The net result from all businesses is an increase of £306,000, and cellaneous items add another £2,000, which reflects on the one hand improvements in joint lines and in capital account investments, and on the other hand reductions in interest items.

The net revenue of £14,356,000 or £308,000 more than in 1936 regarded by some as small in relation to the growth of gross receipts, but the severe increase in prices is, as I have shown, the chief cause, and I must warn you that the full impact of this rise has not felt in 1937. On the other hand, the benefit of increased charging powers granted to us, which I am explaining later, was felt in three months only of 1937.

BALANCE SHEET ITEMS

As to the balance sheet, you will observe that the loan to the Railway Finance Corporation, which I have already fully explained, is a receipt of a capital nature, for technical reasons, and is added to capital account, is increased by nearly

£2,000,000, savings bank deposits have increased by £1,220,000 and reserves of various descriptions by £570,000.

On the last item I should add that the renewal provisions for all businesses set aside during the year out of revenue expenditure in accordance with our usual practice, amount to £5,630,000, an increase of £606,000, mainly due to increased prices. A critic has suggested that we are unduly conservative in this policy, but my reply is that we do not live from "hand to mouth" and our provisions are very carefully considered on their merits and are those appropriate to our responsibilities to the public and to the proprietors.

Our capital outlay has been mentioned by another critic. I have told you before, and repeat, that none is authorised without the fullest justification from the net revenue aspect. This year the largest part of the total of £2,250,000 is £1,650,000 for rolling stock. We expand or contract our stock according to probable requirements such as for the heavy freight traffic in December last (the "peak" since the Great War) and the unique "peak" in passenger traffic early last year due to the Coronation of King George VI.

CAPITAL EXPENDITURE FIGURE

At amalgamation our capital expenditure stood at £437,000,000. In 1929 it had grown to £448,500,000, and in the eight years since then it has grown by £8,200,000 to £456,700,000. Of that £8,200,000, £4,000,000 is due to investments in road transport undertakings, but, to hark back to our net revenue, this £4,000,000 gave us a direct return in 1937 of £360,000, or 9 per cent., and I need not repeat what I explained before regarding the excellent return from our modernisation of equipment generally, and particularly our rolling stock.

The investments, other than those in capital account, amount to £28,250,000, an addition of nearly £3,000,000, a reflection largely of the reduction of the rates and rate relief suspense account as the over-payments are being recovered. We have still nearly £1,500,000 to recover, but it is coming in rapidly.

Stocks of stores have risen by £1,300,000, or 20 per cent., mainly again owing to prices, but partly to building up reserves of certain supplies owing to difficulties we experienced in obtaining deliveries at certain times during last year.

The outstanding traffic accounts show an increase of £415,000 arising from the increased traffic.

I explained last year that our net revenue results for 1936 were the best since 1929 and that we hoped to maintain and improve upon them in 1937. We have actually done so, and the additional 5s. per cent. dividend proposed on the ordinary stock will, we hope, be improved upon in 1938.

RATES AND CHARGES

Since 1929 the Railway Rates Tribunal have been holding their annual reviews of railway charges in accordance with the Railways Act, 1921. As you know, an important function of the tribunal is to fix rates, fares and charges which will, so far as practicable with efficient working, yield to us a prescribed annual net revenue known as the "standard revenue," and they are required when making their periodical reviews to make general modifications of the charges, where necessary, to enable such standard revenue to be earned. I need hardly remind you that if on any such review net revenue exceeds the standard, 80 per cent. of such excess is to be devoted to reducing the charges.

Now it is common knowledge that the railway companies have not yet been able to earn their standard revenues. The deficiency in our case was at its maximum—£10,600,000—in 1932, and the deficiency in 1936 was still £6,500,000. The Tribunal have throughout adopted the practice of inviting the suggestions of the railway companies as to the possibility of meeting the deficiencies. At each annual review from 1929 to 1936 the companies informed the Tribunal that, in their view, an increase of charges would not be likely to yield an increase of net revenue. On each such review the Tribunal found that the undertakings of the companies had been conducted with a view to economy, but having regard to the companies' submissions on charges no increases were authorised. There has, however, been a marked improvement in the trade of the country generally since 1935 which justified a more optimistic view of the future, and after careful consideration the companies came to the conclusion early last year that a moderate increase in charges would improve their net revenues materially, without prejudicing the continuance of the favourable trend in trade and industry. Accordingly, they submitted proposals for increases in charges, with the object of assisting the Tribunal in carrying out the duty imposed on them, although they recognised that this increase would still leave them short of their standard revenues.

THE RAILWAY COMPANIES' SUBMISSION

The railway companies appreciated that different descriptions of traffic would respond in different degrees to an increase in charges, but they felt that there were strong reasons against any differentiation in the application of the increase. They were of opinion that an increase of 5 per cent., applied generally, would yield some increase of revenue, though possibly not to the full extent of 5 per cent., with a corresponding addition to the net revenue. There was therefore no justification for leaving any description of traffic untouched by the increase, and the railway companies felt that any discrimination in favour of any particular traffics would be inequitable and would be resented by those interested in other traffics. In those circumstances the proposals laid before the Tribunal were for a general increase of 5 per cent. or thereabouts, to apply to all charges subject to the jurisdiction of the Tribunal, the estimated addition to net revenue in a full year being, in our case, £2,200,000.

THE TRIBUNAL'S DECISION

The hearing before the Tribunal occupied 16 days, and at the conclusion they decided to modify the standard and exceptional charges substantially as proposed. This decision took effect from October 1, 1937, but it did not apply to fares in respect of intra-London suburban passenger services, as these are governed by the London Passenger Transport Act, 1933.

We have not yet had a full year's experience of the effect of the Tribunal's decision, but the partial experience so far appears to justify the estimate we put forward. Although not its objective, this addition to our revenue will offset to a considerable extent the increased cost of labour and materials which we have felt severely.

INCREASED PRICES

This increase in costs is partly due to the increased wages bill, which has followed from the wages agreements I will refer to later, and to the effect of the cost of living on wages rates of certain grades which move with that index. While this increase is due very largely to a restoration of reductions in the period of extreme depression, the level of wages costs is higher now for various grades than before the so-called cuts and the addition to us in a full year over the costs of 1936 is £1,830,000.

The other factor is the marked increase in prices of coal, iron, steel, timber, provender and in fact nearly all our purchases. Taking as a whole the present addition to our costs over 1936 through increased material prices, after allowing for certain recent reductions from the highest levels, is at the rate of £2,230,000 in a full year.

While these two factors will together add about £4,000,000 per annum to the costs of 1936, the effect on revenue is a little less because of capital elements and so forth, and in any event a large part of the impact will not be felt until 1938-39 owing to the use of earlier purchases.

The effect on the revenue expenditure for 1937 was, as mentioned in the directors' report, an addition of £1,875,000.

ELECTRIFICATION

Three years ago I told you what our general policy is regarding electrification and although some of the factors involved may have altered a little, there has been no change in the main position since then. I must refer to the subject again, however, because I have seen the incorrect statement made in responsible quarters that we had asked for public assistance towards the cost of undertaking electrification schemes. This must be due to a misunderstanding of a statement I made, on a suggestion of further electrification, that insofar as electrification is required certain national values distinct from, or over and above the value of the railways, that was a matter for public funds and not railway shareholders' funds.

Exactly the same comments apply to other statements that we have received material assistance from the Government, to presume through the Railway Finance Corporation. These arrangements were mutual. We on our part agreed to undertake certain specified works which would not otherwise have then been entered upon, but which became justified with cheaper money obtainable by a Treasury Guaranteed Loan, in turn covered by an obligation to issue L.M.S. debenture stock as collateral security. The Government advantage lay in the additional employment created by the placing of orders in the industrial areas.

Shortly our standpoint is, firstly, that works shall not be undertaken by us at the stockholders' expense for non-railway purposes and, secondly, that we have neither asked for nor received any public

assistance for anything done or proposed to be done for railway purposes.

ELECTRIFICATION OF THE WIRRAL LINE

The electrification of the passenger services on the Wirral Section, one of the works carried out under the provisions of the Government Guaranteed Loan arrangement, was put in hand to join up the section of the lines on the Wirral Peninsula to the Mersey Railway, so that passenger trains can run to and from Liverpool Central and West Kirby and New Brighton without the change that has hitherto been necessary at Birkenhead Park. The line will be opened for electric service on Monday next.

This will speed up the service considerably and offer a convenient and comfortable route in and out of Liverpool, and in many instances should enable workers in Liverpool to get home to their midday meal. During the rush hours a ten-minute service will be run between West Kirby and Liverpool and also between New Brighton and Liverpool, and in the off-peak hours there will also be an improved service.

THROUGH SERVICES

In order that the same trains may run over both the Mersey Railway and the Wirral Section, the Wirral line has been electrified on the 600-volt third-rail system. By arrangement with the Mersey railway the L.M.S. trains will run between West Kirby and Liverpool Central and the Mersey Company's trains will run between New Brighton and Liverpool Central.

Power is taken from the Liverpool Corporation by duplicate cables through the Mersey Railway Tunnel to the main sub-station at Birkenhead North, which is the principal point of control. From there, 11,000-volt lines are taken to the other five sub-stations on the system.

Many new technical features have been introduced on the system, such as in the design of the third rail, in welded bonding and in air-operated doors on the rolling stock. The stock is of a light type and the equipments have been designed and laid out specially for easy and economical maintenance. One interesting feature is that all the outer sub-stations are controlled from a main sub-station at Birkenhead North, there being no sub-station operators at the other sub-stations.

WAGES

In February last year I mentioned that the Railway Staff National Tribunal had from August, 1936, reduced the 2½ per cent. deduction to 1½ per cent.

In April last the three Railway Trade Unions submitted claims for the restoration of the remaining 1½ per cent. deduction and the conditions of service which were modified at the time the percentage deduction was made in 1931. In addition they asked for certain improvements in conditions of service.

The claims of the Unions were discussed under the standing scheme of negotiating machinery, and, as agreement was not reached, they were submitted by the three Unions to the Railway Staff National Tribunal on July 1, 1937. The Tribunal, under the chairmanship of Sir Arthur Salter, issued a decision under which the 1½ per cent. deduction ceased to apply as from August 16, 1937. The Tribunal also conceded certain improvements in other directions, including increases to the lower-paid staff.

The cessation of the 1½ per cent. deduction was also applied by agreement to the railway shopmen, and in the settlement covering this section of our staff, made at the National Railway Shopmen's Council, it was agreed to grant a week's annual holiday with pay to all shopmen commencing with 1938.

COST TO THE COMPANY

The total cost to the company of giving effect to these decisions, including the application of the findings to other staff similarly affected, is £1,215,000 per annum.

Further increases in the labour cost have followed on the rise in the "cost of living." The rates of pay of certain staff included in the various National Agreements affecting clerical and conciliation grades are subject to an increase or decrease of 1s. per week on a rise or fall of 5 full points in the "cost of living" index figure compiled by the Ministry of Labour. The recent additional expenditure to the company on this account is approximately £285,000 per annum.

The average number of staff employed during 1937 increased as compared with 1936 by 5,705 (or 2½ per cent.), but at December 31st our staff was 7,056 more (or 3.1 per cent.), than at the same date in 1936. Consequent upon the increases I have mentioned in labour costs, including those in August, 1936, and the employment of

additional staff to meet the increase in volume of business, our labour bill for 1937 was £1,890,000 greater than in 1936.

TRANSPORT ADVISORY COUNCIL

You will remember that a Transport Advisory Council was appointed composed of 29 representatives of the transport industry, including three for the railways and from time to time the Minister has referred various questions to it. It was also the intention that it should examine, on its own initiative, the broad issues of transport problems. Accordingly, three years ago it began an investigation of service and rates in relation to goods traffic borne by rail, canal, road and coastwise shipping, and decided that the first part of the investigation should be into the road transport section.

THE QUESTION OF CHARGES

On the question of charges the Council reports that all forms of transport should, where practicable, be rate controlled, and points out that while the railways are controlled by an elaborate rate structure, canals are to a very limited extent subject to maximum rates and coastwise shipping and road hauliers are entirely free from rate control. They considered what should be done in regard to road transport and reached two conclusions, namely (1) the internal organisation must be regarded as an essential preliminary to further progress; and (2) the stabilisation of wages, working conditions and rates within the industry requires to be dealt with before serious progress can be made in its relation to other forms of transport.

The special committee appointed to examine the present position as regards wages has recommended that the wages and conditions of service should be subject to new regulation machinery which would ensure that there would be uniformity of practice throughout the country and that minimum wages would be enforced. The Transport Advisory Council recommended that effect should be given to these proposals by the legislature at the earliest possible moment that it is desirable to fix some reasonable time limit within which the machinery should become effective, observing that "the settlement of this question will be a great step forward; indeed, no real co-ordination as between road and rail would be possible without it."

COUNCIL'S RECOMMENDATIONS

On the rates side the Council recommend that as a first step opportunity should be afforded for the road hauliers to build up a structure of charges for their own industry in relation solely to factors affecting road transport, without necessarily relating them to charges in other forms of transport. It was not suggested that road charges should be quoted on some cast-iron system, but rather that the structure as a whole should be elastic, and be capable of adjustment by simple and quick procedure. It was agreed, however, that there must be suitable machinery for enforcement of agreed road rates as between road operators themselves; also to set up statutory Area Rates Committees; to appoint Area Rates officers who would approve or modify schedules of agreed rates put before them by the Rates Committee in their area; and appoint a Road Rates Tribunal for the whole country consisting of a representative of the road industry, a representative of traders and an independent chairman.

