—This week's return shows the effects of the increase of £20 millions in the fiduciary note issue. The note circulation is reduced since last week by £4.5 millions, and so the Reserve has increased by £24.4 millions. £20 millions of this increase represents the fiduciary note issue change. This increase was actually effected by a transfer of £20 millions of securities from the banking to the issue department, and so has not caused any enlargement of the credit base.

BANK OF ENGLAND					
	Nov. 18, 1936	Oct. 27, 1937	Nov. 3, 1937	Nov. 10, 1937	Nov. 17, 1937
Issue Department :—	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Gold	248.7	326.4	326.4	326.4	326.4
Note circulation	444.9	483.1	485.9	485.6	481.1
Banking Department :—					
Reserve	64.6	44.9	42.1	42.4	66.8
Public deposits	14.1	32.2	30.3	30.7	33.2
Bankers' deposits	96.1	87.7	89.4	90.9	86.7
Other deposits	44.7	36.6	36.6	36.1	36.1
Government securities	79.0	100.2	103.4	103.9	76.6
Discounts and advances	7.4	8.1	7.8	8.4	9.0
Other securities	21.7	20.9	20.7	20.7	21.3
Proportion	41.7%	28.6%	26.9%	26.8%	42.8%

In the banking department Government securities have fallen by £27.3 millions. £20 millions of this represents the transfer of securities referred to above, while the remaining £7.3 millions of the reduction roughly balances the part of the increase in the Reserve due to the contraction in the note circulation. Public deposits remain high, and will probably continue so until the payment of the War Loan dividend on December 1st. Bankers' deposits are reduced by £4.2 millions. They should grow again on the payment of the War Loan dividend, but also will be depleted by Christmas currency withdrawals.

The Money Market.—Although rates are unchanged, conditions this week showed a tendency to become firmer. The banks were only buying bills sparingly, and with holders unable to sell there was a good afternoon demand for loans. There was also calling by one or other of the clearing banks on Tuesday, Wednesday and Thursday of this week.

	Oct. 28, 1937	Nov. 4, 1937	Nov. 11, 1937	Nov. 18, 1937
Bank rate	2%	2%	2%	2%
Clearing banks' deposit rate	1½-1*	1½-1*	1½-1*	1½-1*
Short loan rate :—				
Clearing banks	1½-1*	1½-1*	1½-1*	1½-1*
Others	1½-1*	1½-1*	1½-1*	1½-1*
Discount rates :—				
Treasury bills	1½-1*	1½-1*	1½-1*	1½-1*
Three months' bank bills	1½-1*	1½-1*	1½-1*	1½-1*

* Loans against Treasury bills and other approved bills and British Government securities within six months of maturity; 1 per cent. Treasury Bonds and other gilt-edged stocks within six months of maturity; and other collateral respectively.

It is not quite clear why the banks are beginning to hold off the market so early. Normally they are not buyers of bills during December, as they have both to pre-meet the Christmas currency demands and also to compare for the end of the year. Discount rates in consequence stiffen up during December. It may be that certain buyers are holding back now in the hope of being able to buy bills more cheaply in early December.

Royal Bank of Scotland.—The latest accounts of the Royal Bank of Scotland reveal a further expansion in the bank's resources. Deposits have risen by nearly three millions, and there is also a slight expansion in the note circulation. In addition, there is a welcome increase in acceptances, etc. It is true that on the day of last year's balance-sheet the bank's outstanding forward exchange commitments probably stood at an unusually low level as the bank had then been reducing them owing to the uncertainties over the gold bloc currencies. Still acceptances, etc., are now higher than two years ago, which points to a real improvement in this class of business.

	1935	October 9th 1936	1937
Liabilities :—	£'000	£'000	£'000
Deposits	64,009	66,801	69,674
Note circulation	2,813	2,930	3,021
Acceptances, etc.	3,734	3,534	4,226
Assets :—			
Cash	6,833	7,258	7,673
Call and short money	7,762	7,720	8,024
Investments	30,045	31,638	30,475
Treasury Bills	1,850	2,035	1,545
Other bills	1,934	2,080	2,338
Advances	21,787	22,412	26,354
Loans on securities	847	922	1,017
Net profit	629	632	636
Dividend	17%	17%	17%

Advances and commercial discounts are definitely higher than a year ago, so much so that there have been small reductions in the bank's holdings of investments and Treasury bills. Nor has the bank's liquidity in any way been impaired. These movements are satisfactory from the point of view both of Scottish commerce and of the bank itself. Net profits are slightly higher than a year ago, and the internal position of the bank must be very strong.

English, Scottish and Australian Bank.—The accounts of this bank for the year to June 30th last bear out the general experience of the Australian trading banks. As was pointed out in our October Banking Supplement, it is estimated that during the year to June 30, 1937, about £20 millions were added to London funds, half of which may have accrued to the trading banks as distinguished from the Commonwealth Bank. Thus it is not surprising to see an increase of nearly £3 millions in the cash held by the English, Scottish and Australian Bank. Advances are rather lower than a year ago, but there are increases in investments and bills receivable. Both deposits at interest and current accounts are greater than a year ago.

	1935	1936	1937
Liabilities :—	£'000	£'000	£'000
Capital	3,000	3,000	3,000
Reserve Fund	1,665	1,680	1,695
Special depreciation reserve fund	1,585	1,585	1,585
Perpetual stocks	1,873	1,873	1,873
Deposits at interest	19,577	19,710	20,937
Current accounts	12,832	13,183	14,345
Bills payable, etc.	1,844	2,011	2,741
Assets :—			
Cash	6,168	8,412	11,325
Investments	2,201	2,132	2,853
Bills receivable, etc.	4,878	3,127	4,380
Advances	28,813	29,112	27,351
Gross profits	1,025	1,103	1,181
Expenses	717	749	772
Taxation	65	96	133
Net profits	243	258	276
Dividend	5%	5%	7%

The impression left by the latest balance sheet is one of greater liquidity, but this has been achieved without any sacrifice of profits. Both gross earnings and net profits are higher than a year ago, and the dividend has been increased from 5 to 7 per cent. The directors announce the election of the Deputy Chairman, Mr S. M. Ward, as chairman in place of the late Mr Andrew Williamson.

THE STOCK EXCHANGE

South Wales and the Investor

THE survey of recovery in South Wales which appeared on page 199 of *The Economist* of October 30th showed that most of the improvement has been due to a revival of the basic industries. Less than justice would be done if the efforts of South Wales itself to prepare for recovery when it should come were passed unnoticed. To the investor, South Wales is known mainly by two large iron and steel concerns—Richard Thomas and Baldwins, Limited, and by two colliery undertakings—the Powell Duffryn group and Amalgamated Anthracite Collieries. With the exception of this last company, each of these undertakings has set its sail to benefit from the trade wind of recovery.

The vast development scheme of Richard Thomas and Company is the boldest and the most recent example of physical reconstruction in the area. The company had progressed less than the others towards preliminary reorganisation before the depression. In 1928 a committee appointed to advise on capital readjustment concluded that approximately £3,500,000 of the share capital was lost. But before specific recommendations could be made, the onset of depression threatened the whole basis of capital reorganisation. Not until the year to March 31, 1933, was even half the preference dividend earned, though a year later the full dividend was earned, with a small margin.

With prospects of recovery in sight, the directors proceeded to the long-postponed first stage of reconstruction at the end of 1934. Debenture interest was not excessive, and had, in fact, been earned in every depression year except one. Apart from the £3,500,000 capital loss, the main problem was to extinguish seven years' preference dividend arrears to March 31, 1934. The directors were, accordingly, prepared to pay the preference shareholders well for the extinction of their arrears, and offered them 1,78862 written-down ordinary shares of 6s. 8d. each in respect of each preference share held, while the ordinary shareholders surrendered two-thirds of their holdings. Thus, against arrears of 45½ per cent. before deduction of tax, preference shareholders received ordinary shares to the equivalent of 59.6 per cent. in par value, not subject to income tax, which subsequently almost trebled in market value. Later experience may well suggest that the directors could have obtained some concession from the preference shareholders for the arrears payment; since their dividend rights were left unaltered at 6½ per cent. free of tax up to 6s. in the £. But at the end of 1934 it was clearly advisable to ensure prompt acceptance of the proposals in order to introduce the second stage of technical reorganisation without delay.

The previous decade had shown that, if South Wales was to maintain its traditional leadership in the world tinplate trade, sweeping modernisation of plant was essential. The continuous mill process developed by the American Rolling Mill Company produced sheets of the highest quality at a cost far below that of the "old style" South Wales mills. The installation of such plant necessitated complete replanning of the company's production strategy and the provision of £7½ millions of new money. Finance of this order could only be raised in really favourable conditions, and when 73 per cent. of the 4 per cent. debenture issue was left with the underwriters last January, it was clear that the company was only just in time. The yield of nearly 10 per cent. now obtainable on the ordinary shares suggests that the market has some doubts whether the new plant will be completed before definite signs of a moderate industrial recession have shown themselves.

Over the next few years, in fact, investors may have

to suspend judgment on this bold plan of extension. They now have evidence of vast expenditure, swelled by the inevitable "extras"—at last July's annual meeting the chairman referred to a probable extra bill of £700,000 to £800,000. Meanwhile, loan capital has risen from 16½ per cent. of total capital to 48 per cent., and combined loan and preference capital from 58 per cent. to 70 per cent. By contrast, the prospectus estimates of last January envisaged a development period of about three years over which profits would increase modestly only (from £597,000 net in 1936-37 to £633,000 net in 1938-39), to be followed in 1939-40 by a leap to £1,130,000 net, when the new plant is expected to produce its full fruits. If these estimates are, in fact, fulfilled, the year 1940 will see 26 per cent. earned on the ordinary shares, and this might be sufficient inducement to holders of the £7,000,000 of new debentures to convert into ordinary shares at one 6s. 8d. share per £1 of stock. If all debentures were converted the earnings would be reduced to 21 per cent. on the larger ordinary capital.

Yet for the uncertain interim period inseparable from any boldly planned development scheme, the shares must be exposed to technical risks and market rumour. If 1940 does not happen to bring high industrial profits and low equity yields, the 7 per cent. earnings yield envisaged on the ordinary shares may not materialise in full, or may not be sufficiently attractive to the convertible debenture holder. After December 31, 1940, the conversion right lapses. The six months between publication of the 1939-40 accounts and the end of the year will therefore be decisive for the company's future capitalisation. If they are months of prosperity, a brilliant financial success may be achieved. A top-heavy capitalisation will be converted into one broadly based on equity shares, and the premiums on the new shares will provide large funds for writing off obsolete plant and past capital losses. But if the company is unlucky in its time-table, its bold reorganisation will have been only partially successful.

The reorganisation of Baldwins, Ltd., though a large operation, is on a smaller scale and faces fewer uncertainties than the Richard Thomas extension. In the South Wales manner, it was achieved in two stages. But by attacking the first stage as early as 1928 (when the issued capital was reduced from £8,000,000 to £4,213,568, and part of the fixed charges were converted to convertible and non-convertible income stocks), Baldwins had a fuller advantage when recovery came. The Guest Keen Baldwins' issue, which financed the second stage of physical reconstruction by the main subsidiary, was made as early as May, 1935, and took the form of a 4 per cent. mortgage debenture stock with a longer date than the Richard Thomas issue. This stock is, in effect, the only debenture outstanding for both the parent and the subsidiary companies, and it accounts for only 29 per cent. of the subsidiary's capitalisation. The Guest Keen Baldwins' income notes and 6 per cent. redeemable preference shares are all held by the parent concerns (who also own over 93 per cent. of the equity) and are not, therefore, to be counted as burdensome prior charges. Baldwins, Ltd., have themselves made arrangements for the extinction of their entire loan account for about 45 per cent., and ordinary shares for about 55 per cent., of the capital.

Baldwins' early start produced results from the new plant before depression even began to be considered. For the year to December 31, 1936, Guest Keen Baldwins'

gross profit rose from £258,897 to £609,201 and net profit earned for the ordinary shares from £34,574 to £211,395 (after £200,000 depreciation, against £70,000). Though the company distributed only £70,055 of these available equity earnings, the Baldwins' accounts for 1936 showed net earnings for the ordinary shares of £245,530, against £155,931 for 1935. It will be interesting to see in 1940 how these advantages of broad-based finance will compare with the advantages of Richard Thomas' low-cost plant. But, meanwhile, the market rightly values Baldwins' shares to yield substantially less than those of Richard Thomas.

South Wales is synonymous with coal to many an investor, whose first thoughts turn to Powell Duffryn. That company's reorganisation presented a less difficult problem at the outset than the Richard Thomas or Baldwin schemes. Profits had fallen from 1925 onwards, but the small preference dividends were usually met, and were in any case non-cumulative. The preliminary stage, therefore, involved no capital reconstruction, and the company was able to proceed, some time before the last depression, with the raising of capital for physical reconstruction and development. The terms of the various construction and development. The terms of the various note and debenture issues were fairly onerous, but the directors prudently reserved rights to effect early redemption. Consequently, in the early stages of recovery, the old 7 per cent. debentures were converted to 5½ per cent., and then, barely a year later, to 4½ per cent. Finally, by the end of 1935, the whole of the loan capital was extinguished, leaving only 14 per cent. of the capital in non-cumulative preference stocks and shares.

Meanwhile, by amalgamating its own assets with those of Welsh Associated Collieries (affiliated to the Guest Keen group) to form the new operating subsidiary, Powell Duffryn Associated Collieries, the group has become easily the largest colliery undertaking in the country. Its productive capacity exceeds 20 million tons a year, and its coal reserves amount to 1,700 million tons. In addition, it operates a full range of by-product plants, a large wagon and steamship service, and two world-famous coal merchanting organisations. In the year to March last, conditions in South Wales coal export markets were not good, yet the Powell Duffryn Steam Coal Company (the joint parent concern) was able to distribute 7 per cent. on its ordinary capital out of earnings of 7.1 per cent., while drawing only 75 per cent. of available earnings from the operating subsidiary. On its record to date, this concern would appear to offer one of the safest of the South Wales heavy industrial equities. Yet the market has never taken warmly to the shares, and now values them to yield 6.6 per cent. The risk premium against strikes or falling exports is evident.

Only brief reference need be made to the one disappointment among the leading South Wales companies. Despite promising objectives in the amalgamation of 1923, Amalgamated Anthracite is generally considered to have paid a generous purchase price for its undertakings, and the first measures towards reconstruction in the early recovery period were swamped by heavy new debenture commitments. Improving general conditions have so far failed to increase the group's profits, and the preference dividend is nearly three years in arrears. The nominal price of 2s. 3d. for the £1 ordinary shares demonstrates that the market has no firm conviction that the management will be able to achieve a normal earnings basis on its present capitalisation under existing conditions.

This discussion suggests at least that South Wales is still capable of bold enterprise on the largest scale, conjoined with patient reconstruction requiring years for its fulfilment. Where bold venture does not demand bold finance, however, experience has deeply underlined the disadvantage of high prior charges. The general investor in 1940 may perhaps find Richard Thomas and Powell Duffryn in sound example of Baldwins and Guest Keen in eliminating loan capital; but meanwhile, in considering South Wales shares, he may well heed the South Wales policy of avoiding highly-g geared stocks wherever possible.

Investment Notes

"Plus Mr Roosevelt Change . . ."—Ordinary share prices on the London Stock Exchange have drifted aimlessly and cheerlessly lower this week, without excitement and without resistance. The tone, indeed, has been set mainly by Wall Street, where President Roosevelt's message to Congress, on Monday, was a great disappointment. There was, in fact, little justification for the suddenly born expectation which gained currency last week that the President was about to move sharply to the right in his attitude to business. Few business men could have dared to expect a complete relaxation of New Deal restrictions upon speculation, corporate devices to avoid taxation, monopolies, and the whole nexus of devices included by the President in his term "economic royalism." The President's message shows that the Administration is prepared to do something about the business depression, but nothing to modify its fundamental attitude to economic affairs. Measures will be prepared for the building, utility, railroad and other industries in difficulties, but in the same message the business world is reminded that speculation, monopoly, regressive taxation, and so on, are to be discouraged. It seems also that although the Government will stimulate the private industry of those whom it calls good business men, and frown upon the wicked, the new stimulus is not to be merely a revival of large deficits; the Budget is still to be made to balance. It is perfectly natural that to such a programme the market response should be unfavourable. The most probable outcome is not a return to the freedom which private industry enjoyed before the depression, but a consolidation of the Government's control over economic affairs. The aim of the Administration is still to enlarge the national income and secure a more equitable distribution of that income. This may be a consolation for the social reformer, but it does not encourage the speculator. For the investor, at least, the sun will shine another day, but the immediate future for the stock market remains uncertain.

* * *

Australia Converts Again.—The authorities have taken advantage of the present strength of gilt-edged securities to introduce the long-expected Australian conversion issue. Like its forerunner last June, this is a re-conversion of an issue which itself represents one of the early operations in Australia's long conversion innings. The latest issue is of 3½ per cent. stock, offered at 97 and dated 1951-54. It replaces the £11,409,965 of 3½ per cent. 1937-38 stock issued in June, 1933. Cash lists opened and closed on Thursday, but the conversion lists remain open until the end of next week. The original stock was purposely designed as a "short" to attract the money houses, and it is substantially held by these institutions, to whom the attractions of a loan with an average life of 15 years must necessarily be somewhat inferior. The issue price of the new stock, however, was somewhat below the price of the June issue of 3½ per cent. stock, dated 1950-52, which on the announcement of the issue stood at 98½. Since, however, the conversion lists remain open for a further week, it is evident that the attractions of the new scrip to the cash subscriber will vary according to the trend of the gilt-edged market during this period. From the longer viewpoint, the British investor now appreciates that although Australia remains fundamentally a "one commodity" country, she is better prepared, thanks to six years' careful budgeting and political stability, to meet the consequences of any moderate fall in wool prices which may occur. The volume of sterling reserves held by the Dominion in London is impressive. And the conversion of £222½ millions of debt to a lower interest basis since 1932 has relieved the Australian budget of over £A4 millions in interest charges. This conversion issue, incidentally, is the last of any size before 1940, when substantial issues are optionally callable. If cheap money has, in fact, become semi-permanent, Australia may thus be able to count on further benefits in store.

Brazil Recants.—Is there a more thankless occupation than that of the foreign bond jobber? Ten days ago President Vargas announced a "temporary" suspension of debt payments on Brazilian obligations. Exactly a week later the Brazilian foreign minister has announced that the debt service will be maintained until a new agreement is reached. The second announcement, however, has not undone all the damage caused to Brazilian credit by the first. Whether there is any substratum of truth in the suggestion that Brazil has been influenced by the possibility that an exchange clearing—to which she would be distinctly vulnerable—would be set up, it is impossible to say. Before the news of the recantation was received, dealers in the London market decided (though not unanimously) to resume dealings shortly after noon last Monday. By the close of business falls of 22½ points on the 1898 Funding and 17½ points on the San Paulo Coffee Sevens were registered. A marked recovery, however, carried the 4 per cent. sterling ("Vargas") bonds of 1936 ten points above their lowest level at 85 on Monday, following a statement by Messrs N. M. Rothschild and Sons that the service of this issue would be unaffected by the suspension. On Tuesday dealings were still difficult to negotiate, and further heavy falls resulted. A late improvement on Wednesday proved portentous, for the news was received long after the market had closed that Brazil did not intend, after all, to default.

The course of dealings, including the big recovery on Thursday, is shown:—

Stock	High 1937	Nov. 10	Nov. 15	Nov. 17	Nov. 18	Net fall from Nov. 10
4% "Vargas" 1936.....	98½	95½	85	90	95	½
5% Funding 1898.....	102½	92½	70	65	70	22½
5% Funding 1914.....	89½	69½	55	48½	60	9½
7% Coffee Realisation ..	100	82½	65	60	69	13½
6% 1927	49½	33½	23	25	28½	8
5% 1903	45½	32½	18½	15½	24	8
4% 1889	28½	16½	13½	13	14½	2
5% 1913	32½	21½	13½	13	17	4½

The Brazilian Government has backed this week's announcement by the transmission of service moneys for coupons due on November 15th. These funds, incidentally, include the sinking fund service on the 1898 Funding issue and next January's coupon and sinking fund payment on the "Vargas" bonds. January 1st next, indeed, is a critical date for the discovery of Brazil's real intentions. A number of payments fall due on that date, and normally the Brazilian authorities would be providing service funds for the payments during December. The market, therefore, is still in a state of relaxed tension, and it is not to be expected that Brazilian bonds will fully regain their earlier levels.

Investors and the Coal Bill.—The direct investment repercussions from the Coal Bill (which is reviewed on page 346) are few, but the coal shareholder and the trustee investor can each draw interesting conclusions from its clauses. The "vesting" of royalties as from January, 1942, will not, in the first place, affect the liability of the individual mines for royalty payments. Terms of acquisition of royalties have been settled by arbitration at fifteen years' purchase of the annual royalty payments. The capital sum involved—£66,450,000—will be an obligation of the Coal Commission, but may be backed by Treasury guarantees. If this course is followed, a 3½ per cent. stock, say, with 1 per cent. sinking fund would require £2,825,000 annually on a par basis (or £3,250,000 if the Coal Commission issued stock up to its maximum powers), and would be extinguished in 45 years. Meanwhile, the surplus between royalty revenue and the loan service, which can be placed at £1.2 millions to £1.6 millions, would be applied to reduction of underground wayleaves, and eventually to the equalisation of rents in different pits and different regions. These advantages will revert to the coal shareholder only in the long term. The pro-

visions for consolidating mixed leases in one colliery undertaking are of more immediate importance, for such consolidation may be effected by the Commission in the interim period before royalties are vested in the Coal Commission. This provision is a matter of considerable practical importance, since maximum underground efficiency is often obstructed by the existence of mixed leases. Finally, the procedure for compulsory amalgamation does not become effective until 1940, and has been greatly modified. In the last resort, the equity of the amalgamation plans submitted by the Coal Commission will come before the Railway and Canal Commission for approval. Such amalgamations will presumably affect the shareholder in public colliery undertakings less than the owner of private pits, but they may, in course of time, greatly increase the number of undertakings known to the investor.

In Gearing Unity.—The Cornhill Trust of Bank and Insurance Shares and British Government Stocks, which was formed by Trust of Insurance Shares, Limited, is of historical interest. Essentially, it is a flexible, managed trust, but its units are of two kinds, 4 per cent. £1 debenture units, redeemable at 5 per cent. premium in 1952, and deferred units, which carry the residual equity in the fund. The debenture units are guaranteed by the Equity and Law Life Assurance Society. The initial 600,000 units offered to the public at 20s. 6d. were over-subscribed, and additional units have been created. Debenture units must never exceed 60 per cent. of the mean market value of the trust fund and must not be sold below £1. The obvious intention is to provide a unit with a secured income of approximately 4 per cent., a satisfactory surplus "cover" for both principal and interest, and a reasonable protection against a possible future fall in value due to a rise in general interest rates. The maximum life of the debenture units—fifteen years—puts them in the "short-long" category, and the prohibition of further issues at a discount will automatically put a brake on their creation if interest rates rise in the intervening years.

The backing of these debenture units will in fact (apart from the Equity and Law Life guarantee) consist mainly of ordinary shares; for a banking or insurance company debenture is *pari passu*. At the moment, according to the Actuaries' Index, the yield on Consols is 3.39 per cent., on representative bank and discount company shares 4.17 per cent., and on insurance company shares 3.56 per cent. The income for the trust's debenture units, however, will be satisfactorily covered, since it will be obtained from a corpus of securities whose market value will exceed the nominal amount of debenture units by approximately 66 per cent. The surplus of income available for the deferred units, however, will obviously not be large. An initial issue of 600,000 of these deferred units has been privately subscribed at an average price of 15s. 9d. a unit. Their appeal—particularly to wealthy investors who are surtax payers—will be less on grounds of income than of capital appreciation. The underlying securities have been chosen in a market where the factor of capital increment is particularly important. The effect of the trust's own gearing is to concentrate future capital accretions on units representing only approximately 40 per cent. of the total. The promoters have ingeniously catered for opposite tastes, but simultaneously to bestride two mettlesome steeds, which in future may conceivably pull unequally and in opposite directions, will call for high qualities in the *manège*. And the promoters have not succeeded in combining unit organisation with gearing without the sacrifice, for the deferred units, of liquidity.

F Rail Traffic Trends.—Since the 5 per cent. increase in freight rates and passenger fares was imposed at the beginning of October, the weekly railway traffics have been disappointing. Week by week there have been

GOVERNMENT OF THE COMMONWEALTH OF AUSTRALIA CONVERSION LOAN.

Offer of Conversion to Holders of

£11,409,965 Commonwealth of Australia 3½ per Cent.
Registered Stock and Debentures, 1937-1938,
into

GOVERNMENT OF THE COMMONWEALTH OF AUSTRALIA
3½ PER CENT. REGISTERED STOCK, 1951-1954,
at the Rate of £97 per Cent.

Interest payable 1st February and 1st August. — Six Months' Interest will be paid on 1st August, 1938.

The Government of the Commonwealth of Australia will comply with the requirements of the Colonial Stock Act, 1900, in order that Trustees may invest in the Stock, subject to the provisions set forth in the Trustee Act, 1925.

Commonwealth Bank of Australia is authorised by the Government of the Commonwealth of Australia to offer to holders of £11,409,965 Commonwealth of Australia 3½ per cent. Registered Stock and Debentures, 1937-1938, maturing 1st February, 1938, Conversion, in whole or in part, into an equal nominal amount of Government of the Commonwealth of Australia 3½ per cent. Registered Stock, 1951-1954.

Principal will be repaid in London at par on 1st February, 1954, the Government having the option to redeem the Stock at par, in whole or in part, on or after 1st February, 1951, on giving three months' notice by public advertisement. The Loan, which has been approved by the Australian Loan Council, is authorised by Acts No. 25 of 1919, No. 5 of 1928 and No. 4 of 1929 of the Parliament of the Commonwealth of Australia, and is issued in accordance with a law passed by Parliament by which the Commonwealth of Australia, as from 1st July, 1929, took over the debts of the various States. The direct liability of the Commonwealth to Stockholders and Bondholders in respect of the Loans so taken over was confirmed in the Financial Agreements (Commonwealth Liability) Act, which became law in March, 1932.

Holders accepting the offer of conversion must lodge their acceptances on the appropriate forms at COMMONWEALTH BANK OF AUSTRALIA, 8, Old Jewry, London, E.C.2. These forms have been posted to the Stockholders or, in the case of joint accounts, to the Stockholder first named in such accounts.

Holders of Commonwealth of Australia 3½ per cent. Debentures, 1937-1938 (interest on which is paid by coupons) may obtain the necessary forms for conversion on application to COMMONWEALTH BANK OF AUSTRALIA, 8, Old Jewry, London, E.C.2.

Holders who convert will receive on 1st February, 1938, a cash payment of £3 per cent. representing the difference between the issue price of the new Stock and the redemption price of the old Loan. They will also receive the usual six months' interest payable on that date.

Six months' interest on the new Stock will be paid on 1st August, 1938.

Any Commonwealth of Australia 3½ per cent. Stock and Debentures, 1937-1938, not converted will be paid off at par on 1st February, 1938, together with the six months' interest then due.

The Stock now offered will be registered and transferable in any amount by deed, free of stamp duty, at Commonwealth Bank of Australia, 8, Old Jewry, London, E.C.2. Interest Warrants of Australia, 8, Old Jewry, London, E.C.2. Interest Warrants will be transmitted by post at the Stockholder's risk, and in the case of joint accounts the warrants will be forwarded to the person first named in the account unless instructions to the contrary be given.

Commonwealth of Australia Stock issued and payable in London and the interest thereon, the property of persons not domiciled in Australia, are not, and will not be, subject to any taxes, duties or levies in Australia.

All Commonwealth loans, all loans issued by the several States and now taken over by the Commonwealth, and all loans guaranteed by the Commonwealth, carry a Sinking Fund in accordance with the provisions of the National Debt Sinking Fund Acts.

In the case of all such loans, the following contributions to the Sinking Fund must be made out of Commonwealth and State Revenues:—

- On the present Conversion Loan and on all loans existing on 30th June, 1927, including such loans when converted into other loans, a minimum of 7s. 6d. per £100 per annum.
- On any new loans 10s. per £100 per annum.

The List for Cash Applications opened on Thursday, 18th November, 1937, and were closed at 3.30 p.m. on that day. The List for Conversions will remain open until 3.30 p.m. on Friday, 26th November, 1937.

The Sinking Fund moneys made available by the National Debt Commission for use in London during the year ending 30th June, 1938, including the unexpended balance brought forward from the previous year, amount to £4,266,000 sterling.

Commonwealth Bank of Australia is further authorised to offer for subscription in cash Government of the Commonwealth of Australia 3½ per cent. Registered Stock, 1951-1954, to an amount sufficient to make up, with the Stock and Debentures converted, the above total of £11,409,965.

PRICE OF ISSUE £97 per cent.

Payable £ 5 0 0 per cent. on Application.
£27 0 0 " " 2nd December, 1937.
£65 0 0 " " 1st February, 1938.

£97 0 0 per cent.

An Interest payment of 4s. per £100 Stock will be made on 1st February, 1938.

Cash applications on the prescribed forms will be received at COMMONWEALTH BANK OF AUSTRALIA, 8, Old Jewry, London, E.C.2, and must be for even amounts of £100 of Stock and be accompanied by a deposit of 5 per cent. on the nominal amount applied for.

In the event of partial allotment, the surplus from the amount paid as deposit will be appropriated towards the payment due on 2nd December, 1937, and any balance will be returned to the applicant. In case of default in the payment of any instalment at its due date the amount previously paid will be liable to forfeiture, and the relative allotment to cancellation.

Payment in full may be made on or after allotment, but no discount will be allowed.

Scrip Certificates to Bearer in respect of Cash Allotments, in denominations of £100, £500 and £1,000, will be issued in exchange for Allotment Letters, and when fully paid, will be exchangeable for Registered Stock on presentation at Commonwealth Bank of Australia, 8, Old Jewry, London, E.C.2. Interest coupons for 4s. per £100 Stock, payable on 1st February, 1938, will be attached to the Scrip Certificates.

The revenues of the Commonwealth of Australia alone are liable in respect of this Stock and the Dividends thereon, and the Consolidated Fund of the United Kingdom and the Commissioners of His Majesty's Treasury are not directly or indirectly liable or responsible for the payment of the Stock or of the Dividends thereon, or for any matter relating thereto.—40 and 41 Vict. cap. 59, sec. 19.

A commission of 5s. per £100 Stock will be paid to Bankers and Stockbrokers on allotments made in respect of conversion acceptances and cash applications bearing their stamp.

Prospectuses, with Statistical Statement relating to the Commonwealth of Australia, may be obtained from Commonwealth Bank of Australia, 8, Old Jewry, London, E.C.2; from Messrs. R. Nivison & Co., 6, Threadneedle Street, London, E.C.2; or at the Offices of the Government of the Commonwealth of Australia, Australia House, Strand, London, W.C.2.

Commonwealth Bank of Australia,

8, Old Jewry, London, E.C.2.

17th November, 1937.

regular gains, but on a very much smaller scale than the market had anticipated. According to the evidence submitted to the Railway Rates Tribunal, the increase in charges was estimated to produce extra gross revenue of £100,000 to £110,000 a week. But during the last six weeks the average weekly gain, compared with last year, has been no higher than £147,000, whereas, for the six weeks before the higher charges were imposed, the average gain was as much as £114,000. The following table shows the position for each of the four railways:—

	INCREASES IN WEEKLY TRAFFICS				
	G.W.R.	L.M.S.R.	L.N.E.R.	S.R.	Total
	£'000	£'000	£'000	£'000	£'000
Average of the six "pre-increase" weeks	26	42	37	9	114
Week of imposition of increase	39	47	40	20	146
Average of the six "post-increase" weeks	25	64	46	12	147
Expected gain from higher charges...	19	45	33½	10	107½
Average "post-increase" change	-1	+22	+9	+3	+33

Thus, the Great Western has actually been gaining less since the increase in charges than it was previously gaining; the Southern and the L.N.E.R. have added to their weekly gain less than one-third of what was expected of them, while the L.M.S. has apparently gained about one-half of its expected benefit. In sum, the average increase of £33,000 per week for the four companies falls far short of the expected additional gain of £107,500 a week after the increase of charges. For this somewhat disappointing record one of two major explanations may apply. First, the volume of traffic may have been falling or, rather, failing to increase over last year's level at the September pace. This interpretation is supported by the October unemployment returns, but its acceptance is hardly encouraging for holders of railway stocks. An alternative explanation may lie in the suggestion that the companies have been unable, in practice, to pass the full 5 per cent. increase on to their consumers, and that a time-lag must elapse before the full fruits of the increase are received. Comparison between the records of passenger and goods traffics suggests that the companies may have been more successful in retaining the former than the latter; the passenger increase has risen from £34,500 a week before the higher charge to £53,000 afterwards, while goods increases have advanced only from £79,500 to £94,000. But according to either explanation this would be so. Certainly, since the beginning of October the outlook for rail stocks has become less favourable.

Company Notes

Bass, Ratcliff and Gretton.—Even the best brewing reports fail to stir the market, and the increased dividend and profits of Bass, Ratcliff and Gretton put the shares only 1s. 3d. higher. Yet this company's figures deserve a good mark. Total income has increased from £1,403,573 to £1,474,681, and the amount earned for the ordinary shares from £584,512 to £611,185. It appears that the rate of advance in net profits is slowing down, but the provision of substantially increased charges for depreciation renders a strict comparison of net profits rather difficult. As they stand, however, the results are good, and the 25 per cent. tax free dividend is covered with the usual margin of 2 per cent. Meanwhile the balance sheet provides its usual demonstration of strength. But it is significant, perhaps, that the directors have reduced the enormous cash holding from £1,556,938 to £1,366,340 by purchasing a corresponding amount of British and Dominion funds. At September, 1935, these holdings totalled only £83,083; the present total is £453,673. Such investment policy accords with

recently developed ideas on the future strength of the gilt-edged market. The results of the past three years are analysed below:—

	Years to June 30th		
	1935	1936	1937
Brewery profits	725,846	802,324	837,005
Rents, etc.	587,679	601,249	637,676
Total income	1,313,525	1,403,573	1,474,681
Rents, taxes, repairs, etc.	329,831	375,564	406,117
Depreciation	167,824	169,975	186,401
Directors' fees	8,700	8,700	8,280
Debenture interest	198,834	196,822	194,698
Preference dividends	68,000	68,000	68,000
Ord. shares (tax free):—			
Earned	540,336	584,512	611,185
Paid	491,841	536,554	558,310
Earned %	24.2	26.1	27.3
Paid %	22	24	25

Carried forward 618,571 666,529 718,804

Bass shareholders might argue that they are not as other brewery shareholders. Their company sells a branded product on a national scale, and does not operate a tied house system in a limited district. The consequence is a much reduced industrial risk, and, broadly speaking, more stable ordinary dividends, achieved and in prospect. Secondly, the marked change of taste from draught to bottled beers has produced benefits of a secular order for the company. The division of the distribution between a 20 per cent. dividend and 5 per cent. bonus may, indeed, be taken as a rough guide to potential basic dividends in future. Bass £1 ordinary rank among the best brewery shares, and at 133s. they yield £5 4s. 6d. per cent. on a gross basis.

The Week's Brewery Results.—The flood of brewery reports, covering different parts of the country, shows, in general, a greater improvement than the modest dividend increases would suggest. The market at first gave the Ansells Brewery preliminary figures a cold welcome. The rapid progress of recent years, coupled with the Thomas Plant and Company acquisition about a year ago, certainly justified hopes of a substantial increase in profits, and a 22 per cent. rise in total profits to £758,688 (against £620,237) cannot be considered disappointing. Earnings for the equity are £108,000 higher and represent 36.2 per cent., against a 17½ per cent. payment, on the £2,000,000 ordinary capital. The allocations to property and other reserve are again substantial, at £250,000. Ind Coope and Allsopp have announced an unchanged dividend of 27½ per cent. This does not necessarily imply stable profits, for distributions in the past have been conservative. Lower provisions for improvement and general reserve are offset by the allocation of £80,000 to writing down bottling plant, and total additions to reserves and carry-forward are somewhat higher than in 1935-36. Another company paying the same dividend (15 per cent.) is Northampton Brewery Company, whose total profits are £25,200 higher at £241,117. In the two previous years earnings only just covered dividend payments, but 22 per cent. has been earned in the latest year, despite increased depreciation. The case of Fremains, Ltd., of Maidstone, is somewhat different, for although the unchanged 10 per cent. dividend is covered by earnings of 22.2 per cent. against 20 per cent., trading profits are a trifle lower. The improvement is due, apparently, to the receipt of an unstated amount from subsidiaries out of past profits. Morgans Brewery Company, operating in the Eastern counties, have followed up their unusually steady profits record with a satisfactory increase in total profits from £138,663 to £163,722. This improvement, however, may be due in part to a new acquisition last November. A similar trend is shown by Stroud Brewery, whose latest profits are the highest in a decade. This company pays 17½ per cent. against 17 per cent. W. Butler and Company, of Wolverhampton, also increase their tax-free dividend by 1 per cent. to 18 per cent. Reserve allocations are unchanged, but £17,000 is added to the carry-forward. In general the results reflect improved pur-

chasing power, which has benefited reserve and improvements funds more than shareholders' pockets. Such conservatism, however, appears to take account of further increases in costs, and brewery shares generally are adjusted to a 4½-5 per cent. basis. The necessity for adequate property reserve provisions was suitably stressed by Sir William Butler at the Mitchells and Butlers meeting on Thursday. Such provisions make an appreciable contribution to the long-run equity prospects of brewery shares.

A New Film Deal.—It is reported in the press that a deal has been concluded whereby London Films has acquired a one-half interest in the United Artists Company of America. The transaction is said to involve the purchase of the separate interests of Mary Pickford, Douglas Fairbanks and Charles Chaplin, by Samuel Goldwyn and Alexander Korda, each of whom—sellers as well as buyers—now owns a one-fifth interest in United Artists. Messrs Goldwyn and Korda acquired an option some months ago for the remaining shares at \$2,000,000 each, which explains the total of \$6,000,000 (or £1,200,000) referred to in the press notices as the purchase price involved in the transaction. Whether the negotiations (in which Mr E. H. Lever of the Prudential Company, is participating) have been between Mr Goldwyn and Mr Korda, as to the respective shares they were to have in the company, or with the vendor members for terms more favourable to the buyers, the published information has not so far disclosed. The tangible assets belonging to the company consist of the benefit of all films completed and in course of exploitation, of contracts for distributing the films of Goldwyn, Wanger, Korda, and others, for a number of years, and a world-wide distributing organisation of great efficiency. We can express no opinion about the value of these assets in the absence of authoritative information about the company's financial position. It may be that the purchasers have driven a keen bargain, and that the assets to set against the price of \$6,000,000 are conservatively valued. But such conditions have certainly not applied to all film deals in the past.

Dorman Long Results.—The Dorman Long preliminary figures and dividend provide an admirable illustration of the difficulties with which the steel share market has now to contend. The figures themselves are excellent. The gross profit of the group has increased by 24 per cent.—from £1,108,258 to £1,375,418. But the directors have had to allocate an extra £50,000 to depreciation, bringing the total allowance to £300,000, and they have also provided £152,208 for taxation, whereas last year nothing was charged in the profit and loss account. Moreover, £200,000 has been set aside to general reserve. Despite the healthy increase of profit, the board has consequently been able to increase the dividend on the preferred ordinary shares from 14 per cent. to only 18 per cent. and the dividend on the increased ordinary capital from 6 per cent. to only 10 per cent. Thus, although the market could hardly have anticipated a bigger advance in trading profit, its estimates of dividend possibilities were altogether too high, and the ordinary shares, which at the end of last week stood at 42s. 6d., have been marked down to 35s. Even at this level they yield just over 6 per cent., and their prospects hardly merit a less conservative valuation. In an industry which is highly sensitive to cyclical trade fluctuations, this company is one of the most vulnerable units, for it concentrates upon constructional work. And its highly-g geared ordinary shares are, of course, doubly vulnerable.

Tate and Lyle Stability.—It takes a handsomely increased dividend to please the market nowadays, and the mere maintenance of the Tate and Lyle distribution was followed by a slight fall in the shares. The 18½ per cent. dividend conforms with the new basic rate since the capital was increased in 1935, and the disclosed profits have revealed a similar stability. From the pre-

liminary statement it is possible to compute that net profits, after debenture interest, were approximately £700 higher at £1,227,553, compared with the previous year's level. The dividend, on this basis, is apparently covered by precisely the same margin of earnings as a year ago. The following table illustrates the stable record of the undertaking during the past three years:—

	Years ended September 30th		
	1935	1936	1937
Trading profit	1,183,907	1,192,315	...
Dividends and rent	179,233	132,100	...
Fees	7,098	7,013	...
Debenture interest	91,250	90,562	...
Net profits.....	1,264,792	1,226,840	1,227,553*
Preference dividend	71,500	71,500	71,500
Ordinary shares:—			
Earned	1,193,292	1,155,340	1,156,053
Paid	870,400	868,700	868,700
Earned %	27.0	26.2	26.2
Paid %	18.2857	18½	18½
Reserves	310,000	284,000	300,000
Carry forward	56,233	58,874	46,227

* Computed.

Behind this screen of unchanged earnings, however, important changes affecting the company's operations have been proceeding for some time. Tate and Lyle has exchanged its beet sugar interests for holdings in the British Sugar Corporation, which will probably carry a well-secured but fairly stable return—a stability which will be enhanced by the agreement between the beet sugar industry and the refiners. But important improvements are being made to the refinery plants, the benefits of which are probably not fully reflected in the latest profits. And meanwhile the company has been actively extending its interests in Colonial sugar-growing companies, which should, in time, provide important fiscal benefits for the company. The £1 ordinary shares, however, stand at 76s. 6d. ex dividend, and offer a well-secured but not exhilarating yield of £4 15s. 6d. per cent.

EVERY MAN'S AIM CAN BE ACHIEVED

How often have you wished that you could save to provide yourself with a worth-while Income when you retire?

How often have you wished that you could make certain that this income would be payable to your wife if you left her a widow?

THE RETIREMENT INCOME & WIDOW'S INCOME POLICY

is the most comprehensive plan of personal and family income provision yet devised. It provides:

A Joint Income for life for both husband and wife from a selected retirement age.

An Income for the lifetime of the widow should the husband pre-decease her at any time.

Thus your aim can be achieved simply and without large outlay. Incomes of any amount in units of £50 per annum can be assured. If you will quote your own age and that of your wife an illustration will be furnished for your consideration. *An enquiry will cost you nothing and you incur no obligation in making it.*

LEGAL & GENERAL ASSURANCE SOCIETY LTD.

Head Office: 10 Fleet St., London, E.C.4.
Established 1836. Assets £40,000,000

Electric and Musical Industries Developments.—

Mr Alfred Clark's survey at the Electric and Musical Industries meeting tends to confirm our recent inferences from the accounts regarding the steady consolidation of the varied interests of the concern to combine allied manufacturing processes and complementary seasonal demand. In the radio business the company has achieved a leading position, and prices remain subject to orderly control. Signs of revival in the gramophone section have been evident during the last two years, while the younger household appliance section has substantially increased its sales. Wireless sets and accessories, however, contributed the greater share to total profits. Turnover in television receiving sets has, however, been disappointing, despite the considerable technical advance which this department achieved last year. The chairman challenged the prevalent notion that the price of television sets is the main restricting factor. Radio-gramophones and television sets were comparable in price, yet the former had been readily sold. He found a more convincing reason in poor entertainment value of television broadcasts so far developed. Mr Clark's comments upon the Rudge-Whitworth acquisition were especially interesting. Bicycles, gramophones and radio sets have many similar manufacturing features, and they are frequently sold by the same dealers. In particular, the new interest will even out production "peaks," since the seasonal demand for cycles differs from the peaks for other products. An immediate contribution to profits from Rudge-Whitworth, however, must not be expected, for the company is erecting a new factory, since the Coventry plant is already operating to capacity. This policy of diversified development should have the approval of shareholders.

Re-armament Company Profits.—Recent reports from companies engaged in re-armament work show no general uniformity, whether on the aircraft or naval construction side. In last week's *Economist* we emphasised the contribution by Armstrong Siddeley to the increased profits of Hawker Siddeley Aircraft. This company's offer of 2,000,000 £1 5 per cent. redeemable preference shares, carrying option rights to subscribe for ordinary shares, was made on Thursday and was over-subscribed. The need for this issue, which will repay loans of nearly £1,400,000 to finance extensions, was explained fully by Mr T. O. M. Sopwith at last Monday's meeting. He emphasised, however, that the commercial side of the enterprise was also expanding. The full Armstrong Siddeley Development report confirms this argument, for total profits, before tax, amount to £766,328, against £527,851 for a 10-month period—a rise of 45 per cent. Since a new charge for interest absorbed £53,791, the ordinary shares earned £162,600 more at £481,155, covering the 150 per cent. dividend with a small margin. Parnall Aircraft, whose results were referred to in last week's issue, showed satisfactory progress and the reduction of the debit balance, coupled with the chairman's optimism, has encouraged hopes of a maiden dividend this year. The shares, however, stand at a much deflated level. On the naval re-armament side, two recently issued reports show inconsistent results. Total profits of Yarrow and Company, in fact, fell from £38,230 to £32,601; the 15 per cent. dividend was maintained, but the allocation to reserve was reduced from £15,000 to £5,000. The meeting on December 1st may disclose to what extent this result is due to expenditure on improvements. The balance sheet, in fact, shows an increase of some £12,000 in fixed assets. John I. Thornycroft & Company, who combine motor vehicle manufacture with shipbuilding, have made a large step towards a resumption of ordinary dividends. Total profits of £125,502 for the year to July 31st were nearly 125 per cent. higher and the payment of six years' preference arrears still leaves a surplus of £37,423 available for the preferred ordinary and ordinary shares. The whole amount, however, has been added to the carry-forward. Assuming normal preference dividends and full preferred ordinary participation, as much as 29 per cent.

was earned for the ordinary shares. Such a rate of expansion can hardly be guaranteed, though immediate prospects seem favourable.

Investment Trust Trends.—The latest investment trust results, though devoid of surprise, make on the whole a good showing. In general, the rate of recovery has been accelerated, and in many cases increased dividends have been declared. The six companies whose reports are analysed below are typical of the recent trend:—

Company (years to Sept. 30)	Total Revenue	Equity Stock earned		Div.	Portfolio		Ord. Stk.	
		Amount	%		Ord. Shs.	Gt. Brit.	Price	Yield
Sec. Scott. Inv.†—

1937	61,021	11,927	7.8	4½	45	34		

† Years to October 5. * Revenue includes arrears in excess of one year's income: 1935-36, £4,306; 1936-37, £4,580. Portfolio analysis on valuation basis 1936 and 1937. ‡ No analysis given in report. § From Chairman's speech.

In two instances, *Scottish National* and *Second Scottish Investment*, the gearing factor has produced an increase in equity earnings of the order of 50 per cent. The latter company, indeed, has set aside as much as £30,000 from the surplus over its 7 per cent. dividend to write down investments, a sum which greatly exceeds its ordinary dividend payment. Although the proportion set aside by other companies is not so high, substantial amounts have usually been provided, and the dividend payments have been increased in conformity with the traditional conservatism of investment trusts. In the present state of the stock markets, the position of investment portfolios disclose no marked or uniform trend either in geographical distribution or in equity holdings during the past year, but current valuations show a depreciation on book values in every case, varying between a fractional percentage to as much as 10 per cent. Trust chairmen rightly stress the importance of earning power rather than capital values, but the latter may exert a strong indirect influence on dividends through the necessity for writing down investments. *Southern Stockholders* provides an interesting, though not necessarily typical, example. In recent years, accumulated losses on sales were shown in the balance sheet. This balance was gradually reduced. In 1935-36, for example, £10,000 was provided before striking net revenue. Capital profits in 1936-37, which almost equalled total revenue, wiped out this and other debit balances with £40,000 to spare. The outlook for investment trusts should continue favourable, for companies have not exhausted the benefits of the time-lag and have much-replenished reserves. But current yield levels are no more than adequate.

Mexican Eagle Deal.—No share has to bear with a greater volume of conflicting report than Mexican Eagle. A few days ago rumours were in circulation that the Mexican Government have decided to expropriate the properties belonging to the Standard Oil Company.

THE WEEK IN THE MARKETS

THE STOCK EXCHANGE

SETTLING DAYS

TICKET: NOVEMBER 30 ACCOUNT: DECEMBER 2

Spirits in the "House" have become damper this week. Mr Roosevelt failed to produce the right stimulus either for Wall Street or Throgmorton Street; commodity shares have again been depressed by further falls in primary commodities and base metals; the Brazilian episode and the Japanese onrush have completely unsettled the foreign bond market. Even gilt-edged cannot claim honours this week, for although they made early progress, a mid-week reaction set in. The tone in industrials has been depressed throughout, and reports on Thursday of weak selling from a Scottish investment trust added to the general gloom.

The week opened with a renewed demand for short-dated gilt-edged securities, National Defence bonds providing a feature with a steady rise to 99 on Monday and Tuesday. A fairly sharp check occurred in mid-week, however, in which the "undated" issues, like Old Consols and Local Loans, suffered most. Dealings in the Liverpool scrip, which opened at ½ premium showed a similar gain on Tuesday and a setback in mid-week.

In the foreign bond market, extraordinary fluctuations occurred in Brazilian bonds. Dealings were resumed at mid-day on Monday, at greatly reduced prices, and dealing conditions were difficult. A comparably sharp upward movement occurred on Thursday, after the announcement that, after all, full service on the 1937-38 debt scale would be provided. The movements are set out in detail on page 378. South American bonds were affected by the Brazilian default, including Argentine issues, whose record is exemplary. Chinese bonds continued weak, on the threat to Nanking, but Japanese issues tended to improve in mid-week.

Home rail stocks received little support at first, and the publication of somewhat brighter traffic merely checked the scattered selling, and prices staged no real recovery. South American rails, both prior charges and marginal ordinary stocks, were depressed throughout the week.

The Industrial markets passed another aimless and depressed week, and only on Monday was there evidence of partial resistance in individual securities. In all sections the volume of business was small. The iron and steel group was weak throughout, and the Whitehead and Dorman Long announcements (the latter is discussed on page 381) were adversely received and dragged the rest of the section down. Attempts to raise such specialities as Vickers and Tube Investments were unsuccessful. Coal shares were again inactive, and such leaders as Bolsover and Horden declined. Motors were also an unsatisfactory section. Prices opened irregular, but the reduced Dennis dividend adversely influenced other commercial motor shares. Rolls-Royce fell appreciably on Thursday. Aircraft shares were neglected, and Hawker Siddeley fell in anticipation of the new preference issue. Electric equipment shares were satisfactory at first, but Crompton Parkinson led a downward movement later. Textiles were again dull, though British Celanese tried to resist the downward drift.

Despite a number of good dividends, brewery shares were easier, apart from Bass; scattered sales from the provinces were reported. The stores and provision groups were uninteresting, though Unilever responded to the interim dividend announcement and reports of increased margarine sales. Early in the week, Carreras and British American Tobacco were better in the tobacco group. Among the miscellaneous leaders, British Oxygen, Murex, and I.C.I. were slightly better on Monday, but gave way later. Electric and Musical Industries sagged in mid-week after responding to the meeting (discussed on page 382). Shipping shares, though irregular, behaved

The Mexican Eagle shareholder—after six months of strikes and untoward labour demands, to say nothing of arbitration proceedings which awarded the strikers of full pay in future—quite naturally inferred that his head would soon rest on the executioner's block. On Monday shares promptly fell, reaching 9s. last Friday. On Monday this week they rose 2s. 9d. on the news that the Mexican Government had granted exclusive rights to the company on the remainder of the Poza Rica field. By this grant the company's area in Poza Rica is increased from 7,700 acres to 13,000 acres, and the oil-bearing potentialities of the new area are regarded as no less valuable than the production actually achieved from the old. Shareholders must find these kaleidoscopic changes bewildering. Clearly no investment operations can be conducted in a share whose property one week is expected to be expropriated and the next week is actually extended. Fortunate, indeed, are those operators who can time their dealings to coincide with the changes in the Mexican policy of that political chameleon, the Mexican Government. Indeed, those who must speculate in Mexican Eagle shares might almost take it as axiomatic to buy on bad news and sell on good. But so simple a formula may conceal dangers of another sort. Will the Government's change of heart prove any more permanent than earlier protestations of good will?

Other Company Results.—Our usual analysis of profit and loss accounts on page 399 covers nearly 40 other companies. A number of miscellaneous industrial concerns are included. The accounts of Wall Paper Manufacturers are available, while three concerns have issued their first accounts since introduction to the public. The results are discussed on page 388 under the heading "Shorter Company Comments."

Company Meetings of the Week.—In this issue reports of company meetings commence on page 389. Mr Sopwith informed members of *Hawker Siddeley Aircraft* that despite the heavy demands made on the company for re-armament purposes, the commercial side of the business was in fact being expanded. Moreover, export business as a whole had improved during the last year. Large sums had been spent on extensions and plant for the armament programme, while provision had been made for a special department to deal with research. Mr Alfred Clark's survey of the past year's developments in *Electric and Musical Industries* is discussed in a Note on page 382. Discussing the record year set up by *S. Smith and Sons (Motor Accessories)*, Mr W. Henderson-Cleland referred to the gradual increase in scope of the instruments and accessories business. The company's range of products could now be fitted to a larger number of cars than previously. At the meeting of *Sudan Plantations Syndicate*, the Hon. A. M. Asquith indicated that, assuming a continuance of favourable conditions, a crop of average yield might be anticipated. He referred to the unfortunate results of the new contract introduced by the Liverpool Cotton Association. Similar views regarding the crop prospects were expressed by Mr Asquith to the shareholders of *Kassala Cotton Company*. Mr F. E. Maguire, at the *Rubana Rubber Estates* meeting, commented on the company's large allocation to reserve. Good progress was being made with the replanting programme. Lieutenant-Colonel Johnson informed shareholders of *Tarkwa Banket West* that the company's shareholdings on September 30th were entered at a cost of £176,000, against a market value of over £273,000. The burden of taxation, both in Australia and in New Zealand, was discussed by the Hon. Edmund Parker at the *Dalgety* and *Company* meeting. The company had, however, been able to make an increased distribution. The chairman's stress upon property reserves at *Mitchells and Butlers* meeting is referred to a Note on the week's brewery results on page 380.

BRITISH MALAYA

MALAYA HOUSE, TRAFALGAR SQUARE, W.C.2

rather more satisfactorily than other sections. The Realisation companies were active, and on Wednesday P. & O. improved. Some much needed activity in oil shares was stirred by the week-end news (see page 382) of the granting of further concessions to Mexican Eagle. The improvement extended throughout the oil market, continental as well as local support being in evidence. But renewed weakness in Wall Street upset the advance. Prices sagged, and the amount of business shrank to even lower levels. The depressed tendency in the rubber market was maintained. Little selling pressure was reported, and the volume of business remained exiguous.

The mining market was dull, the general market situation continuing to exercise a check on speculative activity. Kaffirs, despite their ostensibly attractive yield levels, failed to attract the public and prices were marked down. Despite the announcement of two maiden dividends, by Gold Coast Selection Trust and Marlu, the public showed little interest in West Africans. Rhodesian copper shares were somewhat undecided and affected by adverse copper prices, while tin shares were also depressed in mid-week following the heavy drop in the metal.

"FINANCIAL NEWS" MARKET INDICATORS

	Nov. 11	Nov. 12	Nov. 15	Nov. 16	Nov. 17	Nov. 18
Approximate total of bargains recorded in S.E. List	7,655	7,365	7,630	7,565	7,710	8,400

Home rails (4)	73.2	72.1	70.8	3.00	3.00	3.05

NEW YORK STOCK EXCHANGE

MARKETS this week have been dominated by a feeling of disappointment with the President's message to Congress, reinforced by discouraging industrial news. The President's views on what Government should now do (discussed in a note on page 377) put a stop to the sharp rise which had been stimulated by last week's anticipations, and from Monday

onwards prices have closed lower daily, with a tendency to steadiness towards the end of the week. Steel mill activity fell more sharply than had been expected, *Iron Age's* estimate for the current week showing a level of only 35 per cent. of capacity, against 41 per cent. a week earlier. The automobile industry is feeling unhappy, for the consumers' response to higher prices is poor, and threats of labour troubles are abroad. The railroads are meeting with some opposition in the application of the new rates granted by the I.C.C., for the Pennsylvania Utilities Commission proposes to investigate their reasonableness; and car loadings show a slight decline at the moment. Some utility shares have been supported. The industrial news generally shows a deepening of the recession, but the major factor in market discontent is the attitude taken by the Administration, which promises that something will be done to revive private enterprise, but nothing to renounce the fundamental philosophies of the New Deal. The market finds this very thin beer. Outstanding features in the bond market were the collapse and recovery of Brazilian bonds, and the purchase of government securities by the Federal Reserve Board in pursuit of its open market policy.

CAPITAL ISSUES

A WEEK which has included the Australian conversion and a new form of unit trust has obvious claims to the palm compared with recent new issue business. The *Australia* conversion is, discussed on page 377 and the *Cornhill Trust* issue on page 378. In addition, however, two large debenture and preference issues have appeared, together with a smaller industrial offer. *Hiram Walker and Sons (Scotland)* has been formed under the auspices of Hiram Walker-Gooderham and Worts, a Canadian distillery company. The new company is erecting a new grain distillery at Dumbarton, and has created £1,000,000 4½ per cent. debenture stock, guaranteed as to principal and interest by the parent concern, and offered this week at 98½. The principal of the stock is further covered by "liquid" assets, in the form of whisky stocks. The issuing company, however, is a newcomer to the British whisky trade, and while the guarantee of principal and interest by the Canadian company is highly valuable, the operating company will have to set up its undertaking in competition with established producers at home and may, in fact, be dependent upon export business to a considerable extent. The stock, however, has a maximum life of no more than fifteen years, and the high redemption yield of 4½ per cent., in relation to established distillery securities, proved an attractive feature for the issue. The *Hawker Siddeley Aircraft* issue of 2,000,000 5 per cent. redeemable £1 preference shares at par also presents some unusual features. The shares rank as a second preference claim, and are redeemable at 22s. 6d. by 1949. They also carry option right to subscribe at 35s. for one ordinary share in respect of every two redeemable preference shares held on March 31st next. At current profit levels, the new shares are comfortably covered, but their future, although short, may depend upon fluctuations in expenditure on military aircraft, both in total and between different types. The shares, therefore, are not free from a certain speculative element. The offer of 5s. ordinary shares in *Britannia Electric Lamp Works*, at 70 per cent. premium, shows that the company is the largest non-ring cent. manufacturer in the country, and it contemplates an increase of 50 per cent. in output through factory extensions now in progress. The company's profits jumped spectacularly between 1935 and 1936 (re-calculating the ten months' figure shown to an annual basis), but the rate of advance is tending, apparently, to slow down. The latest figures are used as the basis for an earnings ratio of 24 per cent. on the ordinary capital, or 14 per cent. at the offered price. This figure, however, is stated before N.D.C., unlike many recent prospectus calculations of the same sort. The shares must be regarded as speculative in type, in view of the competitive situation in the industry. A statement for information only has been published by *First Re-investment Trust*, giving details of an issued capital of £245,007, arising from the conversion of sub-units in National Fixed Trust Unit "A."

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields of fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

PRIVATE PLACING

Jamaica Government.—The Crown Agents for the Colonies announce the placing of a further £470,000 3 per cent. inscribed stock, 1956-61 (carrying six months' interest due April 15, 1938).

ISSUES TO SHAREHOLDERS ONLY

Hamiltons Taverns.—Issue of 125,000 4s. ordinary shares, at par, to holders on November 5th (one new for three held).

Heenan and Froude.—Issue of 300,000 5s. ordinary shares at 5s. 6d., in proportion of one for two held. To rank from September 1, 1937.

Romano's, Ltd.—Issue of 10,027 £1 shares, at par, to preference shareholders of London Restaurants, Ltd., in proportion of one Romano's share for 20 preference shares held on March 19, 1937. Bank Loan July 1, 1937.

Sumatra Para Rubber.—Issue of 133,440 2s. shares to shareholders for subscription at par. The new money is required in connection with a replanting programme.

REPAYMENTS AND CONVERSIONS

Commonwealth of Australia.—Holders of £11,409,965 3½ per cent. registered stock and debentures (due February, 1938), are offered conversion into an equal total of 3½ per cent. registered stock 1951-54, at 97. A Trustee issue. New stock redeemable at par February, 1954, or from 1951 on notice. Holders converting will receive also £3 per cent. Public debt domiciled London, June 30, 1937, £stg. 543,412,362. Population, June, 6,831,363. Excess of imports, 1936-37, £stg. 36,372,731; total revenue, £A.82,807,977; expenditure, £A.81,531,419.

UNIT TRUSTS

Cornhill Trust of Bank and Insurance Shares and British Government Stocks.—Offer of 600,000 4 per cent. £1 Redeemable guaranteed debenture units at 20s. 6d., commission and duty free. Redeemable at 1s. premium, October, 1952. Interest, repayment and premium guaranteed by Equity and Law Life Assurance Society. Managers, Trust of Insurance Shares, Ltd., who make offer and select investments within limits of trust deed. Debenture units can be issued up to 60 per cent. of trust fund; 600,000 deferred units, which receive residuary interest, have been privately subscribed at 15s. 9d. cash.

Keystone Consolidated Fixed Trust.—Managers, British Industrial Corporation, Ltd. Certificates have 10-year life; initial price, 17s. per sub-unit. Portfolio of 50 industrial companies (including railway, oil and mining companies, also preference stocks). Initial price includes 4 per cent. service charge to managers, who receive also half-yearly fee (including trustees' fees) of ½ per cent. on value of investments. Bonus shares to be sold and proceeds distributed. One unit contains 6,000 sub-units.

SALE BY AUCTION

Solihull Gas Company.—An amount of 20,000 £1 5 per cent. consolidated shares are to be offered for sale by auction in Birmingham.

FORTHCOMING ISSUES

Union Corporation, Ltd.—This corporation is increasing its capital by £87,500 to £962,500 by issuing of 140,000 shares of 12s. 6d., ranking from January 1, 1938. These will be offered to shareholders at £7. The issue has been underwritten by the brokers to the Corporation, Messrs Keith, Bayley and Rigg in conjunction with Messrs Cazenove, Akroyds and Greenwood and Company. The circular offering the new shares will be issued shortly and will state that in recent years the business of the Corporation has expanded substantially and to enable it to continue a policy which has given satisfactory results and promises to continue to do so, it is deemed desirable that its cash resources should be augmented.

SHORTER COMPANY COMMENTS

COMPANY RESULTS OF THE WEEK.—In addition to the considerable number of brewery reports (discussed on page 380), ASSOCIATED BRITISH MALTSTERS announce a modest increase in profits to £116,394. The 5 per cent. cash bonus of 1935-36 is not repeated, so the total dividend is reduced to 10 per cent., but the reserve allocation is £25,000 higher. DAILY MAIL AND GENERAL TRUST, whose earnings of £326,592 are £20,000 higher, show that 63 per cent. of their investments are in newspapers and newsprint and that 72 per cent. are domiciled in the British Empire. Profits of £138,368, compared with £123,542, enable BROWN BAYLEY'S STEEL WORKS to bring preference payments up to date and to resume ordinary dividends at 10 per cent., tax free. ENFIELD ROLLING MILLS have made profits of no less than £63,663 against a loss of about £5,000; owing, however, to the accumulation of past losses, the whole increase is applied to reducing the debit balance forward. The aircraft manufacturers, SHORT BROTHERS (ROCHESTER AND BEDFORD), have enjoyed an appreciably better year, profits having increased by £22,000 to £98,026, while the dividend is raised from 30 to 40 per cent. The latest rubber company results fully maintain the recent trend. Among the larger companies, MALAYA GENERAL, SUNGAI BUAYA (SUMATRA) and UNITED TEMIANG (F.M.S.) are raising their dividends substantially. Expansion in the plastics industry is illustrated by the new issue announced by BRITISH INDUSTRIAL PLASTICS, whose profits, before tax and depreciation, are £15,000 higher at £52,757. Gross earnings have thus resumed the rise which was temporarily checked a year ago. Owing to higher charges for fuel at £50,731, though the year's volume of trade constitutes a record. The South African department stores, STUTTAFORD AND COMPANY, maintain the 12 per cent. dividend despite an increase in profits, since probable commitments concerning the rebuilding of the Cape Town stores, make an increased transfer to Buildings Reserve desirable. WALL PAPER MANUFACTURERS have been able partly to offset an advance in the cost of paper and other materials and in wages by manufacturing economies. Net profits of £717,746 are accordingly £48,500 higher. Out of these profits, a new reserve of £65,000 has been provided against possible losses on securities in case of realisation before maturity. The consolidated profit and loss account shows trading profits of £737,730. RADIO RENTALS' first annual report, compared with the prospectus figures, shows that profits of £88,816 are £18,000 higher, but depreciation, provided on a generous scale, absorbs £14,000 more at £63,800. Another show net profits for a 15-month period of £24,877, which (allowing for new company whose report has appeared, BUTLER MACHINE TOOL, excess of estimates. One of the most satisfactory industrial reports of the week comes from COVENTRY GAUGE AND TOOL COMPANY. Trading profits of £88,191 are double those for 1935-36, and after increasing depreciation by £17,800, net profits are £45,531, against £13,978. The 10 per cent. dividend is covered by earnings of no less than 41.7 per cent., the excess being added to the carry forward.

MISCELLANEOUS

ABITIBI POWER PLAN.—Mr Justice McTague, in considering the reorganisation scheme on November 13th strongly urged the opposing sides to work out a compromise and adjourned the hearing for this purpose. He felt, he said, that, no matter what the outcome of the present case, the question would go to appeal and further litigation.

ANACONDA COPPER MINING.—Net profits in the September quarter, 1937, totalled \$7,837,000 (90 cents per share). This compares with \$10,590,000 (\$1.22) in the previous three months and \$4,112,200 (47 cents) in the third period of 1936. For the first nine months of 1937 net profits amounted to \$26,965,000 (\$3.11), against \$9,940,000 (\$1.15).

BRITISH INDUSTRIAL PLASTICS.—Trading profit for year to September 30, 1937, £105,569, against £80,485. Ordinary dividend 8 per cent., as before, but absorbed £25,682, against £24,966. Carry forward £4,173.

BRITISH MARINE AIRCRAFT.—A meeting on December 10th is to consider changing the name to Folland Aircraft and a reduction of capital. It is proposed to reduce the £500,000 capital in 10s. shares to £300,000 in 6s. shares. To writing off balance sheet items, £222,663 (i.e. Sikorsky licence, £130,917; expenses, etc., £44,105; debit on profit £22,663. Floating assets, £126,829 (cash, £81,137); creditors, £31,000.

BURCO, LTD.—First annual report since offer for sale shows that profits for year to September, 1937, were £37,220, against £25,200 for year to June, 1936.

BUTLER MACHINE TOOL.—First report for year to September 30, 1937, shows profit of £50,219, which exceeds average of previous 2½ years by £26,089, and is £10,219 more than estimated at time of share issue. Proposed ordinary dividend is 10 per cent. for period January 18 to September 30, 1937, equivalent to annual rate of 14.25 per cent.; forward, £4,753.

COMMONWEALTH MINING AND FINANCE.—Report for year to May 31, 1937, gives particulars of company's holdings. From its Gold Development) Commonwealth Mining has received since date of balance-sheet a dividend of A. 3s. 10d. per share, amounting to £A.69,411 or £E.55,529. The payment represents return of about 75 per cent. of the company's investment.

CHOSEN CORPORATION.—Certain shareholders having asked the directors, by requisition, to call a general meeting, to consider a Special resolution for putting the company into voluntary liquidation and for general meeting has accordingly been convened for Wednesday, December 8th.

DAILY MAIL AND GENERAL TRUST.—Net revenue in year to September 30, 1937, was £326,592, compared with £306,403. Ordinary dividend and bonus 11½ per cent., tax free as before. Investment reserve £120,934. Carry forward reduced from £134,924 to £120,934.

ELECTRICAL SWITCHGEAR AND ASSOCIATED MANUFACTURERS.—Second report shows profit of £21,381 for year to October 31, 1937, against £14,302 from May 14 to October 31, 1936. Final ordinary dividend (on increased capital), 10 per cent., making 16 per cent. for year (against 7½ per cent. for previous period); forward, £4,404 (against £3,226 last year, when preliminary expenses, £2,022, were written off).

COMPANY MEETINGS

MITCHELLS AND BUTLERS, LIMITED

SUCCESSFUL YEAR'S TRADING

INCREASED OUTPUT AND PROFITS

SIR WILLIAM WATERS BUTLER'S ADDRESS

The fiftieth annual general meeting of the ordinary stockholders of this company was held at the White Horse Hotel, Birmingham, on the 18th instant, under the presidency of Sir William Waters Butler, Bart.

The Chairman, in moving the adoption of the report and accounts, said:—As stated in the report, the directors are pleased with the results of the trading during the year, and I am sure you will be glad to hear that the great popularity of our products has been responsible for a remarkable increase in the sale of our bottled ales and stouts.

Increased output was only to be expected to follow the present industrial prosperity, and, of course, with increased output, one naturally looks for increased profits, which I am glad to say has been the result.

Our profits, in addition to an increased rate of income tax, have borne the deduction of National Defence Contribution for the half year commencing April 1st last. This half-year's contribution amounts to nearly 1 per cent. on the company's ordinary stock, and it will be borne in mind that for the current financial year the company will be liable for a full year's contribution. I am sure, however, that all of us must feel willing and content in so contributing to the necessary cost of the defence of our country.

TRADES HEAVY BURDEN OF TAXATION

With the heavy payments we are called upon to make in connection with beer, spirits and licence duties, one feels that our trade can rightly claim that at the earliest moment national taxation can be reduced our industry should be granted some relief. At the same time, I can understand that people who do not appreciate from a study of the balance sheet the full amount of capital employed in the business might consider that a concern which can declare a dividend of 23 per cent. on its ordinary stock does not appear to require any relief of taxation, but rather may be looked upon as making an abnormal profit. This, however, is an erroneous view, for the percentage of profit ought to be calculated on the whole of the capital employed in obtaining the profits; in that way, it will be seen that trading capital includes not only stock capital, but reserves which are mainly derived from surplus profits not taken out of the business but again "ploughed in" in the trading operations of the company. The percentage of profits so calculated in our own case cannot be considered otherwise than a very reasonable commercial return on the total capital employed.

PROPERTY RESERVE ACCOUNT

It will be noted that in the balance sheet we have established a new reserve account to be called the "Property Reserve Account," by transferring thereto a sum of £150,000, which in 1930 was specifically reserved against properties for which it was thought necessary or desirable to make "provision for anticipated expenditure not adding to capital value." That sum has not been utilised, and we now think it can be brought out to commence this new "Property Reserve Account." The words I have just quoted which since 1930 have been in the property item of the balance sheet are no longer necessary, and disappear, and the property item in the balance sheet is no longer reduced by the amount of that provision. We recommend for your approval the appropriation from the profits of a further £50,000, as an addition to this new property reserve account, making it a total of £200,000.

We have felt it advisable to establish this property reserve account in consequence of the great and growing expenditure we are called upon to make in connection with our properties; this includes the alteration, extension or rebuilding of old properties and the building of new properties in the place of licensed properties demolished in connection with slum clearances or street widenings.

I want to make it clear, however, that while we are creating a fund which will be available to meet expenditure which does not add to capital value so far as our trade is concerned, we are

not suggesting a revaluation of the whole of our licensed properties; indeed, we are fully satisfied by a careful analysis of all our properties and their earning power that the trade value of the properties in the aggregate is in excess of their total book values. We think that this reserve account should prove useful to avoid properties appearing in our books at values which are above their market values due to additions from time to time of the costs of structural improvements which have not added directly to their earning power and trade value. From time to time additions from the profits of the year may be made to this property reserve account.

Withdrawals from the fund and additions thereto will be limited because the operations of the fund will be confined solely to the purposes for which it was created. We are now expending increasing sums upon our properties and the costs of carrying out the same are much greater than formerly, due to numerous causes such as increased values of sites, higher building costs, dearer equipment of fittings and fixtures, and the provision of more roomy premises and amenities such as bowling greens, and assembly rooms for friendly and other societies.

DELAY IN BOGUS CLUB LEGISLATION

I regret that undesirable forms of competition are making their appearance, due in a great measure to the growth of bogus clubs and so-called "bottle" shops. The Government has promised, as stated in the King's Speech, to introduce legislation to check bogus clubs, but it is very slow in making its appearance, notwithstanding that magistrates and others responsible for public order insist that an amendment of the law is an urgent necessity "for preventing abuses of the law relating to clubs."

While still a believer in "fewer and better" licensed houses, thanks to our own company and other brewers there is now no real redundancy position in Birmingham. The total number of licences is not excessive, but owing to the movement of the population, existing licences in the older parts of Birmingham should be "thinned" by redistribution, that is to say more modern houses could be erected in districts where at present there is not sufficient provision for the needs of the inhabitants.

I am pleased to say the so-called Temperance Party was never so dormant in my lifetime as now, but do not let us, therefore, assume that we can now disarm. Rather we must strengthen and maintain our defence organisations in a high state of efficiency so that we may be ready and prepared to meet any attacks which may be made upon the licensed trade.

I can only hope that the country's flourishing condition will be maintained, as the Prime Minister and other prominent men predict, and that the Government's efforts to bring about more peaceful conditions throughout the world will be successful.

In conclusion, I am glad to confirm what *The Economist*, a financial paper of standing, has said of the ordinary £1 stock units of our company, viz:—"They represent an equity in a sound brewery in a prosperous area." Long may that be the position!

I have much pleasure in moving the adoption of the report and I will ask Mr Bainbridge to second it.

Mr Herbert W. Bainbridge seconded the resolution, which was carried unanimously.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to:—

HAWKER SIDDELEY AIRCRAFT COMPANY, LIMITED

YEAR OF BUSINESS EXPANSION

ISSUE OF PREFERENCE SHARES

MR T. O. M. SOPWITH'S ADDRESS

The second ordinary general meeting of Hawker Siddeley Aircraft Company, Limited, was held, on the 15th instant, at the May Fair Hotel, Berkeley Street, London, Mr T. O. M. Sopwith, C.B.E., F.R.Ae.S. (chairman of the company), presiding.

The Secretary (Mr. Chas. P. Heselden, F.C.I.S.) having read the notice convening the meeting and the report of the auditors, The Chairman said:—Ladies and gentlemen,—At our last annual meeting I ventured a forecast that the profit for the current year just ended should in the aggregate be higher, and perusal of the report and balance sheet will confirm that my forecast has been justified. With your permission I propose to take these documents as read.

The accounts show that our revenue for the year amounts to £783,437 17s., from which have been deducted income tax and National Defence Contribution amounting to £194,418 7s. 9d.; directors' fees amounting to £1,256 4s. 8d.; administration and other charges amounting to £8,017 15s. 9d.; and bank interest amounting to £6,549 16s. 4d., leaving a balance of £573,195 12s. 6d. available for payment of dividends on the preference and ordinary share capital. Out of this there has been paid or provided for dividends, less tax, on the Five per cent. cumulative preference shares amounting to £52,937 10s., and an interim dividend of 15 per cent., less tax, on the ordinary shares amounting to £163,447 14s. 8d., leaving a balance of £362,443 18s. 5d. Out of this the directors recommend payment of a final dividend on the ordinary shares of 17½ per cent., together with a cash bonus of 10 per cent., both less tax, making with the interim dividend already paid a total dividend on the ordinary shares for the year to July 31, 1937, of 32½ per cent., together with a cash bonus of 10 per cent., both less tax. This will absorb £299,654 3s. 7d., leaving a balance to be carried forward to next year of £62,789 14s. 10d.

SUBSIDIARY COMPANIES' SATISFACTORY YEAR

I am pleased to report that your subsidiary companies have experienced a satisfactory year and turnover shows an increase in every case. The dividends received from this source are, after providing for such reserve as the directors consider adequate, thus making it unnecessary for this company to allocate any specific sum for this purpose. I would, however, draw your attention to the fact that we have increased our carry-forward by the sum of £52,156.

This company now owns the whole of the ordinary share capital of Hawker Aircraft, Limited, with the exception of 150 shares. Your directors would emphasise the importance of having our capital structure in one entity if possible, so that the affairs of the group can be administered as a whole and not in two portions as at present. They are therefore proposing to make an offer to the holders of the 344,166 outstanding 5 per cent. redeemable preference shares of £1 each in Hawker Aircraft, Limited, to exchange into an equal number of 5 per cent. cumulative preference shares of £1 each in this company, or to purchase them for cash on such terms as your directors consider advisable.

PROGRESS EXCEEDS ANTICIPATION

Unfortunately, for reasons of official secrecy, I am unable to give you a precise indication of the situation of our aircraft and allied organisations, but I am glad to be able to report that progress has been in excess of anticipation. The unfortunate troubles in Spain and the Far East have shown in no uncertain manner the swift and appalling potentialities of the air arm, and it requires little imagination to visualise what might happen in this country if we were faced with a relentless enemy fully equipped with bombing and fighting aircraft. To-day—whatever the ethics of the situation—we are most urgently called upon to deal with the matter with more vision than ever in our history. We are living in times of great anxiety, and it is vital to the interests of the Empire that our armed forces be equipped to face any contingency and to know that there are adequate reserves available. I believe the Government realises the necessity of maintaining a standard of first line and reserve material of such dimensions as will cause any possible aggressor to hesitate. It is an insurance policy which will require a premium in the shape of additional expenditure, but no price is too heavy to pay, and no sane person will hesitate

to accept the contention that the security of the British Empire and the safety of its people are essential to civilisation and progress.

The establishments controlled by your company are equipped to take their share of responsibility in this task and are contributing in a marked degree to what might be known as the "Security Campaign."

GROWTH ON COMMERCIAL SIDE

At the same time I would emphasise the fact that our purely commercial side is not only maintained but is expanding. The recent Motor Show proved the continued interest in and demand for the Armstrong Siddeley motor-car, and the improvements which have been effected in this direction should show beneficial results during the current year.

The "Air University," as I would describe our organisation of "Air Service Training," continues to progress. This establishment, which is unique as being the only organisation catering for all descriptions of aerial training, is situated at Hamble, and during the past year more modern equipment has been added, and the buildings and personnel extended.

I am very pleased to report that our export business as a whole has improved during the last year. We realise the importance of the export market not only from our own but from the national point of view, and, where compatible with the exigencies of the situation, the Air Ministry and Department of Overseas Trade have willingly given facilities and assistance which we greatly appreciate. We shall endeavour to further consolidate this position during the next twelve months.

The question of research and development, particularly in connection with the aircraft and aero engine programme, is of great importance, and apart from general procedure we have made provision for a special department to deal with the subject from both the technical aspect and practical application.

CAPITAL INCREASE

You are aware of the proposed increase in the capital structure of the company by the issue of a further two million redeemable cumulative preference shares of £1 each and subject to your approval of the resolution, a prospectus setting out the offer will be issued forthwith. The subsidiaries controlled by your company have of necessity been financed by the parent company and bank loans. They have been compelled, in order to meet the requirements of the armament programme, to spend large sums on extensions, new factories, plant, aerodromes, and equipment, recovery of which must naturally be spread over a period. The additional capital will enable these loans to be repaid, the saving in interest and bank charges and additional anticipated profits should, in my opinion, exceed the cost of the service of the issue proposed and capital will be available for the general purposes and development of the business. Your directors strongly recommend this issue, which will be of great benefit to the finances of the company.

It is unnecessary for me to assure you that your directors are continually in touch with sources of possible further development both at home and abroad. As regards the outlook for your company, we have every justification for anticipating further expansion in all departments during the current year. (Applause.)

Finally, I would like to thank the senior staff and employees endeavours. Last year you generously allocated a bonus of £5,000 to certain officials to give them an opportunity so as to be interested in the company of using that money to apply for 20,000 ordinary shares at par, and it is proposed, with your approval, to make the same allocation, to be used at the discretion of the directors, again this year. (Hear, hear.)

The Chairman concluded by moving the adoption of the report and accounts.

TRIBUTE TO MANAGING DIRECTOR AND STAFF

Mr Philip E. Hill, in seconding the resolution, said that the results achieved could be regarded as highly satisfactory and reflected the greatest credit on Mr Spriggs, the managing director, and the whole of the staff. (Hear, hear.)

The resolution was carried unanimously. The proposed dividends and cash bonus were approved; the retiring director, Mr T. O. M. Sopwith, was re-elected; the auditors, Messrs. Price, Waterhouse and Company, were re-appointed; and a hearty vote of thanks was passed to the chairman, directors, and staff.

At a subsequent extraordinary general meeting a resolution was unanimously passed increasing the capital of the company to £6,000,000 by the creation of 2,000,000 Five per cent. redeemable cumulative preference shares of £1 each.

ELECTRIC AND MUSICAL INDUSTRIES, LIMITED

A YEAR OF PROGRESS

The sixth ordinary general meeting of Electric and Musical Industries, Limited, was held, on the 12th instant, in London.

Mr Alfred Clark (the chairman) said:—The directors are happy to present a report which shows a credit to the balance of profit and loss account substantially higher than that of the previous year. Sales for the trading year have shown an increase over those of the previous period. The radio receiving set business in Great Britain seems to have been conducted on a more stabilised basis than in other years and, together with an advance in set design, I am glad to say we found a continuing effort on the part of all manufacturers to avoid price cutting.

Not only records but also radio-gramophones and acoustic gramophones have shown a modest increase, while household appliances were substantially ahead of the previous year. Abroad, both inside and outside the Empire, the sales of all products showed a healthy increase. On the whole, I think we may look back with some satisfaction on the general trend of our business during the period under review.

TELEVISION PROGRESS

With regard to television, the mobile equipment to which I referred here last year was duly completed and delivered and this apparatus was employed in the televising of the Coronation Procession at Hyde Park Corner with remarkable success. Television viewers were enabled to enjoy the sight of the Royal Coach with a view of Their Majesties clearer perhaps than most of those who lined the route.

Work on the Emitron camera has proceeded with particular success. That camera has been considered as having set a standard and we have actually supplied the Emitron with its equipment which is being installed in the new high power television transmission station at the Eiffel Tower in Paris.

Certain discoveries have enabled us to achieve a considerable advance on this standard Emitron camera which will be of great importance in television broadcasting. The sensitivity of this new instrument is in the nature of approximately ten times greater than that of our standard Emitron. This means that, with this apparatus, it will be possible to televise scenes in an ordinarily lighted public theatre and out-of-doors in very unfavourable light conditions. It was used for the first time yesterday to televise the Cenotaph Ceremony with outstanding success.

Through lack of funds the installation of the studios at Alexandra Palace has been on too small a scale and the general layout is in no sense commensurate with the requirements. The staff there is forced to work under the greatest difficulties and in view of what they have achieved they are to be congratulated.

Television is being held back, we hope only temporarily, because of a lack of the necessary grant of funds for its exploitation. Such a grant should be sufficient to enable the B.B.C. to provide longer programmes with artists of first rank and adequately to equip and carry on the necessary technical services in the studios.

The radio manufacturers of this country who are looking forward to the expansion of the television set market as a necessary development of their industry are fully alive to the needs I have expressed and we hope that the Government will choose the simple expedient of an adequate grant.

We should greatly deplore the adoption by our Government in relation to television in this country of any of the methods practised abroad which involve the dependence for programmes on receipts from paid advertising. It is now generally conceded by impartial observers that in this matter England leads the world. Hayes has become the home and inspiration of television. Engineers from all over the world, including France, Germany and the United States, have visited us that they may learn the newest developments, and it is our earnest desire to retain the leadership which we have achieved. To do so, however, requires that the Government should do their part.

ACQUISITION OF RUDGE-WHITWORTH, LIMITED

Shortly after our last meeting public announcement was made of the fact that negotiations had concluded with the purchase of the whole of the share capital of Rudge-Whitworth, Limited. This concern possesses a name which is, I need hardly say, a household word, not only in Great Britain, but in many foreign countries. It is one of the oldest of the important bicycle manufacturers and enjoys an enviable reputation as makers of motor-cycles as well.

The report and accounts were unanimously adopted and a dividend of 10 per cent. was declared.

DALGETY AND COMPANY, LIMITED

PROSPEROUS YEAR FOR AUSTRALIA

The fifty-third annual general meeting of Dalgety and Company, Limited, was held, on the 18th instant, at 65/68 Leadenhall Street, London.

The Hon. Edmund W. Parker (chairman of the company), in the course of his speech, said: The past year in Australia has been an exceedingly prosperous one, and the outlook continues to be satisfactory. Economic expansion continues. The financial position of the Governments has steadily improved.

Again I regret to have to record no alteration in the exchange rate, and we have still to bear this heavy burden. As last year, the accounts have been able to absorb the full cost of converting our profits into sterling, viz. £112,468, which, as I remarked last year, must be considered a very creditable performance. We have not had to use any of our reserves for the purpose.

New Zealand on the whole has enjoyed a prosperous year. Farmers generally, with the improvement that has taken place in the price of their products and despite a considerable increase in production costs, have made good profits. The rise in production costs has been mostly caused by legislation passed by the present Government, and this increased burden is likely to be recurring, so that provision should be made in these good times to meet any setback which may happen in the future.

The New Zealand exchange rate, like that of the Commonwealth, remains unaltered, and I noticed recently that the Minister of Industries and Commerce stated he could not see much chance of any alteration in the exchange rate for the time being—so that evidently we cannot look for any relief at present.

RESULTS FOR THE YEAR

The price of wool was well maintained during the period covered by the accounts, and this is reflected in the figures we are able to place before you to-day, as, although we have other irons in the fire, wool is our main product and the market price of it affects us more than anything else. Taxation in the Commonwealth and the Dominion is still a very heavy burden, and I see little prospect of relief in this direction—in fact, the burden is an increasing one in New Zealand, and at the present rate of progress—if you can call it progress—the Dominion bids fair to become one of the most heavily taxed countries in the world—per capita of its population.

It is all the more gratifying, therefore, that we have seen our way to recommend a slightly increased distribution over that of last year. We are recommending to-day a distribution of 4½ per cent., less tax, making 8 per cent., less tax, for the year, which is equivalent to 6.4 per cent., free of tax, comparing with 6 per cent., free of tax, paid last year, and I feel sure that you will consider this satisfactory. (Hear, hear.) Although the price of wool since the opening of the new season's sales has shown a weakening tendency, the statistical position is so strong that I feel, provided international affairs do not develop for the worse, that we can look with some confidence to the future.

A SATISFACTORY SELLING SEASON

The record of the 1936-37 wool selling season adds one of the brightest chapters to wool history, being one of eminently satisfactory results to all sections of the industry. The season witnessed the culmination of the recovery from the effects of depressed times and the realisation of the staple upon a much more remunerative basis. This was brought about by a genuine consumptive demand all the time, a demand which it seemed difficult at times to satisfy fully, and was so widely distributed that it ultimately embraced almost every description of the staple. It has seldom, if ever, been keener or more sustained. This extraordinary demand for wool was fostered by a combination of favourable circumstances seldom equalled. Its origin was in the improved economic conditions which released the pent-up buying power of the world's population, previously held in check by the depression.

To-day's prices, although substantially lower than at the peak, should still be remunerative to growers. Japan has come into the market again and has been buying at Melbourne, Sydney, Brisbane and Adelaide, but so far only to a moderate extent. The selling season in New Zealand this year opened at Auckland on November 27th. I am afraid that Dominion growers will have to reconcile themselves to rather lower values than the substantially high ones which were prevailing last season.

The result of our operations for the year is that the net profit amounts to £173,043. The directors recommend a final dividend on the ordinary shares of 4s. 3d. per share, less British income tax, making, with the interim dividend, 8 per cent. per annum.

The report and accounts were unanimously adopted.

SUDAN PLANTATIONS SYNDICATE, LIMITED

STRONG FINANCIAL POSITION

The thirtieth ordinary general meeting of the Sudan Plantations Syndicate, Limited, was held, on the 15th instant, in London.

The Hon. Arthur M. Asquith, D.S.O., who presided, said that he thought it would be agreed that the balance sheet showed a strong financial position. Cash at £2,022,000, the Syndicate share in the cotton stocks of £926,000 and stores amounting to £117,000 gave a total of £3,065,000, from which had to be deducted the balance between London and Sudan debtors and creditors amounting to £96,000, giving a figure of £2,969,000.

The gross profits for the year amounted to £711,779, and after deducting all expenses, appropriations to reserves, writings off and staff bonus, there remained a net profit of £390,291, as compared with £285,000 last year.

The directors recommend the payment of a dividend of 10 per cent. and a bonus of 2½ per cent. for the year ended June 30, 1937. This would absorb the sum of £309,375 and the carry-forward would be increased to £455,084.

Last year he had dealt at some length with the Futures Contract introduced by the Liverpool Cotton Association, whereby a new contract based on Giza 7 was to be a substitute for the old Sakel contract, and which contained a clause under which in certain circumstances similar qualities of Sudan-grown Sakel might be penalised as against Egyptian-grown Sakel cotton by several pence per lb. The results had been chaotic, and he thought it would be admitted even by Liverpool that the contract was not working at all satisfactory.

He thought that the only solution which might bring back the usefulness and popularity of the Liverpool Cotton Futures Market was to have one contract for all Egyptian- and Sudan-grown cotton under which Sakel, Giza 7 and other similar varieties would be tenderable. That he thought might possibly provide a sufficiently wide market to remove the fears of manipulation, which appeared to be a feature of the present contract.

With regard to the prospects of the crops for the current year, the area planted in the Gezira amounted to about 168,000 feddans, compared with 167,000 feddans last year. Rains had been fairly heavy. It was always too early at this date to predict what the crop would be, but the latest cable indicated that granted a continuance of favourable conditions a crop of average yield might be anticipated.

A dividend and bonus, together amounting to 12½ per cent., would, if passed by the Kassala Cotton Company's shareholders at their meeting that day, come into next year's accounts, while, as they would have noticed from the report, the Salt company had made a payment both upon its preference and ordinary shares. The syndicate was now receiving a good return upon its investment in that undertaking, and there seemed to be no reason why it should not continue to prosper.

The report and accounts were unanimously adopted.

KASSALA COTTON COMPANY, LIMITED

TOTAL DISTRIBUTION OF 12½ PER CENT.

The fourteenth ordinary general meeting of the Kassala Cotton Company, Limited, was held on the 15th instant, at Winchester House, London.

The Hon. A. M. Asquith, D.S.O., the chairman, in the course of his speech, said:—It is a great relief that our total debenture debt and interest outstanding should figure in our accounts now at under £200,000. Gezira reserve account is the reserve whereby we provide for items of expenditure otherwise irrecoverable upon the termination of our concession. The allocation proposed this year is £20,000, as compared with £5,000 in 1936, and that will bring our Gezira reserve fund up to a total of £40,500. The tenants' reserve fund, which in the 1936 accounts amounted to about £21,000 and was called "tenants' equalisation fund," has grown this year to £38,000, and it is hoped may provide in bad years a lifebuoy for the tenants, and for the company a buffer against bad debts arising from agricultural advances.

Debenture interest this year cost us nearly £10,000 less than in the previous year, and after provision for taxation of £10,000,

against nil last year, allocating to Gezira reserve £20,000, against £5,000 last year, writing off £5,643, being the total expense of our debenture issue, and setting aside £1,284 for a bonus to our staff, we emerge with a profit, subject to directors' percentage, of £49,039, which compares with £31,556 last year.

We are glad to be able to recommend a dividend of 10 per cent. and a bonus of 2½ per cent., payable to-morrow, and, if you agree to this distribution, the amount carried forward will be about £10,000 more than the amount which we brought in from 1936.

As to the present growing crop, it is too early to make any positive predictions. Our latest cable received from the Sudan at the end of last week indicates that, granted a continuance of favourable conditions, there is no reason why we should not have an average crop.

The report was unanimously adopted.

TARKWA BANKET WEST, LIMITED

DIVIDEND OF 7½ PER CENT.

The ordinary general meeting of Tarkwa Banket West, Limited, was held, on the 12th instant, at River Plate House, London.

Lieutenant-Colonel Frank L. Johnson, D.S.O., the chairman, in the course of his remarks dealt with the accounts and said:—

The shares in the companies in which the company had holdings on September 30th stood at a cost of £176,000, against a market value of over £273,000. The unrealised profit thus shown of nearly £100,000 is perhaps somewhat unduly augmented by our large holding of some 800,000 shares in the Oboum Gold Mines, Limited, which was originally formed as a subsidiary of this company. The results of the operations on the original concession of the Oboum Gold Mines, Limited, did not prove as satisfactory as indications led the old board to anticipate. The recent developments on the property which the Oboum Gold Mines, Limited, are now operating show every indication of promise; moreover, the Oboum Gold Mines, Limited, is obtaining a revenue from the operations referred to. I am sure that we have acted wisely in not realising our holding in Oboum Gold Mines, Limited. On the value of our holding in Amalgamated Banket Areas, Limited, I need not expatiate, and you all know the dividend-paying record and bright prospects of Taquah and Abosso Mines, Limited.

I feel sure you will agree with me that the best interests of shareholders are ensured by adopting the usual procedure of not giving more precise information about our shareholdings than I have already indicated. I may sum up this item by stating that on September 30th last our shareholdings in eight West African companies, referred to in the report, stood in our books at a cost of some £204,000, against a Stock Exchange value of some £311,000. I hope and believe that the board have studied your interests in refusing to undertake any considerable realisation of these assets during the somewhat difficult times covered by these accounts.

To "Cash at bankers," £42,286, should be added the loan of £40,000, bringing the liquid resources of the company to, in round figures, £82,000. On the closing day of the accounts our cash at bankers, loan and the market value of shares in other companies were worth some £288,000, or, after making provision for income tax, etc., some £243,000. This sum does not take into account the potential value of your yet unproved mining properties. This is a position which I hope you will regard as a strong one.

Turning now to the credit side of the profit and loss account, you will see that the realised profits on sales of investments, interest on investments and such moderate underwriting as the directors thought fit, amount in all to £18,881. After deducting the items to which I have just referred, we are left with a profit for the year of £13,091. To this sum must be added £98,457 brought down from the previous year, making a total for your disposition of £111,844.

From this, as a precautionary measure which I am confident you will appreciate, we first of all make a transfer to the reserve account of £50,000 and then ask you to place on one side £5,250 as provision for income tax and National Defence Contribution, leaving the sum of £56,294 to be dealt with. From this I shall submit a resolution, which I hope will meet with your approval, for the payment of 7½ per cent. dividend, less tax, to be posted to all shareholders on the 14th of next month. This will absorb £11,246. There will thus be left the sum of £45,147 to be carried forward to the accounts for the current year.

The report and accounts were unanimously adopted.

S. SMITH AND SONS (MOTOR ACCESSORIES), LIMITED

RECORD TURNOVER AND PROFIT

The twenty-third ordinary general meeting of this company was held, on the 18th instant, in London.

Mr W. Henderson-Cleland, M.C. (the chairman), said that the net profit at £250,385 showed an increase of £74,806, or over 40 per cent. on last year's result. It was gratifying to be able to report that the year under review was a record one in the history of the company, both as regarded turnover and profit. Their position had been fully maintained in the motor accessory section of the business, and their range of dashboard instruments was now fitted to a larger number of cars than in any previous year.

The British Jaeger Instrument Company, manufacturing a similar line of instruments to the parent company, was maintaining its position and continued to supply a high grade of instrument. Further progress had been made by the K.L.G. Sparking Plug Company, the K.L.G. plug having maintained the unequalled position it had achieved of being used almost universally when any strenuous attempt was being made on a record.

The present growth of the aircraft industry and the requirements of the British Air Ministry and of foreign Governments had created an increasing demand for the various aircraft and marine instruments produced by the company. The business of the clock group of companies continued to expand steadily and satisfactory progress was being made.

All sections of the company's business had progressed satisfactorily. As to the future, in the motor accessory group they had consolidated their position by maintaining the quality of their product and improving the design, and they had factories and plant to deal with their customers' increased requirements. Gradually they were increasing the scope of their instruments and accessories.

The turnover for the first three months of the current year was in excess of that of last year, while contracts and orders in hand pointed to a still larger turnover for the balance of the year.

In conclusion, the Chairman paid a special tribute to the managing director, Mr A. Gordon Smith, to whose outstanding abilities the success of the company was primarily due.

The report was unanimously adopted.

RUBANA RUBBER ESTATES, LIMITED

SATISFACTORY RESULTS

The twenty-seventh annual general meeting of this company was held, on the 16th instant, at 19 Fenchurch Street, London, Mr F. E. Maguire, chairman of the company, presiding.

The Chairman said:—The profit for the year was £25,093 18s. 3d. after providing £300 for National Defence Contribution. This compares very satisfactorily with the results for the previous year 1935-36 when we earned £10,319 12s. 9d.

We recommend the payment of a dividend of 7 per cent. and we propose to transfer to reserve the sum of £30,000.

You will expect a word or two in explanation of this large allocation to reserve. We have for many years been setting aside a portion of our profits with a view to providing funds for the rejuvenation of our property when such a course should be necessary. Certain transfers to reserve have been made in the past but a large proportion has been accumulated in the carry-forward.

We think now that the balance sheet will present a truer picture if a substantial amount is transferred from the carry-forward to reserve; after doing so we shall still have a balance of £18,722 4s. 11d. remaining on revenue account.

We are making good progress with our existing replanting programme. During the year under review we cut out a further 161 acres of old rubber, and we completed the replanting of 213 acres. Altogether we have now 285 acres of replanted rubber and we have in hand a further 97 acres.

The forward sales which we have made have been published in the Press from time to time. We have still to deliver 25 tons during the remainder of the calendar year 1937 at an average price—equivalent to 8.84d. per pound landed terms. For the year 1938 we have sold 42 tons at the equivalent of 11.35d. per pound.

We are all anxiously awaiting the decision of the International Rubber Regulation Committee as to the exportable allowance to be permitted during the earlier months of 1938. The present allowance is, as you know, 90 per cent. of standard.

The Chairman then gave figures of probable production, and, in conclusion, said that it seemed they should hope for a cut of 15 per cent., making the exportable allowance 75 per cent.

The report and accounts were unanimously adopted.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended November 13, 1937, amounted to £12,236,000, against ordinary expenditure of £9,900,000. After increasing Exchequer Balances by £226,493 the operations for the week, as shown below, reduced the gross National Debt by £2,109,000, to about £8,240 millions.†

(000's omitted)

Treasury Bills	£ 159
Public Department Advances ..	1,650
P.O. and Teleg. (Money) Act ..	300
	2,109

† Including £575 millions on account of Exchange Equalisation Account.

An approximate analysis of the National Debt as at September 30, 1937, appeared on page 41 of *The Economist* of October 2nd.

ASSOCIATED EQUIPMENT COMPANY.—Final dividend of 13d. per £1 stock unit, tax free, making 1s. 6d., tax free, for year to September 30th (equal to 10 per cent. subject to tax). A similar distribution was made last year.

BANK OF LONDON AND SOUTH AMERICA.—Ordinary dividend raised from 3 per cent. to 5 per cent.

BRITISH OVERSEAS BANK, LTD.—This bank is retaining its profit of £52,454. The board say that on account of the disturbed conditions prevailing it does not recommend a dividend as they consider the profit should be held until the outlook is clearer. The previous year's profit was £82,376, and 6 per cent. was paid on £1,000,000 "A" ordinary capital.

BRITISH PLASTER BOARD.—Interim dividend, 20 per cent. as before.

DENNIS BROTHERS, LTD.—Final dividend of 10d. per 1s. share, making 1s. 2d. for the year to September 30th, against 1s. 8d. for 1935-36. The carry-forward has been increased by £9,500.

UNILEVER INTERIM DIVIDENDS.—The Unilever dividend is 4 per cent. per £1 of stock. Unilever N.V. dividend is £. 30 per £1. 1000 share, both payable December 1st. On December 1st both companies will pay preference dividends for the seven months ending December 31st.

FOURTH BRITISH FIXED TRUST.—Dividend 3½d. per sub-unit.

GOLD COAST SELECTION TRUST.—An interim dividend of 10 per cent., free of tax, has been declared for year ending March 31, 1938, payable on January 3rd. This is the first cash distribution.

ITALO-BELGIAN BANK.—Net profit for year to June 30, 1937, amounts to Bel. Fcs. 13,617,188, including the Bel. Fcs. 1,616,096 brought forward. The board propose a dividend of Bel. Fcs. 50 (10 per cent.) (free of Belgian tax) per share, against Bel. Fcs. 40 (8 per cent.), and to carry forward Bel. Fcs. 1,863,818.

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

THE principal commodity markets in this country, like the stock markets, are being largely influenced by developments in the United States. Declining industrial activity in that country and fears of a further recession have severely curtailed demand and have thus had a depressing influence on commodity prices. After showing some recovery before the week-end, prices in numerous instances have again eased owing to disappointment over President Roosevelt's message to Congress.

These tendencies are well illustrated by the behaviour of the metal markets which, after rallying at the end of last week,

subsequently relapsed. At the close on Wednesday, however, copper, lead and spelter were still a shade dearer than a week earlier. Tin showed a further net loss on the week, mainly in consequence of a fresh decline in the activity of the American tinplate industry. The market in rubber underwent similar fluctuations, but showed no net change over the week. Quotations for raw cotton again showed a sagging tendency, while jute and wool were also a little cheaper. Other textile fibres were unaltered.

Wheat prices firmed up late last week on the news of frost damage in Argentina, and although part of the rise has since been lost quotations still show some improvement. Among other foodstuffs, bacon is steady and cheese unaltered. The

OTHER FOODS

BACON.—The market is steady. The official quotations (per cwt. for No. 1 Sizable) which formed the basis for dealings on the London Provision Exchange this week were: English, 91s.; Canadian, 89s.; last week included: Danish, 12,058 bales; Canadian, 7,077; Dutch, 2,692; Lithuanian, 1,068; and Polish, 2,784; as against 13,539, 6,596, 2,692, 1,381 and 3,329 bales, respectively, in the previous week.

BUTTER.—The butter market has collapsed after the recent rise. Trading on Wednesday was practically at a standstill with prices nominal. Quotations (per cwt.) on the London Provision Exchange on Monday were: New Zealand, finest salted, 131s. to 132s.; Australian, choicest salted, 128s. to 130s.; Danish, 150s.; compared with 140s. to 142s.; 140s. to 141s., and 150s. to 152s., respectively, a week ago.

CHEESE.—Trading has been quiet and New Zealand is a shade easier. Quotations (per cwt.) on the London Provision Exchange on Wednesday were as follows: English Cheddars, finest farmers, 92s. to 94s.; Canadian, finest coloured, 73s. to 74s.; and New Zealand, finest coloured, 70s. to 70s. 6d.; against 92s. to 94s., 73s. to 74s., and 72s. to 72s. 6d., respectively, a week ago.

COCOA.—The spot quotation in New York on Wednesday was 5½ cents per lb., as against 6½ cents per lb. last week. In London, on Wednesday last, good fermented new crop, Accra, "December-February," was quoted at 26s. 3d. sellers per 50 kilos, c.i.f. Continent, against 27s. a week ago. Last week's movements of cocoa in London were as follows: Landed, 356 bags; delivered for home consumption, 5,913 bags; exported, 9,824 bags; stocks, 153,411 bags, against 114,909 bags a year ago.

COFFEE.—On Wednesday, Rio No. 7 (cash) was 6½ cents per lb. in New York, as compared with 7½ last week and 8½ a month ago. Movements of coffee in London last week were as follows: Brazilian, landed, 24 cwt.; delivered for home consumption, 12 cwt.; exports, nil; stocks, 1,680 cwt., against 9,312 a year ago. Central and other South American: Landed, 475 cwt.; delivered, for home consumption, 2,471 cwt.; exported, 442 cwt.; stocks, 70,358 cwt., against 56,806 cwt. last year. Other kinds: Landed, 2,730 cwt.; delivered for home consumption, 3,787 cwt.; exported, 343 cwt.; stocks, 62,822 cwt., against 91,471 last year.

EGGS.—A rather firmer tone was displayed this week and prices have risen. At Smithfield, on Wednesday, English (ordinary packing, Grade I, about 15-15½ lb.) realised 23s. to 24s. per 120, against 22s. 6d. to 23s. 6d. last week; while Danish (15½ lb.) made 15s. 6d. to 16s.; as against 15s. to 15s. 6d. last week.

FRUIT.—The cold bright weather has been favourable to business in the period under review and prices have been fairly steady. At Covent Garden, according to *The Fruitgrower*, a consistent inquiry for apples is noticeable, but orders are usually for small lots. English are in only moderate supply and prices are consequently firmer. The limited supplies of English pears also meet a steady inquiry, with prices showing little alteration. Hothouse grapes are generally rather slow, with prices easier. English cobnuts are a point firmer on shorter supplies, walnuts sell well and inquiry for chestnuts is improving. Oranges continue to sell moderately well, with selected parcels firm. Lemons are cheaper on increasing supplies, while grapefruit are rather slow and easier.

MEAT.—At Smithfield Market on Wednesday last, Argentine chilled hindquarters were quoted at 4s. 4d. to 4s. 8d. per 8 lb., as compared with 4s. 2d. to 4s. 6d. a week ago. New Zealand frozen mutton was 2s. 8d. to 4s. 8d., as against 2s. 8d. to 4s. a week ago. According to the Smithfield Market official report, supplies during last week amounted to 9,714 tons and an increase of 131 tons on the corresponding week last year. Beef and veal accounted for 5,054 tons, mutton and lamb 2,677, and pork and bacon 969, as compared with 5,134, 2,425 and 1,169 tons, respectively, in the same week of 1936.

MILK.—Information relative to the operation of the Milk Marketing Scheme during October as issued by the Milk Marketing Board is given in the following table, together with comparable statistics for earlier months.

LEADING ARTICLES

Trade Across the Atlantic	405
Settling with Germany	406
Too Much Cotton	408
Changes in the Coal Industry	409
Britain's Open Spaces	411

The Dominions most affected were Canada and Australia. But in both cases delay has been beneficial. In Australia, MR LYONS's Government had to face a general election in which any hint of weakness in safeguarding Australian trade would have been eagerly seized upon by the Opposition. Canada had concluded new trade treaties both with Great Britain and the United States which she regarded as parts of a balanced whole, not to be upset on one side without disturbing the other. The Australian election has now confirmed MR LYONS in office; and the mere lapse of time has brought Canada within hailing distance of November, 1938, when her trade pact with the United States expires. Indeed, the announcements in London and Washington were immediately followed by a statement by MR MACKENZIE KING that a new trade treaty with the United States, on as comprehensive a basis as possible, was already the subject of preliminary conversations. This major obstacle has thus been largely surmounted, though it must not be assumed that there will be no hard bargaining by both Dominions. MR LYONS has already mentioned "adequate compensation." The Conservative Opposition in Canada and the Labour Opposition in Australia are both mobilising their forces, and the British Columbian lumber producers are assuredly only the first of many sectional groups which will enter objections.

In principle, however, the matter is decided. Imperial Preference, of course, stands; but it is no longer to impede tariff reductions to foreign countries. The lists of articles on which mutual concessions may be made are presumably already in existence, though the figures may not have been filled in. On the American side, the concessions will presumably relate in the main to special manufactures. On the British side, it is believed that the major concessions will be given to American agricultural produce and lumber rather than to manufactures. This will meet American as well as British desires; for the largest previous American agreement, that with Canada, required some concessions from the farmers and a counterpart in the British Agreement would restore the balance and make MR HULL's policy more palatable in the farming States. But concessions on some American manufactures are not, of course, to be ruled out. Whatever the concessions prove to be, the most-favoured-nation clause in the existing treaties of the two countries will extend them to other countries, unless (as is not impossible in the case of some of the British concessions) it is found necessary to make the reduced tariffs applicable only to certain fixed quantities of imports.

The commercial importance of the forthcoming agreement is too obvious to require proof. The merchandise trade between Great Britain and the United States is

exceeded only by that between Canada and the United States, much of which is of a purely domestic character. When invisible trade is added, the commercial exchanges which pass between Britain and America are easily the most important in the world, and the two countries can be said to dominate the world's trade to an extraordinary extent. More important than these quantitative factors, imposing though they are, is the fact that the agreement will embody a change in the commercial policy which Great Britain has pursued for six years past. For the first time Great Britain will be signing a trade agreement whose net effect is to lower barriers on both sides. Hitherto, British policy has always been subject to the criticism that, when all its results have been worked out, trade has been diverted rather than encouraged, restricted as much as freed. The fact that the world's greatest trading nations are about to sign an agreement to which this criticism manifestly does not apply, cannot fail to be a signal encouragement to all other nations who are striving to free their trade from restriction and paralysis.

These considerations in themselves are of great importance. But the coming agreement has also a definite political bearing. It has been christened, on both sides of the Atlantic, the democracies' reply to the dictators. That may be placing upon it an interpretation more portentous than it can support. But this at least is true, that the Trade Agreements Act has been consistently regarded both by PRESIDENT ROOSEVELT and by SECRETARY HULL as the main contribution which America can make to appeasement in the world. So long as Britain appeared to be holding out against that policy it was possible to represent the two most powerful democracies as divided not merely on methods but on objectives. That is no longer possible, and the fact that Britain will be following America's lead in trade matters cannot fail to assist each country in appreciating the sincerity of the other's policy for peace.

It is a commonplace that peace and justice and freedom ultimately depend upon collaboration between the English-speaking peoples. Commonplace or not, the statement has always sounded, when addressed by British lips to American ears, suspiciously like a declaration that "England Expects Every American To Do His Duty." Few things could do more to remove misapprehension, and to convince American opinion that the benefits of collaboration will be mutual, than British willingness to modify the Ottawa Agreements, which have always been intensely unpopular in America, in the interests of Anglo-American trade. That is the real, and the great, significance of last week's welcome announcement.

Settling with Germany

THE PRIME MINISTER's replies to questions addressed to him in the House of Commons on Wednesday about LORD HALIFAX's visit to Germany have vouchsafed to us only two certain pieces of knowledge, and of these the first is purely negative. We know that we ourselves cannot rely on any of the rumoured reports of LORD HALIFAX's conversation with HERR HITLER; and we also know that, while the French Ministers are still perhaps as much in the dark as the British public, MM. CHAUTEMPS and DELBOS are going to be told something when they come to London early next week.

The positiveness of this second piece of knowledge is some consolation for the negativeness of the first; for MR CHAMBERLAIN's prompt invitation to his French

colleagues gives us a certain measure of assurance on the fundamental issue that is involved in the HITLER-HALIFAX conversation. That issue is in a sense an abstract one, yet it transcends in importance the whole pack of concrete questions which LORD HALIFAX and HERR HITLER may—or may not—have discussed. It is nothing less than the issue between solidarity and isolation as the two competing principles for the conduct of international relations. Germany, like the other two Great Powers who are nowadays on the warpath, has been working with all her might to undermine the whole system of international relations that is based on a belief in "the indivisibility of peace." The present Government of the United Kingdom are still officially committed

to the opposite political creed, which is embodied in the Covenant of the League. It was on the strength of a vociferous confession of this faith that they fought and won their general election in the autumn of 1935. But many of their supporters are lukewarm in their loyalty to a principle to which most of them owe their seats.

Is Britain wise to adopt the rôle of an elderly man with great possessions, who has thrown himself unreservedly into a formidable crusade to establish a sort of "king's peace" in the international arena? Instead of falling foul of the gangsters by backing a weak and struggling police force, might he not obtain a more effective protection for his property by enlisting and equipping a private bodyguard and then hinting to the gangsters, by discreet yet eloquent nods and winks, that the cheapest way for them to make their pile would be to leave in peace the goods of the rich man armed and to fleece all the poor men who were destitute of the means of self-defence? This is the philosophy which seems to appeal to some elements within the Conservative Party and perhaps within the Cabinet also. It has not become the official policy of the British Government; but the possibility of its being adopted cannot be ruled out.

It may be taken as certain that this fundamental issue was at any rate implicit in the colloquy between HERR HITLER and LORD HALIFAX. Would His Majesty's Government capitulate to a judicious German attack upon their *côté faible*? Or would they stick to their guns? We do not imagine that the issue has yet been irrevocably decided. Indeed, we interpret the prompt invitation to the French Ministers as meaning that the existing policy of the British Government still stands. In the world as it is, Anglo-French solidarity is the nucleus of all solidarity. So long as the Anglo-French link holds, the collective system of international law and order still retains a citadel from which it may in time be able to march out again to the reconquest of the ground that it has lately lost. The Anglo-French defensive alliance provides a rallying point for PRESIDENT ROOSEVELT's "ninety per cent. of the population of the world" who want an orderly world instead of a world terrorised by the ten per cent. of its population whose philosophy is the right of the stronger. This is the present enormous significance of the Anglo-French entente; and in the light of this the forthcoming visit of French Ministers to London is the best possible omen. We greet it with relief.

Perhaps, when the Government have taken their French colleagues into their confidence, they will lift at least a corner of the veil that now shrouds the HITLER-HALIFAX conversation from the eyes of Parliament and public in this country. In the meantime we have nothing to go upon except momentarily unverifiable reports. This crop of rumours is an inevitable consequence of the Government's silence, and their accuracy is not necessarily impugned by the show of indignation with which it has been attacked by official spokesmen both at Westminster and in Berlin.

Rumour says that at any rate the elements of an Anglo-German bargain were tabled by HERR HITLER in a game of poker with his British visitor. The plan of a six years' respite from colonial claims may be read into the public speech which the FÜHRER made as soon as the conversation had taken place; and it is conceivable that it is the terms of the speech that have given rise to the story. The conditions which HERR HITLER is reported to have laid down are even more difficult to verify; and we can only say that they bear many marks of verisimilitude, and that, if genuine, they are adroit.

Whatever may be the accuracy or inaccuracy of individual reports, there is no secret about Germany's professed aims. The first of them is the return of her

ANGLO-AMERICAN TRADE
and describing the economic background
for a commercial treaty

colonies. The second is the strengthening of the ties between the Reich and the German-speaking peoples to the south and south-east of it, especially in Austria and Czechoslovakia. In these aims, as they are stated, there is nothing that is inherently unreasonable. On the contrary, the desire of Germany, as a Great Power, to have colonies is legitimate; and it is inevitable that the smaller German-speaking countries of Central Europe should move in the orbit of the Reich.

Why, then, should any resistance be offered to Germany's attainment of her ends? The question has only to be asked to be answered. Because the majority of countries are frightened that the undisclosed aims of German policy are far larger than her publicly stated claims. If Germany were ever to impose her military yoke on Poland and the Danubian States and to push Russia back north-eastwards until she disappeared beneath the Siberian horizon, then Italy would become Germany's slave, and the four west European colonial powers—Holland, Belgium, France and England—would lie at Germany's mercy. The hesitations of the West are not due to unwillingness to concede Germany's just claims; they are due to fears lest, in so doing, we may merely strengthen Germany for aggression, first upon others, later upon ourselves. And if we are asked for the grounds of such suspicions, we can point not only to the whole ideological basis of the philosophy in which the German people is being drilled, but to the writings of the FÜHRER himself.

In these circumstances, the main lines of British and French policy towards Germany are reasonably clear. There must be no slamming of doors upon claims which seem to the German people, and to many others, to be inherently reasonable. On the contrary, the attitude of London and Paris should be one of willingness, in principle, to concede what Germany asks (not forgetting the colonies)—but only on one condition, which must be the very essence of the bargain. That condition must be designed to guarantee that Germany's policy shall not in fact overstep the moderate and reasonable limits which are now publicly admitted. In conceding the reasonable inch, we must have assurances that she will not take the inadmissible ell. There is only one form which such a guarantee can take: the willing adhesion of Germany to a complete system of collective security, buttressed by disarmament.

Germany has secured a hearing for her claims by representing them as vital necessities for the national existence of a strong people. Britain and France must make it clear in return that a system of collective security, adequate to prevent aggression, is an even more vital necessity for the national existence of peoples determined to be equally strong. It holds, indeed, the key to peace. For without it every accession of strength to Germany must be feared and resisted by London and Paris, however equitable its justification. But German agreement to the rule of law in international relationships would at one stroke remove the obstacles to Germany's attainment of her legitimate desires. This, we hope, is the truth that will emerge from the meeting of French and British Ministers next week.

Too Much Cotton

THE prices of many primary products have rapidly and persistently declined since last March, and are now lower than they were a year ago. No leading commodity, however, has suffered so severe a fall in price as raw cotton. After rising above 8d. per lb. last March, the price of American Middling has since declined to 4½d. per lb., which is not much above the lowest level reached during the depression. What are the causes and the implications of this collapse? To find an answer, we may first examine the trend of the world's cotton consumption during the past eight years. Naturally, the intake of the raw material by the world's cotton mills declined during the late depression, but the reduction in demand was surprisingly small. Mill consumption fell from 11,731 million lbs. during the season ended July, 1930, to 10,433 millions during the subsequent season. During 1931-32, consumption rose again slightly to 10,449 million lbs., and the improvement has continued ever since. In 1936-37, for example, the world's mill consumption of 13,944 million lbs. showed an increase of no less than 19 per cent. over the figure for 1929-30. In view of the simultaneous expansion of the rayon industry, this increase in the demand for raw cotton is unexpected and significant. Changes in the consumption of the leading manufacturing countries since 1929-30 are shown below:—

WORLD'S MILL CONSUMPTION OF COTTON
(In millions of lbs.)

* Not available. † Partly estimated. ‡ Season of lowest world consumption.

Consumption has risen in most countries, the improvement having been particularly marked in Japan and

the United States. Germany and Italy, incidentally, consumed less raw cotton in 1936-37 than in 1929-30, and France's intake last season was only slightly larger than eight years ago. The marked increase in consumption in Japan, China, India, Brazil, Canada, and many smaller countries which have extended their cotton textile industries in recent years, goes far to explain the fall in Britain's textile exports. In 1936-37, indeed, mill consumption in China and India was not much smaller than in Great Britain.

The figures, as a whole, show beyond all doubt that the collapse of cotton prices cannot be due to a failure of demand; for consumption, after only a moderate setback in the great depression, increased and apparently is still increasing. Our search for causes, therefore, must needs pass over to the supply side of the equation. The world's supply of raw cotton, like that of many other crops, is insusceptible of rapid adjustment, owing to human inability to control meteorological conditions and, consequently, yields per acre. Any change in the area planted may be offset by a contrary change in yield. This condition is clearly illustrated by the first of the three accompanying charts, which shows the trend of the world's area and production of cotton since 1929-30. The decline in prices after 1929-30 was followed by a steady reduction in the area under cotton between 1930-31 and 1933-34. The world's harvest in 1931-32, nevertheless, exceeded that of 1929-30 by a substantial margin. Although consumption had by that time taken an upward turn, the 1931-32 crop was too big to prevent a further fall of prices. As the second of our three charts shows, the aggregate of "visible supplies" and stocks at mills continued to increase until the end of the 1932-33 season. At that critical juncture, the American Government intervened. Having a laudable desire to raise domestic cotton prices, they decided to limit the crop and to compensate American cotton growers by means of subsidies. Actually, the area harvested in the United States declined from 38.7 million acres in 1931-32 to 26.9 million acres in 1934-35. A substantial part of this decline, however, was offset by an increase in the area under cotton in other countries, stimulated by a rise in prices. Thus, although America's area under cotton was reduced by 11.8 millions between 1931-32

and 1934-35, the area under cotton in the world as a whole, according to the Imperial Economic Committee,* fell by only 4.6 million acres. Thereafter, the area under cotton throughout the world began once more to increase and, in 1936-37, it was actually greater than in 1929-30. Figures for the current crop year, 1937-38, are not yet available, but provisional estimates suggest that a further increase of the area under cotton is more than probable.

This brief historical survey affords strong presumptive evidence that the seeds of the cotton growers' present troubles were sown several years ago, when the American Government took steps to increase domestic and, indirectly, world cotton prices. If the average yield per acre had remained substantially unchanged between 1929-30 and 1934-35, increased supplies due to an extended acreage might have been absorbed by the rapid expansion of demand. Our chart of acreage and production shows, however, that the yield per acre has markedly increased since 1935-36. Consequently, the world's production was far greater, last season, than in 1929-30, although the acreage was only slightly higher. In the present season, 1937-38, it is clear that the yield per acre has shown a further and phenomenal increase, and supplies have been raised to a total with which demand cannot possibly cope, however much the price of cotton may be reduced. The remarkable increase in production this season has been due, in the main, to a record yield in the United States, but the harvests of Brazil, China, Russia, and Egypt have also increased substantially.

We may conclude, therefore, that the current surfeit of cotton is due partly to the American Government's price-raising measures, which stimulated the extension of cultivation in other countries, and partly to a succession of high yields per acre in all countries. The effect of the price-raising measures adopted by the United States on production in other countries is shown by our third chart. There has been a considerable increase in production in India, Russia, China, Egypt and Brazil. In the last-named country, the output increased from 438,000 bales in 1932-33, to 2,000,000 bales in 1937-38. Thus, the American cotton control scheme has ended in failure, like the Stevenson rubber restriction scheme, which sustained prices for a time, but did not prevent their ultimate collapse because it was not world-wide in its application. Thus the last state of the world's cotton growers is worse than the first. Moreover, just as the earlier rubber scheme merely led to a geographical redistribution of output to the disadvantage of Malaya and Ceylon, the American cotton control scheme reduced the United States' share of world pro-

* "Industrial Fibres." H.M. Stationery Office. 2s. 9d. net.

duction from about 55 per cent. in 1934-35 to an average of some 40 per cent. in 1936-37.

One of the reasons which induced President Roosevelt to call a special session of Congress this month is said to have been his desire for the passage of legislation dealing with the surfeit of cotton. As world consumption this year, however, is unlikely to exceed 31 million bales, while supplies are likely to reach 51 million bales, the task of Congress seems wholly unenviable. Even if the acreage under cotton in the United States is severely reduced next year, a small American crop would

WORLD PRODUCTION OF COTTON
(In millions of bales of 500 lbs.)

scarcely make much impression upon the existing surplus; for the area under cotton in the United States now forms only about one-third of the cotton acreage in the world as a whole. Indeed, unless the world can be persuaded to burn a large part of its cotton as Brazil has burned her coffee, or the populations of China and India can be induced to buy an extra garment this season—and both possibilities seem equally unlikely—no improvement in cotton prices can be looked for until next year, when reports of the progress of the 1938-39 crops will play a decisive rôle.

WORLD PRODUCTION AND ACREAGE OF COTTON
(1929-30-1930-31 = 100)

STOCKS AND PRICES OF COTTON

Changes in the Coal Industry

THE House of Commons has given a second reading this week to a measure designed to give practical effect to two aims—the nationalisation of coal-mining royalties and the reduction, by amalgamation, of the number of independent coal-mining concerns—which have been recommended by one commission after another in the recent history of the industry. Tardy action is certainly better than no action, but delayed first-aid may become extreme unction. No one, happily, need suggest that Parliament is busy bandaging a corpse; for coal-mining remains one of Britain's largest industries and its operations are appreciably more profitable to-day than in 1929, before the Great Depression. Events, however, have not been stationary since the Sankey Commission in 1919 recommended, *inter alia*, the nationalisation of royalties. Four years later, at the end of 1923, the number of wage-earners on the colliery books in Great Britain was 1,184,500.

When the Samuel Commission published its report, before the prolonged coal stoppage of 1926, the total was 1,100,000. In October, 1930, after the passing of the Coal Mines Act, which first introduced the principle of a statutory production quota, the total had fallen to 886,800. A month ago it stood at 784,900. These figures in themselves afford strong evidence of momentous changes in the industry and its fortunes, which deserve close examination.

The falling demand for coal-mining labour throughout the post-war period, is partly, but only partly, to be explained by the fact that the total output of the industry, which was 287 million tons in 1913, was only 228 million tons in 1936. Actually, this decline of 21 per cent. in production has been accompanied by a fall of 32 per cent. in the employed labour force. The difference between the two figures measures the extent of the changes which have been effected in the

technique of the industry itself in the interim. It is no great exaggeration to say that in 1913, apart from improvements such as the use of steel implements, winding machinery, and forced ventilation, mining practice differed little in essentials from that in force a century earlier. In 1913, barely 6 per cent. of the coal was mechanically cut; in 1936, some 55 per cent. was machine-cut, and the greater part of the advance had taken place during the last nine years. The pneumatic pick, the chain undercutter, and shot-firing, have considerably increased the rate of exploitation. Although they came originally from the United States, mining practice has developed somewhat differently in Great Britain and in America. There, machine mining has been associated with thick seams, but in Britain the tendency has been to instal machinery to exploit narrow marginal seams of 18 to 36 inches. Not only has the actual cutting and freeing of coal been facilitated; in addition, the provision of belt conveyors and electrical tramways has speeded up transport from the coal face to the shaft bottom. The pit ponies, which were once a familiar feature in every colliery, are now rapidly dwindling in numbers. By means of this radical mechanisation the output of coal per worker underground has risen from 22.6 cwt. per shift in 1921 to 30.1 cwt. in 1936.

Contemporaneous with mechanisation has been the practice of treating coal before passing it to the consumer. A constantly increasing proportion of the output is being dealt with in by-product works or cleaning plants. As much as 42 per cent. of the coal produced was washed or dry cleaned in 1936. Although washeries are much more numerous than dry-cleaning plants, the latter give the more marketable product. Among the different producing areas Durham, a comparative late-comer in the movement, has a particularly high percentage of dry-cleaning plants. As a rule, each colliery group owns at least one plant, situated at some focal point where coal from all of the group's pits may be conveniently treated.

Even more important, however, has been the growth of the practice of treating coal in by-product works, with the object of obtaining increased fuel value from a given quantity of coal. The rise of by-product works has been linked with schemes to produce oil and petroleum from coal, of which the hydrogenation plant of the Imperial Chemical Industries at Billingham and the Low-temperature Carbonisation works at Bolsover are typical examples. Between 1934 and 1936 the output of home-produced motor spirit rose by some 70 per cent., though in 1936 as much as 93.4 per cent. of Britain's domestic requirements were still imported. From the coal industry's point of view, however, the importance of by-product manufacture is beyond question, and there is ample scope for further expansion. Less than one-third of Britain's coal, even to-day, is treated in by-product works, whereas in Germany the proportion is two-thirds. The list of by-products includes not merely petroleum and the residual, but valuable, coalite, but also coal-tar, ammonia, tar dyes and synthetic resin.

So far as the consumption of coal is concerned, the decline in demand for export and bunkering is responsible for more than 80 per cent. of the falling-off in the activity of the industry between 1913 and 1936. The reduction has been due primarily to external factors, such as the post-war rise in the production of electric power in Scandinavia, France and Italy, the opening up of new coalfields, as in Limburg, and the rise of new exporting countries like Poland and the Union of South Africa. Naturally the exporting areas have borne the brunt of the decline in output. The table given in the next column shows that the aggregate production of South Wales and Durham fell from 98.3 million tons in 1913 to 64.2 million tons in 1936. The decline in these two areas was thus 35 per cent., while in the rest of Britain output was reduced by only 13 per cent.

Although the falling off in production has been most marked in the exporting areas, internal coal consumption has by no means kept pace with the increased activity of British industry as a whole, and the rise in the

total production of power. This anomaly, which has powerfully affected the fortunes of coal-mining, reflects the increased efficiency of almost all coal-using industries. In shipping, for instance, coal consumption has been reduced to a figure much below the pre-war level. It is on record, for example, that a fully laden cargo vessel of 8,000 tons has maintained an average speed of 10 knots on 13 tons of coal per day—a figure which in 1913 would have seemed almost impossible of achievement. In thermal electric stations, as recently as 1927, a ton of coal was the equivalent of 699 units of electricity. In 1936, the same quantity of coal produced on the average some 1,364 units of electricity. Between 1932 and 1936, the steel industry reduced its coal requirements per ton of steel by one-fourth, and there is room for still further improvement.

The list of examples might be indefinitely extended, but those already given are sufficient to convey an idea of the far-reaching effect of improved coal-utilisation on demand in the short run. It is clear that, during the last few years, a number of decisive but largely independent movements have been taking place in the coal-mining and coal-using industries—apart altogether from the decline in export and bunkering demand, which is itself due to many factors besides depression in foreign trade as a whole. At home, the effect of increased mechanisation in reducing the amount of human labour necessary to produce a given quantity of coal might have been more than offset had demand for coal been relatively elastic. In fact, demand has been highly inelastic, and an important factor in its inelasticity has been the increased efficiency of the coal-using industries.

In the long run, every development which tends to increase the efficiency of any industry, or of industry in general, can hardly fail to be beneficial to society as a whole. And every change which reduces the amount of coal required to produce a fixed amount of energy extends, *pro tanto*, the life of Britain's coal deposits, which is certainly not unlimited. During the last quarter of a century, however, the pace at which new economies in coal production and consumption have been effected has been markedly expedited, precisely at a time when foreign trade has been restricted and competition from overseas producers and from alternative sources of power has been rapidly increasing. These varied and powerful, but largely uncontrollable, forces have set up formidable stresses and strains within the structure of an industry which, in Great Britain, has always been highly localised. To this condition is due, in no small part, the existence of the Special Areas, whose economic difficulties, appropriately enough, were the subject of special Reports laid before Parliament on the self-same day this week as the Coal Bill obtained its second reading. The coal industry can neither put back the clock nor arrest the march of new discovery. But the facts cited in this article serve at least to emphasise the imperative necessity for removing all hindrances to the economical development of the industry itself. The case for the measure now before Parliament is that it is designed as a means to the indispensable objective of improved technical and financial organisation.

Britain's Open Spaces

GENERATION by generation, as official records show, we are becoming increasingly a nation of town-dwellers. To-day more than four-fifths of the population of England and Wales is clustered in areas of urban administration. Half the urban population lives in some 51 towns with more than 100,000 inhabitants each. Only 8 out of 40 millions live in the country.

A determined effort is being made to redress some effects of this urbanisation. Our urban population is looking increasingly to the countryside for rest and recreation. "Back to the land" has a dual meaning in these days of State encouragement and aid to agricultural production; for though we still import three-fifths of our food from abroad, facilities for light, fresh air and exercise must, for the great majority of our population, be produced wholly at home.

The national importance of the open spaces which are accessible to the 32 million urban dwellers in England and Wales has only recently obtained widespread recognition. Belatedly, it is being sought to preserve these open spaces by public policy: to endow town children with adequate playing-fields, and to ring round cities with belts of green fields and parkland. Yet these steps, welcome as they are, seem to touch only the fringe of a great problem. To-day, all over the country, the townsman is asking that parks and playing fields shall be supplemented by the freedom of the countryside; that he may walk at will on commons, heaths and moors, as the Londoner once walked at Moorfields, Finsbury and Mile End.

The great majority of the commons left to-day are on poor soils and many are in the area of the Home Counties. The battle for their salvation for public uses has already been largely won. After three hundred years of enclosure, a stand was made two generations ago, to save for open spaces such land adjacent to London as had not been subject to agricultural improvement. The Ministry of Transport can still threaten the amenities of the Esher commons. But such threats, happily, are rare to-day. Even now the 1½ to 2 million acres of commons are not land to which the public have rights comparable to those of olden days. Nevertheless, for walking and breathing fresh air, especially in the country around London, the commons are theirs.

London, indeed, has been far more fortunate in its commons than the industrial North in its moors. The Northern battle for access to open spaces has been fought, but not yet won. From the moors behind Leek in Staffordshire, up into the Peak District, on to Blackstone Edge, through the Craven country and the Stainmore country, to the Roman Wall, stretch the Pennines and their adjacent moors, some 140 miles long and 30 to 40 miles wide. Valleys, dales and moors run from Skipton to Holmfirth and Clitheroe, skirt Blackburn, Chorley and Bolton, and come down to Rochdale and Oldham. There is a rich expanse of moors from Cartmel to Newby Bridge. Here, since Bryce introduced the first unsuccessful Access to Mountains and Moors Bill some 50 years ago, the hardy walkers of industrial Lancashire and Yorkshire, tramping 20 to 25 miles every week-end in parties of two and three, have sought full access to their natural haunts of health and exercise.

Their enemies have been the law and the grouse. Actually, in many places and at many times they are permitted to go more or less where they please. In law, however, they are liable to be stopped at any time and, in fact, they are usually debarred from the grouse

moors at all seasons of popular holiday, at Easter and at Whitsun and in August. At all times they walk on sufferance, and their only rights of access to many favoured spots are those which they can prove by prescription or by agreement.

The story of walking in the North is, in consequence, one of disputes and resentment. The walkers of Sheffield and Manchester have struggled for two generations to open footpaths—from Hayfield to the Snake, across Kinder Scout and near Saddleworth, and in a thousand other places. They have established few new rights, and it may be pertinent to ask whether some amendment of the law would not accord with the spirit of the present age. Health and fitness are now in the forefront of national policy. Walking and cycling have grown tenfold in the last decade; and national parks to preserve the fauna, flora and human amenities of the countryside are advocated by high scientific authorities.

One-third of Wales, more than two-thirds of Scotland, and nearly one-eighth of England are classed as heathland, moorland, commons and rough grazing, and described by Mr L. Dudley Stamp as being "of very slight economic value to the country." The proportions have changed little in the last sixty years, and it is precisely in this type of country that unchallenged rights of access are sought. To grant them would involve no uneconomic restriction of the area capable of productive agricultural utilisation. Perhaps the most comprehensive and ambitious of all plans for reconditioning the land of Britain is indicated by the formulae of Professor Stapledon, under which heathland and moorland would be used for permanent grass and timber, for disk ploughing, seeding, rolling and afforestation. Even under this scheme, however, nearly one-tenth of the total area would remain for public use or private shootings, because it was unsuitable for more intensive cultivation. The walker, after all, is a modest "consumer"; his paths, like Euclid's line, have length but no breadth. He does not ask to traverse cultivated land, or to be excused for damage to property. His *terrain* is the moorland and the waste, the mountain and fell, the woodland and the river bank. A grouse moor, he cheerfully admits, is a valuable property, a private asset to its private owner and, frequently, a local amenity. But he denies the necessity of closing many hundreds of square miles to him for practically all those months of the year when walking is pleasant and possible. Above all, he asks for assured rights of access, simply defined in law, in place of uncertainty and uneasy tolerance.

There is a peculiar urgency about the problem in a country like Great Britain, whose area is disproportionately small and whose population is disproportionately large. The germs of a solution were contained in a Bill, inspired by the echoes of crashing Gladstonian oaks in Hawarden Park, which was introduced by Mr Geoffrey Mander in the last session of the House of Commons—and left unheard. The Bill was designed simply to secure the right of free access to uncultivated land, subject to provisions to prevent abuses. It made the absence of specific damage a sufficient defence against any charge of alleged trespass. If its successor were to obtain a Parliamentary hearing, as a Private Member's Bill, the Government might not be ill-advised to grant it at least the facilities accorded last session to Mr Herbert's Marriage Bill. Its passage would make a marked contribution to the decencies of our urban civilisation, without undermining existing rights in private property or impeding the development of British agriculture.

Notes of the Week

The Coal Bill.—The two days' debate in the House of Commons on the second reading of the Coal Bill was not particularly illuminating. A very large part of the time of the House was taken up with the speeches of Labour members refusing to accept anything short of immediate and complete nationalisation of the whole industry and of no more realistic Conservatives like Mr Beaumont who said that "as a life-long opponent of nationalisation" he felt bound to vote against the Bill. One comparatively novel point was Mr. Clement Davies' complaint, from the Simonite bench, that the royalty owners were being given a gilt-edged security while everybody else in the industry has to risk his money or his life. This is a point which has some equitable appeal, though the uncertainty of the royalty owners' present income undoubtedly played some part in the assessment of their compensation at the comparatively low figure of fifteen years' purchase. And, in any case, the attempt to buy the royalties for anything but cash would further delay a reform which is already belated. Several Labour members argued that the surplus income of the Commission should be devoted to a pension scheme for aged miners. There is a strong case for such a scheme, but there are better ways of financing it than by perpetuating the present inequalities in the burden of royalties. The three Ministers who spoke—the President of the Board of Trade, the Chancellor of the Exchequer and the Minister of Mines—thus had very little direct criticism of the Bill to answer and added very little to what is already known of the procedure outlined in the Bill. The easy passage of the second reading will not exempt the Bill from further criticism at later stages. Amendments may be expected both in the Committee of the Commons and, particularly, in the Lords.

Civil Aviation Inquiry.—The composition of the Departmental Committee appointed by the Secretary of State for Air to inquire into the charges made against British civil aviation, and particularly against Imperial Airways, in last week's Commons' debate, has been announced. The members are Lord Cadman, chairman of the Anglo-Iranian Oil and Iraq Petroleum Companies; Sir Warren Fisher, Permanent Secretary to the Treasury; and Sir William Barrowclough Brown, Permanent Secretary to the Board of Trade. The Air Minister is to conduct an independent inquiry into Imperial Airways' relations with its staff, but this subject is not excluded from the Committee's terms of reference, which are to include all the charges made in the debate. Immediate objection was, however, taken in the Commons to the composition of the Committee, consisting as it does of a Government director, a Government official and a onetime Secretary to the Air Ministry. There was also some objection to the examination by civil servants of charges made by Members of Parliament. In the end, the Prime Minister undertook to discuss the matter further with the Air Minister in order to ensure that the inquiry is generally accepted as completely impartial. The public inquiry originally asked for would have ranged too widely over civil aviation topics already adequately canvassed in general by the Maybury and other Committees. This inquiry will be confined to specific charges. But it is important that its proceedings and findings should be made known in full as soon as possible, and that no breath of suspicion of concealment should be allowed.

Prices, Milk and Nutrition.—When Sir Archibald Sinclair, leader of the Liberal opposition, spoke at Manchester on November 19th, he made a petition against the recent increase in the cost of living his text for a strong attack on the Government's policy of agricultural protection and restriction, and especially on the

absurdities of its milk scheme. On the same day, a report of the Food Council drew attention to the excessive costs of milk distribution and the redundancy of distributors. Retail prices being controlled, there is undue competition in the provision of unnecessarily elaborate services. All these factors swell the cost of distribution, and milk is too dear for the purses of those who need it most. The Food Council's alternative suggestions for the removal of this obstacle to the development of a proper nutrition policy were either the decontrol of retail prices to cause a downward revision of prices through competition, or rationalisation of the milk trade. On November 25th, the matter was again raised in the House of Commons, when Labour speakers laid stress upon the prevalence of under-feeding and undernourishment and followed the example of a recent paper to the Royal Statistical Society by questioning the validity of clinical assessments of nutrition.

Mr Bernays, for the Government, was satisfied that everybody could obtain "at any rate the minimum necessary for existence." His critics were not placated by these comfortable words, and maintained that rising prices, coupled with the inequities of milk distribution, were a serious menace to public nourishment. During 1937 the cost of living has been rising faster than the average level of wage rates. While the Ministry of Labour wage index has been some 3 or 4 per cent. above last year's level for the greater part of the year, the cost of living index (on November 1st about 60 per cent. above the level of July, 1914, compared with 51 per cent. a year ago) has been running at about 6 per cent., and the cost of food alone at about 8 per cent., above last year's level. Earnings have risen more than wage rates, but the current trend is serious for the lower paid workers whose margin of subsistence is slender at the best of times—and for the unemployed who have been only slightly protected by the grant of additional 2s. or 3s. weekly "winter allowances." It is on the poor, and particularly on mothers and children, that the vicious effects of the milk scheme really fall.

Typhoid in Croydon.—The alarming outbreak of typhoid at Croydon has not yet been arrested, although the source of the trouble in an affected well has been located. On Thursday as many as 180 cases had been reported, seven persons in the borough had already died, and the abatement of the epidemic officially forecast last week was not discernible. A somewhat similar outbreak occurred in the Bournemouth district last year, and doubt has been expressed whether, in such cases, co-operation between the public health authorities, hospitals and private practitioners is adequately speedy and comprehensive. The magnitude and competence of our health services being undoubted, it is the more disturbing that such grave epidemics should occur. A public inquiry has been ordered by the Minister of Health, which may afford valuable guidance for the erection of future safeguards. Meanwhile, the disease is being fought with a serum, and an early end to Croydon's afflictions is prophesied. There can be no toleration, however, of such outbreaks if medical and administrative ingenuity—and co-operation—can possibly prevent them.

Unemployment Reforms.—The Government's Unemployment Insurance Bill, the text of which has now been issued, makes five detailed, but interesting and important, amendments to the Unemployment Insurance and Assistance schemes. The first two relate to the Junior Instruction Centres and Classes which unemployed boys

and girls may be required to attend. The first clause of the Bill gives the local Education Authorities (who are in charge of the Centres) the power to provide free meals, milk and biscuits for the attending children. Another clause gives Education Authorities in Scotland the power, already possessed by Authorities in England and Wales, to provide medical services for these unemployed juveniles. The Exchequer will provide three-quarters of the cost of these services. The third reform is to include gamekeepers and grooms in the Agricultural Scheme of Unemployment Insurance. This is done on the recommendation of the Statutory Committee, whose report on the subject has also been published. The Committee have considered the inclusion of chauffeurs as well as stablemen and grooms, but have come to the conclusion that chauffeurs should be included in the general, rather than the agricultural scheme, and this can be done without legislation. The Statutory Committee, under Sir William Beveridge's Chairmanship, has already established a reputation for the clarity, progressiveness and humanity of its reports. Its latest document also records an interesting development in the technique of social legislation. The Committee announced both in the Press and by radio that they were contemplating the inclusion of these categories of workers in unemployment insurance, and invited letters both from employers and employees, especially from those opposed to the proposal. The Committee's decision was very largely based on the opinions expressed in the letters received, many of which are quoted. This is a wholly praiseworthy version of the referendum.

The fourth change made by the Bill is financial. In a letter to the Minister of Labour on November 4th, which has now been published, Sir William Beveridge pointed out that by the end of this year the surplus in the Unemployment Fund will amount to about £62 millions and that there is a reasonable prospect of a further £20 millions being added during 1938. The greater part of this surplus is needed as a reserve held against depression or to provide for the improvement of benefit made in the last two years. But in the meantime, the Fund is earning only about 1½ per cent. on its surplus, while it is paying about 3½ per cent. on its debt of about £100 millions. Under the existing law, the Statutory Committee has power to recommend the reduction of debt by more than the prescribed annual amount. But the only effect of such repayment is to reduce the annuity period; it would not affect the annual debt charge on the Fund. Accordingly, Sir William Beveridge suggests that the Fund should have the power to make extra repayments of debt which would proportionately reduce the annual debt charge, and that it should further have the power to re-borrow any such additional repayments. This obviously sensible suggestion is complied with in the new Bill. Finally, the Bill

puts men leaving the defence forces on the same footing as men employed in industry. Hitherto, men normally discharged have been credited with unemployment insurance contributions for the period of their service, but this has not applied to men discharged at their own request or for service or civil offences. This exception, with a few very minor modifications, is now to be removed. This collection of details does not add up to a major reform measure; its dimensions can be gauged from the fact that it will impose a burden on the Exchequer of less than £100,000 a year. But it puts an end to a number of anomalies and illogicalities.

The Japanese in Shanghai.—Having insulated the two foreign settlements in Chinese territory at Shanghai from those Chinese territories that are under Chinese administration, the Japanese have now given the first public intimation that, in the French and the International Settlements, they intend to step into China's shoes. The Japanese Consul-General at Shanghai has presented a number of demands to the Secretary-General of the Municipal Council of the International Settlement and to the French Consul-General, who is the administrator of the French Settlement. He has asked these foreign authorities, in their respective areas, to suppress anti-Japanese activities in the way of Kuomintang propaganda (through the posting of bills, circulation of literature, broadcasting, exhibition of films, theatrical performances, and so on); to remove Chinese Government offices and the representatives of the central and local Chinese administrations; to supervise the activities of Chinese politicians resident in the Settlements; to prohibit Chinese censorship of posts and telegraphs and suppress Chinese censorship of the Chinese Press; and to suppress unauthorised wireless communications. This Japanese move towards taking over the exercise of Chinese sovereign rights would be legal, as a provisional measure for the duration of the war, if a legal state of war existed, and if the Settlements were part of the Chinese national territory that was *de facto* under Japanese military occupation. As neither of these legal conditions is fulfilled, Japan would appear to have no legal *locus standi* for interfering in the affairs of the Settlements at Shanghai. But the question of legality is, of course, beside the point, considering that Japan holds the Settlements in the hollow of her hand and that the foreign Powers are obviously not going to attempt to resist any action she may choose to take.

If Japan is really going to arrogate to herself all China's legal rights in the Shanghai Settlements, the claim may soon be pushed to the point of virtually taking the Settlements over, for the immense structure of

international and French municipal administration rests on the flimsiest foundations. In law the two Settlements are nothing more than aggregates of parcels of land which the Chinese Government have leased to individual foreign leaseholders. An historian will be reminded of what happened to an earlier generation of Frankish business men in the Genoese foreign settlement at Galata when Mehmed the Conqueror captured Constantinople. Galata, like the two Settlements at Shanghai, was spared the physical devastation that the Turks then inflicted on Stamboul and the Japanese yesterday on Chapei. But the Galata merchants lost their municipal autonomy and were reduced to the same status as the wretched Byzantines, whom they had formerly bullied and despised. Are we witnessing a similar metamorphosis at Shanghai to-day?

Advance on Nanking.—Superior transport and weight of armament are still producing their inevitable effect on hostilities in the area between Shanghai and Nanking. The Chinese army, though superior in numbers, has been battered or manœuvred out of one position after another. At the end of last week the Chinese were attempting to hold a line which, leaving the Yangtse at Fushan, ran south with the city of Soochow just behind its centre. But the advance of the Japanese along the south bank of the river forced the evacuation of Soochow, and the Chinese have now fallen back to the heavily defended line between Kiangyin on the Yangtse and Wusih on the lake of Tai-Hu. Nanking is about seventy miles to the rear, and it is still the determination of the Chinese command to defend it with all the means at their disposal. It looks, however, as if even the greatest sacrifices of men and munitions will succeed only in delaying the Japanese advance. The civil government has already left Nanking and the foreign embassies have followed the Foreign Office to Hankow. This retreat into the interior is the best strategy for China. But it would be foolish to prophesy how long it will be of avail in view of last month's demonstration of Japan's strength and the West's weakness.

The End at Brussels.—The Brussels Conference has come to an inglorious end. It re-assembled on Monday and adjourned *sine die* on Wednesday, after adopting a report and a declaration. The report is no more than

an historical summary of the work of the Conference. The declaration puts on record the view of the conferring Powers that the Nine Power Treaty applies to the present dispute, that force can provide no just and lasting solution, and that hostilities should immediately be suspended. And that is all. No wonder that Dr Wellington Koo could not conceal his bitter disappointment; and even less wonder that Count Aldrovandi-Marescotti did not try to conceal his glee. The declaration, it is true, does not formally end the Conference, but merely suspends its sittings "in order to allow time for participating Governments to exchange views and further explore all peaceful methods by which a just settlement of the dispute may be attained." But these words mean little. The conferring powers were unable even to reassure France that it would be safe to resist the Japanese threat of reprisals unless the export of arms to China from Indo-China were stopped. In short, the Conference has been a failure so unrelieved that it would probably have been better never to have called it.

Contracting and Expanding Industries.—The November issue of the *Ministry of Labour Gazette* contains the usual detailed analysis of changes in the number of persons insured against unemployment between July, 1936, and July, 1937. The total of 14,611,000 persons aged 14 to 64 insured under the General and Special Schemes in the United Kingdom on July 5, 1937, shows an increase of 326,000, or 2.3 per cent., over July, 1936. The number insured under the Agricultural Scheme was 723,000. Changes in the number insured in all industries as well as in four important branches of activity since 1929 are shown graphically in the accompanying diagram. While the number of persons engaged in building has risen substantially between 1929 and 1937, those in the steel and engineering, and coal and cotton trades has shown a marked decline during this period. But while the reduction of coal miners and cotton operatives has been continuous, there has been a marked influx of workers into the steel and engineering industries since 1935, an indication of the revival of the metal trades. During the year ended July, 1937, however, the rate of influx into the building, and steel and engineering industries has perceptibly slowed down. The rate of increase between 1936 and 1937 was most marked in the case of electric cable, apparatus and lamp manufacture (15.8 per cent.), non-permanent railway workers (12.7 per cent.),

CHANGES IN NUMBER OF INSURED PERSONS SINCE 1929
(1929=100)

electrical engineering (12.4 per cent.), motor vehicles, cycles and aircraft (12.0 per cent.), and National Government Service (10.3 per cent.). The number of workers in the cotton and coal-mining industries, on the other hand, declined by 3.4 per cent. and 3.0 per cent. respectively.

Conspiracy in France.—The anti-Republican conspiracy in France is an unfortunate affair, whichever way we look at it. The first revelation of its nature and extent came last week, and a more comprehensive public statement was made on Tuesday of this week by the Minister of the Interior. The French Government are, of course, to be congratulated on having detected and presumably frustrated the plot in time, and the first public reaction will no doubt be a rally in support of democratic institutions in general and of M. Chautemps' Government in particular. On a longer view, however, it is to be feared that the incident will leave behind it a legacy of anxiety and embitterment. The successful frustration of the plot may make a less lasting impression than its seriousness; and the indignation that will inevitably and rightly be aroused against the conspira-

The Special Areas.—The eagerly awaited report of the Commissioner for the Special Areas in England and Wales will be received, as clearly it was written, with mixed feelings. There has been a marked improvement in employment in the Areas in the past twelve months, due almost entirely to expansion of the basic industries whose decline brought the Areas into being. The percentage of unemployment in West Cumberland, Durham and Tyneside and South Wales fell from 29.5 to 21.9, a decline of 25.6 per cent. compared with 14.5 per cent. for Great Britain and only 12 per cent. for the rest of England and Wales. In the Commissioner's view, the general recovery of the Areas has been "largely independent of armament work," although, under the Defence Programme, the Government has spent £17,286,000 in the Areas on factories and extensions and, between April 1, 1936, and the end of August, 1937, the Service Departments have placed orders to the value of £32,870,000.

Improvement in the heavy industries and re-armament, however, have "affected only certain parts of the Special Areas." Moreover, "no likely increase in the coalmining industry will absorb more than a small

tors may help to widen a gulf between parties and classes which in France hitherto, as in England, has never been too broad to be bridged.

The revelations began on the 16th of this month with certain arrests at Dieppe on the charge of illegal possession of arms and with the sensational discovery in Paris of a secret arsenal and fortress behind the innocent-looking exterior of a boarding-house. Two further discoveries of the same kind followed in Paris on the 18th, and three more—two in Paris and one in Lille—next day. On the same day, M. Chautemps made a public reference to the affair in the Chamber, in which he described France as being in the position of a besieged country. On the same day, again, it was unofficially reported that much of the war material that had been seized had proved to be of German and Italian make. On Tuesday, another arsenal-fortress was discovered in the house of the late M. Coty, the perfume manufacturer, in the suburbs of Paris; and similar discoveries are being recorded from Dieppe, Caen, Montfleur and Lisieux, Lille and Valenciennes, Lyons and Strasbourg, Bordeaux, Toulouse and Cannes. According to the statement made on Tuesday by the Minister of the Interior, the searches have shown that the Republic is confronted with an organisation modelled on army lines. The documents seized reveal that the conspirators were aiming at the overthrow of republican institutions and at the establishment of a dictatorship which was to lead on to a restoration of the monarchy. (The manifesto issued on Monday by the Duc de Guise, the pretender, may or may not have had some connection with the plot.) Whether or not these discoveries have anything to do with a secret society called the *Cagoulards* ("Hoodies"), which was detected in September, they are sufficiently sensational as they stand.

part of the unemployed labour in the Areas"; and, in the iron and steel industry, "improvements in methods have made it impracticable to employ more men on the present plants" and "some proportion at least of those unemployed are not capable of being reabsorbed." The increase in employment has not been in proportion to the increase in output; and although startling reductions in unemployment have occurred in many places, and some reduction in all, there are still 210,608 unemployed persons in the three Areas. The greatest decrease has taken place among the younger men aged 18 to 34 years, and the proportion of older men has increased. "With the return of prosperity to the country, the unfortunate condition of the Special Areas has become more painfully apparent."

Policy for the Areas.—While the Special Areas have been somewhat relieved of their depression, the Commissioner has been engaged on the latest phase of the Government's policy to facilitate a more lasting recovery in the Areas by broadening the basis of their

economic life. In May, the Commissioner was empowered to give financial assistance to private enterprise in the Areas, by contributions to meet rent, rates and taxes. Sir George Gillett, the Commissioner, sees in this the first step towards the assumption by the State of an increasing responsibility for the location of industry. As yet, however, he can record very little progress in the attraction of new industries, but a great deal in social work. The delays of which Sir Malcolm Stewart complained, due to the need to get decisions from a number of Departments, have been abated by the setting up of an Inter-Departmental Committee. The Trading Estates at Gateshead and Treforest have begun operations, and the Trading Estate Companies are being utilised regionally to clear sites in Durham and South Wales. Sir George has brought into being the South-West Durham Improvement Association and the West Cumberland Industrial Development Company to improve the industrial amenities of the most depressed regions.

To assist him in the inducement of new industries, the Commissioner has the Treasury Fund, the Special Areas Reconstruction Association, and the Nuffield Trust; but, while up to September 30th actual payments from the Special Areas Fund alone amounted to over £4,000,000 out of estimated commitments of £12,900,000, business men have not widely responded to public persuasion. Though he repeatedly emphasises that great progress may be made in the next twelve months, the Commissioner reveals where, in the last resort, his real hopes lie. "The Government cannot, especially since the introduction of tariffs and quotas, evade all responsibility for the location of industry." Referring to the Royal Commission on the distribution of the industrial population, Sir George adds:—

All who have the problem of the Special Areas at heart will follow with great interest the deliberations of this Commission, and will hope there will be produced a policy of lasting benefit alike to the Special Areas and the country as a whole.

In connection with the proposal of the recent Report on the Iron and Steel Industry for an independent body to supervise the development of the industry in the public interest, he says:—

It has at last been conceded that matters which concern the welfare of thousands of our fellow citizens are properly to be considered in relation to their social and broad economic consequences as well as in relation to the profit and loss account of the individual concern. If this

principle had been recognised 15 years earlier much suffering might have been avoided.

Sir George has made the best of a bad job. But, in all honesty, he suspects that neither private initiative and enterprise nor his authorised powers of persuasion are enough. If the Special Areas are to be cured, a more drastic policy is needed.

A Belgian Cabinet at Last.—M. Van Zeeland resigned the Belgian Premiership on October 25th. For four weeks and one day there was no Belgian Cabinet. The three parties which had composed the Van Zeeland Government—Catholics, Socialists and Liberals—were agreed that the only possible Government was a renewal of the same coalition. But several attempts made by Catholic and Socialist leaders were wrecked on the rock of party, personal and linguistic jealousies. M. Spaak, the Socialist Foreign Minister, once almost succeeded and had issued his list of Ministers before the obstinate divisions were re-asserted. Negotiations were suspended during King Leopold's visit to London, but seemed at first to be no more hopeful when they were taken up on his return. Finally, on November 24th, M. Paul Emile Janson, a Liberal Minister of State, succeeded in forming a Government. And after all these delays it is found that the new Government, save for the person of its Premier, is virtually identical with the last. The balance of parties is almost the same, and the two key Ministries of Foreign Affairs and Finance are still occupied by their Socialist incumbents, MM. Spaak and De Man. The result of the crisis is, in fact, a political vindication of M. Van Zeeland, since his personal enemies within the coalition parties have had to be kept out of power. By wrangling for four weeks and then agreeing to a solution which could have been effected on the morrow of M. Van Zeeland's resignation, the Belgian politicians have done themselves scant credit.

Mixed Trade News.—The latest reports from industrial centres indicate that activity is no longer evenly maintained by all branches of business. The iron and steel and metal-using trades remain busy. The demand for coal has shown some improvement, but news from the textile trades continues unsatisfactory. Current sales of cotton yarn represent less than half the current output. Developments in the principal British industries are discussed in greater detail in this week's Trade Supplement.

Washington, Wall Street and Depression

NEW YORK, November 16.—Washington no longer dismisses recent events as a mere flurry in Wall Street, or as nothing more than a desirable adjustment in industry. The dispatches indicate real concern about the outlook, without throwing a great deal of light upon Washington's appraisal of the actual situation. Similarly, comment in Wall Street ranges from the opinion that the recession will be severe, but brief, to the conjecture that we are in the early stages of an extended major depression. If one judges Washington's opinion by the public utterances of eminent officials and Wall Street's opinion by the level of security prices, Wall Street appears to take a more serious view of the future. For example, no one could be better qualified to express Washington opinion than Mr Jesse Jones, chairman of the Reconstruction Finance Corporation (R.F.C.); in the press on November 3rd he was quoted as saying, "there are no clouds on the horizon that would adversely affect the average American citizen"; and he added, "there has been entirely too much attention paid in recent weeks to the gyrations in the stock market." Ten days later he was reported as saying that he did not believe that the business recession was "as serious as some people seem to think," and that he believed improvement would come "in the early future, certainly in the spring."

Mr Morgenthau, Secretary of the Treasury, in a formal address, remarked that "speculative markets have recently been under severe pressure," and that our business indices have "recently shown a declining tendency"; but, after a review of various elements in the situation he concluded that "conditions are favourable for a continued increase in the level of business activity." Considering the prospects of a balanced Budget, he remarked that "to be prudent we should not count on an increase in revenues next year from the existing tax structure. Nor should we impose additional taxation." He suggested instead a reduction in expenditure of some \$700 millions, and specifically of expenditure associated with relief, such as on highways, public works and general unemployment relief. In other words, he anticipated no decline in business which would reduce the revenue from existing taxation, and a lessened demand for relief in its varied forms.

In Wall Street one can pick up highly rationalised forecasts of almost any sort, but on the whole they are pitched in a minor key compared with those from Washington. The average of industrial production (Federal Reserve Board Index) for the calendar year 1936 was 105; the average for the last four consecutive quarters (i.e. the final quarter of 1936 and the first three quarters of 1937) was 115. Part of the taxes paid in 1937 are based on current factors, but part (like income taxes) are based on 1936. The forecast that the present taxes (including the Loophole Tax of last August and the schedule of the so-called Social Security Taxes) will bring revenue in 1938 substantially equal to that of 1937 presupposes that the incomes subject to income tax in 1937 will be approximately equal to those of 1936; and that the rate of industrial activity in 1938 will be approximately the same as in 1937 to date. If the present level of security prices is any expression of unofficial sentiment, it indicates more modest expectations than these; for the decline in the market, and in the current ratio of security prices to dividends disbursed in the last four quarters, suggests a substantial decline in corporate earnings is anticipated. That corporate earnings in the final quarter of 1937 will be lower than in any recent quarterly period is now generally expected.

Reduced Earnings Expected

Actually, these quotations can be interpreted as evidence that a severe and more or less prolonged period of reduced earnings is expected. Such a deduction raises the question whether this forecast is based on fears about the volume of industrial production, or about the diminution of the profit margin. There is no complaint about the volume of business in the utility industry, which is at record high levels; but earning power has been reduced by lowered rates and higher costs. The railroads, on the other hand, are carrying much less traffic than formerly; but, even if their traffic were to recover, they would not recover correspondingly their earning power, which has been eaten away by higher costs and lower rates. The same force has been visibly at work in certain types of building.

The fact is that a considerable part of American investment is not now giving much return to its owners. The railroads are not forming enough capital to provide even for their own repairs and replacements—to say nothing of improvements after long years of small capital investment. The utilities are forming just enough capital to cover maintenance; but at no time in recent years have they offered much attraction for the investment of the additional funds required to meet the needs of a still expanding industry. In an industrial economy, corporate earnings are the principal source of capital formation; and no figures have yet appeared to suggest that recent corporate earnings have in general approached the level of 1928 and 1929, although production in the last twelve months compares favourably with those years. Furthermore, a smaller fraction of those reduced earnings is available for reinvestment in industry by reason of the great increase in taxation. In addition, the general tendency, recently observed, for American investment funds to seek their outlet through institutional channels, and the comparative disappearance of the individual investor, have conduced to the avoidance rather than the assumption of risk.

France

The State of Opinion

PARIS, November 25.—Who are the *Cagoulauds*? None of the public knows. But everyone thinks, without saying so, that it is likely that the discovery of this "plot" will lead to the weakening of the extremists of both Right and Left and the consolidation of the Centre parties. The moderates of the Alliance Républicaine abstained from voting against the Cabinet after the recent speech of M. Delbos, the Minister of Foreign

NEW BOOK ON AMERICA

REMAKING THE BOOM IN AMERICA

By **Major Angas**

Author of "The Coming American Boom," July, 1934

This Challenging Pamphlet

- States the 5 causes of the recent market slump.
- Names forces making for further falls
- Points the *real danger* of new cyclical collapse.
- Tells how collapse can and should be prevented.
- Sounds a warning which must now be heeded.

HOW ROOSEVELT CAN REMAKE THE BOOM

Affairs, and a vote of confidence was passed by 399 votes against 160.

The Government will continue to resist exchange control which M. Bonnet has stated would not eliminate the Budget deficit. Nor are they ready to accept the demands of the extreme Left for increases in civil servants' salaries, pensions to aged workers, relief to distressed farmers, etc. Actually, however, political stability is encouraged less by the firm policy of the Cabinet than by two new factors outside the Government. In the first place, there is confusion in the ranks of the Conservatives, due to the dispute between Col. de La Rocque, chief of the "Croix de Feu," who is accused of having solicited financial aid from the secret funds, and the former President, M. Tardieu, and to the disavowal of the Royalist organ, "Action Française," by the Comte de Paris. Secondly, a less favourable sentiment about foreign markets has developed since the Wall Street slump, and by contrast the French difficulties seem less impossible to surmount than they did when the rest of the world had plane sailing and only France was in troubled waters.

Moreover, there are a number of other factors calculated to inspire confidence. These include the new firmness of the franc; the reconstitution of the reserves of the Equalisation Fund; the increase of 3,000 million francs in the gold stocks of the Bank of France; the lowering of interest rates; the issue of two foreign loans in Switzerland and Holland which will facilitate the reimbursement at maturity of the English loan; improved fiscal receipts; increased subscriptions to the "Bons de la Défense Nationale"; and a slight diminution of the import surplus. There are, however, continued doubts about internal policy; and fears suggested by the foreign "minor crisis" are checking the investment of repatriated capital on the Stock Exchange and in business.

Decline in Prices

Confidence in the public finances to-day depends less on orthodox declarations by Ministers than on favourable movements of the economic indices. A certain section of the Press is laying stress upon all the statistics, and especially those of production and foreign trade, which indicate the disequilibrium maintained by the operation of the 40-hour week. Wholesale prices, however, showed a further fall this week.

WHOLESALE PRICES					
	Oct.	Oct.	Nov.	Nov.	Nov.
	16	23	30	6	13
General index	620	614	611	604	595
Domestic products	644	643	641	643	638
Imported products	576	563	559	536	517

For the first time there was a decline in the index of the prices of domestic products.

Foreign trade showed in October an increase in the volume and value of both imports and exports:—

VALUE OF FOREIGN TRADE			
(Millions of francs)			
	October, 1936	September, 1937	October, 1937
Imports:—	760	841	957

Motor and General Insurances transacted

Chief Office: BROAD STREET CORNER, BIRMINGHAM

The import surplus in trade (excluding colonial) was 1,000 million francs, compared with 1,047 millions in September and 1,593 millions last February. This is the lowest deficit of the year. The ratio of exports to imports is 64 per cent., compared with 59 per cent. in September and 56 per cent. in August.

The monthly figures published by the Statistique Générale of industrial production in France are as follows:—

(1913 = 100)				
	Sept., 1936	July, 1937	Aug., 1937	Sept., 1937
General index	95	100	91	96*
Engineering	97	117	110	109
Iron and steel	81	104	91	102
Textiles	64	59	45	54
Mines (adjusted figures)	91	96	74	99
Building	58	55	53	51
Leather	106	94	91	91
Paper	159	129	112	130
Rubber	952	872	904	932
Motors	450	447	448	438

* An increase principally due to the end of "paid holidays."

In the week ended November 15th unemployment was 325,497, compared with 321,994 in the preceding week and 406,444 a year before.

Germany

Views on World Trade

BERLIN, November 24. — The Halifax visit had no visible influence on business, and very little on political sentiment. Share prices have again declined; but the cause seems to have been uncertainty about the international business outlook and, in particular, American prospects. In general, no serious or prolonged trade depression is feared. For the collapse of securities the fall in primary commodity prices is made responsible. The fact that shares on the Amsterdam stock exchange, where raw material concerns dominate, declined more than on other European exchanges, is considered to support this view. But the depreciation of raw materials, it is held, was an inevitable reaction against a too rapid recovery which was in great part speculative; and Washington's warnings of last winter against this kind of speculation are considered to have merely hastened and intensified the inevitable.

The recent policies of President Roosevelt, and indeed his policies ever since the dollar depreciation, come in for a good deal of criticism. The Director of the Trade Research Institute, Dr Wagemann, does not believe that a serious world economic crisis is impending. The raw material speculators, who drove prices up, underestimated, he says, the elasticity of production. But the future will not be decided by supply, though even in this certain factors raising prices are visible, but rather by demand, as determined by the future development of world trade. Dr Wagemann predicts that, while the reaction in the United States may last into 1938, no serious crisis need be feared; and he considers that cyclical conditions there and elsewhere are much more favourable than in 1929.

Financial journals point out that international unrest has so far had little influence on trade. It is not ignored that re-armament, itself due to the unrest, has stimulated industrial activity. In German business circles war talk is taken less seriously than abroad. The Chinese and Spanish troubles, it is observed, have become chronic and less acute. In these issues the pacific inaction of Great Britain, France and the United States constitutes a certain guarantee against complications. In Central Europe the situation has certainly not become worse. The Berlin-Prague exchange of hard words, which in the American Press has swollen to the dimensions of a "war scare," even with forecasts of the date of the German attack, differs in no way from the wordy duel between Berlin and Warsaw, before it was suspended by the ten-years' truce; and, indeed, the grounds are substantially the same. Certainly Germany is conducting an irredentist agitation against Czechoslovakia; but the

story that she intends to march into that country seems to be entirely without foundation. If only Czechoslovakia were to give up her association with Russia, which is the main cause of German resentment and fear, the irredentist agitation would probably subside.

Food Supplies

The grain and fodder outlook seems to have improved. In consequence of the large potato crop, the veto against using bread cereals for fodder has been more effective than was anticipated. Foot and mouth disease has spread from some 4,000 farms to 6,460 farms; but it is insignificant compared with the outbreak of 1920-22, which affected nearly 85,000 farms in 16,000 municipalities.

The meat question, which is mainly a pork question, is causing apprehension. The total number of pigs is about 2 per cent. lower than a year ago. The increase shown in the number of pigs of slaughtering age guarantees a sufficient supply of fresh pork in the coming months, but a heavy decline in breeding may threaten the supply at some time next year. This problem is being met by restricting the production of sausages and other pork products, and by increasing the prices of pigs to farmers by from 1 to 3 marks per 50 kilograms, according to weight. Retail prices are not to be raised.

The consumption of pork, the chief meat food, in the first three quarters of this year, was 1 per cent. higher than in the same period of 1936. The increase in the consumption of beef was 16.0 per cent.; and of all kinds of meat, including pork, the increase was 6.5 per cent. With the exception of tropical fruits, which show a decline of 34.8 per cent., consumption of all the more important food products has increased: of wheat flour by 7.7 per cent., of sea fish by 4.4 per cent., of milk by 4.9 per cent., of sugar by 10.6 per cent., of coffee by 17.3 per cent., and of beer by 7.9 per cent. The consumption of cigars has risen by 5.6 per cent., and of cigarettes by 7.6 per cent. These increases are in the total, not the per capita, consumption. The value of imported foodstuffs and condiments in the year ended July 31, 1937, was Rm. 1,757 millions, compared with Rm. 1,483 millions in 1935-36, when the lowest point was reached, and Rm. 5,579 millions in 1928-29. The increase in 1936-37 was almost entirely in vegetable foods (mainly wheat), imports of which rose in value from Rm. 674 millions to Rm. 906 millions. In 1935-36, the import of vegetable foods fell to little more than one-fifth of the 1928-29 figure (Rm. 3,160 millions), due, in part, to the fall in prices. The 12 per cent. improvement in prices in 1936-37 also partly accounted for the recent increase in the value of imports. The export of foodstuffs in 1936-37 continued to decline, and was only Rm. 86 millions in value, which is one-tenth of the highest pre-depression level.

The industrial situation has undergone no change. Coal production in 1937 will considerably exceed the output of 1929, which was 163,400,000 tons, the highest figure in pre-depression years. Coal exports, too, will exceed those of 1929 by about 10 million tons; and the average export price of German coal has recovered to nearly the 1929 level, being now Rm. 12.15 per ton, compared with Rm. 12.40 in 1929 and Rm. 8.86 in 1932. The inland price of Ruhr-Stückkohle is Rm. 18.25 per ton, compared with Rm. 20.40 in 1929 and Rm. 17.04 in 1932. It is reported that, owing to increased home production and structural economies, the shortage of non-ferrous metals is abating.

The return of the Reich Debt for September 30th shows a total of Rm. 17,602 millions, which is some Rm. 2,000 millions above that of the same date in 1936. Also returned, but not included in the above total, is Rm. 508 millions of other liabilities, compared with Rm. 940.4 millions a year before. This item consists mainly of tax credit certificates, and the decline is due to decrease in the circulation of these and in the amount deposited with the Reichsbank as security. According to rule, the Reich's bill liabilities are not returned. No new light on this last matter has been thrown for many months.

Hungary

Political Reforms

BUDAPEST, November 12. — Parliament reassembled after the summer recess and M. Darányi, the Prime Minister, opened the political season with a speech which succeeded in calming down the somewhat troubled atmosphere of the late summer months. It appears now that the Government will introduce the Electoral Reform Bill before the end of the year. As the Prime Minister frequently consulted the leaders of the parliamentary Opposition about the secret ballot and the redistribution of the constituencies, there is a fair chance that the Bill will pass, though considerable differences have still to be surmounted, especially about the proposed rights of the Upper House.

The forthcoming visit of M. Darányi and his Foreign Minister to Berlin has no special political significance. Negotiations to improve relations with the neighbouring States, Czechoslovakia and Roumania, are to continue. Their success depends primarily on goodwill and the guarantees which the Roumanian Government is prepared to give concerning the rights of the Hungarian minorities.

The revision of the Rome Protocol has not caused any concern in business circles. When the Rome Protocol was originated in 1934, cereal prices were very low and Hungary's chief object was to obtain for her wheat farmers better terms than the free markets offered. The problems now awaiting solution result from the sharp rise in Hungary's export surplus to Italy, and from the fact that changes in Italy's foreign trade position have altered the prospects of handling the proceeds of this surplus. These changes come just when the whole question of marketing Hungary's exports may be examined anew in the light of the increase in food prices on the free markets.

Favourable Trade Balance

Comparative figures of foreign trade in 1936 and 1937 are as follows:—

(In million pengö)				
	Imports		Exports	
	1936	1937	1936	1937
January-June	219.6	218.5	216.1	293.2
July	36.8	41.7	40.7	41.2
August	31.9	41.2	49.4	49.8
September	33.5	42.6	53.9	48.0
January-September	321.8	344.0	360.1	432.2

Though the export surplus for the first nine months, valued at 88 million pengö, is the largest recorded for any corresponding period for many years past, it is significant

Sun Life Assurance Company of Canada

H. O. LFACH
(General Manager for Gt. Britain)

2, 3 & 4 Cockspur Street, London, S.W.1

that exports in the third quarter were considerably lower in value as well as in quantity than in the same quarter of 1936.

The direction of Hungary's foreign trade show that 23.5 per cent. of the total exports in the first eight months of 1937 went to Germany, 17.2 per cent. to Austria and 14.4 per cent. to Italy, practically the same proportions as in the corresponding months of 1936. On the other hand, exports to England fell considerably, amounting to 6.3 per cent. of the total, compared with 9.7 per cent. in 1936. Germany was again the leading importer, with 26.3 per cent. of the total, a little more than last year, but still insufficient to pay for the value of the merchandise exports; on balance there is some 11 million pengő to Hungary's credit in trade with Germany in the first eight months of 1937. Imports from Austria have increased from 45 million pengő to 54.5 million pengő, or from 15.6 per cent. to 18.1 per cent. of the total imports. While the value of Hungary's merchandise exports to Austria in the same period have risen from 51.5 million pengő to 66.2 million pengő, the Austrian clearing is still unfavourable to Hungary, because the agreed 100 to 150 ratio in favour of Hungary has not been achieved for years, with the result that Austria has considerable uncleared claims in Hungary.

Business continues to be good, and winter prospects are satisfactory. The only disquieting feature is that prices of basic commodities are in some instances well above world market prices, as in the case of wheat, live-stock and other agricultural products, especially those which are readily marketable in Germany. The cost of living, according to the Statistical Office's index, has risen from 97 in September, 1936, to 103.5 at the end of September, 1937. The higher prices have led State employees to ask for an increase in their wages, and the Government has now promised a moderate increase, which will probably take effect in January, 1938. As public revenues continue to come in at a satisfactory rate, a small increase in this item of expenditure will not jeopardise the budgetary equilibrium which was just re-established last year after seven years of continuous deficits.

Spain

Finance in Republican Spain

BARCELONA, November 11.—Towards the end of October the sum of 290 million pesetas (about £3,550,000 at the official rate of exchange) was required by the Spanish Government to reimburse the holders of Treasury debentures if they should make use of their option to be refunded on that day. A loan was issued to meet the possible demands of the holders. The holders of only

an insignificant part of the above amount, however, made use of their option. The Prime Minister, Dr Negrin, in a declaration made to the Press, referred to this episode as a "most eloquent vote of confidence given to the issues of the Spanish State." It was largely due to the previous punctual payment of interest on all loans issued by former Spanish Governments, "a proceeding probably unique in the history of civil wars."

During the sessions of the Cortes held at Valencia in October, the Spanish Government was authorised to carry out a series of temporary and permanent financial measures involving considerable expenditure. The Cortes therefore approved the issue of a loan in one or several parts to a total amount equal to that actually owed by the State Treasury, the amortisation of which must not extend over a period of more than five years. The bonds are to be issued at par at a maximum interest of 5 per cent.

The necessary means for the service of this loan, as well as for the execution of measures for the support, development and guidance of national activities, are to be procured by a series of new taxes. An additional war tax will be levied varying from 50 to 25 per cent. on all incomes over 5,000 pesetas a year. The tax already in force on the interest coupons of public bonds will be increased to cover 50 per cent. of the interest charges upon the State, and the tax will have to be paid on bonds issued free of taxes. A tax varying between 10 and 30 per cent. will be levied on pensions paid by Government, with the exception of those not exceeding 5,000 pesetas a year. All these taxes, it is stated, will be cancelled as soon as possible after the war.

A considerable increase in public income may be expected from new monopolies and from the modification of the existing ones. In cases where the latter have been rented to companies in return for fixed annual payments the Government has the right to reclaim them and work them direct.

Government Intervention

One of the most important parts of the decree deals with the municipalisation of public services. The Government is entitled to superintend the technical and administrative management of these services by the municipal authorities and to lay down conditions for the expropriation of the former owners. The decree states further that the municipalities have no right to entrust the working of these services to third parties.

No modification of the present Spanish monetary system is intended, but the Government of the Republic has now the right to withdraw the coins and notes at present in circulation and to issue new ones, to a maximum covered by a reserve of precious metals, properties, credits and foreign currency, the proportion of which to the total fiduciary issue will be fixed. In no case can notes be issued without cover.

A special section of the decree is devoted to the consolidation of banking establishments and the participation of the State in their profits. The terms of rediscount allowed by the Bank of Spain to private bankers are to be revised, to give greater elasticity to the banking system. The Government is further authorised to decree the amalgamation of several banks, and to alter the composition of the boards of directors of credit establishments to establish "public influence"—but, in no case, to deprive the boards of their autonomous rights.

The prices of foodstuffs and raw materials are officially regulated to prevent profiteering; and foreign trade is supervised to ensure the convenient employment of credit and debit balances and to prevent the flight of capital. An official Agricultural Credit Bank is to be established with branch offices in all provinces to grant credits to small farmers and farmers' syndicates. The cultivation of tobacco has hitherto been prohibited in consequence of the agreement concluded with the tobacco company. It is now to be encouraged, and this cultivation will probably benefit Spanish agriculture, as experience has demonstrated that tobacco of exceptionally good quality can be produced in many Spanish provinces. The tobacco produced will be sold exclusively to the State.

Greece

Agricultural Development

ATHENS, November 5.—Provisional returns confirm to a large extent the optimistic spring forecasts of this year's crops. The output of the principal agricultural products, compared with that of last year, is likely to be as follows:—

AGRICULTURAL OUTPUT (In tons)		
	1936	1937
Wheat	580,000	900,000
Other cereals	363,000	500,000
Tobacco	82,000	64,000
Currants	126,000	120,000
Must	256,000	332,000
Olive oil	64,000	154,000
Cotton	50,000	88,000
Figs	20,000	24,000

The decrease in the output of tobacco is due chiefly to restrictive policy, but the quality is much improved. The lower output of currants is attributed to adverse climatic conditions.

The paramount importance of agricultural development and good harvests for the economic prosperity of Greece need hardly be emphasised. Hence the efforts of successive governments, especially since the world war, to promote agriculture by extensive land reclamation, by the propagation of scientific methods of cultivation, and by the development of agrarian credit. These efforts have gradually been intensified, and the scope of State regulation has been enlarged to include the improvement of the quality of the products and their marketing conditions—especially in the case of products for export, which are meeting with increasingly severe competition in foreign markets.

Active Industry and Trade

Industry has been exempted from the business turnover tax on the proceeds of its sales abroad. Industrial activity is maintained at a high level, especially in the trades working on government contracts and in the metal industries. There are no important stocks, and because of a steady demand and the increase in raw material prices and in costs, the prices of industrial articles are 25 to 30 per cent. higher than a year ago. The index of industrial production (1928=100) was 154.51 in June (the latest available figure), compared with 149.48 last December, and 132.73 in June, 1936. For the same periods the general index of economic activity was 131, 129.5 and 94.2 respectively.

Foreign trade returns for the first eight months of the current year compare as follows with the corresponding period of 1936:—

(In millions of drachmas)			
January to August:—	Imports	Exports	Surplus of Imports
1936	7,556	3,090	4,466
1937	9,909	4,763	5,146
Increase in 1937	2,353	1,673	680

In volume, both imports and exports are larger this year, though the increase in exports is due entirely to exceptionally big shipments of mineral ores of comparatively small value. The large increase in the value of both imports and exports is due to the rise in world prices. Despite restrictions, imports have now been steadily growing for some years; and the import surplus has risen accordingly. New clearing and other agreements were signed on September 24th with Germany, which is now the principal customer of Greece. It was officially stated that these agreements aimed at balancing the trade between the two countries, to avoid the problems arising out of the creation of creditor balances one way or the other.

After steadily declining in July and August, the gold and foreign exchange reserves of the Bank of Greece have increased since September. Compared with last year, the returns of public revenue and expenditure

were also higher. The recent Stock Exchange speculative boom was followed by severe reaction in August and September.

Greek shipping is benefiting from the rise in international freights. Greek shipowners are encouraged to increase their fleets. According to private statistics, in the course of the second and third quarter of the current year 36 new steamers have been bought, with a capacity of 125,243 tons, for a sum of £1,366,220.

Letters to the Editor

Investors and the Coal Bill

TO THE EDITOR OF THE ECONOMIST

SIR,—I cannot but think that in estimating at a figure between £1.2 millions and £1.6 millions the sum which will be applied to the reduction of underground wayleaves, etc. (*The Economist*, November 20th, page 378), you are being somewhat optimistic. If we assume that the gross revenue from royalties is about £5 millions per annum, there is an initial deduction of £1.25 millions for income tax. Since the Coal Commission are in no way exempt from liability for any tax, duty, rate, welfare-levy, or other charge, whether general or local—which means that in Scotland they will have to pay some 50 per cent. of the local assessment—a conservative estimate of the aggregate taxation to be added to income tax would be £400,000; which will leave the Commission with about £3.35 millions.

Assuming that they raise a loan at 3½ per cent. repayable at sixty years, the annual service of the loan will be about £3.065 millions, from which approximately £665,000, being recoverable income tax on the interest (estimated at £2.37 millions), must be deducted. The net cost to the Commission of the loan will thus be about £2.4 millions annually.

The balance at the disposal of the Commission is thus £950,000. But out of this must be found the salaries of five whole-time men, and the costs of secretaries, officers,

agents, surveyors, and the like. This staff will require provision for gratuities, pensions and so forth; incidental costs, such as those relating to arbitrations, will also have to be found; and the costs of the Commission will be about £250,000 a year.

This leaves only £700,000 available for the relief of the industry. This sum is likely to be substantially outweighed by the expense to which colliery undertakings will be exposed owing to the divorce between the ownership of the minerals and the ownership of the surface, and the fact that the mineral owner will no longer have any interest in the extraction of coal.

Under the present system, if a colliery closes down, it ceases to be a burden on the industry. When compulsory amalgamation takes place, the "uneconomic" collieries will remain like a millstone round the necks of the more prosperous undertakings. Even if they are closed down, the price at which they are taken into the amalgamation must increase the capitalisation of the latter, and hence also the sum upon which its dividends have to be earned.

Yours faithfully,

Lincoln's Inn.

PHILIP GEE.

Are We Living on Capital?

TO THE EDITOR OF THE ECONOMIST

SIR,—It is frequently claimed that if a country has an adverse balance of trade, or more correctly balance of payments, it is living on its capital. Is this correct?

When we say that private citizen A. is living on his capital we mean that he is supplementing his income by realising and spending his capital assets. Is this procedure analogous with the broad issue under discussion? When an English importer buys surplus commodities ("surplus" in relation to the volume of exports) no one will suggest that the importer is living on his capital; indeed, if he makes a profit, he is even increasing it. Again, the private buyer of the "surplus" commodities is not living on his capital, since presumably he limits his expenditure to his income. Finally, if it be said that the country must be inflating

its currency or credit, a veiled form of living on capital, the answer is that the known facts are against this assumption.

It is difficult to see whose capital is being destroyed. The foreign exporter of "surplus" commodities acquires "sterling" which he disposes of through the medium, in most cases, of foreign exchange dealers or financiers. The ultimate owner of this sterling may buy commodities, in which case the adverse balance will be eliminated, or he may invest the sterling by loan or in industry or capital goods production. There seems to be no "living on capital" in this procedure in any intelligible use of the phrase.

Yours faithfully,

FRANK MORRIS.

Local Loans Stock

TO THE EDITOR OF THE ECONOMIST

SIR,—May I suggest an answer to the question on page 268 of your current issue, "Why do Government Funds contain such a large proportion of Local Loans Stock?" The National Health Insurance Act, 1924 (14 & 15 Geo. 5. c. 38) provides in section 70 (1): "The Minister shall ascertain periodically what sums standing in the National Health Insurance Fund . . . are available for investment, and the amount so ascertained shall . . . be paid over to the Commissioners for the Reduction of the National Debt and by them invested . . . in any securities which are for the time being authorised by Parliament as investments for Savings Banks funds, but those Commissioners shall, in making the investment, give preference to stock or bonds issued under the provisions of the Acts relating to borrowing for raising capital for the purposes of the Local Loans Fund where the purposes for which the capital is required is the making of advances for the purposes of the Housing Acts, 1890 to 1923."

Yours faithfully,

J. F. CAHAN.

University College, London.

took advantage of the unofficial collaboration which had developed between the Communist armies and Chang Hsueh-Liang's soldiers, tired of wasting their energies on fighting Chinese while Japan was daily becoming a greater menace to the independence of the whole of China. He penetrated to the Communist State in Shensi province and lived there for five months.

His story is full of the personal histories of the leaders of the Red State: Mao Tse-tung, the Chairman of the Soviet, and political leader, Chu-Teh, commander-in-chief, and so on. Mr Snow was deeply impressed by their qualities, and his descriptions show men of simple personal standards, of heroic courage and unlimited enthusiasm and devotion to their cause.

Through their own words he tells of the long struggle of the Communists in Southern China, first in collaboration with the Kuomintang, and later as their enemies, after Chiang Kai-shek had completed his coup and turned to exterminate the Communists in a series of elaborate military campaigns. This stage of the story culminates in the incredible march of the Red Army from its base in Kiangsi to a new home in Shensi, a distance of about 5,000 miles. Much of the ground covered was extremely hazardous, and throughout the march the army was attacked by provincial armies and by the various forces of the Central Government. It is one of the world's great military exploits.

Greatest interest in the book naturally centres in Mr Snow's account of the fraternisation which developed between Communists and Central Government troops; their common agreement to urge upon Chiang Kai-shek to stop civil war in favour of a united front against Japan; the events which led up to the Sianfu crisis early this year; the conversion of the Generalissimo; and the decision by Japan to attack China at once before she became too strong.

It is probable that Mr Snow's account errs in two directions. His picture of the simple Communist State,

its benevolence and freedom from human fault, savours a little too much of perfection. Stupidity, ignorance, revenge, cruelty, must have produced some pretty horrible results even in the Red State of China. And the account of the Sianfu crisis suggests too strongly that it was the devoted Communists who gained their point and that Chiang Kai-shek bowed to their wisdom. In truth the Sianfu agreement is much more of a compromise in which the Communists have the short end of the stick. For the time being the Communists stop their social and economic programme, their armies run the risk of annihilation by the Japanese in the north, and Chiang has opportunity to establish greater control in their present territories. If Japan wins the war, then the tendency for China to turn Communist will be greater, but the Sianfu arrangement could hardly be blamed for this development.

But Mr Snow has put the world in debt by his enterprise in securing an exciting and vivid account of one of the world's most important events, and by bringing alive for us the heroes of Red China, known previously to the outside world only through the highly prejudiced accounts of Chinese nationalist propaganda.

Shorter Notices

"Organising a Sales Office." By L. Urwick, E. Aston, F. H. Cordukes and C. H. Tucker. Second Edition. Pitman. 181 pages. 10s. 6d.

The literature of business management is growing. Mr Urwick's pioneer work on the unified sales office has accordingly been re-issued in its second edition most opportunely. In its first form, ten years ago, this study dealt with Messrs Rowntree's plan to solve the problems of sales organisation. Since then correlated discussion about these questions have led to further experiments, and it was from the report of a paper in the *British Management Review* that Mr Urwick learned of a venture of The Imperial Tobacco Company at Nottingham akin to the Rowntree's scheme. He has therefore included an account of the Nottingham sales office in this second edition. Mr Urwick has been fortunate in his collaborators, and although, as he says, "Great Britain is notoriously a conservative country," the structure of business organisation is clearly receiving more and more attention from progressive business men. The unified sales office, lucidly described in detail in this book with pictorial illustrations, is clearly spreading, and students and practitioners of business alike will find Mr Urwick's account most useful.

"History of Anarchism in Russia." By E. Yaroslavsky. Lawrence and Wishart. 127 pages. 2s. 6d.

An appreciation of anarchism is necessary to an understanding of the Spanish civil war. M. Yaroslavsky's work is therefore timely. His brief history is chiefly occupied with Russian anarchism, but, since he finds it necessary to trace anarchism back to its theoretical roots in the teaching of Bakunin, he is able to give an account and critique of anarchism in general. He makes several references to the present Spanish situation and suggests that the pressure of events is disintegrating the specific ideals of anarchism. In a war situation, with its urgent need for organisation and discipline, the "libertarian communism" of the anarchist is a heavy liability. It is clear that anarchism is an essentially transient social phenomenon appearing in societies such as those of pre-revolutionary Russia and contemporary Spain where there is an uneasy synthesis of two fundamentally antagonistic economies, the capitalist and the semi-feudal. This book deserves less slovenly translation and proof-reading.

"Monetary Policy and Economic Stabilisation." A Study of the Gold Standard. By A. D. Gayer. Second Edition (Revised). A. and C. Black. 288 pages. 10s. 6d.

Dr Gayer has brought his excellent study of monetary practice and controversy up to date. Chief among its many qualities are its clarity and the evidences of first-hand knowledge which the author has derived from his experience as an expert in practical affairs in American administration and banking.

THE ECONOMIC POLICY OF FRANCE

BY

THE HON. GEORGE PEEL

AUTHOR OF "THE FINANCIAL CRISIS OF FRANCE," ETC.

8/6 net

"Mr. Peel's comments on, and exposition of, current French problems are extremely effective, being based on great knowledge and long intimacy with the questions at issue. . . . A most interesting, if somewhat disturbing, book."—*The Scotsman*.

"It is certain that his analysis of present financial difficulties and his admirable review of the past could not easily be bettered."—*Truth*.

"A highly critical survey of the manner in which our French neighbours have conducted their financial and fiscal affairs during and since the War, though his interesting survey incidentally often looks back over earlier periods."—*The Times*.

"Mr Peel's extremely interesting and readable book."—*Investors' Review*.

MACMILLAN & CO. LTD., LONDON, W.C.2.

MONEY AND BANKING

Swiss and Dutch Banking

THE measures taken in Switzerland in recent weeks against the influx of foreign short-term capital have once more attracted attention to the problems of the two smaller members of the defunct gold bloc. Their experience has been almost the opposite of the French, since their problem has been, not to prevent the further outflow of funds, but to stem the flood of foreign and repatriated capital which has threatened to overwhelm them. Both Dutch and Swiss banks have ceased to pay interest on foreign deposits. The Swiss banks have gone further: they have imposed an actual "safekeeping" charge of 1 per cent. on deposits—a form of "negative interest"—and they have now begun to refuse foreign deposits even on these terms.

The effect of devaluation and its sequel upon the Swiss National Bank can be seen in broad outline from the following chart:—

The gold and foreign exchange holdings of the Bank have risen from 1,499 million francs on August 31, 1936, to the record amount of 3,192 million francs on November 7, 1937. Moreover, these figures do not include the holdings of the Exchange Fund, which amount to several hundred million francs more. But even without this addition the increase in the reserve is very large.

The effect of this increase in the reserve has been largely concentrated on deposits. Notes in circulation have risen only from 1,363 million francs to 1,419 million francs, and this increase can be fully explained by the greater volume of activity in Swiss industry today in comparison with last year. Deposits, on the other hand, have risen from 457 million francs to 1,810 million francs, or by 296 per cent. The flood of cheap money has greatly reduced the demand for the credit facilities of the National Bank. Discounts have fallen from 156 million to 10 million francs and advances from 62.6 million to 27.5 million francs.

The balance sheet of the National Bank has thus been dominated during the past year and a quarter by forces external to Switzerland. The quarterly returns for the other large Swiss banks show much the same effects:—

	Sept. 30, 1936	Mar. 31, 1937	Sept. 30, 1937
Liabilities:—			
Demand Deposits.....	1,270	1,501	1,745
Time Deposits.....	338	313	278
Savings Deposits.....	494	496	494
Drafts, etc.	888	846	820
Assets:—			
Cash.....	399	812	855
Discounts.....	459	457	656
Current Advances.....	1,254	1,208	1,101
Loans.....	622	535	432

It will be noticed that the only item on the liabilities side which shows an increase is demand deposits, where the growth has been rapid. On the other side of the balance sheet loans and advances have fallen, in spite of the revival of industrial and commercial activity, and the increase in discounts can be entirely ascribed to one of these seven banks. Only cash shows a large and general increase.

The Swiss banking system is thus in the abnormal position of having at its centre a plethora of funds, arising largely from outside the country. In the period since the devaluation, the Swiss economy has not, in fact, made any call upon these funds, and indeed the supply is now greater than any likely demand. This fact, together with the knowledge that funds which have come so quickly might depart with equal suddenness, has induced the Swiss authorities to lay down the policy not merely of discouraging a further inflow but of inducing the funds already in Switzerland to depart.

The position in Holland is substantially the same as in Switzerland. The chief items in the returns of the Netherlands Bank are shown in the following diagram:—

The reserve of gold and foreign exchange has increased by 108 per cent. since the devaluation, in spite of the fact that the gold is still valued at the old parity. Notes in circulation, on one side of the balance sheet, and advances, on the other, have both shown very little change, but deposits have increased from Fl. 100.6 to Fl. 742.5 millions. As in Switzerland, the superfluity of funds has reduced the demand for central bank credit.

Information about banks other than the Central Bank is not so readily available in the Netherlands as in Switzerland. But the following figures combined from the monthly returns of the Incasso Bank and the Twentsche Bank show the increase in bank cash:—

	Sept. 30, 1936	Mar. 31, 1937	Sept. 30, 1937	Oct. 31, 1937
Liabilities:—				
Deposits.....	123.9	164.6	185.5	201.0
Savings Deposits.....	79.0	85.7	86.3	88.1
Assets:—				
Cash.....	39.6	81.3	111.6	138.5
Advances, etc.	143.7	145.2	147.8	145.2

Dutch experience has thus been very similar to the Swiss. There is less inclination in Holland than in Switzerland, however, to proceed to extreme measures to get rid of "hot" money. The Dutch problem, as seen from Amsterdam, is to convert short-term into long-term capital. The industrial and commercial demand for long-term capital is small at the moment, but Holland's position at the centre of world trade would ensure a rapid revival if circumstances became more favourable. Drastic measures can drive "hot" money away, but they are powerless to harness it to work. Meanwhile, Holland will maintain the freedom of her money market and await fresh opportunities for Dutch enterprise and capital.

Financial Notes

Dutch Loan to France.—It is reported from Amsterdam that a syndicate of Dutch banks headed by Menclssohn and Company and the Netherlands Trading Society has arranged a credit for the French railways for a maximum sum of Fl. 150 millions. The credit is for one year only, and will take the form of three months' bills subject to three renewals. These bills carry a guarantee against any future depreciation of the French franc. They will be accepted for rediscount by the Netherlands Bank. The rate of interest is reported to be 4½ to 5 per cent. This credit will provide the French railways with the equivalent in guilders of £16.7 millions sterling, which, together with the recent Swiss loan, equivalent to £9 millions sterling, provides the French authorities with over £25 millions towards the impending repayment of the French railways' sterling credit of £40 millions. The remainder of the sterling should be found without the slightest difficulty out of the proceeds of the influx of funds into France during the past few weeks. Thus France has successfully surmounted what at one time looked like a difficult obstacle, while Holland and Switzerland have found employment for some of the surplus funds alluded to above.

Some Banking Views.—By a fortunate coincidence authoritative banking expressions of opinion bearing on our trade position have been forthcoming recently from three parts of the British Empire. Speaking at the annual general court of the Royal Bank of Scotland, the Duke of Buccleuch expressed some apprehension at the growth in Great Britain's adverse trade balance, which he pointed out was comparable to that of 1931. Meanwhile Mr S. H. Ward, the new chairman of the English, Scottish and Australian Bank, was alluding to the past year's growth in Australia's export surplus from £23.6 millions to £36.3 millions sterling, which has caused a strengthening for the time being of the Australian banking system's London funds. Finally, Mr A. A. Magee, speaking at the annual general meeting of Barclays Bank (Canada), described how Canada has moved up into the fourth position among the world's exporters. Canada, he was able to add, was also "borrowing less and lending more," for there had been last year a drop in United States investments in Canada and also an increase in Canadian investments in the United States. We agree that there

is some substance in the Duke of Buccleuch's doubts of our own position, but, as the Dominion Bank chairmen show, consideration of the Empire as a whole presents a rather different picture. In any case, unlike 1931, our gold reserves are ample to cover any short-term obligations to the world outside the Empire.

The Foreign Exchanges.—The London market has been quieter this week, particularly on Thursday, when New York was closed for Thanksgiving Day. Dollars, if anything, have been bid, and on Thursday the spot rate dropped from \$5.00½ to \$4.99½. French francs were strong until Thursday, when they came on offer, the spot rate rising from Frs. 147.12 to Frs. 147.20, and the three months' rate from Frs. 2½ to Frs. 2½ discount. There was little sign of any official intervention. There has been a demand for guilders, mainly from foreign interests anxious to secure a participation in the Dutch credit to the French railways. On Thursday the spot rate was Fl. 8.98½-9. Belgas also improved on the news of the formation of the new Government. One month's belgas are now quoted at par to a slight discount, with three months' at 5-7 cents discount.

The Money Market.—This week's further reduction in bankers' deposits has helped to make money rather less easy. On Wednesday there was a keen demand for loans, while on Thursday it is believed that two banks were calling. Still the general impression in the market was that there was no shortage of money. Several houses have already begun to borrow into the New Year at rates of ½ and 1 per cent., and are using this money to cover their bonds.

	Nov. 4, 1937	Nov. 11, 1937	Nov. 18, 1937	Nov. 25, 1937
Bank rate.....	2	2	2	2
Clearing banks' deposit rate.....	½	½	½	½
Short loan rate:—				
Clearing banks.....	½-1*	½-1*	½-1*	½-1*
Others.....	½-1	½-1	½-1	½-1

Discount rates:—
Treasury bills..... ½-1
Three months' bank bills..... ½-1
* Loans against Treasury bills and other approved bills and British Government securities within six months of maturity; 1 per cent. Treasury Bonds and other gilt-edged stocks within six months of maturity; and other collateral respectively.

The change in the money market has caused discount rates to stiffen, in anticipation of Christmas and the New Year, a fortnight earlier than usual. Last week's average tender rate for Treasury bills was nearly ½ per cent., and this week there have been sellers of hot Treasury bills at ½, if not ½ per cent., or at a loss compared with the tender rate. Three months' bank bills have also stiffened to ½ per cent.

The Bank Return.—The note circulation is now at its lowest point for November. Next week the Christmas expansion is due to begin.

	Nov. 25, 1936	Nov. 3, 1937	Nov. 10, 1937	Nov. 17, 1937	Nov. 24, 1937
Issue Department:—					
Gold.....	£ mill. 248.7	£ mill. 328.4	£ mill. 328.4	£ mill. 326.4	£ mill. 326.4
Note circulation.....	445.6	485.9	485.6	481.1	480.4
Banking Department:—					
Reserve.....	63.8	42.1	42.4	66.8	67.5
Public deposits.....	12.1	30.3	30.7	33.2	35.4
Bankers' deposits.....	97.6	89.4	90.9	86.7	83.6
Other deposits.....	41.7	36.6	36.1	36.1	36.3
Government securities.....	78.2	103.4	103.9	76.6	76.2
Discounts and advances.....	6.8	7.8	8.4	9.0	8.6
Other securities.....	20.4	20.7	20.7	21.3	20.9
Proportion.....	42.1%	26.9%	26.8%	42.8%	43.4%

In the banking department public deposits remain at an unusually high level, and it looks as if next week's War Loan dividend of £35 millions will be met without much borrowing on Ways and Means, especially as next week's payments for new Treasury bills will be £5 millions in excess of maturities. As a result of the present accumulation of funds in public deposits, bankers' deposits are as low as £83.6 millions.

Investment Notes

Do Prices Discount Too Much?—In the early part of the week, the London stock markets were conjoined with Wall Street in an unprofitable search to find a new bottom in a pit which, apparently, had none. In London, particularly, a discouraging sign was the number of selling orders emanating from the type of small investor who normally tends to retain his stock through bad times and good. By the close of business on Monday, *The Financial News* index, which stood at nearly 125 at the beginning of this year, had fallen to 93. In New York, the Dow Jones industrial index (which was at 194 last March) broke through the "low" of 126 on October 18th and fell below 114. Wall Street has had its own peculiar troubles (as we show on this page), and they have not been little ones. But the London Stock Exchange—whose authorities, unlike their New York colleagues, were charged neither with being unethical nor inefficient—succeeded in staging a minor rally in the middle of the week. The extent of the decline in some leading securities quoted in London, since the halcyon days of the beginning of this year, and the trend of this week's movements, can be seen from an examination of the following table:—

	High, 1934-36	High, 1937	Aug. 11	Oct. 29	Nov. 12	Nov. 19	Nov. 22	Nov. 24	Nov. 25
2½% Consols ...	94½	84½	74½	74½	76½	76	75½	75½	75½

(a) Comparison affected by bonus issues.

The recession, as these figures suggest, has reached a point which is almost unprecedented at a time when general industrial activity (as will be seen from the survey given in our Monthly Trade Supplement) remains at a spectacularly high level.

The lore of the trade cycle assigns to the Stock Exchange the rôle of a harbinger of industrial disfavours to come. What the present level of security prices seems to be discounting, however, is not the limited business recession hitherto suggested by the look-out men, but a deep depression on the lines of 1931-33. To justify such

a prognostication is most difficult. Indeed, the behaviour of markets prompts the question whether present prices are not the result much more of technical weakness than of rational prevision. The concurrence of depression and continued cheap money is a feature to which the market is unaccustomed. The question, therefore, is being increasingly asked whether the abruptness of the decline in values is not an indication that the rôle of speculation, based on outside financial accommodation, in the preceding boom has been greatly under-estimated. If so, the market for gilt-edged and other sound fixed interest securities may be expected to maintain its firmness; for part of the abundant funds displaced from the equity share market are finding a home there. It is not wholly improbable, indeed, that the authorities, who have recently been testing the appetite of the market for new high-grade issues with increasingly large morsels, may soon deem the moment advisable for giving the investor a full Treasury meal.

Wall Street and the S.E.C.—When the securities and Exchange Commission was first constituted, many observers regarded it as the secular arm for carrying out any burnings required in Wall Street by the Rooseveltian financial theology. With Mr Landis as its chairman, however, the Commission showed a praiseworthy desire for constructive co-operation, as far as possible, with the Stock Exchange. The replacement of Mr Landis by Mr Douglas, however, has coincided with a more radical phase, which has culminated this week in the presentation of a programme which fairly throws down the gage to the authorities in Wall Street. Mr Douglas's platform has five planks: the strict punishment of Stock Exchange members who are guilty of "unethical or illegal activities"; the transfer of management from the present Committee of members to paid outside experts; a reduction in the number of members; the provision of adequate market facilities for dealings in less than 100 shares; and a restriction of floor trading by members and specialists.

Critics of this programme will not be slow to draw attention to the looseness of its terminology. What are "unethical activities"? What is the standard of "adequacy" for odd-lot dealings? Reduced to its lowest terms, the policy announced by Mr Douglas appears to be based on two axioms: first, that speculation is unethical if indulged in by professionals; and, secondly, that government of the Stock Exchange by the Stock Exchange is obnoxious, because it must inevitably be for the Stock Exchange rather than the community as a whole. The Exchange, being "affected with a vital public interest" must be surrounded by "adequate safeguards." Given a different approach, some compromise with the Exchange authorities might have provided for an infusion of "impartial experts," while it left the ultimate power of self-government with the members. And the frontier between legitimate business and anti-social gambling might have been more clearly demarcated, with goodwill on both sides. But a state of open warfare between the Commission and the Stock Exchange will tend to confuse rather than to facilitate sound thinking. Using the phraseology of the Scots on an historic occasion, members of the New York Stock Exchange may declare that they might consider a marriage with the Commission, but they hate the wooing.

Brazil Re-affirms Default.—Last week's statement by the Brazilian Foreign Minister that Brazil's debt service would be maintained until a new agreement was reached proved to have been utterly misleading. The Brazilian Cabinet last Saturday reaffirmed the decision to suspend remittances, and instructed the Minister of Finance to open negotiations for new agree-

ments "in accordance with Brazil's resources." So the market has again been plunged into bitter gloom. It must be confessed, however, that part of its troubles were traceable to the decision to resume dealings last week. That decision, which was by no means unanimous, was taken in the absence of any firm statement of Brazil's intentions, and the market was obviously vulnerable to unsubstantiated reports from which only those with full knowledge of the Brazilian Government's real intentions could have profited. In the House of Commons on Monday, Mr Eden declared that the British Government had already made representations to Brazil and that the new situation was "under serious consideration." To later suggestions that exchange clearing might be set up, Mr Eden replied that he would prefer to await the result of these representations. We bring the default record of Brazilian bonds up to date in the following table:—

Stock	Nov. 10	Nov. 15	Nov. 18	Nov. 22	Nov. 25	Net fall from Nov. 10
4% "Vargas" 1936 ...	95½	85	95	90	89	6½
5% Funding 1898 ...	92½	70	70	60	54	38½
5% Funding 1914 ...	69½x	55	60	50	44	25½
7% Coffee Realisation ...	82½	65	69	60	51	31½
6½% 1927 ...	33½	23	28½	21½	22½	11½
4% 1889 ...	16½	13½	14½	12½	11	5½
5% 1913 ...	21½	13½	17	12½	13½	8

The dates are selected to show pre-default prices, the resumption of dealings, the response to the Foreign Minister's statement and this week's disillusionment. Bondholders must feel that representations from the British Government can hardly be too strong. The Brazilian default has caused greater indignation in the market than any similar episode in recent years.

Chinese Customs in Danger.—A similar confusion of news comes from China. A report from Tientsin a week ago declared that a satisfactory solution of the Customs situation in North China had been reached, under which the integrity of the Customs Administration would be maintained and its normal functions carried out. This superficially cheerful report was received with proper caution. Two days later Japanese forces seized launches and preventive vessels of the Chinese Customs Administration at Shanghai. While it was suggested locally that the seizure might only be temporary, reported Japanese demands for transfer of the sovereign rights of the Chinese Government within the International Settlement suggest that the political and economic interests of foreign nationals in China are not of primary concern to Japan. It is, of course, premature to hazard any guess regarding the future of the Customs collections. War has seriously reduced the sums available—Shanghai's import trade fell 90 per cent. between July and September. Clearly, if China retains no more than, say, 20 per cent. of her normal trade, her best securities will be in jeopardy. The collections forwarded from Tientsin are apparently irregular and insufficient, and Japan's lack of respect for the Customs Administration in the Manchurian ports in 1932 suggests the last thing that bondholders would desire would be that she should control Chinese services generally. Both episodes, Brazilian and Chinese, emphasise that bondholders should read all ostensibly favourable news with jaundiced eye and cynical mind. For, after all, men do not gather figs from thorns or grapes from thistles.

Insurance Share Index.—The *Economist* Insurance Share Index shows a further slight fall during the third quarter from 4,656 to 4,620 (1913 = 1,000). The index stood on December 31, 1936, at 5,111, so that a decline of 9.6 per cent. has been registered in the first nine months of this year. The index is based on the course of an investment of £1,000 in the ordinary shares of each of twenty-four companies, making due allowance for bonus issues. Details of the complete index are set out in the next column.

Company	1933	1934	1935	1936	Mar. 31, 1937	June 30, 1937	Sept. 30, 1937

Yorkshire	3,212	3,401	3,575	4,091	3,762	3,711	3,504
Average	3,535	4,025	4,497	5,031	4,800	4,656	4,620

Of the twenty-four shares represented, half show decreases during the quarter and five are unchanged. Increases appear in seven instances, but only two series, Employers Liability and Equity and Law, stood higher on September 30th than the 1936 level.

Company Notes

E.D. and R.M. Realisation.—The penultimate stage in the task of salvage for which E.D. and R.M. Realisation were formed nearly three years ago will be considered at meetings on December 14th. First, the holdings of Union-Castle ordinary stock—£1,369,990 for each company—are to be distributed in the proportion of £13 stock for every 10 Realisation shares. Secondly, a cash payment of 5s. per share is also proposed. The Union-Castle distribution will complete the main task of the Realisation companies, for the remaining assets are of such a nature that their realisation may be protracted. In these circumstances, the directors propose to put the companies into voluntary liquidation, but to keep the share registers open. To this proposal, no exception can possibly be taken. Shareholders will also echo the directors' appreciation of the services of Mr John Morison, of Messrs Thomson McLintock and Company, in assisting the expeditious and advantageous realisation of the bulk of the assets. The lesson of the past three years is that a firm seller, who can afford to wait his opportunity on a rising market, will ultimately obtain incomparably better results than a Dutch auctioneer who throws away sound assets at rubbish prices.

Break-up Estimates.—How do the two Realisation companies now stand? R.M., whose shares have recovered to 38s. 6d. this week, is the less difficult case. On July 17th last, we suggested that the residual assets might be worth £675,000. This figure may not be re-estimated. The principal item consists of the holding of 325,000 £1 shares in Anglo-Foreign Properties, which will presumably be marketed as circumstances permit. Making estimates for such items as the Nelson and London Maritime Investment interests, and including £290,000 estimated cash surplus, and, say, £70,000 in respect of the residual £69,990 Union-Castle ordinary stock, we reach a probable total of £650,000. The proposed cash distribution will absorb £250,000, leaving about 8s. per R.M. share. At

INQUIRIES SOLICITED

OVER ONE HUNDRED AND TEN YEARS OF SERVICE
SCOTTISH UNION & NATIONAL
INSURANCE COMPANY
ASSETS EXCEED £16,000,000
FIRE LIFE ACCIDENT MARINE
Edinburgh: 35 St. Andrew Square
London: 5 Walbrook, E.C.4, and 45 Pall Mall, S.W.1

the present price of the latter, therefore, the inferential value for 26s. nominal of Union-Castle stock is 25s. 6d., representing 19s. 7½d. per £1 of stock. The E.D. calculation is more conjectural, since the assets will probably take longer to realise. They consist mainly of 130,000 £1 shares in Anglo-Foreign Properties, the share capital of Atlantic Coaling, and a holding in London Maritime Investment. It seems reasonable to reduce our earlier estimate by £50,000 to £400,000, adding £30,000 for the residual £69,990 of Union-Castle stock (£40,000 of this stock is subject to lien) and £300,000 for the estimated cash surplus up to liquidation—a total of £730,000. This figure is reduced by £250,000 by the cash distribution, leaving a net potential sum of £480,000—or, say, 9s. 6d. for each E.D. share. At the present price of 40s., therefore, the latter give an inferential value of 25s. 6d. for 26s. nominal of Union-Castle stock—again representing 19s. 7½d. per £1. It has been suggested that dealings may begin, say, 3s. above this figure, but the shipping share market has recently been in a deflated condition. After the distribution, of course, the speculative interest in R.M. and E.D. shares will largely evaporate. There is no reason to expect a market price appreciably above the probable break-up values indicated above, while the premium of E.D. over R.M. should not obscure the longer period which will probably be required to liquidate E.D.'s residual assets.

Union-Castle Position.—Brief reference may now be appropriately made to the Union-Castle earnings position. Last year's accounts showed a net profit, after charging £65,714 to insurance fund and income tax, of £435,827. The net requirements for normal preference dividends are approximately £120,000. Earnings for the £2,740,000 ordinary stock, on a normal basis, were thus equivalent to rather over 15 per cent. for 1936, and may be safely reckoned as higher this year. On Thursday the board announce the expected payment of two years' 6 per cent. preference dividends to December. Their policy towards ordinary stockholders will probably continue in the cautious tradition. Substantial sums have been advanced for new construction—already totalling nearly £2 millions in last year's balance—and while part may be repaid from normal depreciation quotas, the possibility of heavy repayments in future years has already been suggested in the last directors' report. The company's fleet is certainly in excellent shape, but the rising trend of shipping costs may tend to reinforce the natural conservatism of the board in their ordinary dividend policy. For those who can afford to wait, however, the opportunity to purchase the stock at a small discount via E.D. or R.M. Realisation has some attraction.

Tube Investments Progress.—Stockholders will find difficulty in reconciling the fall in their Tube Investments units from 93s. earlier this year to the present level of 80s. 6d. with the excellent figures published this week. The company's total revenue has increased by 31 per cent. from £639,561 to £836,668; earnings for the ordinary stock are equivalent to 27.8 per cent., against 24.2 per cent.; while the dividend increase from 17½ per cent. to 23½ per cent. was announced several weeks ago.

BRITISH MALAYA

MALAYAN INFORMATION AGENCY
MALAYA HOUSE, TRAFALGAR SQUARE, W.C.2

The market's answer is a persistent fall in the stock, which now yields no less than £5 18s. per cent. The analysis of profits below scarcely fits this valuation, for Tube Investments is not a high-gear equity like Dorman Long, and its step-brother, Stewarts and Lloyds, yields appreciably less:—

	Years ended October 31.		
	1935	1936	1937
Total revenue	502,784	639,561	836,668
Fees and interest	6,778	13,679	11,578

Reserve	230,545*	150,000	100,000
Carry forward	107,276†	112,669†	128,220

* Also 10 per cent. capital bonus requiring £280,545 from reserve. † After writing off capital issue expenses: 1935, £2,143; 1936, £5,152. ‡ Liaison ordinary shares rank for dividend as equivalent to £1,000 ordinary stock.

Nor is there any visible ground for dissatisfaction from the broader standpoint of the group's financial position. The subsidiaries' profits have not been fully divided—in this connection a consolidated earnings statement to accompany the group balance sheet would be most useful. The present level of earnings far surpasses any previous figure. And the group's finances are massive; stocks are up from £1,073,294 to £1,436,457, while surplus liquid assets exceed £2½ millions. The directors are reticent in their reference to the year's working. Progress has been made in every branch of the group—that is the extent of their comment. But stockholders know that armament work has not been regarded as a serious source of profits. They have the evidence of the past year's results to disprove any undue fears of rising costs. And from general considerations they might well argue that since the company enjoys a secure and expanding market for its products, its vulnerability to any industrial recession should be less severe than a typical constructional steel undertaking. This factor, coupled with the group's improved technical resources—the consolidated balance sheet shows a rise in property, less depreciation, from £1,152,195 to £1,434,414, and in plant from £1,295,049 to £1,703,117—suggests that the market has already discounted the possibility of an appreciable check to profits.

Wall Paper Manufacturers.—The profits record of this undertaking is not exciting. Wide fluctuations, however, have been avoided, and the latest accounts show a satisfactory increase in earnings. As in the two previous years, earnings are stated after deducting an unstated amount for tax, but they show an increase of £48,451 to £765,963 in disclosed profits of the parent company (or by £34,828 to £775,053 in consolidated profits), and thus compare favourably with the experience of 1935-36. Distribution policy is becoming increasingly conservative, and the deferred dividend, maintained at 12½ per cent., requires about half the available earnings. A rising trend of profits might perhaps be expected of a company which has acquired other businesses from time to time, but this policy has been in large measure defensive. References to the difficulties of competition are renewed in the latest report, and the process of co-ordination in the industry evidently has far to go. The company's problems have been heightened by higher wages and costs of paper, but manufacturing economies have offset their effects. Acquisitions of competing businesses are reflected in the balance sheet, for the consolidated statement shows goodwill, patents, etc., at £1,328,665, or about one-seventh of total assets. The parent company's dividend policy can in part be attributed to the desirability of a gradual reduction of this item. The sum of £100,000 has, in fact, been set aside in each of the past three years. The carry-forward is increased by £34,000, and £65,000

is allocated to a new reserve against depreciation of investments with fixed redemption dates. At the current price of 38s. 1½d., yielding £6 11s. per cent., the deferred shares appear fully valued.

Gold Fields' Jubilee Report.—The results of Consolidated Gold Fields for the year to June last provide an entirely fitting celebration of the company's fiftieth anniversary. This was marked in tangible form by the distribution of a special 12½ per cent. dividend by the parent company, whose profits increased from £691,263 to £1,033,151. The profits of the operating company, New Consolidated Gold Fields, have made a more spectacular advance from £1,272,231 to £2,159,365—a figure which includes dividends, investment profits and other income, less general expenses. For the greater part of the year the Kaffir market was active, and it may be presumed that share dealings contributed appreciably to the better results. In any event, the operating company's profits cover the special dividend with a handsome margin, and reserve receives £500,000 against £300,000. The balance sheet reveals substantial changes in investments, cash and creditors. These may be traced from the financial summary of the two companies below:—

	Years to June 30th		
	1935	1936	1937
<i>New Consolidated Gold Fields</i>			
Investments	6,068,472	5,373,183	7,636,073
Shares in subsidiaries	1,217,668	1,232,491	1,162,426
Properties and ventures	122,966	101,111	65,375
Loans at short call	529,838	347,874	172,476
Debtors	214,826	221,793	359,223
Cash advances, etc.	397,072	496,835	546,921
Cash	561,380	2,091,376	1,179,812
Creditors	1,155,408	1,293,080	2,014,281
<i>Consolidated Gold Fields</i>			
Net profit	662,636	691,263	1,033,151
Preference dividend	143,177	142,783	141,721
Ordinary dividend	516,253	544,740	886,982
Do. per cent.	20	20	32½*
Carried forward	22,745	26,485	30,933

* Includes special jubilee dividend of 12½ per cent.

No Kaffir house gives a greater volume of information regarding its interests than Gold Fields. Discussing the Rand generally, the directors suggest that for most mines the economic maximum crushing capacity has already been reached, a factor which limits further cost adjustments. Other cost items, particularly labour, are tending to increase. Comments on the established dividend-paying interests of the group are generally favourable. Robinson Deep is increasing its milling capacity and the air-cooling plant has markedly improved efficiency. Simmer and Jack was affected last year by fire and accident, but the reorganisation is expected to improve the profit-earning capacity of the mine. Sub Nigel has proved vulnerable to the new taxation ruling, but a major scheme of expansion for Luipaards Vlei is under consideration. Considerable progress is recorded by the development companies, centred round West Witwatersrand, whose "economic possibilities are considerably enhanced" on the western section, while preliminary development work at Venterspost "holds out great promise of important developments." Such are the more important interests, but Rhodesia, America and Australia are also represented in the mining holdings. Gold Fields £1 shares stand at 68s. 1½d. and yield £5 17s. 6d. on the "normal" 20 per cent. dividend. The prospects in the Kaffir market are not entirely clear, but it seems reasonable to value the shares on this basis.

Burma Corporation.—The report of this leading silver-lead-zinc producer reflects little of the dismay which has spread through the metal markets to base metal shares during the past six months. Metal sales and stocks reached a comfortable post-depression record of £3,235,770 during the year to June 30th, while the net profit available for dividends, after substantially increased taxation charges, jumped from £785,459 to

Economic Conditions in Germany

AN ANALYSIS BASED ON ENTIRELY NEW FACTS

The Financial Times will begin publication on Tuesday next of a series of articles on German economic conditions. They have been written by Mr Norman Crump, who recently visited Berlin on behalf of the Financial Times.

His visit had the full approval of the German Government and being in touch with the various Government departments, the Reichsbank and leading bankers and industrialists he gathered much new information.

Many efforts to analyse the situation have been made in the last year or so. All of them have suffered through being insufficiently based on facts. They have had chiefly to rely on official statistics published prior to 1936 and upon private estimates since that date.

With the aid of the figures now disclosed Mr Crump has been able to give a much more balanced review than has been possible hitherto. His conclusions are presented entirely without bias and are based exclusively on the facts which he sets out.

The Financial Times.

Largest Circulation of any Financial Journal in the Empire

£1,236,794. The operating figures show that lead provided the principal source of increased profits. Output increased from 70,560 tons to 74,885 tons, and the London price averaged £23 2s. 8d. against £16 4s. 5d. for 1935-36. These changes account for a £600,000 gross increase in profits immediately. Silver averaged 4d. per oz. lower, but output increased, while zinc and copper production also tended to offset the fall. The past year's results are analysed below:—

	Years to June 30,		
	1935	1936	1937
Ore mined '000 tons	445	469	479
Yield refined lead tons	70,560	70,560	74,885
Yield refined silver ozs.	5,778	5,847	6,135
Metal sales and stock	£ 2,030,349	£ 2,430,577	£ 3,235,770
Operating profit	710,592	1,078,253	1,715,337
Total income	757,332	1,116,285	1,749,064
Depreciation	89,373	75,449	54,987
Taxation.....	155,743	255,377	457,283
Earned for shares	512,216	785,459	1,236,794
Paid	476,074	781,720	1,174,318
Earned % } (free of all taxes)	5.0	8.6	13.6
Paid % }	4.69	8.33	12.85
Carried forward	23,105*	46,844	109,320

* After allocating £30,000 to reserve fund.

Prospects for the current year are clearly limited by the substantial setback to metal prices. Lead, which averaged £22 10s. for the September quarter, has fallen this week to £16—a few shillings below the 1935-36 average. The good start shown by the September quarterly report will, therefore, not be maintained, and some reduction of the latest bumper dividend must be expected this year. Meanwhile, operating expenditure is rising. From the longer-term viewpoint, interest attaches to the ore reserve estimates. Last year's extraction was some 50,000 tons in excess of tonnage developed, and reserves decreased from 3,914,182 tons to 3,863,548 tons. This figure is equivalent to eight years' supply, and since the full exploration of the known mineralised zones in all sections of the mine is almost complete, a conclusive estimate of the remaining life of the mine should shortly be available. The Rs. 9 shares have fallen from a high level of 24s. 3d. this year to 12s. 9d. On last year's tax-free distribution of 18½ annas, the shares yield 18.1 per cent. gross—a warning rather than an attraction.

Trepca Mines.—With lead and zinc prices falling fast, the market is in no state to respond to base metal mining company reports, however brilliant their figures may be. The Trepca Mines report is good, though, perhaps, not outstandingly good for a year in which the price of both lead and zinc touched nearly £37 per ton. Net profits have increased by over 50 per cent., from £402,194 to £632,470, but the dividend is raised from 25 per cent. tax free to only 30 per cent. tax free. This conservative policy, which permits the transfer of £125,000, against £30,000, to reserve, and an increase of £60,226 in the carry forward, is not readily explicable from the report. But it may be that the company is relying upon good years to find part of the development expenditure of moderate years, of which 1937-38 is likely to be one. However, the most striking feature of the report lies, not in the year's profit figures, but in a further increase in costs from 16s. 10d. to 19s. 3d. per ton of ore mined. As the company raised 655,463 tons, the increase in costs involved nearly £80,000—equivalent to just over 2 per cent. on the issued capital of £1,118,364. Material charges, which accounted for part of the increase, will no doubt adjust themselves. But it may prove difficult for the company to keep wages in line with metal prices when the latter are moving downwards. It

may be noted that £80,000 represents about 20 per cent. of the net profits for 1935-36, which might be considered "normal." The output figures show the expected fall in the production of zinc and a rise in lead and silver—the normal consequence of the reduced zinc content of the orebody at depth. As the prices of lead and zinc are now about £7 per ton below their average for 1936-37, the yield of 11.3 per cent. gross on the shares at 18s. 9d. is not especially attractive. Probably it does not discount unduly the inevitable fall in profits during the current year.

Other Company Results.—Our usual analysis of profit and loss accounts, appearing on page 452, again includes about 40 reports. The heavy industries, represented, for instance, by *Glass Houghton and Castleford Collieries* and by *Redpath Brown and Company*, show excellent results. Progress in the consumption trades is reflected by a number of brewery reports. The accounts are discussed on page 451 under the heading "Shorter Company Comments."

Company Meetings of the Week.—Reports of company meetings commence on page 438 of this issue. At the *Royal Bank of Scotland* meeting, the Duke of Buccleuch expressed satisfaction that a reduction in investments had been required to meet the customers' demands for advances. Mr S. M. Ward's address to *English, Scottish and Australian Bank* proprietors is discussed on page 425. Mr H. J. Joel, at the *Johannesburg Consolidated Investment* meeting, referred to the maintenance of costs at a moderate level. The chairman declared that present Union taxation scales were unjustifiably severe. Referring to the recent decline in copper, Sir Edmund Davis pointed out to *Rhodesian Anglo-American* shareholders that consumption outside the United States was averaging about 30 per cent. above 1936. At the meeting of *Trust of Insurance Shares* Mr McCurdy commented on the three new unit trusts established during the past year, and stressed the advantages of marketability of the units. Mr Alan V. Sugden declared that the past year was one of good trading for *Wall Paper Manufacturers*, though competition and over-production were still operative. *Ansell's Brewery* shareholders were informed that large stocks of barley were fortunately purchased last season. Owing to the small crop the cost of English barley would be much higher during the coming year. Mr Ernest Walls informed shareholders of *North British Rayon* that last May the viscose rayon prices had been stabilised by mutual understanding in the industry. At the *Elswick-Hopper Cycle and Motor* meeting, Mr Fred Hopper drew attention to the increase in stocks, which provided against rising raw materials costs. Mr. A. W. Rogers pointed out that the volume of oil handled and the profits earned by *Trinidad Leaseholds* were the highest in the company's history. At the meeting of *Malaya General* Mr Thomas A. Graham pleaded for a relaxation of restrictions on new planting. Optimism was the keynote of Mr Barrett's speech at the meeting of *Sumatra Para Rubber Plantations*. The profit for the past year was nearly double that for 1935-36. At the *Gold Coast Selection Trust* meeting Mr H. G. Latilla expressed confidence that the output of Amalgamated Banket Areas would be progressive and would add to the parent company's income. To *Marlu Gold Mining Areas* members he reported that a third treatment plant unit had now come into operation and hoped that a fourth would come into commission before the end of the current year. Events in the Australian wool market were discussed by Sir John Anderson at the *Australian Mercantile Land and Finance Company* meeting. The highest prices last season had been reached last January, when Japan resumed buying. Japanese buying has been limited so far this season, although Japan is under agreement to buy 500,000 bales before June, 1938.

THE WEEK IN THE MARKETS

THE STOCK EXCHANGE

SETTLING DAYS

TICKET: NOVEMBER 30

ACCOUNT: DECEMBER 2

It becomes increasingly difficult to forecast changes in sentiment in the "House." There was no new reason for Monday's collapse, and it is similarly difficult to rationalise the recovery which has since occurred. Wall Street's further fall to new lows doubtless assisted the first rush down the slippery slope, but to judge from Monday's sales, the investor with purely domestic interests was evidently reaching the limit of his patience with the continued fall in values. The turn occurred during Tuesday morning, starting with Kaffirs (then at truly deflated levels) and spreading to industrials, according to report, as a result of institutional investment buying. Dealers however, were no more willing to give away stock than to pay for holding it the previous day. The improved tone was maintained on Wednesday and Thursday, assisted, it would seem, by some professional bear closing.

Monday's gloom overshadowed gilt-edged issues, which were unable to maintain their reputation of remaining indifferent to weakness in industrials. All stocks declined sharply, old Consols falling half a point on the day. The fall continued next day, when losses of over half a point were recorded, and War Loan at one time touched 100½. The afternoon rally was not enough to recover all losses. The tone in mid-week was distinctly better; good support was given to Conversion issues and a sharp rise occurred in 4 per cent. Funding.

Home Corporation scrips followed the Funds. After early neglect they were brighter on Wednesday. Dominion stocks lacked interest and did not share in the mid-week improvement; New Zealand issues were weak on rumours of an internal loan, and Australians on second thoughts regarding the outcome of the Conversion.

After the official confirmation of default, Brazilian bonds sagged, quotations on Monday being purely nominal. The accumulation of disquieting news from Shanghai affecting Customs, hit Chinese bonds, which declined persistently. These two groups are discussed on pages 428 and 429.

Home rails were among the more satisfactory sections of the market. Though affected by Monday's slump, they rallied at the close, and on Tuesday considerable activity was reported. Good traffics produced a marked improvement in mid-week with particular support for preference stocks. Among foreign rails, Argentine stocks were unsatisfactory at first, but shared in the subsequent improvement.

Industrial shares registered a heavy fall on Monday, extending to every section of the market. Then bargain hunters appeared on Tuesday morning, and recovery made further headway on Wednesday and Thursday. The feature of Monday's movements was the heavy fall in the solid investment industrials, such as Courtaulds, Imperial Tobacco, and Imperial Chemical Industries. The more speculative sections fluctuated to extremes. Tube Investments (whose profits are discussed on page 430) showed a fall to 71s. 9d. early on Tuesday, and were up to 78s. at the close of the day. Vickers continued their recent fall to 21s. 6d. before recovering to 24s. 10½d. on Thursday. Steel shares generally continued their rise throughout Thursday, on renewed evidence of small buying orders.

Electrical equipment shares fell unchecked at first, but recovered in conformity with the rest of the market, before the publication of a rather adverse "Beama" index figure. Motor shares participated in the improvement rather later than the rest of the market, for only Standard were quotably better on Tuesday. The initial relapse in brewery and tobacco issues was, in the majority of cases, more than made good in mid-week. Imperial Tobacco, however, which fell no less than 5s. 7½d. on Monday, had not regained all their loss by mid-week, though Distillers did so. In the store share rally, Marks and Spencer and Woolworth led the way, but provision and catering issues continued somewhat uncertain. Sharp falls occurred in the Realisation shares (whose position is discussed on page 429) but as the shipping group improved, they were largely regained. Bargain hunting among the miscellaneous leaders corrected the abnormal levels recorded on Monday, and many shares by mid-week were fractionally higher than their opening levels.

Oil shares followed the general trend. New lows were touched on Monday for many issues, and the entire section was without a bright spot. The Eagles did not hold their gains on the Poza Rica concessions news. The next day there were further falls, some of the leaders at first reaching new lows.

(Continued on page 436)

features of THE SCOTTISH INDUSTRIAL ESTATE

No. 1 HEATING

All factories are supplied with heating and process steam from a central boiler house on the estate.

The cost of heating is included in the rental of £50 per annum of the 1,200 sq. ft. factories. For the larger factories the cost of heating

amounts to less than one-half of the cost of heating individual factories.

The capital cost of installing a boiler and heating equipment is eliminated as are the expenses of maintenance and labour.

In no other part of Great Britain is this service available.

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields of fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

(Continued from page 433)

Prices then attracted buyers, and the tone improved. Recovery continued in mid-week, with good demand for Burmah Oil and for Anglo-Iranian, but Paris selling held back Shell and Royal Dutch.

Rubber shares on Monday were affected by a steady trickle of nervous sales which, as usual, depressed prices disproportionately. The next day's rally was half-hearted, and over the whole session prices ended lower. But there was marked mid-week improvement, due mainly to professional buying. The public, however, are apparently holding off till the 1938 quota is known. In tea shares, signs of forced selling decreased as the week progressed.

Mining shares recovered on Tuesday in response to the market's complete reversal of sentiment. Kaffirs shared in the general improvement, Gold Fields attracting attention following the excellent showing made by the annual report. Prices were marked up throughout the list on Wednesday, though there was no very appreciable volume of buying. West Africans joined in the general movement. Rhodesians did not recover till Tuesday afternoon, despite the encouraging remarks of Sir Edmund Davis at the "Rhoango" meeting. On Wednesday demand was steadier and prices made headway. Tin shares were quiet, but prices improved.

ACTUARIES' INVESTMENT INDEX

The Actuaries' Index of 177 industrial equity prices stood at 70.7 last Tuesday—a big drop from 74.9 a week ago. A month ago it was 77.5. The corresponding yields are 5.19, 4.87 and 4.69 per cent. All the separate indices showed a decline on a week ago. The following is a selection of those whose movement was greatest.

Group (and Number of Securities)	Price (Dec. 31, 1928 = 100)			Yield (%)		
	Month ago (Oct. 26, 1937)	Week ago (Nov. 16, 1937)	This week (Nov. 23, 1937)	Month ago (Oct. 26, 1937)	Week ago (Nov. 16, 1937)	This week (Nov. 23, 1937)

NEW YORK STOCK EXCHANGE

AFTER a bad collapse on Friday of last week, Wall Street recovered slightly on Saturday. But the current week opened with a calamitous break on Monday, with prices depressed principally by lower steel mill activity. The market has been discouraged by the absence of the expected friendliness from Washington, and in its despondent mood was subjected to

further attack by Mr W. O. Douglas, Chairman of the S.E.C., who threatens the exchanges with fuller regulation by the Commission, unless they reorganise themselves in the public interest. The chairman's proposals are discussed on page 428. Tuesday saw a modest revival, and stocks improved on the day after new "lows" had been touched earlier. On Wednesday, the eve of the Thanksgiving holiday, prices drifted lower, with the Dow Jones industrial index closing at 113.64, compared with the spring "high" of 194.4. Iron Age estimates steel mill activity for the current week at 33 per cent. of capacity, against 35 per cent. last week, with signs of some improvement. Utilities have been slightly better than the general run of issues, in the hope that something may emerge from the President's conference with Utility leaders, although these hopes are not rated very highly. The bond market has been weak, with the exception of government issues supported by Federal Reserve buying.

CAPITAL ISSUES

THE new issue market has not reproduced last week's activity. Only one public issue has appeared—an offer of £300,000 5 per cent. second mortgage debenture stock of *Earls Court, Ltd.*, at 96½ per cent. The creation of this stock, to provide for increased building costs, entailed the modification of rights of the existing third debenture stockholders. On the original profits estimate—a complete year's trading results are not yet available—the offer shows that the stock would be covered nine times. This calculation by "prior deduction" would be reduced to about three times if the "cumulative requirements" method was employed and to 2½ times when sinking fund operations commence. The high rate offered by the debentures is justified by the absence of an earnings record and by the speculative element in the company's business, but the prospect of substantial sinking fund obligations in 1943 and final repayment in 1957 lend some speculative interest to the stock. A statement for information has been published on behalf of *Malayan Para Rubber*.

COMPANY MEETINGS

ROYAL BANK OF SCOTLAND

ANNUAL GENERAL COURT OF PROPRIETORS

SATISFACTORY YEAR'S RESULTS

PROFITS MAINTAINED

DUKE OF BUCCLEUCH'S REVIEW

The annual general court of proprietors of The Royal Bank of Scotland was held, on the 24th instant, at Edinburgh, His Grace The Duke of Buccleuch, G.C.V.O., Governor of the Bank, presiding.

His Grace said:—I presume it will be your pleasure that the annual report and balance sheet, with the auditors' report, which have been in your hands for some days, shall be taken as read.

Before coming to the ordinary business of this meeting, I should like to refer with deep regret to the loss which the bank sustained on July 19th last in the death of Sir Arthur Worley, Bt., C.B.E., who had been an extraordinary director since 1925. Sir Arthur took a keen interest in the affairs of the bank, and on many occasions we had the benefit of his wide experience and shrewd judgment which he willingly placed at our disposal.

To fill the vacancy caused by the death of Sir Arthur Worley the directors elected Sir Walrond Arthur Frank Sinclair, K.B.E., as an extraordinary director. Sir Walrond is well known in industrial circles in the South. He is a director of our associate bank, Williams Deacon's Bank, Limited, and it is a matter of gratification to us that he was able to accept our invitation.

I now come to the figures of our balance sheet, from which it will be seen that the steady growth in the business of the bank has been well maintained during the year under review.

DEPOSITS

Our deposits again show an increase of £2,800,000—which is equal to the increase shown in our last year's report—bringing the total up to £69,674,161.

Notes in circulation at £3,021,131 are £91,000 higher than last year. The further increase under this heading reflects the improvement in trade and employment.

Acceptances and endorsements of foreign bills and other obligations at £4,226,203 show an increase of approximately £700,000, the increase reflecting in some measure our larger imports and the rise in commodity prices and shipping freights.

LIQUID RESOURCES AND INVESTMENTS

The assets side of the balance sheet provides ample evidence that the highly liquid position of the bank has been maintained. Cash on hand and with the Bank of England and other London bankers, and money at call and short notice, etc., amount to £15,697,758—representing over 21 per cent. of our liabilities to our depositors and to the public in respect of our note issue.

Bills discounted at £3,883,250 show a reduction, compared with last year's figures, of £231,000. As you are aware, we include under this heading our holdings of British Government Treasury bills amounting to £1,545,000—which is £490,000 less than we showed last year. It will, however, be seen that we were holding in our bill portfolio at our balance date £258,000 more of commercial bills than we held a year ago.

Our investments in British Government, Indian and Colonial Government securities and other securities have declined by approximately £1,200,000. I am sure you will agree with me when I say it is a matter for satisfaction that in a year when our deposits have shown a substantial increase, we have had to reduce our investments to meet the requests from our customers for advances to assist them in their trading requirements. I would here mention that a large proportion of our British Government securities is in short- and medium-dated stocks, and that all our investments are valued at or under the market prices ruling on the date of our balance.

ADVANCES

When I addressed you from this chair a year ago I referred to the increase of £625,000 in our advances. I also stated that indications were not wanting that the internal industrial revival and the rise in commodity prices were influencing requests from

our customers for bank accommodation, and I am now pleased to report this year a further expansion of almost £4,000,000 in this important side of our operations.

The increase is well spread throughout the bank, but I should also add that it includes a substantial amount of very temporary accommodation granted for the payment of estate duties.

PROFITS

The profits for the year—at £636,419—are £4,383 more than a year ago.

Following our usual practice, all bad and doubtful debts have been fully provided for.

APPROPRIATIONS

The directors recommend that a dividend for the half-year, payable at Christmas, at the same rate as formerly—17 per cent. per annum—be declared, and that the same appropriation as last year, viz. £30,000, be made to pension reserve fund, and that the appropriation to bank buildings and heritable property be increased from £25,000 to £30,000. We have considered it advisable to increase the allocation to our pensions account having regard to the higher costs of reconstruction and repairs.

After these appropriations there remains the sum of £94,445—which it is proposed to carry to rest or reserve, which now stands at £4,038,616.

BUSINESS OF THE BANK

It will be seen from the figures I have submitted that the bank continues to progress, and I am glad to say that our associate—Williams Deacon's Bank, Limited—is sharing in the English industrial prosperity.

SCOTTISH INDUSTRY

It is pleasing to be able to report good progress in Scottish industry generally.

Coal, which depends so much on its exports, experienced good conditions with better prices during the first six months of this year, but during the past two months less activity has prevailed in the export branch of the industry. Fortunately, the home market continues good, largely due to the busy conditions in the heavy industries.

The iron and steel industry is very busy, and in the steel trade the demand exceeds the output. Furnaces are working at high pressure, and should continue to do so for some time to come in order to cope with the many orders on hand.

While prospects in the light castings branch of the industry still continue bright, a slight falling-off during the past few weeks has been noticeable.

Manufacturing engineers have benefited from Government orders, and contracts on hand are sufficient to keep works at full capacity for some months yet.

Shipbuilders have experienced a busy year, and output is likely to be the highest for the past six years. For a time in the earlier part of the year work was slowed down owing to the difficulty in obtaining delivery of steel, but that difficulty has now disappeared. The yards that are fortunate in having Government contracts are working at high pressure, but it is, perhaps, disappointing that latterly few orders are being received for new merchant tonnage. New Admiralty orders are, however, expected, and with a considerable amount of work in hand the outlook on the whole in the shipbuilding industry can be described as promising.

In agriculture, the improvement reported last year has been maintained. This is largely due to higher prices for which the steadying influence of marketing schemes and other forms of assistance affecting certain commodities is partly responsible.

The fishing industry has gone from bad to worse, and it is to be hoped that steps will quickly be taken to alleviate the parlous condition into which this industry has fallen.

IMPORTS AND EXPORTS

It is with regard to our foreign trade situation that I feel there is cause for apprehension. Our imports are increasing at a much faster rate than our exports. For the first ten months of this year our total imports were £838,000,000—while exports, including re-exports, were £498,000,000—an adverse balance of £340,000,000—which is £64,000,000 more than in the corresponding period of last year. Therefore, on the basis of the last ten months, the excess of imports is running at an annual rate of £408,000,000—and, comparing it with other years in which a heavy adverse balance has caused us anxiety, we find that in 1931 conditions were similar in so far that the financial effect of an unbalanced trade position was veiled by the foreign money which had been transferred to this country for safety. In that year the excess of imports was under £407,000,000—or just a little less than the figure to which the adverse balance threatens to attain in the current year.

The redressing of the adverse balance was one of the tasks to which the National Government directed its energies in 1931, and a notable improvement was brought about within the next few years despite trade depression, so that the nation with the help of its invisible exports was again living within its means.

But to-day, making every allowance for the growth in invisible exports through better shipping freights and better returns from overseas investments, it seems inevitable that this year will close with a deficit in our balance of overseas payments. That is not a happy prospect, and yet there seems to be a singular complacency regarding it.

Too great a degree of activity in internal trade in default of a commensurate expansion of exports would be a dangerous development, but every assistance should be given to our manufacturers and exporters in their efforts to stimulate our export trade, although it seems unlikely that exports under present conditions can rise sufficiently.

The expansion in imports began with the improvement in internal conditions, and when the necessary heavy demand for raw materials, arising from the re-armament programme, is added, the position, I feel, calls for caution. The nation cannot be told too plainly that security against aggression necessitates sacrifices and that such sacrifices can be advantageously made by saving instead of spending money. The resultant contraction of personal expenditure would reduce unnecessary imports and contribute to the restoration of a favourable balance in the national economy as regards overseas payments.

THANKS TO OFFICIALS AND STAFF

I desire once again to express to Mr Whyte, the general manager, the directors' appreciation of his unfailing energy and skill which have contributed so largely to another successful year's working.

The sincere thanks of the directors are also due to the assistant general manager, and to the officials and staff of the bank at the head office, London, Glasgow and Dundee offices, and the branches, for the ungrudging and loyal services they have rendered throughout the past year.

APPROVAL OF ACCOUNTS—DIVIDEND

I now beg to propose that the report, containing a statement of the accounts and balance sheet, be approved, and that out of the profits of the year a dividend at the rate of 17 per cent. per annum for the half-year, under deduction of tax, be declared in conformity therewith.

The report was approved, and the governor, deputy-governor, extraordinary directors, and the retiring ordinary director were re-elected and auditors were re-appointed for the ensuing year.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to:—

The Reporting Manager,

THE ECONOMIST,

8 Bouverie Street,

Fleet Street,

London, E.C.4.

Telephone: Central 8631

ELSWICK-HOPPER CYCLE AND MOTOR COMPANY, LIMITED

DIVIDEND MAINTAINED AT 15 PER CENT.

The twenty-fourth annual general meeting of the Elswick-Hopper Cycle and Motor Company, Limited, was held, on the 22nd instant, at Barton-on-Humber.

Mr Fred Hopper (the chairman) said:—Our floating assets, including the amount due from the subsidiary company, are £189,545, and our creditors, including reserve for income tax, amount to £52,521, showing a surplus of £137,024, or approximately equal to our total issued share capital. Our fixed assets stand at £73,647.

We have made the same allowance for depreciation as last year, which, in our opinion, is ample.

Our subsidiary, I am glad to say, has made a profit which has been carried forward in that company's accounts, after a substantial reservation has been provided for contingencies.

We are again transferring the sum of £5,000 from the profit and loss account to the reserve fund, making it £45,000.

We are recommending a dividend of 15 per cent., which will absorb £15,938 17s., and after the allocation to general reserve of £5,000, just referred to, there remains the sum of £9,377 13s. 1d. to be carried forward.

We drew attention in our report to the increase in our stock from £41,631 15s. 5d. to £57,521 9s. 2d. owing to the necessity of providing against the rising cost of raw materials and the possible difficulty of obtaining future supplies, but since the close of our financial year this position has improved, and we do not anticipate any acute shortage in the near future.

We have made satisfactory progress for the first three months of the current year, and the prospects for the future indicate that the company's activities will be fully maintained.

Once again, I would like to thank the staff and the employees for their loyal service.

The report and accounts were unanimously adopted.

TRINIDAD LEASEHOLDS, LIMITED

NEW RECORDS ESTABLISHED

The twenty-fourth ordinary general meeting of Trinidad Leaseholds, Limited, was held, on the 24th instant, at Winchester House, Old Broad Street, London.

Mr A. W. Rogers (the Chairman) said that the accounts revealed both a satisfactory trading result for the year and a strong financial position. Oil profits and other revenue amounted to £1,090,940, an increase of £421,812 on the previous year. This increase was due to expansion of sales and improved average realisation of products. After transferring £100,000 to reserve account, the directors recommended a final dividend of 20 per cent., making 30 per cent., less tax, for the year.

The development programme outlined a year ago had been actively pursued. Although for a variety of reasons, including to some extent the labour troubles, they had not made the progress they expected in the erection of the plants, one unit had just begun to operate, and it was anticipated that most of those in course of erection would be in operation before the close of the present financial year. Once again new records had been established. The volume of oil handled and the profits earned were the highest in the history of the company. Footage drilled, production and purchases of crude oil all increased by 16 per cent. over the previous year. Refinery throughput had increased by 17 per cent., and drilling costs per foot drilled had decreased by 11 per cent.

The sales in the United Kingdom of the various blends of the company's "Regent" motor spirits had shown a further considerable increase during the year. Continued expansion of their business in the United Kingdom was in no small measure due to the very friendly and mutually beneficial relationship which had been established with the trade. He was glad to say that the number of their distributors showed a gratifying increase.

Working results for the current year to date compared favourably with the average results of last year, but with nearly two-thirds of the period still to run it would obviously be unwise to attempt any forecast of our results for the whole of the present financial year.

The report was unanimously adopted.

ENGLISH, SCOTTISH AND AUSTRALIAN BANK, LIMITED

PROSPERITY IN THE COMMONWEALTH

DIVIDEND OF 7 PER CENT

The forty-fifth ordinary general meeting of the English, Scottish and Australian Bank, Limited, was held, on the 24th instant, at 5 Gracechurch Street, London.

Mr S. M. Ward (the chairman), in the course of his speech, said:—You will, I am sure, have all heard with deep regret of the death on October 25th last of our revered chairman, Mr Andrew Williamson. We have lost a great chairman, who has guided the fortunes of this bank with conspicuous success for the last seventeen years, and, above all, we have lost an old and valued friend. I am sure I shall be acting in accordance with your wishes in conveying to Mrs Williamson your appreciation of the great services her husband has rendered to the bank, and your sincere sympathy with her and her family in the great loss they have sustained.

CONDITIONS IN AUSTRALIA

It is pleasing to be able to report that the Commonwealth is enjoying a period of remarkable prosperity. The Federal election, which has recently taken place, has resulted in the return of the late Government to power, with a slightly reduced majority. The outcome is a record in Australian political history, for this is the first occasion on which the same Government has entered upon a third successive term of office, a result which is a high tribute to the popularity and leadership of Mr Lyons, the Prime Minister. Apart from the spirit of confidence engendered by a stable Government, upon which the ultimate welfare of every nation depends, the factors contributing to prosperity in Australia are mainly the volume and prices of her export commodities. Australia lives by her exports, and of those by far the largest are wool and wheat, which together represent nearly 69 per cent. of her total exports.

With the single exception of butter, the value of every item in the classified list of exports shows an increase, and the total exports amounted to £127 millions sterling, as against £109 millions in 1935-36 and £85 millions in 1931-32, which was the worst year of the depression.

WOOL AND WHEAT

During the period under review wool production exceeded estimates by 200,000 bales, while at the same time the demand continued keen and at times difficult to satisfy. Under these favourable circumstances prices remained firm, and the average market value for greasy wool was 16.48d. compared with 14.01d. per pound for 1935-36. The value of wool exported amounted to £62,526,000, against £51,768,000 for 1935-36. At the moment a general setback of prices has manifested itself, due almost entirely to a lack of confidence in the European situation, the unsettled conditions in the Far East, and the possibilities of reaction from the American position.

The quantity of wheat exported was somewhat lower than in the preceding year, but the higher world price more than compensated for this falling off, and the official statistician of the Commonwealth gives the value of the exported wheat and flour as £24,361,000, compared with £18,570,000 for the year 1935-36.

The present price level is attractive to growers, as is evidenced in the wider areas sown to crop by all chief producing countries, but it should be some time before world production is stimulated sufficiently to reverse the present trend of the market. The Australian crop estimates for the current season were put as high as 190,000,000 bushels, but owing to some unfavourable weather reports from Victoria and New South Wales this figure was modified later to round about 160,000,000 bushels, compared with 150,500,000 bushels last year.

BUTTER AND MEAT

A further decline in butter exports of 17,025 tons below the already reduced level of the previous year has to be recorded, but Australia still stands third in the list of suppliers to this country with 29 per cent. of the total imports from Empire sources. The reason for the decline was due to the dry weather in the dairying-districts of New South Wales and Queensland in the spring and early summer. The total value of butter exported was £7,716,473, against £9,832,733 in 1935-36. One of the essential factors of the meat market of this country is the policy of the British Government, by which each of the exporting

countries is necessarily affected. So far as mutton and lamb are concerned, there is a continuance of the policy of regulating supply to demand and arranging shipments from the Dominions accordingly. Increased prosperity here has led to the absorption of over 1,000,000 more lambs this year than last, and the whole trend of the statistics for imported mutton and lambs shows that the expansion that has taken place is filled from Empire sources. Australia's share in this is reflected in the increased value of her export, £45,234,000, against £44,466,000 last year.

Australia continues to make progress in the export of chilled beef, and it is anticipated that shipments of beef from Australia to the United Kingdom will be approximately 33 per cent. more in 1937 than in 1936. So far as the Dominions are concerned, the British Government have, we understand, agreed to the right of producers to change over from frozen to chilled beef to any extent desired within the quota, and with the improvement of gas storage and transport facilities Australia is rapidly increasing her volume of chilled beef without involving any reduction in frozen shipments.

METALS

The upward trend in prices recorded in 1936 continued until the peak of March this year; since then they have fallen rapidly. The value of all non-ferrous minerals exported, including coal and excluding gold, last year was £9,600,000, an increase of £190,000 over the preceding year. During 1936 gold production of Australia amounted to 1,169,301 fine ounces, worth £10,121,313, being an increase of some 254,600 fine ounces over that of 1935. During the last seven months of the year production exceeded 100,000 ounces per month and in December, 1936, reached the record figure of 123,411 ounces.

With regard to the immediate future, the outlook continues generally favourable. This is borne out by the following telegram which we have just received from our general manager:—“Conditions in Australia on the whole gratifying. Recent rains in important districts have assured satisfactory summer season. Dairying prospects good. Estimated wheat harvest heavier than last year and prices expected to be reasonable. Wool prices have fallen and market tendency obscure. Metals have fluctuated recently, but there appears to be a steadier tone in the market. Trading conditions continue buoyant and general prospects are satisfactory.”

GOVERNMENT FINANCE

It may not be out of place to detain you for a few moments on the important subject of Government finance. For the six years ended in June, 1935, the combined State and Commonwealth Budgets resulted in an aggregate deficit of over £466,000,000, and this will to a large extent account for an increase in the State and Commonwealth Public Debt of over £80,000,000, although the Public Debt of the Commonwealth itself was reduced during the period 1931-37 by £11,019,000. During the past two years, however, the combined Budgets have shown a surplus of £1,100,000 in 1935-36 and £965,000 in 1936-37. Since October, 1932, all maturing and optional loans domiciled in London, totalling £221,770,000 sterling, have been successfully converted at an annual saving in interest of approximately £3,200,000 sterling.

The estimated expenditure of the Commonwealth for the current year is £85,160,000, of which £25,000,000 is allocated to war and repatriation services and defence. The next largest item is £15,900,000 for invalid and old-age pensions—an increase over last year of nearly £2,000,000. In view of the expectation of still further increases under that heading in the future, which is causing some concern in responsible quarters, it is understood that the Government are considering the possibility of introducing a system of national insurance.

With reference to the Banking Commission, the Chairman, in expressing approval of the general conclusions of the report and its endorsement of private enterprise in banking, said that, with regard to the recommendations of that report, about 30 in number, there were some to which the bank would take strong exception in their present form, especially as they appeared to be inconsistent with the body of the report. The report, however, was doubtless receiving careful and exhaustive examination by the Government.

THE ACCOUNTS

Dealing with the bank's accounts, he said that taking deposits and current accounts together at £35,282,660, there was the substantial increase of £2,389,410 over the previous year's figures. The gross profit was £1,181,480, an increase of £78,766, and it was proposed to pay a final dividend of 3½ per cent., less United Kingdom income tax, making 7 per cent. for the year. The report and accounts were unanimously adopted.

TRUST OF INSURANCE SHARES LIMITED

ADVANTAGES OF UNIT TRUSTS

MR. McCURDY ON MARKETABILITY

The third annual general meeting of the Trust of Insurance Shares, Limited, was held, on the 23rd instant, at the registered office, 30 Cornhill, London, E.C.

The Right Hon. Charles A. McCurdy, K.C. (the Chairman) presided.

The Chairman said: Since I last addressed you the company has brought into existence three new unit trusts:—

The Trust of Scottish Bank, Insurance and Investment Trust Units, for which the Royal Bank of Scotland act as trustees and bankers.

Investment Trust Units, for which Lloyds Bank, Limited, act as bankers and custodian trustees, and

The Cornhill Trust, which was successfully launched last week, with the Midland Bank Executor and Trustee Company, Limited, as trustees.

OBJECTS OF SCOTTISH TRUST AND INVESTMENT TRUST UNITS

The creation of the Scottish Trust and the Investment Trust Units raised a question of great importance to unit holders, viz. the maintenance at all times of free marketability in their Units. The purpose for which Investment Trust Units was formed—a purpose which we also had in mind in creating the Scottish Trust—was to give the investing public an opportunity of acquiring an interest in the stocks and shares of the best of the old-established managed investment trusts, incorporated under the Companies Acts, in a form that would always be readily marketable. The Investment Trust companies, I need hardly remind you, are limited liability companies, managed by experts who by their training and experience and the control of substantial resources are in a position to invest capital to better advantage than the average individual. There are in existence in Great Britain some 200 investment trust companies, with an aggregate share and loan capital of approximately £300 millions. Some of these companies have a long record of steadily growing prosperity and constitute an excellent investment with, however, one drawback: the limited marketability of their stocks and shares. It is often a matter of extreme difficulty to buy or sell any substantial amount of stocks and shares of the best investment trust companies, and, in times of market depression, such as we are now experiencing, it would be very difficult to realise any substantial block of shares without severe repercussions upon prices. The portfolios of the Scottish Trust and of Investment Trust Units are made up partly in the one case and wholly in the other of stocks and shares selected from some of the best known and oldest established of the investment trust companies, and offer to the public an investment in the form of units which are, at all times, readily marketable for cash. To achieve this result we took very special precautions. Marketability means that when shares or units have to be sold there is, or should be, no difficulty in finding a purchaser. It is not secured by merely obtaining for a security an official quotation on the Stock Exchange, nor do the provisions commonly found in the trust deeds of the unit trusts for liquidating a part of their underlying securities in order to pay out a unit holder in case of need make the units marketable; on the contrary, they provide a method of partial liquidation of the Unit Trust which is not necessary so long as the units enjoy a free market.

CASH AVAILABLE FOR REPURCHASE

In the case of Investment Trust Units and the Scottish Trust we therefore made special provision, whereby in the one case a sum of £250,000 and in the other a sum of £100,000 can be made available if required for the repurchase of Units or for the realisation of underlying securities without the necessity of throwing stocks on the market, if at any time the markets are difficult. Up to now the Units in these Trusts have proved freely marketable without the necessity of resorting to those special provisions.

In our view, the holding of Units in a properly constituted Unit Trust ought at all times to possess two advantages over the director holding by an investor of the underlying securities:—

1. A greater stability in price movement, and
2. A freer market for the investor who desires to realise his holding.

It is well known that we are always ready to deal in our Units

either way, at the bid and offer prices of the day. These prices are net, and include commission at the usual rates on purchase or sale, as well as the transfer stamp duty, where payable.

The marketability of our Units, apart from any of these provisions, is secured by the fact that they are not speculative. They are bought for investment and for investment only, and during the worst periods of crisis through which the markets have recently passed the bona fide investor was still seeking safety-first investments, and there were no speculative accounts in our units to be liquidated.

It may interest you to know that yesterday and to-day the demand for our Units in our older trusts as well as in the new ones was well maintained.

CORNHILL TRUST

Last week we issued a new trust—the Cornhill Trust—the success of which during a period of depressed markets is extremely gratifying to your directors.

The features of this new trust were described very neatly by the City Editor of “The Times” as “a new type of investment which has been . . . designed to meet the persistent demand in the first place for a short-dated debenture in the high-grade investment class and, in the second, for a type of issue which has as its chief attraction the prospect of capital appreciation over a period of years.”

The Debenture Units of the Cornhill Trust represent the most marketable type of security known to the City—a short-medium dated debenture, fully secured, which gives to the holder the right to receive on fixed dates definite sums of money in respect of capital, interest and redemption premium. For securities of this type there is always a very wide class of buyers, ranging from insurance companies and savings banks to the small individual investor, and a price can always be obtained varying only within narrow limits as current interest rates may vary.

Our experience last week is, I think, conclusive evidence on that point. The initial issue of 600,000 debenture units was immediately subscribed, and as the initial offer was by no means sufficient to meet market demands, arrangements were made to increase the funds and a further issue of 300,000 Debenture Units was created, the greater part of which has since been subscribed at the current price of 21s.

AUSTRALIAN, MERCANTILE, LAND FINANCE COMPANY, LIMITED

DISTRIBUTION OF 6 PER CENT.

The seventy-third annual ordinary general meeting of this company was held, on the 25th instant, in London.

Sir John Sanderson, K.B.E. (the Chairman), said that throughout the twelve months of their financial year the wool market had moved on a profitable level, but prices had risen to the highest point of the season in January, 1937, when Japan resumed buying in the Australian market following the conclusion of a trade agreement with the Commonwealth. It was understood that under that agreement Japan would take from the Australian market not less than 800,000 bales of wool during the eighteen months ending June 30, 1938. Of that quantity some 285,000 bales had been purchased before June 30, 1937, but since the new selling season opened in Sydney on August 30th last Japanese competition had been limited. It was a matter of concern to the wool trade to know how soon the additional 500,000 bales would be bought for admission into Japan.

When the new selling season opened in Australia on August 30th last prices were from 15 per cent. to 20 per cent. higher than at the opening sales of the 1936-37 selling season, but in common with most other commodities, and notwithstanding the strong statistical position of wool, prices were now well below the opening rates of last season and the market was irregular. Unless prices recovered, their commission accounts and results from the company's stations during the current financial year must be adversely affected. Included in the accounts now before the meeting, 9,159 bales of wool from the company's properties had realised £176,085, as compared with £124,524 from 8,190 bales for the period ended June 30, 1936.

After stating that their Argentine business had shown steadily, if slowly, improving results, and that in that great and progressive country they hoped to expand their activities as the years passed, he went on to say that it was a great satisfaction to the directors to be able to recommend to the shareholders after such a long period of adversity a dividend and bonus distribution on the present scale—a dividend of 5 per cent. and a bonus of 1 per cent., subject to British income tax at the rate of 4s. 3d. in the £. The report and accounts were adopted.

WALL PAPER MANUFACTURERS, LIMITED

YEAR OF GOOD TRADING

INCREASED PROSPERITY OF SUBSIDIARIES

The thirty-eighth annual general meeting of the Wall Paper Manufacturers, Limited, was held on the 25th instant, in the Venetian Room, Holborn Restaurant, High Holborn, London.

After commenting upon the accounts, the Chairman (Mr Alan V. Sugden, J.P.) said:—

GENERAL CONDITIONS

The story of the year's results is one of good trading, though with wallpaper manufacture marking time, owing to competition and over-production, whilst our other manufacturing subsidiaries and distributing interests have shown increased prosperity.

Against this we have had to set a considerable increase in taxation and an abnormal circumstance in the depreciation of gilt-edged securities when our holdings were valued at August 31st last.

Our position as large holders of gilt-edged stocks may be described as one of temporary vulnerability, though the risk of depreciation should decrease progressively as redemption dates draw nearer.

Returning to our main manufacturing interest, wallpaper, I would like to say three things—we make an article which for variety and quality is unsurpassed throughout the world, our position is strong, and we are confident of our ability to meet all that may be in front of us.

Wallpaper makes a unique claim on the woman of taste to express her personality in the decoration of her own home.

New methods of application and manipulation are continually appearing which permit of entirely different schemes being built up from individual designs.

The use of narrow borders in this connection supplies new scope for ingenuity combined with harmonious relation to the architectural features of walls and ceilings.

These new fashions are particularly applicable to modern houses and modern flats.

We invite all stockholders to visit the Ideal Home Exhibition at Olympia next March, when the very latest forms of wallpaper and its application will be shown, not only on the stand, but in the model houses and as a background to other exhibits.

Before leaving this subject I should mention the contribution our company has made during the past two or three years towards the instructional classes in decoration which form part of the curriculum of a great many technical schools throughout the country.

Practical work is essential to the student anxious to familiarise himself with the handling of wallpaper and with the object of facilitating the excellent work in these schools, the company has provided regular consignments of material for practice purposes, and in addition has arranged a number of lectures and film displays in various centres.

PAINT MANUFACTURE

The Walpamur Company has had a very satisfactory year with a substantial increase of sales which has been particularly marked among the main decorative products and especially in Walpamur Water Paint and Duradio Enamel Paint.

Steady progress has been made in developing the testing of raw materials and of products in process, the precise control of manufacturing processes at every stage, and in examination before despatch. This results in progressive improvement in technical qualities and is an important factor in the encouraging growth of trade.

ARTHUR SANDERSON AND SONS, LIMITED

This well-known house has had a very good year, to which an important contribution was made by the production of special decorations for the Coronation.

"Sanderson Fabrics," whose showrooms are also in Berners Street, have alike experienced a satisfactory year.

I hope these fabrics will receive the support of all stockholders and their friends. In particular I mention the "Indecolor" range which is not only fast to light but has the quality of withstanding hard and constant washing. "Sanderson Fabrics" are obtainable in all the best furnishing houses and department stores throughout the country.

PENSIONS

Since the various schemes (other than the Employee Directors' Fund) were instituted, £112,206 has been paid out in benefit, and there are at present 450 old employees in receipt of pensions.

ACKNOWLEDGMENTS

The board wishes me to again express our appreciation of the loyal co-operation shown by all members of the staff, both at home and overseas, during the year.

Their interest in the continued success of this great business is unceasing, and the stockholders will wish to be identified with this public acknowledgment of our grateful thanks.

The report and accounts were unanimously adopted.

NORTH BRITISH RAYON, LIMITED

STABILISATION OF PRICES

The ordinary general meeting of North British Rayon, Limited, was held, on the 18th instant, at the Incorporated Accountants Hall, Victoria Embankment, London.

Mr Ernest Walls (the chairman) said that during the year now under review the company had the use of the extensions which were completed in the previous year. The works had been run to full available capacity throughout the period and the output had found a ready sale.

In spite of this the financial year had been a time of exceptional difficulty. It had been a year of rising costs and wage increases, accompanied by falling selling prices of rayon, and the result of these circumstances was reflected in the reduced trading profit for the year.

The protracted run of selling price reductions came to an end in May last, when, by mutual understanding in the industry, prices of viscose rayon were stabilised. The level at which they were stabilised was a low one, lower than that of the year 1935-36; the important thing was that the price avalanche was checked and stability attained. Higher prices for the coming year were called for.

If, as he was sanguine enough to believe, a period of price stability with a reasonable profit for all producers could be anticipated in the future, rayon consumption should expand year by year, for they would have restored what was formerly one of the greatest arguments for rayon in the textile industry, namely, the stable prices as compared with the fluctuating prices of other fibres like cotton and wool. The general rayon position had been well maintained.

Referring to the excise duty, the Chairman said that on the assumption that users of rayon were faced with an increased price in the coming year, there was a special opportunity for the Government to remove that serious handicap from the textile industry. The only flaw in the argument for removal of the excise duty was that by reducing stock values it would cause a heavy loss to users of rayon, but removal of the tax under the circumstances suggested would leave users of rayon with a minimum of loss.

The report was adopted unanimously.

SUMATRA PARA RUBBER PLANTATIONS, LIMITED

The thirtieth annual general meeting of this company was held, on the 23rd instant, in London.

Mr H. A. Barrett (the chairman) said that it was gratifying to report a substantial improvement in results, the profit for the past year being practically double that for 1935-36—namely, £18,001, compared with £9,131. The board now recommend a dividend of 7½ per cent., against 4 per cent. last year. The actual crop harvested was 1,080,382 lbs., making, with the 1935-36 reserve stock, a total of 1,254,522 lbs. They exported during the period 1,158,187 lbs., thus ending up the year with a reserve stock of 96,335 lbs. standing in the balance sheet at the actual cost of production. The exportable crop realised a gross average price of 8.80d. per pound, as compared with 6.80d. per pound for 1935-36 and 5.67d. per pound for 1934-35. The liquid position of the company had been further strengthened, and they now had a total of £24,500 of "gilt-edged" securities.

In connection with the offer of shares for subscription at par, the bulk of the total expenditure on replanting occurred in the first year or eighteen months of the operations, and the additional working capital the board now invited shareholders to subscribe would ensure the company's liquid resources being maintained at a satisfactory and safe level, while permitting the total cost of the replanting programme to be spread over the whole period of immaturity.

Referring to the recent fall in rubber, he thought they might rest assured that the International Rubber Regulation Committee had its eye on the position and could be relied upon to act in the best interests of the industry.

The report was unanimously adopted.

JOHANNESBURG CONSOLIDATED INVESTMENT COMPANY, LIMITED

CONTINUED EXPANSION OF GOLD MINING INDUSTRY

MR H. J. JOEL'S SURVEY

The annual general meeting of the Johannesburg Consolidated Investment Company, Limited, was held, on the 23rd instant, in Johannesburg.

Mr H. J. Joel, who presided, said:—The year was a successful one and the company maintained its strong financial position. The total book value of the assets amounted to £8,953,460—an increase of £701,378 over last year. In the aggregate the market value showed a large surplus over book value. Assets showed a surplus over liabilities, including contingent liabilities, of £6,767,186. The net profit for the year was £1,141,878, which, with a balance of £166,875 brought forward, made a total of £1,308,753 available for distribution. £350,000 was transferred to reserve; £790,000 was declared in a dividend of 3s. and a bonus of 1s. per share, leaving a balance to be carried forward of £168,753.

INCREASED MINING OPERATIONS

Operations of the gold mining industry continued to expand throughout the year, resulting in an increase of three-and-a-quarter million tons milled as compared with the previous year, and approached fifty million tons. Recovery per ton milled showed a slight fall, but the increased operations resulted in the production of half a million more ounces of fine gold. Work and expenditure on capital account, particularly on mines in shaft sinking and developing stages, continued at a rapid rate.

A sum of £47,000,000 was spent on working costs, of which amount approximately one-half represented salaries and wages and one-half stores. On the latter account £15,000,000 was spent on South African products. During the last fiscal year the industry contributed directly to the Government over £14,000,000 in taxation and share of profits from leased mines.

A native labour force of approximately 310,000 was required to operate the industry at the rate of 50,000,000 tons per annum and to maintain the present rate of work on capital account. Since progressive expansion of the industry began at the end of 1932 it had been clear that sooner or later, if expansion continued, there would be a shortage of native labour, which was now being felt. Labour reservoirs at present available were dry, not only on account of the numbers required by the industry, but because expansion of the industry inevitably spread prosperity throughout the country and brought a greater general demand for European and native labour.

DEMAND FOR NATIVE LABOUR

Government spokesmen had from time to time expressed the conviction that Governmental schemes should be undertaken in times of adversity when labour was over-plentiful, but they found large labour-absorbing schemes such as railway and harbour construction and improvement, and dam and road building put in hand when employment was general. However desirable these schemes, it would be agreed that they had become possible only through the expansion of this great primary industry and they would, if demand for native labour was such that the gold mining industry could no longer expand or maintain its present position, lead to a reduction in the general activity rate of the country and a decrease in the European labour employed by the mines.

It was estimated that by the end of 1938 the industry would require over 350,000 natives. There was no possibility of obtaining large numbers of additional natives except from areas north of latitude 22 deg. S. under the control of the Colonial Office, which naturally had refused to permit engagement until the respective Governments were satisfied that conditions of employment of natives were good and the health position satisfactory. Employment on an experimental scale of a number of Nyasaland and Northern Rhodesian natives was permitted and proved so satisfactory from health and efficiency aspects that the Union Government in July last gave permission for the employment of 10,000 Tropicals on mines. Further engagements would be the subject of discussion between the Governments concerned and the Chamber at an early date.

TREND OF WORKING COSTS

A consideration of major importance which had the unremitting attention of control was the question and trend of working costs.

During the past four or five years it had been possible to improve conditions and remuneration of labour to a considerable degree and more recently a gradual rise in the cost of stores, particularly from overseas, became evident.

The cost per ton of ore milled had been maintained at a moderate level; the average in 1932 was 19s. per ton, which was the present figure. Two reasons for this result might be mentioned. Firstly, standing charges of individual mines were distributed over greater tonnage milled, and, secondly, although there was no spectacular single improvement in engineering practice, there had been persistent operating improvement further influenced by the fact that many mines which operated on a bare margin in 1932 with little prospect of improvement were in a position subsequently to improve machinery and plant with good results. With gold at its present selling price and at the present operating costs, the cost per ton of ore treated in terms of gold amounted to 2.7 dwt. While this figure could be maintained the industry was in little danger of retrogression.

MINE TAXATION

The industry had had adequate experience of the present form of taxation and with experience criticism had practically ceased. Such criticisms as were expressed in the first instance seemed to have been made without a full appreciation of the influence of the tax. The tax was designed to meet the Government's repeatedly expressed demands that it should not discourage the mining of ore carrying a small margin of profit and which would at the same time assure the Government of a 50 per cent. participation in any rise or fall in the sterling price of gold. The present form of tax fulfilled those conditions and had many other advantages beneficial to the industry as a whole and to the country. There was every reason to suppose that this form of tax would be permanent and that the muddle into which mining taxation descended in 1933, 1934 and 1935 was a thing of the past. The scale of tax, however, was so severe that it could not be justified from any angle; even the requirements of the country did not demand it.

The gold-mining companies of the group showed the following results for the six months ending June, 30, 1937:—Tons milled, 6,127,500; yield (ozs.), 1,308,204; yield per ton (dwts.), 4.27; working costs, £5,398,154; gross profit, including sundry revenue, £3,892,611.

IMPROVEMENT IN DIAMOND MARKET

At the last annual meeting it was reported that the diamond market had been in a much more satisfactory state, and it was pleasant again to be in a position to report further substantial improvement in the year under review. The harmonious relationship consolidated in recent years between the Diamond Corporation, the Association of Diamond Producers in South Africa, and outside producers had been maintained and the industry was now in a position to operate to the best advantage.

Platinum.—The price realised for platinum showed an improvement during the year. Additions to the plant at Rustenburg Platinum Mines were completed, and although tonnage treated had been increased the labour supply available was not sufficient to allow of the full production of 20,000 tons per month. To October all concentrates produced were shipped overseas for treatment and realisation. In future, concentrates would be partially treated at Rustenburg prior to shipment.

With regard to copper, the year under review was a very prosperous one. Demand increased materially and was followed by a substantial increase in price. In fact, the price rocketed in a disconcerting manner to a figure which could not be considered normal. An unduly high price naturally had a detrimental effect on consumption and encouraged uneconomic production. A moderate price and large consumption was in the best interests of the Northern Rhodesian producers, in which their company was largely interested; they were, as was now generally known, amongst the world's cheapest producers.

The Rhokana Corporation, which declared its maiden dividend on June 30, 1935, of 12½ per cent., increased the distribution to 17½ per cent. and 62½ per cent. for the two succeeding years.

The Rhodesian Anglo-American Company, which paid 5 per cent. for the year ended June 30, 1936, increased its dividend to 15 per cent. for the following year.

S.A. Carbide Company results reflected a continued expansion of business. Dividends of 8 per cent. were paid on the preferred and ordinary shares and an additional dividend of 2s. 5.188d. per share was paid on the preferred shares and 3d. per share on ordinary shares.

The report was unanimously adopted.

Copies of the Chairman's Speech may be obtained from the Secretary, Park Road, Aston, Birmingham.

SURVEY OF COMMODITY MARKETS

Copper, lead, spelter and tin continued their downward

In the United States, the prices of many commodities continued their headlong downward movement. Moody's daily index of staple commodity prices declined from 150.5 to 144.6 in the week ended Wednesday (December 31, 1931 = 100), against 164.5 a month ago and 189.5 on the corresponding day last year.

WORKINGTON.—The new price of West Coast hematite pig iron is known, but until it is formally sanctioned makers are keeping their books closed. A resumption of business may begin in a few days. Orders in plenty are offered, and it is certain that makers can sell all the iron they have during the whole of next year. Furnaces that have long been to spare during the whole of next year. Furnaces that have long been to spare during the whole of next year. It is stated that at worked at capacity may require reconditioning and it is stated that at least one will be blown out for relining early in January. While the steel-works in Cumberland and North Lancashire will not suffer from diminution of output, consumers in the Midlands, South Wales and Scotland will all be affected for six months, and there is likely to be a scramble, therefore, for the spill-over of the furnaces in draught. The output of low-phosphorus iron is sub-normal for high-class steel manufacture in the Midlands, and

Sales of lead on the London Metal Exchange : 1,050 tons on Monday against 1,950 tons last week; 1,450 tons on Tuesday, against 1,550 tons last week; 800 tons on Wednesday, against 500 tons last week. The New York quotation on Wednesday was 5-00 cents per lb., against 5-00 cents a week ago and 5-50 cents a month ago. Wednesday's official closing quotation in London for soft foreign for shipment during the current month was £16 2s. 8d. to £16 3s. 9d. per ton, compared with £17 6s. 3d. to £17 7s. 6d. last week.

Sales of spelter on the London Metal Exchange : 1,950 tons on Monday against 1,100 tons last week; 1,000 tons on Tuesday, against 1,700 tons last week; 1,150 tons on Wednesday, against 1,750 tons last week. Wednesday's quotation in East St. Louis was 5-50 cents per lb., against

5.75 cents the week before and 5.75 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipment during the current month was £15 5s. to £15 6s. 3d. per ton, against £18 2s. 6d. to £18 3s. 9d. last week.

TIN.—Tin fell sharply from £188 to £181 per ton in the earlier part of the week, but recovered on Wednesday to £186. There was some demand both on European and United States account, but it was primarily the improvement in general sentiment which brought about the sharp rally. In the United States tinplate mills are now working at less than 60 per cent. of capacity, while most European tinplate producers are still working at around 80 per cent. of their potential output. Tin is even more dependent on American demand than copper, lead and spelter. The immediate prospects of the metal are not too hopeful, therefore, unless general sentiment improves further and stimulates larger buying by American consumers.

Sales of tin on the London Metal Exchange: 190 tons on Monday against 250 tons last week; 425 tons on Tuesday, against 485 tons last week; 275 tons on Wednesday, against 285 tons last week. The New York quotation on Wednesday was 41.75 cents per lb., against 42.75 cents a week ago and 47.62 cents a month ago. Wednesday's official closing quotation in London for standard cash was £186 to £188 10s. per ton, compared with £188 to £188 10s. a week ago. Stocks of tin in London and Liverpool at the end of last week totalled 2,224 tons, a decrease of 40 tons on the week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted on Wednesday at £100 per ton, and rolling billets at £102 per ton. Nickel, for home and export, was maintained at £180 to £185 per ton. Quicksilver, on the spot, was £13 to £13 0s. 6d. per flask of 76 lbs., the same as last week. Chinese antimony was quoted at £72 per ton, ex warehouse, as against £73 last week. Chinese wolfram for "November-December" shipment was quoted at 62s. 6d. to 70s. per unit c.i.f., as against 70s. to 75s. last week. Refined platinum was quoted on Wednesday at £8 15s. per ounce, compared with £8 15s. a week earlier.

TEXTILES

COTTON.—Manchester.—There have been further indications of spinners and manufacturers losing ground. Sales have been smaller than production. The holding off policy of buyers in certain quarters has been pronounced. There has not been any distinct change in the raw cotton situation. American ginnings up to November 13th have been given as 14,949,000 bales, against 10,767,000 bales same time last year. Most traders are waiting for more definite news with regard to crop control for next season in the United States. The large quantities of material which are going into the loan are doing something to stabilise prices.

The yarn market has remained slack. Sales are now less than half the production. At a meeting of spinners of Egyptian yarns at the end of this week the question of organised short time is to be considered.

The turnover in cloth for foreign outlets and for the home trade has again been comparatively small. Very few manufacturers have been able to sell current production. Stocks in certain quarters are very harassing. Although a fair amount of inquiry has been experienced for India, transactions worth mentioning have been few and far between. Some makers of printed and dyed cloths have done fairly well for Singapore and Hong Kong. The position in West Africa is causing much anxiety. Owing to the lower prices offered for their produce, the natives are refusing to sell. Piecegoods, therefore, are moving off very slowly and shipments are being stopped. More cases have been mentioned of manufacturers offering quite early delivery for certain styles.

The Decline in Cotton Orders.—During the last few weeks there has been a good deal of uneasiness amongst the trade leaders in the Lancashire cotton industry concerning the course of events. Demand for yarn and piecegoods has fallen off very sharply, sales being distinctly smaller than the output. Various reasons have been given for this development, the chief being the fall in raw cotton prices and no signs of an upward movement, unsatisfactory reports with regard to clearances in foreign outlets and in the home trade houses, and increasing foreign competition. In the opinion of some authorities the setback is only temporary. It is significant, however, that the official report on conditions in England in the Quarterly Bulletin of the International Cotton Federation, says, with regard to spinning:—"Due to the uncertain position of the raw cotton situation and other causes, there has, of late, been a scarcity of fresh orders." With regard to the weaving section, it is stated:—"Although cloth production has been comparatively high during the past half-year, it is disquietening to know that the decline in the export trade has not been arrested, most of the improvement having come from the home market. The order book position makes the immediate future seem rather ominous, unless more settled conditions are found and there is a renewal of confidence amongst buyers." One of the most unfortunate developments is that many difficulties are being experienced in completing old contracts as buyers are refusing to accept deliveries. Stocks, therefore, are accumulating at the weaving sheds and also in Manchester warehouses. During the past week there have been unofficial discussions amongst spinners of Egyptian yarns, and it is understood at a meeting to be held in Manchester this Friday the question of

organised short time will be raised. Some mills have recently increased their yarn stocks, and it is suggested that curtailment of output to the extent of one-and-a-half days per week stoppage should be adopted. In forward with the reorganisation scheme of the Joint Committee of Cotton Trade Organisations.

WOOL.—Bradford: During the past two weeks the final series of Colonial sales for the year has been conducted, and its record is the worst it will be interesting to know the actual quantity bought by the different sections of the trade, and the fact that three selling days have been cancelled with lower prices than were generally expected. The majority in the trade forecast good business during August and September, with prices climbing, but the very reverse has occurred. It is known such paralyzing conditions as those which are being experienced distinctly less money being taken than quoted on the day. It is a fact that even to-day some topmakers are asking as much as 29d. for warp 64's, and the usual standard, 26d., has already been taken. Crossbreds, too, have auctions finished yesterday with prices for New Zealand shipes at the lowest point of the year. This is an exceedingly poor outlook for the new selling season in New Zealand which begins to-day (November 27th).

Pastoralists will be called upon to accept prices which seemed impossible at the close of the last selling season at the end of March. There is no improvement to report from manufacturing centres, and a return of confidence is required in order to see trade again normal. The cold weather of the past fortnight has certainly considerably benefited trade in underwear as well as overcoating fabrics.

Decline in Sisal Prices.—Among the commodities which recently experienced a fall in prices is East African sisal. The present quotation for No. 1, at £23 5s. per ton, is £2 15s. lower than several weeks ago and of extensive research work by Colonial institutions with a view to strengthening the position of this Empire fibre against foreign hard fibres, a gradual expansion in the use of sisal, mainly for binder twine and ropes, is taking place in this country. This tendency will be favoured by the fact that East African sisal has recently gained a price advantage over Manila hemp, Mexican henequen, which is mainly marketed in the United States, and of reluctance of trade demand and the disappointing wheat crops during recent years, especially the failure of the crop in some parts of Canada, important outlet for sisal. Moreover, sisal shipments from Tanganyika have been substantially increased this year, while the drop in Mexican exports scarcely affected the British market.

Sisal Shipments (tons)

	1936	1937
Tanganyika, Jan. to June	34,895	39,068
Kenya, Jan. to August	21,756	22,721
Uganda, Jan. to August	1,047	370
Mexico, Jan. to June	50,260	32,265

The expansion of sisal production in East Africa is hampered by the postponement of new planting in the past years caused by the unremunerative price, by labour shortage and unfavourable water conditions. New planting, which has recently been undertaken, will not mature before three to four years, but a substantial increase of output is uncertain even by that time.

GRAIN MARKETS

WHEAT.—Demand has been dull in the period under review and prices have registered a slight decline. The extent of the damage caused to the Argentine crop by recent frosts remains indeterminate, but commercial estimates of the probable output now range from 184 million to 216 million bushels. It seems possible that the Australian crop may exceed the recent estimate of 163 million bushels.

On Wednesday last, "December" futures were quoted in Chicago at 89½ cents per bushel, against 94½ cents the week before and 95½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba (Atlantic), ex ship, 55s. 3d. per 496 lbs., against 55s. 9d. last week; No. 2 Northern Manitoba (Atlantic), ex ship, 53s. 9d., against 54s. 6d. last week. According to the *Corn Trade News*, total shipments of wheat and flour last week amounted to 1,417,000 quarters, against 1,518,000 quarters in the previous week and 1,128,000 quarters in the corresponding week a year ago.

FLOUR.—Following last week's advance prices have relaxed. Wednesday's London quotations (excluding quota payments) were: Straight run, delivered Home Counties, 38s. 6d. per 280 lbs., as against 39s. 6d. a week ago; delivered inner London, 38s., as against 39s. a week ago. Manitoba patents, ex store, 37s. to 38s. 6d., as against 39s. to 39s. 6d. a week ago. Australian, ex store, 31s. to 32s., as against 31s. 6d. to 32s. a week ago.

BARLEY.—The market is steady, with prices showing little alteration. "December" futures were quoted at 56½ cents per bushel in Winnipeg on Wednesday, against 58½ cents last week. Quotations for 448 lbs. in London on Wednesday were: "English feed," at farm, not quoted; "English malting," at farm, 50s. to 55s., as against 50s. to 55s. a week ago; Californian, ex ship, 49s. to 54s., as against 45s. to 58s. a week ago; Chilean, brewing, ex ship, 45s. to 48s., as against 45s. to 48s. a week ago.

OATS.—On Wednesday, "December" futures were quoted at 30½ cents per bushel in Chicago, against 30½ cents a week ago and 29½ cents last month. Quotations in London, Wednesday: "English Black," at farm, 26s. 6d. to 27s. per 336 lbs., as against 26s. 6d. to 27s. last week; "English White," at farm, 26s. 6d. to 27s., as against 26s. 6d. to 27s. a week ago; mixed Canadian feed (Vancouver), landed, 25s. 6d. per 320 lbs., as against 25s. 9d. a week ago.

MAIZE.—The market has presented a steady appearance and prices are about unaltered. "December" futures were quoted on Wednesday at 53½ cents per bushel in Chicago, against 55½ cents a week ago, and 58½ cents last month. Quotations in London, Wednesday: "Plate," landed, 30s. per 480 lbs., as against 30s. a week ago; "Plate," ex ship, 29s., as against 29s. a week ago; "Plate," "November," 29s., as against 29s. a week ago; yellow maize meal, ex wharf, was quoted at £7 12s. 6d. per ton, as against £7 12s. 6d. last week.

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations for selected weeks in 1935-37:—

NEAREST FUTURE	Jan. 2, 1935	Dec. 31, 1935	Nov. 25, 1936	Dec. 30, 1936	Nov. 17, 1937	Nov. 24, 1937
Winnipeg (No. 1, Manitoba)	82½	84½	105½	129	118½	110½
Chicago (No. 2, Winter)	98½	101½	117½	135½	94½	89½

The visible supply of wheat in Canada amounts to 69,818,000 bushels, against 72,868,000 bushels last week and 76,611,000 bushels in the corresponding week last year.

SALES AND PRICES OF BRITISH CEREALS.—The following table gives the estimated sale of home-grown wheat during the harvest years 1934-35 to 1937-38.

	1934-35	1935-36	1936-37	1937-38
Estimated sales of home-grown wheat—	Cwts.	Cwts.	Cwts.	Cwts.
1 week to November 20	322,498	381,557	293,522	279,629
11 weeks to November 20	5,457,764	5,528,197	4,379,207	4,493,424
	s. d.	s. d.	s. d.	s. d.
Average price of English wheat per cwt.	4 11	5 9	8 6	8 11

The following is a statement showing the quantities sold and the average price of British cereals in the past two weeks, and for the corresponding weeks in each of the years from 1933 to 1936:—

Week ended	Quantities Sold			Average Price per Cwt.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
	Cwts.	Cwts.	Cwts.	s. d.	s. d.	s. d.
November 18, 1933 ..	257,789	450,315	45,960	4 7	9 4	5 5
November 17, 1934 ..	322,498	357,681	48,540	4 11	8 5	8 0
November 23, 1935 ..	381,557	394,130	63,106	5 9	8 5	6 10
November 21, 1936 ..	293,522	456,238	61,621	8 6	9 8	8 6
November 13, 1937 ..	308,469	537,275	53,605	8 11	13 0	8 6
November 20, 1937 ..	279,629	454,306	63,491	8 11	12 11	8 6

OTHER FOODS

BACON.—The market has been steady to firm. The official quotations (per cwt. for No. 1 Sizable) which formed the basis for dealings on the London Provision Exchange this week were: English, 95s.; Canadian, 100s.; Danish, 92s.; against 91s., 83s., and 90s. last week. Arrivals in 85s.; London last week included: Danish, 15,067 bales; Canadian, 7,377; Dutch, 2,407; Lithuanian, 1,429; and Polish, 3,187; as against 12,058, 7,077, 2,379, 1,068 and 2,784 bales, respectively, in the previous week.

BUTTER.—With increasing supplies, the market has been slow and prices have eased. Quotations (per cwt.) on the London Provision Exchange on Monday were: New Zealand, finest salted, 114s.; Australian, choicest salted, 112s.; Danish, 142s.; compared with 131s. to 132s.; 128s. to 130s., and 150s., respectively, a week ago.

CHEESE.—New Zealand was easier, with other sorts showing little alteration. Quotations (per cwt.) on the London Provision Exchange on Wednesday were as follows: English Cheddars, finest farmers, 92s. to 94s.; Canadian, finest coloured, 73s. to 74s.; and New Zealand, finest coloured, 68s.; against 92s. to 94s., 73s. to 74s., and 70s. to 70s. 6d., respectively, a week ago.

COCOA.—The spot quotation in New York on Wednesday was 5½ cents per lb., as against 5½ cents per lb. last week. In London, on Wednesday last, good fermented new crop, Accra, "December-February," was quoted at 24s. 9d. to 25s. 3d. sellers per 50 kilos, c.i.f. Continent, against 26s. 3d. a week ago. Last week's movements of cocoa in London were as follows: a week ago, 4,048 bags; delivered for home consumption, 4,541 bags; exported, 4,048 bags; stocks, 152,167 bags, against 111,250 bags a year ago.

COFFEE.—Prices are easier. On Wednesday, Rio No. 7 (cash) was 6½ cents per lb. in New York, as compared with 6½ last week and 8½ a month ago. Movements of coffee in London last week were as follows: Brazilian, landed, 23 cwt.; delivered for home consumption, 45 cwt.; exports, nil; stocks, 1,658 cwt., against 9,462 a year ago. Central and other South American: Landed, 684 cwt.; delivered, for home consumption, 2,084 cwt.; exported, 229 cwt.; stocks, 68,729 cwt., against 55,225 cwt. last year. Other kinds: Landed, 1,054 cwt.; delivered for home consumption, 2,776 cwt.; exported, 59 cwt.; stocks, 61,041 cwt., against 87,028 last year.

EGGS.—With the continuance of cold weather the market has remained firm and prices are now above the level of a week ago. A seasonal decline of prices should occur in the near future. At Smithfield, on Wednesday, English (ordinary packing, Grade 1, about 15-15½ lb.) realised 24s. to 25s. per 120, against 23s. to 24s. last week; while Danish (15½ lb.) made 16s. to 16s. 6d.; as against 15s. 6d. to 16s. last week.

FRUIT.—Business at Covent Garden has been seasonally quiet, states *The Fruitgrower*, but values generally are maintained at a reasonable level. The apple trade is steady and, notwithstanding heavy imports, quotations hold up well. The inquiry for pears continues quite good, and both house and export are steady. Belgian and Dutch grapes hold their price. Business in nuts is fairly active and prices for English cobs and walnuts are

firm. Brazils are a point easier, but are still relatively dear. There are large supplies of Italian chestnuts. Citrus fruits are not moving quite so well as previously and are rather lower in price generally.

MEAT.—At Smithfield Market on Wednesday last, Argentine chilled hindquarters were quoted at 4s. 2d. to 4s. 5d. per 8 lb., as compared with 4s. 4d. to 4s. 8d. a week ago. New Zealand frozen mutton was 2s. 8d. to 3s. 10d. per 8 lb., as against 2s. 8d. to 4s. a week ago. According to the Smithfield Market official report, supplies during last week amounted to 9,521 tons, a decrease of 280 tons on the corresponding week last year. Beef and veal accounted for 4,905 tons, mutton and lamb 2,593, and pork and bacon 965, as compared with 5,098, 2,515 and 1,159 tons, respectively, in the same week of 1936.

PEPPER.—On Wednesday, white Muntok, "November-December," was quoted at 3½d. per lb. sellers, c.i.f. Rotterdam-Hamburg, against 3½d. per lb. a week earlier. Black Lampung, spot, in bonds, was quoted at 2½d. per lb. sellers, compared with 2½d. per lb. last week. Movements of pepper in London last week were as follows: Black landed, 5 tons; delivered, 2 tons; stocks, 1,974, against 1,781 last year. White, landed, 20 tons; delivered, 81 tons; stocks, 11,135 tons, compared with 11,785 tons a year ago.

RICE.—The spot price of Burma No. 2 cleaned was 11s. 3d. per cwt. ex warehouse, on Wednesday, as compared with 11s. 3d. per cwt. a week ago. "January-February" (new), in singles to Continent and U.K., was quoted at 9s. per cwt., against 9s. to 9s. 3d. for "November-December" last week. Movements in London last week were as follows: Landed, 10 tons; delivered, 106 tons; stocks, 1,008 tons, against 1,953 tons a year ago.

SUGAR.—The London and New York markets continue to diverge. In the former centre prices declined in a dull market, but in New York a further rise occurred. The New York spot quotation was 3.38 cents on Wednesday, as compared with 3.32 cents per lb. last week and 3.17 cents per lb. a month ago. Wednesday's sales of raw sugar in London included "December" delivery at 5s. 8½d. to 5s. 9½d., against 5s. 11½d. to 6s. 0½d. a week ago. Movements of raw sugar in public warehouses in London and Liverpool last week were as follows: Imports, 25,599 tons, against 8,713 in the previous week and 22,047 in the same week of 1936; deliveries, 15,930 tons, against 15,893 and 15,837 tons, respectively; stocks, 195,559 tons, against 185,890 and 139,876 tons, respectively.

TEA.—The following table shows the average price (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account in recent weeks:—

Week ended	Northern India	Southern India	Ceylon	Java	Sumatra	Africa	Total
	d.	d.	d.	d.	d.	d.	d.
Nov. 19, 1936	12-69	12-27	14-72	11-58	10-24	12-07	13 12
Oct. 28, 1937	15-75	15-49	16-64	15-16	13-12	14-58	15-90
Nov. 4, "	15-32	15-46	16-48	14-41	12-36	14-57	15-54
" 11, "	15-05	15-00	16-00	14-09	12-86	14-14	15-21
" 18, "	14-68	14-84	15-65	13-48	12-35	14-08	14-87

At this week's public auctions in Mincing Lane, 53,561 packages of Indian and 21,816 packages of Ceylon tea came up for disposal. The market had an irregular tone and was easier generally.

VEGETABLES.—According to *The Fruitgrower's* Covent Garden report, the mention of watercress in connection with the typhoid epidemic has brought trade in this commodity almost to a standstill, though it is claimed that all consignments sold at Covent Garden are free from any kind of contamination. Meanwhile, most lines of kitchen vegetables are in better demand. Plenty of cabbage and sprouts are available, but cauliflowers are in much shorter supply. English and Guernsey tomatoes are finishing, but Canary Island are receiving more attention. Lettuce is a fair trade and celery sells well. House grown beans hold their price and mushrooms are well maintained. Ample supplies of potatoes at London markets have encountered a steady trade at unchanged prices. At the Borough on Tuesday, best siltland King Edward again sold at 6s. to 7s. per cwt., ex market.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OLSEEDS.—Markets generally are dull with very little buying interest. Demand for linseed is negligible, but there is no marked pressure on the part of shippers to sell and with supplies on the light side late prices are about maintained. A quantity of unsold Indian seed afloat has been cleared off the market. The main interest now is in the position in Argentina. Reports last week of serious damage by frost to the new crop were confirmed, while the official report later indicated that the prospects remain good and that harvesting had commenced in some of the northern sections but would not become general until early in December. Meanwhile, shipment of the balance of the old crop proceeds apace and it has now been reduced to 60,000 tons (including Uruguay). India, however, is computed to have available about 100,000 tons for export to the end of March next year. The quantity of linseed afloat for Europe is 130,500 tons or rather more in the week and this includes 14,300 tons from India. Cottonseed has continued to decline and for black Egyptians to Hull down to £5 5s., it is reported, has been accepted for November loading. Later positions are at a fair premium. The record supplies in America are an important factor in the present fall in prices which are now at the lowest level for some years.

Trade in vegetable oils is of a desultory character, demand being poor and prices easier. Linseed oil is barely steady and below the highest of last week. Cotton oil has lost further ground; refined, ex Hull, is now offered at £21 per ton, naked, for prompt delivery. The demand for oil cakes continues to improve.

RUBBER.—After declining to 6½d. per lb. the market scored a recovery and closed on Wednesday with prices about unaltered, compared with those ruling a week earlier. Attention is now centred on next Tuesday's meeting of the International Committee, when it is expected that a cut in the exportable quotas will be recommended. The spot price in New York on Wednesday was 14½ cents per lb., compared with 14½ cents per lb. a week ago and 14½ cents a month ago. Wednesday's official buyers' price for standard ribbed smoked sheet on the spot in London was 7d. per lb., as against 7d. on the corresponding day last week. In forward positions business has been done at 7d. to 7½d. for "January" shipments, as against 7d. to 7½d. for "January-March." Stocks in London and Liverpool at the end of last week totalled 53,411 tons, against 52,064 tons a week earlier. A year ago stocks amounted to 91,568 tons.

L'Entente Cordiale

THERE can be no reasonable doubt about the success of the talks that took place in London on Monday and Tuesday between MM. CHAUTEPS and DELBOS and the British Ministers. The British and French participants show all the signs of being equally well pleased; and in Italy as well as Germany, the first reaction of the Governments, as far as can be seen by the comments in the Press, has been not unfavourable. This reception of the communiqué by the two European partners in the Triangle is satisfactory, for the Anglo-French insistence on a general settlement rather than the isolated treatment of individual problems might in other circumstances have provoked an explosion. But this time, happily, it seems to have met with no more than formal deprecation in Rome and Berlin. It is not too much to hope that this indicates a willingness on the Central Powers' part to contemplate an agreed settlement.

The communiqué which the PRIME MINISTER read to the House of Commons on Tuesday afternoon sets out clearly the main topics of the Anglo-French discussion and also its general tendency.

The proceedings began with a report from LORD HALIFAX on the results of his mission to Germany; and it is now possible to infer that, at any rate on the colonial question, HERR HITLER gave him a more definite idea of Germany's desires than might have appeared from earlier accounts of what passed at Berchtesgaden. The statesmen then embarked on a discussion of "the problems of Europe as a whole" and "the future prospects of appeasement and disarmament." This re-emergence of the disarmament question from cold storage is as welcome as it is surprising. It testifies to the firmness of the two Western Powers, and

at the same time to their optimism. On the one hand, the concessions to the Central Powers, which they are now contemplating in a wide field, are not going to be made simply to purchase a few more months of a peace without assurances or prospects. They are only going to be made as part of a general settlement

the French statesmen "were happy to note the common interests of the two Governments in the maintenance of peaceful conditions in those parts of Europe." Evidently MM. CHAUTEMPS and DELBOS were as agreeably impressed at first hand as outside observers are at second hand with the absence of any suggestion on the British side that the two Western Powers should buy a reprieve by throwing their friends in Central and Eastern Europe to the wolves. Such a policy, it cannot be too often repeated, would be just as suicidal as it would be dishonourable. With our own hands we should be breaking up the last remaining foundations of international law and order, and in the act we should be inviting Germany to achieve a position of supremacy on our continent in which she would have all West Europe at her mercy. On this crucial issue, which concerns the very independence of the United Kingdom, at least one section of His Majesty's present Government in the United Kingdom has been reported for some years past to be dangerously infirm of purpose. But the communiqué is definitely reassuring. German policy has succeeded in bringing the colonial and European questions into close relation. But instead of conceding Europe to Germany to save the colonies, as was feared in some quarters, the British Government looks like making colonial concessions to save Europe. It is the more difficult, but incomparably the wiser policy.

After referring to the Spanish question with mutual congratulations upon the success of the policy of non-intervention, and to the Far Eastern conflict with very much less complacent feelings, the communiqué ends with a final paragraph which is not the least important part of it; for in this skilfully worded sentence the French and British statesmen have committed themselves to the twofold general aim of abiding by the principles of international solidarity which are implicit in the Covenant of the League, while doing their utmost to make it possible for the Triangle Powers to feel at home in an international system of law and order. "While in no way departing from their previously expressed conception of international collaboration, they reaffirmed the desire of their Governments to co-operate

with all countries in the common task of promoting international appeasement by methods of free and peaceful negotiation."

In reading this document to the House of Commons, the PRIME MINISTER added the clear statement that the two Governments had a general settlement as their ultimate object, and that they did not intend to confine the negotiations for such a settlement to three or four Great Powers. It is thus clearly intended that the Anglo-French meeting shall serve as a new initiative for general and collective European appeasement. For the moment it is no more than an initiative, and optimism must wait upon the response which it evokes from Germany and Italy. But there are at least two reasons for hopefulness. The first is that, at last, after so many months of dangerous drift and of apathy that was beginning to turn to fatalism, a new effort is to be made. The second is that the new effort is to be made along the lines which promise most success. The British and French might have rejected all thought of concessions, as they have done so often in the past. Or they might have made haste to pay whatever price was demanded for a few more months of peace, without any assurances for the future. Both policies have their advocates in Britain and France. But either one would be disastrous. MR CHAMBERLAIN and M. CHAUTEMPS, MR EDEN and M. DELBOS are to be very sincerely congratulated on firmly maintaining the middle course which alone has in it the seeds of safety—the course of showing willingness to concede Germany's just and reasonable demands for expansion in return for German concessions to our just and reasonable demands for security.

The future of this very promising new initiative lies entirely with Berlin and Rome. Intransigence there can easily bar the road to progress. But Britain and France have shown that they do not stand in the way. It is not very often since the Armistice that Britain and France have managed to put themselves completely in the right. This time we believe they have succeeded. And they have done so without putting Italy and Germany in the wrong—for only their own actions can do that.

Parliament and Population

THE debate which took place in the House of Commons on Monday of this week on the second reading of the Population (Statistics) Bill showed the House of Commons at its best and at its worst in a single evening. What was gratifying about the debate was to find the House in an independent mood, refusing to be impressed with the slipshod advocacy of the Front Bench and listening with respect to a member whose position in the House owes everything to his personal qualities and nothing to any form of party preferment. This is the brighter side of the medal. But there is plenty on the other side to exasperate the onlooker. For the brilliant speech by an independent back-bencher which dominated the debate was as wrong-headed as it was witty, as irrelevant to the real purposes of the Bill as it was devastating in form. And the MINISTER OF HEALTH, though he was diffuse, obscure and evasive, was in reality sponsoring a small, but very necessary and quite harmless reform.

The matter with which the Bill is concerned is not by any means one of vital importance. But it is gradually coming to be realised that an enormous influence will be exercised on the economic and social life of the nation in the next few decades by the trend of the population. The state of our vital statistics is such that we are unable even to say accurately what is happening to our popu-

lation at the moment, and attempts to foreshadow what is likely to happen to it in the future have to be based on assumptions which are precarious and statistics which are imperfect. It would seem to be so obvious as to need no argument that these defects in the vital statistics should be remedied. This was the genesis of the Population (Statistics) Bill.

It was the duty of the MINISTER and his advisers to decide upon the best method of filling the statistical gaps. On the one hand, the nature of the information needed and the methods of using it resembled those of the regular decennial census. On the other hand, a continuous supply of information was needed, such as the hierarchy of registrars is already accustomed to collect. Consequently it was decided, with both logic and commonsense, to amalgamate the two procedures. The registrars were to collect the facts from those people who are already under legal obligation to register. But the procedure for defining the questions to be asked and for ensuring their confidential character was borrowed from the legal framework of the census.

The Bill clearly reveals its parentage. Almost every clause in it is closely modelled on precedent. As in the Census Acts, power is given to issue Orders-in-Council calling for certain information, and a Schedule is appended to the Bill listing the subjects from which the

Order can select. The Schedule follows precedent with slavish exactness by concluding with the item "any other matter with respect to which it is desirable to obtain statistical information with a view to ascertaining the social or civil condition of the population."

It may or may not be sound practice to legislate by means of Enabling Acts of this nature. It may or may not be unwise to include such a generous and elastic Schedule when everybody knows that in fact only a few of the more vital questions will actually be asked. But neither the civil servants nor the MINISTER can reasonably be blamed for following a precedent which has worked, not merely with administrative smoothness but without a murmur of popular complaint. Moreover, the Parliamentary time-table being as crowded as it is, it is prudent to look ahead and provide the possibility of making further improvements in the vital statistics in the future without waiting for the opportunity to pass an Act of Parliament. The Bill, in short, was probably regarded as a departmental measure which would not excite much comment. As such, it was no better and no worse than most products of the Parliamentary draftsmen.

It is, however, undeniably true that the Bill and the Schedule as drafted could be made to look both sinister and silly if anybody should take it into his head to object. And MR KINGSLEY GRIFFITH did take it into his head to object. He enlisted the support of MR A. P. HERBERT, and they were abetted at the last moment by the Labour Party. MR HERBERT succeeded, in fact, in poking more uproarious fun at this Bill than the Mother of Parliaments has probably ever before heard within a single hour, and his speech reduced the MINISTER's person to ridicule and his majority to an exiguous figure. But for all the brilliance of his performance, it was very obvious that MR HERBERT did not know what he was talking about. Stripped of its humour and its questionable personalities, his speech consisted of three assertions, each of them patently fallacious. His first contention was that the Bill "puts the wrong questions to the wrong people," because it seeks to find out why there are not more babies by asking questions of those who have just had babies, rather than of those who have not. But the Bill does not attempt to probe the reasons for the fall in the birth-rate; no statistics can do that. It merely attempts to establish the facts about the actual fertility of the population of the country from year to year; and the way to do that is to collect information about the parents, and especially the mothers, of the babies who are born. One particularly vital fact, for example, is the age of the mother at the birth of her child. Once we know that, we can calculate how many children are born to the average woman in her lifetime, and this figure—the so-called net reproduction rate—is the key to the whole estimation of future population.

Secondly, MR HERBERT alleged that the correct pro-

cedure was to hold a special census, which was apparently not to be repeated. In fact, so far as the population problem is concerned, a special census would mean the expenditure of a great deal of money and trouble to collect information, most of which would be of little assistance. And at the end of it we should know only what the position is in 1937, and it would be impossible to observe the development of trends, which is far more important than the ascertainment of the present position. Thirdly, MR HERBERT asserted that the existing reports of the Registrar-General supplied all the information necessary. "We have, in fact," he said, "all we want to know." This is simply not true. Can it be that MR HERBERT has not even appreciated the elementary, but vital, distinction between crude birth rates and true fertility rates or reproduction rates? The birth-rate relates the number of births to the total population. But children can only be born to women between the ages of, roughly, 15 and 45, while the total population consists of men, women and children of all ages and in varying proportions. The really fundamental fact is the net reproduction rate, and that cannot be calculated from the existing figures.

MR HERBERT'S errors of fact were thus glaring. But unfortunately the House of Commons was apparently laughing so hard that nobody could be found to expose them. As a result, the impression has been allowed to be created that he made out a strong case against the Bill, which is even said to be in danger of being dropped. It would be a very great pity if it were abandoned, for it would not only be the surrender of a useful and harmless measure to criticism which is no less captious for being clothed in humour, but the whole subject would be placed on the list of matters which no Government dare touch, and the whole study of the problem of population would be handicapped for an indefinite period by ignorance of the facts.

It is, in any case, inevitable that the Bill should be severely amended in Committee. But it is to be hoped that the responsible members of the Committee, of whatever party, will see that the really vital questions are left in the Bill. They are not many in number: the most important are the age of the mother, the date and place of her marriage, and the number of her previous children. But these, and perhaps one or two more, it is essential to have. The usefulness of the figures will be diminished if the same questions cannot be asked to the unmarried as to the married mother. But the MINISTER has already promised to consider a concession on this point, which is one on which sentimental arguments can be most effectively mobilised. This question apart, there is reason to hope that the Opposition will co-operate with the MINISTER in salvaging the vital remnants and ensuring that the mischief done on Monday does not lead to a triumph of obscurantism.

Commodity Prices and Prosperity

PRIMARY products have been much in the limelight of late. The persistent demands of Germany, Italy and Japan have placed the question of "free access" to raw materials in the forefront of international political discussions. The headlong decline of prices since the end of last March has focussed attention on the special position of primary products in the world's economy. The political aspect of primary products—which is largely a function of the geographical distribution of material resources—was exhaustively examined by a Special Committee of the League of Nations in a Report* published last September. But, while the position of individual commodities is receiving extensive publicity, the international economic aspect of the violent fluctuations of the prices of primary products deserves closer study. We propose, therefore, to draw attention to the nature of some of the factors influencing the supply of and demand for primary products in the light of recent experience, and to examine some of the special problems to which they give rise to-day.

We may begin with the enunciation of the truism that the economic progress of the modern world is largely based on an increasing supply of cheap raw materials and crude foodstuffs and on technical improvements in

* "Report of the Committee for the Study of the Problem of Raw Materials." Allen and Unwin. Price 2s.

RAW MATERIAL PRICES

COPPER (Standard)

LEAD (Soft Foreign)

SPELTER (G.O.B.)

RUBBER (Smoked Sheet)

TIMBER (Swedish)

PIG IRON (Cleveland No. 3)

their utilisation. Moreover, the fortunes of the considerable section of the world's population which is engaged in the conversion of primary products into manufactures, and in their distribution, are inextricably bound up with the prosperity of the producers of raw materials and foodstuffs. For example, no less than 60 per cent. of the total value of all the trade which crosses international frontiers is normally concerned with raw materials and semi-finished products. Calculated on the basis of the League of Nations' estimates, the value of international trade in these materials and products fell from £8,500 millions in 1929 to £4,550 millions in 1933, and rose to £5,100 millions in 1935 and £5,400 millions in 1936. By the magnitude of the world's exports of these products it is easy to understand why marked variations of their prices are accompanied by considerable changes in the value of international trade and in the economic fortunes of the world as a whole.

An abundant supply of raw materials, in short, is the springboard of economic progress. To ensure its availability is clearly a task of transcendent importance, and one way of ensuring it is to see that producers of materials and foodstuffs receive adequate remuneration, year by year. This last condition, however, has hitherto been unattainable by producers of some of the most important materials, like wheat, rubber, cotton, copper and tin; for the prices of these essential commodities have shown wide and disturbing fluctuations. Instability of price, it is true, has not prevented a phenomenal increase in the volume of raw material and foodstuff production since the beginning of this century. But it has involved both producers and consumers in recurrent crises whose effects—financial, political and even social—have been regrettably far reaching. Both the hectic rise and the catastrophic fall of commodity prices during the current year have demonstrated the persistence of this condition of fundamental instability, and to elucidate its causes has become one of the most urgent problems of our time.

The sequence of events, both in times of boom and of slump, has in fact a well-defined pattern. In contrast to manufacturing operations, the output of many primary products cannot readily be adjusted to changes in demand. Consequently, stocks tend to accumulate during periods of falling demand, and prices show a tendency to decline to a level which is unprofitable for many producers. The same short-term inelasticity of supplies causes an inordinate rise in prices during periods of recovery, which, by stimulating production, ultimately leads to a fresh decline in prices. This instability tends to aggravate fluctuations in world economic activity due to other causes. These tendencies are illustrated in the diagram we have reproduced at the head of page 462. The chart shows the trend of world production, stocks and sterling prices of primary products in recent years. The annual indices of production and quarterly indices of stocks are those calculated by the League of Nations, converted to the 1929 basis. The trend of prices is shown on the basis of *The Economist* Index of Primary Products (September 18, 1931 = 100). In order to show the movement of prices between 1929 and September, 1931, we have calculated this index back to January, 1930, basing it on January, 1929.

Production, it will be seen, showed a comparatively small decline during the depression, and has since surpassed the 1929 level. The inelasticity of output, however, at first caused the accumulation of heavy stocks, and an equally marked fall in prices, followed by a reverse movement during recovery. Movements of stocks and prices, indeed, show a fairly close inverse correlation during the whole period between 1929 and early 1937. Since the spring of this year, however, prices have again taken a sharp downward turn, partly

because the production of the majority of commodities was again tending to outpace demand, and, more recently, because of the decline of American demand during the past few months. The turning point of the cycle of prices for primary products appears to have been reached again.

In order to illustrate the instability of the prices of individual materials, we have prepared a series of diagrams showing the trend of quotations of 14 important commodities monthly from January, 1927. As all these diagrams have been drawn on a logarithmic scale, the relative movements which they reveal are directly comparable. As will be seen, all of these commodities, with the exception of pig iron, have suffered violent fluctuations in prices during the past 10 years, though the extent of the movement has varied from commodity to commodity. All of them (again with the exception of pig iron, which, for various reasons, does not come into the category of internationally traded raw materials with a free market) declined sharply in price during the depression, and subsequently showed an equally steep recovery, though there was no precise coincidence in time. Most of these materials, however, have already lost a substantial part of their earlier improvement.

For the purposes of this article, primary products may be considered under two headings. Some, like metals, are used mainly in the production of durable goods. Others, like textiles and crude foodstuffs, are used for immediate consumption. Cyclical fluctuations in the manufacture of durable goods are more marked than variations in sales of consumption goods. Hence, changes in the demand for primary products employed in the production of durable goods are more violent than variations in the requirements of crude foodstuffs and textile raw materials used in the manufacture of goods for immediate consumption. Superficially it would seem, therefore, that the difficulties of adjusting supply to demand in the case of metals, for example, are greater than in the case of primary products used for consumption goods. But, as our charts clearly demonstrate, fluctuations in the prices of primary products used in the manufacture of consumption goods have been as marked as in the case of those employed in the production of durable goods. This tendency is due to the fact that the majority of primary products used for consumption goods are of vegetable origin, and their output, therefore, varies not only with acreage but also with climatic changes. Although the demand for consumption goods does not vary as much as that for other industrial raw materials, their prices are as unstable as those of the latter owing to unforeseen changes in yield.

The problem of the primary producers, therefore, is due essentially to the difficulty of adjusting supply to demand. There has been, consequently, in recent times a tendency to look for its solution in international control of supplies. Until recently, however, most control schemes remained unsatisfactory, either because they did not cover the whole of the world's resources (and therefore merely led to a temporary increase in prices and a redistribution of production) or were devised merely as temporary measures to bring about a rise in prices. Moreover, in the case of many commodities, such as sugar and wheat, national attempts to maintain prices and production have aggravated the world position of these commodities.

Some of the more recent experiments in international control seem, however, to have been inspired, in part at least, by a genuine desire to reduce the magnitude of price fluctuations, without penalising the consumer. The copper, tea and rubber schemes are among the best-known examples. Unhappily, their lack of success is revealed by the movement of prices during the past twelve months, and there is a considerable measure of

agreement, among those chiefly responsible, that their failure has been due, chiefly, to changes in demand which were wholly unforeseen. Here is the crux of the problem. Recent experience has shown that it is physically possible to control the supplies of raw materials subject to continuous production. But, as most of these commodities are bought and sold in a free international market, control of supplies has not prevented fluctuations in prices. On a superficial view, therefore, it might be argued that the control of supplies should be followed up by fixed selling prices. The control of prices, however, has its obvious dangers, and in the case of textile raw materials and foodstuffs it is rendered particularly difficult by changes in yield due to variations in weather conditions. Under a satisfactory scheme it would be necessary, therefore, not only to control acreage—a formidable problem in the case of plants maturing only after a number of years—but also to institute revolving funds of stocks in order to smooth out variations in yield. Moreover, any such scheme would postulate world-wide agreement, for national action is likely only to aggravate the position. The solution of the problem of the instability of prices, therefore, still seems far off. Meanwhile, prices are likely to remain subject to fluctuations, and unless industry in the

WORLD PRODUCTION, STOCKS AND STERLING PRICES OF PRIMARY PRODUCTS, 1927-37
(1929=100)

United States resumes its upward trend in the near future, it would be rash to assume that the recent downward trend of prices has reached its limit.

What is Calcium Carbide?

THE ideas of the average British elector probably lack precision on the subject of calcium carbide. An assiduous newspaper reader may be aware, possibly, that calcium carbide is a chemical product whose production is concerned in some way, directly or remotely, with Britain's defence programme; and that after a British company's proposal to build a factory in the Scottish Highlands had been twice refused by Parliament, the Government, on the advice of a special committee, decided that Parliament must think yet again. A substance thus capable of maintaining its special claims, against the reiterated will of the Mother of Parliaments, must obviously have industrial and commercial possibilities well out of the common. We propose to discuss some of these properties in the following article.

Calcium carbide is, in fact, an important chemical raw material in the development of which Britain has been a laggard. It is, as its name implies, a compound of calcium and carbon, and like all carbides, its production requires great heat. The fact that its manufacture, in an electric arc furnace, consumes very considerable quantities of electricity, has materially influenced its history.

The industries which use calcium carbide as a raw material fall into two main groups. The first group combines carbide, initially, with nitrogen; the second with hydrogen. The nitrogenous compounds of the first group start with calcium cyanamide, prepared by heating carbide in an atmosphere of nitrogen at an appropriate temperature. The hydrogen compounds of the second group of industries begin with acetylene, made by adding water to carbide. The simplest form of this process was familiar—sometimes painfully so—to cyclists who used acetylene lamps twenty years ago. Its modern application on an industrial scale involves complex engineering problems, since acetylene and air, even in very small quantities, form a highly dangerous explosive mixture.

Calcium cyanamide, the basis of the first group of industries, is used both as a nitrogenous fertiliser and as a raw material for further industrial products. It accounts for about 10 per cent. of the world's output of chemically fixed nitrogen. As a fertiliser, it has some excellent qualities, combined with others more deleterious, which have somewhat restricted its use. As a raw material, calcium cyanamide is the main source of the sodium cyanide used in gold and silver mining and in other metallurgical processes. It has, however, other and more warlike uses; for it can be converted, via

ammonia, to nitric acid, which is a *sine qua non* for the manufacture of modern high explosives. Cyanamide was so used during the Great War, both by Great Britain and by Germany, who developed her carbide works on a particularly large scale. Since the war, however, the cheaper synthetic ammonia process has tended to replace cyanamide for the manufacture of nitric acid. But the latter remains as an obviously valuable alternative source for munitions purposes, especially in view of the somewhat exposed position of the great synthetic ammonia works of Imperial Chemical Industries at Billingham on the North-East Coast.

So much for cyanamide. The uses of acetylene, the other basic product of calcium carbide, are more numerous. The most familiar is welding, whose growth in recent years has been phenomenal. Welding is done by the oxy-acetylene torch and by the electric arc. Each method has its own advantages and disadvantages, but for many purposes—airplane work, for example—oxy-acetylene welding is indispensable.

The chemical products whose manufacture starts from acetylene are almost innumerable. Acetone is invaluable as a solvent in the manufacture of smokeless powder, celluloid and many other products. Acetic acid is an intermediate for solvents and softeners. It is also used directly for making cellulose acetate, which, being non-inflammable, is employed for certain films, for lacquers such as aeroplane dope, and for acetate silk. The plastic materials include cuprene, a chemically inert substance which can be used, among other things, as a filler in explosives manufacture and as a cork substitute in the linoleum industry. Synthetic rubber is an acetylene product, and the list might be indefinitely extended.

The amount of the world's output of calcium carbide has never been accurately computed, but it was put at between two and three million tons a couple of years ago. As much as 80 to 85 per cent. of the whole is produced by six countries—Germany, Japan, Italy (the three most important), Canada, the United States and France. Among a score of other countries, Russia, Norway and Poland are noteworthy. The manufacture of calcium cyanamide absorbs about half the world output of carbide; welding follows with some 30 to 40 per cent.; and synthetic products account for the remainder. Great Britain's annual consumption of 55,000 to 60,000 tons is now obtained entirely from imports—chiefly from Norway, who last year supplied some 54 per cent. of our

The desire, easily understandable in the present state of the world, to make Britain less dependent on imported carbide, was largely responsible for the preparation, in 1936, of a scheme for a hydro-electric station and carbide works in the Highlands. The British Oxygen Company, the largest national consumer of acetylene, was closely associated with these proposals, which were embodied in the first Caledonian Power Bill and rejected by the House of Commons in March, 1936. When a second Bill, amending the original scheme in certain respects, was similarly refused a second reading in March of this year, the Government stepped in and appointed an official committee to investigate the situation. The committee's report has not been published, but the chief factors determining its recommendations are fairly clear. The basic considerations underlying any carbide scheme are the source of electricity, speed of construction and vulnerability to air attack. Vulnerability is a question for experts on defence. Electricity can be obtained either from steam or water power; and the speed with which construction can be carried out depends on which of the two is chosen. A carbide plant based on thermal power would require about a year to bring into operation, whereas at least three years are needed for a hydro-electric plant.

On the question of steam *versus* water-power the debates in the House of Commons were far from clear. The supporters of the Caledonian Power Bills claimed that hydro-electric power provided the only economically sound basis. Here, it is generally felt that they overstated their case. Power is not the only item in the cost sheet of the carbide manufacturer, and it certainly does not count more than all other items. The manufacturer's task is to achieve not the lowest possible power cost, but the minimum for all costs, including raw materials, packing and transport.

So far as the Government is concerned, however, the issue has been fully decided. Sir Thomas Inskip has informed the House of Commons that the Government have now decided to support the scheme submitted to the Carbide Investigation Committee by the British Oxygen Company. This scheme provides for the erection of a works using thermal power at Port Talbot in South Wales and another works using hydro-electric power at Corpach in the West Highlands. The initial output capacity of the Port Talbot works will be 20,000 tons a year and the cost is estimated at about £1,000,000. Provision will also be made for constructing further 20,000 ton units as demand warrants. The Corpach scheme, which involves extensive hydro-electric works and the diversion of water resources, is estimated to cost £2,500,000 and will require the re-introduction of the Caledonian Power Bill, this time with Government support.

The Government's decision evidently takes account of the experience of other countries—Germany, France and Poland among them—which use thermal power for the production of carbide; and the Port Talbot works must therefore be welcomed, not least because it brings a new industry to a distressed area. The justification of the Corpach proposal is far less clear. National interests of prime importance are involved, and there is a *prima facie* case for reconsidering, even at this late hour, the decision against publication of any part of the Carbide Committee's report, in order that the House of Commons may have adequate data on which to base its judgment. The Corpach project can only be brought to the production stage after a period measured in terms of years. In present circumstances, however, time is of the essence of the problem, and only overwhelming considerations of ultimate economy can justify delay.

Egypt To-day

AN assailant's attempt, happily unsuccessful, on the life of El Nahas Pasha has produced a remarkable demonstration of spontaneous support for the Premier of Egypt and for his policy of friendship with Great Britain. Nahas Pasha, who writes a foreword to the Supplement on Egypt published with this issue of *The Economist*, is the first premier of an Egypt restored to full equality of status with her fellow sovereign nations of the world.

In the Allenby Declaration of 1922, Great Britain acknowledged Egypt to be an independent sovereign State, after forty years of virtual British tutelage; but the "reserved points" touched so closely upon the vitals of political sovereignty that the status remained but titular. Until a few years ago, however, all efforts to negotiate a permanent settlement were unsuccessful, owing to the absence of a compelling identity of vital interest, realised on both sides. But Italy's conquest of Abyssinia emphasised, on the British side, that a discontented Egypt might be far more dangerous than the withdrawal from Cairo of a garrison whose presence in any case could have made little difference to military realities in the event of grave internal or external disorder. On Egypt's side, the spectacle of Italian troops passing in great numbers through the Suez Canal, and massing in Libya, served as a plain warning of the danger that Egypt, standing alone, might become a Naboth's vineyard for the Powers of Europe.

The Anglo-Egyptian Treaty of Alliance and Friendship was signed in August, 1936. It terminated the military occupation of Egypt and finally restored Egypt's sovereignty in internal affairs and foreign policy. Her liberty in protecting the foreign countries within her boundaries, reserved in 1922, has also been reinstated. And Egypt, finally, has become a State Member of the League of Nations.

Our Supplement comes at an opportune moment for discussion of the economic and other factors which determine Egypt's place in world affairs. Fundamental

to them all is the factor of geography. The map shows Egypt to be the nodal point of the land, sea and air routes between Europe and Asia, Africa and the southern oceans. Even if the Suez Canal had never been constructed, Egypt would still have been strategically vital as the land passage from the Mediterranean to eastern waters, and, by this time, as the air corridor to the Red Sea and to East and South Africa. The defence of Egypt—including that of the Suez Canal—is of critical importance for Great Britain and thus for her associates in the League. It is even more important than it was before 1914, when the Anglo-Japanese alliance limited British liabilities in the Far East and when no European Power was bent on establishing a great empire on the borders of the Red Sea.

While Egypt's external policy must thus depend on imponderable factors beyond the control of any single nation, her internal affairs are more completely the prerogative of her own people to-day than for many centuries in her long history. The energies of her statesmen are likely to be absorbed, for a long time to come, by the urgent task of raising the standard of living of a people whose numbers are increasing faster than the productivity of the soil. Out of a territory with a total extent of 387,000 square miles, the habitable area is restricted to little more than 12,400 square miles, along a narrow strip of alluvial river soil—brought down from Central Africa by the silt-laden flood of the Nile—which is never more than fifteen miles wide south of Cairo. On this soil of unequalled fertility the predominant crop is cotton, and Egypt's cotton crop accounts for about 85 per cent. of her total export trade. Her imports include clothing and nearly all her national requirements of fuel, machinery, metals, chemicals and other products of heavy industry. To raise her standard of living her Government may be expected to pursue concurrently two aims—to initiate and nourish new home industries, and to increase the quality and value of her indigenous products which can be exported for foreign

merchandise. Events will show whether the first of these objectives will involve the raising of a tariff which is still only moderately protectionist and has been imposed mainly for revenue purposes. The latter of the two aims will be furthered by a continuance of scientific effort to develop new and profitable varieties of Egyptian cotton—of whose importance the story of Giza 7, narrated in our Supplement, affords convincing evidence—and by ceaseless efforts to increase the number of products, other than cotton, which can be grown advantageously in a country blessed with fertile soil and an abundance of sunshine. Our Survey suggests some of the lines which such an effort might take. Already Egypt is self-supporting in sugar and is practically self-supporting in food grains. She has an important export trade in raw hides and skins, and her wool industry is in an early but vigorous stage of development.

The carrying out of any far-reaching economic programme will involve what the Minister of Finance describes as the "necessary evil of increased taxation." It may be taken for granted that every effort will be made to restrict its amount to the lowest possible level and to spread its incidence as equitably as possible over different classes of taxpayers. A question may well arise, nevertheless, as to the extent to which recourse can, and should, be had, for the financing of large-scale capital works, in part to the overseas investor and in part to the large and increasing Reserve Fund of the country itself. The latter now totals some £34 millions, of which £25 millions is held in liquid assets. It was designated at one time as a financial reservoir for great

engineering projects like the Aswan Dam, which, in the outcome, were largely financed from revenue. In the past Egypt has absorbed large amounts of foreign capital, whose present total is estimated as from £400 millions to £500 millions, and her credit, deservedly high to-day, would enable her to increase the total, in future, if she so desired.

Finally, Egypt's prosperity will be furthered by every advance in the "industry" of tourism, whose "raw materials" are her climate and her treasured memorials of one of the oldest civilisations of the world. Tourism in Egypt is reviving again, after being depressed during the Abyssinian hostilities. There is no necessary reason why Egypt should be a holiday zone only for the rich man. And as a centre of air travel Egypt's advantages are obviously beyond all question.

Great Britain welcomes the independence of her newest ally, who has already shown every evidence of determination to put the treaty into effect with a loyalty and a spirit of mutual understanding equal to her own. To no country is the maintenance of world peace more vital than to Egypt. To few countries does the future offer greater promise of progressive economic development and, at the same time, more immediate and weighty problems whose solution postulates the highest qualities of statesmanship. We may re-echo the sentiment of her Prime Minister and express our hope that Egypt, free to resume the weaving of the web of her history, will add to the prestige of her past the dignity of a renaissance based on consciousness of her destiny and her solidarity with all countries of goodwill.

Notes of the Week

Modernising the War Office.—An official announcement, which was issued on Thursday evening, makes one of the most sweeping changes in the High Command of the British Army that has ever been known. Of the four military members of the Army Council, three are to resign. The posts of two of them are to be filled by younger officers, while the functions of the Master-General of Ordnance are to be taken over by the Director-General of Munitions Production. In the vital post, that of Chief of the Imperial General Staff, General Lord Gort replaces Field-Marshal Sir Cyril Deverell. The most obvious effect of this almost sensational change is clearly to bring younger blood into the War Office. But it is by no means the usual "acceleration of promotion," for the officers who have been selected to fill these high posts were not next to the retiring officers in order of seniority. It is, in short, a deliberate attempt to break through the paralysing effect of promotion by seniority. Of the reasons which lie behind the change little is known, but it may be taken for granted that they consist of far more than the mere desire to lower the average age of the Army Council by a few years. Mr Hore-Belisha has presumably persuaded the Cabinet that these personal changes are the only means of effecting the very necessary modernisation in the strategical and tactical doctrines of the Army, and possibly also in its organisation. The internal affairs of the Army are not a subject on which the outsider finds it easy to formulate an informed opinion, but there can be very little doubt that the change, which cannot have been decided upon without the most careful consideration by the Cabinet, will be welcome to the public and salutary to the service. It is nevertheless an extremely courageous step for Mr Hore-Belisha to have taken. He will bring down upon his head a great deal of resentment from a class of persons who can be expected to have much more influence with the Conservative rank and file than he, a Liberal National, can command. He deserves the warmest support from his colleagues in the Cabinet and from the general public.

Defending the Civilian.—It is not easy, even for the most optimistic of Government spokesmen, to over-

come the belief, stated definitely by a former Prime Minister, that all defences against air attack are inadequate. The struggle between the Government and the local authorities over the division of the cost of air raid precautions has been tacitly won in the last round by the Government. The Home Secretary's main task, therefore, in piloting his Bill through the Commons is to persuade members—and the general public—of the efficacy of his plans. Broadly, the proposed precautions are based upon the gas-proof refuge, with gas-masks, sand-boxes and shovels as second and supplementary lines of defence. Publicity was given some months ago to experiments by a group of scientists who claimed to demonstrate the deficiency of gas-proofing in ordinary houses under ordinary conditions. On November 27th the report of tests made by the Chemical Research Department was published. Experiments, under "the most severe conditions likely to be met," showed that a remarkably high measure of protection would be afforded if Home Office instructions were obeyed. This conclusion endorses, in the special case of gas bombs, the general impression derived from recent events in Spain and China, that the power of an air offensive is by no means so overwhelming as has commonly been supposed. Nevertheless, the safety of men, women and children is too important for merely favourable tests to remove the horror and fear of bombing from the towns and, in reply, the Under Secretary protested against "the obsession of the whole national mind" with air dangers. Our defences may be better than we have feared; but, even with food storage and improved anti-aircraft measures, the prospect of war would remain a hideous menace.

Films Advisory Council.—After a debate extending over more than two whole sittings, the Standing Committee which is considering the Films Bill voted last Tuesday in favour of the Government's proposal for an Advisory Council instead of a Films Commission. Thus, the authority for the future administration of the Films Act will be a body of twenty-one members, ten of whom will be definitely appointed to represent various specified

trade interests, and the remaining eleven will be independent, without any pecuniary interest whatever in the trade. The Moyne Committee's recommendation for a Films Commission of wholly independent members, devoting their whole time to films, is thus abandoned. But certain concessions by Mr Stanley, announced during the debate, may prove to go a long way in the direction contemplated by the Moyne Committee. The first concession is a willingness to introduce words to make it clear that the work of supervision is to be not spasmodic and occasional—which the words "from time to time" might imply—but continuous. The second concession is the admission that it may be necessary for the Chairman to be a full-time officer. This would introduce an element corresponding to the managing directorship of a public company, and would convert the Council to something of the order of a board of directors. The Council will have its hands full during the next ten years. It will have to consider questions referred to it by the President of the Board of Trade. It will have a general right of initiative to consider any subject and make recommendations. It will keep an open door to all interested bodies and, of course, it will have the duties specifically imposed upon it by the Act.

Air Inquiry Amended.—Last week some indignation was expressed in the Commons that, in the inquiry instituted to examine the charges made in the House on November 17th against Imperial Airways and the Air Ministry, two civil servants should have been appointed to investigate the statements of members of Parliament. Accordingly, on November 30th, Mr Chamberlain announced the retirement from the Departmental Committee of Sir Warren Fisher and Sir W. B. Brown, against whose personal probity and qualifications, be it said, no objection was raised. The question was one wholly of constitutional etiquette. The retiring members have been replaced by two eminent business men, Sir Frederick Marquis and Mr T. Harrison Hughes; and—presumably to meet the further objection that the original committee was not fully competent to assist the Air Minister in assessing the weight of the pilots' grievances—Mr J. W. Bowen, until last year general secretary of the Union of Post Office Workers, has been added. The episode has been unpleasant and need never have occurred. Indeed, the suggestion that the Air Minister's membership of the Upper House is a practical handicap in matters of this kind, where the general sentiment of the Commons is all important, would appear to have a certain substance. Now, however, that the affair has been settled with dignity and propriety, it remains for the Committee to dispel the considerable public anxiety about the charges under investigation. As its proceedings will be entirely *in camera*, the Government will be well advised to publish, in due course, a full report of its findings.

The Advance on Nanking.—Interest in the war in China is still concentrated on the Japanese advance from Shanghai towards Nanking. The Chinese "Hindenburg Line" from Kiangyin to Wusih was broken without much difficulty, and it is daily becoming clearer that the most the Chinese can hope to do is to delay the invader in front and harass his communications by isolated bands of "dares and dies." But they cannot stop him. In these circumstances it is questionable whether any attempt should be made to defend Nanking, since it can only result in the destruction of the city and further heavy drafts on the limited Chinese supply of munitions. Moreover, the left wing of the Japanese forces is advancing due west of Shanghai across the base of the semi-circle described by the Yangtse, and these troops may before long be in Wuhu, which is sixty miles up the river from Nanking. Thus to resist at the capital may mean the encirclement of the Chinese army as well as the bombardment of the city. The position of the Chinese is serious; but there is still not the slightest sign of any weakening in their moral resistance or in their deter-

mination to fight it out. But it is painfully clear that their superior armaments and mobility confer a much greater advantage on the Japanese than was thought. Meanwhile, Shanghai, a hundred miles to the rear of the fighting, is a city in the occupation of the conqueror. The occupation does not yet openly extend to the southern half of the International Settlement or to the French Concession. But every day brings further news of arbitrary Japanese action directed against the property and interests of foreigners, and it has been made very clear that even the restricted remaining degree of autonomy left to the Settlement authorities is dependent upon their good behaviour.

Japan's Peace Terms.—At the beginning of the week the Japanese Prime Minister, Prince Konoe, managed to give an interview to the Press on Japan's peace terms in a form which did not expose this eminent statesman to any grave risk of immediate assassination by a watch committee of junior officers. The Prince's statement was lengthy and detailed; but the gist of it was that the essence of Japan's demands consisted in there being no limit to them. While Japan does not object to neutral Powers offering their good offices, she is not going to have any third-party participation in Sino-Japanese negotiations. Her aim is "a fundamental readjustment" of Sino-Japanese relations, and she will have no truck with any Chinese Government that declines to accept Japan's proposals to this end *in toto*, when the time comes for formulating Japan's demands. As fast as the Japanese armies advance, they will set up local "Chinese" regimes of a kind with which Japan can co-operate; and if half China were to come under the *de facto* control of some regime of the sort, Japan would then recognise this as the lawful Government of the whole of China, just as she has now recognised General Franco as the lawful ruler of Spain—though in this case there has been the *quid pro quo* of Italian recognition of Manchukuo. Japan does not at present intend to declare war, but she may alter her policy on this point if supplies continue to reach China from other countries. She has not yet decided whether to go on from Nanking (when she has got that far) to Hankow in order to intercept the inflow of supplies through Hongkong. She has likewise not yet decided on her policy towards the two foreign settlements at Shanghai. There "everything depends on the other side" (which appears to mean the foreign Powers, and not China). As for the Nine-Power Treaty, Japan really does not very much care whether, or when, it is revised or abrogated, so long as nobody disputes in practice the Japanese principle—on which Japan is now acting—that the destinies of the Far East are to be settled without any Western intervention. The "independent" regime in North China will be established about January. Shantung is going to drop into Japan's mouth, and Tsingtao will be a delicious morsel. Stalin is at present being a good boy, so Japan need not be in any immediate hurry to

give him that good hiding which she proposes to give him some day. On such terms Prince Konoe's life may still be safe. But what about ours?

* * *

M. Chautemps' Triumph.—M. Chautemps' sensational victory in the Chamber in Paris in the small hours of last Friday (November 26th) was a happy prelude to his visit to London. If there was anybody left in Great Britain who still believed that the Popular Front Government in France was tottering to a fall which would involve the whole country as well as the Ministry, his eyes must surely have been opened at last by the debate in the French Parliament which ended with the vote of confidence. The question under consideration by the Chamber was the momentous one of whether the Government's proposals for increasing the salaries and wages of public servants should be accepted, and, if so, by how great a majority. As it turned out, the Government's proposals were carried by the enormous majority of 521 votes to four, with eight abstentions. The completeness of the victory was probably a surprise to the Government themselves; for the representatives of the public servants, who are a substantial and influential fraction of the French community, had continued, up to the end, to hold out for something more than the Government's maximum offer. The striking result of the voting in the Chamber as a whole was due to the policy of the Communists, who at the last moment decided to vote for the Bill—in spite of their reiterated disagreement with the Government—instead of abstaining. The Communist leader, M. Duclos, told the Chamber, when he announced his party's decision, that it had been determined by the fact that the Opposition were so patently eager to produce a rift in the Front Populaire's ranks. The French Right, of both the milder and the more militant persuasion, must no doubt be assigned due credit for last Friday's most effective demonstration of the persistent solidarity of the Popular Front; but it would be ungenerous to deny all meed of praise to Herr Hitler, Herr von Ribbentrop and the other Nordic heroes who, for months past, have been weeping their crocodile tears over the imminent disappearance of French democracy in the quicksands of Bolshevism. For this service English and French voices may thank these German propagandists in a cordial unison.

* * *

Franco's "Blockade."—The threatened insurgent offensive in Spain has not yet materialised, although there are reports of extensive troop movements at both the northern and southern extremities of the fighting line and there has been a sudden recrudescence of aerial activity in the Madrid region. On Saturday last the insurgent wireless stations at Salamanca and Cadiz broadcast a statement to the effect that a blockade had been proclaimed of the whole Government coast and of the island of Minorca, and that the "safety zones" previously designated for the use of foreign shipping in the harbours of Barcelona and Valencia had been abolished. The British Government has taken immediate objection to this pronouncement, which can be legally challenged in three different ways. First, a blockade, even if fully legal, must be formally notified to neutral Governments. Second, General Franco, as an unrecognised insurgent, has no legal rights of blockade. Third, no blockade is legal unless it is effective, i.e. it is open to a recognised Government to arrest foreign vessels but not indiscriminately to attack them within any area which it chooses to proclaim as prohibited. What the British Navy would do if the insurgent fleet or air force attempted to enforce General Franco's "blockade" is uncertain. But a notice has been issued to British shipping reaffirming the policy of granting protection on the high seas but not in territorial waters. Both sides have now replied to the British Plan, and while neither has rejected it, both ask for further elucidation. There is no reason to anticipate serious difficulty on either side, though General Franco has made the inadmissible claim that the "substantial

degree" of withdrawal of foreign volunteers which is to entitle him to belligerent rights shall be defined as the withdrawal of 5,000 men.

* * *

American Housing.—Much had been hoped from President Roosevelt's housing proposals, which were revealed on Monday, as a means of stimulating some increase in the activity of the construction industry. The message, however, was slightly disappointing, for though it recognised that the major hindrance to increased housing activity was the present extortionate level of costs, the President proposed no remedy except a series of conferences with the representatives of the contractors, the building unions and the suppliers of raw materials. Indeed, it is difficult to see what the Government can do to reduce costs short of starting a campaign for lower wages or—what would perhaps be politically easier and economically more beneficial—longer hours. The Government's own proposals relate almost exclusively to finance. The Federal Housing Administration has been in existence since 1934 with the function of "insuring" mortgages, so that they become safe and attractive investments for banking and insurance funds. Its activities are now to be extended in several directions. The limit imposed on its commitments is to be raised, the charge made for the insurance is to be lowered, and the proportion of the valuation of a house which is to be eligible for insurance is to be raised, for the cheaper dwellings, to 90 per cent. That these changes, especially the last-named, will have some effect is undeniable. But that they will by themselves raise the rate of building to the 600,000 to 800,000 units a year which the President declares to be necessary is more doubtful. Such calculations of the demand for housing can be very deceptive, for at present costs there is very little demand at all, even though its absence may mean the progressive overcrowding of the American people. For the same reasons the Housing Message does not look like being a major factor in halting the business recession. Another field in which attempts are being made to restore business confidence is that of the Budget. The current philosophy finds no contradiction in demanding at one and the same time the balancing of the Budget and the remission of unpopular taxes, and both are accordingly being attempted. There can be no question that the whole subject of economic policy in the widest sense is in the greatest confusion in Washington. Policies which may restore the business man's profits may be very different from policies which will quieten his apprehensions (balancing the Budget is a case in point), and both are different from the policies of social reform which the President was elected to continue. But at the moment all three policies seem to be pursued at once.

* * *

Dr Schacht's Resignation Announced.—At long last, on November 26th, the resignation of Dr Schacht from the post of Minister of Economics was officially announced in Berlin. It has been common knowledge in every country except Germany that Dr Schacht has been trying for months to resign from the headship of a Ministry in which he had lost all authority. But his reputation as the saviour of Germany from inflation is a very valuable asset of the Nazi Government, and Herr Hitler was very reluctant to let him go. In the end Dr Schacht has got his way, but he remains as President of the Reichsbank and also as Minister Without Portfolio. What influence he will be able to exert on German economic policy from these posts remains to be seen. The new Minister of Economics is to be Herr Funk, hitherto Secretary of State in the Propaganda Ministry. He is *persona grata* to General Goering, and the Ministry of Economics must now be considered as being fully under their have been appointments to high posts in the Propaganda Ministry, and Herr Lammers, Head of the Reich Chancery, has been promoted to the Cabinet. Dr Schacht's departure changes nothing in German economic policy, since the military occupied the Ministry

of Economics some time ago. But taken together with the growing evidence of the inconveniences to which the German people are being put by the exigencies of the Four-Year Plan, it may in the long run change quite a lot in the attitude of German industry towards the Nazi Government.

* * *

Nahas Pasha's Escape.—The Prime Minister of Egypt is to be congratulated on his fortunate escape last Sunday evening from an attempt on his life. His assailant has accomplished the exact reverse of his presumable intentions; like all would-be assassins of prominent public men, he was playing a game in which he was bound to lose either way. The power of the most popular, potent and competent living statesman is as nothing to the power of a martyr. The posthumous political career of Dr Dollfuss is merely the latest of the innumerable testimonials to this truth. As it is, Nahas Pasha may congratulate himself on having had the best of both worlds, for he has been invested with something of the martyr's prestige without having had to pay the martyr's price for it. The young man who committed the crime was thought at first to have been an agent of the Greenshirts, an ultra-nationalist Egyptian political organisation who are inclined to regard last year's Anglo-Egyptian treaty as a betrayal of Egyptian national interests. However, the Greenshirts have now made haste to repudiate him. He was, they declare, expelled from the Party some months ago for bad behaviour, and has since been in Palestine. Nevertheless, all the Greenshirt leaders have been arrested and the party premises searched. The crime is not to be taken as evidence of widespread opposition in Egypt to the Treaty. On the contrary, the virtual unanimity with which the Treaty was welcomed by all substantial parties in Egypt as well as in Great Britain indicates that the Egyptian people as a whole are inclined to feel that an unhappy half-century of Anglo-Egyptian relations has been retrieved by a happy ending. The plain fact is that Great Britain is no longer the most menacing of the European Powers in Egyptian eyes. The present Egyptian attitude in foreign affairs is like the wise dog's attitude in Aesop's fable of the dog and the ticks. An alliance with an old and familiar parasite is likely to be more comfortable than a subjection to some new and still more voracious aggressor.

* * *

Future of the Two Rhodesias.—The course of closer union among the British territories of Eastern and Southern Africa has not always run smooth. A consultative Governors' conference is all that has emerged from grandiose plans for the amalgamation of the East African colonies. When the Union of South Africa was formed, it was confidently expected that Southern Rhodesia would eventually link her destiny with that of her greater neighbour, while Northern Rhodesia would find her associates in the tropics. The progress now, on the contrary, is towards the linking of the two Rhodesias in a *bloc* with Nyasaland. A Royal Commission, it was announced last week, is to inquire on the spot whether any, and if so what, form of closer co-operation between the three territories is desirable and feasible, with due regard to the interests of all the inhabitants and to the special responsibility of the British Government for the interests of the natives. The difficulty, of course, lies in the proviso; for hitherto, while Southern Rhodesia has gone a long way towards "white man's self-government," Northern Rhodesia has been a Colonial Office preserve. The latter, however, has lately been moving in the same direction as her neighbour to the south. The Legislative Council has been given more authority, and only this week the colonial Government agreed to the establishment of a standing finance committee with two official and two unofficial elected members. The dangers of divided responsibility, or of the shifting of responsibility for native interests, are too obvious to need reiteration.

Roumanian Elections.—Roumania is now passing through the most severe constitutional crisis that the country has suffered since King Carol returned from exile. If the King had acted according to precedent and popular opinion (so far as that can be ascertained), he would have entrusted the National Peasant Party with the task of forming a Government and conducting the elections. The Party had made it easier for him to do so by electing M. Mihalache to its Presidency, in place of M. Maniu, between whom and the King there is a deep-seated personal antagonism. But the King, by making a coalition with M. Vaida Voevod's pseudo-Fascist Party a condition of office, made it impossible for M. Mihalache to accept. The Liberals are thus continuing in office with the alliance of M. Vaida Voevod. The Roumanian electoral law gives a majority of the seats in the Chamber to the party or coalition which receives 40 per cent. of the votes. By general admission, the Liberals, after four years of office, are too weak to obtain the necessary 40 per cent. by themselves, even with the control of local administration in their hands. Consequently, they have formed an electoral cartel with M. Vaida Voevod and a number of other small parties, including the German Nationalists, whose leader, M. Fabricius, is known as the Roumanian Henlein. The reaction to this over-clever series of manoeuvres has been surprising. The National Peasants have restored M. Maniu to their leadership, a step which makes them the opposition not merely to the Government but to the King. What is more, they have concluded an electoral truce with the other Opposition parties, including even the "All For the Fatherland" Party, or Iron Guard.