The railway companies did not ask that there should be any form of compulsory agreement as to rates, but preferred that any agreements should be entirely voluntary, and the road members concurred in this view, agreements being terminable at reasonably short notice by either party to lapse until replaced by a new agreement. The Council suggested that conferences should be held as early as practicable.

The Minister of Transport has announced that the Government accept the broad principles of the Report and propose to introduce legislation accordingly.

OUTLOOK FOR 1938

Comparing the two months already elapsed with 1937 there has been, ignoring the 5 per cent. rate increase, a decline in the revenue from general merchandise, but it has been made good by an increase in minerals, coal and passengers. Although in many particular industries in 1938 it would have difficulty in maintaining the 1937 results, the general prospect over our system is that trade as a whole may be just about the same level as in 1937—perhaps a little above it. If this proves to be the case, the net financial results will then reflect the increase in rates and fares for nine months, less the increase in wages for seven, and also less any

general increase in the cost of our supplies. Economies in working continue to be made in many directions, and although road competition remains severe the position of our undertaking compares very favourably with that of railways generally throughout the world.

I now move: "That the report now read, with the statement of accounts, be received and adopted."

Mr E. B. Fielden (deputy-chairman) seconded the resolution.

STOCKHOLDERS' VIEWS

In the course of discussion Councillor J. Wilson congratulated the Chairman on his speech and the directors, officials and staff on the successful manner in which they had handled the increased traffic during the year under review. He expressed regret at the illness of the Secretary and said that he would like to take the opportunity of saying how greatly he appreciated his services to the company. Although he was secretary to the largest organisation in the British Isles, he always replied personally to any stockholder who sent him a letter containing constructive suggestions.

Mr E. C. McAdam said that he was glad to see that the chairman had safely returned from his trip to Australia, and expressed the hope that he had come back full of ideas for increasing the profits of the company and for keeping down expenditure.

Sir Charles Stuart-Williams said that in his view the results of the operation of the line during the past year had been extremely satisfactory and he was sure that all stockholders desired to express their appreciation.

The Chairman, replying to a question as to whether he would do anything towards amalgamating the four main line railway companies, said that most of the advantages that could be expected from amalgamation had been secured in recent years by pooling schemes and co-operative working. There was not much which could be got by an amalgamation of the four companies in the way of further financial benefits and there was no lack of common front in dealing with general problems, such as relations with trade unions.

The resolution was carried unanimously; the dividends as proposed were approved, and the retiring directors and auditor were re-elected.

The proceedings terminated with a vote of thanks to the chairman, directors, management and staff.

D. NAPIER AND SON, LIMITED

A DEFINITE IMPROVEMENT

The twenty-fourth ordinary general meeting of D. Napier and Son, Limited, was held, on the 4th instant, at Acton.

Sir Harold Snagge, K.B.E., the chairman of the company, said that shareholders no doubt would feel some concern at finding once again in the report the unhappy paragraph relating to the non-payment of a dividend on the 8 per cent. non-cumulative preference shares or on the ordinary shares. He hoped, however, that they would not allow their very natural disappointment to obscure the favourable features in the accounts, which definitely indicated marked improvement in the company's position and prospects.

He believed, indeed, he was justified in going further and in saying that there was ground for thinking that the end of the period of waiting had been reached at last, that the profit and loss account and balance sheet showed a much better state of affairs all along the line, and, unless all the calculations of the board were upset, it might fairly be regarded as presaging a resumption of dividends at no distant date. A trading loss of £24,902 at September, 1936, had given place to a trading profit of £58,172—a trading swing in the right direction of £83,000. After making all the usual deductions and providing for depreciation they were carrying forward to current year's accounts the sum of £99,534 compared with £88,051.

Their orders in hand—the surest barometer of all—had grown upwards of tenfold from the modest figure of £101,000 at September, 1932, when the company's fortunes were at their lowest ebb. At the close of last year they stood at the highest figure reached in the company's history, and the board had reason to think that the current year would show no falling away.

The board had concentrated all efforts on developing and producing aero engines which should satisfy the demands of aircraft designers and the somewhat capricious requirements of the Air Ministry. To that policy the board proposed rigidly to adhere. Thanks in the main to Major Halford, who had been responsible for designing the "Rapier" and "Dagger" engines, the leeway had in a large measure been made up. They had in hand development work of great importance in regard to which he was precluded from speaking with any precision, but upon which they had reason to build the highest hopes.

The report was adopted.

UNITED KINGDOM PROVIDENT INSTITUTION

£63,000,000 OF ASSURANCE

A HIGHER RATE OF INTEREST

INVESTMENT PROBLEMS AND POLICY OF CHEAP MONEY

SIR ERNEST BENN'S PLEA FOR JUSTICE FOR SAVERS

The ninety-seventh annual general meeting of the members of the United Kingdom Temperance and General Provident Institution was held on Wednesday, March 9, 1938, in the Incorporated Accountants' Hall, Victoria Embankment, London, W.C.

Sir Ernest J. P. Benn, Bt. (the chairman and managing director), in opening the proceedings, said:—My lords, ladies and gentlemen, I move the adoption of the accounts which are before you and the directors' report on the ninety-seventh year of the work of this wonderful Institution.

TRADE PROSPECTS

The year's account has received an appreciable benefit from better dividends secured from your industrial investments and future accounts will suffer should there be any setback in trade. We can, I think, be reasonably hopeful in this much-discussed matter. All the known factors taken together point towards continuing prosperity. Employment figures reach totals beyond anything thought possible a few years ago. Unemployment figures tend more and more to indicate the growth of a valuable social service, rather than unemployment as the term was formerly understood. We have over three million new houses. Some people talk as if the only economic value of a house was in its building, and forget that every house is the permanent foundation of a continuing trade in all things that make it a home. Budget prospects are better than was generally expected, and nearly all the indices and statistics with which we are satiated provide grounds for optimism. But we cannot assess the unknown factors, such as, for instance, the psychological factor.

If everyone believes that a slump is coming, and acts accordingly, then undoubtedly a slump will arrive. Attention should, I think, be called in this connection to a curious new phenomenon. There is, I suspect, a risk of a new political technique. Governments are vulnerable, and rightly vulnerable, according to the state of trade prevailing during their tenure of office. They may have little or much to do with that state of trade, but they cannot escape blame, nor will they fail to take credit, as the circumstances permit. If in the future it is to be considered the duty of the Opposition, whatever Government is in power, to promote the slump psychology in order to damage that Government, a serious new threat to prosperity will appear upon the scene. Having regard, however, to the quality and experience of our electorate, I cannot think that any such sinister device can possibly benefit those who are foolish enough to adopt it.

THE FIVE MILLIONS

I am very proud to report to you that the year 1937 took us above the five million mark in new business.

If the Institution were a company, with its eye upon dividends, you as shareholders would be gratified to note this spectacular advance in the amount of business done. Being a mutual institution, and having no shareholders, we look upon the matter from a rather different point of view. We exist to confer upon the public the benefits of economical and adequate life assurance, and we measure our success in the fulfilment of that mission by the response of the public to our endeavours. To have put upon our books in a single year £5,000,000 of new assurance means profit and added security to all our members, but it also means that a few more thousand people have come within that privileged class which we call the assured.

As we are a mutual institution, every new member is a new agent, and if the new members whom we welcome to-day speak as well of the United Kingdom Life Office as the old members have done in the past, we can look forward with confidence to the future rate of business.

It is widely thought that social advancement can be secured by the raising of wages and the increase of the incomes at the lower end of the income scale. That very natural opinion is only true if it is held as part of a wider view. France and America have each provided us in the recent past with illustrations of the dangers of simple processes such as all-round increases in wages, or wholesale distributions of borrowed money.

The truth is that an increase in income is only good provided that a proper proportion of that income is saved—that is to say, that the due relations between capital expenditure and expenditure for consumption are maintained.

This is where our five millions, and the general increase in life assurance, claim an important place in public affairs.

If we look at the savings banks, the building societies, the friendly societies, the insurance offices, and, in our case, at our £5,000,000, there is no doubt that our people, with their traditional wisdom, are doing their utmost to save a full proportion of the higher incomes which better times are placing at their disposal. This is not a matter which the experts can arrange for us. It concerns the breeding and the sound common sense of the individuals who compose this nation, and from it we can derive a complacency about our security and the future state of trade which is, unfortunately, not available to less happily-favoured peoples.

CHEAP MONEY

Year by year I have felt it a duty to utter a warning against the forcing of a cheap money policy. Last year I talked about the "five per cent. mentality." To-day we have the satisfaction of finding ourselves a good step nearer to that ideal.

You will remember that I speak for the savers, and I think it is time to speak even more emphatically. We savers have for too long suffered the injustice of a one-sided market, a borrowers' market, forced upon us by artificial means. As savers, we can claim to be at least as valuable to the community as the spenders, and far more valuable than the spendthrifts. I am not speaking on behalf of the money-owners, the wealthy, the capitalists, as those terms have for so long been understood, or misunderstood. Your report shows you that our average policy is £759. I speak, therefore, for many thousands of hard-working people, tradesmen, clerks, civil servants, schoolmasters, and the like, each of whom, by dint of a lifetime's saving, hopes to leave behind him or her £759. In the great majority of cases this is all they will leave. I am entitled to speak for all members of provident societies of all kinds, whose funds together constitute the bulk of all the money which is now so much managed.

These people, and as a class they embrace practically the whole population, are ignored, on their saving side, by the advocates of cheap money.

I am one of those who think that the commercial and industrial value of cheap money can be overstated, and that view is confirmed by the experience of the last few years. In 1929, when the Bank rate was 6½ per cent., joint stock bank advances totalled £990,000,000. In 1937, with a 2 per cent. Bank rate, the banks have only been called upon to lend £924,000,000 to the whole of their customers.

So little does industry appear to appreciate the value of this cheap money that the banks have been driven to employ it by increasing their investments to two and a half times the 1929 level, although the investment of funds has never been regarded as more than a subsidiary function of a bank.

Happily this position is slowly, albeit too slowly, righting itself, and, as I have reminded you, there is already a marked tendency towards a better rate of interest. I notice that in Holland (for this difficulty is not peculiar to us) the life assurance offices and savings banks have formed a "front of large investors" to uphold the rights of the unprotected policy-holder and depositor, and are declining to subscribe to municipal loans at the present unremunerative rates.

The improvement in the rate of interest experienced during the year has, of course, resulted in a substantial depreciation in the values of your investments. Seeing, however, that we have never taken any credit for the artificial appreciation caused by the cheap money policy, we are free from worry as those puffed-up values steadily subside. We have ample reserves and are fully prepared for a return to natural capital values with their appropriate rates of interest, such as will enable us to maintain intact our splendid benefit and bonus records.

MONEY MANAGEMENT

We are very grateful to the Chancellor of the Exchequer for his recent loosening of the control on foreign investments, and in time we shall benefit from this restoration of some of our former freedom. But in the money market at home we are still said to be "managed." Nobody seems to know exactly what is meant by "management," and there is a general uncertainty as to who does the "managing."

The British Constitution is, happily, unwritten. We have always been fortunate in a combination of respect for tradition with a liberty to do the right thing as dictated by the circumstances of the time. The present somewhat nebulous monetary arrangements are, therefore, altogether within our well-tried rules. If, however, as some people appear to desire, we are to commit ourselves to a definite and permanent policy of management, two urgent questions must be asked and answered.

Is it to be management by the Treasury, or management by the Bank of England? The constitution of the Bank was very carefully drawn so as to make it free from political and bureaucratic influences, and our safety for more than a century has depended upon that carefully devised system of check and balance. That question I merely mention, but do not propose to debate.

Secondly, and from your point of view a more pertinent question, is this. In whose interests is this management to be conducted? Is it the borrower's or the lender's: the people who want the money or the investors? Are we to be managed into spending, or managed into sound finance?

A WORLD PROBLEM

If the management of money is to be management by government, then further questions arise. Government is by its nature a borrower rather than a lender. Management may not, therefore, be a process of checks and balances, of managing fairly as between different interests, or redressing grievance and restraining abuse, but may degenerate into a one-sided device to enable Government to borrow cheaply. This is much more than a local question, and, like everything that affects the London money market, it concerns the whole world. Management is at its best in dictator countries.

It is quite possible that the management of money by Governments, in the interests of Governments, may have played some part in bringing about the deplorable armament position. The armament racers might have been handicapped if they had been limited to such money as they could tempt out of the pockets of the genuine savers.

I must not, however, widen the issue, but confine myself to management as it concerns the safe investment of insurance funds. Such modest management as has existed in the past has aimed at dear money when required by the circumstances, but the advocates of modern management appear to visualise a world in which money will become progressively cheaper. That, to my more limited vision, means a world in which saving becomes progressively less worth while.

Such a prospect has no attractions to members of a mutual insurance institution.

These are big and difficult questions, and my only justification for once again making mention of them is to support the plea that management, whoever does it, must be an all-round affair, conducted in the interests of all.

PUBLIC BORROWING

Whatever may be the merits of a cheap money policy at home, it is hard to see the advantage of a low rate of interest in the case of an overseas loan. Our own Dominions will always be welcome, and indeed preferential, borrowers in London, but, however we look at it, we cannot escape the conclusion that we have voluntarily, by our recent Treasury policy, conferred considerable benefits upon some of our sister kingdoms. Australia would be offended if we talked of subsidising her, and yet that is in effect what we have done. By recent operations Australia has saved £3,000,000 per annum in interest. That, however, is not the whole story, for we have also adopted the curious notion that commodity prices should also be managed—but upwards. Thus, for the export of a given quantity of wealth to Australia, we have arranged to receive a smaller return of wealth on interest account, and also to reduce our rightful dues still further by bolstering up the money value of the smaller quantities.

I hold no brief against Australia, and if her managers have been wise enough to take advantage of the folly of ours, she is to be very heartily congratulated.

One of the most obvious effects of control, even the limited control of to-day, is that industry is borrowing too little and Governments are borrowing too much. Public borrowings are now of two kinds—borrowings for new requirements and borrowings to replace maturing

debts, and it is noticeable how, especially with our local authorities, old debts almost always seem to require to be renewed. One sometimes wonders what has become of the revenues which at the time of the original borrowings were held up as the certain means of repayment, and of the sinking funds arranged for the amortisation of these loans.

The New Issue Market is obliged to consider its daily needs, and, being only the medium between the borrower and the permanent investor, may not always attach enough importance to the ultimate worth of a loan. As long-term investors, insurance directors are in a very different position.

A CASE IN POINT

A case in point is provided by the recent raising of £10,000,000 at 3½ per cent. by the Government of the Dominion of Canada. Part of the excuse for this flotation was the maturity of the 3½ per cent. Loan of 1888. Under the influence of a cheap money policy, and in the present circumstances of the market, the Government of Canada thought it necessary to do no more than mention the simple fact that the Loan of 1888 was about to mature.

I went to the trouble of looking up the prospectus of 1888. Messrs Baring Brothers arranged a loan on 50-year Land Grant Bonds of the Canadian Pacific Railway to be repaid out of the proceeds of lands. The Government of Canada guaranteed interest on the loan and accepted the position of trustees, the prospectus stating that

"the net proceeds of the sales of the said lands shall from time to time be paid over to the Government . . . to constitute a fund to be set apart and held by the Government exclusively for the purpose of satisfying the principal of the said bonds."

So far as I can ascertain, those very rigid conditions have been completely fulfilled, and this money raised in 1888 has been repaid in full to the Government of Canada, acting as trustees for the lenders who accepted Messrs Baring's invitation 50 years ago. Public finance in Canada, as well as here, seems able to escape the obligations and safeguards common to ordinary finance, and so the Dominion Government, as trustees, having received the whole of the money on trust, and being under the most specific obligation to hand it over to the lenders can come back to the same market and, without question asked, proceed to borrow fresh money, they having, so far as I can see, applied these trustee funds to other purposes in the meantime.

In justice to Canada, it should be said that there is nothing exceptional about this particular loan. I select it as a quite recent and typical example of public borrowing, to show how the forcing of a borrowers' market tends to weaken the safeguards formerly thought to be appropriate to the high standing of public finance.

RATE OF INTEREST

Our own accounts may at first sight appear to weaken these arguments, for we have earned 2s. 11d. per cent. gross and 2s. 1d. per cent. net more than in 1936. The net rate of interest on the book value of your funds stands at the highly satisfactory figure of £4 5s. 7d. per cent. We may be asked, with such a record, what is there to grumble about? That is a very short-sighted question, which overlooks all the care and caution of a long past.

New money, such as the £888,000 increase in our funds this year, has not and could not have been invested at these average rates. This increase in our interest earnings reflects the strength of our hidden reserves, and is also due in some measure to movements from one group of assets to another.

FUNDS

The Institution's funds grow steadily year by year, and, including the reserve fund, now stand at over £25,000,000, there being an increase in 1937 of £888,308.

It is not customary for the details of the business in force to be published, but I find in the chairman's speech in 1924 it was stated that the total of our policies amounted to £32,700,000, including bonus, and at that time the funds were £13½ millions.

On December 31, 1937, in addition to passing the milestone of £5,000,000 new business, the total sum assured by our policies, including bonuses, was over £63,000,000. The security for the fulfilment of each of these contracts when the time comes for payment is over £25 millions of funds, amply sufficient on the most stringent basis of valuation.

EXPENSES OF MANAGEMENT

The ratio of the commission and expenses of management to the total premium income shows an increase over the previous year of

.8 per cent., but, as has been explained on previous occasions, the amount of single premium business transacted distorts the crude expense ratio, and the actual rise is under .6 per cent.

In these days of keen competition the expenses of procuring new business must tend to increase, and it might well have been expected that our record new business of £5,000,000 would have been attended by a bigger increase in the expense ratio.

MORTALITY

It has been the custom from the early days of this Institution to report annually the result of the actuary's comparison of the deaths actually experienced and those expected.

It is common knowledge that the longevity of assured lives has improved very considerably since the days when this Institution was founded, and although changes in the standard of comparison have been made as further mortality tables have become available, it has become the normal custom, up to two years ago, for us to publish figures showing that the actual claims were on the average only about 70 per cent. of those expected. The value of these figures when the Institution's business was very young was considerable, as they provided a good indication as to whether we had made a profit from mortality or not. The strain on the office in meeting a death claim is the amount by which the reserve held against the policy falls short of the sum assured and bonuses, and as these reserves are now considerable, the crude comparison of the actual and expected deaths, without having any regard for the reserve held against the claims, tends to give a misleading impression as to the amount of profit derived from our favourable mortality experience.

In the last three reports the expected claims have been based upon the most recent tables of mortality, and, as was to be anticipated, the percentage of actual to expected deaths is much nearer 100. It is possible that we may at some time show a percentage exceeding 100, but even so, we may well have made a considerable profit from mortality. The question is a highly technical one, and the reason for my mentioning it is that we propose in future to discontinue the publication of these mortality figures in the annual report, and to deal with them only in the chairman's speech at the annual meeting, where their true significance can be more fully explained.

BONUS YEAR

We are now in the last year of another triennial valuation period. At the end of 1938 a valuation of the Institution's assets and liabilities will be made, and the surplus available for distribution to our with-profit policies will be known.

This office has always made its valuations on the most stringent basis, it being the declared policy of the directors to rank first the security the Institution gives. Our next consideration is to make each particular contract as remunerative as possible by the addition of periodical bonuses. I do not propose to indulge in any forecast as to whether the next bonus will be the same as, or a trifle higher or lower than, the substantial rates we are now paying, but I can say that the position to date is a thoroughly sound one. I am confident that, barring catastrophes, a with-profit policy in this office will turn out in the long run to be a more profitable contract than a guaranteed without-profit policy.

MANAGEMENT

Three important changes have occurred during the year among the higher ranks of your officials. Our distinguished secretary and actuary, Mr W. G. Barrett, upon whose guidance and wisdom we have relied for many years, reached the retiring age in the autumn, and, to the regret of the directorate and the staff, decided to enjoy the leisure to which his forty-three years in your service had given him an unquestionable right.

To fill the vacancy thus created, the directors appointed our accountant, Mr P. G. Leveritt, to the position of first officer of the Institution. Mr Leveritt's personal qualifications, allied to his long acquaintance with the work of the Institution and his intimate knowledge of all the branches as well as of the departments at the head office, fit him for the post in quite an exceptional way, and after an experience of only six months the board is satisfied that the interests of the Institution were never in safer hands.

Mr C. E. Kingham has figured for four years past as "assistant actuary." As, however, the actuary was also secretary, the term "assistant" had less than its usual meaning. Mr Kingham now carries on his well-qualified shoulders the full responsibility of actuary without prefix or suffix, and as the most distinguished pupil of the Barrett School he can be relied upon to guard us as securely as ever.

These two promotions have made room for the advancement of two more of the best of your servants, and Mr F. Ives thus becomes chief of the accounts department and Mr C. G. Maggs head of the Actuarial department.

In all these circumstances I have, for the fourth time, the honour to move the adoption of the report and accounts. With an improved knowledge of the past and the present, I am able to commend them to you with, if that is possible, an enhanced confidence in the future of the United Kingdom Temperance and General Provident Institution.

MARQUESS OF LOTHIAN'S SPEECH

The Marquess of Lothian, in seconding the motion, said:—After the masterly survey to which you have just listened, I think you will agree that there is no need for me to say very much about the annual report. Despite the unsettled condition of the world, the Institution marches steadily from strength to strength, and all the essential facts about its affairs are clearly set forth in the report and accounts and the chairman's address. As a Mutual Provident Institution, I think we can congratulate ourselves on the way in which its business is being conducted. Though we were all sorry to see our old friend, Mr W. G. Barrett, retire during the course of the year, the steady increase in our business is proof of the efficiency and loyalty of the staff. The principal problem which confronts the directors from week to week is that of where they should invest the funds of the Institution to the best advantage. The good old days of stable and gilt-edged securities are no more. The more expert the financier the more uncertain he seems to be as to where real stability is to be found. Safety clearly lies in distributing our investments over a wide variety of those fields which promise not only an adequate yield but security. This is a subject in which your chairman, assisted by Dr Bray, takes the closest interest and exercises an extraordinarily sane judgment, and the fact that the rate of interest on the insurance fund during last year was £5 4s. 9d. per cent. before tax was deducted is proof of the success with which he has directed your affairs. Moreover, though I do not use the word in a political sense, there are quite enough conservatively minded directors on the board to enable me to assure you that the rate of interest is not a result of any speculative investment of your funds. It is always a matter of reinsurance to me every year, when the comparative tables are prepared, to see that all the best insurance companies seem, broadly speaking, to be pursuing the same general policy of investment.

INCREASE IN ENDOWMENT BUSINESS

I believe that actuaries are satisfied that the "all life with profit" policy yields the maximum return to the policyholder. That a remarkable change has come over the insurance habits of the public can be seen from the fact that, whereas in 1905 the Institution's ordinary whole life and endowment business was divided in the proportion of 54 per cent. whole life and 46 per cent. endowment, in 1937 the whole-life policies comprised 28 per cent. and the endowments 72 per cent. It is difficult to assess accurately the reasons for this change. It is partly, I think, due to the fact that insurance policies are aggregated with the individual's other assets at death for purposes of death duties. People object to saving money in order that the State rather than their children or relatives should be the beneficiary. It is partly, I think, due to the social services, which means that once a child has had his education and is launched in life the risks of destitution are less than they used to be. It is partly, I suppose, that the individual wants to enjoy some of the fruits of his own abstinence in his own age, or at any rate to distribute his savings among those whom he wishes to benefit in his own lifetime rather than to wait for the State to take part of them after his death. At any rate, the change-over from all-life to endowment policies is a very significant indication of the changing social habits of our time. It is only further proof of the immense and growing importance which the principle of insurance has come to occupy in the conditions of modern civilisation.

LESSENING RISKS OF MODERN CIVILISATION

When I was in India recently I visited an asylum directed by a very able Indian doctor who had studied and visited mental hospitals both in England and the United States. I asked him whether he could detect any general differences in the causes of mental derangement in India as compared with the West. He replied that in India the main causes were physical, malnutrition, childbirth, and so on. In the West a much greater part was played by uncertainty and anxiety about the future. In the Indian village, though the standard of living may be terribly low, the individual has a life job and is part of a community which has some obligation to look after him in the

event of serious trouble. In the West few people who have not got independent resources of their own feel really secure either of employment or pension, and a great many are actually insecure or dependent on charity or the dole for a bare subsistence. Moreover, the West has lost its old faith that providence directs the individual life of man and therefore that it was not the individual's business to worry about what providence had decreed for him. For the great mass of the Indian population, on the other hand, fatalism is a corrective to anxiety and worry. If this Indian doctor is right, the extension of the habit of insurance is one method of diminishing these growing anxieties and doubts which are the cause of so much nervous illness in our time and which, if my Indian friend was right, are contributory factors in increasing the number of people who find their way to mental hospitals. The steady growth in our own business goes to prove that, consciously or unconsciously, more and more people are coming to realise that insurance is perhaps the best single contribution they can make to lessening the risks and uncertainties of modern civilisation.

LORD PLENDER'S REMARKS

Lord Plender, G.B.E., in supporting the motion, said:—Mr Chairman, ladies, and gentlemen,—In response to the chairman's wish that I should address you, I would like first to offer my congratulations on the very satisfactory report which has been presented to the members. The past year has again been one of ordered progress and marks a further record in the volume of new business transacted. Such progress and healthy growth are founded upon the financial strength and high reputation deservedly enjoyed by the institution, and upon the enterprising and yet guarded way in which its affairs are conducted.

May I refer now to wider matters? I see little signs in this country of any material retrogression in business generally in the near future. But it is not possible to look far ahead in these days, and whilst the country's internal trade is active the outlook for its foreign trade is less clear. There is the recession which has

occurred in the United States of America which, if continued, must adversely affect our foreign trade both directly and indirectly through the reduction in the purchasing power of the primary producing countries, of whose products the United States is a large consumer. There is further the unsettled state of Europe and the movement on the part of certain Continental countries towards more economic self-sufficiency, and there are also the deplorable conditions in the Far East.

CHANGES IN THE UNITED STATES

On the other hand, changes are apt to occur with bewildering rapidity in the United States, where there must be much leeway to be made up in the provision of capital goods and equipment, and the negotiations now in progress between our country and the United States in reference to a trade agreement should, if successfully consummated, and with due regard to our Imperial interests, have far-reaching and beneficial results.

And we must not ignore the conversations now taking place between our Government and that of Italy with a view to lessening tension and bring about a genuine understanding and good will. It is to be hoped that they will meet with solid success, and among other great issues contribute to a general improvement in international relations and trade.

Ladies and gentlemen,—It is not by pessimism that the ills of the world will be cured—(Hear, hear)—but rather by a belief in the vitality of faith and freedom, with strength to defend them which this nation strives to exemplify in its policy at home and in foreign affairs. (Applause.)

After discussion the motion was carried unanimously.

Alterations to a number of the rules of the Institution were moved by the Chairman, seconded by the Right Hon. Isaac Foot, and approved by the meeting.

A vote of thanks to the staff was proposed by Mr F. H. Elliott and acknowledged by Mr P. G. Leveritt.