* * *

On the surface, the country's foreign policy is not involved, since M. Tatarescu, the Liberal Prime Minister, has reaffirmed the policies of alliance with France and the Little Entente. But his electoral allies are the agents in Roumania of Rome and Berlin, with which capitals his own relations are closer than can be wholly reconciled with the policy to which he is committed. It is significant that M. Titulescu has returned to Roumania and is believed to intend offering himself as a National Peasant candidate in Siebenbürgen. Domestically, the issue is confused by the arrangement between the Peasants and the notorious Iron Guard. But the Government has already removed all Jews from its own lists of candidates and is allied to politicians who demand the "abolition of party politics." Thus in spite of the confusing complications the issue is a fairly clear one between democracy and the League of Nations on the one hand and authoritarianism plus attachment, through Poland, to the Rome-Berlin axis on the other. The real misfortune is that the King has committed himself to one side, and that the one which will do least good to Roumania in the long run.

INSURE WITH

7, CHANCERY LANE, LONDON, W.C.2

Iron and Steel Development.—The possibility of unfavourable developments abroad was one of the main reasons which led observers to question the ability of the British Iron and Steel Federation to maintain steel prices throughout next year. Demand for steel in the United States has fallen catastrophically since September. The decision of the Continental Steel Cartel and subsequently of the British Iron and Steel Federation to maintain prices was expected to be followed by an intensive American sales campaign in overseas markets. Actually, some of the smaller American concerns have succeeded in obtaining substantial orders at cut prices. It was feared that the intensification of competition from the other side of the Atlantic might undermine the price structure, first of the Cartel and ultimately of the British Iron and Steel Federation in the home market. The latest developments indicate, however, that these fears, if not groundless, have been somewhat exaggerated. Since increased American competition came mainly from the smaller concerns, the Cartel decided at Warsaw last October—a decision confirmed at subsequent meetings—to stand firm, apart from minor price adjustments. Obviously the Cartel's price policy could not have been maintained in the long run without the willingness of American producers to co-operate. This co-operation appears now to have been secured, for at a meeting in Paris last week American manufacturers agreed to observe an informal understanding on prices, covering most products apart from sheets. While the United States cannot be expected to join the Cartel, an informal understanding, if observed, would achieve the same object. It seems, therefore, that at least one of the dangers to the Cartel's and the British Federation's price policy might be averted.

So far as domestic developments in the British iron and steel industry are concerned, the decision of the Stanton and Staveley ironworks to withdraw from the Federation has given an impression in some quarters of disagreement on price policy among the members of the Federation. Actually, however, an assurance has been given that the resignations were not caused by differences of opinion but by the fact that these two concerns are chiefly manufacturers of cast-iron pipes, a product which is not covered by the Federation. While membership of the National Federation of Iron and Steel Manufacturers—since superseded by the British Iron and Steel Federation—entitled Stanton and Staveley to certain

privileges, the two concerns evidently felt that the new association, since it did not cover their products, could not further their interests. The general policy of the Federation, however, is certainly not escaping all criticism. For example, a strong attack has been made on it this week by Mr Arthur Chamberlain at the annual meeting of shareholders of Tube Investments, Ltd., in terms which are discussed in a note on page 487.

Industrial Production in Germany.—The diagram below shows the trend of industrial production in Germany during the past ten years. The diagram is based on the indices of the Institut für Konjunkturforschung. Annual indices have been used for the years 1927 to 1935, and monthly figures from January, 1936, to August, 1937. The monthly indices are not adjusted for seasonal variations in activity. As in most countries, industrial production in Germany recovered in 1933 and has since risen well above the pre-depression level. Moreover, industrial activity has continued to expand fairly rapidly during the past twelve months. In addition to the general trend of industrial activity, the diagram also shows the course of production of investment goods and of commodities for immediate consumption. While cyclical fluctuations in the production of durable investment goods are normally more marked than changes in the output of goods for immediate consumption, the diagram reveals a decline in the output of the latter between 1934 and 1935. During the past year the output of consumption goods has risen again, but the increase has been relatively small, an indication of the cost to the German public of rearmament and the policy of self-sufficiency.

Britain's Overseas Markets.—The announcement of pending formal negotiations for an Anglo-American Commercial Treaty gives point to an analysis of Britain's overseas markets in the first nine months of 1937 and earlier key years, given on page 507. Two weeks ago (see *The Economist*, November 20, page 348) we examined, in detail, the figures for the three months to September last, which afford the best available indication of current trends in our overseas trade. The nine months' figures to some extent obscure these trends, since changes in international prices and in other factors

INDUSTRIAL PRODUCTION IN GERMANY 1927-37
(1929=100)

governing the course of trade have been unusually varied and violent since the beginning of this year. Reference to the figures, however, reveals the significant fact that 58½ per cent. of the increase in value of British exports between the first nine months of 1936 and of 1937 was attributable to increased shipments to countries outside the British Empire, and only 41½ per cent. to Empire shipments. If the comparison be extended back to the first nine months of 1933, the worst year of depression, the Empire's share of the total increase in exports is as much as 56½ per cent. The figures also show, among other things, that we bought from the United States of America, in the first nine months of this year, merchandise valued at £73.5 millions—a figure some £21.3 millions higher than in the corresponding months of 1933, but as much as £65.5 millions below the total for the similar period of 1929. Our exports to America, in the first nine months of this year, valued at £23.8 millions, showed a recovery of only £9.9 millions since 1933, and were £9.8 millions below the 1929 figure. Controversialists who draw conclusions from bilateral figures of visible imports and exports, to the exclusion of invisible items, may take what comfort they can from the fact that reduced trade has brought down our "adverse" balance with the United States from £105.3 millions in 1929 to £49.7 millions in 1937. If both sides of the account were reduced to zero a perfect balance would be achieved, but the result would be disastrous for both countries. Even to-day the United States comes fourth on the list of our overseas customers.

More Tea but Less Rubber.—No less than three of the principal commodity markets have been effected by quota decisions this week. At its meeting on Tuesday the International Rubber Regulation Committee decided to reduce the export quota for the first quarter of 1938 to 70 per cent. of standard. The quota was 75 per cent. for the first quarter of the current year, 80 per cent. for the second and 90 per cent. for the last six months. Tuesday's decision will involve a reduction in supplies of some 18,500 tons of rubber monthly. The cut was more drastic than the majority of market operators had dared to hope, and their satisfaction was reflected in an immediate advance in prices. It remains to be seen whether the quota will be maintained at the 70 per cent. level for more than three months. Meanwhile, the more liberal Tea Committee, meeting on the same day, disturbed market expectations in the opposite sense by fixing the export quota for the twelve months commencing April 1st next at 92½ per cent. of the basic quotas; this compares with a present quota of 87½ per cent. and involves an addition of some 40 million lbs. annually to the current level of supplies. Although the additional tea will not come on to the market for at least seven months, prices were distinctly easier at this week's auctions. Finally, restriction on the output of copper was re-imposed on Wednesday after ten months of unrestricted production. The output of the restricting companies will now be at the rate of 105 per cent. of the standard tonnages. The decision to re-impose restriction was made public almost two months ago, and the market was consequently unaffected this week.

Manchester Ship Canal's Jubilee.—Fifty years ago, on November 11, 1887, Lord Egerton of Tatton cut the first sod of the Manchester Ship Canal. This waterway, 35½ miles long, took over six years to complete and cost over £15 millions. The scheme took its birth in the house of Daniel Adamson at Didsbury on June 27, 1882, at a time when there were over 18,000 empty houses in Manchester. The difficulties were formidable, but the Manchester Corporation gave whole-hearted support and the Canal was opened for traffic on January 1, 1894. The effect justified Adamson's faith. Between 1894 and 1911, 32,623 new houses were built, and the aggregate rateable value of the towns within a 20 mile radius of Manchester increased from £2.2 millions to £7.1 millions. In its first

year the Canal carried 925,659 tons; in 1913, 5,780,161 tons; and last year, 6,373,308 tons. To-day the great industrial area of Trafford Park adjoins the dock estate and is directly linked up with it. The total issued capital of the Manchester Ship Canal Company at December 31st last, was £19,973,210; and its gross revenue last year totalled £1,880,915. The measure of its achievement is the fact that Manchester, an inland city, is, to-day, the fourth port of Great Britain.

Prosperous Road Passenger Transport.—The Sixth Annual Report of the Traffic Commissioners in Great Britain shows that the road passenger transport industry continues to expand. For the third year in succession, there has been an increase in the number of vehicles licensed, though the total of 47,973 vehicles for 1936 falls far short of the 52,648 vehicles in 1930, before the Road Traffic Act came into force. During the six years of the Traffic Commissioners' control, the history of the industry has been on these lines:—

Year ended December 31	No. of Vehicles Licensed	Passenger Journeys	Passenger Receipts	Vehicle Miles	Receipts per Vehicle Mile
		Millions	£ million	Millions	d.
1931	46,230	5,399.5	58.4	1,313.9	10.68
1932	46,458	5,344.9	58.2	1,323.7	10.61
1933	45,393	5,424.0	58.1	1,315.0	10.67
1934	45,795	5,722.1	60.0	1,345.8	10.77
1935	46,510	6,031.5	62.1	1,381.4	10.85
1936	47,973	6,426.4	65.2	1,439.6	11.00

Much of the increase in the number of vehicles licensed is attributable to municipal bus undertakings, particularly those which have substituted buses for trams, and to additional services to new housing estates. At present, local authorities own 15.5 per cent. of the total vehicles, London Transport 13.6 per cent., and other operators 70.9 per cent. The process of absorption of the smaller operators by the larger undertakings continues, and is enabling existing operators progressively to revise the organisation of their services and to effect considerable economies by eliminating "dead" mileage or reducing frequency. The Traffic Commissioners, however, are aware that in certain rural districts there may be a danger of prejudice to the interests of the travelling public. The larger the associated companies are, the greater, in the Commissioners' view, is their responsibility to the travelling public. Given the increasing pressure of modern life, particularly in towns and cities, convenient transport at reasonable fares is as essential a public service as an efficient water supply. The Commissioners, very properly, make it clear that any road transport combine which placed the interests of its shareholders before those of the travelling public, however financially prosperous it might be, would be regarded as failing in its public duty.

Rising Use of Electricity.—The report of the Electricity Commissioners for the year ended March 31, 1937, is the seventeenth of its kind. The report points out that the industry is, as yet, within no measurable distance of saturation point, despite the considerable advance in recent years. Output in 1936-37 was

and with its numerous branches offers special facilities in Canada,
Newfoundland and the United States.

20,868,000,000 units, an increase of 13.3 per cent. over the previous year. The number of premises connected in 1935-36 was 7,652,000, and 85 per cent. of these were domestic premises. But some 40 per cent. of premises in supply areas are still unconnected, and the room for expansion is very large. Consumers of power, such as factories and workshops, represented 60 per cent. of sales and 34 per cent. of revenue; while shops, offices and public buildings now contribute some 29 per cent. of revenue. The balance of revenue, amounting to 37 per cent., was derived in 1936-37 from domestic consumers. Here the field for expansion is now power rather than lighting; and here, too, the direct competition between gas and electricity, complicated by divergent modes of charging and varying statutory conditions, is most evident. The advance in electricity consumption, recorded in this report, should not be allowed to obscure the steady progress of the gas industry. There is clearly still room for a considerable development of the two industries, both where they are competitive and where they are technically complementary.

Lower Coal Output.—In contrast to the movement a year ago, when the output of coal increased from 18.8 million tons in September to 20.0 million tons in October, production during the corresponding period this year showed a decline of 50,000 tons to 20.4 million tons:—

With the exception of Yorkshire, all the principal mining districts registered a slight decline in output. Although new business remains limited, the colder spell has brought a welcome improvement in demand. As a result production rose from 4,901,700 tons during the week ended November 6th to 4,952,200 tons in the subsequent week, an increase of 227,900 tons over the corresponding period last year.

Prices Again Fall.—The decline in wholesale prices, both here and abroad, continues. In England *The Economist's* complete index number has fallen during the past fortnight by 1.7 per cent., while primary products have fallen by 1.9 per cent. The decline in primary products, however, is less marked than during the previous fortnight. Since the peak figures of March 31st, the complete index has fallen by 11.6 per cent., and the primary products index by exactly 20 per cent. The fall in American prices since last March is even more severe, the Irving-Fisher complete index having fallen by 10.1 per cent. and *The Economist's* primary products index by 30.4 per cent. Here again, however, the last fortnight's declines were less marked than those of the previous fortnight, amounting to only 1.9 per cent. for primary products and 0.9 per cent. for the complete index. French wholesale prices have fallen during the past fortnight by 0.9 per cent.

* These figures relate to November 24th.
† Monthly averages.

We publish below a chart showing movements in British wholesale prices since the depreciation of the pound in the autumn of 1931:—

Details of group movements in the complete *Economist* index number in the three most recent fortnights, with the figures for September, 1931, are given below:—

The Economist Index (1927 = 100)				
	Sept. 18, 1931	Nov. 3, 1937	Nov. 17, 1937	Nov. 24, 1937
Cereals and meat	64.5	90.6	89.8	87.8
Other foods	62.2	67.5	65.5	64.3
Textiles	43.7	62.0	60.6	58.9
Minerals	67.4	97.5	96.4	95.9
Miscellaneous	65.8	81.7	80.6	79.3
Complete index	60.4	79.7	78.4	77.0
1913 = 100	83.1	109.6	107.8	105.9
1924 = 100	52.2	68.8	67.7	66.5

The detailed movements for the past fortnight reveal here and there signs of recovery. American cotton is higher than a fortnight ago, and there has also been a slight rally in tin, copper and rubber. On the other hand, wheat and maize are lower, and there has been a further heavy fall in wool and hides.

Uneven Trade News.—Apart from important developments in the iron and steel situation, discussed in a preceding Note, the week's industrial news contains no new features. The heavy industries remain very active on previous orders, but news from the textile trades is again disappointing. Meanwhile, the scheme for the reorganisation of the industry has received much support. There has been no improvement in the demand for wool textiles.

Overseas Correspondence

United States

(Comparison with Past Depressions)

NEW YORK, November 23.—If production falls no lower than it has fallen to date, the decline will approximate to those recorded in what are historically called major depressions. Between the middle of August and the middle of November, the weekly business index of the *New York Times* dropped about 20 per cent.. The Federal Reserve Board index for October is not yet available, but from the fragmentary data available about its major components (such as steel production) one could infer for November a comparable decline, viz. about 20 per cent. from August.

From 95 in February, 1920, the Federal Reserve index fell to 64 in March, 1921; the average of the year 1920 was 87; in 1921 it was 67; and in 1922 it was 85. From top to bottom on that occasion, the decline was more than 30 per cent., and the period of decline was about 12 months. In the so-called minor recession of 1924 the index ran from 102 in February to 84 in July—a fall of about 20 per cent. The 1924 episode was extremely brief; by December the index was back to 101; and this is commonly cited as an example of the "V-shaped" recession, violent, sharp, brief—as contrasted with the "U-shaped" depression of 1921, slower in decline and recovery.

In 1929, the index dropped from the peak of 125 in June and 121 in September to 103 in December, a level which it held for six months. By the end of 1930 it had fallen a further 20 per cent. to 84; by the end of 1931, to 74; and by the end of 1932 to 66, the lowest month being July, when it was 58. In 1933 production bounded from 59 in March to 100 in July, fell back to 72 in November, and was 71 almost a year later in September, 1934.

Much of Wall Street's time is taken up, and largely wasted, in making these comparisons with the past, and seeking analogies. In the search for explanations, however, there are, broadly, two different schools of thought. To one, the present recession is a mere reaction to the boomlet of last winter. In the sellers' market of last winter, there was a good deal of forward ordering, and a certain tendency to accumulate inventories. Prices failed to continue their upward course, orders fell off, and production declined. Meanwhile, these inventories are being eliminated. Presently they will drop to a level which will force a resumption of ordering, etc., etc. Exponents of this view, instead of being alarmed at the unprecedented rapidity of the decline in production, believe it is a prudent curtailment, which hastens the day of resumed activity. They find their analogy in 1924.

Shortage of Capital

The other school makes a wholly different approach. From 1930 it has been obvious that the weakest spot of our economy is the demand for capital goods. The capital goods industries took the brunt of the depression; they were laggards in the recovery; and except for the best months of 1937, they were generally far behind the average. Yet, statistically, there is evidence of an enormous accumulated demand for the products of these industries—not to increase productive capacity, but merely to restore it to something like the level of equipment and efficiency of eight years ago. This demand cannot become effective because there is no market for new capital. From 1930 to 1934 no capital was formed

in the United States; ours was a deficit economy, with no savings. From 1935, savings began to form, and there was a large influx of foreign capital. Yet the new issue market hardly surpassed the amount of capital imports. The inference drawn is that the formation of capital was relatively small, and what there was, was largely canalised into the Treasury either by taxation or borrowing under our system of tax exemption, against which corporate enterprise can no longer compete. In short, this argument runs, the recovery collapsed because of a shortage of capital available for industry.

Increased and Rigid Costs

This argument may be elaborated. The level of production in November is conjectured to be roughly 20 per cent. lower than the average of the last four consecutive quarters, which was about 115. The index for the first quarter of 1936 averaged about 95; and the average for the calendar year 1935 was 90. In other words, the current level of production is in the vicinity of that of 1935, or the first quarter of 1936. Those were not rated as depression periods. But, in the interim, costs of production have been greatly increased, by taxes and by the wage-and-hour arrangements which have become more rigid under our rather recently instituted type of collective bargaining. As a consequence, any decline in the volume of production impairs the profit margin drastically, which has an immediate effect on the formation of capital. On the one hand, it is argued that this rigidity of the wage structure will maintain consumer purchasing power; on the other, that its tendency is to increase unemployment.

The impaired profit margin is most marked in railroads, utilities, and real estate. The railroads and urban real property, in general, now have almost no earning power on the equity, while in many cases they are not even covering their fixed charges. The utilities are in a stronger position, but the rapid decline in the industrial demand for electricity in recent weeks, in the presence of lower rates and higher costs, has begun to cut into earnings. These are precisely the areas of hypothetical demand for capital goods; but their low earning power on their present capital investment offers no attraction for fresh capital. In short, little capital is being formed; and the industries that need it most are quite unable to attract it because of their impaired profit margins.

Both these opinions are largely deductive rationalisations. The objective fact is that there has been an abrupt collapse from a sustained level of prosperity to a current condition of depression. This depression, whether in the market or in industry, certainly has rational economic causes, however obscure; but it also contains a large measure of pure panic. The recollections of 1929-32 are so vivid to the present generation of business men and investors that memory of itself is a powerful influence in the making of decisions.

The State of Production

PARIS, December 2.—The annual reports of metallurgical firms complain that the recovery in production would have been much greater if the 40-hour week had not been applied so drastically. Production in the last twelve months, that is, from July 1, 1936, to June 30, 1937, exceeded by 16 per cent. the output of the preceding year; and was 85 per cent. of the 1929 production in the first six months of 1937, compared with 68 per cent. in the second half of 1936, and 69 per cent. in the first half. World production in the same period was 10 per cent. higher than that of 1929. Moreover, orders are again diminishing and the outlook is not so favourable as it was in 1936.

Coal production in October was 4,142,000 tons in 23.16 working days, the highest output of the year, except for March, when it was 4,179,765 tons in 23.8 working days, and nearly the same as in October, 1936. Average daily production in October was also the highest of the year, being 178,560 tons, compared with 177,400 tons in January and a lowest monthly figure of 169,000 tons. The increased yield is due to many factors: an increase in the yield per man, and improvements in plant. The general increase in production is due to one or two additional working days, and the increase in staff—241,629 workers were employed in October, 1937, compared with 226,369 in October, 1936. In spite of this favourable trend, the gap between production and requirements remains large; and the improvement in output has lagged considerably behind the increased demand for coal due to the recovery.

The September index of general production (after the period of paid holidays had ended) was 96 compared with 92 in August, and 100 in July. This figure of 96 is lower than the average of recent years, except for 1935. Some industries are very unfavourably situated: in building, the September index of output was 51 against 137 in 1930; and in the textile trades it was 54 compared with 85. The improvement in business, which followed the passing of the social laws and the building up of stocks in face of rising prices, was rapidly stemmed by a rise in the cost of living. The purchasing power index prepared by M. Dessirier fell from 95.3 (100 = 1913) in September, 1936, to 83.5 in October, 1937.

Checks to Investment

The rise in prices and tax burdens hinders the competition of new firms against old ones, which have made their profit out of the devaluation of the franc from 75 to 150 to the pound. Consequently, average monthly new investments of capital in new enterprises were 3 million francs in the first ten months of 1937, compared with 4 millions in the same period of 1936, 11 millions in the first ten months of 1935, and 40 millions in the same months of 1931. This explains why the capital driven away from U.S.A. by the latest crisis is not flowing into business or on to the Stock Exchange; and the fear of fresh political or financial difficulties prevents investors from going into Rentes, as they have gone into gilt-edged in London since the world economic outlook became less promising. The yields of recent public issues suggest that cheap money is confined to the short-term market; although the rate of the two-year Bons de la Défense Nationale has just been lowered from 4 to 3½ per cent.

The Committee of Inquiry into the state of production will be in session daily until the end of December, when it is hoped that its work will be completed. The Government will act on its report, and plans for the adaptation of certain social laws have already been prepared.

Wholesale prices have fallen steadily for seven consecutive weeks. The general index of wholesale prices this week was 590 compared with 595 in the preceding week and 620 on October 16th. The index of the prices of domestic products is 636, compared with 638 last week and 644 on October 16th; and the corresponding indices for the prices of imports are 506 this week and 517 and 576 at the earlier dates.

Unemployment Increases.

In the week ended November 20th, unemployment was 327,494 compared with 305,341, the lowest figure of the year, reached on September 25th; on November 28th last year, however, the figure was 407,831. Fiscal receipts in October were 4,683 million francs.

This yield is 317 millions higher than the estimates and 773 millions above the actual yield in October, 1936. This improvement is mainly due to the yield of Customs and stamp duties. Other receipts, notably from indirect taxes and the turnover tax, show a decline in spite of the increase in prices and in the rate of these taxes. Indirect taxes have yielded 104 million francs less than last year, and the turnover tax has produced 39 millions less. In the first ten months of 1937, receipts were 30,071 million francs against 26,466 millions in the same period of 1936. The ten months' surplus over estimates was 816 million francs; and of the improvement of 3,604 millions compared with the actual yield of the same ten months in 1936, some 2,911 millions were derived from indirect taxes.

Germany

Dr Schacht Retires

BERLIN, December 1.—The definitive announcement of Dr Schacht's retirement from the Ministry of Economy and of Dr Funk's appointment as his successor had no effect on the Bourse, and little on business sentiment. Officially, the change continues to be represented as a necessary consequence of the fusion of the Ministry with the Four Year Plan organisation. The Party Press, however, confirms the public conviction that important questions of policy were involved. True, the Press organs emphasise merely the Party's success in once more making good its claim to hold the chief offices; but that is another way of admitting that Party policy, which is not altogether Dr Schacht's policy, will henceforth be pursued.

It is not to be expected that any radical Party measures will be immediately put through. Dr Schacht has been virtually out of office for several months; and General Goering, who has been in charge, and who will actually be in charge in future, has made no great changes. How far the choice of Dr Funk, who is certainly a strong Party man, will influence developments is not clear. Having already decided that a Party man would succeed Dr Schacht, business circles took Herr Hitler's actual choice of a new Minister with indifference.

The main question of interest now is whether Dr Schacht will remain President of the Reichsbank as long as might be expected from Herr Hitler's friendly letter to him. It seems beyond doubt that Dr Schacht resigned because he was unwilling to bear responsibility for certain recent developments, or because of the increasing obstacles raised against his own policy. But in this respect the offices of Minister of Economy and of Reichsbank President are hardly separable. Dr Schacht was appointed as Minister in 1934 because of the close connection between Reich industrial and armaments activity and the management of credit. If Dr Schacht remains permanently at the Reichsbank, he will therefore not only have to countenance passively the official economic policy but also to co-operate in it actively.

The cost of living index for November was 124.9 compared with 124.8 in October and 124.3 in November, 1936. The only component of the index which changed considerably was clothing, which now stands at 127.6, compared with 123.3 a year ago. The retail prices of ready-made garments have lately risen, and are much higher than a year ago, though owing to changes in the materials used, no close comparisons can be drawn.

Industrial Progress

In October the number of workers employed in industry was larger by 12 per cent. than in October, 1936, and the number of hours worked was 15.3 per cent. greater. The average time worked rose slightly, and was 7½ hours a day. In production goods trades the number of hours worked in October was 16.8 per cent. higher than in October, 1936, compared with an advance of 13 per cent. in the hours worked by the consumption goods trades. The manufacture of machinery has advanced much more rapidly than the production of iron, steel, and other metals, the number of hours worked being 20.6 per cent. higher than in October, 1936.

A Bureau of Statistics report states that industrial activity has already been favourably affected by the Four Year Plan. The number of hours worked in industry in May, 1937, was 97 per cent. higher than in May, 1932. The production of ingot-steel in October was 1,713,600 tons, compared with 1,693,300 tons in September in the same number of working days. Steel output in the first nine months of the year was 16,291,900 tons, which is only 70,000 tons higher than the production of the same months in 1936. Foreign demand for pig-iron is said to be reviving.

The consumption goods industries are now seasonally slackening, after the Christmas trades had done well. The trade Press states that the three companies of the Salzdettfurth potash concern, Salzdettfurth, Aschersleben, and Westeregeln, are to be fused into a single company. Although this report has not been officially confirmed, potash shares, which had fallen since the recent compulsory reduction of 25 per cent. in prices, have advanced. Salzdettfurth was quoted this week at about 178, which is 20 points above the recent lowest quotation.

Busy Shipping

The shipping outlook has improved very considerably. On October 1st only three sea-going vessels, all of inconsiderable size, were laid up. The tonnage of laid-up vessels has fallen year by year, after totalling 303 vessels of 917,800 gross tons at the beginning of 1933. The tonnage of ships in operation is returned at 3,829,000 tons gross, which is 800,000 tons more than in 1933. In the meantime, new ships have been built, and a good many, particularly in the last few months, have been purchased from abroad. Overseas freight traffic, which fell to 39,400,000 tons in 1933, recovered in 1936 to 57,000,000 tons. The official index of German freight rates (1913 = 100) rose from 67.2 in January, 1932, to 76.3 in January, 1937, and to 97.4 in September, 1937. The chief shipping companies are not, however, expected to resume the payment of dividends in the near future. There are still outstanding old debts and the need to renovate tonnage.

A return for 1936-37 shows the combined yield of Reich, State and municipal taxes (municipalities with over 5,000 inhabitants) at over Rm. 15,500 millions, compared with a little over Rm. 10,000 millions in 1932-33.

(In millions of Marks)

	1932-33		1936-37	
	Total	Reich's share	Total	Reich's share
Revenue from:—				
Reich transfer taxes	3,308	1,585	7,414	5,107
Other Reich	3,375	3,375	4,209	4,138
State and municipal	3,539	...	4,037	...
Totals	Rm. 10,222	4,960	15,660	9,245

The Reich's share has greatly increased, being about 59 per cent. of the whole against about 48 per cent. Gross Reich revenue from taxation in the period from April to October, 1937, totalled Rm. 7,933.5 millions against Rm. 6,494.4 millions in the same months of the financial year 1936-37. Of the increase of nearly Rm. 1,500 millions only Rm. 272 millions were derived from indirect taxes.

Holland

Set-Back in Recovery

AMSTERDAM, November 16.—The general collapse of security rates witnessed on all international stock exchanges during recent weeks did not leave Amsterdam unscathed. Not only has the drop been drastic in American securities, but the reaction on local securities has been considerable. According to the Amsterdamsche Bank's computations, the market value of 139 Dutch shares, which was 2,819,748,000 guilders on September 26, 1936, had risen to 4,525,127,000 guilders by August 16, 1937, representing an increment of 60.5 per cent. in 11 months. Approximately two months later the market value had fallen to 3,669,936,000 guilders, representing a drop of 855,191,000 guilders from the peak quotations, and a loss in two months of over half the previous increase in value (50.1 per cent. to be exact). Thus the market value of these shares is now only 30.1 per cent. above the level of September 26, 1936—immediately prior to the devaluation of the guilder.

It is not surprising, in view of this collapse, that people are wondering whether the revival of trade and industry, which set in with the devaluation of the guilder and has therefore only lasted just over a year, has now to be regarded as a thing of the past. The Netherlands Institute of Economics endeavoured to answer this question in an article, stating that:—

The process of recovery . . . has been retarded in the course of the third quarter of 1937. Although the indices of industrial activity are considerably higher than a year ago, the curve has not continued its upward course since July. Imports of raw materials for industrial production also reached their highest point in July. Moreover, unemployment has not declined further since the end of the second quarter, . . . and the number of unemployed has not yet dropped to below the 1934 level. Foreign trade figures are still in excess of the 1932 level. Here again, however, the rising tendency seems to have been arrested for the time being; . . . compared with the corresponding period of last year, however, a decided improvement is still being shown. The advance of the various price indices has come to a standstill too, which need not be an undesirable feature, as this should retard a further increase in the cost of living.

The reaction on the Stock Exchange is no doubt partly responsible for the reduced activity displayed in the new issues market last month. Actually the issues for securing new funds were on a somewhat larger scale, but they were none too successful. The new issues marketed in October totalled 61,300,000 guilders, and some 48,258,000 guilders of which were for conversion purposes.

We reproduce below the figures setting out the international balance of payments of the Netherlands in 1936, issued a few days ago by the Central Statistical Bureau:—

	(In million guilders)

High Record for Exports

September was a favourable month for the trade of the Netherlands, the value of exports in that month beating all records subsequent to the depreciation of the guilder. Imports and exports during recent years, quarter by quarter, are set forth in the following table:—

(In million guilders)									
	Imports				Exports				
	1934	1935	1936	1937	1934	1935	1936	1937	
1st qtr....	276	226	233	336	168	160	156	246	
2nd qtr....	261	229	234	410	171	159	163	286	
3rd qtr....	251	228	243	399	196	174	194	313	
4th qtr....	250	253	307	...	177	182	233	...	

(In thousand tons)									
	Imports				Exports				
	1935	1936	1937	1935	1936	1937	1935	1936	1937
1st qtr.....	4,652	4,508	4,847	2,948	3,137	3,789			
2nd qtr.....	5,068	4,841	5,963	3,023	3,093	4,022			
3rd qtr.....	5,401	5,407	6,606	3,118	3,347	4,081			
4th qtr.....	5,316	5,602	...	3,360	3,961	...			

The course of events on the international money exchanges has resulted in a brisk demand for guilders, in consequence of a flight of capital to the Netherlands from abroad. The Netherlands Equalisation Fund has consequently been faced with the necessity of purchasing sterling on a large scale, which it has been doing at advancing rates.

Roumania

Cabinet Crisis

BUCHAREST, November 23.—Politics and business are so deeply interwoven in Roumania that the current change in the Government has made itself felt on all kinds of business transactions in which the State is involved, the number of which has grown considerably since the introduction of exchange restrictions and the quota system in foreign trade. The country expected a Government of the National Peasant Party, which is, apart from the Liberals, the only popular and strong party. The democratic ideas of this party are, however, difficult to bring into line with the system which King Carol considers most suitable in the present state of international politics; and the tradition of democracy in Roumanian public life is very short. Accordingly, when the King offered office on strict conditions to the leader of the National Peasant Party it became clear that they would not be accepted; and the King again called upon M. Tatarescu to form a Cabinet. M. Tatarescu enjoys the confidence of King Carol; but, his party, the Liberals, although still commanding support among the electorate, seems to be tired of governing.

State revenue continues to flow in at a satisfactory rate:—

Public Revenue			
	1935	1936	1937
Seven budgetary months (In millions of lei)			
Total revenue.....	12,768.7	13,583.3	14,780.4
Out of which:—			
Direct taxes.....	2,321.1	2,510.1	2,891.9
Indirect taxes.....	3,754.0	4,933.1	5,925.5
Fiscal stamps.....	1,189.9	1,324.7	1,649.4

The much improved opinion of investors about State finance has caused a marked improvement in the quotations of all State loans.

Foreign trade still shows a marked surplus of exports. In the first nine months of this year exports attained the record value of 10,200 million lei, which compares with 5,200 and 3,300 millions, respectively, during the corresponding periods of the two preceding years. Accordingly, the exchange situation of the Roumanian National Bank is gradually improving. If there are still difficulties in making payments abroad, their origin is no longer the lack of foreign exchange but rather the existing clearing arrangements.

Poor Outlook for Crops and Oil

Provisional figures about the crop results are disappointing; only wheat and rye are likely to be above the average, while maize, which is of outstanding importance to Roumania, has produced only a poor yield:—

	Average 1931-35	1936	1937
(In 1,000 quintals)			
Wheat	26,285	35,031	37,014
Rye	3,204	4,532	4,241
Barley	13,122	16,119	8,650
Oats	6,553	8,471	3,805
Maize	53,672	56,120	42,352

The oil industry is the chief beneficiary of the improvement in prices. Its general situation is, however, far from sound, since output continues to decrease. Output during the first eight months of this year was 4.8 million metric tons, compared with 5.9 millions during the corresponding period of 1936. Since drilling has increased, the fall in output must be due to the gradual exhaustion of the oilfields under exploitation. New permits for exploration are likely to be granted, but it has yet to be seen whether the regions where further oil is supposed to be will prove to be as rich as those exploited hitherto. It is fairly certain that the export of oil products will continue to decline: during the first nine months of the current year they have fallen to 4.3 million tons from 5 millions during the first nine months of 1936. On the other hand, the lumber industry has been very active during the whole season; and exports during the first eight months of 1937 were 772,346 tons, compared with 620,304 tons during the corresponding period of 1936.

Banking business has been very active throughout the year. Although several medium-sized bankruptcies occurred during the autumn—in many circles they were taken as harbingers of an approaching downward trend—the year promises to bring record profits to all the banks. Nevertheless, the outstanding feature of banking business continues to be extreme caution; and, as a rule, only short-term credits are being granted. On the other hand, the newly created State-controlled institutions for medium- and long-term loans to small peasants, craftsmen and owners of small mining rights, have begun operations; and hope is expressed that the chronic lack of cheap long-term loans will thus be remedied.

Bulgaria

Electoral Reform

SOFIA, November 18.—At a time when Bulgaria was more than usually dominated by a kind of bureaucratic dictatorship under a strong censorship, the new Electoral Bill came to put an end to the uncertainty about the internal position of the country. King Boris is doing everything possible to restore the country to normal after the *coup d'état* of the Army in May, 1934. The law provides that Parliament shall have 160 members instead of 275, elected directly in single-member constituencies. It allows every citizen over thirty years of age who has paid his taxes, and is solvent, to stand for election on condition that he declares publicly his renunciation of any ideas subversive of the present order of the State. New democratic principles are introduced by the granting of the franchise to all men and married women over twenty-one years of age. The elections are to be held early in March, 1938, and the Bill was received as a further step towards a democratic regime.

Continued Economic Improvement

Two abundant harvests in 1936 and 1937 have contributed to a continuous improvement in all branches of economic activity. The higher prices of agricultural products increased purchasing power and facilitated a record increase in industrial output which, by the end of

September, 1937, had risen 30 per cent., compared with the same date in 1936. The net increase of bank deposits in the same period was over 1,200 million levas, or about 10 per cent.

Easy conditions in the autumn foreshadowed a big rise in the advances and the discounts of the National Bank: these items reached a level of 1,050 million levas (against 450 million levas in 1936), which has brought the position very near to that of 1929. State revenues during the first eight months of 1937 rose to 5,523 million levas or 17 per cent. more than in the same period of 1936. The deficit on the Budget amounts to only 156 million levas compared with 356 million levas in 1936: and it is expected that this will be covered by the end of the year.

Large Import Surplus

The expansion in the value of foreign trade in the first nine months of the current year has been more than 58 per cent. compared with 1936. The value of imports is 67 per cent. higher than in the same months of 1936, and the value of exports was 52 per cent. higher.

	1936	1937
Million levas		
Imports (first nine months)	2,213	3,702
Exports (" ")	2,242	3,376

For the first time since 1930 there is an unusually large import surplus. The apparent deficit of 326 million levas does not affect the current balance of payments much because of the large proportion of imported armaments which are to be paid for mostly in five-years terms.

The National Bank records an increase of gold holdings from 1,607 million levas in September, 1936, to 1,840 million levas in September, 1937. The effective *devisen* held by the bank decreased in the same period by only 103 million levas, from 470 million levas to 367 million levas. The improvement in the foreign exchange position of the bank is due to bigger exports to countries with free exchanges; the German share of Bulgarian exports fell from 60 per cent. in the first nine months of 1936 to 42 per cent. in the same period of 1937; and exports to England reached 476 million levas in the nine-monthly period, compared with a value of 216 million levas in the same months of last year. The value of imports from England, which was only 96 million levas in the first nine months of 1936, rose to 170 million levas in the corresponding quarters of this year.

U.S.S.R.

Independence of Foreign Capital

MOSCOW, November 23.—The Soviet Union's balance of payments for 1936 confirms the increasing independence of the Soviet Union of foreign capital and short-term financing. The figures omit the most significant factors in this independence: the steeply increased Soviet production of gold and the consequent increase of the nation's foreign and domestic gold reserve. Figures about these are considered military secrets.

At the same time, the Soviet balance sheet reveals the strain with which the Bolsheviks have secured this independence and paid the foreign costs of their Five-Year Plans. This strain goes as far as any single reason to explain the human wreckage of this year's purges. At the beginning of 1932 the Soviet Union owed its foreign creditors, chiefly on commercial account, \$1,220,000,000. This was roughly 2,440,000,000 roubles of the 1932 vintage, before the 77.5 per cent. devaluation of February 29, 1936. Five years later, by dint of tightening the Russians' collective belt, this debt had been reduced to "an insignificant sum."

Retirement of this outstanding indebtedness had been largely accomplished before 1936. In that year it absorbed only 385,700,000 roubles, compared with 1,012,600,000 roubles in 1935. Foreign exchange was

correspondingly released with which payments for imports could be increased from 860,000,000 roubles in 1935 to 1,328,181,000 in 1936. This latter figure includes 241,574,000 roubles of imports paid for by long-term English, German and Czech credits. But the English credit arrangement, concluded on July 28, 1936, did not materially affect the 1936 figures, according to Soviet economists. They predict that the figures of the 1937 balance of payments will mark the complete liquidation of the peak load of short-term indebtedness caused by the machinery imports of the first Five-Year Plan.

Reserves of Exchange and Gold

Stalin's lead to the Communist Party at its Sixteenth Congress in 1930—"We must build ourselves solid reserves of grain, of goods, of foreign exchange"—has been followed so far as the last item is concerned. With the gold reserve shrouded in the same mystery as the fortifications along the White Russian frontier, the net balance of 32,024,000 roubles added in 1936 to the foreign accounts of Soviet banks is regarded here as an asset of national defence.

U.S.S.R. BALANCE OF PAYMENTS, 1936

(In thousand roubles)			
CURRENT ACCOUNT		CAPITAL MOVEMENTS	
Income	Outgo	Income	Outgo
Merchandise exports	1,497,542	Merchandise imports (including shipping charges)	1,328,181
Shipping income (net)	71,636	Port fees (net)	1,834
Port fees (net)	1,834	Technical assistance	23,439
Other transport income	15,893	Government expenses abroad	55,081
Insurance income (net)	1,695	Interest on loans and credits (net)	43,990
Non-commercial exports	7,090	Other expenses	61,645
Tourist expenditure	35,133		
Other income	32,375		
	1,663,198		1,512,336
CAPITAL MOVEMENTS			
Repatriation of capital	71,275	Retirement of State and concession bonds (net)	45,982
Increase in short-term debt	241,574	Retirement of commercial credits	354,100
		Reduction of short-term debt and bank credits	31,606
	312,850		431,688
Excess of income on current account	150,862		
Excess of outgo on capital account	118,838		
Net increase of balances held abroad by U.S.S.R. banks	32,024		

Other items in the 1936 balance of payments reflect the same increasing independence. Shipping expenses are entered as a net income of 71,636,000 roubles (compared with 47,500,000 in 1935), because imports are almost wholly transported in Russian bottoms, while export figures are given f.o.b. One-third of Soviet exports were carried by Soviet ships in 1935, and this figure was bettered in 1936. Income from port fees and other expenses of foreign ships in Soviet ports dropped from 11,400,000 roubles in 1935 to 1,834,000 in 1936.

"Other income" dropped in 1936 to 32,375,000 roubles from 164,900,000 in 1935, because of a change in Soviet accounting at the request of the League of Nations. Payments by the Japanese for the Chinese Eastern Railway are now included under the heading "repatriation of capital." The decline in tourist expenditure, which began in 1936 as a result of the liquidation of the Torgsin stores catering for foreigners, is believed to have become even more marked in 1937. At the same time, payments for foreign technical assistance, which amounted to 38,000,000 roubles in 1931 before currency devaluation, have also fallen sharply.

THE BRITISH LINEN BANK

Incorporated by Royal Charter, 1746

Head Office: 38 St. Andrew Square, Edinburgh

OVER 210 BRANCHES IN SCOTLAND

LONDON OFFICES:

City Office: 38 Threadneedle Street, E.C.2
West End Branch: 198 Piccadilly, W.1

The export surplus remains the basic factor in the Soviet Union's new independence of short-term financing. For the first nine months of 1937 exports, valued at 1,218,549 roubles, exceeded imports, valued at 1,012,761 roubles; and the monthly surplus has been increasing steadily since April. How great a change this indicates in the foreign economic relations of the U.S.S.R. may be judged by comparison with the accumulated import surplus of 709,700,000 roubles during the fifteen years between 1920 and 1934.

Chile

Steady Activity

SANTIAGO, November 15.—There has been no change of importance in the general economic situation of Chile. Trade and industry are maintained at a relatively high level and above that of last year. A comparison of the results for the first eight months of the current year with the same period of last year shows a considerable rise in mining production. The general index of mining activity rose 50 per cent., which is largely due to the increase in the production of copper—the output of bar copper for the period January to August, 1937, was 276,000 tons, compared with 150,000 tons for the same period of 1936. The production of nitrate and iodine, iron, coal and other minerals also advanced. The output of gold may this year reach approximately 10 tons, the production up to August last being 6,645 kilos.

The output of the manufacturing industries in general shows only an insignificant rise. The volume of buildings constructed in the large cities rose slightly over 8 per cent., and railway car-loadings advanced 13 per cent.

Exports increased considerably, amounting in value to 693 million gold pesos in the period January to August last, compared with 368 million gold pesos in the same period of 1936. Imports also increased, although not to so great an extent. Their total value for the first eight months of the year was 265 million gold pesos, compared with 229 million gold pesos in the same period of 1936. Imports from the United States for the first eight months of 1937 amounted to 74.7 million gold pesos, compared with 60 millions in 1926; from Germany 68.8 million gold pesos, compared with 64 millions in 1936; and from Great Britain 29.9 millions, compared with 30.9 millions in 1936.

Rising Prices

The price level has risen considerably. The average of the index of wholesale prices for January to August last is 24 per cent. higher than in the same period of 1936; and the cost of living rose 13 per cent. It is noteworthy that the index of the total amount of wages paid in the country rose in the same period by 24 per cent.

The exchange situation has continued favourable. The "export" rate of exchange for the dollar has been maintained at 25 pesos and that for the pound sterling at 123 pesos. The President of the Republic, in a speech made recently, stated that it was not the intention of the Government to appreciate the peso further, and that present exchange quotations would be maintained. It is true that, as a result of the change in the price trend of the principal products in the world market, there has likewise been a change in the conditions which, at least in the first months of the current year, favoured a revaluation of the peso, and were in particular manifest in the "free" market, where the quotation for the dollar dropped from nearly 30 pesos to less than 25 pesos. Lately there has been a new reaction in the "free" market, the dollar having risen to 26 pesos and the pound sterling to 128 pesos.

The fall in the price of metals, coupled with the downward trend in the stock exchanges of New York and London, has produced an adverse reaction in the stock

markets of Santiago and Valparaiso, copper, tin and gold shares having particularly suffered. Lately, however, the downward tendency has spread also to other national stocks. It is difficult to say whether this portends the approach of a general change in the internal situation, or whether it merely represents a repercussion of what has recently taken place in other stock exchanges. In general, trade and industry have reached a degree of activity which does not leave much room for new or considerable increases. The characteristic feature of the present situation is a certain stagnation of business, which, however, does not as yet warrant the assumption that a commercial crisis is impending.

Canada

Albertan Legislation in Suspense

OTTAWA, November 22.—The Federal Government has decided not to exacerbate its quarrel with the Alberta Ministry, and has acceded to the request of Mr. Aherhart that both the validity of the Federal right to disallow provincial legislation and the constitutionality of three bills dealing with the banks and the Press respectively shall be referred to the Supreme Court of Canada. The Government has not, however, agreed to the proposal that these three Bills shall become operative pending the decisions of the Supreme Court. As all the cases are virtually certain to be carried eventually to the Privy Council, the position of this legislation is likely to remain in suspense for many months. The Supreme Court has fixed January 10th for the beginning of the arguments about the challenged legislation.

In October the Federal Government successfully placed a new Dominion loan of \$100 millions, and the proceeds are being used to liquidate the balance of the last of the tax-free 5½ per cent. Victory loans maturing on December 1st.

Canada and Anglo-American Pact

There are no known developments in Ottawa about the Canadian end of the negotiations for an Anglo-American trade treaty. There is opposition to any sacrifice of Canada's privileges in the British market for the sake of facilitating such an agreement; and the tariff issue promises to be a source of trouble to the Government at the coming session of Parliament. Last session a group of western supporters of the Ministry staged a minor revolt against its tariff policy; and in Manitoba both the official Liberal organisation and the United Farmers' Association have recently condemned the Government for its failure to implement its tariff pledges. Dissatisfaction in the West has now been increased by the recent reduction of the duties on mutton from Australia and New Zealand. The Western farmers feel that it is grossly unfair to curtail one of the few measures of protection which they enjoy when duties on most industrial products are being maintained at a level well above that of the Dunning Budget of 1930. In all its negotiations the efforts of the King Ministry will be directed first to reducing the concessions demanded of Canada to as small dimensions as possible, and secondly to securing from the Roosevelt Administration ample compensation for any sacrifices which have to be made.

Business Apprehensive

Heavy rains in Manitoba and Alberta may have been building up reserves of moisture for the next grain crop; but, by saturating large quantities of hay and straw and making them unfit for fodder, they have created a shortage of feed for livestock. Winter conditions have arrived in the prairie country and Western Ontario, but not so far elsewhere.

There has lately been an ominous drop in the general economic index of the Bureau of Statistics:—

Week ending	Car-loadings	Wholesale Prices	Bank Clearings	General Index
November 14, 1936	73.5	76.8	90.4	111.8
October 30, 1937	78.7	84.4	88.1	105.7
November 6, 1937	74.6	83.6	92.4	105.2
November 13, 1937	72.3	83.5	81.4	103.3

The index has shown a declining tendency for ten weeks, and there are now distinct apprehensions that unless the present recession in the United States is checked, Canada will soon feel its consequences and have to face a serious decline in business activity.

Meanwhile, although there has been some curtailment of retail trade, business is holding its own better than in the United States, and merchants are preparing again for a brisk Christmas trade. The number of people on public relief has steadily diminished in recent months; in September the total number of recipients of public relief was 854,194, compared with 978,630 in September, 1936—despite the fact that the number on relief in the drought-stricken areas of the West has risen from 99,931 to 202,112.

The unquenchable optimism of the West is being kept alive by the rapid development as a producer of commercial oil of the Turner Valley Oilfield in Southern Alberta. The daily outflow of oil has so far outstripped the storage facilities locally available that the companies operating in the field have had to agree to reduce the daily output of oil first to 65, then to 45, and now to 35 per cent. of

the producing capacity of the wells. The output of the field is at present being kept down to 7,500 barrels per day; but relief is promised by the decision of the Imperial Oil Company, the Canadian subsidiary of the Standard Oil Company of New Jersey, to spend a large sum on equipment and pipe lines, which will open up wider markets for the Turner Valley's oil.

Manufacturing operations are being maintained, but a factor of uncertainty has been introduced into industry and trade by the downward trend of commodity prices. Retail prices were raised last spring on the strength of advances in the costs of raw materials and labour, but, now that the former have fallen in some cases as much as 30 per cent., wholesale and retail quotations on many lines of finished goods are counted too high, and manufacturers and distributors of consumers' goods are now faced with the problem of taking some losses on inventories and bringing the prices of finished goods into conformity with the new price-levels for finished articles without producing a wave of price-cutting.

The newsprint industry continues to operate at a high level, and its production for October was 314,594 tons, compared with 321,351 tons in September and 301,106 in October, 1936. Its outlook has also been improved by the recent signing of a long-term contract between a group of Canadian newsprint companies and a group of leading Australian publishers, whereby the latter agree to take for a period of years about 175,000 tons of newsprint per annum, at a price varying according to the ruling price in New York.

Letters to the Editor

Living on Capital

TO THE EDITOR OF THE ECONOMIST

SIR,—I was interested by the suggestion that there might come a time when the accumulation of British capital placed abroad would become so vast and the population of Britain so small that everything required for their material well-being could be imported and paid for with the income from those investments. If we were to achieve that happy state, we should not be unaware of its extreme vulnerability: in war-time, we would have no heavy industries to provide a sure supply of the sinews; in peace, the arrogance so prevalent among those who live idly on inherited wealth might induce a League of our Debtor Nations to declare a united and complete default.

Perhaps these dangers could be guarded against by a mass migration of the much depleted British race to emulate the present fortunate few by going to live on the Riviera and in all the more attractive spots in our debtor countries. England could be laid out as a National Park, and we could add to our income by catering for foreigners trying to escape the ever-spreading industrialisation of their own countries by our capital. We could keep a watchful eye on our hard-working debtors, and reap on the spot the income of goods and services they would work to provide for us.

No doubt those of us who had not learnt the art of enjoying perfect freedom and endless leisure might work with our debtors and even, aided by the power of our wealth, participate in their government. What better guarantee could one have of world peace? Mr Wells might well have developed this theme thirty years ago.

Yours faithfully,

L. K. O'BRIEN.

Worcester Park,
Surrey.

Gold and the Dollar

TO THE EDITOR OF THE ECONOMIST

SIR,—In your issue of November 13th (on page 316) it is said "Meanwhile, gold's present vagaries have nothing to do with its intrinsic value or its suitability as the world's ultimate currency basis." I hold a fundamentally different opinion.

Efforts should no longer be directed towards the creating of stable currencies and prices, but towards the establishing of a fair and harmonious relation between the constantly increasing quantity of commodities and the purchasing power of money; towards the creating of a money circulation increasing or decreasing proportionally with the rising or falling level of economic prosperity.

Gold is no longer able to act as a currency basis owing to its production annually being far smaller than the increasing quantity and value of commodities. Without substitutes for currency—banknotes and bank deposits (bank money), the purchasing power of gold coin would have been considerably greater. The world economic crisis of 1929 is a proof that gold in the form of money, owing to its restricted production, enforced money deflation: the prices of commodities expressed in gold-money fell.

The devaluation of sterling in 1931 did not alter the purchasing power of sterling expressed in commodities with the exception of gold (from 84s. 11d. to 140s. 7d. per oz.). In reality only, the value of gold had increased, and will further increase. As long as we have a gold standard or a gold exchange standard, we will always be confronted, owing to the scarcity of gold, with the danger of further devaluations of money.

Very sincerely yours,

Sofia.

Dr K. NEDELTCHEFF.

POINTS FROM LETTERS

The American Constitution.—The American Constitution does not distinguish between natural and artificial persons, and may be responsible for the difficulty of carrying out the New Deal, since trusts and corporations, as artificial persons, may over-ride private individuals. Yet the bulk of the Constitution defines the powers of *de facto* political artificial persons, such as the President, his Council, Congress and the Supreme Court, while leaving the People, on which all the rest depends, undefined.—*L. C. Burton, Co. Dublin.*

Writers in *The Economist* overlook what is perhaps the chief reason for the American Constitution, namely the geographical background. The United States compares in magnitude with the British Empire, and a measure of local autonomy, responsive to local conditions, is as necessary to the one as to the other. Many Americans prefer partial disability to possible dismemberment, which they believe might result from entrusting the government of so vast a territory to a single central executive. This, I think, was the basis for much of the feeling against the Supreme Court Bill, as well as that against certain other New Deal policies.—*MacPherson Holt, Chicago.*

The Fiduciary Note Issue.—In former days the Bank of England governed the note issue with regard to

the state of the foreign exchanges. Under the present state of inconvertible paper money the whole system of the foreign exchanges has been rendered artificial. This year, owing to large issues of paper money by France and this country, the exchange with America has been unfavourable and there has been a steady flow of gold bullion to that country. To some extent that has now been checked, but an increase now in the fiduciary note issue cannot but have an inflationary effect. It will accentuate the flow of gold to America; and will not be in accordance with the Tripartite Agreement, i.e. "to maintain the greatest possible equilibrium in the system of international exchanges."—*D. M. Mason, Queen's Gate Gardens, S.W.7.*

Wheat Prices and Mortgage Claims.—The gross cash revenues of Canadian wheat farmers, some 70 per cent. "geared" to world wheat prices, moved from an all-time high in 1928 to an all-time low in 1932. While my wheat revenues, for a fairly stable output, moved from \$2,250 in 1928 to \$936 in 1932 and \$895 in 1933, and then recovered to \$1,257 in 1935 and \$1,654 in 1936, my mortgage payments (principal plus interest) remained steady throughout at \$608 annually. It seems to me that this situation throws a questioning light on the wisdom of Liverpool wheat-buyers playing off the Australian and Canadian wheat-farmers against the State-controlled near-slave wheats of Europe.—*"Jack Canuck," Toronto, Canada.*

Books and Publications

After Lenin

The new edition of the Webbs' monumental work is to be welcomed; for this book* will stand, whatever may happen to the subject of it. Here is an account of Russia, in a vital stage of her history, from the hands of two of the most experienced of all contemporary sociological observers. The Webbs' work will have a lasting place in the bookshelf of the historian of the future.

In the first edition of *Soviet Communism*, the sub-

title was followed by a question-mark. In the new edition, this note of interrogation is omitted—and so it is in Victor Serge's book† as well. The Trotskyite exile, however, writes in direct contradiction to the Webbs' thesis. The sub-title of this other work—"A Critical History of the Third International from 1917 to the Moscow Trials of 1936-37"—might perhaps be contested by a critical reviewer. It is a hazardous claim to make for a book written by a man of action who has been in the thick of the stirring and poignant events with which he is dealing—particularly when the tragedy goes on unfolding itself as he writes, so that the tail-end of the book is almost a contemporary chronicle.

This is not to say that the book lacks value or interest. It is both interesting and valuable as a mirror of the feelings of a sincere and passionate combatant in the *melée*. It is a cry of agony and indignation from the heart of one of the companions of Lenin and Trotsky who has grasped the element of greatness and selflessness in their work, and who has since found himself compelled to watch, in helpless rage, while the fruits of their labours are harvested by an arch-political boss who, in the author's view, is betraying every principle of the Bolshevik Revolution of 1917 for the sake of his own personal aggrandisement.

One odd and illuminating feature of the book is the almost uncanny likeness between this discomfited Trotskyite's attitude towards Stalin's triumph in Russia and a discomfited Western Liberal's attitude to the triumphs of the Fascist dictators. Like so many Liberals, M. Serge is content to bewail and denounce the victory of egotism over enthusiasm as an inexplicable atrocity. It does not seem to occur to him that, in singing his dirge over the undoing of Lenin's work, he is implicitly subjecting Lenin to the most deadly criticism. What more damaging epitaph could be written on Lenin's career than to record that he has prepared the way for Stalin?

There is an astonishing close parallel to this chapter of Soviet Russian history in the annals of early Islam, when the Prophet Muhammad's labours were harvested by the crafty Mu'awiyah, while Trotsky's rôle was played by Mu'awiyah's victim Ali. The parallel is illuminating because it makes us aware of the common explanation of the two prophets' equally tragic failures.

* "Soviet Communism: A New Civilisation." Second enlarged edition. By Sidney and Beatrice Webb. Longmans, Green and Co. 2 Vols. 1,326 pages. 35s. net.
† "From Lenin to Stalin." By Victor Serge. Secker and Warburg. 229 pages. 3s. 6d.

Professor Harold J. Laski
writes:

"It is a remarkable book, worthy of its remarkable predecessor. I know few books more likely to confer an insight into the contemporary conditions in a typical American town."

MIDDLETOWN
IN TRANSITION

By ROBERT S. & HELEN M. LYND

"It has never been so important as to-day to understand the currents of American life. Understanding is necessary both for the light American developments will throw on similar problems elsewhere, and because what America will do in foreign affairs depends much more on the attitude of Middletown than on the interests of New York. To everyone who wishes to achieve such understanding, *Middletown in Transition* is indispensable."—*Sunday Times*. 18/- net

The 'remarkable predecessor' referred to by Professor Laski is, of course, the earlier study by the same authors:

MIDDLETOWN

"Probably one of the best and most informative books on modern America yet written. One leaves the book with the feeling that one has learnt a great deal about a singularly curious and complicated community, and one could pay Mr. and Mrs. Lynd's work no greater compliment."—*Times Literary Supplement*.
New and Cheaper Edition, 10/6 net

Constable & Company
10 Orange Street W.C.2

Muhammed's idealism, as well as Lenin's, was betrayed by the unscrupulous violence with which the Prophet set himself to put his ideals into practice. For this was to invite a successor who would stick to the violence while he threw the idealism overboard; and that simple improvement on the Prophet's method is the secret of Stalin's success as well as Mu'awiyah's.

Is it really a new civilisation? Or is it just a new police-state? Stalin might boast that he had come not to destroy but to fulfil—the Czarism. At any rate, M. Serge's book tells strongly in favour of this thesis; and to disprove it will be a tax upon even Mr and Mrs Webb's ability.

Shorter Notices

"Money." By Emile Burns. 94 pages. "An Introduction to Economic Botany." By James Gillespie. 96 pages. "A Short History of the Russian Revolution." By R. Page Arnot. Volume I. From 1905 to February 1917. Volume II. From February 1917 to the present day. Each 96 pages. The New People's Library: Gollancz. All 1s. 6d. cloth or 1s. paper.

These volumes attempt to give a simple and accurate introduction to their respective topics. The success of the venture, which is really something of a Home University Library written from a "left" point of view, cannot be estimated until more volumes have been published and until there is some indication of the response from the public. The price seems a little high in these days of Penguin and Pelican. It is, of course, true that the New People's Library consists entirely of new works and not of reprints, but the general public cannot be expected to understand the economics of the publishing trade. Mr Burns is elementary and attractive on *Money* and contributes a slight but interesting chapter on money and prices in a Socialist economy. *An Introduction to Economic Botany* is quite the most exciting of the volumes under review. It treats a new subject in a new way. The social implications of the natural sciences are seen most clearly in the case of plant biology, and Mr Gillespie has done for botany what, on a very much larger scale, Professor

Hogben has already done for mathematics. Mr Page Arnot's history is well done within its limits, but necessary brevity leads to over-simplification. It was a mistake in the second volume to attempt to bring it up to date. Had it ended at 1921 with the adoption of the New Economic Policy, there would have been more room for a detailed study of the revolutionary period proper. All the volumes except *Money* have suggestions for further reading. Such suggestions are obviously quite essential and we hope they will not be omitted from any future volumes.

"The Economic Policy of France." By Hon. George Peel. Macmillan. 242 pages. 8s. 6d.

Mr Peel knows a great deal about the economic history of France, and is more than a little alarmed about the state of that country's finances. He does not share the vulgar and erroneous belief that M. Blum's New Deal and the coming of the *Front Populaire* were wholly responsible for France's latest troubles. He appreciates not only the cost of reconstruction after the war and of re-armament, but also the effect of curious habits in State borrowing. The case for sounder finance is stated persuasively, although despite his background of information and insight, Mr Peel does not always avoid superficial judgments. Few readers, however, will question the need, amply recognised by M. Chautemps and M. Bonnet in recent months, for France's house to be set in order; and they will enjoy Mr Peel's lucid account.

WAGES & INCOME

IN THE UNITED KINGDOM SINCE 1860

By A. L. BOWLEY. 8s. 6d. net.

The author has made many investigations into the subjects of wages and incomes at various dates in the last forty years; but some of the more essential studies are now out of print or not easily accessible, and with the accumulation of new information and the making of new analyses earlier estimates have had to be modified. This new book is a résumé presenting the results of the investigations as a coherent whole. It gives a continuous picture of the changing standards of income and of living during the last eighty years.

CAMBRIDGE UNIVERSITY PRESS

LONDON: JOHN MURRAY

MONEY AND BANKING

World Monetary Policy

AN important address was delivered to the Institute of Bankers in London on November 30th by Dr Kienböck, President of the Austrian National Bank and a former Austrian Minister of Finance. Austria is a country which perforce imposed exchange restrictions in 1931, but has since gradually been able to relax them. To-day, in her relations with free exchange countries, she imposes controls only over repayments of foreign capital. Dr Kienböck has thus had first-hand experience both of exchange restriction and de-restriction, which, added to his intimate knowledge of other fields of banking, places him among the foremost of the world's authorities on monetary practice and policy.

The first part of his address this week was concerned with general monetary principles. Dr Kienböck took as his starting-point certain resolutions of the World Economic Conference of 1933. These said that stability in the international monetary field should be achieved as quickly as possible, and that gold should be re-established as the international measure of exchange values, the time and parity being for each country to determine. Dr Kienböck's address re-examined these resolutions in the light of the subsequent events; particularly the increase in gold production and the greater maldistribution of the world's stocks of monetary gold. He concluded that neither development was an insuperable obstacle to a general return to gold.

The increase in gold production, he argued, was a direct consequence of the devaluation or depreciation of many currencies and the attendant rise in the price of gold to a point higher, temporarily at least, than the cost of production. In short, both the increase in gold production and the fluctuations in the value of gold were a consequence, not a cause, of monetary instability. Stabilise currencies, his argument proceeded, and it will be much easier to establish equilibrium between gold supply and demand and so to minimise the natural fluctuations in the output of gold.

Gold maldistribution, he declared, was undoubtedly a serious problem, but it was largely linked up with both gold hoarding and the migrations of fugitive capital. In this respect, also, the prime necessity was to remove uncertainties surrounding the position of particular currencies. Once fugitive capital has returned home, gold will be better distributed over the world. Some maldistribution admittedly will remain, but in Dr Kienböck's view this feature will reflect differences in national wealth. The corollary of this conclusion might be, in fact, a return to the old maxim that the richer areas should assist the development of the poorer areas by credits and other forms of investment.

Dr Kienböck declared himself strongly opposed to any further drift over the question of world monetary policy. Already, he argued, the time was ripe for study, and the Bank for International Settlements might well consider methods which would render easier the defence of an internationally agreed gold standard. Dr Kienböck admitted that he himself was not prepared to describe such methods, and he later said that he was not hopeful that monetary technique could be used to control cyclical fluctuations in trade. There was no doubt in his mind, however, that we must establish a definite point of departure, and that the gold standard provided the necessary basis. He recommended, therefore, that we should proceed to draw up as simple and uniform a programme as possible for the future reinstatement of the gold standard. The ground, indeed, had been prepared by the Tripartite Monetary Agreement of last year.

Leaving these general considerations, Dr Kienböck devoted the second part of his address to Austria's monetary

experience since 1931. For a short time after the collapse of that year Austria maintained the official rate for the schilling, although on the free world's markets it was already quoted at a discount of about 21 per cent. Later, certain groups of importers and exporters were allowed to buy and sell at rates higher than the official rate and closer to the free rate, and gradually this concession was extended to all traders. This change necessarily increased the cost in Austrian schillings of imports from abroad. While it was in progress, however, world prices were falling, so there was no increase in the Austrian internal price-levels; what happened was that Austria did not share in the world-wide decline in prices.

While Austria has now succeeded in restoring almost completely normal dealings with the free exchange countries, her experience with the restricted countries has followed very different lines. In their case, Austria has been forced back upon clearing and compensation schemes, with all their attendant delays and accumulation of arrears. Meanwhile, the restricted countries have frequently been only too anxious to sell their goods to free countries in return for free exchange, rather than to Austria and to other countries with whom they have had clearing agreements. Consequently, the reduction of the arrears due to Austrian exporters has proved a slow process.

The importance of Dr Kienböck's address is beyond question. In this country, the fact that the British Empire, Scandinavia, most of South America and certain other countries are content to base their currencies upon sterling has, possibly, tended to postpone serious consideration of the questions bound up with an ultimate return to the gold standard. Recent events and tendencies, however, have drawn increased attention to the possibility that a continuance of cheap and plentiful credit may be associated with a downward trend of prices and trade. And it may be significant that one of the first stages of the recent setback took the form of a gold scare, which was itself a direct consequence of monetary instability. In England, again, we may be apt to overlook the fact that few people on the Continent repose the same faith in a managed currency as do many people in Great Britain and the United States. Dr Kienböck himself declared that non-gold standards, even if they were perfect, are not calculated to hold the imagination of the public, and his doubts would be echoed in banking circles in such diverse countries as France and Germany.

It does not follow, however, that the time is yet ripe for a general return to gold or that we may not have learned how to make the best of both worlds before that time has come. In the discussion on Dr Kienböck's address, Sir Josiah Stamp emphasised that the speaker was anxious only to take the first step of drawing up a programme; while Mr Brand suggested that the political situation was a serious difficulty in the way of an early return to gold. There may, however, be something to be said for the drawing-up by the Bank for International Settlements of a possible programme, though that programme may need to be widely modified before the time is ripe for putting it into execution. If the main lines of such a programme were evolved and made generally acceptable, then future monetary policy could be gradually shaped so that, if and when the time arrived for the final transition, the interval to be bridged way ahead, and in the meantime the economic and political problems of the restricted countries remain formidable. Dr Kienböck, nevertheless, has done good service by his vigorous protest against drift and inaction.

Financial Notes

Distribution of Bank Advances.—In continuation of the details cited by Lord Wardington at last January's Lloyds Bank meeting, the Bank of England publishes in its statistical summary for November a complete classification of clearing bank advances. This is reproduced below. The 1936 figures represent the nearest available date to October 31st, while those for 1937 relate to various dates between August 4th and October 26th:—

	1936 £mn.	1937 £mn.	Difference £mn.
Textiles (cotton, wool, silk, linen, jute)	39.9	43.8	+ 3.9
Heavy industries (iron, steel, engineering and shipbuilding)	40.7	49.9	+ 9.2
Agriculture and fishing	57.7	60.1	+ 2.4
Mining and quarrying (including coal)	18.1	15.1	- 3.0
Food, drink and tobacco	29.4	32.5	+ 3.1
Leather, rubber and chemicals	12.6	15.3	+ 2.7
Shipping and transport (including railways)	23.2	20.1	- 3.1
Building trades	61.5	68.2	+ 6.7
Miscellaneous trades	67.4	74.7	+ 7.3
Retail trade	60.1	64.0	+ 3.9
Local government authorities and public utility companies (excluding railways)	50.4	54.2	+ 3.8
Amusements, clubs, churches, etc.	40.5	44.5	+ 4.0
Financial (including banks and building societies)	109.5	118.2	+ 8.7
Other advances	258.5	300.4	+ 41.9
Total	869.5	961.0	+ 91.5

The increase in the borrowings of heavy industries is the most noticeable feature of the table. In view of rearmament and the other general activity of these industries, this increase is not surprising. There is also a big increase, both absolutely and proportionately, in the miscellaneous mass described as "other advances." This presumably includes all borrowing by private and professional customers. To a certain extent it represents borrowing for consumption as distinct from production—and it may have been used, in part, for security dealings.

Midland Bank's Record Deposits.—The Midland Bank's monthly statement for November shows deposits of £501.8 millions. This is the first time that the deposits of a commercial bank, either in England or elsewhere, have exceeded £500 millions. The ratio of cash to deposits is 10.4 per cent., while 18.0 per cent. is represented by discounts, 22.5 per cent. by investments, and 43.2 per cent. by advances. The achievement of this record is a notable event in banking annals.

Commercial Bank of Scotland.—This Bank is able to report further progress, and during the year to November 1st last deposits rose from £42.0 millions to £46.1 millions, or to a new high record. There has also been an increase in advances from £13.1 millions to £14.6 millions, and this clearly represents an expansion in the new business of the bank. Cash and investments are higher than a year ago, but there has been a slight reduction in call and short loans. Still the total of cash, call loans and investments has grown from £36.0 millions to £38.6 millions, or to 77 per cent. of the bank's note circulation and deposits. Net profits are slightly lower than a year ago, the decline being from £400,000 to £396,000. The usual allocations are made to reserves and other funds, and last year's dividends are repeated.

Barclays Bank (D.C. and O.).—The accounts of this bank for September 30, 1937, show a slight drop in deposits, but a definite increase in advances.

Discounts are slightly lower than a year ago, and there has also been a drop in cash. The net result is that the bank is now lending a greater proportion of its resources. The drop in discounts and increase in advances may both be fortuitous, as the type of demand for credit depends to some extent upon seasonal factors which vary from year to year. Still the main impression left by the account is that up to September 30th, last the bank was experiencing a growing demand for credit.

	1935 £ millions	1936 £ millions	1937 £ millions
September 30th	87.8	97.0	96.2
Deposits	24.4	25.5	22.8
Cash	12.5	13.1	11.1
Discounts	23.4	27.8	28.3
Investments	29.2	32.2	35.9
Advances			

Net profits for 1937 were £431,000, compared with £401,000 the year before. Last year centenary grants to staff and pensioners absorbed £178,000. This year the allocation to the reserve fund is increased from £75,000 to £100,000, and £75,000 is placed to reduction of premises account. The dividend on the "A" and "B" shares is increased from 11 to 12 per cent.

Bank of Montreal.—The annual statement of the Bank of Montreal for the year to October 30th last shows that total assets have risen during the year from \$804 millions to \$830 millions. Quickly available resources amount to \$599 millions, or to 79.6 per cent. of the bank's liabilities to the public, which total \$753 millions. Deposits have risen from \$691 millions to \$718 millions. Current loans have risen during the year from \$175 millions to \$205 millions, but the contraction of business in the securities markets is reflected in a slight reduction in call loans in Canada. Call loans abroad have also fallen, the decline being from \$25.4 millions to \$19.9 millions. Profits have improved as the result of the expansion in the bank's business, and this year amount to \$3,408,000 or 4.47 per cent. of the bank's capital, reserve and undivided profits. Last year's dividends are repeated. The bank has thus had a satisfactory year, but it remains to be seen whether next year witnesses any recession in Canadian business.

Bank of London and South America.—The accounts of this bank show a noticeable expansion in both assets and liabilities since a year ago. Last year's balance sheet was issued immediately after the absorption of the Anglo-South American Bank, and the consequent readjustments were then hardly complete. This year it is possible to see the full picture, and meanwhile the bank has benefited both from the year's expansion in South American export trade and also from the appreciation of the leading South American currencies against sterling. This latter factor has increased the sterling value of most of the items on both sides of the balance sheet.

	1935 £'000	1936 £'000	1937 £'000
Liabilities:—			
Capital	3,540	4,040	4,040
Reserve	2,000	2,000	2,000
Current and deposit accounts ..	28,289	55,403	58,304
Bills payable	661	1,168	1,402
Acceptances	1,719	2,605	3,032
Bills for collection	6,350	8,953	10,168
Assets:—			
Cash in hand and at call	7,144	13,521	15,314
British Government securities ...	956	2,420	2,635
Foreign Government and other securities	219	2,929	2,890
Bills receivable	6,026	10,118	10,549
Advances	18,651	29,727	30,494
Premises	1,914	2,853	2,688
Net profits	210	253	462
Dividend	3%	3%	5%

Net profits have responded to the increase in the bank's business and resources, and after making full provision for bad and doubtful debts and losses of subsidiary companies, are nearly double those of last year. The dividend has been raised from 3 to 5 per cent., and £200,000

has been carried to contingencies. This last is a wise precaution, because the accounts relate to September 30th, and lately there has been a break in the prices of many of South America's staple exports. No doubt Lord Wardington will discuss this aspect of the outlook in his address to the meeting on December 14th, and he will also probably refer to recent developments in Brazil.

* * *

British Overseas Bank.—This year's balance sheet shows several important changes. First there is a drop in discounts and an increase in advances. This is due to the Hungarian standstill agreement of last July, under which standstill bills, for which Hungarian debtors were liable, were replaced by cash advances. The shrinkage in acceptances is more unwelcome. To a large extent it arises out of the disorganisation of Spanish trade due to the civil war, and this year's balance sheet contains a note that advances to customers and liability of customers for acceptances include balances which come under European standstill agreements and exchange restrictions, and also those due by customers in Spain.

	October 31st		
	1935	1936	1937
Liabilities :—	£'000	£'000	£'000
Capital	2,000	2,000	2,000
Reserves	250	250	250
Deposits	2,638	3,983	3,840
Acceptances	2,989	4,078	3,089
Assets :—			
Cash	247	256	278
Money at call and short notice	869	1,260	1,149
Balances with banks abroad	208	457	197
Bills discounted	554	973	138
Government securities	371	446	446
Other Investments	538	535	645
Advances	1,783	1,957	3,031
Net profit	60	62	52
Dividend	6%	6%	Nil

Taking into account both the contraction in net profits and also the unsettled state of affairs in many of the countries where the bank operates, the directors have decided to pass this year's dividend, and to carry forward the whole of the year's earnings. The decision is regrettable, but all will agree that it is the only prudent course for the directors to pursue.

* * *

Chinese War Risk Insurance.—In ordinary times shipping on the Yangtze River has been insured along the same lines as international shipping, but since the outbreak of the Shanghai hostilities, Yangtze boats have been refused insurance including war risk. Simultaneously aerial warfare practised by the Japanese air force has added to the risks of transport by rail, road and water. As a result, China's internal traffic was seriously disorganised, and for a time it seemed likely that aerial warfare might achieve that disruption of communications which is one of its avowed aims. Under such conditions the Chinese Government have entered the insurance business through the Central Trust of China, an organisation closely affiliated with the Central Bank of China. The Central Trust of China has organised a special war risk insurance department with a capital of \$10 millions Chinese (about £600,000 sterling). This department is prepared to insure war risks affecting goods transported in the interior of China as well as the means of transportation (i.e. especially motor vehicles and boats of all descriptions) and the personnel employed. Demand for insurance on these lines is already considerable, but it is much too early to draw any conclusions from actual experience.

* * *

The Foreign Exchanges.—Francs were in demand at rates of Frs. 147.06-09 up to Tuesday morning, and the French Control was consequently a buyer of sterling and dollars. Its latter purchases brought the sterling rate for dollars down from \$5.00½ to \$4.99½. The strength of

the franc was reflected in the forward market, three months' francs being quoted at Frs. 1½ discount, or the smallest discount for a very long time. On Tuesday the demand for francs ceased, and the French Control stopped buying dollars. A new demand for dollars, however, continued, which brought the sterling rate on Wednesday down to \$4.9855. On Thursday it moved up slightly to \$4.9915. Guilders have been steady at Fl. 8.98½. Apparently the new Dutch loan to France has not had too good a reception either from the banks or the general investor. Belgas strengthened to bel. 29.33½ on Wednesday, but have since returned to bel. 29.36½-7. Swiss francs are unchanged.

* * *

The Bank Return.—The Christmas expansion in the note circulation has begun, and so far amounts to £5.3 millions. The Reserve is reduced by £5.5 millions, and now stands at £62 millions.

	BANK OF ENGLAND					
	Dec. 2, 1936	Nov. 10, 1937	Nov. 17, 1937	Nov. 24, 1937	Dec. 1, 1937	1937
Issue Department :—	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Gold	248.7	326.4	326.4	326.4	326.4	326.4
Note circulation	451.6	485.6	481.1	480.4	485.7	
Banking Department :—						
Reserve	57.6	42.4	66.8	67.5	62.0	
Public deposits	10.6	30.7	33.2	35.4	12.0	
Bankers' deposits	99.1	90.9	86.7	83.8	105.7	
Other deposits	41.1	36.1	36.1	36.3	36.6	
Government securities	82.4	103.9	76.8	76.2	78.8	
Discounts and advances	8.5	8.4	9.0	8.6	10.5	
Other securities	20.2	20.7	21.3	20.9	20.7	
Proportion	38.1%	26.8%	42.8%	43.4%	40.2%	

Movements in the banking department reflect the payment on December 1st of the half-year's War Loan dividend. Public deposits are reduced by £23.4 millions, while the small increase in Government securities may represent Ways and Means borrowing. Bankers' deposits should have received the full benefit of both these changes, but they have also had to bear the brunt of this week's currency withdrawals. In consequence they have only risen by £23.1 millions.

* * *

The Money Market.—The repayment on Tuesday of the first instalment of £8,000,000 due on the French railways' sterling credit made money very plentiful, but in spite of the War Loan dividend payment the following day, there was some calling by the clearing banks on both Wednesday and Thursday. Money generally remains easy. On Tuesday some houses were re-lending at under ½ per cent. Rates for loans into the New Year range from 1 to 1½ per cent. against bills, with higher rates for loans against bonds :—

	Nov. 11, 1937	Nov. 18, 1937	Nov. 25, 1937	Dec. 1, 1937
Bank rate	2%	2%	2%	2%
Clearing banks' deposit rate	1½	1½	1½	1½
Short loan rate :—				
Clearing banks	1½-1*	1½-1*	1½-1*	1½-1*
Others	1½-1	1½-1	1½-1	1½-1
Discount rates :—				
Treasury bills	1½	1½	1½	1½
Three months' bank bills	1½-1	1½-1	1½-1	1½-1

* Loans against Treasury bills and other approved bills and British Government securities within six months of maturity; 1 per cent. Treasury Bonds and other gilt-edged stocks within six months of maturity; and other collateral respectively

Last week's Treasury bills went at just over ½ per cent. This week the banks have been buying sparingly. They took a few February bills at ½ per cent. provided that they were offered December bills as well. Hot Treasury bills have been dealt in at just under ½ per cent. The release of funds through the French repayment and the War Loan dividend have not altered the buying policy of the banks, and it is a question how soon they will cease buying bills altogether until the end of the year. If they do, rates may jump to ¾ per cent. and perhaps even higher.

THE STOCK EXCHANGE

Fate of the Chinese Customs

THE Japanese armies, pressing towards Nanking, threaten the capital city of a nation which has, within its means, treated its creditors honourably. The future political status of vast areas of China is undefined, and the ability of her Government to prolong resistance against the aggressor is questioned. Japanese intentions towards the political and economic rights of foreign nationals in China are ominously uncertain. Yet last Monday the Boxer Loan rose 3 points and the 5 per cent. issue of 1913 nearly 5 points.

The explanation of this singular movement may be that the market has reverted to its earlier policy of welcoming any news which promises the shortening of hostilities. Or perhaps it was intended to applaud the joint representations in Tokyo, emphasising British and American interests in the Customs. But investors must needs look beyond the mere silencing of the guns or amiable professions of good faith. What part will the Maritime Customs play in China's future administration?

To answer this question, we must clearly understand the rôle of the Chinese Customs in the past. The origins of the Customs Administration spring from the Treaty of Nanking in 1842, when five treaty ports were opened to foreign trade with reasonable import and export dues. In the middle 'fifties, the Shanghai Customs office was re-established, with a Chinese-speaking British representative in control. In 1858, following the Treaty of Tientsin, another British nominee, Mr H. N. Lay, became the first Inspector-General of the Customs Service, which had been quickly extended to other ports as they were opened. Mr Lay anticipated the introduction of preventive measures, to his cost. Having elaborated a scheme for the suppression of piracy, he purchased eight revenue cruisers while on leave in England. This flotilla proceeded to China, where the Emperor, placing considerations of sovereignty before those of public finance, repudiated the scheme with great displeasure and forced Mr Lay's resignation.

From that day, nevertheless, the service has enjoyed a succession of distinguished Inspectors-General. In 1898, the Chinese Government undertook to retain a British subject as Inspector-General so long as the British trade in the treaty ports exceeded that of any other nation. That position has always been maintained. After the Boxer troubles, the "Young China" party—desiring to break all bonds of extra-territoriality, and doubtless impressed by the rapid rise in the Customs revenues, following the commercial treaty of 1902, and the opening of the early railways—sought to achieve Chinese control of the Customs. But in 1911 a new British Inspector-General was appointed, and in 1929 he was succeeded by the present Inspector-General, Sir Frederick Maze.

By general consent, the Customs have always provided the example, in Chinese administration, of efficiency and probity. And even in China itself, it has been admitted that foreign control has been no unimportant factor in this record. Of recent years, the Chinese Government has derived substantial revenues from the Customs surpluses, and for this reason if no other, the Nanking Government, left to itself, would hesitate to alter the service in any fundamental respect. The Government has, indeed, applied the historical lesson of the Customs Service to the Salt Administration, which under foreign direction has provided a startling increase of revenues during the past four years. There is, incidentally, no provision in the Reorganisation Loan agreement that the associate chief inspector of the Salt Administration must be British, though he must be foreign. But British or American supervision has enormously

enhanced the effectiveness of both services, and British investors, at least, would be reluctant to grant their confidence, in equal degree, to these services under Japanese control.

The Customs Administration has surmounted, with tact and efficiency, the many problems arising from the grant of fiscal autonomy to China, the civil war and the currency disorders. What of its future? In an article on October 2nd, we showed that Customs revenues might fall 76½ per cent. from their 1936 level and still cover the full Customs loans service. We also showed that Shanghai accounted for 46 per cent. of last year's collections and Tientsin for 11 per cent. We have it on the authority of the Foreign Minister that remittances from Tientsin, where Japanese control has been established, are neither regular nor adequate. And of Shanghai it need only be said that September's trade was nearly 73 per cent. below that of July, before the outbreak of hostilities. Even if the Shanghai Customs House continued its work unhampered, the trade situation would itself be ominous for the investor.

In the short run, obviously, the omens for continued full payment on the Customs issues by China are anything but bright. She has attempted to offset the heavy reduction in revenue from import duties by developing a new form of "interport duty" on goods transported by road, rail or steamer between points in the interior, provided that they have not already paid import duty. This species of business turnover tax may not gather all domestic trade within its net, but it may secure an appreciable yield. If the total revenues do permit China to pay, her willingness must surely be encouraged by the fact that large amounts of domestic bonds, secured on the Customs revenues, are held by banks in China, so that default would further jeopardise the banking structure. We may conclude that China would prefer the part of the peaceful and reasonable debtor, but that her present military burdens may prove too severe to provide her with the means of payment.

What, then, may the investor assume regarding Japan's intentions? The Japanese "Foreign Office Spokesman," commenting on the British and American Notes regarding the Shanghai Customs, has admitted that the military forces desire to control the Customs House. According to this statement, the military authorities "fully understand" that the Customs are a security for foreign loans. But "if the Customs revenues were used for the buying of Chinese munitions, the position would be almost intolerable to the Japanese army." Foreign bondholders, for their own part, have had ample experience in recent years of "almost intolerable" situations. They might even be inclined to apply the term to the present situation in Shanghai. But it would be premature to forecast what will emerge from the Japanese Consul-General's negotiations with the Maritime Customs Administration. Significant hints, however, are being dropped concerning the Japanese attitude. Since the Manchurian ports were seized five years ago no revenues from local Customs collections have been received at Shanghai. It appears that these collections have been accumulating "until negotiations are opened with the new state." By this device, Japan presumably hopes to obtain diplomatic recognition of Manchukuo by paying the creditors with their own money. The same technique, apparently, is envisaged by Tientsin and the Northern provinces. The position of Shanghai, however, may conceivably be on a different footing. Japan certainly has no need—possibly she has no wish—to perpetuate a default on the Chinese Customs loans,

for which she could be held to blame by the Western creditors. Japan's own debt record is so exemplary that foreign bondholders, clutching at every hope in a world where little else remains, may be encouraged to believe that she continues to set great store by financial rectitude. In that event it is possible that, even if Japan secures control of the Chinese Customs, she will at least save her act by making due payments to the creditors.

If payments were forthcoming, however, they might well be hedged about—again on the analysis of past experience—with conditions. Their offer might be coupled, for example, with pressure upon the creditor Powers to use their offices towards stopping the war. Alternatively, it might be based on demands for recognition of Japanese sovereignty in China proper or in Manchuria, or in both areas. To put the matter in its most cynical terms, it might be argued that in these circumstances an offer of full payment would be in Japan's own interests; for a country whose own economic circumstances are deteriorating does not, if it is wise, sever all its business connections.

We may sum up the conclusions of this article by saying that the threat to Nanking, the possibility of divided authority in China and the impoverishment of Chinese finances, all suggest that China may be compelled to default. Payment by Japan might be offered as part of a bargain—perhaps *kuhhandel* is the better word—over Japan's "rights" in China. In neither case would the ultimate investment basis for the Customs issues be sound. Investors in short, would follow Monday's rise in market prices at their own peril.

Investment Notes

Course of Share Values.—The course of share prices last month was as harmful to the reputation of the prophets as to the pockets of security holders. The month opened with a recognition, both in Great Britain and America, that the decline in values heralded some recession in trade, whose existence President Roosevelt proceeded to acknowledge, though Mr Chamberlain con-

BRITISH AND AMERICAN INDUSTRIAL SHARE VALUES DURING THE PAST TWO YEARS

(1928=100)

British: "Financial News" Index of 30 Ordinary Shares
American: "Standard Statistics" Index of 50 Common Stocks

tinued to maintain that there was no such thing. The main concern of the markets was with the probable duration and intensity of the recession which share prices were discounting. It was felt that if the well-informed astrologers were right, and the depression, whenever it arrived, was to be only a little one, then prices had already fallen enough. Yet they continued to fall further, almost until the month's end. In America, the

President's statement of his policy was not enough to restrain Niagara, while in Great Britain, where industrial recession is far less noticeable than in America (if it is noticeable at all, as yet), overseas politics lacked compelling force, either as a bull or a bear point. The month ended with a distinctly more hopeful feeling, based on the argument that the market's weakness, in its last phase, had been mainly technical. If prices have been driven down below the level they ought to have reached at this stage, then it is probable that, once their retreat has been arrested, for the duration of one or two Stock Exchange Accounts, they are more likely subsequently to show a moderate rise than a further fall. Presumably some such reasoning as this finds expression in the announcement of the formation of three new investment trusts, of which we give particulars on page 494. The advisability of large security purchases, on a long view, may well depend on how long the view is. There may be a strong possibility that ten or twenty years hence the value of a portfolio of good securities will be higher than it is to-day. To infer, however, that prices have reached bottom in the present movement is another matter; for they may well be lower in twelve months' time than at present.

Is Fixed Interest Illusory?—In a paper read before the Institute of Actuaries last Monday evening, Mr E. H. Lever, joint secretary of the Prudential Assurance Company, made an attack on the fundamental assumptions of long-term investment policy which may have widespread repercussions among institutional investors. Mr Lever contended that both logic and history showed that long-term financial contracts with rigid conditions carried the seeds of their own undoing. If conditions changed to the borrower's advantage, it was frequently found that he had had the foresight to incorporate a one-sided option into the covenant, which allowed him to repay his obligation and re-contract it at a lower interest rate. If conditions changed to his despite, he was apt to default or to bring inequitable pressure to bear on his creditor. The media of fixed interest contracts for industrial companies—debentures and preference shares—were so liable to abuse that resort ought to be had to them only in exceptional instances. Broadly, Mr Lever's conclusions were that in present conditions ten years was long enough for any long-term contract; that preference shares ought to be replaced by participating preferred ordinary shares, with a low fixed rate of interest as a first charge on earnings; and that debentures ought to be limited, in effect, to the value of fixed assets on a break-up.

To many investors, Mr Lever's generalisations will recall the classic definition of the epigram as a statement which, by causing a temporary shock, draws the greater attention to the truth beneath it. Undoubtedly, his main contention is sound. Contracts of over-long duration are inappropriate in a rapidly changing world. But the degree of unsuitability is not a function merely of the time element, but rather of the degree of change which may be expected. Among the elements of change, certainly, the time factor is one of the most important. A decade may be an impracticably short period for the majority of fixed interest contracts, but a century or even half a century is too long. And even ten years would have been too long, e.g. for many steel company debentures, issued at high interest rates in 1920. But changes in prices and interest rates are also relevant to Mr Lever's main thesis, and they are determined by factors other than the mere efflux of time—as is obvious from a comparison of the experience of the last four decades of the nineteenth century with the first four of the twentieth. And in the case of company debentures and preference shares, the factor of earning power is material. If complete stability in income could be postulated, then in theory anything up to 100 per cent. of

company obligations might be of fixed-interest character. No company is ever in this position, but so long as there is a limit below which income is not likely to fall, even in the worst of times, there will always be investors willing to pay for *priority*. Some industries and some companies are notoriously liable to wider fluctuations than others, and this fact, rather than the amount of their fixed assets, should govern the extent of their fixed-interest commitments. A good engineer builds his bridges to withstand three to four times the maximum strain to which they are likely to be subject.

Insurance and Long-Term Investment.—Mr E. H. Lever's address to the Institute of Actuaries, discussed in the preceding note, was rounded off by the application of his conclusions to the question of long-dated life assurance liabilities. Mr Lever argued that, with negligible exceptions, non-profit assurances—which, being long-dated contracts of fixed amount, must in practice depend on some assumed future rate of interest—should no longer be issued. He further argued that with-profits rates should be based on mortality rates only. He would ignore interest, i.e. he would take rate "zero"; while expenses, in so far as they were not met from miscellaneous sources of surplus, would be paid out of interest receipts. No specific addition would be made to the premiums for future bonus. (It will be noted that the speaker did not anticipate that the interest element would vanish.) Premium rates so calculated are shown to be higher than present rates at the younger ages and longer endowment terms, where interest has most play—and conversely lower at the older ages and shorter terms. The elimination of interest (and expenses) means that single premiums under participating whole life and endowment assurances would be equal in amount to the sums assured provided by them; similarly the periodic cash surpluses allotted to these policies would purchase participating reversionary bonuses of equal amount, payable at the same time as the sum assured. The cash surpluses might, of course, be applied in other forms, for example, to purchase assurances of a temporary nature either of fixed or fluctuating amount, or in reduction of future premiums. So long, however, as the probability of the happening of the event upon which the payment of the converted cash surplus depends amounted to unity, the cash and converted amounts must be equal.

One result of the method would be that the participating rates of all offices would be the same, and Mr Lever declared: "... all companies ... would then vie with one another in economy of administration and skill in investment and compete on the profit-sharing side alone." But is this not rather a rosy picture? It would seem that the suggested method would offer at least as much scope to the imagination in regard to estimated future bonuses as is given at present; in reality, true comparisons might be made even more difficult with new methods of distributing surplus. The technical implications of Mr Lever's stimulating suggestions will doubtless attract detailed consideration from actuaries; for example, in such problems as the effect on actuarial reserves and the effective contribution to expenses of policies of different sums assured. It would seem improbable, however, that his ideas will be widely adopted in practice under conditions similar to those ruling in the past or present.

The President and Wall Street.—Wall Street, which nowadays waits on Washington, has during the past week received several crumbs of consolation from the high table. The President announced that he would assent to tax revision discussions when Congress was ready, but later it was stated that Congress would not be ready this session. The President's second contribution was far more substantial. His housing programme

ESTABLISHED 1884

THREE years before Queen Victoria celebrated her Jubilee, the Co-operative Permanent Building Society opened its doors in a small office at 31 Southampton Street off the Strand. In that year the books recorded total assets of £1,897.0.0.

During the intervening half century the Society has advanced more than £40,000,000 for house purchase, and has assisted more than 70,000 people to achieve the ideal of owning their houses. To-day the Society's headquarters are in a large modern building and its assets are £25,000,000.

There is another side to the Society's activities. It affords the public safety and profit for their Savings and Capital, and convenience for both investing and withdrawing. Investment Prospectus post free on request.

CO-OPERATIVE PERMANENT BUILDING SOCIETY

NEW OXFORD HOUSE, HART STREET,
LONDON, W.C.1

Managing Director: Arthur Webb, J.P., F.C.I.S.
Secretary: Charles Runcorn, F.L.A.A., F.C.I.S.

ASSETS: £25,000,000

500 Branches and Agencies

will give considerable Government aid to the building industry, but the responsibility for promoting building revival is laid squarely on private enterprise and labour. The effect may be substantial, but most certainly it will not be rapid. Further evidence of the President's inclination for judicious compromise was given by his recommendations of various cuts in Government grants for State expenditure on roads and similar public works, and his continued insistence upon the need to balance the Budget. There is apparently to be no revival of drastically unbalanced Budgets, and if Congress passes expensive measures for farm relief it must either provide the revenue or anticipate a veto. Mr Gay has replied, on behalf of the Stock Exchange, to Mr W. O. Douglas's recent charges, in a mild and conciliatory tone. And Mr Willie, President of Commonwealth and Southern, has published his proposals to the President's recent conference on Utilities, which suggest acceptance of the Government's standard of valuation on a prudent investment basis, modification of the "death sentence" clause of the Holding Company Act, and a compromise on the T.V.A.—the main point of the latter being that accounts should be on the same standard as those enforced on the private companies. The combined effect of these various developments has been to induce a little more confidence in the markets. There was a substantial rise in prices in anticipation of the President's housing message, and prices have since oscillated around slightly lower levels. A large volume of short covering is reported. Steel output seems to be near the bottom of its recession, and optimists are beginning to feel that a period of convalescence may be hoped for, which may last through the first quarter of next year.

Foreign Bond Movements.—November was a distressing month for the foreign bond market, which is threatened by default from Brazil and by the Sino-Japanese war. The effects are sadly revealed in the Municipal and General foreign bond index, which shows a fall of 13 per cent. from 98.5 to 85.5—the lowest level so far recorded. The South American index registers a 25 per cent. fall on the month—it has actually fallen 39 per cent. from February's "high"—but it still stands higher than in the period from August to October, 1935. Chinese Customs and Salt loans have fallen no more severely than Japanese issues and, as the Near and Far East index shows, the recent fall in the bonds must be accounted moderate for circumstances of war. The index figures are given below:—

Average January-June, 1934=100

End of Month	Europe	Near and Far East	Egypt	South and Central America			Complete Index	Unde-faulted Bonds	De-faulted Bonds
				States	Pro-vinces	Total

No alteration has been made between defaulted and unde-faulted bonds in respect of the threatened default on Brazilian issues, but with the reduction of the total number of issues to 109 by the Finnish Railway repayment, defaulted issues now exceed unde-faulted in number owing to the transfer of the Polish Stabilisation Loan from the latter category.

Company Notes

P. and O. Results.—The full accounts of Peninsular and Oriental Steam Navigation leave no doubt that the 4 per cent. dividend—disappointing as it was to the optimists who had bought the deferred stock up to 37s. 6d.—represented the limit of the company's financial achievement last year. And the payment was made after bringing non-trading revenue into account. The result shows how far the market had lost touch with the chairman's warnings twelve months ago. There will be some disappointment, however, over the fact that the parent company's net shipping income for voyages completed to last June has fallen from £1,284,923 to £1,115,837. The report points out that the recent improvement in liner freight rates is not fully reflected in earnings, but it would seem that rising costs are mainly responsible for the decline. Income from shipping subsidiaries totalled £413,612—an advance of £42,013—but while their earnings, in the aggregate, covered more than 5 per cent. depreciation provision, the amount set aside represented less than this rate. Total profits, excluding non-recurring items, fell from £2,114,420 to £1,975,695. The parent company's depreciation provision is maintained at £880,000 (plus £5,000 for tugs) and apart from a reduction of approximately £46,000 in loan and exchange charges, expense items are little changed. The profits of the past three years are analysed below:—

	Years ended September 30th		
	1935	1936	1937
Net voyage receipts to June...	1,054,862	1,284,923	1,115,837
Subsidiary shipping companies	288,629	371,599	413,612
Other investment income	305,183	318,112	298,277
Coaling, etc., and other income	151,651	139,788	147,969
Total profits	1,800,325	2,114,420	1,975,695
Depreciation	868,944†	885,000*	885,000
General expenses and interest	613,035	593,418	546,777
Debt interest	317,700	314,663	312,030
Preferred dividend	152,000	152,000	152,000
Deferred stock:—			
Earned	Dr. 151,354	169,339	79,888
Paid	Nil	183,701	183,701
Earned %	Nil	3.7	1.7
Paid %	Nil	4	4
Contingencies reserve	†	*	150,000
Special receipts	156,353	7,570	244,920
Carry forward	158,885	152,093	143,200

* Special reserve of £6,481,434 from asset realisation used thus: £300,000 to reserve account; £250,000 to writing down investments in subsidiaries; £5,931,434 to writing down fleet. † Also £450,000 transferred to depreciation from debenture redemption reserve.

Special receipts total £244,920, of which £74,920 represents income tax credits, and £150,000 of this total, in effect, is applied to "reserve for contingencies including reconditioning steamers." The chairman last year stated that a depreciation allowance of £880,000 would remain appropriate in the absence of a considerable increase in shipbuilding costs. Is the contingencies allocation an indirect method of supplementing the provision in a year when shipbuilding and repairing costs rose considerably?

Two features stand out in the balance sheet. The first is the conservative book valuation of the fleets, for substantially more than 5 per cent. depreciation quotas have been provided. Part of this £9½ million surplus, however, results from the special capital transfer of £6 millions last year. The second feature is the very large total of £15 millions of net liquid assets held by the group. But neither conservative asset valuation nor financial liquidity justifies stockholders in expecting the company to distribute handsome dividends from sources other than earnings. And on the operating side, costs can scarcely be significantly reduced this year. Indian and other freight rates are higher, though certain

Australian rates have fallen. The Far Eastern trade has been seriously affected by the Sino-Japanese war, though measures of co-operation in the passenger trade, it is hoped, will prove beneficial. At the present deflated price of 2rs. 6d., the £1 deferred stock units still yield no more than £3 14s. 6d. per cent. Clearly, they discount an appreciable increase in earnings, of which, it must be confessed, the present accounts reveal no sign.

Tube Investments Meeting.—Mr Arthur Chamberlain's speeches to Tube Investments stockholders invariably present a forceful and commonsense view. He has, in the past, invited his audience to consider the shortcomings of company accounts before asking their approval of their own balance sheet. Last year, he compared the advantages of "honest business" with armament work. On Wednesday he criticised the high prices demanded for industrial raw materials and the difficulties of obtaining supplies last year. The group increased its turnover by 25 per cent., and so, while it made moderate price adjustments in relation to rising labour and materials costs, the resulting profits were unexpectedly large. The increase in turnover enabled the group to spread its fixed—or, in Mr Chamberlain's descriptive word, "dead"—charges to unwonted advantage. But the chairman spared no criticism of certain suppliers of raw materials whose price policy, he declared, would bring retribution in its train. Consumers have long memories, and Mr Chamberlain's is one of the longest. He has a little list, and on it appear those suppliers who accepted too much business and then gave delivery only to those customers who paid the highest price. It also includes the new trade associations, who, he feels, have been more mindful of their new powers than of the virtues of moderation. The "iron and steel people," however, have pride of place among those who never would be missed. Mr Chamberlain, with effective irony, charges the Federation with bluff. He reads the announcement of stable prices for 1938 as a "desperate but futile attempt to maintain exorbitant prices a few months longer." In his view, it heralds an imminent drop in steel prices which, it was intended, might be postponed. For the Tube Investments group, the outlook seems favourable. Turnover in the first quarter of the current year exceeded the 1936-37 figure, but the later records achieved last year may not be repeated. But the company's dividend policy is explicit. The board decided in favour of a 23½ per cent. dividend rather than a scrip bonus distribution, and if profits fell as much as £250,000 this rate could be maintained. The stock has made a rapid recovery from last week's depressed level to 85s. 9d. and yields £5 11s. per cent.

Tate and Lyle Report.—The process of consolidation which this company has pursued in recent years is well illustrated by the full report. With total profits practically unchanged at £1,325,362 (the accounts confirm the net profit figure calculated in a Note on page 381 of *The Economist* of November 20th) it appears that considerable stability has already been achieved, and that in due course some extra contribution to profits may be made by the economies from amalgamation and co-operation. In some respects, the assets position shows greater movement and interest than earnings. In the past years substantial additions have been made to properties, amounting in 1936-37 to £202,943. The Caroni Sugar transaction, apparently, is now reflected in the accounts. The rise in investments in subsidiaries, from £34,989 to no less than £296,089, also presumably includes Tate and Lyle's share in the Waterloo Sugar Estates flotation last July. Each of these acquisitions involved some £52,000 as the purchase price of roughly half the ordinary shares, and it has since been announced that Waterloo and Caroni are to be amalgamated. But these investments in subsidiaries still remain much smaller than the holding in British Sugar Corporation, which forms the bulk of the £629,556 interest in Associated companies. The reported acquisition, through a

subsidiary, of the Jamaican sugar properties of United Fruit Company for £650,000 is not apparent in the balance sheet. Owing to these substantial increases in fixed assets and investments, coupled with a very large rise in stocks from £1,187,918 to £2,054,123, it is not surprising that cash has fallen from £2,444,628 to £943,102. Net liquid assets, at £2,022,000, are, however, only £338,000 lower. The company's new cane sugar developments are of interest to the long-term holder.

Turner and Newall Record.—The directors of Turner and Newall have satisfied conservative market opinion with a dividend distribution of 20 per cent. The preliminary profits statement shows that net trading profits, after providing for depreciation and taxes, have increased by £170,181 to a new record level of £1,333,489. The dividend, of course, is payable on an increased ordinary capital of £5,328,448, against £4,843,933 for 1935-36, and the profits statement shows that the rate of earnings on the increased capital has been fully maintained, after setting aside £40,000 in respect of the estimated N.D.C. liability for the half-year to September. This year, however, the general reserve allocation is halved, at £100,000, while the balance carried forward is increased by £16,701. The profits are analysed below:—

	Years to September 30th		
	1935	1936	1937
Net trading profits, after depreciation, directors' fees and income tax	780,625	1,163,308	1,333,489
Pensions fund	10,000	10,000	10,000
National Defence Contribution	...	...	40,000
Preference dividend	101,098	101,098	101,098
Ordinary shares:—			
Earned	669,527	1,052,210	1,182,391
Paid	605,492	847,689	1,065,690
Earned %	14.2	23.0	22.9
Paid %	12½	17½	20
General reserve	100,000	200,000*	100,000
Carried forward	94,548	99,069	115,770

* And £337,097 from share premiums.

For fuller information regarding the past year, stockholders must wait until the report is in their hands on Wednesday week. The results, however, are highly satisfactory. If the company has followed its normal practice, the profits disclosed above represent the full distribution of subsidiaries' profits (less losses), and thus show, in effect, the net consolidated earnings of the group, subject to any inner reserves which the subsidiaries may have made. The group's expansion continues. Only a month ago it was announced that a new factory is being established near Johannesburg, while two new factories are to be erected in India. It is developing a new industry in asbestos pipes, both home and overseas, and there is scarcely a trade which does not call, at

£1,300 instead of £1,000

UNDER The Distinctive System of The Scottish Provident Institution the premiums are so moderate that at the usual ages for assuring the yearly sum charged elsewhere for a Whole Life Insurance of £1,000 (with profits) will here secure from the first as much as £1,300 or thereby with right to share in the surplus. The additional £300 is equivalent to an immediate and certain bonus of £30 per cent., as large as can be looked for in other Offices only after many years.

FUNDS EXCEED £24,500,000

some point, for the products of the Turner and Newall group. The £1 stock units have lately improved to 84s. 4½d., and after allowance for the final dividend, they offer a yield of £5 1s. per cent. We propose to assess their prospects more fully on the publication of the report.

Further United Molasses Progress.—Stockholders of United Molasses have welcomed the excellent dividend of 21½ per cent., backed by an impressive preliminary earnings statement. Last year was highly profitable for the group, thanks rather to the shortage of tanker tonnage than to any material improvement in the molasses situation. Consolidated net profits of the group consequently jumped from £759,044 to £946,241, and, following the repayment of the debentures, the amount earned for the parent company's ordinary stock has increased by an even greater sum from £321,412 to £534,421. The dividend is covered by the earnings of no less than 36·7 per cent., and the large sum of £225,000 is set aside to general reserve. The following table compares the latest preliminary statement with the results for 1935 and 1936:—

	Years to September 30th	1935	1936	1937
Consolidated profits, after expenses and taxation	£	718,200	759,044	946,241
Depreciation	£	297,608	303,678	318,101
Debt interest	£	178,965	56,298	...
Staff funds	£	8,000	20,000	37,000
Preference dividends	£	58,125	57,656	56,719
United Molasses ordinary stock:—				
Earned	£	175,502	321,412	534,421
Paid	£	120,311	207,148	309,267
Earned %		11·7	21·7	36·7
Paid %		8	14	21½

General reserve*..... 80,000 110,000 225,000
Carried forward..... 45,216 49,480 49,634

* Share premiums and investment profits transferred to general reserve: 1935, £78,145; 1936, £122,643; 1937, £215,123.

Stockholders may regard the depreciation charge of £318,101 as very adequate. The tanker fleet, in fact, has an average age of 8½ years; it will be written down to scrap values, at the present rate of depreciation, in about five years, but the effective future life may be put at eleven years. Similar strength has been injected into the reserve position. In 1934, the company had only a credit balance carried forward of £70,000 to protect its equity. Recent provisions from revenue and large direct transfers have quickly raised a general reserve fund of £830,911, which compares with an issued ordinary capital of £1,940,500. The recent strengthening of the Gulf freight market suggests that the new year has opened well for the company. Certainly, it is in a much stronger financial position than only two years ago, and while the

molasses market promises more for the future than the present, the fact remains that the company is essentially a storage and transport company enjoying considerable prosperity at current freight levels. The 6s. 8d. stock units are quoted at 25s. 3d. to yield £5 12s. 3d. per cent.

Dorman Long Accounts.—The full accounts of Dorman Long, set out with comparative figures for the last two years, emphasise the conclusions suggested by the preliminary figures which were discussed in a note on page 381 of our issue of November 20th. The profits have increased satisfactorily: total gross profit is up from £1,128,916 to £1,396,701, and even after increased allocations for depreciation and taxation, 31·3 per cent. has been earned on the very highly-g geared preferred ordinary and 23·3 per cent. on the even more highly-g geared ordinary shares. The board, however, has been unable to recommend the payment of dividends of more than 18 per cent. and 10 per cent. respectively, and there is some evidence that this order of payment represents the peak which investors may regard as properly distributable. The equity indeed is very highly geared and the company operates in an industry which is itself highly geared in its vulnerability to cyclical fluctuations of trade. The board, therefore, rightly adopts a conservative dividend distribution policy. Actually, the board's sound financial policy since the reconstruction has greatly strengthened the company's ability to face any possible decline in demand. There is now a cash holding of £936,091, the bank debt has been entirely liquidated, and surplus liquid assets exceed current liabilities by £2,696,000. At the same time, however, the position of the junior shareholders, if there is any decline in the company's profitability, must be regarded as vulnerable.

Crompton Parkinson's Position.—The rate of progress achieved by this electrical manufacturing company between 1934 and 1936 has not been fully maintained. But a rise of 12 per cent. in total earnings to £432,114 for 1936-37 after providing an unstated amount for N.D.C. is commendable, particularly in a year of rising costs. The report declares that the maintenance of the ratio between profit and turnover was due rather to improved manufacturing methods than to price adjustments. The accounts do not distinguish the charges (such as tax and contingencies) upon gross profits, but the appropriation of earnings in recent years is shown below:—

	Years ended September 30th	1935	1936	1937
Profit	£	272,244	384,608	432,114
Depreciation	£	25,184	25,000	25,000
Benevolent fund and fees	£	13,250	10,250	8,250
Preference dividends	£	43,658	43,658	43,658

Ordinary and "A" Shares:—			
Earned	£	190,152	305,700
Paid	£	29,856	62,435
Earned %		99·8	76·4
Paid %		12½	76·9
Capital bonuses %		107	7

To reserve	£	154,377	224,963
From reserves, for bonuses	£	258,184	34,963
Carried forward	£	63,430	79,232*

* After debiting £2,500 capital increase expenses.

The company shows a remarkable increase in profits over so short a period as five years, but its distribution policy has proved somewhat complex. In the past four financial periods, the cash dividend has remained at 12½ per cent., but it has been accompanied by regular and by special capital bonuses. In 1932-33 a 5 per cent. capital bonus was declared, raised in subsequent years to 7 per cent. In addition a 100 per cent. bonus was declared in 1934-35, and there is to be an extra 33½ per cent. this year. The trend of profits broadly

justifies regular capital bonuses, and it is, of course, legitimate that the share capital should keep a reasonable relation with the physical expansion of the business. But there is nothing inherent in the electrical industry which indicates a geometric expansion of profits, and thus justifies a capital bonus policy in the long run. The market, which reckons scrip bonuses as greater prizes than cash, in turn robs the shares of attraction for the investor who requires income. At 47s. 6d. cum dividend and bonus (equal to 33s. 6d. ex all), the 5s. shares yield only £1 17s. 3d. per cent. On earnings, adjusted for the increased capital, the yield of £8 4s. per cent. is no more than adequate. The company's bonus policy has promoted a high degree of liquidity, and net liquid assets, at a record level of £1,112,858, are only £200,000 less than fixed assets and interests in subsidiaries.

Commercial Motor Results.—Though opposed in tendency, the A.E.C. and Dennis results are reasonably in accordance with the advantages and risks attaching to the respective businesses. Associated Equipment Company have followed up the remarkable progress made in 1935-36 by a 22 per cent. increase in total profits to the record figure of £435,952. The company enjoys a ten-year contract, dating from December, 1933, with London Transport for the supply of a large proportion of the Board's requirements for chassis and repair parts. But there is no question of exclusive rights and the agreement is a factor making for stability and not necessarily for progressive profits, which depend on outside sales. Meanwhile the company's record in recent years has been very satisfactory. Particulars of recent profits are given in the following table, together with Dennis Brothers' result:—

	A.E.C.			Dennis Bros.		
Years to September 30th	1935	1936	1937	1935	1936	1937
Total profits	£	209,535	355,180	435,952	137,918	151,714
Depreciation	£	48,074	59,578	104,368	14,119	13,501
Taxation	£	30,000	60,000	120,000	...	...

Earned %		11·1	19·5	18·7	158·9	180·6
Paid %		8½	9½	10	150*	166½
Reserve	£	25,000†	85,000	100,000	115,815	123,796
Carry forward	£	244,432	255,000	260,000‡	115,815	123,796

† Also £15,000 to reserve against a loan on mortgage. ‡ After bringing in £8,016 balance of this reserve not required. * Also special dividend of 50 per cent. (taking £37,562) from surplus on White and Poppe realisation.

Despite the large increase in total profits, A.E.C. net earnings are some £13,500 lower, owing to the doubling of provision for tax, and a generous allowance for depreciation. In our table earnings and distributions are expressed on a gross basis, but the tax-free dividend of 7½ per cent. is, of course, unchanged.

The Dennis dividend had largely prepared the market for the disappointing drop in profits, but the latest figure of £117,006 had a poor reception. This company has encountered difficulty owing to the tendency for the field of competition to narrow. In the heavy vehicles trade a handful of makers compete vigorously to obtain business in a market affected by differential speed-limit restrictions. At last year's meeting Sir Raymond Dennis pointed out that closer attention was being paid to vehicles weighing under 2½ tons and thus enjoying a higher speed limit, but there are established makers in this range also. A.E.C. £1 units at 37s. 6d. yield £5 6s. 9d. per cent., and Dennis Brothers' rs. shares at 21s. 7½d. only 1s. 3d. per cent. more. The relatively low yield on the Dennis shares must be attributed largely to the balance sheet position. General reserve has stood for many years at £650,000, against total assets of £1,059,336, and, together with the carry-forward, is equal to 10½ times the share capital.

Other Company Results.—This week our usual analysis of profit and loss accounts, appearing on page 506, includes some 50 further companies, in which brewery concerns are predominant. The results are discussed on page 495, under the heading "Shorter Company Comments."

Company Meetings of the Week.—Reports of company meetings begin on page 496 of this issue. Mr Arthur Chamberlain's comments at the *Tube Investments* meeting are discussed in a note on page 487. Mr A. Woolley-Hart declared to shareholders of *Glass Houghton and Castleford Collieries* that the new Coal Mines Bill would not bring appreciable benefit to the industry. Nor was he optimistic about the effects of amalgamating large concerns. At the meeting of *Wankie Colliery Company*, Sir Edmund Davis refuted the notion that the company's prosperity could be endangered by the development of an outside property in Southern Rhodesia. Mr G. H. Harrison, at the *Central Uruguay Railway* meeting, distinguished two main factors working against recovery—competition from road transport and the continued depreciation of the peso. Mr John A. Agnew, at the *New Goldfields of Venezuela* meeting, referred to Mr C. O. Lindberg's report that the physical condition of the mines and equipment were in better shape than ever before. The excellent prospects of *Gold Coast Main Reef*, based on substantial ore reserves, were described by Lord Dorchester. Mr A. Chester Beatty declared at the *Trepca Mines* meeting that the long-range outlook for both lead and zinc was fundamentally healthy. Mr John Agnew, in addressing *Consolidated Goldfields of South Africa* members, discussed the deterrent effect of mining taxation burdens upon the raising of capital to develop new mines, and referred to the proved existence of the main reef at Venterspost.

BREWERY UNIT TRUST

Trustees:

MIDLAND BANK EXECUTOR & TRUSTEE CO., LTD.

● Brewery Units make it possible for the first time for both small and large investors to acquire a well-spread interest in brewery undertakings.

● Brewery dividends are more consistent over periods of years than those of almost any other industry and rank among the safest shares in the industrial market.

● The fact that Brewery and Distillery Shares are tightly held and in many cases difficult to obtain, makes the facilities offered by the Brewery Unit Trust of real value to the private investor.

● The Brewery Unit Trust has been formed in consonance with the Board of Trade Report on Unit Trusts.

● Price of Brewery Units 16/9d., as at 2/12/37. Estimated yield at this price based on cash dividends alone is 4½%.

● Comprehensive booklet about the Brewery Unit Trust which forms the basis of all transactions, is obtainable from any Bank or Stockbroker, or direct from the Managers.

RATTRAY'S 7 RESERVE

A GIFT OF DISTINCTION

For the "friend who smokes a pipe" there can be no more subtle or pleasing gift than Rattray's 7 Reserve Tobacco. 7 Reserve owes its special charm to the fact that it is a cunning blend of seven carefully selected tobaccos, hand-prepared and time-matured. No single flavour predominates, and even the constant smoker's palate is never dulled.

Price: 21/4 per lb., post paid.
Send 5/4 for sample ½ lb. tin, post free.
Export, 24/- per 2 lbs., plus postage.

Chas. Rattray
PERTH SCOTLAND

Rattray's 3 Noggins is the full and generous strength of 7 Reserve.

THE WEEK IN THE MARKETS THE STOCK EXCHANGE

SETTLING DAYS

TICKET: DECEMBER 14 ACCOUNT: DECEMBER 16

UNTIL the middle of the week, security prices continued their recent advance, though the explanations given were not always easy to reconcile. Some observers detected further covering by the professional bear; others were convinced that the recovery sprang from solid investment support of an institutional character. Perhaps the formation of three new investment trusts this week linked with the second view. And perhaps the accumulation of straws blown by the industrial wind contributed to the mid-week hesitancy. The trade reports, indeed, provide some signs of a check to demand which it would be idle to ignore. Politics, however, have been self-cancelling. The success of the Chautemps talks helped the investment sections, but the Far Eastern news—particularly the reported threat to Hong Kong—was regarded with some seriousness.

Gilt-edged opened with a fresh advance. Although Old Consols and Local Loans closed unchanged on Monday, undated stocks were generally well supported, while a further rise was registered by National Defence Bonds. The improvement was well maintained on Tuesday, but checked at the close on Wednesday. Losses of $\frac{1}{4}$ were common on Thursday. In the Dominion market, the Australian scrip opened at an appreciable discount, underwriters being left with 67 per cent. of the total, and little interest was taken in the loan.

The Chinese list showed a sharp recovery on Monday, on the representations of the Powers regarding interference with the Customs collections, but the advance was too rapid to be fully held. We examine the general features of the Customs position in a leading article on page 483. Japanese bonds recovered in mid-week, but further selling of Brazilian issues was pressed on an unwilling market. The improved international situation was of help to German issues.

Home rails opened with considerable dash, but support was curtailed, particularly after a set of rather unimpressive traffics. In the Argentine section, conditions were quiet but firm, with interest mainly concentrated upon Cordoba first debentures, following the meeting.

For the first half of the week, industrials were more satisfactory than for some time past, widespread if modest gains being recorded. After a cheerful start, activity fell, but on the whole earlier advances were held though not usually improved upon. On Monday the Dorman Long accounts helped the iron and steel section, and rises were fairly general. One of the chief centres of attention was Tube Investments, before and after the meeting. Stewarts and Lloyds, however, inclined to weakness. Coal shares were a steady but quiet market, with William Cory in modest demand. Among electrical equipment shares, Crompton Parkinson rallied somewhat from the initial setback following the report, but other shares in the section showed no uniform tendency. Motor shares were satisfactory, with support for Leyland Motors in evidence. Textiles continued to make a mixed and undecided showing, but steadied in mid-week.

Brewery shares were helped at first by some demand from the provinces, on the publication of several good reports, but after profit-taking, an irregular tendency set in. On Monday, tobacco issues were well supported, especially Carreras, but an easier tendency followed. Stores were firm under the lead of Woolworth. Towards mid-week Tate and Lyle rose on the issue of the full report, and there was some demand for Unilever. The miscellaneous group followed the general trend. I.C.I. improved, and there was some quiet support for Turner and Newall in anticipation of the dividend. In the shipping group, the centre of interest was the start of dealings in Union

Castle ordinary stock units and the quotation of the Realisation shares ex rights. P. and O. deferred reacted further on consideration of the results.

Oil shares started the new account in promising fashion, following a general advance in American oil shares over the week-end. The decline in the latter resulted in dullness on Tuesday morning, but purchases of the leading favourites by Amsterdam and Paris brought a distinct turn for the better. Anglo-Ecuadorian shares improved on the surprise dividend. On Wednesday higher prices for American oil stocks and an appreciable decline in U.S. production assisted the market, and a fair local demand was supplemented by buying from Paris and Amsterdam.

Business in rubber shares was quiet on Monday before the quota decision, but the hopeful undertone contrasted strikingly with the recent depressed sentiment. Shares responded strongly to Tuesday's announcement of a 20 per cent. cut in the export quota for the first quarter next year, and brisk business was reported. Wednesday's reaction was only moderate, and business was still reported as satisfactory. The increased tea quota had a considerably less favourable reception. Little business was done on Tuesday, but prices where changed, were lower and support was absent.

The mining market staged no spectacular advances, but the tone was considerably brighter than of late. Some quiet investment buying of dividend-paying and finance Kaffirs was neither big in volume nor long-lived, but it served to stimulate professional interest. The cheerful tendency was helped by Cape support and rumours—however improbable—of a reduction in South African mining taxation. Anglo-American Corporation rose on news of the share deal which renewed, under the lead of Rhokana. West Africans were a more active and cheerful market than of late, and there was a marked revival of interest in Australians early in the week.

"FINANCIAL NEWS" MARKET INDICATORS

	Nov. 25	Nov. 26	Nov. 29	Nov. 30	Dec. 1	Dec. 2
Approximate total of bar-gains recorded in S.E. List	8,865	8,535	10,590	8,220	7,790	7,180

Lowest 1936: Ordinary Shares 107.4 (Jan. 2); Fixed Interest 136.2 (Sept. 23).
Highest 1937: Ordinary Shares 124.8 (Jan. 4); Fixed Interest 136.6 (Jan. 4).
Lowest 1937: Ordinary Shares 93.1 (Nov. 22); Fixed Interest 128.0 (Sept. 8).

ACTUARIES' INVESTMENT INDEX

THE Actuaries' Index of 177 industrial ordinary share prices was calculated at 73.6 on Tuesday last, compared with 77.5 a month ago and 91.2 a year ago. The majority of the component indices have recovered from last week's low levels, but the recovery shows no signs of restoring the levels of a month ago. The average yield on the 177 shares is 4.95 per cent. this week, 4.69 per cent. a month ago, and 3.57 per cent. a year ago. The usual monthly selection of fixed interest securities shows that industrial debentures have scarcely benefited from the recovery in gilt-edged, while preference shares are slightly, but not significantly, lower on the month. Selections from the fixed-interest and equity groups follows:—

Group (and No. of Securities)	Prices (Dec. 31, 1928=100)			Yield (%)		
	Year ago (Nov. 24, 1936)	Month ago (Oct. 28, 1937)	This week (Nov. 30, 1937)	Year ago (Nov. 24, 1936)	Month ago (Oct. 28, 1937)	This week (Nov. 30, 1937)
Fixed interest:—						
2½% Consols (1)	150.1	131.7	133.6	2.97	3.39	3.34
Misc. industrial deb. (20)	126.1	121.0	121.2	3.91	4.10	4.10

OVERSEAS STOCK EXCHANGES NEW YORK

MARKETS closed last week at the top of a sharp rise which carried the Dow Jones industrial index up by 10 points on and cranberry sauce proved more digestible than Washington despite the President's message on housing, prices gave way a few points, but this was a measure less of disappointment

with the substance of the message than of the extent to which it had already been anticipated. However satisfactory the housing message, it could hardly be expected to promote any rapid and long-extended recovery. The railroads group withstood the general decline, on the friendliness of the I.C.C. to the railroads, evinced at the opening of the rate hearing. On Tuesday prices recovered most of the ground lost since Saturday, with metal, building material and railroad issues in the lead. Rails reacted slightly later, and utilities were unmoved. In mid-week turnover was the smallest for many weeks, and prices oscillated downward. Oils were firm, but utilities sagged, despite the desire for peace with the Government shown by the published proposals of Mr Willkie to the President's utility conference. *Iron Age* estimates steel mill activity for the current week at 30 per cent. of capacity, against 33 per cent. for last week, and anticipates an upward movement in January although of less than seasonal proportions. Speculative bonds followed the market trend, with some irregularity; Government issues were firm, but quiet.

PARIS

LACK of public support has been responsible for slack business in Paris as elsewhere. Although conditions proved dull and heavy during the month the net decline in prices was not serious, Rentes in fact showing noticeable improvement. The fall in commodity prices, sales from Amsterdam and London, and the Brazilian default, all exerted a depressing influence, but the month ended on an optimistic note, in anticipation of the London talks. The market, however, greeted with comparative indifference such events as the reduction in bank rate, the increase in the Bank of France's gold reserves and the vote of confidence in the Chautemps Government. Internationals were irregular, but more prominent than of late owing to the improvement in the franc and to Amsterdam sales.

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields of fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum. div." shares.

reported early in the month. In general, most interest was shown in loan-stock issues, which were alternately bought and sold on varying surmises regarding the impending new law. The three potash companies of the Salzdetfurth group also gained considerably on the month. Most standard industrials were lower. Mortgage banks were favoured, and the two German overseas banks rose, but commercial banks were dull, while Reichsbank moved with other loan stocks. Shipping shares reacted. Late in the month colonial issues were bought and prices rose, but share quotations generally were weak. Home fixed interest securities were firm, but speculative dealing was confined to "New-Owned" public loans (acquired after June, 1920), regulation of which is expected. Late in the month the German (reichsmark) section of the Young Loan advanced, and closed at 105.50.

AMSTERDAM

DESPITE occasional good sessions, November was an unsatisfactory month, with sagging prices and a low level of activity. In the first ten days falling commodity prices depressed the market, one of the weaker stocks being Royal Dutch. A slight improvement towards mid-month was checked by the Brazilian default, but although business was quiet, the tone was slightly firmer. In spite of occasional rallies, the market situation deteriorated in the latter part of November, and stocks touched new low records. A feature last week was the weakness in domestic issues, independent of fluctuations in American securities.

CANADA

AFTER eleven days of continuous selling the slump in Canadian stocks was checked about mid-October, and prices rebounded sharply. Subsequently markets were hesitant, and any advances were almost invariably followed by setbacks. Trading continued light. Borrowing on collateral by members of the Toronto Stock Exchange totalled \$28.4 millions for September, a decline of \$18.4 millions from January's high figure. The second week saw a sharp slump in Brazilian Traction, which is a Canadian corporation, as the result of the Brazilian coup. Dull but fairly firm mid-month dealings were followed by a marked fall under the lead of base metals, though they led a recovery at the close. Gold stocks provided some resistance, and were among the few satisfactory features of the market. The markets are still apprehensive concerning the winter business outlook in the United States, and newspaper issues, in particular, have been affected for this reason. Bonds remain firm, helped by the success of the new Dominion conversion loan. The Bureau's "Investors" Index for common stocks which stood at 103.1 on October 15th rose to 109.0 on October 29th, but on November 4th had reacted to 106.2. The index for Dominion bonds was 114.3 for the week ending November 4th, 2.9 points below the corresponding week of 1936.

CAPITAL ISSUES

THE new issue market this week has been actively discussing the shape of things to come, particularly on the investment trust front. It is reported that no fewer than three investment trust formations are in an advanced stage of preparation. The largest, *New Mercantile Investment Trust*, will have a capital of £1,000,000 4 per cent. debentures and £2,000,000 Sir Miles Mattinson (chairman of Mercantile and General Trust) and four other members, of whom two are also associated with the Mercantile group. It is proposed to offer debentures, dated 1958-68, at par, with instalments spread over nine months, while only 10s. is to be called on the ordinary capital at first. The second new trust is ordinary shares, and will be managed by Helbert, Wagg and Company. It is not proposed for the present to make a market in these shares, which will be held principally by insurance companies and other investment interests. The smallest of the three—*Perham Trust*—is to issue £500,000 of new capital, and appears under the auspices of Messrs M. Samuel and Company. Scotland has monopolised this week's public issues. The *Paisley* loan, issued on Thursday, followed the familiar lines, in interest, price and date. The burgh is of good standing in the London market. *Clyde Crane and Booth* is an amalgamation of two crane-making specialists, which acquires net assets of £182,369 for £144,520. The company, it appears, will begin life with a substantial surplus of assets over its issued capital. The amalgamation is expected to produce two branches as far removed as Leeds and Glasgow. A spectacular increase in joint profits over recent years is considerable advance is anticipated for the first financial year. The 6 per cent. redeemable £1 preference shares, issued at par, will not enjoy a wide market, though they will have the benefit of a sinking fund from profits, while the 4s. ordinary shares, (subject to N.D.C.) earnings basis on the issue price. Both must be ranked in a speculative category. Statements for *International Trust* and *Thompson Brothers (Bilston)*, Ltd.

Paisley Corporation.—Issues of £1,000,000 3½ per cent. stock at 101. A trustee stock. Redeemable at par January, 1960, or from 1958 on notice. Ranks with existing and future debt. Estimated population, 90,500; rateable value, £646,000; rates, 10s. plus water rate. Net debt, £3,535,565 (of which £2,696,286 productive). Total liabilities, £4,203,257, and assets £5,804,605.

Clyde Crane and Booth, Ltd.—Issue of 90,000 6 per cent. cum. redeemable £1 preference shares at par and 340,900 4s. ordinary shares at 5s. 6d. Preference shares redeemable from 1938 by purchase at or under 21s. 6d., or from 1947 at 22s. on notice. Combines two crane-making businesses. Combined profits before depreciation, interest and managing directors' remuneration: 1934-35, £11,370; 1935-36, £26,490; 1936-37, £35,367. Net assets, £182,369, purchased for £144,520 (by 109,100 ordinary shares, and discharge of £122,700 special bank loans.)

BY STOCK EXCHANGE INTRODUCTION

English and International Trust, Ltd.—Particulars relating to £100,000 4 per cent. debenture stock secured by first floating charge and of which £50,000 issued. Redeemable at par October, 1972, or from 1967 on notice. Further stock ranking *pari passu* cannot be issued beyond one half of issued share capital without extraordinary resolution of debenture holders. £50,000 has been taken at 99 in cash.

Thompson Brothers (Bilston), Ltd.—Issued capital £89,606 ordinary stock and 10,394 6 per cent. tax free cumulative £1 preference shares. General engineering business, founded 1810. Profits, after depreciation, years to July 31st: 1935, £16,551; 1936, £16,748; 1937, £28,615. Total assets, £162,023. Achilles Trust subscribed to 179,212 5s. ordinary shares at 8s. 4½d., or 8s. 7½d. including expenses.

PRIVATE PLACINGS

Anglo-American Corporation of South Africa.—It has been decided to accept an application from the British South Africa Company (80 per cent.) and Messrs. E. Oppenheimer and Son Company (20 per cent.) for 700,000 6 per cent. cumulative 10s. preferred shares (20 per cent.) for 700,000 6 per cent. cumulative 10s. preferred shares and 300,000 10s. ordinary shares of the corporation for a total cash consideration of £1,250,000. In accepting this offer the board was influenced by the present favourable opportunities for investment and by their desire to maintain the Corporation's very strong financial position.

Transport Services.—This company has placed privately 38,000 6 per cent. redeemable cumulative £1 preference shares and 114,000 5s. ordinary shares. The proceeds are for the purchase of fresh interests. Further shares are to be placed in the next few days.

BONUS SHARES

Morrisons (Gowns).—Distribution to deferred shareholders of nine £1 deferred shares (ranking from January 1st) for each deferred share held on December 8th, in capitalisation of £9,000 placed from 1936 profits to dividend reserve account.

Atlas Steel Foundry.—This company is increasing its capital to £56,250 by issuing 18,750 £1 bonus shares, in proportion of one bonus share for two shares now held.

Crompton Parkinson, Ltd.—A special bonus distribution will be made from capital reserve of one new "A" ordinary share of 5s. for three ordinary and/or "A" ordinary shares held.

Handley Page, Ltd.—The capitalisation of £124,465 from certain reserves is recommended, for the issue to existing ordinary stockholders of a capital bonus of one 5s. unit for every 5s. unit held.

ISSUES TO SHAREHOLDERS ONLY

Second Alliance Trust Company.—It is proposed to increase the capital from £1,050,000 to £1,500,000 by creating 450,000 £1 shares. The directors intend to issue part of the new capital; the shares will be offered to ordinary stockholders on terms to be announced later. Meeting, December 10th.

RESULTS OF ISSUES

Australia 3½ per cent. Registered Stock, 1951-54.—It is understood that underwriters will have to take up about 70 per cent. of the issue of £11,409,965.

Earls Court.—It is understood that underwriters will have to take up 86 per cent. of the recent offer of £300,000 in 5 per cent. debenture stock.

SHORTER COMPANY COMMENTS

COMPANY RESULTS OF THE WEEK.—For the most part the 14 brewery and distillery results published this week show a satisfactory rate of improvement. Higher sales have yielded BENSKINS WATFORD BREWERY an increase in gross profit of £18,100, net earnings of £266,100 being some £7,500 greater. The BIRKENHEAD BREWERY dividend is raised from 10 to 11 per cent., and £20,000 is provided for renewals and alterations. BRICKWOOD AND COMPANY profits of £184,119 compare with £170,393. The chairman's speech, included in the excellently presented report, refers to the large expansion in bottled beer requirements. CHELTENHAM ORIGINAL BREWERY net earnings are £2,500 higher at £91,866, generous provisions being made for improvements and for writing down plant. The ROBERT DEUCHAR dividend remains at 20 per cent. tax free, though net profits have risen by £11,000 to £71,306. PHIPPS AND COMPANY earnings have increased from £158,015 to £161,866; a new insurance reserve is being created. One of the more notable improvements is that of PETER WALKER AND SON, WARRINGTON AND BURTON, who have earned £520,136 against £459,871. Another company to increase its dividend by 1 per cent. is WOLVERHAMPTON AND DUDLEY BREWERIES, whose latest distribution is 16 per cent., out of net profits of £259,051. MERCANTILE CREDIT, the hire-purchase finance company, have earned £3,700 more at £50,843, and are paying 15 per cent. against 12½ per cent. TOBACCO SECURITIES TRUST are paying 16 per cent. on the ordinary shares, and deferred dividends are consequently resumed at the rate of 4-5 1/4 per cent.; net profits amount to £575,884 against £537,832. Satisfactory progress has been revealed in recent heavy industry and engineering company reports. ATLAS STEEL FOUNDRY have earned 50 per cent. more at £33,347, and the dividend is now doubled at 30 per cent. MITCHELL SHACKLETON AND COMPANY net profits of £31,062 for 1936-37 compare with £12,117 for nine months; output has benefited from the forge extension. The first report of DUNSWART IRON AND STEEL WORKS, the South African company, since its introduction to the public, shows net profits of £35,014. The second report of H. M. HOBSON (AIRCRAFT AND MOTOR) COMPONENTS shows that the year's net profits amount to £67,856, against £23,770 for the initial 15-month period. C.T.C. BAZAARS (SOUTH AFRICA) net profits have declined by over £10,000 to £26,804: the unusual method has been followed of taking share premiums (£80,973) into the Appropriation Account, so that the carry-forward becomes £104,312. HARRODS (BUENOS AIRES) have resumed dividends with a 1½ per cent. payment: profits of £282,725 are more than double those for 1935-36, while SOUTH AMERICAN STORES, having earned £188,504 against £122,892, have paid six years' preference dividend to the parent company. BRITISH TYRE AND RUBBER maintain their 10 per cent. dividend, after earning £12,000 more at £135,186 and have reduced goodwill to £62,500. BROOM AND WADE have earned 41 per cent. more at £49,982, and have doubled their allocation for depreciation. The CRITALL MANUFACTURING dividend is raised from 20 to 25 per cent. by an increase in net profits from £223,732 to £249,745.

MISCELLANEOUS

GLASS HOUGHTON AND CASTLEFORD COLLIERIES.—Report for year ended September 30, 1937, shows profits, including dividends, £123,192 against £85,886; depreciation, £20,000 (as before); debenture interest, £15,637. Final dividend of 7½ per cent., making 12½ per cent., against 7½ per cent. General reserve, £20,000 (against nil). Carry-forward, £4,518 (against £4,502).

CABLES AND WIRELESS, LTD.—This company announces the opening of a new Overseas Telegraph Office in Thames House, Millbank, S.W.1.

LIMITED INVESTMENT FUND.—Distribution for half-year to November 26, 1937 (on coupon 4, due January 15th) is 4-40d. per unit tax free, or £4 17s. 9d. per annum on initial price (against rate of £4 9s. on coupon 3). Fourth progress report shows that current gross yield on fund is 4½ per cent. on initial price of £1; at last report it was 4½ per cent. The report shows percentage composition of the fund.

HARRODS (BUENOS AIRES).—Profits for year to August 31, 1937, were £227,715, an increase of £66,563. Available balance of £16,198 increased to £30,114 by transfer of £13,916 from ordinary shareholders' dividend liquidation account, ordinary dividend, 1½ per cent., against nil. Sales expanded during year by over 15 per cent.

RICHARD THOMAS AND COMPANY.—It is announced that this company has secured a large order for the tinplate requirements of an important Canadian consumer for delivery during 1938. It is expected that the 1938 requirements of this consumer will amount to 1,500,000 boxes, or about 70,000 tons.

GRIFFITHS HUGHES PROPRIETARIES.—The directors have decided to end financial year on March 31, 1938, instead of June 30th, to coincide with financial year of the operating company. This will in no way affect profit of holding company. Interim dividend of 2½ per cent. actual on ordinary for period to March 31, 1938. Interim of 5 per cent. was paid on account of year to June 30, 1937.

Messrs W. D. and H. O. Wills are offering, for the Christmas trade, oak cabinets containing "Gold Flake Special" or "Capstan" Special cigarettes on the same lines as in earlier years. The retail price of oak cabinets containing 50 cigarettes is 3s. 10d., 100 cigarettes 6s. 6d., and 150 cigarettes 9s. 6d. Tins, enclosed in Christmas cartons without extra charge, are also obtainable.

COMPANY MEETINGS

TUBE INVESTMENTS LIMITED

LARGE INCREASE IN TURNOVER

MR ARTHUR CHAMBERLAIN ON RAW MATERIAL POSITION

The eighteenth ordinary general meeting of Tube Investments, Limited, was held at the Queen's Hotel, Birmingham, on the 1st instant. Mr Arthur Chamberlain (chairman) presided.

In moving the adoption of the report and balance sheet, the Chairman said that in 1937 their turnover, incredible as it might seem, increased by no less than 25 per cent. over that of 1936. During the year there was hardly a corner in any of the company's factories that was not operating to capacity, and this unexpected increase in output from existing plant by the spread of dead charges over a larger turnover led to an unexpectedly larger profit and a higher rate of profit. When the final figures were available they found to their surprise that 1937 constituted a record that would take a lot of beating. He said "to their surprise" because they had raised their prices very much less than the increase in labour and materials, on the face of it, made imperative. Encouraged by this reward of virtue they would continue their policy of taking no advantage of this being a sellers' market, but would continue to ask from their customers not what they could get, but something less than the ruling prices for labour and material justified, confident that when, in the course of time, conditions changed and buyers came into their own the company's present moderation would stand them in good stead.

INCREASES IN COST OF PRODUCTION

The three months of the financial year already passed recorded a continuance of the increase in turnover over the corresponding period of 1937. This increase was extremely unlikely to continue at the same rate, as they came into comparison with the later and larger months of 1937, and it was even likely that the figures of the latter months of 1937 might not be reached. On the other hand, they could forecast with horrible certainty the increase in prices of labour and raw material and the rise in the cost of social services, such as holidays with pay. We did not grudge the increases in pay nor the holidays with pay. Some of the increases in raw material prices were extortionate and would bring their own retribution in their trail. They would unduly inflate the cost of manufacture and thus check consumption, causing loss of employment and profits generally in the country. Individually the chief sinners would not be forgotten and when times changed they would be sorry indeed to find how many people had long memories. Protection and direct Government encouragement had latterly been responsible for very many trade associations being formed or tightened up and, from their actions, some, he regretted to say, seemed unable to exercise their new power with that moderation that was desirable if stability and continuity were a sought-for achievement. Unless the Government were unusually watchful and firm—and so far they showed no signs of being so—this co-ordination of manufacturers that, in his opinion, the Government had rightly encouraged and aided would rapidly grow into a strangling grip on costs of production and so on home and foreign trade alike.

THE DIFFICULTY IN OBTAINING RAW MATERIAL

The year 1937 would go down in their recollection as a year of difficulty in getting raw material. Right through the year there had not been a week when one or other of their works was not threatened with stoppage for want of material. Sometimes suppliers had accepted more orders than they could execute; sometimes they, in turn, could not get their raw material; and sometimes, he regretted to say, suppliers took advantage of the famine and withheld deliveries from those who had placed their orders before the general rise in price and mysteriously found themselves able only to deliver to those who were paying the highest price. The difficulties attendant on securing regular supplies of raw material were, he thought, now becoming less troublesome. The recent announcement of the iron and steel people that present prices would hold good until the end of 1938 was an indication of this. "We are informed," Mr Chamberlain went on, "that this is a public-spirited action, taken in the face of great uncertainty as to the cost of their raw material, to give confidence and stability to all users of steel and iron, and so to endeavour to put a check on that recession in trade activity that we are told is already operative in the United States, and with which we also are threatened during the next twelve months. It

may be, and if so it is an action both wise and worthy of our admiration. It would have been wiser, more certain of achieving, its announced aim, and more worthy of our admiration if they had announced an immediate reduction in price. Personally I read the omen differently. I think that they have begun to realise that the recession in trade with which some people think we are threatened, and of which some of us think we already feel the beginning, is in part caused by the prohibitive cost to industry of their goods, and that this is a desperate but, in my opinion, futile attempt to maintain their exorbitant prices yet a few months longer. I hail the announcement as heralding an imminent drop in steel prices which they fondly hope to postpone by a show of trade solidarity that they really fear will not stand up against the hard facts of supply and demand."

BASIS OF COMPANY'S STABILITY

The year 1937 was another of those in which he was able to report that everyone of their companies made a profit. When the company was formed eighteen years ago and consisted of Tubes, Limited, and Accles and Pollock, with their two subsidiaries, Simplex and Credenda, they gave employment to 2,934 people and did a trade of one and a half millions per annum, whereas to-day they gave employment to some 16,000 people and turned out some ten million pounds' worth of manufactures. The stability of the company was now built on four main foundations: (1) The original plain tube businesses; (2) the group that owes its existence to manipulation to a greater or lesser degree of the plain tube and which, starting with perhaps bending the tube, as in a cycle handle bar, extends in complexity of machinery and manipulation to cover such varied articles as motor-car axles, gas containers, golf shafts, steel furniture, road equipment and a host of other articles; (3) the cycle fittings group, responsible for such things as brakes, handle bars, hubs, lugs, cranks, chain wheel and pedals; (4) the electrical group engaged in the manufacture and sale of the lighter articles of electrical equipment, such as fires, cookers, water heaters, irons, conduit, switches, cable, etc. Two years ago he reported ominous indications that their cycle fittings trade had seen its best days, but the clouds had dispersed and last year the turnover showed a remarkable expansion. The last few years had witnessed an ever-increasing use of tube in some form or other in industry, and the introduction of stainless steel, the various hard steel alloys, and lately aluminium alloys, had vastly increased the field in which tube as a basis was found to be the most suitable material. Reynolds had now a mill for producing aluminium and aluminium alloy tubes and sections by the extrusion process that exceeded in importance its old and still flourishing steel tube business, famed, amongst other products, for the celebrated Reynolds butted tubes. A further expansion of Reynolds' activities had been the successful opening, in conjunction with High Duty Alloys, Limited, as fellow shareholders, of a large and very complete rolling mill for aluminium alloy sheets. In fact, now taking its place in the first half-dozen. The manufacture of steel sections, too, was now a flourishing subsidiary of Accles and Pollock.

BOARD'S DIVIDEND POLICY

Concluding, the Chairman said that the financial position was such that merely to retain their dividend at last year's rate would be, in his opinion, to exercise an undue determination to look after somebody else's money instead of leaving them to do it themselves. The choice seemed to lie between increasing the dividend or capitalising and distributing as bonus shares some of their £1,200,000 undivided profits. They thought it wiser to increase the dividend rate to a total of 23½ per cent., and they fixed on that rate because, without any idea of a guarantee, they saw no reason why, even with a diminution of a quarter of a million in their annual profits, they should not be able to maintain it. They saw no reason to assume that English trade was going to suffer a setback larger than would account for a fall of about that amount. (Applause.)

Mr J. Herbert Aston seconded the resolution, which was adopted unanimously.

GLASS HOUGHTON AND CASTLEFORD COLLIERIES LIMITED

DIVIDEND OF 12½ PER CENT.

The annual general meeting of the members of Glass Houghton and Castleford Collieries Limited, was held on the 29th ultimo, in London.

Mr A. Woolley-Hart, the chairman, in the course of his remarks, said:—On this occasion it is with great pleasure your directors meet you with a satisfactory report representing what should be a normal year. During the year we have had to meet a large increase in wages and cost of materials. Therefore we have not benefited much from the increased price obtained, particularly as, like all other collieries, we had contracts running at lower prices, which have now been replaced by contracts at the higher prices ruling. Those prices, however, do not reflect the high level of increase which consumers and many others seem to believe prevail. As against this there has again been a considerable increase of wages, starting from September 1st last, and a further large increase in the cost of all materials, particularly timber, the whole of which increase we estimate, so far as we can tell, is likely to come to a total of 1s. 3d. to 1s. 6d. per ton in the current year.

The development of the new area is proceeding as rapidly as possible. We still have a fault to prove before we arrive in the main body of the area. We hope then to get into a settled area and that the various seams will prove satisfactory.

As to the results to be obtained during the current year, one quarter of which has already passed, the prospects of a satisfactory year are distinctly good. The coke industry is holding its own, and, I think, likely to do so for at least another year or two.

THE NEW COAL MINES BILL

You might like to hear a few words about the new Coal Mines Bill which is before the House of Commons. It deals with, I think everybody must know, two sides of the coal industry, and with regard to that part which refers to the nationalisation of minerals, which is called by a much longer name in the Bill, I still hold the views which I have constantly put forward for some years past that what the Government wishes to do will not be of much, if any, benefit to the industry, and all that it can effect of real use could have been done by further amendments of the last Act.

On the question of amalgamations, with which I personally think we are very much more concerned, a great deal more has been accomplished voluntarily than is generally realised, and the number of separate ownerships much reduced. There are still some instances where, failing closure, amalgamation may be of some service, but this is not generally the case. Further than this, the hopes of amalgamations of the larger concerns will not realise the hopes and statements of the various Royal Commissions and inquiries that have taken place, unless great care is taken, and great ability displayed by those preparing the schemes, who should have a very long practical acquaintance with the coal industry as a whole, including the sales questions, and of the particular districts in which the amalgamations are to be compelled.

WIDER POWERS FOR TRIBUNAL ESSENTIAL

The main point, however, is that in case of compulsory mergers there are words in the Bill which are supposed to give the colliery owners the right to refer to a tribunal of appeal, and try to obtain justice if they do not consider the terms fair and will be suffering any injustice. Such tribunal, if it is to be able to rectify any faults of the projectors of a scheme, should not be limited in its powers, but be free to examine and reject the scheme in respect of any and every detail, and not be tied down to giving its decisions upon strictly limited lines and conditions. All the costs of such appeal should be borne by the Commission and no step towards amalgamation should be taken by the Commission until the appeal has been heard and a decision given.

It is too late when the proposed procedure under the Bill has been followed prior to such decision. I am hopeful that amendments will be proposed and carried which will meet at all events some of those objections.

After providing for the full upkeep of our plant, sidings, etc., we again write off £20,000 depreciation as last year, and after paying debenture and preference share interest we propose to add £20,000 to the reserve fund, to pay a dividend of 12½ per cent. for the year—5 per cent. of which has already been paid as interim dividend—and carry forward £4,518.

The report and accounts were unanimously adopted.

WANKIE COLLIERY COMPANY, LIMITED

FAVOURABLE REVALUATION OF PROPERTIES

The fourteenth ordinary general meeting of this company was held, on the 30th ultimo, in London.

Sir Edmund Davis (chairman and managing director), in the course of his speech, said:—The profit for the year amounted to £222,959. After deducting the three interim dividends, one of 6 per cent., paid on March 1, 1937, £59,850, and two of 5 per cent. each, paid on April 17 and July 15, 1937, which amounted to £99,750, there remains a balance of £56,045. From this balance it is proposed to pay you a final dividend of 4 per cent., absorbing £39,900.

During the year under review we considered it advisable to have the properties and their equipment independently valued. We approached the Anglo-American Corporation of South Africa, Limited, and have received their report, in which they value the collieries at £1,195,000.

In this valuation they have taken a radius, so far as No. 1 Colliery is concerned, of two miles from the station at the bottom of the main hauling shaft, in which they estimate a tonnage of about 15,000,000 tons, or within a three-mile radius an additional 28,000,000 tons, making a total of 43,000,000 tons of extractable coal, without any heavy capital outlay.

In the No. 2 Colliery, within the same radius, it is estimated that the total available coal, to be worked under the same conditions, is about 352,000,000 tons, but as the coal in this No. 2 Colliery is so near the surface only about 50 per cent. of the present seam is extractable in the first working, leaving the pillars to be extracted at a later date. These valuations are based on 56 square miles out of our coalfield of 400.

As a result of this revaluation we have written up the coal-mining and other rights from £489,763 in our previous balance sheet to £1,200,000 in the one which is now before you, and the difference of £710,147 has been carried to a capital surplus account.

QUESTION OF COMPETITION

Of late we have been somewhat troubled not only by the publication in one of our newspapers with a very large circulation of a statement on the subject of an opposition colliery being opened in Southern Rhodesia, but also by inquiries being made by members of the Stock Exchange here as to the possible effect of this new colliery on our business.

In this connection I cannot do better than state that at one time we could have pegged the property and at another we could have purchased it for £3,000, and that with the permission of the then owners we had the property reported on in March, 1930, and in September of the same year, and as a result of reports obtained and assays we had made we decided not to consider the acquisition of the property.

In continuance of the same subject—that is, so far as the development and equipment of any outside property in Southern Rhodesia are concerned—I have read with much interest references in the Southern Rhodesia Press to speeches which have been made of late, especially so far as concerns the price of coal in Southern Rhodesia.

WANKIE COAL'S HIGH CALORIFIC VALUE

In this connection no attention has apparently been paid, previous to making these remarks, to the extraordinarily high value of Wankie coal compared with certain coals elsewhere in South Africa to which reference was made.

In buying coal you have to consider what its heating qualities may be, and no comparison as to price is of any value if you do not take this into consideration. This you will readily appreciate when I point out to you that the coal being produced by some South African collieries, which I understand were meant in the speeches already referred to, had a calorific value of 9,600 B.T.U. compared with 14,000 for Wankie coal. This means that you would have to use about 3 tons of their coal to 2 tons of Wankie, or 50 per cent. more coal to obtain the same heating results.

We have a very simple proposition to deal with so far as concerns the value of the coal and the cost thereof to the public at the colliery, and for this purpose you must bear in mind the calorific value already mentioned, and the ash content from the coal produced by the colliery referred to, which amounts to about 520 lb. per ton of coal, whereas in Wankie coal it is about 242 lb. If you then take the price at which this particular South African coal is sold to the public—which varies between 6s. 6d. and 7s. 6d. per ton at the pit's mouth—and make a calculation based on the information I have just given, you will find that our prices at pit's mouth are really more favourable to the consumer.

The report and accounts were unanimously adopted.

NEW GOLDFIELDS OF VENEZUELA, LIMITED

RECORD GOLD REALISATION

The tenth annual ordinary general meeting of the New Goldfields of Venezuela, Limited, was held, on the 26th ultimo, at the Chartered Insurance Institute, 20 Aldermanbury, London.

Mr John A. Agnew, the chairman, who presided, in dealing with the profit and loss account, said proceeds of bullion amounted to £505,259, a record figure. The net result of the year's operations is a profit of £128,999, against £100,199 for the previous year. In December last interim dividend No. 1 of 5 per cent., less tax, was paid, absorbing £39,908, and it has been necessary to write off £28,877 in respect of depreciation and of obsolete stores. At June 30, 1936, the balance to the credit of profit and loss account amounted to £79,171, so that the total balance of profit amounts to £139,385, which, for the reasons set out in the report, we have decided to carry forward to the current year.

SATISFACTORY RESERVE POSITION

Tonnage treated at 192,069 tons and gold recovered at 71,999 ozs. both show very satisfactory increases over the previous year, the gold recovery at over 10,000 ozs. more being a record. At June 30, 1937, ore reserves were shown at 559,020 tons on an average grade of 8.6 dwts. per ton, representing an increase of 64,492 tons after allowance had been made for the 192,069 tons extracted during the year, and an increase of 0.5 dwt. per ton in value.

It is very reassuring to note that the average grade of ore treated during the year at 8.2 dwts. so closely approximated the estimate of 8.1 dwts. given at the beginning of the year. The present estimate has again been made with due regard to the geological and ore-breaking conditions in each section of the mine and should thus prove reliable. The increase of 0.5 dwt. in value is due to the average grade of the Peru ores being 8.9 dwts. per ton this year, as against 8.1 dwts. a year ago, the Caratal ores having remained unaltered at 8.0 dwt. per ton.

Development footage this year amounted to 12,076 ft. and resulted in a relatively high tonnage of new ore being added to the reserve for each foot of development. The average over the last three years has been about 17 tons of new ore per foot of development. We have this year milled an average of some 16,000 tons per month, and this will be increased during the coming year, so if we assume a crushing rate of, say, 225,000 tons yearly, with the anticipation of a possible 250,000 tons in the future, we would, at the ratio of 17 tons per foot, require a development footage of 15,000 ft. yearly to keep the ore reserve position intact.

In the mill the flotation plant is coming into operation, and it is satisfactory to note that, with two-thirds of the ore reserves consisting of sulphide ore, the treatment of this ore by flotation is likely to be simpler and less costly than is the case at present. It is thought that possibly one-half of the total tonnage to be treated this year will go to this unit, and if this is so, milling costs should show some reduction.

MR C. O. LINDBERG'S VIEWS

Mr C. O. Lindberg estimates that on a tonnage of 225,000 tons there should be a recovery of 85,000 ozs., with a slight fall in operating costs in terms of bolívares.

A recent report from Mr Lindberg states:—The physical conditions of the mines and equipment are in better shape than ever before. The ore reserves are larger, and the deep development has established at Peru the undiminished extension in depth of sulphides with gold content higher in grade than the ores hitherto exploited. While no such definite indications have been found in the Caratal section—that is, the Union, Sosa Mendez and Hansa Mines—these mines are as yet shallow, and it seems likely that they will eventually develop similarly at depth to these in Peru.

In the mines where a large percentage of the costs is absorbed by wages, any reduction in unit costs will be slow. A reduction will be seen as facilities offered by the shafts, mechanical haulage and other mechanical means become effective and utilised to capacity by the labour now inexperienced in their operation.

That the properties have been brought to the present excellent condition under more than the usual difficulties inherent to mining operations reflects creditably on the general manager and his staff. The amicable regard in which the company is held by the federal authorities in Caracas is partly due to the efforts of the company's legal adviser, Dr Nicomedes Zuloaga, and in no small measure to the understanding and diplomacy shown by your general manager, Mr A. J. Anderson.

The report and accounts were unanimously adopted.

CONSOLIDATED GOLDFIELDS OF SOUTH AFRICA, LIMITED

A NOTABLE JUBILEE YEAR

The ordinary general meeting of this company was held, on the 2nd instant, in London.

Mr John A. Agnew (the chairman) dealing first with the accounts of New Consolidated Gold Fields, Limited, the operating company, said that the item "Dividends, profits, etc.," amounted to £2,214,610, against £1,306,453. The increase of £908,000 was due in the main to the opportunities which had existed during the first nine months of the year under review for the profitable realisation of some of the company's holdings. The revenue from dividends was again higher, and had shown an increase for four successive years, in which period it had been nearly doubled. (Applause.) It was interesting that in the jubilee year of the company the figure of profit was easily the highest on record, with the exception of 1895, the year of the great Kaffir boom, and if the present system of account-keeping had been followed in 1895 the year with which they were now dealing would have shown an absolute record. (Applause.)

The dividends paid by the operating company called for no comment except that this year a special ordinary dividend of 2s. 6d. per share had been paid, which had enabled the parent company to pay a special jubilee ordinary dividend of the same amount. A total dividend of 6s. 6d. per share, or 32½ per cent., had been paid, which enabled the old company to pay a similar amount and to carry forward £30,000.

TAXATION BURDENS

At meetings of this company during the past three years he had had a good deal to say regarding the taxation position in South Africa. His remarks, he was afraid, had had very little effect in the direction of securing any relief, but those who studied the course of events in South Africa could not help being impressed with the evidence of the very great amount of money that was being continually raised for the development of new mines. Many millions of pounds had been subscribed in the last three or four years, and it was safe to predict that further like amounts would be required in the near future, but what inducement was offered to shareholders to increase their holdings in the Union of the profits which they should be entitled to receive as a reward for enterprise and courage by unduly high taxation.

In February their company had celebrated its golden jubilee, marking the occasion with a jubilee bonus dividend. So far results achieved reflected lasting credit on those responsible for dividends on the ordinary shares. There had been paid in the fifty years' life of the company, and that was irrespective of profits. They stood now at the commencement of a new era with the business of the company expanding in many directions, full of hope for the future, and the board trusted that, given a measure of stability in this far from settled world, they might be able to record of progress made, and thus retain the confidence shareholders had so continuously and so very definitely placed in the directorate.

POSITION AND PROSPECTS

The chairman proceeded then to deal exhaustively with the current position and prospects of the company's principal interests in South Africa, West Africa, Australia and America. He would like to point out to shareholders that the feature which gave the directors the greatest cause for satisfaction was not the record undoubtedly was, but rather that it had now been proved beyond all question of doubt that at Venterspost the main reef existed it had been located by geophysical methods, that it was of great strength and of a grade well above that necessary to stamp the property as a potential dividend-payer.

That we should emerge from the present gloom was certain, but it was very difficult to express a definite opinion as to when and how the improvement would be brought about. He would forcibly express the hope that the American Government would not, at any rate, reduce further the value of the dollar in order to escape the difficulties immediately confronting it. He would say that it was mainly a psychological phenomenon, and few things would do more to restore confidence than the knowledge that trade and industry would be granted a fair interval in which to work out their own salvation.

The report and accounts were unanimously adopted.

TREPCA MINES, LIMITED

RECORD PROFIT

The tenth annual general meeting of the Trepca Mines, Limited, was held, on the 30th ultimo, in London.

Mr A. Chester Beatty, the chairman, in the course of his speech, said: The profit and loss account shows a gross profit of £943,944, compared with £503,805 for the previous year. The net profit is £632,470, and it is proposed to pay a final dividend of 9d. per share free of tax.

The profit for the year is the largest in the history of the company, due, of course, to the striking rise in the prices of lead and zinc which took place during the first half of the year. In spite of the violent and unsettling fluctuations, I am still of the opinion that the long-range outlook for both lead and zinc is fundamentally healthy.

Ore treated for our own account amounted to 638,729 tons, resulting in the production of 70,486 tons of lead concentrates and 69,863 tons of zinc concentrates. The tonnages of ore treated and of lead concentrates produced were the largest since the opening of the mine, as also was the silver content of the lead concentrates.

Our sales of pyrite concentrates amounted to approximately 82,000 tons, showing an increase of 32,000 tons over the previous year. With the additional plant now available for the recovery of this by-product, we look for some further expansion in this section of our business. We expect also during the current year to commence earning some additional revenue from the recovery, in the form of a low-grade copper concentrate, of the small copper content of the Stantig ore.

There has been a further rise in operating costs per ton of ore treated. Our ore reserves now amount to 3,900,000 tons, having an average value of 9.5 per cent. lead, 5.2 per cent. zinc, and 4 ozs. of silver per ton. As to the prospects of the current year, it seems to me that the decline in security and commodity prices has reached a point which is not justified by general economic conditions, and from which a recovery may in due course be expected. In this recovery I should expect lead and zinc to take their full part.

The report was unanimously adopted.

GOLD COAST MAIN REEF, LIMITED

IMPROVED PROSPECTS

The fourth annual general meeting of the Gold Coast Main Reef, Limited, was held, on the 30th ultimo, in London.

The Rt. Hon. Lord Dorchester, the chairman, in the course of his speech, said that it would be most gratifying to the shareholders to learn that he was able to endorse the opinion expressed last year as to the future of their company's mines which at that time hinged upon the development then taking place on the Bondaye property. The work carried out had gone far to justify any optimism he might have shown.

At the last annual general meeting he had given a figure of 52,794 tons as the indicated ore reserves on the Main ore body and Spur perty down to the second level on the Main ore body and Spur reef, in addition to which there were just under 6,000 tons on the North indicated on the North ore body, and 5,000 tons on the North East ore body. On July 21 last a circular had been issued in which it was stated that the ore reserves, including stoppage dilution, amounted to 106,500 tons, of an average value of 10.3 dwts. per ton.

Those ore reserves existed on the 1st, 2nd, 3rd, and 4th levels at the Bondaye Mine, and did not include any tonnage from the development work in hand on the 5th level, where the first 25 feet sampled on the lode averaged 11.9 dwts. over 45 inches. Work on that level should be completed before the end of the current year, when a fresh computation of the ore reserves would be made.

They had extended their operations to the Tuappim Concession, where indications were also very favourable. The latest cabled advice stated that on the 1st level over a length of 548 feet, the ore averaged 8.2 dwts. for a width of 63.3 inches. On the new Ekotokroo Concession, old workings were being opened out and resampled, with interesting results over a strike length of 609 feet.

Their prospects were very much better than they had been at last year. They had a substantial tonnage of ore in sight at Bondaye, very favourable indications at Tuappim, and the possibility of a further mine being developed on the new Ekotokroo Concession.

The report was unanimously adopted.

CENTRAL URUGUAY RAILWAY COMPANY OF MONTE VIDEO, LIMITED

THE TARIFF PROBLEM

The ordinary general meeting of this company was held, on the 29th ultimo, in London.

Mr G. H. Harrison, C.M.G., M.Inst.C.E. (the chairman), said that the company had been reorganised and its capital rearranged, and the previously leased allied companies had been absorbed. Shortly after the scheme was approved he had visited Uruguay, accompanied by General Hammond and their consulting engineer, formulating a programme of expenditure on economic lines with a view to making the railway an efficient machine, especially as regarded shop equipment and rolling stock in relation to the work it had to do. That had been done and they were confident that economies would result.

The increased cost of all materials, especially oil fuel, would adversely affect the net revenue and therefore must be offset as far as possible. Some progress had been made towards co-ordination of transport services. The fortunes of the company were largely in the hands of the Government. While the country was emerging from the crisis with renewed prosperity, the British-owned railways were struggling to avoid insolvency. They were faced with the impossibility of charging tariffs sufficient to give a reasonable return on the capital which had been spent. The two main factors working against recovery were the severe and unfair competition from road transport and the continued depreciation—to-day about 45 per cent.—in the sterling value of the Uruguayan peso.

The report was unanimously adopted.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended November 27, 1937, amounted to £10,537,000, against ordinary expenditure of £10,201,000. After reducing Exchequer Balances by £444,993 the operations for the week, as shown below, reduced the gross National Debt by £781,000, to about £8,237 millions.†

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

WITH sentiment on the Stock Exchanges showing a marked improvement, the majority of the commodity markets have also exhibited greater strength this week. While it would be premature to argue that the tide has definitely turned, prices in many instances have been firmer than for some time past.

There has been no dearth of news this week, three commodities having been affected by quota decisions. At its meeting on Tuesday, the International Rubber Regulation Committee decided to cut the permissible export quota for the first quarter of 1938 from the present level of 90 per cent. to 70 per cent. of standard. The decision, which was more drastic than the market had anticipated, will involve a reduction of some 18,500 tons monthly compared with the current rate of export. Prices were consequently marked up.

The International Tea Committee, on the other hand, decided this week to raise the export quotas by 5 points to 92½ per cent. of standard for the twelve months commencing April 1st next. This increase was in excess of market expectations and, although it will not be reflected in available supplies for many months, prices eased at this week's auctions. Copper was also affected by a quota decision this week, for the output of the restricting companies was reduced to 105 per cent. of the standard tonnages as from December 1st. Metal prices were generally higher, mainly in consequence of the improvement in sentiment in the United States. Cotton was about unchanged, but wool was reduced in price.

Among foodstuffs, wheat was easier owing to bearish crop news and a dull demand, while other grains were about unaltered. Sugar scored a recovery after its recent fall, and

provisions were firm in price generally. The normal seasonal decline in egg prices has now begun.

In the United States the downward trend of prices was arrested. Thus Moody's daily index (December 31, 1931 = 100) was 146.4 on Wednesday, against 144.6 a week ago, 160.1 a month earlier, and 194.2 on the corresponding day last year.

COAL

SHEFFIELD.—Although there is comparatively little new buying on the export market supplies are well taken up under contract. Competition appears to be increasing. The inland industrial market is strong. Supplies are steady, but with an accumulation of orders at collieries there may be some delay in delivery. Small coal is in keen request, and electricity works are taking full deliveries. All qualities of metallurgical coke are well taken up, and prices are steady. Central-heating coke is rather slow. Further batteries of coke ovens will be put into commission in South Yorkshire early in the New Year. The colder weather has given an impetus to the call for household fuel and gas coal. Increased output of the former is being arranged, and new seams are to be opened. Prices are unchanged.

NEWCASTLE-ON-TYNE.—Whilst a fair amount of business has been done in North East Coal, for delivery over next year, there is now little or no inquiry from abroad, and all reports indicate that buyers prefer to wait in the hope of a fall in prices. This position has no doubt been brought about by the uncertain outlook in Northumberland steam coals, due not so much to loss of export trade as to a decline in domestic business caused by competition from other districts. Prime Northumberland screened steam coal of the D.C.B. class has now been reduced to 20s. per ton f.o.b., with other grades 18s. 6d. to 19s. 6d. per ton f.o.b. The Durham market is steady, home trade being just as active, and there is no indication of any serious fall in prices.

GLASGOW.—The market has maintained its recent improvement, but while prices remain firm, little further progress has been made. This is perhaps because the weather, although more severe, is not yet quite seasonably cold. Moreover, there remain considerable accumulations of fuel at foreign depots to be disposed of before new business can develop on a normally active line. For export, however, contract supplies are being regularly taken up, and in Fife and the Lothians only secondary steam and washed trebles are in need of prompt outlets. The position in Lanarkshire is better because of sporadic labour troubles and the expanding tendency of inland demand, more especially for public utility and household purposes—industrial demand being already active—while in Ayrshire outputs are on the whole being readily absorbed.

CARDIFF.—Comparatively dull conditions have prevailed on the Cardiff coal market during the past week. Shipments are being fairly well maintained; they totalled 422,400 tons last week, compared with 422,900 tons in the previous week, and 366,732 tons in the corresponding week last year; but there is very little new business, and prices for prompt positions are a shade easier. For all classes, however, they are well above the old minimum schedules, and notwithstanding the paucity of orders on the market the commitments of the collieries under contracts are so heavy that applications will probably be made for supplementary allocations for the current quarter. There has been no movement in prices of coal, patent fuel, or pitwood. The joint ascertainment for the three months ended October 31st shows a credit balance of £99,389, compared with a credit balance of £78,298 in the previous three months, and a loss of £1,945 in the corresponding period last year. For the twelve months ended October the credit balance amounts to £590,398, which compares with a debit balance of £85,044 in the twelve months ended October, 1936.

IRON AND STEEL

LONDON.—The weekly report of the London Iron and Steel Exchange indicates that the stabilisation of the prices of most descriptions of iron and steel for a long period ahead has imparted steadiness to the markets. Consumers continue to exert pressure to secure supplies, and the record output of steel is apparently insufficient to satisfy all the requirements of the market, although makers appear to be making some headway in reducing the heavy accumulations of undelivered orders. In most cases the steel works have enough work on hand to keep them busy for several months.

The demand for pig iron remains steady at a high level, and although some consumers of foundry iron have been able to lay in stocks there is little surplus from which to build up reserves after immediate needs are satisfied. Seasonal declines are apparent in the quantities of pig iron taken by some of the consuming industries; but these losses have been balanced by the expanding demand from other branches of the trade. The steel-works are now comfortably situated so far as their supplies of basic iron are concerned.

There are no signs of diminution in the demand for semi-finished steel, and the whole production of the British works supplemented by imports is not sufficient to meet the full requirements of the consuming industries.

In the finished steel department a fair amount of business has been placed recently, and negotiations on contracts for far forward delivery are proceeding. In this department the question of delivery is again becoming more important than that of price now that quotations have been fixed for the whole of 1938.

MIDDLESBROUGH.—The fixing of Cleveland foundry and East Coast hematite prices from January 1, 1938, has facilitated business, and orders are being placed over the first half of next year. From January 1, 1938, the price of No. 3 Cleveland foundry pig iron will be 109s. per ton delivered locally, and the price of East Coast Mixed Numbers hematite pig iron 132s. 6d. per ton delivered locally, both classes now being subject to a rebate of 5s. per ton to loyal consumers.

The demand for semi-finished and finished steel continues very strong, and indications are that producing works will be fully employed over the first half of next year, and orders are understood to have been placed for the second half of 1938. The fixing of prices for finished steel has induced buyers to come forward.

There has been no diminution in the demand for heavy steel melting scrap, and, whilst the official prices are maintained to the end of this year, it is understood that a meeting will shortly be held to fix prices for next year. The foreign ore position is unchanged. Lower freights have had the effect of increasing shipments, the total quantity of foreign ore arriving in the Tees during November being 271,348 tons, compared with 173,912 tons during October. Good Durham blast-furnace coke is still quoted at 42s. per ton delivered at the furnaces here.

SHEFFIELD.—The fact that the majority of iron and steel prices have now been stabilised over the next six to twelve months has given the market a much steadier appearance. The somewhat hectic conditions which have operated for so long are rapidly disappearing, a more regular state of trading being observable. So far as consumers of forge and foundry

iron are concerned, many of them have already placed contracts for the first quarter of next year, and are ready to do so for six months ahead. Forge business is more readily accepted than for foundry, supplies of which continue to be on the short side. Arrears of delivery under contract are being slowly overtaken, but little or nothing is going into stock at furnaces, foundry iron will stand as at present until June next, but forge will be increased by two shillings per ton on January 1st. There is also to be an increase in hematite prices of 10s. per ton, to operate throughout 1938. A full demand exists for this material, and good contracts are being booked, although makers of West Coast are not showing any eagerness to add much to their commitments. Business in heavy basic steel billets continues at a high level, makers being offered many more orders than they can handle. Stainless steel sheets continue to be a very big feature, and demand for wire rods and strip taxes the capacity of producers.

The national defence programme is bringing much important work into this district, but big efforts are being made to prevent any interruption in dealing with ordinary commercial orders, which are being received in increasing volume, both from home and overseas sources.

GLASGOW.—During the present week a substantial amount of new business has been placed with local steelmakers. Inquiries are also numerous. Practically all classes of material are in demand, both for home and overseas deliveries. The improvement as regards supplies of semis but, until supplies are sufficient to enable makers to put a much greater of them being able to give deliveries to meet all requirements. Re-rollers of bar iron are somewhat quieter, but there is a steady demand for re-rolled steel bars.

CARDIFF.—Slightly easier conditions are ruling in the tinplate industry. Manufacturers continue to realise from 1s. 6d. to 2s. per box in excess of the minimum price, but demand is not so active as it has been, and production has declined to about 74 per cent. of allotted capacity. For sheets, however, the position shows little change, with inland requirements still active. The steel works have been affected by the slight recession in tinplates, but pig iron is a good market at the fixed prices. Shipments of tinplates at Swansea last week dropped to 4,766 tons—the smallest for any normal working week this year—compared with 8,408 tons the previous week, and 5,217 tons a year ago. Stocks have consequently jumped from 3,885 tons to 7,386 tons.

OTHER METALS

COPPER.—This has been the most satisfactory week for copper for several months, the standard cash quotation having risen by 2 1/2 6s. 3d. to 40 2s. 6d. per ton. Turnovers on the London Metal Exchange have risen, particularly in the last three days, and consumers have purchased on a fair scale. The improvement as a whole, however, was mainly based on the better trend of Wall Street, so that its maintenance does not appear national copper scheme came into operation again on Wednesday. The inter-quota is now 105 per cent.—the same as that in force between the beginning of November, 1936, and the time when restriction was removed in January 1937. The new quota will probably reduce the extra United States output by 15 per cent., a cut which is quite sufficient to maintain the statistical equilibrium of the European market, even if consumption should show a slight decline from its recent levels.