Sir Thomas Barlow, Bt., K.C.V.O., M.D., F.R.C.S., moved a vote of thanks to the chairman, which concluded the proceedings.

year) and 13.4 million pengő current account deposits (155.7, against 142.3 million pengő in 1936). Deposits entrusted to the Bank have accordingly grown at a rate far in excess of the average accumulation of deposits in Hungary, and have reached the highest level recorded since the post-war stabilisation of the Hungarian currency.

Foreign liabilities of the Bank, figuring under the head of "Sundry Creditors," have experienced a further notable decrease by 4.8 million pengő, and figure accordingly at 24.7 million pengő, as against 29.5 million pengő in the previous year.

ASSETS

Cash in hand, clearing account deposits and accounts with banks and bankers show an advance totalling 4.2 million pengő. Debtors and bills show a material rise, viz. bills 4.2 million pengő (89.2, as against 85 million pengő in the previous year) and debtors 8.7 million pengő (138.3, as against 129.6 million pengő in the previous year), so that the aggregate advance of debtors and bills totals 12.9 million pengő (227.5, as against 214.6 million pengő in the previous year). It follows that the Bank satisfied the credit requirements of its customers to a great extent also during 1937.

CONSERVATIVE VALUATION

Stocks and participations figure at 57.1, as against 58.1 million pengő in the previous year. This valuation leaves considerable latent reserves.

Guarantees have been reduced by 1.7 million pengő (39.4, as against 41.4 million pengő in the previous year). This is due to a noteworthy decline in foreign liabilities of this kind, not included in the item "Sundry Creditors," which exceeds the increase of inland guarantees due to the enhanced business activity.

The inland branches of the Bank continued to develop a successful activity, and the foreign branches have likewise achieved satisfactory results. The course of business of the goods departments continued satisfactory.

Earnings derived from interests fell off somewhat in consequence of the continued shrinkage of the interest margin; on the other hand, an advance may be recorded in the earnings on commissions. The slight increase of expenditure resulted mainly from the engagement of new employees and from measures for the benefit of the staff, whereas general expenses do not show any noteworthy change as compared with the previous year.

The business results of the industrial undertakings controlled by the Bank have developed satisfactorily, special mention being due to the improvement in the degree of employment of industries producing capital goods.

REFUGE ASSURANCE COMPANY, LIMITED

PROGRESS MAINTAINED

REDUCTIONS IN EXPENSE RATIOS

INCREASED ALLOCATION OF PROFITS TO INDUSTRIAL BRANCH POLICY-HOLDERS

INCOME EXCEEDS £13,000,000

ASSETS £68,700,000

The seventy-fourth annual ordinary general meeting of the Refuge Assurance Company, Limited, was held, on the 7th instant, at the chief office of the company, Oxford Street, Manchester.

Mr J. Wilcock Holgate (chairman of the company) presided.

The Secretary (Mr J. W. Moss), having read the notice convening the meeting and the auditors' report,

The Chairman, in moving the adoption of the report and accounts, after referring to the retirement of Mr Albert Swift, the late agency manager, and the very valuable service he had rendered during a period of over 47 years, said:—

Gentlemen,—The report and accounts now before you afford, I think, gratifying evidence of the continued progress of this company during the past year, for though there was a tendency towards a slowing down in the upward trend of trade and industry in the latter part of the year, we were fortunate in that the general prosperity of the country was well maintained, and it is evident that the industrial recovery has been gradual and well-balanced. Even in times not distinguished by political doubts and disturbances as they exist to-day, it would surely be unreasonable to expect recovery to continue at one fixed pace; it is natural that there should occur halts and temporary fallings away; and in surveying the industrial position of this country and its future prospects it is encouraging to reflect how systematic has been our progress and upon how healthy a basis it has been built up.

In this connection the situation in America to-day is one which cannot but have its reaction here. In that country, as in others, the industrial position is largely conditioned by political needs and considerations, and it seems unfortunately clear that the general establishment of freer trade relationships, with all the benefits that they connote, must wait upon the advent of confidence in the world political situation.

FEATURES OF THE YEAR'S OPERATIONS

Arising out of our operations during the past year, several features call for special mention. In the ordinary branch the amount of our new sums assured has only once been exceeded in the history of the company, whilst in both branches the expense ratio has been appreciably reduced: in both branches also the mortality experience—as more favourable than in the preceding year, and was well within our expectation; whilst a reliable indication of the satisfactory nature of economic conditions generally is to be found in our high percentage of industrial branch collections of premiums and in the decreased demand for cash surrenders and loans in the ordinary branch.

MORTALITY

The period under review appears to have been one of light mortality generally, and certainly this was the case as regards policy-holders of this company. The normal seasonal maximum in February was higher than in the preceding year; but apart from this there was no indication of any such disturbing influence as an epidemic would exert. There was, as is usual, a close correspondence between the course of our industrial branch claim ratios week by week and that of the death-rate per thousand in the large towns in England and Wales; a correspondence which indicates how brief a period elapses between death and the payment of a claim, as may be shown in the accompanying diagram.

ACCIDENTAL DEATHS

Industrial assurance is so integral a part of the economic life of those classes of the community to which it is applicable that hardly a single disaster occurs on land or sea without involving the payment of claims under industrial assurance policies. In the single instance of the Brymbo Colliery explosion in July last the company paid the sum of £416, including £51 under an ordinary branch policy. In addition there was paid out in claims during the year in this branch alone a sum of £70,521 on account of deaths through accidental causes, of which £18,022 was accounted for by falls

at home or in the street—a striking illustration of the force of that element of the unexpected to which we are all subject, the financial effects of which it is the purpose of life assurance to mitigate.

COMBINED RESULTS

Turning now to the details of our results, our total premium income for the year amounted to £10,481,573, showing as compared with the previous year an increase of £191,798. The net interest income was £2,657,322, showing an increase of £72,447 over the corresponding figure for the preceding year. The amount paid in claims by death or maturity during the year was £6,648,810, including £3,683,847 by way of maturities alone, the total figure representing the payment of over £22,000 each working day; and the total sum paid under this head since the inception of the company is now £109,702,898. The aggregate surplus shown by the valuation of the two branches of the company was £2,229,015, and the total assets now stand at £68,709,610, having increased by £3,081,454 during the year.

ORDINARY BRANCH

In the ordinary branch, the number of new policies issued by way of periodical premiums was 54,961, at annual premiums amounting to £476,335, the sums assured thereunder amounting to £8,530,460, a figure which, as I have already said, has only once been exceeded in our history. In addition, there were issued during the year 821 single premium contracts, the premiums applicable thereto amounting to £133,085. It is again interesting to observe that of the total of £8,684,648 new ordinary branch sums assured issued last year, 33 per cent., or £2,866,893, represents individual assurances of £500 and over. In this connection it is remarkable to observe, from a study of the annual reports of the Commissioners of Inland Revenue, to how limited an extent the proceeds of life assurance policies appear in the estates upon which death duty is paid. In the financial year 1936-37, for example, duty was paid in respect of nearly 37,000 estates appearing under the heading "£100 to £1,000 net." Amongst these 37,000 estates the average amount of life assurance was no more than £86. I am tempted sometimes to wonder at an attitude of mind which can permit its owner to make so sparing a use of the one agency whereby there can be created an immediate estate, which by any other means of saving would take many years to build up and I am inclined to believe that whilst numerically, perhaps, life assurance contracts are well distributed, yet in their individual amounts there remains an extensive field in which we may exert our energies with advantage to the social order.

HUNGARIAN GENERAL CREDITBANK

SATISFACTORY RESULTS

PROFITS FURTHER INCREASED

The board of directors of the Hungarian General Creditbank have established, at their meeting on March 5th, the balance sheet for the business year 1937. The profit and loss account closes, less the amounts written off and exclusive of the profit brought over from 1936, with net profits of 2,553,702.32 pengő, as against 2,388,741.93 pengő in the previous year. This amount, plus the surplus of 2,479,959.83 pengő brought over from 1936, leaves net profits of 5,033,662.15 pengő to be dealt with by the general meeting.

ALLOCATIONS

With regard to the appropriation of these amounts, the board has decided to move to the general meeting to be held on March 29, 1938, that 500,000 pengő should be used to increase the ordinary reserve fund; 200,000 pengő should go to strengthen the depreciation fund; and 1,100,000 pengő should be used to endow the employees' pension funds, whereas the remainder of 3,233,662.15 pengő should be carried forward to the account of 1938.

The board's decision to propose these appropriations of the net profits and to declare no dividend has been mainly prompted by the uncertainty of the present international economic and political conditions, which do not seem to be favouring a resumption of dividend payments just now.

REVIVAL OF BUSINESS—INCREASED TURNOVER

The business activity of the Bank shows a further gratifying advance during 1937. Owing to the manifold relations existing between the Bank and the various spheres of Hungarian economic life, the revival of business in general is reflected in a corresponding development in the several fields of the Bank's activity as well as in the advance of its turnover. In this respect special attention is due to the increase of deposits and to the further decrease in the foreign liabilities of the Bank.

The turnover—cash turnover as well as that of pengő-current accounts and foreign exchanges—shows an advance in keeping with the revival of business; the number of customers has also increased.

ADVANCE IN DEPOSITS

The amount of deposits advanced by 20.7 million pengő (from 208.5 to 229.2 million pengő); hereof 7.3 million pengő constitute savings deposits (73.5, as against 66.2 million pengő in the previous

The ordinary branch premium income for the year was £4,627,836, showing an increase of £29,044 over that of the previous year, which takes into account a reduction in the payment of premiums under the new single premium policies of £41,344, as compared with 1936. The net interest amounted to £1,520,431, showing a net yield of £4 2s. 6d. on the assurance fund. The expense ratio was appreciably lower than that of the previous year, being 14.46 as against 14.89 in respect of 1936, and the life assurance fund now amounts to £38,224,041, showing an increase of £1,203,133 during the year, in addition to which there is an investments reserve fund of £1,750,000.

ORDINARY BRANCH BONUS

The annual valuation was again made on a 3 per cent. basis, and the resulting surplus was £1,755,977, which includes £696,032 brought forward from the preceding year. It is proposed to declare a reversionary bonus at the rate of £1 16s. per cent. on with-profit policies, absorbing £941,370, to allocate £104,597 to the shareholders, and to carry forward unappropriated the sum of £710,010.

INDUSTRIAL BRANCH

In the industrial branch our premium income amounted to £3,853,736, showing an increase of £162,753 over that of the previous year. The net interest income was £1,136,890, representing a net yield of £4 12s. on the life assurance fund, which increased during the year by £1,780,865, in addition to which there is an investments reserve fund amounting to £1,750,000. The expense ratio was again reduced, being 33.59, as against 34.27 in respect of 1936.

The average duration of the premium-paying contracts on our books shows a further increase, and is now twelve years. This fact should be considered in conjunction with a further decrease I am able to record in the number of policies falling out of benefit through the non-payment of premiums, which stands now at a figure lower than at any time in the last ten years. You will remember that I referred to this feature twelve months ago, when I remarked that it afforded evidence of the progress we are making in one of our deliberate aims—by careful selection of business and constant service to encourage our policy-holders to keep their contracts in force until the due emergence of the claims, whether by death or maturity. This service, of course, depends entirely upon our regular weekly or monthly calls at the homes of our policy-holders: and the system is one which exactly meets their needs. That this is so the size and steady growth of our business are themselves sufficient proof; and in this connection it was interesting to observe in the Press last June a note regarding a letter addressed to the Rehousing Committee of a certain municipality by the tenants of corporation flats, asking amongst other things that the committee should provide a door-to-door collection of the rents instead of the tenants having to make payment at an office set aside for that purpose.

INDUSTRIAL BRANCH VALUATION

As indicated in the report, the valuation basis has again been strengthened and is materially more stringent than any previously employed by the company in this branch. The rates of interest assumed are 2½ per cent. for all premium-paying contracts and 3 per cent. for free policies.

The resulting surplus is £473,038, which includes £120,297 brought forward from the preceding year. After the transfer of £50,000 to the investments reserve fund it is proposed to set aside £256,194 for allocation amongst the policy-holders in this branch, and from the remainder to allocate to the shareholders the sum of £45,403, the amount carried forward being £121,441.

ALLOCATION OF PROFITS TO POLICY-HOLDERS IN THE INDUSTRIAL BRANCH

It is the tendency, I think, in industrial assurance, and certainly our own deliberate aim, to make policies in this branch increasingly advantageous to their holders; and it is therefore with particular pleasure that I am able to-day to announce a very considerable increase in the sum we have found it possible on this occasion to allocate to our industrial branch policy-holders.

The ability to make this increased allocation is the direct outcome of the principle we have followed for many years of conserving our resources, with the deliberate purpose, as I have just said, of making industrial branch policies increasingly advantageous. The sum it is proposed to set aside on this occasion is £256,194, to be applied to increase to the latest and most favourable scales of benefit (where this has not already been done) the sums assured under all claims arising by death or survivorship between March 7, 1938, and March 5, 1939, under policies dated prior to January 1, 1933, the sums thus payable being then increased by 5 per cent. The effect of the scheme in specimen instances may be observed from the following

table, which illustrates also the increases in sums assured consequent on successive revisions of our prospectus:—

WHOLE LIFE				
6d. Weekly Premium				
Date of issue	Age at entry	Policy sum assured	Sum assured under claim	
		£ s.	£ s.	
1900	20	50 2	70 11

INVESTMENTS

Having regard to the unsettled political and economic situation throughout the world which, in some directions, has been accentuated during the year, the responsibility of your directors with respect to the company's investments has not been a light one and their policy relative thereto has not been materially altered from that of the immediately preceding years.

Turning to the balance sheets, I have already referred to the fact that the company's assets have increased during the year by £3,081,454 and now amount to £68,709,610.