Sales on the London Metal Exchange: 3,300 tons on Monday, against 2,350 tons last week; 2,300 tons on Tuesday, against 2,400 tons last week; 1,800 tons on Wednesday, against 1,700 tons last week. Domestic spot was quoted at 9.97 1/2 cents per lb. in New York on Wednesday, against 9.57 1/2 cents a week ago and 10.37 1/2 cents a month ago. Wednesday's official closing price for standard cash in London was 40 2s. 6d. to 40 5s. per ton, compared with 37 16s. 3d. to 37 18s. 9d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 8,468 tons, showed a decrease of 322 tons, while stocks of rough copper, at 19,198 tons were 755 tons larger.

LEAD AND SELLER.—Both markets shared in the general improvement. Lead closed at 16 5s., a rise of 2s. 6d. on the week, while spelter rose by 13s. 9d. to 15 18s. 9d. There was a fair amount of buying this week, while sellers showed greater reserve than of late. But the October production figures for the two metals, as published by the American Bureau of Metal Statistics, were not encouraging. The world's lead output increased from 156,400 short tons in September to 168,200 short tons in October, while the world's spelter output advanced simultaneously from 151,400 to 162,300 short tons. Production of both metals must now be well in excess of current consumption, and stocks—for which figures are not available—must consequently be on the upgrade. Unless production of a much better trend than of late, both markets may come under severe pressure before very long.

Sales of lead on the London Metal Exchange: 2,000 tons on Monday, against 1,050 tons last week; 1,300 tons on Tuesday, against 1,450 tons last week; 1,000 tons on Wednesday, against 800 tons last week. The New York quotation on Wednesday was 5.00 cents per lb., against 5.00 cents a week ago and 5.25 cents a month ago. Wednesday's official closing quotation in London for soft foreign for shipment during the current month was 16 5s. to 16 7s. 6d. per ton, compared with 16 2s. 6d. to 16 3s. 9d. last week.

Sales of spelter on the London Metal Exchange: 1,350 tons on Monday, against 1,950 tons last week; 1,200 tons on Tuesday, against 1,000 tons last week; 2,350 tons on Wednesday, against 1,150 tons last week. Wednesday's quotation in East St. Louis was 5.25 cents per lb., against 5.50 cents the week before and 5.75 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipment during the current month was 15 18s. 9d. to 16 per ton, against 15 5s. to 15 6s. 3d. last week.

TIN.—Tin advanced by 5 15s. this week, closing at 191 15s., the highest level for the past twenty days. The improvement was mainly due to good reports from Wall Street and the endeavours of the United States Government to support industry. On Wednesday, also, the publication of the November statistics was well received by the market.

According to A. Strauss and Company, Ltd., the total visible supply increased last month, as compared with the end of October, by 1,065 tons to 21,908 tons. This rise did not come as a surprise after the unexpected decline in stocks a month before, and was actually smaller than expected by the market. New supplies declined in November by 2,035 tons to 10,321 tons, while deliveries fell by 1,752 tons to 10,610 tons. The decline in deliveries was due to the lower Straits shipments, while the only 5,195 tons last month, was accounted for by the United States, which took 15,195 tons last month, a decline of 3,015 tons compared with October. It is likely that the comparatively small increase in stocks, despite the low level of deliveries, will have a strong influence on the Tin Committee, when

THE BRITISH OVERSEAS BANK, LIMITED.

ESTABLISHED 1919

Report by the Board of Directors to the EIGHTEENTH ANNUAL GENERAL MEETING of SHAREHOLDERS to be held in the BANK PREMISES, 33, GRACECHURCH STREET (LOMBARD COURT), LONDON, E.C.3, on TUESDAY, the SEVENTH day of DECEMBER, 1937, at 12 noon.

The Directors submit to the Shareholders the Balance Sheet of the Bank, as at 31st October, 1937, and Profit and Loss Account, together with copy of the Auditors' Certificate.

The Profit, after allowing rebate of interest and providing for all bad and doubtful debts (other than provided for out of Contingencies Account), for the year ended 31st October, 1937, amounts to £52,454 8 11

Balance available from last account £121,601 0 0

Making a total of £121,601 0 0

LIABILITIES

Capital: Authorised

300,000 "A" Ordinary Shares of £5 each

300,000 "B" Ordinary Shares of £5 each

400,000 Shares of £5 each which may be issued in whole or in part as "A" or "B" Ordinary Shares

Subscribed and Paid in Full:

ACCOUNTANT: F. J. SULLIVAN

GEORGE A. TOUCHE & COMPANY, London.

As already intimated, the Directors do not recommend payment of a dividend on the "A" Ordinary Shares as they consider it prudent to conserve the resources of the Bank in view of the unsettled state of world affairs.

The term of office of The Right Hon. Lord Aberconway, C.B.E., as Deputy Chairman having expired on 31st October, 1937, Mr. Duncan A. Stirling has been appointed to succeed him for the current financial year.

The Directors retiring by rotation are Sir James Caird, Bart., Sir Nigel Campbell and Mr. T. F. Tallents, M.C., who, being eligible, offer themselves for re-election.

The Auditors, Messrs. George A. Touche & Co., and Messrs. McClelland, Ker & Co., also retire, and, being eligible, offer themselves for re-appointment.

By Order of the Board, A. E. THORNE, Secretary.

London, E.C. 29th November, 1937.

AUDITORS' REPORT TO THE MEMBERS.

We have examined the above Balance Sheet and compared it with the books of the Bank. We have satisfied ourselves as to the correctness of the Cash Balances and the Bills of Exchange, and have verified the Securities. We have obtained all the information and explanations we have required, and are of the opinion that the Balance Sheet is properly drawn up so as to exhibit a true and correct view of the state of the Bank's affairs, according to the best of our information and the explanations given to us, and as shown by the books of the Bank.

London, E.C. 22nd November, 1937.

PROFIT and LOSS ACCOUNT for the Year ended 31st October, 1937

Dr.	£	s.	d.	Cr.	£	s.	d.
To Balance carried to Balance Sheet	121,601	0	0	By Balance brought forward	69,146	11	1
				" Profit, after allowing Rebate of Interest and providing for all Bad and Doubtful Debts (other than provided for out of Contingencies Account), for the year ended 31st October, 1937	52,454	8	11
				Notes.—The total remuneration received by the Directors by way of Directors' Fees from this Company and its Subsidiary Companies during this financial year amounted to £8,308 17s. 1d.			
	121,601	0	0		121,601	0	0

STATEMENT REQUIRED BY SECTION 126 OF THE COMPANIES ACT, 1929.

None of the Accounts of the Subsidiary Companies shows a loss. The net profits have been carried forward in their own Accounts after providing for dividends, which, so far as they relate to this Company, have been brought into the above Accounts.

ARTHUR C. D. GAIRDNER, Chairman.

D. A. STIRLING, Deputy Chairman.

JAMES CAIRD, Director.

22nd November, 1937.

C. T. JAMES.

The spot price in New York on Wednesday was 14½ cents per lb., compared with 14½ cents per lb. a week ago and 14½ cents a month ago. Wednesday's official buyers' price for standard ribbed smoked sheet on the spot in London was 73d. per lb., as against 7d. on the corresponding date last week. In forward positions business has been done at 7½d. to 7½d. for "January" shipments, as against 7d. to 7½d. for "January-March" stocks in London and Liverpool at the end of last week totalling 54,782 tons, against 53,411 tons a week earlier. A year ago stocks amounted to 89,228 tons.

WHOLESALE COMMODITY PRICES

UNITED KINGDOM: LONDON, December 1st

The prices in the following are revised with the assistance of an eminent firm in each department

CEREALS AND MEAT				POTATOES—				WOOL—			
GRAIN, Etc.—				King Edward (per cwt.)				English Southdown, greasy, per lb.			
Wheat—				Other English				Welsh, best Ad'ty., ton			
No. 2, N. Man. 498 lb.				SPICES—				Lincoln hog, washed			
Eng. Gaz. av., per cwt.				Pepper, per lb.				Queensland, sed. super cmbg.			
Barley, Eng. Gaz. av.				Black Lampoon				N.S.W. greasy, super cmbg.			
Oats				White Muntlock				N.Z. gray, half-bred 50-58			
Maize, La Plata, landed				Cinnamon—1st sort, per lb.				Crossbred 40-44			
480 lb.				Cloves—Zanzibar, per lb.				Tops			
Flour, Loc. stan. ex mill,				Ginger—per cwt.				Merino 70's average			
280 lb.				African				" 64's "			
Rice No. 2 Burma, per cwt.				Jamaica, ord. to good				Crossbred 48's			
MEAT—				Mace				" 48's "			
Beef, per 8 lbs.				Nutmeg, 65's				MINERALS			
English long sides				SUGAR—				COAL—			
Argentine chilled hinds				(Duty, 11/8 per cwt.)				Welsh, best Ad'ty., ton			
Mutton, per 8 lbs.				Centrifugals, 96", prpt.				Durham, best gas, f.o.b.			
English wethers				shipm., c.i.f. U.K./Cont.				Type			
N.Z. frozen				B.W.I., crystallised				Sheffield, best house, at			
Lamb, per 8 lbs.				Java, white, c. & f. India				pits			
Pork, English, per 8 lbs.				Oct.-Dec.				IRON AND STEEL—			
OTHER FOODS				Remya—London				Pig, Cleveland No. 3, d/d.			
BACON—				Yellow Crystals				Barr, M'brough			
English				Cubes				Steel rails, heavy			
Irish				Crushed				Tin plates			
Danish				Granulated				METALS—			
Dutch				Home Grown				Copper, Electrolytic, ton			
HAMS—				TEA—				Sheets (Strong)			
Canadian				Indian—per lb.				Standard			
United States				Pekoe				Lead, Eng. pig			
BUTTER—				Broken Pekoe				Soft foreign			
Australian				Orange Pekoe				Spelter G.O.B.			
New Zealand				Broken Orange Pekoe				The English ingots			
Danish				Ceylon—per lb.				Standard cash			
CHEESE—				Pekoe				MISCELLANEOUS			
Canadian				Broken Pekoe				CHEMICALS—			
New Zealand				Orange Pekoe				Acid, citric, per lb., less 5%			
English Cheddars				Broken Orange Pekoe				Nitric			
Dutch				Ceylon				Oralic, net			
COCOA—				Pekoe				Tartaric English, less 5%			
(Duty, British grown,				Broken Pekoe				Alcohol, Plain Ethyl.			
11/8; foreign, 14/- cwt.)				Orange Pekoe				Alum, lump			
Accra, f.i.				Ceylon				Ammonia, carb.			
Trinidad				Pekoe				Sulphate			
Grenada				Broken Pekoe				Arenite, lump			
COFFEE—				Orange Pekoe				Bleaching powder, per ton			
(Duty, British grown,				Ceylon				BORAX, gran.			
4/8; foreign, 14/- cwt.)				Pekoe				Do., powder			
Santos sup. c. & f. cwt.				Broken Pekoe				Nitrate of soda			
Colombian, good				Orange Pekoe				Potash—Chlorate, net			
Costa Rica, med. to good				Ceylon				Sulphate			
East Indian				Pekoe				Soda Bicarb.			
Kenya, medium				Broken Pekoe				Crystals			
EGGS—				Ceylon				Sulphate of Copper, per ton			
English				Pekoe				CEMENT, best Eng. Portland, d/d. site,			
Danish				Broken Pekoe				London area, jute sacks, 11 to ton			
FRUIT—Oranges—				Orange Pekoe				(charged and credited at 1/6d. each) or			
S. African				Ceylon				paper bags 20 to ton (free, non-return-			
Brazilian				Pekoe				able)			
Lemons, Malaga				Broken Pekoe				4-ton loads and upwards 39/- per ton			
Sicilian				Ceylon				1 and up to 4-ton loads 41/- per ton			
Apples: Amer. (var.) brls.				Pekoe				COPRA—			
(var.) boxes				Broken Pekoe				S.D. Straits c.i.f., per ton			
" Australian				Ceylon				DRUGS—			
Onions—				Pekoe				Camphor			
Valencia, case				Broken Pekoe				Japan, refined			
Egyptian, bags				Ceylon				Ipecacuanha			
Grapes, Almeria, barrels				Pekoe				HIDES—			
Grapefruit, Brazilian				Broken Pekoe				Wet salted—Australian			
" S. African				Ceylon				West Indian			
LARD—				Pekoe				TALLOW—			
Irish, finest bladders				Broken Pekoe				London town			
U.S.				Ceylon				TIMBER—

Government, although he has left Nanking to organise further resistance.

It is, however, by no means out of the question that a *coup d'état* at Nanking will spontaneously produce a Chinese National Government with which Japan can treat, and in any case we must expect to see puppet Chinese local administrations set up by the Japanese wherever their occupation extends. The farce that was first played in "Manchukuo" has already been repeated at Peiping; and it may be taken as certain that the same heavy-footed comedy will be reiterated at Nanking to-day and perhaps at Hankow to-morrow. This is a trick that can always be practised upon any invaded country if the invader deems it worth his while. In Turkey, for instance, after the Armistice of 1918, when Western Anatolia and Thrace were occupied by the Greeks and the Straits by the Allies, there was a puppet Government at Constantinople which dutifully earned its keep by periodically anathematising a mutinous officer at Angora. CHIANG KAI-SHEK can find as much encouragement in the precedent of MUSTAFA KEMAL as in that of FABIVS CUNCTATOR.

The parallel is, as a matter of fact, remarkably close. In the Græco-Turkish War, as in this, a continental Asiatic country was invaded by an aggressor from overseas. In that war, as in this, the invader was well equipped and his victim relatively destitute of arms and munitions. In that war, as in this, the defenders followed the strategy of bartering territory against time.

New Model Army

MR HORE-BELISHA'S drastic reconstruction of the Army Council came to the public last week as a complete surprise. That there were divergent schools of thought in the Army was well known to the informed. That the SECRETARY OF STATE held views on some matters which were not shared by the senior generals could have been surmised. But that the dilemma had reached a stage where it could only be resolved by the appointment of an almost entirely new set of military members of the Army Council was not suspected. The change has been made smoothly; there have been no dismissals, and the affected officers have resigned "in order to facilitate the promotion of younger officers." But there has been no attempt to suggest that it was merely a matter of age that was in dispute. As a result of last week's changes in personnel there has been, or will be, a re-casting of the policies of the War Office.

The effect of this sudden announcement on British public opinion has been strikingly favourable. Whatever may be the reaction in other countries, here it has been one of satisfaction that the efficiency of the Army is to be increased. It took courage for the SECRETARY OF STATE, who has been only six months in office and has no family roots in the military tradition, to make such sweeping decisions. A First Lord of the Admiralty in similar circumstances would be defeated by his admirals. But the public has views on the Army; the war has left millions of men who consider themselves—and are—competent to express an opinion on military matters. This vigilant body of opinion is now asking itself what are the changes in policy portended by last week's changes in personnel. On this important matter no official word has been vouchsafed, but it is possible, nevertheless, to piece together an answer.

All the defence forces necessarily work in a strategical twilight. The nation's war plans, even in a democracy, cannot be shouted from the house-tops. But the taxpayer who foots the bill has a legitimate interest in the objects

In that war, as in this, the continental Asiatic nation that was fighting for its existence had a back door communicating with the Soviet Union; and, whatever may have been the military effect of Russian supplies to the Turks upon the outcome of their struggle with the Greeks, there can be no doubt of the psychological effect, upon the Turks' *moral*, of their consciousness of having a huge friendly Power in their rear. No prophet would follow out the parallel to the extent of foreseeing a rout of Japan by China. But it does at least suggest that China's cause is by no means yet lost, and that Japan's final victory in her war of aggression is by no means yet assured.

Meanwhile, *securus indicat orbis terrarum*. The world's condemnation of Japan has been clear and all but unanimous. To this world-wide feeling the Japanese are patently sensitive, and the plaudits of the tiny minority of mankind that believes in the ideology of aggression can do little to fortify the Japanese against the consciousness of being condemned by an overwhelming majority of their fellow men. This judgment of the world is like the spaciousness of China; it will tell against the Japanese with a cumulative effect the further they go and the longer they keep at it. China is faced with a tragedy. But beneath all the mafficking in Tokyo the wiser heads of Japan cannot contemplate without disquiet the endless vista of the difficulties towards which their country is being thrust with such headlong precipitancy.

for which armed forces are maintained. He rightly expects to be told what the Navy, the Army and the Air Force are for—not merely what foreign policy they are ultimately intended to reinforce, but also what their broad strategic functions would be in time of war. The Navy's purpose is perfectly clear—to blockade the enemy and to keep our own trade routes and military supply lines open. The Air Force has a similar dual rôle—to harass the enemy's internal communications, to lame his munitions industry and (let us be frank) to frighten his civil population, while preventing him from doing the same things to us. But what is the Army to do? We know that Britain has never fought in a general European war without having to make a great effort on land. But what form should we envisage the land effort taking in any future war? And how, within the means available, should we prepare for it? These questions are not easy to answer, and it is in the answering of them that differences of opinion have most probably arisen.

The Army's future has three elements—the strategic conceptions to which it is moulded; its personnel and organisation; and its equipment—but the two latter follow semi-automatically from the first. So far as its strategic *raison d'être* is concerned, the British Army still apparently considers itself as an imperial fire brigade, with a home establishment whose main function is to replenish the outposts of Empire. This, the CARDWELL conception, was admirably suited to its time, which was a time of peace in Europe. On to it HALDANE grafted an Expeditionary Force of six divisions. This force was ready in 1914 to play its prepared rôle of left wing to the great French attack. The attack never came off, and the war bogged down into the trenches. But the fact that the expectations of 1906-12 failed to materialise in 1914-18 was not the fault of HALDANE or his collaborators. They prepared efficiently the sort of expeditionary force which by all reasonable indications seemed to be the sort that would be wanted.

Are we doing as much to-day? The political setting of the problem is not dissimilar from its pre-1914 appearance. In any European war which can be envisaged in the near future, we shall be fighting as the allies of the French. But does that mean that we must be ready to send them the sort of help they wanted, and were given, in 1914? Rather the contrary, for the whole French conception of strategy has changed. Instead of an advance of masses of troops all along the line, the French strategy is now defensive. It relies on the Maginot line to prevent a break-through *en masse*. But it is conceivable that the Maginot line may be pierced by a highly mobile and heavily-armoured mechanised force. So to counter this the French are organising a number of light and heavy mechanised divisions to reinforce the Maginot line quickly at the point where the German mechanised spear-head attacks it, and to contain any force which breaks through. Moreover, if the nature of the war requires a French attack (if, for instance, Germany marches to the East and stands on the defensive in the West), the attacking force must be armoured and mechanised.

Now, in a scheme of this sort, the old British Expeditionary Force of six divisions has no place at all. However much its transport were mechanised, it could not possibly get into action in time to be of assistance in the first phase of rapid movement. And if the war moved on to a second phase in which armed millions faced each other, six divisions would be almost negligible. If the British Army is to play any decisive rôle at all without conscripting the whole manhood of the nation, its Expeditionary Force must be a body no larger than can go into action in a few days, and mechanised so thoroughly that it can help to deliver the swift and powerful punch or counter-punch which, launched in the first few days, may be decisive. But hitherto there has been no sign that the War Office is preparing such a force. The older military generation has a long-standing and often-proved aversion to mechanical equipment—KITCHENER thought four machine-guns per battalion were enough, and cavalry officers still think, to judge by the outcry whenever a famous regiment is mechanised, that the disappearance of cavalry in the last war was due to an accident of the weather. There is a very strong suspicion among laymen that it is on these matters that the military mind most needs bringing up-to-date.

Strategy is not the only matter on which long-standing preconceptions need re-examination. It needs to be asked whether the CARDWELL system of "linked battalions" is appropriate to the new conditions. HALDANE wanted to

abolish it thirty years ago, and the need for at least a part of the Army to be definitely trained for European service has not lessened since his day. Or there is the question of the terms of enlistment. The seven-year period is proving unattractive to recruits without yielding special benefits in efficiency. Both France and Germany now have what amount to two armies, a highly-trained nucleus of men who serve a life-time, and a short-service army building up vast trained reserves. Should we not, on our smaller scale, make some similar reform? The new policy of depleting the reserves by attracting time-expired men back to the colours seems to make it logically necessary. More immediate than these questions of organisation are the problems of supply. There is some danger that the Army, precisely because of the confusion surrounding its purpose, may become the Cinderella of re-armament.

The public looks to the War Office to answer these questions. But it does not expect them to be answered with a mere reference to glorious traditions. Nor is the public over-impressed with the doctrine of "trust the expert." Civilians have always made the best Army reformers. CARDWELL, the Liverpool business man, and HALDANE, the Scots lawyer, provide ample precedent for MR HORE-BELISHA. Moreover, there are the lessons of the last war. It has been said that JELlicoe was the only man on either side who could lose the War in a single afternoon. But though the generals' mistakes were not as immediately disastrous as a naval blunder might have been, they had nevertheless to be slowly wiped out in rivers of blood. It is perhaps too severe to say, as one critic has put it, that the General Staffs still have before them "the picture of 1918 painted with the renewed confidence of 1914 upon a canvas of 1814." But Passchendaele has left behind a healthy distrust of generals.

This explains the satisfaction, amounting almost to enthusiasm, with which last week's changes have been greeted. There is no reflection upon the officers who have resigned; but the change is taken by the public as meaning that the way has been cleared for the re-examination of the whole *rationale* of the British Army in the desperately cold light of the facts of the present world. Whether the assumption is correct, whether MR HOREBELISHA has pointed the British Army in the right direction, whether the new men are not merely younger than and different from, but superior to the old, cannot now be said by any man living. But the SECRETARY OF STATE is at least sure of public support in his search for methods of bringing the Army to the highest pitch of military efficiency in an armed and mechanical world.

Population on the Move

MUCH has lately, and rightly, been made in Parliament and the Press of the potential consequences of a movement which threatens us first with an ageing and later with a declining population. The effects of such a change (which were analysed in *The Economist* as recently as July 10th, 17th and 24th, on pages 59, 115 and 167) must necessarily be profound, and the nation cannot afford to neglect them. There is, however, another type of movement in the population of these islands of which much less is popularly written—the migration of large bodies of people from one town or one region or one industry to another, or from country to town or from town to suburb. The consequences of this ceaseless internal migration are evidenced in a hundred ways: by new housing estates, *passim*; by the

depopulation of Welsh mining valleys and the uprising of towns like Dagenham, in the Thames marshes; by Northern accents heard in Oxford; by the rush-hour difficulties of the London Transport Board; by increased sales of the humble pedal-bicycle to workers living at a distance from their employment; and by many other signs. For really satisfactory information about internal migration we must rely on the geographical and industrial figures of the decennial census returns, but a valuable insight on more recent developments is afforded by the Ministry of Labour's figures, particularly the annual "census" of insured workers described in the current issue of *The Ministry of Labour Gazette*.

The first and most striking conclusion suggested by the available evidence is that Britain, like the majority

of countries enjoying a Western type of civilisation, is fast becoming a land of town-dwellers. The census of 1931 showed that, if towns and urban districts were taken together, as much as 80 per cent. of the population lived on 12 per cent. of the surface of England and Wales. The population of London increased between 1921 and 1931 at more than double the rate for the whole of Great Britain. Industrial depression failed to check the steady concentration of new urban and semi-urban areas round centres like Manchester and Liverpool.

The growth of towns, however, is only a single aspect of the population movements of recent years. People have been moving outwards as well as inwards from great cities. For example, between 1881 and 1931 the county of London had a net "natural" increase of two million persons, but lost one and a half millions by migration. Even more significant has been the movement of the population in response to the geographical redistribution of Britain's industrial activity. Thus, in recent years, the Midlands have served as a species of clearing house through which have passed industrial workers from the Northern manufacturing areas on either side of the Pennines, from Wales and from London and its hinterland. The Midlands have gained a little on balance, but the set of the tide has been towards London and the South-East. Between 1923 and 1937 the number of insured workers in these two areas and the Midlands together increased by 34 per cent., while the percentage growth in the North-Western and North-Eastern areas was only 12½, and in Great Britain and Northern Ireland as a whole only 22.

The opposite effect of industrial prosperity and depression is even more strikingly brought out by the figures for different districts in Great Britain. Between 1921 and 1931, migration cost Lancashire 2.3 per cent. of her population. In South Wales the loss was 12.1 per cent., on the North-East Coast it was 9.2 per cent., in South-West Scotland 9.0 per cent., and in Cumberland 8.7 per cent. The decline in population was heaviest, in fact, where industrial depression was greatest. The experience of Lancashire, examined more closely, reinforces this moral; for as much as 83 per cent. of the total loss by migration from the county between 1921 and 1931 occurred in the two years 1930 and 1931, during the trade slump. Yet some districts in Lancashire actually registered rises of anything up to 24 per cent. during the decade, while many others suffered losses ranging down to 12 per cent.

What are the causes of these important movements of population? One cause, undoubtedly, is a desire to enjoy the facilities and amenities of town life, to which we may add the ambition which prompts workers already in employment to migrate voluntarily to better-paid jobs. These movements are essentially voluntary. But other and special factors cause migration of a more or less enforced character. Changes in industry and commerce lead to movements which, though undertaken on individual initiative, are largely involuntary. And, under the policy of transference from the Special Areas, thousands of men, women and children have been moved by the State.

What are the factors which make these involuntary movements necessary? Hitherto, nearness to ports, markets, or sources of material, and the availability of suitable sites and supplies of labour, have governed the location of industry. On the whole, trades like cotton, shipbuilding and coalmining, which relied most on export trade, were the most highly localised of British industries. Consequently, depression, which crippled the export trades, created Special Areas, with a population that must move or be moved. Between 1923 and 1936, the number of employed workers in the cotton industry fell by 20 per cent., in shipbuilding by 21 per

cent., and in coalmining by 47 per cent. We may contrast this experience with that of industries localised largely in a prosperous inland area like the Midlands. During the same period the number of employed workers in the carpet trade increased by 20 per cent., in iron and steel tube making by 31 per cent., in hosiery by 33 per cent. in general ironfounding, etc., by 35 per cent., in the miscellaneous metal industries by as much as 62 per cent., and in the motor, cycle and aircraft industry by no less than 72 per cent.

The social, economic and administrative problems created by these changes are embarrassing, costly and far-reaching. Migration, clearly, is bound vitally to affect the "social capital" of an area depleted of a large part of its population. The Rhondda Valley, for example, registered between 1921 and 1935 a decline in population of over 25 per cent. and a further decline of nearly 20 per cent. below the 1935 figure is expected by 1941. The effect on the institutional structure of the district will be considerable: for its government and services have been constructed to serve the needs of a population much larger than it is likely to possess in the near future.

On the economic side, if the risks of specialisation, the instability of which has largely caused these movements of population, are to be avoided in the future, it is clearly important to ascertain the conditions under which industries can be revived, or new industries encouraged in the Special Areas. The establishment of trading estates is an attempt in one direction to solve this problem by broadening the economic basis of life in these districts and thus providing a continuous livelihood for their populations.

Migration and transference, however, present their own group of problems. People do not always move easily. The mobility of a population may be affected by temperament and environment, and also by social circumstances. In Lancashire many workers are women, and a fair proportion are married women, who move far less readily than men. The economic structure of a family is often based, not on a single bread-winner, but upon the co-operative effort of several. And the purchase of the family home, outright or by instalments, tends also to immobilise large numbers of people.

Diagnosis of a difficulty is one thing and prescription is another. Despite the recent improvement in trade activity, the fundamental problem of the proper location of industry is far from having been resolved. Should the rapid development of London and the South-East be deliberately checked, as SIR MALCOLM STEWART has suggested? Is compulsory State-directed location of industry the obvious specific remedy, as some members of Parliament appeared to suggest during this week's debate in the Commons? It would be premature, at this stage, to anticipate the findings of the Royal Commission which is considering the whole question of industrial location. But there are obvious objections to any hasty action which might provoke more ills than it would cure. Whether, in the long run, the Government's agricultural policy, land settlement, afforestation and so forth, will play an effective rôle in the general redistribution of the population, it is also too early to say.

What emerges most clearly from study of this intricate and serious problem is the fact that more knowledge is needed as the foundation of policy. The task of the Royal Commission may be formidable, but its findings will be indispensable. The events of the last quarter of a century have squarely posed the question whether inevitable economic change should be allowed to take its own course, or whether it can be controlled, without authoritarian regimentation, in the social, economic and strategic interests of the country.

Industry in the Dominions

THE rise in prices since 1932 has so greatly increased the value and profitability of primary production in the British Dominions that it has tended to deflect attention from the simultaneous progress of their secondary industries. To that progress a number of factors have contributed. One was the increased protection afforded to manufacturers in the Dominions after 1929 as part of the effort of Dominion statesmen to adjust their balances of payments to meet lower prices and the drying-up of imports of capital. Another factor has been the improved technical efficiency achieved by local industry under the pressure of slump conditions. Over and above these special conditions, there has long been a tendency towards the industrialisation of all the newer countries of the world, and recent events have, on the whole, served to intensify it. Abnormal protection has now assumed quite a subordinate scale in stimulating industry in the Dominions, except in the special case of the Irish Free State. Practically all special crisis restrictions have been removed in the other Dominions. The Ottawa Pacts and other trade treaties have modified the effective scale of tariff protection, and the Scullin and Bennett tariffs are things of the past. We must look, therefore, to permanent economic factors for the main explanation of the recent growth of secondary industries in the Dominions.

Australia offers, perhaps, the outstanding example of industrial expansion since the last slump. From 1919-29 to 1928-29 the annual value of all material production in Australia, both primary and secondary, fluctuated with numerous ups-and-downs between extreme limits of £343.7 millions and £454.6 millions, the peak being reached in 1924-25. Meanwhile, the net output of manufacturing industry rose steadily, without a single break in the curve, from £92.3 millions to £159.8 millions. At the end of the decade its proportion to the whole was 35.7 per cent. The depression drove the value of all material production down to £305 millions, and the net value of manufacturing production down to £106.5 millions, its proportion to the whole thus falling to 34.9 per cent. By 1935-36 (the latest year for which full statistics are available) the proportion had risen to 38.5 per cent., total production having meanwhile been raised to £405 millions, and the net value of the manufacturing production to £155.9 millions. Such later figures as have been published suggest that the same trend has been continued during the past three years. In 1928-29 the average number of persons employed in Australian manufacturing industry was 450,000. Three years later it had fallen to 337,000, but by 1934-35 it had regained its pre-depression level. In June of this year the figure was 535,000, which was some 19 per cent. more than the maximum annual average before the slump.

The tendency, indeed, for the volume of employment in secondary industries to recover more rapidly than the value of the net output of those industries has been general in the Dominions. Thus, in New Zealand the net output fell from £32.3 millions in 1929-30 to £24.2 millions in 1931-32, and recovered to no more than £30 millions four years later. The numbers employed, however, fell only from 83,000 to 69,000, and by 1935-36 were in excess of 86,000.

In Canada the net output of manufacture fell from \$1,997 millions in 1929 to \$1,390 millions in 1931, while the number of workers fell only from 694,000 to 557,000. By 1935 the net output had fallen even lower, to \$1,302 millions, but over 25,000 more workers were employed than in 1931. In 1935 the gross agricultural income of Canada was only \$949 millions. Even if we add to this figure some \$115 millions earned from primary forest production, and \$47 millions from furs and fisheries, the total of \$1,111 millions is below the net income of manufacturing industry.

While Canada has been slowest in recovering her

pre-depression industrial position (though her net output has risen largely since 1935), recovery in South Africa, thanks to the gold boom, has been very rapid. In 1934-35 the net output of private secondary industries in the Union was valued at £52.6 millions, a figure over 22 per cent. above the peak pre-depression figure of £43 millions in 1929-30. The number of Europeans employed had risen from 70,000 to 96,000, and of non-Europeans from 116,000 to 139,000. A further rapid advance is now causing a serious pressure on the labour supply.

The Irish Free State (now, to the solace of her nationalists but to the confusion of everyone else, to be officially entitled Ireland) can be brought into the same picture of industrial expansion. Though she is a Dominion by analogy rather than by historical character, she has in this connection at least two traits in common with the overseas Dominions. The first is a reliance on exports of primary products, which find their chief (in her case virtually their only) market in Great Britain. The second trait is a determination to render herself more independent economically by fostering local secondary industries. In Ireland this process has been stimulated by the so-called tariff war, which arose out of her political quarrel with Great Britain. In 1926 the net output of her manufacturing industries was £23.1 millions, and these industries employed 90,000 workers. By 1931 the net output had advanced to £25.6 millions, and the employment afforded to 96,000. There are no complete figures for later years; but if those available for certain of the more important industries are indicative of the whole, then the net output would seem to have risen above £31 millions by 1935 and the numbers employed to 155,000. A fall in the average rate of money-wages paid is a striking feature of the Irish statistics.

Altogether, in the Dominions as a whole it is clear that the long-term trend towards increasing industrialisation has not been disturbed, but rather reinforced, since 1929. Experience of collapsed primary prices, and the threat or actuality of quantitative restriction on the entry of their products into their principal market—in most cases Great Britain—would seem to have accentuated the Dominions' long-standing ambition to secure "a more balanced economy." Their increasing industrialisation has inevitably been accompanied by increasing urbanisation, which has set up its own subsidiary economic problems. Even in New Zealand, over one-third of the population (excluding Maoris) now lives in the four principal urban areas.

It is doubtful whether popular ideas about Empire trade, migration and capital investment have kept pace with these developments. The figures given in this article suggest that the Dominions are no longer to be considered, primarily, as great granaries and pastures, feeding a great urban aggregation in the United Kingdom. They are rising industrial countries, though primary production is still the mainspring of their economic activity. As markets for our goods, however, or as providers of opportunities for the investment of our money or men, they are conforming more and more closely to the pattern of other industrial countries. This is a development in which the Dominions' policy of protecting their manufacturing industry has played a large part, but to which Britain's agricultural policy has also contributed. Strategical considerations have, in turn, contributed to the same end; for, apart from their general effort towards greater economic self-sufficiency, the Dominions have without exception spent an important part of their re-armament effort on the stimulation of local munitions industries. The tendency towards the industrialisation of the Dominions, in short, is undoubtedly permanent in its effects, and its implications deserve fuller recognition by statesmen, industrialists and traders in Great Britain.

Is Life a Boon?

UNTIL three years ago a personal action at law died with the litigant and the estate of a deceased person could be neither plaintiff nor defendant in a suit for tort. In 1934, however, our excellent lawyers and our Ministry of Transport decided to have the law changed. An Act was passed, known as the Law Reform (Miscellaneous Provisions) Act, by which the right of action was made to survive death. In the Act's own words:—

All causes of action subsisting against or vested in him shall survive against or for the benefit of his estate.

The birth of this miscellaneous reform was widely acclaimed. The trouble with begetting children, however, is that one never can tell what they are going to do in later life; and it was not long before the parents of this new law had reason to be astonished at their own offspring. When the Act first came before the House of Lords it appeared that a dead man's heirs were entitled to receive damages for the very shortening of life which had brought them their inheritance. It was decided in the now famous case of *Rose v. Ford* that, if a man is negligently killed, not only can his dependants claim for their own loss but his estate (i.e. his heirs) can claim for the years which he would have lived, the life that he would have enjoyed but for the accident. That judgment caused consternation among the authorised insurers of motor car risks, and must in time force them to re-cast the whole scale of premiums charged.

A week ago there came before MR JUSTICE GREAVES-LORD another case—that of a little girl aged eight who was killed by a Great Western van at Swindon. Her father claimed for himself the expenses in which he had been involved by her illness and death; and for her estate he claimed compensation for the loss of the life which she would have had if the accident had not taken place. The poor child herself was beyond reach of money; but, on the strength of *Rose v. Ford*, a claim was made on her behalf for the benefit of her personal representatives; and to the judge fell the difficult and responsible task of deciding what were the proper damages for cutting short a life at the age of eight. He gave his decision in a judgment which is a remarkable combination of law, accountancy, philosophy, poetry and psychology. Bound by the case of *Rose v. Ford*, he said:—

The question was how far damages must be assessed for the loss of expectation of life which the child had suffered. It had to be assessed in her personal right just as though she were living.

In other words, the judge had to put himself into the position of this little girl at the time she was killed and to decide what was to her at that moment the cash value of the life which, on a normal expectation, lay before her. But there were (he explained) certain factors that might be thought to have a bearing on that value, which he was prevented by the House of Lords from bringing into account:—

What one had to value was life as a whole with all its various incidents. One could not take it on loss of earnings or any calculation as to earning capacity. One was not allowed to base it on the social position of the person whose life was shortened because in respect of all those matters one was definitely and carefully restricted by the House of Lords.

Ruling out, therefore, wealth, prospective earnings, social position and the extent to which the person concerned would have appreciated the damages herself, his

Lordship faced the task of determining "what is life considered as a good thing," setting debit against credit, weighing the normal vicissitudes with all the joys, all the sorrows, all the hardships and the various burdens and duties, "coupled with the fact that the person had to provide for her own life." That simple asset must be turned by his Lordship into pounds, shillings and pence, and it is not surprising that before doing so he turned for help to the stored wisdom of the poets. They led him to award the child's father £1,500.

As the duty of valuing lives in this way will almost certainly present itself more and more often so long as the law remains in its present admirable state, we have, in the hope of being helpful to His Majesty's judges and to the juries on whom the work of valuation will fall, given serious consideration to working out a "state of happiness" index number, which will be published as soon as certain minor difficulties have been overcome. In the meantime, we have drawn up a provisional schedule of life values according to occupations, on which the authorities may base themselves till the index number itself is ready. The judicial directions, fortunately, are clear and unambiguous. We have to value life as a whole without taking into account wealth, social position or earning capacity, but concentrating on the question of how far the life lost was a good thing, an amenity—how far the dead person was likely, if he had lived, to pass his life in rest and quietness. Money and social position do not count, and to the legal personal representatives a dead tramp, if he was happy before he died, is a better investment than a wealthy but worried stockjobber. The issue, it will be seen, is simple, and it remains only to express the result in sterling, to which end we venture to submit to their Lordships for their future serious consideration a few valuations of dead folk according to their occupation and their respective enjoyment of rest and quietness:—

	£	s.	d.
A High Court Judge	100,000	0	0
A Commissionaire	10,000	0	0
A Ministry of Transport Official...	10,000	0	0
An Editor of <i>The Economist</i>	10	0	0
A Motor Car Underwriter in the present condition of the law ...	0	0	10

These figures can, of course, be taken only as a basis and will need to be weighted for individual cases in different ways. For example, in a British court of law regard must surely be had to the relations of this world and the next; and evidence must be heard as to whether the deceased person was likely to find himself better or worse off after his decease. For if the continuance of life is only a postponement of a future life, the value to himself of a man's life here must depend partly on what it is that is being postponed. If, therefore, we had evidence that a deceased civil servant had been a very good man, orthodox in his views and impeccable in his private life, we should be inclined to knock 50 per cent. off the valuation and give his legal personal representative £5,000 instead of £10,000. And *vice versa*, if the plaintiff could prove the deceased to have been a very bad man we might raise the damages to £20,000. A judgment from the House of Lords on this aspect of the law will be eagerly awaited. In the meantime, both the legal profession and the personal representatives of deceased persons may face the future in confident anticipation of a satisfactory harvest.

Notes of the Week

Setback in Employment.—The publication at the beginning of the week of the November unemployment figures (the salient features of which are reproduced in a later Note on page 524) came as a shock to public opinion. The returns for September and October had contained some elements of *disquiet* for those who analysed them closely, but on the surface they showed very little change in the trend of recovery. An increase of 108,000 in unemployment, however, and a fall of not much smaller proportions in the numbers of insured persons at work, came as a startling reversal of trend. The unemployment figures relate to the position on one particular day and a large change from one return to the next is sometimes to be explained by peculiar circumstances, such as weather or local holidays, affecting individual industries or districts on the day of the count. This month, unfortunately, there is no such possibility of explaining the figures away. The increase in unemployment was fairly evenly spread both industrially and geographically, Wales being the only region and coal-mining the only industry to escape. Nor is November a month in which unemployment has more than the slightest seasonal increase. The count this year was taken a week earlier than last year and the greater distance from the increase of activity in many trades in preparation for Christmas may have affected the figures slightly, but certainly not enough to account for more than a fraction of the rise in unemployment.

It has been appreciably more difficult, since the publication of these figures, completely to deny the existence of a recession in British trade. On the other hand, it is very important not to exaggerate its dimensions. The fall in employment is very little more than half of one per cent. of the total, and although the unemployment total is a bare 70,000 below the figures of twelve months ago—with a number of industries showing higher figures than in 1936—the number of persons employed is still 350,000 more than it was a year ago. The November figures are therefore disturbing only if they stand at the beginning of a downward trend. There is a large body of opinion which finds no basis for such a pessimistic assumption. Mr Reginald McKenna, for example, speaking on the same evening that the figures were announced, ascribed the recession entirely to the cessation of purchases of raw materials by American industry, leading to lower commodity prices and depressed Stock Exchanges. "While we may not unreasonably anticipate a decline in American industry," he said, "we need not anticipate any similar decline here." On the other hand, another body of informed opinion, with equal authority,

would almost exactly reverse Mr McKenna's prediction. But after this week's unemployment figures, there certainly cannot be any further attempt to stifle discussion of the outlook for British industry under the pretext that any forecast other than that of continued expansion constitutes a species of economic defeatism. There is now clearly a need for the most careful and objective analysis of the position of the national economy.

Air-Raid Precautions.—The Government's efforts to allay public anxiety about the state of the national defences continue. Hard upon discussion of the organisation of the Services came the announcement by the Home Secretary on December 7th, in the final stages of the Air Raid Precautions Bill's passage through the House of Commons, that the Air Raid Precautions Department was to be placed on a service basis. It will, in fact, become a Defence Department under the Home Office, civil in character but with the distinction between staff and administrative duties peculiar to service bodies. This organisational change and the additions to personnel—which include the appointment of Wing-Commander Hodson as Inspector-General in charge of the staff side and of Mr Eady, previously secretary of the Unemployment Assistance Board, as Deputy Under-Secretary of State—will, like the decision to collect information from local authorities concerning the possible evacuation of urban populations, inspire general confidence.

In the Commons' discussions this week there have been echoes of the wrangle about the allocation of costs between central and local authorities. For the most part, however, argument has been concerned with the technique of home defence. While most speakers have agreed with the Home Secretary that "no air raid precautions could assure complete immunity," there are still divergent opinions about the adequacy, within this limitation, of the Government's plans. The House was no doubt encouraged to learn from the Under-Secretary that public buildings, including the Palace of Westminster, were to be structurally safeguarded. But, for private persons whose resources will not permit them to construct the shelters for which wealthier persons are already seeking remissions in rating or income-tax assessments, the news that not even the London tubes will be available as refuges is disquieting. Nevertheless, despite delay due to fiscal and political polemics, much headway has been made with the organisation of raid precautions. A gratifying number of

persons has been trained in protective methods; and the Government has realised the problem's central importance. It is clear, however, that the belief that this country has lagged behind some others in vital aspects of air-raid precautions is not entirely unfounded. And, since actual anti-aircraft developments seem so far to have been slight, the Government's concentration on the offensive in the air will not in itself dispel alarm.

* * *

Amendments to the Population Bill.—The amendments to the Population (Statistics) Bill which have been handed in by the Government show that Sir Kingsley Wood has decided to meet the detailed criticisms of the Bill that were made on second reading rather than to abandon it altogether. The first of these amendments limits the obligation of the public to the provision at the time of registration of "such of the particulars specified in the schedule to this Act as are appropriate to the registration and are within the knowledge of the person giving the information." The Act is now to come into force automatically on July 1st next without any procedure by Order in Council. Other amendments strengthen the safeguards against the improper disclosure of information thus collected. The biggest changes, however, are in the schedule, which instead of outlining a wide field for the Government to pick and choose from, specifies precisely the questions that will be asked. In the case of a birth, the information to be collected will be the age of the mother, the date of the marriage, the number of previous children by the present or previous marriages, and the number of such children living. In the case of a death, the questions will be, for a male, his marital status, for a married woman, the date and duration of her marriage and the number of her children by her husband or any former husband, and for married persons of either sex, the age of the surviving spouse. This schedule provides for the greater part of the essential information, though completeness will still be prevented by the special privacy accorded to the unmarried mother and, perhaps, by the restriction that only such information as is within the knowledge of the person making the registration may be demanded. Mr A. P. Herbert, whose speech in opposition to the second reading of the Bill played the largest part in inducing the Minister to amend it, is reported to have stated that he will support the amended Bill, and if it now has an easy passage to the Statute Book, the Englishman's objection to prying questions will have been triumphantly demonstrated, without the Government being deprived of the information that is needed on this important topic.

A Road Accident Inquiry.—In a debate on road accidents in the House of Lords on Wednesday, the Government accepted a motion to appoint a Select Committee of the House to inquire into the problem, and make recommendations for reducing the number of casualties. There is no doubt that the public conscience has not yet been sufficiently stirred by the appalling figures of deaths and maimings on the roads, and the Select Committee will perform a service in crystallising opinion. Unfortunately, however, the debate showed how difficult it will be for any representative Select Committee to reach unanimity on proposals for betterment. Opinions—or perhaps it would be more accurate to say prejudices—are, in fact, sharply divided into two camps. The three first speakers in the debate, the Bishop of Winchester, Lord Newton and Lord Ponsonby, blamed the motorist, and Lord Ponsonby, after saying that he was "perfectly sure" that it was not the roads but the human factor that was the key to the position, went so far as to say that widening roads merely increased the number of accidents. Later speakers, on the other hand, acquitted the motorist and placed the blame on "road starvation." The difficulties are further illustrated by figures contained in an analysis of 100,000 road accidents made by the

Ministry of Transport. Of the total, 45 per cent. are blamed on the drivers or riders of vehicles (including pedal cyclists), and the most frequent single fault is "emerging or turning from one road into another without due care." Excessive speed, which bore the full weight of the censure of the anti-motorist peers, is given as the cause of only 4.4 per cent. of the accidents. On the other hand, bad road conditions share an omnibus item with the weather and mechanical defects, and the three in combination only account for 8.7 per cent. But it is also true that many of the accidents blamed on drivers, especially the large number which occur at road junctions, would not have happened with better roads.

A Separate Film Quota?—The Committee stage of the Films Bill continues its slow progress. Some freakish propensity among different sections of the film trade seems to be responsible for the erection of hurdles in unexpected places and at unexpected moments. Last week was devoted to the Films Commission; this week the separate quota has been under consideration. Future sittings will be devoted to the viewing panel; and a full-dress opportunity will no doubt be created on some other occasion for the discussion of film reciprocity. Meanwhile the shadow of next March 31st looms ominously ahead. On Thursday of this week Mr Oliver Stanley had no difficulty in exposing many of the fallacies which envelop the specious and superficially attractive scheme known as the separate quota. When it was first mooted a few weeks ago we suggested that splitting the quota might prove as difficult as splitting the atom. We believe the promoters of the scheme did not realise how serious was the fallacy on which their scheme was based, and on which it must ultimately founder. Protection by quota is totally different from protection by tariff. The efficacy of tariff protection ultimately depends on power to shift its incidence on to the ultimate consumer. There is no analogous power in the case of quota protection. A monopoly is doubtless created for a portion of the entire market, though even in this *enclave* the object of the producers will be realised only if prices to exhibitors can be raised to a point at which a margin of profit can be realised in the home market. It is, however, of the essence of the Government's scheme, as it was of the expiring Act, that the exhibitor can plead, in defence against any prosecution for quota default, that the prices at which films might have been procured were too high to be remunerative. There has never been, and there can never be, any power to coerce the public to pay for admission to cinemas to see films they do not want; and without this inflation of revenues the protection will be ineffective. A further objection made by Mr Stanley in the strongly reasoned speech to the Committee, in which he advised the rejection of the plan, was the fact that British renters would have two kinds of films, one kind consisting of those made to satisfy renters' quota, and a second of those designed to satisfy exhibitors' quota. As the qualification of each would be the same, there would be a natural tendency for the better films to be registered for renters' quota, and the worse films for exhibitors' quota. If this happened, it would be difficult to contemplate prosecutions against exhibitors for default when in fact they had been showing the better British films which were not technically eligible for statutory quota. Experience seems again to be emphasising the danger of last-minute proposals.

The Mailed Fist at Shanghai.—In contempt of the most earnest entreaties to refrain, the Japanese did, after all, carry out their "victory march" through the International Settlement at Shanghai on Friday of last week. Apart from the juridical aspects of the case, it was a provocative act, considering that the International Settlement has a huge Chinese population, swollen during

the last few months by thousands of the innocent victims of the aggression which the "victory march" was to celebrate. The Japanese Army was deliberately imposing on the International Settlement Police a virtually impossible task; and although the police did wonders, it was beyond their power to ensure that there should be no "incidents." In fact, there were three, the most serious being the throwing of a bomb by a Chinese spectator at the Japanese troops as they marched past. Luckily the bomb caused no fatal casualties; a Chinese policeman shot the bomb-thrower, and a Scottish policeman interposed himself as a screen between the exploding bomb and a Japanese spectator. For a time it looked as though, nevertheless, the Japanese Army were going to seize upon this pretext for occupying the southern part of the International Settlement—as they have already occupied the northern part (Hongkew) since the beginning of the present hostilities. The Settlement Commissioner of Police (a British subject, Mr F. W. Gerrard) finally induced them to withdraw after a long argument. Their declared intention to carry out another "victory march" through the French Settlement has been successfully resisted by the French authorities on the ground that the Japanese have no legal status there (as they have, of course, in the International Settlement, as one of the nations with a share in its administration). Even the French, however, have been compelled to concede a right of way through their Settlement to a train of Japanese military lorries. On Tuesday the Japanese military again invaded the Settlement to abduct several Chinese guests from a British-owned hotel. For this action what might pass as an apology was given and the prisoners were released. The Japanese civil authorities, in the persons of the Consul-General at Shanghai and the Foreign Minister at Tokyo, are attempting to maintain the forms of legality and have announced that future relations between the Army and the Settlement authorities will be handled through diplomatic channels. But it is all too clear that the constitution of the International Settlement, always precarious, now lies at the mercy of the Japanese military.

Italy Leaves the League.—The Fascist Grand Council has been summoned to meet in extraordinary session on Saturday, and there are the most circumstantial reports that its business will be to approve Italy's resignation from the League of Nations. Two years ago Italy's withdrawal from Geneva might have had considerable political importance. Now it has none. Indeed, it is difficult to understand why, after so many hesitations, Signor Mussolini has decided on the retreat from Geneva at precisely this moment. It brings Italy no advantages, since she could avoid China's pending protest against her recognition of Manchukuo by merely refraining from attending, as she has done for two years past. And it brings the small disadvantage to Signor Mussolini that it removes one of his regular opportunities for demanding the recognition of the Abyssinian conquest. The explanation is probably to be found in pressure from the other two corners of the anti-Communist "Triangle," who presumably feel uncomfortable at even the slightest tribute paid by international vice to international virtue. To the League, Italy's resignation will bring few regrets, save that the decision was not made to expel her at the time of her conviction as an aggressor.

* * *

France and Poland.—M. Delbos' tour of France's European allies has now taken him from Poland to Roumania. Little though we may know about what passed between the French visitor and his Polish hosts, there is one conclusion of importance which can be accepted without hesitation. M. Delbos has been a great deal more successful than his unfortunate predecessor, M. Barthou, who was the last French Foreign Minister to tread the East European road. M. Delbos has had a

delicate and difficult task. One of his most formidable obstacles was the memory of M. Barthou himself, who had both alarmed the Poles by trying to drag them into an anti-German front and incensed them by an irritating assumption that it was Poland's business to follow France's lead. Both these pitfalls have been avoided by M. Delbos. Moreover, Herr von Neurath did France as well as Germany a very good turn by his happy stroke of statesmanship in paying a call on M. Delbos in his railway carriage in Berlin. This improvised Franco-German meeting will, it is to be hoped, be the prelude to more leisurely conversations between the same two parties; but, in any event, the meeting in Berlin has already done a service to the cause of European peace. It enabled M. Delbos to continue on his way to Warsaw without appearing to be bent upon either encircling Germany or compromising Poland. Hitherto, French policy has been directed to providing security for all European countries except Germany, and German policy to breaking up a system of security from which Germany was excluded. Cannot France and Germany agree upon a joint pursuit of security for everybody? That would certainly suit the Poles, who want neither on the one hand to encircle Germany, nor on the other hand to be dominated by her. One particular question that is known to have come up at Warsaw was that of finding outlets for emigration, and supplies of tropical raw materials, for densely populated Central and East European countries. In this matter, Poland and Germany have parallel interests; but Poland appears to be eschewing all claims to the acquisition of colonies for herself, and to be concentrating upon the possibility of forming special connections with colonial territories under the flags of other nations. Thus, almost at every turn Africa is found at the heart of European problems.

Non-Intervention and Dis-Intervention.—The Sub-Committee of the Non-Intervention Committee met again on Tuesday at the Foreign Office in order to consider the replies from the two combatant parties in Spain to the Committee's proposal for a withdrawal of foreign troops on both sides. It appears that, in the Sub-Committee's opinion, both the replies can fairly be regarded as "acceptances in principle." From principle to practice, and from words to acts, is usually a far cry in the field of international affairs—as is witnessed by the Abyssinian tragedy among other miserable dramas that have been played out to sorry conclusions on the diplomatic stage during the past few years. It is possible, and perhaps even probable, that the war in Spain will be over before the Committee's withdrawal-scheme is ever

Prosperity Programmes in America.—The American Government is still earnestly preoccupied with the methods of putting a stop to the business recession which has come upon the country with such surprising swiftness. It is barely two months since President Roosevelt summoned Congress into special session in the obvious belief that with public opinion behind him he could persuade it to enact further instalments of the New Deal. But so quickly have conditions changed that Congress with public opinion behind it is forcing him to abandon one tenet of the New Deal after another in the attempt to placate business and start the indices once more moving upwards. For the present at least, the President's leadership has almost lapsed. He has gone far towards meeting the ideas of Wall Street and Big Business, but not far enough to placate these implacable enemies. Unfortunately, as we commented last week, the need to placate the Opposition seems to be stronger than the need to cure the recession. The housing message, for example, was well received by the conservative elements, especially for its hint of the need for lower wages, but it will probably be less successful in getting houses built. Similarly in the field of the Budget, business opinion appears to demand at one and the same time the balancing of the Budget and the repeal of taxes which, whether or not they are just, are certainly productive of revenue. The result seems likely to be the cutting-down of expenditure and the imposition of new taxes, and it is highly unlikely that these two deflationary blacks will make a reflationary white. Mr Wallace, the Secretary of Agriculture, has outlined a seven-point plan for recovery, consisting of a revival in housing; revision of taxation "to cure injustice but to maintain revenue"; maintenance of farm purchasing power; maintenance of the purchasing power of labour "by the formulation of a sensible labour programme"; "assurance of an abundant supply of cheap credit and capital by a healthy securities market"; provision of Government capital in case of need to carry the burden until private capital takes over; and the continuance of a careful approach for the revival of world peace and world trade by a reciprocal trade programme. This outline is verbally impeccable; but different interpretations might be put upon every item in it. Mr Wallace has not lightened the prevailing obscurity. The plain truth is that a sharp trade recession had no place in the Administration's outlook. Mr Roosevelt has been caught off his political and economic balance, and in both spheres he is still floundering.

* * *

Less Capital Abroad.—Sir Robert Kindersley has returned with vigour to his theme of the dangerous depletion of British investments overseas. In the latest of his annual surveys he estimates that the total nominal value of our overseas investments fell by £24 millions to £3,764 millions in the course of 1936. He had already published figures showing that redemptions and repayments exceeded new issues in that year by £46 millions, the balance being partly restored by other newly-acquired capital. It is true that, thanks to higher commodity prices and trade recovery, the income from our capital abroad rose from £159,200,000 in 1934 to £171,600,000 in 1935 and £184 millions in 1936. Mining and rubber dividends have more than doubled since 1934, and even the interest on foreign loans has risen slightly. But Sir Robert Kindersley points out that the quality as well as the quantity of total overseas investment is falling off. In 1936 holdings of Empire loans declined by £57 millions, whereas the post-slump increase in the nominal value of foreign loans has largely consisted of the involuntary conversion of unremitted in-

terest into capital. Mining enterprise is the only category in which commercial investments abroad have appreciably increased since the depression. Sir Robert's warning cannot be ignored. It was the considered conclusion of *The Economist's* Supplement on British Capital Abroad (published in the issue of November 20, 1937) that unless our overseas investment is at least maintained intact, a readjustment of our industrial structure and our national standard of life must sooner or later become necessary.

* * *

Milk Prices.—When the Government announced its plans in July for continuing the subsidy in aid of the price realised by milk going into manufacture, it was met by the furious and indignant objection of the National Farmers' Union. The objection was not to the receipt of public money; it was an objection in principle to the Government's refusal to place duties on imported dairy products. The Minister of Agriculture has now filled in some of the details in his proposals, and it is discovered that the opposition of the N.F.U. has been very considerably abated; high principle has, in fact, yielded to financial persuasions. The standard prices which are to be "insured" have been raised from 100s. per cwt. in the case of butter to 112s. in summer and 120s. in winter, and from 56s. per cwt. of cheese to 62s. 6d. in summer and 67s. 6d. in winter. The quantities to which the subsidy is to apply are specified as being 125,000,000 gallons per annum in each case. These are high prices—the present level is 133s. and 70s. 6d. respectively—and the gallonage is more than went into these uses in the twelve months ended September 30th. Moreover, the earlier proposal to reduce the subsidy by a "tapering" process over a period of years is now made subject to review, which probably means abandonment. Thus the familiar story of subsidies looks like being repeated: they get higher and more permanent as time goes on.

* * *

Production in France.—The recommendations of the General Committee on Production in France have still to be made public, but confident forecasts suggest that a feasible compromise may have been found between the social importance of retaining the basic elements in M. Blum's New Deal in industry and the indisputable need for a greater rate and volume of industrial production. It is well known that the Government's plans for amending the incidence of the forty-hour week have already been prepared. In recent weeks, revisions have been made to permit longer hours in retail trade and certain categories of mining; and it is expected that the Committee's conclusions will be on similar lines. There can be no question of abrogating the principle of the forty-hour week, so long as the Popular Front remains relatively intact—especially when the improvement in time-rates of payment due to the reduction of hours from 48 to 40 has been wiped out by the depreciation of the franc. The Committee is likely, however, to suggest the working of overtime in industries, such as mining, where labour is short and production is lower than is required by France's industrial and commercial needs. Industries in process of reorganisation will be similarly served by some temporary relaxation in the present rigid application of the forty-hour principle. The forty-hour week will thus be retained as the foundation of French industrial legislation, and suspended only under strict safeguards for a limited time, to tide over the current emergencies which press hard upon France's balances of trade and payments. Some compensation is likely to be given to the trade unions in the form of improved working or living conditions; and overtime payments will be made reasonably attractive. Only when the exact proposals of the Committee are made known will it be possible to estimate the doubtful factor, that is, their quantitative effect in lightening the Government's task of restoring the equilibrium of the national economy.

New Commonwealth Parliament.—A post-election reconstruction of Mr Lyons' Cabinet was made necessary by the defeat of three Ministers at the polls and the retirement of two others. The most interesting appointment is that of Mr W. M. Hughes as Minister of External Affairs, whose return to such a position will, no doubt, be taken as a gesture of moral re-armament. The balance of the Cabinet between the United Australia and Country Parties is scarcely altered. The programme of legislation outlined in the King's Speech includes the adoption of the clauses of the Statute of Westminster which have not hitherto applied to Australia, the institution of national health and pensions insurance (on which Australia recently had the advice of British official experts), and the establishment of a mortgage bank department of the Commonwealth Bank. The States are to be consulted afresh with a view to framing a scheme of national unemployment insurance. The most important issue in the debate on the Address (in striking similarity to the recent debate at Westminster) has been the Labour Opposition's argument that a trade recession cannot be far off and should be parried by a programme of public works financed by loans.

* * *

By-Election Portents in Canada.—Two by-elections of critical importance have just taken place in Western Canada. The announcement of formal Anglo-American trade negotiations brought the vigorous intervention of Mr Bennett in the Federal by-election in Victoria, British Columbia, and made of it a test-case for the Liberal Government's freer trade policy. In the Liberal landslide election of 1935, the Liberal candidate had come last in a three-cornered contest; now, with the same three parties in the field, the Liberals won the seat for the first time for thirty years. Mr Mackenzie King claimed for this decisive result that it meant that the days of economic nationalism and economic imperialism were past for Canada. Certainly Mr Bennett's view that there must be no tampering with the Ottawa preferences could not have met with a flatter rebuff. The provincial by-election at Lethbridge, Alberta, though neither so important nor so convincing, was of interest as showing the trend of Albertan opinion about the Social Credit Government. The Social Credit candidate had had a clear majority of 800 over three other candidates in the General Election. On this occasion the Opposition presented a united front, and won the seat by well over 700 votes. A turnover of 20 per cent. of the poll should be a great encouragement to Mr Aberhart's opponents.

* * *

Shipping Rates Fall.—The steep rise in shipping freight rates between the summer of 1936 and 1937 gave way to a headlong decline in October. Between September and November our index of freight rates fell by no less than 14 per cent. Thus, the reluctance of shipowners to place new orders for merchant vessels at current prices can be readily understood. The sudden decline in freight rates has been caused by the deterioration of the international situation since last summer, accompanied by a persistent fall in the prices of primary products. Incidentally, the prices of primary products took a downward turn six months earlier than freight rates.

The Economist INDEX OF FREIGHT RATES
(1898-1913=100)

	Average, 1913	Nov., 1936	August, 1937	Sept., 1937	Oct., 1937	Nov., 1937
European waters	110.0	126.1	178.7	180.6	181.3	164.2
North America	113.1	100.1	125.9	146.8	143.5	130.2
South America	123.4	102.9	154.2	159.2	148.6	125.0
India	106.3	123.1	180.2	186.4	177.9	161.9
Far East and Pacific ..	117.4	113.5	170.6	180.8	171.5	149.1
Australia	127.9	108.6	161.1	165.0	158.8	146.3
Total	116.3	112.4	161.8	169.8	163.6	146.1
1913 = 100	100.0	96.6	139.0	145.0	140.7	125.6

As the next table shows, none of the leading trade routes escaped the decline in freight rates between October and November:—

	Index No.	Inc. or dec. Points		Index No.	Inc. or dec. Points
Home trade	128.3	- 3.4	South America:—		
Bay—outwards	187.2	-23.8	Outwards	77.8	-21.6
Bay—homewards	251.6	- 3.2	Homewards	172.3	-25.5
Mediterranean:—			India—outwards	134.7	- 8.3
Outwards	103.0	-33.1	India—homewards	189.1	-23.8
Homewards	186.6	-36.2	Far East, etc.	149.1	-22.4
North America	130.2	-13.3	Australia	146.3	-12.5

The extent of the rise of rates in 1936-37 and of the decline since September is shown graphically by the accompanying chart:—

Despite the sharp decline since September, our index of freight rates for November is still 61 per cent. above the level of June, 1936. Unfortunately, the possibility of a further decline cannot be ruled out. Consequently, a marked increase of shipbuilding orders in the near future can scarcely be expected.

* * *

Still More Cotton.—The sixth official estimate of the yield of the cotton crop in the United States ran true to form by showing a further substantial increase over the figures given in the preceding forecast. Beginning with a forecast of 15,593,000 bales in August, the United States Department of Agriculture has steadily raised its estimates to 18,243,000 bales in November and 18,746,000 bales this week. This is the heaviest crop ever harvested in the United States, the former record being 17,978,000 bales in 1926. The area under cotton was considerably smaller than in former years, but favourable weather conditions and a liberal use of fertilisers—encouraged by the restriction of acreage—produced an abnormally high yield per acre, estimated at 264.6 lbs., against 197.9 lbs. last year. As we pointed

TRADING ABROAD

The existence of restrictions in a given country may temporarily prohibit dealings in forward exchange, but up-to-date information on this and on all points bearing on Forward Exchange generally may be obtained through any branch of the Westminster Bank. For any who may be unfamiliar with the facility, a very brief outline entitled *Forward Exchange* is always available at its counters

WESTMINSTER BANK LIMITED

Head Office: 41 Lothbury, London, E.C.2

out in a survey of the cotton position in *The Economist* of November 27th (pages 408-9), this season's world supplies of the textile fibre are likely to reach 51 million bales, while consumption is unlikely to exceed—and may even fall below—last season's total of some 30 million bales. In these circumstances, the outlook for prices will be definitely discouraging in the absence of wholesale destruction and some curtailment of output next year. The markets have taken the addition of another half-a-million bales to the anticipated yield of America's crop with calm, for prices were left practically unchanged. What does it matter if a molehill be raised on the top of a mountain?

Wages and the Cost of Living.—That the marked rise of the cost of living since last spring, though partly seasonal, is causing anxiety is revealed by the controversy which recently found an echo in Parliament. On behalf of the Government it is said that a rise in prices was inevitable during economic recovery, and that employment and the purchasing power of wages are both much greater now than in 1931. The critics, on the other hand, base their arguments mainly on the admitted fact that the cost of living has recently tended to increase faster than wage rates, with the result that the purchasing power of wages is declining. In order to show recent developments in perspective we have prepared the accompanying diagram, indicating the trend of the Ministry of Labour's index of weekly wage rates and its cost-of-living index during the past ten years. Both indices have been based on 1929, the peak of industrial activity in the preceding trade cycle. The official cost-of-living index is admittedly inadequate, and the index of wage rates does not take account of changes in short-time or overtime work. The two indices, therefore, provide only a broad indication of the trend. With all their imperfections, however, the figures do throw valuable light on a matter of public importance, and they suggest, paradoxically enough, that both parties to the controversy have reason on their side. Apart from the increase in employment since 1929, the index of wage rates is still considerably ahead of the index of the cost of living. On the other hand, as the curve of the cost of living has risen much more rapidly than weekly wage rates since last spring, the purchasing power of wages has lately tended to decline. If the recent trends of wage rates and the cost of living con-

tinued much longer, the gain in real wages per head since 1929 would soon be lost. There are indications, however, that the rise in the cost of living may be arrested, or even reversed, before very long.

November Employment Figures.—The decline in the number of persons employed continued at an increased rate during the past month. As we suggest in a comment on page 519, it cannot wholly be explained by seasonal factors. Between October and November, 1936, the number of insured persons aged 16 to 64 in employment in Great Britain rose by 17,000, while this year it fell by 86,000 to 11,573,000. There were, however, 353,000 more persons employed in November, 1937, than in 1936. A year ago the number of unemployed persons on the registers of the employment exchanges rose from 1,611,810 in October to 1,623,602 in November—an increase of 11,792. During the same period this year the figure increased by 108,954 to 1,499,203. Over the year the number of men and boys has increased; the total number shows a decrease of 69,860 over November, 1936.

Industrial Group	Number in Thousands			Percentage	
	Nov. 23, 1936	Oct. 18, 1937	Nov. 15, 1937	Nov. 15, 1937	Change since Nov. 23, 1936
Coal mining	161.7	114.6	102.9	11.9	- 6.2
Engineering	47.3	41.1	42.9	5.2	- 1.1
Road transport	32.3	24.5	26.7	10.5	- 4.2
Shipbuilding and repairing	40.2	35.7	36.2	20.9	- 4.0
Building	145.9	124.3	142.9	13.8	- 0.5
Public works contracting	119.3	105.3	107.6	36.6	- 4.6
Cotton	57.1	39.4	50.0	12.2	- 1.4
Woollen and worsted	14.8	26.8	36.0	16.1	+ 9.5
Tailoring	25.5	24.3	30.3	14.1	+ 2.0
Hotel, boarding-house, etc., service	76.1	70.7	79.6	17.9	+ 0.4
Distributive trades	188.9	171.6	175.8	8.5	- 0.6
All persons registered (including other trades)	1,623.6	1,360.2	1,499.2	...	...

Employment has improved in the coal-mining industry since October, but all other industries show a decline. The improvement over the position a year ago is maintained in the heavy industries, but unemployment showed an increase in woollen and worsted textiles, and in tailoring and hotel service. Unemployment has increased in all the administrative divisions except Wales.

Agricultural Rewards and Penalties

NEW YORK, November 30.—The Farm Bill now before Congress promises to establish a new record for length and complexity. Discussion in Congress has certainly not clarified it to the public; and the Press, much more preoccupied with the severity of the business recession, has given it less attention than it merits. The Bill proposes a control of agricultural output. It provides quotas; and the farmer marketing in excess of his quota is liable to a heavy fine. If he adheres to his quota, the farmer is eligible for soil conservation benefits and commodity loans, as well as the advantage of a "parity" price.

Although it has been deemed *ultra vires* for Congress to control production, the present Bill, which covers marketing, is brought under the provision of the Constitution which authorises Congress to regulate inter-state commerce. In the maintenance of the parity price, the Bill includes the principle of the ever-normal granary, and apparently contemplates occasional dumping of surpluses on world markets. The proposal clearly involves heavy subsidies, but these are not specifically provided for in the Bill; and no estimates have been submitted. The Bill merely authorises the appropriation of "such sums as are necessary." The estimates run from \$500 millions upwards. The essence of the Bill appears to be price fixing for a number of agricultural commodities, buttressed by control of production and/or marketing, enforced by penalties and subsidies.

Public Control in Wall Street?

While the Agricultural Bill is probably the more important event, the recent formal statement of the Chairman of the Securities and Exchange Commission is more interesting to Wall Street. The New York Stock Exchange is an association, rather than a corporation—that is, seats on the exchange represent membership rather than share holding. As an association it has made its own rules of practice and undertaken the enforcement of its own rules. The statement, quite accurately, compares it with the management of a club; and recommends that executive responsibility, instead of being entrusted to the members, should be "in charge of those who have a clearer public responsibility." "Any realistic approach to the problems confronting the Exchanges must soon meet the question whether the Exchange should attempt to provide a livelihood for their present huge memberships. In short, are the Exchanges attempting to feed too many mouths?" The personnel of Wall Street, although much smaller than a decade ago, requires for its maintenance a volume of transactions rather above the average of recent years, and this condition has been reflected in the price of Stock Exchange memberships, which this year have not only sold for far less than their prices of ten years ago, but at about the figures at which seats changed hands in the depths of 1932.

Certain proposals have recently been put forward by the President regarding the utilities, whose condition becomes continuously more critical as earnings ratios fall. In this country, rates are established by the utilities, subject to approval of State power commissions; the rate structure is supposed to represent a "fair" return on the investment. The present controversy concerns the percentage that represents a "fair" return, and the

value of the investment to which this percentage applies. According to the Press, the President has suggested that the valuation for rate making be reduced by \$1,000 millions or \$1,500 millions. The total present valuation lies in the vicinity of \$12,000 millions.

Decline in Business

The Federal Reserve Board's Business indices for October are now available.

	BUSINESS INDICES (1923-25=100. Adjusted for Seasonal.)			
	Oct., 1936	Aug., 1937	Sept., 1937	Oct., 1937
Industrial Production	110	117	111	103
Manufactures	111	118	110	101
Minerals	105	112	115	113
Construction Contracts	57	63	56	50
Residential	43	40	37	36
All Other	69	81	71	62
Factory Employment	94.4	102.4	100.7	98.3
Factory Payrolls	89.0	103.8	100.1	100.2
Freight Car Loadings	77	79	78.5	76
Dept. Store Sales	90	92	94	93

In October, 1937, all items were below October, 1936, except employment, payrolls, and department store sales. This was expected, and probably indicates a considerable increase in labour costs per unit of output. Up to October, the decrease in employment was just under 4 per cent.; and in an industrial working group of about 10 millions, would suggest an increase in unemployment of about 400,000.

The group indices show more clearly the severity of the decline.

	Oct., 1936	Aug., 1937	Sept., 1937	Oct., 1937
Iron and Steel	127	142	125	100
Textiles	114	115	108	91
Meat Packing	105	78	87	89
Automobiles	93	157	135	*
Leather and Shoes	112	109	97	90
Tobacco	146	159	162	155

* Not available.

Foreign trade figures for October once again show rising exports and falling imports. Both imports and exports are larger than a year ago, but imports have been steadily falling and exports rising during the past seven months.

Family provision scheme

A scheme to secure a Capital Sum payable at death and a regular Income over a period of years for dependants in the event of early death, at a cost which is little more than that of ordinary life assurance.

It is readily adaptable, and rates will be quoted on application for policies to suit the needs of each individual.

Write for prospectus to the Manager

**EQUITY & LAW
LIFE ASSURANCE SOCIETY**

20 Lincoln's Inn Fields, W. C. 2
Established 1844 Funds exceed £27,000,000

In the last four weeks, the Reserve Banks have been pursuing an open-market buying operation, as follows:—

	(\$'000,000)		
	Holdings of U.S. Securities	Currency In Circulation	Member Bank Reserves
October 27	2,526	6,519	6,951
November 3 ...	2,526	6,565	6,889
" 10 ...	2,537	6,564	6,879
" 17 ...	2,555	6,534	6,922
" 24 ...	2,564	6,554	6,949

It is possible that this is directly associated with the currency demand which, while rather erratic, can commonly be looked for at this time of year. At all events, during the past month, member bank reserves have been maintained, and there has been an increase in currency. In spite of this open-market operation, and the gold destitution of September 13th, the total loans and investments of the reporting member banks continue to move downward—a decline largely attributable to the contraction of brokers' loans in the bear market.

France

Increasing Debt

PARIS, December 9.—The general report of the Chamber on the 1938 Budget lays stress on the persisting deficit and the increase in the public debt. The deficit has risen by 70,000 million francs in five years:—

	(Francs)	
	Deficit Mill.	Debt Mill.
1932 (9 months)	4,628	285,486
1933	11,509	299,899
1934	8,812	318,955
1935	10,383	337,872
1936	7,744 (?)	355,167
1937	7,000 (?)	...

If the debts of the public undertakings are added, the total debt would now be about 500,000 million francs.

The Budget, which is being voted rapidly by the Chamber, is balanced on paper as follows:—

	(Francs) Mill.
Receipts	54,251
Expenditure	52,691
Surplus	1,560

But more than this surplus has already been allotted to increase the wages and salaries of civil servants, a charge which will cost 1,700 million francs.

This statement does not include the whole public expenditure. The following "budget" should normally be added to the ordinary Budget:—

	(Millions of francs)
Caisse Autonome	5,300*
Pension fund	2,300†
Posts, Telephones and Telegraphs	4,000*
Normal military expenses which have been transferred to the extraordinary Budget.....	2,500†
	14,100

* To be covered by individual receipts.
† To be covered by loans.

The 1913 Budget was 5,000 millions, or 50,000 millions in terms of the present franc, but the national revenue has been severely affected by war and successive crises. The most recent taxation returns, though higher than those of preceding months, are lower than might normally have been expected after the rise in prices and the increases in the rates of tax. A balanced Budget can only be obtained by an increase in general economic activity. Some modification of the 40-hour week has just been announced in the retail trade (excluding provisions), and provisional measures to allow overtime in coal and iron mining have been taken. But any drastic change in the immediate future seems improbable. Some help may be derived from exports, since the last devaluation

brought French prices some 5 to 15 per cent. below world prices. But fresh internal steps, such as the 25 per cent. increase in transport charges, will be reflected in prices; and the 40-hour week, even if modified, may prevent industry from deriving any considerable advantage from this favourable prices situation.

Mixed Outlook

These considerations explain why, although the franc remains firm because of the heaviness of the dollar and the return of capital provoked by the needs of private industry, the Stock Exchange is still lifeless. If the Treasury issues a loan, it must offer 5 per cent. for 3-6-9 years, which represents a yield of 6½ per cent. In spite of the courageous efforts of M. Bonnet to improve the finances, in spite of the return of capital, and in spite of the reimbursement of the British loan (which led to an increase in the gold of the Bank instead of an increase in the advances of the Bank to the State) the Government is still divided between the supporters of free and controlled exchanges, who only agree in asking how the State is going to find the 26,000 million francs which will have to be borrowed in 1938.

On the other hand, the present political situation seems to have been consolidated by recent events, and notably by the failure of an attempt by the Socialists and Communists to form a united party. The counter-part of this failure is the support given to the syndicalist Confédération Générale du Travail (which has lost a number of its members) by the Government. Moreover, the threat of a dissolution in the event of a new financial crisis is an encouragement to the Socialists to be prudent.

Germany

The Power of the Plan

BERLIN, December 8.—General Goering last week decreed as a permanent measure that full wages must be paid by employers for the following holidays: New Year's Day, Easter Monday, Whit-Monday and the two Christmas holidays. This measure supplies a striking instance of the manner in which the Four-Year Plan organisation is ousting or subordinating the economic Ministries. Formerly such an important reform would have required either a new law (which under the National-Socialist system would have taken the form of a Cabinet decree) or at least an ordinance of the competent Minister under some empowering law. But this measure, though it concerns all employees, among which as an "eleventh decree for the execution of the Four-Year Plan," and is issued under the special powers of General Goering as Commissioner for the Plan.

It seems certain, and indeed appears from statements by General Goering and various party organs, that not only the Ministry of Economy but also the other economic departments, finance, communications, etc., will henceforth execute the orders of the Plan. So far, however, their competence has not been formally curtailed. Assurances continue to appear that Dr Schacht will remain at the Reichsbank and that he may continue to advise Herr Hitler.

The Nazi Party was long unfriendly to the Bourse, which it regarded as an instrument of predatory speculation conducted in the so-called "Jewish-International" interest. The number of Bourses was reduced. There has been a fall in the number of companies officially attendants at the Bourse and their employees. Last Reichhart, who as a Government nominee must voice official views, delivered an address which was considered to be emphatically friendly to the Bourse. Herr Reinhardt defended "speculation" as a practice that has useful functions; and endorsed the view expressed by defenders of stock exchanges everywhere that trading for future settlement tempers extreme fluctuations.

Herr Reinhardt announced that the futures market,

which was closed in 1931, would be restored at some unstated date. Emphasising the value of the Bourse, in particular for Reich financing purposes, Herr Reinhardt made the "totalitarian" demand that security dealing, which is at present largely conducted directly by the banks, should be made a Bourse monopoly. The stagnation of the official Bourse is attributed to heavy outside dealing. It is even claimed that the real prices of shares are determined by the supply and demand outside the Bourse, whose official quotations merely endorse these prices.

Share Decline and Food Shortage

The prices of industrial shares again declined last week and early this week. Fusion of the three chief companies in the Salzdettfurth concerns, rumours of which caused potash stocks to rise against the generally weak trend, has been officially announced. The Westeregeln and Aschersleben companies will be absorbed by the Salzdettfurth A.G. The pure potash undertakings and the potash-preparation undertakings will be organised in separate subordinate companies. In the three balance sheets of December 31, 1936, the sterling loan, which is booked at the old exchange of 20.40 marks to the pound, appears as follows: Westeregeln Rm. 9.83 millions, Aschersleben Rm. 13.24 millions and Salzdettfurth Rm. 8.24 millions, making in all Rm. 31.31 millions. The full total, including the other companies in the concern, appears to be Rm. 37 millions.

The index of wholesale prices stood on December 1st at 105.6, against 105.5 on November 24th. Two of the hitherto permitted standard wheaten flours have been abolished by an ordinance of the Reich Nutrition Corporation. The effect is to establish a single quality of flour. Official valuations of the combined food and fodder crop of 1937 are relatively satisfactory, and the large potato crop is specially important. The area under maize has recently increased rapidly. The oil seed crop was 21 per cent. smaller in 1937 than in 1936; but the flax and hemp crops increased substantially. The supply of necessities in Berlin is unsatisfactory. Fresh eggs are unobtainable, and other eggs can usually only be got in twos or threes. The largest Berlin shops are without bed linen, and they state that none will be available this year. Owing to the inability of the Press to report supply conditions, it is impossible to say whether there is the same shortage outside Berlin.

World Prices and Foreign Trade

On December 1st the import duty on rubber, gutta-percha and balata was increased from Rm. 125 to Rm. 160 per double centner. This measure is a result of the drop in the world market price. The duty was first imposed in May, 1937, to protect and to yield capital for the synthetic Buna rubber industry. The annual yield was then estimated at about Rm. 110 millions. At the new rate of duty, and on the basis of the actual import of rubber, which has lately increased, the yield should reach about Rm. 150 millions. The production of electricity in October was 19 per cent. higher, and of gas 7½ per cent. higher, than in October, 1936. The output of private motor cars in October was 29 per cent. higher, and of commercial cars 37 per cent. higher, than in October, 1936.

Imports of iron and steel and iron and steel goods (other than machinery) increased in October to double the recent lowest figure; and exports, which declined in September, also rose slightly. In the first nine months of the year, exports of heavy iron and steel were practically the same as in the corresponding period of 1936; but there was a sharp drop in exports of pig iron and semi-finished products, and exports of bars, sheets, tubes and wire increased. Data in the recently published steel industry year-book prove that the present shortage of iron and steel is due to increased demand. In 1936 the per capita supply of iron, after allowance for imports and exports, was 274 kilogrammes, against 240 kilogrammes in 1929 and 81 kilogrammes in 1932. The greatest increases were in bars, joists, sheets and tubes.

Switzerland

Continued Progress

GENEVA, November 24.—The improvement in the economic situation continued and was even emphasised during the third quarter of the year, when activity in all branches of trade and industry was greater than it had been for six years. In the first nine months of the year the value of imports rose by 64 per cent., and of exports by 51 per cent., compared with the same months of 1936.

VALUE OF FOREIGN TRADE (In Swiss francs)

	Imports		Exports	
	1936	1937	1936	1937
1st quarter...	268,501,649	454,911,769	192,406,928	264,099,456
2nd quarter...	273,511,531	474,805,796	203,803,506	314,822,997
3rd quarter...	279,798,307	419,131,006	210,327,785	338,297,764
	821,811,487	1,348,848,571	606,538,219	917,220,217

The average monthly value of exports was 101,913,356 francs, a figure not equalled since 1931.

The improvement is noticeable in exports of the four chief industries of watchmaking, silk, cotton, machinery. Together they show a rise in the value of their exports of about 60 per cent. over last year.

Trade with five principal countries was as follows:—

	Imports from		Exports to	
	(In millions of francs)		(In millions of francs)	
	1936	1937	1936	1937
Germany	220.1	298.9	126.2	142.9
France	121.4	178.4	81.3	105.4
U.S.A.	45.3	89.1	43.0	71.4
Great Britain	51.4	87.4	65.4	103.2
Italy	49.3	86.2	40.8	66.1

Imports from Great Britain rose by 70 per cent. and exports to Great Britain by 58 per cent. compared with last year. Great Britain was fourth among exporters to Switzerland, the third place which she occupied last year being taken this year by the United States, whose exports to Switzerland showed an increase of 97 per cent. as the result of the trade agreement concluded at the end of 1936. Great Britain retains the third place among Switzerland's customers, and her imports from that country now almost equal those to France.

Tariff Revision Favoured

Prior to devaluation, import quotas were applied to 440 categories of the Swiss Customs Tariff, but were later abolished on 80. The value of goods corresponding to these 80 categories represented 3.6 per cent. of total imports and 6.5 per cent. of imports submitted to quotas. These relaxations were designed to arrest an excessive rise in the cost of living; but foodstuffs and raw materials (which Switzerland is bound to import) are actually more heavily taxed than manufactured goods, many of which are produced in Switzerland. That is shown by the following figures, which represent Customs duties calculated in percentages of the value of imports:—

	1914	1931	1935
Foodstuffs	6.3	17.9	31.0
Raw materials	1.1	6.7	26.9
Manufactured goods	5.9	16.1	13.8

Consequently, some economists and business men favour a revision of the tariff, which the Federal Administration, however, does not seem willing to make.

Recovery has been greatly helped by increased activity in the tourist industry. To the end of August, the 6,900 Swiss hotels received 2,627,600 visitors, of

whom 1,258,200 were foreigners, compared with 1,109,100 and 861,200 respectively in 1936. The coming winter season is likely to be a record one: booking in the various winter sports centres is already reported to be unusually heavy.

Money is so abundant that, at a recent meeting of the Board of the Swiss National Bank, it was suggested that steps should be taken to prevent a further influx of foreign funds and to induce the withdrawal of foreign capital which has taken refuge in Switzerland in excessive quantity. How this will be achieved has not yet been made public. Up to the middle of October loans totalling 870,513,000 francs, compared with 574,000,000 francs in 1936, have been issued on the Swiss market, of which 243,830,000 francs were for foreign issues.

Norway

Labour's Disappointment

Oslo, November 22.—The outstanding feature of recent political developments was the municipal elections last month. In view of the result of the Storting elections last year, when Labour advanced by leaps and bounds, the increase of 3 per cent. in the number of municipal votes cast for Labour, compared with the elections three years ago, fell considerably short of the Labour victory generally anticipated. The Conservatives also gained slightly, and the Left and Liberal Left showed heavily reduced polls.

The final accounts for the Budget year ended June 30, 1937, reveal a surplus of 57.2 million kroner, compared with 28.5 million kroner in 1936. From this surplus, however, should be deducted 11.2 million kroner, representing increased expenditure transferred to the next Budget, thus reducing the actual surplus to 46 million kroner. Taxes and duties yielded about 33 million kroner more than estimated.

The money market continues very easy. In September deposits in private joint-stock banks increased by 20 million kroner; and while there was a decrease of some 5 million kroner in deposits with the savings banks in that month, October again showed some increase. The returns of the Norges Bank indicate an appreciable decrease in notes in circulation, while deposits on November 8th rose to 105 millions, against 90 million kroner a week earlier. Loans and discounts rose slightly compared with the preceding weeks, but are exceptionally low compared with the position a year ago. The average figure of loans and discounts for the last four weeks, viz. 120 million kroner, is actually lower than at any time since 1916. Bonds have been in great demand lately, rates have consequently hardened appreciably, and a number of loan conversions and new issues have been negotiated at rates very favourable to borrowers.

Continued Prosperity

The total amount of the Norges Bank's holdings of gold and balances abroad now aggregates 394 million kroner, against 329 million kroner a year ago, this strong contraction of foreign debts having been made possible by the earnings of our shipping and export industries. The freight earned by our shipping companies during the current year cannot be estimated with accuracy, but even if the freight markets have been far less encouraging during recent weeks than earlier in the year, the favourable time charters secured by the majority of ship-owners will enable them to close their books at the end of the year with considerably higher net balances than in any previous year since the war.

Industrial activity, indicated by the production index, showed some recession from August to September, due to labour disputes; but the employment index for the quarter ended September 30th showed an increase. As usual at this time of the year, there was an appreciable

increase in foreign trade during September. The development of trade in the first three quarters of the year is shown in the following table:—

	1936 (first three quarters : value in kroner, 000's omitted)	1937
Value of Imports	650,211	960,786
Value of Exports	476,667	586,354
Excess of Imports	173,544	374,432

The whaling season in the Antarctic opens on December 8th. The increase in number of whaling boats is mainly in those owned by British, Japanese and German companies; and the former Norwegian predominance is no longer in evidence.

The repercussions of the collapse of foreign bourses have been much in evidence on the Oslo Bourse; prices, especially those of shipping shares, have at times fallen sharply.

Finland

Growing Industrial Output

HELSINGFORS, November 28.—Industrial output for the third quarter shows increased volume and value. The index of volume rose to 180 (1926 = 100), against 177 and 172 in the earlier quarters of the year, and 162 in the third quarter of 1936. Since 1931, when the depression was greatest, the index of the volume of output has risen 90 per cent. Owing to the advance in the price of industrial products the value of output increased even more. The index for the third quarter of 1937 was 205, compared with 178 and 191 in the previous quarters of the year, and 151 in the third quarter of last year.

All branches of industry shared in the increased output, but the extent of the rise varied greatly. In volume the increase since the third quarter of last year was largest in the leather and footwear industry, the textile industry, building trades and in industries producing for export. In value the main branches of the export industries took first place. The uncertainty that marked the timber market in the autumn has not yet been reflected in a slowing down of production. It has, however, depressed the price of timber which had previously reached a very high level.

Foreign trade in September and October reached record figures.

	Imports		Exports		Surplus of exports	
	Sept. Mill. mks.	Oct. Mill. mks.	Sept. Mill. mks.	Oct. Mill. mks.	Sept. Mill. mks.	Oct. Mill. mks.
1935	468.0	557.1	601.3	621.8	133.3	64.7
1936	801.0	616.6	712.4	794.3	111.4	177.7
1937	844.5	944.0	1,058.3	999.1	213.8	55.1

The large increase in the value of foreign trade is partly due to the higher level of prices, but volume also increased very much, particularly in the case of imports. The considerable growth of imports of metals and machinery is connected with the investment activity proceeding in industry. Imports of raw materials for industry record a sharp rise. Imports of textiles and other finished industrial products have also increased; while imports of grain, sugar, coffee and other foodstuffs and luxuries have not advanced. The former considerable surplus of imports was converted by the end of October into a surplus of exports of 39.3 million marks. This is insignificant, however, compared with the large surplus of exports in former years amounting to between 900 and 1,000 million marks annually.

During the autumn the demand for credit was considerable. Credits granted by joint-stock banks rose by 140.3 million marks in September and 114.5 millions in October. This increase was not balanced by larger deposits. On the contrary, the same circumstances that increased credits caused withdrawals from deposit accounts. There was, indeed, a slight increase of 24.9 million marks in September in deposits, but in October they fell off by 88.6 millions. These changes made the money market

a little tighter, though this tendency should really be ascribed to seasonal causes. As deposits, after the drop, amounted to 9,715.6 million marks, while credits represented 8,521.5 millions, it is impossible to speak of any actual tightness; and the easiness that has characterised the money market for some years still continues.

Japan

Exploiting the Occupied Areas

Tokyo, November 20.—With the progress of the North China campaign increasing attention is paid to economic reconstruction in the occupied areas, and plans are being studied by the newly reorganised Planning Board. The general scheme is understood to entrust economic exploitation to separate syndicates to be formed in each branch of industry. The Japan Power Federation will take over the development of electricity; the Hsing-Chun Company, Limited, a subsidiary of the South Manchuria Railway, is, in co-operation with other interests, to exploit the salt resources; and Japanese cotton importers and spinners are planning to establish a new company among themselves, to improve cotton growing in Hopei and Shantung. It is, however, considered urgent that aid should be given to the farmers in the war-devastated area, and the purchase by the Japanese mills of 1,500,000 piculs of cotton and 20,000,000 lbs. of wool has been suggested, despite the fact that restrictions on the import of these materials are in force.

Stimulated by war needs business activity is generally on a high level, and industrial production is being intensified, even in branches not concerned with munition production. The output of cotton yarn during October totalled 134,791,000 lbs., a decrease of 5,220,000 lbs. compared with September, while rayon production amounted to 28,554,000 lbs., an increase of 1,554,000 lbs. The decrease in cotton yarn production is explained partly by the smaller number of working-days and partly by the curtailment of operations as the result of restrictions on the import of raw cotton. Many small business and retail traders, however, have been adversely affected by the Sino-Japanese hostilities. In certain branches of the textile trade which cater for the home market, and even in such a fine silk goods producing centre as Nishijin, Kyoto, there are many idle looms and a number of workpeople are unemployed. Bicycle manufacturers and rubber goods producers also are among the worst sufferers. Department store sales in recent months have been from 15 to 20 per cent. below those of a year ago, primarily because of the Government's economy campaign.

Increase in Imports

The October trade returns show that, although imports have been reduced in a number of cases under the restriction scheme, the values of both imports and exports are still substantially higher than a year ago. Imports valued at 244,146,000 yen rose by 57,054,000 yen, or 30.5 per cent., compared with the corresponding month of 1936; while exports, valued at 297,293,000 yen, increased by 52,033,000 yen, or 21.2 per cent. The increase in imports is obviously accounted for mainly by iron and steel, petrol, and munitions of war (the detailed figures of these articles have not been made public since August last). The three articles subject to import restrictions, namely cotton, wool and timber, show a decline of 24.9 million yen in the aggregate value of imports. Considerable increases were recorded in the value of exported textile goods, with the single exception of raw silk.

The note issue expanded rapidly from 1,681,401,000 yen to 1,781,223,000 yen between October 1st and November 1st. Allowance, however, must be made for Bank of Chosen notes—issued under the new Banking Act against Bank of Japan notes—which are in circulation in North China as a means of payment by the

expeditionary force. The actual circulation at home, therefore, has not increased very considerably. Money rates remain practically unchanged; fine bills are quoted at a fraction above 4 per cent., and overnight loans are obtainable at 2½ per cent. Commodity prices have again turned downwards. The Bank of Japan's wholesale index number for October recorded a drop of nearly 1 per cent. on the month, after an advance of 1.6 per cent. in September. The price index for October of all shares listed on the Tokyo Stock Exchange was up by a little over ¾ points against a month earlier.

Argentina

Labour Disputes

BUENOS AIRES, November 23.—The last month or so in Argentina has been marked by labour troubles, which may indirectly be traced to the return of prosperity. The two most important disputes—the strike on the Córdoba Central Railway and the stoppage of work by the bricklayers—were both settled on November 2. Concessions to the strikers were made in both cases. By the terms of the Government Decree the State Railways will take over the administration of the Córdoba Central Railway for a period of one year. In return, the company will be guaranteed the same net profit as was earned during the financial year 1936-37; and the Government retains the option of purchasing the railway, pending the decision of Congress. The railwaymen will receive the same wages and conditions of work as those at present enjoyed by the employees of the State Railways—which means a substantial improvement. The bricklayers agreed to return to work in consideration of a 10 per cent. increase in wages. In the meantime the

strikes on the Entre Rios and Argentine North Eastern Railways continue.

Exports in October amounted to 1,264,945 tons, valued at 160,918,256 pesos, compared with 1,520,099 tons valued at 154,895,521 pesos in the same month of last year. There was thus a sharp decline in volume which was more than compensated by higher prices. In the first ten months of the year the volume of exports was appreciably higher than in the same period of any of the preceding nine years, while the value was only exceeded in the first ten months of 1928. The volume of cereal exports in the first ten months of 1936 and 1937 was as follows:—

	1936	1937	Increase in 1937
	(in Tons)		
Wheat	1,139,254	3,692,929	2,553,675
Maize	6,496,205	8,160,437	1,664,232
Linseed	1,194,062	1,544,210	350,148
Oats	111,521	324,244	212,723

In 1936 Argentina was suffering from the effects of drought.

Imports Rise while Exports Fall

The immediate future of Argentine foreign trade is viewed with some uneasiness owing to the downward trend in the volume of exports, while at the same time imports show an upward tendency. Furthermore, the world level of cereal prices is inclined to fall rather than to rise. In several respects the omens differ greatly from those of a year ago. This is illustrated by the following figures of exports in tons during the last five months of this year compared with the same period of 1936:—

	1936	1937
June	862,811	1,334,706
July	1,021,341	1,257,804
August	1,146,939	1,212,220
September	1,649,800	1,308,620
October	1,520,099	1,264,945

Owing to heavy exports early in the year, Argentina has no old wheat available for shipment and not very much maize. Everything therefore depends on the coming crops and the future of cereal prices. The weather has been unseasonably cold this year, and crops in general are a month or so behind. Heavy frost occurred in the cereal zone on two nights in the last week of October, and temperatures again fell below freezing point during the last few days. Frosts were especially heavy on November 11th, and the opinion has been expressed that the wheat crop, already expected to be substantially lower than that of last year, will be reduced by between a million and half a million tons.

Flour and Wheat Exports Prohibited

On October 28 the Government issued a Decree prohibiting until further notice the export of wheat and flour. Subsequently the decree was slightly modified to benefit those who had already contracted engagements. The immediate cause of the decree was the dearness of bread, following a sharp rise in the local price of (old) wheat, owing to scarcity. On the same day the Government issued its second estimate of the sowings of wheat and linseed. Wheat sowings amount to 7,800,000 hectares, against 7,083,000 hectares last year, and an average of 7,282,460 hectares during the last five years. The area sown with linseed is calculated to be 2,970,000, against 3,010,000 hectares last year and an average of 2,943,506 hectares during the last five years.

The recent decline in Argentina's export surplus has become more pronounced:

	(in Argentine Pesos)		
	Exports	Imports	Export Surplus
June	153,924,793	122,235,467	31,689,326
July	155,932,952	149,536,067	6,396,885
August	147,708,134	144,042,845	3,665,289
September	158,109,336	157,385,758	723,578

This tendency is likely to continue until the new crops begin moving in January. Among imports the biggest rises during the first nine months of 1937 compared with 1936, in value, are shown by iron, which rose 49,266,617 pesos, or 51.5 per cent., and machinery and vehicles,

which rose 45,442,521 pesos, or 60.2 per cent. The increase in textile imports is also becoming more pronounced; they were valued at 29,978,183 pesos in the first nine months of 1937, which was 15.3 per cent. more than in the same period of last year. The value of imported fuel and lubricating oils rose 18,493,394 pesos, or 13.2 per cent.

British Guiana

Disappearing Deficits

GEORGETOWN, November 18.—British Guiana approaches the end of the year with the prospect of emerging again without a "working loss." The Government's financial advisers insist on this phrase, because the real working of any year is likely to be confused by the extent of capital (£588,742) transferred to revenue between 1923 and 1934; and by the intricate system, built up since the financial crisis of 1931, of loans-in-aid of the Budget, public works, and working capital, and grants-in-aid of unemployment relief. All these subventions are received from the Imperial Government.

What the absence of a working loss means to this Colony can be seen in the following table:—

Year	Working Loss
1923-1930 (average)	\$323,247 (£67,343)
1931	\$1,471,979 (£306,662)
1932	\$659,691 (£137,435)
1933	\$294,570 (£61,370)
1934	\$453,005 (£94,376)
1935	\$206,692 (£43,061)
1936	Small surplus

On October 15 His Excellency the Officer Administering the Government, opening the annual session of the Legislative Council, showed that at the end of August the estimated working loss for the whole year had been reduced to \$59,391 (£12,373), with the probability of its disappearing entirely.

That a Colony which has such magnificent resources should be content with an "absence of working loss" is one of the oddities of colonial administration. Apart from sugar, for which the Colony has always been famous, and rice, in which it does a small export trade with neighbouring West Indian islands, British Guiana produces gold and diamonds, bauxite, and timber; while there are excellent cattle rearing possibilities in the Rupununi. Sugar exports, recently limited to 170,000 tons, are 70 per cent. of the Colony's export trade. This industry is the major support of the coastal population. The majority of the population of the entire Colony dwells on the coast; and 28 per cent. of the total population is engaged in some form of agriculture. The forests occupy 86 per cent. of the whole area and produce some of the finest hardwood timbers, including the world-famed greenheart. Increasing attention is being paid to timber development, and since 1936 the outlook has been particularly bright.

Minerals and Future Needs

Since the production of gold was first recorded in 1884, British Guiana (up to 1936) produced gold to the value of £10,541,590, and according to Dr Grantham, former Government geologist, "there is more gold remaining in the British Guiana soil than ever came out of it." Diamonds can be relied on to add, on the average, £100,000 to the annual export trade. Exports of bauxite, easily the most prosperous of the mineral industries to-day on account of the world's re-arming, were worth £214,610 last year—a record that is certain to be exceeded this year. British Guiana is an agricultural Colony, but the population pins its brightest hopes on the highly mineralised nature of the Colony's hinterland.

The paramount needs of the Colony have always been capital, population and communications. In recent years there has been, apart from the investments of the Imperial Government, an appreciable inflow of private capital from abroad. The Colony needs capital, but the position has now been reached where a considerable increase of population is necessary if the full benefit of

past capital expenditure is to be secured. The Colony's population per square mile is 3.5; the North-West district, which a section of the local press is now suggesting should be sold to the United States, is 7,342 square miles in area and its population is 5,706; the area of the Rupununi, where a settlement for the Assyrians has been proposed, is 40,772 square miles and the population is 1,030.

Works of salvage and protection on the coast, pre-

paration of the land for civilised life, e.g. sea defences, drainage and irrigation, artesian wells, sewage schemes, and coastal roads: these have consumed British Guiana's capital before directly productive works could be put under way. Until its wide open spaces are filled, the Colony will never be truly the "Magnificent Province" Anthony Trollope depicted. In the meantime, she contents herself with knowing that there is no annual "working loss."

Letters to the Editor

Parliament and Population

TO THE EDITOR OF THE ECONOMIST

SIR,—The article "Parliament and Population" in your issue of December 4th, by concentrating unduly upon certain passages in one exceptionally brilliant speech, does some injustice, I think, to the general criticism of the Population (Statistics) Bill in the House of Commons on November 29th. It really is not an adequate description of the Bill to describe it as only "a short, but very necessary and quite harmless reform."

This would, indeed, be a just description of a Bill which had merely provided for enquiries, at birth registration, as to the three points declared by the population experts to be essential for their work, viz., age; order of birth; duration of marriage. But on this modest foundation the Bill built up a huge superstructure of other questions which would be likely, when linked to birth registration, to cause very considerable inconvenience and resentment.

Moreover, it is not sufficient defence of the unlimited "any other matter clause" to say that it has a precedent in the Census Acts. Whether or not it is justified in that case there is a great difference between a Census, employed at long intervals for purely statistical purposes, and the use for more than essential information of the birth registration machinery, which is in permanent and daily operation and involves enquiries about, and probably from, a woman shortly after childbirth.

I think the Bill should have been introduced in a radically different form, and that it should now be very drastically amended—in the future interests of economic research.

There is a limit, even if it be an elastic one, to what the public—of many classes—will stand in the way of statistical enquiries. Economic research requires that they shall be asked a great deal—and perhaps more in future. It is, I suggest, the more important that officials, statisticians and economists should make the imaginative effort required to measure the utility of each particular enquiry against the inconvenience entailed, and to discriminate very carefully between the essential and the non-essential. A Bill should not, I suggest, be defended because, beneath a mass of other defined enquiries and the threat of others without definition or limit, there is somewhere hidden the modest and necessary requirement of the population experts. I suggest to economists (and *The Economist*) that the Debate of November 29th, whatever the blemishes in particular speeches, did really constitute a very salutary and much needed warning, which may ultimately be in the true interests of the study of economic and social problems.—

I am, Sir,

Yours faithfully,

ARTHUR SALTER.

House of Commons.

[In our article of last week we explicitly refrained from stating an opinion on the wisdom of introducing the Bill in its original form. We did, however, criticise those who, approving the Bill's purpose but disliking some of its details, nevertheless tried and almost succeeded, in killing it altogether. If we concentrated on the fallacies of one speech it was because that speech, and its fallacies, dominated the debate.

It is really not open to those who, like Sir Arthur Salter, voted against the second reading, to claim that they had the interests of statistical enlightenment at heart, for they must have known that the result of killing the Bill would be to put the whole subject in cold storage for a generation.

We agree that economists should be reasonable in their requests to Parliament for information. But they have a right to expect that their request shall be reasonably discussed in Parliament, and, if they require amendment, that they shall be amended and not rejected outright when they serve a useful, not to say an essential, purpose.—
Ed. *Econ.*]

British Banking Principles

TO THE EDITOR OF THE ECONOMIST

SIR,—So far as I understand it, savings deposits represent part of the country's savings held in liquid form while current deposits form part of the country's working capital. If we imagine a bank whose composition of liabilities has so changed that these consist solely of current deposits withdrawable at a moment's notice, it would be sheer suicide for this bank to adopt a policy of lending for six months or a year, on the ground of possessing the backing of these current deposits. As these deposits form the country's working capital the banks cannot, on their slender basis, build additional working capital in the form of advances. The possibility of the banks' granting advances must presuppose the existence of time deposits; and the relation between advances and these saving deposits is therefore important.

That advances are the least liquid form of banking resources may be deduced from the fact that whereas other resources can be immediately turned into cash, advances must await their term of expiration to be turned into cash. (*Vide The Macmillan Report*, page 36.)

The proportion of saving deposits rises during depression because the demand for credit accommodation abates, and the banks contract their creation of current deposits. Hence, other things being equal, the ratio of saving deposits rises owing to a diminished total. Business men cannot forecast how long a depression will last and for just that time put their working capital on time-deposit accounts with the banks. They would prefer to keep their resources liquid on current account, ready to be employed at the first opportunity, than to earn a trifle on a locked-up saving deposit account.

Your obedient servant,

S. HERSZBERG.

Lodz, Poland.

India and Her Gold

TO THE EDITOR OF THE ECONOMIST

SIR,—Mr B. R. Shenoy's comments, in your issue of September 11th, on my article on "India and Her Gold" (*The Economist*, June 6, 1937) have raised certain issues which would require fuller treatment than is possible in a letter. If the Government of India had, following the advice of the Federation of Indian Chambers of Commerce, placed an embargo on gold exports and purchased in the open market all the gold that came out of hoards since 1931,

ECONOMIC POLICY OF FRANCE

By the Hon. George Peel

AUTHOR OF "THE FINANCIAL CRISIS OF FRANCE," ETC.

Since the War, the fiscal relationship of France and Great Britain has grown much more intimate than before, and there is every sign that this will be the case increasingly in the future.

Owing to political developments on the Continent, the stability of the French Republic is steadily becoming of more consequence to ourselves.

8/6 net

MACMILLAN & CO., LTD., LONDON, W.C.2

it would have imposed very heavy responsibilities on the Government as well as the Reserve Bank, and the net result might have been heavy burdens on the taxpayer.

By allowing gold to be exported to the place where that commodity obtained the highest price, India has converted barren metal into mobile purchasing power on very favourable terms. An embargo on gold export would certainly have deprived this country of such advantages. Therefore, by allowing free and unrestricted export of gold, India has not "lost" but gained "the fruits of appreciation in the price of the metal."

India has been importing gold as a commodity for centuries and it cannot therefore be right to apply, in the case of such gold, principles and practices developed in other countries in respect of their bank reserves.

Yours faithfully,

Madras University.

P. J. THOMAS.

POINTS FROM LETTERS

Acts of Deflation.—It was recently discovered that, where countries operate Exchange Equalisation Funds, gold imports tighten credit conditions by adding to deposits

while leaving cash reserves unaltered. Similarly, gold disboarding like the import of gold has been discovered to be deflationary. *On the same lines*, when a Government unbalances its Budget and finances the deficit out of the proceeds of a loan issue or Treasury bills, it has unwittingly committed an act of deflation. All these theories are equally true or equally untrue according to the way you look at the matter. But if it is assumed that the Central Bank will always through open market security purchases, or by other means in its power, counteract the effects of any such unintended deflation, the theories are absolutely worthless.—*Wh. B. Fairweather, London, W.4.*

Living on Capital.—It is incorrect to say that whether we are consuming our own capital or not depends on the commercial balance sheet, that is, the balance of payments. The increase of our assets does not depend only on whether more values accrue to us from other countries. Our own or the nation's wealth may increase from many other sources. We may increase the capital goods at our disposal by our own activities. Our capital assets may increase in value because our estates and houses are worth more, owing to the growth of the population and its needs. Devaluation may also increase our wealth by decreasing our foreign debts.—*Egon Virany, Budapest.*

Books and Publications

Wages and Income

PROFESSOR BOWLEY is to be congratulated on publishing this short *résumé* of a lifetime's research into wages and incomes. So much of his work is hidden away in the less obvious journals, in books and pamphlets now out of print, and in unpublished material, that it was previously very difficult to extract a general view of long-period changes.

This new volume* is not, like so many collections, fragmentary and disconnected. On the contrary, it is a comprehensive and systematic guide, not only to Professor Bowley's own work on wages and incomes, but also to the work of other statisticians, where they have covered the same ground. The book is a model of statistical presentation, which other authors would do well to follow. The methods are clearly described and the validity of the statistics indicated. In many cases figures are calculated on alternative hypotheses, so that the reader can judge for himself. For the student, and for the lay reader in search of particular pieces of information, the text contains numerous references to an admirable bibliography.

The first two chapters are devoted to studying the movements of wages and the cost of living from 1860 to 1936. The result is a table of three index numbers: average full-time money wages, the cost of living, and the "quotient." Professor Bowley uses the term "quotient" in preference to real wages, because of the numerous qualifications that must be made when the latter term is employed. He thinks it unlikely that the collection of family budgets now being made will result in any important modification of the estimates of the cost of living up to 1936—in the field of expenditure they cover. Professor Bowley has tested the index number of food prices by changes in consumption per head. While there has been a slight tendency for people to buy more of the foods whose prices have increased less than the average, Professor Bowley's conclusion is that there is not much chance of an error of more than a couple of points in the published index. But the present index number of the cost of living covers only necessities or goods so considered in 1914. In the intervening period the margin of expenditure over and above that required for necessities has increased enormously. For example, an average town working-class family, when work is regular and moderately skilled, has a free margin to-day of about £1 a week compared with 4s. 6d. in 1914. This factor, together with the increase in the social services, make it impracticable, in Professor Bowley's view, to give any definite

measurement of the change in the average standard of living in recent years. None the less, if we satisfy our desire to make a comparison between 1929 and 1936, we obtain the interesting result that, while average full-time money wages rose by about 2 per cent., the quotient, our only guide to real wages, rose by 13 or 14 per cent.

The remainder of the book includes studies of average earnings and their distribution, earnings and needs, the national wage bill and the national income. Professor Bowley gives annual figures of the national wage bill from 1924 to 1936, but he has not found it possible to make more than a tentative estimate of the national income in 1934 to compare with the results of the full-scale investigation carried out in collaboration with Sir Josiah Stamp for 1924. One would not expect Professor Bowley's figures to show precisely the same change over the decade as Mr Colin Clark's, but it is a little disconcerting to find that Professor Bowley's figures show a fall and Mr Clark's a rise. Nor does the difference lie in the imponderable lower salaries, but in the estimates of wages. Professor Bowley finds a fall of 5 or 6 per cent. in the national wage bill over the period and Mr Clark a rise of 3 per cent. This disagreement is of service if only to remind us not to pay too much attention to small changes in statistics of the national income. Indeed, if such differences between estimates can exist for a year as far ago as 1934, one wonders what sort of validity is possessed by estimates for more recent periods.

Shorter Notice

"Modern Money." By M. Curtis and H. Townshend. Harrap. 320 pages. 7s. 6d.

Books on money, with titles like this, are over-abundant. It is therefore the more gratifying to find that Miss Curtis and Mr Townshend have written a book, which, as an introduction for students and general readers, is excellent in nearly every way. Their thesis is that spending is the sole source of business activity and, although they cannot accept his views about the relations between savings and investment, their mentor is Mr Keynes. In the course of their argument, the authors describe with great clarity and considerable accuracy the working of the money market, the Stock Exchange and the banking system. They lay bare the methods of computing income, personal, corporate and national, and at every stage fasten down their objective account with appendices of skilfully chosen and intelligible statistics. None of the field is left untouched: the role of prices and interest rates, no less than problems of monetary control, are treated characteristically with a nice blend of theory and fact. The what, how and why of money are explained with the minimum of technicalities or controversial quiddities. The academics will question points here and there, but the rest—and all ordinary people ought to read this book—will be deeply grateful to Miss Curtis and Mr Townshend.

MONEY AND BANKING

The Floating Debt

SINCE the end of September, the total volume of Treasury bills issued by tender has risen from £573 millions to £622 millions. This is a considerable, though not unprecedented movement, and by itself it may arouse the fear in that, in order to finance its needs, the Government is having to resort to borrowing of a quasi-inflationary character. Any tendency towards a misconception of this kind may have been increased during the past fortnight, first by the rise in Treasury bill and other discount rates from a fraction over $\frac{1}{2}$ per cent. to nearly 1 per cent., and next by the appearance in the latest floating debt return of £10 millions of borrowing on Ways and Means Advances from the Bank of England.

The floating debt always increases in the autumn, when revenue lags consistently behind expenditure, the culminating point being reached with the War Loan dividend payment on December 1st. This latter payment, amounting to £35 millions, explains the £10 millions borrowed on Ways and Means from the Bank shown in the latest available returns. The hardening tendency of discount rates is equally a seasonal movement. The joint-stock banks, who normally are the greatest purchasers of bills, always hold off the market during December. They do so, in the first place, because of the Christmas currency withdrawals by the public from the banks. Here we may observe that the recent increase in the fiduciary note issue did not assist and was not intended to assist the cash position of the joint-stock banks. Secondly, the banks hold off the discount market at this time because they wish to carry adequate supplies of cash on December 31st, when they make up their balance sheets.

In view of this year's heavier Government expenditure, part of which is to be financed by borrowing, it is relevant to examine the size and nature of this year's increase in the floating debt. This has been done in the two tables which follow. The first is a comparative analysis of the composition of the floating debt this year and last. The second table shows how the year's growth has come about.

FLOATING DEBT
(£ million)

	1936			1937		
	Mar. 31st	Dec. 5th	Change	Mar. 31st	Dec. 5th	Change
Treasury bills:—						
(a) Tender	498	613	+ 115	500	617	+ 117
(b) Tap	265	203	— 62	175	302	+ 127
Ways and Means Advances:—						
(a) Public Depts.	19	29	+ 10	23	43	+ 20
(b) Bank of England ..	...	...	...	...	10	+ 10
Total Floating Debt	782	845	+ 63	698	972	+ 274
Floating Assets	284	232	— 52	198	345	+ 147
Effective Floating Debt	498	613	+ 115	500	627	+ 127

Treasury bills can be distinguished according as they are issued by tender or through the "tap." The former are taken up by the money market, the banking system and the general investor, and so constitute genuine borrowing by the Government from outside sources. For this reason we may describe tender issues of Treasury bills, together with the occasional Ways and Means borrowing from the Bank, as the effective floating debt. Tap issues of Treasury bills are, to some extent, taken up by public departments. These, together with Ways and Means Advances by the departments, we have accordingly described as the floating assets of the departments.

The second table shows Exchequer Receipts and

Issues for the period April 1st to December 4th, in each of the past two financial years.

EXCHEQUER RECEIPTS AND ISSUES

	April 1st to December 4th	
	1936	1937
(£ millions)		
Revenue	403	435
Expenditure	535	593
Deficit	132	158
Other Issues (—) } or Receipts (+) }	+ 69	— 116
Total Floating Debt Increase (+)	+ 63	+ 274
Effective Floating Debt Increase (+)	+ 115	+ 127

This table, it will be seen, begins by setting out each year's income and expenditure, together with the resulting deficit, to date. The item "other issues and receipts" includes all operations on capital account other than changes in the floating debt. Usually, between April and December, there is a small net outflow from the Exchequer on capital account. This outflow amounted last year to £13 millions, and this year to £16 millions. Last year the main capital items were the repayment of £42 millions of Treasury bonds in April; the receipt of the final call of £71 millions on the $2\frac{1}{2}$ per cent. Funding Loan of December, 1935; and the receipt of the first call of £53 millions on the $2\frac{1}{2}$ per cent. Funding Loan issue of November, 1936. This year the story is obscured by the enlargement last June of the Exchange Equalisation Account by £200 millions. Nominally, the whole of this £200 millions was issued to the Account at once, and occasioned an equal increase in the floating debt. Actually, the true increase in the effective floating debt depends entirely upon how much of the £200 millions is used by the Account in the purchase of gold or foreign exchange. Any unused portion is invested in Treasury bills, and so causes an increase in floating assets and not in the effective floating debt.

The other major operation of 1937-38, so far, has been the issue last April of £100 millions of Defence Bonds. If the receipts accruing to the Exchequer from this source be set against the issue of £200 millions to the Exchange Account and also the miscellaneous issues amounting to £16 millions, it will be seen how a revenue deficit, up to the present of £158 millions, has been accompanied by an increase of £274 millions in the floating debt.

We may next compare the increases in the total floating debt and the effective floating debt. For the portion of 1936-37 under review the increase in the total floating debt was less than the revenue deficit and less than the increase in the effective floating debt. Debt funding explains the divergence from the revenue deficit. The greater increase in the effective floating debt is due to gold purchases by the Exchange Equalisation Account and also to the fact that part of the new Funding Loans were taken up by the departments, whose floating assets were proportionately reduced.

In 1937-38, so far, the total increase in the floating debt has been much greater both than the Budget deficit and the effective floating debt increase. If we now proceed to deduct from the current floating debt and from floating assets the £200 millions representing the June enlargement of the Exchange Account, we are left with the following picture:—

	£ millions
Deficit to date	158
Increase in total floating debt	74
Increase in effective floating debt ..	127
Decrease in floating assets	— 53

The outlines of the picture are now fairly plain. The Defence Bond issue has so far gone mainly to mitigate

the increase in the floating debt which otherwise would have occurred; for this year's deficit to date is only £26 millions greater than that of last year. Floating assets, however, are reduced by £53 millions, partly because of the departments' support to the Defence Bond issue and partly because of the Exchange Account's gold purchases, which continued right through to the early autumn. Thus the increase in the effective floating debt is, notwithstanding the Defence Bond issue, commensurate with the Budget deficit.

During the past seven weeks, however, there have been signs that in one respect the tide may be at the turn. On October 23rd, the departments' floating assets fell to £310 millions, the lowest figure since the June enlargement of the Exchange Account. Since then they have risen to £344 millions, largely, it may be presumed, because of the growing strength of the franc; for the repatriation of capital to France has led in turn to sales of gold by the British Exchange Account to the French authorities. Thus, in spite of a revenue deficit of £50 millions during those seven weeks, the effective floating debt has increased by only £17 millions. The remaining £33 millions of cash have been obtained largely out of the proceeds of the Exchange Account's gold sales. Thus the seasonal expansion in the effective floating debt has recently been much less than usual. Taking the whole period from March 31st to date, the increase is very little greater this year than last.

The conclusion suggested by this analysis is that allegations of inflationary Government borrowing, for the purpose of financing defence expenditure, are difficult to substantiate. The Government has not even used more than a small proportion of the amount raised on the long-term market by means of the Defence Bond issue. The large increase in the total floating debt is explainable by the June addition to the Exchange Account, and in its absence the increase in the floating debt, up to the present, would have been smaller than is usual at this season of the year. Finally, the increase in the effective floating debt is little greater than that of the previous year, and the rate of increase has also been checked during recent weeks by the repatriation of capital to France and the British Exchange Account's consequent sales of gold. Taking all these factors into account, it would seem that the present size and composition of the floating debt should not arouse anxiety.

Financial Notes

Weakness of Silver.—Early this week there was a sudden relapse in the London silver market. At the usual time of fixing on Monday there were no buyers, and there was a delay of an hour before the prices were fixed at 18½d. per ounce for cash and 18¾d. per ounce for forward. These prices represented declines of 1d. and 1½d. per ounce below Saturday's prices. There were two causes of this weakness. The first was the fact that the International Silver Agreement of 1933 is not, according to recent advices, being renewed on its expiry at the end of the month. This at once raised the question whether the American Administration intended to continue its buying policy, and this fear not only affected the silver market, but also caused the dollar to depreciate to \$5.00½. On Tuesday, President Roosevelt and Mr Morgenthau indicated that a new silver proclamation would be issued just before the end of the year. This did not prove very reassuring, especially as there is a belief that one section of opinion at Washington favours a reduction of the bounty to a point nearer to the present world price. Another source of apprehension is lest the war in the Far East may force China to throw substantial quantities of silver on the world's markets. Thus, in spite of some support from America and India, there has only been a limited recovery in the London market, Thursday's prices being 18½d. per ounce for spot and 18½d. for forward.

The National Bank of Scotland.—There has been a further growth this year in both the resources and net profits of this bank. This not only applies to the note circulation and deposits, but also to acceptances, endorsements, etc., which are more particularly indicative of the state of commerce. Thus the bank's accounts provide further evidence of the year's net improvement in Scottish trade.

	1935	1936	1937
Liabilities:—	£'000	£'000	£'000
Capital	1,100	1,100	1,100
Reserve fund	1,550	1,600	1,800
Note circulation	2,596	2,720	2,881
Deposits	35,213	36,532	37,002
Acceptances	728	1,078	1,136
Endorsements, etc.	1,327	1,125	1,473
Assets:—			
Cash	3,201	3,129	3,494
Balances and cheques	1,649	1,646	1,895
Call and short money	4,641	5,006	4,536
Investments	18,688	19,241	18,642
Discounts	1,014	1,303	1,357
Advances	10,902	11,276	12,528
Net profits	270	272	276
Dividend	16%	16%	16%

Apart from a general strengthening of the bank's cash and liquid resources, the main change in assets is the growth in advances. To make room for this, the bank has had to reduce the size of its investments. This is a very satisfactory movement, as it shows that the bank has been able to employ a greater proportion of its resources in purely banking business as distinguished from investment in gilt-edged securities. Net profits have risen by £4,000, and the increased sum available is applied to reducing the cost of heritable property and alterations and to increasing the amount carried forward.

British Overseas Bank.—Mr A. C. D. Gairdner, at the annual general meeting of the British Overseas Bank held on December 7th, had no difficulty in persuading the shareholders of the wisdom of the bank's directors in conserving this year's profits and paying no dividend. In his address to the meeting he began by explaining the functions of the bill of exchange, and how they had been affected by the war and post-war developments. For example, in the standstill negotiations the German borrowers have recognised the pre-eminence of the commercial bill. Mr Gairdner pointed out that the amount of credit of this character available to Germany was insufficient for the trade to be carried. From Germany Mr Gairdner passed to Hungary, where he showed that, unfortunately, the position had become more rigid as the result of last summer's developments. Spain was another country where grave difficulties had been encountered, but their Spanish clients had displayed a high sense of honour and had done their best to meet their engagements. Concluding his general survey, Mr Gairdner emphasised the need for as wide a system as possible of free exchanges. Mr Gairdner next analysed the bank's balance sheet, showing how various items had been affected by events in Hungary and Spain. There were also the difficulties of the Latvian Akciju Banka. Here the Latvian Government and State Bank were being sympathetic and helpful, but a reconstruction of the bank's capital would be necessary. Taking all these and other points into consideration, the board of the British Overseas Bank had decided to set aside £50,000 to contingencies and not to pay any dividend. This decision is regrettable, but most people will agree with those shareholders who congratulated the directors upon having the courage to take this course, which was both prudent and in the interests of the bank.

Barclays Bank (D.C. and O.).—Sir John Caulcutt, who has recently succeeded Mr Tritton as chairman of Barclays Bank (D. C. and O.), devoted the greater part of his address, at the ordinary general meeting on December 9th, to a review of conditions in the

primary producing countries. He began by emphasising how important it was to Great Britain that these countries should maintain their prosperity, and he traced the consequences of the fall in the prices of primary products between 1929 and 1932, and their subsequent recovery up to the early part of this year. The recent set-back he described as not altogether surprising. Up to a point it may have been healthy, but he added that it was difficult to find adequate justification for the extent of the decline. He ascribed part of the recent uncertainty to fears of possible monetary developments, and expressed the view that when the revival of an international monetary system upon a more permanent footing proved possible, the only practicable method would be a continuance of the use of gold. The earlier part of his speech consisted of a detailed review of business conditions in the areas served by the bank. On the whole he had an encouraging account to give, and he added that the trade requirements for credit by the bank's customers had expanded to the point where the bank had had to reduce its holdings of Treasury bills by nearly two millions. Net profits were £30,000 higher than last year. The dividend on the "A" and "B" shares had been raised from 5½ to 6 per cent. (and not from 11 to 12 per cent. as we erroneously stated last week). Altogether Sir John Caulcutt was able to give a very satisfactory account of the bank's progress.

November Clearing Bank Returns.—In spite of the high level of public deposits during November and the consequent drop in bankers' deposits at the Bank of England, the cash held by the clearing banks in November was slightly greater than that of the previous month. Discounts have not risen quite as much as might have been expected, in view of the increase in Treasury bill tender issues since early October; but towards the end of November the banks were not keen buyers of bills.

(In £ millions)

	Nov., 1936	July, 1937	Aug., 1937	Sept., 1937	Oct., 1937	Nov., 1937
Capital and reserves	131.8	132.5	132.5	132.5	132.5	132.5
Acceptances, etc.	102.9	122.1	116.1	114.2	115.6	114.9
Deposits (including undivided profits, etc.) ..	2,243.3	2,255.6	2,245.9	2,249.8	2,275.2	2,272.9
Total liabilities	2,478.0	2,510.2	2,494.5	2,496.5	2,523.3	2,520.3
Cash	223.6	231.8	231.0	234.3	230.7	231.6
Cheques, balances and items in transit	60.4	63.7	64.8	60.1	62.9	65.8
Money at call	158.9	157.9	156.7	157.4	159.7	154.8
Discounts	349.2	280.7	275.8	279.2	294.6	296.0
Investments	640.0	631.7	630.4	626.0	624.6	619.4
Loans and advances	872.9	954.7	952.6	957.5	967.3	969.8
Investments in affiliated banks	25.2	23.5	23.5	23.5	23.5	23.6
Cover for acceptances, premises, etc.	147.8	166.2	159.9	158.5	160.0	159.3
Total assets	2,478.0	2,510.2	2,494.5	2,496.5	2,523.3	2,520.3

There has been a further increase in advances, but it is much less noticeable than in October. The December averages will be affected by the repayment of the French credit, and for that reason will probably show a decrease. Investments are £5.2 millions less than in October, and there has also been a slight drop in deposits.

The Foreign Exchanges.—The London Market has been very quiet. Early in the week dollars were offered up to \$5.0060, on the weakness in the silver market, but so soon as buyers of silver appeared, dollars were bid, and the rate has come back to \$4.99½. One month's dollars have risen to a premium of 0.40 cents, as some operators were selling dollars spot and buying them one month forward in order to provide themselves with sterling over the end of the year. The three months' rate was unaffected by these operations, and only widened slightly to ¾ cents premium. Francs have been steady at Frs. 147.06 to Frs. 147.09, with the French authorities buying sterling spasmodically. Three months'

francs came on offer, and the rate widened from Frs. 1½ to Frs. 2½ discount. The French authorities turned purchasers of forward francs. There was practically no change in other sections of the market. The Shanghai rate remains steady at rs. 2½d., but there has been very little business for quite a long time.

The Bank Return.—The Christmas expansion in the note circulation continues. During the past fortnight there has been a certain amount of dishoarding of British currency, and when allowance is made for this the increase in the note circulation to date is much the same as the parallel increase a year ago:—

	Dec. 9, 1936	Nov. 17, 1937	Nov. 24, 1937	Dec. 1, 1937	Dec. 8, 1937
Issue Department:—	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Gold	248.7	326.4	326.4	326.4	326.4
Note circulation	458.9	481.1	480.4	485.7	492.8
Banking Department:—					
Reserve	50.5	66.8	67.5	62.0	54.7
Public deposits	17.5	33.2	35.4	12.0	11.7
Bankers' deposits	87.0	86.7	83.6	105.7	106.3
Other deposits	38.9	36.1	36.3	36.6	36.7
Government securities	81.7	76.6	76.2	78.8	87.2
Discounts and advances	8.1	9.0	8.6	10.5	9.6
Other securities	20.9	21.3	20.9	20.7	21.0
Proportion	35.2%	42.8%	43.4%	40.2%	36.3%

In the banking department, the growth of the note circulation has reduced the Reserve by £7.3 millions, but this contraction is neutralised by the increase of £8.4 millions in Government securities. Bankers' deposits therefore are practically unchanged. The higher level of Government securities may be related to the Ways and Means borrowing from the Bank shown in the floating debt statement of December 4th, or it may represent an increase in the Bank's Treasury bill holdings. In any case, the banks still have the benefit of the cash released by the War Loan dividend payment and so have been shielded from the effects of the Christmas currency withdrawals.

The Money Market.—The War Loan Dividend payment and the continuance of the French credit repayment have made money very comfortable, and the banks have only experienced a small afternoon demand. Outside money is now obtainable at ½ per cent. Loans into the New Year command rates of 1-1½ per cent. The general tendency is to use this money to carry bonds, and so the demand for shorter loans against bonds is less evident than usual.

	Nov. 18, 1937	Nov. 25, 1937	Dec. 2, 1937	Dec. 9, 1937
Bank rate	2	2	2	2
Clearing banks' deposit rate	½	½	½	½
Short loan rate:—				
Clearing banks	1-1½	1-1½	1-1½	1-1½
Others	1-1½	1-1½	1-1½	1-1½
Discount rates:—				
Treasury bills	½	½	1-1½	nom.
Three months' bank bills	1½-1	1½-1	1½-1	1½-1

* Loans against Treasury bills and other approved bills and British Government securities within six months of maturity; 1 per cent. Treasury Bonds and other gilt-edged stocks within six months of maturity; and other collateral respectively.

Discount rates are again firmer, but from time to time the market shows signs of weakness. The banks are now only buying bills sparingly, at rates of ¾ per cent. and occasionally 1½ per cent. There is practically no business in hot Treasury bills. Last week, Treasury bills to be paid for on Monday went at £99 15s. 5d. per cent., these being 80-day bills. Bills dated Tuesday onwards, being 90-day bills, went at a minimum rate of a penny less, but only 25 per cent. of the applications at this minimum rate were allotted, applications at higher rates receiving full allotment. There is a feeling in the market that some applicants paid too much for their bills. The average tender rate works out at 18s. 2.16d. per cent.

THE STOCK EXCHANGE

Australian Investment Outlook

THE year 1937 has seen the close of a phase of Australia's investment history in London. After a series of conversions beginning in 1932 sufficient time has already elapsed to make re-conversions necessary, but without any substantial further saving. The reception accorded to the £11,409,965 3½ per cent. stock issued in November was so little enthusiastic that underwriters had to take up 67 per cent. This result, however, seems more due to the general malaise of the markets than to any defects in Australia's position. The entrance of the Lyons Coalition Government upon its third term of office has, indeed, been welcomed by investors in this country. But it has also brought nearer the negotiation of fresh arrangements with the Imperial Government to replace the expiring Ottawa agreements. And the opening of preliminary discussions for a trade pact with the U.S.A. suggests that the future course of Australian trade is a matter which deserves the investor's attention.

Since 1927, when the Bruce Government gave, in effect, a Commonwealth guarantee to State loans, Australia's investment rating in London has deservedly been high enough to procure her full advantage from the decline in interest rates. She has made an almost sensational recovery from depression, restored her standards of living and balanced her Budgets. No investor would ask for better evidence of general trade recovery than is furnished by Table I below.

The main stake of British investors is in the Commonwealth and States' debt. Last June, Australia had the equivalent of £1,400 millions (Australian) of public debt, requiring about £A50 millions in annual interest, and including some £A90 millions of floating debt. The total consisted of approximately £A430 millions of Commonwealth and £A980 millions of States' loans. Some £A674½ millions of the combined total were internal debt, while a further £543½ millions (sterling) was domiciled in London and the dollar equivalent of £45 millions (sterling) was domiciled in New York. Since 1932, the sterling debt has been gradually reduced, and the total of all Commonwealth stocks has fallen appreciably. There has been, however, a rise of internal State indebtedness of £A100 millions in these same years. Nevertheless, falling interest rates and Australia's im-

proved credit status have enabled her to save roughly £A4 millions net in her debt charge. The total nominal debt converted since 1932, by as many as fourteen different operations, has been in excess of £222 millions (sterling), or roughly £200 millions apart from re-conversions. Details of these changes are given in Table III at the foot of this page.

Whereas the stocks which have been converted were costing Australia anything up to 6 or 6½ per cent., the majority of the new stocks were floated on a basis of under 4 per cent., the high point of Australian credit being reached in 1936, when a 2½ per cent. loan (of relatively short life) was offered to yield only £2 18s. 6d. per cent. Since then, Australia, like other Governments, has been compelled to offer somewhat greater inducements to the investor, and for the last two conversions the response might have been better had the inducement been even greater. Reference to the table will show, also, that the difference between the old stocks and the new is not confined to their rates of interest. The new stocks have far more sharply defined dates of repayment. Only two of the conversion issues have optional periods of redemption which exceed five years, whereas many outstanding loans, issued in the 'twenties, are optionally redeemable during periods of twenty years or more. The change from the investor's point of view is welcome; for a borrower who is paying lower interest cannot reasonably ask for a prolonged double option of repayment into the bargain.

The present position, as it affects the British investor, can be briefly summarised. Commonwealth and State Australian stocks to the nominal amount of £430 millions (sterling) are quoted on the London Stock Exchange. Of the total, some £217 millions carry interest at rates ranging from 2½ to 3½ per cent., while £67 millions are at 4 or 4½ per cent. But owing to the long dating of the loans issued in the 'twenties, there is left as much as £146 millions (sterling) of stocks carrying 5 or 5½ per cent. Apart from £18,179,000 which is due in 1940-60, the earliest redemption date of these high-interest stocks is 8 or 10 years ahead. If interest rates remain low, therefore, Australia still has large savings in prospect—but not in the immediate future. At present Australian

Investment Notes

Tale of Two Markets.—The stock markets, both in London and New York, have succeeded, on the whole, in holding their ground this week. In London, the action of the influential promoters of the New Mercantile Investment Trust (whose prospectus duly appeared this week and is reviewed in a later note) has been interpreted in much the same way as that of the helmsman who cried "Courage!" and pointed toward the land. It now remains to be seen whether the markets will, appropriately, come to a land where it is always afternoon. Such a sequel, in fact, is not unlikely; for the recent fall in prices appears to have discounted the worst that can happen to industry and earnings for some considerable time ahead. Once the decline has been stayed, therefore, there may be a period of months during which prices, as a whole, are moderately stable, with a perceptible upward trend at one time and a downward trend at another, and with a volume of business just sufficient to provide Stock Exchange members with their bread and butter. It may not unreasonably be inferred, indeed, that the sponsors of the new investment trust, whose attestation of faith in the outlook was so opportunely timed, had in mind the possibility of a sequence of events much on these lines. The New Mercantile Investment Trust has called up only 10s. on each of its two million £1 shares, and 5s. of this is not payable before next May. The final payment on the £1 million of its debenture stock comes even later—i.e. in September, 1938.

★ ★ ★

It may be premature to conclude that the line along which the markets have dug themselves in, during the past fortnight, will be that on which the enemy will ultimately be held. Trade recession—whose second coming is now tacitly or explicitly admitted by almost everybody except the Government and Mr Reginald

stocks carrying about 3½ per cent. nominal interest stand close to par. Thus the 5 or 5½ per cent. stocks present a clear, and the 3½ or 4 per cent. a problematical, opening for future conversion. Some details of stocks of which £10 millions or more are now outstanding are given in Table II. In addition, there are smaller loans totalling £38 millions at 2½ to 3½ per cent., £40 millions at 4 to 4½ per cent., and £16 millions at 5 to 5½ per cent.

Future maturities are not evenly spread—a legacy from the consolidation of Commonwealth and State debt. If the latest repayment date be taken in each case, it appears that in 1938 some £73 millions (Australian) of internal stocks fall due, of which £6 millions now bear interest at 3 per cent. and £67 millions at 4 per cent. Subsequently there are no considerable maturities either in Australia or in London until 1940-41, but between then and 1944 there are repayments of some £160 millions of internal loans. In this country some £13,470,000 at 3 per cent. is due by 1941 and £18,179,000 of 5 per cent. stock already referred to is optionally redeemable in or after 1940. Thereafter, the chief concern of investors will be with the conversion, in or after 1945, of the big 5 and 5½ per cent. loans.

So much for future conversion opportunities. The actual cost to Australia of her sterling debt service, in terms of Australian pounds, however, depends not only on the rate of interest but also on the rate of exchange at which her remittances are made. How far does this factor offer a prospect of a further reduction of Australia's effective burden? In recent years Australia has had a favourable balance with this country, and in his last Budget speech Mr Casey declared that, in a single year, £20 millions had been added to Australia's sterling balances. Under a free exchange system the corollary would have been a strengthening of the Australian pound against sterling. But interest payments and net capital repayments are as important, in determining exchange rates, as trade movements. In any case the rate is maintained rigidly at a level which is unlikely to change in the near future, since quasi-political questions are bound up with it. Consequently, the prosperity of Australia's export industries tends to be reflected, not in a reduction in the number of Australian pounds required to finance sterling debt payments, but in an increase in the reserve of sterling funds in London, out of which interest payments can be made.

Since 43 per cent. of Australia's total merchandise exports consists of wool, the British holder of Australian ports has, in the last resort, a stake in the pastoral trades far exceeding the £21 millions of British capital in pastoral companies. During recent years Australia has supplied just over one quarter of the world's estimated wool production, and the United Kingdom has taken around 35 per cent. of her exports. Chief interest at the moment centres upon the policy of Japan. As a result of her abstention from the wool sales between April, 1936, and January, 1937, she purchased in 1936-37 only 10 per cent. of the total volume of Australia's wool exports, against 28 per cent. in the preceding season. Under an agreement made last January, however, Japan undertook to buy not less than 800,000 bales in the eighteen months to June, 1938. Up to the end of last June she had purchased only 285,000 bales, and there is some speculation in Australia as to how and when the balance will be bought. If the strain on Japan's economy, due to the war in China, resulted in a decline in her future purchases, the effect might be more damaging than her abstention from the Australian market in 1936-37, when she largely transferred her custom elsewhere and so did not influence world prices adversely.

This is the chief cloud on the horizon, though it may be no bigger than a man's hand. At present the balance of the various factors in Australia's position—the probable revision of trade relations, the war in the Far East, the attitude of Japan, and the recent deterioration of commodity prices—still inclines in Australia's favour. Whether she should reappear as a borrower of new money in London in future is another matter. Here "I will not" may wait upon "I would"; and the "will not" may not come wholly from the British Treasury.

McKenna—is as yet only in its earliest stage, though this week's unemployment figures show that it may have already begun. Their stoical reception by the markets, however, suggests that technical conditions are much better than they were a few weeks ago. A pointer in the same direction may be the disinclination of investors to be mulcted unduly for the element of safety in gilt-edged securities. This week's Southern Rhodesian loan of £2½ millions was felt in some quarters to have been keyed up a little too high; for its status is not perceptibly better than that of certain British corporation loans which have recently been issued at the same price, but with a five years' shorter life. Meanwhile, in New York, the Dow Jones industrial index, after falling below 114 on November 24, stood over 130 at one time on Wednesday. Wall Street at first saw little to go for in Mr Wallace's seven-point programme for agricultural and economic recovery. On second thoughts, however, the augurs were inclined to read more into expressions like "revision of taxation," "a sensible labour programme," "an abundant supply of cheap credit," and "a healthy securities market." And the New York Stock Exchange has chosen the part of sweet reasonableness (and, doubtless, of worldly wisdom) by answering the threats of the chairman of the Securities and Exchange Commission by appointing a Special Committee to study its own reorganisation.

Carte Blanche for Trusts.—Investors who enjoy acquaintance with the personalities of the City of London will appreciate that the New Mercantile Investment Trust, whose prospectus was issued this week, has been formed under the highest possible auspices and with directors whose names are a guarantee of expert management. Other investors, less well informed, can learn from their advisers of the undoubted high standing of the new trust—but they cannot, from the prospectus alone, reach any independent judgment. The prospectus, of course, sets out the full amount of statutory information, and gives ample detail concerning the security for the debenture stock. Beyond this it only shows that the company is to "carry on the usual business of an investment trust company, spreading its funds over a number of selected investments," and that capital profits are to be applicable only to capital purposes. The intending shareholder may well feel his curiosity still unsatisfied by this information, however much he may applaud the directors' apparent desire to refrain from making financial estimates where there is no foundation of experience. But he would have appreciated, perhaps, a few words of comment on one or two points, such as the new Trust's policy, the rate of return which can at first be expected, the extent of intended investment in home industries and/or in fixed interest securities, or the limits which are placed upon investment in any one security. He does not know if he will receive with the annual report a list of investments, or what information he will have on the way the portfolio is spread. In fact, subscription to the debentures or shares of this new trust is an act of faith which may be well-founded, but is of a kind the Trust's directors, being prudent men, would doubtless hesitate to perform in carrying out their own duties.

The Trend of Industrial Profits.—The rate of increase in industrial profits during November was well maintained, completing three months in which the percentage improvement has run higher than a year ago. Total profits of the 206 companies whose reports were received amounted to £23,579,407, compared with £20,144 for the previous year. The trend over the past three months is shown in the next column.

Reports published in	No. of Companies	Rise in Profits*	Reports published in	No. of Companies	Rise in Profits*

March	307	12.52	November	206	20.25

* After payment of debenture interest.

Reckoned by total profits the breweries group is most important with 33 reports during the month and total profits of £5,007,961. The largest contribution to the month's increase of £3,977,963 is made by iron, coal and steel companies (including such leaders as Dorman Long, and Tube Investments), which account for one-fifth of the increase, but only one-eighth of total profits. Rubber companies' profits also contribute substantially to the improvement, but only slightly to the total results. November's reports, however, are well distributed industrially, and give an accurate impression of the recent trend of profits.

Capital Issues in November.—There was evidence of greater activity in the new capital issue market last month, particularly in fixed interest securities, but in relation to 1936, the level of activity is still subnormal. The following table gives our usual analysis of new money involved in recent months:—

(000's omitted) Excluding Conversions				
Monthly Average (Old Basis)	United Kingdom	British Possessions	Foreign Countries	Total
1933	17,520	2,429	449	20,398

1935	18,388	1,270	21	19,679
1936	19,195	2,035	58	21,288
(New Basis)				
1935	27,233	2,443	97	27,773
1936	37,370	2,823	964	41,157
Monthly Total (Old Basis)	Govt.	Other		
Sept., 1936	Dr. 200	7,305		
Sept., 1937	Dr. 550	4,487	Nil	7,553
Oct., 1936	Dr. 150	19,772	2,706	6,643
Oct., 1937	Dr. 400	6,965	4,404	24,026
Nov., 1936	61,254	11,335	350	6,915
Nov., 1937	Dr. 150	10,570	3,338	75,987
(New Basis)				
Sept., 1936	Dr. 200	10,379	1,802	12,222
Sept., 1937	Dr. 550	5,634	5,382	138
Oct., 1936	Dr. 150	37,849	5,897	Nil
Oct., 1937	Dr. 400	10,528	4,633	Nil
Nov., 1936	61,254	26,799	1,061	Nil
Nov., 1937	Dr. 150	13,318	3,955	157
			2,897	Nil

The low level of activity in industrial issues is emphasised by the fact that the November total (on our "old basis") of £12,222,000 includes over £3,000,000 for Liverpool Corporation, and nearly £2,000,000 for Kent Electric. Being wholly for conversion purposes, the recent 3½ per cent. Australian loan is not included in the totals.

Company Notes

P. & O. Prospects.—Lord Craigmyle's comprehensive review of the P. & O. position on Wednesday may give the bulls of the deferred stock some balm for their wounds, though at no point did it suggest divergence from the conservative dividend tradition which the company has always honoured. That policy, it is evident, will continue—the limit of relaxation for depreciation has been reached. But there are factors of a long-term order which suggest some possibility of increased payments in the future. Reading between the lines of the speech, it would seem that the next feature in the group's programme is a substantial replacement of

tonnage by the subsidiaries. The P. & O. building programme has anticipated the parent company's requirements. Three new "Strath" vessels will be in service for next season, and they have been built at prices considerably lower than those ruling to-day. In addition, two new refrigerated vessels for the Australian trade have been put into service, at a cost roughly equal to last year's depreciation provision. All told, the P. & O. fleet is not faced with "pressing necessity" for major additions. With the subsidiary and associated concerns, it seems, the position is somewhat different; for at two points in his speech Lord Craigmyle declared that it was not wise to press them for higher dividends, having regard to the desirability of conserving their resources to meet substantial building programmes. In short, these concerns will be placing orders for new tonnage when shipbuilding prices permit.

Their trading results, however, are steadily improving, and should benefit, like those of the parent company, by increases in freight rates which were not fully reflected in last year's voyage accounts. Of the P. & O. decrease in net shipping profits the chairman himself gave warning at last year's meeting; and, as events proved, static conference rates (for the greater part of the year) coupled with rising costs, resulted in smaller net earnings. It is evidently expected that moderate freight increases will compensate for the increased costs of ship operation. Although the group's total depreciation provision last year was not directly shown in the accounts—owing to the withdrawal of certain vessels from service—the actual provision was in excess of £3,300,000—a figure which, although somewhat less than 5 per cent. of first cost, was considered sufficient. Investors will be glad to learn that the board contemplates some improvement in the display of the depreciation figures in the accounts. Long-sighted stockholders, moreover, will welcome the chairman's reaffirmation of the principle that depreciation is really necessary to provide liquid assets for shipbuilding—a point which was stressed in these columns a year ago. Lord Craigmyle thus reconciled the company's cautious dividend policy with some hopefulness for better things in the future. In the last resort, the prosperity of the group will depend upon the prosperity of world trade; for the immediate present, however, stockholders must take account of disturbances in the Mediterranean and Far Eastern trades—and of falling commodity prices.

South Durham and Dorman Long.—This week has provided an interesting miscellany of steel news, especially from the North-East Coast. The South Durham Steel dividend, like that of Dorman Long, disappointed the market, and the report emphasises the basic industrial facts which now affect steel shares. Total profits of South Durham have increased very satisfactorily by £41,071 to £258,343, and profits of the group rose very much more, for the Cargo Fleet Iron profits jumped from £223,402 to £284,832, though its ordinary dividend was only cautiously raised from £40,000 to £50,000. As the Dorman Long accounts showed, however, heavy depreciation allowances are intervening between profits and dividends, as plants are being worked at acute pressure. South Durham has increased its allowance from £85,000 to £110,000, and Cargo Fleet allocates £150,000, against £120,000 for the previous year. Ordinary share earnings, consequently, are only slightly increased, and South Durham has raised its distributions by only one per cent., on the ordinary from 12 per cent. to 13 per cent., and on the "B" ordinary from 6 per cent. to 7 per cent. The moderation of these advances, in a year of peak activity and profits, shows very clearly the caution with which the investor must value highly-gear steel shares. At 43s. 9d., the South Durham ordinary shares yield 6 6s. 6d. per cent., which, probably, does not excessively discount the risks inherent in a share of this type.

Viscount Greenwood's speech at the Dorman Long meeting on Tuesday similarly failed to arouse the market's interest. His review of the recovery which the company has made in the last five years was, of course, a source of satisfaction to the shareholders, many of whom must, in the past, have despaired of any return on their holdings. The output of coal has increased by 65 per cent. since 1932, ironstone by 128 per cent., coke by 133 per cent., pig iron by 171 per cent., steel ingots by 177 per cent. and rolled steel products by 160 per cent. These past achievements, coupled with the greater financial strength of the balance-sheet, are highly satisfactory to shareholders. But Lord Greenwood was almost silent about the prospects for the future, and did not refer to the major economic controversies which are causing steel shareholders disquiet. The chairman attributes primary thanks for the prosperity of the industry to the tariff policy of the Government, but he vouchsafed no opinion about the ability of protection alone to maintain the level of steel demand and profits.

Steel Shares in Prospect.—For holders of steel shares, the future of demand has become a fundamental question. From every steel-producing centre comes striking evidence of prosperity. The deputy-chairman of Hadfields has remarked that the company is in the happy position of not having to run after orders. The chairman of the Tees Conservancy Commission reports record tonnage in and out of the Tees. The Iron and Steel Federation apparently restrained producers from increasing prices further. Scrap prices are fixed for another six months. Yet, at the same time, many steel shareholders are becoming uneasy, and a few prominent industrialists, such as Mr Arthur Chamberlain, have

EXECUTOR AND TRUSTEE BUSINESS CONDUCTED

COMMERCIAL SERVICE

The Bank has over 370 Branches in Africa, and Agents and Correspondents throughout the world. The closest touch with Trade and industrial conditions is maintained, with special attention to Commercial and Credit Intelligence. This service is available to Exporters, Importers and all firms wishing to develop trade with South, East and Central Africa.

THE STANDARD BANK MONTHLY REVIEW is sent post free on application. It gives the latest information on all South, East and Central African matters of Trade and Commercial Interest.

openly stated that there is a danger of a falling-off in demand. In the United States, activity in the steel industry has collapsed so rapidly and unexpectedly that investors are beginning to speculate on the potential dangers of a similar collapse here. The latest unemployment figures show a decline in consumption-goods activity, and evidence accumulates that rising costs are hindering some branches of the constructional industries. Is the steel boom, then, nearing its end? A market circular issued this week asserts emphatically that there is no danger. The difference in yield between iron, coal and steel shares and the "gilt-edged" industrials—about £1 rs. per cent.—is regarded as excessive, "especially as dividends, barring accidents, are certain to be maintained and likely to be increased in the future." The circular, however, deals lightly with some of the major arguments which are encouraging investors to take a conservative view. The effect of high steel costs upon constructional work is an important factor, and the arguments which take normal cyclical economic forces into account are equally important. It states that "re-armament gives an assured market for three or four years," despite recent statements by Mr Goodenough, director of Dorman Long, that re-armament accounts for only 10 per cent. of the company's output, and by Commander Craven that 76 per cent. of the Vickers group's steel-making is commercial. Nor is the statement that, when re-armament is complete, "there are still many tasks awaiting completion that will tend to maintain activity," itself axiomatic. Some of these tasks may require heavy public expenditure, but will public funds be in a position to finance them? The steel industry is primarily dependent upon private industrial activity and the market's present conservative valuation of steel shares appears to be based upon a not unreasonable fear that the steel requirements of private industry may not be maintained.

Carreras' Profits.—Although the preliminary profits statement of Carreras, issued at the end of last week, showed an increase of £116,763 to £1,351,596, both this result, and the increase of the ordinary dividends (on a comparable basis) from 45 per cent. to 49 per cent., wholly failed to satisfy the market. Optimistic holders had for some time been content with an appreciable lower rate of return on Carreras, compared with Imperial Tobacco, partly, it may be supposed, because last year's capital bonus had aroused premature hopes of further bonuses to come, and partly because the rate of increase in profits had been over-estimated. On the increased ordinary capital, the latest earnings of £1,139,637 (against £1,081,843) are equivalent to slightly under 50 per cent. and the 35 per cent. dividend is consequently well covered. As the following analysis shows, the balance at profit and loss is increased by no less than £218,000:—

	Years to October 31		
	1935	1936	1937
Net trading profit, after depreciation and fees ...	942,007	1,234,833	1,351,596
Taxation	43,017	70,666	124,212
Staff funds	7,042	17,324	22,747
Preference divs.	65,000	65,000	65,000
"A" and "B" Ordinary:			
Earned	826,948	1,081,843	1,139,637
Paid	708,626	797,204	871,813
Earned %	48.6	66.1	49.6*
Paid %	40	45†	35*

Contingencies fund 100,000 50,000 50,000
Carried forward 1,282,834 808,847 1,026,671
* On increased capital. † And 40 per cent. capital bonus.

On these results, the "A" ordinary shares fell sharply last week-end, and now stand at £7 16s. 9d., to yield £4 12s. per cent. Their return has thus been increased to a basis of equality with that on Imperial Tobacco ordinary. Such a yield may probably be regarded as reasonable, but it is proper to point out that rising costs are operative in this industry, as in others. The large tobacco undertakings, it is true, smooth out the effect

of variations in raw tobacco prices by a stock equalisation policy, so that their accounts are protected from violent price movements. From recent reports, however, it appears that tobacco consumption is not insensitive to trade fluctuations. While current dividend rates are well protected, therefore, moderation in profits estimates for the current year may be a wise policy for tobacco shareholders.

United Molasses Prospects.—The excellent dividend and profits figures of this concern (on which we commented in last week's issue, page 488), have been followed by a comprehensive report, which includes consolidated assets and earnings statements. The trading profits of the parent concern jumped from £716,186 to £1,014,054, and total revenue increased by £307,698 to £1,139,284. The consolidated net trading profits, after taxation, rose from £759,044 to £946,241, as we showed last week. Molasses trading apparently contributed more to these results than might have been inferred from the preliminary figures. Deliveries increased by 370,000 tons, though average prices are being kept almost completely stable. Nor has the company experienced difficulty in securing supplies adequate for its business. The benefit of a stable price policy in encouraging demand, particularly in the fermentation alcohol industry, is apparent from the profits trend. This is a factor of long-term importance, and the company, which sells 60 per cent. of its turnover to Empire countries, has become less dependent on the United States than it was some years ago, though it is not immune from industrial depression there. The company, moreover, is not merely a trading, but also a transport enterprise, and this side of its business can be divorced from molasses when circumstances compel. But since the company's fleet is chartered at fixed rates several months ahead, it did not obtain substantial benefits from the midsummer freight boom. Current rates, however, are still 100 per cent. higher than in October, 1936. There seems, all told, to be an adequate basis for the board's view that profits during the current year will be at least maintained—a view which is founded substantially on forward contracts and charters.

Caterers and Costs.—A year ago, the chairman of J. Lyons and Company issued a warning to shareholders that rising costs of raw materials were adversely affecting profit margins. Dual confirmation of his view comes this week from a company in his group and from the chief competing concern—Aerated Bread Company. At the *Strand Hotel* meeting, reference to increased costs of foodstuffs and equipment was linked to intimation of increased charges. The *Aerated Bread Company's* report reveals the same effect, for net trading profits, after unstated contingencies provisions, are reduced from £221,407 to £207,652, and total income from £234,935 to £217,262. During the past year extensive rebuilding operations at the company's main bakeries have unavoidably affected operations, and added their dis-economies to the rising prices of commodities. Profits, consequently, show the first set-back since 1929, though the stable 5 per cent. dividend is covered by earnings of 6½ per cent. Profits for the past three years are analysed below:—

	Years to end September		
	1935	1936 (approx.)	1937
Net trading profit (after contingencies)	214,339	221,407	207,652
Interest received	9,496	13,528	9,610
Total income	223,835	234,935	217,262
Fees	2,581	2,602	2,645
Depreciation, etc.	65,329	73,120	73,747
Income tax	44,000	45,000	42,000
Preference div.	36,042	36,604	36,009
Ordinary shares:—			
Earned	75,883	77,609	62,861
Paid	49,877	48,876	48,075
Earned %	7.6	7.9	6.6
Paid %	5	5	5
Reserve	25,000	25,000	18,500
Carried forward	44,604	48,337	44,623

Analysis of the balance sheets for the same period reveals a growing deficit on current assets account, now totalling £211,000. Some £137,000 has been expended on additions to property and plant during the past year, while a bank balance of £69,780 has been replaced by an overdraft of £15,322. Rebuilding operations are not yet finished and it would be premature to expect immediate relief from rising costs on the recent fall in primary commodity prices. A yield of slightly over 5 per cent. on the ordinary shares affords no special attraction to buyers at the moment. Meanwhile, both the ordinary and deferred shareholders of *Scribbans and Company*, another company whose fortunes are bound up with the consumption trades, must remain in suspense until the current year ends next April. The directors, faced with increased wages and materials costs and falling selling prices, have felt themselves compelled to defer the consideration of an interim dividend. Shareholders in other consumption goods trades may well reflect on this unequal battle between caterers and costs.

Brewery Earnings and Trends.—Brewery reports issued during the past fortnight show that the rate of increase in profits has been well maintained. Dividend increases are less spectacular, for in general the provision of large sums for improvements to properties has been increased. A 10 per cent. increase in Ind Coope and Allsopp total profits is most satisfactory. Although a 26 per cent. increase was shown in 1935-36, the Nalder and Collyer acquisitions renders the comparison untrustworthy. Walker and Homfrays are the sole exception to the brewery improvement. The financial trials of this concern since 1932, however, put it in a class apart, and it is evident that, sooner or later, the board will be compelled to consider a reconstruction scheme. As we show in the following table, the recovery in brewery profits is well spread geographically:—

Company (year to Sept. 30)	Total Profit	Earned for fixed charges	Earned for Ord. Shares	Ord. div.	Current Price†	Yield %
Ind Coope, etc.:						
1935	842,049	644,607	417,472	36.5	25	109/-xd 5 1 0

1937	271,463	202,119	163,119	26.7	15	

† Year ends October 31st. ‡ All shares £1 denomination. (c) 5 per cent. cumulative preference.

These results, however, provide little indication of cost changes which are now in progress. Rising purchasing power and increased demand for bottled beers—on which profit margins are higher—have tended to obscure the cost factor during the latest year. Reference has been made by the chairman of Mitchells and Butlers and Brickwood and Company to the rising cost of barley. Although the increase may well be covered by forward purchases, the effects of such a rise cannot be delayed indefinitely. But one of the most interesting features of the trade is the growth in sales of bottled beers. Ind Coope have used £80,000 to write off bottling plant, and without this allocation the earnings for the ordinary shares would have been a little higher than in 1935-36 instead of lower. Hewitt Brothers, like Brickwood, have been compelled to extend their bottling stores, necessitating an

increase in their capital. Brickwood and Company, whose well-presented accounts are supplemented by a print of the chairman's speech, report that their capacity has been tested to the point of breakdown last year. The question has some bearing on cost, for bottled beers require an increased amount of storage space disproportionate to the rise in sales. And with sharply rising building costs, such additions, combined with the improvement of premises, have some bearing upon profits. Current yields on brewery shares, in general, appear adequate, since, for most companies, they are backed by strong financial circumstances.

Bad News from New Companies.—Recent reports from the majority of new companies have disclosed, on the whole, moderately good results, but the first accounts of some others are poor indeed. News comes this week of two companies recently introduced to the public investor. Assurance Finance Trust was converted into a public company in 1936. Its £1 ordinary shares, introduced in that year, were dealt in between 33s. and 39s., and reached much higher levels earlier this year. As recently as August last, the chairman declared that the volume of business, in some sections, was many times greater than in any previous year, and that turnover for the second half of 1937 would show "a further marked advance." A proposal to increase the authorised capital by £250,000 and to issue 25,000 shares at par was unanimously approved. Early in November, it was reported that the managing director had left the board, following a resolution of a meeting of shareholders. An investigation into the company's affairs, it is now stated, indicates that a very large proportion of the company's share capital (now totalling £250,000) would appear to have been lost, and new business is not being accepted. The fullest investigation and disclosure of the causes of this *débâcle* is evidently required.

METALS AND MINERALS TRUST

The gross yield at the offered price of 15/- per Unit, based on the actual distributions in respect of the last two half years of the Trust, is equivalent, with income tax at 5/- in the £, to

£6.8.6% per annum

in addition, the income placed to Reserve is equivalent to a further

£1.15.1% per annum

The system of allocating half the surplus over 4% per annum to a Reserve Fund gives investors an exceptional opportunity of putting money with the highest degree of safety into these important and promising industries, producing and handling gold, coal, tin, copper, lead, nickel, spelter, zinc, asbestos, diamonds, etc.

The second piece of bad news concerns a company floated in the South African industrial boom—Stanley Motors, whose £1 preference and 4s. ordinary shares were issued in September last year. The first accounts of this concern show a net loss of £1,584, compared with estimated profits of nearly £70,000. In the profit and loss account this figure is plainly stated as a loss—which, beyond peradventure, it is—but the directors, in their report, prefer to dub it a "profit" of £10,062 (to which is added £16,250 for share premiums) and to transfer £11,646 to "reserve for doubtful debts and unearned finance charges," which now stands "at the considerable figure" of £40,345. The figure, indeed, is considerable, but its magnitude is scarcely a compliment to the board. So far as it represents a necessary provision for anticipated losses, its size would appear to be a testimonial of the "Failed B.A." type. The accounts appear also to suggest that the company—which is registered under South African law—has paid preference dividends, in effect, out of funds provided by share premiums. The chairman seeks to mitigate the loss which has fallen on the shareholders, first by taking over part of the company's tax liability, secondly by providing £16,765 for special writing down of stocks, and thirdly by transferring 8 per cent. of the equity as a free gift to the shareholders. The latter will be grateful, but not unduly so; for it is difficult to be enthusiastic over the presentation, with a lame horse, of a bar of soap. Many shareholders in Great Britain will regret their inability to attend the meeting, which has been called in Johannesburg for the day before Christmas Eve.

Future of Far West Rand.—At the end of last week it seemed that Mr John A. Agnew's speech at the Consolidated Gold Fields meeting (coupled with the Anglo-American Corporation's capital increase) might well stimulate a considerable revival of interest in the Kaffir share market. But though the tone has subsequently been firm, there has been no boomlet. Mr Agnew's discussion of the high level of Union taxation must have fallen on sympathetic ears, though the Union financial authorities will scarcely see the problem in the same light. But, from the speculative aspect, undoubtedly Mr Agnew's most important reference was to the future of the Far West Rand enterprises, which are now reaching an advanced stage of preliminary development. At Venterspost, indeed, underground work on the reef has already been begun. West Witwatersrand, the chairman declared, was entering a "new phase" in its career, and he confidently asserted that the results so far achieved at Venterspost would be repeated along the many miles yet to be developed in the areas originally acquired. So far as modern borehole and geophysical surveys can disclose the ore formations below ground, the case for the Far West Rand seems to have been

proved. From the market aspect, Mr Agnew confessed that he could find no adequate explanation for current share prices. But the shareholder in developing mines is apparently taking some account of the substantial increase in costs of mining equipment, and the possibility that, while the new mines are being opened up, these costs may be further increased. Except for the speculative investor, who is prepared to accept the essential risks of such holdings as West Wits. and "Writts," it is arguable that an interest in the new field can best be acquired through the shares of such a leading mining finance house as Consolidated Gold Fields.

Wiluna's Poor Results.—Australian gold mining has evidently struck a bad patch. The recent Commonwealth Mining and Finance meeting found shareholders aggrieved partly by the heavy fall in their holdings, and partly by the disappointing results disclosed by the development of certain properties. The Wiluna Gold Corporation is an established concern which has, in the past, paid good dividends to its shareholders. For the past year, however, no dividend was received from the operating company, and the shareholders in the holding company have gone dividendless since the distribution of an interim payment for 1935-36. The shares, which reached 70s. 1½d. during 1934, have fallen to 8s. 6d. this week. On the results disclosed by the operating company, it is difficult to find enthusiasm for the shares, even at this low level. Total income has fallen from £1,089,274 to £997,921. Mine, milling, depreciation and other expenses are all appreciably higher, and the net amount available for dividends has thus been sharply reduced from £357,574 to £195,526. This amount, together with £16,500 from the carry-forward, has been employed to write off "Excess development and exploration and advance stope preparation"—a legacy from 1935 which would otherwise have been a burden on annual profits for some time to come.

Working costs per ton rose significantly from 17s. 2.45d. to 17s. 8.78d., owing to increased wages and stores costs. "Positive and probable" ore reserves have been reduced by some 103,100 tons to 2,310,600 tons, compared with last year's estimate of "positive" reserves, while average values have fallen from 5.46 dwt. to 4.74 dwt. per ton. Reserves represent about four years' supply to the mill. Meanwhile development is being pushed ahead fast, but the results exposed to date are not exciting. A sum of £59,846 was expended on special development last year, while capital expenditure absorbed over £300,000. But the results at depth in the main shaft mine show lower gold content and smaller ore bodies. The mine appears to have reached a critical stage in its development, and its future depends upon the nature of ore discoveries from the present development programme. Clearly an early resumption of dividends on any appreciable scale can hardly be expected.

Malayan and S. Malayan Tin.—Dividends of 92½ per cent. and 57½ per cent. respectively by these companies prepared the market for this week's good reports. Both companies had the advantage of a substantial increase in permitted production, for the Malaya domestic quota averaged 73 per cent. of assessed production, an increase of 14.075 per cent. over 1935-36. Both companies also secured an appreciably higher price, averaging approximately £145 per ton, compared with £132 per ton a year before, but in each case costs increased per cubic yard of land dredged. Malayan Tin Dredging shows a total revenue of £363,378 compared with £271,791, and net profits, after provision for substantially increased charges, N.D.C. and depreciation, amount to £186,851, against £164,076. After payment of

THE WEEK IN THE MARKETS THE STOCK EXCHANGE

SETTLING DAYS

TICKET: DECEMBER 14 ACCOUNT: DECEMBER 16

PRICES have ebbed slightly on the Stock Exchange, but there is no symptom of the disorder which spread abroad three weeks ago. The major achievements to the credit of the last complete Account of the year are thus two in number. Prices have been lifted significantly above the low panic levels of the last Account; secondly, despite an adverse unemployment return this week, they have been broadly maintained. Business, on the other hand, has been very thin. Some small investment buying was evident early this week, but speculative operations, both large and small, have been negligible. A natural drift of prices followed the withdrawal of the recent modest support, but no new selling tendency was evident, and the close of the Account was quite featureless.

Gilt-edged securities opened quietly, dipped on Tuesday, and then found some sudden bear support towards the close on Wednesday. But business was never large, though undated stocks perhaps found best support in the recovery. The Paisley scrip opened at ½ premium, of which the best part was maintained during the week, while the Australian scrip made minor gains, to ½ discount.

In the foreign bond market, it has been remarkable to see Brazilian issues (now in default) vying with Chinese issues (with Nanking besieged) for the bigger advance. A statement on the debt position is apparently expected from Rio de Janeiro, but the reports which circulated in the market regarding an outline plan would hardly commend themselves to bondholders generally. Customs issues were well supported in the Chinese group—apart from a nervous day on Tuesday, on reported moves towards peace, and a growing hope that the Japanese authorities would respect the creditors' rights in the Customs Administration.

The home rail market has been quiet, and the recovery on Wednesday must be attributed as much to bear covering as to a welcome for moderate traffics. Argentine debentures were firm, but little business was done in the equity stocks.

Small dealings and the absence of any definite trend have characterised the industrial section. Transatlantic issues were subdued until Wall Street showed its mid-week improvement. Unrelieved dullness affected steel shares. Indian Iron were specially weak on forced Indian selling, Dorman Long fell 1s. 6d. on the day of the meeting (discussed on page 539), while a selected list like Tube Investments, Firth-Brown, and Hadfields, showed significant falls. Electrical equipment shares opened well, but failed to maintain their promise. Supply shares, however, were generally satisfactory, on investment demand.

Appreciable falls in motor shares were recorded, some of the leaders falling by 1s.-2s. 6d. on Tuesday, while aircraft issues remained uninteresting. Most brewery shares were a few pence lower, and in the consumption trades generally, there were falls in tobacco, provision, catering and store shares. Shipping shares lost ground, even P. and O. deriving no benefit from the chairman's speech (discussed on page 538). Limited interest was taken in the miscellaneous industrial leaders, and British Oxygen, Turner and Newall, Imperial Chemical Industries and Murex were included among the many falls. Building materials issues remained dull.

Oil shares began in promising fashion and prices responded to a good demand. The advance was not entirely held, and Tuesday saw a heavy tone at the opening, following dullness in New York. Business dwindled to an extremely small scale, but improved with Wall Street. The 4 per cent. drop in U.S. production, below the quota set by the Bureau of Mines, also assisted the market, and buying orders from Paris and Amsterdam helped a fair local demand.

The rubber market was very steady at the beginning of the week on the maintenance of the commodity price, but business was small and buying too restricted to influence quotations significantly. The market thus became less steady and the few changes in prices were all downward. Share prices failed to respond to the commodity's short-lived spurt. In mid-week the majority of shares were not dealt in and many prices were nominal.

the 92½ per cent. dividend, an amount of £75,861 is carried forward, compared with £74,010 brought in. Southern Malayan's total income rose from £355,151 to £489,217. In this case also, higher charges and increased depreciation have to be met, and the net amount earned has increased more moderately from £188,197 to £251,597, leaving a slightly increased balance to be carried forward. Both mines are well administered, and enjoy a moderate level of costs. Although the quota allowance was maintained at 110 per cent. during the first six months of the current financial year (against 90 per cent. a year ago)—the Malayan domestic quota, of course, is below this rate—the Tin Committee, whose decision was not known as we went to press, had already indicated the desirability of cutting the quota to 85 per cent. for the first quarter of 1938. Since standard tin has fallen from £230 per ton to £194 per ton during the past year, it is probable that average prices will not be maintained by these companies. The combination of these factors goes far to explain the high yields on the best tin shares. Malayan 5s. shares (whose probable working life appears shorter than that of Southern Malayan) yield 13.4 per cent. at the present price of 35s. 7½d., while its sister company's shares offer 9½ per cent. at 30s.

Other Company Results.—Our usual analysis of profit and loss accounts, appearing on page 562, covers as many as 65 further companies. The list includes a number of miscellaneous industrials, but the engineering industries in particular, are well represented. A discussion of the results appears on page 563 under the heading "Shorter Company Comments."

Company Meetings of the Week.—Reports of company meetings will be found in this issue from page 549 onwards. The chairman's comments at the *Peninsular and Oriental Steam Navigation* and *Dorman Long* meetings are discussed on pages 538 and 539. The Right Hon. Lord Catto warned the deferred shareholders of *Tobacco Securities Trust* that although dividends had been resumed, they should not indulge in excessive anticipations regarding the future. At the meeting of *British Overseas Bank*, Mr Arthur Gairdner discussed the factors which had reduced the bank's earnings, and declared that dividends could not prudently be distributed under present conditions. Sir John Caulcutt, at the *Barclays Bank (Dominion, Colonial and Overseas)* meeting, declared that when the revival of an international monetary system proved possible, the only practicable method would be to continue to employ gold as a monetary base. These two bank speeches are discussed at greater length on page 534. Mr C. W. Reeve informed shareholders of *Associated Equipment Company* that business in trolley buses, both at home and overseas, was expanding. Mr J. T. Brockhouse informed shareholders of *J. Brockhouse and Company* that the company could not get enough steel, although it consumed over 100,000 tons annually, and he invited the Iron and Steel Federation to ensure adequate supplies. At the *British Tyre and Rubber* meeting Sir Walrond Sinclair disclosed that the company had offset narrower profit margins by a larger volume of sales. Major M. Gluckstein informed members of the *Strand Hotel* that the company's hotels were being improved in advance of modern standards. Sir Edmund Davis confidently expected the profits of *South-West Africa Company* in the current year to equal the figures recently announced. At the *Cam and Motor* meeting, Mr L. E. B. Homan declared that, while gold seemed to be stabilised at about 140s. per ounce, he did not rule out a higher price. Mr W. Arthur Addinsell disclosed that the exportable allowance of *Bukit Kajang* would approximate 1,497,000 lbs., compared with 1,336,000 lbs. harvested last year.

RATTRAY'S 7 RESERVE

A GIFT OF DISTINCTION

For the "friend who smokes a pipe" there can be no more subtle or pleasing gift than Rattray's 7 Reserve Tobacco. 7 Reserve owes its special charm to the fact that it is a cunning blend of seven carefully selected tobaccos, hand-prepared and time-matured. No single flavour predominates, and even the constant smoker's palate is never dulled.

Price: 21/4 per lb., post paid.
Send 5/4 for sample ½ lb. tin, post free.
Export, 24/- per 2 lbs., plus postage.

Chas Rattray

PERTH SCOTLAND

Rattray's 7 Reserve is the full and generous strength of 7 Reserve.

London: 5 Walbrook, E.C.4, and 45 Pall Mall, S.W.1

Tea shares made an unsatisfactory start, and there were appreciable declines in a number of the principal Indian and Ceylon issues. Business continued restricted, with no public interest.

The improvement in the mining market last week was not maintained at first. Business continued at a very disappointing level, but Tuesday's close was appreciably firmer. From time to time, Cape buying found a response in prices, but turnover remains modest. Little business was transacted in Rhodesian copper shares, though a moderate demand brought a firmer tendency later in the week. Interest was almost completely lacking in West African issues. Tin shares found good support at the start, but later turned dull, following the fall in the metal.

ACTUARIES' INVESTMENT INDEX

The Actuaries' Index of 177 industrial ordinary shares recovered slightly to 74.0 last Tuesday, compared with 73.6 a week ago, but it is still significantly lower than 77.4 a month ago. The corresponding yields are 4.92, 4.95, and 4.69 per cent. The majority of the component indices are higher than last week, though motor shares are an exception. The following table gives a selection of the component indices.

Group (and Number of Securities)	Prices (Dec. 31, 1928 = 100)			Yield (%)

We are officially informed that on December 3rd Messrs. Solomon Charles Cohen, Gordon Ratan Roy, and Ernest Charles Pawley, trading as S. Charles Cohen and Company, were declared defaulters upon the London Stock Exchange.