Of the amounts standing against the various classifications in the balance sheets, the largest addition is £1,149,580 to those of British Government securities and securities guaranteed by the British Government, now amounting to £25,095,147. In this connection it will interest you to know that these securities, together with other trustee stocks, comprise over 50 per cent. of our Stock Exchange securities. Other principal additions to our funds appear under the classifications of railway and other preference and guaranteed stocks, railway and other debentures and debenture stocks, loans on parochial and other public rates, and Indian and Colonial Government securities, in the order named. There have been relatively minor reductions in mortgages on property, railway and other ordinary stocks, loans on the company's policies and foreign government securities.

The company has not escaped the consequences of the general fall in the market values of securities during the year. I am able to state, however, that despite the depreciation which has occurred the market values still very substantially exceed the amount at which the investments appear in the balance sheets, leaving intact the investments reserve funds of £3,500,000, which include £50,000 added during the year. It is noteworthy that during the second half of the year the company experienced in the aggregate a slight appreciation in the market value of its investments.

There has been little variation in the general geographical distribution of our investments, which is approximately as follows:—

	1936	1937
	Per cent.	Per cent.
Great Britain ...	82.75	82.84
Indian and Colonial ...	12.09	12.49
Foreign ...	5.16	4.67

The net interest received during the year amounted to £2,657,322 compared with £2,534,875 in the preceding year, showing an increase of £72,447 and giving a net yield on the combined assurance funds of £4 6s. 4d., against £4 7s. 11d. in 1936. Having regard to the financial conditions prevailing, this will, I think, be regarded as satisfactory.

NATIONAL HEALTH INSURANCE

Dealing now with another branch of the company's activities, I have to report that on behalf of the National Amalgamated Approved Society we administer the National Health Insurance of a membership of 668,000. During the year 1937 payments of benefit were made amounting to £687,087, including £75,477 in respect of maternity benefits. In addition, the further considerable sum of £62,441 was received by "Refuge" members by way of non-cash benefits. The number of new members admitted during the year in the "Refuge" section of the society was 47,824.

Before I conclude my remarks under this head I am sure you would wish me to pay tribute to the memory of the late Sir Thomas Neill, who preceded me in the chairmanship of the society, holding the position with great distinction for twenty years. He was not only one of the pioneers of National Health Insurance, having been one of the first Commissioners, but in his capacity as chairman of the Association of Industrial Assurance Companies and Collecting Friendly Societies he played a most valuable part in the development of industrial life assurance.

THE NATIONAL BANK OF EGYPT

EGYPT'S SOUND POSITION

DEVALUATION RUMOURS UNFOUNDED

The thirty-eighth ordinary general meeting of the shareholders was held, on the 10th instant, in Cairo, Sir Edward Cook, C.S.I., C.I.E. (the Governor), presiding.

Directors.

E. M. COOK,
Governor.

TRIBUTE TO STAFF

The company's staff, both outdoor and indoor, have again given good service, and I have pleasure in expressing my appreciation of their efforts during the year under review both as regards efficiency of administration and business progress. Our relations with the Chief Office Staff Council and the Field Staff Association continue to be satisfactory, mutually based, as I hope, on an appreciation of present-day realities; and it is in the best interests of both staff and company that such relations should be carefully preserved.

CONCLUSION

Gentlemen, I have now much pleasure in moving the adoption of the annual report and accounts.

The report and accounts were adopted.

Messrs William Proctor Smith and James Wilcock Holgate were re-appointed directors.

Messrs Walton Watts and Company were re-appointed auditors. The meeting closed with a vote of thanks to the chairman.

GOVERNOR'S SPEECH

The ease with which Egypt, as compared with most countries, came through the world depression is evidence of the economic strength about which I have spoken to you on previous occasions. I must refer to it again to-day, for I have some remarks to offer on a matter intimately connected with her economic health, namely, her currency position.

A substantial fall in the price of cotton during the summer led to a recrudescence last autumn of the devaluation rumours which for a short time had been current, mostly abroad, the previous year. It was suggested that Egypt, in the first flush of her independence, might desire to follow recent fashion and try the effect of a New Deal. To you I owe an apology for referring to rumours so devoid of any foundation. In case, however, my remarks penetrate to quarters not so well informed regarding Egypt's monetary

system and her financial and economic position, I will give briefly the reasons why no one who knew the facts was in the least perturbed.

DEVALUATION RUMOURS UNFOUNDED

In 1931, Great Britain, finding it impossible, for economic and social reasons, to carry through the deflation that would have been necessary to maintain the gold parity of sterling, was obliged to abandon the gold standard. This course was followed almost at once by several other countries, including Egypt, and eventually by most. Thus, in maintaining unchanged in 1931 the parity of her currency with sterling, Egypt has already carried out her own devaluation. Her economy is now well adjusted to world facts; her budget is balanced, in fact as well as on paper; her public debt is actually less than it was before the war; her trade balance is satisfactory; her currency is soundly based, its volume is closely related to the needs of trade and there is no difficulty in maintaining its external value. The excellent reputation she has enjoyed for the prudence of her financial administration must surely have had much to do with her success in winning full sovereign rights.

Wantonly to abandon this enviable position and to set Egypt's feet on the slippery slope of a further and quite unnecessary devaluation, in order to raise the internal price of her cotton to the supposed benefit of producers and debtors, would not only be to work a fraud on creditors but, in addition, would be reckless folly. There would, it is true, be a rise in cotton prices and, for a short time, many cotton cultivators might be under the delusion that their lot had improved. But they, and still more the country as a whole, would soon find that they were worse off than before.

VOLUME OF ADVANCES AND PRICE OF COTTON

It is impossible to trace with precision the fluctuations of bank advances from year to year, for those banks whose domicile is abroad do not publish separate figures for their Egyptian advances, which in the aggregate must be considerable. It is probable, however, that our own monthly balance sheets indicate the general trend. These show that the volume of advances follows closely the price of cotton, although the pace with which the crop moves from the interior to Alexandria, and is thence exported, is also an important factor. On December 31st last our advances of all sorts amounted to about £6.5 millions, the average for the year being £4.8 millions. These figures are less than half those of 1928, in December of which year the average price of cotton was about \$38 and \$23 a cantar for Sakel and Ashmouni, respectively, as against \$14½ and \$10½ in December last. During the same period of ten years the percentage borne by advances to deposits has fallen from 38.7 to 24.0.

The average advances in 1937 were slightly less than in the previous year, and our net profits, after making provision for doubtful debts, have similarly fallen from £461,063 to £448,085. We propose, with your approval, to pay the same dividend as before, namely, 15 per cent., thus absorbing £438,750, adding £9,335 to the carry-forward, which will then amount to £233,458.

During the ten years from 1919-28, when prices were greatly inflated and all profits were large, the dividend was gradually increased from 14 per cent. to 18 per cent. In 1931 it was reduced to 15 per cent., at which level it has since remained, although the profits on the bank's commercial business are now considerably smaller. The reason why the dividend has so far not had to be reduced in proportion to the diminution in business is because a substantial portion of the profits made during the boom period was utilised in building up strong reserves, either in the form of a definite fund as published in the balance sheet, or by maintaining a cautious margin in the valuation of our assets. These reserves are invested and we are now reaping the fruit of the foresight and restraint of our predecessors.

But the existence of strong reserves in the National Bank is not only of importance to the actual shareholders. It frequently enables the bank, on occasions when the public interests are involved, to give first place to considerations other than those of profit-making. And in abnormal times, here or abroad, it is of still greater importance that the bank's position should be well buttressed, in order that it may play its proper part in maintaining confidence or in ensuring that the country's trade shall not suffer through a withdrawal of foreign funds—as was threatened in 1914. We all hope that such contingencies may not arise in our time, but no country is in a sound position if its National Bank is not equipped to meet them.

Our anticipation a year ago that the Sudan had another prosperous year in sight has proved correct. For the fourth year in succession there has been an increase in both exports and imports, and it is probable that the purchasing power of the people is now higher than ever before.

LONDON AND NORTH EASTERN RAILWAY COMPANY, LIMITED

GROWTH OF TRAFFIC

The fifteenth ordinary general meeting of the London and North Eastern Railway Company was held on the 4th instant at Hotel Great Central, London.

Mr William Whitelaw (the chairman) said that the net capital expenditure for the year had amounted to only £852,905, mainly owing to the sale of Tyne Dock, in respect of which £808,000 had been credited to the capital account. Sales of land and other assets credited to the account amounted to £440,000. The chief expenditure incurred was for new passenger carriages, costing along with improvements in existing carriages £888,000, of which £583,000 was provided from the money borrowed from the Railway Finance Corporation, Limited, in accordance with the agreement scheduled to the Railways (Agreement) Act, 1935. The improvement referred to consisted of the substitution of electric for gas lighting. On land and construction of way and stations in connection with the London suburban electrification, which the company was carrying out for the London Transport Pool, £275,000 had been spent, and on similar works under the agreement scheduled to the Railways (Agreement) Act, 1935, expenditure of £313,000 had been incurred.

Their estimate of capital expenditure during the current year was £3,385,000. Works under the above-mentioned agreement accounted for £468,000, and works and rolling stock under the agreement scheduled to the London Transport Passenger (Agreement) Act, 1935, accounted for £3,817,000. Ordinary additions and improvements to rolling stock accounted for £3,639,000.

DEVELOPMENT OF PASSENGER TRAFFIC

The development of their passenger traffic had been remarkable and had exceeded their expectations. They had had an increase of over seven and a quarter million passenger journeys, exclusive of season tickets, as compared with 1936, in which year they had had an increase of about five millions over 1935. The increase in receipts had been £568,000 over 1936 and £1,051,000 over 1935. Receipts from first-class fares showed an increase of £55,950 following an increase of £69,395 between 1936 and 1935 and from third-class fares there was an increase of £477,000 following an increase of £367,000 between 1936 and 1935.

Receipts from parcels and miscellaneous traffic had increased by over £94,000. Mails and parcel post had yielded about £14,000 less, but an advance in rates agreed with the Post Office would, it was hoped, give an improved return in the current year. They had earned a good increase in freight carryings. From merchandise (excluding classes 1-6) they had obtained £441,000 more; livestock had brought in nearly £5,000 less; minerals and merchandise in classes 1-6 had yielded £236,000 more; and coal and coke receipts had risen by over £868,000. The iron and steel originating traffic of all kinds had increased by 2,068,000 tons, or 16 per cent., and timber by 180,000 tons, or 9 per cent. The originating tonnage of landsale coal had increased by 1,547,000 tons, or 3.79 per cent., and that of shipment coal by 1,445,000 tons, or 4.5 per cent.

RATIO OF EXPENDITURE

The ratio of railway working expenditure to gross receipts had been 80.55 as against 81.38 in 1936. That was the best result since 1930. The ratio in 1931 was 80.95; it had risen to 83.55 in 1932, since when it had gradually decreased to the present figure.

The directors had thought it prudent to recommend that out of the earnings of the year £150,000 should be put into the fund for contingencies. Previous to 1926 that fund had stood at over a million pounds; it was wholly used up at the end of the year to meet the financial position which had been brought about by the prolonged stoppage of work in the coal trade; since 1928, when it was re-established, it had varied between £100,000 and £200,000. If the transfer was agreed to it would amount to £340,000.

The balance available enabled them to recommend the payment of the dividends on the first preference and redeemable preference stocks at the rates required to bring them up to the full rates for the year and a dividend of 1½ per cent. on the second preference stock as compared with a half of 1 per cent. a year ago. While the increase in the payment of that dividend no doubt gave cause for satisfaction, they did not forget that they were not yet able to pay even half of the dividend appropriate to that stock. When the amalgamation of the companies took place there was an undertaking with Parliament that each railway company was to be put in a position to earn a certain standard of revenue. The net revenue of the L.N.E.R. still fell far short of that figure—the shortage was, in fact, over five millions. They had not abated and they would not abate the right of the stockholders to that standard revenue.

The report was adopted.

SCOTTISH EQUITABLE LIFE ASSURANCE SOCIETY

RECORD IN NEW BUSINESS

SIR CHARLES FERGUSON'S STATEMENT

The annual general meeting of the Scottish Equitable Life Assurance Society was held, on the 10th instant, in Edinburgh.

The Right Hon. the Earl of Stair, K.T., D.S.O., president of the Society, was in the chair, the chairman of the board of directors being General Sir Charles Fergusson of Kilkerran, Bt., G.C.B., G.C.M.G.

Before dealing with the business of the meeting Sir Charles Fergusson made a touching reference to the death of Sir Arthur Rose, a valued member of the board, and also expressed the regret of his colleagues that Mr D. A. Stevenson, who had been a director since 1884, did not see his way to seek re-election for reasons of ill-health.

During the year Mr R. K. Cuthbertson, Writer to the Signet, a member of the firm of Messrs Mackenzie, Innes and Logan, W.S., accepted an invitation to join the board.

FAVOURABLE INTEREST EARNINGS

Sir Charles Fergusson proceeded: The rate of interest earned on the funds is £5 1s. 4d. per cent. gross, or £4 2s. 5d. per cent. net; to get the true effective rates, however, we must omit from the calculation the balance-sheet reserve and the carry-forward. By so doing we find the yield is £5 4s. 11d. per cent. gross, or £4 5s. 4d. per cent. net.

Including the special expenditure occurring at the investigation date, the expenses work out at £15 4s. 4d. per cent. of the premium income; excluding these special expenses, the expense ratio is £14 13s. 11d. per cent.

SATISFACTORY NEW BUSINESS PROGRESS

The year's new business, after deducting reassurances, was slightly in excess of the Society's previous record. Between two valuation dates progress and profit-earning capacity are judged largely on the rate of interest earned, the expense ratio, the claims experience and the growth of new business. The ultimate test of a life office is an actuarial valuation on a sound basis.