NEW YORK STOCK EXCHANGE

The market has slowly improved during the past week, and operators have been encouraged by signs of rising volume on the upward movement and dwindling volume on the occasional reactions. There has been no special news to explain the firmer tone of the markets. Washington has provided nothing more promising than a seven point programme enunciated by Mr. Wallace which was pleasantly vague. Amid a few shreds of better industrial news, *Iron Age's* estimate of steel operations for the current week showed a further reduction to 27.5 per cent. against 30 per cent. for last week. Despite this lack of improvement in steel output, steel shares have

shared in the general rise. Aviation shares were prominent during the week, on hopes of a rapid expansion in air travel during 1938, aided, perhaps, by reports that the Government may assist in developing air fields. Rails and utilities are both slightly better than a week ago. There are already signs of the usual end-of-year switching for tax purposes, and consequently movements are inclined to be irregular. The bond market moved quietly downward, with Government issues adjusting themselves to the new issues, which were heavily oversubscribed.

CAPITAL ISSUES

TRUSTEE borrowing has been continued this week with an issue of *Southern Rhodesia* 3½ per cent. stock, dated 1961–66, at £101 per cent.—terms identical with recent corporation borrowing except for a few years' extension of life. The proceeds of the loan are required for public works, not more than 7 per cent. being expended outside the Empire. The prospectus was accompanied by a detailed economic review of the colony, and while some quarters were inclined to regard the price as fractionally high, in view of its somewhat extended date, the security of the stock appears well protected. We comment in general terms on the *New Mercantile Investment Trust* prospectus on page 538. Subject to our earlier comments, the debenture stock should form a reasonably attractive holding. There are certain points concerning the ordinary shares, however, which deserve comment. The first is the question whether, in principle, this is the right time for forming new investment trusts—a question which is optionally safeguarded by the extended instalments on the debenture and ordinary share issues. Secondly, a partly-paid share is not likely, in practice, to form the most popular investment trust operation. Thirdly, during the early years of investment trust operation, it is wise to expect modest dividends while adequate reserve funds are built up. Statements for information only have been issued by *Rugby Portland Cement*, and *Northern Securities Trust*, both in respect of debenture issues.

by 1977 by drawings at par from 1939; or on notice at decreasing premiums. Issue taken on behalf of Prudential Assurance at 99. Proceeds to repay £175,000 overdraft.

ISSUES TO SHAREHOLDERS ONLY

Bell (A.) and Sons.—Issue of 160,000 5½ per cent. £1 cumulative preference shares at par.

Fullers' Earth Union.—Issue of 15,438 £1 ordinary shares at £2 (one new for four held).

Mid-Cheshire Electricity Supply.—Issue of 100,000 £1 ordinary shares at 32s. 6d. and 300,000 4 per cent. preference shares at par.

Town Investments, Ltd.—Issue of 50,000 7½ per cent. £1 cumulative preference shares at 29s. (one new for four held).

Wellman Smith Owen Engineering Corporation.—Issue of 97,135 £1 ordinary shares at par (five new shares for eight now held). The new shares rank with the present share capital except for the interim dividend of 5 per cent. already declared during the year to March 31, 1938.

Westover Garage.—Issue of 78,965 5s. ordinary shares at 6s. 3d. (one new for four held on November 24th).

BONUS ISSUE

Booker Bros., McConnell and Company.—It is proposed to increase the capital to £840,000 by creating 165,000 ordinary shares of £1 each, by making a bonus issue to the ordinary shareholders of three ordinary shares for five now held.

PRIVATE PLACING

Transport Services.—35,250 5s. ordinary shares have been placed privately.

RESULT OF ISSUE

Paisley Corporation.—The recent issue at 101 of £1,000,000 3½ per cent. stock has been substantially over-subscribed.

FORTHCOMING ISSUE

Lillywhites Holdings, Ltd.—On December 15th Whitehead Industrial Trust will offer for sale 60,000 5½ per cent. cumulative 10s. preference shares at par, and 500,000 1s. ordinary shares at 4s. 6d. in Lillywhites Holdings, Ltd. The offer will show that the company owns all the share capital of Lillywhites, Ltd. (specialist sports firm founded 1863). Lillywhites, Ltd., average net profits for three years to September 30, 1937, £27,618 subject to N.D.C.; for latest year, £30,563. Net liquid assets, over £78,000.

DIVIDEND ANNOUNCEMENTS

ASSOCIATED BISCUIT MANUFACTURERS.—The directors have decided that consideration of an ordinary dividend should be postponed until the audited accounts for the year are completed.

BARTON AND SONS (1935), LTD.—Final dividend of 6 per cent. actual, making 10 per cent. for year to October 31st, but payable on capital of £360,000 (increased from £175,000). The final dividend compares with 7½ per cent. paid last year for 16 months.

BRADFORD DYERS ASSOCIATION.—Dividends for 6 months ending December 31st on 5 per cent. cumulative preference stock postponed. In arrears from January, 1938.

BRAZILIAN TRACTION LIGHT AND POWER.—Dividend, 50 cents per ordinary share of no par value, against 40 cents. Total dividend for 1937, \$1 per share as against 70 cents for 1936.

BRISTOL AEROPLANE COMPANY.—Interim ordinary dividend of 7½ per cent. (unchanged).

BRITISH EMPIRE FIXED TRUST, COMPREHENSIVE SERIES.—Coupon No. 8, due December 15th, will be paid at rate of 2-2d. net per sub-unit (against 2-4d. a year ago).

BULLARD AND SONS, LTD.—Total ordinary dividend of 10 per cent. plus 2½ per cent. bonus, making 12½ per cent. for year. Also special centenary bonus of 5 per cent. from general reserve.

CANADIAN CELANESE.—Quarterly dividend on common stock 40 cents per share as before, making \$1.60 for year (same).

CARRERAS, LTD.—Dividend on "A" and "B" ordinary shares 35 per cent. for year absorbing £871,813, against 45 per cent. absorbing £797,204.

E. K. COLE, LTD.—The directors deem it advisable to defer consideration of an ordinary dividend payment until the end of the company's year.

FORESTAL LAND, TIMBER AND RAILWAYS COMPANY.—Interim dividend of 2 per cent. on ordinary stock, against 3½ per cent.

SOUTH DURHAM STEEL AND IRON.—Dividends of 13 per cent. on ordinary and 7 per cent. on "B" ordinary shares, for year to September 30, 1937 (against 12 and 6 per cent. respectively).

STEEL BARREL SCAMMELLS AND ASSOCIATED ENGINEERS.—Interim dividend 6 per cent., against 5 per cent. Dividend for year to June 30, 1937, was 12½ per cent.

SUEZ CANAL.—It has been decided to add to the half-yearly interest on the capital shares, which was fixed at Frs. 36-37, an interim dividend of Frs. 263-63, making a total was Frs. 26, making Frs. 205. On the bonus shares the distribution is Frs. 263-63 gross, against Frs. 179, and on founders' shares Frs. 297-04, against Frs. 201-69.

SUSSEX BRICK.—Profit, £84,001, against £82,372; final dividend reduced from 12 to 9 per cent.

COMPANY MEETINGS

THE BRITISH OVERSEAS BANK LIMITED

POST-WAR MONEY MARKET CONDITIONS

FUNCTION OF BILLS OF EXCHANGE

LONDON AND FOREIGN BORROWERS

FINANCING OF INTERNATIONAL TRADE

MR ARTHUR GAIRDNER ON THE OUTLOOK

The 18th annual general meeting of The British Overseas Bank Limited was held on the 7th instant at 33 Gracechurch Street, London, E.C.

Mr Arthur C. D. Gairdner (chairman of the bank) presided.

After intimating that Lord Aberconway (director) was unable to attend the meeting and that another director, Mr Louis E. Meinertzhagen, was abroad on the bank's business, the secretary (Mr A. E. Thorne) read the notice convening the meeting and the report of the auditors.

The Chairman said: Ladies and gentlemen, I presume that it is your wish that we should hold the report and accounts as read. (Agreed.)

The general situation becomes more and more confused as time goes on, but the present occasion seems a suitable one to review at least those aspects of it in which we ourselves are more particularly concerned. It is not easy to retain a firm grasp on the fundamental issues, as they have been obscured by the artificial expedients used from time to time to meet difficulties as they arise, without regard either to the underlying causes of the difficulties or to the ultimate consequences of the measures taken. In all this confusion we can only take for our starting point the practical question of how we, as a bank, have to carry on our business. The British Overseas Bank, as an institution established to deal with commerce between this and other countries, has its foundation in the mercer between this and other countries, similar institutions, however, of exchange. In common with other similar institutions, ever, we have found in recent years that the proper functioning of the bill of exchange has been seriously hampered through imposition of the various standstill agreements and through increasing interference in other ways with the normal machinery of international trade.

PRE-WAR SITUATION

In order to clear our minds on the subject, it will be useful to start with more settled conditions and consider the position of the London bill before the War. At that time the three essential factors, a balanced budget, a sound balance of trade, and a sound currency, were more or less automatically maintained by the operation of the gold standard. Shipments of gold served to at once as a warning sign and set in motion forces tending to remedy an unsound situation. In addition to its use in emergency, gold also served to meet seasonal requirements, to finance movements of crops, and in general gave the necessary assurance to trade and industry, in the pursuit of their daily functions, of protection from violent movements in which they were not directly concerned.

The bill of exchange played a vitally important rôle in this scheme of things. It enabled London to build up its position as the dominant money market of the world and to perform its functions smoothly and efficiently. The fluctuations of interest rates provided an extremely delicate control of the stability of the short-term money and thereby maintained the stability of the currency by putting a drag on over-trading and speculation, while low rates eased the situation and in time helped to revive trade when it had fallen below normal. A power such as that possessed by the London bill of exchange, and the fact that it could be discounted on a lower interest basis than anything else, was naturally open to abuse, and it was abused. The question as to how this could be remedied was frequently discussed between bankers before the War, but the subject was one of unusual complexity and nothing was done, with the result that when war

came the abuses, which it was realised did exist, were revealed. In spite of such temporary abuses, however, the London bill retained its character as the document representing the highest form of credit known in the world.

UNIVERSAL RECOGNITION OF THE BILL

After the war and the financial chaos which followed, a modified form of the gold standard was evolved, and its collapse after only a short time led to the confused conditions of the present day. Throughout the post-war period, however, the bill of exchange remained the principal element in the financing of international trade, and, while changed conditions led to fresh difficulties, its value and effectiveness continued to be recognised universally.

In the crisis of 1931 and the ensuing standstill arrangements, however, the bill of exchange was subjected to the most serious trials that had yet been encountered. In the endeavour to prevent a complete collapse, the bill of exchange was included in the standstills with all sorts of other obligations, and there was a danger that the special character of the bill of exchange might be affected, although actually a commercial bill retains its character whether inside or outside a standstill agreement. The German borrowers themselves have recognised this and the formal pre-eminence of the commercial bill has been emphasised throughout successive standstill agreements. Recently steps have been taken towards restoring the quality of any bills that may have fallen off during the standstill period, as Germany well understands that if she hopes to make use again of the facilities supplied by the London market there must be no question of the manner in which she has dealt with previous obligations, and that it is to her interest as much as ours that the high standard of a bill of exchange should be maintained.

GERMANY, HUNGARY AND SPAIN

It is not primarily a question of repayment; what is necessary is that the amount of credit of this nature outstanding at any one time should be proportionate to the amount of trade to be carried. Whatever may have been the position in the period of acute depression, the amount of credit of this character available to Germany to-day is insufficient for the trade to be carried. If, as it may be hoped, the bill of exchange could be dealt with on its own merits, the problem would be placed on a basis of common sense from which results would follow which cannot be looked for in existing circumstances.

In Hungary the same general considerations apply, and obviously it is as much to the interests of Hungary to regain her entrée to the London market as it is in the case of Germany. Here, however, matters have developed during the summer on lines that do not appear to be in the interests of either country, for, instead of loosening a position that had become rigid, the difficulty of obtaining greater elasticity has been increased by an agreement made for three years.

Spain is another country in which grave difficulties have been encountered. In the first place, a clearing arrangement was established which created utter confusion. It was later done away with, when still more confusion arose. These matters, however, are something in the nature of ancient history, and it is perhaps unnecessary here to say more about them. Between the two events—that is to say, between the initiation and the cancellation of the clearing—civil war broke out and we found ourselves in a position

of great delicacy, as from the nature of our business we had clients in both parts of Spain. There was only one thing to do and that was to carry out our banking duties with scrupulous impartiality. In this I hope we have been successful, and, if so, it is largely due to our Spanish clients themselves, in whom we have found not only a high sense of honour but a sound grasp of fundamentals—characteristics which we believe are common to Spain as a whole and which are bound in the end to restore national unity and prosperity. These characteristics will furthermore ensure that Spanish borrowers may return to London, after the present trouble is over, with an unblemished financial reputation and with every justification for expecting the same sympathetic treatment as has always been accorded to them in the past.

CHOICE OF TWO ROADS

Does this short survey indicate any common ground on which all nations can meet? I think it does. The prime interest of any country is surely to dispose of what it does not need and receive what it does not produce. For this some system of international trade is required and of finance to carry that trade. Once the gold standard provided the necessary common basis, but, for the present at least, it has collapsed, and, looking back on the period after the War, it is not difficult to see the reason. Gold is a good servant but a bad master. The conditions in which the gold standard operated before the War did not exist after it, and the attempt to force our post-War economic life into the pattern imposed by the gold standard failed. For the present we can see only the choice of two roads, one leading along the way to further restrictions, state control and barter, and the other to some sort of common basis such as was developed first in the sterling *bloc* and now, one hopes, may be extended to the wider area of all countries desirous of preserving free exchanges and individual liberty to trade.

State control, with its quotas and restrictions, has been tried in various countries in many forms, but the common experience of all is one of disappointment. This is only natural. The underlying difficulties are not such as can be cured by artificial expedients, and opinion is steadily growing in the direction of greater freedom.

What part gold will ultimately play it is not yet possible to say, but one thing is clear, that we have found nothing better to take its place as the world's measure of value and medium for settling temporary difficulties, and it seems impossible that it can be dispensed with altogether in these capacities.

NEED FOR FREE EXCHANGES

It was inevitable that the London market and its mainstay, the bill of exchange, should be affected by these upheavals, both directly and indirectly. But in spite of all handicaps it has continued to perform the same invaluable service in the promotion of trade, and the machinery of the market has shown itself capable of remarkable adaptation to changed conditions. In any case, whether or not the wheel turns the full circle back to the old gold standard, the necessity for as wide as possible a system of free exchanges is unchallengeable. Within such a system the London money market will continue to perform its indispensable function of financing world trade and the London commercial bill will remain the mechanism for the purpose. For these reasons the integrity of the London bill is of value not only to ourselves but to all countries which may look to London for finance, and it is in their interests no less than our own that this principle should be recognised and upheld.

I have referred in my remarks to some of the principal matters in which we are directly interested, but this by no means completes the picture. Time, however, does not permit me to do more than mention some of the other items that contribute to the disturbed conditions from which the world is suffering. In the minds of many people, war in the East and war talk nearer home dominate the situation, but possibly the prevailing tendency towards autocracy is potentially as unsettling. In the United States of America this trend has been exemplified by fierce conflict between the Legislature and the Law, which adds to the uncertainty of the effects of any new measure the uncertainty as to what the measure itself may be. Fortunately politics is a field into which no banker will enter. At home it is his duty to co-operate professionally with alternating policies; abroad, this duty becomes still more difficult, as it frequently means the bridging in finance of two opposing and conflicting policies. If confidence in his professional judgment is to be retained he can never appear in the guise of a partisan, and it is remarkable how little resentment is caused when the banker, within the limits of his professional capacity, has to express opinions unpalatable to those in authority. To do so is his bounden duty, and in the

absence or diminution of all other criticism, which is one of the first consequences of autocracy, this duty is more than ever incumbent on him.

CHANGES IN THE BALANCE SHEET

Turning now to our balance sheet, you will see that several marked changes have taken place. Our acceptances have decreased by about £1,000,000 sterling. There are, of course, various contributory causes, the chief being in connection with Hungary, to which I have already referred. This involved taking out of circulation all Hungarian standstill bills, and these are now included in "Advances to Customers and Other Accounts." "Bills Discounted" are also reduced. For some years we have been in the habit of discounting a substantial percentage of our own acceptances, but these now appear under "Advances to Customers and Other Accounts." Here, too, there are several contributory causes, but the Hungarian item is the largest. All these drafts have the obligation of two perfectly good debtors and are now held as collateral security. It will, therefore, be realised that these changes, in so far as our balance sheet is concerned, are largely changes of form.

The two accounts, "Acceptances for Account of Customers" and "Advances to Customers and Other Accounts," have also been affected by the situation in Spain, with which country we did an active business. We have taken up our acceptances on Spanish account and only about 50 per cent. of the sums outstanding had been repaid on October 31st. At the same time, we feel nothing but respect for the manner in which our clients have stood up to their obligations in circumstances of the greatest difficulty, but for the moment the unpaid balance of these bills goes to swell the balance of the last-named account. The effect on the earning capacity of our business with these two countries in particular has been unfortunate, while at the same time the difficulty of carrying through financial transactions in all countries has been greatly increased.

POSITION IN LATVIA

The only other question to which it seems desirable to refer specifically is that of Latvia. When Latvia went off gold, the interests of the Latvian Aukciju Banka were seriously affected, and last February I went to Riga in order to discuss the situation with the Government. As a result of these conversations it was decided to continue the activities of the bank, and we are satisfied that this decision was a wise one. The attitude of the Government has been sympathetic, while the State Bank has been considerate and helpful in its relations with the Latvian Aukciju Banka. This decision, however, involves the reconstruction of the bank's capital, and I hope that the necessary formalities will very shortly be completed and that the bank will have many years before it as a prosperous and independent Latvian institution.

You will see that our Government securities show a shrinkage accounts which, although not bad, have been affected by existing conditions. We feel that it is desirable to deal fully with these points and recommend that £50,000 be set aside to contingencies account.

NO CAUSE FOR PESSIMISM

I have endeavoured in my remarks to state as plainly as possible the problems that have to be faced. I trust that in doing so I have not created in the mind of anyone a feeling of pessimism in regard to the future, as that is entirely opposed to the opinion of your board. We have, however, for the reasons mentioned, to be prepared for the time being to recognise the reduced earning power of the bank. We have also definite and active. Until there is more assurance in regard to these points, we consider it prudent not to distribute the profits earned, and we feel sure that we shall have the support of the shareholders in this policy. However painful the process by which better conditions are reached, we believe that common sense will ultimately prevail, and that, in spite of threats and alarms, force will not become the dominant power in the world to the exclusion of reason.

I now move the following resolution:—

"That the report and accounts for the year ended 31st October, 1937, as audited and certified by your auditors, now before the meeting, be approved and adopted." (Applause.)

I call upon Mr Norman L. Hird to second the resolution, after which I shall be glad to answer any questions which shareholders may like to ask.

MR NORMAN L. HIRD'S REMARKS

Mr Norman L. Hird (advisory director): Mr Chairman, ladies and gentlemen, your speech to-day, Mr Chairman, has dealt in a broad and comprehensive manner with the difficulties of foreign trade and the reason for these difficulties. I am sure it will be read with interest and appreciation by a much larger public than is represented by the British Overseas Bank shareholders. (Hear, hear.) As you mentioned in your speech, this bank was formed just over 18 years ago to deal with the financing of foreign trade, and, at no time during its career, has it had what one would call easy conditions. The slump in commodity prices which occurred in 1920 will be remembered by many of you, and the troubles arising out of the American slump in the late months of 1929 are also fresh in our memories.

In spite of all these troubles, by good management, hard work and a great deal of enthusiasm an excellent business was built up, but no one could have visualised the catastrophes of 1931. Since that date, as all of you are aware, foreign exchange dealings and foreign trade have been very difficult matters, and these have, of course, affected the bank adversely from an earning point of view. We all hope with the chairman that sanity will prevail and that economic nationalism, with its attendant political dangers, will give way to greater freedom of trade and greater friendship between nations. (Hear, hear.)

BOARD'S DIVIDEND DECISION

We sympathise with the "A" shareholders in receiving no dividend at this time. As a representative of the "B" shareholders I can say that nothing would have pleased us better than that there should have been a dividend for both of us. I am, however, permitted to point out that in some of the earlier years of the bank, when conditions were easier and earnings were good, we "B" shareholders could have been paid higher dividends, or a dividend in the years when we received nothing, but we never pressed for these, and we agreed entirely that it was the right and proper thing for the bank to build up that it was the right and proper thing for the bank to build up reserves. We regret that it has not had more favourable conditions for the building up of reserves, but we approve the policy of conserving the resources of the bank at the present time. I beg to second the adoption of the report and accounts. (Applause.)

No questions being asked, the resolution was put to the meeting and was carried unanimously.

Sir Edgar Horne, Bt. (advisory director): Sir, I beg to move:—"That the directors retiring by rotation, Sir James Caird, Bt., Sir Nigel Campbell and Mr T. F. Tallents, M.C., be re-elected." I should like to take this opportunity of thanking you, sir, and the board for the courage you have shown in not declaring a dividend but conserving our resources.

Mr Duncan A. Stirling (deputy chairman): I beg to second the resolution.

The resolution was unanimously approved.

The chairman: I will ask a shareholder to move the next resolution.

Mr W. Starling: I beg to move:—"That the retiring auditors—Messrs George A. Touche and Company and Messrs McClelland, Ker and Company—be reappointed as auditors of the company for the current year, at the same remuneration, namely, a collective fee of seven hundred and fifty pounds."

Mr R. W. Morrison: I beg to second that.

The resolution was passed unanimously.

The chairman: That, ladies and gentlemen, is all the business and I thank you very much for your attendance. I hope that at our next meeting we shall have a more rosy report to submit to you. (Hear, hear.)

VOTE OF THANKS

Mr Walter Scott: Ladies and gentlemen, I think it is only right and proper that we should pass a very hearty vote of thanks to the chairman for his splendid speech, and also to the directors and staff. As one of your colleagues stated, Mr Chairman, it was a courageous speech and I am sure that we all appreciate it very much. The only thing that has occurred to me is that instead of having a turkey for my Christmas dinner I shall have to be contented with a pigeon. (Laughter.) However, that does not matter. I am sure that you have the good wishes of the general body of shareholders in coming to the conclusion to conserve the resources of the bank, and we offer you the very best of Christmas greetings. (Applause.)

The chairman: I thank you very much, Mr Scott, ladies and gentlemen, for those kind words, which are very encouraging to us in these hard times.

The proceedings then terminated.

ASSOCIATED EQUIPMENT COMPANY, LIMITED

SUCCESSFUL YEAR

The twenty-sixth annual general meeting of this company was held, on the 6th instant, in London.

Mr C. W. Reeve, C.B.E., the chairman and managing director, who presided, said:—"The report submitted by the directors for the year to September 30, 1937, was the best which he had yet presented."

The development of business in trolley buses produced in co-operation with the English Electric Company, Limited, continued apace, both at home and overseas, and there was no sign of the waning of the popularity rightly enjoyed by that silent, comfortable, and economical vehicle. A.E.C. oil-engined vehicles of all kinds maintained their popularity and developed their sales.

A.E.C. rail cars had now been operated over more than 2,000,000 miles, and the company had produced a greatly improved form of rail car, capable of taking a trailer or trailers. As the merits of the A.E.C. marine engines became more widely known, they too showed increased sales. Business overseas still continued to be improved, and the directors stimulated its growth with all reasonable means.

The re-armament programme had handicapped the company, both as to labour and materials, while less than 4 per cent. of the company's sales had been to Government departments.

The company's property and assets had been maintained in excellent condition, considerable sums having been expended in the replacement of machinery and plant and building developments. General reserve had been increased by £100,000.

The directors now proposed the payment of a final dividend (free of tax) of 13d. per £1 unit of stock, making for the year a total dividend (free of tax) of 18d. per £1 unit of stock; this was equal to 10 per cent. subject to tax for the whole year.

Current liabilities amounted to £365,921—a slight decrease when compared with last year. Considered, however, in relation to the amount of current assets (£1,515,438) it would be found that the latter exceeded the current liabilities by £1,149,517—an eminently satisfactory liquid position.

The report and accounts were unanimously adopted.

THE STRAND HOTEL, LIMITED

ANOTHER SUCCESSFUL YEAR

The thirtieth ordinary general meeting of The Strand Hotel, Limited, was held, on the 3rd instant, at the Trocadero Restaurant, London, Major M. Gluckstein (the chairman) presiding.

The Chairman, in the course of his speech, said that the company had had another successful year. The character of their hotels ensured a fairly even flow of business year by year, and the past year had been no exception. The presence in London of large numbers of additional visitors for the Coronation celebrations had not been expected to increase their income to any appreciable extent. In the first place, bedrooms at the Regent Palace and Strand Palace Hotels were let virtually throughout the year, and, secondly, their policy was to maintain standard charges irrespective of special occasions. The almost general rise in prices, however, was a factor of which they had felt the growing intensity, and their charges for bedrooms at the Regent Palace and Strand Palace Hotels were increased by 6d. per room towards the end of the financial year. The benefit from this step only partly offset the extra outgoings; but, notwithstanding this, the company's net revenue was only slightly less than that of the previous year, and the available balance, after providing for contingencies, was again shown at £123,000.

Progress with the work of modernising the hotels had continued. At the Regent Palace Hotel the restaurant had been entirely redecorated and re-equipped. Guests now enjoyed the advantages of conditioned air in that room, and it was intended to extend the system to other public rooms. At the Strand Palace Hotel, upon which they intended to concentrate this year, conditioned air would be introduced simultaneously into all the public rooms. In general, they were effecting a gradual metamorphosis of the hotels, thus keeping them not merely up-to-date but actually in advance of modern standards.

Mr Maurice Salmon, in seconding the resolution, said:—"On the catering side of our business, the cost of many items of foodstuffs has risen, and continues to rise. Maintenance and repair materials are dearer. Furniture, carpets, linen, china, and cutlery (on all of which there is a constant expenditure) now cost more."

The report was unanimously adopted.

BARCLAYS BANK (DOMINION, COLONIAL AND OVERSEAS)

PROGRESS IN MANY COUNTRIES

SIR JOHN CAULCUTT'S REVIEW

The twelfth ordinary general meeting of Barclays Bank (Dominion, Colonial and Overseas) was held, on the 9th instant, at Southern House, Cannon Street, London.

Sir John Caulcutt, K.C.M.G. (the chairman), in the course of his speech, said,—With regard to the balance sheet as at September 30, 1937, you will notice that the total of £110 millions, reached last year, has been maintained. On the liabilities side, current, deposit and other accounts amount to £96 millions. On the assets side of the balance sheet, the item cash in hand and with bankers stands at £22,758,000. This figure is £2½ millions lower than at September 30, 1936, but it represents a ratio to current, deposit and other accounts and note circulation of no less than 23.39 per cent. Investments, at £28,334,000, are greater by £500,000. All our investments, with the exception of a few hundred thousand pounds, have definite maturity dates, and a very large portion of them is short-dated. Advances at £35,918,000 reveal the satisfactory increase of £3,713,000.

WIDESPREAD ACTIVITIES

As an institution with over 400 branches spread over various territories, we are closely in touch with the changes in economic conditions in many parts of the world, and a satisfactory feature of the reports we have received, covering the period under review, is the evidence they afford of progress in many countries which a few years ago were experiencing the full force of a depression of unprecedented severity. Nevertheless, it cannot be ignored that the outlook has been obscured by the recent sharp falls in prices for a number of commodities and by the hesitancy, in certain directions, in the placing of new business.

Reports indicate that both wholesale and retail business in South Africa was again maintained on a satisfactory level during the year under review. The current price of gold undoubtedly contributed largely to the prosperity in business, not only through its effect on the balance of trade, but also by encouraging the extension of gold-mining operations and thus opening fresh avenues for employment and stimulating the demand for products of the agricultural and secondary industries of the country. The substantial fall in prices of gold-mining shares and the reduction of the volume of business on the Stock Exchange during the year have had little adverse effect on the expansion of actual gold-mining operations.

CONDITIONS IN SOUTH AFRICA

The rise in prices of certain manufactured products, imported into South Africa, has given an impetus to the development and extension of local secondary industries, but, at the same time, imports have continued to expand, partly owing to the fact that many of the secondary industries utilise a large proportion of imported raw materials and semi-manufactured goods as the basis of their operations, and also partly due to an increasing variety of wants.

South Africa, in spite of the decline in the price of gold-mining securities, continues to benefit by the prudent financial policy of its Government, and by the manner in which the finance, generally, in the country has been handled, in circumstances of an exceptional character. Great responsibility has devolved upon the commercial banks, which assist in fostering the country's trade, and it has been our constant endeavour to give our customers proper banking accommodation for all legitimate business purposes, whilst being careful to refrain from being drawn into financing any broad speculative movement.

The growth of the internal and external trade of the Union brought us, as a bank, increasing activity, and the number of our staff in South Africa has risen during the year to a record figure. It is our practice to invite to the United Kingdom for training picked men from South Africa, who are also given the opportunity, in some cases, to gain experience in the United States of America, so that they may go back with added knowledge to assist in dealing with the widening banking interests of the country and the international business which is undoubtedly developing and which will continue to develop.

In Southern Rhodesia trade conditions have been generally well maintained, due largely to continued activity in mining

operations. The values of, and the demand for, town properties have been well maintained, and the building trade has been active, especially in Bulawayo and Salisbury. Existing secondary industries have made good progress, and several new industries have been established.

Substantial increases in the figures of exports and imports were recorded in all the British West African territories, not only during the year 1936 but also during the first eight months of 1937, as compared with 1935.

MOVEMENTS OF PRICES

After dealing with trade conditions in the various other territories in which the business of the bank is conducted, the chairman said: Primary producing countries have been particularly affected during the past eight years by the wide movements in prices which have exerted such an important influence on the trend of economic conditions generally. Sterling prices of food-stuffs and raw materials, which had shown a downward trend for some time prior to 1929, reached a low point in 1932. Since then the trend has been reversed, the more sensitive prices for primary commodities recovering at a greater rate than those of finished goods. In fact, at one time early this year it seemed that a fresh disparity might arise, although in the opposite direction.

For a considerable period after 1929, world markets of primary commodities were overshadowed by the abnormally large stocks that had accumulated. These stocks have since been reduced, thereby removing one of the principal factors tending to depress prices. To some extent the reduction in stocks of commodities was the result of the operation of the various restriction schemes and of the normal influence of the depression in causing a decline in output. More recently, however, increased demand seems to have been the main influence. The growth in industrial activity, accelerated to some extent by the inauguration of extensive programmes of rearmament, led to increased consumption and to the replenishment of stocks by manufacturers, and these movements were accompanied by speculative activity. The rising trend of commodity prices was particularly marked in the closing months of 1936 and in the early part of this year, and, in view of the rapidity of the advance, the break which occurred in the second quarter of 1937 was not altogether surprising; up to a point it may have been healthy, but is difficult to find adequate justification for the extent of the decline which took place.

"SLUMP PSYCHOLOGY"

Every element of uncertainty in economic conditions increases the possibility of developing, upon the basis of fears rather than upon facts, what I may describe as a "slump psychology." For example, one of the causes of the break in commodity prices in April this year was, no doubt, the rumour, subsequently denied, that the United States contemplated lowering its buying price for gold. The fears concerning possible monetary developments, which were so noticeable at that time, indicate the uncertainty that must always be latent until conditions enable the principal countries of the world to stabilise their currencies on a definite national monetary system on a more permanent footing proves the only practicable method will be a continuance of the use of gold as a base for whatever system be adopted.

Turning to the figures of the profit and loss account, the net profit for the period under review is £431,209, compared with £401,192 for the previous year. A further sum of £100,000 has been carried to the reserve fund, compared with £75,000 in the previous year, and the total of that fund now stands at £2,025,000. The board now recommends the payment of final dividends at the rate of 8 per cent. per annum on the cumulative preference shares, and at the rate of 6½ per cent. per annum on the "A" and "B" shares, less income tax in each case at the rate of 4s. 4d. in the £. The dividend for the year, therefore, on the "A" and "B" shares is at the rate of 6 per cent. It is proposed to pay these final dividends on December 20th, and, after making these appropriations, there remains a balance of £134,320 to be carried forward.

The report was adopted.

PENINSULAR AND ORIENTAL STEAM NAVIGATION COMPANY

MORE PROFITABLE OPERATIONS

LORD CRAIGMYLE'S SPEECH

The ninety-seventh ordinary general meeting of the Peninsular and Oriental Steam Navigation Company was held, on the 8th instant, at the company's offices in London, the Right Hon. Lord Craigmyle (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said that the operations of the P. & O. Group as a whole had been somewhat more profitable than for a good many years past. The improvement in trading results which most of them had experienced, although by no means spectacular, had been fairly steady of recent years and was a good augury for the future, provided that there was no pronounced increase in operating costs and that something like the present level of freights was maintained. Dividends from subsidiary shipping companies had this year shown an increase, the figures being £413,000 as against £371,000 last year. The other shipping concerns like the P. & C. closed their accounts of ships' voyages at some date considerably earlier than the end of the P. & O. financial year, and the improvement in rates of freight was not yet fully reflected in the accounts of the allied shipping companies any more than it was in the P. & O.'s own accounts.

SUBSIDIARY COMPANIES

Rather to the board's surprise there appeared to have arisen some misapprehension with regard to the P. & O. Company's shipping subsidiaries. In certain quarters an expression had been used about interlocking companies, and visions had been conjured up of a highly intricate and tangled organisation complicated by cross-shareholding which offered a considerable measure of obstruction to the stockholders in the mother company benefiting from the revenue of its subsidiaries. The whole idea was entirely groundless. The position was simply that the P. & O. Company held as an investment in certain other shipping companies, in some cases the whole and in others a portion only of the ordinary capital. That ordinary capital ranked for dividend after the debentures, in cases where they existed, and the preference capital of those various companies.

Those interests which the P. & O. Company had in other shipping concerns had not accrued in a haphazard way, but as the result of a deliberate and far-sighted policy of the board under the auspices of the late chairman, who had in mind not merely the permanent value of those concerns as an investment to the P. & O. Company, but also their value as feeder services and the wisdom of cutting out in various parts of the world where the P. & O. Company's ships plied, the probability of overlapping services and of unnecessary and wasteful competition. In those cases where they existed, and the preference capital of those holders as an investment, those purchases were, in the opinion of the board, fully justified then and remained justified to-day.

VOYAGE RECEIPTS

At first sight it might seem strange that in a year which had been marked by a recovery of shipping generally, the voyages of P. & O. steamers had not been more lucrative than was shown in the accounts. Shipowners in the liner business were bound by Conference agreements. These agreements guaranteed regular sailings at fixed rates of freight which did not vary with the market. During a period of rapidly rising costs it was a lean period for the shipowner if he were bound to a low level of freights. His expenses rose but his receipts did not rise with them. He could not alter freights in an upward direction until new conference agreements had been made. So it came about that the P. & O. Company, in the accounts of the operation of its ships which closed on June 30th last, had been faced with increased expenses for wages, salaries, stevedoring, pilotage, fuel, stores, repairs and so on, whereas for the greater part, and in some cases the whole, of the period under review it had not had the advantage of enhanced freights. It was to be hoped that the moderate increases in freights which had obtained in negotiation under conference agreements would compensate for the increased costs of ship operation.

The unsettlement in the Mediterranean had tended to restrict the valuable short sea passenger traffic which the P. & O. carried between London, Gibraltar, Tangier and Marseilles. P. & O. ships followed the route advised by the Admiralty between Gibraltar and Marseilles and he now saw no reason, with the greater security now prevailing, why that traffic should not revive. If

the situation in Spain had been prejudicial to their cruising receipts, the hostilities in China had recently still more gravely affected their normal trade.

SHIPBUILDING COSTS

It was fortunate that the major gaps in their fleet had been filled before the present high level of costs had been reached. They were well ahead with their programme of rebuilding, and could carry on for a number of years without the pressing necessity for major additions to the P. & O. fleet. With the commissioning of the "Strathallan" early in the year in time for the company's busy homeward season, the P. & O. would have five fine "Strath" steamers to cater for first and tourist class passengers not only from Australia but also from Bombay.

The P. & O. Company had this year celebrated its centenary. They had been greatly pleased by the very cordial messages which came from every great shipping undertaking, not only in this country but abroad. Those constituted not only a great compliment to the P. & O., but a happy augury for co-operation in future. Such co-operation was essential if the shipping industry were not to fritter away its resources in that stupid form of competition which consisted of uneconomic rate-cutting. The shipping industry owed His Majesty's Government a debt of gratitude for the action which it had taken, both with regard to subsidy and the scheme for co-operation, and he thought all would be glad that such co-operation was to continue, that it had the goodwill not only of the tramp but of the liner section of the industry, and that there were good prospects of embracing in the scheme not merely British tramp ships but also those of other countries. Nothing could, he considered, prevent the ebb and flow of freights in accordance with market conditions; nor was the scheme designed to prevent that or to form any sort of ring or combine. It sought merely to introduce a larger measure of common sense into the operation of the industry and to prevent form of waste which could be of no ultimate use to anybody.

POLICY OF THE BOARD

There was nothing that the board would like better than to recommend some increase in the rate of dividend on the deferred stock as soon as it could be prudently done, but the celebration of a centenary would be no excuse for a departure by the board from the policy which they had deliberately adopted and unswervingly pursued since the acute crisis in shipping had come upon them. What was the policy and what had it achieved so far, he asked. It was a policy of internal economy and rationalisation directed to make good the wastage of a succession of calamitous years and to build up the strength and credit of the company in the best interests of its proprietors. It was a policy of steadiness with nothing spectacular about it, but was based upon experience and upon the best advice obtainable in the City of London. If they would look back and compare the situation in which they now stood to that of a comparatively few years ago, he ventured to think that they would agree that the policy of the board, as repeatedly endorsed by the proprietors, had been well justified and, if steadily pursued, would find an ever fuller justification in the years to come. By internal rationalisation of the P. & O. services an economy amounting to £300,000 per annum had been effected. Other large economies had been drastically carried through. New vessels were laid down at a time when costs were low, and the first of those was already operating to the great advantage of the company.

In spite of bad times and the crash of other great concerns, the credit of the P. & O. Company stood deservedly high in the City of London. It had been able to pay off one million pounds of its debentures, and to find the rest at 4½ per cent. instead of at 5, and 5½ per cent. as formerly. They had faced the storm of bad times and of unparalleled uneconomic foreign competition and come through. Through all those years the company had continued to meet every obligation. It had paid its debentures and its preferred stockholders in full. Last year it resumed dividends on the deferred stock.

Although such action had been urged upon them from certain quarters, the board had considered it not wise to press their allies for higher dividends than those which, in the opinion of the men responsible, were justified by the actual results of their year's working in view of the circumstances of their concerns and of their future programmes for ship construction. After the storm they must be given a breathing space, but if they were granted a period of reasonably good trade their available resources, unless there were any calamitous rise in the costs of ship operation, should tend to increase, and it might then be possible for them to make a somewhat larger distribution consistently with the policy of steadiness and caution which he submitted must remain their sheet anchor.

The report was adopted.

DORMAN, LONG AND CO., LIMITED

RECORD PROFIT

VISCOUNT GREENWOOD'S REVIEW

The forty-eighth ordinary general meeting of Dorman, Long and Co., Limited, was held, on Tuesday, December 7th, at Winchester House, London, E.C.

The Right Hon. the Viscount Greenwood, P.C., chairman, who presided, said:—The year under review, ended September 30th last, has been one of expansion of the company's activities in every direction. This means a great increase in employment. In all our works, mines and collieries, including our subsidiaries, the total number of our employees is now 39,889, an increase over 1936 of 3,780, and an increase of 17,141 over the year 1932. Of this great total 34,150 are employed in and about Middlesbrough and in the counties of York and Durham. Our total wage and salary bill for the year under review amounted to nearly £7,000,000. These splendid figures are most gratifying and make clear the strength and influence of our company in our national life and especially in the well-being of the North-East Coast. I am glad to say that in Middlesbrough and Tees-side, the centre of our activities, there is an increasing expansion not only of our own industries but also of other industries.

I know you will want to express through me and the board our appreciation and thanks to all those who work with us in the parent and subsidiary companies of Dorman Long, and whose united efforts have produced the record results set out in the report and accounts. I am glad to say a healthy spirit of co-operation exists among all grades throughout our great business, and your board and the management do everything in their power to maintain that goodwill.

Out of the £10,000 which was set aside last year for a pension fund, £5,000 was definitely allocated to the existing staff pension scheme. This year the board have set aside a further sum of £15,000 for a pension fund for all classes of employees, but the exact allocation of this fund has not yet been determined by the board.

In the course of his review of the accounts and balance sheet the Chairman referred to the repayment of the company's debt to the banks following on an issue of 750,000 ordinary shares, and the consequent relief of the company from fixed charges of approximately £140,000 per annum.

Additions to plant during the year included the completion of the new coking plant, a new light mill, improvements in existing mill equipment, and the rebuilding and modernisation of the North Steel Plant, all at Cleveland Works.

During the year the company's interests in the Union Construction Company, Limited, South Africa, had been increased and that company had been amalgamated with Wade and Dorman, Ltd., the name of the concern being changed to Dorman Long (Africa), Limited.

YEAR'S PROFIT

Continuing, the Chairman said:—The balance of profit for the year amounting to £1,375,418 shows a marked improvement over last year, and is a further record in the history of Dorman, Long and Co., Limited.

During the period of depression ending in 1934 the company was adversely affected as compared with some other steel manufacturers owing to the fact that it owned and worked collieries, mines, quarries, coke ovens and by-product plants and blast furnaces in addition to steelworks and rolling mills.

During the past two years the company has benefited from these departments in two ways:—

1. By the maintenance of supplies of raw materials to the steelworks, and
2. By the profits earned by these departments.

During the past three years expenditure aggregating £1,180,000 has been incurred in improving the company's productive capacity for coke and pig iron, with the result that the company has been able to do its share in response to the Government's demands for increased production of coke and pig iron on which the increased production of steel depends.

Owing to the shortage of pig iron and scrap, the very foundation of re-armament necessities, the British Iron and Steel Federation made arrangements to purchase supplies of great quantities of these essential commodities abroad, and agreements have been entered into to cover the excess cost of these supplies over the prices charged to the steel makers by contributions at a flat rate per ton included in the selling prices of finished steel. This company obtains little direct benefit from an arrange-

ment of this character. It has, however, been possible in this way to maintain stability and to help to expedite the national policy of re-armament.

INCREASES IN PRODUCTION SINCE 1932

Since 1932, the year of greatest depression, production has been raised—

- By 65 per cent. in coal.
- By 128 per cent. in ironstone.
- By 133 per cent. in coke.
- By 171 per cent. in pig iron.
- By 177 per cent. in ingots.
- By 160 per cent. in rolled steel.

The material increase in the company's output of iron and steel during the year 1937 reflects the activity of the steel trade generally and illustrates particularly the effort the company has made to meet the great demand for rolled steel.

PROSPERITY DUE TO NATIONAL TARIFF POLICY

At every annual meeting I have felt bound to emphasise the fact that the prosperity of our industry is primarily due to the national tariff policy of the Government. In my opinion, this policy assures steadier and safer employment of labour and of capital. Our industry has a duty to the public to meet demand with increased efficiency and improved service. That duty the steel industry fully recognises and is doing its best to discharge.

For the future, we will continue to carry out our policy for the concentration and for the modernisation of the works comprised in our great undertaking. Our order book is satisfactory. With the improved state of our finances, with the improvement in our plant and equipment, and with the efficiency and good will of our personnel, we are equipped to do our share in the development of our industry, in the progress of our country and in the future.

The directors' report, balance sheet and accounts of the company for the year ended September 30, 1937, were approved and adopted on the proposition of the Chairman, seconded by Mr J. G. Goodenough.

BRITISH TYRE AND RUBBER COMPANY, LIMITED

SUBSTANTIALLY INCREASED PROFITS

The thirteenth annual general meeting of the British Tyre and Rubber Company, Limited, was held, on the 7th instant, at Winchester House, Old Broad Street, London.

Sir Walrond Sinclair (chairman and managing director) presided and said it gave the directors great pleasure once more to report an increase in the company's profits at a total of £226,289, as compared with £204,659. That was a most gratifying result as, though trade conditions in this country had, generally speaking, been favourable, the board had nevertheless had many difficulties to surmount, more particularly in the wide fluctuations in raw material prices and the delays in deliveries due to circumstances entirely beyond their control. The net profit, subject to tax, was £168,707, against £148,322, and the directors recommended a final dividend of 4½ per cent. together with a cash bonus of 2 per cent., making 10 per cent. for the year. The balance sheet again reflected the continued expansion of the company's business, and two interesting propositions having recently been put before the board, it was probable that before the presentation of the next balance sheet a profitable use would have been found for a large proportion of the company's surplus cash resources.

In most of their products they had had to work on narrower profit margins, but to a large extent that had been compensated by the larger volume of sales. The high quality and reliability of their company's products was widely appreciated, and the board would continue to maintain that standard of quality and service as being "best in the long run."

The principal subsidiary, the India Rubber and Gutta Percha Company, had experienced a satisfactory increase in turnover in practically all departments. All their other subsidiaries had made satisfactory progress and in the aggregate had increased contributions to the parent company's profits.

With regard to the future, the company was better equipped than ever to take full advantage of every trade opportunity, or, conversely, to withstand unexpected shocks.

The report was unanimously adopted.

J. BROCKHOUSE AND COMPANY, LIMITED

NET PROFIT PRACTICALLY DOUBLED

The fortieth annual general meeting of this company was held, on the 8th instant, at West Bromwich.

Mr J. T. Brockhouse, J.P. (the chairman) said that the year had been one of remarkable expansion for the company. The total net profit was practically doubled and as yet they had not begun to reap the benefit of their new acquisitions and expansion. They had reason to regard the coming year with optimism and were anticipating a substantial increase in their share of the trade available, one reason being that the orders on hand were a new record and a very substantial increase on last year. The prosperity of the company depended on no one trade but their interests were spread over practically all the industries of the country using iron and steel. Their complaint was that, as consumers of over 100,000 tons annually, they could not get enough steel and he thought that the Iron and Steel Federation should see that progressive firms such as theirs were kept well supplied with raw material.

New lines taken up included the Lewin Road Sweeper and the businesses of Piercy and Company, R. J. Hunt and Son, Iron-foundries, and the Vitreous Enamelling Company, from all of which they were looking for good returns. They had also entered themselves in the Fluvio Self-priming Pump and now had the machine shop facilities of the Vulcan Motor and Engineering works secured by taking over that business while disposing of its motor vehicle side.

A consolidated balance sheet would be presented next year when the financial years of the subsidiaries had been adjusted. Such a statement would show their reserve to be £300,000 instead of £280,000 and profit additions of probably £10,000 and approximately the same bank balance.

As to the future, with the companies they had acquired this year everything of a doubtful nature in investments had been written down to a nominal figure and they could reasonably expect to maintain, and he hoped, to improve, the profits in future.

He was delighted in asking them to agree to the very handsome dividend of 25 per cent.

The report was adopted.

TOBACCO SECURITIES TRUST COMPANY, LIMITED

NET INCOME £38,000 HIGHER

The tenth annual meeting of Tobacco Securities Trust Company, Limited, was held, on the 8th instant, at the registered offices of the company, Westminster House, 7 Millbank, London, S.W., the Rt. Hon. Lord Catto of Cairncatton presiding.

The Chairman, in moving the adoption of the report and accounts, said that on the present occasion he addressed the shareholders in the happier circumstances of resuming dividends on the deferred stock. In that connection he would point out in view of the manner in which the distributable profits had to be applied, as was clearly shown on the front page of the report, the ordinary capital being about four and a-half times that of the deferred capital, it followed there was a formidable prior charge ahead of the latter which was therefore particularly vulnerable to variations in income. He would strike a note of warning that although a dividend had been resumed on the deferred capital, too great anticipations should not be indulged in. The board naturally hoped there would be continued improvement in the company's earnings, but those came almost entirely from dividends on investments mainly in tobacco companies which were liable to fluctuations.

Their net income amounted to £575,883, against £537,831 last year. The increase of £38,052, though not large, fully justified the board in recommending that dividends be resumed on the deferred capital, a course they had been specially glad to take in view of the patience stockholders had shown in face of the disappointments of recent years.

With regard to the shellac, there was no reason to anticipate any further loss on the stock still held, but the directors, should any further important depreciation take place, would treat that as an isolated loss to be met from the company's reserve fund, thus not affecting the distributable profits of the year. Generally, he hoped that that meeting would be looked on as the beginning of more normal conditions in the future.

The report and accounts were unanimously adopted and the dividend recommendation approved, including the payment on the deferred capital of 4.5714 per cent.

SOUTH WEST AFRICA COMPANY, LIMITED

DIVIDEND AND BONUS AGAIN 15 PER CENT.

The annual general meeting of this company was held, on the 6th instant, in London.

Sir Edmund Davis, J.P., chairman and managing director, after having dealt exhaustively with their various interests, said: The profit of £110,861 is about £12,000 in excess of the profit earned in the preceding year.

At the last general meeting I stated that it was our hope that we should be able in our next accounts to show sufficient profit to warrant again the declaration of a dividend of 5 per cent. with a bonus of 10 per cent., and that the carry-forward would probably be a few thousand pounds larger than the accounts which we were then presenting. Your directors have been gratified to see that forecast fulfilled, inasmuch as, in addition to distributing the same dividend and bonus as last year, we are carrying forward not less than £117,856, compared with the last carry-forward of £86,766. I see no reason why I should not state that we confidently hope to be in a position at the end of our new, that is the now current, financial year, to earn profits equal to those in the accounts now before you, though this may be influenced by lack of development of the Abenab Mine in depth. In this connection we have been delayed in our operations and all we can say is that on the lowest level the ore is apparently of the same value as it was previously, though all appearances tend to indicate that the ore body is contracting in size in depth.

I feel fairly confident in stating that our profits for the current financial year should be sufficient to warrant our again suggesting the payment of a dividend of 5 per cent. and a bonus of 10 per cent.

The report and accounts were unanimously adopted.

CAM AND MOTOR GOLD MINING COMPANY (1919), LIMITED

NOTABLE DIVIDEND RECORD

The ordinary general meeting of this company was held, on the 3rd instant, in London.

Mr L. E. B. Homan (the chairman) said that, as a result of the year's operations, and including the profit on exchange of the year's operations, and including the profit on exchange of the year's operations, there was a balance to appropriation account of £378,333, £40,541, there was a balance to appropriation account of £378,333, compared with £337,715 in the previous year. With the balance brought forward there was a total available of £444,146, of which £337,500—an increase of £37,500—had been distributed in dividends.

The ore reserves again showed an increase of some 17,000 tons, in spite of their having drawn from the mine 317,000 odd tons during the year, and the average value per ton was practically the same. With regard to tonnage drawn from the mine, although 317,317 tons were mined, of this only 184,951 tons were taken from the stopes.

Since June 30th the most interesting news was the intersection of the motor lodes in the thirty-fourth level, where good values had been encountered, although not so good at the point of intersection as in the upper levels. Driving was now proceeding on this level, the latest information being given in the cable published on Thursday.

With regard to the immediate future, further capital expenditure was recommended by their engineers for equipment in connection with opening up the lodes at depth. They were now down over 4,500 ft., which, of course, also meant that they had to arrange for equipment for ventilation. In view of this capital expenditure, shareholders could not look for increased dividends under present conditions.

The lower values at present being encountered in the bottom levels of the mine had also a bearing on the position, as the development rock—all of which went through the mill—affected the head values. There was also a tendency to a rise in costs owing to the increased cost of materials and of recruiting. The new taxation here—N.D.C.—would also affect profits. This tax, and the variation of the tax in Rhodesia, was causing the board a certain amount of anxiety, and they might be some day forced to recommend to shareholders that, in their own interests, the control of the company should be moved to Rhodesia.

The tables at the end of the report showed that to June 30th last the company had crushed practically 5,000,000 tons from the mine, and had produced gold, including premium, to the value of £10,500,000, with a working profit of £5,000,000, of which shareholders had received up to June last no less than £3,000,000 in dividends, apart from repayment of capital to the extent of 7s. 6d. per share. A welcome addition to these figures would be made by

the declaration of a dividend for the current half-year, as he was in a position to advise shareholders that at a meeting held that morning the board had decided to declare a dividend at the rate of 4s. per share, less tax, after allowing for Colonial relief.

The report and accounts were unanimously adopted and the conversion of shares into stock was unanimously approved.

BUKIT KAJANG RUBBER ESTATES LIMITED

INCREASED PROFIT AND DIVIDEND

The twenty-eighth annual general meeting of this company was held, on the 9th instant, at 7 Martin's Lane, London.

Mr W. Arthur Addinsell, the Chairman, said *inter alia*: You have before you a gratifying record of the year's working. By an increase of some 300,000 lbs. in the quantity harvested and approximately 2½d. per lb. in the average net sale price, we secured a profit of £25,603, compared with £10,096 last year. Your directors recommend a dividend of 11 per cent., compared with 5 per cent. last year, and place £5,000 to reserves.

The planted area has been increased by the purchase of 133 acres of mature rubber. The main object was to round off our Rengo Malay Estate boundaries; but apart from that, it was a desirable acquisition at a reasonable price. The report advises that 60 acres of jungle reserve owned by the company has been selected by the Rubber Research Institute as suitable for an experimental area.

At our last meeting I gave particulars of an investment in a new issue by Castlefield (Klang) Rubber Estate, Ltd. When it was decided to acquire the 133-acre block it was decided to dispose of the Castlefield shares and utilise the proceeds towards the purchase of the new property. The realisation resulted in a profit of £986.

Taking into account the areas in the Holyrood and Edensor Companies in which we have shareholdings, the par capitalisation per cultivated area of rubber works out at about £33, which is comparatively low.

During the past two or three months the trend of the rubber market has caused concern to shareholders in producing companies, and it was a source of satisfaction to learn the decision of the International Control Committee last week. Assuming the 70 per cent. export rate fixed for January-March is continued for April-June our exportable allowance for the twelve months ending June 30th next will approximate 1,497,000 lbs., compared with 1,336,000 harvested last year. Whether we can secure the same average sale price is for the future to decide, but I am hopeful that it will be possible to at least maintain the dividend you are now asked to sanction.

The report was unanimously adopted.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended December 4, 1937, amounted to £9,200,000, against ordinary expenditure of £45,027,000. After reducing Exchequer Balances by £152,673 the operations for the week, as shown in the next column, increased the gross National Debt by £35,904,000, to about £8,273 millions.†

† Including £575 millions on account of Exchange Equalisation Account.

† Free of income tax. (a) No comparative figures. (c) 15 months. (v) February 13, 1936, to September 30, 1937.
 (p) Distributed on a deferred share capital of £150,000. (w) Amount paid on £150,000 deferred share capital was £103,200.
 (r) September 21, 1936, to June 30, 1937.

SHORTER COMPANY COMMENTS

COMPANY RESULTS OF THE WEEK.—Favourable prices have enabled NEW ZEALAND LOAN AND MERCANTILE AGENCY to return to ordinary dividends with a payment of 2½ per cent. on the new capital. The report includes a *pro forma* balance sheet showing the effect of the reconstruction scheme. Better prices for wool have similarly assisted the SCOTTISH AUSTRALIAN COMPANY, whose profits of £74,923 are nearly three times the former figure, but as prices have fallen since the end of the financial period, the dividend distribution is conservative. AUSTRALIAN PASTORAL COMPANY also have substantially increased profits, from £47,244 to £73,531. R. A. LISTER AND COMPANY are maintaining their 16 per cent. dividend, though profits of £122,286 are £18,500 higher. RALEIGH CYCLE HOLDINGS net earnings are £278,646, against £262,223, though the operating company's net profits fell from £473,482 to £451,087. The decrease is, however, entirely attributable to special profits in 1935-36, and special charges in 1936-37, and trading profits rose from £514,125 to £527,225. Owing to higher costs, bicycle prices were advanced last May when 72 per cent. of the year's output had already been sold, and a further increase has since taken place. Both larger sales and higher prices for crude oil have enabled ANGLO-ECUADORIAN and OILFIELDS to earn £300,457, against £168,520, in spite of increased wages, royalties and other expenses. A satisfactory rate of improvement in profits is shown by LONDON SCOTTISH AMERICAN TRUST, whose net earnings of £75,664 compare with £67,776, and whose dividend is raised from 7 to 8 per cent. A similar increase in dividend is made by NORTH AMERICAN TRUST COMPANY, who are paying 15 per cent. Besides benefiting from generally improved conditions in the Argentine, AGAR CROSS AND COMPANY have been able to take credit for £84,673 over-provided for interest in previous years, a note issue having permitted some repayment of old debts. ILFORD, LTD., who during the latest period acquired an interest in Dufay-Chromex, Ltd., by an exchange of shares, have earned £26,500 more at £135,175. A decline from £95,547 to £87,121 in INDIA RUBBER, GUTTA PERCHA AND TELEGRAPH WORKS COMPANY is attributable to the effect on trading profit of exceptional expenses in connection with the transfer to new buildings. Moderate progress is indicated by the rise in MANBRE AND GARTON net profits from £340,030 to £375,193. SUSSEX BRICK COMPANY are paying 3 per cent. less, at 15 per cent., but they report a rise in consolidated trading profit. Having earned £213,225, against £185,397, WATERLOW AND SONS are increasing their distribution from 5 to 6½ per cent.

BANKS

ITALO-BELGIAN BANK.—Net profit for year ended June 30, 1937, was Frs. 12,001,121 compared with Frs. 10,029,799. The dividend of 10 per cent. per annum net of Belgian tax absorbing Frs. 10,000,000 compares with 8 per cent. Directors' fees, Frs. 853,369 against Frs. 603,936. Provision for taxes, Frs. 1,100,000. Balance forward, Frs. 1,663,818, against Frs. 1,616,067.

RAILWAYS

GREAT WESTERN OF BRAZIL RAILWAY COMPANY.—It is announced in connection with a proposed moratorium on the 4 per cent. debentures that a question has been raised as to the relative priority of the 6 per cent. permanent debenture stock and the 4 per cent. debentures to bearer. It is doubtful whether in strict law the 6 per cent. permanent debenture stock has the priority which has in good faith been assumed, and further consideration is immediately being given to the situation with a view to formulating proposals to deal with it. Further announcements may be expected in the near future.

ASSURANCE

THE STANDARD LIFE ASSURANCE COMPANY.—A bonus has been declared at the rate of 42s. per cent. for the eleventh year in succession. The new business figures for year to November 15, 1937, were published in *The Economist* of November 27, 1937, page 451.

MISCELLANEOUS

ALBION DROP FORGINGS COMPANY.—Net profit for year ended September 30, 1937, amounted to £19,530. Ordinary dividend 17½ per cent. for the year. Carry forward £4,540. Total assets £159,036.

ANGLO-ECUADORIAN OILFIELDS.—Total income, year to June 30, 1937, £433,559, compared with £294,144. Ordinary dividend raised from 10 to 15 per cent. Carry forward raised from £55,783 to £68,314. Written off: equipment, etc., £125,048, against £117,688; development, £50,000 against £25,000; to extra depreciation, £8,000 against £15,000. Production rose by 35,672 tons to 255,778 tons.

BARTON TRANSPORT COMPANY.—Gross revenue, year ended September 30, 1937, £229,208, comparing with £204,501. Net profit £36,643 against £29,863. Deferred dividend 20 per cent. as before. To reserves: Taxation, £7,000; general, £10,000 (against £8,080). Carry forward increased from £4,416 to £4,570.

Sales of tin on the London Metal Exchange: 455 tons on Monday, against 325 tons last week; 280 tons on Tuesday, against 260 tons last week; 115 tons on Wednesday, against 400 tons last week. The New York quotation on Wednesday was 43.75 cents per lb., against 43.12½ cents a week ago and 44.62½ cents a month ago. Wednesday's official closing quotation in London for standard cash was £194 15s. to £195 5s. per ton, compared with £191 15s. to £192 a week ago. Stocks of tin in London and Liverpool at the end of last week totalled 2,062 tons, a decrease of 168 tons on the week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted on Wednesday at £100 per ton, and rolling billets at £102 per ton. Nickel, for home and export, was maintained at £180 to £185 per ton. Quicksilver, on the spot, was £13 to £13 0s. 6d. per flask of 76 lbs., the same as last week. Chinese antimony was quoted at £68 to £69 per ton, ex warehouse, as against £70 last week. Chinese wolfram for "December-January" shipment was quoted at 77s. 6d. to 82s. 6d. per unit c.i.f., as against 65s. to 70s. last week. Refined platinum was quoted on Wednesday at £7 12s. 6d. per ounce, compared with £8 5s. a week earlier.

TEXTILES

COTTON.—Manchester.—There has been very little change in the amount of business passing in the market. Some sellers have reported a slightly improved inquiry and here and there a few more transactions have been arranged, but the trade done has given no satisfaction to producers. Only minor fluctuations have occurred in raw cotton rates. The revised crop estimate of the American Government of 18,746,000 bales was about equal to expectations, and has not caused any change in prices. No decision has yet been reached with regard to crop control in the United States for next season. A considerable amount of material is going into the loan, the total up to date being 3,078,000 bales. Reports have been received of further mill curtailment in America where consumption of raw cotton will be appreciably smaller than last season.

No relief has been experienced by spinners and sales have aggregated less than half the production. In the American section producers of ring beams have pressed for delivery instructions against old contracts. More curtailment of output is taking place in ring mills. In the Egyptian branch home demand has continued poor, but more contracts for Germany have been arranged. The general inquiry in piece-goods has been of fair extent, and in one or two directions there have been indications of certain buyers being in greater need of supplies, but no particular expansion in the turn-over can be recorded. In order to prevent the stoppage of looms, some manufacturers are now willing to accept prices which are very little above cost. Merchant shippers, however, hesitate to commit themselves owing to what they consider to be excessive margins for spinners. News from India has not been encouraging and competition from the home mills against Lancashire goods is very severe. Further reports have been received of keen competition from Italy in Egypt and the Near East. Business for West Africa has been almost at a standstill and demand for South America has fallen. Home trade purchases have been restricted.

WOOL.—Bradford.—The final series of Colonial sales for the year has come to an end. The change in the wool market since last summer is reflected by the decline of 20 to 30 per cent. in the prices of both merinos

and crossbreds. The quantities taken by the different traders at each series during the year are as follows:—

Series	Home Trade	Continent	America	Total	Carried Forward
1st	Bales 47,000	Bales 45,500	Bales 2,000	Bales 94,500	Bales 11,500
2nd	40,500	32,000	...	72,500	6,500
3rd	29,500	26,000	...	55,500	13,000
4th	37,500	24,500	...	62,000	22,000
5th	29,500	18,000	1,000	48,500	42,000
6th	29,500	27,500	...	57,000	60,500
Totals	213,500	173,500	3,000	387,000	155,500

The heavy carry-forward after the last series is due to the fact that 48,000 bales were not offered.

Since the close of the series there has been considerable improvement in overseas markets. There has also been a welcome improvement in the tone and spirit of the trade here, largely due to an important covering movement ten to twelve days ago. A return of confidence has called forth considerable purchases of tops and yarns in consuming centres, particularly in the West Riding of Yorkshire, where considerable weights of merino tops were sold at practically the lowest point of the market. No doubt thousands of packs were sold as low as 28d. per lb. for average 64's tops, and a penny more for warp 64's. The sales effected have materially changed the outlook, and given a welcome fillip to trade in general. At the same time many mills are not running full time or enjoying the same measure of activity as earlier in the year. There is ample room for the placing of new piece business, the improvement at the top end of the trade being largely due to the considerable purchases made on hosiery account. Wholesale fabric buyers are not fully convinced that prices have reached bottom, and are not yet buying freely for the spring.

GRAIN MARKETS

WHEAT.—While Manitoba wheat is rather dearer than it was a week ago, other grades are about unaltered. Reports of unfavourable harvesting weather and low commercial estimates of the new crop Plate surplus have contributed to the steadiness of the market. Broomhall now estimates the aggregate surplus of Australia and Argentina for 1938 at 25.5 million quarters, against 30.5 millions a year ago.

On Wednesday last, "December" futures were quoted in Chicago at 97½ cents per bushel, against 92½ cents the week before and 89½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba (Atlantic), ex ship, 58s. per 496 lbs., against 54s. 9d. last week; No. 2 Northern Manitoba (Atlantic), ex ship, 54s. 3d., against 52s. 9d. last week. According to the *Corn Trade News*, total shipments of wheat and flour last week amounted to 1,541,000 quarters, against 1,444,000 quarters in the previous week and 1,529,000 quarters in the corresponding week a year ago.

FLOUR.—Prices remain unaltered. Wednesday's London quotations (excluding quota payments) were: Straight run, delivered Home Counties, 38s. per 280 lbs., as against 38s. a week ago; delivered inner London, 37s. 6d., as against 37s. 6d. a week ago. Manitoba patents, ex store, 37s. 6d. to 39s., as against 36s. 6d. to 38s. a week ago. Australian, ex store, 30s. 6d. to 31s. 6d., as against 30s. 6d. to 31s. a week ago.

BARLEY.—Imported feeding barley is quietly steady. "December" futures were quoted at 58½ cents per bushel in Winnipeg on Wednesday, as against 56½ cents last week. Quotations for 448 lbs. in London on Wednesday were: "English feed," at farm, not quoted; "English malting," at 45s. to 58s., as against 45s. to 58s. a week ago; Californian, ex ship, 45s. to 48s., as against 45s. to 48s. a week ago.

OATS.—On Wednesday, "December" futures were quoted at 31½ cents per bushel in Chicago, against 30½ cents a week ago and 30½ cents last month. Quotations in London, Wednesday: "English Black," at farm, 26s. 6d. to 27s. 6d. per 336 lbs., as against 26s. 6d. to 27s. last week; "English White," at farm, 26s. 6d. to 27s. 6d., as against 26s. 6d. to 27s. a week ago; mixed Canadian feed (Vancouver), landed, 25s. per 320 lbs., as against 24s. 9d. a week ago.

MAIZE.—Plate maize is firmly held and the market has shown an advance this week. "December" futures were quoted on Wednesday at 54½ cents per bushel in Chicago, against 52½ cents a week ago, and 56 cents last month. Quotations in London, Wednesday: "Plate" landed, 30s. 9d. per 480 lbs., as against 29s. 9d. a week ago; "Plate" landed, 30s. 9d., as against 28s. 9d. a week ago; "Plate," ex ship, 28s. 9d., as against 28s. a week ago; yellow maize meal, ex wharf, was quoted at £7 17s. 6d. per ton, as against £7 12s. 6d. to £7 15s. last week.

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations for selected weeks in 1935-37:—

NEAREST FUTURE	Jan. 2, 1935	Dec. 31, 1935	Dec. 9, 1936	Dec. 30, 1936	Dec. 1, 1937	Dec. 8, 1937
Winnipeg (No. 1, Manitoba)	82½	84½	114½	120	114½	119½
Chicago (No. 2, Winter)	98½	101½	128	135½	92½	97½

The visible supply of wheat in Canada amounts to 61,696,000 bushels, against 68,099,000 bushels last week and 65,887,000 bushels in the corresponding week last year.

SALES AND PRICES OF BRITISH CEREALS.—The following table gives the estimated sale of home-grown wheat during the harvest years 1934-35 to 1937-38.

	1934-35	1935-36	1936-37	1937-38
Estimated sales of home-grown wheat—				
1 week to December 4	Cwts. 331,556	Cwts. 318,377	Cwts. 296,075	Cwts. 286,985
13 weeks to December 4	6,096,599	6,194,867	4,951,654	5,063,424
Average price of English wheat per cwt.	s. d. 4 11	s. d. 5 8	s. d. 5 5	s. d. 5 9

The following is a statement showing the quantities sold and the average price of British cereals in the past two weeks, and for the corresponding weeks in each of the years from 1933 to 1936:—

Week ended	Quantities Sold			Average Price per Cwt.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
	Cwts.	Cwts.	Cwts.	s. d.	s. d.	s. d.
December 2, 1933	247,045	420,569	43,502	4 7	9 1	5 4
December 1, 1934	331,556	363,718	54,291	4 11	8 10	6 9
December 7, 1935	318,377	367,864	52,421	5 8	8 3	5 11
December 5, 1936	298,075	411,641	52,848	8 5	9 5	6 10
November 27, 1937 ..	283,015	371,029	42,293	8 10	12 10	8 5
December 4, 1937 ..	286,985	399,771	43,700	8 9	13 1	8 6

The visible supply of wheat in Canada amounts to 61,696,000 bushels, against 68,099,000 bushels last week and 65,887,000 bushels in the corresponding week last year.

OTHER FOODS

BACON.—Following a rise of prices at the end of last week, the market has continued firm. The official quotations (per cwt. for No. 1 Sizable) which formed the basis for dealings on the London Provision Exchange this week were: English, 97s.; Canadian, 89s.; Danish, 95s.; against 97s., 85s. and 92s. last week. Arrivals in London last week included: Danish, 14,263 bales; Canadian, 6,709; Dutch, 2,585; Lithuanian, 1,725; and Polish, 3,029; as against 13,299, 7,095, 2,388, 1,497 and 2,715 bales, respectively, in the previous week.

BUTTER.—Colonial grades of butter were quiet and easier, but Danish was rather higher in price. Quotations (per cwt.) on the London Provision Exchange on Monday were: New Zealand, finest salted, 111s.; Australian, choicest salted, 109s.; Danish, 152s.; compared with 116s., 114s. and 150s., respectively, a week ago.

CHEESE.—English was steady, with other kinds quiet. Quotations (per cwt.) on the London Provision Exchange on Wednesday were as follows: English Cheddars, finest farmers, 94s. to 96s.; Canadian, finest follows: English Cheddars, 72s. to 74s.; and New Zealand, finest coloured, 66s.; against 94s. to 96s., 72s. to 74s., and 68s., respectively, a week ago.

COCOA.—Cocoa was a fairly steady market this week. The spot quotation in New York on Wednesday was 5½ cents per lb., as against 5½ cents per lb. last week. In London, on Wednesday last, good fermented 5½ cents per lb. last week. "December-February" was quoted at 26s. 3d. sellers new crop, Accra, c.i.f. Continent, against 26s. a week ago. Last week's movement of 50 kilos, c.i.f. Continent, was as follows: Landed, 10,701 bags; ments of cocoa in London were as follows: Landed, 10,701 bags; delivered for home consumption, 10,250 bags; exported, 728 bags; stocks, 141,248 bags, against 98,066 bags a year ago.

COFFEE.—The London spot market was quiet, while New York prices were unaltered. On Wednesday, Rio No. 7 (cash) was 6½ cents per lb. Move in New York, as compared with 6½ last week and 7½ a month ago. Movements of coffee in London last week were as follows: Brazilian, landed, 228 cwt.; delivered for home consumption, 91 cwt.; exports, nil; stocks, 2,024 cwt., against 2,217 a year ago. Central and other South American: Landed, 1,216 cwt.; delivered, 65,418 cwt., against 53,423 cwt. last year. Other kinds: Landed, 3,079 cwt.; stocks, 59,962 cwt., against 89,742 last year.

EGGS.—The market has been seasonally easier, especially for English and Irish eggs. At Smithfield, on Wednesday, English (ordinary packing, Grade 1, about 15-15½ lb.) realised 21s. 6d. to 22s. per 120, against 23s. to 24s. last week; while Danish (15½ lb.) made 16s. to 16s. 6d., as against 15s. 9d. to 16s. 3d. last week.

FRUIT.—Business at Covent Garden showed some improvement during the past week, says *The Fruitgrower*. Fine bright weather would result in a further improvement in trade. There was a steady inquiry for apples, with prices showing little alteration. Pears also continued to be well demanded. Business in nuts was more active and there were larger arrivals of pineapples from the Azores. Quite a number of the usual special lines for the Christmas trade have now become available. Grapefruit was plentiful and cheap, while lemons were easier. Oranges were in good supply and were lower in price.

MEAT.—At Smithfield Market on Wednesday last, Argentine chilled hindquarters were quoted at 4s. to 4s. 6d. per 8 lb., as compared with 4s. 1d. to 4s. 6d. a week ago. New Zealand frozen mutton was 2s. 8d. to 4s. 4d. per 8 lb., as against 2s. 8d. to 3s. 10d. a week ago. According to the Smithfield Market official report, supplies during last week amounted to 9,126 tons, an increase of 4,908 tons, mutton and lamb 2,303, and pork 3,203, as compared with 4,071, 2,432 and 1,182 tons, respectively, in the same week of 1936.

PEPPER.—On Wednesday, white Muntok, "January-March," was quoted at 3½d. per lb. sellers, c.i.f. Rotterdam-Hamburg, against 3½d. per lb. a week earlier. Black Lampung, spot, in bond, was not quoted, per lb. last week. Movements of pepper in London last week were as follows: Black, landed, 12 tons; delivered, 19 tons; stocks, 1,964, against 1,827 last year. White, landed, 29 tons; delivered, 32 tons; stocks, 11,149 tons, compared with 11,840 tons a year ago.

RICE.—The spot price of Burma No. 2 cleaned was 11s. 3d. per cwt. ex warehouse, on Wednesday, as compared with 11s. 3d. per cwt. a week ago. "January-February" (new), in singles to Continent and U.K., was quoted at 8s. 10½d. per cwt., against 9s. last week. Movements in London last week were as follows: Landed, 142 tons; delivered, 81 tons; stocks, 1,032 tons, against 1,738 tons a year ago.

SUGAR.—The markets in raw sugar have been quiet and easier. The New York spot quotation was 3.28 cents on Wednesday, as compared with 3.30 cents per lb. last week and 3.25 cents per lb. a month ago. Wednesday's sales of raw sugar in London included "December" delivery at 5s. 11½d. to 6s., against 6s. 1d. to 6s. 2½d. a week ago. Movements of

raw sugar in public warehouses in London and Liverpool last week were as follows: Imports, 17,466 tons, against 39,005 in the previous week and 24,851 in the same week of 1936; deliveries, 16,481 tons, against 15,286 and 14,977 tons, respectively; stocks, 220,263 tons, against 219,278 and 156,000 tons, respectively.

TEA.—The following table shows the average price (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account in recent weeks:—

Week ended	Northern India	Southern India	Ceylon	Java	Sumatra	Africa	Total
	d.	d.	d.	d.	d.	d.	d.
Dec. 3, 1936	12-67	12-44	14-50	11-61	10-24	11-61	13-03
Nov. 11, 1937	15-05	15-00	16-00	14-09	12-86	14-14	15-21
" 18, "	14-68	14-84	15-65	13-48	12-35	14-08	14-87
" 25, "	14-36	14-61	15-31	13-45	12-23	13-87	14-54
Dec. 2, "	14-02	14-33	14-89	12-51	11-59	13-35	14-16

The quantities sold at this week's auctions at Plantation House included 57,780 packages of Indian and 22,411 packages of Ceylon tea. Prices for ordinary and medium grades of Indian tea were lower, but business was active at this level. Ceylon teas were irregular and generally a shade easier.

VEGETABLES.—With the colder weather, demand for most lines of kitchen vegetables showed an improvement at Covent Garden this week, says *The Fruitgrower*. Cabbage, cauliflower and sprouts sold well, but savoy was a slow item. House-grown beans met a good inquiry and celery was a steady trade. Lettuce, however, was slow and mushrooms were easier. Meanwhile, business in potatoes at London markets has been active and in some cases prices have advanced. At the Borough Market on Tuesday, for example, best sitland King Edward were quoted at 6s. 6d. to 7s. per cwt., against 6s. to 7s. a week earlier.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OLSEEDS.—Trading conditions are about unchanged except that a rather steadier tone is making itself felt. Crushers' demands for linseed are confined to covering immediate requirements, there being little inducement to enter into forward contracts until the outlook in Argentina is clear. Everything points to the new crop progressing favourably and soon the possibility of damage from frost or heavy rain will have passed. Harvesting is now general in the northern districts and a continuance of good weather will assist to a substantial yield. It cannot be known until the official report is issued some time next week how much of the area under linseed has been abandoned or the possible area that will come under the reaper. Market expectations are that the official estimate of aggregate yield will be around one-and-three-quarter million tons, compared with a production of 1,936,000 tons (revised figures) in the season now ended. Very little old Plate seed remains for shipment, but the new seed will soon be reaching the seaboard. The quantity now afloat for Europe is 115,800 tons (including 9,300 tons from India), and for the United States 55,800 tons. Despite lower freight rates linseed prices are well maintained in a firm market, and £12 or rather more is indicated as the price of new crop, January-February loading. Indian shipments are again very small.

Cottonseed remains under the shadow of the record cotton crop in the United States and low prices rule with only a moderate trade. Linseed oil is in better demand and has advanced in sympathy with seed and is 17s. 6d. to 20s. per ton above the lowest touched late in November. Cotton oil is quiet and unchanged.

RUBBER.—The spurt of prices following last week's decision to cut the quota to 70 per cent. of standard for the first quarter of 1938 was short-lived. An easier tone has since become apparent and prices show a general decline on the week. Trade buying has been small, but a certain amount of bear covering has helped the market.

The spot price in New York on Wednesday was 15½ cents per lb., compared with 14½ cents per lb. a week ago and 14½ cents a month ago. Wednesday's official buyers' price for standard ribbed smoked sheet on the spot in London was 7½d. per lb., as against 7½d. on the corresponding day last week. In forward positions business has been done at 7½d. for "January" shipment, as against 7½d. to 7½d. Stocks in London and Liverpool at the end of last week totalled 55,584 tons, against 54,787 tons a week earlier. A year ago stocks amounted to 85,285 tons.

THE FINANCIAL NEWS INDUSTRIAL SHARE INDEX

1929-1937 RECORD

Copies of a complete tabular record of THE FINANCIAL NEWS INDUSTRIAL ORDINARY SHARE INDEX from the beginning of 1929 up to the end of last quarter are now available at 10s. per copy. The record comprises daily figures and weekly averages from January 1, 1930, onwards and fortnightly averages for the year 1929, together with the composition of the original and the revised Indices.

Readers will also in future be supplied on request with a regular quarterly record for a fee of 2s. 6d. per annum, payable in advance. The first Supplementary Sheet covering the quarter to December 31st next will be available early in January.

Orders and enquiries should be addressed to the ENQUIRIES DEPARTMENT,

DECEMBER 18, 1937

No. 4921

CONTENTS

declared objectives of Mr CORDELL HULL's trade agreement policy." It could be pointed out, if there were any reason to believe in the truth of this very grave but unsubstantiated allegation, that the mere maintenance of present tariffs would not suffice to stop dumping where price is no object. Presumably, therefore, the F.B.I. desire the imposition of quotas on American imports, as their contribution to a "firm and lasting" understanding. The statement proceeds to repeat the hoary fallacy that the United States "continues to demand gold instead of goods to pay for her exports." Actually, taking visible and invisible trade together, America buys more than she sells, and her continued imports of gold are wholly due to the stampede of foreign capital to New York, which the American authorities have done what they can to discourage. Nor is it true in more than the narrowest and most misleading sense that the United States "sells to us $2\frac{1}{2}$ to 3 times more than she buys from us," since such a statement ignores the very large "invisible" purchases that the United States makes from this country.

The general conclusion of the F.B.I.'s statement is that the only acceptable agreement would be one which lowered American tariffs while not restricting in any way the freedom of the British Government to raise British tariffs. In short, the representative organ of British industry vetoes a reciprocal agreement.

It is impossible to blame the F.B.I. for this very frank statement of their views. We have pointed out some of their mistakes of fact; but their logic is impeccable. The Import Duties Act of 1932 declared Protection to be the policy of Great Britain. Moreover, it was protection of a particular sort, with each industry invited to apply to the Import Duties Advisory Committee for its own individual made-to-measure protective duty. Now it is possible to argue with consistency (though not necessarily with correctness) that British industry as a whole requires the protection of a duty of ten per cent., or some other flat rate, and still to maintain that scope is left for a flourishing import and export trade. But once industries

are treated individually, any such moderation becomes impossible. For what possible principle can the Advisory Committee then take as their guide except the so-called "scientific principle," which would accord to each industry precisely the degree of protection necessary to enable it to outface the competition of foreign imports? How could the Advisory Committee, instructed to consider each industry separately, possibly justify a rate of duty which, however high it might be, was nevertheless not high enough to keep in existence an established British industry? The fact that the "scientific principle," if universally applied, would cut off all our exports, except for a little coal, is not the concern of the Advisory Committee, of the applicant industries or of the Federation of British Industries. It is all in the logic of protection. Let there be adequate protection *ruat cælum*. If the conclusion of an Anglo-American Trade Agreement involves the reduction of protection and the impairment of profits to any British industry, however small, the Federation of British Industries is quite correct in pointing out that it is contrary to the policy of the Import Duties Act.

The Federation must not, therefore, be abused for their frankness. Nor must they be blamed for so blatantly putting their own interests before those of the community as a whole, for it is the Government that has taught them to be selfish. Rather must the Federation be congratulated for placing the issue so clearly and squarely before the public. It would be impossible to imagine an act of commercial policy for which so many potent reasons of the public interest plead as the projected Anglo-American treaty. The F.B.I., in the interests of its constituent firms, imposes its veto. The successful conclusion of the treaty thus becomes as important for the internal economic democracy of Great Britain as it is for its external relations. By whom are we ruled in economic matters? By the interests of the whole nation, or by those of the protected industries? This is the issue, in its clearest form, that the Federation of British Industries has raised.

Japan Angers America

THE energetic steps that the Japanese are taking in China "for the preservation and consolidation of peace in Eastern Asia" are producing some possibly incidental but certainly incongruous effects upon the lives, happiness and property of a good many other people. In the estimable cause of making the Chinese love Japan, some hundreds of thousands of Chinese have by now been killed, maimed and ruined. But "teaching China reason" is only part of the self-imposed mission of the Japanese. They have also made it their business to teach the Americans and Europeans to look upon Japan as the guardian of law and order in the Far East, and they have not been neglecting this side of their task either. Their first steps in this field were the twice repeated bombing and machine-gunning of British Embassy cars from the air, and this week they have found time to devote a little more of their benevolent attention to the English-speaking peoples.

In the Yangtse River on Sunday, at a point between Nanking and Wuhu, a concentration of British merchant shipping, with two British gunboats in their company, was attacked and bombed three times by Japanese planes; and on the same day the British gunboat "Ladybird," coming to the rescue of a British tug that had been attacked by machine-gun fire, was herself fired upon by Japanese field artillery which caused several casualties, including one death. On the same day similar attacks were made upon American shipping in the same

reach of the river. The United States gunboat "Panay," together with three barges belonging to the Standard Oil Company, was bombed and sunk as a result of a series of attacks from Japanese aeroplanes, which dived low to make sure of hitting their targets. The barges were carrying Chinese refugees; the gunboat was "the floating embassy" of the United States in China, and had on board her at the time several members of the diplomatic staff in addition to her crew. The attack resulted in death and injury to neutrals. For all these outrages, the Japanese Government have promptly made the smooth-spoken apologies, which are now common form. As we go to press, it is reported that the Rear-Admiral in charge of Japanese air operations has been recalled from China, and that a joint conference between THE EMPEROR, the Army and the Navy is to be held in Tokyo.

As far as the latest crop of Japanese outrages has affected British lives and interests, it has been taken up in a diplomatic document, addressed by the British to the Japanese Government, which strikes a new note of severity and peremptoriness. Its tone is in harmony with the temper of the House of Commons on Wednesday, which was the day on which the missive was despatched. With this British reaction we deal separately in our first Note of the Week. Meanwhile, President Roosevelt has been addressing the Japanese Government in similar language; and this conver-

gence between the American and the British Government's attitude and policy is one of the earliest results of Japan's campaign of universal provocation. If the Japanese go on as they have begun, this Anglo-American convergence may prove to be epoch-making. The movement of American opinion is crucial; for in the Pacific the United States is the English-speaking Power that has principally to be reckoned with.

What moral will be drawn, and what action taken, in the United States? For the American Government and people, as well as for ourselves, this "incident" is bound to be a cause of deep heart-searching, because it is a sensational demonstration that the present policy of neutrality is not effective for its purpose. It does not render any of us immune from becoming the victims of "incidents" which may involve us in war, in spite of our desire to remain at peace. What, then, is the moral?

On the one hand, it is being argued by some Americans that the present policy of insulation is not succeeding because it is insufficiently drastic; and that the reply to these Japanese salvos ought to be to withdraw from the Far East bag and baggage—gunboats, merchantmen, traders, missionaries, consuls, ambassadors and all—and to abandon immovable property like America's factories in Shanghai and her dependency in the Philippines. Alternatively, it might be argued that the whole policy of trying to keep out of international trouble by avoiding international obligations is now being confuted by Japanese bullets, bombs and shells; that, however far the Anglo-Saxon nations may retreat, they will never succeed in breaking contact with the aggressor.

Which of these arguments is correct? What are the Americans likely to do? To draw in their horns until there is no one and nothing American left to be bombed anywhere west of the Aleutian Islands and Hawaii? Or to consider how best they can play their part in creating a system of law and order among nations?

Any movement for the establishment of international law and order has, of course, to surmount a traditional stumbling-block which still looms large in the United States, as it does in the rest of the English-speaking countries. We all of us have a horror of foreign entanglements. And this horror—which is still felt in England to-day for entanglements on the Continent anywhere

east of the Rhine—is felt in America for entanglements in Europe as a whole. There is, however, one feature in this "Anglo-Saxon attitude" which has a bearing upon the question of American policy in the Far East. Our inhibitions against foreign entanglements do not apply with equal force to all quarters of the globe. An Englishman who shivers at the thought of being involved on the Eurasian Continent in the basin of the Elbe does not turn a hair at the thought of being much more deeply involved on the same continent in the basins of the Indus and the Euphrates; and the same tacit and almost unconscious distinction can be detected in American minds, too. The entanglements from which an American most shrinks are entanglements beyond the Atlantic, whereas entanglements beyond the Pacific do not upset him nearly so deeply. For the United States, the Pacific and the China seas are what the Mediterranean and the Indian Ocean are for the British Empire. In the Spanish-American War, for instance, at the close of last century, the Americans did not hesitate to occupy the Philippines, though they would never have dreamed of occupying the Canaries or Fernando Po. And in the 'fifties of last century they persistently knocked at the door of Japan when they would never have gone out of their way to arouse, say, Morocco or Abyssinia from their slumbers. In fact, what happens in and across the Pacific is traditionally an American concern, and it is only what happens across the Atlantic that is traditionally not America's business. This distinction in American minds is strong just because it is founded less on logic than on history. It was the dust of Europe, not the dust of Asia, that the ancestors of all living citizens of the United States once upon a time shook from off their feet; and it was against entanglements in Europe, and not against entanglements in Asia, that Washington uttered his historic warning.

Imponderable considerations like these often have a greater effect than any material interest upon public opinion and policy. Will America meekly acquiesce in Japan's aggressive ambition? The sinking of a single gunboat will not determine the answer. But each succeeding Japanese outrage helps to strengthen the growing body of American opinion that holds not even the strongest democracy safe in a world of aggressors.

Health: Good and Bad

THE health of the public is a new issue in national affairs. Hitherto the State has hardly ventured outside the far narrower bounds set by the official connotation of "public health." Within that restricted sphere its concern is not, of course, a new thing. Some forms of ill-health are so obviously more than the individual concern of the sufferer that even the most primitive community must needs take notice of them, even if its action goes no further than the isolation of the patient. Hospitals for the treatment of the sick are one of the oldest forms of public benefaction and even the history of public sanitation—a comparative newcomer—now goes back for many decades. What is new in the last few years is not a fresh array of enactments or of administrative machines but an attitude of mind. Hitherto, when the State said "Public Health," it meant "Public Ill-Health," and nearly all its endeavours were directed towards the avoidance or the cure of specific maladies. Good health was merely what remained when ill-health was removed: a residual and negative thing. But recently the State has been increasingly interesting itself in the positive good health of its citizens. At this moment an official campaign is in progress with the slogan of "Keep Fit"—an exhortation that our grandfathers might have thought an inter-

ference with their freedom to be in as bad condition as they chose.

This new turn to policy, which is converting public health into the health of the people, opens up an entire new field for the State—a field that is unorganised and largely unmapped. We have a Ministry of Health; but it deals with much else besides health, and many health services fall outside its purview. There is no official body designed to survey the whole problem of health or even merely to traverse the uncharted land and to come back and report what it has discovered. But this preliminary, though very necessary, task has now been accomplished—unofficially, but not less thoroughly—by P.E.P.* The ensuing report is the bulkiest yet issued in the invaluable P.E.P. series, but it is also probably the most informative; for it brings within the covers of one volume a variety of matters which are not only largely alien to the informed layman but are also far too large to fall within the range of a single expert.

An attempt, within the limits of a single article, to

* "Report on the British Health Services." Published by P.E.P. (Political and Economic Planning), 16 Queen Anne's Gate, S.W.1. 418 4to pages. 7s. 6d. net, boards; 10s. 6d. net, cloth.

review all, or even the greater part, of the topics covered by the report would degenerate into little more than a catalogue. But, in any case, the greatest merit of the report is not that it is a careful inventory of the health services, so much as that it will serve to stimulate thought on the problem of evolving a conscious and consistent health policy out of the variegated mass of our present expedients.

From this point of view, there are three main hurdles to surmount before the problem can be approached as a whole. First of all there is the administrative question. By what sort of machinery should the State intervene in matters of health? It might almost be sufficient answer to say by any mechanism less chaotic than the present. A comprehensive survey such as the P E P report is needed to bring out the full patchwork of the existing health services. Most of them, it is true, are entrusted to local authorities of some sort, but there is an absence, even a reversal, of logic in the assignment of functions to different authorities. In London, for example, the L.C.C. concerns itself with the hours of work in shops, the provision of seats and the observance of early closing, but the Borough Councils with sanitary conditions in shops. Maternity and child welfare services are separated from the supervision of midwives and the school medical service. Moreover, throughout the country, even when the majority of health services come within the competence of a single body, as with most county borough councils, they are often elaborately divided between a variety of separate committees, many of which are primarily concerned with other matters and only incidentally with health. There is a beginning of co-ordination in the Medical Officer of Health, but in the nature of the case it cannot be more than an embryo. As a result, "a citizen's health may depend on which side of a local government boundary he happens to live at a particular age."

The gaps in the health services are gaps not merely in space, but also in time. Before, at and immediately after birth, the citizen can call on a number of services, whose nature and quality vary with the precise local authority whose area he honours with his arrival. But thereafter, except in a tiny minority of cities, he is lost to the public health services until he comes of school age. By that time he may have acquired a formidable array of defects. In England and Wales as a whole in 1936, 16 per cent. of the children entering public elementary schools were found to have defects requiring treatment, and in areas where the Education Authority has strict ideas about fitness and generous ideas about treatment, the proportion is far higher. From 5 to 14 the child's health is at least partially supervised by the School Medical Service, but on leaving school, he vanishes into another limbo from which he does not emerge until he has not only joined National Health Insurance but become fully eligible for benefit. Dental benefit frequently does not become payable until the age of 20, and even then only if the insured person has joined one of the wealthier approved societies.

National Health Insurance itself is strangely incomplete. The gap between 14 and 16 is being filled by a Bill now before Parliament. But it is illogical and uneconomic that provision should only be made for the breadwinner, leaving his dependants without medical attention except such as they can pay for. Even for the insured breadwinner, the scheme stops short of specialist and consultative services and the provisions for dental and ophthalmic treatment are rudimentary. In addition, there are all the inequalities and wastes that come from the administration of the scheme through hundreds of independent approved societies.

These very brief indications are enough to show the magnitude of the task that faces the health reformer. Co-ordination, in recent years, has come to be a "blessed word" to cover empty aspirations. But it must

perforce be used to describe what chiefly needs to be done to the public health services. If the various segments of the patchwork could be brought into proper relation to each other, the more serious gaps filled, an equal nation-wide standard of administration laid down, and the whole placed both centrally and locally under one body which could not evade its responsibilities, that in itself would be a large contribution to the health of the people.

Public health services, however, are of limited value unless they are backed by an efficient medical profession. That the British medical profession is efficient in the sense that it applies the teachings of medical science with skill and understanding cannot be doubted. It is questionable, however, whether a system under which each general practitioner works largely in isolation and draws his income mainly from fees levied on his patients is economically suited to the present day. An interesting and judicious chapter of the P E P Report is devoted to this question. The conclusion to which it comes is in favour of the gradual creation of a public medical service, built round the general practitioner. The ideal to be worked towards is that the general practitioner should be, literally, the family doctor who keeps in close touch with his clients, in good and bad health, serves them as a general health adviser, as diagnostician and as a channel through which they can gain access to specialist and consultative services. No system of this sort could hope to be a success until some method had been worked out of spreading its cost widely and evenly over the population. National Health Insurance is one way of doing this, and the report includes detailed proposals for its extension. The great growth of voluntary contributory schemes in the last few years shows that there is a willingness in the public to make regular provision for medical care instead of leaving it as an emergency to be deferred as long as possible and then financed by emergency means.

The problem of finance is, indeed, at the root of health progress. It is not so much a question of how much health but of how much illness we can afford. The P E P report has some careful calculations on the present cost of ill-health, which it puts at not less than £300 millions a year, exclusive of the cost of the "environmental services" which can be assumed to contribute to good health. Not all of this, of course, could be saved even by the most perfect health service, but there is clearly room for large economies. All such calculations of social benefit, however, involve the difficulty of knowing how to embody the benefits in cash and to collect part of the money to support the services which create the benefits. Further heavy loading of the national Budget can hardly be contemplated. The contributory principle has its obvious defects, especially its inability to distinguish capacity to pay. But within limits it offers the best opportunity for immediate advance. The P E P Report puts forward as its chief specific proposal an extension of National Health Insurance to cover the dependants of insured persons and to make available both specialists' services and also such additional matters as dental and ophthalmic treatment. The cost of this extension is put at £16 millions a year, of which half could be raised by an additional contribution of 3d. a week from insured persons.

Specific suggestions such as this have obvious merit, but a large part of their value will be lost if they merely add another patch or two to the existing crazy quilt. The usefulness of the P E P Report is that, in addition to making detailed suggestions for immediate action it demonstrates the need for taking a comprehensive view of the State's responsibilities in health matters. If as a result of the Report that comprehensive view becomes obligatory on public authorities and private citizens alike, its authors will have done their work well.

Diamonds

THE diamond is the economist's classic example of value determined by scarcity. Influential diamond producers have taken his words closely to heart, and the long duration of organised restriction in this industry gives modern schemes like those of the rubber, tin, copper and tea producers a distinctly *parvenu* air. Since the beginning of the last world depression two developments have played a considerable part in the striking recovery of the diamond industry. The first, which has beneficially affected the world's total demand, has been the rapidly increasing use of diamonds for industrial as distinct from purely ornamental purposes. The second, which has operated on the supply side, has been the extension of the membership of, and the effective control exercised by, the central producers' body in South Africa.

The sole official selling agency of the diamond industry is the Diamond Trading Company. The ability of this body to make its policy effective obviously depends upon the support obtained from producers, and in the years which immediately followed the boom of 1929 competition between producing interests brought the inter-

national diamond market under severe pressure. A decisive change occurred, however, in 1933, when a new South African Diamond Producers' Association was joined by the so-called "Conference Producers" of earlier days, and in addition by the Koffyfontein Mines, by the Cape Coast Exploration Company, and by the South African Government. All South African producers agreed to make all their sales through the Association, which proceeded to allot quotas to the various participants, in the approved manner. The South African Government's separate selling office was thereupon closed down. There was, however, one complication, for the Diamond Corporation, which had acted as the selling agency of the Conference Producers, held very considerable stocks of diamonds, which are estimated to have a value still in excess of £10 millions. The difficulty was surmounted by making the Corporation a member of the Association, with the formal status of a producer with a fixed quota, so that its stock could be disposed of in an orderly fashion, without upsetting the market's equilibrium.

The Diamond Producers' Association effects sales for all its members through the medium of the Diamond Trading Company, Limited, a newly formed subsidiary of the Diamond Corporation. The Trading Company also sells, under contract, the output of the chief diamond producers outside South Africa. Much of the credit for the recovery which has occurred in the international diamond trade during the past four years must be accorded to improved conditions in the world as a whole. It is generally admitted, however, that the formation and subsequent policy of the Producers' Association have helped to produce a feeling of confidence in the market, whose effects have been distinctly beneficial from the producers' point of view. Efforts have recently been made, accordingly, to extend the scope of co-operation by securing the support of the finishing and selling interests of the diamond trade. Last September an agreement was reached at Antwerp for the formation of a World Union of the Diamond Industry, to embrace every

section of the trade. The new organisation is still in a preparatory stage, and its detailed objectives are unknown. That it is designed still further to strengthen the trade's international position, however, is beyond doubt.

The growth of demand, since the worst days of depression, has certainly been encouraging. In 1932 the world's turnover of rough diamonds (as measured by the sales of the central body) was valued at £1½ millions. By 1935 it had increased by £6¼ millions and by 1936 to £8¼ millions. This year's sales of over £9½ millions will be well within hailing distance of the average of £12 millions in the boom period of 1927-29. Luxury diamonds are now selling at prices 40 to 50 per cent. above the lowest points reached in the slump, and their strong tendency has persisted despite the recent decline in demand.

This improvement has been effected, significantly enough, against a background of increasing production. Statistics of diamond production in three recent years are given in the table on this page, which shows that world production has risen from 4,060,000 metric carats

in 1933, the worst year of the slump, to 8,240,000 metric carats in 1936, the highest figure in the history of the industry. Since the end of 1936, production has again increased substantially and may reach the level of 10 million metric carats this year.

The table reveals that in 1936 British Empire countries produced only 35 per cent. of the world's diamond output, by quantity, but were responsible for as much as 72 per cent. of the total value. The position of South Africa is well indicated by the fact that whereas her production of 624,000 metric carats was slightly lower than in 1935, and not very

greatly in excess of the total for 1933, its value last year represented more than a third of that for the entire world. During the present year, however, the output of the mining section of the diamond industry in South Africa has been substantially increased. The Dutoitspan Mine, owned by De Beers (the first South African diamond mine), was reopened in March, 1936, and increased its operations from one to two shifts (of eight hours) last January. Early in June operations were restarted at the Bultfontein Mine (also owned by De Beers), and the Wesseltown and Jagersfontein Mines are at present being reconditioned.

Closer selling organisation among producers, however, could not in itself have enabled the industry to carry an increase of over 100 per cent. in world production between 1933 and 1936, in the absence of a phenomenally rapid increase in the use of diamonds for industrial as distinct from decorative purposes. A very rough idea of the importance of this development can be inferred from the fact that the output of all countries outside South Africa rose from 3,553,000 metric carats, valued at £2,150,000, in 1933 to 7,616,000 metric carats, valued at £4,045,000, in 1936. Formerly, the industrial use of diamonds was limited to such operations as rock-drilling, glass-cutting, wire-drawing and engraving. To-day diamonds are extensively used for all kinds of abrasive operations and for the sawing, shaping, setting and turning of particularly hard

* Based on sales value.

† Based on export value.

materials. Diamond-set tools and grinding wheels represent an entirely new development of the past few years, but already their employment accounts for about 40 per cent. of the total consumption of industrial diamonds. Increasing demand for absolute precision in engineering work, and the growing use of alloys of maximum attainable hardness for armaments, springs, tool steels, etc., ensure a still greater demand for industrial diamonds in the near future. Though comprehensive figures are unobtainable, the detailed foreign trade returns of the United States show that that country's imports of industrial diamonds have risen from 46,949 carats in 1929 to 954,589 carats in 1935, to 1,166,094 carats in 1936, and to 1,349,815 carats in the first nine months of 1937.

This remarkable advance in the demand for industrial diamonds, which the armament boom has stimulated, has actually produced a shortage of industrial stones of good quality at the present time, in spite of the sharp rise in world production. Though there is no direct relationship between the markets for industrial stones and for "gem" diamonds, the probable maintenance of demand for the former would indirectly tend to sustain

the latter's price, even in the event of a moderate trade recession. The lowest grades of jewellery diamonds exercised a formidable pressure on diamond prices as a whole during the last slump, but to-day they are capable of being diverted to industrial purposes should their normal market become unduly contracted.

The year now drawing to its close has seen wide fluctuations in the diamond trade. It opened with a boom, followed by a decline in the summer, and, subsequently, by the decision of the Diamond Trading Company to interrupt its "sights" from the middle of November till the end of December. Nevertheless, the tone of the market remains satisfactory, and on the whole it would seem that the industry may look to the future with fair confidence. If trade recedes, its own organisation is stronger than it was eight years ago, and the rising secular trend of industrial demand is a factor making for increased stability. If the political and industrial optimists are right, and world prosperity speedily resumes its advance, average annual sales of diamonds in the rough may regain and surpass their past record figure of £12 millions in a year or two.

Changes in West Africa

(By a Correspondent)

THE part played by the cacao bean in the development of the Gold Coast reveals how many-sided and far-reaching may be the consequences of the importation from one country to another of a valuable food-yielding form of plant life. West Africa has sustained three external influences upon the slow evolutionary trend of its aboriginal life. The first made itself felt when the white man discovered gold, the second when he discovered "black gold," or the wealth to be won in the slave trade. The last factor, the importation of the cacao tree, has radically changed the life of the people, by weaning them from their nomadic and warlike ways, and accelerating their economic and social development. The West African, to the surprise of the descendants of the old slave traders, has in recent times revealed himself as a man swift to learn new ways and to absorb new ideas. Hitherto a wanderer, a sporadic hunter and a wasteful agriculturist on the old "shifting cultivation" lines, the West African has abandoned internecine warfare and settled on the land.

We first hear of the cacao tree on the Coast in 1815, from a Dutch source. Later, in 1857 a Basle missionary imported seedlings; but it was not until nine years later that the first ripened pods were secured. The growth of the industry, however, so far as the export trade is concerned, began only at the end of the nineteenth century. The first considerable consignment of 80 tons was shipped in 1891, but from that time the influence of the cacao bean upon the life of the West African has been decisive.

The cacao-growing areas of West Africa are confined to the humid twilight of the forests, where a leafy canopy saves the rich soil from the whip-lash of tropic rains. This tract lies between the Gomoe and Volta rivers. It is separated on the coast from the Atlantic by a belt of unsuitable land, and it reaches northwards beyond Kumasi, the capital of the Colony. In this area the growth of the cacao bean is confined by law to native industry. Exports of the cacao bean, in tons, have risen from an annual average of 5 in the period 1891-95 to 218,895 in the period 1926-30, and to an average of 256,030 for the five years 1932-36. The supremacy of the cacao crop over all others is revealed by the following figures, showing the value of exports in 1936:—

Cacao	7,660,000	Manganese ore	613,000
Palm oil	6,187	Gold	3,048,000
Palm kernels	107,000	Diamonds	585,000
Kola nuts	5,000	Timber	101,000
Copra	25,942	Raw rubber	24,048

The cacao figures in the table represent the yield of a million acres of land, the bulk of which is farmed by

Africans, few of whom have more than five-acre holdings.

Any radical change in the economic condition of a people is likely to reveal, on the one hand, a capacity for cultural and economic progress, hitherto inherent but unrevealed; and, on the other, various limitations and intrinsic weaknesses. Particularly has this been the case in West Africa. Almost in a day the people of the Gold Coast were propelled forward by external forces from an aboriginal existence which had remained unchanged for centuries, to the complex system of the Western world in the twentieth century. The old communal system of land tenure has given place to the idea of private ownership, and this, in turn, has brought the concept of land values and the beginning of land as the basis of private wealth. Formerly the West African had little or no sense of property in land; now he realises that his small four-acre farm is an economic and financial asset. Though he still remains, by Western standards, strikingly indifferent to gain, he knows, nevertheless, that his land has a market value, and he asks for it. Conveyancing of landed property has made its appearance, and with it there has appeared the man who organises his land for profit rather than cultivates it by his own efforts. In fact, the West African has become an employer of labour, usually drawn from the Northern territories. Ultimately this system will involve the stratification of African society—a result which may make for "progress," in a material sense, but will be hailed with regret by many lovers of earlier days and older ways.

The concept of the private ownership of land includes, inevitably, the right to alienate and dispose of land by will, and in this direction Western ideas are also revealing themselves. For example, the old matrilineal system of passing possessions through the sons of the testator's sister is giving way to the system of direct inheritance through the father. In the sphere of transport, again, importance. A few years ago the West African was content to carry his produce to market on his own head, or highways he prefers the lorry as a means of transport. West African mind, but appreciation of the fact that roads need constant repair came more tardily. Yet ledge of English and of "the three R's" was of inestimable advantage in his trading operations, and at once children to the Government schools in steadily increasing numbers.

These changes, which have profoundly affected West African life, morally and materially, have brought a host of new problems in their train. The African cultivator has been slow to realise, for instance, that the forest itself has its needs—that when trees are chopped down other trees must be planted. And many ideas with which Europeans have been familiar for centuries have come with a shock of surprise to the African mind. The West African has long realised the value to himself of his own strength. The notion of selling this personal asset, however, by engaging himself, as a free man, to work for another has been entirely novel to him, though formerly slave labour was a commonplace of this aboriginal African society. There has been an increasing demand for labourers from the Northern territories, who have brought with them a new complication; for not only

have they had to receive an agreed wage, but it has been necessary to find food for them on the farm.

Altogether, it can scarcely be a matter for surprise if some of the institutions which are commonplaces of Western civilisation have slightly dazzled the eyes of the expectant West African, and profoundly disturbed his mental and material balance. Ultimately, the great and growing industry based on the cacao bean exerts its decisive influence on the social life of the Gold Coast through a single agency: the use of money as a medium of exchange. Money, which can be buried and dug up again in bright florins; money, which means power, has put a time limit to an ancient aboriginal culture, and is stimulating a potentially great people with the heady draught of the restless Western world.

Notes of the Week

Notes to Japan.—In the House of Commons on Wednesday at question time Mr Eden announced that a Note had that day been despatched to the Japanese Government on the subject of the outrages which we deal with this week in a leading article. "His Majesty's Government," said the Foreign Secretary, "wish in particular to be assured that action is being taken of such a character as will definitely ensure that there shall be no repetition of these incidents—which, as the Japanese Government themselves realise, must impair relations between the two countries." The severity of these words was matched by the temper of the House as it listened to them, as well as by the tenor of the Note, which was then on its way and has since been published. After rehearsing the facts, the British Note acknowledges the receipt of the Japanese Note of the 14th in which the Emperor's Government tenders a "profound apology" and announces that compensation will be paid, that the culprits will be punished, and that measures have been taken to prevent the recurrence of such incidents. Taking up these suspiciously artificial-looking olive twigs, the British Note puts them under the microscope. It recalls the long tale of previous Japanese outrages, and the Japanese Government's repeated assurances of their intention fully to respect the interests of third Powers in their present conflict with China. "It is clear," the British Note concludes, "that the steps hitherto taken by the Japanese Government to prevent such attacks have so far failed in that purpose; and His Majesty's Government therefore ask to be informed that measures have actually been taken of a character which will put a definite stop to the incidents of which they complain." A very similar line is taken by the American Note which was delivered in Tokyo on Monday. The Note mentions previous occasions when Japan has "violated the rights of the United States" and asks for an assurance that "definite and specific steps have been taken" to prevent a recurrence. This is, indeed, the issue: can, and will, the Japanese Government effectively control the Japanese military authorities? And can, and will, the Japanese high command effectively control the Japanese junior officers?

Civil Liberties.—A debate on the question of the liberties of the subject took place in the House of Commons on Wednesday evening on a motion proposed by Mr G. Strauss, the Labour member for North Lambeth. Mr Strauss's motion spoke of "the extent to which the liberty of the subject has suffered encroachment within recent years" and declared that such encroachment "threatens the maintenance and impedes the development of a healthy democracy." In spite of such broad terms, however, Mr Strauss largely confined himself to a severe criticism of the Metropolitan Police for alleged partiality in favour of Fascist organisations

and against the working-class. He received no support even from his Labour colleagues for these attacks, which the overwhelming majority of Londoners would consider completely unwarranted, and it is a pity that the discussion was so largely diverted to a matter on which there is little ground for debate, since there is much in the general subject of civil liberties that well deserves a Parliamentary airing. It is undeniable that there has been a certain restriction of the liberties of the citizen in comparison, say, with the decades before the war. It is also true that the price of liberty is eternal vigilance. But there seems to be a growing tendency among the professed champions of civil liberty to take an extreme attitude which in the long run will only do harm to their cause. There is some agitation, for example, against the ban on political processions in the East End—which has just been extended for a further three months—on the ground that it applies to all parties alike. But if the authorities, in the name of civil liberty, started on a policy of discrimination (for which, incidentally, fresh legislation would probably be needed), the last state of liberty might well be worse than the first. A Conservative member who spoke in the debate was being more realistic than Mr G. Strauss when he said, "The one threat to our liberties is the growth of such disorders that the people say 'Anything for order' and do not examine too closely the policies of the extreme parties who offer to restore order." The essential problem, as Mr Geoffrey Lloyd said, is to achieve a proper balance between freedom and order, for freedom without order will lead to its own destruction. Let this be thought to be a Fascist sentiment it may be pointed out that the British people have already, in the interests of order, surrendered the liberty to carry arms—a liberty that is enshrined in the Bill of Rights written into the American Constitution. But which is the bigger threat to the freedom of the citizen to pursue the life he chooses, the compulsory disarmament of the Englishman or the revolvers and machine-guns of the gangsters?

The Castlecary Railway Accident.—One of the worst disasters in British railway history occurred on the afternoon of December 10th at Castlecary, between Edinburgh and Glasgow on the London and North Eastern Railway. In a blinding snowstorm a train from Dundee, while the latter was at a stand. The death-roll amounted to 35 passengers, and a further 63 were injured. The driver and fireman of the colliding train had miraculous escapes. Apart from the absence of fire, nothing was wanting to add to the horror of the collision in thick snow and darkness, or to the difficulties of subsequent rescue work. The cause of the disaster is as yet unknown, for the official Ministry of Transport inquiry only opened on December 16th, while the inquiry under

the Fatal Accidents Act, held under Scottish law, had not opened when we went to press. Falling snow reduces visibility and disorganises traffic just as seriously as fog, and in the extra precautions enjoined in the signalling regulations the two are treated on exactly the same footing. Whether the driver of the rear train ran past a signal at danger or whether the signalman overlooked the presence of the first train, or whether there was some other cause—these matters will necessarily be determined by the official Ministry of Transport report. All that can be said to-day is that complete track-circuiting plus automatic train control are the only certain preventives of such a disaster. The suggestion has been made that the use of wooden carriages increased the death-roll, but actually the carriages were built as to three-quarters of steel. In view of the speed at which the colliding train was proceeding, serious loss of life was unavoidable.

* * *

Mr Attlee's Defence.—The dangers of confusing political with constitutional issues have been exemplified by the attempt of certain Conservatives in the House of Commons, on outside platforms and in the Press, to indict the leader of the Opposition on account of speeches in favour of the Spanish Republican Government during a brief tour in its territory. It was alleged that, by virtue of his constitutional office, now recognised by statute and a salary, Mr Attlee was in duty bound to respect the British Government's Spanish policy. His speeches, moreover, were stated to have violated the agreement he signed on departure not to intervene in the Civil War. A vote of censure against him, as leader of the Opposition, was tabled in his absence. On Monday Mr Attlee hastened to state his position to the House. He made no excuses, claiming on the one hand that the expression of his known views about events in Spain in no way violated the agreement he had signed, and on the other that the salary recently thrust upon him could not be construed to limit his right as a private member to speak his mind on politics as he pleased. His argument carried conviction, and the Prime Minister, who had given no sanction to the attack, asked that the matter should be dropped. Mr Liddall, Earl Winterton and certain leader writers may dislike Mr Attlee's politics. That, in fact, is why Mr Attlee is leader of the Opposition. To suggest, however, that his salary made him virtually a pensioner of the Government, by limiting his right to express an opinion contrary to official policy, would be bad logic, bad constitutional doctrine and—at the price—bad business.

* * *

Jugoslavia, France and Italy.—Last week Dr Stojadinovic, the Prime Minister of Yugoslavia, was a guest of honour in Italy; and now this week M. Delbos, the Foreign Minister of France, has been a guest of honour in Jugoslavia. On the whole, it looks as though the powers that be in Jugoslavia, like the powers that be in Poland, will continue to sit on the fence while opening their hands to take any sugar-plums that may be offered to them as baits to coax them down on one or other side. For the moment, these smaller states for whose favours two rival Great Powers are competing are perhaps in a privileged position—but this perhaps only on a short view. In the long run, they will have to make up their minds which of two alternative kinds of Europe they themselves desire; and the difference between these two Europes is of even more vital importance to the lesser European States than to the Great Powers themselves, since their very existence as States may depend upon the choice. For the moment, it is as tempting for Jugoslavia to coquet with Italy as it is for Poland to coquet with Germany; for her totalitarian neighbour is in a mood to pay for Jugoslavia's good graces in coin which Jugoslavia values. It seems that in Italy last week Dr Stojadinovic was successful in extracting from Signor Mussolini a certain relaxation of Italian pressure both on Jugoslavia's frontiers and on the Jugoslav minority under Italian rule. In Jugoslavia, as in Poland, to-day

the powers that be incline towards authoritarianism rather than towards democracy. Yet here again, as in Poland, the democratically-minded elements that still exist in—and may well be a majority of—the people have a winning card up their sleeve; and this card is patriotism. For it is evident that, if the Rome-Berlin axis did prevail in Central and Eastern Europe, the Successor States, one and all, would lose their independence in fact, however sedulous their new German and Italian masters might be in preserving the outward forms of it. The only ultimate guarantee of a genuine independence for these Central and East European States is that the West European Powers, and, in particular, France, should continue to count in European affairs.

* * *

Danubian Majorities and Minorities.—It is not only in Jugoslavia that M. Delbos's tour has significance for the domestic politics as well as for the external relations of the countries visited. In Roumania he found a situation not dissimilar from that in Jugoslavia. The Government, which in either country is in office more through Royal favour than through popular support, officially maintains the policy of the French alliance. In both countries the Government is faced with Oppositions of the Right and the Left, the former section inclining to Germany while the much larger democratic Opposition is the most fervent supporter, in each country, of the connections with Paris and Geneva. In Roumania, the position is complicated by the fact that a general election is in progress. M. Delbos could hardly ignore the Opposition leaders—among whom M. Titulescu must now formally be counted—for they are France's best friends and may conceivably be the Government within a few weeks. But the King and the Prime Minister insisted on excluding MM. Maniu and Titulescu from a reception at the French Embassy and the visiting Minister accordingly had to receive the Opposition separately, at the cost of considerable embarrassment both to him and to the Government.

* * *

In Czechoslovakia, where M. Delbos has now arrived, the Government is both firmly and democratically in the saddle. But the perennial problem of the German minority is nevertheless giving renewed trouble. At the moment there is serious dissension in Herr Henlein's Sudetendeutsch party, which has now reached the stage of an open clash between Herr Henlein and his "Kameradschaftsbund" on the one hand and, on the other, the so-called "Aufbruchkreis" who believe that Herr Henlein is far too moderate in his Nazism and panicked from the party, and it is believed that they have a considerable following among the Sudeten Germans. At the same time there has been an increase of complaints among the "Activist" Germans (i.e. those who co-operate with the Government) that the agreement of February 18th, which made several concessions to the German language and culture, is not having much effect. Wisely, the Czech Government has announced the public service need not speak Czech on appointment, provided they learn it thereafter. The Government in the German-speaking districts. But the agitation goes on. That it receives rather more than moral support from Berlin is clear, and in the last few days it has been found necessary to tighten the provisions against the disclosure of military information.

* * *

The Soviet Elections.—The election of members of the Supreme Council of the Soviet Union has passed off exactly as was expected. It is officially announced that all 1,143 candidates have been elected. Since, in this

"democratic" election, only one candidate was permitted to stand for each constituency, the result is hardly amazing. But it is also announced that, on an average of the whole vast country, 96.5 per cent. of the total electorate actually recorded their votes. M. Stalin has thus not secured quite such a high percentage as Herr Hitler did in his last effort, but he has done very well, considering the difficulties that had to be faced in some parts of the Union, where the mere idea of an election met with traditional opposition. In any case, the absolute number of votes, 90,319,346, is easily a record for any election anywhere at any time. It is perhaps an anticlimax, after such impressive statistics of aggregated humanity, to wonder what purpose the election has served. It has, of course, once more demonstrated the effective results that can be produced by a mixture of propaganda and compulsion, when all voices from outside have been eliminated. But the world has learnt how to assess these demonstrations. The official claim that the election has turned Soviet Russia into a democracy is, of course, laughable. The restriction of candidatures to one officially approved nominee per constituency would be enough to dispose of it. But in addition, the continuance of the "purge" places an insuperable obstacle in the way of the acceptance of present-day Russia even as a State with democratic aspirations. The approved list of candidates itself had to be purged, and M. Mezhlauk, Deputy-President of the Council of People's Commissars and Chairman of the State Planning Commission, was ominously removed from it within a day or two of the election. How can such things be reconciled with any tolerable system of government, let alone with democracy?

* * *

A Mussolinian Gesture.—The reports which were recorded in last week's *Economist*, that Italy's resignation from the League of Nations would be decided by the Fascist Grand Council at its meeting on Saturday, proved to be entirely correct. The decision was duly announced, in suitably truculent language, from the balcony of the Palazzo Venezia by Signor Mussolini himself. The step hardly reaches the usual standard of dictators' sensations—certainly not in the eyes of the outside world and probably not in the eyes of the Italian people. Juridically, Italy broke her covenants to the League when the first Italian soldier crossed the Abyssinian frontier rather more than two years ago; morally she broke them when the invasion was plotted in cold blood, years earlier. There is, in fact, far more political significance attaching to the German reaction to Italy's resignation than to that act itself. In a statement issued by the German Government on Sunday it is declared that the Reich is in full agreement with Italy in holding that "the political system of Geneva is not only a failure but is pernicious in itself," and it is added that, in view of this conviction, "a return of Germany to the League will never come into consideration again." This reads like the first word of command in a triangular German-Italian-Japanese propaganda campaign in which the League will be designated as an organisation which is neither world-wide in its membership nor worthy in its purpose. So far from being an oecumenical association of States for the maintenance of international order, the League (it will be represented in these hostile quarters) is not, and indeed has never been, anything but a gang of Powers with great possessions, who have tried to cajole the have-nots into co-operating with them for the safeguarding of their loot. The "Triangle's" piratical attacks upon China, Abyssinia, Spain and whoever may be their future victims, will be lauded as a righteous and effective retort to the League Powers' dog-in-the-manger policy. If they really fear the League and what it stands for (as they must do) the dictator States are taking a false step. For their anti-League campaign will make it impossible for any other States to leave the League without admitting that they have yielded to the pressure of the Triangle. Signor Mussolini's need for flamboyant gestures is distorting his diplomacy.

Films and Quotas.—This week's proceedings in Committee on the Films Bill have given rise to questionings whether the Government really knows its own mind. Having threatened earlier in the year to drag on the trade into submission unless the different sections came together and agreed on a film policy which would be acceptable to the Government, the Board of Trade has since been content to waste valuable time in attempting to placate each section in turn. Perhaps if Mr Stanley, now a disappointed man, were to return to his best sergeant-major manner, the whole of the trade might fall into line with sprightly celerity. His attitude in Committee last Tuesday, however, was altogether different. He intervened in the discussion on the split-quota amendment—which he had denounced in unmeasured terms at the previous sitting—to say he might be in favour of some other proposal (which he had not fully thought out) if it proved acceptable to the trade (which had given it no thought at all). By this new proposal any renter who made British films in excess of his quota liability would be permitted to offer them to exhibitors on terms entitling the exhibitors to double quota.

* * *

The value of the new proposal is anything but clear. Under it, from the viewpoint of the exhibitor, there would still be two classes of British films. The first would count at their full length and the second at double their length, towards his quota liability. The concession, however, would be meaningless to the exhibitor unless he could sell a given film profitably to the public, and its entertainment value would have no relationship whatever to its relative ranking for exhibitors' quota. In some respects, indeed, there is stronger ground of objection to the new scheme than to the original proposal. And the old dilemma remains, since all the better films under the proposed arrangements may tend to gravitate to the renters' quota, while all the inferior films tend to become exhibitors' double-quota films. The price which the exhibitor can afford to pay depends entirely on the merits of the film and not on the quota class in which it may be placed. Unless any given project is likely to produce higher returns from the public, it can offer no possibility of increasing the total return to the producer. The new proposal, like the old, does nothing to make film production more profitable.

Private Members' Bills.—With unusual generosity the House of Commons on December 10th unanimously gave second readings to three measures introduced by private members, dealing respectively with hire-purchase, street playgrounds and workmen's compensation. Back from her brief travels in Spain, Miss Wilkinson clearly exposed the more notorious abuses of the hire-

purchase system. Her Bill is designed to prevent the harsh repossession of goods the purchase price of which has been largely defrayed by the hirer, and, among other reforms, to make it possible for the hirer to return the goods and end his liability with the payment of only a reasonable sum to cover wear and tear. The intention of the measure is to put a stop to the activities of touts and bruisers and to the "snatch-back" and "linked" agreements. Its execution would tax the resources of the county courts, but, in the view of members of all parties, including the Solicitor-General (cautiously unofficial), the various clauses are both practicable and desirable. Mr Perkins' Bill to empower local authorities to close streets for use as playgrounds was equally commended, and, indeed, the Ministry of Transport had advised Mr Perkins about its actual drafting. Similarly, Mr Cary's proposal to extend to several thousand taxicab drivers and barges in London the benefits of Sections 3 and 5 of the Workmen's Compensation Act of 1925 was warmly welcomed by the Home Office. Apparently these measures have been launched upon the troubled waters of private member procedure with a fair wind, and all, it may be hoped, have more than the usual opportunity to reach the Herbertian haven of enactment. It is in cases like these that the House can reflect more aspects of public opinion than can be brought within the necessarily narrow limits of the Government's programme.

Rent De-restriction.—Next week the Minister of Health will receive the Report of the Committee on Rent Restriction. A minority of the Committee is reported to be opposed to any general removal of restrictions, but the majority is expected to recommend general decontrol in stages up to 1950. After that date the rents of houses will be controlled only in overcrowded districts or in places where the Minister thinks it advisable to retain restriction. For instance, houses rated at over £20 and under £45 in London and over £13 and under £35 in the provinces may continue to be restricted, if they are occupied by one or more families already paying a rent above a prescribed level. Until the Committee's Report is made public, comment has little value. But it may be appropriate to suggest that any plan to remove restrictions by gradual stages, with adequate safeguards to protect impoverished and overcrowded tenants will, in general, be welcomed. The system of restriction is steadily lapsing through the falling-in of tenancies; but in so far as those restricted rents which remain tend to act as a brake on the building of new houses, there is a case for deliberate decontrol on grounds of economic expediency. Rent restriction has lingered long since its institution as an emergency measure at a time of housing shortage. During its tenure its function has largely changed; for it has become part of a social policy against slums and overcrowding. This rôle of restriction is likely to be indicated in a suggestion by the Committee that another overcrowding survey should be made in 1940. Meanwhile, though permanent restrictions on the earnings of one particular form of property may be unjustifiably discriminatory, the State must ensure that if rents are to be decontrolled on the one hand, new houses must be built to let at adequately low rents on the other.

Traffic Facts and Problems.—The Report on the administration of the Road Fund lends much weight to the contention that our roads, and especially those of London, are wholly inadequate to carry the growing burden of modern motor traffic. In 1936 the number of licensed motor vehicles rose from 2,581,000 to 2,768,000. There is now one licensed driver for every 12 persons in this country. In London, congestion has reached a peak. An investigation of traffic delays showed average speeds of between 3.6 and 5.8 miles per hour in the City and between 6.3 and 7.7 m.p.h. on the journey from Euston Road to Trafalgar Square. Only on the outskirts of London can average speeds of 18 m.p.h. be attained;

and it is now slightly quicker to travel 22½ miles round the North Circular Road at 23½ m.p.h. than to proceed at 12½ m.p.h. through the heart of the City, a distance of only 12½ miles. The waste of time and engineering skill involved in this dilatory progress represents a serious economic loss to the community.

Far more serious is the toll of the road in life and limb, which is akin to that of a minor war on our out-moded highways. Up to March 31, according to this Report, schemes to cost £73,312,000 had been approved under the Government's five-year plan of road improvement. On November 3rd, in answer to a question in the House, it was stated that only £9,250,000 had actually been spent since the programme was made an important plank in the Government's election platform over two years ago. Counting local contributions, probably no more than £15,000,000 out of the promised £100,000,000 has been spent in nearly half the allotted five years. It is not sufficient to set up an inquiry into the causes of road accidents, or to analyse road deaths without reference to the security which better roads might afford—as the Ministry of Transport does. The Parliamentary Road Group on the German Roads Delegation have recommended a national system of motorways. Economy, humanity and duty alike counsel drastic action. And the possibility of a trade recession is not the least important argument in favour of a comprehensive programme of road reconstruction.

The Future of the Australian North.—The Northern Territory of Australia derives its importance, not from the numbers of its people, but from its lack of them. With its 3,800 Europeans and 1,600 Asiatics inhabiting over half a million square miles it is the epitome of Australia's alleged "empty spaces." Much of it is desert; the exploitation of the rest has been littered with the wreckage of failure. A committee of two, appointed last April by the Commonwealth Government (which administers the Territory), has just presented a sweeping report. Working on the principle that revenue considerations must be subordinated to those of production and development, it recommends the abolition of the petrol tax and the suspension for twenty years of the Territory's income tax and all tariffs. It also recommends that Darwin should become a free port. Within the conditions established by this Elysian relief from taxation, and by the avoidance of over-centralisation and bureaucratic method, new modes of development are proposed. Instead of the uneconomic north-south railway, lines should be built linking the best areas of the Territory with the port of Wyndham in Western Australia and the Queensland rail head of Dajarra. As much of the country as possible should be converted from cattle to sheep grazing. Other recommendations include the improvement of housing, the establishment of a small meat works at Darwin, and the application of industrial arbitration. The Committee conceive as the aim a population of 15,000 within a decade and one of 40,000 within twenty-five years. The interim cost of these plans to the Commonwealth Government has not been stated in the cabled summaries, but in 1934-35 the combined revenue from Customs, Excise, land tax and income tax in the Territory was £16,340—a negligible figure against the total deficiency of £583,819 on that year's accounts.

Price-Fixing in New Zealand.—The New Zealand Parliament has accepted a Primary Products Marketing Amendment Bill of far-reaching scope and possibilities. The Bill empowers the Marketing Department to fix maximum and minimum wholesale and retail prices for dairy produce, fruit, honey, eggs and any other foodstuffs prescribed by Order in Council, and

to buy foodstuffs at fixed prices, exporting the surplus over home requirements. Mr Nash, the Minister in charge, defended the measure as a necessary interference with the economic mechanism in the interests of the community. It is, in fact, a logical corollary of the Act already secured by the Labour Government for the Government marketing of dairy produce and other commodities for export. British experience itself shows that price fixation at one point soon requires price dictation at others, and may eventually involve Government control of the whole distributive process.

Protestants Nationalised.—Within the last few days the Nazi State has made a fresh move in its unremitting campaign to bring the Christian churches under its control, and this time it has been the turn of the Protestants to draw their pagan overlords' fire. The attack was opened on December 8th in an article in the "Schwarze Corps"—the organ of the S.S., whose élite is the Secret Police—and on the 11th these words were followed up by acts on the part of Herr Kerrl, who is Hitler's sub-dictator for ecclesiastical affairs. The Nazis' ecclesiastical policy is taken ready made from those Russian Communists whom it is the Nazis' trade to denounce. The churches are to be confined to the performance of their liturgies and to the cultivation of "personal holiness"—on the understanding that such holiness is not to have any practical effects and not to be regarded as being even of any spiritual value. And the whole of the ground from which the churches are to be evicted is to be annexed by the State. "The State," as the "Schwarze Corps" puts it, "is the living expression of the divine order. . . . The National-Socialist State will create the divine order in all spheres of life. . . . There can be only one divine order." Accordingly, Herr Kerrl now takes over, root and branch, the government of the Protestant Church in Germany. The spontaneously organised Confessional Movement is declared to have no legal standing *vis-à-vis* the divinely-inspired Führer's authorised representative. And it is expressly declared that the reason why the State cannot and will not allow the Church to govern itself is because "the National-Socialist State cannot tolerate any State-free compartments, which would tend towards the disintegration of the nation." An idol which proclaims that it cannot afford to tolerate even earth-worms is avowing that it has feet of clay.

Italy and the Copts.—In his efforts to confirm his hold upon his Abyssinian conquests, Signor Mussolini is also playing politics with religion—a dangerous game, as other dictators have discovered. The Duce's first move was to try to induce the Catholic Church to become his accomplice in the Ethiopian crime by offering it all facilities for missionary work behind an advancing screen of Fascist poison gas. His next move was to try to set Muslims against Christians in Abyssinia by representing himself to them as their pagan liberator from a Christian domination. In the last few days he has made a third move—and this time for securing control over the ecclesiastical organisation of the Monophysite—or, as it is commonly called, "Coptic"—Church in Abyssinia. These Monophysite Christians are the most important religious community in Abyssinia, and for that matter in Eritrea too; and, as is signified by their being known as Copts, they have always maintained the closest relations with their co-religionists in Egypt. The Coptic Monophysite Patriarch of Alexandria has continued to be the head of the church in Abyssinia as well as in Egypt itself; he has always appointed the local Metropolitan of the Abyssinian Monophysite community, who has always been an Egyptian by nationality. It is now reported that the Italian conquerors of Abyssinia have, of their own motion, appointed, as an "independent" Metropolitan of the Monophysite

Church in Ethiopia, a native Abyssinian bishop named Abraham (who is said, incidentally, to have been blinded by Italian poison gas). Such an appointment is, on the face of it, entirely uncanonical; and it seems likely to cause offence in Egypt without winning allegiance in Abyssinia. If there is any truth in the further report that the Italians intend to force this Italian-made "autonomous" Monophysite Church in Ethiopia into union with Rome, then they are indeed asking for trouble.

Tin Restriction Quotas.—On Friday of last week the International Tin Committee fixed quotas under the restriction scheme for the first three months of 1938, at 70 per cent., against a present rate of 110 per cent. Special provisions, however, have been made under which Bolivia, the Belgian Congo and French-Indo-China will "surrender" tonnages which they are themselves incapable of producing, so that Malaya, the Dutch East Indies and Nigeria will be enabled to make exports at a rate of approximately 80 per cent. The cut is severe, but those who supported tin restriction have no room for complaint on that account. Experience suggests that, once consumption has started to fall, it may decline so rapidly that restriction must develop an exceptional turn of speed to overtake it. But the incidence of the latest reduction is hard to justify by elementary logic. In recent months, Bolivia has been producing at only 55 per cent., the Belgian Congo at 63 per cent., and French Indo-China at 50 per cent. of standard assessments, while Malaya and the Dutch East Indies have been producing up to their 110 per cent. quota. What, under these conditions, does "100 per cent." mean? To-day, in fact, one group of producing countries is admittedly under-assessed and another group is over-assessed. Under last week's decision, the over-assessed countries relinquished "rights" they were quite incapable of exercising in order that the real (and quite substantial) reduction made by the others might appear slightly smaller in terms of a percentage of some imaginary number. This approaches the limit of absurdity. Free competition tends to concentrate the burden of adjustment, in a falling market, on high cost producers; restriction normally apportions it arithmetically between high and low cost areas and producers. But what is to be said for a system which endeavours to ensure the continued co-operation of the former by throwing the burden primarily on the latter?

Record Steel Output.—The output of steel ingots and castings reached a record in November, but pig iron production was slightly smaller than in October, which contained one more working day. The total output of

crude steel in 1937 is now expected to reach 12.9 millions, against 11.7 millions in 1936. A year ago, both pig iron and steel production showed a substantial decline between October and November:—

Imports of iron and steel materials jumped ahead last month, when they were three times as heavy as in November, 1936. Exports, however, registered a decline between October and November and were only slightly higher than a year ago. The rising domestic output, coupled with heavier imports and practically unchanged exports, has brought about a substantial increase in the supplies available to domestic consumers.

(In thousands of tons)

Period	Production		Foreign Trade	
	Pig Iron	Steel Ingots and Castings	Total Imports	British Exports
1913—Monthly Average	885.0	638.6	185.9	414.1
1929 " "	832.4	803.0	235.2	364.9
1932 " "	297.8	438.5	132.7	157.4
1936 " "	640.5	974.8	123.6	183.8
1936—October	870.3	1,080.5	101.0	184.4
November	643.1	1,001.3	90.7	193.3
December	671.4	1,019.2	84.8	204.8
1937—January	650.7	998.9	83.1	215.0
February	608.7	995.9	82.9	200.5
March	680.3	1,108.5	94.3	231.6
April	680.7	1,080.4	88.5	239.5
May	686.3	1,047.3	98.1	228.3
June	699.3	1,106.4	174.8	235.4
July	729.3	1,059.2	202.3	232.2
August	714.0	987.7	213.4	201.4
September	726.7	1,163.0	228.2	193.6
October	769.6	1,133.6	220.5	206.9
November	762.3	1,178.3	272.5	193.0

Despite the enormous increase in domestic supplies, there are no indications as yet of an accumulation of stocks.

Moreover, consumption is expected to continue at a high level for some time to come.

An interesting development in the British iron and steel industry was revealed by this week's announcement that Messrs Richard Thomas, the well-known steel and tinplate manufacturers, had arranged with the American Rolling Mill Company of Ohio to take over all the shares of Armco, its British subsidiary, on July 5, 1938. Under this arrangement, Messrs Richard Thomas will not only have a very effective control in this country of the strip mill patents of American Rolling Mill, but they will also benefit from any further technical improvements made by the research department of the American concern. How Richard Thomas's acquisition is likely to affect the development of this new process by Messrs John Summers (with whom Armco formerly had an arrangement) remains to be seen.

Decline in Milk Production.—The history of the Milk Marketing Scheme for England and Wales is epitomised in the charts which are reproduced at the foot of this page. These show, respectively, the prices paid to the farmers for "liquid" and "manufacturing" milk and the quantities sold in these two markets. During the first three years of its life the Milk Marketing Board was continuously confronted with the problem of the growing "surplus." The pool prices were sufficiently remunerative to call forth increasing supplies of milk, but retail prices were so high that consumption made little headway. The surplus which had to be disposed of at low prices for manufacturing purposes consequently showed a steady advance. During the current year, however, several factors have combined to check the growth of milk production. These include the poor quality of much of last year's hay, considerable spells of unfavourable weather and the rise in feeding costs. Concurrently with this check to production, liquid consumption has shown a gradual improvement in response to the propaganda of the Milk Board and the gradual improvement in the standard of living. The surplus has thus been reduced and the average realisation price for manufacturing milk is higher than at any time since the scheme began. Whether this improvement

MILK PRICES AND SALES

in the milk producers' position will be maintained in the near future may, however, be questioned. For the retail price in London and many large towns is now 7½d. per quart—the highest since 1924—and will remain at this level until the end of next February. To suggest that consumption will continue to advance in face of this increase in prices would seem to be unduly optimistic. But unless means can be found to reduce distributive costs, which now amount to 1s. per gallon (or 40 per cent. of the selling price), the chance of any substantial reduction in the price of milk seems slender indeed.

Overseas Trade in November.—In contrast to the movement a year ago, when imports declined by £1.8 millions between October and November, British purchases rose this year by £1.2 millions to the highest level since January, 1930. Domestic exports, on the other hand, declined between October and November, but the fall of £2.0 millions was smaller than the £3.4 millions of a year ago:—

	1935	1936	1937	Change between 1936 and 1937	Per cent.
November—					
Total imports	71,455	78,680	97,251	+ 18,571	+23.6
British exports	39,400	38,441	45,183	+ 6,742	+17.5
Re-exports	4,372	4,343	5,306	+ 963	+22.2
Total exports	43,772	42,784	50,489	+ 7,705	+18.0
Excess of imports over exports	27,483	35,896	46,762	+ 10,866	+30.3
Transshipments under bond	2,485	2,724	3,406	+ 682	+25.0
Eleven months—					
Total imports	683,556	765,372	935,412	+ 169,540	+22.1
British exports	391,037	400,254	477,880	+ 77,226	+19.4
Re-exports	49,821	54,596	70,224	+ 15,628	+20.5
Total exports	440,858	454,850	548,104	+ 93,254	+21.5
Excess of imports over exports	242,697	311,022	387,208	+ 76,186	+24.5
Transshipments under bond	22,946	26,046	34,385	+ 8,339	+32.0

Compared with the corresponding month of last year, both imports and British exports showed a bigger increase in November than in October. The improvement was most marked in the case of exports, whose rate of increase had previously tended to decline. But while the increase in imports over November, 1936, was above the average for the first eleven months of the year, the rise in British exports was again below the average recorded since the beginning of the year. The excess of imports over total exports last month was £46.8 millions, bringing the import surplus for the first eleven months to £387.2 millions, against £311.0 millions during the corresponding period last year.

While the sustained advance in imports points to the maintenance of a high level of activity in this country, the improvement in exports over a year ago indicates that the recent decline in new business has not yet found reflection in current shipments.

Trade by Commodities.—Though the increase of imports last month, as compared with November, 1936, is partly a consequence of the rise in prices, many materials, as the following table shows, were purchased

in larger quantities. Imports of crude petroleum and materials for the metal industries showed a substantial expansion by comparison with November, 1936, and the intake of machinery and iron and steel continued to exceed last year's by a considerable margin:—

RETAINED IMPORTS—MONTH OF NOVEMBER

Item and Measure	1935	1936	1937
Wheat	9,835	9,293	8,149
Beef and veal	1,051	944	1,034
Mutton and lamb	380	317	367
Sugar (unrefined)	2,879	4,264	3,375
Iron ore and scrap	422	515	787
Raw cotton	1,616	1,533	2,194
Sheep and lambs' wool	483	538	435
Flax, hemp and jute	23,890	31,163	29,960
Crude petroleum	37,893	39,786	50,508
Hides, wet and dry	149	152	158
Wood pulp	208	215	176
Rubber	66	17	288
Unwrought copper	13,591	27,988	39,372
Pig lead	28,429	24,503	37,824
Tin: Ore and concentrates	3,650	4,292	6,637
Blocks, ingots, slabs and bars	1,652	336	680
Iron and steel manufactures	77	90	272
Machinery	5,569	8,998	11,513

Exports showed substantial increases over November last year under most headings. The improvement in shipments of coal has so far been maintained, in spite of the recent lull in new orders. Exports of iron and steel also remained above last year's level, but were smaller than in November, 1935. The sustained expansion of machinery shipments is particularly encouraging. Among the items showing a decline, the lower shipments of iron and steel scrap are a reflection of the increase of domestic requirements. But the fall in sales abroad of textiles and motor vehicles and chassis is less satisfactory.

BRITISH EXPORTS—MONTH OF NOVEMBER

Item and Measure	1935	1936	1937
Coal	3,496	2,920	3,512
Iron and steel scrap	18,557	16,300	8,722
Pig iron and ferro-alloys	14,036	7,548	14,002
Railway materials	18,344	13,196	17,468
Total iron and steel manufactures	211,954	193,311	198,008
Textile machinery	3,510	4,827	7,561
Total machinery	33,638	31,997	40,275
Cotton yarns	12,414	12,424	11,374
Cotton piece-goods	158,489	154,414	150,688
Wool tops	4,607	4,936	2,937
Worsted yarns	3,249	2,460	1,734
Woollen tissues	5,584	5,173	5,353
Worsted tissues	3,169	3,181	3,108
Linens	5,966	7,180	5,247
Leather boots and shoes	40,853	39,685	38,541
Leather	24,203	20,896	18,826
Paper and cardboard	336,767	349,161	386,654
Locomotives and parts	993	1,182	766
Motor vehicles and chassis	6,800	9,016	8,217

Owing to the time-lag between the placing of orders and their delivery, no marked change in either imports or exports is to be expected in the near future.

Italian Budget.—The figures of the Italian Budget were issued in Rome after a meeting of the Council of Ministers on Wednesday. The year 1936–37 closed with a surplus of 1,289 million lire (about £13,500,000). This result was due to an unexpectedly high revenue of 24,703 million lire (about £260 millions) which was swollen by the revaluation of the gold reserve after the fall of the lira, by gold gifts from individuals and by cash payments in composition for the levy on real

Financial Agents of the Government of the Dominion of Canada in London.

The Bank undertakes banking business in all parts of the world, and with its numerous branches offers special facilities in Canada, Newfoundland and the United States

property. In the current year 1937-38, a deficit of 3,200 million lire (about £34 millions) is estimated. Next year, however, the estimates show a prospective surplus of 20 million lire (about £210,000). These figures are achieved by an expansion of revenue and by only moderate increases in expenditure. That revenue is increasing, thanks to the devaluation of the lira, world recovery, and the heavy increases of taxation in recent years, can readily be believed. The expenditure figures, on the other hand, impose rather a strain on credulity. In the following table the rough equivalent of the Italian estimates for the four most important Ministries (there is no "free" exchange rate between the lira and the pound, so conversions must be approximate) is compared with the corresponding Estimates in the United Kingdom in 1937-38:—

	Italian Estimates, 1938-39		British Estimates, 1937-38
	Million lire	£ million	£ million
Army	2,591	27	91
Navy	1,943	20	105
Air	1,265	13	83
Italian Africa....	1,785	19	No comparable Ministry

Making every possible allowance for the economies of conscription and for the low rate of wages in Italy, the comparison suggests that the figures, as a measure of probable expenditure, are altogether too low. In Germany, the other heavily-armed Fascist dictatorship, the figures of State expenditure are not published. Whether the Italian policy of publishing official Budget estimates is noticeably more illuminating is obviously doubtful.

* * *

Wholesale Prices Steadier.—During the past fortnight the persistent fall in wholesale prices was arrested. The improvement finds reflection in *The Economist* price indices, which showed a slight rise for the first time since September 22nd. But whether or no the slight rise of the prices of a number of industrial raw materials and crude foodstuffs during the past fortnight is likely to mark a change of trend is still uncertain, especially as there is no evidence as yet of a resumption of large-scale forward purchases. Nevertheless, there has been a definite improvement on a number of important markets:—

* These figures relate to December 8th.
† Monthly averages.

We publish below a chart showing movements in British wholesale prices since the depreciation of the pound in the autumn of 1931:—

Details of group movements in the complete *Economist* index number in the three most recent fortnights, with the figures for September, 1931, are given below:—

	The Economist Index (1927 = 100)			
	Sept. 18, 1931	Nov. 17, 1937	Dec. 1, 1937	Dec. 15, 1937
Cereals and meat	64.5	89.8	87.8	90.5
Other foods	62.2	65.5	64.3	64.0
Textiles	43.7	60.6	58.9	58.8
Minerals	67.4	96.4	95.9	94.9
Miscellaneous	65.8	80.6	79.3	79.2
Complete index	60.4	78.4	77.0	77.2
1913 = 100	83.1	107.8	105.9	106.2
1924 = 100	52.2	67.7	66.5	66.7

As this analysis shows, the rise of prices during the past fortnight was by no means general, but was confined to the cereals and meat group. Compared with a year ago, both our primary products and complete indices show a decline, which, in the case of the former, is substantial.

* * *

Trade Negotiations with Switzerland.—The Board of Trade, despite its laudable pre-occupation with the discussions for an Anglo-American Treaty, has recently found time to undertake a parallel, but more modest, task. Switzerland has for some time been desirous of negotiating a new commercial treaty with Great Britain. Her present treaty goes back to 1855 and ranks amongst the oldest which are still in force. A simple "most-favoured-nation" treaty, inspired by the English free-trade ideals of its time, it has served both countries well. In 1914 its benefits were specifically extended to the Dominions and Colonies. In latter years, however, the mutual promise of "most-favoured-nation" treatment has lost much of its original significance, owing to developments such as the exigencies of the Great War, the enactment of the McKenna Duties and the Dyestuffs Act, the revision of duties made by Switzerland in 1921 (supplemented later by heavy quota restrictions), the devaluation of the pound, and finally, Britain's resort to a general tariff. A revision of the treaty is overdue, though neither side wishes to renounce the most favoured-nation clause. In view of the relatively modest rôle Switzerland plays in Britain's foreign trade, far-reaching changes are scarcely to be expected from the present negotiations. These started recently in London, but have been adjourned, probably until January. It may be assumed that Switzerland is seeking tariff reductions on highly dutiable articles like watches, certain silk specialities and embroideries. The Board of Trade, on the other hand, is probably more interested in quota concessions than in the lowering of Swiss duties which are still relatively modest.

* * *

Prospects for House Building.—In a speech last Monday Sir Harold Bellman pointed out that approved plans for new dwelling-houses this year amounted to £54 millions, against £65 millions and £64 millions in the corresponding periods of 1935 and 1936. Sir Harold committed himself only to the comment that these figures were not severely discouraging.

Housing Proposals

NEW YORK, December 6.—The President's Message on housing proved to be a general outline rather than a specific project of legislation or administrative action. First of all, the President intends to facilitate the construction of houses costing \$6,000 or less by authorising mortgage loans up to 90 per cent. of the value, compared with 80 per cent. now available under the Federal Housing Administration. Secondly, there will be some broadening of the facilities accorded to individuals undertaking to erect dwellings or apartments to let. Thirdly, the President explicitly recognised the influence of building costs in stopping the recent housing recovery.

As far as the individual housing programme is concerned, it is doubtful whether the reduction in margin requirements from 20 to 10 per cent. will be a determining influence. It is said that few applicants for the F.H.A. mortgages have taken full advantage of the 80 per cent. permissive loan. Of the many bitter memories of the 1932 depression, perhaps the most numerous are not of speculation in the stock market but of home buying on an inadequate equity. Building to let, although not entirely absent in the existing F.H.A., was disproportionately emphasised in the Message. The real problem of building is costs.

The "news of the week," however, was not the President's building Message but the circulation of a special tax form by the Treasury applicable only to persons who reported \$100,000 of income in 1936. This requires them to present a complete inventory of all personal and real property, whether or not producing income, and on the basis of this figure to compute their personal "net worth" as at the end of 1936. No explanation of this questionnaire was forthcoming, and the almost exaggerated mystery which surrounded it has provided a fertile field for rumour and conjecture. The number of persons affected is, however, quite small. The Statistics of Income show the following figures:—

PERSONS REPORTING \$100,000 OF INCOME OR MORE

1914	2,348
1919	5,526
1925	9,560
1928	15,977
1932	1,836
1934	1,907
1935	2,264

There was undoubtedly an increase in this category by 1936; and the figures, of course, are complicated by the development of the Personal Corporation, abolished by the Loophole Act of last August. But, altogether probably not more than 5,000 individuals will be directly affected.

Having reached a deadlock on the Anti-Lynching Bill and on the Agricultural Bill, the Special Session of Congress is now concentrating on the Wages and Hours Bill, sometimes called the Black-Connery Bill. This has passed through many metamorphoses since it was introduced as the Black Thirty-Hour Bill some years ago. In one form it passed the Senate at the last Session, but stuck in the House Committee. It is now before the House, as a demand for a forty-hour maximum week and a forty cents an hour minimum wage, and even this is still in process of drafting.

In anticipation of maturities on December 15th the Treasury has offered two financing issues, both of which were very well received.

The Rôle of Taxation

Washington regarded the Anti-Lynching Bill as the most important item on the agenda, followed by the Agricultural Bill and the Wages and Hours Bill; while New York considers taxation, not on the agenda but likely to come up early in January, as most important. This mirrors a fundamentally different estimate of the current recession in business. By Washington it has been repeatedly described as a brief recession, disagreeable to stock market speculators, but of no great significance to the country. New York, or at least Wall Street, regards the situation as far more serious, containing at least the germs of a protracted depression. And Wall Street is convinced that taxation is one of the basic causes of the recession.

While the Tax Bill will not appear at the Special Session, its outlines are beginning to be visible. As things now stand, there is a fair prospect of the removal of the undistributed profits tax on small corporations—a very numerous group. Probably much more significant are rumours of some alteration in the status of tax-exempt securities. About \$50,000 millions of Government securities are more or less tax-exempt in the United States—that is, the income from these is wholly or partially exempt from income and surtax. Of these, about \$13,000 millions of Federal Government securities and \$15,000 millions of local government securities are totally exempt; and the remainder of the Federal debt is exempt for certain institutional holders. This exemption has represented a progressively important differential, as the income tax has been continuously increased since 1932, until, at the present time, capitalists with substantial fortunes are virtually precluded from investing in corporate enterprise.

In computing income-tax liability at present only taxable income is counted in calculating the normal tax and surtax rates applicable. Under the new proposal, taxable and non-taxable income would be added to discover the gross income and the surtax rates applicable to it. The effect of the proposal would not, of course, tax tax-exempt securities; it would increase the taxes applicable to persons holding mixed portfolios, and in instances would oblige them to liquidate their corporate holdings. Broadly speaking, any capital capable of bringing a return of \$100,000 or more will now yield a larger net return if invested exclusively in tax-exempt securities; and the process of forcing large estates out of corporate securities into Government securities has been a conspicuous phenomenon of the current year, particularly under the Loophole Tax Act of August. It is likely that, during the past decade, all U.S. manufacturing corporations have averaged only 2.8 per cent. of earnings on net worth. One may argue that this was an unrepresentative decade for statistical purposes; but the calculation does show the attraction of Government securities exempt from taxation compared with corporate securities not so exempt.

Financial Recovery

PARIS, December 16.—The financial situation has eased considerably. Of the 15,000 million francs of fresh advances granted by the Bank to the Treasury last June, only 5,000 millions have been used. Yet 5,400 millions of 1934 bonds and 6,000 millions of the English loan have been reimbursed. The gold stock of the Bank of France has been increased by 3,000 million francs, and the Equalisation Fund has been reinforced. The rediscount rate of the Bank has been lowered from 6 to 3 per cent., and three months' rates have declined from 5½ to 2½ per cent. Treasury bond issues have increased by 1,000 million francs. The surplus of deposits over withdrawals at the public savings banks amounted to 400 million francs in August, September and October, and 200 millions in November; and 1937 will probably end with a surplus of deposits, compared with surpluses of withdrawals amounting to 5,170 million francs in 1936, 108 millions in 1935, 911 millions in 1934, and 317 millions in 1933.

The return of capital is, however, slower now than the industries have covered their needs up to the end of the year. Short term money is cheaper, but middle and long term money is still dear. There remain doubts about the recovery of the public finances and political stability—while the Socialists continue their campaign for control of the exchanges.

So long as financial recovery is not supported by an acceleration of economic activity, production and foreign trade, increasing internal debt will act as a brake on business and the Stock Exchange. The following table indicates the mounting debt:—

	August 31, 1936	August 31, 1937
Perpetual debt	50,532	50,038
Redeemable debt	192,264	202,113
Short-term debt	32,543	37,499
Floating debt	66,825	79,981
Agricultural credit debt.....	2,283	2,053
Posts, Telegraphs and Telephones Debt.....	10,585	10,265
Totals	355,032	381,949

There has been a capital increase of 26,917 million francs during the year, and interest charges have risen by 971 millions.

Railway Deficits

The new *Société Nationale des Chemins de Fer*, set up in August, will function from January 1, 1938. The 2,200 million francs of interest due on the accumulated railways deficit of 32,500 millions will remain included in the general charges of the public debt. Some 4,300 million francs of capital charges will be taken over by the State in 1938. The deficit on working, estimated at 3,000 million francs will be covered by a fresh increase in tariffs from January 1st of 0.08 francs per kilometre in fares and 20 per cent. in goods charges; provided that the co-ordination of rail and road is likely to produce economies in 1938 to the value of 300 million francs; that 490 million francs is incorporated in the accounts of the posts, telephones and telegraphs to cover the cost price of transport services rendered on their behalf; that the increase in wages and the price of coal does not exceed the estimate; and that the increase of charges does not cause a falling-off in traffic. Failing these conditions, the uncovered deficit might amount to between 3,000 and 5,000 million francs.

In 1935 the railway deficit was 4,393 million francs. This year it will be 7,300 millions—excluding the yield of increased fares and charges. The deficit has thus increased by 3,000 million francs in spite of an increase in annual receipts of 2,200 millions, between 1935 and 1937—an increase which will amount to 4,000 millions in 1938. This gap which has been brought about by the increase in prices and wages and by the introduction of the 40-hour week, which entailed an increase of between 20,000 and 100,000 in staff.

Recovery in Production

The index of industrial production (100=1913) has regained the level of last July, it stands at 100 against 98 in October, 1936, and averages of 98 in 1936, 94 in 1935 and 99 in 1934. All the components have advanced, except the figures for leather, building, and paper, which remain unchanged.

	(1913=100)			
	Oct., 1936	Aug., 1937	Sept., 1937	Oct., 1937
General index	98	91	97	100

Motors (adjusted figures) ...	491	448	438	452

Wholesale prices in November registered a marked decline, whilst retail prices remain practically stationary. This trend is principally due to the slump in the prices of imported raw materials and foodstuffs, which was partially compensated by an increase in the prices of a few domestic products, and notably of meat. Retail prices will be influenced in the near future by the rise in the prices of bread and milk and by the increase of transport charges.

	Prices:

Unemployment showed last week a further increase of 5,133 to 337,983, compared with 332,850 in the preceding week, 305,341 at the lowest point of this year and 407,332 at the same time last year.

Germany

The League Criticised

BERLIN, December 14.—The departure of Italy from the League of Nations had no visible effect on German business, and the Bourse remained weakish. Official comment in Berlin treats the League much as German Ministers and the officially instructed Press have been treating it since 1933. If Germany's aversion in principle to League and to collective security against war seems to be militaristic and provocative, her repudiation of the League's actual record, which is certainly not the same as the League in principle, has good grounds. And the Germans, Italians, and Japanese may fairly say that they could not have killed the League unless the League had wanted to kill itself.

The Rump League, as it is called here, is regarded as an irritant and a danger. Observers are surprised that some British circles desire that it should be kept as the nucleus of more efficient world organisation in the future because it is clearly beyond Great Britain's capacity to organise a peaceful and stable Europe of a Europe that wants to be peaceless and instable. The cynical Continent sees in British devotion to the League and to collective security merely an expectation that certain countries will voluntarily help the Empire against the enemies that may threaten it.

Impounded Dividends

The long-awaited amendment of the Loan-Stock law of December, 1934, together with an ordinance to regulate the distribution of the already accumulated dividends, appeared last week. The amendment prolongs the Loan-Stock Law, which was originally enacted for three years, for another three years. This means that dividends

in excess of 8 per cent., and in certain conditions those in excess of 6 per cent., will be impounded, and administered by the Gold Discount Bank. The dividend money already impounded in the first three years of the law is to be refunded to the shareholders, as was promised in 1934, not in cash, but in an indirect way which will inflict on them considerable loss and yield a corresponding profit to the Reich. In effect, this step constitutes a forced loan bearing no interest.

The Reich will expropriate the interest-bearing securities (in the main municipal conversion bonds) in which the accumulation is invested, and will issue for distribution to the shareholders an equivalent in new non-interest-bearing tax-credit certificates. These certificates, like the originals first devised in 1932, will be valid for payment of taxes (except income tax) in the five financial years beginning April, 1941. The tax certificates will be negotiable on the Bourse; and the holder will therefore be able to realise them for cash. But as the certificates cannot be used for tax-payments before, on the average, five years, and will in the meantime yield nothing, they will be quoted at a considerable discount, probably in the vicinity of 20 per cent. The Reich will gain correspondingly by acquiring interest-bearing securities in exchange for those bearing none.

The number of companies that have contributed to the Loan-Stock is about 173. The sum impounded in the three years is, however, only about Rm. 90 millions. The smallness of the sum is due to the fact that the Loan-Stock Law influenced companies to declare low dividends. The undistributed profits went to strengthen the companies' finances.

A further government measure provides for recognition of private citizens' claims against organisations whose funds were expropriated after the Nazi Revolution. Hitherto, the position of these creditors has been ambiguous. The German Labour Front, which replaced the Trades Unions, claimed that it was not their legal successor and was therefore not liable for their debts. The Labour Front now becomes legal representative of the Unions, Dr Ley becomes trustee of their assets, and the claims will be settled under the bankruptcy laws. Creditors who lent money to the Unions "for political reasons" will not be repaid.

A measure of the Brüning Cabinet, whereby Germans who settle abroad must part with 25 per cent. of their capital, has been amended. In the financial year 1936-37, this tax brought in Rm. 70 millions. As the tax is payable on the mere act of emigration, without regard to the assets actually removed abroad, this yield reveals nothing about the amount of actual capital migration.

A return for March, 1936, of juristically independent Reich and state undertakings show these to have a total nominal capital of Rm. 17,131 millions. There are in all 285 concerns, mostly joint stock or limited liability companies. The Reich Railways Company and the Reichspost account for Rm. 15,190 millions of the capital. Of the remaining capital Rm. 605 millions is invested in public utilities, and Rm. 510 millions in industry and other profit-making undertakings.

Prospects for Agriculture

The condition of winter crops on December 1st was better than a year ago. The Food Minister, Herr Darré, has declared strongly in favour of the mechanisation of agriculture. The fat-cards system, introduced a year ago, has been prolonged, with some alterations. The Reich Commissary of Prices has concluded an agreement with manufacturers and traders for an 8 per cent. reduction in the price of home produced watches and clocks. The prices of textiles and yarns are being readjusted to meet the recent decline in raw material prices. In an elaborate analysis of world-market conditions, the Institute for Trade Research expresses the view that the prices of both inorganic raw materials and agricultural products in the coming months will be affected less by supply, which can in general be foreseen, than by the development of trade in the chief consuming countries, in particular in the United States.

The number of unemployed in November rose by

71,000 to 573,000, against 1,197,000 at the same date in 1936. The export demand for steel is stated to have slightly increased, but exports of machinery are stagnant, and in October they actually declined considerably. In the Four-Year Plan it is announced that great progress is being made with substitutes for shoe-leather and in the utilisation of wood as a raw material for the production of sugar and albumen.

Austria

Austro-Italian Trade

VIENNA, December 3.—Since 1934 the commercial relations between Austria and Italy have been based on the so-called Brocchi treaties, a triangle arrangement including Hungary, and ingeniously devised to evade all claims arising from the most-favoured-nation clause. Austria and Italy assumed the obligation to buy on favourable terms the surplus of Hungary's agricultural products, while Italy and Hungary opened their markets to numerous Austrian manufactured articles. Austria's most important articles, such as timber, paper pulp, paper, iron and steel, were admitted to Italy on fixed terms.

The results were favourable to Austria. Her exports to Italy, which were valued at 86.8 million schillings in 1933 and 95.4 million schillings in 1934, rose to 130 million schillings in 1936 and 117.6 million schillings in the first nine months of 1937. Austria's trade with Italy is showing an increasing export surplus, causing considerable difficulties of payment, which is regulated through a clearing institution. Italy was not able to cover the surplus, and was compelled to repatriate Austrian securities, Italian holdings of which now seem to be exhausted. By a new treaty Italy hopes to adjust the terms of trade with Austria.

Increased Sugar Production

The Austro-Hungarian monarchy was not only self-supporting in sugar, she was also prominent among sugar exporting countries. In 1913 the area of post-war Austria produced beetroot on 25,000 hectares, with an average yield of 242 quintals per hectare. The principal factories were situated in pre-war Bohemia and Hungary. Separated from Bohemia and Hungary after the war, Austria proper in 1919 had only 5,300 hectares under beetroot, and the average crop was only 140 quintals per hectare. Not even 10 per cent. of the low home consumption after the war (10 kilograms per head) could be produced in Austria. By systematic co-operation between agriculture and industry sugar production in Austria has since been steadily developed. In 1934, 50,000 hectares of Austrian territory—ten times as much as in 1919 and twice as much as before the war—were under beetroot, the average yield per hectare was doubled, and the crop amounted to more than 14 million quintals. The Austrian consumption per head rose to 26.3 kilograms, against 48.8 kg. in England, and the production of refined sugar for the home market to 1.5 million kg.

Employment, both of agricultural and industrial workers, the balance of trade and the balance of

THE COMMERCIAL BANK OF SCOTLAND LIMITED

PAID-UP CAPITAL . . . £2,250,000

RESERVE FUND . . . £3,050,000

ESTABLISHED 1810

payments have all been improved by this development of sugar production. The number of agricultural workers employed in the culture of beetroot, which was 6,615 in 1923-24 (when there were 6,529 land-owning peasants), increased to 23,616 in 1937-38 (when there are 23,323 land-owning peasants). The number of seasonal workmen, traditionally imported from Czechoslovakia, and numbering 16,810 in 1931, was reduced to 3,116 in 1937 by systematically substituting the Austrian unemployed, specially trained for beetroot field work. During the first decade after the war Austria's home consumption, small as it was, could only be satisfied by yearly imports of 1 million quintals of sugar at an expense of about 60 million schillings, a heavy adverse item in the country's balance of payments. There is now only an insignificant import surplus of sugar of 6,500 quintals in 1936-37.

Beetroot culture was subsidised in the period 1929-33 out of the proceeds of the sugar tax. The beetroot producers, in return, were obliged to take over from the peasants in the mountains cattle for fattening, in order to lessen to their mutual advantage the great economic differences existing between the various groups of the Austrian peasantry. The burden of all those measures falls on the taxpayer and consumer. The sugar tax yielded 54.6 million schillings in 1936, and was one of the most important items in the Austrian Budget.

Czechoslovakia

Armament Expenditure

PRAGUE, December 5.—The Budget has been presented to Parliament. An increase in expenditure has been caused by the need for armaments. According to the statement of the Finance Minister, the sums which have so far been applied to defence amount to Cz.K5,830 millions. In the new Budget a further Cz.K4,458 millions is incorporated, some Cz.K2,098 millions in the regular Budget and Cz.K2,360 millions in the extraordinary one. In the ordinary Budget, expenditure amounts to Cz.K10,117.4 millions, and estimated revenue to Cz.K10,120.2 millions. State undertakings are expected to yield a revenue of Cz.K1,336.8 millions. The increase in the Budget, compared with last year, amounts to Cz.K1,663.6 millions. The extraordinary Budget amounts to Cz.K3,508.7 millions, and will be covered by credits. Of this total the sum of Cz.K2,360 millions is destined for national defence, and the rest for the capital investment in State concerns.

The national debt, according to the Budget statement, amounts to Cz.K47,094.4 millions, of which the external debt accounts for Cz.K8,251.6 millions. Debt service and amortisation will this year take up Cz.K1,852.2 millions. To cover the deficit of Cz.K1,153 millions on the Budget the Government proposes to introduce several new or increased taxes. A new contribution towards national defence has been instituted, and will be levied as part of the income tax; and a tax on extraordinary profits is to be paid by those undertakings which are now subject to the general and special trade taxes. Both these taxes are progressive. The taxes on artificial fats, beverages and artificial sweetening materials will be increased, while a new tax on rubber goods and rubber will be introduced. The stamp duty on playing cards is also to be increased, and a charge on cartel agreements will be made. Finally, the contributions and guarantees to stimulate private building granted by the State in previous years are to be partly repaid.

The increased expenditure on armaments has been accepted quietly by Parliament and the public. The estimates to cover this expenditure are stigmatised as causing an unfair distribution of the tax burden, which falls principally on industrial and commercial interests and on taxpayers with fixed incomes. The agricultural interests are almost entirely exempt from the new taxes. The Governor of the National Bank, Dr Englis, has

spoken of the necessity for money market regulation; and there are rumours of further taxation. All this has alarmed entrepreneurs.

Production and Trade Agreements

The index of wholesale prices declined at the beginning of October to 749 from 763 in July. The number of unemployed persons at the end of October was 237,400, against 441,679 a year ago. The production of pig iron and raw steel for the first ten months of 1937 attained a higher level than in the same period of 1929. The heavy metal and engineering industry is still fully occupied, and in the export industries there is also brisk employment. A slight decline or easing off, however, has lately been observed in some trades. The index of production in September stood at 97.8 (1929 = 100), against 99.8 in May.

Imports in the first ten months of the year were valued at Cz.K8,908.1 millions, against Cz.K6,019.7 millions a year ago; and exports at Cz.K9,733.7 millions compared with Cz.K6,268 millions a year ago. Compared with the first ten months of 1936, if devaluation is not taken into consideration, imports rose by 48 per cent. and exports by 55 per cent. The export surplus (precious metals excepted) amounts to Cz.K817 millions compared with Cz.K225 millions a year ago.

In addition to the commercial agreement concluded with Germany, a new agreement with Italy has been signed, and negotiations with France, Hungary, U.S.A. and Austria are shortly to be taken up. In the German agreement the relation between agricultural and industrial exports has been changed to the advantage of agriculture, in accordance with German policy, which has caused some uneasiness among the Czechoslovak industrialists. Among other things, a considerable export of wheat and flour to Germany has been agreed upon. To support these exports the National Bank has negotiated a credit of 100 million francs with the Bank of International Settlements to speed up payments for exported goods and eliminate exchange risks for the exporter.

On the money market an increased seasonal demand made its appearance in the autumn. Investment values were quiet on the whole, but industrial values, previously weak, showed a further rapid fall in the first half of October in reaction to the conflict in China, the decline on the world stock exchanges, and the slump in the prices of raw materials. The sharp fall in values was in no way substantiated by home conditions. The fall affected especially metal, engineering, sugar, coal, chemical and textile shares.

Spain

The Government Peseta

BARCELONA, December 5.—When the new Popular Front Cabinet was formed in May, 1937, the three portfolios of Industry, Commerce and Finance were merged into one, and Dr Negrin, the Prime Minister, took over the portfolio of the united Ministry. Since then all economic activities in loyal Spain, and especially export and import trade, have been subjected to an increasingly rigid control. According to Dr Negrin:—

The Government is taking the necessary steps to solve the problem of food supply. The collaboration of the public is necessary and the supervision of food distribution by the local authorities will be intensified to make profiteering impossible. One of the remedies will be the establishment of large stocks of foodstuffs and a co-operative system of sale to enforce the officially fixed prices. One of the reasons that has caused the increase in prices both of foodstuffs and manufactured articles has been widespread, although erroneous, ideas about the value of the Spanish peseta. Although we have had to spend large sums of money on the war, the astronomical figures some people imagine have not been reached. The intrinsic value of the peseta is now higher than before

the beginning of the war. The value given to our peseta abroad for commercial transactions does not mean anything; the only fact that counts is the reserve of the Spanish Treasury Department wherewith to guarantee its emissions. The note circulation is by no means excessive, and the fact that the peseta appears to be depreciated is a consequence of the measures taken against speculators. Moreover, the peseta was already depreciated under the governments prior to the outbreak of the rebellion. We shall obtain foreign currency not only by the sale of our fruit and other products of agriculture, but also by exporting quantities of manufactured goods.

This statement, while it may not show any profound understanding of the procedure and machinery of the foreign exchanges, at least indicates that, even after so long drawn out a campaign, there is no lack among Government spokesmen of confidence in their solvency and in the potentialities of their commercial policy.

Small Farmers

In the rural districts of loyal Spain farmers are working with great zeal, knowing that the soil they are tilling is their own property now. The enormous increase in rural property held by small farmers amounts to about 8,750,000 acres, excluding Aragon, where no expropriations have yet been made, and Catalonia, where special measures have been taken. The Government, through the Institute of Agricultural Credit, is assisting these small farmers, and the sums distributed amount to about 27 million pesetas to the syndicates and co-operative unions and 3½ millions to individual farmers. In addition, credits of 110 million pesetas have been given by the Institute of Agrarian Reform, which has also distributed 5,000 tons of seed corn and 117,000 tons of artificial manure. Although the system of co-operative farming is officially commended, legislation does not impose it, and every farmer is free to follow his own wishes in this respect without losing the right to obtain protection and financial help.

Spanish Potash

In former years the world's consumption of potash was supplied by the German mines. From about 1932, however, the Spanish production increased rapidly, rising from 22,363 tons (K₂O) in 1928 to 165,722 tons in 1935. But when the civil war broke out potash production rapidly decreased, and in September, 1936, it dwindled to 7 tons. The reason for this total annihilation of a once prosperous business was that, the mines (in the absence of their original owners, who had left the country) having been taken over by the Government of Catalonia, the former proprietors of the mines obtained from foreign courts an embargo preventing the delivery of potash exported from Spain to buyers. Thereupon, the Catalan Government brought an action, pending which exports of potash had necessarily to be discontinued, and, Spanish consumption being insignificant, work at the mines had to be practically stopped.

According to an official statement, the action brought by the Government against the representatives of the former proprietors of the mines has been decided in favour of the former by the Montpellier Law Court on November 24th. The embargo on cargoes exported to France has been cancelled. The interest in this decision is increased by the fact that a similar action is pending in England, where a cargo of Spanish potash has also been put under embargo. It is thought that the British Court may be guided in its decision by the same factors as the French Court, whose sentence was based on the following argument:—

The dispute is about an act performed within the sphere of sovereignty of the Government, direct or by delegation, and this act of sovereignty is beyond any criticism by the jurisdictional authorities of a country which has recognised the Government which performed this act.

If the embargoes are wholly removed, Spanish potash production will resume its former high rate of increase.

Lithuania

Disappointing Harvests

REVAL, December 7.—Of the three Baltic States Lithuania is the most agrarian, although even here there have lately been tendencies towards industrialisation. According to a report of the Bank of Lithuania, the yields of the last two harvests have been as follows:—

	1936 (tons)	1937
Rye	510,630	535,930
Wheat	175,350	172,120
Barley	199,970	230,620
Oats	271,410	359,580
Clover	1,287,000	550,000
Meadow hay	1,127,000	850,000
Flax	34,620	40,960
Linseed	32,660	37,880
Potatoes	1,828,630	2,102,190

The area under cultivation has increased from 1,598,670 hectares in 1936 to 1,626,050 hectares. The 1936 harvest was regarded as poor, and this year's yield cannot be regarded as satisfactory. The fodder harvest is particularly disappointing. Under the circumstances it will be difficult to abolish the prohibition on the export of grain which was issued in 1936. Meanwhile the prices of agricultural products have improved and the purchasing power of farmers has increased. The favourable flax harvest is, however, now considerably diminished in importance by the drop in prices. The plentiful potato harvest opens up possibilities for greater exports, principally to southern Europe. In addition the use of potatoes for the manufacture of spirits will be increased and new distilleries erected.

Lithuania's foreign trade usually shows a surplus of exports since the import requirements of the country have up to the present been comparatively small. This year, however, imports have considerably increased—by about 42 per cent. compared with last year, while exports have increased by only 7.8 per cent. The balance of trade for the first nine months is as follows (in million lits):—

	1936	1937
	(9 months)	
Imports	109.8	155.5
Exports	137.6	148.3
Balance	+27.8	-7.2

The increase in imports is mainly due to imports of machinery, metals, transport equipment and textile goods, which indicates that attempts are being made to modernise and extend home industry. The increase in exports is almost entirely due to the timber trade. Compared with the previous year there is an increase in trade with Germany as a result of the commercial treaty concluded in 1936. During the first nine months of this year Lithuania imported German goods to the value of 32.9 million lits, against 5.9 million lits during the corresponding period of the previous year, and exported to Germany goods to the value of 22.1 million lits, compared with 8.0 million lits. Imports from Great Britain for the same periods were valued at 44.7 and 42.9 million lits, and exports to Great Britain at 72.9 and 72.6 million lits, respectively.

Progress of Industry

Industry is at present well occupied; plans for increasing its activities are under consideration. Great attention is paid to the building industry, and wooden structures are gradually to be replaced by stone buildings. It is planned to erect new brick factories, whose annual production is to be increased from the present 60-70 million bricks to 400 millions, in order to economise in timber. Similarly, turf is to be more extensively used. In the year 1936-37 production of sugar in both the existing factories totalled 27,000 tons, which roughly represents the demands of the country.

The State is taking an increasingly active part in the country's economic development largely because of the

scarcity of private capital. Its participation extends to a number of banks, producers' associations, building companies, woodworking factories, sugar factories, printing works, electrical companies, flax factories, etc.: in most of these instances the State's interest exceeds 50 per cent. In Kovno a hotel is maintained solely by State aid, and a short while ago an automobile factory was founded largely with State capital.

After the reduction of import duties on motor vehicles the automobile trade has shown signs of increased activity. It is now proposed to allow the import of only certain types of commercial vehicles suited to Lithuanian road conditions; and every automobile dealer is advised to open up a repair workshop. At the same time greater attention is to be paid to road conditions: the existing sand-roads, with the exception of a few main thoroughfares, leave much to be desired.

Sweden

Depression Ahead?

STOCKHOLM, December 12.—The business world inclines more and more to the opinion that the time has come to face a period of depression, though it is generally felt that this will not have the same violent character as the depression between 1929-1932. The shrinkage of orders is spreading to a steadily growing section of industry, and although employment is still good at most works, recession is only a question of time. The Stock Exchange displays, on the whole, a downward trend, and investors as well as speculators are beginning to realise that there must be deeper reasons for declining quotations than repercussions from Wall Street and technically unfavourable stock exchange positions. Whatever the future may bring, Swedish banks and industrial enterprises are now far better prepared to meet rough weather than in 1929.

Industrial production is still running high, but, on the other hand, market reports for the main Swedish staple articles are far from favourable. The timber agreement reached last autumn, providing for a 10 per cent. reduction in export quotas, proved insufficient to stop the decline in the price of wooden goods, and the question of a further quota reduction will be raised. The present weakness must be ascribed to a large extent to exporters themselves, since they have shown too great eagerness to get rid of their stocks.

Reports from the pulp industry are at present rather discouraging. There are very few contracts for delivery in 1939, since paper producers are waiting for lower prices. A most disturbing factor in the pulp trade is the attitude of American importers, who to an increasing extent cancel their contracts at the slightest signs of a price recession. This treatment has aroused great indignation among Scandinavian paper and pulp exporters. Iron and steel works are still running at top capacity, but the shrinkage of orders will soon force producers to reduce production.

Employment is still satisfactory, and the number of unemployed, which usually undergoes a marked rise in the autumn, increased this October by only 2,200 to 12,000, compared with 24,700 in October, 1936. Agriculture and forestry are still suffering from shortage of workers, while the metal industry reports a steady demand for skilled labour. Progress has been made in labour negotiations, which affect practically the whole of Swedish industry. Settlements have still to be made in such important trades as engineering and the paper and pulp industries, but a number of other trade unions have already come to an agreement with their employers. Though in most cases substantial wage improvements have been secured, the turn of the tide has obviously induced labour leaders to preach moderation.

Expansion in Foreign Trade

Foreign trade is still expanding, as can be seen in the following table:—

FOREIGN TRADE (In million kronor)			
January-October, January-October,			
	1936	1937	
Imports	1,316	1,734	
Exports	1,210	1,603	
Import surplus	106	131	
TRADE WITH THE UNITED KINGDOM (In million kronor)			
	January-September, 1936	January-September, 1937	
Exports to U.K.	247	309	
Imports from U.K.	161	207	
Export surplus	86	102	

Wholesale prices are tending to move downward, and in November the Silverstolpe index recorded a further decline of 3 points to 137 (average 1913-14 = 100). On the other hand, the prices of consumption goods remained comparatively steady.

Letters to the Editor

New Model Army

TO THE EDITOR OF THE ECONOMIST

SIR,—Your very interesting article, "New Model Army," in the issue of December 11th, raises the question "whether the Cardwell System of 'linked battalions' is appropriate to the new conditions," adding that "Haldane wanted to abolish it thirty years ago." May I ask what is the authority for that statement? Haldane's immediate predecessor, Arnold-Forster, had tried to abolish it in favour of a system of a separate foreign-service army, fed from depots at home and on a long-service (pensionable) basis, with a very-short-service (two years) army for home defence; but the generals on the Army Council unanimously opposed him. When after a long struggle he intimated that he would use his constitutional power as Secretary of State to put his scheme through, it being then evident that "B.M.G." and there would be a General Election before the next estimates (1906/7) took effect, the generals agreed, as a farewell concession to a zealous and well-meaning but misguided Minister, that he should begin enlisting two-years' men for his Home Army. I forget how many of these men were recruited towards the end of 1905, but when Haldane took

over, almost his first act was to stop such enlistments, as he intended from the beginning to produce the best army the limitations of recruiting and finance would allow for service in Europe, if the clouds already on the horizon did not disperse.

The Army Estimates for 1906-7 were practically those he found in draft on taking office. His memorandum on the Estimates of 1907-8 announced his Expeditionary Force of four cavalry brigades and six infantry divisions, but did not mention the Cardwell system. His memorandum (February, 1908) on the 1908-9 Estimates discussed the whole question at length, as it then stood. He had asked me to give him a paper on its financial aspects and published it with his memorandum, under the title *Note on the Possibilities of Permanent Reduction in the Army Estimates by abandonment of the Cardwell System*. Its general conclusion was that, compared with any system of the two-armies and depot-drafting type which had then recently been discussed, to make a saving of about £2,190,000 on the Army Estimates (including the deferred reduction of the charge for the Army Reserve, but not the cost of pensions—a type of expenditure on which savings are very slowly realised) it would be necessary to cut down the Expeditionary Force to just half the size then being built up; and against this saving on British Estimates there would be a very

substantial increase in the cost to India of the then British garrison. In his memorandum to Parliament, Haldane wrote that, "two years ago (i.e., February, 1906), the present Government decided to uphold in its integrity the system initiated in 1869 . . . On this decision the military legislation of last session was based" (Territorial and Reserve Forces Act, 1907); and recorded his conviction that, for a given sum of money, no other system would give better results than a strict adherence to the Cardwell system.

There is no trace, in the recently published *Life of Haldane, 1856 to 1915*, by Major-General Sir Frederick Maurice, of any change in his views in the then conditions; and I was so far in his confidence throughout his War Office time that I cannot believe (unless very clear evidence is produced) that he would have deserted his officially proclaimed faith without further discussing the financial results with me.

Strictures on the Cardwell system, unaccompanied by a clear sketch of what is to succeed it, often make me wonder what exactly their authors think the essentials of it are. Very briefly, it was based on the following principles, of the truth of which painful experience had convinced generals of the Wolseley type whose thoughts travelled beyond the old "theatrical" army with "all its goods in the shop window":—

(a) The long-service pensionable, enlisted for twenty-one years, with nothing behind him but half-trained recruits, was very bad value for money in terms of fighting, under modern conditions.

[The still greater present strain of war, ideas of what an adequate pension is, and extraordinary prolongation of the pensioner's life as compared with the old reckless drinking type, have greatly strengthened this argument.]

(b) Some form of Army Reserve, i.e., men no longer in barracks, but who can be called back from civil life before they have forgotten their training, is essential under a voluntary system.

(c) The man trained in a combatant unit is far better fighting value than the product of a sedentary depot.

On these principles, the main lines of the structure erected were (taking the line infantry as the leading case):—

(d) The soldier to be enlisted for a first period of twelve years, a few specially selected men and n.c.o.s being allowed to "extend" for a further period up to twenty-one years, leading to life pension, while the great majority spent part of the twelve years with the Colours and the rest in the Reserve, with a daily retaining fee and liable to be recalled. The proportion of this reserve service, and the pay, varied according to the arm of the service, the proportion in each arm of men in overseas garrisons to men at home, the degree of liability to be recalled to the Colours and other considerations. All this was kept elastic, to meet varying conditions.

(e) The recruits of each regiment, after a short period at its depot for elementary instruction, passed to the home battalion and thence, after complete training, by annual drafts to the foreign battalion to replace men time-expired and casual losses. In this way the foreign battalion was always fit to take the field, while the home battalion had no pretence to be so without "mobilisation" by calling up the regiment's reservists and sending immature men, invalids, etc., back to the depot.

(f) Each line infantry regiment had two battalions at least (some had two pairs), of which battalions one went on foreign "tour" for a period of years, while the other stayed at home to "find the drafts," the two battalions of each pair exchanging these functions at intervals. Officers were moved systematically between home and foreign battalions. In practice, before Haldane, there were always more line battalions abroad than at home, the system of drafting for the excess abroad being covered by makeshift arrangements, which only applied to the particular regiments out of balance, and was thus a partial departure from theory, but not a breakdown of the system. Haldane restored the ideal balance, but was prevented by want of recruits and of money from keeping pairs of battalions at home to enlarge the Reserve instead of sending drafts abroad.

(g) Two battalions of a four-battalion regiment at home could form one battalion fit for active service by clubbing together their fully-matured men. More such battalions could be formed from single home battalions by calling up Section A of the Reserve, consisting of individual men who had just finished their Colour service and undertook, for a double retaining fee, to come up on emergency without a general proclamation. These measures met the objection that the system made no provision for a small force for minor emergencies.

It is true that since the Great War the world position

has changed so much in many ways that the best way of using the military strength we now possess may not be to send five divisions and a (mechanised) cavalry force to the Continent. It is also true that changes in equipment, mechanisation, tactics and other matters may have such effects on the internal organisation of units and the proportions of the several arms (old and new) of the Service that the special problems before Cardwell and Haldane may be replaced in future by new ones. But the system is very elastic and may be said in essence to reduce to this: (1) keep your fighting men young, and don't waste money on pensioners as far as you can avoid it. (2) Train your men in mobile fighting units rather than sedentary depots. (3) Give them the variety and experience of all (or at least the great majority) soldiering overseas, in peace and/or war, at every available opportunity. (4) Never forget that by making the training machinery necessary for young soldiers at home capable of being converted instantly into an organised field army, you are getting double value out of the same men and the same money; and that is the truest economy.

Viewed thus, I have still to find any clear explanation of what new features the future is bringing which make it wise to scrap the Cardwell system in favour of some other not adequately defined.

Cookham, Berks, December 14th.

C. HARRIS.

P.S.—The "linked battalions" were only a short phase sixty years or more ago, in the passage from the single-battalion regiments of antiquity to the double-battalion regiments of the Cardwell system; and their unpopularity in the Army (though they had great administrative merit as a stepping stone) still connotes such condemnation that this out-of-date title should be dropped.

[In reply to Sir Charles Harris we would point out that our article did not express any opinion on the Cardwell system, but only suggested that it should be re-examined. Nor did we intend to suggest that Haldane, after his assumption of office and the Government decision of February 1906, attempted to reverse this decision. It was, indeed, one of the conditions laid down by Campbell-Bannermann when Haldane took office that the Cardwell system should not be touched. As to his views before this decision was reached, we defer to Sir Charles Harris' greater authority.—Ed.—Econ.]

New Model Army

TO THE EDITOR OF THE ECONOMIST

SIR,—There appears to me to be an inconsistency in the article headed as above, which you published in your last number. The writer applauds the change of Army Councillors and the Minister who carried it out, but at the same time himself refrains from saying that the new men can yet be adjudged better than the old, and he warns his readers against reaching any other conclusion. What, then, is there to applaud?

He states that our army has not been reformed to meet the new form of war, which he seems to assume is that type of defensive for which the French are preparing behind their Maginot line. But is there any more reason why we should now accept French doctrine as being correct than we did prior to 1914? May it not be just as wrong as it was then?

The seizing of the initiative in war has always been, and is likely to remain, of vital importance. The ways in which it can be done are not always the same. It may conceivably be achieved by the adoption of a defensive attitude, but to construct an army and train it for this would be to take a very great risk. Such an army would surely be like a chained watch dog.

The lessons of the North-West Frontier of India over three-quarters of a century show how indecisive a consistently defensive attitude can be. The growing crescendo of apprehension which afflicted our army while we awaited the German attacks of 1918 is not an experience to which it would seem wise deliberately to prepare to expose even the British Army.

Yours faithfully,

J. R. KENNEDY.

Parliament and Population

TO THE EDITOR OF THE ECONOMIST

SIR,—I never realised how unintelligible our procedure must be to those who are not Members of the House of Commons until I read your note on Sir Arthur Salter's letter in your current issue.

If those of us who desired drastic revision of the Population Bill had contented ourselves on second reading with criticism of detail without opposition in the division lobby, we should have been put off on the Committee stage with minor amendments that would not have gone to the heart of the matter.

Government Bills are never killed on second reading. If there were the least chance of that happening, their Whips would forewarn the Minister concerned and he would get up before the vote was taken and announce concessions which he had assured himself in advance would be sufficient to turn the scale.

Yours, etc.,

House of Commons, F. W. PETHICK-LAWRENCE.
December 13, 1937.

TO THE EDITOR OF THE ECONOMIST

SIR,—I am reluctant to continue a discussion on the Population (Statistics) Bill, now that the Government amendment has both admitted the force of the criticisms and made them obsolete. I must, however, protest against your Note that "It is really not open to those who, like Sir Arthur Salter, voted against the second reading, to claim that they had the interests of statistical enlightenment at heart."

Why not? I took the view, for reasons I have given, that the Bill, in anything like its original form, would do real damage to the interests of future statistical research. There was no hope of such radical amendment as is now being made except on the motion of the Government, who held out no prospect of more than minor changes during the debate. The Bill was a Government one with the Whips on and the chances of the Bill being lost were less than those of its passing into law without substantial change—unless immediate and sharp protest was made by the House of Commons. This was made, and it has proved successful, and, as a small contribution to it, an adverse vote by an independent member was certainly legitimate and consistent with his view that a Bill in what will now be its form was more in the interests of economic research.

That, anyhow, is my view, and a tenable one. You are quite entitled to have a different opinion, but not, I suggest, upon the facts, to deny either the sincerity or consistency of my action.

I am, Sir,

All Souls College,
Oxford.

ARTHUR SALTER.

[Of course, we do not question either Sir Arthur Salter's sincerity or his consistency. Our point was that a vote against the Bill on the score of its detailed imperfections (almost all of which were in the Schedule) was a very dangerous form of protest. In addition, we believe that the opponents of the Bill in its original form very greatly exaggerated the objection which the public would, in the event, take to the questions which would actually be asked them.]

It is true (or almost true) that Government Bills always get their second reading. But if the Government majority is small on the second reading of a Bill which is not one of their major political measures, it may be withdrawn. By general report, this almost happened to this Bill, and, if it had, every vote against it would have helped to keep the population problem in a statistical twilight.

Why should it be assumed that the Bill could not be drastically amended in Committee? On a non-party matter of this sort, with a large proportion of members hostile to the Bill, it would surely have been possible to carry all the amendments that were necessary. Would Mr Pethick-Lawrence hold that Government Bills never have their schedules drastically amended in Committee, even when there is much less opposition to them than there was to the Population Bill?—Ed. Econ.]

British Banking Principles

TO THE EDITOR OF THE ECONOMIST

SIR,—The distinction which Mr Herszberg draws between current and deposit accounts is highly unreal, so far as this country is concerned. So, too, is his discussion of whether the banks would be able to make loans at all, if their deposits consisted solely of current accounts; though even here the answer is that they would, for it is not usually considered necessary for demand deposits to be invested 100 per cent. in liquid assets. The Swedish bank law of 1933 requires banks to hold "readily realisable assets" only to the amount of 25 per cent. of demand liabilities. In Switzerland, under the law of 1934, liquidity requirements vary according to the ratio of short-term liabilities (those maturing within a month) to total liabilities, but in no case need liquid assets exceed 50 per cent. of short-term liabilities. In England, where banking is far more concentrated, and where the last bank failure is a very remote event and confidence thus runs high, a case could be made for at least as small a ratio of liquid assets to demand liabilities as in Switzerland.

With regard to the liquidity of bank investments, the position has, of course, changed a lot since the Macmillan Report was written. As far as concerns the general concept of liquidity, almost any bank asset except a bad debt can be realised if the bank is pushed to it and does not mind sustaining a loss. But an asset, the immediate realisation of which would involve a capital loss of 10 or more per cent. cannot be deemed particularly liquid.

Yours faithfully,

A. M. ALLEN.

London.

POINTS FROM LETTERS

Conspiracy in France.—If your Note of November 27th, about the *Cagoulauds*, had been written from France you would have headed it "A Red Herring" not solemnly "A Conspiracy in France." The Paris edition of an American journal remarked "Paris's irrepressible midinettes, on Saint Catherine's Day, exploited the topic in song and in millinery." That is about all it is worth.—J. Sicot, Vendée, France.

"Setback in Employment."—With technical progress, the rate of employment is no longer parallel to the rate of production. The report of the Import Duties Advisory Committee on the Iron and Steel Industry is categorical: "the rapid advance of mechanisation, and concentration of production . . . brings with it a decline in the numbers required for the existing output of the industry." In the sheet trade "methods of manufacture are changing rapidly. . . the whole output of plates and sheets could be replaced by a very few mills of the magnitude of that now in process of erection at Ebbw Vale, with a very large reduction in the numbers employed." In the month of November, when employment fell, the production of steel reached a new record.—J. Sicot, Sables d'Olonne, France.

Books and Publications

The American Melting Pot

ABOUT two-fifths of the population of the United States consists of the "foreign-born," their sons and daughters, and of negroes. The "minority" population which forms the subject of this book* is, perhaps, proportionately even greater, since it may include even members of the third and later generations of the foreign-born. The minority population is, however, declining, not only statistically by the cutting off of further recruitment by immigration restriction, but culturally by assimilation into the majority. Is this assimilation to be approved and encouraged, as most Americans have hitherto assumed?

Drs Brown and Roucek, of New York University, after surveying the evidence obtained from various specialists in sociological studies, and from thirty contributors each representing a different minority group, decide that the "melting pot" should be regarded as a myth and a dangerous delusion. They well recognise, of course, that much cultural fusion is being effected by such common institutions and amenities as the school, the automobile, the cinema and the radio; and particularly by the economic progress of the older-established minority groups and their tendency to move into the more well-to-do sections of the majority. But only these older-established groups have come anywhere near to losing their identity. The newer groups retain even their outward differences.

Assimilation has, in general, failed among minorities which are of recent arrival; socially unacceptable (e.g., the negroes); large in numbers; or mainly composed of Roman Catholics, former peasants and illiterates, or victims of tyranny in Europe. All these circumstances and conditions have in varying degrees made for the internal cohesion and preservation of the groups. Members of different nationalities—generally of the same economic status, sharing the same domestic habits, modes of thought, national traditions and ceremonial usages—have congregated together and formed distinct settlements served by their own churches, newspapers and benevolent societies. Or they have combined together in a defensive reaction against American customs and institutions, which they regard as bewildering, difficult, or even oppressive.

But even if the assimilative forces do not complete their work until the lapse of generations, they cannot but have some effect at once. On the actual immigrants their influence is generally slight or superficial, but the children of immigrants soon begin to speak, think and behave in what appears to them the American way. This Americanisation of the second generation is the product of only two factors, the school and the street—mainly the latter; but it is sufficient to open a gulf between parent and child, and to produce a mutual unintelligibility, not only of ideas and standards, but often also of the actual languages used. Parental control therefore tends to break down, and we have the high rates of delinquency and crime for which the second generation of the foreign-born is so notorious. Delinquency and crime are also functions of the income level: they have been high amongst each in turn of the main immigrant groups during the initial stage of its residence in the slum areas of the large cities, and have then declined with the subsequent economic progress of the group.

With high crime rates are associated numerous other social problems and a great deal of personal unhappiness. The conditions responsible for such evils seem also to have led to a widespread apathy among the newer immigrant groups towards civic affairs in general. These groups do not participate in the full range of

customs, ideas, institutions and amenities of American life; and the limitations of both their material and spiritual environments often lead to cultural stagnation, if not decay.

Consideration of such problems leads Drs Brown and Roucek to urge a policy of *cultural pluralism* in opposition to assimilation. Not only do they argue that to afford shelter and support to the minorities' own customs, languages and traditions would do much to arrest personal demoralisation, but also that the preservation of such variety would enrich the whole of American life. Each minority has a distinctive contribution to make to America, and the task of America's educational and social agencies is therefore to promote those feelings of tolerance and respect, for and among all the minorities, without which their contributions cannot truly fructify.

Shorter Notices

"Introduction to the Theory of Employment." By Joan Robinson. Macmillan. 127 pages. 4s. 6d.

Little more need be said of Mrs Robinson's latest book than that it is as lurid and stimulating as the best of her previous writings. Briefly and to the point, she explains, in terms of Mr Keynes' *General Theory*, why the modern economic system fails to provide employment continuously for all who want it. The key to Mrs Robinson's exposition lies in the causes and consequences of changes in investment and in the desire to save. As usual, the author is especially effective in exploding fallacies, and the passages on hoarding, thrift, the supposed remedies for unemployment, and on economic nationalism are excellent examples of her clear and incisive thinking. She explains why authorities are inclined to use their influence to prevent trade conditions from becoming "dangerously good"; why "a revival of trade is always in danger of cutting its own throat"; how "the policy of forcing down prices, even if it is successful in the end, leads to much loss and suffering and social injustice"; and how, as things at present work out, the chief function of the rate of interest seems to be "to prevent full employment from ever being attained." The rate of interest is simply the payment for lending money; but the rhythm of investment is the main force governing the cycle of trade activity and "a long-run fall in the rate of interest would do much to stimulate private investment, while an extension of public investment could make up for its deficiencies; and a drastic policy of redistribution of income would increase consumption, and reduce the amount of investment necessary to preserve a reasonable level of employment." This brilliantly simple book is addressed to the layman and novice; but the high priests themselves might profit from its reading.

"A Survey of the Social Structure of England and Wales." Second Edition. By A. M. Carr-Saunders and D. Caradog Jones. H. Milford. 235 pages. 10s.

In its first edition this book, which collates with terse and lucid comment all the available facts about population, industrial status, social classes, the national income and capital, education, the social services, insurance, poverty, crime and the nation's intelligence became a standard authority. The revised second edition, brought up to date in its statistics and largely rewritten in the light of new knowledge and argument, is an even better and more useful book. The bookshelves of few intelligent persons can be complete without it.

MONEY AND BANKING

The Future of Australian Banking

MR LYONS' Government has begun to implement the report of the Royal Commission on Australian banking and currency, with a measure to attach a mortgage banking department to the Commonwealth Bank. In Australian banking circles, discussion of the report has largely crystallised round the vigorous criticisms expressed by the Bank of New South Wales in its Circular of last August. The Circular attacked, among other things, the proposal to set up a special mortgage bank, mainly on the ground that rural property-holders could borrow more safely and cheaply from the existing trading banks. But the main objects of its criticism were the recommendations concerning the relation of the Government to the central bank, and the latter's control over the London funds and cash reserves of the trading banks.

The Commission held (and few will disagree) that the Government and Parliament are in the end responsible for monetary policy. Therefore, the Commission argued, in the event of irreconcilable differences, the Government should assure the Bank that it accepts full responsibility for any proposed policy, and is in a position to take, and will take, any action necessary to implement it. "It is then the duty of the Bank to accept this assurance and to carry out the policy of the Government." The Bank of New South Wales believes that the Commission had in mind legislative action, and that the central bank should therefore be safeguarded by statutory checks—for instance, minimum reserves against currency—to which it could appeal if the Government insisted on a profligate policy. The Commission had recommended that the statutory minimum of 25 per cent. reserves in sterling be abolished in favour of a maximum note issue (say £60 millions), subject to the Bank's right to exceed the maximum by a stated amount (say £10 millions) with the consent of the Commonwealth Treasurer.

The merits of this proposal are perhaps a matter for argument. The minimum reserve ratio, however, is logically hard to reconcile with the thesis, accepted alike by the Commission and by the Bank of New South Wales, that stability of internal economic activity rather than stability of external exchange relations should be the primary guide to Australia's monetary policy. On the wider issue, it would surely be regrettable if discussion of this section of the report were limited to questions of legislative action. The Commission themselves used an unhappy phrase in describing the Government as "the executive of the Parliament." The Government must indeed have the confidence of Parliament, but a wide range of monetary and other policy comes within the executive sphere proper, not the parliamentary or legislative sphere. The Commission's views are indeed rather foggy; for while their arguments lay stress on parliamentary responsibility, their conclusions leave the power with the Treasurer. The issue is thus in essence one of Australian politics rather than of Australian banking, for it involves speculation on the question whether, in some future monetary crisis, the rapidity of executive action or the ponderousness of legislative action would be the more valuable to Australia.

Naturally, the more the trading banks fear Government domination of the central bank, the more closely they scrutinise the powers proposed for the central bank over themselves. The Commission recommended that the existing exchange mobilisation agreement, whereby the trading banks undertake to furnish the Commonwealth Bank with the sterling necessary for the public debt service, should be extended to allow the Bank to build up a London reserve at a minimum rate of £500,000 sterling a month. The Bank of New South Wales has retorted that the London funds of the trading banks are essential to their ordinary banking and

exchange business, and that the Commission has not sufficiently differentiated between this portion of Australia's sterling assets and the portion representing national monetary reserves. The same sterling assets, however, serve both a national and a private banking purpose. The prime necessity would seem to be to ensure that the national interest has priority. The Bank of New South Wales relies on the existing voluntary co-operation (whose importance certainly should not be underestimated) between the trading banks and the central bank and on a plan for putting Australia on a definite sterling exchange standard by requiring the Commonwealth Bank to buy and sell sterling at fixed marginal prices (say, £A124 and £A126 respectively). This plan, it is claimed, would enable the Bank to build up a "national" sterling reserve from the only resource, barring fresh loans, which is now available—namely from surpluses on Australia's balance of payments.

This important proposal clearly implies two conditions: first, that the central bank should possess the means to pay out sterling at the upper limit; and, second, that the trading banks should have an inducement to sell sterling at the lower limit. The first condition would appear to make the acquisition of considerable London funds by the Commonwealth Bank a prior necessity. As to the second, the trading banks might be expected to sell provided that the margin of profit in holding sterling instead of Australian assets was small or negative, and that there was no probability of a subsequent reversal of the movement and a shortage of sterling. Critics of the Bank of New South Wales's views are frankly sceptical on both these points. Short money earns more in Australia than in England, but the outlets for it are restricted, and the trading banks' sterling assets include medium-term Government securities which count as liquid reserves against liabilities in Australia. And a rebound of the exchange would be a natural expectation when the Commonwealth Bank was known to be anxious to build up sterling reserves and was therefore unlikely to sell back sterling until the opposite statutory limit was reached.

The Bank of New South Wales's argument, however, must be related to the bank's views on the internal powers of the Commonwealth Bank. The Commission proposed to authorise the Commonwealth Bank, with the Treasurer's consent, to require the trading banks to deposit with it a uniform minimum percentage—variable from time to time—of their deposit liabilities. This recommendation is criticised on the ground that it would enforce control, not over the total of the banks' reserves against deposits, but over the form of those reserves—whether Commonwealth Bank deposits or cash or London funds; and that it would therefore be capable of compelling individual banks to part with sterling. The Bank of New South Wales leans on open market operations as the proper means of central bank control over trading bank reserves and over the credit policy based on them. It lays special stress—as did the Commission itself—on the need for developing a broad market for Australian Treasury bills. These views, together with the plan for sterling exchange, envisage a flexible system in which economic forces would have the freest play and legal compulsion be reduced to a minimum.

The principle of this theme demands the greatest respect, but its details appear to rest to some extent on an exaggerated parallel between Australian and English conditions. It may be seriously questioned whether the market for Government securities in Australia is yet wide enough to bear the impact of open-market operations without disturbingly large fluctuations in values. There

is no specialised short-term money market to absorb Treasury bills. The banks, which pay 2 per cent. to customers on three-months' fixed deposits, themselves indirectly compete with Treasury bill issues—a fact for which the Commonwealth Bank, as controller of the largest savings bank, must share responsibility. The commercial banks permanently hold large stocks of "foreign exchange." The reserve against currency and against international deficits takes the form of the same foreign exchange, of which the central bank is—or was until recently—in short supply. There is no adequate market in exchange futures to relieve the banks of the need to hold large permanent reserves of exchange.

These and other contrasts with the position in London tend to vitiate conclusions which are not firmly based on the peculiar conditions of Australia. And the latter considerations were obviously present to the minds of the members of the Commission. The Commission's recommendations, moreover, carry extra weight at the present time for a reason which is political rather than financial. The inquiry was Mr Lyons' response to Labour agitation for drastic banking reform. If his Government falls short of implementing the resultant report, a Labour successor might not unjustly claim a right to go as far beyond it, and it would certainly do so, unless it were restrained by a lively and informed public opinion. And Labour command of both Houses at Canberra cannot be postponed indefinitely; it may not, indeed, be many years distant.

Financial Notes

The New Standstill Agreement.—As has been generally anticipated, the standstill agreement with Germany has been renewed on much the same terms as before. There are, however, one or two small improvements on points of detail. First a scheme has been introduced for improving the quality of those standstill credits not at present being used to finance trade. As in the case of unavailed lines, credit lines embraced in this scheme can be availed in future only by bills drawn for financing international trade. They may not be used for the purpose of creating foreign exchange or for financing inland business. All such bills will be paid off at maturity, and the credit lines will only be available again for similar business. It is realised that the scope for this scheme is limited by the fact that much of Germany's foreign trade is conducted by means of clearing agreements, but the creditors' delegates hold that the scheme will be one of real benefit to creditors. It is also provided that in the case of credit lines guaranteed by the Golddiskont Bank, the bank will now become the sole debtor in cases where the original debtor has ceased to exist or has been relieved of his obligation. Payment will be made of an amount equal to 10 per cent. of the Golddiskont Bank's guarantee outstanding on February 28, 1938, when the existing agreement expires. Credit lines unavailed for at least two years are to be cancelled. It is pointed out that by September 30th last the total amount of the credit lines had been reduced to Rm. 1,010 millions, of which Rm. 941 millions was availed of. Rm. 87 millions of the total credit lines was then guaranteed by the Golddiskont Bank. Conversions into registered marks between March 1, 1933, and September 30, 1937, amounted to Rm. 2,064 millions. Thus the problem initiated by the first standstill agreement of 1932 is gradually being reduced to manageable proportions, though at the cost of heavy loss to those foreign creditors who decided to accept payment through the operation of the registered marks scheme. The main difficulty to-day is that of combining the provision to Germany of the normal form of international short-term finance with Germany's maintenance of exchange restrictions and desire to conduct the bulk of her external trade by means of clearing and compensation agreements.

Bank for International Settlements.—The Board of the Bank has elected M. Roger Auboin as general manager of the bank in succession to the late M. Quesnay. M. Auboin has had a lengthy experience of central banking, because from 1929 to 1935 he acted as technical adviser to the National Bank of Rumania, for the purpose of supervising the Rumanian stabilisation plan. He has also served as a member of the General Council of the Banque de France and since June 30th last as Secretary-General at the Ministerial Committee of National Economy. In connection with M. Auboin's appointment it has been suggested that in 1930 a promise was made to Germany that when the time came to appoint a successor to M. Quesnay, that successor should be a German. The problem of meeting various national interests always exists over the appointment of the higher officials of the B.I.S., but the many fundamental changes since 1930, both inside and outside Germany, must have deprived such an undertaking, even if given, of all significance.

* * *

The Bank of Scotland.—The directors have decided to abolish the present liability of the stock-holders to a further call, and at the same time to issue fresh capital. The present issued capital amounts to £2,250,000, £1,500,000 of which is paid up and £750,000 is callable. It is proposed to offer to existing stock-holders stock to the total amount of £150,000, £100,000 paid up, at a price of £440 for each £100 of paid-up capital. This will raise the bank's total capital to £2,400,000, £1,600,000 paid-up. It is proposed to transfer to the reserve fund £340,000, representing the premium on the new issue, and £110,000 from undistributed profits. This will raise the reserve fund from £2,350,000 to £2,800,000, and it is proposed finally to apply £800,000 of the reserve fund to the cancellation of the uncalled liability on the issued stock, both old and new. Assuming the present rate of dividend is maintained, the nominal rate of dividend will have to be reduced from 18 to 12 per cent., as henceforth the stock will be fully paid instead of two-thirds paid. Judged from the present ratio between capital and reserve of £3,850,000 and deposits of £37.6 millions, the bank is not in need of fresh capital, though it will incidentally obtain £440,000 in new cash from this operation. Its greater significance lies in the decision of the directors to abolish the stock-holders' present liability to a further call. In the early days of joint-stock banking this afforded some margin of protection to depositors. To-day it has become an almost complete anachronism, whose only effect is to impair to a very slight degree the value and marketability of bank shares.

* * *

Bank of London and South America.—Recent events in South America have imparted to Lord Wardington's speech at this year's annual meeting of this bank an unusual amount of interest. The first point of importance was the likely effect of the recent set-back in commodity prices upon South America's export trade. Lord Wardington felt bound to warn his shareholders that both export and internal trade were already being affected by such factors as the heavy decline in the prices of metal and cotton, and he particularly instanced Chile and Peru. Lord Wardington naturally devoted a fair amount of his speech to recent developments in Brazil. The principal motive behind the Government's new policy, namely, the freeing of the coffee trade and the abandonment of the former policy of deliberate destruction, had much to commend it. Lord Wardington also discussed the possible reactions upon other coffee-producing countries. The decision to suspend the service of the external debt pending re-examination of Brazil's obligations was consequential upon the abolition of the official exchange quota, and Lord Wardington made no further comment upon this important point. He was not seriously exercised by the new Brazilian decree affecting

the position of foreign-owned banks. A somewhat similar clause, he recalled, appeared in the constitution of 1934, and he to-day expected that the bank would receive equitable treatment in the future. In discussing the bank's own experience, he alluded both to the increase in the bank's general business, and also to the benefits derived from the appreciation of most South American currencies in terms of sterling. The outlook, he concluded, depended upon conditions in the British Empire and the United States, and he therefore laid considerable emphasis upon the discussions now in progress for an Anglo-American trade agreement.

* * *

Martins Bank.—Sir Richard D. Holt, a deputy Chairman of Martins Bank since 1934, has been appointed Chairman in succession to the late Mr E. B. Orme. Sir Richard has also been elected to a seat on the London board. His appointment marks the culmination of a long family connection with the bank, for his grandfather, Mr George Holt, was one of the first directors and founders of the bank in 1831, and his father, Mr Robert D. Holt, served as both deputy chairman and chairman of the bank. Sir Richard himself is a well-known Liverpool shipowner, and is also Chairman of the Mersey Docks and Harbour Board. In view of the bank's close connection with commerce in Liverpool, instanced by the fact that the bank's former name was the Bank of Liverpool and Martins, Sir Richard Holt's appointment as Chairman is peculiarly appropriate, and will be to the advantage both of the bank and the industrial and commercial interests which it serves.

* * *

Irish Banks' Returns.—The returns for the banks operating in the Irish Free State for the September quarter, published by the Currency Commission, are as follows:—

(£ thousands)

	Sept. quarter, 1936	June quarter, 1937	September quarter, 1937		
			In I.F.S.	Else-where	Total
Liabilities:—					
Capital, reserves, etc.	17,429	17,363	10,212	7,177	17,389
Notes in circulation	8,755	8,968	5,133	3,750	8,883
Current deposit and other accounts	163,695	164,246	116,362	44,593	161,285
Other liabilities	4,798	5,869	2,988	2,237	5,225
Total	194,677	196,445	135,025	57,757	192,783
Assets:—					
Cash and balances with London agents and other banks	13,504	12,951	4,668	6,867	11,533
Money at call and short notice	10,603	10,572	6	10,448	10,454
Bills	6,245	6,815	5,410	1,180	6,590
Loans and advances	67,306	69,640	45,623	24,607	70,230
Investments:—					
(a) Government	79,425	77,719	3,494	72,164	75,658
(b) Other	8,943	10,756	3,654	7,040	10,694
Other assets	7,650	7,990	3,087	4,532	7,619
Total	194,677	196,445	65,943	126,840	192,783
Excess of assets outside I.F.S. over liabilities outside I.F.S.	71,969	71,064	...	...	69,083

The marked decline in deposits is the result of withdrawals from the banks to take up some of the new capital issues floated during the year, to provide more working capital in view of the rise in agricultural prices, and, partly, it is to be feared, to use existing savings in order to tide over bad times. The increase in advances is also a reflection of the rising agricultural price level, and is probably greater than the figures indicate, since many old advances have recently been repaid. It appears that the banks are carrying £500,000 of Free State Government bills which represent short-term borrowing by the Exchequer. The decline in the net sterling assets suggests that there has been a flow of funds outwards from the Free State, and this suggestion is corroborated by the statistics of external trade which demonstrate that the balance of trade is becoming more unfavourable.

The Money Market.—Money has remained easy in spite of further heavy Christmas currency withdrawals from the banks. Short money is now available at $\frac{1}{2}$ per cent., and in practice is being lent solely against bills, as bonds are now being held against money borrowed into the New Year. Loans into January now cost 1-1 $\frac{1}{4}$ per cent.

	Nov. 25, 1937	Dec. 2, 1937	Dec. 9, 1937	Dec. 16, 1937
Bank rate	2	2	2	2
Clearing banks' deposit rate	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Short loan rate:—				
Clearing banks	1-1 $\frac{1}{2}$	1-1 $\frac{1}{2}$	1-1 $\frac{1}{2}$	1-1 $\frac{1}{2}$
Others	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Discount rates:—				
Treasury bills	$\frac{1}{2}$	$\frac{1}{2}$	nom.	$\frac{1}{2}$
Three months' bank bills	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$

* Loans against Treasury bills and other approved bills and British Government securities within six months of maturity; 1 per cent. Treasury Bonds and other gilt-edged stocks within six months of maturity; and other collateral respectively.

Bill rates have been variable, but are lower than a week ago. The average tender rate dropped between December 3rd and 10th from 18s. 2.16d. to 15s. 8.9rd. per cent. The banks have bought a few February and early March Treasuries at $\frac{1}{2}$ per cent., but the market are not keen sellers, as some members believe there will not be any serious pressure at the end of the year.

* * *

The Foreign Exchanges.—The London Market has been very quiet, but the Paris exchange is rather weaker, mainly owing to various statements in the French press concerning the general French economic outlook. The spot Paris rate has weakened from Frs. 147.06 to Frs. 147.30, and the French authorities have had to sell some of their foreign exchange in order to prevent a further depreciation. Three months' francs have also widened from Frs. 2 $\frac{1}{2}$ to Frs. 4 $\frac{1}{2}$ discount. The New York rate has remained steady at \$4.99 $\frac{1}{2}$, while there is no change in the Swiss, Dutch or Belgian rates. Argentine pesos are a shade weaker on Continental selling. The gold content of the Uruguayan peso is to be reduced to a level corresponding to the present general export rate of 7.60 pesos to the pound sterling, the import rate remaining at 8.58 pesos to the pound. The writing-up of the nation's gold stocks will enable enough gold to be shipped to cover immediate needs, while leaving adequate gold reserves in hand.

* * *

The Bank Return.—This week nearly £10 millions more notes have gone into circulation, making the total increase since November 24th £21.6 millions. This is only half-a-million less than the parallel increase last year, so that Christmas trade apparently compares well with that of a year ago.

BANK OF ENGLAND					
	Dec. 16, 1936	Nov. 24, 1937	Dec. 1, 1937	Dec. 8, 1937	Dec. 15, 1937
Issue Department:—					
Gold	£ mill. 313.7	£ mill. 326.4	£ mill. 326.4	£ mill. 326.4	£ mill. 326.4
Note circulation	467.7	480.4	485.7	492.8	502.0
Banking Department:—					
Reserve	46.6	67.5	62.0	54.7	45.6
Public deposits	10.4	35.4	12.0	11.7	11.4
Bankers' deposits	96.2	83.6	105.7	106.3	103.4
Other deposits	38.8	36.3	36.6	36.7	36.5
Government securities	89.1	76.2	78.8	87.2	95.0
Discounts and advances	6.7	8.6	10.5	9.6	7.8
Other securities	20.8	20.9	20.7	21.0	20.7
Proportion	32.0%	43.4%	40.2%	35.3%	30.1%

The Reserve is now reduced to £45.6 millions, compared with £42.4 millions on November 10th immediately before the Christmas increase in the fiduciary note issue. Government securities in the banking department continue to increase in volume, this being the way in which the authorities are off-setting the Christmas expansion in the note circulation and contraction in the Reserve. In this way the credit base, as represented by bankers' deposits, has been kept fairly constant during December.

THE STOCK EXCHANGE

The Air and the Investor

IN the summer of 1934 the Government adopted its first plan of Air Force expansion. During the past three years the programme has been vastly extended and quickened; its definite shape has been lost and policy has become essentially elastic, in the sense, however, that it can apparently only expand. Yet a succession of favour-able pointers for the aircraft industry has served only to depress the shares of aircraft companies. Prices have steadily fallen since 1935, although dividends have increased, and the stage has now been reached when the 8 per cent. yields are shown on latest dividends by the best shares. Is this basis excessive, or is the outlook so obscure that even the best concerns in the industry must be classed as speculative? The expansion programme has been in progress sufficiently long to confront investors fairly with that question.

It is necessary, first, to trace the reasons for dis-appointment with the profits shown by aircraft concerns during the past three years. Air Force expansion started at a favourable time for the Air Ministry, but for most aircraft companies the circumstances were distinctly less auspicious. At that time, technical conception of the aircraft design had changed, and the Ministry seized the opportunity to compress what would have been a long period of normal development into the space of a year or two. This fact alone would have produced problems enough for any industry. But, at the same time, the aircraft companies began to double and even treble their capacity, although they were fully aware that these extensions might well be redundant after a few years. Such difficulties might have been more readily overcome by an industry accustomed to mass or semi-mass production methods; but until 1934 the aircraft companies had been living precariously on small orders. Many of them, in fact, were little more than designing concerns, with an engineering shop attached. In the early days of the programme, therefore, the industry definitely feared, as chairmen's speeches unequivocally showed, that it was faced with something akin to poverty amidst plenty. This factor, conducive neither to rapid expansion of production nor to large profits, changed when a Government "guarantee" was granted in respect of capital employed in plant extensions. Thus, after initial shocks, the industry became convinced that a reasonable price would be paid for the machines produced. These changes, however, were slow; indeed, they occupied the whole of 1935 and the greater part of 1936.

In this sense, therefore, 1936-37 may be regarded as the first "normal" year in the extension programme, so far as it affects established companies. This conclusion is evident from an inspection of the industry's earnings

record, given at the foot of this page. The latest company reports show that reasonable—indeed, handsome—profits are being made. This week, after raising the ordinary dividend from 10 per cent., less tax, to 12 $\frac{1}{2}$ per cent., tax free, on a capital increased from £500,000 to £1,000,000, Fairey has announced a spectacular jump in net profits from £35,696 to £162,678. No shareholder could complain at results of this order. In fact, Hawker Aircraft seems to be the only major company which fared worse in 1936-37 than in previous years, but this company was in an exceptional position even in 1934. In the initial stages of the programme it was favourably placed, since its machines were then rather more advanced than other types. Such technical leadership, however, constantly changes, and Hawker has recently undertaken a costly change-over to a new type of machine. The company, moreover, produces, in the main, fighters and light bombers on which the air policy has not been concentrated. Although the company's profits may recover, its recent experience is a general warning to the aircraft shareholder.

So much for the present position of the aircraft industry. How long will the current prosperity last? To this question only very tentative answers can be given, for the outlook may alter rapidly. There are, however, elements of short-term stability in the industry's present situation. The peak rate of aircraft production in this country has not yet been reached. The Metropolitan Force now has its 123 squadrons (composed of about seventy squadrons of bombers, thirty of fighters and the balance miscellaneous), but a number of these squadrons, possibly the majority, are not equipped with the new-type monoplane machines. Further, the expansion of the Fleet Air Arm, which closely concerns such a company as Blackburn, has only just started, while the expansion of overseas squadrons and the general provision of reserves must be provided for. To meet this demand, however, manufacturing capacity is still increasing. The aero-engine "shadow" factories and the Austin airframe factory have already started operations, though they have yet to reach capacity production. The other airframe "shadow" factory, managed by Rootes, Ltd., at Liverpool (which will ultimately produce the Bristol "Blenheim" bomber), will probably be ready by next summer. Further manufacturing capacity will be provided by the new Short Bros.-Harland and Wolff plant at Belfast.

It is apparently the Government's intention to use the "shadow" factories to build the full reserve strength required by the present programme; and when this objective is reached to keep the plants on a "care

* Year ends December 31st. (a) And capital bonus of 10 per cent. (b) Includes recent issue of £2 million preference capital. (c) 100,000 "A" ordinary shares received quarter of dividend paid on balance of ordinary capital. (d) As increased last July. Year ends September 30th. (e) On capital of £500,000; balance did not rank. (f) And capital bonus of about 730 per cent. (g) Prospectus figure. (h) 100 per cent. capital bonus recently distributed. Dividend and earnings yield calculated on old capital. † Tax free.

last year. The rate has now been increased to 4s., to which higher diamond dividends, particularly from the De Beers holding, have made an important contribution. Among the operating companies there are no surprises, but West Springs, whose ore grade has risen, has established a 2s. 6d. total dividend. In the Rand Mines-Central Mining list, Crown Mines proudly maintains the 9s. 6d. payment for the fourth successive half-year. Geldenhuys shareholders receive 3s. per share, against 2s., of which 6d. results from the clean-up of the closed Eastern plant. Rand Mines distribution, conditioned by the large holding of Crown Mines, is maintained at 4s. Two reductions appear in the "Corner House" list. New Modder's advancing age, plainly reflected in declining grade, brings a further reduction in the December dividend to 2s. 9d.—making a total of 5s. 9d. for the year, against 7s. 9d. in 1936. Consolidated Main Reef's reduced payment of 2s. 6d., against 2s. 9d. in June, also follows a further lowering of grade, while substantial capital expenditure is being met. Rose Deep has enjoyed the advantage of reduced capital expenditure.

Gold Fields and Other Groups.—The maintenance of the Sub Nigel payment of 7s. 6d. is a welcome, if negative, feature of the Gold Fields list, for this undertaking has been affected in especial degree by the revised taxation and royalty assessments. Some mild disappointment was expressed at the mere maintenance of the Simmer and Jack dividend, although reflection might have suggested that recent experience at the mine would make for caution. East Geduld, in the Union Corporation Group, had prepared the way for an increased payment with a series of excellent profits figures, but Geduld Proprietary, largely interested in East Geduld, maintains the 7s. 6d. dividend for the fourth successive half-year. The declarations of these two groups, together with the "Johnnies" and General Mining dividends, are given below:—

	Total, 1935	Dec., 1936	Total, 1936	June, 1937	Dec., 1937	Total, 1937

MALAYA HOUSE, TRAFALGAR SQUARE, W.C.2

Both Government Areas and Randfontein have declared the same dividend as in June—lower, of course, than last year—but neither the reduction in the "regular" Langlaagte payment to 1s., nor the special 1s. bonus from sales of property and township stands are surprising. General Mining Corporation again benefits substantially from the West Rand Consolidated ordinary dividend declaration. The December payment of 1s. 6d. per share (as a year ago) maintains the year's total at 2s. 6d. General Mining thus receives 141s. 8d. per share on its large holding of the 25,000 deferred shares. Three independent mining concerns, not listed above, announce the same payments as for June—New Kleinfontein (2s.), Witwatersrand Deep (1s. 9d.) and Nigel Gold (1s. 6d.).

Other Company Results.—Over fifty further companies, including a number of miscellaneous industrials, are contained in our usual analysis of profit and loss accounts appearing on page 619. The results are discussed on page 605 under the heading "Shorter Company Comments."

Company Meetings of the Week.—Reports of company meetings will be found in this issue commencing on page 606 Lord Wardington's speech at the *Bank of Lonaon and South America* meeting is discussed on page 593. The desirability of encouraging the development of lighter industries in Scotland and praise for the industrial estate experiment were emphasised by the Earl of Mar and Kellie at the meeting of the *Commercial Bank of Scotland*. The governor's speech to *National Bank of Scotland* shareholders provided a detailed analysis of the balance sheet, and emphasised its liquidity and strength. Sir Alan Anderson declared that *Orient Steam Navigation* had replaced the entire fleet in thirteen years, with the exception of the "Ormonde." The Rt. Hon. Viscount Goschen disclosed that 51.1 per cent. of *Nelson Financial Trust's* investments were in Great Britain and a further 30.5 per cent. in the Empire. Addressing shareholders of *Ind Coope and Allsopp*, Sir G. L. Courthope drew attention to the recent material rise in the cost of malt and barley. Mr Philip E. Hill informed shareholders of *Second Covent Garden Property* that recent property purchases have been financed by £400,000 of mortgages for a term of years. Mr J. P. Colbert declared that the potential profit-earning position of *Industrial Credit Company* had improved during the year. The chairman of *British Vacuum Cleaner and Engineering* disclosed that the company is now successfully marketing electric washing machines and clocks. The view that the building industry was stable and progressive was put forward at the *Davis Estates* meeting. Discussing the 25 per cent. interim dividend of *Kwahu Mining*, Lieut.-Col. Frank Johnson declared his belief that so small a dividend would not be announced again. Expert recommendations for an extensive drilling programme were reported by Mr John A. Agnew to *Wiluna Gold* shareholders. At the *Oroville Dredging* meeting Mr Frederick W. Baker anticipated a gradual increase in dividend payments. Mr W. Arthur Addinsell informed shareholders of *Ratanui Rubber* that fifty acres of reserve land had now been completely planted. Considerable additions to mineral reserves were reported by Lt.-Col. John P. Grenfell at the *Messina (Transvaal) Development* meeting. At the *Anglo-Ecuadorian Oilfields* meeting, Mr H. C. R. Williamson expressed the belief that co-operation in the American oil industry would be maintained. Mr Harold G. Brown referred with satisfaction to the resumption of dividend payments on the reorganised ordinary capital of *New Zealand Loan and Mercantile Agency*. The chairman of *Mitchell Cotts* discussed the recent acquisition of Fraser and Chalmers. An improvement of over 50 per cent. in sales during the first five months of the current financial year was reported at the *Agar, Cross* meeting.

THE WEEK IN THE MARKETS

THE STOCK EXCHANGE

SETTLING DAYS

TICKET: JANUARY 4

ACCOUNT: JANUARY 6

WITHOUT gaining any appreciable new business, the Stock Exchange has shown an improved tone this week. At first, the fear of political complications arising from the Japanese attack on British and American gunboats created an atmosphere of caution. Official assurances regarding the trade outlook, and Sir Thomas Inskip's statement that re-armament would not slow down for four or five years, were held by some commentators to explain the slight gain of ground in mid-week, but there was no evidence of new support for industrials on any significant scale. In the gilt-edged market, new issue competition made for quietness, though a small improvement was recorded on Wednesday, despite the paucity of business. Among Dominion stocks, Australian issues improved on the success of the internal conversion, while the Southern Rhodesia scrip staged a steady improvement to $\frac{1}{2}$ premium in mid-week. Chilcan bonds were an early feature in the foreign market, on the Lautarao Nitrate report (discussed on page 598), but the improvement was quickly followed by falls on Tuesday and Wednesday. Polish Sevens rose on the debt scheme (discussed on page 597). Japanese bonds were at first depressed by the diplomatic tension, but rose in mid-week, and some improvements were also recorded in Chinese issues.

Scant interest was taken in home rail stocks at first, though actual falls were confined to Monday. The traffics attracted no interest. Reports of increased freight tariffs brought initial support in the Argentine group, despite the general dullness, but reaction followed. In mid-week conditions were idle, and the only recorded movements were small falls in the debentures.

Only the only records in the history of the company.

Interesting features were rare among industrial, but while business remained small, there was a noticeable tendency towards cheerfulness as the week progressed, after a particularly dull start. The iron and steel group at first registered small losses, but improved gradually, helped in mid-week by Sir Thomas Inskip's statement. Renewed interest was taken in Tube Investments, Vickers were particularly good, and in Indian Iron recovered. Richard Thomas were helped by news of the "Armco" deal, and Colvilles by reports of a new issue. Coal shares were not active, though William Cory hardened, and Powell Duffryn rose on the increased interim. Electrical equipment issues were irregular and somewhat neglected.

Motor shares opened in dull fashion, but a steadier tone followed, helped by the Raleigh meeting. On Wednesday interest was renewed in such leaders as Leyland and A.E.C. Aircraft shares made a mixed showing, though they shared in the mid-week improvement. Fairey opened steady and then improved on the accounts. On Monday, Bristol, Napier and Rolls Royce moved upward slightly, against the general trend, and on Wednesday Westland responded to the maiden dividend. Prices in the radio group were inclined to sag; "Emmies" eased, together with Decca preference in spite of the improved results. Union Cinemas were a nominal market, while Bowater's Paper ordinary fell to 13s. 6d. on the report (discussed on p. 597). Textiles were dull almost without exception. A small recovery in Bleachers' preference was short lived, while rayons also were neglected until Courtaulds advanced a little in mid-week. The stores group was quiet, with a firmer tendency on Wednesday. Among provision shares some interest was taken in Manbré and Garton. Breweries were dull on the whole, but Distillers held their own. There was little support for tobacco shares until mid-week, when B.A.T., Imperial Tobacco and Gallahers were in demand. The miscellaneous group behaved similarly. Turner and Newall were one of the brighter spots on the report (see page 598). Marked renewal of interest in cement shares was shown on the 3s. increase in cement prices. Shipping shares improved on the rather better freight rates.

After a dull opening, oil shares became firmer, international counters being well supported. Dealers reported moderate business on Tuesday, but New York news received overnight was unhelpful, not least the substantial addition to American oil stocks. The turnover remained small, though a few features, like the demand for Royal Dutch and Shell on good Continental demand and interim dividend hopes, saved the market from dullness.

The rubber share market suffered from increasing stagnation, though the tone became steady, so far as the small amount of business permitted any judgment. Some selling occurred on Tuesday, although it affected small lines of shares and caused only trifling setbacks. In mid-week a few principal issues were supported, but quotations were scarcely affected. The

announcement of a decline in American consumption for November had a poor reception.

Professional support for tea shares was not renewed this week, but setbacks were neither numerous nor important. Business was extremely small, but some improvement in leading issues followed a better demand on Mincing Lane.

Kaffir shares were stimulated by the December dividends (set out on pages 599 and 600), though surprises were few. The broader mid-week demand, however, may be traced to the declarations, which appeared to attract investment support for the mature dividend-paying Kaffirs, like Crown Mines and East Geduld, while Anglo-American Corporation responded to the good dividend. Developing mines enjoyed some reflected glory, with West Wits. again in the lead. De Beers fluctuated, but responded to Paris buying in mid-week, while the Rhodesian copper group, on Wednesday and again on Thursday, responded to bear covering.

NEW YORK STOCK EXCHANGE

SINCE the middle of last week, prices on Wall Street have weakened. Last week's relatively minor cause of recession was the refusal of the ICC to grant an immediate emergency increase in railroad rates without awaiting the pending hearing. This was not taken too much to heart, for the President has urged the Commission to reach a rapid decision, and the hearings have been brought forward to the middle of January. A more serious drop occurred on Monday of this week, when the Dow Jones industrial index lost four points on the Japanese attack on American ships in the Yangtse. Steels declined further, despite estimates that steel mill activity has reached a bottom in its decline; *Iron Age* gives this week's activity at 27.5 per cent. of capacity, unchanged on the week. Railroads also fell, but aircraft shares have again moved higher. In mid-week, a slight general improvement was recorded, on a turnover less than has been usual in recent weeks. Some slightly better trade reports appear to justify this change, and markets hope for the best from the utility talks which are to be renewed next week. On the bond market this week governments were slightly easier.

(Continued on page 604)

NORANDA MINES, LIMITED
DIVIDEND NOTICE

Notice is hereby given that an interim dividend of \$1.50 per share, payable in Canadian funds, has been declared by the Directors of NORANDA MINES, LIMITED, payable December 23rd, 1937, to shareholders of record at the close of business December 9th, 1937.

By order of the Board.
Toronto, December 1st, 1937

T. N. HAY,
Secretary-Treasurer.

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields of fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption, where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum. div." shares.

CAPITAL ISSUES

An active close to the new issue season is evident from our summaries of the week's new issues which appear below.

Belgium's 4 per cent. sterling loan is discussed on page 597. Direct trustee borrowing is limited to the *Huddersfield* issue of 3½ per cent. stock, dated 1958-63, at 101. The borough has a high financial record, and the current level of rates is 10s. in the £. As a "name," however, the municipality is perhaps less widely known than others which would envy its municipal trading record, but the issue was eagerly subscribed on Thursday. Particulars for information have been published regarding the *Sierra Leone* 3½ per cent. stock, 1958-63. Holders of 4 per cent. stock, 1938-63, have been offered the right of conversion, of which some £170,000 of the total sum of £570,000 has already been guaranteed. Any balance not converted will be subscribed at 101. Public participation in the *Perham Investment Trust* is limited to 80,000 £1 shares, issued at par, out of the total capital of £500,000, the balance having been subscribed in advance. The prospectus gives no details regarding the investment policy of the new trust, and the provisions regarding investment powers and management expenses are informative without being highly significant. Two small industrial issues have appeared this week. *Lillywhites Holdings* acquire the whole issued share capital of *Lillywhites, Ltd.*, sports outfitters. The capital of the new company amounts to £157,500, of which £100,000 is in 5½ per cent. 10s. preference shares and the balance in 1s. ordinary shares. The latter, offered at 350 per cent. premium, offer an earnings yield of 9½ per cent. on the operating company's latest profits. This calculation, however, does not take into account N.D.C. (important for highly-g geared shares), and it also assumes the full distribution of profits from the wholly-owned subsidiary. If the reasons for the formation of a separate holding company were all-compelling, it is surely reasonable to undertake, in the offer for sale, to publish full annual accounts of the operating concern. The latter has a reasonable profits record, but the holding company's capitalisation nevertheless appears generous. The capitalisation of *Macowards, Ltd.*, a retail trading concern in South Wales, also has unusual features, for it consists of £80,000 5½ per cent. first mortgage debenture stock, issued at par, and £80,000 in 4s. ordinary shares, of which 398,000 are issued at 5s. 3d. The debenture stock is not handsomely covered as to assets though its service is more generously provided for on the basis of latest earnings. In their class, both the stock and the ordinary shares, which show an earnings yield of 15 per cent. on latest profits, must be regarded as speculative in character. A statement for information on behalf of *Goorwich, Ltd.* gives particulars of the 6 per cent. preference and 5s. ordinary shares, in which permission to deal is being sought in London and Belfast. Stockholders of *Bank of Scotland* will welcome the proposal to issue new stock and to eliminate uncallability on the issued stock.

PUBLIC OFFERS

Huddersfield Corporation.—Issue at 101 of £1,000,000 3½ per cent. stock, redeemable at par September, 1963, or from 1958 on notice. A trustee stock. Ranks with other loans. Population, 123,000; rateable value, £909,444; general rate, 10s. Aggregate net debt, £5,762,074 (of which £1,115,821 rate fund services). Gross profit from utilities, £325,377; gross rental from estate, £91,000; housing, rents £56,690 and subsidies £29,742. Lists closed 9.5 a.m. December 16th. Heavily oversubscribed. Applications totalled 44,900,000. At least part of 500,000 £1 shares

BY OFFER FOR SALE

Kingdom of Belgium.—Offer for sale of £5,000,000 4 per cent. Sterling Bonds, 1937, at 97. Redeemable at par by January, 1960, by drawings from year to January, 1939, or on notice at 102 from 1943 to 1947 or thereafter at par. Budget : Ordinary receipts, 1936, frs. 10,567 millions and expenditure frs. 10,595 millions. Public debt, frs. 36,428 millions internal and frs. 20,247 millions external; annual service, frs. 2,455 millions (including frs. 505 millions amortisation). Foreign trade, 1936, imports, frs. 21,098 millions, exports, frs. 19,724 millions. List closed 9.45 a.m., December 16th.

Kingdom of Belgium.—Offer for sale of 60,000 5½ per cent. Bonds, 1937, at 97. Redeemable at par by January, 1960, by drawings from year to January, 1939, or on notice at 102 from 1943 to 1947 or thereafter at par. Budget : Ordinary receipts, 1936, frs. 10,567 millions and expenditure frs. 10,595 millions. Public debt, frs. 36,428 millions internal and frs. 20,247 millions external; annual service, frs. 2,455 millions (including frs. 505 millions amortisation). Foreign trade, 1936, imports, frs. 21,098 millions, exports, frs. 19,724 millions. List closed 9.45 a.m., December 16th.

BY STOCK EXCHANGE 75,000 6 per cent. cumulative redeemable £1 preference shares, and 400,000 5s. ordinary shares. Incorporated in N. Ireland to acquire drapers' businesses. Redemption fund to redeem preference shares at 22s. by drawings to 1988, or from 1949 on notice. Net assets, £69,628 (stock, £58,727) acquired for £100,000 (goodwill, £30,372) in 400,000 ordinary shares. Profits after depreciation, before redemption fund : years to August 31st : 1935, £11,920; 1936, £17,566; 1937, £19,158. Shaw Loeb! take all preference shares at par for £2,156 commission, and 100,000 of vendors' ordinary shares at par. Company pays £6,000 expenses.

BONUS ISSUE
Associated Motor Cycles.—It is proposed to make a free bonus issue of one ordinary share for 20 held on 23rd December.

ISSUES TO SHAREHOLDERS ONE.
Bank of Scotland.—It is proposed to make a new stock issue and to eliminate uncalled liability by raising paid-up capital from £1,500,000 to £2,400,000 and cancelling the £50 per £100 potential liability. This involves issue of £150,000 (£100,000 paid), to be issued to proprietors at 440 per £100 paid, in proportion of £1 (13s. 4d. paid) per complete £15 (£10 paid) held. Uncalled liability to be paid from reserves, and added to paid-up holding. Premiums on issue (£340,000) to be added to reserves.

Crittall Manufacturing Company.—Issue of 250,000 5s. ordinary shares to ordinary shareholders at 12s. 6d., in proportion of one in four. Applications will be considered from preference and debenture holders for any shares not taken up

Crittall Manufacturing Company.—Issue of 250,000 5s. ordinary shares to ordinary shareholders at 12s. 6d., in proportion of one in four. Applications will be considered from preference and debenture holders for any shares not taken up

Birmid Industries.—Issue of 97,500 £1 shares at 30s. in proportion of one for six held.

Odhams Press Limited. Issue of £100,000 5 per cent. debenture stock at par.

Sierra Leone Government.—Issue of £570,000 3½ per cent. inscribed stock to repay outstanding 4 per cent. stock on June 15, 1938. Balance not converted, may be subscribed at 101. Redeemable on June 1963, or from 1958 on notice.

Aktiebolaget Elektrolux "B" Shares.—Capital represented by these shares will be reduced by 25 per cent. and Sw. Kr. 25 per share in cash will be due to shareholders on December 15, 1937, against coupon No. 21, and share certificates for marking. Coupon No. 21 should not be detached. An interim dividend of Sw. Kr. 5 per share will be payable on December 15, 1937, against coupon No. 20.

Uganda Company.—All outstanding 6 per cent. first mortgage debentures will be redeemed at par on January 1, 1938.

Union Corporation.—Of the offer to shareholders of 140,000 12s. 6d. shares at £7, 8s. 1 per cent. was applied for by shareholders, leaving 14.9 per cent. for underwriters.

COMPANY RESULTS OF THE WEEK.—The larger brewery companies show substantial increases in profits. LEEDS & WAKEFIELD BREWERIES are paying 11 against 10 per cent., while trading profits of H. & G. SIMONDS, LTD., are no less than £188,000 higher at £709,184. The latter company's balance sheet now reflects the reorganisation scheme of 1936, and a consolidated balance sheet has been added to the report. Among property companies, DAVIS ESTATES, whose net earnings have fallen from £86,004 to £78,587, report that, owing to rising building costs, profits were affected by the completion of forward sale contracts entered into before the increase in sale prices. The first report of LANDSOWNE HOUSE (BERKELEY SQUARE), for the 55-week period to September 29th last, shows a net revenue of £19,284, out of which a 7 per cent. dividend is being paid. In the heavy industries, CLEVELAND BRIDGE & ENGINEERING have converted a loss of £70,985 into a net profit of £16,118. The volume of orders booked has been satisfactory, but supplies of steel have been insufficient, and work has not been too plentiful. Modest increases in revenue are recorded by three investment trusts; the largest of these, the ARMY & NAVY INVESTMENT TRUST, has raised its dividend from 12 to 13 per cent. SCOTTISH MOTOR TRACTION net profits are £198,857, against £184,451, though improved industrial conditions were in part offset by a strike last March. Several competitive businesses have been acquired during the year. The DECCA RECORD CO. balance sheet now reflects the Crystalate acquisition, though manufacture of these records did not begin till after the end of the year. A small profit is reported against a loss of £12,372, but it is stated that preliminary figures for the current year show a substantial balance after debenture interest. R. HOOD HAGGIE & SON trading results have been affected by a sudden unexpected fall in the hemp markets, combined with wage advances. Net profits as a result are £46,865 against £64,467. SUNLIGHT LAUNDRIES (LOUD & WESTERN) are maintaining their 16½ per cent. dividend, and report that the work done was in excess of any previous year, but net earnings have fallen by £14,000 to £42,865. VACTRIC, LTD., also point out that sales constituted a record, but owing to increased material, labour and selling costs and also to a fire at their premises, net profits amount to £21,227 against £31,673.

COMPANY MEETINGS

THE COMMERCIAL BANK OF SCOTLAND,
LIMITED

ANOTHER YEAR OF STEADY PROGRESS

STEADY IMPROVEMENT IN TRADE

EARL OF MAR AND KELLIE'S ADDRESS

The annual meeting of the shareholders of The Commercial Bank of Scotland Limited was held, on the 16th instant, at Edinburgh.

The Earl of Mar and Kellie (Governor of the bank) presided.

TRIBUTE TO THE LATE DR NASMYTH

The Governor, in submitting the report, said:—Before commencing the business of the meeting I have to refer to the loss we sustained during the year through the death of Dr Nasmyth, who, for a period of fifteen years, was a member of the Board of Ordinary Directors, after having served as an Extraordinary Director for a number of years. Dr Nasmyth took a very real interest in the welfare of the bank and his wide knowledge of men and affairs was at all times freely placed at the service of his colleagues. He rarely allowed a day to pass without paying a visit to this office, and to customers and staff alike he was a familiar figure. We miss him greatly.

It is a pleasure to me to preside again at this meeting and to have the satisfaction of presenting for your approval a report and statement of accounts which continue to show steady progress.

In recent years I have been able, when addressing you, to refer to steadily improving business conditions at home, and I am glad to be able to do so again. In almost all spheres of activity progress has been seen and, although at the present time there may be a feeling of hesitancy, largely I think created through difficulty here in assessing the American situation, I see no reason why morbid fear of an early major recession of business activity should be allowed to develop. Last year I emphasised the importance of concentration upon development of overseas trade and referred to the fact that the stimulus given to business at home by the defence programme might obscure for the time being the need ultimately for overseas markets. That need is steadily becoming more apparent; our imports are increasing more rapidly than our exports.

IMPORTANCE OF EXPORT TRADE

We are essentially an industrial nation requiring to pay for the major portion of our foodstuffs and raw materials by manufactured goods and services and, although in the present adverse trade balance there may be exceptional elements, the broad fact remains clear that by every available means our export position must be improved. Under present conditions of restrictions and exchange difficulties, there are few factors present calculated to stimulate development in this department of our activities, but there is a definite spirit of enterprise around us which should be encouraged by all available means. There is no virtue in ignoring the experience of the past and the trade cycle is almost bound to recur, but much can be and I think is being done to minimise the severity of such movement and any irresponsible and ill-founded forecasting of approaching depression is a public disservice of the first magnitude under present circumstances.

DEVELOPING LIGHTER INDUSTRIES

A laudable attempt is being made at the present time to encourage the development in Scotland of the lighter industries, and the experiment of the industrial estate at Hillington, Renfrew, will be watched with much interest by all having the welfare of industrial Scotland at heart. Never was it more evident that originality and initiative in design, as well as good workmanship on well organised lines, are what is required to command markets and the sooner it is realised that the methods of a generation or two ago are not necessarily suited to present conditions the better it will be for our chance of participating to

a satisfactory extent in the lighter industries which form so important a part of the economic structure.

BALANCE SHEET ITEMS

Turning now to the report you will observe that the directors have applied to the reserve fund out of the year's profits, the sum of £50,000, which makes the fund £3,100,000, or £850,000 more than the paid-up capital. A strong reserve position has always been a feature of this bank, and the directors consider that the best interests of all concerned are to be served by still further strengthening an already exceptionally strong position. The cost of operating the business tends steadily to increase, the future is in many respects uncertain, and a large reserve fund employed in the business makes for that stability of earning power which is most desirable in a banking institution.

NOTES IN CIRCULATION

Notes in circulation appear in the balance sheet at £3,768,000, which is £139,000 more than last year, and a satisfactory indication of the greater spending power in the hands of the public.

Deposits and other credit balances at £46,055,000 are higher by over £4,000,000, and constitute a record in the history of the bank.

Acceptances and engagements on account of customers are again higher at £3,380,000, and reflect greater activity on the part of our foreign department, which has been developed and adapted to modern requirements during recent years.

ASSETS

Turning to the assets side, cash, bank balances and money at call and short notice provide a sum of £11,718,000, or approximately £1,200,000 more than last year.

British Government securities amount to £26,611,000, which is £1,377,000 more than last year. Much care has been taken in the selection of our holdings, which for the most part consist of stocks with definite dates of maturity. Outside of the British Government group our investments amount to only £274,000, in which item. The market value of the investments is greater than the amount appearing in the balance sheet. Investments and the preceding cash items you will observe together produce a figure of £38,603,000, equivalent to seventy-seven per cent. of our liabilities to the public by way of deposits and notes in circulation, which I think you will agree is a very liquid and satisfactory position.

Bills discounted appear in the balance sheet at £1,178,000, and as at the date of our balance we did not hold any Treasury bills, the figure which I have mentioned represents bills discounted to our trading customers in the ordinary course of business, and it is satisfactory to observe that this item shows a moderate increase when compared with last year's figure.

LOANS AND ADVANCES

With regard to the item loans and advances, amounting to £14,633,000, there is an increase to record of rather over £1,500,000. This may be considered very satisfactory as improving trade brought with it in the earlier stages a tendency towards repayment of advances which had been required during the period of depression. We are now finding, however, that fresh demands upon us have restored our advance figures to a more satisfactory level, but you will readily see that the bank is in a position adequately to take care of the requirements of our customers.

BANK OF LONDON AND SOUTH
AMERICA, LIMITED

ALL ROUND IMPROVEMENT

DIVIDEND INCREASED TO 5 PER CENT.

LORD WARDINGTON'S ADDRESS

During the year we have continued our policy of improving our properties, which appear in the balance sheet at a total of £950,000, which may be considered a very moderate valuation. Our balance sheet now takes account of a sum of over £58,000,000, which is easily a record in our history and provides an interesting comparison with the figure of £18,000,000, which was the aggregate of assets in the year 1910, when the bank completed its first one hundred years' operations.

PROFIT AND DIVIDENDS

The profit for the year amounts to £395,664, which is arrived at after providing for all bad and doubtful debts. A reduction in profit of approximately £4,000 has been shown this year, but this is not surprising considering that higher taxation has had to be provided for, both in respect of income tax and the new National Defence Contribution. Salaries also have been steadily increased over a period of years but this, I am sure, is a factor which will receive ready approval from the shareholders. I think you will agree that in all the circumstances the results are satisfactory.

As to the allocation of profits, interim dividends have been paid on the "A" shares at the rate of 16 per cent. per annum, and on the "B" shares at the rate of 10 per cent. per annum, and it is now proposed that a further distribution on both classes of shares be made at the same respective rates, subject to income tax.

I have already mentioned that £50,000 has been added to the reserve fund, and there have also been appropriations of £50,000 to property accounts; £30,000 to the trustees for the staff non-contributory pensions fund; £10,000 to the widows' and orphans' fund; and £5,000 to the staff insurance fund. With regard to the contribution to the pension trust, it may interest you to know that these annual sums are clear additions to the fund in the hands of the trustees. The bank is under obligation to the pensioners to meet the annual deficiency arising in the payment of the pensions, while the fund on an actuarial basis is unable to support the full liability. The annual allocations which we have been making, of £30,000, in addition to the payment of the deficiency, is steadily improving the position.

You will observe that after the dividends and allocations out of the year's profits, to which I have referred, have been made, the carry-forward to next year's account amounts to £68,394, or some £3,000 more than the amount brought in.

NEW DIRECTOR

To fill the vacancy caused by the death of Dr Nasmyth, the directors nominated Mr Gilbert Archer to a seat on the board. Mr Archer has taken a prominent part in the business life of Edinburgh and Leith and requires no introduction to a meeting such as this. We are very pleased to welcome him at this our first annual meeting after his nomination. In accordance with the regulations, he retires at this time, and it is proposed that he be re-elected.

RE-ELECTION OF DIRECTORS

It is proposed that I should be re-elected Governor, and Lord Mackenzie, Deputy Governor, and that the extraordinary directors, whose names appear on the list, be re-elected. It is also proposed that Mr Thomson, the ordinary director who retires at this time, be re-elected. Mr Macfarlan and Mr Annan, the auditors, being eligible, offer themselves for re-election for the current year.

The Governor then moved the adoption of the report, and the motion, having been seconded by Mr A. W. Robertson Durham, was put to the meeting and carried.

At the close of the meeting, on the motion of Mr Francis Chalmers, W.S., a vote of thanks was accorded to the directors and the staff for their services during the year, and acknowledged by Professor Candlish Henderson on behalf of the directors and by Mr Erskine, the general manager, on behalf of the staff.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to:—

The Reporting Manager,
THE ECONOMIST,
8 Bowyer Street,
Fleet Street,
London, E.C.4.

Telephone: Central 8631

The seventy-fifth ordinary meeting of the members of the Bank of London and South America, Limited, was held, on the 14th instant, at 6, 7 and 8 Tokenhouse Yard, London, E.C., the Rt. Hon. Lord Wardington, chairman of the bank, presiding.

The Secretary (Mr J. A. Stark) having read the notice convening the meeting and the report of the auditors,

The Chairman, in the course of his speech, said:—I will not detail the items in the balance sheet, as almost all show increases. The total of £79,000,000 is higher by £5,000,000 than that of last year, and whilst this, in part, is due to the slightly improved values of some of the currencies, I am glad to say that it results in a greater degree from an all-round increase in the general business of the bank. Interest and commission rates, however, continue at a low level, and competition for banking business is increasingly keen.

YEAR'S RESULTS

We will now pass to the profit and loss account. On the debit side charges have risen by £532,000 to a total of £1,348,000 but, on the other hand, gross profits are up by £742,000, the total being £1,827,000, and the net result is an improvement in the bank's earning capacity of some £210,000 in the year, the net profit being £462,074 as compared with £252,850 last year. The result is arrived at after providing for bad and doubtful debts and for depreciation on capital employed abroad.

I feel sure that you will agree that this is satisfactory when you bear in mind the relatively low values of many of the currencies in which our profits are made, and furthermore that profit and loss account this year has borne exceptional expenditure, such as the losses of subsidiary companies, which should be non-recurring, as also transfer expenses, likewise non-recurring which under the laws of the various countries, have been incurred in the taking over of the business of the Anglo-South American Bank.

Relieved of these charges, and in the knowledge of the fact that our programme of economies has perforce been a gradual one, only a portion of which has emerged in the year under review, I feel that we can look forward with some degree of optimism to the results of the year now before us. Your board therefore are glad to be able to recommend on this occasion the payment of a dividend of 5 per cent. per annum, subject to income tax.

Mainly through the operation of "compensation" trade treaties, much of the overseas trade of South America continues to be confined within set channels. These arrangements are an integral part of the foreign exchange regimes in certain of the Republics, which include the official control of imports and of rates of exchange, and, generally speaking, there has been little, if any, relaxation of the exchange controls which weigh heavily upon all activities.

HIGHER STERLING VALUE OF CURRENCIES

Nevertheless, if you compare the rates of exchange at which our books were closed on September 30th last with the corresponding rates twelve months earlier, you will see that these represent a higher sterling value for the principal currencies concerned. Thus, the currency of Argentina is valued at 16 pesos to the £ sterling, against 17 as at end-September, 1936; Chilean currency at 124 pesos, against 130; the Peruvian sol at 19.85 soles, against 20.15; Brazilian currency at 79 milreis to the £, against 84½; and Uruguayan at 8.67 pesos, compared with 9.12 pesos. On many occasions at our previous meetings emphasis has been laid upon the vital importance to us of the exchange value of the currencies of the countries where we trade, and in which our capital is invested, and you will appreciate the effect which movements in the rates exercise upon the figures in our balance sheet, which is drawn up in terms of sterling.

The improvement during the past year in the exchange value of the currencies mentioned, as also the rather greater ease of remittance, may be ascribed directly to the improvement in South America's export trade, which resulted from better world demand and enhanced prices for certain primary products.

Events during recent months have demonstrated very clearly the dependence of the Republics upon world commodity market conditions and the characteristic suddenness with which a wave

ORIENT STEAM NAVIGATION COMPANY, LIMITED

HIGHER OPERATING PROFIT

The thirty-eighth ordinary general meeting of the Orient Steam Navigation Company, Limited, was held, on the 14th instant, at the offices, 3 and 5 Fenchurch Avenue, London.

Sir Alan Anderson, G.B.E., M.P., who presided in the absence of the chairman, Mr I. C. Geddes, who is visiting Australia, said that the vote of thanks which Australia gave to the "Orion" had been repeated for the "Orcares" and he mentioned the success of their experiments in air-conditioning.

In the balance sheet the item of "Fleet, etc." was higher on the year by £34,201, being increased by payments on account of "Orcares" and reduced by depreciation and the sale of "Orsova."

Operating profit at £351,000 was higher by £135,000 and would by itself have met depreciation and preference dividends and left something for ordinary dividend. With the help of profit and interest on investments and the balance brought forward, they could pay a dividend of 5 per cent. free of tax on the ordinary shares. The profit and loss account was better, but had not given a return commensurate to the real capital involved in what must always be a risky business.

During the last 13 years they had replaced the whole of their fleet with the exception of the "Ormonde." It might easily cost £400,000 more to build the "Orcares" to-day, and the orders placed in bad times had helped the shipbuilders just as the farmer was helped by rain in drought.

In 1924 some 25,000 migrants per annum were assisted out to Australia and many other third-class passengers paid their fare out and home. In 1930 assisted migration stopped, so rather than let their ships continue running empty, they had decided to alter the "Orama" and her four sisters to carry tourist passengers. When the world returned to sanity and once more spent its exchange on Australian butter and meat and fruit instead of on guns, the demand for settlers would revive. The Commonwealth Government were proposing once more to help settlers nominated by friends in Australia, and they hoped it would be remembered how cheaply the existing ships could carry such migrants outside the few months when the ships were full and how steep would be the curve of rising costs if special ships were to be provided.

In saloon traffic, too, there had been great changes and on one ocean after another services had been established at a scale of speed, luxury and cost far beyond the paying capacity of the traffic. When British travellers were carried under a foreign flag at a high speed for an uneconomic charge they sometimes forgot that the foreign taxpayer bore the loss from no special desire to help them or British trade either in peace or war.

This year it was hoped that many people from Europe would take advantage of the specially reduced fare to attend the 150th birthday of Australia.

The report and accounts were unanimously adopted.

DAVIS ESTATES, LIMITED

PREMIER POSITION MAINTAINED

The annual general meeting of Davis Estates, Limited, was held, on the 16th instant, at Winchester House, London.

Mr M. S. Myers (the chairman) said that during the year the overdraft at the bank had been reduced from £88,469 to £23,528, and sundry creditors had been reduced by some £23,000, while cash was approximately £26,000 as against nil. Debtors had been reduced by £30,000, and the stock, less mortgages, by some £69,000. Cash deposits with building societies had increased by £20,000, and freehold and leasehold investment properties, at cost, had been increased by over £73,000. On the other hand, mortgages had been obtained in connection with these properties, and the result was that the equity was some £22,000 less, but the income was considerably greater. Shares in and loans to subsidiary companies had increased by some £27,000, and the item of goodwill had been reduced during the past three years by £101,405 by the application of reserve accounts.

The profit for the year of £78,587 was slightly less than in the previous year, due to the completing of forward sale contracts entered into prior to the increase in sale prices. One satisfactory feature was that the net amount of income derived from their property investment account, after deducting outgoings of every kind, equalled an amount approximately equivalent to one-half of the interest required for the service of their preference share issue. This was a good result to have achieved in three years.

The preference shares were well covered, both as to capital and interest, and this cover would increase from year to year. No dividend had been paid on the ordinary shares since the inception of the company, although they showed a large earning capacity, this year something approximating to 20 per cent., but the earnings over the company's charges had been "plugged" back into the business. This would not be bad for ordinary shareholders, for virtue, and especially financial virtue, brought its own reward to those who could wait. The company had progressed remarkably well, and owing to its premier position in the trade its present operations and outlook were as good as they had ever been.

Mr A. F. Davis (managing director) said that he would like to say a few words about the building industry and its prospects. That industry was the largest in the country, with a gross turnover estimated at no less than £600 millions per annum. His views were that the building industry, as a whole, including house building, was stable and progressive, and he was confident from reports which he received in course of business that he was justified in making those statements.

As a matter of interest shareholders would no doubt like to hear that one of their wholly owned subsidiary companies, Davis (Contractors), a self-explanatory name, was well known in the building-contracting world, and was carrying out work for architects and municipalities.

As to the future, he realised that he was a wise man who said as little about the future as he could, but he would like to assure them that his fellow directors and he were satisfied that the prospects of that company, built on solid foundations, were excellent.

The report and accounts were unanimously adopted.

BRITISH VACUUM CLEANER AND ENGINEERING COMPANY, LIMITED

A RECORD YEAR

PRE-EMINENT POSITION OF "GOBLIN" CLEANERS

The thirty-fourth ordinary general meeting of The British Vacuum Cleaner and Engineering Company, Limited, was held, on the 15th instant, at the registered offices of the company, Parson's Green Lane, London, S.W.

Mr H. Cecil Booth, F.C.G.I., M.Inst.C.E., chairman and joint managing director, said that the directors were again glad to report that a further increase both as regarded turnover and profits had established another record. A factor which the directors had to meet was the increased cost of materials which had taken place during the year. They determined, as being in the best interests of the company, to develop a still more vigorous attack on the market rather than adopt the alternative of raising prices to the public, and they were satisfied that the results had shown the wisdom of such policy.

The company's trade name, "Goblin," was famous throughout the whole electrical trade of the country, and was accepted as implying a standard of excellence and outstanding value, and there was no doubt that Goblin Cleaners held a pre-eminent position in the vacuum cleaner industry.

The question of further increased accommodation had become one of paramount importance during the past twelve months, and the directors had recently acquired the freehold of a first-class modern factory, with 20 acres of land, between Epsom and Leatherhead.

The company had recently taken steps to broaden further the basis of its operations, and was now marketing, with encouraging signs of success, two lines, viz. electric washing machines and electric clocks, which allied themselves very well with its main business. The company had an excellent range of models, which were being very favourably received and were being marketed under their trade name "Goblin."

The company's sales as from October 1st last to date showed a substantial increase on those of the same period last year.

The directors recommended a final dividend on the ordinary shares of 30 per cent., making 40 per cent. for the year, leaving £8,449 to be carried forward. The balance sheet showed a really strong position, especially when they considered that no items for goodwill, patents or development were included.

In conclusion the chairman paid a tribute to the loyalty and enthusiastic work of the staff during the past year and mentioned that reservation had been made in the accounts for a staff bonus in accordance with the directors' usual policy. He felt that all shareholders would like to know that every employee of the company was granted a minimum of seven days' holiday with full pay, and he was sure the shareholders would cordially endorse the tribute which, on behalf of his co-directors, he had paid to the whole of the company's organisation.

The report and accounts were unanimously adopted.

MITCHELL COTTS AND COMPANY, LIMITED

DIVIDEND OF 10 PER CENT.

The ordinary general meeting of Mitchell Cotts and Company, Limited, was held, on the 16th instant, in London.

Mr Alexander Hamilton (chairman and managing director) said that the profit for the year, which included the net profits of subsidiary companies, whether distributed or not, amounted to £44,258. The directors recommended a dividend of 10 per cent., less tax. As mentioned last year, their principal subsidiary, Mitchell Cotts and Company (South Africa), had acquired a 100 per cent. interest in Thesen's Steam Ship Company, Limited.

As regarded general trading conditions, their export coal business from Durban had been considerably handicapped throughout most of the year because of the very great pressure on the South African railways which had prevented them from giving facilities to the collieries to rail coal to the port in anything like adequate quantities.

The successful operations of their London steamship companies had largely contributed to those results, and it was pleasing to remember in that connection that as the year of these companies ended in December last, full benefit of the improvement in freights was not reflected in the accounts. Freights had within the last few weeks fallen again somewhat. It was felt in any case by a few weeks fallen again somewhat. It was felt in any case by a few weeks fallen again somewhat. It was felt in any case by a few weeks fallen again somewhat.

The acquisition of Thesen's Steam Ship Company had justified itself, and they felt certain it would continue to do so. Since the close of the financial year all the shares in Fraser and Chalmers (South Africa), Limited, had been acquired, and the shareholders had authorised the necessary increase in their capital to provide for that purchase and for possible other similar developments. They remained convinced that that acquisition would not merely be advantageous in itself and a source of increased profit to the company, but that the association with that important and well-established company in South Africa and Rhodesia would bring strength and numerous other advantages to the company.

The report was unanimously adopted.

AGAR, CROSS AND COMPANY, LIMITED

SUBSTANTIAL RISE IN PRICES

The thirty-first ordinary general meeting of this company was held, on the 16th instant, in London.

Mr Stuart C. Sheppard (chairman), in the course of his speech, referred specially to the loss they had suffered through the death of their managing director, Mr H. S. F. Alexander; the resignation of Sir William Coats Cross, Bart., from the board, under medical advice, and the new additions to the board—Mr Charles Hendry, Mr Walter Woodbine Parish and Mr James Asher; also that Mr William A. Agar, whilst retiring from the chairmanship, still remained a member of the board.

He dealt with the issue of £350,000 5½ per cent. five-year unsecured notes, explaining terms and conditions thereof, and that with funds thus obtained the company had been able to effect a cash settlement of indebtedness to their two principal American suppliers, thus obtaining a substantial saving.

After dealing with the balance sheet in detail, he explained that the exchange deficiency account had been merged into the profit and loss figures, giving the reasons therefor, and that this alteration enabled this year's accounts to be presented in a form which, besides showing the actual year's trading, would make future yearly comparisons easier and more accurate—as it included all known exchange depreciation on net movable assets to date of balance. The gross balance now stands at £310,195, as against £537,700 last year.

The Chairman then touched upon the substantial rise in the company's sales due to improved economic conditions in their trading territories, and the benefits accruing from more stable exchange. The first five months of the present financial year showed an improvement of over 50 per cent. on the monthly sales, and in the aggregate it was thought that reasonably satisfactory crops on the whole could be secured, and they might look for a continuance of an increase in sales.

The accounts were duly passed, as also the resolution converting the share capital of the company into stock.

The shareholders having requested the chairman to express their condolences to Mrs Alexander, the proceedings terminated with a vote of thanks to the chairman, directors and staff.

THE INDUSTRIAL CREDIT COMPANY, LIMITED

IMPROVED PROFIT-EARNING POSITION

The fourth annual general meeting of the shareholders of the Industrial Credit Company, Limited, was held, on the 14th instant, at the offices of the company, 9 Leinster Street, Dublin.

The Chairman, Mr J. P. Colbert, said:—Ladies and Gentlemen, We have under consideration to-day the fourth annual balance sheet of the company. You will have noted that our profits show a decline as compared with last year. The gross profit is £38,625, being £7,853 less than that for 1936. There has been a slight saving in expenses, and the net profit, at £30,898, shows a decline of £7,690.

No particular significance must be attached to this recession in our profits. A substantial proportion of our earnings was derived from our underwriting activities, and as this source of income is liable to considerable fluctuation, a certain element of variability must necessarily be reflected in our accounts. During the year the company undertook five capital issues, as against six in the previous year, but the turnover involved was only £428,707 as against £1,149,400. Profits on realisation of investments have constituted another accidental factor affecting our net earnings. At last year's meeting, in recommending the allocation of £10,000 to investment reserve, I indicated that the bulk of this sum represented capital profits. It so happens that during the last year realisations of shares have been considerably less.

The decline in revenue from these two sources would more than account for the decrease in our net profit. On the other hand, our revenue from loans and investments has shown a very satisfactory expansion during the year, despite the fact that we have had to sell revenue-producing securities in order to afford funds to enable us to take up commitments in entirely new industries. On the whole, therefore, the potential profit-earning position of the company may be said to have improved during the year.

We recommend that out of the amount of £35,194 available the sum of £10,000 be added to reserve fund, £10,000 to investment and other reserves, and £5,000 to contingency reserve, leaving a balance of £10,194 to be carried forward.

The report and accounts were adopted.

IND COOPE AND ALLSOPP, LIMITED

INCREASED SALES AND PROFIT

The twenty-fifth ordinary general meeting of Ind Coope and Allsopp, Limited, was held, on the 13th instant, at the Abercorn Rooms, Great Eastern Hotel, London, E.C.

Colonel the Rt. Hon. Sir L. G. Courthope, Bt., M.C., M.P., (the chairman), said that they had had another good year, and had made satisfactory progress with the work of amalgamation of the numerous companies controlled by Ind Coope and Allsopp.

The trading profit for the year to September 30th last was £914,501, as against £768,621 in 1936, an increase of nearly £146,000. The considerable increase in trading profit was accounted for by larger sales in bulk and bottle. For the year 1937 they had a full year of the Nalder and Collyer trade, whereas in 1936 they had only a little over five months, and, in addition to that, the general trade in bulk and bottle showed a satisfactory improvement, due no doubt to the greater prosperity in the country. The trading results in their managed houses also showed a very gratifying increase.

With regard to the combined statement of assets and liabilities of the parent company and its subsidiaries, it was most satisfactory that the excess of assets over liabilities of the whole group had increased by nearly £160,000. They had five breweries working, two large ones at Burton-on-Trent, a large one at Romford and two small ones at Liverpool and Plymouth. All those breweries were working to more or less full capacity at busy periods of the year. He was able to assure shareholders that all their breweries and bottling stores were well managed and up-to-date. Manufacturing methods and machinery were under constant revision.

Their stocks of brewing materials were adequate, both in quantity and quality. During recent months the cost of materials, particularly malt and barley, had risen materially, but they were well bought, and much of their barley and malt had been purchased before the rise in prices; but the rise could not fail to affect the current year's accounts. In common with other brewers, they endeavoured to use as much home-grown malt as possible.

From the balance available for disposal they proposed to pay a final dividend of 20 per cent., less tax, making 27½ per cent. for the year.

The report and accounts were unanimously adopted.

OROVILLE DREDGING COMPANY, LIMITED

LARGER EARNINGS ANTICIPATED

The twenty-sixth ordinary general meeting of the Oroville Dredging Company, Limited, was held, on the 10th instant, at 20 Aldermanbury, London.

Mr Frederick W. Baker (the Chairman) said that shares in companies at cost stood at £278,047, as against £332,461 in last year's accounts, resulting from the writing off of £58,914 from premium account, and their holding in Pato Mines of Columbia, remained at £139,877, the same figures as appeared in last year's accounts, the two items together making up a total of £417,924.

Dividends had been received amounting to £68,449, and other credits increased the total to £73,666. After deducting the dividends paid in December, 1936, and April, 1937, there was a balance of £136,253 to be carried forward.

Turning to Pato Consolidated Gold Dredging, dredges Nos. 1 and 2 dredged 3,668,000 cubic yards, and 193,700 cubic yards were treated hydraulically, averaging over the whole 15.19 cents per cubic yard, and the operating profit was \$244,627. For the five months of the current financial year dredges Nos. 1 and 2 dredged 1,371,000 cubic yards, averaging 21.58 cents. Dredge No. 3 was completed in May last, and dredges 4 and 5 should be ready to operate early next year. The successful result of hydraulic work carried out during the year had justified the purchase of four additional units.

ENORMOUS GRAVEL RESERVES

The head consulting engineer of Placer Development estimated that the properties controlled by Pato Consolidated contained 600 million cubic yards of gravel of an average recoverable value of between 14 and 15 cents per cubic yard, gold taken at \$35 per ounce, and that, in addition, 37 million cubic yards of gravel suitable for hydraulic with an average recoverable value of 25 cents per yard had been proved. He estimated that, with five dredges in operation, the dredging costs would not exceed 7 cents per cubic yard. It was expected to dig around 16 million cubic yards of gravel annually, and the hydraulic units now being installed should handle yearly a further 1,500,000 yards. The report gave the estimated average recoverable value of the dredging ground as between 14 and 15 cents per cubic yard, but the chances were that for many years to come the average recovery would be more like 20 cents a yard.

The company's holding in the Asnazu Gold Dredging remained unaltered. For their financial year 1,542,000 cubic yards were dredged, averaging 49.67 cents per cubic yard, and the operating profit was \$436,000. Dividends of 10 cents per share were paid in April and October, 1937.

With regard to the company's interest in Bulolo Gold Dredging, during the year the four Bulolo dredges dredged 11 million cubic yards, the bullion produced realising \$4,870,000, with an operating profit of \$3,585,000. Two interim dividends, equal to \$2.90 per share, had been paid, and a further interim dividend for the current year of \$1.50 (Canadian) had been declared.

IMPROVED INCOME PROSPECTS

He had stated in his remarks to them at last year's annual meeting, that with the enormous gravel reserves controlled by Pato Consolidated, which would, in due course, as the construction programme was carried out, come into profitable operation, they might look for a gradual augmentation of dividend payments, culminating in maximum returns within a period of from two to three years.

It would be clear to them from his remarks that they should, during the coming year, be beginning to reach that period of dividend augmentation, as they were on the eve of completing the first and most important stage of their construction programme, so that from the early part of next year they might anticipate increased yardages handled with corresponding additions to income, to be followed by further increases of earnings as Bulolo and Asnazu's additional dredge construction programme was completed and the developments at Nechi, as planned, should title be secured, were carried out. They would endeavour, as far as it was possible, to repay existing loans effected by Pato Consolidated in the past and provide for further capital outlay to carry out their expanding programme by the sale of working capital shares, rather than by the reinvestment of their earnings in the business to the prejudice of dividend distribution: a policy followed by Pato Consolidated in the past two years.

The report was unanimously adopted.

KWAHU MINING COMPANY, LIMITED

SUCCESSFUL RESULTS—GOOD PROSPECTS

The ordinary general meeting of this company was held, on the 13th instant, in London.

Lieut.-Colonel Frank Johnson, D.S.O. (the chairman), in the course of his speech, said that, referring to their 25 per cent. interest in the Tokosea Mine, the board still thought very highly of this old mine, and had no hesitation in taking advantage of the opportunity to increase their interests to 33½ per cent.

To prevent any misunderstanding and to stop any rumours that might be current he would state they still held, and were likely to continue to hold, the 765,000 shares in the Gold Coast Main Reef and 400,000 shares in the Marlu Gold Mining Areas. Last year he referred to the Marlu Gold Mining Areas as likely to be added to the small and historic list of the world's great mines, and he now saw no reason to change the opinion he then expressed.

Shareholders would have seen the ever-increasing profits in the first few months during which the reduction plant had been running. When the whole plant was in operation there was every reason to anticipate a profit of about three quarters of a million pounds per annum, one-twentieth of which would come to the Kwahu Company and represented almost 100 per cent. on its capital. So long as they were in a position to recommend the payment of 100 per cent. from the dividends they were likely to get from the Marlu Gold Mining Areas and Gold Coast Main Reef it was their intention to regard their holdings in the other companies given in the report as a potential reserve to be realised as and when they deemed it expedient. Their 765,000 shares in the Gold Coast Main Reef, at their market valuation, represented nearly five times the capital of the company.

Referring to the interim dividend of 25 per cent., free of tax, the board believed that it was the first and last occasion on which such a comparatively small dividend as 25 per cent. would be distributed. He asked the shareholders to remember the statement that he had made to the effect that the board had every reason to look forward to asking their approval of the distribution of 100 per cent. per annum during the next few years, in which time a substantial reserve was being built up.

The report was unanimously adopted.

ANGLO-ECUADORIAN OILFIELDS, LIMITED

RECORD DISTRIBUTION

The nineteenth annual ordinary general meeting of the Anglo-Ecuadorian Oilfields, Limited, was held, on the 14th instant, at Winchester House, London, Mr. H. C. R. Williamson (chairman of the company) presiding.

The Chairman, in moving the adoption of the report and accounts, said:—When I had the pleasure of addressing you last year I described the report as encouraging and healthy. I believe you will agree that, judged by the report which we are at the moment considering, that measure of good health which we enjoyed last year might almost be described as robust health to-day.

It is a great pleasure to your board to be able to recommend the payment of a dividend of 10 per cent., plus a bonus of 5 per cent. This is the largest distribution ever made by the company and, if we find ourselves in a position to repeat it in future, we shall, I think, have no reason for dissatisfaction.

There are some slight indications to-day of a certain weakness in the gasoline price structure in the United States market. Stocks of gasoline at this time of the year have a tendency to rise, and States prove exceptionally severe, for refineries in that case have to cater for a greatly increased consumption of oil for heating purposes, necessitating the manufacture of a corresponding amount of gasoline which, owing to weather conditions, does not rapidly go into consumption. However, the various State Governments and the industry in the United States are fully alive to these factors, and, I believe, will maintain that spirit of co-operation which has resulted, during the past year or more, in the maintenance of comparatively stable conditions and the avoidance of wastage.

In conclusion I would say to you this—Do not expect anything spectacular from this company. We have had a successful year, but everything has been in our favour. The pendulum may swing the other way. Meantime, if there is no material change in crude prices or in exchange rates, I venture to hope that we shall again make a satisfactory showing for you in the current year.

The report and accounts were unanimously adopted.

WILUNA GOLD CORPORATION, LIMITED

AN EMINENT GEOLOGIST'S RECOMMENDATIONS

Presiding at the annual general meeting held in London, on the 13th instant, Mr John A. Agnew (chairman), in moving the adoption of the report and accounts, said that as the subsidiary company (Wiluna Gold Mines, Limited) had paid no dividend in respect of the year to March 31st last, the Corporation was similarly unable to make any distribution. Operations of the Mines Company had shown a net profit for the year of £267,846 (Australian), which had been absorbed by expenditure on new plant and development.

The main factor was the diminished size and progressive impoverishment of both the east and west lodes. These tendencies had now persisted over so great a distance that their significance must not be minimised. The ore deposits at Wiluna had presented unusual features from the first. It was unusual that a lode like the East Lode, presenting such strong and well-marked shearing over great distance, should prove so erratic at depth. It was also unusual that the large West Lode No. 2 ore-body had not come within 300 ft. of surface and had been encountered unexpectedly.

This analogy alone indicated the strong chance that in the large unexplored area especially to the south of the main workings other lodes existed, possibly of equal or greater value. They considered the chances sufficiently good to warrant intensive exploration. The present ore reserves gave them a life of approximately four years, they had a good plant and smelting indicated a higher gold extraction. During that period such proportion of the working profit as was deemed necessary would be devoted to intensive and exhaustive exploration.

He added that Dr Connolly, an eminent geologist, had just completed an investigation, and a cabled summary of his report contained recommendations for an extensive drilling programme in favourable areas, and it was satisfactory to note that there was a possibility of a recurrence of values below the present zone of the main workings. Dr Connolly pointed out that the present ore structure bore no relation to the surface which might have been thousands of feet above the present surface and that the Wiluna ore-shoots which had produced 1,300,000 ozs. of gold were once deep-seated. This gave more than hope of a recurrence of the lodes at still greater depth. The programme of exploration recommended coincided with their own views, and they proposed to proceed with this work at once.

The report and accounts were unanimously adopted.

MESSINA (TRANSVAAL) DEVELOPMENT COMPANY, LIMITED

PROFITS DOUBLED

The annual general meeting of the Messina (Transvaal) Development Company, Limited, was held, on the 15th instant, in London.

Lieut.-Col. John P. Grenfell (the chairman) said that at the annual meeting last year he stated that their profits in the coming year would be double those of the preceding year, and that prediction had been more than borne out by the accounts now presented. The receipts from sales of copper and from sundry revenue amounted to £536,407, compared with £350,074 in the preceding year. The total expenditure was £379,705, leaving £156,701 as a result of the year's working.

The total of Messina Mine reserves had increased to 911,125 tons, assaying 1.96 per cent., as against 715,350 tons, assaying 2.07 per cent. last year. Harper Mine had added a further 100,000 tons to its reserves and, as the grade had been higher, the figures now stood at 619,890 tons, assaying 2.74 per cent. Cu, as against 519,840 tons, assaying 2.47 per cent. Cu last year. The lower levels were looking very good, with largely extended ore bodies of high grade. Both to the east and west the surface indications were of a promising nature, and indicated considerable further tonnages of ore.

At the further end of their copper field they were developing the Campbell Mine. At present they had as reserves 37,510 tons of 2.22 per cent. Cu, as against 11,460 tons of 1.75 per cent. Cu last year. The results of this mine were definitely promising, and when they got to the 600 ft. level he anticipated that they would have a valuable addition to their other twin mines, Messina and Harper. The total addition to the ore reserves was 325,755 tons, an increase of 25 per cent. and he was informed that a rough computation up to date showed a further large increase.

They proposed to pay a final dividend of 20 per cent., making 35 per cent. for the year, and after providing for taxation, to carry to general reserve an amount which would bring it up to £250,000. After doing that they were left with a strong cash position. Ore reserves had reached a figure of approximately 1,600,000 tons, an increase of 325,000 tons.

The report and accounts were unanimously adopted.

RATANUI RUBBER LIMITED

LARGELY INCREASED PROFIT

The third annual general meeting of Ratanui Rubber, Limited, was held, on the 15th instant, at 7 Martin's Lane, London.

The Chairman (Mr W. Arthur Addinsell) said, in the course of his remarks:—The profit for the year at £9,700 is more than three times greater than that earned for the previous year. The factors responsible were the substantial increase in the quantity of rubber allowed for export, and the higher average net sale price by approximately 2½d. per lb. The proposal is that the dividend should be raised from 4 per cent. for last year to 10 per cent. Some of you may have considered that a more liberal distribution should have been recommended, but prevailing conditions justify an attitude of caution.

The allocation of £1,000 to replanting reserve and the writing down of the book value of buildings, etc., leaves £2,336. The contribution to the National Defence Fund will call for approximately £110, and after providing for the staff bonus and directors' extra remuneration, there will be a net carry-forward of about £1,600 as compared with £1,011 brought in.

Permission has been granted to the company to extend the planted area by the opening of 50 acres of reserve land. This area is now completely planted up with specially selected budgrafted material. It should, in time, form a valuable addition to the area under cultivation.

Our investment in Endors is equal to approximately 60 acres, so that our total rubber interest is capitalised at about £33 per acre, which speaks for itself. The financial position is sound, provided the industry receives the treatment to which it is entitled. Fears have been expressed that events in the U.S.A. would check consumption, and the International Rubber Control Committee has deemed it necessary to impose a cut in the export rate. The crop which we shall be allowed to export during the twelve months ending June 30th next should not be appreciably less than that for the past year, but we cannot calculate with any certainty what the average sale price will be. The position of the company has been strengthened by prudent finance, and I hope that a year hence the results will show that the rate of dividend can at least be maintained.

The report and accounts were unanimously adopted.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended December 11, 1937, amounted to £11,576,000, against ordinary expenditure of £13,513,000. After increasing Exchequer Balances by £139,987 the operations for the week, as shown below increased the gross National Debt by £2,077,000, to about £8,275 millions.†

† Including £575 millions on account of Exchange Equalisation Account.

SHORTER COMPANY COMMENTS
MISCELLANEOUS

CARRERAS, LTD.—Balance sheet at October 31, 1937, shows cash stands of £1,158,723, against £553,078. Stocks are lower at £2,251,324, compared with £2,687,821. Sundry debtors £1,025,322, against £1,043,439. Creditors stand at £855,039, compared with £742,929. Profit figures were dealt with in *The Economist* of December 11, 1937, page 540.

DAVIS ESTATES, LTD.—Report for year to September 30, 1937, shows net profit of £78,587, compared with £88,004. To reserve, £37,774 (£37,000) and £10,000 (£17,813) for tax and N.D.C. Preference dividend £20,231 and £6,011 applied to preference share redemption. Carry forward £25,485. Bank overdraft reduced from £88,469 to £23,528.

AUSTRALIAN ESTATES CAPITAL PLAN.—It is proposed to reduce issued capital of £1,483,595 (£1,481,889 paid up) to £1,101,890 in shares of £3 12s. This will be effected by cancelling £381,705 ordinary stock and all unissued shares. The amount by which ordinary capital is thus, for each £1,000 of present preference shares, the holder will receive £800 in 5½ per cent. cumulative "A" preference stock, £800 in 5½ per cent. non-cumulative "B" preference stock, and £220 in cash. For each £1,000 of ordinary stock, holders will receive £519 ordinary stock.

WESTERN AUSTRALIAN GOLD.—The Agent-General for Western Australia has received cable advice that during November, 1937, 94,383 £659,501 sterling or about £824,378.

SOUTH DURHAM STEEL ACQUISITION.—It is announced that the South Durham group of steel manufacturers has acquired control of the London and Wales Steel Construction Company.

H. AND G. SIMONDS, LTD.—Trading profit for year ended September 30, 1937, £700,184, compared with £512,840. To depreciation £102,252, against £71,437. Ordinary dividend 18 per cent., as before, but improvement reserve £31,177, against £24,148. To property against £22,000. Carry forward reduced from £109,963 to £108,966.

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

THE tendency of prices on the commodity markets was irregular this week. Most consumers continue their policy of purchasing only sufficient for immediate requirements.

The decision of the International Tin Committee to reduce export quotas to 70 per cent. of the standard tonnages during the first quarter of 1938 gave rise to a sharp advance of quotations, but subsequently the market suffered a setback and Wednesday's quotations actually showed a decline on the week. Copper, lead and spelter were also marked down. The market in rubber was dull with prices practically unchanged on the week, but linseed and linseed oil were firmer, seed being now in short supply pending the shipment of the new Argentine crop. Among textile raw materials, the Australian wool auctions have recently shown a firmer tendency, and cotton was also marked up a little.

In the absence of any new developments, wheat prices are scarcely changed on the week, but coffee, sugar and tea were slightly firmer. Meat prices varied within narrow limits. Among provisions, butter was firmer on a temporary reduction of Australasian supplies. The market in eggs was firm owing to the cold weather.

In the United States the improvement noticeable during the previous week was maintained. Thus Moody's daily index (December 31, 1931 = 100) was 149.8 on Wednesday, against 148.9 a week ago, 150.1 a month earlier, and 200.3 on the corresponding day last year.

COAL

SHEFFIELD.—There is a good deal of pre-Christmas activity on the inland market, and production is being well maintained in advance of the holiday. Prices are firm all round. Demand for household fuel shows expansion, and gas coal is in good request. There are plenty of inquiries for small coal, and industrial fuels generally sell freely. Collieries are very well off for orders, but deliveries are hampered somewhat by lack of transport facilities.

Coke is in improving supply with the coming into operation of some new batteries of ovens. Graded coke, for central heating, fetches 34s. per ton on rail at ovens; blast-furnace coke is quoted around 30s. for inland, and large patent oven coke, selected, realises from 32s. to 34s. per ton. There is a slightly better feeling on the export market, but the volume of business is by no means satisfactory. Prospective buyers appear to be holding off in the hope of lower prices, but there is little likelihood of a fall in present conditions. A few odd cargoes are being disposed of for early shipment. All prices remain unchanged.

NEWCASTLE-ON-TYNE.—Cold weather and the usual pressure for supplies before holidays is bringing more trade in domestic coals from home consumers, but there is little additional inquiry from abroad. Northumberland steam coals continue to be short of trade for their screened qualities, but other grades are very firm. The Durham section is steady under a good home trade, coking coal being particularly firm, whilst collieries producing gas coals are fully stemmed until the end of the year. There is good home demand for patent oven coals, and with the colder weather in the Scandinavian countries more tonnage is being stemmed against contract.

GLASGOW.—Further strength has developed in the home market, and the effect on the export position is seen in a tightening of supplies despite the fact that new business remains quiet. Stocks at foreign depots appear still to be considerable, although the colder weather is permitting a more regular uplift of contract tonnages from British ports. Most of the qualities usually favoured in the shipping trade are now readily taken up, only secondary steam and washed treble nuts being in need of new business. In Lanarkshire acute pressure of home demand prevails, and the relative scarcity of supplies is accentuated by some dislocation of transport and a reduction in working staffs owing to the weather. House coal is notably firm, and washed smalls are fully booked for some weeks ahead. The position in Ayrshire is also strong.

CARDIFF.—The tonnage position at the South Wales docks, and particularly at the port of Cardiff, has been exceptionally favourable, and during the earlier part of the week many vessels were waiting their

turn at the Barry loading berths. Shipments are absorbing the full export supply quotas of the collieries, and for several classes of coal there is a shortage for prompt shipment. Loadings in the foreign and coastwise trades last week totalled 429,100 tons, compared with 410,100 tons in the preceding week and 294,339 tons in the corresponding period last year. There has been a little more inquiry for 1938 supplies, and the French State Railways have placed a contract for 125,000 tons of large and small coal for delivery during the March quarter. Prices are firm but unchanged.

IRON AND STEEL

LONDON.—The weekly report of the London Iron and Steel Exchange indicates that holiday influences are beginning to affect the iron and steel markets and that the quieter tendency noticeable recently in new business has become more apparent. The works, however, continue to make able. There is also a considerable demand for small supplementary parcels needed for work in hand.

Steady conditions rule in the pig-iron department, and whilst makers are well sold for the first quarter of next year, consumers for the time being are showing no inclination to undertake far forward commitments. Deliveries against existing contracts are on a heavy scale; but so far users have found little opportunity for laying in stocks.

The demand for semi-finished steel of all descriptions shows no signs of declining. The British works are operating at capacity, and in some cases have been unable to accept all the business offered. Even with the imports of Continental semis, the consuming industries do not find it easy to maintain full production, although the position in this respect is much better than a few months ago.

New business in finished steel materials remains quiet; but there is strong pressure from consumers to obtain deliveries, and the whole of the record output of the steelworks is passing immediately into use. Business with some of the export markets has improved of late, but in general the overseas demand is quiet.

MIDDLESBROUGH.—No business is being done for delivery during the remainder of this month, and transactions for parcels of pig iron for as follows: No. 3 Cleveland foundry pig iron, 109s. per ton, delivered locally; East Coast mixed numbers hematite pig iron, 132s. 6d. per ton, are well employed and are using iron recently received from the Continent and parcels of Midland foundry pig iron, which is more freely available. It is expected that Cleveland foundry pig iron will be in increased production early in the New Year, and this will ease the position considerably, although there are arrears to overtake. East Coast hematite is able to effect shipments of odd lots to overseas destinations. A further parcel of 1,500 tons has recently been despatched to Australia, from this area.

Steelworks are doing their utmost to meet the large demand for semi-finished and finished steel. New business in finished steel can only be accepted at the fixed price and for delivery further ahead, the production for the next few months being fully sold.

Good Durham blast-furnace coke is quoted at 42s. per ton delivered at the furnaces, whilst foreign ore continues to arrive in large quantities. Transactions are restricted to odd cargoes for prompt delivery. The official prices for scrap have now been issued, and will operate from as follows: 69s. 6d., 67s. 6d., and 62s. 6d. per ton, for 500-ton lots for heavy steel melting scrap delivered to North-East Coast works.

SHEFFIELD.—With the stabilisation of prices now virtually complete, the iron and steel market has a much steadier appearance. Business in pig iron is on a good scale, with consumers ready to place contracts well over the first quarter of next year, and some are accepting business for delivery taken up, users being desirous of accumulating such stocks as may be possible. There is not much basic iron available. Hematite demand is active, but makers are showing a certain amount of caution about accepting all the business which is offered. It is now announced that there is to be no change in the price of finished iron during the first six months of next year. Buyers are anxious to cover their requirements, but bar very heavy additions just at present. Demand for common and marked improvement. Steel business continues to expand, and the output of basalt and bar, strip and sheet requirements are difficult to meet in full. The iron and steel scrap market has a rather easier appearance, with better

Continued from page 618

NATIONAL BUILDING SOCIETY.—Accounts for year to October 31, 1937, show that share capital (including unpaid interest) has net increase of £1,184,942 at £29,346,527. Mortgage assets were £30,131,602, a net gain of £1,479,313, and total assets were £33,016,310, a net increase of £1,594,123. Reserves increased by £271,469, to £1,849,274. Advances were £4,496,897, against £7,021,967. Balance of profit increased from £1,159,805 to £1,240,047, after £11,500 for N.D.C. Interest on shares, tax free, absorbed £922,682; premises written down by £14,817; £86,469 to reserve No. 2; £185,000 to general reserve; £31,079 carried forward.

MEXICAN RAILWAY.—For half-year to June 30, 1937, gross receipts were Pesos 8,069,031, a gain of 17 per cent. on first half of 1936. Working expenses increased by 11.9 per cent. to Pesos 7,603,863. Balance to net revenue is Pesos 465,167 (against Pesos 102,190) and at standard rate of Pesos 18 to £1, is equal to £25,842. With exchange differences and sundry revenue, total balance is £29,383. Debenture interest and income tax require £100,015; deficiency for half-year is £70,632, which increases total debit balance to £77,772.

RICHARD THOMAS AND COMPANY.—It is announced that this company has contracted with the American Rolling Mill Company of Middletown, Ohio, U.S.A., to purchase from it, as from July 5, 1938, all "Armco" in America, Ltd., its subsidiary in England. The registered brand "Armco" will be available for specialities produced by Richard Thomas and Company at their works, and sold exclusively through Armco, Ltd., which will continue to trade as hitherto.

CLEVELAND BRIDGE AND ENGINEERING.—Trading profit for year to September 30, 1937, after expenses, tax, N.D.C. and contingencies was £22,714, against Dr. £19,015. To reserve £4,875, against £4,638. Ordinary dividend 4 per cent., tax free, against nil. To reserve £2,000, against £15,000 from reserve. Carry forward £7,507.

DECCA RECORD COMPANY.—Trading profits for year to March 31, 1937, £28,142, against £25,705. Net profit £273, which reduces the debit balance to £144,995. Profits for the current year to date are stated to be preliminarily figures show a substantial balance, after debenture interest.

AERO ENGINES, LTD.—The report for 13 months ended July 31, 1937, shows a loss on trading of £57,478. In the initial period from June 7, 1935, to June 30, 1936, the loss was £11,851. Debit balance carried forward £69,329. It has been decided to write off against reserve account and whole of development expenditure of £14,803. As result, reserve account now stands at £131,507.

LIMITED INVESTMENT FUND.—Distribution of 4.40d. per unit, tax free, for half-year to November 28, 1937 (Coupon No. 4), being at rate of £4 17s. 9d. gross per cent. per annum on initial price of £1 against £4 9s. on Coupon No. 3.

EDMONTON BANK CLEARINGS FOR NOVEMBER.—The total of the Edmonton Bank Clearings for November, 1937, was \$20,323,565.57 and for November, 1936, \$17,382,722.25.

supplies available. The list of controlled prices is to remain virtually unchanged over the next six months.

GLASGOW.—In the West of Scotland the quieter tendency in new business is more pronounced this week, except in the case of plates for which there is a heavy demand. At the steel plants, however, there is no slackening off owing to the enormous tonnage on books and the continued pressure for deliveries on the part of consumers. Makers of semis are not yet able to undertake all the business offering, but the increased supplies of Continental material now available have eased the situation for the re-rollers. For finished material specifications are not so plentiful this week, particularly for export. In many branches, however, several months' work is already on books and output is being rapidly absorbed by the manufacturing industries.

CARDIFF.—Conditions in the tinplate industry was appreciably easier. Production has declined to 67.6 per cent. of capacity, and it is not expected that there will be any substantial improvement in the output until the New Year. Prices are also weaker, and are now ruling around the scheduled cartel minimum of 22s. 6d. per box for approved specifications in soke finish, with waters quoted down to 18s. 6d. l.o.b. Shipments of tinplate at Swansea last week totalled 5,533 tons, compared with 9,373 tons the previous week, and 4,946 tons in the corresponding week last year. The Sheets, however, are an active market, but prices are easier owing to the fall in the quotation for zinc. In the heavier branches of the iron and steel industry there is little change.

OTHER METALS

COPPER.—The market was featureless this week. Consumers' buying was comparatively poor and turnovers on the London Metal Exchange were smaller than of late. Standard cash closed on Wednesday at £39 10s., a loss of 15s. on the week. Advances from the United States were not encouraging. Buying on the other side of the Atlantic continues small and the United States price structure remains vulnerable. Home warehouse and the United States price structure remains vulnerable. At the end of last week this country continued their recent advance. At the end of last week they reached a total of 29,935 tons, against 29,055 tons in the pre-week they were and are now at the highest level since the week ended March 6, 1937, i.e. the week of this year's record price.

According to the statistics of the American Copper Bureau, world stocks of refined copper rose by some 31,000 tons last month. The increase was, however, solely in American domestic stocks, those in the rest of the world being actually 7,000 tons lower. American consumption was some 11,000 tons smaller than in October, but the rest of the world absorbed 6,000 tons more. The increase in world stocks was appreciably smaller than the 40,000 tons increase which the market had expected, and prices consequently scored a recovery on Thursday.

Sales on the London Metal Exchange: 1,100 tons on Monday, against 2,300 tons last week; 1,400 tons on Tuesday, against 2,500 last week; 2,300 tons on Wednesday, against 900 tons last week. Domestic spot 725 tons on Wednesday, against 900 tons last week. Domestic spot was quoted at 9.65 cents per lb. in New York on Wednesday, against 10.02½ cents a week ago and 10.02½ cents a month ago. Wednesday's official closing price for standard cash in London was £39 10s. to £39 11s. 3d. compared with £40 5s. to £40 6s. 3d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 9,735 tons, showed an increase of 203 tons, while stocks of rough copper, at 20,200, were 677 tons larger.

LEAD AND SPELTER.—Lead lost 8s. 9d. per ton this week, closing on Wednesday at £15 13s. 9d., while spelter declined by 12s. 6d. to £14 17s. 6d. There was little demand, particularly for spelter, but offerings were also smaller. During the week it was reported that the Rhodesia Broken Hill Development Company has suspended its production of zinc owing to water shortage; but this step will do little to relieve the market.

The Metallgesellschaft lead production figures for October, published this week, were very disappointing for the market. Production reached the high total of 140,955 metric tons, as against 136,265 tons in September. Outputs in the first ten months of 1937 amounted to 1,366,699 metric tons, against 1,184,327 tons in the corresponding period of last year. Production must now be some 20,000 to 30,000 tons per month above current consumption and no major reduction in output is expected in the immediate future.

Sales of lead on the London Metal Exchange: 1,900 tons on Monday, against 1,900 tons last week; 1,850 tons on Tuesday, against 1,700 tons last week; 800 tons on Wednesday, against 700 tons last week. The New York quotation on Wednesday was 5.00 cents per lb., against 5.00 New York and 5.00 cents a month ago. Wednesday's official closing quotation in London for soft foreign for shipment during the current month was £15 13s. 9d. to £15 15s. per ton, compared with £16 2s. 6d. to month was £15 13s. 9d. last week.

Sales of spelter on the London Metal Exchange: 550 tons on Monday, against 1,250 tons last week; 1,400 tons on Tuesday, against 1,300 tons last week; 900 tons on Wednesday, against 600 tons last week. Wednesday's quotation in East St. Louis was 5.00 cents per lb., against 5.00 cents the week before and 5.75 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipment during the current month was £14 17s. 6d. to £14 18s. 9d. per ton, against £15 10s. to £15 12s. 6d. last week.

TIN.—The tin market was even more disappointing than the other base metal markets this week. On December 10th, the I.T.C. decided to reduce the quota for the first quarter of 1938 from 110 per cent. to 70 per cent. of the standard tonnages. Bolivia, Belgian-Congo and Indo-China cent. of their arrears, plus certain additional tonnages up to an approximate total of 11,500 tons, in favour of Malaya, Nigeria and Dutch East Indies. Under these conditions total exports under the scheme are likely to reach 40,000 tons in the first three months of 1938 and the "outside" supply may reach about 6,000 tons. This prospective total supply of 46,000 tons compares with the apparent consumption in the first quarter of this year of slightly more than 50,000 tons. Although the cut in the quota was much larger than the market had expected, tin quotations declined this week and closed on Wednesday at £190 15s. per ton, a net loss of £4. The reason for this disappointing price trend, despite the lower quota, was the nervousness of the Singapore market in connection with the Japanese outrages in China and the great reserve of United States tin consumers who have covered the bulk of their requirements for the first quarter of 1938 at prices between £180 and £190. Unless American industrial activity revives, the tin market is likely to maintain its present weak appearance for some time to come.

Sales of tin on the London Metal Exchange: 550 tons on Monday, against 455 tons last week; 370 tons on Tuesday, against 280 tons last week; 115 tons on Wednesday, against 115 tons last week. The New York quotation on Wednesday was 43.37½ cents per lb., against 43.75 cents a week ago and 42.75 cents a month ago. Wednesday's official closing quotation in London for standard cash was £190 15s. to £191 per ton, compared with £194 15s. to £195 5s. a week ago. Stocks of tin in London and Liverpool at the end of last week totalled 1,989 tons, a decrease of 73 tons on the week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted on Wednesday at £100 per ton, and rolling billets at £102 per ton. Nickel, for home and export, was maintained at £180 to £185 per ton. Quicksilver, on the spot, was £13 to £13 0s. 6d. per flask of 76 lbs., the same as last week. Chinese antimony was quoted at £67 to £68 per ton, ex warehouse, as against £68 to £69 last week. Chinese wolfram for "December-January" shipment was quoted at 80s. to 85s. per unit c.i.f., as against 77s. 6d. to 82s. 6d. last week. Refined platinum was quoted on Wednesday at £7 12s. 6d. per ounce, compared with £7 12s. 6d. a week earlier.

TEXTILES

COTTON.—Manchester.—Although the tone of the market has continued quiet, some producers have reported more inquiry. In one or two directions business was slightly larger than in recent weeks. Greater firmness has shown itself. Raw cotton prices have shown a firmer tendency. Bullish features, however, are scarce, and apart from the enormous supply of raw cotton, consumption is tending to decline, especially in the United States. There is much discussion amongst the officials at Washington with regard to the details of crop control for next season.

Yarns have again moved off slowly and sales have not been equal to

half the production. The American Ring Yarn Price Agreement Committee has revised slightly the list rates, the changes being against buyers. In both the American and Egyptian sections there is determination to maintain margins, but owing to the small demand the owners of more mills are making arrangements to restrict output. Manufacturers of piece goods have not met with much encouragement, although possibly, in small lots, the turnover has been slightly better than in recent weeks. More manufacturers have been prepared to make price concessions rather than make to stock or stop looms. Some shippers to India have given out a few more orders, chiefly in bleaching and printing styles. Fancies have attracted a moderate amount of attention for several minor outlets East and West. Stocks of dear goods which cannot be moved continue to harass traders, and until these are reduced there seems to be little probability of any big buying movement. Home trade requirements have been limited.

JUTE.—Dundee.—Almost idle conditions prevail in the jute industry here. Buyers are showing extremely little interest in cloth and confine their purchases to the trifling lots. This has an adverse effect on yarns and then on raw jute, so that the market is being carried on under depressing circumstances. Calcutta goods have shown further weakness in recent days, and now 10 oz. 40 in. is down to 16s. 11d. for all positions December to June, with 8 oz. at 13s. 6d. December, 13s. 7d. January/March, and 13s. 8d. April/June. The Indian jute mills must be losing money at these low and uneconomical rates, but they go on producing and working the increased number of hours of recent months. Stocks of hessians in Calcutta have substantially increased lately, amounting to 173 million yards at the end of November, compared with 91 million yards at the end of July. They have now reached the highest point since September, 1931, and are having a depressing influence on prices. The "talks" between the Associated Mills and the non-member mills have not resulted in any favourable tendency towards an early settlement of the vexed question of working hours and the "outside" mills are apparently blind to the fact that an agreement on the matter would be very beneficial to them, as well as to the Associated Mills and also to the producers of jute goods in all countries. The keen competition to dispose of output in Calcutta naturally affects all markets, and Dundee manufacturers particularly have a hard struggle to keep going owing to the huge quantities of goods made in Calcutta which are sent to the United Kingdom as the only country where free import is allowed. Dundee interests are not allowing the question of a quota or tariff system to rest, and they are ready to make further representations to the Government for protection.

Raw jute has weakened a little because of larger imports into Calcutta. The full group of Daisee-2 3 is being offered here at £18 10s. and fairs at £17 7s. 6d., while Tossa-2/3 has been reduced to £19 15s. and fairs to £18 17s. 6d., December/January. There is a great lack of offers of white jute to Dundee this season, and prices are nominal at £22 for Firsts, £21 for Lightnings and £20 for Hearts, same shipment. Dundee's purchases of raw jute this season so far are only about half those of last season.

The market in jute yarns is slow, even at 2s. 1d. for common 8 lb. cops and 2s. 2d. for 8 lb. spools. In the absence of business these prices are nominal. Twist has been sold down to 3½d. for 3 ply 8 lb., but that is an exceptional price, as 3½d. is also being paid, while sacking yarns are named at 2d. for 24 lb. web and 3½d. for 8 lb. chains. Rove is firm at £21 for 48 lb. and £18 for 200 lb., but the finer yarns and carpet descriptions are very quiet and nominal.

Cloth remains very slow and the rates of 2½d. for 10 oz. 40 in. and 2½d. for 8 oz. are not being seriously tested. They are so much higher than Calcutta goods. Linoleum hessians and heavy goods are quiet. Holidays at the Dundee works at New Year, usually extending for 10 days, will be much longer this year.

GRAIN MARKETS

WHEAT.—The general level of prices is rather higher than it was a week ago, with Manitoba grades at a substantial premium. The tone of the markets is quietly steady. The Argentine crop has now been officially estimated at rather more than 200 million bushels—about 10 millions more than the market had expected—against 245 millions actually harvested last year. Meanwhile, threshing returns in Australia suggest that the final

out-turn may be as high as 170 million bushels, compared with 150 million last year.

On Wednesday last, "December" futures were quoted in Chicago at 94 cents per bushel, against 97½ cents the week before and 94½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba (Atlantic), ex ship, 58s. per 496 lbs., against 56s. last week; No. 2 Northern Manitoba (Atlantic), ex ship, 55s. 9d., against 54s. 3d. last week. According to the *Corn Trade News*, total shipments of wheat and flour last week amounted to 1,088,000 quarters, against 1,541,000 quarters in the previous week and 1,073,000 quarters in the corresponding week a year ago.

FLOUR.—Demand remains moderate and prices show little alteration. Wednesday's London quotations (excluding quota payments) were: Straight run, delivered home counties, 38s. per 280 lbs., as against 38s. a week ago; delivered inner London, 37s. 6d., as against 37s. 6d. a week ago. Manitoba patents, ex store, 38s. to 39s. 6d., as against 37s. 6d. to 39s. a week ago. Australian, ex store, 30s. to 31s. 6d., as against 30s. 6d. to 31s. 6d. a week ago.

BARLEY.—The market has been steady this week. Supplies of English malting descriptions are now very scarce. "December" futures were quoted at 59½ cents per bushel in Winnipeg on Wednesday, as against 58½ cents last week. Quotations for 448 lbs. in London on Wednesday were: "English feed," at farm, not quoted; "English malting," at farm, 55s. to 65s., as against 50s. to 65s. a week ago; Californian, ex ship, 49s. to 54s., as against 45s. to 55s. a week ago; Chilean, brewing, ex ship, 48s. to 49s., as against 45s. to 48s. a week ago.

OATS.—On Wednesday, "December" futures were quoted at 31½ cents per bushel in Chicago, against 31½ cents a week ago and 30½ cents

last month. Quotations in London, Wednesday: "English Black," at farm, 26s. 6d. to 27s. 6d. per 336 lbs., as against 26s. 6d. to 27s. 6d. last week; "English White," at farm, 26s. 6d. to 27s. 6d., as against 26s. 6d. to 27s. 6d. a week ago; mixed Canadian feed (Vancouver), landed, 24s. 9d. per 320 lbs., as against 25s. a week ago.

MAIZE.—Under the influence of an improvement in demand and a decrease in Plate shipments prices have advanced. "December" futures were quoted on Wednesday at 58½ cents per bushel in Chicago, against 54½ cents a week ago, and 55½ cents last month. Quotations in London, Wednesday: "Plate," landed, 31s. 8d. per 480 lbs., as against 30s. 9d. "Plate," ex ship, 30s. 6d., as against 28s. 9d. a week ago; yellow maize meal, ex wharf, was quoted at 48 per ton, as against 47 17s. 6d. last week.

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations for selected weeks in 1935-37:—

NEAREST FUTURE	Jan. 2, 1936	Dec. 31, 1935	Dec. 16, 1936	Dec. 30, 1936	Dec. 9, 1937	Dec. 16, 1937
Winnipeg (No. 1, Manitoba) — Cents per 60 lbs.	82½	84½	121½	129	119½	128
Chicago (No. 2, Winter) — Cents per 60 lbs.	96½	101½	134½	138½	97½	98

The visible supply of wheat in Canada amounts to 61,482,000 bushels against 61,696,000 bushels last week and 63,557,000 bushels in the corresponding week last year.

SALES AND PRICES OF BRITISH CEREALS.—The following table gives the estimated sale of home-grown wheat during the harvest years 1934-35 to 1937-38

	1934-35	1935-36	1936-37	1937-38
Estimated sales of home-grown wheat—				
1 week to December 11	Cwts. 380,540	Cwts. 352,153	Cwts. 280,690	Cwts. 258,996
14 weeks to December 11	6,477,139	6,547,020	5,232,344	5,322,420
Average price of English wheat per cwt.	s. d. 4 10	s. d. 5 9	s. d. 8 7	s. d. 8 8

The following is a statement showing the quantities sold and the average price of British cereals in the past two weeks, and for the corresponding weeks in each of the years from 1933 to 1936:—

Week ended	Quantities Sold			Average Price per Cwt.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
December 9, 1933	Cwts. 338,534	Cwts. 375,163	Cwts. 45,712	s. d. 4 7	s. d. 9 2	s. d. 5 3
December 8, 1934	380,540	312,573	41,241	4 10	8 7	6 8
December 14, 1935	352,153	325,391	32,811	5 9	8 2	5 10
December 12, 1936	280,690	389,768	61,967	8 7	9 4	7 1
December 4, 1937	286,985	399,771	43,700	8 9	13 1	8 6
December 11, 1937	258,996	326,987	42,968	8 8	13 2	8 4

OTHER FOODS

BACON.—Bacon has been a steady market this week. The official quotations (per cwt. for No. 1 Sizable) which formed the basis for dealings on the London Provision Exchange this week were: English, 97s.; Canadian, 89s.; Danish, 95s.; against 97s., 89s., and 95s. last week. Arrivals in London last week included: Danish, 14,234 bales; Canadian, 7,303; Dutch, 2,151; Lithuanian, 1,690; and Polish, 3,136; as against 14,263, 6,709, 2,585, 1,725 and 3,029 bales, respectively, in the previous week.

BUTTER.—Colonial butters were rather firmer on a temporary shortage of available supplies, and Danish also scored a further advance. Quotations (per cwt.) on the London Provision Exchange on Monday were: New Zealand, finest salted, 114s.; Australian, choicest salted, 113s.; Danish, 154s. to 155s.; compared with 111s., 109s. and 152s., respectively, a week ago.

CHEESE.—New Zealand and Australian cheese were a rather slow market this week, with other sorts steady. Quotations (per cwt.) on the London Provision Exchange on Wednesday were as follows: English to Cheddars, finest farmers, 94s. to 96s.; Canadian, finest coloured, 72s. to 74s., and New Zealand, finest coloured, 64s. 6d. to 65s.; against 94s. to 96s., 72s. to 74s., and 66s., respectively, a week ago.

COCOA.—A renewed decline in quotations occurred this week. The spot quotation in New York on Wednesday was 5½ cents per lb., as against 5½ cents per lb. last week. In London, on Wednesday last, good fermented 5½ cents per lb. last week. "December-February" was quoted at 24s. 3d. sellers new crop, Accra, c.i.f. Continent, against 26s. 3d. a week ago. Last week's per 50 kilos., c.i.f. London were as follows: Landed, 5,612 bags; movements of cocoa in London were as follows: Landed, 2,859 bags; delivered for home consumption, 10,088 bags; exported, 2,859 bags; stocks, 133,913 bags, against 103,737 bags a year ago.

COFFEE.—The London spot market again had a quiet tone. New York prices suffered a further fall, but were steady at the lower level. On Wednesday, Rio No. 7 (cash) was 6½ cents per lb. in New York, as compared with 6½ last week and 6½ a month ago. Movements of coffee in London last week were as follows: Brazilian, landed, 65 cwt.; delivered, 63 cwt.; exports, nil; stocks, 2,026 cwt., against 1,114 a year ago. Central and other South American: Landed, 1,428 cwt.; delivered, for home consumption, 1,751 cwt.; exported, 396 cwt.; stocks, 64,699 cwt., against 54,487 cwt. last year. Other kinds: Landed, 3,065 cwt.; delivered, for home consumption, 3,656 cwt.; exported, 211 cwt.; stocks, 59,160 cwt., against 89,713 last year.

EGGS.—In response to the spell of cold weather, the market has been firm. At Smithfield, on Wednesday, English (ordinary packing, Grade I, about 15-15½ lb.) realised 21s. 6d. to 22s. per 120, against 21s. 6d. to 22s. last week; while Danish (15½ lb.) made 17s. 6d. to 17s. 9d., as against 16s. to 16s. 6d. last week.

FRUIT.—Despite rather unfavourable weather conditions, business at Covent Garden during the past week showed a gradual improvement, according to *The Fruitgrower*. Fancy fruits and other Christmas lines—particularly tangerines—were rather short, and all regular lines showed a firmer tendency. The apple trade was fairly active, although English culinary sorts were not moving quite so well. Pears continued in demand. South African deciduous fruit met a good reception, peaches, apricots and plums all selling well. Hothouse grapes were a steady trade, with prices inclined firmer. Azores pineapples have been receiving more attention, selling

has gone by in comparative peace. The qualification is needed, for in Spain the civil conflict still rages in all its bitterness, and in the Far East Japanese aggression, endemic for six years past, has blazed up into a new and most destructive war. But neither the war in Spain nor the war in China has yet provoked an open conflict in which more than one of the Great Powers is engaged at the same time. This comparative peace has been bought only at the cost of still further retreats by the democratic Powers in the face of ever bolder aggression. We are thus still buying time, and history alone will be able to say whether our purchase has been a good bargain.

In the economic sphere also, 1937 has not precisely lived up to the expectations that were held of it twelve months ago. The surprises have, in the main, been on the unfavourable side. There were few people a year ago, for example, who realised that Stock Exchange values were then standing at their peak. There were few who foresaw the weakness that was to afflict the majority of commodity markets. There were few who predicted a

recession of industry and trade in the United States, which, on its smaller scale, has proceeded even more rapidly than the sensational slump of 1929. Yet in spite of these disappointments, there is enough and to spare in the economic record of 1937 for which to be thankful. For at least three-quarters of the year the expansion of enterprise has continued as fast as ever, and the check to further progress administered in the last three months of the year has so far been only a surface modification of widespread prosperity. Nearly a third of a million more people have drawn wages this Christmas week than last year, and the British people as a whole have more money to spend this Christmas than ever before.

There is ground, then, for thanksgiving this Christmas, even though there are possibilities in the future grim enough to appal any thinking man who attempts to outline the course of the next few years. But if, twelve months hence, we can say of 1938 as we now say of 1937 that the worst fears have not materialised, that in itself, in this troubled age, will be a source of Christmas comfort.

Eire

"RING out the old Free State! Ring in the new Eire, or, in the English language, Ireland," will be the message of the bells of Dublin on December 29th. For that is the day on which the new Irish constitution will come into force, and that is the full new title of the State which MR DE VALERA will rule.

The addition of a familiar English name was the work, not of those who drafted the constitution, but of the Dáil in amending it. Gaelic may indeed become the future vehicle of Irish thought and sentiment, but it was not for "Ould Eire" that the Irish political heroes, from WOLFE TONE to EAMON DE VALERA, fought and (many of them) died. So in the English language the Irish Free State becomes Ireland—a confusing nomenclature, since six of the thirty-two counties of Ireland are actually outside, but significant of the mood in which the whole new constitution has been framed. Article 2 of the constitution runs thus: "The national territory consists of the whole island of Ireland, its islands and the territorial seas." Article 3 provides that "pending the re-integration of the national territory" the laws of the Parliament now to be established shall apply over the same area as those of the Irish Free State. But the general terms of the constitution, from the declaration of "inalienable, indefeasible and sovereign" rights to the absolute prohibition of legal divorce, must be taken as applying, in the minds of its framers, to the whole of Ireland, including that portion which is in fact alienated and not sovereign.

The constitution, indeed, serves a declaratory as well as an operative purpose. The new organs of government that it sets up, and the rules it makes for their functioning, are in many ways less important than the expression it gives to Irish phobias and Irish dreams. It does not, in so many words, read Eire out of the British Commonwealth, though the only hint of continued membership is in the paragraph permitting the Government, in conducting its external relations, to use or adopt any instrument or method of procedure "used or adopted for the like purpose by the members of any group or league of nations with which the State is or becomes associated for the purpose of international co-operation in matters of common concern." But the constitution takes bell, book and candle to the English monarchy. With superstitious care it avoids calling the

bogey by its name, cumbrously assuming for "the people" the powers and rights exercisable in or for the Irish Free State immediately before December 11, 1936, by "the authority in which the executive power of Saorstát Eireann was then vested." The significance of the date is that on that day, when KING EDWARD VIII's abdication took effect, a Saorstát law was passed which relegated the Crown to the position of being nothing more than an instrument—and an optional one at that—of external relations.

It must not, therefore, be assumed that the new constitution is completely republican. It contains no mention of a republic, and the powers of the new President (who is to be elected for seven years with the right of re-election once) resemble those of a restricted constitutional monarch rather than those of most republican heads of States. He is even provided with a Privy Council in the shape of a Council of State, though this is only an advisory and not an executive body. The pattern of Bunreacht na Eireann is not the French or the American but the British constitution. Indeed, the President of Ireland has in many ways less legal power than the British King or a Dominion Governor-General; for he is more closely hemmed in by written and formal limitations on his action. For instance, he is left no elbow-room whatever in calling upon a statesman to form a Government, but under the constitution he must appoint his Prime Minister on the nomination of the Dáil.

Experience alone can decide whatever difficulties may be in store when the parties in the Dáil are nicely balanced, or when none of them has an absolute majority, or when parties themselves are split over rival personalities. Even now MR DE VALERA's party has no absolute majority, though he himself stands out so far above other personalities that the choice could not be in doubt. The system of proportional representation imposed by the new constitution makes a succession of parliamentary deadlocks far more likely under the Irish than under the British system, particularly if proportional representation becomes really effective through the enlargement of the constituencies. Powerful voices are being raised in Ireland to-day to urge that the corollary of P.R. in the Dáil elections is P.R. in the Dáil's choice of Ministers, and the abandonment of party

government. This may yet prove the inevitable by-product of the rigidities imposed upon the President by the new constitution—a possibility doubtless unforeseen by its draughtsmen.

Eire begins its fresh career with the Presidency in commission. Our contemporary, *Dublin Opinion*, in its Christmas pantomime scene, depicts the President as no more than a pair of striped trousers climbing the beanstalk to the land "above politics." But the mystery that has enveloped the choice of candidates must soon be dispersed, for the first President must enter upon his office not later than one hundred and eighty days after the constitution comes into force—that is to say, by June 20, 1938. A contested election (on the basis of the single transferable vote) might possibly be an exciting trial of Irish political trends. It must not be forgotten that MR DE VALERA's party received only 45 per cent. of the votes cast at the general election in July, or that the constitution itself was approved by a majority of only five to four, and by less than 40 per cent. of the total electorate.

This is not to suggest that the constitution itself, once in force, will be an object of envenomed opposition in Ireland by any but a few extreme republicans or die-hard imperialists. Englishmen, for their part, cannot be expected to like it, but they cannot help raising their hats to the ingenuity with which MR DE VALERA

and his friends have expressed their faith in constitutional terms while leaving the British and the Irish Redmondite minority to dream unawakened their dream of Ireland as an equal partner in the British Commonwealth. MR DE VALERA clamped his jaws upon the doctrine of external association in 1920, and has now at last swallowed his mouthful of it. But is the British Commonwealth relationship itself now more than external association? It is true that Ireland's new form of Government and declaration of rights may give rise to certain awkwardnesses in her relations with the Crown, with Great Britain and the rest of the Commonwealth. Such friction, however, is unlikely to be more troublesome than the checks and complications that lie in shoals within the new constitution itself. Unless MR DE VALERA hurries he may find that after December 29th his decision to recognise Italy's empire of Abyssinia will be challenged, not by the British Crown, but by the Irish Courts under the fine clauses of Article 29, which run: "Ireland affirms its devotion to the ideal of peace and friendly co-operation amongst nations founded on international justice and morality. . . . Ireland accepts the generally recognised principles of international law as its rule of conduct in its relations with other States." The postman, clearly, must not be tardy in delivering MR DE VALERA's Christmas message of peace and goodwill to the Palazzo Venezia.

Italy's Mineral Resources

LIKE Germany, Italy has embarked on a policy of self-sufficiency. The needs of national defence, the protection of Italian currency and trade, and the desire to develop domestic resources to feed a population encouraged by special inducements to breed and multiply are the reasons given for this campaign. Moreover, the application of economic sanctions by the League in 1935 to restrain Italian aggression in Abyssinia undoubtedly strengthened Signor Mussolini's resolve to achieve autarky at all costs; and prompted a more stringent control over Italian foreign trade and exchange transactions.

It is doubtful, however, whether autarky can be even moderately successful in Italy. Perhaps in agriculture some degree of self-sufficiency may be achieved, but the deficiencies of Italy's mining and metallurgical equipment set a well-defined limit to the success of her present policy. She has inadequate workable deposits of many essential minerals, of coal, iron ore and petroleum. She is largely dependent on foreign supplies of ferrous and ferro-alloy minerals.

The most marked shortage is of fuel. Italy needs nearly 12 million tons of coal every year, and her annual production of coal and lignite is less than one million tons. Eventually she hopes to produce about 4 million tons annually from Istria and Sardinia; but even then she will need to supplement her resources by imports. Mainly as the result of sanctions, supplies from the United Kingdom dwindled to 77,000 tons in the first half of 1936; and Italy now depends largely on Germany and Poland. The German supply of coal to Italy rose to 7.4 million tons in 1935 and 3.23 million tons in the first half of 1936. And an agreement with Poland to produce an import of 1.3 million tons took effect recently.

There is a similar deficiency of petroleum. Italy consumes 1½ to 2 million tons annually, and her production from home sources is only 20,000 tons; though she refines something like three-quarters of a million tons from imported crude oils. Intensive efforts have been made to encourage the exploitation of oil-bearing land and to increase production. Subsidies and bonuses have been offered, and the S.A. Azienda Nazionale Idrogenazione Combustibili was recently formed under State

auspices with a capital of 400 million lire. This company has two hydrogenation plants under construction at Bari and Leghorn to treat crude Albanian oil.

Italy's shortage of iron is equally striking. It became acute in the later months of 1936, when naval orders and oil contracts made large demands on the iron and steel industry. Normally the Italian production of iron ore amounts to only a half to three-quarters of a millions tons annually, and to make on an average just over two million tons of steel yearly Italy must import ore and scrap from abroad. Early in 1936 the Steel Scrap Buying Cartel was formed, because of a serious shortage of scrap largely due to Government restrictions on imports. Recently, however, all countries have found it difficult to obtain scrap, and Italy's import has fallen from one million tons in 1935 to 400,000 tons in 1936.

Italy is also dependent on imports for adequate supplies of ferro-alloy minerals. She produces only 25,000 tons of low-grade manganiferous ores annually, and needs 90,000 tons every year, which will not be met from home output even if the development of new mines in Cosenza and at Pisa is remarkably successful. In 1934 Italy imported 65,284 tons of manganese ore, and 49,122 tons in the first half of 1935.

Italy is no better supplied with precious metals. The gold production of Piedmont is no more than 80 kilogrammes a year; and the silver derived from Italy's base metal properties amounts normally to under 20 per cent. of her annual requirements. In spite of high hopes of Abyssinia as a producer of precious metals, it is probable that the geologists and mining engineers are right when they say that no workable gold or silver will be found there.

Thus the task of achieving self-sufficiency in fuel, ferrous minerals and precious metals is probably beyond Italy's powers of adjustment. On the other hand, Italy is more adequately endowed with non-ferrous and non-metallic minerals. Her production of zinc ore in 1935 had a metal content of about 53,000 tons, and her resources should satisfy Italian requirements for seven more decades. Cheap water power, high tariffs and substantial subsidies have in this instance been effective.

In 1935 total imports of 30,359 tons of lead came chiefly from Mexico and Spain, and Italy has only a few high-grade lead deposits. Nevertheless, although Italian mines are not yet capable of producing the tonnage of ore required by the smelters and for munition manufacture, domestic production has been increased by over 50 per cent. since 1933. Similarly, although Italy has no important copper deposits, she produces nearly 2,000 tons of cement copper annually, with a copper content of 75 per cent., from her copper-bearing pyrites. In 1935, in addition, she imported 88,000 tons, mainly from the United States, Chile and Portuguese Africa. But she is replacing copper by aluminium in the building, automobile and electrical industries.

Indeed, Italy's position is notably favourable in the production of aluminium. Her plants produce 36,000 tons of Al₂O₃ and over 15,000 tons of the metal annually. Bauxite ore is abundant in Istria and water-power is cheap; production has been enormously increased. There are large reserves on the Adriatic coasts and in the Appennines. Output figures are given below:—

	1913	1923	1929	1935
Aluminium (metric tons) ...	874	1,480	7,373	15,110
Bauxite (metric tons)	7,000	95,000	192,774	174,000

Moreover, experiments are being made to produce aluminium economically from leucite, found in practically unlimited quantities and yielding potash salts for agricultural purposes.

Italy is similarly well supplied with mercury and elemental sulphur. The improvement in prices and foreign demand since 1934 has led to a striking increase in mercury production and export. The Tuscan mines have an annual production of 1,500 tons, and the Idria mine of 500 tons, though this mine will soon be exhausted. As Italian consumption is only 100 tons a year, however, her importance in the world market for mercury has only an indirect bearing on her campaign for self-sufficiency. A similar position exists with regard to elemental sulphur, in the production of which Italy and Sicily are second only to the United States. Here the problem is one of export sales, marketing arrangements and world prices.

When all is considered, however, Italy is poorer even than Japan in her domestic supplies of strategic minerals. Intensive efforts have been made to find new

ITALY'S MINERAL PRODUCTION, ETC.

		(In metric tons)	
		Reserves	Domestic Production

minerals in Ethiopia, Somaliland and Eritrea. The Compagnia Mineraria Ethiopica with a capital of £215,053 has been formed to explore coal deposits in Italian East Africa, and about £130 millions have been spent since 1934 in African conquest and exploitation. The Institute for Industrial Reconstruction, initially founded in 1933, was reorganised last June and given permanent functions. A sum aggregating £11 millions was placed at its disposal, to enable it to take up new shares in industrial undertakings engaged in re-armament activities, or the development of Italy's self-sufficiency policy, or in the agricultural and industrial development of Abyssinia. At the same time the Iron Finance Company was formed with a capital of £9.7 millions, to which the Institute for Industrial Reconstruction will transfer its shareholdings in the Ilva, Terni and two other iron works. Last October the Italian Cabinet gave its approval to the imposition of a 10 per cent. levy on the capital and reserves of joint-stock companies. This is expected to yield nearly £50 millions, and is designed to defray part of the cost of the Abyssinian war, the economic development of Ethiopia and the prosecution of the re-armament programme. More generally, through the Ministry of Corporations, drastic measures have been taken to regulate mineral production and trade. Export premiums on zinc concentrates to increase lead output; the abolition of import duties on many raw materials; the licensing of imports over the whole range of metals and raw materials; and the devaluation of the lira; all these devices have been adopted to minimise Italy's deficiencies. In the long run, however, the most Italy can do—and the best—is to trade more freely. She cannot become self-sufficient.

A Year's New Capital

IT is more than a trite commonplace to say that the year 1937 was unlike all its predecessors in the new issue market. During its course a great deal of new money was borrowed, yet somehow the market never became really active. Four main factors shaped the mould in which the year's events were cast. In the first place, industrial production reached an all-time high peak. Secondly, interest rates rose perceptibly in the first half of the year, but achieved rock-like stability in the second half. Thirdly, equity share prices wavered, declined and, finally, slumped. And last, but certainly not least, the Treasury was not content with its rôle of point-duty policeman, but re-entered the gilt-edged market as a borrower on its own behalf, with the issue of the first *tranche* of its Defence Loan.

The tables set out on the next page show that the year's direct public offerings (our "old basis" figures, in Tables I and II) were almost identical with those of 1936, which were two and a half times as large as in 1931, the worst year of depression, but only a little more than two-thirds of those of 1928, the best pre-depression year. If the computation be extended to include all new capital in which Stock Exchange dealings were authorised, the total (Table III "New Basis"), it will be seen, was 7½ per cent. lower than in 1936, but 28 per cent. higher than in 1935. Of the aggregate amount of £458 millions thus arrived at, 84½ per cent. was destined for employment at

home, 14 per cent. for the Empire and a mere 1½ per cent. for foreign countries. The new domestic capital was shared almost equally between gilt-edged borrowers, like the Government, certain municipal authorities and public boards, and "other borrowers," who were mainly home industrial companies. The largest industrial borrowers were mining companies and iron, steel and engineering concerns. The "exploration, financial and investment trust" group of companies, however, easily outdistanced any other single group of non-Government capital raisers. And the stream of conversion issues (Table IV), after achieving torrent-like force in 1933-35, was reduced to little more than a rivulet.

There were, in fact, three sharply differentiated types of borrowers in the past year, who, between them, largely monopolised the market. The first included the British Government and its protégés. The Treasury found no new public works project, of national importance, to back with its guarantee, though the final instalment of London Electric Transport stock duly appeared in January. But it lost no time in issuing the first £100 millions of Defence Bonds, on an unreceptive market, after the opening of the Budget in April; and the passing of the Tithe Act had its sequel in the opening of Stock Exchange dealings, in August, in £46½ millions of Redemption Stock. Ostensibly, the Government is adamant in opposition to the conception of a National

Investment Board; actually, an increasingly important share of the new issue market is coming directly or indirectly under its control. In the past year its own creations of gilt-edged securities represented nearly one-third of the total of new securities of all kinds which received "permission to deal." In coming months the list will be extended by further issues for Defence and by the creation of anything up to £76½ millions of new stock for the purchase of mining royalties. If account be taken, also, of the fact that other gilt-edged domestic borrowers, like the municipal corporations, can make long-term offers to the public only on official "advice" as to amounts, times and terms, while all overseas issues require a specific Treasury visa, then it would appear (on the evidence of Table III) that approximately half the total new borrowing of 1937 has been subject to official direction in one form or another.

A second type of borrower, of which the public have, possibly, seen a little more than enough in 1937, has been the new company—usually of small size—whose creation is a function of contemporary Stock Exchange activity. The stream of speculative company issues has, however, tended perceptibly to slacken in recent months, and is unlikely to regain its earlier pace and volume in the absence of a marked revival in equity share dealings.

Finally, special comment may be reserved for an influential category of borrowers who never come to the issue market at all—established industrial and commer-

cial concerns who finance their capital extensions out of their own accumulated earnings. An approximate idea of their importance may be deduced from the fact that (Tables V and VI), out of £255 millions of new company securities to which facilities for Stock Exchange dealings were granted in 1937, only £100 millions were issued by means of a prospectus or offer for sale. The process of *internal* capital accretion is continuous—our records of industrial profits show that some 2,109 companies added £72½ millions to their reserves in the first eleven months of this year. Figures of capital which has obtained "Permission to Deal" afford no reliable measure of the extent of this class of "borrowing" in any one year; for a single bonus share issue may confer *de jure* status on capital which has been accumulating, *de facto*, over a considerable period. But of the growing importance of the custom of financing industry from within rather than from without, and of its far-reaching reactions on the public issue market, there can be no question whatever.

On page 663 we give a supplementary table, showing some of the largest individual offers during the past year. The conclusion suggested by our figures, taken as a whole, is clear. Given the probable continuance of relatively low interest rates and the absence of any striking recession in industrial activity, the extent to which new securities will be created in the near future depends largely on Government policy, on the one hand, and the decisions of company directors, on the other.

South American Republics

SOUTH AMERICA is sometimes described as the sixth continent. The name is apt. Geographically, the connection of the great triangular mass of South America with North America is slight. Politically, South America stands apart from the whole of the rest of the world. It is neither the home of Great Powers nor under their domination. With the exception of the three Guianas, the whole of the mainland is divided between ten independent republics, none of which is even remotely under the control of any external power. Argentina has many ties with Great Britain; Brazil has for many years had close relations with the United States; there is a traditional friendship between Chile and Germany; and all ten republics keep in close contact with the sources of their languages and culture, Spain and Portugal. But these relations are no more than the special ties of blood or interest which unite all sovereign states. South America was hardly at all brought into the Great War. Brazil did, indeed, formally declare war upon Germany, but her co-operation was not very active, and the other nine republics remained neutral. The continent is thus in a category of its own. Undeveloped but independent; sovereign but playing no part, active or passive, in the game of world politics, it is hardly remarkable that South America stands somewhat outside the main stream of world affairs.

In history, both before and after what we with our European arrogance call the discovery of America, the southern half of the great double continent was the senior partner. Before the coming of the *Conquistadores* the west coast at least was more thickly populated and far more advanced in civilisation than the areas which now form the United States. Moreover, the European discoverers turned their attention earlier and more thoroughly to the South than to the North. When the Pilgrims landed in Massachusetts Bay the Spanish system of vicerealties and *audiencias* was already almost a century old in the South. Why, then, is it that North America, with so late a start, has left South America so far behind?

The answer to this comprehensive question, and much else besides, can be derived from a most useful volume recently published by the Royal Institute of International Affairs.* This book, which grew out of one of the Chatham House study groups, brings together a mass of information which had formerly to be sought from an intensive reading of many authorities, and it will therefore by itself do a great deal to remove some of the ignorance of this vast area which afflicts many Europeans who are otherwise well acquainted with the world. Some explanation of the slow development of South America can be found in the methods pursued by the Spaniards. Not only was the political administration closely centralised, but trade was also confined to very narrow channels. It was not until 1778 that permission was given for direct trade from Buenos Aires to Spain; until then the only permitted route was the long and incredibly difficult trail along and across the Andes to the isthmus of Panama. When Boston, New York, Philadelphia and Charleston were already flourishing ports, the great River Plate saw only one ship in every six weeks.

Rigid mercantilism, however, must not be exclusively blamed for what is largely geography's fault. South America lacks all North America's advantages. In minerals, despite all the wealth of the Incas, it is very poor. Its greatest width is in the tropics, where intensive development is impossible. The interior of the continent is as inaccessible as the Middle West is open. The Andes, the longest and, save for the Himalayas, the highest mountain chain in the world, impose an insuperable obstacle to any lateral circulation. As a result, the republics are still very largely composed of coastal or river settlements, isolated from each other by

* "The Republics of South America." Oxford University Press. 374 pages. 21s.

distance. They all trade outwards with the rest of the world rather than with each other, and in almost every case it is easier to get from the chief port of a country to Europe than to many parts of its own hinterland. Only in Argentina has there been anything approaching intensive development, and Argentina is more favoured than her neighbours by her temperate climate and by the extent of her flat and fertile pampas.

In spite of this isolation, there are surprisingly many similarities between the different republics. Brazil is an exception to many of the generalisations: she is the only Portuguese-speaking republic, the only one which has experimented with monarchy. But even in Brazil the underlying forces of geography and history work out in the same patterns as in the other states. Politics, for example, has its local variations. But everywhere there is the dominance of *personalismo*, the mixture of democratic forms with the individual authority of the *caudillo*, which leads to endless revolutions and *coups d'état*. In all the republics the basic issues of politics tend to be the same. The land and its ownership, the political battles between *Liberales* and *Conservadores* have nearly always hinged on one or more of these controversies.

From the long-term point of view, the most interesting question for South America is that of population. The present composition of the population varies much more than most Europeans realise. Ecuador, Peru and Bolivia are predominantly Indian countries. The small half-breed or *mestizo* population in each country has played the largest part in running these countries hitherto, but the Indians are becoming politically conscious and these three countries may well develop along the same lines as Mexico, where Indian emergence and agrarian radicalism walk together. The *Aprista* movement in Peru, which seems to be taking the lead in this direction, is one of the most interesting and original of all the world's revolutionary ideas. Venezuela, Colombia and Paraguay are all, in varying degrees, *mestizo* countries. Chile must also be classed as a *mestizo* country on any rigid definition. But there is a stronger white strain, and in addition the Araucanian Indians in other parts of the continent, and the Chilean *mestizo* is of a noticeably more enterprising character than in the other states. Argentina and Uruguay are the only countries in which the white descendants of European blood, though later immigration into Argentina has brought elements other than the Spanish, among whom ethnographic classifications. It is the true melting-pot, in which white immigrants of all nationalities are mixed and remixed with Indians, Negroes and Japanese.

For many years to come, South America will be economically dependent on the outside world. In each republic, with surprising uniformity, the national economy depends almost entirely upon the export of one or two agricultural or mineral products; meat and grain in Argentina, coffee in Brazil, copper and nitrates in Chile, oil in Venezuela, and so forth. There is no industrialisation, and no possibility of more than the most artificial industrial growth. The region of Buenos Aires, the great Southern Chicago, is the only exception to this generalisation, and also the only area where there is enough indigenous accumulated wealth to finance the growth of enterprise. Not even Argentina, however, is entirely free from the need for foreign loans which, for the other countries, will remain an absolute necessity.

Thus for commercial and financial reasons, if not political, the English-speaking nations and the South American republics will continue for many years to have need of each other. All the more desirable is it that they should increase their mutual knowledge and appre-

Notes of the Week

Parliament Adjourns.—In the closing stages of the session's first term the time of the House of Commons has been very much taken up by the Committee stage of the Government's Coal Bill. Amendment after amendment by Labour members to secure some material benefit for the miners, either directly from the moneys voted for the purchase of royalties or by extending the powers of the proposed Coal Commission, has been refused. The purchase money has been defined by Government spokesmen as arbitrated compensation and therefore as not available for pensions or miners' welfare. Nor will it be the Commission's function to engage in coal mining or even in searching and boring. The Bill has so far been preserved largely intact, and the House adjourns for Christmas, not to return until February 1st, with the feeling that, in this measure and the Air Raid Precautions Bill, two of the hardest nuts of the session have been cracked. So far, however, the Films Bill has not proved so susceptible to straightforward piloting, largely perhaps because Government steersmen have shown an odd willingness under pressure to take new bearings and to depart from any steady course. The Special Areas may prove to be a dangerous rock in the middle distance, if unemployment becomes worse, though the Commons debate on December 16th showed the Opposition to be very little better equipped than the Government to draft a positive and specific policy. At any rate, the shadows likely to cast most gloom over the Government's Christmas, apart from the standing dangers of foreign events, are those of the Budget and electricity supply. The Opposition has made no ground since October. The Government's strongest opponents, in fact, appear to be the vested interests on the one hand and the possibility of trade recession on the other.

The Commons Debate Foreign Affairs.—The debate in the House of Commons on Tuesday on the perennial subject of foreign affairs added very little to the information available to the public. The Government apparently consider that the present is not one of the times when "appalling frankness" is the best policy. But if the debate elicited few facts it did do something to define attitudes a little more clearly. The Government still keep the League of Nations on their banner, but they are becoming steadily more explicit in their confessions that they do not propose in present circumstances to implement the full theory of the League—namely, that Great Britain should play her part in maintaining peace

and the rule of law all over the world and rely, in her turn, on the collective strength of the League's members for her own safety. This policy, as preached by the Opposition, the Prime Minister condemns as likely to lead to war, and in its place he is pursuing a policy which on both sides is much narrower. Its objective is confined to the defence of British territory and its resources are also limited to British arms, aided by a close co-operation with France. The weakness of the official policy is that while deploring the weakness of the League it does nothing to restore its authority. This was the omission that was made good by Mr Winston Churchill in the most statesmanlike speech made on either side of the House. Mr Churchill sees clearly the vital point that the League of Nations is not, for Great Britain, a piece of quixotic generosity to other countries, on which we are forced to retrench in difficult times, but an essential guarantee of our own safety. The whole of our policy, whether in firmness or in concession, should therefore be directed to the reconstruction as soon as may be of a system in which there is an overwhelming preponderance of force behind the concept of international law and order.

Italian Propaganda.—Tuesday's debate showed varying feelings towards Germany, but an almost unanimous resentment against the methods pursued by Italy. At question time on the previous day, Mr Eden declared that His Majesty's Government were well aware of Italian propaganda in the Near and Middle East and that an improvement of relations between the two countries would be impossible so long as it continued. It is high time that the British Government began to take a firm line in this matter. Italian propaganda in the Arabic world has been notorious for some time past. It suits the Italian book to pretend that Signor Mussolini is, as he claims to be, the "Protector of Islam," and it may be that this patent falsehood takes in some of the more thoughtless Moslems of the Near East. But the real object of the propaganda is to make trouble for Britain and France and to further Italy's ambitions of expansion, the end of which would be the subjection of the Arab peoples to a domination beside which British or French rule would appear the mildest liberalism. The British authorities are already defending themselves against this flood of misrepresentation and mendacity by supplying their own broadcast news service in Arabic. But it is a question whether self-defence should not pass over into retaliation. Rome broadcasts in English; why

should not London, or Malta, broadcast in Italian? Propaganda, after all, is a far more deadly weapon when it is used against people who are forcibly kept in ignorance.

* * *

Rent Restriction Report.—It is not always realised how much of the wartime system of rent restriction still remains. According to figures collected by the Inter-Departmental Committee (whose report, foreshadowed in *The Economist* last week, has now been published), there are still 5,190,000 controlled houses in Great Britain, as compared with 2,926,000 decontrolled houses and 3,569,000 "new" houses (i.e. those built since the war). The larger or Class A houses were decontrolled in 1933. Class B houses at present remain under control until there is a change of tenancy; Class C are under complete control. The main recommendation of the Committee is that a definite time-table should now be set for the ending of control in England and Wales (but not in Scotland, where the shortage of houses is still acute). The larger Class B houses are to be decontrolled immediately and the smaller Class B houses amalgamated with Class C to form a single controlled class. Control is to be removed from this class stage by stage, the speed of the process in any area depending upon the local shortage of houses, as shown by the overcrowding percentage. But in every case control is to be removed by 1950.

* * *

The Liberal and Labour members of the Committee dissent from this recommendation, the former in a reservation, the latter in a Minority Report. They argue that it is impossible to foresee the future accurately enough to lay down a time-table for a dozen years ahead and that, in any case, the absence of statutory overcrowding does not necessarily mean that the removal of control would not lead to a rise in rents. The whole problem is clearly of great practical difficulty. On the one hand, it is impossible to find any logical justification for the artificial lowering of the rents of some houses while others are left entirely uncontrolled. But on the other hand it is an undeniable fact that if decontrol means the raising of rents it will cause widespread hardship. There are dangers in a rigid time-table, but the absence of one may mean that control will drag on indefinitely. On the whole, the best solution would seem to be that suggested by the two Liberal members—namely, that control of the new consolidated Class C should be maintained for a further five years and the position then re-examined.

* * *

What Next in China?—The occupation of Nanking and the attacks on the British and American warships in the Yangtse mark the end of the first act of the tragedy that is being played in the Far East as a result of Japan's embarkation upon her vast military adventure. The original Japanese plan was that the tragedy should be a one-act play which was to end, at this point, in leaving Japan the sole remaining actor on the Far Eastern stage. Upon the fall of Nanking, Chiang Kai-shek was to have collapsed. He might be deposed from power by colleagues who believed the Japanese story that China's game was up, or he might anticipate deposition by resigning the independence of China into the Japanese Government's hands and lingering on as a Japanese puppet. But, in one way or the other, he was to be eliminated. The British and Americans, again, were to have evacuated China bag and baggage when the Japanese attacks on their warships faced them with the prospect of finding themselves implicated in hostilities with the Japanese armed forces. As it has turned out, however, none of these convenient exits from the stage has been opened. Mr Cordell Hull has announced that under present conditions there will be no withdrawal of American warships from Chinese waters. Our own Government are appointing a new Ambassador as a symbol of their determination to stay in China. As for President Chiang Kai-shek, he has announced his determination to fight it out; and he appears to have the power to do so. The blowing up of the Japanese mills at Tsingtao is

a gage of defiance, and at the same time a proof that for the present the Chinese no-surrender men have the upper hand over the defeatists. Meanwhile, the Japanese are speaking to China in two discordant voices. General Matsui talks of a pause in the military operations, in order to give President Chiang the time to make, after all, the exit which the Japanese have planned for him. With another voice Tokyo threatens fresh military advances into the vastness of the interior and sends warships and troopships to the neighbourhood of Hong Kong. Will the Japanese now overrun Shantung? And Canton? And the Upper Yangtse Basin? The Chinese hinterland is as spacious as the sky itself; and behind China stretches Russia. For a frost-bound Japanese expeditionary force it is a chilly prospect.

* * *

America and Japan.—American indignation over the "Panay" incident has not abated during the past week. Rather has it been increased by the gradual accumulation of details which tend to put the Japanese attack in an even less excusable light, by the delay of Tokyo in sending any reply to the American Note and by the attempts on the part of the Japanese military authorities at Shanghai to deny what is amply vouched for by eye-witnesses. It would be a mistake to think of the affair as changing the foreign policy of the United States; but it would be equally mistaken to overlook the fact that it is calling to the surface many emotions which have hitherto been latent in American opinion. One of the most striking manifestations of this fact is the letter sent to President Roosevelt by Mr Alfred Landon of Kansas, his opponent in last year's presidential election and the titular head of the Republican party. Mr Landon wrote to offer his full support to the President in his foreign policy, believing that "politics cease at the water's edge." He, a Republican and a Middle Westerner, went out of his way to oppose the proposed amendment to the Constitution which would take the power of declaring war out of the hands of Congress and confide it to a popular referendum; and he also rebuked those members of Congress who give the impression that America either will not or cannot fight in any circumstances. The President, in his reply, was even more specific, saying "throughout our long history we Americans have rejected every suggestion that ultimate security can be assured by closing our eyes to the fact that, whether we like it or not, we are part of a large world of other nations and peoples." Thus the Japanese are sedulously doing the work of all those who see in America's awakening to her position in the world the chief hope of countering Japanese, and all other, aggression.

* * *

A Congressional Defeat.—At the time when Mr Roosevelt's foreign policy is receiving notable evidence of wide support in American public opinion, his domestic prestige is sinking lower. The special session of Congress that he summoned in November has now adjourned without accomplishing most of the tasks he set it. On housing alone good progress has been made and if cheaper and easier finance can stimulate house-building, the way will be open early in the New Year. Each House of Congress has produced a Farm Bill and the task of accommodating these differing versions with the Administration's wishes proceeds in Committee. On the other hand, the Wages and Hours Bill, which is the major Administration measure of the session, has been buried again in Committee. It is opposed by a coalition of Republicans and Southern Democrats. The former dislike it because Business dislikes it, the latter because it would remove the advantages derived by the Southern States from their cheaper labour. But both these sections of opinion are increasingly hostile to the whole economic philosophy of the New Deal. They are the coalition that defeated the plan for the reform of the Supreme Court and they look like being a permanent Opposition, with control of Congress, as long as Mr Roosevelt stays in the White House. The prospect is uninviting for him, and Wall Street has marked the fact with an appreciable rise.

Civil Aviation.—After the heated controversies of the last few months about the efficiency and policy of Imperial Airways, the objective Report on the Progress of Civil Aviation in 1936, published on December 20th, is in the main refreshingly unprovocative. Special attention is given to the rapid development, in quantity and in quality, of the meteorological services provided for civil aircraft, and to the large increase in air mail from Great Britain. Some 341 tons of letters were carried in 1936, compared with 187 in 1935. A non-surcharged air-mail service to South Africa has now been in operation for six months, and when this system is extended to India, Burma, Malaya and Australia there will be, in all, 19 such services every week. Of the 42 accidents to registered aircraft causing death or serious injury in 1936, about half are stated to have been due to errors of judgment or faulty airmanship; and it is perhaps comforting to learn that none caused serious injury to persons on the ground. The Report says little about equipment or aircraft design. One comment is, however, important. The number of aircraft equipped with wireless increased by only 12 per cent. in 1936, and it is claimed in the Report that the employment of two-way wireless communication for the prevention of collisions has reached the limit of its effectiveness. "A directly operating anti-collision device is called for," and has not as yet been discovered. There will be some disappointment that the Report makes no authoritative statements about de-icing equipment and other problems of safety technique and design which have been publicly debated of late. Within its limits, however, the Report is an excellent record of progress achieved, which might have been greater but for the pre-occupation of aircraft designers and producers with military requirements.

* * *

Shipping and the Balance of Payments.—The exercise of judgment or guess-work in statistical matters belongs to the primitive and pioneering stages of numerical inquiry. Today, half a century after Giffen made his first reference to invisible exports before the Royal Statistical Society, rough and ready methods ought to have no place in the official assessment of Britain's balance of international payments. Five years ago an exact inquiry into Britain's total export of shipping services in 1931 revealed a total of £73,000,000. This differed scarcely at all from the estimate of the Board of Trade which, including an expenditure of some £9 or £10 millions by foreign ships in British ports, amounted to £80,000,000. This year, however, a further voluntary inquiry relating to 1936, undertaken by the Chamber of Shipping, shows a startling discrepancy between its provisional results and the Board's latest estimate. As Dr L. Isserlis pointed out to the Royal Statistical Society on December 10th, the final total of the net earnings of British shipping in 1936 is likely to be about the same as in 1931, namely, between £70 and £75 millions. The Board of Trade's estimate for the same year was £95 millions. The latter figure includes an unstated amount for the expenditure of foreign ships in British ports, but it is wildly improbable that these receipts have doubled since 1931. The presumption is that the official guess is too high, and like the official estimate of income from overseas investment, recently revealed as exaggerated by Sir Robert Kindersley, must apparently be revised downwards. It is disquieting, to say the least, that in a matter which so closely affects the public interest, guess-work, informed or otherwise, should have any place at all. There will be every sympathy for the Board of Trade's officials, who, in the absence of fuller opportunities for authoritative and independent investigation, are virtually compelled to fall back upon the unsatisfactory device of annually writing up—or down—the figures established, at some earlier date, by private inquirers. The figures of the British balance of payments have long ceased to be a statistician's hobby; they have become an essential part of the nation's commercial and financial equipment and even a deciding factor in the Government's policy on trade and fiscal matters. There is a strong case for the

setting up of a full-time bureau at the Board of Trade, charged with the duty of producing reports at least as detailed and accurate as those of the Commerce Department of the United States Government.