STRINGENT MODERN VALUATION BASIS

Since our last valuation, new and up-to-date tables of mortality have been published by the Faculty of Actuaries and the Institute of Actuaries. The directors decided, on the recommendation of the manager and actuary, to employ the new tables in valuing the assurances, and in view of the fall in the general level of interest rates to adopt a more stringent interest basis—namely, 2½ per cent. net. The annuity reserves have been substantially strengthened. The valuation discloses a surplus of the substantial sum of £1,105,670, and your directors have felt justified in allocating a sum of £932,577 to provide bonuses.

MAINTENANCE OF HIGH RATE OF BONUS

This sum will be sufficient to maintain the high rate of £2 per cent. per annum compound. The actual bonus resulting where five years' premiums have been paid in the period will range from £100 to £242 per £1,000 of original assurance. The balance of surplus, £173,093, has been carried forward, and it is not proposed to make any change in the reserve shown in the balance sheet at £250,000.

THE PROSPECTS

It is very gratifying to the directors to be able to put before you such a satisfactory report. In addition to the strong actuarial reserves, the balance-sheet reserve and the carry-forward, I should also mention the reserve which we have in the difference between the market values and the balance-sheet values of our investments. It is satisfactory to be able to say that in spite of depreciation in Stock Exchange securities there is still a substantial margin with which to face the future.

STRENGTH OF FINANCIAL POSITION

The policy of the board regarding development and expansion is, and has been for many years, to rely on the strength of the society's financial position and on bonus results. This policy has resulted during the period since our last investigation in a regularly increasing amount of new business coupled with a continuation of our £2 compound bonus. The adoption of the report was seconded by Major Sir William Prescott, C.B.E., D.L., J.P., and was carried unanimously.

THE STANDARD LIFE ASSURANCE COMPANY

BONUS OF 42s. PER CENT. ANNUAL AND COMPOUND DECLARED FOR THE ELEVENTH SUCCESSIVE YEAR

RECORD NEW BUSINESS

NET INTEREST RATE EARNED OVER 4½ PER CENT.

The hundred and twelfth annual general meeting was held on Tuesday, March 8, 1938, Mr George William Blackwood in the chair.

The Manager and Actuary, having read the auditors' report, the Chairman said:—Gentlemen,—May I take it to be your wish that the directors' report which is in your hands be held as read?

The new business transacted by this company is naturally affected by the general state of trade in this country, which in turn is influenced by conditions in world trade and finance. I do not, however, propose to-day to touch upon the subject of world affairs except to remark that consideration of the great economic problems which beset the world has, it would seem, for some time past been subordinated to questions of international politics.

SATISFACTORY NEW BUSINESS FIGURES

Trade in this country was maintained at a high level during the past year and life assurance has increased in volume. The Standard had a particularly successful year in the new business field, £4,341,000 of net new ordinary life assurances have been completed, representing an increase of £267,000 over the previous year's total. This figure has never been exceeded in our long history of over 112 years. In addition to ordinary life assurance £789,000 of group life assurances were effected during the year in connection with staff schemes for commercial firms. The total amount of net new life assurances completed, therefore, was £5,130,000.

If you will turn to the revenue account you will see that our premium income has now passed the two million pounds mark, and our interest revenue exceeded £1,200,000. Notwithstanding the fact that the yield obtainable on new investments during the year remained comparatively low and that there was an increase in the rate of income tax in this country from 4s. 9d. to 5s. in the £1 the net rate of interest earned on our funds exceeded 4½ per cent. The surplus income of the guarantee fund transferred to the credit of the life assurance and annuity fund amounted to over £39,400.

With regard to the expenditure side of the revenue account I may say that our mortality experience has again been favourable; the fact that claims by death and maturity show an increase over last year's figures is a feature to be expected with a growing business. The only other item which calls for comment is the sum of £100,000 transferred to the trustees of the staff pension fund: for some years past the directors have, as you are no doubt aware, transferred a sum each year out of revenue as a provision for pensions. These transfers were required mainly to meet the actual pension payments falling due during the year, and the directors recently decided that it would be in the interests of the company that a fund be instituted charged with the payment of present and future pensions. Trustees have been appointed and the transfer of £100,000 appearing in the accounts is the initial contribution by the company to the fund. Our life assurance and annuity fund now stands at over twenty-six and a half million pounds; this represents an increase of about £1,200,000 over last year's total.

STRENGTH OF THE VALUATION BASIS

Turning to the balance sheet, I am glad to say that notwithstanding the general fall in security values during the year, the margin between the market and balance-sheet values of our assets is of very considerable amount. As regards the actuarial liabilities, the manager and actuary employed the same stringent bases as were adopted last year, one of the principal features being the conservative assumption that only 2½ per cent. interest will be earned by the company in the future. After making this full provision for the liabilities and after transferring the sum of £100,000 to the trustees of the staff pension fund, the directors declared an annual compound reversionary bonus of £2 2s. per cent., with corresponding bonuses in respect of policies issued under our minimum premium cash bonus plan of assurance and other schemes.

MR MACNAGHTEN'S RETIREMENT

There is another matter which I have to report, and I do so with great regret—a regret which I know will be shared by you. Our manager has decided to retire in July. His expert knowledge and his wholehearted working energy have been devoted to the Standard for the past 27 years, nineteen of them as manager. The reports,

which we have considered and approved at our annual meetings during these latter years are a record of his wonderful—I can use that adjective without fear of contradiction—his wonderful success. We can only accept Mr Macnaghten's decision. We do so with a full sense of the debt which the company owes to him. But that, I am more than glad to say, is not all. He will join the board at the date of his retiring, and at our annual meeting a year hence, in the usual procedure, you will be asked to confirm this appointment.

BRITANNIC ASSURANCE COMPANY, LIMITED

SATISFACTORY PROGRESS IN ALL BRANCHES

ASSETS EXCEED £30,000,000

£552,000 ALLOCATED FOR BONUSES TO POLICYHOLDERS

The seventy-second annual ordinary general meeting of the shareholders of the Britannic Assurance Company, Limited, was held, on the 4th instant, at the chief offices, Broad Street Corner, Birmingham, Mr J. A. Jefferson, F.I.A., chairman and general manager, presiding.

Mr Jefferson, in moving the adoption of the report, said:—

The directors' report for the year 1937 is one of satisfactory progress. The premium income of £5,295,000 in the life branches was over £170,000 in excess of the previous year, while, excluding the general branch, the total income of £6,679,000 was £247,000 ahead of 1936. The total payments for claims in the life branches were over £2,500,000, including £1,054,000 in respect of maturing policies. In both life branches the business was transacted at a lower rate of expense, and as a result of the year's working the addition to the total funds was the record sum of £1,944,000, which brought the company's assets to over £30,000,000.

With regard to the investments, the care with which they have had to be selected during times like these will be appreciated. Such times most forcibly demonstrate the soundness of our past policy of building up adequate reserves, and, in continuance of that policy, the directors have again transferred £100,000 to the Investment Reserve Funds, bringing those funds up to £1,600,000, which is practically 7 per cent. of the cost of our Stock Exchange investments. Last year I was able to report that this was a free reserve in every sense of the word, the market value of the assets being far in excess of the balance-sheet values. Even after the substantial falls in values during 1937, I am glad to be able to say that that position is unchanged and that we should have to see a further very substantial contraction in values before it became necessary to have resort to the investment reserve funds.

Taking the assets in their balance-sheet order, you will see that mortgages in the United Kingdom are now £3,390,000—an increase of £259,000—this being mainly due to the expansion in the house purchase department.

British Government securities show a slight decrease, due to redemptions. Railway and other ordinary stocks show an increase of £1,082,000. Most of these purchases were made in the latter part of the year, when prices were depressed, and a large proportion of the increase has been in the shares of banks, insurance companies and electric supply companies. At the end of the year the purchases made during the year under these three headings actually showed a slight appreciation in market value over cost price. For the rest, the investments have been widely spread, and in many cases represent additions to existing holdings of shares of first-class companies which over a long period of years have proved to be satisfactory investments. Taken altogether, the depreciation on new investments in ordinary stocks during the year has been negligible, whilst on our total holding under this heading the appreciation is still very considerable. Under the other headings there are only small changes.

ORDINARY BRANCH

The premium income amounted to £1,387,500—an increase of £46,000 over the previous year. Our new business totalled almost £3,600,000 in sums assured—the average sum assured per policy exceeding £200 for the first time.

The gross rate of interest earned was £5 3s. 3d. per cent.—a reduction of 11d. per cent. from the previous year—and, after allowing for the increased rate of income tax, the net rate earned was 1s. 5d. per cent. lower at £4 6s. 3d. per cent.

Claims by death amounted to £188,000 and were within the expectation. Claims by maturity increased by £94,000 to a total of £555,000.

The expense ratio of 13.08 per cent. showed a further slight reduction.

There can be no doubt of your unanimous approval.

Your directors have decided to appoint Mr King as manager and actuary, and they do so with every confidence, being sure that the efficiency and the tradition of the past will be carried on.

I now move the formal adoption of the report, revenue accounts and balance sheet submitted.

Dr. A. Rae Gilchrist seconded this motion, and the report was adopted unanimously.

The increase in the funds of the branch during 1937 was £670,000, and the total, after the transfers made in respect of the year 1937 as shown in the accounts, exceeded £11,185,000.

A reversionary bonus of 38s. per £100 sum assured was again declared on with-profit policies, and the amount carried forward undivided is £175,000, which shows an increase of over £15,000 on the amount brought forward from the previous year.

INDUSTRIAL BRANCH

The industrial branch funds have increased during the year by £1,058,000 to £15,314,000. The premium income amounted to £3,908,000, being an increase of £124,000.

Interesting features of the new business were another increase in the average sum assured and in the average weekly premium; more business transacted on the younger lives and on the lives of the bread-winners; a further increase in the proportion of business effected under the endowment assurance tables, all of which indicate how incorrect are those critics who say that industrial assurance exists mainly for the purpose of issuing policies to cover funeral expenses.

The gross and net rates of interest earned during the year in this branch were £5 4s. 10d. per cent. and £4 11s. 2d. per cent., respectively.

The expense ratio for the year was 31.38 per cent. of the premium income and showed the substantial reduction of 1.86 per cent. as compared with the figure for the previous year.

Death claims during the year amounted to £1,273,000, which included £60,652 paid in respect of bonuses.

Payments under maturing policies, inclusive of £37,315 in bonuses, amounted to £493,700, which showed a reduction of £35,244 as compared with 1936. Surrenders for cash amounted to £123,600, and were less than those of the previous year by £9,151. A reduction in this item has been a continuous feature since the year 1932, and this indication of the continued prosperity of the country is to be welcomed.

As a result of the annual valuation, made on the same stringent bases as before, the total surplus was the record sum of £855,918—an increase of £41,245 over that of the previous year. Out of this surplus, £250,000 has been allocated to Britannic policyholders, which is £25,000 more than last year, and £17,500 to British Legal policyholders.

GENERAL BRANCH

The premium income of £191,154 shows an increase of £6,540 over the previous year. The business is of excellent quality and shows a favourable claim ratio in every section.

STAFF PENSION FUND

I am sure the action of the board in transferring £100,000 to the trustees of the staff pension fund has the approval of the shareholders. At the present time pensions amounting to over £50,000 per annum are being paid to old servants of the company.

To the staff both in the field and at chief office the directors offer sincere thanks for their loyal and efficient services during the year. It is always a pleasure for the directors to meet the representatives of the Britannic Field Staff Association or the Chief Office Staff Association and so long as this spirit of mutual confidence and goodwill continues the future progress of the company is assured.

Mr Murray Laing, the deputy general manager, in seconding the report, said the financial strength of the company was such as to afford to policyholders that indispensable characteristic of a good life policy—absolute security of capital, and this was accompanied by excellent prospects in regard to the future maintenance of bonus distributions.

The report and accounts were unanimously adopted.

HARRODS, LIMITED

IMPROVED RESULTS—FAVOURABLE OUTLOOK

The forty-eighth annual general meeting of Harrods, Limited, was held, on the 7th instant, at the company's premises, Brompton Road, London, Sir Woodman Burbidge, C.B.E. (the chairman), presiding.

The Chairman, in the course of his speech, said:—Last year I expressed the opinion that 1937 would be a year of successful trading, not only because of an expected stimulus to the retail distributive trades, arising out of the Coronation of our King and Queen, but for the further reason that the outlook for trade and industry generally was considered to be promising for further development and prosperity. The results of our trading were quite satisfactory for the first half of the year. During the closing months of the year, however, the results fell short of our expectations; in fact, they were disappointing. The reasons for this recession in trade are well known. The severe setback in the United States of America and the general international situation had a depressing influence upon the trade position, seriously affecting the market value of practically all classes of securities and resulting in heavy capital depreciation and widespread losses.

Notwithstanding this setback, the final results of our trading for the year are not unsatisfactory. You will have observed from the report and accounts now before you that the total net profit for the year amounts to £817,802, an increase on the previous year of £17,482.

MANCHESTER BRANCH

Having dealt with the balance sheet, and pointing out that their liquid resources of cash and British Government securities amounted to £1,768,156, the Chairman continued:—I am happy to report further progress at our Manchester branch, as sales and net profit both show a satisfactory increase. I stated last year that if the trading results at this branch continued to show improvement, as they had done for the two previous years, we should further consider the building of the new store. Last year's trading results are the best we have had for some years past, and we have decided to proceed with the building scheme, as we are confident that the erection of a modern store will lead to increased profits, especially as this old business enjoys a high reputation for quality, value and good service throughout Lancashire, and, indeed, the North of England. The main building, where the largest part of our trade is carried on, being an island site, does not admit of any further extension. We have, however, an excellent site immediately opposite our present store, already connected with a subway, in which we have been trading for many years. The building is very old, and we propose to erect on this site a department store consisting of seven storeys above ground with basement and sub-basement.