* * *

Ludendorff and Kellogg.—Death, the great satirist, seldom produces such a sardonic juxtaposition as this week, when successive days have brought the deaths of General von Ludendorff in Munich and Mr Frank B. Kellogg in Minneapolis. Ludendorff was not only one of the greatest generals of the age; he was also—what many great generals are not—a man of war. Not for him the apothegm of that other great strategist, Sherman, "War is Hell." On the contrary, war was to him a thing good in itself, and he even, in his old age, turned against Christianity because it was a creed of peace. Kellogg's name, on the other hand, stands to the world for an attachment to peace which was as idealistic, but made as little allowance for human psychology, as did Ludendorff's attachment to war. Both men died failures. Ludendorff could not persuade the man in the street to like war, and Kellogg could not persuade the men in the chancelleries to forswear it. Yet both men have their disciples. Most of the world would gladly follow the American lawyer in abandoning force as a means of settling international disputes. But in Ludendorff's country and in Italy and in Japan new doctrines are growing up which do not yet dare to assume the full pagan blood-thirst of war worship but clearly spring from the same notions that occupied the general's years of embittered retirement. Sooner or later the world will have to choose between Kellogg and Ludendorff.

* * *

M. Delbos's Tour.—M. Delbos is now back in Paris after a Central European tour which ended at Prague after having taken the French Foreign Minister through Berlin and Warsaw to Bucarest, Belgrade and Budapest. If we try to sum up the points of likeness and difference between the respective receptions with which M. Delbos met at Belgrade (which we chronicled last week) and later at Prague, we may put it that, while the Yugoslav public may not have been much less enthusiastic for its French guest than the Czechoslovak public has since shown itself to be, this unofficial enthusiasm was fully shared in Czechoslovakia by the Government. The point is important because M. Delbos's task in Prague had its delicate side. No doubt his efforts to improve relations between Czechoslovakia and Poland were as welcome in the former country as they were unpalatable in the latter. But asking the Poles to feel more kindly towards the Czechs must have been at any rate not quite so difficult for M. Delbos as his final task of asking the Czechs to behave more kindly towards the Sudeten Germans. Nevertheless, the French Foreign Minister did, it seems clear, make some tactful representations on this subject at Prague; and, with the Czechoslovak Government's concurrence, he also had interviews with several members of Herr Henlein's Sudeten German Party. The problem here broached is a difficult one in itself, quite apart from the strong feelings that are excited by it. For account has to be taken of two desiderata which may not easily be reconcilable. On the one hand, if Czechoslovakia is to have a prospect of

obtaining British as well as French support—and it might be a question of either both or neither—in the event of an attack upon her by Germany, it is vital that she should have previously given evidence of having genuinely done her best to give her minorities a fair deal. On the other hand, if the Czechoslovak Republic is to make sure of putting up, against the German attack if it comes, the most effective military resistance in its power, it is essential for it to retain unimpaired military control over its frontier districts—and in Czechoslovakia frontier districts and minority districts are synonymous.

* * *

French Production Proposals.—The general lines of the Report of the Committee of Inquiry into Production in France, published on December 16th, were as expected. The Report points out that, whereas in Great Britain and Germany the production of 1929 has been exceeded by 25 and 20 per cent. respectively, in France output is still 20 per cent. below the level of eight years ago. This lag has seriously hampered the Government's efforts to restore the equilibrium of France's foreign trade and public accounts. The Committee recommend the elimination of waste in industrial organisation and technique; the provision of medium-term credits through the banks for industrialists and, especially, for exporters; and the modification of the forty-hour week in practice, while retaining the principle. In industries behind with production, certain basic industries, and industries concerned with national defence, the Committee advocate the working of overtime at appropriate rates of payment. The Report repudiates any suggestion that equipment of French industry is deficient in any serious respect, but recommends the speeding-up of replacements in farming, coal-mining, the metal trades, the silk industry and the mercantile marine. Markets at home should be developed by the reduction of costs, and markets abroad by the extension, through the State, of credit facilities. The gist of the proposals is a plea for improved organisation in trade and industry, and better co-operation between employers, employees and the State.

* * *

Teruel Captured.—The world has been waiting for many weeks for the much-threatened offensive in which General Franco was to employ against the main Government line the troops released by the successful conquest of the Asturias and the Basque Provinces. The offensive, predicted in turn for the north, the centre and the south, has never materialised. But while waiting the Government troops have carried out a very successful operation against the town of Teruel, which for many months has stabbed into their side at the point of a long rebel salient which came within eighty miles of the Mediterranean. The attack began, with all the suddenness of surprise, about December 15th. Teruel was cut off from the main insurgent territory and while the Government forces held off attempts to relieve it, they invested and attacked the town, which fell to them on the 21st. This is an important success. Teruel was a considerable danger to the Government, as it might at any time serve as the sally port for an advance to the Mediterranean which would divide Barcelona from Valencia and Madrid. But even more important than this strategic gain is the fact that, for almost the first time since the war began, the Government army has taken the initiative and pressed an attack to a successful conclusion. The long series of rebel successes has inevitably created the impression that the two sides in Spain are of unequal fighting capacity. The capture of Teruel will go some way to correct this impression.

* * *

Constitutional Crisis in Egypt.—In Egypt within the last few days the Crown and the Wafd have come into collision again. In part it is a familiar story, with

a mere substitution of the young King Farouk for the old King Fuad. The formal occasion of the conflict is one that has come up before. A constitutionally appointed Ministry, resting on a parliamentary majority which has been legitimately obtained in a general election, is introducing legislation which would have the effect of making it difficult, almost to the point of impossibility, for the Crown to put and keep in office a Prime Minister who did not enjoy the support of the Chamber and the country. The present King of Egypt is showing a disposition to oppose this move, as his father opposed it, not unsuccessfully, in his day. If the Cabinet will not yield, the King is credited with the intention of dismissing his Ministers and appointing a new Government, which would dissolve the Chamber and seek the support of the country. The situation in Egypt, however, is no longer what it was; for the change of person on the throne has been followed by a political change of greater moment. The successful conclusion of the Anglo-Egyptian treaty of last year has released Egyptian domestic politics from the former absorbing pre-occupation with the single dominating question of Egypt's relations with a particular foreign country. In the old days the British hold upon Egypt was supposed to tell in the Egyptian Crown's favour against the Wafd, for it was thought that Great Britain would be unwilling to countenance anything in the nature of a revolution in Egypt at the Crown's expense. But was the British factor really altogether prejudicial to the Wafd? After all, it was British intransigence that made the Wafd's fortune. It was as the champion of a supreme national interest of Egypt against a domineering foreign Power that the Wafd was able to put forward, and largely to make good, its claim to be no ordinary domestic party but a Pan-Egyptian patriotic movement with a moral title to the allegiance of every son and daughter of the land of Misr. It remains to be seen what will be the future of the Wafd now that its British *raison d'être* has disappeared from the Egyptian political stage.

* * *

Purge Unending.—The new Russian "democracy" has been baptised in blood. It has now been announced that four days after the elections eight high officials were shot. They included Karakhan, a former Vice-Commissar for Foreign Affairs and Ambassador to Turkey, Yenukidze, former Secretary of the Central Executive Committee, Orakhelashvili, former Prime Minister of Transcaucasia, and five others of only slightly less exalted rank. Karakhan and Yenukidze were executed without any recorded trial, secret or otherwise. With each batch of executions there is a fresh period between the issue of the approved list of unopposed candidates for the election and the election itself, thirty-seven of them had to be removed. This substitution, it appears, violates the letter of the new Constitution as much as the refusal to allow any opposition violates its spirit. It seems probable that a large part of the reason for the elaborately stage-managed peoples of the West. If so it is strange that the rulers of Soviet Russia attach no importance to the intense horror and disgust that fill even many who would most like to be their friends at the steady continuance of this brutal blood-bath. Any attempt to understand or explain it has long since been abandoned. A treasonable plot, if it ever existed, cannot possibly have been so widespread. The only rational conclusion is that Stalin, like some demented Oriental tyrant, is butchering all but the most prius dementat. By making the Nazis look like angels of mercy, Stalin is doing more harm to his cause than any of his enemies.

* * *

Voluntary Co-operation in Shipping.—The end of 1937 will see the final winding-up of the schemes inaugurated in 1934 to alleviate the distressed state of British shipping. Early this year, the "scrap and

build" programme was abandoned for lack of scrap tonnage; and on December 31st the subsidy to tramp shipping in relief of freights, extended for a further period by the Merchant Shipping (Continuance of Subsidy) Act of this year, will automatically come to an end. No subsidy will be paid in respect of 1937 since, despite the steep decline in freight rates in October and November, freights have run considerably above the average of 1929, the normative figure for purposes of relief. Though the subsidy will cease to be available, the tramp shipping industry will not enter unprotected and unguarded upon a falling market. In anticipation of its own demise with the end of the subsidy, the Tramp Shipping Administrative Committee made proposals in September last for the collaboration of tramp ship-owners under the more exposed conditions of 1938. Their recommendations for voluntary co-operation in the maintenance of minimum rates, in the limitation of the amount of shipping going to particular ports, and in the observance of specified wages and conditions of work were, broadly, accepted by the industry in October.

* * *

This autonomous creation of control over British shipping has now been placed on a wider base and made correspondingly more effective. At a meeting of the International Shipping Conference on December 17th, the representatives of twelve countries, met to consider the possibilities of maintaining the world co-operation instituted in 1935 (concurrently with the British subsidy), approved the British scheme of voluntary co-operation for international application. Co-operation to be effective must assuredly be international; and on that ground the new agreement is welcome. Similarly, any scheme designed to obviate the waste and chaos of cut-throat competition on the high seas, and to maintain reasonable standards of profit and remuneration, in the face of disturbed world conditions and falling commodity prices, cannot, in general, be adversely criticised. Nevertheless, the consumer's interest is no less important than the producer's; and a quasi-monopoly of this kind, unless wisely and generously exercised, is dangerous. It is, in any case, doubtful whether this agreement, in either its national or still more, its international aspect, would be able fully to withstand the pressure of adverse circumstances if bad times were ever to return.

* * *

Outlook for Building.—For many months investors and business forecasters have been discounting a substantial decline in building activity. These anticipations have not yet materialised and, in fact, new high records of employment have recently been achieved by the industry. With the publication this week of the November building plan figures, however, fears of a coming slump in building have increased. How are the industry's prospects to be assessed? The aggregate value of the plans approved by 146 local authorities since the end of March is some 10 per cent. below last year's corresponding total—and the reduction in November was 14 per cent.; this is clearly a serious bear point. A further unfavourable factor is the movement of costs. Structural steel prices have been stabilised at a high level, cement has just been advanced by 3s. per ton, and the rise in the cost of living is sufficient to justify a further increase in wages under the industry's sliding scale next February. Thus, while timber prices may decline, the general level of costs is likely to be higher next year than this. On the other side of the picture, it must be remembered that the Ministry of Labour's plan figures do not tell the whole story. Assuming that they constitute a fair sample of plans passed for private work, they still exclude Government contracts. There is reason to believe that Government work will continue to increase at least in the early months of 1938, though he would be a bold prophet who held that this increase will be sufficient to offset for any length of time the inevitable decline in private work. The conclusion seems to be that a gradual decline in total building may be expected next year. Naturally,

however, a Government decision to embark upon a public works policy—as has been urged by the Building Industries National Council—or to accelerate slum clearance, would greatly improve the outlook.

* * *

Changes in Employment.—The December issue of the *Ministry of Labour Gazette* contains an analysis of changes in the number of insured persons employed between 1936 and 1937, by industries and geographical areas. For example, the greatest proportionate increase in employment was in Wales, where the number of insured persons employed last June was 13.0 per cent. greater than a year earlier. Coal-mining, which was largely responsible for the improvement in Wales, gained more in employment than any other single industry. In general, the increase in employment was more marked in the metal trades than in the consumption goods industries. For example, engineering, motor vehicle, cycle and aircraft manufacture, the electrical, iron and steel and other metal trades, and shipbuilding and repairing were responsible for about one-third of the total increase of 670,000 in the number employed between June, 1936 and 1937. We hope to publish an extended discussion of these figures shortly.

* * *

Increased Output of Coal.—The production of coal in November was higher than in any month of 1937 except April. Output rose from 20,372,000 tons in October to 21,207,000 tons in November, compared with 21,740,000 tons in April:—

These results square, as expected, with the excellent record of employment in coal mines in November (recorded in a Note in *The Economist* on December 11th on page 524), and bring output considerably above that of a year ago, when the November figure was 19,211,000 tons. As recorded in the Trade Supplement published with this issue, cold weather and the approach of Christmas caused improvement in the demand for house coal.

and demand for industrial grades was strong. The industry as a whole is experiencing the usual seasonal fillip, but, while the general outlook is fairly promising, a decline in export business in November, compared with the previous month, was a disturbing factor.

Divergent News from Industry.—The approach of Christmas has brought a lull in business activity. For example, transactions in iron and steel have shown a decline, though the pressure for the delivery of materials remained fairly strong. The coal industry has benefited from the cold spell, and collieries have been working hard to raise as much fuel as possible before the holidays. Thus, the output of coal rose from 5,090,700 tons during the week ended December 7th to 5,134,300 tons during the following week, against 4,944,800 tons during the corresponding period a year ago. The November returns of the value of building plans passed by 146 local authorities are disappointing in that they show a reduction of 14 per cent. on the corresponding month in 1936. An important event of the past week was the decision of Courtaulds to raise rayon yarn prices by ½d. to 3½d. per lb., according to quality. This step marks a significant change of the policy of the biggest producer in this country whose aim hitherto has been to cut prices as much as possible in order to retain its ascendancy in the industry. The improvement in the wool textile trade has been sustained so far by the firm trend of raw wool prices. New business in other goods has also shown expansion as a result of the rise in raw cotton prices. Recent developments in the various branches of activity are discussed in greater detail in the *Trade Supplement* published with this issue of *The Economist*.

Trend of Beer Production.—The accompanying diagram shows the trend of beer production in this country during the past ten years. As monthly figures are not available prior to 1934, monthly averages of quarterly returns have been used for 1927-33. Since the war beer consumption in this country has shown a secular downward trend. During the depression the fall in consumption was hastened by the growth of unemployment and the increase of the beer duty by Lord (then Mr) Snowden. Stimulated by Mr Chamberlain's revision of the duty and general recovery, beer consumption took an upward turn in 1933 and, rather surprisingly, production during the first ten months of 1937 was almost as high as during the corresponding period of 1929. But if allowances be made for the in-

crease in the population during the past eight years, consumption per head remains below the pre-depression level.

India's Oversea Trade.—That India's overseas trade still bears the scars of the unprecedented fall in the prices of primary commodities which started in 1929 is made clear by the official Review which has just been issued. The total value of India's exports during 1936-37 amounted to Rs. 1,96 crores (one crore equals £750,000) which was Rs. 36 crores more than in 1935-36 and Rs. 64 crores above the lowest point reached in 1932-33. As compared with 1928-29, the pre-depression year, exports in 1936-37 still showed a deficit of Rs. 1,34 crores, or 41 per cent. This "enormous shrinkage is due almost entirely to the decline in prices of exported articles," and "the quantum of exports was in all probability slightly higher than that in 1928-29." The resulting decline in purchasing power has had the inevitable sequel. Imports into India were valued at Rs. 1,25 crores in 1936-37, as compared with Rs. 1,34 crores in 1935-36 and Rs. 1,15 crores in 1933-34, the lowest figure recorded during the depression period. Since 1928-29, when imports were valued at Rs. 2,53 crores, the fall in terms of the latest figure has been no less than 51 per cent.

Only a part of the shrinkage is, however, due to the decline in prices; for, compared with 1928-29, the decrease in import prices in 1936-37 was only about 35 per cent. Part of the reduction is a reflection of the expansion of local industries. Sugar production more than trebled between 1928-29 and 1936-37. The purchase of cotton piece-goods was nearly doubled. The output of cement rose by 80 per cent., of steel by 70 per cent., and of paper by 25 per cent. These examples are illustrative rather than exhaustive. Gold shipments, which touched Rs. 66 crores in 1932-33, totalled only Rs. 28 crores in 1936-37, but a revival of imports of silver occurred last year, of the order of Rs. 14 crores. As a result of the latter reversion to bullion purchases, the net balance of transactions in treasure in favour of India was only Rs. 14 crores in 1936-37, against Rs. 36 crores in the preceding year and Rs. 65 crores in 1932-33. In 1928-29 India's net balance in treasure was "adverse" to the extent of Rs. 34 crores. The total balance of trade in favour of India, which amounted in 1936-37 to Rs. 92 crores, was exceeded only in 1933-34, when gold exports were very considerable.

Explanations of Recession

NEW YORK, December 14.—As the latest general data refer to October, one cannot say positively what the current level of business activity is. Estimates have computed it as about 25 per cent. below the level of August. Early December found the rate of activity, at least as measured by steel production, still descending. Such a contraction has caused a great deal of unemployment, but it has shown itself more in part-time employment.

Meanwhile, the security markets have become more tranquil. Common shares and gilt-edged bonds have been firm, or better, for some two weeks; and commodities, while sluggish, have also been steady for about the same length of time. Even the new issue market perked up a little last week; a small corporate issue and several municipal issues were offered. In Wall Street, the general mood is to look forward rather than backward; but as this mood is emotional it is not very enlightening.

No very satisfactory explanation has yet been formulated for the autumn débâcle, although a variety of more or less plausible reasons have been given. Among these are the views that it is a mere correction of over-buying in last winter's sellers' market; that it is a paralysis of industry by the operation of the Labour Relations Act; that it is caused by dislocations within the domestic price structure; that it is the consequence of the deflationary policy of the Reserve system in increasing reserve requirements and sterilising gold; that it is caused by the incidence of taxation; that it is the consequence of the collapse of the new issue market; that it was brought about by the reduction in the Federal spending programme; that it is the result of too much regulation in the security market; that it represents a great conspiracy by "economic royalists" to discredit the Administration; and, alternatively, that it represents a great conspiracy in Washington to discredit capitalistic enterprise. Some of these explanations seem fantastic, but not one of them has not been put forward by important people. A few of the points raised are worthy of closer examination.

There was a sellers' market last winter—no more pronounced in this country than in England, but important. This sellers' market lifted primary commodity prices, and, when it passed, they came down hard. Under the combined influences of the sellers' market and the pressure of labour organisations, wages were increased with the expectation that the consumer would carry the higher costs. This did not happen; in residential building, in motor cars, and in consumer lines generally, the public has not taken the higher-priced goods in quantity.

Unsatisfactory Labour Relations

From the end of the textile strike in late 1934 to the great maritime strike in late 1936, there was no important labour dispute. The demand for labour increased, and with the increased demand wages rose. Beginning with the maritime strike at the end of 1936, and continuing with the motor and steel strikes in the first half of 1937, there was half a year of general industrial disputes on a grand scale. There have been fewer in the latter half of the year; but, by and large, the whole of 1937 has been marked by bad labour relations in almost every industry—even when there has been no strike. There was no railroad strike; but there was an increase in railway wages, which, even if there had been no slump in traffic, would have rendered precarious the already

insecure position of many lines. At the present moment no great strike is in progress; but there are innumerable minor strikes; and the year is ending with relations between labour and industry anything but good. Whether or not the present Labour Relations Act is responsible, the fact remains that these relations have been bad since its passage.

As to the "deflationary" policy of the Reserve Board, the data show (for the Reporting Member Banks) a decline in total loans and investments of \$1,100 millions between December 9, 1936, and December 8, 1937; and a decline in deposits of \$780 millions—each decline of about 5 per cent., after a long period of "reflation." The total of loans, investments and deposits is still about the same as in 1929, when prices and activity were much higher.

Most of the contraction fell on New York City, where the Banks have since late spring been under intermittent pressure, owing to a continuous loss of reserves to the interior. It would appear that New York City has an unfavourable balance of payments with the interior. In spite of the fact that during the year the Reserve authorities put over \$400 millions of reserves into the New York City banks (over \$100 millions by open-market operations, and \$300 millions by gold sterilisation) these banks had only \$2,451 millions of reserves on December 8, 1937, against \$2,486 on December 9, 1936. The absence of a money market in New York throws the burden of such adjustments on the reserves of the New York banks, and their only mechanism of adjustment is their portfolio of Government securities; they sold about \$700 millions net between the dates named.

Taxation and Risk Bearing

The taxation principally blamed for the recession is the undistributed profits tax on corporations. This tax is now recognised as bearing heavily on small, growing or weakly-financed corporations, and some modification is expected in January. The tax had no distinguishable effect on large or strong corporations. One of its objectives was to prevent self-financing by corporations, and oblige them to seek the regulated issue market.

The issue market during the year was disappointing. There was a strong, close and persistent demand for Government and other tax-exempt securities; a small demand for gilt-edged senior corporate issues of the highest quality; and a weak market for equity capital, which finally collapsed. It is impossible to dissociate our capital market from our fiscal system. The latter dominates the former. Pure rentier capital is wholly or partially exempt from taxation; risk-bearing capital is heavily taxed, and certain types, subject to both the capital gains tax and the surtax, are rapidly being eliminated from the American economy.

M. Bonnet Upheld

PARIS, December 22.—The voting of the Budget was marked by two attacks on the financial policy of M. Bonnet. The Left Socialists recommended exchange control. And M. Reynaud declared that the sums to be borrowed in 1938 by the State and the public undertakings would exceed the figure of 28,000 million francs estimated by the Minister of Finances, because the estimates of receipts and expenditure would prove to be too optimistic. So long as there is no financial crisis, and capital returns, proposals for exchange control are purely academic: both the Right and the Government are opposed to it.

M. Bonnet was applauded by the Chamber. Actually he and M. Reynaud were defending, in effect, the same cause, that is, the view that balancing the Budget is largely a problem of increasing production. The Government has just published the conclusions of the Commission of Inquiry into Industrial Production. The Report first makes a series of observations about the weakness of the French economy. Its recommendations on this head, however, calling for rationalisation, better quality and lower costs, in so far as they are not already commonplace, are not very significant.

The main point of the Report is the conclusion that, if the principle of the forty-hour week is to be maintained, an extension of hours must be accorded to certain industries: those of a seasonal nature, with fluctuating periods of activity, those short of specialised labour, those manufacturing capital equipment and those engaged in armament work. The Report declares that the representatives of both the employers and the workers were agreed about the necessity of maintaining the New Deal, in principle at any rate. It remains to be seen what decisions will follow the Report and what effect they will have on production. The Finance Minister must restore the balance between trade and production, and loans and taxation, but his lot is hard. If he condemns destructive and pessimistic critics like MM. Reynaud and Flandin, and lays stress upon the fundamental soundness of the French position, he will find himself faced with new demands for concessions from the Left, convinced that he must be able to afford them.

Further Rise in Import Surplus

There was a fresh increase in imports in November in both value and volume. Exports, which had advanced in October and September, remained nearly stationary; exports of raw materials declined 5 per cent., while exports of manufactured goods rose 5 per cent.

	October, 1937	November, 1937
. Francs ('000 omitted)		
Imports:—		
Foodstuffs	957,115	1,010,280
Raw materials	2,208,900	2,337,648
Manufactured goods	553,793	583,197
Totals	3,719,808	3,931,126
Exports:—		
Foodstuffs	342,551	351,848
Raw materials	844,623	801,272
Manufactured goods	1,177,578	1,228,856
Totals	2,364,752	2,381,976
Import surplus	1,355,056	1,549,150

The surplus of imports, which had shown a slight decline after the peak of 1,700 million francs in June, increased again in November to 1,500 million francs. This was partly due to heavy imports of coal, which amounted to 2,400,000 tons to the value of 500 million francs. The surplus for the first eleven months of 1937 was valued at 15,400 million francs against 7,749 million francs in the same months of 1936. It will be about 17,000 million francs for the whole year, and the estimated deficit in the balance of payments amounts to between 5,000 and 6,000 million francs. The chronic

surplus affects both the Government and private industry. The Under-Secretary of State for Mines emphasises that the imports of fuel and power will reach 9,000 million francs in value before the end of the year, made up of 30 million tons of coal, 3 million tons of oil and 400 million kilowatt-hours of electricity.

The automobile industry, on the other hand, claims in its annual reports that France—with 200,000 cars—is now third among European producers after Great Britain (461,000 cars) and Germany (301,000). In 1931, France was first. But the wages bill has increased by 70 per cent. during the last eighteen months and the cost of raw materials by 40 per cent.; while selling prices have been raised by no more than 30 per cent. And even so, 60 per cent. of customers bought second-hand cars. For the week ended December 11th, unemployment was 345,096 against 337,983 in the preceding week and 408,453 in the corresponding week of 1936.

Germany

New Consolidation Loan

BERLIN, December 21.—Conjectures about the terms of the new Reich consolidation loan dominated the Bourse last week. They were actually published on December 18th, and the new loan will rank as the first of 1938. The current year witnessed three such Reich flotations of Rm. 700 millions, Rm. 800 millions, and Rm. 850 millions (in August), all in the form of 4½ per cent. middle-term Treasury Certificates. Of the total of Rm. 2,350 millions, Rm. 2,050 millions were publicly subscribed, and Rm. 300 millions were taken in advance by bank syndicates under the leadership of the Reichsbank. The loans were oversubscribed.

The conditions for a new loan are considered to be favourable. Apart from seasonal fluctuations money is abundant. One sign is the sharp increase in November of the Gold Discount Bank's circulation of promissory notes. Savings deposits have risen. Owing to the restriction of private bond and share issues, there is a shortage of securities on the Bourse. For months, on and off, mortgage bonds have been rationed to buyers. There is also a shortage of company shares; and to this may perhaps be attributed the insignificance of the recent decline in quotations, compared with the sharp drops on some foreign stock exchanges. Shares, though they have reacted a little, still stand well above the level of early 1937. Bonds rose without any mentionable break throughout the year. The index of quotations for mortgage bonds now stands at 100; for public loans at 99.28; and for bonds in general at 99.68, which is 3.32 per cent. higher than at the end of 1936. Although a slightly more liberal policy has of late been pursued towards private capital issues to further Four-Year Plan enterprises, the total of private industrial bonds this year to date is only Rm. 301 millions, and of shares only Rm. 304 millions, which is even less than in 1936. Public middle-term borrowing may therefore be said to have monopolised the capital market.

Except for its larger amount and its longer duration, the new loan is identical with that of August. It consists of Rm. 1,000 millions in 4½ per cent. Treasury Certificates, issued at 98½. The loan is repayable in six equal instalments in the years 1951-56, and the Reich reserves the right to redeem it wholly or in part after five years. The yield is calculated at 4.61 per cent., against the 4.63 per cent. of the August issue. Of the total Rm. 1,000 millions, some Rm. 250 millions have already been taken by a bank syndicate; and the remaining Rm. 750 millions will be offered for public subscription between January 3rd and 18th. Payments will be made in instalments between January 26th and March 8th. The loan is the largest so far floated. The desire to progress gradually from middle-term loans (which is what these Treasury Certificates really are) towards genuine long-

term loans has been shown in all recent Reich flotations. The average maturity term of the first issue of 1937 was nine years, of the second and third issues twelve years, and of the new issue it is fifteen years. The new loan is bound to be a success: January is always a month of plentiful cash.

The State of Public Debt

The consolidation loans issued since the beginning of 1935 will now total some Rm. 8,000 millions. As the following comparative table of Reich debt shows, the effect of the consolidation policy has been to increase the debt classed as "long and middle term." The small (returned) short-term debt remains stable. But the consolidation loans were not issued in order to get rid of this petty short-term liability, but in order to fund part of the great (and unreturned) debt for armaments and public works. The total of these is still unknown:—

	(Thousands of Marks)	Dec. 31, 1934	Oct. 31, 1937
I. Old valorised debt		3,335.5	2,896.0
II. Other old debt incurred before April 1st, 1924		597.5	583.2
III. New debt (after April 1st, 1924)		7,767.0	14,094.8
Thereof: Foreign		1,809.9	1,362.3
Home long & middle term		3,684.4	10,335.8
Home short term		2,272.7	2,396.7
Total		11,700.0	17,574.0

Christmas retail trade is reported to be good. The supply of semi-necessaries from abroad is irregular, and some goods in this class are not to be had at all. In general, however, foreign luxury goods are abundant, but at prices usually three or four times the foreign prices.

The railway system is heavily taxed by the carriage of materials for motor-road construction, other public works and Four-Year Plan undertakings. Difficulty has been experienced in moving part of the crops. At the height of the autumn traffic the Reich Railway Company was short of 100 to 120 thousand goods wagons. Next year improvement is expected; and the new Mittelland Canal between the Western and Elbe water systems will prove a substantial help.

The General Staff officer, Colonel Loeb, who is director of the "Office for German Raw and Shop Materials" has given an optimistic account of the Four-Year Plan, emphasising the superiority of some synthetic over natural products. The progress of the execution of the Plan, said Colonel Loeb, is not determined by the supply of primary materials for the artificial "raw materials," but by the supply of labour. Labour is also the determining factor for the development of native natural materials. Colonel Loeb mentioned that in Silesia alone there are 4,000,000 tons of copper, which would meet the German demand for ten to fifteen years. But the great quantity of labour needed to exploit ore in such low degree of concentration is not available. Industry is not pleased by the continual official statements or hints that it must provide capital out of its current profits for virtually compulsory Four-Year Plan undertakings. The Ruhr Chemie Company mentions this as a reason for passing its dividend.

Declining Export Surplus

Foreign trade in November underwent a slight seasonal decline: and the export surplus, as in all recent months, was lower than in the same month of 1936. The record is in general satisfactory. The decline in imports of materials is, taken by itself, not a good sign; but these fell off towards the close of last year as well. The stability of manufactured exports compared with October is a favourable sign; and still more favourable is the increase in exports of goods classed as "finally manufactured." The terms of trade must also be considered to have improved: whereas the average import price fell, the average export price rose, and this points to a recovery in the world prices of the manufactures which constitute four-fifths of all German exports. The export surplus in eleven months of 1937 was Rm. 420 millions, against

Rm. 460 millions in the same months of 1936. The whole year's export surplus is likely to be well below Rm. 500 millions, compared with Rm. 550 millions last year. As exports were much higher in every month than in 1936, the decline in the surplus is wholly due to the rise in imports. As imports are officially rationed, the balance may be said to be determined by the Government.

Denmark

Constitutional Reform

COPENHAGEN, December 15.—Information about the contemplated changes in the Constitution was recently given by the Prime Minister. The voting age will be lowered to twenty-one years; the Landsting (the second chamber) will be abolished and in its stead a permanent Commission to consider the technical, administrative and legal aspects of Bills will be appointed, and definite provisions for referendums will be introduced.

A trade agreement for 1938 between Denmark and Germany was entered into on November 22nd. Danish exports to Germany will depend on Denmark's purchases from Germany during the previous quarter. The subjoined figures give an idea of what Denmark expects as regards exports to Germany in 1938:—

Butter (tons)	41,500
Cheese (tons)	4,700
Eggs (tons)	27,000
Cattle (heads)	146,000
Pigs (number of)	170,000
Horses (number of)	7,900

These estimated exports are calculated on the basis of 1937 prices. If prices rise the quantities will be proportionately reduced and vice versa.

The Commission to inquire into the problem of population has published its second report. It arrives at a conclusion similar to that already deduced in other countries, namely, that people do not want children owing to the financial burdens involved. Fewer children mean a higher standard of living to each individual member of the family. Small families can afford, *inter alia*, the rent asked for modern flats, while the large families who most need such flats and conveniences cannot afford to pay the rents. The Commission therefore recommends the shifting of financial burdens from the shoulders of parents with many children. The Commission urges the need for action, since a continuation of the present trend will mean a decreasing population from 1970 at the latest, with a consequent decline in wealth and a fall in the standard of living of the whole community.

Exchange Control Discussions

Negotiations about the new Exchange Control Act are still going on. The Government, possessing a majority in both houses of the Rigsdag, is very reluctant to concede in any way the wish of trade and industry that the new Act should be the first step towards a liquidation of import control. Although a certain increase in the "free import list" is foreshadowed, the impression is still left that the Government would like to use the exchange control office as a tool of its socialist policy. Yet the present foreign exchange position suggests that there is some ground for slackening the import restrictions. The improvement in the shipping trade and the better prices obtained for Danish agricultural exports have between them entirely reversed the

foreign exchange position compared with the situation a year ago. The present net holdings of foreign exchange by the Nationalbank amount to about 38 million kroner, and it is expected that 50 million kroner will be obtained before the end of the year. The private banks are in a similar position.

The immediate outlook for industry is not quite so encouraging as it was a few months ago. With 24.3 per cent. of organised workers out of work at the end of November the unemployment situation can hardly be characterised as satisfactory. Some increase in unemployment is due to normal seasonal fluctuations as, for instance, in the building trades, but the number of unemployed is greater than last year and has been so for some months, and further growth of unemployment will no doubt occur during the forthcoming winter months.

Canada

Provincial Finance

OTTAWA, December 10.—The Royal Commission on Dominion and provincial relations began its public hearings at Winnipeg on November 29th. Statements were submitted on behalf of the province of Manitoba. It was argued that the experience of the last five years, during which the Western provinces only averted bankruptcy by becoming indebted to the Federal Treasury to the amount of 127 million dollars, had demonstrated the inadequacy of the present financial arrangements of the Confederation. It was also contended that a primary cause of the breakdown was fiscal protection, which had not enhanced the income of the two industrialised provinces of Ontario and Quebec, but had also contributed to the impoverishment of the Western provinces.

The Federal income-tax returns for 1935-36 were cited to show that, in Manitoba, whose population was roughly one-fifth that of Ontario, 12,742 persons had paid a total of \$1,043,179 in income tax, compared with 91,983 persons in Ontario paying a total sum of \$16,806,390, or sixteen times as much. It was proposed that, in return for a surrender of the provincial right to collect death duties and of the annual provincial subsidies now paid by the Federal Treasury, the provincial Governments should be completely relieved of the cost of unemployment relief and insurance, of old-age pensions and of a substantial part of their present debt burdens. The cost of other vital services, such as technical education, highway construction and maintenance, mothers' allowances and certain public health services, should be shared on an equal basis between the Dominion and the provinces. Premier Bracken also committed his Ministry to support a merger of the three prairie provinces under a single administration. The gist of the Manitoban proposal is that the older and wealthier provinces should consent to a redistribution of their share of the national wealth for the benefit of the younger and poorer provinces. In reply, it is being pointed out that the proposed additional burden on the Federal Treasury would be at least 150 million dollars annually, while the off-setting yield from death duties would in most years be less than a fifth of that sum.

Mr Hepburn has evidently decided that he must alter his policy in relation to the Quebec power companies, and negotiations are afoot for a fresh contract with the Beauharnois Corporation, whose original contract with the Hydro-Electric Commission of Ontario was arbitrarily cancelled some years ago. He has called a special session of the Ontario Legislature and introduced some curious measures designed to frustrate the efforts of lawyers to block his attempts to collect succession duties from estates alleged to have defrauded the provincial Treasury.

Business Caution

Winter has now definitely made its appearance in most parts of Canada, but so far there has been comparatively little snow in the Central provinces. The

business community is adjusting itself to winter conditions, but shows a cautious hesitancy, animated more by unsettled conditions in the United States than by actually adverse domestic factors. The general business index of the Bureau of Statistics shows a tendency to sharp fluctuations week by week, as the data given below show:—

Week ending	Car-loadings	Wholesale Prices	Bank Clearings	General Index
Nov. 28-'36.....	75.0	77.2	94.4	112.9
" 13-'37.....	72.3	83.5	81.4	103.5
" 20-'37.....	72.6	83.5	90.6	105.1
" 27-'37.....	71.1	82.6	87.0	103.6

The general index for the last week of November was 9.3 points below the level of the corresponding week of 1936. Both wholesalers and retailers are trying to work off inventories at prevailing prices, and for the time being are buying ahead only on a hand-to-mouth basis. Although there appears to be a normal demand for staple goods, there has been a marked curtailment of the purchases of luxury goods, and rosy anticipations about Christmas trade are being modified.

The latest employment bulletin of the Bureau of Statistics up to November 1st shows a recession of employment in October; but this was rather less than the average seasonal decline for this month. The Bureau's employment index on November 1st stood at 125.2, compared with 125.7 on October 1st and 110 and 107.7 on November 1, 1936 and 1935, respectively. The lumber industry has made plans for a smaller cut in the woods this winter, planning a decrease in New Brunswick of as much as 50 per cent. The outlook for the newsprint industry, however, has been improved by the announcement by the leading companies that the basic price of \$50 per ton will be maintained for the second half of 1938. The mining industry continues to show great activity, but declines in the prices of base metals promise to affect adversely the profits of producers.

Turkey

Ataturk's Programme

ISTANBUL, December 12.—The programme of the new Cabinet was outlined in Ataturk's yearly message to the Great National Assembly. The President, who has personal experience of modern farming, is devoting his energies to the development of agriculture and the marketing of agricultural produce. He is particularly intent upon making every peasant the owner of enough ground for him and his family to live upon, the extent of such holdings to vary according to their fertility and the density of the population. The peasant is to possess ploughs and draught cattle—horses rather than oxen—while threshers shall be placed at his disposal by villages or unions of villages. The fleet is to be considerably increased, largely by domestic shipbuilding; and a number of taxes are to be reduced. Mr Muammer Erish, general manager of the Ish Bankasi, has been entrusted by Ataturk with the task of submitting a report on the importance of easy credit facilities in the development of business in Turkey, on the means of distributing such credits, and, generally, on the measures to be taken to raise the level of Turkey's economic life.

Trade Negotiations with America

Negotiations are being conducted with the United States for the conclusion of a trade agreement. The United States is one of the four countries—the others being Egypt, Syria and Palestine—exports from which into Turkey are paid for in free foreign exchange without any restriction, on the understanding that they buy from Turkey more goods than they sell to her. Now, the advance in German prices, on the one hand, and the clumsy working of clearing accounts, on the other, have increased the sales of American materials. As a result, at the end of September the balance of payments showed

an excess of American sales over American purchases amounting to \$4 millions. The Turks did not suspend payments in foreign exchanges, as was feared, but waited for the usual American tobacco purchases, which are already modifying the situation in favour of Turkey. It is anticipated that, in the proposed extension of Turco-American business, certain Turkish staples will be granted preferential treatment, thus ensuring a greater volume of Turkish export to the U.S.A.

If these negotiations succeed, Turkey will escape from some of the disabilities which are inherent in her depend-

ence on Germany as her principal customer. If only cash—not long-term—business is considered, Germany still owes Turkey 40 million marks, which means long delay in payments for Turkish goods sold to Germany on a cash basis. The 12 per cent. difference in excess of world prices, which the Germans agree to pay as a compensation for the loss of interest, does not attract Turkish exporters, so that any arrangement with other countries, establishing something like normal trade relations, would be greatly welcomed by the trading community in this country.

Letters to the Editor

Gold and Currencies

TO THE EDITOR OF THE ECONOMIST

SIR,—It is amusing to observe developments in public opinion regarding economic questions. Eighteen months ago everybody in the U.S.A. and Great Britain said the whole trouble of world economy was the existence of the so-called gold bloc, and that the golden age of prosperity would be restored if and when the gold bloc devalued. Well, the gold bloc did devalue; prosperity and a not quite healthy boom followed.

Then, early this year, it was discovered that recovery went too fast, and commodity and security prices rose too quickly. One of the reasons given was that "gold was too high in terms of currencies." Though talks of "too high" were confined at that time to dollars, Swedish crowns and were seemed no doubt that the price of gold was sterling, there seemed no doubt that the price of gold was also too high in relation to one of the currencies recently devalued, viz. guilders. It was not quite clear how a currency which was over-valued in relation to gold until October, 1936, became undervalued in relation to gold in May, 1937.

The so-called "Gold scare" is now a thing of the past. But he would be a bold man who declared that the conditions which brought it about were unlikely ever to recur in the future. What were the main causes of the events which it symbolised?

I think the main factor behind all these disturbing developments was a political or psychological one. Money went to those countries where it was believed to be safe. Mass fear of European disturbances drove money from Europe to the U.S.A. Naturally it took the form of gold exports to the U.S.A. Anxious to avoid a gold inflation, the U.S.A. had to sterilize the gold, which costs the Treasury a lot of money. It is seldom noticed that the same effect of sterilizing the gold could have been reached without cost to the Treasury by increasing the legal cash-reserves of the banks hand in hand with the gold imports; this would not have been unfair, generally, to the banks as they pay no interest on the deposits resulting from the gold influx; but it would have necessitated a more agile and discriminating reserve policy, as only the big banks in New York, and not the country banks, profited from the influx of foreign deposits.

It is a well-known law of psychology that fear that something may happen often causes the feared event. I might even say that francs and guilders were too high before the devaluation because the Dutch, French and Swiss people feared they were too high, and I am convinced the dollar, and after it the pound, became too low in relation to gold because people believed they were too low; because people thought gold would become devalued in terms of dollars, they converted at an accelerating pace their gold, liquid funds and even their security holdings into dollars. This conversion gave rise to an ever-increasing stream of gold to U.S.A., and the fear that eventually the Government of the U.S.A. would be forced to devalue the dollar.

If a similar situation were to occur, what could be done? Assurances by the Governments concerned will not help. Assurances of this kind have been too much discredited during recent years. The Governments must give facts. There seems to be only one way. In the event of another gold scare the Treasury of the U.S.A. must declare it is prepared to coin gold at the present parity, for everybody who pays the fees for it.

What would be the consequences? The chance to have its gold coined into dollars any day it likes would prevent it from buying dollars for fear it might not be able to buy them at the present price in the future.

2. Very cautious ones would have their gold coined and hoard these gold-guaranteed dollars.

3. All hoarders of gold, especially in countries which have foreign exchange regulations (Germany, Italy, etc.), or which are full of political fear on the part of capitalists (France), or which have always hoarded gold (some Asiatic countries), would hoard the new dollar-guaranteed gold.

The American Treasury could theoretically withdraw from the note circulation all amounts coined in gold, i.e. continue sterilization as it did before. The total circulation must, however, be closely watched; if, as I expect, most of the new coins were hoarded, the amount hoarded, which could be approximately ascertained, must not be withdrawn from the note circulation. Theoretically, the note circulation might be replaced by gold, but I do not believe that this could happen. The "fear" gold would return where it came from—to the safes and stockings. The gold, being mined now in Russia and South Africa and elsewhere, would go to the central banks of rising South America and of those countries willing and able to return to normal conditions. Some people may argue that all this does not settle the gold question. I think it does. If we start to devalue gold, we may end one day with demonetising it just as we did with silver and no common measure would remain at all. This would be rather dangerous. I believe that all governments would like to return to gold and, with this in mind, I do not think too much gold is being produced. It is only a few years since everybody believed in a scarcity of gold, and this belief was proved to be false. The increasing fear to-day of over-production will probably prove another fallacy. New peoples—until now debtors with only a bad cover and a bad reputation as debtors—are steadily improving their economic position. They all need gold; so I am of the opinion that for some time to come, we shall not have over-production; and if, in some distant future, we should have, there is still the possibility of the gold-producing countries coming to an agreement regarding the pace of production. I do not think of restriction, but of stabilisation of production. Nobody to-day seems to think of the possibility of goldfields becoming exhausted or that perhaps a country like the South African Union may become interested in the preservation of her gold-ore reserves.

Gold itself is nothing; just a yellow metal with not much practical value. But confidence is much, and those who wish to avoid revolutions, those who wish to have evolution

Tariffs and Prosperity

TO THE EDITOR OF THE ECONOMIST

SIR,—Nearly every financial article in recent weeks ends in similar words to yours on "Commodity Prices and Prosperity" in your issue of December 4th. "Unless industry in the United States resumes its upward trend in the near future it would be rash to assume that the recent downward trend of prices has reached its limit." One nation alone cannot bring about a world recovery in prices. Neither this country nor the U.S.A. can stage a recovery which is going to do anyone any permanent good merely by spending money within their own borders.

How can industry in the U.S.A. improve to any extent so long as she has a high tariff barrier? She was immensely prosperous during and after the War as she was willing to grant practically unlimited credit to enable her products to be bought. She had high tariffs and therefore could only receive payment in gold and thus succeeded in obtaining a great portion of the world's stock of that metal; but by shutting out foreign products she has also shut in her own.

World-wide free trade will be necessary before civilisation as a whole can receive any permanent benefit. We were told, when a protectionist policy was adopted here, that it was a bargaining weapon. The longer our Government

allow industries to flourish behind tariffs the greater will be the outcry when they are removed. And they must eventually be removed if peace and prosperity is the aim of politicians.

Yours faithfully,

T. W. M. WHITSON.

Old Broad Street,
London, E.C.2.

POINTS FROM LETTERS

Living on Capital.—Mr Morris asks (in *The Economist*, November 27th), whether it is correct to say that a country is living on its capital when its payments exceed its receipts? We may be said to be living on our capital if we use our labour and materials to make consumables rather than means of production, so that there is a decline in the latter. But, in the present case, capital may be taken to mean claims on other nations, which are held mostly in the form of securities. If we sell more foreign securities than we buy, taking goods which we consume for the difference, we may be said to be living on our capital. This has nothing to do with any tendency for our payments to other countries to exceed our receipts from other countries, for the sales of securities may easily result in a tendency for our receipts to exceed our payments.—*R. Grant Brown, 2b Belsize Lane, N.W.3.*

Coming Events?—In the letter from your New York correspondent, published in *The Economist* of January 4, 1938, occurs the sentence: "President Roosevelt, instead of being denounced as a destroyer, will come into his own country." Can this be accepted as prophetic of the present time as well?—*E. C. S., London, S.E.1.*

Books and Publications

Whither Belgium?

DEVELOPMENTS in the internal and external politics of Belgium are closely connected. The perpetual irritant of extreme Flemish nationalism, the more recent advent of Rexism, the virile Catholicism of large numbers of the people, all combine to create a potentially unstable internal situation which in itself is not serious, but which, considered in relation to the foreign policy of the Third Reich, gives cause for disquiet. We need not anticipate insurrection à la Franco. But already these internal stresses have produced a new orientation in Belgian foreign policy, an orientation which is possibly not unfavourable to German diplomacy. The falling out of Belgium from the Locarno system limits still further the remaining possibilities of achieving a degree of collective security in Europe. The recent proposal of King Leopold that economists should combine for the study of world economic problems (which, it is alleged, perhaps quite wrongly, was suggested from outside, seemed to cast an unjustified slur on the work of the economic intelligence service of the League.

In the autumn of 1936 a number of academic political scientists and active politicians representing most of the differing points of view in Belgium founded the *Centre d'Études pour la Réforme de l'État*. They have now issued what is in effect an interim report.* Eight commissions in all have issued their reports and have made provisional recommendations. The divisions of the field of study are in the main the conventional ones: the executive, the legislature, the judicature, the electoral system, are all surveyed. There is an interesting section on *Le Quatrième Pouvoir*, that is, the Press. It favours the setting up by law of an "Ordre des Journalistes." Membership would be voluntary, but would confer very definite advantages. Professor Jean Dabin, of Louvain, argues ingeniously but, in our view, unconvincingly, that the setting up of such an order would not be a violation of Article 18 of the Constitution, which guarantees liberty of the Press. The tendency towards an "authori-

tarian" conception of government which is implicit in this proposal receives approval in the recommendations of other commissions. It is pleasant to note, however, that the commission on *Les Questions Electorales* emphatically rejects any form of corporative representation. Speaking of proposals for this method of representation it says, and says well:—

"L'application d'un pareil système ne pourrait que faciliter la domination des intérêts privés sur l'intérêt général, alors que, déjà aujourd'hui, on s'accorde à dénoncer les graves dangers que fait courir à la chose publique la ruée démagogique des intérêts particuliers."

The commission which deals with the question of different nationalities in relation to state structure recommends no revolutionary changes. A federal solution is rejected on the ground that it would subject Belgian unity to an unbearable strain. There should be greater delegation of powers to provincial authorities and the improved in order to lead to a richer development of the national cultures within the framework of a single state.

The report and recommendations are sufficiently interesting and valuable to make one look forward to a more definitive report in the future. Taken as a whole, they are too formal and academic. Many of the proposals for administrative reform are no doubt useful and timely but, with the partial exception of the section on the national problem, there is no attempt to set the political machinery in the social and economic context within which it must work and which must condition its very nature. In short, it is a piece of constitution making in the tradition of the Abbé Siéyès. The President of the *Centre d'Études* himself says, in the dedicatory letter to M. Van Zeeland, which prefaces the book, that "les vingt dernières années ont apporté dans la vie sociale des transformations d'une profondeur et d'une rapidité que peut-être aucune période antérieure n'avait connues." One hopes that the next report issued by the *Centre* will consider more concretely these profound and rapid changes.

Shorter Notices

"The Future of Immigration into Australia and New Zealand." Edited by W. G. K. Duncan and C. V. James. Angus and Robertson, Ltd. 1937. 6s.

Dr W. G. K. Duncan of Sydney University has edited a symposium constituting "a more or less representative sample of public opinion in Australia concerning immigration." The meagre population density in Australia (2.3 persons per square mile) is remarkable, and, even allowing for vast useless tracts, it is generally conceded that further scope for settlement exists. The really important conclusion reached is that immigration must bring the right type of settler and be governed by economic controls. Closer settlement of the better soils is advocated, in preference to adventuring in marginal areas, and a case is stated for developing secondary industries. Costs generally need control, particularly in view of past over-borrowing, and no policy should fail to consider the question of markets and at the least to maintain the present standard of living. "The economic conditions in the country of immigration are the decisive factor in attracting migrants." With general prosperity the immigration problem, as history suggests, would largely settle itself.

"The World Since the War." By Stephen King-Hall. Nelson. 111 pages. 2s. 6d.

Commander King-Hall has seized upon this disturbed moment in post-war time to take a snapshot of events since 1918. The result is too slight to be authoritative, but too readable and stimulating to be ignored. The author's conclusion that the need for concerted action is more urgent than ever before, is broad and cannot easily be criticised. The book shows in equal measure Commander King-Hall's gift for popular writing and the ambiguities of easy generalisations.

"German and Czech. A Threat to European Peace." By S. Grant-Duff, with a Preface by Hugh Dalton, M.P. New Fabian Research Bureau. 52 pages. 1s.

This is a very valuable pamphlet, published at a most opportune moment. The author demonstrates convincingly the strategic importance of Czechoslovakia in the programme of Nazi aggression. She also traces the history of German and Czech relations back through the war-time convulsions to the 1848 period; and gives a fully detailed history of the economic and political conflicts in Czechoslovakia which have finally produced the Crypto-Nazi Henlein Party.

"A Catholic in Republican Spain." By Prince Hubertus Friedrich of Loewenstein. Gollancz. 112 pages. 1s.

Prince Hubertus Friedrich of Loewenstein, having decided that his proper place as a Catholic was on the side of the Government, felt impelled by conscience to commit his opinions to print. But first he visited Republican Spain. This book contains his impressions. Prince Hubertus uses some trenchant arguments to dissuade his fellow Catholics from supporting General Franco. But he says little that cannot be found in the hundred and one books of a similar type that have already been published.

"Introduction to the Theory of Unemployment." By Joan Robinson. Macmillan. 127 pages. 4s. 6d.

In a limited number of copies of our last week's issue, a printer's error resulted in the substitution of the letter *r* for the *c* of the word "lucid," on the second line of our review of this book. Our intention was not to disparage but to praise, and we hasten to record our regret for an unfortunate typographical accident. The correct rendering of the sentence in question (given in all the later copies of our issue last week) is: "Little more need be said of Mrs Robinson's latest book than that it is as lucid and stimulating as the best of her previous writings."

MONEY AND BANKING

Tripartite Agreement in Action

EVERY retrospect of the foreign exchanges during 1937 is inevitably a commentary on the results of the agreement between the monetary authorities of Great Britain, France and America made in September, 1936. How has the Tripartite Agreement worked in practice? Has it maintained monetary stability throughout the world? Has it fulfilled wider hopes of freer and more abundant international trade?

The answer is compounded, almost equally, of hope and disappointment. The conclusion of the Agreement was followed by certain tariff reductions, effected mainly to offset the immediate reactions on internal prices of the devaluation of certain currencies. For the rest, the past year has seen M. van Zeeland's mission and the opening of the discussions for an Anglo-American Trade Agreement. We should be the last to belittle the significance of these developments. M. van Zeeland has performed valuable work with his sounding rod, though he may have charted in many parts of the world more shoals than deep water. The Anglo-American discussions, again, embrace, through their relationship to the Ottawa Agreements, the whole of the Empire as well as Great Britain; and the fruits of the Trade Agreement would be widespread, through the inclusion of the most-favoured-nation clause. But all this is only a story of tasks begun. All that we can say to-day is that without the Tripartite Monetary Agreement there would have been no basis either for M. van Zeeland's mission or the preliminary Anglo-American discussions.

In the narrower field of foreign exchange rates, the year has again been a mixture of achievement and disappointment. The immediate purpose of the Tripartite Agreement was to permit the orderly devaluation of the franc to a new level which, it was hoped, would prove tenable. Events have belied that hope. The new level was fixed at about Frs. 106 to the pound sterling, but in spite of the support given by the sterling credit to the French railways in the early part of 1937, it was found necessary to allow the franc to depreciate last April to Frs. 110, the worst level permissible under the devaluation legislation of the preceding autumn. This rate, in turn, proved untenable, because of the continued rise in French internal prices and costs, and the continued flight of French capital. At the end of June, when the Government of M. Chautemps had replaced that of M. Blum, almost its first act was to carry out a second devaluation to a point corresponding to just over Frs. 130 to the pound. Not even then was the franc at the end of its vicissitudes, for a further slide during September carried the pound to Frs. 150. Thereafter, however, the financial policy of the new Government began to develop new confidence. The reaction on the London and New York stock markets came opportunely at that moment, and helped to stimulate a return of capital to France. Sterling lapsed to Frs. 147, and the French authorities were enabled to replenish their gold and foreign exchange resources. Only in December were any fresh signs of weakness evident, and by that time the French authorities had once more a fair gold reserve in hand.

Of the successive reductions in the French franc be left out of the reckoning, the Tripartite Agreement may claim, superficially at least, to have fulfilled its promise of international monetary stability. The year's fluctuations between the pound and dollar were within a range of 3 per cent. The Dutch and Swiss exchanges remained very stable, and the belga was nearly as steady. There were no significant alterations in exchange rates within the sterling area, but signs of slight strain were observed from time to time. The sharp rise in sterling

commodity prices early in the year caused misgivings in Sweden, and at one time the possibility was canvassed that the krona might be allowed to appreciate against the pound rather than depreciate in terms of commodities. The *raison d'être* for such a step disappeared, however, when the reaction in sterling prices began in the late spring.

The South American exchanges showed up to September 30th an improvement upon the preceding year, but the fall in commodity prices during the past six months has now begun to affect South America's power to export and may in time weaken her exchanges. Meanwhile, Brazil has abolished her exchange quota, under which a proportion of the foreign exchange received by exporters had to be resold to the central bank at the official rate; and she is proposing to place the coffee trade upon a competitive basis. Argentina has taken advantage of her favourable exchange position to redeem or convert part of her external debt, and has also repatriated part of her gold reserves previously held in London. The Minister of Finance has stated, however, that exchange control is not to be abandoned. In the Empire, Australia's export surplus for the year to June 30th last was sufficient to cover her external debt service and also to add £stg. 20 millions to London funds. There is a distinct possibility, however, that owing to heavy imports and the fall in wool prices, part, at least, of this new surplus will be drawn upon during the current year.

Over a large part of the world, in short, there has been exchange stability—but below the surface the waters have been repeatedly troubled. The past year has been one of sudden fears, of rapid international movements of liquid capital and of heavy transfers of gold between the various Exchange Funds. Further, the continued divorce of the leading currencies from gold has provided a setting for doubts about the future value of gold in terms of currencies, or currencies in terms of gold. The gold scare of April and May was due to fears of impending reduction in the dollar price of gold, while, conversely, the dollar scare of November reflected the fear of a forthcoming increase in the dollar price of gold. To set these two scares side by side is sufficient to disclose their inherent absurdity. The gold scare, nevertheless, had far-reaching effects; for it must be numbered among the proximate causes of the setback in securities, commodities and business which, for the United States at least, was the chief economic event of the year. The subsequent dollar scare had a more satisfactory result, since it was a contributing factor to the repatriation of French capital and the replenishment of the French gold reserves. Both scares threw upon the British Exchange Account the new duty of supporting the bullion market, as an indirect but effective way of preventing contemporary operations in gold from upsetting the course of the exchanges.

The past year, taken as a whole, suggests the need for serious consideration of a number of weighty matters. In the first place, it is clear that a large part of the world is to-day operating a quasi-gold standard. Although gold movements are still an ultimate method of settling international differences, many countries divide their gold reserves between their central bank and their Government-owned Exchange Funds in such a way that gains or losses of gold affect only the holding of the Exchange Funds. So long as this obtains, they do not enlarge or contract the internal credit base. Thus, Governments are left free to pursue their own internal monetary policy, regardless of what is happening abroad. A time may be at hand when it will be necessary to consider whether or not this is wholly desirable, and whether or not the

system should continue if and when a general return to gold is made.

Next, the question of the secrecy of Exchange Fund operations deserves attention. In earlier days, when the British Exchange Account stood alone and when its main object was to prevent speculation in sterling, the arguments for secrecy were unanswerable. To-day, when many Exchange Funds work in co-operation and in such a way that their gold holdings have become the reserves out of which international differences are settled, the case for secrecy is much more doubtful. After all, in the old days of the gold standard, when central banks were the custodians of national gold reserves, the whole world knew at once when gold was gained or lost, and was able to act upon the knowledge. To-day, gold movements into and out of Exchange Funds are deliberately concealed from view, and so the world is deprived of the knowledge which is the best antidote to nameless and unreasoning fears. No one, in fact, may be able to say whether a currency is weak or strong until some dramatic event reveals its inherent position, and by that time constructive action may be fruitless. That is neither helpful to confidence nor good for trade. For this reason alone there is a case for the immediate and regular revelation of Exchange Fund gains and losses of gold. The British authorities have taken a step in the right direction this year, but their reports on the condition of the Exchange Account are still infrequent and tardy.

A third point concerns those central banks, including the Bank of England, which have not yet revalued their gold at the current market price. On the whole, it may be desirable that they should be empowered to do so as soon as possible, so that every country's gold reserves can be readily evaluated on a more or less uniform basis.

Finally, consideration might well be given to the suggestion, recently made by Dr Kienböck, that the Bank for International Settlements should study the whole possibility of an ultimate return to gold, and that a simple programme for the gold standard of the future should be formulated without undue delay. It is true that current international political and economic conditions leave little hope of an early return to gold, and that any programme may have to be amended before it is carried into operation. But the events of the past year show clearly that the Tripartite Agreement has been only an initial and incomplete step towards world monetary stability, and no responsible authority could possibly be satisfied with the prospect of the indefinite continuance of the conditions which exist to-day.

Financial Notes

Bank of New South Wales.—Sir Thomas Buckland, the President of the Bank, gave an interesting account of current Australian conditions in his address to the shareholders at the meeting held on November 26th. He alluded to the very satisfactory increase in exports between 1935-36 and 1936-37, but added that the improvement in Australian standard of living, due to greater internal prosperity, was being reflected in larger imports of such commodities as cocoa, chocolate and raw silk. The secondary industries were also importing more raw materials and capital goods. Sir Thomas was not greatly perturbed at the recent fall in the export price index, but he did express the hope that part at least of the recent increase in Australia's international balances would remain to help rebuild Australia's reserves to the level of pre-depression years. Meanwhile the strengthening of London funds had eased the position of the banks. Cash ratios were higher, and the stringency to which he drew attention last year was passing. It was, however, necessary for the banks to discriminate more carefully in the granting of advances, even though this might involve smaller profits. On the whole, Sir Thomas took a hopeful view of the Australian outlook, but if the present growth in Australian imports, arising out of the

past year's prosperity, is set off against the recent decline in wool prices and the rather more dubious outlook for primary products in general, it is an open question if there will not be some depletion of London funds during the current year. Such a swing of the pendulum, however, is neither abnormal nor necessarily a cause of trouble to Australia, especially if it can be foreseen. Sir Thomas Buckland's plea that the banks should exercise greater selectivity in the granting of advances will in itself be a precaution against any untoward consequences of a drop in London funds.

The Money Market.—Easy conditions have prevailed during the week, with rates for December money unchanged. Loans into January now cost $1\frac{1}{2}$ per cent., but there is no great demand for January money as the market is now convinced that there will not be any serious pressure on the last day of the year. Next week may not be too easy, for if on December 24th the market concentrates all these Treasury bill applications on bills to be paid for in January, it means that the whole of next week's payments will have to be made on the morning of Saturday, January 1st. Still the market sees no insuperable difficulty in this, and the opinion is held that no bills to be paid for during December will be tendered for on December 24th. This means that as in previous years it will be the Government and not the market which is in the Bank on December 31st. We may expect to see an increase in Ways and Means borrowing from the Bank (i.e. in Government securities) as much as in discounts and advances.

	Dec. 2, 1937	Dec. 9, 1937	Dec. 16, 1937	Dec. 22, 1937
Bank rate	2	2	2	2
Clearing banks' deposit rate	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Short loan rate:—				
Clearing banks	$1\frac{1}{2}$ -1*	$1\frac{1}{2}$ -1*	$1\frac{1}{2}$ -1*	$1\frac{1}{2}$ -1*
Others	$1\frac{1}{2}$ -1	$1\frac{1}{2}$ -1	$1\frac{1}{2}$ -1	$1\frac{1}{2}$ -1
Discount rates:—				
Treasury bills	$1\frac{1}{2}$ -1	$1\frac{1}{2}$ nom.	$1\frac{1}{2}$	$1\frac{1}{2}$
Three months' bank bills	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$

* Loans against Treasury bills and other approved bills and British Government securities within six months of maturity; 1 per cent. Treasury Bonds and other gilt-edged stocks within six months of maturity; and other collateral respectively.

December 17th witnessed a further drop in the Treasury bill tender rate from 15s. 8.91d. to 13s. 9.17d. per cent., and at this lower rate the market appears to have obtained an allotment of 85 per cent. The expectation of an easy passage over the turn of the year accounts for this lower trend. This week some of the banks were buying February and early March Treasuries at $1\frac{1}{2}$ per cent. and slightly under. These rates contrast with a tender rate on December 3rd of as high as 18s. 2.16d. per cent.

The Foreign Exchanges.—French francs were stronger on Monday and Tuesday, and it is clear that the criticisms by M. Reynaud and others of French financial policy have not had any lasting effect. In consequence of this recovery, three months' francs were bid down from Frs. $4\frac{1}{2}$ to Frs. $3\frac{1}{2}$ discount and spot sterling from Frs. 147.30 to Frs. 147.12. On Wednesday the spot rate weakened to Frs. 147.19 and the three months' rate to Frs. $4\frac{1}{2}$ discount, on the news of the French strikes, and the French Control had to give some support. Still the Control gained exchange earlier in the week, and taking the past fortnight as a whole its net losses have been very limited. Spot belgas have been on offer, with sterling rising from Bel. 29.40 to Bel. 29.43 $\frac{1}{2}$. This slight movement is in sympathy with the week's equally slight fall in the sterling price of gold from 139s. 9 $\frac{1}{2}$ d. to 139s. 8d. per fine ounce, for as Belgium is on the gold standard any fluctuations in the sterling price of gold naturally tend to be neutralised by movements in the Brussels rate of exchange, the result being to keep steady the price of gold in belgas. There was no change, and very little business, during the week in any other currencies. The New York rate is unaltered at \$4.99 $\frac{1}{2}$, and the Amsterdam rate is Fl. 8.98 $\frac{1}{2}$, again with practically no change.

THE STOCK EXCHANGE

"The Chairman Said . . ."

COMPANY meeting procedure is a fitting topic for the festival of Christmas. Outwardly, it is a conglomeration of paradoxes whose superb unreason best suits the moment when paper hats are put on and logic leaves by the chimney. Approximately five thousand British public companies invite their shareholders, once every year, to a *folk moot*. If half the proprietors of even a moderate-sized company attended, the chairman would have a larger audience than Signor Mussolini ever addressed from the Palazzo Venezia. No hall in England could possibly contain the 150,000 ordinary shareholders of Imperial Chemical Industries. But no secretary ever lost sleep on that account; for shareholders simply do not come trooping by battalions. Contrary to all theatrical canons, the best shows draw the thinnest houses. Only a passed dividend, a heavy loss or a reconstruction scheme can really pack the hall; a crowded meeting is usually an angry meeting. Shareholders who cannot attend, however, are given special facilities for voting in favour of the chairman's policy before they have heard his speech.

The meeting opens with the reading of accounts which are always taken as read. Discussion of grievances precedes the voting of supply—by shareholders to themselves. Many crowded hours of criticism, interruption and cross-questioning have gone down to history in a single sentence: "After some discussion—the accounts were adopted." The main resolution is ultimately put, defeated (if it be very controversial) by those present, and duly carried by the absent shareholders. The meeting ends with a directorial election in the Russian manner. Candidates and vacancies are identical. Everybody is successful, and everybody has served before.

Despite these anomalies, however, the company meeting system has worked with a minimum of friction and (except in a small minority of instances) to the reasonable satisfaction of the majority of investors for a good many years. Ninety-nine per cent. of company meetings are merely formal; for shareholders are wisely content to leave their interests in the capable hands of those whose prime duty is to direct and manage them. But they do afford chairmen an opportunity to establish direct personal touch with a scattered army of beneficial proprietors whom they may never meet in the flesh.

To go back, in retrospect, over some of the outstanding meetings of the past year is to realise how effective an instrument of enlightenment a good chairman's address can be. Memory recalls the figure of Lord Wardington, urbane and authoritative, drawing aside the veil and revealing the composition of a great joint-stock bank's advances; Sir Josiah Stamp delivering his learned annual presidential address (with chart) to the Society of L.M.S. Stockholders; Mr Samuel Courtauld describing the world's rayon position with an air of Haroun-al-Raschid; and Mr Arthur Chamberlain uttering a kindly but stern philippic on producers who too closely identify the steel industry's interest with their own. Some of the year's speeches have conveyed a salutary warning, like Mr Graham Cunningham's hint to Triplex Safety Glass shareholders, that they must not expect an unbroken sequence of years of favourable legislation and booming car sales. Others have reminded shareholders of basic truths in company finance, as did Lord Craigmyle by his insistence on an adequate depreciation policy for maintaining the efficiency of the Peninsular and Oriental Steam Ship Company. And a becoming modesty alone restrains our wider commendation of the example set by the chairman of a progressive

Midland brewery, who, in peroration, expressed the hope that his company might long continue to deserve the praise of *The Economist*.

Who is the perfect chairman? What is he that every junior director would wish to be? There are manuals of "dos and don'ts" on many subjects, from golf to writing for the Press; but no one has yet compiled a list of the topics which conscientious company chairmen ought to discuss, and those they should wisely avoid. We may, perhaps, be permitted to make a few tentative suggestions, based in good faith on the discipline of many years' attendance at company meetings. Doubtless, progressive earnings and dividends, maintained or increased over many years, speak louder to shareholders than any number of words. But the real audience which the chairman of even a small company addresses is far wider even than the total of the proprietors, since it includes all investors, large or small, who may choose to become proprietors in the future. Such an audience will pardon, and even welcome, the enthusiastic satisfaction of a directorial board with its own achievements. Conversely, it will be sympathetic, in time of depression, to a frank avowal of difficulties encountered. It does not expect chairmen to give their companies a bad advertisement or to do the shareholders' job of criticism for them. What it desires, above all things, is *news* about a company, its achievements, its aims, its hopes and its problems.

Investors, indeed, have an insatiable appetite for positive facts, from which they can draw their own conclusions with the assurance that no consideration which is basic to their decision has been omitted. The best speech can never be a satisfactory substitute for detailed and informative annual accounts. Its ultimate function, indeed, is to give these annual figures their due perspective, to remove misapprehensions, to put present results into relationship with the past and the future, and to elucidate the causes which have brought them about. There is obvious utility in a speech which specifies the directions in which a company's business is expanding, the new products it is manufacturing and the new branches it is about to open. Equally useful is the speech which describes the background of the industry in which the company is a single unit.

Whether an address which amply covers all these points can leave any room for controversial propaganda is, perhaps, an open question. One would not deny to *ex parte* views any place, provided their nature were made clear; but a company meeting-room is not an appropriate venue for matters best discussed in the House of Commons. A certain seeing of facts through rose-coloured spectacles, again, may be permissible, if shareholders and investors can determine the tint employed more or less accurately. The rostrum is not a judicial bench, and he is a poor father who does not praise his own child. But investors may rightly ask that what is misleading, or irrelevant, or sufficiently condensed and partial to be both, shall be excluded. On the whole, they have reason to complain of speeches which tell them too little rather than too much. From their viewpoint, the least useful address is the one, bathed in noonday sunshine, which studiously avoids every unfavourable possibility. And the most dangerous is the speech (happily rare to-day) made with one eye on the price of a company's shares on the Stock Exchange.

For the rest, the best speeches will always express some indefinable *trait* of the speaker's personality. When ought they to be made? An increasing number of highly successful businesses is following the practice of

including the text of the chairman's speech in the annual report to its shareholders. The list includes Benskins and Brickwoods in the brewery trade, Crompton Parkinson in the electrical industry, Turner and Newall in the asbestos industry and Prices' Tailors in the multiple clothing trade. The device can never be a complete substitute for present methods of giving wide publicity to company speeches; for a chairman's effective audience includes potential as well as actual shareholders, who may be synonymous with the whole body of contemporary investors. There can be nothing but commendation, however, for every innovation which tends to stimulate the interest of shareholders in their companies, to bring them in greater numbers to annual meetings and to increase the number and pertinence of the questions they put. The problem of overcoming the apathy of shareholders over the affairs of their own companies—a corollary of the widening diffusion of capital ownership—can only be solved, eventually, by the investor himself. But chairmen and directors can make a valuable contribution by encouraging every development calculated to impair their own peace and quiet.

Investment and Company Notes

Wall Street Improves.—Wall Street is celebrating Christmas with a judicious rise in prices which is sufficiently steady to be almost festive, but stops short of suggesting that Washington has been forgiven. Wall Street's New Year resolutions include no grace for President Roosevelt. The House of Representatives has referred back the Wages and Hours Bill to committee. To Wall Street, this represented a welcome rebuff to the President, who has been unable to get anything of consequence through his special session of Congress. Wall Street was not so pleased by the adjournment of the finance committee without any decision on tax reform. But the present rally in stock prices seems to be based less on political events than on the growing belief that the industrial outlook is clearer, that recession appears to have touched bottom, and that there is now a reasonable context for cautious hope about the coming year. The Iron and Steel Institute's estimate of steel mill activity for the Christmas week shows that activity is roughly unchanged if allowance is made for the holiday. The expectation of industrial improvement is necessarily tempered, for the market, by the realisation that the President has not disclosed any radical change in his attitude to economic affairs, by the activities of the Chairman of the S.E.C., ever zealous to raise the moral standards of the Exchanges, and, finally, by the Sino-Japanese war. With this mixed prospect, Wall Street's more seasonable spirit is courageous. The New Year will prove if it is really justified.

Chinese Customs Position.—Questions put to the Foreign Secretary on Monday this week revealed the anxiety (felt also in another "House") about the future of the Chinese Customs Administration and the security for Chinese Customs loans. Mr Eden had no new information to give about the position in Shanghai, Tientsin and Chinwangtao. But he returned a provisional affirmative to a suggestion that the Government had no intention of recognising any assumption by the Japanese authorities, or by alleged Chinese authorities, of rights which belong to the legitimate Chinese Government. It is difficult, at this stage, to define the question of "rights"—and much more difficult to insist upon them. The market's concern this week has arisen from the possibility of diplomatic repercussions from the "Panay" and other incidents, and Japanese bonds

have been principally affected. Chinese issues, on the other hand, have remained relatively steady. These bonds stand at levels which clearly assume the maintenance of some payments, but what the scale will be, and by whom it will be met, is far from clear.

Property Societies Disclosures.—Some two months ago the position of certain property societies was brought to the public notice by the plight of three concerns registered under the Industrial and Provident Societies Acts. A fortnight ago, the stories of the General Mortgage and the London and Provincial Property Societies were further unfolded at meetings of creditors and members. Both businesses were more or less inactive until eighteen months or two years ago, when effective control passed to particular individuals; both had attempted, not very successfully, to raise money by debenture issues, and in both cases the Official Receiver spoke plainly of mismanagement. The London and Provincial Property Society, it was disclosed, had continued to do business after the failure of a debenture issue; it had overtraded on limited means, and the appointment of an undischarged bankrupt as general manager was an unfortunate choice. The Senior Official Receiver declared that it was too early to name the causes of failure of the General Mortgage Society, but he did not mince words in his description of the society's business methods. The society's collapse was imminent after the failure of a debenture issue, and Mr H. J. Greville, who had resuscitated the business in July, 1936, proceeded abroad last August, and was removed from office afterwards. The directors, on learning of complaints, called for an investigation, and as it was unsatisfactory, themselves presented a winding-up petition. At the time of the order the board consisted of Mr Walter Ranson, Mr H. J. Greville, Sir John Frankland Payne Galloway, the Earl of Ypres, and the Earl of Halsbury. The last two noblemen, one of whom informed a Press representative after the meeting that both joined the Board after the irregularities had taken place, became directors last April. There had, in fact, been inserted in a brochure a slip (boldly printed in red type) reporting these appointments, and also that of Captain Sir John Seton as joint secretary. The Official Receiver's comments included a reference to the support which the Society received from the names of two peers. It will be hoped that the abuses outlined at these creditors' meetings will be checked by legislation. As we go to press, it is reported that summonses in the names of the English and Scottish Co-operative Property, Mortgage and Investment Society, Limited, and Mr J. Wolstenholme, managing director, have been issued at the instance of the Registrar of Friendly Societies. It is understood that the summonses relate to the statement of profits in the Society's accounts for 1936, and are returnable on December 30th.

The Investor's Christmas.—"Lawyers, I suppose, were children once"; the same hint of doubt may apply equally to investors at this season. The investor who cannot forget the Stock Exchange, even in the West End stores, will find comparatively little scope in the toy trade for purchases which will pay his own dividends. Santa Claus does not often apply for permission to deal. There are, however, at least two important exceptions to the rule that toy businesses are in private hands. Lines Brothers, who made a public issue last year, manufacture a large range of toys, and are perhaps best known to the public through the "Triang" toys and Hamleys toy-shop businesses. The combined share and loan capital of the company exceeds £600,000 and in five years net profits have doubled. The scope of the business is extending and improvements in organisation are helping to solve the problems of seasonal peak production. The second exception, Meccano, Limited, covers a wide range, extending beyond the Meccano sets and Hornby trains of boyhood memory. Profits, after overhead charges (which are disclosed in the

accounts), have been relatively steady since the company was made public, but depreciation and special reserve policies have been generous, and until a 7 per cent. distribution was made last August, dividends had remained at a low rate.

When the time comes to put away childish things, however, the investor seeks the calm solace of tobacco and "beaded bubbles winking at the brim." A pipe smoker will find interest in the profits of Alfred Dunhill, Limited, which, not unnaturally, have been subject to cyclical fluctuations. But dividends were resumed in 1934, and recovery has since been rapid. Though no concern familiar to the investor can supply the blushful Hippocrene, a considerable number of wine merchants and a large number of brewers handle its modern equivalent. Among those who follow the slogan "Beer is best," the name of Bass, Ratcliff and Gretton is nationally known. The magnitude of this business is illustrated by the approach of the latest profits to the £1½ million mark. Pre-depression earnings have not been quite achieved, but in the past few years progress has been made at a steady rate. The English beverage, known as "Scotch," brings to mind Distillers, whose profits, incidentally, now include some appreciable benefit from the non-potable industrial alcohol business. For the wine drinker, Henekeys, Limited, display a satisfactory profits record. The company's capital is not highly geared, but in recent years the distribution has not fallen below 12½ per cent., and in 1935-36 pre-depression profits were comfortably exceeded. The cigar-smoking investor, familiar to the cartoonist, but somewhat rare after a year's falling markets, may combine self-interest with pleasure in the products of Henry Clay and Bock—one of the links in a considerable chain. American Cigar Company control Cuban Tobacco Company, Incorporated, who control Henry Clay and Bock, who control Havana Cigar and Tobacco Factories among other companies. Both the latter companies resumed dividends in 1933, but recovery has proceeded erratically, and the latest profits are much below the best. The Christmas scene, then, will have innumerable investment implications, but we confess to failure in trying to discover a public company manufacturing the red robe and false whiskers of St. Nicholas.

British American Tobacco Report—A sharp rise in the ordinary stock units preceded the publication of the "Bats" dividend and profits. The results deserved, and obtained, a good reception, although the accounts themselves are no more informative than in the past. Total profits have increased from £5,541,756 to £5,760,450—representing dividends received from subsidiaries and reserves written back in respect of subsidiary companies' former losses, after deducting charges, management expenses and taxation. The sum disclosed, in short, covers preference dividends, the 21½ per cent. tax-free ordinary distribution and £100,000 transfer to staff funds with £42,000 to spare. Our usual table, for holding company accounts of this type, is a mere arithmetical exercise:—

	Years to September 30th		
	1935	1936	1937
Profit	5,469,171	5,541,756	5,760,450
Preference dividends	585,000	585,000	585,000
Ordinary stock (tax free)—			
Earned	4,884,171	4,956,756	5,175,450
Paid	4,735,936	4,736,352	5,033,399
Earned (%)	20.6	20.9	21.8
Paid (%)	20	20	21½
Benevolent fund		150,000	100,000
Carried forward	2,357,877	2,428,281	2,470,331

The disclosed profits can best be interpreted as a general indication of the trend of the group's earnings as a whole. The main factor contributing to increased profits last

year was undoubtedly rising commodity prices, which greatly increased the purchasing power of the company's principal markets abroad—including India, China, and South Africa. Some three-quarters of the balance-sheet total (which slightly exceeds £50 millions) is represented by subsidiary and associated companies. There may be some significance in the sudden increase in advances to subsidiaries from £1,446,092 to £3,659,571, though it appears to be related to fluctuations in trading stocks—the parent company's stocks (including advances for leaf purchases) have advanced from £3,468,664 to £3,811,958. For the current year the check to commodity prices and the disorganisation of the important Far Eastern market should be remembered by the investor. The long-term investment merits of the ordinary stock, which yields 4½ per cent. gross at the present price of 109s. 4½d. are axiomatic, and deservedly so. They would be even more clearly appreciated if the company's accounts were more informative.

Courtaulds and Rayon Prices.—The rayon trade this week learned with surprise that Courtaulds, Ltd., had decided to increase rayon yarn prices, except for certain finer counts which compete with acetate yarns. The Stock Exchange has rightly regarded this announcement as an important step, and the ordinary stock units have advanced to 47s. 3d. During the past decade Courtaulds have followed a single price-policy, through good and ill, whether materials costs were rising or falling. That policy has been a steady reduction of rayon prices, with the object of winning a bulk business for rayon. During the past three years, it is true, the relative stability of viscose yarn prices has suggested that the competitive battle had been more than half won. The latest increases are related to increased raw material costs, such as wood pulp and chemicals, and higher labour and plant expenses. The explanation may be sound, without detracting from the importance of the increase in itself. Investors may wonder whether, a year or two ago, the company would have raised its selling prices if costs had then increased. That it has done so to-day suggests that the board believes the company's competitive position in the rayon industry to have been fully consolidated. It is significant, indeed, that the price of "Fibro" staple fibre, in which the company is developing a new bulk market, was recently reduced, although its production costs have presumably also increased. If our interpretation is correct, the Courtaulds' stockholder, rather than the rayon consumer, may enjoy the benefit of future cost reductions. These reductions in the past have formed the basis of the company's successful development policy. That is not to say, however, that the short-term outlook for Courtaulds has been transformed. The position of the American Viscose Corporation, in particular, introduces a cautious bearing upon profits estimates for 1937, and perhaps for 1938. The current yield of 4½ per cent. on Courtaulds ordinary stock must be justified by appeal to somewhat longer-term considerations than a single year's profits.

Radio Companies' Problems.—The radio industry, at present, is suffering from acute "atmospherics"—a recurrent distortion of the profit curve for which it has yet discovered no sovereign cure. The true explanation of these vagaries probably lies in the table below, which shows the growth of wireless licences in issue at the end of each year during more than a decade:—

End Year	Licences (000's)	Inc. % over previous year	End Year	Licences (000's)	Inc. % over previous year
1926	2,178	...	1932	5,283	22
1927	2,315	6	1933	5,973	13
1928	2,628	14	1934	6,781	14
1929	2,956	13	1935	7,402	9
1930	3,411	15	1936	7,961	7
1931	4,329	27	1937*	8,424	7

* End November comparison.

Here, the investor might think, are all the signs of a soundly progressive industry, although its advance is slackening. The pace, in fact, has been too hot and the industry has never been able to settle down. It has suffered from all the failings of industrial youth—continuous changes of models, new inventions which ruled out an even flow of production, bouts of price cutting, troubles with retailers, and excessive selling, in some cases, on unsoundly financed hire purchase and retail plans.

It is, moreover, an indisputable fact that every set sold to a new purchaser brings the industry one set nearer saturation point. The declining rate of increase in licences shows that saturation point is gradually being approached. There are probably fifteen million homes in this country and well over half are now equipped with wireless sets. New business on the 1930-34 scale, therefore, can only be obtained by marketing sets at prices within reach of the poorer working classes. Already competition is acute in this category. Again, renewal business, which probably represented at one time 15 per cent. to 20 per cent. of the turnover, can hardly maintain its past scale, for changes in technique to-day are not such as to render the older sets obsolete. This factor, of course, certain advantages, since heavy preliminary expenditure on "revolutionary" new models is consequently avoided. A period of falling real wages, in fact, is likely to coincide with some considerable building up of delayed replacement. To establish itself on the investment map, the radio industry must first seek sound organisation and discipline. Many companies, such as Electric and Musical Industries have broadened their operations, and hedged their seasonal and technical risks. Much also remains to be done in the export markets. More important still, the private association of makers which has been able to exercise some intermittent control over prices and marketing must be strengthened. Until the radio industry is properly consolidated, on a reasonable earnings basis, it will provide no opportunity for the staid investor. Relevant data are given in the following table:—

Co. & Denom.	Total Profits		Earned for Ord.		Ord. Div.		Ord. Shares
	Prev.	Latest	Prev.	Latest	Prev.	Latest	
E.M.I. (10s.)	£226	£293	10.2	13.5	10	10	17/-
Pye (5s.)	53	95	232.1	374.2	125*	125	11/6
Philco (2s.)	51	51	67.4	67.4	40	30†	1/3
E. K. Cole (5s.)	132	58	80.1	41.4	Nil	Nil	6/10½
Kolster (6s.)	Dr. 7	Dr. 3	Nil	Nil	Nil	Nil	2/6

* And capital bonus of 400 per cent. Shares then consolidated from 1s. to 5s.
† Interim for current year passed.

The calculation of yields on radio shares, unless we exclude a return of 5.9 per cent. on Electric and Musical Industries, is of little investment significance. Such recent events as the passing of the E. K. Cole interim show that conditions in the industry have lately deteriorated.

Baird Television Position.—Critics like *The Economist*, who objected to the capital reorganisation put forward by this concern two years ago, on the ground that under it potential profits would be inequitably distributed, took a long-term, but so far irrelevant, view. For the latest accounts, covering the year to June 30th last, give no sign that the company is approaching the profit-earning stage. The company, in fact, is still adding to the intangible items on the "assets" side of its balance sheet. The further sum of £111,903 is transferred from the debit of profit and loss account to general development account in the balance sheet, raising that item to the formidable total of £560,502. The other large item in the balance sheet, covering patent rights, trade marks and other interests, totals £538,320. Finally, the balance sheet discloses a shortage of liquid assets to meet current liabilities amounting to £46,392. Nor is the directors' report cheer-

ful in its tone. Public response to television has not come up to expectations. The manufacturing industry is, at times, inclined to lay the blame upon the limited transmissions. It may be doubted, however, whether a mass market for television receivers can be created until the price of receivers is substantially reduced. The "sales prospect" for television is likely to be the person who remembers that the high radio and car prices of little more than a decade ago have given place to "popular" prices and vastly improved models. The fear of technical obsolescence and the absence of a second-hand market restrains many potential buyers. For the investor, the Baird accounts carry the familiar lesson, that new industries, in a state of technical flux, usually cost him dear. In the television industry itself there are at least ten concerns manufacturing television receivers under competitive conditions. There may be an argument for obtaining an interest in television via Electric and Musical Industries, in whose operations it is a subsidiary though perhaps not unpromising branch. But the majority of television receiver manufacturers are in no better circumstance than the radio manufacturer of the early 'twenties. Meanwhile, Baird Television, if it would fulfil its aspirations in television transmission, must obviously find new capital.

New Companies' Poor Results.—Feasts are not complete without their skeletons, and for yesteryear's speculative investor a number of poor reports issued by new companies play that rôle. Earlier disappointments have been discussed in *The Economist* of October 30th and December 11th. It is difficult to measure the exact extent to which achievements have fallen below expectations. Comparability between reports and prospectuses is so imperfect that it is impracticable to present these first results in tabular form. Proprietors' and managing directors' remuneration, for instance, is frequently not deducted from prospectus profits, but appears to be deducted before disclosing profits in annual accounts. Depreciation is occasionally treated with similar want of consistency, or not distinguished from other expenses. One company, Wallpapers Consolidated, formed to amalgamate other businesses, showed profits for the separate companies in the prospectus, but its first accounts include no consolidated profit and loss account. Consequently, the parent company's trading profits and dividends appear at £1,918, compared with combined earnings in 1935 of £15,139. In the case of D. M. Gilbert and Company, furniture makers, profits of £17,715 appear to be below a consolidated prospectus figure of £25,957, but they do not include any profit or dividend from the subsidiary. But no hair-splitting over accounting formulæ can disguise the unsatisfactory nature of many results. Two reports have rightly involved closer examination into the companies' affairs: the directors of Popular Footwear, which made a loss of £4,961, against a roughly comparable profit of £9,945, are taking legal advice in connection with the company's formation and administration. Preston Breweries also made a loss, and there have been changes in the board. British Aircraft Manufacturing followed up an initial loss by a larger deficit in the second year.

But it is significant that the disappointing results of other companies have, in part, been attributed to delays in building new premises, to dislocation arising from removal or reorganisation, or to want of sufficient preparation

in making changes. C.T.C. Bazaars, a South African concern, which brings share premiums into the Appropriation Account (though it does not distribute them), shows a trading profit for the initial period of £29,219 against a prospectus figure of £43,862. The report refers to buildings not being available. Similar difficulties were experienced by S. E. Opperman, aero and motor component makers, by Alexandre, Limited, multiple tailors, whose latest profits of £9,347 compare with £15,257, and by Goodman Brothers and Stockman, clothing manufacturers, who removed to a new factory. Premier Metal Company of South Africa apparently fared as well as the prospectus suggested, but had similar difficulties of reorganisation and new building. Aero Engines, Limited, made a net loss of £57,478 in 1936-37 against a loss of £11,851 in the company's initial period. The chairman has stated that certain work was undertaken without an adequate planning staff and without a sufficient study of costs. The dovetailing of the two businesses amalgamated by D. M. Gilbert and Company, it appears, had not borne fruit by the time of the first report. Speaking at the Wallpapers Consolidated meeting, Mr P. H. Taylor was commendably frank: the policies of co-ordination (on which stress was laid in the prospectus) had not been planned in sufficient detail. Companies must be opportunist when they appeal to the public for new capital, but investors will be reminded by these and similar results to scrutinise the exact purposes for which this capital is required with the utmost care.

Union Cinemas Disclosures.—On Wednesday the shareholders of Union Cinemas adopted the directors' report, as distinct from the accounts to March 31st which accompanied it, after listening to some remarkable statements by Mr John Maxwell. Some of his more far-reaching suggestions, perhaps, may be left for comment if there are later developments arising from the company's past affairs. But there can be no two views regarding the financial position to which the company, with its 43 subsidiaries, has been brought. Mr Maxwell declared that properties standing in the balance sheet at £3,856,564 had been written-up by £2,200,000 at the time of the amalgamation of the Union, Oxford and Berkshire and National Provincial Cinema companies. This surplus had not been apportioned over the properties, and was, in fact, impossible to reconcile with real values, or even with original costs of individual properties. The scale of leasehold amortisation provided was insufficient, since it was allowed on a 99 years' basis, although the actual life of the properties was probably 20 to 30 years. Property depreciation on an adequate scale was required, and not mere leasehold amortisation. Reference was also made to certain transactions which had been capitalised, although ostensibly of a revenue nature. Mr Maxwell anticipated that the new accounts would be available before the end of March. He promised efficient management of the group by the Associated British Picture Corporation, but pointed out that dividends would be ruled out until a capital reorganisation had been effected.

Argentine Company Prospects.—While the English investor now believes that recovery at home has run its course, no country in which he holds substantial interests has offered in 1937 such clear evidence of reviving trade as Argentina. In the first half of this year the value of exports was almost twice the corresponding figure for 1936, and though it was clear that the rapid rate of improvement in the first few months could not be fully maintained, the Republic has enjoyed an increase of 57 per cent. in exports for the ten months to October, compared with the previous year. Growing imports, particularly in steel and machinery, indicate that the Argentine is now commencing to renew capital equipment, while the national finances have been strengthened by extensive conversions of debt to a

4-4½ per cent. basis. In some respects, however, the outlook remains uncertain. The Anglo-Argentine trade agreement of December, 1936, disposed of hopes of relaxed restrictions on British imports of Argentine produce, while the fortunes of the meat trade are in turn partly dependent on any action which the Argentine Government might take in controlling the market. In the political sphere, the effect of the recent presidential elections upon the attitude which may be adopted towards foreign capital cannot yet be assessed. Meanwhile, recent reports, of which we give a selection below, show on the whole a very satisfactory increase.

Company (and Date of Accounts)	Total Profits	Earned for Dividend	Ordinary Shares		Ordinary Shares Price and Denom.	Yield (%)

* Including only 10 months' sales of sugar and alcohol.
† Includes £10,000, £270,000 and £370,000 transferred from Depreciation Account in 1934, 1935 and 1936 respectively.

Although the results show, on the whole, considerable recovery by 1936 or mid-1937, due in part to the improvement of the peso, the latest earnings emphasise past difficulties without indicating a high degree of prosperity. The preference dividends of Agar Cross are still five years in arrears; in 1935-36 similar arrears of Harrods (Buenos Ayres) were capitalised, but normal preference and ordinary dividends have now been resumed. A setback in Leach's Argentine Estates profit reflects a lower price obtained for sugar combined with a higher cost of production. The chances of a return to truly prosperous conditions have become somewhat clouded in the past few months. Apart from the falling trend of commodity prices, Argentina has recently had special difficulties of her own: frosts have affected wheat to such an extent that crops are likely to be 20 per cent. or more below estimates. Such crop conditions, combined with easier prices, must have some bearing upon general economic activity in the Republic.

Mexican Oil Wages.—Mexico produces three principal things—silver, oil, and attacks upon foreign capital. It is becoming as difficult to tell which of the three is the most important, as to judge the ultimate intentions of the Government towards foreign capital. In November, Mexican Eagle's leases on the Poza Rica field were ratified, and a new concern—Centralmer, Ltd.—was also granted rights in the field. The grant of new territory, it was held, presaged a revised Government attitude towards the companies. Centralmer, a British concern with influential backing, brought with it golden sheaves to the extent of £1 million in a cash loan to the Mexican Government. Mexican Eagle, however, is apparently to make its contribution in indirect form. The Federal Labour Board, it appears, has published its findings in the arbitration enquiry which followed the strike last May. The award calls for increased wages and social benefits costing £1,440,000 on paper, but, in practice, appreciably more. The award, apparently, runs to fifteen hundred pages, and the oil companies propose to examine this lengthy document before issuing

a further statement. The companies, however, have already stated that the maximum figure which they could afford for increased wages, short of bankruptcy, is £1,200,000. Apparently, the Mexican Eagle contract to operate in the Poza Rica field has not been suspended as was reported last week-end. Even the Mexican Government does not, it seems, wish to kill outright the goose which provides the golden eggs. After the extraordinary tergiversations of the Mexican Government this year, with strikes and labour pressure alternating with such conciliatory gestures as the cession of new territory, the investor is plainly unable to value Mexican Eagle shares by any normal standard.

Other Company Results.—Although our usual analysis of profit and loss accounts appearing on p. 666 is seasonably short, it includes a number of interesting results. Among the large companies' reports are *Adelaide Electric*, *United Tobacco Companies (South)*, *Booker Brothers*, *McConnell* and *Joseph Nathan and Company*. The results are discussed on p. 665, under the heading "Shorter Company Comments."

Company Meetings of the Week.—In this issue, reports of company meetings begin on page 653. Sir Thomas Buckland's review of Australian recovery, made at the *Bank of New South Wales* meeting, is discussed on page 653. The opinion was expressed by Mr Edward S. Baron to *Carreras* proprietors at the annual meeting that the company should continue to enjoy a fair share of consumption, which continued to show a reasonable increase at home and abroad. On the financial side, their stock equalisation policy was a protection against violent movements in the price of leaf tobacco. At the *United Molasses* meeting, Mr F. K. Kielberg discussed the equipment with which the company could face a possible trade recession. They had no excess stocks, and their stock valuations were very conservative. The way in which the business had been built up from its own resources was commented upon by Mr A. Woolley-Hart at the *British Tar Products* meeting. Viscount Elibank, at the *London and Rhodesian Mining and Land Company* meeting, discussed development in the company's mining and ranching interests, and recorded with satisfaction that ranching showed a profit for the first time for many years. The payment of only 5 per cent. on the ordinary stock of *Scottish Australian*, despite a substantial improvement in profits, was justified by Mr J. C. Inglis on the grounds of the fall in wool prices since July. Mr Francis Allen declared to *Akim* (1928) shareholders that the essence of the company's policy was to avoid selling securities at a price known to be below their real value. At the *Southern Malayan Tin Dredging* meeting, the chairman expressed the hope that the International Tin Committee would form a buffer stock scheme. The recent quota decisions of the International Tin Committee were also discussed by Mr C. V. Stephens at the *Malayan Tin Dredging* meeting. Mr Francis Allen reported to *Ariston Gold Mines* (1929) shareholders that ore reserves were steadily mounting, and must be near the million-ton mark. Sir Oswald Stoll, at the *Stoll Theatres Corporation* meeting, after discussing the opportunities for selling certain properties, commented at some length on the entertainments tax burden. The increasing demands of labour and the problems of equipment were put among the chief difficulties of the *Mexican Railways*. There were few signs of a recession in prosperity, but the general situation in the U.S.A. required close attention. The chairman of *Consolidated Tin Mines of Burma* referred to the benefit which the company derived from an exceptional price for wolfram. An appreciable improvement in the value of the ground dredged was among the points made at the *Killinghall Tin* meeting.

THE WEEK IN THE MARKETS

THE STOCK EXCHANGE

SETTLING DAYS

TICKET: JANUARY 4

ACCOUNT: JANUARY 6

BUSINESS on the Stock Exchange in Christmas week is always subdued, though spirits usually are not. This week has proved true to tradition in the first respect, and the committee, by deciding to close the doors of the "House" at 2 p.m. on Christmas Eve, have indicated that the light-hearted may indulge their seasonal humours off the floor. Postal delays have upset the normal routine of brokers with country connections, and business has been too thin to occupy the full attention of members.

Gilt-edged remained steady, though business was small. A small amount of end-year selling was comfortably absorbed. The eager subscription of the Coventry loan, which opened at a small premium on Wednesday, assisted the market, and recent new scrips tended to improve.

Among foreign bonds, Brazilian issues were nervous since no statement is yet available about the Government's intentions regarding the debt service as a whole, and the interest payments due next month. Japanese bonds reflected the diplomatic tension, though Chinese issues remained steady. A little support for the Belgian scrip raised the price to 1½ discount.

Home rails received little support at first, and the traffics encouraged no new interest. The Argentine rail market, having long awaited an official increase in freight rates, was inclined to criticise its inadequacy, in advance of official publication.

Limited trading in the industrial markets concealed few features. Trans-Atlantic issues inclined to improve, in company with Wall Street. Steel shares opened well, though the early prices were not fully held. The motor share market gave an impression of greater firmness, though business was too small to move prices appreciably in either direction. A certain provincial demand for brewery shares was reported, and Distillers improved further. Tobacco shares, however, tended to ease. Early dividend hopes brought support for Woolworth, but it was not maintained. Absence of specific trend, indeed, is evident in every section of the market, from shipping shares to the miscellaneous leading industrials. The tone, however, has remained firm throughout.

In the oil market, the latest cables from Mexico City (discussed on page 650) have seriously affected the "twin Eagles." Some demand for Royal Dutch and Shell gave way to profit-taking later. Apex (Trinidad) improved on the 32½ per cent. final dividend, making 45 per cent. for the year, against 35 per cent. Little interest was taken in rubber shares, but tea shares were slightly better.

Although Kaffirs remained firm, business was subdued, and a certain amount of professional business was not sufficient to keep the market active. Some of the Far West Rand developing mines went ahead, however, led by West Wits, but the dividend paying shares were only steady. Rhodesian copper issues were slightly better, and some tin shares improved despite the lean turnover.

NEW YORK STOCK EXCHANGE

IN the short session at the end of last week some good rises were recorded, and the close left the general price level at the highest for the week. On Monday this week the Dow Jones industrial index gained more than two points in a fair turnover of 1,460,000 shares. Steel and electrical shares led the market. A further gain was made later, despite some profit selling and a certain amount of disappointment with the adjournment of the House Committee on taxation without any concrete proposals. There was speculative support for shares likely to benefit from armament expansion, and some solid buying in the chemical group. Utilities did not respond to the renewed discussion between leaders of the industry and the President. Some improvement in tone was evident in the bond market this week. Industrial news suggests that the recession may be at its bottom; Treasury officials profess to see a turn at the end of this month or January. The Iron and Steel Institute's estimate of steel mill activity for the current week is 23.5 per cent. of capacity against 27.4 for last week; since this week's figure does not allow for the holiday, the rate is regarded as maintained.

CAPITAL ISSUES

THIS week's only public offer was an issue of £1½ millions of 3½ per cent. stock by *Coventry*, redeemable 1960-64, at £101 per cent. These now familiar terms are tending to attract the stags, and the issue had a good reception. Particulars of new industrial capital are limited to statements for information only. *C.L.R.P. Investment Trust* has placed a line of 4 per cent. debenture stock at 99, while particulars of 6 per cent. preference shares are published on behalf of *Wolverhampton Die-Casting Company*. Statements have also appeared on behalf of *Forton Trust*, *Gloucester and Cheltenham Greyhounds*, and *Heal and Son*. Under the heading "Offer to shareholders only" particulars are given below of the offer by Philip Hill and Partners to purchase *Hawker Aircraft* 5 per cent. preference shares for 24s., or for exchange into one 5 per cent. preference share of *Hawker Siddeley* together with 4s. in cash.

PUBLIC OFFERS

Coventry Corporation.—Issue of £1,500,000 3½ stock at 101; redeemable May, 1964, or from 1960 on notice. A trustee stock. Ranks with other stock. Proceeds to repay short-term debt. March, 1937: population, 194,100; rateable value, £1,378,430; rate, 13s.; net outstanding debt, £8,101,031 (of which £5,771,749 productive). Trading undertakings, £2,885,472, with profits before debt service of £487,537, or £315,779 after sinking fund. Lists closed 9.35 a.m., December 21st.

BY STOCK EXCHANGE INTRODUCTION

C.L.R.P. Investment Trust.—Particulars of issue of £150,000 4 per cent. debenture stock which Messrs. Cazenove Akroyds and Greenwood and Company have purchased at 99, less ½ per cent. commission. Redeemable at par 1968, or on notice at 102½, 1943-53, or at 101 to 1963. Further stock ranking *pari passu* can be issued up to two-thirds of share capital.

Wolverhampton Die-Casting Company.—Particulars of issue of 110,000 6 per cent. cumulative 10s. preference shares. Specialises in pressure die-castings. Net assets, £89,024, acquired for £95,000 (goodwill £5,976) in 90,000 10s. preference shares and 199,600 5s. ordinary shares, and £100 cash. Net profits before depreciation, managing directors' remuneration, and interest, years to March 31, 1935: £13,225; 1936, £16,380; 1937, £23,084.

Forton Trust, Ltd.—Issued capital 100,000 £1 shares. Invests in Stock Exchange securities. Total assets, June 30, 1937, £121,161. Profit, year to June 30, 1937, £5,901. Dividends, per cent., paid years to June 30: 1935, 4½; 1936, 5; 1937, 6; credit balance forward after these dividends: £5,097, £5,630, and £7,006, respectively.

Gloucester and Cheltenham Greyhounds.—Issued capital 151,100 2s. shares and 73,900 8 per cent. cumulative convertible 2s. preference shares. Incorporated 1932; greyhound racing track and sports stadium. Total assets, £31,022. Net profit, year to September 30, 1937, £2,762 (after allowing £756 depreciation).

Heal and Son, Ltd.—Issued capital 126,450 £1 ordinary shares, 35,107 6 per cent. cumulative £1 preference shares and £27,300 5 per cent. debentures (secured by sinking fund policy maturing 1944). House furnishes since 1810. Net profits (after interest and depreciation): 1934, £18,857; 1935, £16,942; 1936, £20,136. Total assets, December, 1936, £313,899; net assets exceeded £268,000.

BONUS SHARES

Associated Motor Cycles.—A bonus of one ordinary share for twenty now held is to be distributed.

ISSUES TO SHAREHOLDERS ONLY

Offer to Shareholders in Hawker Aircraft, Ltd.—A circular letter has been sent to preference shareholders of Hawker Aircraft, Ltd., dealing with an offer by Messrs. Philip Hill and Partners, Company to purchase the 5 per cent. redeemable cumulative £1 preference shares in Hawker Aircraft, Ltd., at 24s. cash, or at holder's option, for 4s. cash and one 5 per cent. cumulative £1 preference share in Hawker Siddeley Aircraft Company (ranking from February 1, 1938). Holders are reminded that the Hawker Aircraft preference shares can be redeemed from January, 1939, at 22s. 6d.

Drage's Limited.—A cash offer is being made by Ocean Trust Company of 17s. per £1 preference and 3s. 7½d. per 10s. preferred ordinary in Drage's, Ltd., subject to acceptance by not less than 90 per cent. of each class, or such lesser amount as the purchasers may be willing to accept. As part of the deal, Debenhams will transfer to Ocean Trust, without cash payment, its ordinary shareholding in Drage's, being not less than 1,683,365 out of 2,000,000 shares.

Wright's Ropes.—Issue of 30,000 new, £1 ordinary shares at 27s. 6d. to existing holders of 150,000 as at 13th December, in proportion of one in five.

Key Glassworks.—Ordinary shareholders are to be offered a further 13,323 £1 7 per cent. preference at 23s., in proportion of one for ten held.

New Kleinfontein Company.—Issue to shareholders of 134,447 £1 shares at £2 per share.

OIL OUTPUTS

THE BRITISH BURMAH PETROLEUM COMPANY, LTD.—Production of crude oil by this company, 40,278 barrels for November, 1937.

BRITISH CONTROLLED OILFIELDS, LTD.—Production for week ended December 11th: Western Area, 13,178 barrels; Central Area, 2,389 barrels; total, 15,567 barrels. Production for week ended December 18th: Western area, 12,794 barrels; Central area, 1,894 barrels; total, 14,688 barrels.

THE MEXICAN EAGLE OIL COMPANY, LTD.—Production for the week ended December 11, 1937, was 685,000 barrels.

TAMPICO OIL, LTD.—The total production from the Company's properties in Mexico for October was 13,172 barrels, in respect of which the royalty due to Tampico Oil, Ltd., amounted to 988 barrels. Total production during November was 12,715 barrels, in respect of which the royalty due to Tampico Oil, Ltd., amounted to 954 barrels.

TRINIDAD PETROLEUM DEVELOPMENT COMPANY, LTD.—Production for week ended December 11th: 47,766 barrels. Production for week ended December 18th: 50,003 barrels.

COMPANY MEETINGS

BANK OF NEW SOUTH WALES

CONDITIONS IN AUSTRALIA AND NEW ZEALAND

SIR THOMAS BUCKLAND'S ADDRESS

The ordinary general meeting of the Bank of New South Wales was held, on November 26, 1937, at the Head Office, Sydney.

Sir Thomas Buckland, president of the bank, was in the chair, and, in the course of his speech said:—

I have the honour on this occasion to present to you the accounts of the bank for the one hundred and twentieth year of its existence.

You will notice that the total of the balance sheet this year has reached the high figure of £123,145,000. This is an increase of £7,900,000 on the figures disclosed twelve months ago. It can be considered an eloquent testimony of the recovery which has continued its progress in the countries we serve and also of the enthusiasm and efficiency of the staff of the bank throughout all grades.

Commencing as I usually do with the items on the liabilities side of the balance sheet, our deposits now stand at £95,876,000, some £6,730,000 higher than last year. This growth is largely the outcome of the better prices our customers have received for their products. The year has also been free of any serious set-back in the shape of a general drought, although individual districts have suffered, some of them seriously.

Bills payable £8,322,000 are £1,182,000 higher than a year ago, the result of increasing trade and a general improvement throughout the community.

Capital £8,780,000 and reserve fund £6,150,000 remain the same as a year ago.

Turning now to the assets side of the balance sheet, our cash items, which stand this year at £16,646,000, are some £5,371,000 higher than at last review. In accordance with banking prudence and in co-operation with the policy of the central bank, our figures show that we have used the improvement to increase the strength and liquidity of our position. It is almost unnecessary for me to remind you of the efforts this bank put forth in the years of difficulty and stress to assist both its own customers and the community at large. As that was the proper policy for those dark days, so is it essential that we should take the first years of prosperous conditions to gain that position of liquidity and strength that would enable us to face with certainty and calm a depression even of the severity of that recently past. I am glad to inform you that the attainment of this great objective is in sight.

Our funds at short call in London are some £600,000 higher at £2,070,000.

Treasury bills standing at £2,630,000 are £4,645,000 less than a year ago, due to the withdrawal of Treasury bills from this bank by the central bank.

Investments in Government securities are £1,270,000 higher at £5,159,000.

Bills receivable and remittances in transit, £7,960,000, are £600,000 higher than a year ago. This is further evidence of increased trade, but its value as an indicator is affected very largely by the time at which our export season opens.

I shall deal later with general business conditions and the view taken by your directors and your officers with regard to the outlook for the immediate future. But it is interesting to point out here that of the increase of £6,700,000 in deposits, some £3,600,000 have been retained, spread among cash and other more or less liquid items, while our loans and advances have grown by £3,980,000 to a total of £80,570,000. This increase is the result of a much greater growth of business than would be revealed by a mere comparison of the balance sheets for this and previous years. Improving conditions have enabled a very large proportion of our customers to lean less heavily upon the bank, creating a tendency for advances to decrease. The growth in our figures, therefore, while giving evidence of the careful policy being pursued by the bank, is a most encouraging evidence of an active and growing business.

This rate of growth has forced upon us the necessity of providing room for the expansion that is taking place in many of our branches, particularly the larger. The increase of £300,000 in the amount standing against bank premises, £2,900,000, represents the outlay on new premises less the proportion which we find desirable to write off year by year.

Contingent liabilities stand at £3,650,000, a small increase on last year.

The balance of the year's profits, £543,000, shows an increase of £73,000 on that of last year. Your directors recommend a payment for the fourth and final quarter's dividend at the rate of 6s. per share in Australian currency.

REVIEW OF CONDITIONS IN AUSTRALIA

Australia's recovery has now reached an advanced stage. Indeed, "prosperity" is the better word to describe the present position. Seasonal conditions are generally good. Prices of our exports, though somewhat adversely affected by the disturbed international situation, are on the whole still satisfactory. The liquidity of the banking system has improved during the year, chiefly on account of the high returns from exports, and the upward trend in business has continued without interruption.

In the "fat years" the commercial and industrial community tends to give way to over-optimism and so to hold exaggerated estimates of future profits. New industrial buildings and plant are constructed to meet a demand for finished goods which either fails to come up to expectations or proves to be short-lived. The greater the disappointment, the more likely is a relapse into a state of pessimism as unjustified as the earlier optimism. In order, therefore, to preserve prosperity as long as possible, it is important to restrain any tendency to over-activity as soon as economic conditions appear which are likely to stimulate unjustified expansion.

Influences of this nature are already seen in Australia. One of the most outstanding is the rapid growth of company profits during last year, a number of large enterprises having registered record figures. Over a wide range of companies the total disclosed profits earned during the year ended June, 1937, were about 18 per cent. greater than those earned in 1935-36, which in turn were about 14 per cent. greater than those of 1934-35.

Such results are likely to encourage an unduly rapid expansion of operations. Another factor which promises to reinforce this tendency is the recent sharp increase in consumers' spending power through the rises in wages awarded in the first instance by the Federal Arbitration Court. We were told that the Court based its judgment mainly upon its opinion that a large rise in wages would tend to damp down any movement towards boom conditions. But it is not unlikely that, at a time when business confidence is high, employers will regard an increase of spending power as a factor which will increase their turnovers and profits. A further stimulus to spending has been provided by remissions of taxation, particularly in New South Wales where a substantial reduction of the wages tax will shortly become effective.

All these changes in the earnings of labour and capital are welcome after the "lean years" of depression. But they appear to be taking place at a rate which involves some danger of generating that state of unwise expansion of activity known as "boom."

Indeed, signs of this tendency have already begun to appear. The value of building permits has risen markedly, unemployment is declining rapidly and industrial unrest is developing. The great increase in the imports of all classes of metals and machinery cannot be entirely accounted for by replacement requirements, and points to a net growth of industrial capacity.

RISING COSTS

The trend of unemployment is particularly important. In New South Wales, where a fairly reliable index is published—no Australian employment statistics are perfectly satisfactory—unemployment has been falling throughout the year and has now reached a remarkably low level. If the usual seasonal trend persists, it will be even lower by the end of the calendar year. The significance of this situation is that it forces industry to employ a large number of men who cannot under any circumstances be classed as efficient, and causes increased competition for the services of those who are efficient. For both these reasons the unit costs of industry are rising as unemployment declines, and therefore prices may soon catch up with higher wages.

These signs of instability are likely to increase as time goes on. In the present financial year we shall experience in addition a major stimulus to industrial activity on account of increased expenditure on defence. It has now become an established principle that, as far as possible, public works should be reduced to a

minimum during periods of prosperity. Yet certain forms of public enterprise often become urgent at times which are inconvenient economically. The most important example is provision for defence which, in the present disturbed state of the world, simply cannot wait. The Commonwealth Government proposes to spend on defence about £A.3.4 millions more in the current financial year than in the previous year ended June, 1937. Much of this expenditure will go to the heavy industries, which are already working to capacity. Necessary government spending, therefore, must be added to the other factors which are tending to encourage the provision of additional capacity.

Another element of danger results from private rather than public initiative. The rise in property values and the increase in the value of building permits issued indicate speculative activity. In New South Wales speculation was recently given an impetus by the Government's encouragement of closer settlement schemes. The co-operative building societies are also creating a wide demand for houses and land. At the same time building costs are rising substantially, and the additions recently made to wages are increasing them further.

Rising costs quickly curtail profit margins unless selling prices can be increased. The existence of higher incomes makes such an increase possible, but a rise in prices soon leads to demand for further wage increases. Then we have a typical inflationary situation requiring continued monetary expansion. This expansion should not be allowed to get out of hand; but as soon as the brake is applied costs overtake prices, and profits decline.

In a prosperous period, therefore, the constructional industries should be watched, since their excessive activity is often the precursor of dangerous boom conditions generally, when capital is expended to cater for a demand which may prove temporary.

I have been dealing hitherto chiefly with the internal factors which might check our prosperity. But it is necessary to watch world conditions as well. When export prices are high, primary producers are as likely as industrialists to develop over-optimism and to increase the scale of their operations, usually with borrowed money. In the event of any material decline in the overseas demand for their products, they too would be confronted with problems of excess capacity.

A fall of the order of 10 per cent. has occurred during recent months in the Australian export price index. This drop is quite serious enough to cause some uneasiness, even though it is due rather to the disturbed world situation than to any basic unsoundness in the marketing position. The statistical factors do not point to any major recession in the prices of primary products in the near future.

NEED FOR CAUTION

The point I am trying to stress is that our present prosperity has certain underlying weaknesses and that we must do all we can to avoid a recession in business activity. The best way to achieve this is to realise that the time for a general advance on all economic fronts has passed. From now on the wise industrialist or primary producer will, before adopting any projects for expansion, consider whether he is at present in a position to stand up to any reduction in turnover or fall in prices. The lean time has, in the past, so often eaten up the fat time that it is caution rather than pessimism which prompts me to plead for fitness as well as mere size in judging our economic assets.

PRIMARY INDUSTRY

Australian primary industry has enjoyed a good year. Production for the most part was well maintained, despite variable weather conditions, and prices were high. Generally the high prices can be attributed to the increased demand characteristic of recovery. In the case of wheat particularly, the large world stocks accumulated during the depression became almost exhausted largely on account of poor harvests in some of the principal producing countries during recent seasons.

The outlook for the current season seems generally satisfactory. Seasonal conditions are fairly good on the whole, and are much better than at the same time last year. Rainfall during recent months has proved of great benefit and provided normal rains are received in the coming months, the outlook for most districts should be a good one.

In the last few years the prices of primary products have risen at a much more rapid rate than those of manufactures and in consequence the terms of trade have become much more favourable to primary producing countries. These countries are now able to obtain a much larger volume of manufactures per unit of their exports of raw materials and foodstuffs than they could during the depression. But in recent months some rather sharp falls have occurred in the prices of some of our most important primary products. At the same time the prices of manufactured goods

have risen, and there are indications that this movement will continue. Thus it seems that our terms of trade, although they may remain quite favourable, are likely to become less favourable than at present.

SECONDARY INDUSTRY

One of the most striking developments which have occurred in Australia since the depression is the expansion of its secondary industries. The increasing activity which I mentioned last year has continued. New capital is being invested in expanding old industries and in establishing new. Plans are proceeding rapidly for expanding the iron and steel industry in response to the shortage of supplies. The manufacture of aeroplanes is about to begin, and plans have been put in operation or are afoot for the production of alkalis, ammonia and nitro-cellulose, newsprint and paper, steel sheets, wood boards, carpets and rayon fabrics.

The pleasing feature of the growth of secondary industry is its increasing ability to meet competition from overseas producers with little or no tariff protection. Certain industries still require considerable protection, but the Tariff Board is exercising its powers wisely and endeavouring to promote further efficiency by constantly revising duties. The result is therefore an increase in the variety of goods manufactured under reasonable rates of duty. The greater diversification in production, by providing a more balanced economy, is securing greater powers of resistance to meet the impact of any future world recession.

We must not, however, overlook the causes of industrial expansion. It is the preoccupation of British manufacturers with armament requirements and the widespread shortage of iron and steel that are leading to the intensive development of Australian heavy industry and its subsidiaries. Capital expenditure on a large scale is involved in expansion both at Port Kembla and Newcastle, and it is proposed to build a blast furnace in South Australia. But armament manufacture cannot be expanded indefinitely and the shortage of iron and steel will not last. In view of these abnormal factors, the present development of industry may lead to surplus capacity unless our industries can develop a satisfactory export market.

NATIONAL STANDARDS LABORATORY

Development of secondary industry is also being urged on other than economic grounds. From the point of view of national defence Australia must necessarily become less dependent on other countries in time of war. Hence the increasing attention which is being paid to the manufacture of all types of war supplies and arises one which will be sound if it is administered liberally and with a readiness to accept new ideas. I refer to the proposal for the establishment of a National Standards Laboratory, which, by securing uniformity in tools and materials, will not only facilitate production for defence, but in time of peace will increase efficiency, reduce waste and protect the consumer against inferior products. But defence needs are often being cited as a justification for uneconomic production. Political expediency and economic efficiency are clashing, and present world tendencies indicate that political requirements are likely to prevail for some time. In the long run the arbitrary establishment of industries can be carried out only at the cost of lower standards of living, although any deterioration may be offset by progress in technical efficiency.

Yet in the present disturbed state of the world we are bound to undertake schemes which will provide greater security, even though they be costly. The developments that are taking place, however, are complicating the problem of national defence. Industrial enterprises are springing up chiefly around the coasts. Probably the time has come when governments should inquire whether there are any areas suitable for industrial activity in the interior of Australia which would not be so accessible to an enemy. The first step which could be taken to prepare inland centres for industrial development is the provision of amenities designed to attract a large number of urban dwellers. Some moves in this direction have been made by one or two States to encourage local and electricity supply.

OVERSEA TRADE AND BALANCE OF PAYMENTS

Following the general world trend, Australian overseas trade for the year ended June expanded considerably. Exports were greater than in any year since 1928-9, but imports have not attained their pre-depression level, although they have increased considerably. The large export surplus of £87,359 millions is very satisfactory, as it opens the way for an increase in desirable imports and for the building up still further of Australia's international balances which were drawn upon so freely and wisely in the early days of the depression.

The result of all overseas transactions was an appreciable increase in Australia's international balances. It is reasonable to hope that some part of these will remain to help rebuild our reserves to the level of pre-depression years. To achieve this desirable object will need great patience, as any attempt to force the building up of these balances might have an adverse effect on the continued development of Australia.

EMPLOYMENT AND WAGES

A striking improvement in economic welfare has occurred during the year. The revival of trade has resulted in a remarkable increase in the number employed, which is now higher than pre-depression levels. At the same time, the rapid rise in wages, made possible by the general improvement in economic conditions, has raised materially the incomes enjoyed by large numbers of workers. These factors combined have been responsible for an appreciable rise in the standard of living.

BANKING

The considerable improvement in overseas trade is reflected in an improved banking situation. The cash position eased, and, despite a noticeable growth of deposits, the trading banks' percentage of cash to total deposits was restored from 10.57 per cent. during the September quarter of 1936 to 12.01 per cent. during the corresponding quarter this year. Thus the stringency to which I drew attention last year is passing.

Advances have remained substantially unchanged during the past year. The banks have taken an early opportunity of improving their liquidity, realising that in times of prosperity much greater care is required than in adversity.

Indicators point to recovery having reached more or less its maximum, so that we should direct our thought and our efforts to pursuing policies that will conserve and maintain prosperity for as long as possible. With the continual growth of knowledge and experience much more can be done in this direction than could be done five or ten years ago.

It is incumbent upon the banks as their contribution to the maintenance of prosperity to exercise considerable caution in considering applications for accommodation, particularly those for the financing of extensions of capital equipment. The time has come when they should, in the interests of the community, become increasingly selective in advance business, even though this may involve smaller profits.

PUBLIC FINANCE

Continued economic improvement throughout Australia is reflected in the public accounts. As recovery has proceeded, the need for public works expenditure as a stimulus to employment has been lessened and Governments have accordingly been able to reduce their loan programmes.

The somewhat unsatisfactory results of the conversion loan last June should not be taken as evidence of any weakening in Australia's credit overseas, nor should there be any doubt or hesitancy about the position within Australia. Sinking fund payments have been made punctually throughout the whole of the crisis. For the last financial year they amounted to £A9.7 millions, and in the current year will be still higher. In view of this satisfactory record, and the success of large conversion loans in the past, the conversion of £A72.7 millions of war debt, falling due in Australia in December, 1938, should be accomplished with ease.

CONDITIONS IN NEW ZEALAND

The prosperity of New Zealand is almost entirely dependent upon the returns obtained from the sale of primary products overseas. It is therefore encouraging to note that the Dominion has enjoyed an extremely good export year, the value of exports for the year ended June, 1937, being 20 per cent. greater than that for the previous year. While wool was responsible for the major part of the increase, the returns received for most important commodities improved.

These increased returns have stimulated general economic activity within the Dominion. Evidence of greater prosperity is afforded by the increase of private motor vehicles registered, radio licences, totalisator investments, and the like. Indicators of commercial activity, such as bank debits and sales tax collected, point in the same direction. These favourable circumstances have enabled the Government to continue its general policy, and have disguised for the present the inevitable consequences of giving hostages to fortune.

The report and accounts were unanimously adopted.

Copies of the full address, from which the above extracts have been taken, may be obtained from the Bank of New South Wales, 29 Threadneedle Street, London, E.C.2.

CARRERAS, LIMITED

RECORD PROFITS

HIGH QUALITY OF PRODUCTIONS

The thirty-fourth annual general meeting of Carreras, Limited, was held, on the 20th instant, at Arcadia Works, Hampstead Road, London.

Mr Edward S. Baron (chairman and managing director), after extending a welcome to the three new members of the board—Mr William Codrington, Sir Francis Humphrys and Mr Mark Patrick—said that the accounts showed a net profit of £1,351,596, which constituted a new record in the history of the company. The directors proposed to allocate a further £50,000 to the contingencies fund, making it £200,000, and £15,000 to the female pensions fund, and recommended dividends for the year on ordinary, "A" ordinary and "B" ordinary shares at the rate of 35 per cent., of which 15 per cent. had been paid; the balance remaining to be carried forward would then amount to £1,026,671. He would remind shareholders that this 35 per cent. was equivalent to 49 per cent. on the capital as it was in 1936. The policy of the company had always been to combine the maximum of progress in the industrial and commercial field with a cautious and conservative attitude in the matter of finance, and he did not think that anyone looking back over the company's history would venture to deny that this policy had proved itself successful. In spite of rumours of impending slump—and he could see no solid foundation for them—this country to-day was in many respects more prosperous than it had ever been in the course of its long history. It was true that the foreign situation gave cause for serious anxiety, but here at home times were good and, in his personal opinion, they were likely to remain so for some considerable time.

The large stock of tobacco leaf was of exceptional quality and would enable them to maintain without variation the very high standard of their brands, and their stock equalisation policy was a protection from violent movements in the price of leaf tobacco.

INCREASED SALES

Both home and export sales had shown an increase during the year, and by the maintenance of the high quality of their productions, fullest value to the consumer, and a progressive sales policy, he saw no reason why the company should not continue to enjoy a fair share of consumption, which was still showing a reasonable increase both at home and abroad.

Shareholders would be aware that this business was world-wide, and the familiar red packet or tin of Craven "A" cigarettes and that old-fashioned pink-labelled tin of Craven Mixture tobacco were to be found wherever one travelled. It was no easy task to achieve world-wide distribution under the present difficult conditions, with every kind of restriction hampering trade in different countries; but they had an excellent organisation controlled from Arcadia Works, with resident representatives in different parts of the world. They endeavoured to adapt themselves to the conditions in the different countries where they traded, and he was happy to say that they supplied all the principal Government monopolies in foreign countries.

The Australian associated company had had a very successful year and showed an increase in profit and dividend over the previous year. In the home trade competition continued to be no less than in the past, but he thought they could claim to have obtained at least their fair share of the market, and they would make every effort to continue to do so.

WELFARE OF EMPLOYEES

They would already be aware of the provisions of the superannuation fund for men. In addition to that there was the dependants fund, for which a sum was set aside each year to relieve cases of hardship among the dependants of any man who might die in the company's service. This year, moreover, they had instituted a female pensions fund which would ensure a pension of £1 a week to those women employees who remained with them till the age of fifty-five, with an increase of that amount based on retiring salary. In addition, he was confident that shareholders would approve of them meeting the cost of the free medical attention, the convalescent home treatment, the full pay for annual and statutory holidays, and the social facilities which were available to all employees.

Since the commencement of the new financial year their sales showed an increase over the corresponding period last year and, providing nothing unforeseen occurred, the directors felt confident of the future.

The report and accounts were unanimously adopted.

STOLL THEATRES CORPORATION, LIMITED

BURDEN OF THE ENTERTAINMENT TAX

EFFECT ON EMPLOYMENT

SIR OSWALD STOLL'S VIEW

The ninth ordinary general meeting of the Stoll Theatres Corporation, Limited, was held on December 22nd at the London Coliseum, St. Martin's Lane, London, W.C.

Sir Oswald Stoll (chairman and managing director) presided.

The Secretary (Mr Roland J. Bentley) having read the notice convening the meeting and the auditors' report.

The Chairman said: Ladies and gentlemen,—I rise to move the adoption of the report and accounts, which I assume may be taken as read.

After comparing each item on the balance sheet with last year's, the Chairman continued:—

On page 3 of the directors' report last year the following paragraph appeared: "A review of the present position shows that after allowing for the amount included in the before-mentioned sum of £2,769,775 in respect of the main Alhambra properties, furnishings, etc., recently sold by The Alhambra Company, Limited, also for all other proper deductions, there remains a figure approximately equal to the par value of the issued ordinary and management share capital of this company, after excluding ordinary shares in this company held by subsidiaries."

The position as at September 30, 1937, has again been considered in collaboration with the auditors of the company, and the question of a consolidated balance sheet has been dealt with. The conclusions arrived at are embodied in the summary of figures set out on page 3. My own view is that the assets in that summary are placed at figures too low, but I suppose I am like the American who says "in units of measurement there are dollars and Roosevelt dollars." At any rate the figures are good.

QUESTION OF SELLING THE PROPERTIES

There has been a suggestion that as the properties are of such value and we are not receiving dividends from them, why are they not sold and the money returned to the shareholders. As to this, I say if that could be done I personally should be one of the principal parties to benefit. I would receive a very large sum of money and free myself from the anxiety which management naturally entails. The full paper premium at which my shares and your shares in the subsidiaries were sold to this company would then be realised. There have been various willing buyers of the properties who would pay the price for them if they had the money. The truth is that they have not had the money. The uncertain conditions which have prevailed in finance have caused real values and prices to be disregarded, but these unfavourable conditions are disappearing.

We expect, however, to be able to utilise our credit balance for dividends before buyers with money come into the field.

A new theatre is born in plays like "St. Moritz" at the Coliseum, and an ice show has been started at Leicester. Large sums of money have been spent at the Leicester Palace Theatre and the Stoll Picture Theatre, Kingsway, in order to facilitate the production of ice shows, and in my opinion substantial profits will accrue from such expenditure. More will be done in due course at other of our theatres.

EFFECT OF TAXATION

Meanwhile, it is a fact that but for taxation, which is harmful, and exemption from which is long overdue, we should have been paying dividends now and should never have been out of the dividend-paying list. Mr A. P. Herbert, M.P., made an appeal in the House of Commons in the last Budget debate. He spoke of the entertainments duty with knowledge and experience. His appeal made a deep impression on the Chancellor of the Exchequer, who asked him for certain information to be provided for consideration in the coming year.

For investors in Entertainment Securities the present hour may be the darkest hour before the dawn. If the Chancellor were to wave his wand of common sense he could give stability to those securities by relieving the theatres which they represent from the burden which they have to carry in the shape of the present unfair and discriminatory entertainments duty. If the theatre stage were made exempt from entertainments duty, theatres would make profits, performers would multiply. Instead of one star, many stars would appear in the theatrical sky.

The flow of favourites would no doubt gravitate to the picture studios, but only to be replaced by others on the stage as fast as they were needed. The vast cinema industry would be able to fill its screens with attractive pictures instead of being compelled to show the same picture in two cinemas within a few yards of one another.

A TAX ON EMPLOYMENT

The entertainments duty in this country is not recognised as a tax on employment. Nevertheless it is so. It does not result, as in Hollywood, in rich artistes having too much work, but it does result in all kinds of artistes having little or no work.

No one can truly say that entertainments duty as imposed on entertainments of the stage, where the living artiste is present in person at every performance, is not a tax upon employment. The case of the production theatre ought to prove that it is. A production may cost in materials, charges and rehearsals £15,000. The curtain rises upon it. The theatre is crowded. Public and Press applaud it. It runs for weeks to full houses and everyone looks upon it as successful. Suddenly it is withdrawn and the public are blamed for not having supported it. The public, however, did support it, but the Board of Customs took the vital receipts.

TAKINGS AND COSTS

The performances struggle along because good houses register no loss on the weekly running costs. But the production costs do not come back. When the time comes for a natural drop in the takings, there is no cash in hand to meet it and the play is suddenly withdrawn. The entire cost of production amounting to £15,000 is lost, and this although a sum equal to £15,000 has been handed over as entertainments duty to the Board of Customs.

If that £15,000 were allowed to remain with the theatre the money would be available for another production immediately and the artistes thrown out of employment would mostly be re-employed in a new production. £15,000 taken by the Board of Customs means that to embark upon such a production, even one which is successful, is no more than to ensure that the persons engaged upon it shall be thrown out of work unless the finders and losers of the original £15,000 are prepared to put up more money for continuous losses.

The fact that £15,000 of receipts are taken by the Board of Customs has the natural and obvious effect of ruining the life and continuity of the business.

There is no way out of this particular dilemma except by exemption, until the production costs shall have been first recovered, of every stage production from entertainments duty. This would, at any rate, afford a partial relief, though I and others in the business contend that the real way is to abolish entirely the stage entertainments duty.

Even if there were such partial relief, I am sure that there would be more productions; that more artistes would be employed and that the duty would escape its most vicious form of being not only a tax on employment but a tax which stamps out employment.

NEED FOR NEW PRODUCTIONS

A constant flow of new and good productions is needed by theatres: a constant flow of new and good pictures is needed by cinemas. The second can only arise out of the first, which provides the personnel to bring the characters in books and plays to life. These are the amusements which, as Mr A. P. Herbert believes, are the recreation for the minds of the people. The B.B.C. is no substitute. Without the living stage the B.B.C. would collapse from lack of broadcasting material.

These amusements, and the artistes who are the life and soul of these amusements, are a necessity of the people. Relief should be granted under the pressure of necessity.

THE OUTLOOK

And now, to sum up, I am justified in saying that the assets which our investments represent are good assets; that good trade lies before us; and that new earning power is not only in sight, but is actually taking effect. The whole position and outlook of the company will change for the better and our expectation that our credit balance on profit and loss account may be utilised for dividends is certain to be fulfilled.

I beg formally to move: "That the directors' report and balance sheet at September 30, 1937, and profit and loss account for year ending that date be approved and adopted and that the balance of £109,659 os. 8d. at credit of profit and loss account be carried forward to the current year's accounts."

Mr Douglas McCraith seconded the resolution.

After the Chairman, in reply to a member, had stated that the total entertainment duty paid since its inception by their companies amounted to £3,111,555, the resolution was put to the meeting and carried by a large majority.

The retiring directors were re-elected and the auditors were re-appointed.

BRITISH TAR PRODUCTS, LIMITED

DIVIDEND AND BONUS OF 15 PER CENT.

A RECORD YEAR

MR A. WOOLLEY-HART'S SPEECH

The seventeenth ordinary general meeting of British Tar Products, Limited, was held, on the 15th instant, at the Charing Cross Hotel, London, W.C.

Mr A. Woolley-Hart (chairman of the company) presided, and said:—

Ladies and Gentlemen, since last addressing you there is little to say that is not covered by the report and balance sheet, which to say that the past has been our record year. Since will convey to you that the past has been our record year. Since the year 1923 the company (with one exception) has paid a minimum dividend of 10 per cent. in every year, together with a bonus varying from 2½ per cent. to 5 per cent.—the latter having been paid for the last five years in succession. Your board, however, do not propose to recommend any increased dividend.

VALUE OF FIXED ASSETS

Turning to the balance sheet, the accounts have been made up in the same form as usual, except that in previous years we have given you the value of the fixed assets as they stood in our books after deducting depreciation, whereas this year we have given you the details under five headings before taking off depreciation, which is at the same rate as in previous years, for the current year, which we now show as a separate item, assuming it would be more satisfactory to the shareholders to see it put in this way.

Investments have increased £7,346 at cost, but show a depreciation of £7,271, owing to the great slump in the stock markets generally, which will, no doubt, continue so long as the Stock Exchange is adversely affected by home and international political conditions. This, however, is practically covered by the Investment reserve account. The interest they produce, however, is a pleasing help.

One particular point I think you will be satisfied with is that, following upon £6,000 written off goodwill and contracts last year, we have written off a further £9,000 this year, reducing the original £85,087 to £30,000. On this subject I may say that the value of this item, which we shall continue to reduce as profits allow, has been reinforced by the fact that three undertakings who supply us with the bulk of our raw products have extended their contracts with us for ten years from August, 1948—i.e. to terminate in August, 1958.

It was encouraging, however, to read what the Prime Minister said about the slump—that so many people are speaking about. Personally, I am not over optimistic, but certainly not a pessimist on this subject, and see no inclination towards a slump at present.

PLANT EXTENSION

The reserve for taxation is increased from £6,383 to £8,558, a sum of £2,175 having been added to provide for National Defence Contribution. Additions during the year include boiler extensions, a new sulphur removing plant, tank wagons, welfare rooms, and bath accommodation, etc., at a total cost of approximately £9,000.

It is probable you may have heard that an action brought against us by one of our suppliers was heard last month and decided against us. We are by no means satisfied with this decision, and the question of appeal is now under consideration by our advisers. The matter is still, therefore, *sub judice*, and I am sure you will all understand that, in the circumstances, I cannot say more on this subject at present.

This business has now been carried on for about 22 years. It has never had to stay its hand in improvements or development for want of funds, and has not added to its capital for such purposes. There are no debentures, and, as I explained last year, practically no preference shares. We have built up a reserve in investments outside the business of nearly half its capital. With this, combined with our credit and possibly a debenture issue, should one be necessary, we are quite prepared to buy the controlling interest or make an outright purchase of any thoroughly sound business

upon reasonable terms (which could run with our own), or financially assist in developing coke ovens or by-product schemes to a fairly considerable amount, but we are not open to consider any fantastic terms such as are frequently put forward.

Before sitting down I beg to propose that—

(1) The audited accounts and balance sheet be approved and passed.

(2) That a dividend be declared on the preferred ordinary and ordinary shares of 3½ per cent., making with the interim dividend of 6½ per cent. already paid, a total of 10 per cent. for the year, and a bonus of 5 per cent. on the preferred ordinary and ordinary shares.

(3) That a sum of £9,000 be written off goodwill and contracts, reducing that amount to £30,000.

(4) That a sum of £2,293 7s. 4d. be transferred to general reserve, making that account £5,000, and that the balance of £3,800 11s. 3d. be carried forward.

The resolutions were seconded and carried unanimously.

Mr M. Deacon, the retiring director, was re-elected, and the auditors, Messrs Bryden, Johnson and Company, were re-appointed.

MEXICAN RAILWAY COMPANY, LIMITED

LARGER RECEIPTS

INCREASING DEMANDS OF LABOUR

The one hundred and forty-fifth ordinary general meeting of the Mexican Railway Company, Limited, was held, on the 22nd instant, at Winchester House, Old Broad Street, London.

Mr Vincent W. Yorke (chairman of the company), in the course of his speech, said:—I am sorry to say that I can find very little of an encouraging nature to say to you to-day. The prosperity of Mexico and the good gross earnings which it is bringing us are continuing, but the increasing demands of labour and the deterioration of our equipment by reason of the heavy burden it has to carry are causing us constant anxiety.

As regards the half-year under review, passenger traffic was highly satisfactory, the receipts showing an increase of over P.150,000 and the numbers reaching the high figure of 1,036,000, the highest figure since 1930. Although in 1921 and 1922 we carried considerably higher numbers (indeed, in 1922 the figures reached 1,400,000), it should be remembered that in those days road competition did not exist. Both local and tourist traffic has been good all through the half-year, and we have done our best to cater for tourists by co-operating in the organisation of excursions from the United States and the provision of side trips to Orizaba and Cordoba. Express traffic again shows a decline for reasons which I have already given you, namely, the difficulties in which the company who have subcontracted for provision of these services finds itself. The contract will come up for review at the end of the year, when it is possible that we may find it necessary to take the business back into our own hands.

Goods traffic, with an increase of P.1,124,000, has, I believe, exceeded all previous records in the history of the company. Of this increase as much as P.223,000 is due to traffic in fruit and vegetables, which speaks well for the settled conditions in the lower altitudes and for the purchasing power of Mexico City, and sugar has also brought us an increase of P.367,000. Oil and its products also show an unexpected increase of P.88,000, owing to difficulties incidental to strikes found by the oil companies in working the pipe lines through which much of this traffic normally moves. A remarkable feature of our traffic to-day is that of motor-cars of which we carried no less than 3,808 tons in this half-year, an increase of 1,113 tons as compared with the corresponding half-year of 1936.

Returns of foreign goods imported through Vera Cruz show an increase of 31,000 tons for the half-year, the total figure being 131,000 tons. Of this no less than 57 per cent. moved over our line, and this proportion would have been more if we had had sufficient cars to deal with traffic offered to us.

GROWTH OF WORKING EXPENSES

As against an increase of 17 per cent. in gross earnings there is unfortunately an increase of 11 per cent. in working expenses to record. Some proportion of this increase is due to the allocation of 10 per cent. of our gross receipts to special renewals and is, therefore, automatic in character, while a further proportion is necessarily due to increased services incidental to increased volume of traffic. During the whole of the half-year all engines and rolling stock were fully employed, and the expenses and maintenance, in

The report was unanimously adopted.

In conclusion, the Chairman said he had no doubt that shareholders would be satisfied not only with the advance shown all along the line, but also with the general policy of cautious enterprise being pursued by the board which had secured these results. The report and accounts were unanimously adopted, and the proposals for converting the shares of the company into stock were approved.

The reports and accounts were unanimously adopted.

ARISTON GOLD MINES (1929) LIMITED

GOOD VALUES AND WIDTH AT DEPTH

The eighth ordinary general meeting of Ariston Gold Mines (1929) Limited, was held, on the 20th instant, at River Plate House, London, Mr Francis Allen presiding.

The Chairman, in the course of his speech, said that the capital of the company was increased during the year from £700,000 to £800,000, the whole of which was issued and fully paid, and consequently the final dividend of 2½ per cent. and the interim dividend of 7½ per cent. would be payable on the whole £800,000. They had to be very moderate in their dividends on account of the very heavy capital expenditure incurred during the year and the further expenditure they had ahead of them until the new shaft and the alteration and improvements in their reduction plant were completed.

Their ore reserves were steadily mounting up, and must now be near the 1,000,000 tons mark.

They had informed the mine that the general meeting was being held, and had requested a cable reporting any later developments. The main item of interest cable was that on the 21st level No. 6 crosscut had exposed the reef with an average value of 11.13 dwt. over 19.9 ft., after reducing all high values. That was good news, as it proved that the values and width still held at the deepest point in the mine. They were now in the fortunate position of having a second big ore body. That No. 2 ore body was already exposed for a length of 1,200 ft., and the average value was nearly 6 dwt. over a width of 23 ft. That comparatively new and great ore body was steadily opening in the vicinity of the new shaft, and it set one wondering what ore there might be above the 15th level, where the ground had never been worked.

The sixth level from Anfargah shaft would prove that by driving to the new shaft and the driving of that level might lead to important discoveries. As regarded the Broomassie Mine, he was able to go a step farther than the statement in the report, and tell them that the option would be granted to the Gold Coast Selection Trust, Limited, which would be the predominant partner in any company formed to deal with the property.

The report was unanimously adopted.

AKIM (1928), LIMITED

SATISFACTORY YEAR

The eighth ordinary general meeting of Akim (1928), Limited, was held, on the 21st instant, at River Plate House, London, Mr Francis Allen, J.P. (the chairman of the company), presiding.

The Chairman, in the course of his speech, said: The year under review has been a particularly satisfactory one. I think particularly satisfactory, because in addition to the dividends, we are now able to build up the reserve fund by placing £30,000 to reserve. I think that is a very wise and sound thing to do, because if at any time we have a loss on shares we have got a reserve from which to write it off.

Our principal holding continues to be in Ariston Gold Mines, and Ariston is in a very fine position. You will have your report of that meeting and will be able to read it at your leisure.

Our holdings, in addition to Ariston shares, are all in first-class mining ventures. Mining is, of course, a speculative business, but the slump in the share market was in no way confined to the mining market, nor was it due to industrial conditions. The mines in which we are interested have practically all made excellent progress since our last meeting, but even that good progress did not prevent the lowering of our market valuations. Our mining enterprises are essentially sound and well financed, but since it is proved that share values can be materially lowered, however good the future of the companies, we must take warning from the fact and act accordingly.

As the causes of the trouble are obviously quite beyond control, it is our duty to see that the bad effects on business are minimised as far as possible. To this end we have done our best to avoid the need of selling securities at a price below what we know is their real value; this should, in the end, prove the most profitable course. That really is the essence of our policy. I will not say that the conditions to-day are easier, but the fall in the market prices made us look very carefully at our investments. We have looked at them and we did not find one that we should part with, and we are not prepared to part with shares at prevailing prices. We are in good things and we intend to hold them.

The report and accounts were unanimously adopted, and the payment of a final dividend of 2½ per cent., less tax (making 10 per cent. for the year), was approved.

CONSOLIDATED TIN MINES OF BURMA, LIMITED

A NOTABLE IMPROVEMENT

The ninth annual general meeting of the Consolidated Tin Mines of Burma, Limited, was held, on the 22nd instant, at Winchester House, London.

Mr Reginald Pawle, A.R.S.M., M.Inst.M.M. (the chairman), said that the accounts showed a notable improvement over anything previously achieved in the history of the company. After deducting London office expenses, the results of their operations showed a net surplus for the fifteen months of £56,852.

As to Bwabin, they were indeed fortunate to have located a large alluvial area some 1,500 ft. above sea level, which he believed was capable of providing at least twenty years' profitable surface operations, irrespective of the possibility of eventual underground mining should the veins persist at depth, as they thought they would. The surface workings on other areas such as Hermyingyi and Taungpila, had been heavily drawn upon in the past, and the outputs from that source must inevitably dwindle unless the developments in progress at the lower levels of the former mine disclosed fresh and payable reserves. They hoped, nevertheless, to neutralise any falling off in that direction by the programme instituted at Bwabin, which was comparatively a virgin property.

They were favoured at the present time with an exceptional price for wolfram, due very largely to the increased demand and more especially to the uncertainty of supplies from China, but, if the price now prevailing was maintained, they could undoubtedly look forward to some further improvement in profits during the ensuing year. The prospects for the current year were distinctly favourable, having regard to circumstances generally.

Mr P. E. Day, A.L.A.A., referring to his visit to Burma, said that the general impression he had obtained was a favourable one. The Bwabin property was impressive and, after it was appropriately equipped, should alone be capable of producing from 500 to 600 tons per annum for many years on a highly profitable basis. In his view they could hope that their development and prospecting efforts in a country which still offered excellent opportunities to the pioneer would add to their productive areas.

The report was unanimously adopted.

KILLINGHALL TIN, LIMITED

RECORD RESULTS

The ninth annual general meeting of Killinghall Tin, Limited, was held, on the 21st instant, at the registered offices, 7 Martin's Lane, London, E.C., Mr A. G. Glenister, M.Inst.M.M., presiding in the unavoidable absence of Mr W. Arthur Addinsell, chairman of the company.

Mr Jack Addinsell read the speech which the chairman had prepared:—Gentlemen, the result of last year's working easily eclipsed all previous records. The net profit has advanced from £62,798 to £103,620, and a final dividend is recommended which will make a total of 60 per cent. for the year. The company has paid £25,719 to the Malayan Government by way of royalty, and after meeting our liability for British income tax, and the National Defence Fund, we can take pride in our total contributions to National Exchequers.

There was an appreciable improvement in the value of the ground dredged, the recovery working out at 1.11 lb. of tin ore per cubic yard. The increase in the cost per cubic yard from 2.51d. last year to 3.69d. was due primarily to the necessity for replacements and renewals on the dredge, which has run continuously throughout the year, giving entire satisfaction.

Arrangements have been made for the replacement of the Bucket band for delivery towards the end of next year. A reserve has already been created which at August 31st last amounted to £9,201; therefore the expenditure involved would not be a charge against the year's working.

It is unfortunate that events have caused a severe decline in the market price of tin. The International Tin Committee has decided that for the quarter commencing January 1st the rate of export is to be cut by 40 per cent. This enables mines operating in Malaya to export at the rate of 56 per cent. of their standard assessment as compared with 80 per cent. for the current quarter. This action we must in the circumstances accept as inevitable, and also face the fact that we shall be fortunate if we are able to maintain the same rate of dividend this year. Shareholders should, however, keep in mind that their interests lie in a valuable property, efficiently equipped, and with proved capabilities. The strong financial position is also a gratifying feature.

The report and accounts were unanimously adopted.

SCOTTISH AUSTRALIAN COMPANY LIMITED

SUBSTANTIALLY IMPROVED RESULTS

The annual general meeting of this company was held, on the 17th instant, in London.

Mr J. C. Inglis (chairman and managing director), in the course of his speech, said:—A year ago the profit showed a substantial improvement on those for the previous year, a loss of over £60,000 having been transformed into a profit, after meeting debenture interest and all revenue charges, of £25,451.

Great, however, as that improvement was, it was not sufficient to enable us to meet the dividends on our guaranteed stocks, apart from any dividend on the ordinary stock, but we were fortunately able to resort to a reserve which had proved to be no longer required, and with this assistance not only to pay the guaranteed preference stock dividends and a dividend of 4 per cent. on the consolidated ordinary stock, but, in addition, to carry forward a sum of over £4,000.

It is a pleasure to all of us to report to you a further substantial improvement, for compared with the profit of £25,451 9s. 1d. year ended June 30, 1936, we have the figure of £74,924 4s. 1d. year ended June 30, 1937, perhaps, why in these circumstances

You may ask, therefore, in their prudence decided to recommend a dividend of only 5 per cent. on the consolidated ordinary stock. The answer to this is that the wool prices which prevailed during the past year have, since last July, suffered what I think I may call an inexplicable and unjustifiable decline. This became particularly marked in the month of November, though since then I have been glad to note some improvement.

What, therefore, the directors had in mind was that in view of this decline in prices it was prudent to pay just 5 per cent. on the consolidated ordinary stock, and to increase the carry-forward from £4,426 to £22,350.

We have still a large amount of wool for sale, which we are hopeful will be realised at improved prices, so that at least the increased volume of wool may offset any decrease in prices.

As regards weather, I am hopeful that in the very near future we shall receive news that all our stations have received the necessary rainfall.

The report and accounts were unanimously adopted.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended December 18, 1937, amounted to £14,884,000, against ordinary expenditure of £20,901,000. After increasing Exchequer Balances by £85,300 the operations for the week, as shown below increased the gross National Debt by £6,332,000, to about £8,281 millions.†

† Including £575 millions on account of Exchange Equalisation Account.

† Free of income tax. (a) Paid on a larger capital. (c) To date.

ASSOCIATED BRITISH PICTURE CORPORATION.—Interim dividend on ordinary shares 10 per cent., against 7 per cent. a year ago. It is stated that profits of the company have been fully maintained.

BEECHAM'S PILLS.—Second interim dividend on ordinary shares of 20 per cent., making 37½ per cent. to date, against 15, making 27½ per cent.

BRITISH INDUSTRIES FIXED TRUSTS—SECOND PORTFOLIO.—Income distribution of 7½d. per sub-unit, tax free, representing income received during the half-year to November 30, 1937. This compares with 6½d., tax free, for the corresponding period a year ago.

HUDSON'S BAY COMPANY.—Half-year's pref. dividend will be paid on January 1st next. (Six years' arrears were paid last April, bringing payment up to December 31, 1936, and further half-year's payment was made last June.)

INDIAN COPPER CORPORATION.—Interim ordinary dividend raised by 1 per cent. to 6 per cent.

LEIBIG'S EXTRACT OF MEAT.—Tax-free final ordinary dividend, 7 against 6 per cent., making 11 against 10 per cent. (all tax free).

LOBITOS OILFIELDS.—Interim dividend of 5 per cent. on account of year 1937, payable January 14th. This compares with nil a year ago, although 12½ per cent. was declared for 1936 with the issue of the accounts for that year. Not since that paid in respect of 1933 has the company declared an interim dividend.

MOUNT MORGAN, LTD.—The directors have decided not to pay an interim dividend for the December quarter, 1937.

NATIONAL FIXED TRUST.—Seventh income distribution on Unit "D," certificates covering period from June 2 to December 1, 1937, at rate of 5-963d. net per sub-unit.

APPOINTMENTS AND PERSONAL

Sir Leonard Lyle has been appointed president of Tate and Lyle, and Mr George Vernon Tate chairman.

Sir Felix J. C. Pole has been appointed chairman of the Milford Docks Company, and Mr J. M. Whittington deputy chairman.

Mr Robert Kelso has been appointed chairman and managing director of The General Steam Navigation Company.

Mr E. Henry Murrant has joined the board of British Airways, Ltd., and Viscount Monsell is to be a Government director.

Sir Richard D. Holt has been appointed chairman of Martins Bank.

Sir Hugh S. Barnes has retired from the chairmanship of the Imperial Bank of Iran, but retains his seat on the board. Colonel Sir A. Henry McMahon has been elected chairman.

The Eagle Star Insurance Company announce that Mr Sydney A. Bennett, F.C.I.I., has been appointed a director as from January 1st next. Mr John Spencer, F.I.A., has also been elected a member of the board. Mr Brian E. S. Mountain becomes general manager.

Sir Alfred E. Lewis is relinquishing his position as a deputy chairman of the National Provincial Bank as from January 1, 1938, as he wishes to be relieved of some of his work in the City. He will retain his seat on the board. The Honourable Jasper Nicholas Ridley has been elected deputy chairman of the bank.

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

The past week was an uneventful one in the commodity markets, turnover tending to decline with the approach of the holidays.

Among non-ferrous metals, copper was marked up a little owing to the improvement on Wall Street, and lead and spelter were also marked up. Tin, on the other hand, is slightly lower on the week. The markets in rubber and linseed oil were firmer.

Among textile raw materials, the improvement in raw wool prices was maintained. Merino qualities are now 15 per cent., and crossbred wools 10 to 15 per cent., above the lowest point reached during the recent setback. The rise in prices has led to an increase in the demand for manufactured goods. Raw cotton prices also showed a firmer tendency this week. On Monday Messrs Courtaulds announced their decision to raise the prices of the coarser qualities of viscose yarns.

Wheat was slightly cheaper, but provisions and other foodstuffs are scarcely changed on the week.

In the United States, the recent improvement in prices was maintained this week. Thus Moody's daily index (December 31, 1931 = 100) was 149.1 on Wednesday, against 149.8 a week ago, 146.6 a month earlier, and 202.6 on the corresponding day last year.

METALS

COPPER.—Though turnovers have been small the market has registered a slight advance in the period under review. Wall Street displayed a firmer tendency and the copper market was also encouraged by the smallness of American copper exports last month. Shipments were smaller than in any month since February and amounted only to 2,600 tons, against 4,300 tons in October, according to Messrs. Brandeis, Goldschmidt and Co. Meanwhile, British stocks continue to increase.

Sales on the London Metal Exchange: 750 tons on Monday, against 1,100 tons last week; 1,250 tons on Tuesday, against 1,400 tons last week; Domestic spot was quoted at 9.82½ cents per lb. in New York on Tuesday, against 9.65 cents a week ago and 9.57½ cents a month ago. Tuesday's official closing price for standard cash in London was £40 10s. to £40 11s. 3d. per ton, compared with £39 10s. to £39 11s. 3d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 10,030 tons, showed an increase of 295 tons, while stocks of rough copper, at 20,785, were 585 tons larger.

LEAD AND SPELTER.—Both metals were dearer than a week earlier, but the rise in lead amounted only to 1s. 3d. per ton. The market was disappointed by the November building plan figures, which were 13.5 per cent. lower in value than the corresponding figure for last year. Meanwhile, spelter production remains in excess of current consumption.

Sales of lead on the London Metal Exchange: 850 tons on Monday, against 1,900 tons last week; 950 tons on Tuesday, against 1,850 tons last week. The New York quotation on Tuesday was 4.75 cents per lb., against 5.00 cents a week ago and 5.00 cents a month ago. Tuesday's official closing quotation in London for soft foreign for shipment during the current month was £15 15s. to £15 17s. 6d. per ton, compared with £15 13s. 9d. to £15 15s. last week.

Sales of spelter on the London Metal Exchange: 1,200 tons on Monday, against 550 tons last week; 850 tons on Tuesday, against 1,400 tons last week.

OTHER FOODS

BACON.—Bacon met a steady trade at unchanged rates. The official quotations (per cwt. for No. 1 Sizable) which formed the basis for dealings on the London Provision Exchange this week were: English, 97s.; Canadian, 89s.; Danish, 95s., against 97s., 89s., and 95s. last week. Arrivals in London last week included: Danish, 16,266 bales; Canadian, 8,033; Dutch, 1,834; Lithuanian, 1,746; and Polish, 2,474; as against 14,234, 7,303, 2,151, 1,690 and 3,136 bales, respectively, in the previous week.

BUTTER.—The market remained steady. Quotations (per cwt.) on the London Provision Exchange on Monday were: New Zealand, finest salted, 114s.; Australian, choicest salted, 113s.; Danish, 155s.; compared with 114s., 113s., and 154s. to 155s., respectively, a week ago.

CHEESE.—The market in cheese was quietly steady. Quotations (per cwt.) on the London Provision Exchange on Monday were as follows: English Cheddars, finest farmers, 94s. to 96s.; Canadian, finest coloured, 72s. to 74s., and New Zealand, finest coloured, 64s. to 64s. 6d.; against 94s. to 96s., 72s. to 74s., and 64s. 6d. to 65s., respectively, a week ago.

COCOA.—The spot quotation in New York on Tuesday was 5½ cents per lb., as against 5½ cents per lb. last week. In London, on Tuesday last, good fermented new crop, Accra, "January-March," was quoted at 23s. 9d. sellers per 50 kilos, c.i.f. Continent, against 24s. 3d. for "December-February" a week ago. Last week's movements of cocoa in London were as follows: Landed, 3,242 bags; delivered for home consumption, 5,243 bags; exported, 43 bags; stocks, 131,869 bags, against 104,190 bags a year ago.

COFFEE.—The markets in London and New York have been quietly steady. On Tuesday, Rio No. 7 (cash) was 6½ cents per lb. in New York, as compared with 6½ last week and 6½ a month ago. Movements of coffee in London last week were as follows: Brazilian, landed, 103 cwt.; delivered, for home consumption, 36 cwt.; exports, nil; stocks, 2,093 cwt., against 9,131 a year ago. Central and other South American: Landed, 1,168 cwt.; delivered, for home consumption, 2,512 cwt.; exported, 565 cwt.; stocks, 62,790 cwt., against 52,665 cwt. last year. Other kinds: Landed, 279 cwt.; delivered, for home consumption, 3,516 cwt.; exported, 524 cwt.; stocks, 55,399 cwt., against 88,945 last year.

EGGS.—An easier tone has been evident for new-laid eggs, with other selections steady to dearer. At Smithfield, on Tuesday, English (ordinary packing, Grade I, about 15-15½ lb.) realised 20s. to 20s. 6d. per 120, against 21s. 6d. to 22s. last week; while Danish (15½ lb.) made 17s. 9d. to 18s., as against 17s. 6d. to 17s. 9d. last week.

MEAT.—At Smithfield Market on Tuesday last, Argentine chilled hindquarters were quoted at 4s. 3d. to 4s. 8d. per 8 lb., as compared with 4s. to 4s. 6d. a week ago. New Zealand frozen mutton was 2s. 8d. to 4s. 4d. per 8 lb., as against 2s. 8d. to 4s. 4d. a week ago. According to the Smithfield Market official report, supplies during last week amounted to 11,230 tons, a decrease of 266 tons on the corresponding week last year. Beef and veal accounted for 5,053 tons, mutton and lamb 2,961, and pork and bacon 1,072, as compared with 5,346, 2,613 and 1,324 tons, respectively, in the same week of 1936.

PEPPER.—On Tuesday, white Muntok, "January-March," was quoted at 3½d. per lb. sellers, c.i.f. Rotterdam-Hamburg, against 3½d. per lb. a week earlier. Black Lampung, spot, in bond, was not quoted. Movements of pepper in London last week were as follows: Black, landed, nil; delivered, nil; stocks, 1,972, against 1,815 last year. White, landed, 54 tons; delivered, 25 tons; stocks, 11,198 tons, compared with 11,791 tons a year ago.

RICE.—The spot price of Burma No. 2 cleaned was 11s. 3d. per cwt. ex warehouse, on Tuesday, as compared with 11s. 3d. per cwt. a week ago. "January-February" (new), in singles to Continent and U.K., was quoted at 8s. 9d. per cwt., against 8s. 10½d. last week. Movements in London last week were as follows: Landed, 1 ton; delivered, 30 tons; stocks, 938 tons, against 1,543 tons a year ago.

SUGAR.—A steady tone has been evident this week. The New York spot quotation was 3.20 cents on Tuesday, as compared with 3.20 cents per lb. last week and 3.38 cents per lb. a month ago. Tuesday's sales of raw sugar in London included "May" delivery at 6s. 3d., against 6s. 2½d. for "March" delivery a week ago. Movements of raw sugar in public warehouses in London and Liverpool last week were as follows: Imports, 12,741 tons, against 20,850 in the previous week and 44,673 in the same week of 1936; deliveries, 15,994 tons, against 15,688 and 17,423 tons, respectively; stocks, 222,172 tons, against 225,425 and 197,954 tons, respectively.

TEA.—The following table shows the average price (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account in recent weeks:—

The visible supply of wheat in Canada amounts to 60,140,000 bushels, against 61,462,000 bushels last week and 63,634,000 bushels in the corresponding week last year.

NEAREST FUTURE	Jan. 2, 1935	Dec. 31, 1935	Dec. 23, 1936	Dec. 30, 1936	Dec. 15, 1937	Dec. 21, 1937
Winnipeg (No. 1, Manitoba) Cents per 60 lbs.	82½	84½	123½	129	128	128
Chicago (No. 2, Winter) Cents per 60 lbs.	98½	101½	131½	135½	96	95½

The following is a statement showing the quantities sold and the average price of British cereals in the past two weeks, and for the corresponding weeks in each of the years from 1933 to 1936:—

Week ended	Quantities Sold			Average Price per Cwt.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
December 16, 1933 ...	Cwts. 263,443	Cwts. 350,648	Cwts. 41,519	s. d. 4 6	s. d. 9 2	s. d. 5 4

MISCELLANEOUS COMMODITIES

RUBBER.—Although the market has had a quiet tone prices show a rise on the week. Stocks in London and Liverpool were larger than in the previous week.

The spot price in New York on Tuesday was 15½ cents per lb., compared with 14½ cents per lb. a week ago and 14½ cents a month ago. Tuesday's official buyers' price for standard ribbed smoked sheet on the spot in London was 7½d. per lb., as against 7½d. on the corresponding day last week. In forward positions business has been done at 7½d. for "February" shipment, as against 7½d. Stocks in London and Liverpool at the end of last week totalled 55,665 tons, against 55,244 tons a week earlier. A year ago stocks amounted to 80,315 tons.

BARCLAYS BANK LIMITED

Head Office: 54 Lombard Street, London, E.C.3

Over 2,000 Branches in England and Wales

WORLD-WIDE BANKING SERVICE

The Barclays group of Banks has Branches in many parts of the Empire and elsewhere, and is represented by Agents and Correspondents throughout the World. This extensive organisation is placed at the disposal of customers desirous of transacting any description of British or Foreign Banking Business.

OUR FUTURE MONETARY POLICY

WITH the franc still in a stage of transition, and with numerous other world problems still unsettled, it would be premature to think of the permanent stabilisation of the pound sterling, even if we intended ultimately to revive something like our old monetary system. Nevertheless, it is very desirable to look ahead; for since we suspended the gold standard almost exactly six years ago we have been gradually evolving new monetary methods, from which are likely to spring the new permanent monetary system of the future, and it is well to know whither we are going. Broadly speaking, ever since September, 1931, when we abandoned the complete and rigid gold bullion standard, we have been gradually returning to what may fairly be described as an unofficial, elastic and managed gold standard. The differences between the old and the new gold standard are admittedly fundamental. No longer is the Bank of England bound to sell gold at a fixed price, and while it is still bound to buy gold, it is at the old price, which is now far below the current market price. Again, no longer is all our monetary gold held by the Bank of England and permitted to form the ultimate base of our internal credit supply. Instead, part of our gold is held by the Exchange Equalisation Account, where it lies segregated from our internal credit system. Meanwhile, the gold held by the Bank of England is still valued at the old price of 84s. 11½d. per ounce fine, and so is grossly undervalued in comparison with the current market price of about 140s. per ounce fine. Nevertheless, the Bank now holds so much gold, in contrast to ten years ago, that it has proved possible to reduce the fiduciary note issue from £260 to £200 millions—narrowing the credit base by the same amount—and at the same time to maintain an ample and even an abundant supply of credit.

With all these changes since 1931 one basic fact remains. Gold is still used by us for the ultimate settlement of exchange differences between us and certain foreign countries, notably the United States, France, and in case of need, some of the former members of the gold bloc. It is true that this rules out a large part of the world, including the whole of the sterling area and also those countries with restricted currencies. Still, we use our gold not only to settle our own differences, but also those emanating originally from the sterling area, and to that extent we act as the sterling area countries' agent in the banking sense of the term. With all these changes, gold has retained one of its chief functions as the ultimate medium for effecting the international transfer of funds.

This is the general basis of fact from which we can begin to look ahead. At the outset, two or three principal observations suggest themselves. In the first place, it seems unlikely that for a long time to come we shall get away from gold altogether. In spite of the shocks that have been given to the supremacy of gold and the doubts that have arisen as to its real stability as a standard since it ceased to be actually in circulation, gold still commands greater general confidence as an international standard of value than any substitute that has yet been tried or suggested. So long as people believe that gold will retain its value, and that if they go to enough trouble, bank deposits can be turned into currency and currency into gold, the psychological argument for retaining gold in the monetary system in some form or another remains a very strong one.

Another consideration is that, by contrast with ten years ago, we in England now have an abundance instead of a scarcity of gold. A third consideration which has forced itself to the forefront is the problem of "hot money," that is of unemployed capital, which moves to and fro about the world in search of safety rather than profit. No longer can a financial centre rely upon a high interest rate to attract capital. On the contrary, a high interest rate may be regarded as a danger signal, and the only way to attract funds is

to convince people of the stability of the currency and, indeed, of the country's whole financial and economic life. Meanwhile, the migration of this unemployed capital has become the main cause of gold movements from one Exchange Fund to another, and so a country may find itself gaining or losing gold for reasons quite unconnected with its external trade balance, or with the general state of its internal industry, commerce or finance. This is the chief justification for segregating gold in Exchange Funds, and for preventing these gold movements from exerting their orthodox influence upon the internal credit basis. It has become necessary both to shield a country from the temptation to use a sudden influx of gold as a means of expanding the internal supply of credit, and to relieve it of the necessity of having to resort to deflation whenever a sudden outflow of gold occurs.

This, then, is the background—a strong presumption still persisting in favour of gold, tempered by a growing uncertainty regarding its value, which has to be carefully assessed in anticipating the future. And besides all this, there is the complication of having to deal with great masses of fugitive capital. These are not conditions which suggest a final solution of our monetary problem on a fixed gold basis. There are, however, certain general suggestions which are appropriate to this complex situation. The chief desideratum is to discover ways and means of combining an international gold standard with a variable price of gold.

There are various methods by which this dual objective might be attained. But, in any case, it is desirable that the anomaly of our present gold valuation should be ended. If the Bank of England's gold were written-up to the real value, we should have a true picture of our position. This would, of course, involve the revaluation of the Bank's gold from day to day, as the London market price varied. It would be easy, however, to neutralise the effect of these fluctuations either by small transfers of gold between the Bank and the Exchange Account or by frequent changes in the fiduciary note issue. In any case, the initial writing-up of the Bank's gold would have to be offset by a big reduction in the fiduciary note issue—practically to zero—and possibly by a small reduction in the securities held in the Banking Department. This could be effected out of the profit received by the Government on the revaluation of the Bank's gold. In this way the Bank's Reserve and the internal credit base could be fixed at levels adequate, but no more than adequate, to our needs.

Under these conditions, the Exchange Account would, of course, retain its present gold holdings as a reserve to cover any likely withdrawal of gold from London as the result of the repatriation of foreign hot money now here. The impact of any future movements of gold into and out of the country would first fall upon the Exchange Account, but gold could be transferred between the Account and the Bank as circumstances warranted from time to time. This means that gold movements would not affect the banking system if they were clearly of a temporary character, but only if they had economic significance.

These suggestions would represent an evolution of our present monetary system in the direction of an elastic and managed gold standard. They would make provision for the ebb and flow of hot money or unemployed capital, and give to our internal credit system reasonable insulation from the shocks of such movements. They would provide for the proper valuation of all our monetary gold, and would recognise that as the original 1928 Act intended, our fiduciary note issue would be used as a flexible instrument of control. They would, in short, provide one means for effecting a working compromise between the rigid gold standard and an inconvertible currency with the instability which is inseparable from it.

BRITISH BANKING TRENDS

THE period since our last examination of the banking system has been one of continued recovery. Various disturbances have occurred such as to affect security prices, but in the long run they have not influenced the general trend of trade to any great extent.

The banking system is governed by two factors, the trend of trade and Government policy, either of which may predominate. For six years now the monetary policy of the Government has been to maintain cheap credit conditions. Short-term money rates remain as low as ever, and so far gilt-edged prices have not fallen much below their early 1936 peak. Sooner or later, however, if the trend of trade continues upward and the rearmament programme continues with the present intensity, the long-term rate of interest must move upwards still further.

Meanwhile, the Government's borrowing requirements compel, on political grounds, the continuance of cheap money as long as possible. Our first chart shows the steps that have been taken in the form of gold purchases made during last summer, with this object in view. It also demonstrates how bankers' deposits at the Bank of England, and consequently the joint-stock banks' cash, have varied under the positive influence of increases in the Bank of England's holdings of gold and securities, and the negative influence of increases in the note circulation.

THE BANK OF ENGLAND

The Bank's gold purchases since April total £12.7 millions. At the same time the note circulation has increased by £26.3 millions. At August Bank Holiday the increase was even greater, for a record circulation of over £500 millions was then attained. Part of this increase is due to currency hoarding on Continental account, but a fair proportion is due to the increasing needs of the public, caused by the trade revival, the rise in prices and the general improvement in purchasing power. The Bank's gold purchases have been to a limited degree reinforced by fresh acquisitions of Government securities which, since April, have risen from £94.5 to £106.9 millions. The fiduciary note issue has remained unchanged throughout. Public deposits are also lower than in April, and so bankers' deposits are higher. This maintenance of the supply of joint-stock bank cash receives further illustration in the second chart, showing the position of the clearing banks.

Among the clearing banks' liquid assets discounts have been rising, but with a parallel fall in call money. It looks as if the banks may be holding more bills in their portfolios and fewer as collateral for loans, but regard must also be had to the increase in tender issues of Treasury bills shown in the third chart.

Bank advances are continuing their steady rise. Since

April they have increased from £919 millions to £938 millions. This increase is clearly due to the trade revival and to the rise in prices. As advances and investments together do not normally exceed 70-75 per cent. of deposits, the banks have had to offset this increase in their advances by reducing their investments from £671

THE CLEARING BANKS

to £616 millions. This presents a problem for the Government, as in the absence of counter-influences the result would be a further rise in the long-term interest rate.

Our next chart sets out the changes in the volume of outstanding Treasury bills.

TREASURY BILLS

The first thing to be noticed is the increase in tender issues since the early months of the year. The chief reason for this is the growing seasonal excess of expenditure over revenue, which will persist up to December 31st, but allowance must also be made for the Exchange Equalisation Account's summer gold purchases and consequent sales of Treasury bills. The inherent strength of sterling, coupled with the flight of money from the Continent to this country, has resulted in a steady flow of gold into the Exchange Account. Further reduced by the end of June, the Account's sterling resources were then replenished by £200 millions of Treasury bills, but a fair proportion of them have now been dispersed into the banking system, against the further gold purchases since that date. Since the beginning of the year the floating assets of the public departments have risen by £113 millions, but this is much less than the June increase of £200 millions in the Exchange Account would suggest. The explanation of the discrepancies is that the departments had to take up a fair proportion of the April issue of £100 millions of National Defence bonds, and they had to reduce their floating assets in order to make room for it. To that extent Defence borrowing has been thrust upon the banking system.

The rising tendency of the long-term rate of interest is as yet barely apparent. The reduction in the clearing banks' holding of gilt-edged securities has undoubtedly been a source of anxiety, but hitherto prices have not

seriously fallen. The reason is that other sources of demand—the Government departments and funds, the insurance companies and building societies—have been

INTEREST RATES

sufficient to make up the difference. Another contributing factor is the comparative insecurity of alternative investments, particularly the less well-established industrial which in earlier months had attracted a great deal of speculative interest. Thus there may now be some shifting out of equities into gilt-edged stocks. Nevertheless, the problem is only shelved, not solved.

At the moment the difficulties confronting the monetary authorities are less immediate than they were at the end of the first quarter, when a boom of dangerous proportions appeared to be developing. The March upswing came to a catastrophic conclusion with the gold scare, and the need for stiffer money rates as a check evaporated. Still facing the Government is the problem of defence borrowing. So far only £100 millions has been placed, most of which has been taken up by the public departments. To keep the rate of interest low there is a certain temptation to adopt the inflationary method of increasing the credit base, so as to allow the banks to take up more gilt-edged securities. The danger of such a course cannot be too strongly stressed, especially as the cost of living, wages, and cost of production are already beginning to rise. Money cannot be kept cheap indefinitely without dangerous consequences, and if the Government wishes to borrow, it must pay the price. The needs of re-armament do not justify an attempt to keep down the long-term rate of interest by artificial means.

THE LONDON GOLD MARKET

(BY A CORRESPONDENT)

THE pre-eminence of London as a financial centre and the absence of any restriction in the United Kingdom on gold imports and exports have combined to maintain the London market as the great free gold market of the world, but it is only since the abandonment of the gold standard by this country in 1931 that the London gold market has attracted any general interest.

The gold price quoted daily in the Press here and abroad is announced following a meeting of six firms which takes place daily at 11 a.m., except on Saturdays when the meeting is half an hour earlier. This price is the official or "fixed" price, and the bulk of the gold business put through in London is based on this price, although dealing in gold continues throughout the remainder of the day at prices which may often vary from this fixed price. The volume of such dealings is at times quite considerable.

The six firms are Messrs Johnson, Matthey and Company, Ltd., Mocatta and Goldsmid, Samuel Montagu and Co., Pixley and Abell, N. M. Rothschild and Sons and Sharps and Wilkins. The meeting, known in the market as the "fixing," is private, none but representatives of the member firms being present, and takes place at the offices of Messrs N. M. Rothschild and Sons at New Court, St. Swithin's Lane, E.C. The representatives attending the "fixing" have in hand orders to buy and sell gold entrusted to their respective firms. They keep in touch with their offices during the course of the "fixing" by private telephones so that these orders can be amended or cancelled, and fresh orders received right up to the actual moment when the price is fixed. There are no elaborate or set rules of procedure, and the method of "fixing" is roughly as follows: A price is suggested, which is usually about the "dollar parity" (the meaning of which will be explained later), and at this price the various members declare how much *on balance* they have to sell or buy. Should the buyers be unable to absorb all the gold offered the price is lowered until the volume of buying and selling becomes equal. On the other hand, if supplies are not enough for the buyers, higher prices will be tried. Exact equality is sometimes difficult to achieve, but buyers or sellers are usually willing to modify their orders slightly, rather than force the price *in any one way*. Up to the time the price is "fixed," members only disclose the balance of their orders, but

when the price has been "fixed" they each declare how much buying and selling they have already set off or "married" in their books. The *total* of these "marriages" added to the amount actually changing hands between the members makes up the figure which is publicly announced as the total business done at the "fixing." No details are given out as to each individual member's turnover. The unit of dealing at the "fixing" is a bar of about 400 troy ounces or 12½ kilos., value at present prices about £2,830. The price is quoted in shillings and pence per fine troy ounce, with minimum variations of one halfpenny, and all dealings are for delivery and payment the same day, except for Saturday's business, fulfilment of which takes place on the following Monday. Purchases and sales for forward delivery cannot be arranged at the "fixing," and form part of such after-fixing operations. Forward dealing, however, has been restricted to a great extent during the last year or so, as in deference to the wishes expressed in official quarters, members of the market have accepted only forward orders of an assuredly non-speculative character.