The trading results of Dickins and Jones, Limited (a subsidiary), have again been satisfactory. The net profit (before deducting debenture interest and preference dividend) is £125,097, an increase on the year of £4,593.

With regard to D. H. Evans and Company, Limited, the trading profits for the first completed year of the full occupation of the new building have been very satisfactory. The total net profit for the year is £137,779, an increase on the previous year of £23,302, or over 20 per cent. I think stockholders will agree that our first year's results confirm the policy of the board in rebuilding and providing a modern store.

CURRENT YEAR'S PROSPECTS

As far as our own business is concerned, I am optimistic about the future and feel that there is a possibility of a further increase in trade and profits in the coming year. Trade in February has not been favourable, but it is to be remembered that, owing to many difficult conditions, trade has had a setback during the last six months, and it takes some time to get back to normal. Trading during the first three months may be difficult, but I feel that after that we shall be able to go ahead again, and that, providing international troubles are settled, we can look forward confidently to a good year.

You will gather from the various building schemes that are being undertaken at Harrods, Dickins and Jones and at Kendal Milne's, Manchester, that the directors have great hopes of good trading and increased profits in the future. There is no doubt that we have great possibilities in front of us. There is still only one Harrods, and when we have the pleasure of meeting you next year I feel the results will be even more satisfactory than those I have been able to put before you to-day.

The report and accounts were unanimously adopted, and a final dividend of 11 per cent., making 16 per cent. for the year, on the ordinary stock, together with a bonus of 2½ per cent., was approved.

MIDLAND COUNTIES ELECTRIC SUPPLY COMPANY, LIMITED

ANOTHER YEAR OF PROGRESS

The twenty-fifth ordinary general meeting of the Midland Counties Electric Supply Company, Limited, was held, on the 7th instant, at Winchester House, London.

Mr George Balfour, J.P., M.P. (the chairman), after expressing regret at the death of Mr Alfred R. Holland, who had been associated with their two power companies and their original transport business since the promotion and syndicate days thirty-five years ago, said that the accounts would, he was sure, be regarded as satisfactory, and showed results quite up to anything which shareholders must have expected from his observations a year ago. The transport business continued to make progress and they now possessed a first-class undertaking. After providing £28,700 for depreciation and bringing in interest and dividend to the modest amount of £7,549, they had left a free surplus of £86,929 in the transport company's accounts to provide further against goodwill and statutory rights value in the operating companies. If those properties continued as they were doing—and he had no reason to doubt it—shareholders would get their reward. Including the newly acquired Mansfield undertaking they now operated 277 vehicles and had carried last year about fifty million passengers.

The electricity supply undertakings continued to record an increase in maximum load and unit output, which was reflected in an increase in both gross and net revenues. They had for years pursued a regular policy of unification and of reduction in tariffs and had been able to reduce prices due to an intensive cultivation of business, coupled with an ever-increasing goodwill between Local Authorities in whose areas they operated, consumers and the public at large. The generating plant in their three power stations had a total capacity of 150,000 kw.

ADDITIONS TO SYSTEM

During the year they had added to the distributing system 258 miles of high-tension lines and 323 miles of low-tension lines, bringing the total up to 1,774 miles and 2,069 miles respectively. They now had in operation 1,325 sub-stations of various sizes. They had connected additional load amounting to 43,587 kw., to which must be added 22,599 kw., the connected load of the Tamworth undertaking, bringing the total at the end of the year up to 352,528 kw.

At the end of the year they had 134,102 consumers connected, an increase of 25,836. The number of units sold again showed a substantial increase, the total being 419 millions. Eliminating units supplied under large bulk and special commercial contracts and sales of the Tamworth company, they had a comparable figure of 306 million units compared with 262 millions for the previous year, an increase of over 16 per cent. In addition they again exported to the Central Electricity Board approximately 98,500,000 units, for which they calculate to pay us about 0.124 pence per unit.

They had supplied local authorities in their Derby and Notts area with electricity in bulk last year to the value of £107,000. If those authorities had been supplied direct by the Central Board on the basis of Grid tariff, including the relative Grid coal clause adjustment, they would have had to pay £11,600 more than the amount charged by the company, and he trusted the authorities would appreciate the fair and strictly commercial attitude of the company in these matters.

The average price received from customers throughout the Derbyshire and Nottinghamshire area was 0.680 pence per unit, and if they excluded special contracts the average was 0.956 pence. In the Leicestershire and Warwickshire area the average received was 0.996 pence per unit. The average price obtained over the whole area was 0.840 pence per unit, which he thought they would agree was a very low average price bearing in mind that the consumers were scattered over 2,391 square miles of territory for which the company under its various Power Acts and Lighting Orders was responsible for direct supply.

DEVELOPMENT SINCE 1922

He proceeded to quote figures showing the progress of the company since its inception twenty-five years ago. He said that consumers had increased from 4,172 in 1922 to 134,102 in 1937; units sold from 23,800,000 to 419 millions, and gross revenue from £166,000 to £1,467,000. Last year they had made reductions in charges in certain areas and might possibly make further reductions in the current year.

The amount carried to net revenue account was £374,183, and they proposed to pay a final dividend of 5½ per cent. on the ordinary stock, making 8 per cent. for the year.

The report was unanimously adopted.

Films

In view of the considerable interest aroused in the economics of cinemas and film production by discussions of the Films Bill which is now before Parliament, we have collected a number of significant facts about the film industry which we present below in graphical form. For these illuminating charts we are indebted to the courtesy of Mr S. Rowson. Chart 1 shows how the total production of British "longs" has continued to expand well above the amount required by the quota. In Chart 2 it has been assumed that the seasonal variation in cinema attendances in 1937 was the same as in 1934. It is not believed that this introduces any serious error. Chart 3 draws attention to the wide variations in cinema accommodation in different parts of the country.

GOVERNMENT FINANCE

For the week ended March 5, 1938, the total ordinary revenue was £29,453,000 against ordinary expenditure of £19,974,000. The deficit accrued since April 1st last is thus £2,305,000, against a deficit of £16,698,000 a year ago.

troops on the Brenner and in Vienna before Italy or Czechoslovakia had time to think of moving. Indeed, he has been quite masterly in his handling of Signor Mussolini; for he has contrived to save the Duce's face handsomely while eliciting from him, not only an explicit acceptance of the Austrian *fait accompli*, but also an emphatic confirmation of the maintenance of the Berlin-Rome Axis—thus advertising, before the Anglo-Italian conversations have seriously begun, that there is no possibility of their achieving Mr Chamberlain's main object.

Herr Hitler's policy is by this time clear. It is to secure all the advantages of possessing a superiority of brute force without having to use it, or even to show it, beyond the minimum degree demanded by the circumstances of each successive experiment. His technique consists in making his moves in the right order, after the right preparation, at the right moment, in the right way; and, of these four rules, the first is perhaps the most important. No *contretemps* would so seriously upset Herr Hitler's plans as to find himself at grips, no longer with a single victim, but with a collective resistance in which the victim whose turn has now come to be "put on the spot" is promptly and bravely defended by neighbours who come only second or third on the German list. But if the survivors in this programme of violence continue to wait on Herr Hitler's convenience, as we have been doing so far ever since January, 1933, what are his next moves likely to be?

Move Number One is already near completion. It is to clinch the hitherto gradually maturing Italo-German conquest of Spain. This move will give Herr Hitler two useful assets. In Spanish coin he can tender to Mussolini a quick and generous payment for the Duce's good grace in accepting the inevitable on the Brenner; and at the same time he can grip France and England still more tightly. The German frontier now marches with that of Italy; and on Wednesday Signor Mussolini broadcast his full submission to his master. This places not only Trieste but the whole great peninsula of Italy at Herr Hitler's disposal. Germany is thus to-day, in fact if not in name, a Mediterranean power. In conjunction with Italy, his troops have access to wherever naval power can carry them, from Africa to Asia Minor, while his industrial resources will be available for the dockyards of Italy to help build the ships to protect them. It is the merest common sense that Spain should be drawn into this anti-Communist *bloc* unless the threat of sea-power and the fiat of France bar the road.

If this Spanish adventure succeeds the consequences are far-reaching. The Balearic Islands command the maritime route between France and French North Africa; the resuscitation of the Pyrenees (which Louis XIV thought he had abolished!) threatens a third of France's European frontiers—already threatened on the Rhine and the Alps. The command of Spanish Morocco and Andalusia transfers from British to Italo-German hands the control of the Western gate of the Mediterranean. Naval bases at Corunna and Vigo menace British trade routes.

Move Number Two will no doubt be against Czechoslovakia. But, if Herr Hitler can help it, it will not take the form of a military act of aggression. Adroitly the German forces in Austria are being kept at a distance from the Czechoslovakian frontier (contrast the "close-up" on the Brenner); while, in Berlin, assurances are being given of Germany's lack of hostile intentions against Czechoslovakia. Presumably Herr Hitler's first endeavour will be to divide the Czechs against themselves by suggesting to the Czech parties of the Right that they have tolerable terms within their grasp if only they will make an Eden of Dr Benes. The Czechs' own right hands are then to be induced to unleash the Henleinites! That would be the true Berchtesgaden touch. But, if this elegant scheme were to miscarry, Herr Hitler would still have another card to play before resorting to naked force. Poland and Hungary

also have their minorities in Czechoslovakia. With these other neighbours as his associates it would be easy to turn the weapon of economic sanctions against Prague and to challenge France and England to raise a finger in protest.

If and when the Third Reich, with Polish and Hungarian connivance, obtained the capitulation of Czechoslovakia by one or other of these devices, a German-dominated *Mittleuropa* would be an accomplished fact. It would be a structure in several storeys, with Italy and Poland on a finely upholstered top floor, Hungary and Jugoslavia on the mezzanine, Roumania and Bulgaria on the ground floor, and the torso of Czechoslovakia in a cellar in the basement. The whole building would be on an American scale, but it would nevertheless be strong, for Herr Hitler is an expert at mixing his political mortar. There is the cement of a common anti-Semitism to bind the Polish, Hungarian and Roumanian lower middle class to their German opposite number. There is the cement of land-hunger to whet the Polish and Hungarian, as well as the Swabian, peasant's appetite for a crusade against Communism in the U.S.S.R.; and there is the common exclusion of all the Central European countries from any share in Europe's vast colonial empire, which is now monopolised by four West European countries.

Which crusade comes next—the easterly or the westerly one? Is it more profitable to relieve Stalin of the Ukraine or to do a deal with him and pick up the plums of the Colonial Empires? The latter alternative is more consonant with the policy of winning bloodless victories. But there is no need to probe further into time-tables or methods. Suffice it to say that all the varied technique of a vast totalitarian Empire will be brought to bear against France, including not only economic pressure, but every device for undermining and destroying French democracy.

As for Britain, will not Herr Hitler help (possibly even with the compulsory connivance of Scandinavia as a base for the German fleet) to achieve the purpose of the arch-protagonist of isolation whose ideal is that Britain should become "one gigantic rock of Gibraltar"? Happy issue! By waiting till resistance was impossible, we should have avoided the danger of ever having to fight at all. But Herr Hitler would have been cleverer still; for he too would not have had to fight—but he would have won the game.

This isolationist dream, however, is not merely a matter of geography, of tactics and of armaments. Ideals and civilisation—in the continent that is the cradle of civilisation—are at stake. Of this we have had a sharp reminder this week in the fate of the unhappy outcasts of Nazidom, who constitute so large a proportion of the City of Vienna.

If, when we look into our hearts, we find that our wish is, not peace at the price of any life worth living, but liberty even at the price of peace, then we must start making a series of moves of our own. First, we must do what Mr Churchill is calling for. We must reproclaim our adherence to the Covenant; we must assemble round Great Britain and France a number of States in a solemn treaty for mutual defence against aggression; we must marshal our united forces in a Grand Alliance; and we must inscribe our first "No" on the face of Spain.

What of Central Europe, since we have already allowed Herr Hitler to ensconce himself in Vienna—the strategic key to the whole of Danubia? Even here Great Britain and France, acting as a single Power, one and indivisible, are surely still strong enough to compel Herr Hitler to give Czechoslovakia not intolerable terms. We ought at once to accept Dr Benes's offer—to discuss with the pair of us the status of the Sudeten German minority. And, having satisfied ourselves and the world that justice is being done, we ought then to say to Herr Hitler: "Hands off! Resort to force at your peril. We draw the line *here*."

Now, as Mr Eden said, is the time to stand firm. We believe that the country is waking up to the truth.

New Model Army

THE speech made by the Secretary of State for War in introducing the Army Estimates to the House of Commons on Thursday of last week was immediately overshadowed by the dramatic flow of events in Austria. But it deserves, nevertheless, the meed of public attention appropriate to a scheme of Army reform as bold in outline as those of Cardwell and Haldane, and more extensive in scope than either. As Mr Hore-Belisha pointed out, the three great problems of military administration are manpower, organisation and distribution. Cardwell was content to deal in the main with distribution; Haldane, though not exclusively, with organisation. Mr Hore-Belisha himself made the somewhat surprising claim that he was not faced with a problem of man-power, though some of his proposals would seem to indicate the contrary. But in any case he boldly straddled the fields of both his great predecessors by tackling distribution and organisation together.

It has long been an open secret that the War Office was canvassing the advantages of bringing to an end the Cardwell system of organising the battalions of the British Army in pairs, one of which at any one time is at the home depot and the other in India. Mr. Hore-Belisha did not announce last week the end of this system, for the reason that the Government of India is obviously closely concerned, and no drastic change can be made without their consent. This fact in itself is a potent argument against the Cardwell system, for it means that "the pace of the re-adaptation of the rest of the British Army is influenced by the speed at which the Government of India find themselves able to proceed."