There are three main categories of buying orders which are handled by the London market, namely arbitrage, investment—generally referred to as "hoarding"—and official. Buying for trade and industrial purposes has not been an important feature for many years, being off-set outside the market by large supplies of "scrap" gold derived from the realisation of old jewellery, etc., brought out by the enhanced prices of the last few years.

Arbitrage demand consists of purchases by banks and others for shipment and resale to the central bank or treasury of a gold standard country and is the backbone of the buying in the market. To-day the United States is the only country to whom arbitrage shipments are made on a large scale. It is for this reason that the "dollar parity" price is generally the basis on which bidding starts at the "fixing."

The "dollar parity" price is that at which a purchase of gold in the market for shipment and realisation in New York would produce neither profit nor loss. For example, the statutory buying rate of the United States Treasury is \$35 per fine ounce, which, at an exchange rate of \$4.95½ to the pound sterling, is equivalent to 141s. 2½d. per fine ounce. The total expenses involved

in making a shipment of gold to New York for delivery to the United States Treasury work out at approximately 11½d. per fine ounce. Therefore, if the gold price was fixed in London at 140s. 3d. when the selling rate for United States dollars was quoted at \$4.95½ to the pound sterling, reports on the market would state that the price had been fixed on the "dollar parity." Given the same exchange rate, a price of 140s. 2½d. would be said to be at a ½d. discount on the "dollar parity" and a price of 140s. 3½d., a premium of ½d. on the "dollar parity."

The demand for hoarding has been a very prominent feature in the market since 1934 when the United States startled the financial world by deliberately devaluing its currency. Nationals of the other gold standard countries naturally became apprehensive of the effect of this on their own currencies, and began to buy sterling which they invested in gold. During the state of monetary strain which culminated in the break-up of the gold *bloc* a year ago, this buying became so insistent that the price was often forced to a substantial premium over any possible arbitrage parity levels.

Following the devaluation in September last year by France, Switzerland and Holland, the hoarding ceased and some selling of the immense stocks held in London took place. This liquidation was considerably hastened by the remarkable panic which developed earlier this year owing to the world-wide fear of a possible reduction by the United States of its gold buying price, and for several weeks during the summer gold was quoted in London at a discount below the dollar parity price. Recently, however, owing mainly to the still unstable state of French finances, the demand for hoarding purposes has revived and again has established a premium in the price over the dollar parity.

Although precise information cannot be obtained as to official purchases and sales there is no doubt that they have become a very important feature in the London market. Demand or supply from official sources may

not necessarily be for British account, as orders on behalf of foreign central banks or exchange funds are handled through the intermediary of the Bank of England in accordance with what is now understood to be the general practice.

Gold production from the two most important sources, namely, the Transvaal and the U.S.S.R., does not now come on the London market for sale. These outputs are taken over by the Bank of England, the former through the intermediary of the South African Reserve Bank, but may indirectly reach the market as part of official sales. Gold production from Rhodesia and West Africa is still marketed here, and the weekly shipments usually swell offerings on Tuesdays. Australian output has in the past been sold forward in London at the time of shipment, but recently some direct shipments have been made to San Francisco for sale to the United States Treasury.

An important source of supply ever since 1931 has been India, where hoards of gold have been accumulated for many centuries. Attracted by enhanced sterling gold prices following Great Britain's abandonment of the gold standard, this gold commenced to flow rapidly to the London market and, although the rate has slackened now, there is still a steady stream of supplies shipped weekly from Bombay, the bulk of which has usually been already sold for forward delivery.

Private arbitrage dealing in London, as mentioned previously, plays an important part as regards demand but does not figure at all on the selling side. The United States Treasury, though willing to buy gold from all and sundry, will not give out gold except to another central banking institution. Belgium and Switzerland, the two remaining Continental gold standard countries, now observe the same rule. During the last week or so a profit could have been made by withdrawing gold from the Belgian National Bank for resale in London. Although such a source of supply is barred

BROWN, SHIPLEY & COMPANY

Lothbury, E.C.2

Established 1810

to the private dealer, a large part of the recent "official" offerings of gold in the market have no doubt been provided by that institution as a result of official arbitrage.

The London gold market has enjoyed remarkable activity during the last six years or so, and has well

lived up to its reputation as the leading free gold market of the world. Increasing collaboration between central banking authorities, however, is tending to strengthen the power of official intervention, and the term "free market" may before long prove to be but an empty title.

CURRENCY INFLATION AND DEPRECIATION IN FRANCE

(BY A CORRESPONDENT)

THE essential feature of the French situation seems to be the fact that the country is undergoing the most classical process of inflation, without any marked increase in monetary circulation nor in the outstanding bank money. It is hardly necessary to go back to the actual causes of this inflation. Although there does not exist in France any "party of debtors" nor any "inflationists," the pressure of the Treasury's deficit (the State being the largest debtor in the country) has brought about an enormous expansion in Bank of France advances to the Government. From August, 1936, to August, 1937, these loans increased by nearly Frs. 13,000 millions (including over Frs. 2,000 millions which were cancelled at the time of the October devaluation). In addition a "Fonds de soutien des rentes" was organised last July and endowed with the second (July, 1937) revaluation profit of the gold reserve. This is nothing else but a Central Bank advance for purchasing long-term bonds (unless it should operate like a revolving fund). Finally, during the same year, the Bank of France did its best to assist a money market which remained most of the time in dire need of liquid funds, its assistance taking the form of collateral loans, 30-day advances and rediscounts.

This expansion of credit has not led to a corresponding increase in the note circulation nor to any increase in the commercial banks' liabilities. Its only apparent consequence was the continuous depreciation of the franc. The note circulation increased in one year by only about Frs. 4,000 millions. This may be ascribed to higher prices and to some extent to the growth in tourist traffic. The increase in the other liabilities of the Central Bank, i.e. in "deposits," is not entirely relevant, as the larger part of the Frs. 10,000 millions expansion in this item is due to the operation of the Exchange Fund. Had this fund not existed the francs deposited by it would have been acquired by the bank itself and therefore cancelled.

As to banking deposits, the statements of the larger French banks evidenced an increase of about 20 per cent. between August, 1936, and January, 1937. This figure has apparently not undergone any large change since then, except during the month of March, when it was swollen by subscriptions to the exchange guaranteed loan. On the whole, it would even seem that banking deposits have since the beginning of 1937 rather tended to decline. Foreign exchange deposits being important, the fall of the franc should have brought about an increase in their franc equivalent, but this does not appear in the statistics.

In fact, most of the francs created for financing the Treasury's needs were sold on the exchange market, and then found their way back to the Bank (or the Equalisation Fund) and were exchanged for gold. In the balance sheet of the Bank, loans to the Treasury have progressively replaced the gold reserves. Due to the fact, however, that the metallic reserve of the Bank of France is now computed in francs of 43 milligrams (900/1,000 fine) the last drop of the exchange quotation of the franc, which occurred in September, resulted in a large gold premium, the actual exchange value of the reserve reaching about Frs. 71,000 millions instead of some Frs. 55,700 millions as carried in the balance sheet. According to semi-official reports, the liquidation of the Exchange Fund plus this premium of Frs. 15,000 millions would allow for a complete wiping out of the

temporary loans to the State. In other words, everything has happened as if the Government had simply borrowed gold and was repaying the bank out of future revaluation profits.

The experience of the French Equalisation Fund has been rather disappointing. In March, June and September, it was forced off its defence line and was obliged to let the depreciation of the franc take its course. In March, a new committee was appointed for its management. In June, M. Bonnet took power as Minister of Finance after the fall of the Blum Government. In both cases, a policy of Budget equilibrium was announced and the control over the exchanges was relaxed, i.e. so that the franc was allowed to depreciate. M. Bonnet even imposed on the country a system which would have been thought impossible one year before, a floating currency, after having allowed the Exchange Fund to purchase a new 8,500 millions of gold from the Bank following the depletion of its original endowment of 10,000 millions. In both cases the reward came in the form of some capital repatriation, the more so in March than in June. In both cases, when it became apparent again that the deficit was being financed by the Central Bank the public's hopes were foiled and a new pressure was soon felt on the franc. Conversely, there was a very real though slow improvement in July and August. Without bringing pressure upon the market, as had happened on previous occasions, the discount rate was lowered from 6 to 5 per cent. on July 6th, to 4 per cent. on August 3rd, and to 3½ per cent. on September 2nd. During the same period banking and savings deposits and the liquidity of the market generally had improved, and the end of August settlement was, except for March, the easiest which the market had experienced in many months.

Such improvement, however, was not sufficient to warrant a staunch resistance when the sales of francs became serious by the middle of September, and the Fund was forced to adopt the only possible method of defence, i.e. retreat. It is too early to tell how far the dangerous policy of pegging forward exchange rates, upon which the Fund had embarked in July, has contributed to weakening its position.

The pressure to which the larger commercial banks have been subjected during the last year is clearly apparent from their balance sheets. Their cash ratios have been reduced to minimum levels, in sharp contrast with preceding years. Conversely, their loans and discounts have on the whole tended to increase (a maximum being reached in January). In spite of their need of liquid funds, it has been quite uncommon for the larger institutions to rediscount with the Central Bank. They have, broadly speaking, remained true to their traditional policy which precludes any recourse to the Bank of France. The same is not true of the smaller organisations, and the Central Bank has had to increase its securities and collateral loans, to maintain its 30-day advances at a high level, and to expand its discounts by about 30 per cent. Part only of the latter increase represents rediscounts from commercial banks. Another fact may be ascribed to discount operations by the bank's private customers, while yet another part corresponds to two special transactions. In August, 1936, the Bank of France was requested by law to accept for discount commercial paper presented both by the Wheat Board and

also by the Central organisation for the "banques populaires" guaranteed by the Government. The first category never exceeded Frs. 600 millions (at the end of November, 1936), and proved to be a healthy self-liquidating paper. The same cannot be said of the "banques populaires," which reached a maximum of Frs. 1,190 millions in March and since has now been reduced by only one-half.

The Bank of France has thus been called upon to supply credit for private business, banks, public boards, and principally for the Government. But excess mer-

chandise imports and capital exports have drained out of the country all the francs which were being created and were not actually needed for current business transactions. Failing any major repatriation of French capital, the prospects are that the monetary expansion will tend to develop, and that the available margin of credit of the Government with the bank will be utilised to a large extent. There is little doubt that this expansion, or the prospect of its continuance, has now become the leading factor on the money and exchange markets, as well as the chief cause of the rise in internal prices.

THE AUSTRALIAN BANKING COMMISSION

(BY A CORRESPONDENT)

AUSTRALIA has finally emerged from the depression. On every hand there is evidence of prosperity; real income per head is equal to the highest pre-depression levels and unemployment is as low as it ever has been. Government accounts, after the provision of nearly £A10 millions for debt reduction, showed an aggregate surplus of about £A1,000,000 for the year ended June 30th, when all seven Governments, except those of two smaller States, balanced their Budgets. There was a trade surplus (including gold) of £stg.35.9 millions for the twelve months ended last June, and a considerable inflow of capital from Europe, America and New Zealand. After meeting external commitments, about £stg.20 millions will have been added to London funds, bringing the total (including the note issue reserve) to about £stg.65 millions. About half of this amount is held by the central bank, the Commonwealth Bank of Australia, and the remainder by the trading banks. The improvement in the balance of payments also placed the trading banks in a sound position internally.

Australia since 1931 has made a co-ordinated national effort to prepare the ground for this recovery. It will be interesting to see how she tackles the equally difficult problem of prolonging prosperity. This will involve debt reduction, the avoidance of excessive expansion, and the building up of overseas reserves. Judging by its report for the half-year ended in June, the central bank fully realises the needs of the situation. The need for caution is also apparently felt by the trading banks, which have actually reduced advances in the past prosperous year.

This is the background in Australia for the reception of the Report of the Royal Commission on the "Monetary and Banking Systems" and on desirable alterations and the manner in which they should be effected. As a survey of the banking system it is excellent and the most exhaustive yet made. Its conclusions as to general lines of economic, including monetary, policy are sound. It does not, however, give a firm guide as to desirable changes in the system; almost every important recommendation is dissented from, or reservations are made about it, by one or more commissioners, whose opinions are important. The Government so far has only decided to give effect to the recommendations for mortgage lending to primary industry and for capital for small secondary industries.

The Commission, with one dissident, opposes nationalisation and concludes that "the most desirable banking system in the present circumstances in Australia is one which includes privately-owned trading banks"; it approves of the existing banks because organisation on a profit-making basis conduces to efficiency, while they afford borrowers a greater area of choice than under nationalisation.

The Commission also considered the ideal system was one "in which a strong central bank regulates the volume of credit, and pays some attention to its distribution." It added that the adoption of its recommendations "would place the central bank in that position." The Commonwealth Bank's trading and savings bank activities are held to be consistent with its central bank functions, as they give additional powers of control.

It must always be difficult to resolve the problem of the appropriate relationship between Government and central bank, for either is able to some extent to vitiate the policy of the other. Four of the six commissioners consider that, where differences are found to be irreconcilable "after full and frank discussion," the Government should give the bank an undertaking to accept responsibility for any proposed policy and an assurance that it can implement it. "It is then the duty of the bank," they say, "to accept this assurance and to carry out the policy of the Government." The Chairman, Mr Justice Napier, in his reservation, implied that the board might at times be justified in acting otherwise. Mr H. A. Pitt, Director of Finance to the Victorian Government,

held that the authority over the bank should rest, as at present, with Parliament and not with the Government of the day.

The repeal of the present gold and sterling backing against the note issue is advised by four out of six commissioners, the same two dissenting. This may be justifiable on theoretical grounds because existing provisions are a very distant check against inflation. Nevertheless a legally guarded external reserve for emergencies is essential in Australia's case, not only to meet overseas commitments, but to maintain confidence that she will. A maximum note issue of about £A60 millions is recommended. This the bank might exceed by an amount of about £A10 millions, but only "with the consent of the Treasurer." The latter phrase places a limitation on the bank by requiring it to obtain the Treasurer's permission for desired action and the Commission's principle covering the relations of the bank with the Government appears to imply that the initiative may come from the Government. These new provisions appear to give a Government scope for a considerable expansion; the note issue might be increased to £A70 millions from its present level of £A47 millions, and there would be no legal requirements to prevent a consequent depletion of London funds.

In the relations between the central bank and the trading banks the Commission places most reliance on co-operation, but it recommends drastic powers to be held in reserve. It proposes that the central bank, again "with the consent of the Treasurer," should be given power to requisition an unspecified percentage of trading bank deposits, to be lodged with the central bank as cash, and to vary the percentage. The period of the requisition would be six months, extensible to twelve with the Treasurer's consent; it would be limited to eighteen months out of every twenty-four. The Chairman opposed this recommendation, "which would give power to requisition up to the full amount of deposits," because "it goes beyond the necessities of the case," and because it was "a power which Parliament ought not to delegate." He was supported again by Mr Pitt, who considered a maximum deposit "with at least reasonable notice" should be specified.

Consideration was also given to the vexed question of the London resources of the central bank. A majority recommended an extension of the existing voluntary exchange mobilisation agreement, whereby the trading banks would sell regularly to the central bank London funds in excess of their present contributions for the debt service. This was considered unnecessary by Professor Mills, and Mr J. P. Abbott, who considered the agreement had worked well as an emergency measure and was no longer necessary. Professor Mills alone recommended the floating of a loan in London "at an appropriate time" for retiring the central bank's London holdings of short-term Government securities which amount to about £stg.30 millions.

The short-term debt, to which Professor Mills refers, might also be reduced by Governments paying the central bank in Australia for its retirement. This would sterilise resources in Australia, diminishing pressure on London funds, and provide the central bank with a fund for future depression finance. The same objects would be achieved as by retiring Treasury bills in Australia, which might be retained as a basis for the open market which the Commission recommends. The establishment of a permanent open market in Australia on the lines of the English one would not only increase the central bank's powers of credit control but might also encourage the trading banks to transfer to Australia some of the liquid resources they now choose to hold in London, thus further adding to the central bank's London funds.

The Commission considered that the holding of some trading bank liquid resources in the form of London funds does not materially affect the central bank, if it holds ample itself. From the borrowing public's stand-

point it is probably all to the good, for a small return on cash reserves which would be idle in Australia, makes possible lower advance rates. The Commission does not say what it considers is ample for the central bank, but implies that it may on occasion be desirable that con-

siderable London funds should be held outside the central bank, when it records that the raising of the exchange rate for the Australian pound in terms of sterling in 1931 was "one of the major contributions of monetary policy to recovery."

CANADIAN BANKING

(BY A CORRESPONDENT)

THE year has been an encouraging one for the Canadian banks. It has seen the consolidation of the central banking system, and has shown the impact on it of industrial recovery. Public attention has, however, been concentrated mainly upon the threat of disturbance from the Social Credit Government of Alberta. This controversy has been fully discussed elsewhere in *The Economist*, and need not, therefore, be discussed here.

Following the issue of new capital stock to the Government, six additional directors have been appointed by the Government to serve on the board of the Bank of Canada. Four of the six are outstanding business men; the fifth is Mr Coote, a farmer-politician who has been known as a monetary reformer; the sixth is Mr McQueen, head of the department of economics in the University of Manitoba. The selection of these Government directors has been described as "a typical Mackenzie King move," which appears to make some concession to the nationalists and monetary expansionists without, in fact, doing anything to initiate a radical change of policy. Certainly no radical change has appeared, though there have been interesting developments which are mentioned below.

The Canadian banking system has been enjoying the benefits of increasing prosperity in most of the country, and the operations of the Bank of Canada and the chartered banks must be viewed against this background of

improving business. In 1936 the wheat crop was again very low; but the farmers found compensation in much higher prices. This year conditions have been rather more satisfactory except in Saskatchewan, where the crop failure is complete. Canada has its depressed area, but elsewhere conditions are very bright. The total physical volume of production, measured by the seasonally adjusted index, stood at 126.5 in July, 1937, against 110.8 a year previously. The component series bring out the changing balance of the Canadian economy: mineral production has risen from 169.0 to 215.3, as new mines have reached the productive stage, while manufacturing industry has risen from 109.5 to 127.2. Tourist traffic has reached very high levels. Capital construction has at last shown appreciable revival, but is still rather low as compared with the levels reached in the last boom. Generally speaking, it may be said that Canada is experiencing greater prosperity than in any year since 1930, but that this prosperity is far more dependent upon mining industries than was the prosperity of 1927-30.

The main effects of this developing prosperity on the banks have been an increasing demand for cash for circulation and—at long last—a revival in the demand for bank loans. The way in which the banking system has adapted itself to the situation has largely depended upon the operations of the Bank of Canada, which are

apparent in the following figures, abstracted from weekly returns near the end of each quarter:—

BANK OF CANADA RETURNS

(millions of dollars)

	June 30, 1936	Sept. 30, 1936	Dec. 30, 1936	Mar. 29, 1937	June 30, 1937	Sept. 29, 1937
Notes	96	128	136	126	133	161
Govt. deposits	18	14	22	37	15	26
Bankers' deposits	189	174	187	194	190	180
Gold	180	179	179	187	181	179
Sterling and U.S. dollars	9.7	3.1	13.1	19.7	18.1	26.1
Govt. Securities (Canadian)	112	138	162	153	134	159
Other securities	...	...	...	...	10	11

The movements in Government deposits are due to temporary discrepancies between Government receipts and disbursements, and are apparently not allowed to have any seriously disturbing influence on bankers' deposits. In the remainder of the figures we have to allow for the seasonal movement of the note issue, which swells to its maximum in the second half of each year. Apart from these seasonal movements the upward trends in the note issue, in security holdings and in reserves of foreign exchange are clear. The Bank of Canada has allowed the chartered banks to draw more notes, without reducing bankers' deposits appreciably, by itself acquiring additional securities and foreign exchange. The central bank has, that is to say, created the new cash which has been wanted by the banks for circulation and till-money. Of the assets it has acquired, \$11 millions, mostly bought in June, are described as "Other securities." No public explanation has been given, but it is understood that these new securities are short-term British and United States securities. Twenty-one million dollars have been added to the reserves of sterling and United States dollars. These substantial additions to the bank's foreign assets may be ascribed either to the bank's desire to maintain its foreign assets at about 60 per cent. of its liabilities or to a desire to strengthen its foreign reserves while the chartered banks continue their recent policy of allowing their foreign liabilities to exceed their foreign assets (in contrast to their general post-war position).

While the central bank has been prepared to provide them with increasing cash to meet public demands, the chartered banks have increased their security holdings from \$1,368 millions to \$1,442 millions, as well as meeting the increased demand for current loans, which have reversed their six-years' downward trend and risen from \$657 millions in June, 1936, to \$728 millions in June, 1937. The banks are holding a little more till-money

(Bank of Canada notes), while their deposits at the Bank of Canada have remained practically unchanged. In relation to the higher level of deposit liabilities to the public the bankers' deposits are now about 8 per cent. against 9 per cent., and thus still well above the statutory minimum of 5 per cent. That the Bank of Canada should have added to its securities while the cash position of the banks was still so strong is evidence of its determination not to allow any banking stringency to check the boom yet. The policy has involved no appreciable fall in bank interest rates. The yield on long-term Government bonds in Canada as elsewhere has risen slightly (from 3.16 to 3.35 per cent.). The index of common stock prices rose from 114 in July, 1936, to 133 in July, 1937.

While there has been no general change in bank loan charges, there have been two interesting innovations having expansionist effects. The first is the Home Improvement Plan, sponsored by the Government, under which a bank will lend at 3½ per cent. per annum for one, two or three years. The Dominion Government guarantees each bank against loss up to 15 per cent. of its total Home Improvement loans. Secondly, the Canadian Bank of Commerce has appeared as a competitor of the ordinary moneylenders by granting small personal loans (two signatures being required) at 6 per cent., the loans being repayable in monthly instalments. The former of these two novelties is said to have been little used as yet; the latter has had considerable success.

Some increase in total operations and, more especially, the increased outlet for current loans, have enabled the banks to earn bigger profits. But dividends remain at the depression levels, and unless the secular downward trend in the demand for bank loans is reversed a return to the high dividends of earlier years appears impossible.

The Bank of Canada has performed useful advisory services as investigator into the public finances of the three Prairie Provinces. The provincial Governments have been urged again and again to bank with the Bank of Canada; but none of them has yet done so. The Bank commenced in January the issue of a Statistical Summary, which, like its English prototype, presents the material in tables and graphs without interpretation.

The balance of trade has continued to be favourable, higher wheat prices, enormous American tourist traffic and bigger and more valuable mineral production all having helped. The balance on current account for 1936 was probably nearly \$350 millions. This has enabled Canada to redeem and repurchase large amounts of her securities held abroad, while the banking system as a whole has been able to maintain its foreign assets without divorcing the Canadian dollar from that of the United States.

vities, and also undertakes on its own account the purchase of sterling funds in order to meet the Government of India's remittance requirements. In this connection it may be mentioned that the accumulation of large sterling balances in London is no longer a matter in which either the Government of India or the Secretary of State is actively interested, as the responsibility for the maintenance of adequate resources has devolved upon the Reserve Bank alone. Between January and April, 1937, the Bank purchased some £30 millions sterling at rs. 6½d., thus placing some Rs. 40 crores at the disposal of the money market in India. Simultaneously, the total of Treasury bills outstanding with the public was allowed to fall from about Rs. 28 crores in January to Rs. 13 crores in April. Currency expansion, however, was limited to a total of about Rs. 12 crores, mainly against sterling assets. On April 1, 1937, Rs. 5 crores of excess silver coin was handed over to the Government against rupee securities. With the better demand for money the average rate for the three months' Treasury bill advanced from about ½ per cent. in August-September, 1936, to just over 1 per cent. in January, 1937. Though the prices of Government securities eased in the first three months of the new year, the recession was only slight and prices have since shown some recovery. Three and a half per cent. Government paper is now quoted at about Rs. 98, as compared with Rs. 100 in October, 1936, and Rs. 91.3 in March, 1937.

With the general improvement recorded in agricultural conditions, increased profits have been shown by the joint-stock and indigenous banks during the half-year ended June 30, 1937, and in view of the progressive development of industrial activity and the execution of schemes requiring capital expenditure which are now being undertaken by many of the autonomous Provinces, the banking outlook is brighter than it has been for some years. Fortunately the falling off in the exports of gold has been more than compensated for by increased exports of merchandise, with the result that exchange has been steady and the balance of trade sufficiently large to enable a steady volume of imports to be maintained, a factor which will in due course be reflected in the increased yield of Customs duties.

On January 15, 1937, certain amendments to the Indian Companies Act of 1913 came into force, by which, *inter alia*, a banking company is defined as a company which carries on as its "principal" business the accepting of deposits of money on current account or otherwise subject to withdrawal by cheque, draft or order. Banking companies formed after January 15, 1937, must now expressly limit the objects set out in the Memorandum to accord with the activities enumerated in the Company's Act as amended (Section

277 F). A number of further regulations are provided affecting banks, and it may be said that the new sections as a whole are a praiseworthy attempt to establish good banking by decree, though how far this will be successful remains to be seen.

The important political changes which took place on April 1st have of necessity meant alterations in the relations of the Reserve Bank with the various Provincial Governments. The political separation of Burma from India is now reflected in the Reserve Bank's weekly statement, which shows the totals of notes issued and in circulation in Burma separately, though the Reserve Bank continues to have the sole right of note issue in both countries. Indian notes remain legal tender in Burma, but the Burma notes are overprinted "legal tender in Burma only." Both classes of notes, however, possess the right of convertibility into the silver rupee, and it is provided that the Indian rupee coin and subsidiary coin shall remain legal tender in Burma for not less than two years from April 1, 1937. Another consequential change of the new regime is exemplified by the recent issue in India by the Reserve Bank in its capacity as Provincial Government banker of a joint loan on behalf of the five Provinces of Madras, United Provinces, North-West Frontier Province, Central Provinces and Berar, and the Punjab. The total amount offered was Rs. 4 crores 60 lakhs at 3 per cent., repayable 1952 with an issue price of 99, and as the offer was well timed and well conceived it met with complete success. Other aspects of the Reserve Bank's activities during the year are set out in its report issued in February, 1937.

One feature to which the report draws attention is the increase in the numbers of branch offices of the scheduled banks from 723 to 828 during the year ended December, 1936. Under section 55 (1) (b) of the Reserve Bank Act, the Bank duly issued its report in December with reference to the methods of effecting a closer connection between the Bank's operations and agricultural enterprise. The report, however, contained little that had not been said before on the subject, and the main conclusion arrived at was that until a good deal of preliminary clarification and organisation had been effected along the lines recommended, the Reserve Bank would be in no position to depart substantially from its existing practice. Recently, however, the Reserve Bank issued to all scheduled banks and the Shroffs Association a circular letter requesting constructive suggestions for bringing within the framework of organised banking operations those persons and firms not being scheduled banks engaged in the business of banking in India. The Reserve Bank suggests that in certain circumstances it

INDIAN BANKING

(BY A CORRESPONDENT)

ONE of the most important features of the Indian economic situation during the past year has been the sustained improvement which has occurred, owing to favourable world trends, in the commodity price level. Since August, 1936, the Calcutta index number of wholesale prices has risen by some 15 points to 105 (July, 1914 = 100), chiefly owing to the better prices obtained for oilseeds, tea, jute and jute manufactures. With this stimulus both internal and external trade have been progressively active. In consequence of this activity the demand for money broadened considerably during the busy exporting months of November, 1936, to May, 1937, and bankers' call money rates in the chief towns quickly reflected the altered conditions. The rate for call money, which for months previously had been a nominal ½ per cent., advanced during the period to over 1½ per cent., and the three months' deposit rate also moved up from ½ per cent. in October, 1936, to about 1½ per cent. as late in the season as April, 1937. The total advances of all the scheduled banks, as shown by the Reserve Bank's consolidated return statement, amounted, in

October, 1936, to Rs. 89.37 crores, or 38.71 per cent. of the banks' demand and time liabilities, but at the height of the exporting season in April, 1937, the percentage had risen to 54.42 (Rs. 132.68 crores), as compared with a high level of 45.54 (Rs. 101 crores) in April, 1936. Similarly, the cash ratio, expressed as a percentage of demand and time liabilities, fell from 14.98 per cent. in September, 1936, to 9.9 per cent. in January, 1937. The Reserve Bank then took steps to ease the position, and the percentage gradually rose to about 12.93 per cent. in April, 1937. No change was made in the Bank rate, which continued at 3 per cent. throughout the year, and as the Reserve Bank judiciously expanded currency as occasion arose, no undue stringency was experienced in the money market. The active note circulation rose from Rs. 165 crores in September, 1936, to Rs. 195 crores in April, 1937, and the demand and time deposits of the scheduled banks increased in the same period from Rs. 230 crores to Rs. 241 crores.

The Reserve Bank now regulates the issue of Treasury bills in India as part of its normal central banking acti-

might be prepared to make advances against trade bills endorsed by indigenous bankers or against the promissory notes of indigenous bankers drawn for the purpose of assisting trade or agriculture provided the scheduled bank acted as intermediary and was prepared to take the risk of default. The Bank suggests that by this means the benefit of the cheap discount rates granted

by it to the scheduled banks would be passed on to the indigenous banker. At the moment of writing it is not known what response has been received from the scheduled banks to the suggestions, but under section 55 (1) (a) of the Act, the Bank will have to make a report on the matter to the Governor-General before April 1 next year.

IRISH BANKING

(BY A CORRESPONDENT)

No striking changes have taken place in the economic life of the Irish Free State in the last year, but the general rise of prices has had the effect of increasing the unfavourable trade balance to a degree that is causing some anxiety. In the first six months of the present year imports amounted to £21.6 millions, compared with £19.1 millions in the same period last year, while exports rose from £10.0 millions to £10.5 millions. The unfavourable trade balance is thus £11.0 millions for the first half of the year, and, unless some material change occurs in present trends, it will amount to £22.0 millions for the whole year. While there is some doubt over the details of the Free State's invisible imports and exports, it can be stated with certainty that the favourable balance on invisible account is not sufficient to bridge a gap of this magnitude, and the country is undoubtedly dissipating its external assets. This conclusion is borne out by the decline that has taken place in the net sterling assets of the banks, which have fallen from £72.4 millions in the middle of last year to £71.1 millions in the middle of the present year.

From the standpoint of the maintenance of currency stability such a situation is obviously unsatisfactory, and it is important to attempt some forecast of the probable future course of the balance of payments. Many of the principal invisible exports, e.g. emigrants' remittances, British pensions and the receipts of the sweepstakes, are wasting in their nature, but some increase in dividends from abroad and tourist expenditure may possibly be expected. There is no reason to think that any of the invisible imports will decline. The value, if not the volume, of visible imports may be expected to increase if the general price level continues to rise, and the balance of payments will therefore tend to become more rather than less unfavourable unless visible exports are substantially increased. No growth of industrial exports can be hoped for, and it is to agriculture that the Free State must look for the exports which are vitally necessary if the creditor position of the country is not to be continuously and progressively impaired. The stimulation of agricultural exports is, for the time being at least, very difficult owing to the British penal duties and the absence of alternative markets. It is true that part of the imports represent capital goods for the new protected industries, but the success of these industries will involve further imports of raw materials and consumption goods purchased by wage-earners. The capital nature of the imports does not therefore alter their effect on the balance of payments, and it is questionable to what extent the country will profit by financing new industries by the repatriation of external investments.

The position of the currency is also affected by the rise in the internal price and cost level. Numerous measures of State interference have resulted, by accident or design, in an increase in the prices of many agricultural and industrial products. The cost of living has risen steeply in recent months, and much labour unrest has been caused thereby. Considerable sums are being spent on building and other constructional works by public authorities, and expenditure thus generated—much of which is being financed by borrowing—is coming to form a large percentage of the total national income. Evidence of this internal expansion and of the rise in prices by which it is accompanied is to be found in the statistics of bank debits, which have increased from £245.0 millions in the period January-June, 1936, to £259.2 millions in the corresponding period this year. The same tendencies are illustrated by the growth of the

total monetary circulation from 15.2 millions in June, 1936, to £16.2 millions in June of this year.

The first impression conveyed by the banking statistics is the surprising stability of the Irish banking system during a period of serious economic dislocation and transition. The total assets and liabilities of the Free State shareholding banks show practically no variation, and the changes in the constituent items of their balance sheets are quite moderate. The public have certainly lost none of their confidence in the banks in spite of the difficulties of the times. The slight shrinkage that has taken place in deposits is, it is to be feared, a reflection of agricultural distress, since there is evidence that the withdrawals have been greatest at country branches. Indeed it is probable that urban deposits, and in particular current accounts, have increased. The rise in loans and advances is a satisfactory feature of the returns, as it indicates that the rise in prices has widened the field of profitable borrowing. The new advances have been financed by a reduction in cash and investments, but the banks still maintain their assets in an unusually, but not therefore undesirably, liquid form.

The profits of the banks have risen during the year, as the result partly of the increase of advances and partly of the slightly higher rates of interest that have ruled. All the banks have maintained their rates of dividend, while two have increased them. The tax on consolidated banknotes has been reduced from 3 to 2½ per cent., but it is still too high to render the note issue privilege profitable at present interest rates. The banks, however, are willing to pay a price for the privilege, which they apparently regard as possessing some advertising value; and, of course, the present cheap money regime may not continue indefinitely.

The Report of the Currency Commission for the year ended March 31, 1937, states that the volume of the legal tender note issue fluctuated during the year between a minimum of £8,058,581 and a maximum of £9,699,132, the latter being the highest figure ever attained by this issue. On March 31, 1937, the Currency Commission held in the Legal Tender Note Fund, as the primary backing of these notes, sterling assets amounting to £9,112,355, of which £3,593,034 consisted of British Government securities of maturity exceeding twelve months. The other assets in the Fund consisted of cash, London balances and British Government securities maturing within twelve months. The convertibility of the Free State currency is thus amply secured. The surplus income of the Commission for the year 1936-37 amounted to £189,097, as compared with £195,213 in the previous year. The Currency Commission is also responsible for the issue of consolidated banknotes, which are assigned to the shareholding banks in amounts determined by a triennial revision. The maximum amount of this issue is £6,000,000, and the total note issue in the Free State is therefore about £15,000,000, to which must be added an unknown, but declining, quantity of British notes.

The Report of the Agricultural Credit Corporation for the year ended October 31, 1936, states that the interest rate on loans made after January 17, 1936, was reduced from 6 to 5 per cent., and that this reduction has stimulated business considerably and has been of much benefit to borrowers. The aggregate of loans issued by the Corporation from the opening of business in 1927 amounted to £1,370,627, and the number of loans was 16,719, of which 16,408 were for sums under £500; 159 for sums between £500 and £1,000; and 80 loans were

for sums of £1,000 and upwards. The average amount per loan was £82.

The Industrial Credit Company has continued to underwrite new issues on the Dublin capital market. In July, 1936, an issue was made of 500,000 additional shares of £1, on which 12s. 6d. has been paid up. The paid-up capital of the company is now £812,500, of which the Government holds by far the largest part. During the last complete year of its operations the company undertook six capital issues, the net cash total involved being £1,149,400. The Company was also

associated with the underwriting of the Dublin Corporation 4 per cent. Redeemable Stock, 1960-85. The net cash total of the capital issues undertaken by the Company since its incorporation in 1933 is £3,968,400. Of this total the underwriters were called upon to take up slightly over 12½ per cent.

The Commission of Inquiry into Banking, Currency and Credit has not yet presented its report, but it is understood that the Commission is approaching the end of its investigations, and its report is awaited with widespread interest.

SOUTH AFRICAN BANKING

(BY A CORRESPONDENT)

The year 1936-37 has seen a noticeable widening of the area of South African prosperity, which had hitherto been based mainly on goldmining and its dependent industries. During the last few months the almost fantastic boom in the Witwatersrand has received something of a check, probably salutary, arising from fears of a possible fall in the price of gold and from the consequent heavy falls in prices of gold-mining shares, especially of the more speculative type. One effect of this reaction may be seen in the sharp decline in bank debits in the Transvaal in May and June. On the other hand, conditions in the farming industry have continued to improve substantially, mainly in consequence of higher world prices:—

PRINCIPAL EXPORTS OF FARM PRODUCE
(In million £)

	1928-9	1931-2	1935-6	1936-7
Wool.....	16.4	5.4	9.1	13.8
Maize.....	4.6	0.7	0.7	0.2
Hides and skins.....	4.0	0.9	1.7	2.3
Other.....	2.4	4.6	7.9	7.3
	27.4	11.6	19.4	23.6
Index of prices.....	100	38	68	79
Index of quantity.....	100	112	104	109

During the past year, the rise in exports of farm produce has been due mainly to an increase of over 25 per cent. in the price and of nearly 20 per cent. in the quantity of wool shipped. In the present year, an excellent maize crop will mean an increase of something like £5 millions in the value of maize exports. If prices are maintained, the value of farm produce exported in 1937-38 will probably be back at the pre-depression level.

The improvement in farming conditions is already showing itself in the hitherto relatively depressed indices of business activity in the areas outside the Transvaal:—

BUSINESS INDICATORS

	1931-2		1935-6		1936-7	
	£ mill.	Per cent. of 1928-9	£ mill.	Per cent. of 1928-9	£ mill.	Per cent. of 1928-9
Bank debits to individual accounts:—						
Transvaal.....	557	87	1,097	171	1,479	233
Other provs.....	537	70	627	79	752	95
Value of buildings commenced:—						
Witwatersrand.....	3.5	70	10.8	229	12.0	256
Other towns.....	3.5	57	4.6	75	6.8	111
	June, 1932		June, 1936		June, 1937	
Index of European employment in industrial establishments:—						
Witwatersrand.....	83		141		146	
Other towns.....	80		107		113	

The recovery in the prosperity of farming areas is of the greatest importance to the South African banks, for farmers are among their best customers for advances. It is probably to the improvement in farming prospects that we may attribute much of the sharp further increase in the total of their South African advances from £47.5 millions in June, 1936, to £55.5 millions in June, 1937.

THE CHASE NATIONAL BANK

OF THE CITY OF NEW YORK

(Incorporated with Limited Liability under the Laws of the U.S.A.)

HEAD OFFICE:

PINE STREET CORNER OF NASSAU, NEW YORK

The Bank offers complete facilities for the provision of all banking services and the handling of Anglo-American and foreign business. Current and deposit accounts are invited and consultation with the management is welcomed.

The Chase Banking Organisation has Offices in:
PARIS, HAVANA, SAN JUAN-PORTO RICO, PANAMA,
CRISTOBAL, COLON, HONGKONG, SHANGHAI and TIENTSIN

and Special Representatives in:
BERLIN, ROME and MEXICO CITY

CORRESPONDENTS THROUGHOUT THE WORLD

51 BERKELEY SQUARE, W.1
BUSH HOUSE, ALDWYCH, W.C.2

The Chase National Executors & Trustee Corp., Ltd.
6 Lombard Street, E.C.3

which have fallen by £4.6 millions. Of this decline in cash, however, not more than about £1 million, or at most £2 millions, can be attributed to an excess of South African overseas payments over receipts. The rest is due to an increase in the circulation of Reserve Bank notes and to an expansion in non-banking deposits with the Reserve Bank.

BALANCE OF PAYMENTS

(In million £)

	1935-36	1936-37
Exports of merchandise	30.6	37.3
Gold produced	77.3	80.8
Total Exports	107.9	118.1
Imports	80.8	94.3
Export Surplus	27.1	23.8
Estimated net balance of other payments on income account	27.0	28.0
Balance of payments on income account	0.1	4.2
Estimated provision for repayment of Government overseas debt	15.0	10.0
Reduction in S.A. banking system's reserves of gold and foreign exchange	-14.9	-14.2
Estimated net inflow of capital	9.9	12.7

In view of the fact that in 1936-37 the South African balance of payments was probably adverse, and no less than £18.7 millions of South African Government debt was paid off in London, the negligible amount of the reduction in the banking system's holdings of gold and foreign exchange is at first sight remarkable. No doubt the bulk of the £11 millions of debt repaid in July, 1936, had been provided for in 1935-36, while some of the £10 millions repaid in 1935-36 may have been provided for in 1934-35. If we put the transfer of South African Government funds to London for debt repayment at £15

millions in 1935-36 and £10 millions in 1936-37 we may be somewhere near the truth. The estimates of the South African balance of payments would then be somewhat as shown above.

It would appear that the balance of payments on income account was approximately in equilibrium in 1935-36, but that in 1936-37 the rapid further rise in imports caused a moderate excess of payments to appear. The net inflow of capital from abroad, however, was sufficient to provide both for the excess of payments on income account and for heavy repayments of Government debt in London. Some confirmation of these estimates of capital imports may be obtained from an inspection of the long list of South African securities, both mining and other, issued in London or introduced to the London Stock Exchange during the past two years.

The present position is that the cash reserves of the South African commercial banks, despite reductions caused by the heavy repayments of Government overseas debt in recent years and the expansion of the local note circulation, still stand at more than twice their statutory minima, while the position of the Reserve Bank is equally comfortable, even without a revaluation of its gold holdings. Even if 1937-38 should see both a further marked rise in imports and a slackening of the inflow of capital, the expected further rise in exports and the cessation of repayments of Government overseas debt would probably render unnecessary any serious depletion of bank reserves, always provided that prices of commodities and especially of gold are maintained. The only check on the expansion of advances will therefore continue to be, as during the past four years, the discretion and judgment of those responsible for the policies of the commercial banks. Whether they permit their advances to rise above their present profitable level will depend largely on their expectations regarding the future, and especially on their view of the probable future course of prices of commodities and gold.

† Including £102,580 long term mortgage debentures. † Including £807,050 long term mortgage debentures. * Includes money at call, and in 1936 and 1937 remittances in transit between branches, which were in previous years included under Discounts and Advances.

THE TWILIGHT OF AMERICAN CAPITALISM: An Economic Interpretation of the New Deal.

By A. S. J. BASTER, Ph.D., Lecturer in Economics, University College, Exeter. 9s.

A critical essay on American attempts under the Roosevelt régime to control and regulate the competitive system in the general interest. The book examines the ways in which the régime has used its vast economic authority in finance, in industry, and in agriculture, and reviews the economic and political problems raised in the process.

THE NEW MONETARY SYSTEM OF CHINA: A Personal Interpretation.

BANK OF LONDON AND SOUTH AMERICA, LIMITED

The profit for the year ended September 30, 1936, after deducting all expenses and charges, and after providing for bad and doubtful debts and legal reserves in South America, amounts to £252,851. To this sum has to be added £167,274 brought forward from last year, making a total of £420,025. From this unappropriated balance the directors recommend the following

distribution:—To dividend of 3 per cent., payable December 22, 1936, subject to income tax, £106,200; to writing off special legal and other expenses incurred during the year £25,000; to contingency reserve, £120,000; to profit and loss carried forward, £168,925. During the year the bank has taken over the business of the Anglo-South American Bank. The issued capital has been increased to £4,040,000.

unappropriated balance into income.

THE BANK OF ROUMANIA, LIMITED

The report for the year 1936 states that the balance of earnings in Roumania, namely, £11,739, cannot be remitted and has therefore been added to the provision for bad and doubtful accounts in Roumania. On the other hand, sterling expenses, covering London office, directors' fees and payments on account of the Bucharest branch exceed earnings by £3,459, which has been covered by a transfer from sterling reserve for doubtful debts, contingencies, etc.

BANQUE COMMERCIALE DU CONGO

The report of the board of directors for the year 1935-36 announces a net profit of Frs. 2,391,297, out of which a dividend of 8 per cent. free of tax, has been paid. Frs. 250,000 have been allotted to the reserve, and Frs. 5,718 are carried forward. Owing to a change in the presentation of the balance sheet, the figures for 1935-36, below, are only approximately comparable with those of previous years.

COMPTOIR NATIONAL D'ESCOMPTE DE PARIS

The report of the directors for the year ended December 31, 1936, shows that net profit, after the necessary reductions for expenses, taxes, and other charges, amounts to Frs. 34,818,957. A dividend was announced of Frs. 40 for each share, and Frs. 6.21 for each founders' share. This leaves Frs. 51,386, which increases the amount carried forward into the shareholders' account to Frs. 6,566,757.

COMMERCIAL BANK OF THE NEAR EAST, LIMITED

The following is a statement of the results for the year 1936: Profit for the year, after making provision for bad and doubtful debts, rebate and directors' fees, £6,059; add balance brought forward from the year ended December 31, 1935, £2,976—£9,036. In view of the unsettled international conditions which exist at present, the directors have decided not to declare a dividend, but to strengthen reserves, as follows: to reserve fund, including the 5 per cent. required by the articles of association, £3,000; to contingency account, £5,500, leaving to be carried forward £536.

HAMBROS BANK, LIMITED

The directors' report for the year ending March 31, 1937, shows that after payment of all expenses, making provision for rebate on bills discounted, bad and doubtful debts, and income tax, the accounts show a profit of £325,726. Deducting the directors' remuneration of £15,078, and adding the balance brought forward from last year of £92,502, there remains an available total of £403,150. After transferring £150,000 to contingency reserve account and allowing the sum of £61,000 for interim dividend on the £10 shares and £9,150 for interim dividend on the £1 "A" shares paid on October 30, 1936, the directors now recommend the payment of a further dividend of 10 per cent., less income tax, on the £10 shares, making a total of 18 per cent. for the year, less income tax, and a further dividend of 3 per cent., less income tax, on the £1 "A" shares, making a total of 6 per cent. for the year, less income tax, and that the balance of £99,001 be carried forward.

THE HONGKONG AND SHANGHAI

The directors report that the net profits for the year ending December 31, 1936, together with \$3,327,060 balance brought forward from last account, after paying all charges, deducting interest paid and due, and making provision for bad and doubtful accounts and contingencies, amount to \$18,434,235. They recommend writing off bank premises account the sum of \$1,000,000. After deducting \$1,000,000 the interim dividend of

BANKING CORPORATION, LIMITED

£2 10s. per share, paid on August 10th last, viz.: £400,000 at 1s. 3d.—\$6,269,388, and remuneration to directors, there remains for appropriation \$11,085,328, out of which the directors recommend the payment of a final dividend of £3 per share, viz., £480,000 which, at 1s. 2d., the rate of the day, will absorb \$7,744,538. The balance \$3,340,789 to be carried to new profit and loss account.

THE IMPERIAL BANK OF IRAN

The profits for the year ended March 20, 1937, after making provision for expenses of management, general charges in London and at chief office and branches, income tax, and bad and doubtful debts, amount to £77,430, to which has to be added £50,604 brought forward from last account, making a total of £128,034. The assets and liabilities of the branches in Iran have been converted at the rate of exchange of Rials 80½ per £ sterling,

being the rate on March 20, 1937. The rate last year was Rials 80. The directors now recommend payment of a final dividend of 7s. per share, and a bonus of 2s. per share, making with the interim dividend of 4s. per share a total for the year of 13s., free of income tax. It is also proposed to add £10,000 to reserve, which is thereby increased to £750,000, and to carry forward £53,034.

THE NATIONAL BANK OF EGYPT

The report for the year ending December 31, 1936, shows the following statement: Gross profit for the year, after providing for depreciation on the bank's buildings and furniture, for rebate of discount, and for doubtful debts, amounts to £948,108. After deducting from this for directors' fees £16,729, and for

current expenses £458,492, the remainder is divided between the statutory dividend of 4 per cent., amounting to £120,000, and an additional dividend of 11 per cent., amounting to £330,000. By adding the balance brought forward from last year, £206,984, there remains £229,870 to be carried forward.

SOCIÉTÉ GÉNÉRALE Pour Favoriser le Développement du Commerce et de l'Industrie en France

The directors' report for the year ended December 31, 1936, states that net profits amount to Frs. 42,499,516. It was proposed to declare a dividend of 5 per cent., i.e., of Frs. 12.50, on 1,210,394 shares half paid up, and Frs. 25 on 39,606 fully-paid shares, amounting to Frs. 16,120,075. A statutory payment of Frs. 1,700,444 to the directors and auditors leaves a surplus of Frs. 24,678,997, to which is added Frs. 27,465,396 carried forward from last year. A further dividend was proposed of Frs. 27.50, amounting to Frs. 34,375,000, leaving Frs. 17,769,393 to be carried forward.

SWISS BANK CORPORATION

After deduction of expenses and taxes, and making provision for bad and doubtful debts, etc., the net profit for the year ended December 31, 1936, amounts to S.Fcs. 8,242,828, which together with the amount carried forward from last year, viz.,

S.Fcs. 1,056,085, makes a total of S.Fcs. 9,298,913. The board propose to pay a dividend of 5 per cent. on the paid-up capital, which will absorb S.Fcs. 8,000,000, and to carry forward S.Fcs. 1,298,913.

THE YOKOHAMA SPECIE BANK, LIMITED

The directors' report for the half-year ending December 31, 1936, shows that the net profit of the bank, after providing for all bad and doubtful debts, rebate on bills, etc., was Yen 17,458,919, inclusive of Yen 10,446,651 brought forward from last account. The directors propose that Yen 1,750,000

be added to the reserve fund, and recommend a dividend at the rate of 10 per cent. per annum, which will absorb Yen 5,000,000. The balance, Yen 10,708,919, will be carried forward to the credit of next account.

A SELF-BINDER
FOR
THE ECONOMIST

Week by week you keep your copies of THE ECONOMIST and ultimately you either file them or bind them. Doubtless you are accustomed to the annoyance which attaches to the ordinary binder—the difficulty of reading half the left-hand page and the unwieldiness of the device generally.

We are able to offer our readers a binder which overcomes these irksome difficulties and is, in our opinion, the most efficient contrivance for the purpose we have yet seen.

It holds three months' issues and index, it has no wires, clips or metal contrivances, and each issue can be bound up in an instant in such a way that it can be read as easily as a well-bound book.

(IN FULL CLOTH, LETTERED ON SPINE AND FRONT)

Price 5/- each, post free (Overseas 6/-)

EGYPT

THE ECONOMIST

Introduction

by

His Excellency Mustapha El-Nahas Pasha, Prime Minister of Egypt

With much pleasure I convey to *The Economist* my fullest appreciation of the initiative they have taken in publishing this special number in the interests of Great Britain and Egypt. Since the conclusion of the Anglo-Egyptian Treaty of Alliance and Friendship, fifteen months ago, we have begun, on both sides, to put its execution into effect with equal loyalty and in a spirit of complete mutual understanding. To do so has been all the easier because the Treaty was a response to an urgent reality, and above all was intended to foster and maintain that peace on the preservation of which it is the duty of every country to keep a jealous eye.

On our side we are proud, within the framework of our complete independence and under the aegis of the mutual alliance, to co-operate with the peoples of the world in ensuring an era of constructive peace. Let us hope that one day there will rise on this troubled world the star of good hope that will shed on the hearts of men a faith, active and still more active, in the noble destinies of humanity.

Egypt, a loyal ally to Great Britain and a sincere friend to all other powers, is fully conscious of her responsibilities. Now that the misunderstandings that separated our two countries in the past have been blown away, and now that she has taken her seat in the Parliament of the Nations, Egypt, equally allied to order and justice, mindful of her constitution and solicitous of an orderly progress, is free to resume the weaving of the web of her history, adding to the prestige of her glorious past the prestige of a no less glorious renaissance into which enters neither empty pride nor paltry vanity, but only the consciousness of her own personality and destiny, and a feeling, no less vital, of her solidarity with Great Britain and all countries of similar good will.

Modern Egypt

TO those who were nurtured on the Old and New Testaments the name Egypt conveys an association of lifelong familiarity, tinged with something of mystery. Egypt was the refuge of Jacob and his sons in their days of famine, the scene of the romances of Joseph and of Moses, the victim of the awesome plagues, the land of bondage and of thrilling escape, and, still later, the refuge of another Family, escaping from yet another oppression. These and other happenings have long acquainted us with Egypt, its mysterious river, its majestic and haughty Pharaohs, its stately priests and occult religion, and to many of us, in many countries, it has become almost a second fatherland. Shakespeare's immortal tragedy of Antony and Cleopatra, the mysticism of Hypatia, the wizardry of the Thousand and One Nights, the fanaticism of Saladin, the piety of St. Louis, tales of Soldans, Nubian slaves, Caliphs and mamelukes—all these have strengthened the appeal and increased the charm of Egypt's name. In our own times Egypt has been the scene of a keen political strife, the begetter of a problem whose solution baffled many a statesman, and whose elements were known to few. Last year a solution was found under the stress of international facts—"chiels that winna ding." Is that solution final, or is it but one phase more in a story, the half of which is still untold?

What is Egypt to-day? Geographical treatises tell us that it is a land in the North-East corner of Africa, extending from the Mediterranean in the North to the parallel of Wadi Halfa in the South, a length of 655 miles; and from Libya in the West to the Red Sea and the frontiers of Palestine in the East, a breadth varying between 550 and 750 miles; with a total extent of 387,000 square miles. Not all, however, of this territory is habitable, but only a narrow strip, "the gift of the Nile," as Herodotus told us over two thousand years ago. Every cubic yard of this soil has been brought down from Central Africa by the silt-laden flood of that mighty river, and deposited in the shallow trough that an older Nile etched for itself in the bleak and sterile limestone plateau of the Saharan desert. This fertile tract—sometimes but a few hundred yards and never more than 15 miles wide, till it reaches Cairo, where it expands into the fan of the Delta, a circular segment of 110 miles radius and 170 miles arc—covers 12,400 square miles, or 7,667,000 acres in all. There it is that—apart from a few scattered oases and valleys in the desert, where a scanty supply of underground water fosters a precarious agriculture—the people of Egypt live, and thence they draw their sustenance, which is also the gift of the Nile. Without that river's beneficent flood, hardly a green blade would flourish in the country. South of Cairo rain is practically unknown and between there and

the sea it is too uncertain to admit of the cultivation of cereals.

On these 7½ million acres (6 millions of which have been brought under cultivation, while 1½ millions still await development by irrigation) lives and toils a population of 16 million souls. A quarter of a million of them are subjects of foreign powers, and the rest are Egyptian subjects. Behind them lie fifty-two centuries of recorded and much more of unwritten history. For even when the invention of writing began the marvellous series of sculptured records that endure to-day, the Valley of the Nile had already been inhabited for thousands of years. And the race that lived there in 3340 B.C. had already made large strides towards modern civilisation.

Isolation and an almost unchanging environment have produced a remarkable homogeneity in the Egyptian people. Apart from the Berbers or the Nubians of the far South and the sparse Arabs of the desert, there is little difference in appearance or in character between the inhabitants of the North and of the South. This racial homogeneity is most marked among the Copts, the oldest Christian community in the world, whose religion has placed bars in the way of intermarriage with foreigners. It is well marked, also, among the fellahin, who form the great bulk of the population. Many of the Moslem upper classes, however, show traces of descent from Turks, Circassians, Georgians and other foreign races.

Agriculture is now, and is likely to continue for some considerable time to be the principal industry of the country. Of the adult male population, 60 per cent. are directly employed on the land; 4 per cent.—a high proportion—are employed in the public service, including local government and the railways; 2 per cent. practise professions and 22 per cent. are engaged in transport, commerce and industry. The population is increasing faster than productivity of the soil. Consequently, it has been a cardinal point of the policy of every Government to initiate and nourish new industries, and to provide a better standard of living, either by producing goods that can be exported against an import of food, or by replacing imported manufactures by non-indigenous foodstuffs. Economic policy, however, remains mildly protectionist, with the Customs tariff imposed mainly for revenue purposes. Egypt is not rich in natural resources, apart from the remarkable fertility of her soil, aided by unfailing sunshine and an adequate water supply. Cotton, grains, sugar and onions are her staples, though there is also a flourishing cigarette industry which uses foreign tobacco and some export of phosphates and manganese when prices are favourable.

Politically, Egypt has been a sovereign independent State since 1922, when

the British protectorate, proclaimed in 1914, was declared at an end. A constitution was granted in the following year, under which Egypt is governed by a king, with a bicameral parliament. Half the members of the Upper and all of the Lower House are elective, and the remainder are nominated by the Crown. As the suffrage is restricted to adult males, with a property qualification, the Lower House, inevitably, is strongly agrarian in composition.

The defence of Egypt's wide frontiers is entrusted to a small army, a single division strong, and a few gunboats, mostly for coastguard purposes. Strategically, Egypt has always been at the mercy of any power commanding the sea or an advancing army from the North-East or North-West with the parallel support of a sea force. All invasions have come from these two directions. Times have changed since Napoleon called Egypt "strategically the most important country in the world." The submarine and the aeroplane have modified Egypt's rôle without wholly destroying her attraction for a would-be world conqueror. To what, then, has Egypt, strategically important and geographically weak, owed her immunity from foreign aggression for over a century? The answer is that, from the Napoleonic era up to the British occupation of 1882, Egypt owed her defence indirectly to the supremacy of the British fleet. From 1882 to 1937 the aid of the Navy's "sure shield" was more clearly visible. And last year saw the conclusion of a Treaty of Alliance and Friendship between the two countries under which we guarantee on ally and friend against foreign aggression. The British Empire needs Egypt as a friend and Egypt needs the Empire so long as Great Powers desire to find colonial outlets.

The conclusion of the Treaty marks the end of the old dispensation to Egypt. The change has been signalled by the appearance on the throne of a young ruler, heir of a glorious past and a pioneer, one may hope, of a still happier future. The religion of the ancient Egyptians held that the souls of good men, after a period of 3,000 years of trial, were reincarnated on earth as a stage towards their ultimate perfection. For nearly 3,000 years, until 1937, Egypt's independence had been lost to one or another power. May we look on the appearance of a young and independent monarch as her own reincarnation? And may we close with a suggestion? Just as the politico-strategic interests of the two high contracting parties to the Treaty are identical, so at bottom, are their economic interests. Is there no statesman prepared to recognise this fact and admit Egypt to position comparable with that of the Ottawa countries, not as a member but as an associate of the British Empire?

The Treaty and the Capitulations

(By His Excellency Dr Hafez Afifi Pasha, Egyptian Ambassador in London)

IN the midst of the present international difficulties the conclusion of the Anglo-Egyptian Treaty of Alliance and Friendship is certainly a happy event. This Treaty, which was signed in August, 1936, has, besides terminating the military occupation, recognised the sovereignty of Egypt in dealing with her own internal affairs as well as in her foreign policy. More than that, it has consecrated between the two signatories an alliance based on mutual friendship which is in no way beset by any fundamental differences. Internally, Egypt has resumed her liberty in protecting the foreign communities residing within her boundaries which was originally reserved by the Declaration of 1922 to Great Britain. Externally, Egypt has gained her admission to the League and has begun to play her rôle in the concert of independent nations.

The Treaty has also settled the points which were the cause of friction between Great Britain and Egypt. As to the Sudan, which proved an obstacle in the way of agreement in the past, a solution was arrived at which, though temporary, will help to remove the cause of misunderstanding in the future. Also, I am confident that the friendly atmosphere created by the Treaty will help the two countries to find a permanent solution to this and other important questions.

The Treaty, like most similar conventions, was a result of compromise. Time and experience alone will show the points which are in need of re-examination, but with understanding the other's viewpoint, each of the signatories will be able to meet the changes, when the necessity arises, with the same friendly spirit that dominated their last negotiations for the Treaty. The latter is undoubtedly a workable agreement, which has removed some grave causes of difference; and in fact, considering the short period which has elapsed since its conclusion, it has already helped to create a beneficial effect in the relations between the two countries. Now that the different causes of friction are removed and the independence of the country guaranteed, both Government and people are beginning to appreciate their co-operation in cultural, political and commercial spheres.

Another important act was the signature of the Montreux Convention in May last, which brought to an end the system of Capitulations. This medieval system of Capitulations, which were originally concessions made by the Sultan of Turkey in treaties concluded

far back in the sixteenth century, and which Egypt inherited through her association with Turkey, exempted foreigners from paying taxes without the consent of their Governments, and made it illegal for the Egyptian Government to enact any law applicable to foreigners, whether fiscal or administrative, without the same consent.

This is not the place for stating some or all of the difficulties which Egypt used to encounter as a result of these Capitulations. It is enough to say that they encroached on Egypt's enjoyment of her sovereignty and were a source of hindrance in the way of the country's development and progress.

The success of the future is undoubtedly dependent on the spirit in which the Treaty is going to be executed. We on our part are determined to carry out our responsibilities loyally and faithfully,

and we are happy to find that the same spirit of fair play and understanding dominates in Great Britain.

Egypt is conscious of the heavy responsibilities which she is facing. There is a vast programme of varied social reforms to be carried out, consisting of education, public hygiene, town planning and road building. As a result of the Treaty there is the question of reinforcing and reorganising the present small army. These schemes entail heavy expenditure and demand from our statesmen and public men great and herculean efforts, but I am confident that, with sincere endeavour, vision and unity, we shall succeed in accomplishing our aim.

We hope that the era of our young and beloved King will be a happy, progressive and prosperous chapter in the history of our ancient country.

His Majesty
King Farouk I.

The Government's Economic Programme

(By His Excellency Makram Ebeid Pasha, Minister of Finance)

THERE is in Egypt no Ministry of National Economy, but its functions are shared by the Ministries of Finance, Commerce and Industry and Agriculture. Since most schemes for national economic development, however, ultimately involve questions of finance, in the last resort it becomes the duty of the first of these three Ministries to examine conflicting schemes, to support the most promising and to co-ordinate them in inception and execution. In a comparatively young country—for Egypt is young in the matter of modern economic development—the difficulty is not so much to find schemes for improving the country's welfare as to select from the large number available. All Governments are agreed on the need for this development, but not all are agreed as to the best selection; and the emphasis laid on particular items gives a Government the particular colour it chooses to wear.

The purpose of the present article is not to outline a detailed programme, to be carried out within a definite time, such as five years. It is

designed rather to lay down on broad lines the economic objectives at which the present Ministry is aiming.

In the first place there is no intention of interfering with the present position of the currency, although agitations are from time to time started by interested parties to have Egyptian money devalued to their exclusive advantage. It is fully recognised that such a step could only react to the detriment of the country as a whole.

The general economic policy of the Government is determined by two main factors: first, the Government's obligation conscientiously to fulfil the terms of the Treaty, including the means to secure the defence of the country; and, secondly, its earnest desire to improve the standard of living throughout all classes of the community. Under the Treaty, Egypt has agreed to carry out certain constructive works, which will enable the concentration of the allied British troops to be effected near the Canal, but will increase their mobility, should the need for their services ever arise. The roads and railways forming

a part of this scheme will have useful economic as well as military advantages. The execution of these works will call for the expenditure of very considerable sums of money in the next few years. As much as possible of this money will be taken from the free and not otherwise earmarked balance of the reserve fund. The remainder, however, must be taken from current resources which will need to be reinforced by additional taxation, especially since the social aspect of the Government's programme has also to be brought into account. But it is the intention of the Government to restrict to the utmost the amount of this necessary evil of increased taxation, and to spread its incidence as equitably as possible over different classes. For this purpose a small committee has been set up to examine different systems of taxation and to report on those best adapted to the needs of Egypt.

The principal plank of the programme, however, is the urgent need for social reforms. It is calculated that the average income per head of popu-

THE KINGDOM OF EGYPT

Above—H.E. Mustapha El-Nahas Pasha, Prime Minister

Right—H.E. Makram Ebeid Pasha, Minister of Finance

lation hardly attains £12 per annum, against some £100 in Great Britain. There is no exaggeration, therefore, in the statement that a very large proportion of the Egyptian people lives in conditions of grinding poverty—material, intellectual and moral. It is the earnest desire of the Government to do what is humanly possible to relieve the misery of this stratum of the population, who are chiefly agriculturists. Hence, an agrarian policy to increase the return which they wring from the soil, by a labour that is not equalled amongst other agriculturists elsewhere, comes necessarily first in the Government's programme. It has hitherto been an anomaly of the country that while the producer of cotton could barely make a living out of it, its distributors were able to amass handsome fortunes. To help the producer to withstand the pressure to sell cheaply, which an urgent need for ready money has frequently caused, a policy of advances on cotton, wheat and other produce has been placed in the forefront of policy, and the credit institutions already in existence have been strengthened. This will do much to kill the usury that has hitherto battered on the produce of the fellahin's toil.

Still on the material side, measures are in hand to increase the number of general and special hospitals throughout the country. In view of the spread

of medical knowledge, the day is long past when it was necessary to urge patients to attend the hospitals. The crying need now is not for patients but for more hospital accommodation. Simultaneously, steps are being taken, on the prophylactic side, to stop the ravages of such diseases as malaria, ankylostoma and ophthalmia by removing their causes.

Measures have further been prepared for increasing the amount of land in the hands of the people by selling gradually to approved cultivators those portions of State land which are brought under cultivation thanks to the increased supply of water and its corollary, increased drainage.

The intellectual and moral needs of the people are being cared for by the extension of primary education, as rapidly as the supply of efficient teachers and buildings can be arranged. But the Government is not unaware of the danger of creating a class of educated unemployed, and it is directing its attention to the problem of finding openings for the skilled technicians who are being turned out by the intermediate and higher schools and colleges. Hitherto the chief outlet for such trained men has been the civil service, but it is recognised that this process has now reached its optimum extension, and that other careers must be found for these youths. Hence attempts are being pursued to create

new openings for them in transport, commerce and industry. In particular, new industries are being encouraged by the direct assistance of cheap capital and the indirect assistance of a protective tariff that is still so moderate that the consumer's purchasing power is left unimpaired.

Moreover, while there is grateful recognition of the advantage accruing to the country from the establishment of industries and commercial undertakings with the aid of foreign capital, it is considered that the time has now arrived when concessions of this nature can conveniently be taken over by Egyptian capital, as they fall in. Accordingly, notice has been given of the termination of some of these concessions. In the same order of ideas, companies whose concessions have still long terms to run, such as the Suez Canal, have been approached and asked to increase the opportunities for Egyptian youth in their service.

Space does not permit of enumeration of other ways in which the financial powers of the Government are being used to improve the social conditions of the people. It may be hoped, however, that this brief recital has been sufficient to show that the Government's policy reflects a sincere desire to combine enterprise with wise moderation, in a consistent endeavour to raise the standard of living of the Egyptian people.

Structure of the State

ON March 15, 1922, Great Britain ended the protectorate which had been proclaimed over Egypt in 1914. Thus, after an interval of over 2,000 years, Egypt became a sovereign independent State once again. In 1923 a Constitution, modelled on that of Belgium, was granted by King Fuad I, and under it the country is governed by a king, with a Parliament of two Houses, the Chamber of Deputies and the Senate. The monarchy is hereditary, and the King acts through a Council of Ministers, appointed and dismissed by him, but responsible to Parliament. A brief description of Egypt's administrative system may throw an interesting light on the position at the coming into force of the Anglo-Egyptian Treaty this year. The following review is specially concerned with the financial aspect of Egyptian administration.

The administration is divided into *Legislature*, exercised by the King with the two Houses of Parliament, *Executive*, by the King acting through his Ministers, and *Judiciary*. The last branch consists of (1) National Courts; (2) Mixed Tribunals; (3) National Courts of Personal Status; and (4) Consular Courts. The National Courts try civil and criminal cases in which alone Egyptians and non-capitulatory subjects (with some exceptions) are concerned. The Mixed Tribunals try all civil and commercial cases between (a) foreigners of different nationalities; (b) foreigners and Egyptians; and (c) foreigners of the same nationality, if the dispute concerns real estate. Consular Courts try other cases between their own nationals and criminal cases in which the accused is of their nationality. In consequence of the abolition of the Capitulations, criminal jurisdiction of Consular Courts is now transferred, with certain reserves, to the Mixed Tribunals, and the latter are to be abolished after twelve years. Certain Consular Courts, however, still retain jurisdiction in cases of personal status.

Ministers need not be members of either House of the Legislature, though in practice they generally have seats. The suffrage rests on a property qualification, and no person other than an Egyptian subject with a certain minimum of property is eligible for election. The Senate is half elective and half nominated by the Sovereign. Parliaments are quinquennial, but may be dissolved by the Sovereign. Members are paid £400 a year, and are expected to attend all sittings or give sufficient reason for their absence.

Each year's Budget contains a detailed estimate of both revenue and expenditure, and it must be laid before the Chamber three months before the financial year begins, on May 1st. Until

recently the Government had no right to impose new taxes upon foreigners without the consent of their Governments. Fiscal legislation was greatly impeded by this restriction, which was based on the Capitulations, though the difficulty had been lessened by the delegation of power to accept fiscal legislation to the Assembly of the Mixed Tribunals. The Government, however, was reluctant to compel its own nationals to pay taxes which it could not impose, as of right, on foreigners. To this may be partially attributed the inelasticity of Egypt's fiscal mechanism. The Minister of Finance first estimates his revenue and the Council of Ministers trims expenditure to conform with the available resources. Thus, Egyptian Ministers must cut their coat according to their cloth, while the British Chancellor of the Exchequer, more fortunate, is able first to accept a design for his coat and then to demand the cloth to make it.

Egypt's fiscal system rests on two main bases. The first is the system of direct taxation of agricultural land and of houses in the cities and principal towns. The second comprises a long list of indirect taxes on all imported and on a few exported commodities, with countervailing excise duties on certain domestic products. On present figures, some 16 per cent. of the revenue is derived from land tax, 3 per cent. from house tax, 26 per cent. from general Customs duties, 18 per cent. from tobacco duties and 5 per cent. from excise. Thus, some 68 per cent., in all, is raised by taxation. The balance accrues from various sources, such as shipping and judicial and registration fees (which produce 7 per cent. of the total); profit on the State Railways, Posts, Telegraphs and Telephones and State Domains (8 per cent.); and interest on investments, participation in the note issue profits of the National Bank of Egypt and in the earnings of various concessionary companies, together with miscellaneous receipts (11 per cent.). The balance is made up by Stamp duty, which is in reality a deduction from salaries, pensions and payments to contractors for work done, which was imposed in 1931 as an emergency measure and has never been rescinded, and by the contributions of permanent employees towards their pensions—an item whose treatment as current revenue is naturally a subject of recurrent criticism. Income tax does not exist, and would be difficult to control in a country where the majority of the commercial community keeps no books. An extensive scheme of business and professional taxes, stamp duties and succession duties is under discussion. It is frequently questioned, however, whether Egypt would not benefit

from a measure of redistribution of the incidence of taxation.

On being tabled, the Budget is at once referred to the Financial Committee of the Chamber, which considers it in minute detail, and seldom terminates its analysis before the beginning of the financial year. It is then scrutinised by the Chamber as a whole, and, finally, by the Senate. It may be, and often is, referred repeatedly back and forward, with consequent delay, which has resulted, on occasion, in failure to pass the Budget before September. Undoubtedly, this procedure would be improved by simplification.

The Executive is not dissimilar to that in many other countries, but the delegation of powers is still imperfectly practised—possibly as a legacy from the days of British control. This tendency affords matter for regret; since the creation of a strong, efficient and loyal civil service is impeded so long as officials are not able and willing to accept responsibility for their own acts and for those of their subordinates.

The country is divided into 14 provinces, each under a *mudir*, responsible to the Minister of the Interior, and 5 governorates, each under a governor, who is similarly responsible. A further sub-division is made into some 90 districts, which again are sub-divided into over 3,000 circumscriptions, or villages, the actual units of administration. Each village is ruled by an *omda*, or headman, who is always a prominent local landowner. The *omda* is assisted, for fiscal purposes, by a *sarraf*, or treasurer. Within this organisation a number of self-governing local bodies and municipalities exist, notably that of Alexandria. Local government, however, is still in its infancy in Egypt, though it is doing good work in training men in statesmanship.

Only an Egyptian subject can hold a permanent post under the Government. A considerable number of foreigners, in fact, hold office under contract, for five years at most, but none is now being appointed unless no Egyptian can be found who is sufficiently qualified. For the most part, foreign subjects, chiefly British, are found in the State Railways, the Ministry of Education, on the bench of the Mixed Tribunals, in the Survey Department and in the Police. Usually these officials serve directly under an Egyptian chief. The system appears to be working in a satisfactory way, and a new class of Egyptian civil servant is arising who will bear comparison with his colleagues of any other nationality whatsoever. This consideration is subject to what has been said, earlier, on the delegation of powers. But it is encouraging, nevertheless, for the future of Egyptian administration.

Public Finance

THE rôle of public finance in Egyptian administration has been indicated in the preceding article. We propose, in the article which follows, to discuss Egypt's financial position in greater detail. Its ministerial and Parliamentary setting may be briefly described. The financial year extends from May 1st to April 30th. The Budget is an estimate of revenue and expenditure in the ensuing year, and deficits and surpluses result in deductions from or additions to the reserve fund. Parliament, of its own initiative, may reduce the estimated expenditure; but only a minister may introduce a proposal to increase it. If unforeseen events necessitate supplementary estimates, and if Parliament is not in session, their authorisation falls within the competence of the Council, subject to sanction as soon as the House meets. In theory the accounts are closed on April 30th; in practice suspense accounts are kept open, into which pass payments for liabilities incurred, but not liquidated, during the year.

Figures for the last decade are given in Table I at the foot of the page.

These figures show clearly the effect of the depression on the revenue, which for four years was too optimistically forecast. On the other hand, there has been a regular failure to reach the estimated expenditure.

THE PRESENT BUDGET

The Budgets for 1936-37 and 1937-38 are shown in summarised form in Table II.

The estimates for 1937-38 balance at £36,992,000, an increase of £1,842,000 over the expenditure of last year. The chief items of increase are £1,000,000 (nearly) for War and Marine, due to works in part execution of the Treaty; £180,000 extra on Public Health; £547,000 on Public Works; and £388,000 on Education. The additional expense on national defence is more than compensated by the volun-

tary contributions of the national defence subscriptions. An extraordinary Budget is to be presented later, however, for the main expenditure arising under the Treaty, which will be met out of increased taxation and a draft on the reserve. The State Railways, Telegraphs and Telephones have budgets balancing at £7,021,000 against £6,920,000 last year. The Egyptian University and Royal Library have independent but small budgets, which are not included above.

THE PUBLIC DEBT

During the reign of the Khedive Ismail Pasha, the Public Debt of Egypt increased from £E4 millions to over £E100 millions. The annual charge of £E8 millions was quite beyond the means of the country at that time. After the ensuing default an international body, called the *Caisse de la Dette Publique*, was set up in 1876 to administer the revenues assigned for

Cash	6,988,733
Total, Liquid	25,009,280
Total, Reserve Fund	34,046,316

the service of the debt. Table III shows the figures at which the debt was finally classified and adjusted in 1885, and also its present amount.

The Egyptian Government, in addition, is legally responsible for the payment of the two Ottoman Loans, as shown in Table IV.

These outstanding amounts are largely offset by the holdings of the Treasury (£13,682,051), *Caisse de la Dette* (£1,846,160) and Postal Savings Banks (£3,572,061)—a total of £19,100,272.

The Treasury is further liable for certain annuities (Table V), and there are liabilities outstanding in respect of the two local loans of 1933 (the 4½ per cent. loan of £1,629,700 redeemable by 1943 and the 4 per cent. loan of £216,000 redeemable in 1938), but these are offset by the Government's share in the mortgage repayments by landowners for whose benefit the debts were incurred.

For the past fifty years the Government's policy has been to finance public works out of revenue and not by loans. The finance of the Aswan Dam was only an apparent exception, for it was paid for on the instalment

plan out of the increased revenue created by the extra supply of water. Against its liabilities, the State holds remunerative assets, including the Railways (valued at over £E35 millions), the Telegraphs and Telephones (valued at £E3½ millions)—both figures being subject to depreciation—and its reversionary interest in the Suez Canal, which will become the absolute property of the State in November, 1968.

THE RESERVE FUND

Besides its earning assets, Egypt has a reserve fund of £E34 millions. This originated in the earlier period of the *Caisse*, in provision for a possible rainy day; but later, as Egypt's finances became stabilised, it became a form of provision for ultimate capital expenditure, especially on the gigantic irrigation programme of 1904. Much of that programme, however—e.g. the two raisings of the Aswan Dam and the construction of the Gebel Awlia Dam—has been financed from revenue, and the reserve has lately tended to be a means of providing cash for operations which in London would be appropri-

ately financed by special loans. Finally, some of the cost of the works made necessary by the Anglo-Egyptian Treaty is to be met from the Reserve Fund, whose position at April 30, 1937, is shown in Table VI.

The liquid investments of the fund include Egyptian Public Debt (£E9,869,625); British War Loan (£E5,846,457); Belgian Treasury Bonds (£E585,099); and various securities (£E1,739,366). Their market value exceeds the total by £E4½ millions.

Clearly, Egyptian public finance is on a sound footing, a heritage from the bygone days of British control. The Budget is normally balanced, and there exists a large and sufficiently liquid reserve to meet unexpected demands. The country passed through the War without any augmentation of its public debt and, more recently, successfully weathered the economic blizzard of 1929-32. The public debt and its annual charge do not exceed, *per capita*, £E6.5 and P.T. 32, respectively. For Egypt, if for any country, immediate financial prospects seem bright—although the country has been caught, *nolens volens*, in heavy expenditure on armaments.

Giza 7

THE new variety of Egyptian cotton, "Giza 7," epitomises in a striking way the whole of the work of scientific cotton breeding done by the Botanical Section of the Egyptian Ministry of Agriculture. Most countries now carry on plant-breeding research, for the discovery of improved varieties of their particular crops. These efforts are organised in various ways, and have resulted in varying degrees of success.

In Egypt, the Botanical Section of the Ministry of Agriculture, soon after the war, laid its plans for research work on a large scale, and its work under a varying personnel, which includes several English experts, has now reached a high pitch of efficiency.

The story of its main achievements starts about 1920, when the Egyptian cotton crop was divided into Ashmouni, grown in Upper Egypt, and Sakel,

grown in the Delta; with a few unimportant other varieties. At that time improvement was mostly directed towards increasing the purity of these varieties by bulk selection and the elimination of off-types. Single plant selection soon showed that individual families of single-plant origin could be isolated, and that they showed better qualities than those of the bulk type. As a result of close comparison of these

families, several consecutive replacements of the original bulk seed stocks were made. It appears now that the present Sakel type (Sakha 7) and the present Ashmouni type (Giza 19) probably represent the best possible combination of yield and quality of these particular varieties. The names are taken from the localities of two of the nurseries: Sakha, in the Delta, and Giza, near Cairo.

The production of new varieties, however, was a separate and more difficult problem. Sakel, in particular, has numerous defects as a type. It has a relatively low yield, and when ginned it gives a low proportion of lint to raw seed cotton. Further, it offers no resistance to *Fusarium* wilt, the principal fungus disease which attacks cotton in Egypt. Several new cotton varieties produced since the war, such as Pilon, Casuli, Nahda, Fuadi, and Maarad, have claimed to be superior to Sakel in one or other of these respects. None of these varieties, however, has been grown on an area comparable with the 160,000 acres on which Sakel is still grown to-day. It was left to Giza 7 to capture the field.

About the year 1921 the plant from which the present Giza 7 has descended was first picked out. The plant was selected from a field of Ashmouni in Upper Egypt for its superior quality, and compared with large numbers of other choices. Not until 1925 was it realised that this particular family had unusually good qualities. A small bulk of it, about one-quarter of an acre, was first grown on the Botanical Section's farm at Giza in 1926.

Its further progress is a record of the successive stages through which a new variety of cotton must needs pass. The first stage is the further testing on a larger scale by the Botanical Section, in comparison with existing varieties. This occupied the years 1927, 1928 and 1929, during which increasing quantities of seed were raised. The breeders were now satisfied that the new variety justified propagation on a larger scale, and their next step was to endeavour to spread the knowledge of its possibilities among growers, "the market" and the spinners. Here, inevitably, a difficulty arose. The large-scale growth of any new variety of cotton must necessarily be at the expense of one or more of the existing varieties. The conservatism of growers must be overcome; and in the case of spinners, the more serious difficulty arises that part of the existing demand may be met by a type of yarn for which the new variety of cotton may not be entirely suitable. But the large variety of uses for Egyptian cotton ensures at least some outlet for any meritorious new type. Giza 7 became increasingly popular in 1930, 1931, and by 1932 it was well established. Its acreage has now increased to 500,000, and it has won the honour of a futures quotation in both Alexandria and Liverpool. In the latter market, indeed, Giza 7 is now the basis of the only long staple Egyptian contract.

Although Giza 7 has weakened greatly the competitive position of most of the "minor" varieties grown in Egypt (some of which, like Pilon and Nahda, are now extinct), the bulk of it is grown in replacement of Sakel. Admittedly, Giza 7 is not equal to Sakel in quality. It comes sufficiently close, however, to be a reasonably good substitute for many purposes, and a high-grade Giza 7 can always be used instead of, or in a mixing with, a low-grade Sakel. The chief attraction of Giza 7 to the Sakel spinner is its relative cheapness. Its general quality lies between Ashmouni and Sakel, and as no other medium staple cotton had been grown in recent years in Egypt on a very large scale, its uses at the outset were largely unknown. Nevertheless, the fact that trade demand has fully kept pace with the increased growth of Giza 7 suggests that it is meeting a real need.

The strength of the competitive position of Giza 7, from the grower's point of view, is that it gives a yield per acre which is from 35 to 40 per cent. higher than Sakel, but sells at a price which is only about 10 per cent. lower. The relative acreages grown in the last three seasons have been as follows:—

	1935	1936	1937
Sakel	297,127	162,072	161,330
Giza 7	269,795	407,022	519,719

In 1935, the acreage under Giza 7 was less than that under Sakel. In 1937, it was more than three times as great. Is Sakel destined to be completely replaced by Giza 7? This consummation might be retarded by a considerable relative rise in the price of Sakel, as a

result of the diminishing supply, but at the moment there are no signs of such a development. A more likely factor would be the emergence of other new varieties. In fact, it is improbable that Giza 7 will permanently retain its position as the principal long staple Egyptian cotton on the futures exchanges of Alexandria and Liverpool.

The story of Giza 7 may, therefore, aptly conclude with a glimpse into the future. At the time of its introduction it was the highest yielding Egyptian variety with a staple better than Ashmouni, but that condition no longer holds. A new selection, Giza 12, is somewhat lower in quality than Giza 7, but gives a higher yield. It is now, in fact, the highest yielding variety grown commercially, and its acreage has increased from 5,835 in 1936 to 15,939 in 1937. Thus, Giza 12 has not yet seriously challenged Giza 7, nor disturbed the futures market; in the future it may do both. Meanwhile, a new selection, Giza 30, surpasses even Giza 12 in yield, but is not yet grown commercially. Both these varieties will eventually compete with Giza 7 on the same basis as Giza 7 competed with Sakel; for they gain more in relative yield than they lose in quality. Further, several new long-staple cottons, which have a better yield than Sakel, are coming on to the market, and in general the improvement of Egyptian cotton by the breeding of new varieties is proving strikingly successful. Each development represents the growth of an increasing quantity per acre of cotton of a given spinning value. From the consumer's point of view, each represents a continually reduced real cost of production.

Sacking
Cotton

Egypt's Industries

ALTHOUGH Egypt is predominantly an agricultural country, she has largely developed her industry in recent years, to provide an outlet for a steadily increasing population and to establish a better balanced national economy. Generally speaking, Egyptian industries are based on the agricultural and mineral products of the country, and they include conditioning and processing for export and manufacture for the home market. There is very little export of finished articles. Industrial development has been encouraged by a carefully considered import tariff and by State loans, on adequate security but at low rates of interest. Much has been done, also, through the initiative of the Banque Misr, which was founded in 1920.

By far the most important primary product in Egypt is the cotton crop, which accounts for about 85 per cent. of the total export trade, and is the raw material of the largest home industries. In 1936-37, the area under cotton was 1,720,000 acres, and the yield was 1,180,000 tons of unginned cotton. The whole crop is ginned in 130 factories, but pressing for export is concentrated in four large presses in Alexandria, which, with its important spot and futures markets, is the centre of the cotton trade. The crop of 1936-37 gave 410,000 tons of lint, equivalent to about one and a quarter million bales, and 730,000 tons of cotton seed.

About 55,000 bales—less than 5 per cent. of the crop—are spun in Egypt, all the rest being exported. The import of raw cotton is prohibited. There is a large spinning and weaving mill at Mahalla el Kobra and another at Alexandria. Much expansion has occurred recently, especially in bleaching, dyeing and printing. The total output of yarn is now about 36 million lbs. a year, and all of it, except one and a quarter million lbs., is consumed internally. As imports of yarn, in turn, are no more than one and a quarter million lbs., Egypt's spinning and weaving industries are almost complementary. The total output of cotton cloth is now about 83 million yards a year, about half of which is woven in the mills at Mahalla el Kobra and Alexandria, and about half on handlooms all over the country. Home production, however, still provides only 30 per cent. of the total annual consumption of 275 million yards. The greater part of the yarn spun is from low to medium counts, but the tendency of an industry which is perforce confined to Egyptian cotton should naturally be to spin finer.

About half of Egypt's production of cotton seed is exported. Of the remainder, 240,000 tons are now pressed in the country, which has five large

and ten smaller pressing factories. The total output is about 38,000 tons of oil and 200,000 tons of cake. The greater part of the oil is consumed locally, either as food or for soap-making, with the addition of some 20,000 tons of other oils, mainly coconut, olive and hydrogenated, which are imported. Four large and many smaller soap factories produce altogether about 45,000 tons of soap a year, and supply approximately 90 per cent. of the total consumption.

The wool industry is in an early stage of development. An annual production of about 500,000 lbs. of yarn (supplemented by about 750,000 lbs. of imported yarn) is used for hand-made carpets and rugs, both knotted and woven, and also in the flourishing tarbush factory at Cairo.

Egypt is now self-supporting in sugar. The area under cane is from 45,000 to 50,000 acres, mainly in Upper Egypt; the cane is pressed in five factories in the sugar-growing areas, and refining is concentrated in one large refinery near Cairo, which handles more than 200,000 tons a year. In the season 1936-37 some 1,425,000 tons of cane were pressed, and produced 137,000 tons of refined sugar for home consumption. In addition, about 25,000 tons of raw sugar were imported and refined for re-export. The production of molasses is estimated at 70,000 tons a year, of which 20,000 tons are used for the manufacture of alcohol, the rest being either exported or used as fuel in the sugar factories. An alcohol factory outside Cairo, near the sugar refinery, produces annually 1,500,000 litres of pure alcohol and 3,500,000 litres of denatured alcohol from molasses. Egypt has two large breweries, one at Cairo and one at Alexandria, and two smaller breweries, which produce altogether 60,000 hectolitres of beer—some 60 per cent. of the total consumption—from malt partly local and partly imported.

Egypt is now also practically self-supporting in food grains, and the milling industry is developing on modern lines. In 1936 the area under wheat was 1,400,000 acres, and the crop was estimated to be 1,244,000 tons, all of which was ground and consumed in the country. There are two large mills at Cairo and two at Alexandria, in which modern machinery for cylinder grinding is installed. But a great part of the crop is still ground in small stone mills scattered all over the country. About 3,000 tons of high-grade flour are imported, mainly from Canada.

About two million animals are slaughtered annually in the abattoirs of Cairo, Alexandria and other large towns, and tanneries are frequently situated near the abattoirs. About 2,000

tons of raw hides and skins are exported. The rest is tanned in Egypt, and is nearly sufficient to meet total home demand. Although methods of tanning in the larger tanneries have much improved, large quantities of better quality leather continue to be imported. Leather goods manufacture, carried on mainly in small factories or as a cottage industry, produces boots, shoes and fancy articles.

So much for Egypt's industries based mainly on the products of her domestic agriculture. She has also a mining industry of some importance, situated mainly along the Red Sea littoral. The oil fields at Hurgada are operated by the Anglo-Egyptian Oil Company, which has also a refinery at Suez. The output is about 200,000 tons of crude petroleum a year. In addition, some 130,000 tons of crude oil were imported last year for refining, mainly from Iran. The refinery supplies the bulk of Egypt's requirements of benzine and black products, and about 50,000 tons of asphalt are exported.

Egypt's phosphate mines are at Quseir and Safage. Practically the whole of the output, which amounted to more than 500,000 tons in 1936, is exported, but a factory has recently been started at Kafr el Zayat, in the Delta, for the production of sulphuric acid, from imported pyrites, and superphosphates. Large quantities of superphosphates are used as fertilisers in the Delta.

Manganese ore is mined, for export, at Abu Zenima, in the Sinai peninsula. The percentage of manganese, however, is low, and exports vary widely, with a maximum of about 200,000 tons. Gold is mined on a small scale by the Mines Department of the Government at El Sokkari.

There are large works for the production of common salt from brine on Lake Maryut, near Alexandria, and at Port Said. The total production in 1936 was about 350,000 tons, of which 120,000 tons were consumed in the country.

Natural carbonate of soda is found in the Wadi el Natrun depression, between Cairo and Alexandria, and at Hosh Issa, near Damamhur, and is recovered for the production of caustic soda, which is used mainly in the manufacture of soap. Production, however, is not sufficient for local requirements; and in 1936 some 2,600 tons were imported.

In addition, there are two large industries which depend almost entirely on imported raw materials. The growing of tobacco has long been prohibited in Egypt, and the renowned Egyptian cigarettes have always been manufactured from imported Balkan tobacco. Large quantities of Japanese leaf also

are now imported for the manufacture of cheaper qualities. Total imports in 1936 were 12 million lbs., but exports of cigarettes in that year were only 600,000 lbs., the remainder being consumed in the country. There are twelve large modern factories in Cairo and Alexandria and a number of smaller factories.

The engineering industry is progressing, but it is still dependent on imports and has not yet gone far beyond assembling, fitting and repairs. The railway and other Government workshops and those of the Pharaonic Mail Line at Alexandria and Suez are the most important establishments of the kind in the country.

No recital of Egyptian occupations would be complete without mention of the important fishing industry. The Nile itself is rich in fish fauna of the African type. There are also the four Delta lakes, which are in communication both with the Nile system and the Mediterranean; a lagoon north of Sinai; an overflow basin in the Faiyum depression (the remains of Lake Moeris); and, last but not least, a coast of more than 1,000 miles bordering both the Red Sea and the Mediterranean. The seas along these coasts bring to Egypt an Indo-Pacific as well as a modified Atlantic fauna. The annual catch is about 40,000 tons of

The Desert Patrol against Drug Smugglers

fish. It is valued at £1,000,000, and includes between 5,000 and 10,000 tons of sardines. The whole catch is consumed in the country, and there is as yet no canning industry. Incidentally, sponges of high quality, valued at about £50,000, are taken annually from the Mediterranean between Alexandria and the Western Frontier at Solloum.

The Banking System

RIGHTLY to understand both the position and the special problems of Egypt's banking system, readers should bear in mind two of its dominant features. First, a large proportion of the national banking business consists in financing the seasonal export of cotton and the more evenly spread import of manufactured goods. Secondly—and largely as a consequence—all the sixteen commercial banks in Egypt, with one notable exception, the Bank Misr, are either branches of foreign banks, or companies established, under Egyptian legislation, largely with foreign capital. There are also certain mortgage institutions, whose function is to grant long-term credit.

The table on page 17 gives an indication of commercial banking progress in recent years. It includes, however, only those banks which publish balance-sheets in Egypt. The local branches of powerful English and French banks do a large and important business, but do not publish separate figures.

Unfortunately, it is impossible to draw exact inferences from the movement shown of total deposits in 1935 and 1936, since the figures reflect cer-

tain changes due to the liquidation of two mortgage institutions, the Agricultural Bank and the Mortgage Company of Egypt. Broadly, however, the figures reveal certain features common to the banking experience of most countries in the last few years—rising deposits, increased liquidity, larger security holdings and a decline and subsequent recovery in advances.

There are now only three important mortgage banks in Egypt: the Crédit Foncier, the Crédit Hypothécaire, and the Land Bank. The first, which is the oldest and the most important, was founded in 1880. Its rural mortgage loans, in 1936, were £12 millions. The Crédit Hypothécaire was originally formed as a department of the Crédit Agricole, but it later became an independent unit. No figures have as yet been published of its operations. It is estimated that the present total of rural mortgages (including the Land Bank's figures of £4 millions) does not exceed £20 millions, which is only half the pre-war figure.

A single institution, the Crédit Agricole, comes outside the twofold classification already mentioned. This was established by the Government seven

years ago in order to assist the cultivator by granting short- and medium-term loans for purchasing seed and the like. It has grown rapidly and has become the instrument by which the Government is implementing its policy of indirectly subsidising wheat growers, and giving limited advances to cotton producers.

Egypt's exchange problem can be simply described. Her imports come in fairly regularly throughout the year, but payments to the growers of her cotton crop fall to be made chiefly in the three months from September to December. Her currency requirements thus postulate an elastic and certain source of liquid funds, and a smooth working mechanism of currency or credit. In this connection, two considerations arise. The first—the means of expanding the note issue—is a currency problem. The second—the avenue by which funds enter the country—is an exchange problem.

Originally, a 50 per cent. gold cover was legally required for the note issue, the remaining 50 per cent. consisting of approved securities. Since 1916, however, British Treasury bills and bonds have been accepted in lieu of gold, by

Modern Cairo,
from the Air

the authority of the Government. In order to expand the note issue, therefore, it is necessary for the National Bank of Egypt merely to deposit the required amount of Treasury bills in London on behalf of the Issue Department in Cairo, and the latter can then issue the notes. The reverse operation takes place when it is desired to contract the issue.

The exchange problem is handled in a manner which may be briefly described. If a bank operating in Egypt wishes to increase its funds there, it has only to deposit sterling funds with the National Bank of Egypt in London. By virtue of a long-standing agreement, funds are thereupon placed at its disposal by cable, in Cairo or in Alexandria. Note issue movements are thus exact reflections of transfers of bank funds only in so far as banks utilise those funds by withdrawing notes, or vice versa. This second question, however, requires further consideration. The Egyptian pound is on a sterling exchange standard; for, by virtue of

the agreement already mentioned, the National Bank of Egypt both buys and sells sterling—in amounts of £100,000 and upwards—at 97½ piastres per £. As a result of this fixing of the rate, the relationship of Egyptian currency with other foreign currencies is exclusively determined by the world value of sterling. It should not be assumed, however, that the National Bank exercises a stringent control over the banking system: for the nature of the latter makes this impossible. It would be interesting, however, to speculate on the difficulties which would confront an independently operating central bank. The functions of the National Bank of Egypt may now be described. The Bank is the Government banker, and the sole source of paper money. Although its capital was originally subscribed in sterling, it is an Egyptian corporation in the private ownership of its shareholders. In addition, it controls the sterling exchange. A fully equipped central bank, in addition to these powers, would necessarily exercise a

direct control over the cash basis of credit. This is impossible, however, under present conditions in Egypt, where the foreign banks, which have ample supplies of funds to draw upon abroad, need keep no reserve in view of the fixity of sterling exchange. The imposition of a minimum cash-deposit ratio, or the requirement of the deposit of a fixed proportion of sight liabilities with the central bank would entail a revolutionary change in banking activity.

There is, again, no local bill or money market through which pressure from a central institution might be applied. Apart from the fact that banks can obtain funds abroad and therefore do not require rediscount facilities, the volume of commercial bills is small, and in most cases individual bills are for paltry amounts. Comparatively few bills, further, would be of a credit status rendering them generally acceptable for rediscount. But the development of a local bill market is not necessarily a *sine qua non* of the successful functioning of a central bank.

If the authorities were, in the future, to consider the advisability of establishing a central bank, they would have three main questions to answer. Is there real scope for such an institution? To what lengths would the authorities be prepared to go in supporting it by new banking legislation? And what form ought the central bank to take? Two other considerations seem relevant to the problem. In the altered circumstances in which such a bank would operate, the change from passivity to active intervention would necessitate careful definition of policy at the outset. And banking policy would need to be rendered independent of all extraneous and ephemeral political influences.

Foreign Trade

A SMALL country which has no extensive mineral resources or large-scale manufacturing industries does not as a rule carry on an extensive or varied foreign trade. But Egypt is an exception to the rule. Both its exports and its imports are now in the neighbourhood of £E30 millions, which, with a population of about little less than 16 millions, gives imports and exports per head of nearly £E2, a high figure for a country in Egypt's position. Her trade, moreover, is unusual in its distribution and it raises problems which have for long called forth energetic policies from the Government.

The main characteristics of Egyptian trade may be seen by a glance at the first table opposite, in which the totals of trade for the largest categories in the elaborate Egyptian tariff are given for the last four years. It will be seen that "textile materials and textiles" account for fully three-quarters of the total value of exports, and at the same time for a quarter of total imports. The explanation is obvious: Egypt exports raw cotton and imports manufactured cotton goods. For example, of the total export in this category for the first

nine months of this year (the latest figures available) which amounts to £E20.8 millions, over £E20.2 millions is for raw cotton. On the other hand the articles imported under this general head cover the whole range of textile manufactures, in all their variety, though pure cotton piece goods account for nearly half.

Thus, Egyptian exports may be summed up in two words: raw cotton. Despite all the efforts of the Government, the country's economy is still predominantly dependent upon the world's demand for that commodity. The second largest export from Egypt is cotton seed, followed closely by rice, with onions a good fourth. These also are commodities whose price fluctuates sharply from time to time.

Imports are, however, much better distributed. Besides clothing, they include nearly all the country's requirements of fuel, machinery, metals, chemicals and other products of heavy industry, as well as such consumption goods as tea, coffee, tobacco, butter and oils. They cover, in fact, a fairly typical range for a largely unindustrialised agricultural country.

Egypt's dependence upon a single

export is a matter with which her statesmen have been, and are, rightly concerned. But her balance of trade has not, as a rule, been the cause of any great anxiety. The country produces all the chief necessities of food for itself. When the price of cotton slumps, Egyptians may find it advisable, for the time, to import less luxuries, and to make their clothes last longer; and there may be a slowing down of capital investment. But the balance of the national economy is not gravely overset. And normally the country has a favourable visible trade balance. The British Commercial Counsellor in Cairo, in the latest of his admirable reports, calculates that in the fifty-seven years from 1880 the balance has been adverse only eleven times. The net balance of exports in that period has been £E175,400,000. Gold exports have been excluded from this figure. The balance has been steadily favourable in the last four years, with an average excess of exports over imports of £E1,700,000; though in the years 1920-32 it was unfavourable, the excess of imports in 1930 being as much as £E14,900,000.

Against Egypt's normally favourable balance of visible trade must be

set her "invisible" payments abroad. For example, nearly all Egypt's insurance is done abroad; only four of the 140 companies working in Egypt are of national origin, and even they re-insure partly in London. The Government also contributes to investments in the Sudan. There are, however, important items on the other side of the account. These include (1) the expenditure of, and on, the British Forces in Egypt, totalling about £E1,750,000 per annum; (2) expenditure by tourists in Egypt—which is largely offset, however, by money spent by Egyptians on pilgrimage and by those who winter abroad—and expenditure on educational missions; (3) shipping expenditure in Egypt, including the portion of the Suez Canal dues which remains in the country, estimated in all at about £E1 million. This item is not fully counterbalanced by the expenditure of Egyptian ships abroad. On balance, there is no doubt that Egypt has absorbed great quantities of foreign capital. Estimates range from £E400 millions to £E500 millions, of which the greater part is certainly French. In the last fifteen years, in particular, there has been a considerable movement of capital back to Egypt—as is suggested, indeed, by the growth of the Reserve Fund (see page 12) by £E34 millions during that period, and there has been a considerable export of bullion since 1930. Egypt altogether is a country which has always provided a market for investors in other lands, and seems likely to continue to fill that rôle for a long time to come.

How this situation will be affected, if and when the Government gives effect to its desire to establish a strong domestic cotton-manufacturing industry, it is difficult to say. Such a policy would be calculated to result in a reduction of imports of cotton manufactures and perhaps in some growth of agricultural exports other than cotton. Eventually, it might even make Egypt a seller of textile goods in the Near East and in Africa.

What would be the repercussions of such a policy on British exporters to Egypt? Great Britain has an immense interest in Egyptian imports of cotton goods, on the one hand, and in her purchases of machinery on the other. The former, in recent years, has been a disturbed trade. Until late in 1935 Egypt was overwhelmed by a flood of cheap Japanese piece-goods of low quality. These accounted for 142 million square metres of piece-goods, out of a total for the year of 193 millions, from Japan. A 40 per cent. depreciated currency surtax was thereupon imposed, and the position became more normal. Almost simultaneously the imposition of sanctions came as a great help to British trade, though the exclusion of Japanese imports was, of course, also an encouragement to the growing Egyptian textile industry.

On the whole, a substantial future rise in British textile exports to Egypt seems improbable. On a superficial view, again, the scope for expansion

in our exports of machinery, motor cars, hardware and similar products seems also limited. But our share in Egyptian imports, as our second table shows, is still twice that of any other country's, and there is no reason to believe that Egypt's new-won independence will do anything to diminish it. The extent of further expansion in Egypt's own cotton manufacturing industry, however, is a matter which is open to discussion. Egyptian cotton itself is too high in quality and in price to be really serviceable for the coarse tissues which are chiefly in demand in Egypt. The industry, indeed, chiefly uses the lowest qualities of Egyptian cotton, with a certain amount of imported yarn. Some informed observers believe that a combination of imported Indian cotton for woof and Egyptian cotton for warp would produce a cloth which, for colour and softness, would be highly suited to its market, and which might encourage a considerable increase of output. Official policy has, however, hitherto been averse to development on these lines.

It is improbable, again, that British exports of complex and highly finished machinery will be supplanted, in the near future, by the products of Egyptian engineering. The latter, however, may be an increasingly formidable competitor in such lines as ploughs, implements and, possibly, motor bodies.

The second half of Table II shows beyond the need for comment our position as an export market for Egypt: we take five or six times as much as any other State and rather over a third of the total. Almost the whole of the resulting sum is spent on raw cotton. Last year we spent £8,970,000 on it, while the second largest buyer, France, only took £3,142,000, with Japan and Germany following closely. We also buy nearly all Egypt's cottonseed and some of her onions—though the vagaries of compensation agreements made Germany the largest purchaser of that vegetable.

Taken all in all, Egypt's connection with Great Britain, both as consumer and as purchaser, is vital—and beneficial to both countries. Our trade policy must needs have far-reaching consequences for Egyptian prosperity. Egypt, as an independent State, will naturally desire to pursue her economic aims along national lines. Great Britain, obviously, will be anxious to safeguard her market. But the best bargain will be that which most honours the maxim that "Trade is not war, but a process of exchange."

The Foreign Investor

EGYPT'S public debt, well secured by assigned revenues and competent budgetary policy, has been served with exemplary regularity. Egyptian bonds thus carry solid investment status, and rank superior to those of most foreign Governments. The London market has always been impressed by the willingness of the Egyptian Government to follow so closely in the British financial tradition. Egypt's recent financial history may lack excitement but it abounds in virtue. The absence of a wide range of industrial investments throws the greater emphasis upon the Government bonds. For general purposes, these may be classified under three headings.

First comes the consolidated debt, which springs originally from the unified debt. Two important inquiries played their part in determining Britain's policy as to the Egyptian debt. The Cave inquiry was responsible for the British Government's decision to come into the *Caisse* (see below). The process of putting the debt on a solid footing, however, may be associated with the Goschen inquiry of 1876. Loans contracted before that year were converted into 6 per cent. unified debt, and a new issue of privileged debt was also created, carrying interest at 5 per cent. That, however, was only the first stage, and four years later it became necessary to increase the privileged debt and to reduce the interest on the unified debt to 4 per cent.

In compensation, certain revenues were assigned to cover the service. And, finally, after five difficult years, an issue of £9 millions stock, guaranteed by six European powers, was made on Egypt's behalf.

The position of this first category of Egyptian bonds is given in the following table:—

Loan†	Cost of Service, 1935-36	Redemption†	Price	Yield
3% Guaranteed	£1,307,125*	P or D	100†	2.99
4% Unified	2,154,708	P or D	101	3.96
3½% Preference	1,045,384	P or D	94	3.72
Total	3,507,217			

* £115,000 sterling.

† P or D By Purchase or by Drawings at par.

‡ For amounts, see table in article on Egypt's Public Finance, on page 11.

These loans are served by land taxes collected by the *Caisse de la Dette Publique*. The *Caisse*, according to its last report, held a reserve fund of £1,846,160 sterling, equivalent to approximately £1,800,000 (in unified and preference bonds), and, in addition, cash funds of £1,150,000. Its management of the debt has been sound and conservative. The annual cost of the *Caisse* is approximately £40,000.

In no way whatever is it to Egypt's discredit that her consolidated debt service, nominally secured by gold clauses, has been paid since 1931 in sterling. The lower Egyptian courts ordered payment in gold, but in February last

year the Mixed Court of Appeal decided that it was not competent to hear the case and quashed the lower courts' judgment. If Egypt errs in this matter she errs in good company with Great Britain and the United States. As our table indicates, Egyptian credit is slightly better than a 4 per cent. basis.

The second category consists of the Tribute Loans—the legacy of Egypt's vassalage under the Ottoman Empire. The two loans, issued in the 'nineties, were originally secured from the tribute payable to the suzerain power. In 1924 the Egyptian Government, arguing that her release from Turkish domination had caused the tribute obligations to lapse, tested its case in the Mixed Tribunals, which found the Government was still liable for the annuities that provided cover for the loans. They have been regularly paid since that year.

Particulars of the Tribute Loans are here given:—

Loan†	Cost of Service, 1935-36	Redemption†	Price	Yield
1% of 1891	£1,273,608*	1951 D	102†	3.9
3½% of 1894	321,018*	1955 D	98†	3.5
Totals	594,626			

* Sterling annuities, £280,623 and £329,249, respectively.

† For amounts see table in article on Egyptian public finance, on page 11.

‡ D By Drawings.

These loans, carrying the advantage of

a substantial sinking fund, stand somewhat higher than the unified and preference debt.

The third section consists of miscellaneous obligations—certain annuities in respect of railways and works (which, after the termination of the heavy charge for reservoirs in 1933, now cost no more than £51,600), together with two issues of five- and ten-year Treasury bonds issued in 1933. The Government also assumed contingent liability in respect of the City of Alexandria 4 per cent. loan of 1902.

It will be evident, from this survey, that Egypt's public debt is well secured and well administered. There is no reason to fear that Egypt, under her new sovereignty, will relax the high standards.

We turn next to the ordinary share investment opportunities which Egypt affords. Details of selected shares will be found in the next table:—

Company and Share	Latest Div.	Present Price	Yield
Nat. Bk. Egypt (100 sh.)	15	389	3.95
Egypt. Maritime (100 sh.)	11	25	9.20
Egypt. Delta Land (100 sh.)	4.17	23.9	3.51
Alex. Water (50 sh.)	15.15	173	4.22 1/2
Anglo-Egypt. Oil (100 sh.)	12	37.8	6.66
Egypt. Salt & Soda (100 sh.)	11	45	5.00

The 410 shares of the National Bank of Egypt are the foremost banking security. In pre-depression times the divi-

dend was 18 per cent., but since 1931 a distribution of 15 per cent. has been regularly paid. The improvement in Egyptian economic conditions formed the keynote of the chairman's speech last March. It seems reasonable to expect a further improvement in this year's profit figures.

Utility shares of the stable dividend type are to be found among such undertakings as Egyptian Markets, Egyptian Delta Land and Alexandria Water. The first company's concession expires next year, and negotiations have been proceeding in the hope of obtaining an improved offer of extension from the Government. Alexandria Water shares carry the advantage that British income tax is not deducted from the dividends at source.

Anglo-Egyptian Oil, which is associated with the Royal Dutch-Shell group, is extending its refinery at Suez and is also seeking to extend its supplies of indigenous oil from new exploration areas. Egyptian Salt and Soda has enjoyed a progressive dividend record in recent years, but its special sales arrangements expired in 1936. Finally, for the investor who considers that Egypt has not exhausted her recovery possibilities, such a share as Egyptian Delta Light Railways 10 preference—which is at present dividendless and carries substantial arrears—may be considered.

A Centre of Travel

EGYPT has never lacked visitors. Throughout history, invaders, traders and travellers have sojourned in the valley of the Nile. Persians, Greeks, Romans, Arabs, Turks, Frenchmen and Britons have all, in turn, sought to control the land of the Pharaohs. Alexander, Cæsar, Augustus and Napoleon were all victims of its riches and charm. More than 4,000 years before Christ, spices, balm and myrrh came to the Euphrates from the Nile. Egypt, which was the granary of the ancient world, supplies fine cotton to the modern. It has always been the meeting place of East and West, of old and new; and to-day men still come to marvel at its mysteries.

Like Stonehenge, Egypt "will bear a discussion antiquarian, picturesque and philosophical"; and its tourist industry is as old as its story. In the days of the Roman Empire it was visited by those who sought its health-giving climate and the treasures of its antiquity. It ranked then with Sicily, Greece and Asia Minor as a tourist centre. Men and women came to consult its oracles and to visit the temples of Isis. Consumptives sought its hot springs and its sunny dry weather. There were great luxury hotels at Alexandria, the cultural centre of the Macedonian conqueror's world; and a regular shipping service via Puteoli from Rome. Then, as now, there were

things in Egypt which could not be savoured elsewhere: the racecourses, theatres, dancing and music of Alexandria; the monuments and ruins of Memphis and Thebes; the Pyramids which, in Hazlitt's words, "are too mighty for any single contemplation."

The lure of nature and knowledge has never entirely failed. Even the pre-eminence of Egypt as a routeway to the East was only slightly diminished for 300 years when ships went sailing round the Cape of Good Hope; and to-day the Suez Canal and the airways have restored its glories. Egypt's "mummified civilisation and fossilised marvels" still "stare living modernity out of face." Its temples, rock-passages and caves, sphinxes, sculptures and hieroglyphics still draw men from afar. Its cloudless skies and rainless lands, cooled by a persistent north wind; its date palms, mulberries and acacias; its vines, oranges and lemons; its pomegranates, tamarisks, sycamores and mimosa—all these combine health and pleasure in Egyptian travel. A brilliant social season for wealthy visitors has become a feature of European and Egyptian life.

Over half-a-million Egyptian pounds a year are spent by tourists in the season, between December and April, and tourism is worth in all nearly one million pounds a year. In the season 1936-37 the number of visitors was

over 50,000, and they spent more than £10 each. Nor do tourists alone come to Egypt; there are business men, officials, professional men, and Egyptian travellers returning from abroad. And thousands of pilgrims pass through Egypt to Mecca. In 1932 some 72,000 people disembarked in Egyptian ports, and nearly another 9,000 passed on to more distant places. In 1935 about 78,000 disembarked, excluding 10,400 in transit; and in 1936, while only 8,000 passed through, over 82,000 came to stay for long or short periods. Between April 1, 1936, and March 31, 1937, some 43,825 passport visas for Egypt were issued by consulates abroad. The number of passengers to Egypt on cruises and special trains in the year 1936-37 was 9,345; and the number of "quick trippers" was 15,538. Even more fleeting in their stay were the 843,078 passengers on ships who, between May 1, 1936, and April 30, 1937, were permitted by port authorities to land for a few hours in Egyptian ports. Between one-fifth and a quarter of Egypt's visitors are British.

The proceeds of this tourist industry rank third in Egyptian exports. They amounted to £600,000 in 1934 and £800,000 in 1935. And these were disappointing years, as years go. Economic depression, the uncertain political situation in the Mediterranean, exaggerated stories of student disturbances, and the competition of cheap hotels in the newly popular centres of winter sports in Europe combined to

reduce Egypt's tourists. Consequently, a determined effort was begun to raise the industry to the level merited by the traditions of Egyptian travel and the attractions of the country. The Tourist Development Association, drawing an annual subsidy of £7,500, already grouped tourist agencies, railway companies, shipping and air lines and hotels in the encouragement of tourism in Egypt. In 1936 a new State Tourist Bureau was set on foot and, on the advice of the recently established Ministry of Commerce and Industry, a sum of £50,000 was devoted to propaganda, though this sum was reduced in 1937 to £20,000 on grounds of economy. The campaign has already been very successful; publicity has been afforded in Europe and America by Press and radio; and on an average, over £10,000 is spent annually on propaganda. Most important of all—in view of the popular but mistaken impression that Egypt caters chiefly for the rich traveller—tourists have been attracted by increased facilities in the way of combined rail and hotel charges,

which in some cases have been reduced by as much as 40 per cent. Visitors can make a short stay in Egypt and rejoin their ships at Port Said; and in the summer which has just ended 4,000 tourists availed themselves of this facility.

Egypt has also become, in recent times, a nodal point in the network of the world's airways. Only twelve years ago, Sir Alan Cobham blazed the trail from London to Capetown via Cairo. A year later, Imperial Airways inaugurated a service from Cairo to Basra; and in 1932 the company secured authority for the 20 years' operation of services to and from Egypt, from the United Kingdom to Egypt and on eastward to Palestine, Iraq and India and southward to the Cape. By the end of 1934 the 4,880 miles route to India and the 7,923 miles route to South Africa were hinged on Egyptian aerodromes; and the Royal Dutch air lines had inaugurated a service via Egypt to Batavia. Last year, at least 7,000 people travelled on Imperial Airways' planes from England to Egypt on their way to more distant places; and only

the slow delivery of new aircraft prevented the company from developing a considerable passenger traffic to Egypt itself. In 1938 there will be from eight to ten services weekly in each direction; and travel to Egypt will bulk largely in the increased Empire services. The Dutch route to the East, and the Italian route to Italy's African Empire are also being further developed.

These are modern trends. But the future of Egypt in this respect is its past. Thebes, Memphis, Abydos, Luxor, Heliopolis, the ancient cities of the Delta, the Coptic Monasteries and churches, the tombs of Kings and Mohammedan saints, Helwan, Assuan, and the Arab-founded Cairo—"the diamond stud in the handle of the fan of the Delta": these are the magnets for travellers. Egypt is a land of wonder and good health. If the Government of Egypt's new independence can turn this past to modern uses in modern ways, if they can cater cheaply for the crowds who seek new pleasures in this holiday-age, then tourism in Egypt will flourish and prosper.

TRADE SUPPLEMENT

New Series

SATURDAY, OCTOBER 30, 1937

No. 10

The Trend of Business

DESPITE the deterioration of the international economic situation, reflected in falling security and commodity prices and a lull in the expansion of world trade, the volume of business activity in this country remains at a record level. In general, business has shown a normal seasonal trend since last August. *The Economist* Index of Business Activity, adjusted for seasonal movements in trade, showed only a slight decline between August and September, and remains well above the level of a year ago. Of the 14 component series of *The Economist* Index, given on page 3, four registered a fall between August and September, an equal number showed a rise, but six remained unchanged. All the most important series, however, either remained unchanged or were slightly higher than in August.

The latest reports from industrial centres indicate that order books are still in a satisfactory state and that the volume of business on hand is sufficient to enable many branches of activity to maintain the current volume of output for many months to come. At the same time, there has been a significant decline in the volume of new business in certain industries, as a direct consequence of the lull in world economic progress. If this hesitancy persisted over the winter, it would bring about a decline in industrial production next year, though the volume of orders on hand is generally sufficient to carry industry over a temporary lull. Whether the present lull in new orders is temporary or whether it marks the beginning of a definite downturn in the trade cycle it is as yet too early to say.

The iron and steel and metal-using industries are still favourably placed, and deliveries of many products, especially machinery, remain below requirements at current prices. While new orders are declining in certain branches, such as civil construction, shipbuilding, and heavy electrical machinery, the volume of armament contracts is either well maintained or still increasing. Despite the decline in the value of new plans passed by 146 Local Authorities, unemployment in the building and public works construction industries is still less than it was a year ago. Moreover, the recent decline in constructional activity is entirely seasonal. But a rise in steel prices (which, until recently, was being widely canvassed to take place early next year) might well lead to a reduction in civil contracts. Meanwhile, the domestic supplies of iron and steel are expanding with the completion of extensions to capacity, and the stringency of iron and steel supplies has been alleviated by a considerable expansion of imports, due, in a large measure, to the decline in demand in other importing countries and in the United States. Incidentally, the volume of imports last month was substantially in excess of British exports. Any decline in British steel consumption next year, however, would find the industry with a capacity substantially greater than at

present, and would probably involve pressure for a curtailment of imports, in an attempt to throw the burden of the reduction in demand on to foreign manufacturers.

The cotton and wool textile trades have experienced a definite reduction in new business, which can be attributed to the fall in the prices of their raw materials. In the jute industry activity has been severely curtailed owing to increasing competition from India. Automobile manufacturers, on the other hand, report a satisfactory volume of business, both for the home and export markets. New business in consumption goods trades, catering mainly for the home market, remains active. In view of the steadily growing national income, this is scarcely surprising. The value of retail sales, for example, is still on the upgrade, the official figures for September showing an increase of 8.6 per cent.

over the corresponding month last year.

Developments abroad have been less satisfactory. The persistent fall in the prices of primary products and in the value of industrial securities reflects, among other factors, a more pessimistic view of the future than was current only a

few weeks ago.

The fear of a major recession in the United States has been largely responsible for these developments. Indeed, the activity of the capital equipment industries in that country has taken a sharp downward turn during the past few weeks, and new capital investments have almost ceased for the time being. The railways have stopped orders for new equipment because of the decline in their revenues, due to the sharp advance of wages and other costs earlier in the year. Similarly, the Utilities, finding themselves unable to raise new capital, have curtailed orders for new equipment. Building contracts awarded have fallen off steeply owing to rising costs. Industry, moreover, has put into cold storage plans for extensions and renewals, for the Undistributed Profits Tax has denuded many companies of working capital, and recourse to the new issue market is virtually impossible under present conditions.

Business activity in the majority of European countries, except France, has been well maintained, though no further progress is expected for the time being. In France the outlook is more hopeful, but prospects are dependent on political developments. The political outlook, however, should become clearer after the forthcoming party conferences.

The latest news from the Dominions and South America remains satisfactory, but the future of these countries is dependent, in a large measure, on the course of the prices of primary products. In the Far East business has been severely dislocated and curtailed by the Sino-Japanese conflict. Taken as a whole, the latest developments abroad are not entirely reassuring, and the future trend of the prices of primary products, which vitally affects a large number of countries, is largely conditioned by the course of events in the United States.

British Industrial Developments

The following reports on British industry cover, in most cases, the period to the middle of October. In the remainder they relate to the month of September.

COAL

The industry is now beginning to benefit from a seasonal expansion of demand. Activity was maintained on a high level in September, when the output of saleable coal amounted to 20,421,000 tons, compared with 18,231,000 tons in the previous month and 18,805,000 tons in September, 1936. Employment showed a further improvement and was fairly good for the time of year in most districts. There was a marked decrease in the number of workpeople recorded as temporarily stopped in Yorkshire. Unemployment is now substantially less than at this time last year. Meanwhile, the demand for house coal has been slow to expand in recent weeks and pithead stocks are, consequently, tending to become unwieldy. A spell of cold weather is needed by this section of the trade. The market in industrial grades of coal and coke remains firm and demand continues active. Sales overseas were satisfactorily maintained last month, when total exports were 3,657,000 tons, compared with 3,031,000 tons in the same month of last year. Export contracts are keeping the collieries busy, though a shortage of shipping tonnage has lately been a handicap at South Wales ports. New business is, however, distinctly limited, British prices being sometimes too high to attract foreign buyers. Inquiry from France has been adversely affected by the fall in the franc.

IRON AND STEEL

In response to the sustained demand of the heavy industries, the iron and steel manufacturers are working at capacity. The output of steel last month, at 1,163,000 tons, constituted a record, while pig-iron production, at 726,700 tons, was the highest monthly figure since September, 1920. The employment position, accordingly, showed a further slight improvement, though temporary stoppages, owing to shortages of material, were again reported from some districts. The pressure on the home market is reflected in the overseas trade figures. British exports showed a further decline in September, although remaining above the level of a year ago. Imports, on the other hand, continued their remarkable expansion and were substantially larger than exports last month. While demand for the products of the industry remains active, the supply position is now appreciably less stringent than of late. Growing imports, the expansion of home capacity, and the cancellation of certain substantial orders in consequence of the Far Eastern crisis have all contributed to this result. Meanwhile, new business is very quiet, partly owing to the difficulty of securing early delivery and partly in consequence of the possibility of an alteration of prices next year. While the rise in costs is held to justify a further increase in selling prices, the view is gaining ground that it would be better to stabilise them at the present level to prevent a decline in demand. Thus the steel-sheet makers at a meeting last week decided to maintain their present prices for the whole of next year.

GENERAL ENGINEERING

The general lull in the activity of the engineering industry during the summer has given way to a marked expansion during the past few weeks. Not only is the volume of production still expanding, but, in contrast to a number of other branches of industry, new business is still on the up-grade. Government contracts, in particular, are still increasing, and the industry does not expect a decline in armament work for many months to come. In any case, the volume of work on hand is of such dimensions that the industry is assured of a high level of activity during the first half of 1938. Moreover, the improvement is not confined to the domestic market, for exports of machinery are running at a substantially higher level than a year ago. Imports, too, remain substantial in volume. Although the agreement concerning working conditions reached at the end of July has not yet been ratified, industrial relations continue satisfactory. There has been some difficulty over the demands of the apprentices, but their cause, apparently, is being taken up by the Unions.

SHIPBUILDING

In contrast to general engineering, the latest reports from the shipbuilding industry are less encouraging. According to the shipbuilding returns issued by *Lloyd's Register*, the volume of new mercantile tonnage commenced declined from 367,700 gross tons in the second quarter to 218,600 gross tons in the third quarter of this year. This decline is due to the uncertain outlook for international trade, which has prompted owners to refrain from ordering new mercantile tonnage on a large scale, especially as the cost of new vessels has risen very considerably over the past year. This development was not confined to the industry in this country, for the volume of tonnage commenced abroad also showed a decline, from 596,600 gross tons in April-June to 429,700 gross tons in July-September. So far, however, the decline in new orders has scarcely been reflected in current activity, the tonnage under construction at the end of September being 1,185,000 gross, against 1,200,000 gross at the end of June.

ELECTRICAL EQUIPMENT

The electrical equipment industry also remains active, though home and export orders for heavy electric machinery have recently tended to decline.

AUTOMOBILES

The Motor Show at Earls Court is reported to have been a great success and the attendance showed an increase of over 4,000 compared with a year ago. This year's attendance constituted a record since 1928. Meanwhile, the industry remains busy and sales continue above the 1936 level. New registrations of private cars in August amounted to 16,294, compared with 14,210 in the same month of last year—a gain of no less than 14.7 per cent. New registrations of goods vehicles were, however, 6.5 per cent. smaller than last year—4,726 against 5,057. Total exports of motor vehicles and chassis in September were 7,828 units, against 7,065 a year earlier. It is stated that the volume of export orders booked at the Show was highly satisfactory and that the outlook is promising.

BUILDING

The recent decline in building activity is due to seasonal influences. Indeed, the percentage of insured workers unemployed last month was slightly less than a year ago in the case of building and showed a considerable reduction in public works contracting. In general, the construction industries remain very active and, apart from a normal seasonal increase in unemployment during the winter, no serious curtailment of activity is likely to take place in the near future. The *Economist* Index of Building Activity, while remaining unchanged between August and September, shows a substantial decline over the past year. It must be remembered, however, that this Index is based on plans passed by 146 Local Authorities which do not include direct Government contracts. Hence, the index is no longer representative of the changes in the activity of the construction industry as a whole.

CHEMICALS

During the past month business on the home chemical market was steady and fairly active, chief interest being shown in industrial chemicals. Demand for wood distillation products was well maintained and business in pharmaceutical and other fine chemicals was about average for the time of year. A fair amount of actual orders placed have been small. Overseas trade in September, the value of exports being £309,492 greater and of imports £44,786 greater than in September, 1936. The improvement in the export market was fairly general, ammonium sulphate, coal tar products and fertilisers being particularly good items.

POTTERY

In North Staffordshire last month employment showed an improvement in all sections of the industry and was fair generally. At Bristol and Derby the position remained good. At Worcester, good. Meanwhile, exports of general earthenware and of electrical ware were larger than in September, 1936, but sales of china and of tiles were rather smaller.

FOOTWEAR

The position of the industry showed little change last month. Employment was fairly good on the whole, a slight decline in some districts being counterbalanced by an improvement in others. Exports of leather boots and shoes were again larger than in the corresponding month of 1936, shipments aggregating 35,008 dozen pairs, compared with 31,454 dozen pairs.

COTTON

Although the employment position was not quite so good in September as in August, activity in the industry was well maintained. New business, however, has again been restricted, mainly in consequence of the decline in raw cotton prices. The latter movement, in turn, is principally due to the excellent progress made by the United States cotton crop, which is now expected to yield as much as 18 million bales. The outstanding factor is the remarkably high yield per acre, brought about by favourable weather conditions and the increased use of fertilisers. Consumption is unlikely to exceed 13 million bales. Attention is now concentrated on the special session of Congress, due to begin on November 15th, for the future course of prices may be considerably influenced by the action there taken. Meanwhile, British exports of yarns and piece-goods last month were in excess of those for September, 1936, but new business has been patchy. Thus demand from India has been disappointing. Fair business has, however, been done for such outlets as Singapore, Egypt, South America, the Dominions and the Crown Colonies, though bulk lines have been scarce. Home buying has been limited. Business in yarns has been better than in cloth, and there is still a scarcity of certain counts and qualities of weft. Spinning production remains at about 92 per cent. of capacity, against 81 per cent. at this time last year.

JUTE

New business in yarns and cloth have been of small dimensions and the markets have an idle appearance. Buyers appear to be waiting for a reduction in prices, but spinners and manufacturers are unable to offer concessions in view of the maintenance of raw jute prices. Short-time working is, consequently, resorted to. Meanwhile, competition from India remains acute—not only on foreign markets, but on the home market as well. Efforts have been made to induce the Government to impose restrictions

on the importation of Indian jute manufactures. Negotiations to this end have, however, been suspended and the matter is in abeyance for the time being.

LINEN

New crop Irish flax has been sold at prices which show little change from those ruling last season. Business in Courtrai fibre has also been transacted at about unchanged rates. There are unconfirmed reports of bulk sales by the U.S.S.R. Buyers of yarn are not at present inclined to operate beyond actual requirements. Business in coarse cloth is slow in consequence of pressure from cotton, but quality goods maintain their position. The uncertainties of the Far Eastern outlook are a depressing factor.

RAYON

Little new business is being booked in rayon yarns or in fabrics and made-up goods. Deliveries, however, remain substantial and the yarn-producing companies are maintaining production on a high level. Prices for viscose are firm, but there is still weak selling of acetate yarns. A fair volume of inquiries is circulating, and it is thought in trade circles that the present quietness is unlikely to be prolonged.

WOOL

The slump in the price of raw wool, mentioned a month ago, has had a severely adverse effect on the wool textile industry. Confidence in the future has been undermined and buyers have held off the market pending a clarification of the outlook. Spinners and manufacturers are accordingly experiencing difficulty in keeping their machinery running, and are less prosperous now than they were a year ago. The deterioration of the position is reflected in a slight increase in unemployment last month. The movement occurred mainly in the preparing and spinning departments and has not, as yet, seriously affected the manufacturing section. Nevertheless, the unemployment percentage is now higher than a year ago, and a further increase seems probable in the absence of any improvement in the general political and economic outlook. Meanwhile, the trend of exports is not encouraging. Shipments of wool tops, of worsted yarns and of woollen tissues last month were smaller than in September, 1936; but exports of worsted tissues were larger.

AGRICULTURE AND FISHERIES

Corn crops are generally reported free from disease and the quality and condition of the grain is good. The estimated yields

of wheat, at approximately 15 cwt. per acre, barley, at approximately 14 cwt. per acre, and oats, at approximately 14½ cwt. per acre, are below the average yields of these crops for the ten years 1927 to 1936. The yield of main crop potatoes is forecast at about 6½ tons, which is equal to the final estimate for the ten years 1927 to 1936. The yields per acre of turnips and swedes for stock feeding or seed, estimated at about 11½ tons, mangolds, for stock feeding or seed, estimated at about 11½ tons, forecast to be about eight tons, are less than the average yields for the last ten years. Autumn cultivation is well forward. Cattle and sheep have done well and are being marketed in fair condition. Milk yields are about average for the time of year. During the first nine months of the current year British takings of wet fish were rather larger than in the same period in 1936, the aggregate being accounted for 11,123,126 cwt. of the total catch this year, against 10,441,126 a year earlier. Average prices were, however, below the level of a year ago. The total value of the catch consequently declined from £11,383,152 in the first nine months of 1936 to £11,050,726 in the same period of the present year.

SHIPPING

The continued strength of the freight markets during September is reflected in *The Economist* index, which advanced from 161.8 in August (1898-1913 = 100) to 169.8 last month. Since early October, however, an easier tendency has been evident and freight rates have declined. Meanwhile, the British tramp ship owners have adopted a scheme of voluntary co-operation, to come into force next January, when the Government subsidy scheme comes to an end.

RETAIL TRADE

The money value of retail sales last month, according to *The Board of Trade Journal*, was 8.6 per cent. above the level of September, 1936, this being the largest increase recorded since last May. Increases ranged from 3.4 per cent. in Central and West End London to 11 per cent. in the Midlands and South Wales. Sales of food and perishables, accounting for some 55 per cent. of the total, showed a gain of 8.8 per cent., while the expansion in the case of the non-food group amounted to 8.2 per cent. It is not possible to determine accurately what proportion of these increases is due to the rise of prices and what proportion is accounted for by an expansion of turnover.

TRADE SUPPLEMENT

No. 11

The Trend of Business

The Trend of Business

being still smaller than a year ago. The aggregate value of building plans passed in October by 146 local authorities was practically as high as a year ago, and there are still no definite indications of a slump in building activity, at any rate before the spring. Despite the precipitous decline in contracts for new merchant ships, shipyards remain active on previous orders. Moreover, the anticipated further increase in naval contracts is likely to offset, at least partially, any decline in mercantile work during the next few months. Since the long time taken by the metal-using industries in completing orders is likely to ensure sustained activity for some time to come, the current lack of replacement orders may not be felt by many branches until some time next year.

So far, however, the volume of activity in this country has been well maintained. The *Economist* Index of Business Activity, adjusted for seasonal movements, declined only slightly from 1921 (1925 = 100) in September to 113

Activity, adjusted for seasonal movements, declined only slightly, from 113½ (1935 = 100) in September to 113 in October, compared with 108 a year ago. Seven of the 14 component series of *The Economist* Index given on page 11 rose between September and October, and six showed a decline, while one remained unchanged.

While unfavourable economic developments abroad have as yet scarcely affected current activity, the widespread decline in new orders, unless reversed, is likely sooner or later to lead to a curtailment of production. No sudden decline, however, is expected, for most industries have still a considerable amount of work on hand. Meanwhile, there are no indications of an early improvement in the prices of primary products and in the general international background.

As is shown by the latest reports of developments in the principal industries, summarised on pages 10 and 11, most branches of business remain very active. For example, our index of domestic steel consumption for October is 158½ (1935 = 100), against 127½ a year ago, an indication of the sustained activity in the metal-using industries. The decision of the British Iron and Steel Federation to leave steel prices unchanged has been welcomed by most consumers as giving at least a temporary stability to the market; but it is questioned in some quarters whether the Federation will be able to maintain the present prices until the end of 1938, as is the present intention. Moreover, owing to the steady expansion of home production and the increase in imports, the scarcity of steel is now much less acute, though semi-finished materials are still in short supply. Pressure for delivery remains as strong as ever, and as armament demand is still on the up-grade, consumption of steel is likely to be maintained at a high level during the next few months. Among the principal consumers of steel, the engineering industry remains very active, and even if the recent lull in new orders were to continue, the volume of orders on hand is sufficient to keep the industry busy for many months. Apart from a normal seasonal decline in activity, operations in the building and contracting trades remain at a high level, the proportion of insured workers unemployed

year.

The trend of activity in consumers' goods industries has been uneven. In general, those branches of activity which depend mainly on the home market remain very active. In the case of a number of other industries, however, the recent decline in new business is causing considerable anxiety. In the cotton industry, for example, the persistent

The graph displays the Business Activity Index (1926=100) from 1933 to 1937. The Y-axis represents the index value, ranging from 80 to 120. The X-axis shows the years 1933, 1934, 1935, 1936, and 1937. The index starts at approximately 80 in 1933, rises to about 90 by 1934, and continues to climb with fluctuations, reaching approximately 110 by 1937.

Year	Business Activity Index (1926=100)
1933	80
1934	90
1935	95
1936	105
1937	110

decline of raw material prices has checked forward purchases, and sales of yarn in recent weeks have been below current production. Unless turnover increases again in the near future, curtailment of activity and smaller profit margins seem inevitable. In the wool textile industry recession has already begun, for the number of unemployed last month showed an increase over October, 1936. The motor industry, on the other hand, remains active, and the decline in new registrations of private cars between September, 1936, and September, 1937, is said to be due to the delay in the introduction of new models this year.

The outstanding development abroad has been the rapid decline of business activity in the United States. Expenditure on new capital equipment has been severely curtailed. The extent of the decline in general business is reflected by the fall of the *New York Times*' Index of Activity from 104.7 during the week ended September 25th to 94.0 during the first week of November. Again, the curtailment of expenditure on capital equipment is revealed by the decline in steel mill operations from 74.4 per cent. of capacity during the week ended September 27th to 31 per cent. this week.

So far, the decline in quotations for primary products has scarcely affected business activity in the leading exporting countries, though prospects in the Dominions and the Argentine are less promising. In Scandinavia and Germany industrial production remains at a high level, but the latest reports from Holland, Austria, and Belgium are less favourable. In France the downward trend of activity was arrested in September, but the position still remains precarious. In the Far East business has been disorganised by the Sino-Japanese conflict, with disastrous consequences to China's foreign trade.

British Industrial Developments

The following reports on British industry cover, in most cases, the period to the middle of November. In the remainder they relate to the month of October.

COAL

There was a slight reduction in the output of saleable coal last month, the total being 20,371,600 tons, against 20,421,000 tons in September. The decline was common to all the principal producing areas, with the exception of Yorkshire. Meanwhile, employment showed a modest improvement in some areas and was fairly good for the time of year. There was a marked decrease last month in the number of persons recorded as temporarily stopped in Lancashire, but an increase in South Wales and Monmouthshire. October was a bad month for the house-coal trade, and business in this section, though now showing an improvement, is still below normal for the time of year. Industrial grades of coal and coke, on the other hand, are in short supply, and the bulk of the output is taken up on contract account. The volume of coal exported and shipped as bunkers last month was higher compared with both the previous month and with October, 1936, and exporters remain busy on current contracts. During October and early November, however, new business was scarce and the market had a dull appearance. In consequence of rising prices in this country Britain's competitors have been gaining ground in the export markets. It is reported that some improvement in shipment demand was noticeable in mid-November, but it remains to be seen whether the improvement will last.

IRON AND STEEL

Perhaps the most important development this month was the decision of the British Iron and Steel Federation to leave basic steel prices unchanged until the end of 1938. The removal of the uncertainty concerning the future of prices called forth a substantial volume of inquiry, but most steelworks are so fully provided with orders that they are not anxious to add to their commitments for the time being. In contrast to the movement a year ago, the output of steel ingots and castings declined between September and October. Pig-iron production, on the other hand, reached a post-war record last month. Imports of iron and steel materials in October, though slightly lower than in September, were more than double those of a year ago, and again exceeded British exports. Exports showed some improvement last month, but remained below the level reached earlier in the year. British consumption remained at a high level and pressure for delivery is as strong as ever. Our index of domestic iron and steel consumption for October, for example, was 158½ compared with 127½ a year ago. But the stringency of supplies, though still noticeable in the case of semi-manufactured materials, is less acute owing to the steady expansion of home production and imports.

GENERAL ENGINEERING

Activity in the engineering industry has so far been well maintained. Moreover, the volume of inquiry for new business remains satisfactory, and the steel industry's decision not to change prices until the end of 1938 has been favourably received. Nevertheless, there are signs of hesitancy in the expansion of the industry, though the volume of orders on hand is large enough to ensure the maintenance of a high level of output for many months. Exports in October were higher in volume than in any month since October, 1930. Moreover, the improvement in exports has been fairly general. Imports also remain at a high level, the heavy intake of rolling-mill machinery for the British iron and steel industry being a special feature. As far as individual branches of the industry are concerned, there has been a seasonal increase in the agricultural implement section and further improvement in the textile machinery and machine tools branches. Activity in the mining and printing machinery and power equipment branches remains at a high level.

ELECTRICAL EQUIPMENT

Unemployment in the electrical equipment industry showed a slight increase between September and October. The B.E.A.M.A. Index of new domestic and foreign orders for heavy generating plant showed a further decline last month, but this index only covers one of the branches of electrical equipment and, consequently, is not representative of changes in the industry as a whole. Exports last month were satisfactory, shipments of both machinery and apparatus showing an increase in value over the corresponding month last year.

AUTOMOBILES

Sales of private cars on the home market in September showed a decrease of 1,232 units, or 5.7 per cent., compared with the previous month, while sales of goods vehicles were 4 per cent. lower. It is held in trade circles, however, that this decline in new business does not indicate any real regression. The offer of new models was delayed longer this year than last, and a commercial motor exhibition was held in November. Both these factors are believed to have delayed consumers in making purchases, and it is hoped that the November and December figures, when available, will show a recovery. Exports of private cars and chassis last month were a shade smaller than in the previous year—6,372 units,

compared with 6,389; but overseas sales of commercial vehicles rose from 1,784 to 1,916 over the year. In the first ten months of the current year total exports showed one of the largest increases ever recorded.

BUILDING

Activity in the building trades is maintained on a high level, and the position showed little change last month. Employment registered a slight general decline, affecting all administrative divisions and all occupations except plumbers, being most marked in the painting and decorating branch of the industry. There was little change compared with October, 1936. Meanwhile, the building plan figures, published in the "Ministry of Labour Gazette," although still running rather below last year's corresponding totals, are well maintained. Plans approved for dwelling-houses last month were slightly smaller, in value terms, than last year's corresponding total, but plans approved for business premises, churches, schools, public buildings and other purposes were higher. The outlook has been somewhat improved by the decision to maintain the price of basic steel products unaltered until the end of 1938. Certain other costs have declined in recent weeks. There is no indication of a serious fall in building activity, apart from seasonal factors, in the immediate future.

CHEMICALS

In most sections of the home chemical industry business was fairly active during the past month. Business in industrial chemicals and wood distillation products has continued steady and satisfactory for the time of year, and a fair number of inquiries have been received for pharmaceutical and other fine chemicals. The coal tar products market has, however, been rather dull. Overseas trade in chemicals, drugs, dyes and colours showed a continued improvement in October, exports increasing in value by £185,309 and imports by £77,900 as compared with October, 1936. Total exports during January-October, 1937, have now reached a value which is more than three million pounds greater than the total for the first ten months of 1936.

POTTERY

The position of the industry showed little change last month. In North Staffordshire employment remained fair on the whole. At Bristol there was a slight decline, but employment at Derby continued good. At Worcester there was a slight improvement and employment was fairly good. Meanwhile, the export position continues to show progress. Overseas sales of general earthenware, tiles, sanitary ware and electrical ware were all larger last month than in October, 1936, but exports of china showed a slight decline.

FOOTWEAR

Conditions showed little general change last month and remained somewhat patchy. The unemployment percentage was unaltered and both overtime and short-time working were common. Exports were rather larger in October than in September, but were smaller than in the corresponding month of the two previous years.

COTTON

The cotton textile industry remains busy, as is shown by the improvement in the employment position last month, but new business has again shown a decline. The latter development is mainly attributable to the sagging tendency of raw cotton prices, due in turn to the record output in the United States and Egypt. Yarn prices have been steady owing to the price-cases been forced to make price concessions. The trade reorganisation scheme of the Joint Committee of Cotton Trade Organisations has been approved by substantial majorities of the different sections of employers and operatives, but there is some doubt whether the proposals will result in a reduction in costs, inquiry in piece-goods trade is to benefit. Although little satisfaction. Business with China has naturally been in a state of chaos, but some orders have been placed for Hongkong. Turners have complained of delivery instructions against old contracts being unsatisfactory. The Government has, however, bought heavy materials and certain fine cloths on a fair scale. Sales of yarn have been less than current production, but the spinning section continues to operate at about 92 per cent. of capacity.

JUTE

A feature of the trade in early November was the receipt of large Government orders for sandbags for delivery by the end of March. These gave a fillip to the market and caused a hardening of yarn prices. The improvement was not maintained, however, and an expected seasonal expansion of contracts has not materialised. Manufacturers, while very anxious to secure orders, are unable to make price concessions in consequence of the firmness of yarn prices. The outlook is not encouraging.

LINEN

While some merchants and speculators are reported to be anxious to encourage purchasers of raw material, the monopolies are not disposed to push sales of the new crop fibre. Irish and Courtrai flaxes are consequently firm in price. Yarns move slowly, and although exports of cloth are at present well maintained, new contracts have not shown the expected seasonal expansion; an exception is damask, which continues to receive good support for both home and export account.

RAYON

During the past few weeks there has been a marked absence of new buying, especially on the weaving side, and deliveries against old contracts have shown an appreciable decline. A minor reduction has been made in the price of 150 denier viscose, the main significance of which is the implication that viscose prices are unlikely to be advanced in the near future.

WOOL

During the past month international factors have continued to depress the raw wool markets. This decline has seriously undermined the confidence of consumers and has resulted in a substantial volume of business being held up pending the clarification of the outlook. The reduction in machinery activity has naturally caused a slump in the demand for tops and yarns, and has affected the employment position. Thus unemployment continued to increase last month, and is now noticeably worse than at this time last year. Export business has also tended to flag recently. Overseas sales of wool tops, worsted yarns and woollen tissues last month were smaller than in October, 1936, though exports of worsted tissues registered an improvement. It is believed in trade circles that a substantial volume of new business would be forthcoming if prices were to show a steadier tendency.

AGRICULTURE AND FISHERIES

The lifting of the potato crop was carried out under excellent conditions, states an official report. Some varieties are reported to be yielding a light crop, but in general the tubers are of good quality and fair size. The yield per acre is forecast at 6½ tons. Root crops have been adversely affected by the prolonged absence

of rain. The yield per acre of turnips and swedes is forecast at about 11 tons, that of mangolds at about 17½ tons, while that of sugar beet is now expected to average about 7½ tons of washed and topped beet. Good progress was made during October with autumn cultivation and sowing, except in the case of the heavier soils. Both cattle and sheep made progress, but milk yields are more difficult than usual to maintain. Meanwhile, the position of the fishing industry showed little alteration. British takings of wet fish rose from 2,395,307 cwts. in October, 1936, to 2,470,160 cwts. last month. Average prices were, however, lower this year than last, and the total catch was, consequently, valued at only £1,541,004 in October this year, against £1,629,505 in the same month of 1936. The Sea Fish Industry Bill, designed to implement the recommendations of the Sea Fish Commission for the betterment of the white fish industry, has been presented to the House and has passed its Second Reading. The Bill provides, *inter alia*, for the setting up of a development commission with powers to improve the organisation and efficiency of the industry.

SHIPPING

As foreshadowed a month ago, the freight markets were less active during October and freights showed a decline. Thus *The Economist* index (1898-1913 = 100) fell from 169.8 in September to 163.3 in October, the latter figure comparing with 105.9 in the corresponding month of last year. In consequence of the fall in the demand for tonnage, the volume of idle shipping is showing an increase.

RETAIL TRADE

The money value of retail sales during October, according to this week's *Board of Trade Journal*, was 4.4 per cent. above the same month of last year. Increases ranged from 4.6 to 8.0 per cent. in six of the seven districts, the only decline being in Central and West End London. Here the decrease amounted to 5.6 per cent., and declines occurred in almost every category. Sales of food and perishables rose by 8.9 per cent., district increases exceeding 8 per cent. in every district except Central and West End London, where the change was negligible. Sales of other merchandise, however, declined by 0.7 per cent. for the first time since September, 1933, ignoring disturbances caused by the varying incidence of Easter and Whitsun.

Business Developments Overseas

BRITISH EMPIRE

AUSTRALIA.—Despite the recession in commodity prices, secondary production and building activity are well maintained, states a cable from the National Bank of Australasia. Consols remain strong, but the market in industrials has weakened slightly, base metal mining shares being adversely affected by the fall in metal prices. The employment position has further improved. It is estimated that the wheat harvest will be equal to that of the previous season; but production is expanding in consequence of good rains in the main dairying districts.

SOUTH AFRICA.—In recent months business activity in the Union has been maintained on a high level. Building plan figures have been running above last year's level, foreign trade has expanded and railway earnings have exceeded Budget estimates. The fall in security prices has, however, had an adverse effect on the business outlook and a certain hesitancy is now noticeable. Meanwhile, drought prevails in certain areas, where crops and livestock are being adversely affected.

CANADA.—In Canada, as elsewhere, the stock markets have suffered a severe recession although business indices generally remain favourable. The mining industry is active and the heavy industries remain very busy. Employment is consequently improving. The purchasing power of the rural community is now expanding as the new crops are being sold, but the mild autumn has retarded the normal seasonal improvement in retail trade. There are also fears that the decline in security values will adversely affect the demand for luxury goods.

IRISH FREE STATE.—One of the major problems of the Free State at the present time is that of the growing import surplus and the adverse balance of payments on current account. This movement is reflected in the reduction in the net sterling assets of the Irish banks and in the liquidation of overseas investments. Agricultural products must continue to constitute the bulk of Ireland's exports, and these show little growth in volume, though their value is mounting in consequence of rising prices. Among "invisible exports" which could be developed are the receipts of the tourist industry, and efforts are being made to expand these.

EUROPE

FRANCE.—The downward trend of industrial production has been arrested, at least temporarily; the official index of production (1913 = 100) rose from 91 in August to 96 in September. A year ago the figure stood at 95. The improvement has been most marked in the case of iron and steel, mining and textiles, though the output of the latter remains considerably below the level of a year ago. Building activity, on the other hand, showed a further decline between August and September, when the official index was 12 per cent. below that for the corresponding month last year. The number of persons in receipt of unemployment benefit declined from 406,600 at the end of October, 1936, to 305,300 at the end of September this year. During October, however, it rose again to 319,200. The increase in wholesale prices has been checked and there has been some repatriation of capital and a slight decline in the long-term rate of interest, but the position remains precarious.

GERMANY.—The latest information indicates that business activity in Germany has been well maintained. The German Institute for Business Research's index of industrial production (1928 = 100) rose from 121.1 in August to 125.1 in September, compared with 114.2 a year ago. The capital equipment industries remain the most active branches of business, but the output of consumption goods has also shown an increase in recent months. The number of unemployed, as officially estimated, showed a slight seasonal rise during October from 469,000 to 502,000. Activity in the iron and steel industry continues to expand. For example, the output of pig iron rose from 1,349,500 metric tons in September to 1,417,900 in October. Similarly, car loadings increased from 154,800 per day during the first week of October to 163,600 during the first week of the current month. Both wholesale prices and quotations for industrial securities have shown a slight decline during the last few weeks. In general, industrial activity is expected to continue at a high level.

SWEDEN.—Business activity has continued to expand in recent months, though the rate of expansion has diminished. The index of business activity (1929 = 100) rose from 133 in September, 1936, to 144 in August and 145 in September, 1937. Employment has continued to increase, the number of unemployed at the end of September being only 9,900, compared with 20,900 a year ago. It is questioned, however, whether the current level of activity can be maintained for many months, especially as new orders have recently tended to decline.

POLAND.—Industrial activity showed a slight decline between August and September, when the index of industrial production (1929 = 100) fell from 87.6 to 85.8. The current volume of activity remains above the level of a year ago, when the index of production stood at 74.9. Despite the increase in production, however, the number of unemployed is only slightly smaller than a year ago. Imports remain at a high level and were 113.2 million zloty in September, compared with 107.2 millions in August and 97.1 millions in September, 1936. In contrast to the movement a year ago, however, exports declined between August and September from 96.5 million zloty to 90.6 millions, against 89.3 millions a year ago.

HOLLAND.—The expansion of business activity in Holland has been arrested. In contrast to the movement a year ago, the index of industrial production (1929 = 100) declined from 93.2 in August to 83.3 in September. A year ago the index rose during this period from 66.7 to 69.1. According to the voluntary unemployment insurance statistics, the number of unemployed rose slightly from 118,683 in August to 118,931 in September. In September, 1936, however, it was 159,689. Imports rose from 92.4 million guilden in October, 1936, to 130.3 millions in September and 148.7 millions in October, 1937. Exports, on the other hand, after increasing from 75.8 million guilden in October, 1936, to 113.2 millions in September, fell to 106.2 millions in October, 1937. It is significant that a year ago exports showed an increase between September and October.

UNITED STATES OF AMERICA

The downward movement of business activity which began in September has since gained momentum. Expenditure on new equipment by the railways, public utilities and other branches of activity has been sharply curtailed. Retail trade has so far kept up fairly well, but now shows signs of decline. The industrial setback is reflected in the decline of the *New York Times* index of business activity from 104.7 during the week ended September 25th to 94.0 during the first week of November. A year ago the index stood at 101.3. Within a few weeks business activity has thus fallen below the level of a year ago. The decline has been most marked in the case of the capital equipment industries. This is reflected in the sharp reduction in steel production; steel mill activity, as estimated by the American Iron and Steel Institute, has declined from 74.4 per cent. of capacity during the week ended September 27th to 31 per cent. this week. Moreover, quotations for Stock Exchange securities and raw material prices have continued to fall. The latest information does not indicate an early change of trend in business activity.

LATIN AMERICA

ARGENTINA.—The aggregate volume of exports in the first ten months of this year reached the record figure of 16,322,263 metric tons, compared with 11,360,627 tons in the corresponding month of 1936, while their market value, at 2,032,166,913 pesos (say, £127,000,000 sterling), has been exceeded only in the corresponding periods of the years 1920 and 1928, and compares with 1,287,746,571 pesos in January-October, 1936. Nevertheless, monthly export figures have fallen away from the record levels earlier in the year, but there should be seasonal recovery when the new crops are moved in December. There is, however, considerable anxiety concerning the yield of the new crops, latest reports indicating that some 10 per cent. of the wheat crop may be lost as a result of frost. Retail trade in Buenos Aires was quieter during October owing to unfavourable weather, but appreciably better than in October, 1936. Argentina's increased purchasing power is now finding reflection in practically every line of import.

BRAZIL.—The past month has witnessed important developments. The President successfully effected a *coup d'état*, and a new Constitution has been promulgated. The foreign debt service is understood to have been suspended; the 35 per cent. quota of export exchange taken by the Government has been abolished—which should increase the supply of free exchange—and the Government is entering upon a policy of open competition in world coffee markets. The most optimistic view—although not necessarily correct—of the Brazilian situation is that, with the coffee industry facing a crisis of over-production, the President has decided to adopt a widespread plan for the rehabilitation of the country's economy. Brazil's decision, however, has virtually paralysed the markets of the Central American "coffee" countries, and world coffee prices will probably fall further.

CHILE.—Foreign trade is now falling away as a result of the decline in production and prices of copper. Should there be no recovery in metal prices, Chile's economy will be adversely affected, as well as that of Peru.

THE FAR EAST

The industrial position in Japan shows little alteration and business remains very active—especially in the heavy industries. Efforts to improve the balance of trade and so to relieve the pressure on the exchanges have now been successful. Hence, mainly in consequence of a reduction in imports of raw cotton and an increase in exports of cotton cloth, the October trade returns disclose an export surplus of 55 million yen. Imports totalled 252 millions and exports 307 millions, against 273 and 303 millions in September. Stock markets have recently been quiet and commodity prices irregular. Meanwhile, in consequence of the stresses of war, the Chinese Government last month imposed a system of banking restrictions, akin to a system of exchange control, to stop the exodus of capital from the country. The artificial stringency in the money market has seriously hampered business, and the situation has become more acute since the Japanese have taken control of Shanghai. China's imports last month totalled 34 million dollars against 55 millions in September, while her exports rose to 67 millions, compared with 45 millions in the previous month.

British Industrial Developments

The following reports on British industry cover, in most cases, the period to the middle of December. In the remainder they relate to the month of November.

COAL

The coal industry is now experiencing a normal seasonal improvement and is appreciably better off than at this time last year. The output of commercially disposable coal last month was 21,207,000 tons, compared with 20,372,000 in the previous month and 19,211,000 in November, 1936. Employment consequently showed a further improvement last month in most of the principal districts, there being a marked decline in the number of work-people temporarily stopped. As foreshadowed a month ago, however, export business was less satisfactory in November, though continuing to show progress compared with last year. The quantity of coal sold abroad and shipped for the use of steamers last month was 4,728,000 tons, against 5,116,000 tons in October and 4,205,000 tons in November, 1936. While the volume of shipments in recent weeks has been well maintained on contract account, the decline in new business has continued. Competition from the Continent is a source of anxiety to British shippers. Meanwhile, with the colder weather and the approach of Christmas, December witnessed a considerable improvement on the house coal market, and stocks have now been substantially reduced. Demand for industrial grades of coal and coke has also been strong and shortages of some descriptions are reported.

IRON AND STEEL

The output of steel ingots and castings reached a record in November, but pig-iron production was slightly smaller than in October, which contained one more working day. The total output of crude steel in 1937 is now expected to reach 12.9 million tons, against 11.7 millions in 1936. A year ago both pig iron and steel production showed a substantial decline between October and November. Imports of iron and steel materials rose sharply last month, when they were three times as heavy as in 1936. Exports, however, registered a decline between October and November and were only slightly higher than a year ago. The rising domestic output, accompanied by heavier imports and practically unchanged exports, has brought about a substantial increase in the supplies available to domestic consumers. Our index of domestic iron and steel consumption rose from 125 (1935 = 100) in November, 1936, to 158½ and 166½ in October and November this year. Moreover, despite the enormous increase in domestic supplies, there are as yet no indications of an accumulation of stocks. While the volume of new business has not been as heavy as in recent months, consumption is expected to continue at a high level for some time to come.

GENERAL ENGINEERING

In contrast to the usual seasonal movement, unemployment showed a slight increase during the past month. Moreover, while armament contracts are probably still increasing, there has been a slight fall in new civil business. In general, the industry is slightly less optimistic than hitherto. While there are indications of a lull in progress, current activity is at a very high level. As the volume of work on hand remains substantial, operations are expected to continue at a fairly high level until the middle of next year. The industry now has less difficulty in obtaining supplies of raw materials, but despite the British Iron and Steel Federation's decision to maintain prices unchanged until the end of next year, there is some uncertainty concerning the Federation's ability to carry out their decision. Exports remain at a satisfactory level, shipments of machinery having increased from 32,000 tons in November, 1936, to 40,300 tons last month. Imports also continue above last year's level, though the increase in volume is less marked than in the case of exports. During November, for example, imports of machinery were 11,500 tons, compared with 9,000 tons a year ago. Heavy imports of rolling-mill machinery were a feature of the November returns. Most individual branches of the industry remain active.

ELECTRICAL EQUIPMENT

The past month witnessed a slight increase in the proportion of the insured workers unemployed in electrical engineering and in the manufacture of electric cables, apparatus, lamps, and other equipment. Exports, however, remained satisfactory. Thus, the value of electrical machinery shipped abroad rose from £207,000 in November, 1936, to £271,000 last month. During the same period exports of electrical goods and apparatus advanced from £867,000 to £1,163,000. It must be remembered, however, that these exports represent orders placed some time ago. Despite the lull in activity last month there are no indications of a serious decline in the near future. The BEAMA index of new domestic and foreign orders for heavy generating plant showed no further decline last month, a slight reduction in foreign business having been offset by an improvement in domestic contracts.

AUTOMOBILES

Following the setback in September, the motor industry suffered a further reduction of sales in October. Home sales of private

cars were 29,901 (12.5 per cent.) below the level of October, 1936, while sales of goods vehicles showed a decline of 797 units (11 per cent.). It remains to be seen whether—as is anticipated in the trade—the figures for November and December register an improvement. Meanwhile sales overseas have been well maintained. During November, exports of private cars and chassis totalled 6,610 units, against 6,322 in the same month of last year, while shipments of commercial vehicles amounted to 1,690, against 1,637. Taking the year as a whole, exports business in 1937 shows one of the largest increases ever recorded.

BUILDING

Apart from seasonal factors, activity in the building industry is maintained on a high level. There was, however, a seasonal decline in employment in November, principally affecting the painting and decorating branch. On the whole there was little change compared with November, 1936. Activity is likely to show a further seasonal slackening in the near future, while a more general decline seems probable later in the New Year. The month, as published by the Ministry of Labour Gazette, was 13.5 per cent. below the level of a year ago. A further adverse factor in the outlook is the increase of 3s. per ton in the price of cement, announced early in December. On the other hand, figures, and these may be sufficient for a time to offset the effects of the probable decline in private construction. The outlook would, moreover, be radically transformed if the Government were to embark upon a public works policy or encourage the local authorities to accelerate slum clearance.

CHEMICALS

Business on the home chemical market has been on a fair scale generally during the past month. In the industrial chemicals section, a considerable number of inquiries have been received for coal tar products, this section of the market having been dull throughout the month. Trade in wood distillation products has continued on a very fair scale, and there has been a steady though small demand for pharmaceutical chemicals. The returns for November show a further increase in overseas trade in chemicals, £256,345, as compared with November, 1936, the increase for imports being £291,958.

POTTERY

The position of the industry has been gradually deteriorating recently and the unemployment percentage for November was 13.6, against 12.4 in the same month of last year. In North Staffordshire last month employment showed a slight decline but fairly good, while Derby remained the brightest spot in the industry. Export business in some directions was less satisfactory last month, shipments of tiles, sanitary ware and china being smaller than in the same month of last year. Overseas sales of general earthenware and of electrical ware were, however, above the level of November, 1936.

FOOTWEAR

A slight decline in the number of workpeople employed in the boot and shoe industry was recorded last month and short-time working was more common than overtime; the position of the industry was still better than at this time last year. Total exports last month were smaller than in November, 1936—38,541 dozen pairs, against 39,685 dozen pairs—the fall being wholly accounted for by smaller sales of women's shoes. Two years ago the Irish Free State constituted the most important overseas customer of the footwear trades, but business with that country has now shrunk to comparatively small dimensions.

COTTON

The past month has been an unsatisfactory one for the cotton textile industry. The employment position suffered further deterioration and the unemployment percentage was a trifle higher than in November, 1936. New business was limited and sales were appreciably smaller than output. Some producers have consequently been disposed to make price concessions. Raw cotton prices have been about steady, despite a further increase in the official estimate of the American crop, which is now fore-
have again been disappointing. Exporters to India have kept in touch with Manchester prices, but purchasing has been of a local, though a small trade has been done for Hong Kong. Business with West Africa has given rise to anxiety and less demand has been experienced for South America. Home trade for the Government in heavy and fine materials. Sales of yarn have been less than one-half the production of the mills, but spinners have maintained their price agreements. Spindle activity is now running at 90 per cent. of capacity, against 92 per cent. last month and 89 per cent. at the same time last year.

JUTE

The raw material has been subject to fairly wide fluctuations, the general tendency being downward. The manufacturing industry has had another unsatisfactory month, and unemployment is at a high level. Government orders for sandbags have provided a certain amount of work, but new business has been extremely quiet in recent weeks, and severe competition from India has had a depressing effect on prices. Further representations on the question of Indian imports are, it is stated, likely to be made to the Government in the near future.

LINEN

All flax markets are firm and recorded transactions are confined to moderate quantities. Linen yarns have been purchased in bulk by both merchants and manufacturers, and prices have risen. This increase has brought out some covering in cloth requirements, but not to the extent anticipated.

RAYON

Finished goods are moving into consumption slowly and there is a tendency for stocks to accumulate. New business in rayon yarns has accordingly been scarce in most sections of the trade in recent weeks and machinery activity has declined; nevertheless deliveries remain substantial. Staple fibre has been reduced in price from 11d. to 10d. per lb., but the finished yarns have been reduced by only ¼d. per lb., and spinners' margins have consequently improved.

WOOL

November was a bad month for the wool textile industry, and the employment position, especially in the woollen and carpet sections, showed a serious deterioration. Unemployment amounted to 15.5 per cent. of the insured workpeople last month, against 11.3 per cent. in October and (on a comparable basis) 6.2 per cent. a year ago. The heavy reduction in the demand for manufactures was reflected in the raw wool markets, where quotations fell 20 to 30 per cent. below the level of last summer. The value of exports was, however, well maintained last month, the total being appreciably above the previous year's corresponding figure. Germany, although taking less than last year, was again the

industry's chief overseas customer. It is reported, moreover, that the tone of the markets has undergone a change for the better in the latter part of December. A sharp improvement in demand at the manufacturing end has revealed a temporary shortage of the raw material and prices have been advanced. It remains to be seen whether this improvement will be maintained.

AGRICULTURE AND FISHERIES

Autumn sowing and cultivation are well forward. Early-sown corn has germinated well. The quality and condition of the potato crop is good generally, and total production is estimated at about 3,126,000 tons. The bulbs of root crops are smaller than usual. Mangolds are of sound quality, and the total production is estimated to be about 3,668,000 tons, while swedes and turnips are moderate. The yield per acre is estimated at 10.9 tons, which is 0.6 tons less than the average yield for the ten years 1927-36. The sugar beet crop generally is satisfactory, and the average sugar content is reported to be high. On present information the yield per acre is expected to be about 8.1 tons of washed and topped beet. Cattle and sheep have made fair progress. Supplies of winter keep will probably be sufficient, but straw is expected to be scarce later. Milk yields have shown a fall of more than normal seasonal dimensions since the period of peak production. British takings of wet fish were larger in November than in the same month of last year, the total being 2,607,300 cwt., compared with 2,337,050 cwt. The aggregate value of the catch last month was £1,499,400, against £1,426,800 a year earlier. The year's catch to date has been rather larger than during the same period of 1936, but the aggregate value shows a decline.

SHIPPING

The shipping position has suffered a sharp deterioration during the past two months in consequence of the uncertain economic and political outlook and the decline in commodity prices. Thus the *Economist* index of whole cargo shipping freights (1898-1913 = 100) fell from 163.6 to 146.1 last month, the latter figure comparing with 112.4 in November, 1936. This decline has had unfortunate repercussions on the shipbuilding industry, where new orders have declined. It would be rash to assume that freight rates have yet touched bottom.

Business Developments Overseas

BRITISH EMPIRE

AUSTRALIA.—According to cabled information from the National Bank of Australasia, recent rains have improved summer prospects in the grazing, dairying and fruit-growing districts. Wheat has ripened early and the expected yield is stated to be 150 million bushels. The wool market has been passing through a quiet spell, but a stronger tone was displayed at the latest sales. Meanwhile, industrial building and trading activities are stated to be well maintained. On the Stock Exchange industrials are steady. Consols are firm and metal shares have recovered.

SOUTH AFRICA.—Absence of adequate rainfall has adversely affected the farming outlook recently, while international factors have caused a setback on the produce markets. It is feared that these factors may react unfavourably on the Christmas trade. Business generally, however, appears to be well maintained, though certain of the secondary industries are less buoyant than at this time last year. It is stated that the building industry generally has sufficient plans on hand to ensure the maintenance of the existing level of activity for many months.

CANADA.—Business generally has been maintained in Canada better than in the United States, though there are now signs that a decline has set in. Thus, the Dominion general economic index has recently shown a sagging tendency. The setback on the commodity markets has introduced an element of uncertainty into the outlook for a number of industries. The position of the newsprint industry has, however, been improved by the recent signing of a long-term contract between a group of newsprint companies and a group of leading Australian publishers. Meanwhile, a brisk Christmas trade is expected.

HONG KONG.—The British colony has naturally been considerably affected by the undeclared war between China and Japan. The influx of refugees has taxed housing capacity to the utmost and has considerably increased the demand for foodstuffs. Prices and rents are accordingly on the upgrade. In consequence of the tightening up of imperial preference regulations manufacturers are switching from Japanese to Empire raw materials. Meanwhile, the trade of the colony has been abnormally swollen owing to a large volume of merchandise destined for Shanghai being landed at the southern port.

EUROPE

FRANCE.—Evidence of a gradual improvement in business activity is steadily accumulating. Thus, the official index of industrial production, which rose from 91 (1913 = 100) in August to 97 in September, increased to 100 in October. A year ago the index stood at 98. There has been an increase of activity in the mining and metal trades. The textile industry is also a little more active, but building operations remain at a very low ebb. The report of the Committee on Production recommending certain adjustments in working conditions has been favourably received, and there are indications that the trade unions are not against the introduction of greater elasticity into working conditions, provided that the principles of last year's social legislation are maintained. The repatriation of capital, an indication of returning confidence, has continued in recent weeks, and the activity of the capital market has shown an increase during the past two months. Commodity and security prices show little change.

GERMANY.—Industrial activity remains at a high level. The German Institute for Business Research's index of industrial production (1928 = 100) rose from 124.9 in September to 125.7 in October. A year ago the index stood at 113.8. Average daily pig-iron production rose from 45,000 tons in September to 45,700 tons in October, compared with 44,500 in October last year. Crude steel output was 65,900 tons per day in October, against 65,000 in September and 63,300 in October last year. The output of coal increased from 541,000 tons per day in October, 1936, to 601,000 tons and 620,000 tons respectively in September and October this year. There are no indications of an early setback in activity. Indeed, the output of steel is insufficient to meet all requirements. Retail trade is also expanding, though less rapidly. The Institute for Business Research's index of retail trade for October was 89.0 (1928 = 100), against 87.2 a year ago. The increase in the number of unemployed during November from 502,000 to 573,000 is ascribed to seasonal movements. At the end of November, 1936, the number of unemployed, as officially recorded, was 1,197,000. Wholesale prices are scarcely changed on the month, but share prices show a slight decline.

HOLLAND.—Holland, whose fortunes are intimately linked up with the trend of the prices of primary products, has suffered a recession in business activity. Thus, the index of production, which rose rapidly after the suspension of the gold standard from 69.1 (1929 = 100) in September, 1936, to 102.5 last July, had fallen to 75.9 by October. Similarly, the number of registered unemployed, after declining from 394,444 at the end of October, 1936, to 310,616 at the end of last June, rose again to 340,436 at the end of October. The value of imports declined from 148.7 million gulden in October to 130.3 millions in November, against 100.6 millions in November, 1936. Again, exports which had risen from 77.4 million gulden in November, 1936, to 106.2 millions last October, fell to 97.9 millions in November.

SWEDEN.—Business activity remains at a record level. For example, the index of industrial production rose from 134 (1929 = 100) in October, 1936, to 145 and 146 respectively in September and October this year. Crude steel production last October was 107,000 metric tons—the highest level so far

attained—against 105,000 tons in September and 97,000 tons in October, 1936. The number of unemployed, including forestry and timber-floating workers, at the end of September was 43,474, compared with 51,965 a year earlier. The value of imports in October was Kr. 192.4 millions, against 186.8 millions in September and 159.8 millions a year ago. Exports in October were Kr. 192.9 millions, compared with 195.0 millions in September and 145.3 millions a year earlier. But the outlook is now less promising.

CZECHOSLOVAKIA.—Recovery made headway until last spring, but more recently industry has been marking time. For example, the index of industrial production, after advancing from 82.7 (1929 = 100) in September, 1936, to 99.8 last May, had fallen to 97.8 by September. Coal production in October was 1,460,000 metric tons, against 1,626,000 tons in September and 1,260,000 during the corresponding month a year ago. The output of crude steel in October was 200,000 metric tons, compared with 199,000 tons in September and 143,000 a year ago. The number of registered unemployed fell from 510,205 at the end of November, 1936, to 237,737 at the end of October, but rose to 332,981 a month later. The value of imports last October was Kr. 959.4 millions, against 789.7 millions a year ago. Exports rose during the corresponding period from Kr. 768.2 millions to Kr. 1,120.3 millions. Wholesale prices eased.

UNITED STATES OF AMERICA

The process of curtailment of industrial activity continued throughout November, when new purchases of capital equipment came almost to a standstill. The extent of the decline is revealed by the fall of the *New York Times* index of business activity, from 104.7 during the week ended September 25th to 94.0 during the first week in November and 84.8 during the week ended December 4th. A year ago the index stood at 107.5. Within the short space of three months activity has thus fallen well below the level of a year ago. As a result of the drastic curtailment of production the heavy stocks of semi-manufactured articles and manufactured goods have been substantially reduced. During the second week of December the decline in activity lost momentum, and the *New York Times* index showed a fractional rise. The latest news is more hopeful, and some observers even suggest that the recession has run its course and may be followed by an improvement early next year. There are indications that Congress may free business from some of the shackles impeding the investment of capital. Moreover, it is expected that the Inter-State Commerce Commission will permit the railways to increase their freight rates, though probably not by the full 15 per cent. for which they have applied. Retail trade has taken an upturn, and reports from wholesale houses indicate an improvement in the prospects for Spring goods.

LATIN AMERICA

ARGENTINA.—The latest reports from Buenos Aires confirm damage to growing crops by frost in October and November. The yield of the wheat crop is estimated to show a reduction of 20 to 25 per cent. on the previous forecast. Losses to linseed are much less, and maize has been scarcely affected. The exportable sur-season, or as previously reckoned for this season. Argentina will also be affected by the downward tendency in world prices.

BRAZIL.—It is too early to forecast the economic effects upon Brazil of the inauguration of the era of free competition in world coffee markets. President Vargas, however, appears to have widespread support for his policy, and measures being taken are expected to stimulate national production and increase exportation for an increasing number of commodities other than coffee. The new coffee policy is regarded favourably, but with the fall in value of her aggregate exports at anything like the present figure. This probably accounts for the recent weakness in the milreis.

OTHER COUNTRIES.—The future of Chile depends largely on world markets for copper, and that of Peru on cotton. Uruguay is devaluing the gold content of the peso to a parity with sterling at around the existing exchange rate, and is shipping gold to provide the market with exchange pending the commencement of the Central American Republics are affected by Brazil's new coffee policy, and are trying to combat the effect of lower coffee prices.

THE FAR EAST

Stimulated by war needs, Japanese business activity has generally been maintained on a high level and industrial production is being intensified, even in branches not concerned with munition making. Many small businesses and retail traders, however, have been adversely affected by the war with China. Thus in certain branches of the textile trades catering for the home market there are many idle looms; bicycle manufacturers are also among the worst sufferers. Department store sales have recently been running well below last year's level in consequence of the Government's economy campaign. Overseas trade has continued above the level of a year ago, though imports are being restricted in certain instances. Meanwhile the note issue has increased and commodity prices have turned upwards. The Stock Exchange has had a dull tone. The reduction in China's overseas trade figures is partly due to the fact that more business is passing through Hongkong rather than through the northern ports. An improvement occurred last month, imports being 4.7 million dollars and exports 50.3 millions, against 36.3 and 48.7 millions, respectively, in the previous month. Trade is, however, still well below the 1936 level.

UNITED KINGDOM