This necessity for marching in step with India is, however, by no means the only objection that can be raised to the Cardwell system. There have been great changes since the seventies in the nature and responsibilities of the British Army. None of these changes has been larger than the revolution that has come over transport. Compared with Victorian days, the communications between the Mother Country and some parts of the Empire have become liable to serious interference in wartime, while at the same time the possibilities of rapid transport within any large region have been immensely enhanced. This in itself would seem to call for a regional organisation of our overseas garrisons, each region largely self-contained. Secondly, in the ensuing decades there has been a great extension of our liabilities both in Europe and in the Middle East, but not in India. And, finally, within the last few years Home Defence—in its three divisions of defence against air attack, internal security and coast defence—has become the primary and most onerous responsibility of our land forces. Even after these profound changes the Cardwell system has many friends—it was defended with great force on the last occasion that *The Economist* referred to it, in a letter from Sir Charles Harris, whose authority on the subject is unquestioned. But the *prima facie* case in favour of some thoroughgoing modification of the system, as it was made by the Secretary of State last week, is convincing, and it is good news that inter-departmental discussions with that end in view are to be begun at once.

On the side of organisation Mr Hore-Belisha is following the same line of adapting traditional arrangements to new conditions. Haldane's organisation of the Expeditionary Force, which served his country so well in 1914, was arrived at on a purely mathematical basis. He took the number of battalions available in the strategic reserve, and dividing them by the twelve battalions per division which was then international common form, he arrived at the answer of six divisions, which is still the organisation of

the Home Army to-day. But here again there have been decisive changes in conditions. Material rather than manpower is now dominant, and a much more flexible organisation is required. Mr Hore-Belisha indicated that in future there will be two main types of divisions, the first to be known as the motorised division, based on the light machine-gun, but supported in time of war by heavy machine-guns and artillery; the second to be known as the mechanised division, based upon the tank. The object underlying these changes "is to provide a flexible organisation of the Regular Forces at home, capable of producing a greater number of divisions better suited than are the existing formations to meet the varied commitments which might devolve upon us. Smaller divisions are easier to manage, to move, to supply, and to transport—important considerations for a country which has to operate overseas." It is arguable that this is an understatement of the changes that are being made. They really amount to a full acceptance of the implications of mechanisation—a tardy acceptance, but peculiarly fitting for an industrial country which does not rely on vast conscript masses of man-power.

The third division into which Mr Hore-Belisha's speech fell was concerned with improving the conditions of the men of the Army. And though he was concerned to emphasise that it was no part of his intention to bribe recruits into the Army, it is clear that reforms such as he proposes are essential if ever the Army is to receive the full supply of men that it needs. The Army has suffered for too long under the old attitude to the private soldier, which regarded him as coming from the semi-criminal classes, and aimed to make of him no more than an automaton who could be relied upon to stand firm under fire. There is now to be a relaxation of the less necessary forms of discipline, and "a progressive elimination from the soldier's drill of all superfluous postures requiring rehearsal, and from his kit of all superfluous gadgets requiring polish."

These, however, are the details. More important are the arrangements being made to provide a career for the recruit who is attracted by the soldier's life. There are to be increased opportunities of promotion from the ranks to commissions, and progressive increases of pay for all ranks, together with a large number of concessions on details of Army life. In addition, a further step is made towards the division of the Regular Army into short-service and long-service branches by allowing enlistment for twelve years with the Colours, with the certain prospect of re-engaging for pension. There will thus be a nucleus of men who make soldiering their life's work, together with a further body who, after a shorter period in the ranks, return to swell the reserve. All these proposals should serve to make the service much more attractive than it has been in the past, and, in the Secretary of State's words, "to give to the soldier in peace-time the security which we expect from him in the blunt eventuality of war."

These are drastic changes, and there will be many who will feel some apprehension at such far-reaching modification of a model that has served the nation well in the past. But it is undeniable that the governing factors which determine strategy—and particularly British strategy—in the modern world have changed rapidly even since 1918, and that the British Army has not changed with them. Underlying the new proposals there has clearly been a fresh effort of thought to discover the basic principles which should shape the army of a democratic island power. The whole country will wish Mr Hore-Belisha well in his determination to see that we are never again accused of having a contemptible little army.

Sheffield Visited

SHEFFIELD is an industrial town without pretence. In the sudden sunlight of a March morning the hill-tumbled streets and blackened buildings of the city bear witness to centuries of hard work and special skill. Sooted spires and gaunt chimneys break sharply through the smoke laden air of the steep-sided valley, where for five hundred years Sheffield's industries have crept mile after mile along the edge of the Don. Near the waterside, ancient and cluttered produce markets sprawl across the city's main arteries; and tumble-down workshops and modern factories, clustered grimly in the trough of the valley, symbolise the several ages of cutlery and steel. The citizens' houses and shops have groped their way upwards out of the smoke to the glorious moorland's edge. The health of Sheffield is found on the windswept hills, but its wealth and history lie down in the smoke by the Don.

Workshops and houses grew up centuries ago around the wells near the river. Water power and river transport gave birth to the city; and nearby coal and the rich seams of South Yorkshire brought new opportunities to Sheffield at the dawn of the industrial age. Barely thirty-odd miles away lie the markets of Leeds, Derby, Huddersfield and Manchester. London is only three hours distant by rail, and all the Midlands, the West Riding and Lancashire less than a day's delivery by road. It is barely forty miles to the quays on the Ouse, and seventy-five miles to the sea. Sheffield is a centre of more than metal-working. It is a hub of transport and trade.

Sheffield's geographical setting was responsible, in no small measure, for the nature of its present activities which, measured by employment, are about equally divided between the production of steel and heavy steel goods, and the manufacture of cutlery, electro-plate and numerous "light" products based on metals. Chaucer mentioned the city in "Canterbury Tales": one of the characters was "bearing a Sheffield thwytel in his hose." Water wheels in the valleys drove the tilt hammers and the grinding stones for the manufacture of knives and swords, which was the origin of the growth of Sheffield's metal industries. Nor is Sheffield's importance as an armament centre of recent origin. Even in Cromwell's time, Sheffield was busy making the death-dealing weapons.

Sheffield is well-off to-day and wears its prosperity in a sensible workaday way. The grim days of depression, when over 58,000 were out of work in 1932, have passed. Steel, tools, cutlery and silver-ware have all been notably prosperous in recent times. In the city's solid and unsophisticated places of entertainment and refreshment the "brass" earned by traditional skill and adaptability is freely spent. The tariffs imposed by free trade Britain are gratefully spoken of by dour Yorkshire individualists; and not even native reserve can mask the background of busy trade and steady work.

Yet, the bearing of the town is little changed from what it was six years ago. There is none of the tinsel and glitter of boom-mindedness, and little of the chromium and glass and flashing signs of over-optimistic urban growth. The Sheffielder in his words and deeds takes the great activity of 1937 with a grain of salt. Employers and managers talk of the trade cycle and con charts and logarithmic curves. The many hundreds, high and low, who dabble in shares, have learned that they fall at least as often as they rise; and workmen know only too well that unemployment is increasing again towards the 20,000 mark. One and all give ample evidence in broad-vowelled and brief words that they are keeping their powder dry.

Sheffield people are peculiarly aware of their common destiny in matters of trade and employment. Representa-

tives of the light and heavy trades work hand in hand. No visitor can escape this sense of community; and the relations between employers and workpeople are now notably smooth. The recent successful negotiations for paid holidays in iron and steel revealed considerable amity between capital and labour; and outside the basic industries, in the lighter trades, strikes and dissensions have been conspicuous only by their absence.

It would be folly, however, to ignore the labour problems which Sheffield, by its own characteristically honest admission, has still to solve. Outside of the prosperous steel industry there is a large nucleus of low-paid labour working under poor conditions; and the initial introduction of mass production into the tool and cutlery trades has produced a new problem of female and juvenile labour. In the background, as in other industrial centres, over 13,000 men stood permanently idle in the market place at the height of last year's boom.

Indeed, some citizens learned at least one important lesson from the experience of the last depression. In the twenties and early thirties, when trade was bad, bold schemes of technical re-organisation rendered Sheffield iron and steel and engineering fit to meet all requirements when business did revive. Research and rationalisation consolidated the city's international pre-eminence in the making of special steels. But much valuable human material went to waste.

In the last resort, indeed, most of Sheffield's outstanding problems are human problems. Old Central Sheffield is not a pleasant place for the poor to live in. A bold plan to reconstruct the city is lifting the poor from the congested and unhealthy centre of the smoky basin, and planting them down in garden estates on the encircling hills by the edge of the moors. Over 20,000 houses have been built in 18 years at a total cost of nearly £11 millions. Tangled and precipitous streets in the heart of the city are being widened, and new arteries are planned. Antiquated workshops and the age-old markets still stand in the way; but statutory powers to assist the lingering small masters in the city's centre to remodel their works have been obtained; and the elimination of ancient markets by building new ones has been begun.

Thus, in housing and town clearance, as in the manufacture of steel, the "canny" individualists of Sheffield, inured by hard experience to the ups and downs of trade, are learning to seek the control of their future. The swings of the city's business have always been more violent than in most other industrial places. In June, 1921, over 69,000 persons were out of work—nearly 11,000 more even than in the depths of the recent depression. In 1932, when the percentage of unemployed among the insured persons in Britain was 22, in Sheffield it was 34. Last December, when the British percentage was 12.5, in Sheffield it was 9.4. The end of prosperity's road has not yet been reached. Sheffield is still relatively better off than cities of Lancashire, the West Riding, Wales and the North-East Coast. Both managers and workers are well aware, however, that the road that they have been treading in recent months may turn again. Things are "champion" just now; but "it can't last." Every Sheffielder refuses, as he always has done, to surrender his independence of action. But native common sense has taught him the expedient virtues of collaboration. Steel-men and tool-makers, and even the scattered cutlers, are looking at the future together. And Sheffield's prosperity, soundly based in the long run on the rising secular demand for metal products, is likely to grow in the future. Cutlery may slowly decline, but other metal manufactures will continue to expand.

The Films Bill

THE Committee Stage on the Films Bill in the Lords last Monday provided an occasion for several peers to show their independence of mind. In a particularly thin House they secured the introduction of drastic amendments in the teeth of the Government's opposition. These changes included a further increase of quota rates for both renter and exhibitor, and the elimination of the proposal that the current quota for exhibitors should be reduced to 15 per cent. Both proposals are likely to be reversed on Report, and if the Lords prove obdurate the Government are expected to ask the Commons to disagree with them. None too much time remains, however, before the Bill must reach the Statute Book; and the anxiety of the Government over their Bill offers a tempting opportunity for a little polite pressure by interested parties, of which advantage is being taken in full.

The Bill is impelled forward by a substantial amount of goodwill. There is unanimity about the objective to be attained, but wide differences about the road to be taken. There is a universal desire to help the film industry to take firm root in this country. Appreciation of the difficulties the industry has had to encounter exists, nowadays, to an extent which was impossible a few years ago. The industry provides entertainment for enormous masses of the population; it forms tastes, habits, opinions for large sections of the people. The Archbishop of Canterbury admitted a few days ago that in this respect the film was already more powerful than the Press or the radio. Its growing power as an instrument of international goodwill is now realised; and this aspect is unlikely to escape the attention of the Vansittart Committee for the Co-ordination of International Propaganda, recently set up by the Prime Minister. A considerable amount of capital—probably over £100 millions—is now invested in the industry, and normally a large number of persons—believed to be well over 100,000—is employed in it.

There are signs of a better understanding, also, of the industry's technical and commercial problems, most of which are without parallel in any other industry. In the naval world big battleships on one side compel similar vessels to be built on the other side; similarly, competition in film-making compels frank acceptance of the condition that only big films can compete with big films. Whether the objective be international propaganda, or commerce, or even entertainment pure and simple, it is impossible to compete with Hollywood's products by puny efforts at home, involving on each picture an outlay of one-fourth or even less of that of a comparable American film. The conditions for success can therefore be readily discerned. First, our producers must be normally prepared to spend sums on pictures equal to Hollywood's standard. Secondly, British producers and technical men must be capable of producing pictures of equal commercial value when the same costs are involved. Thirdly and finally, British commercial men must obtain the same freedom to enter and exploit the American market as the American film has enjoyed in Great Britain for almost a generation. And that freedom must be *de facto* and not merely *de jure*.

Recognition of these considerations has induced the Board of Trade to give increasing attention recently to means of securing reciprocity. The new Bill, when introduced, offered double-quota rights for any picture made here costing three times the minimum. It was hoped that American companies would prefer to make this more expensive grade of picture, because they would be in possession of a film that could be readily sold in their own output programmes in America. This forecast may prove well

founded—particularly if legal standing is secured for the new amendment to give treble-quota rights for pictures on which not less than four times the minimum, i.e., about £60,000, has been spent. A further amendment made in the Lords is assumed to be of particular value to British producers. Costly pictures of the £45,000 and £60,000 level, if not registered for renters' quota, may be acquired for distribution in America. The renter acquiring any such picture for American distribution will be granted exemption from quota liability to an extent equal to once or twice the length, if the price paid to the British owner for the American rights is £15,000 or £30,000, respectively. Strong objection to the proposal has come, however, from exhibitor quarters, whose attitude may fairly be dubbed intransigent. They fear the reduction in the total number of pictures implied in the double and treble-quota proposals, and refuse to see any compensation in the resulting improvement in the grade of pictures and in the far larger number of cinemas which would be willing and able to book them. In this attitude exhibitors in the mass seem definitely open to criticism. At the other extreme, there is little to be said for arithmetical calculations, designed to reassure the exhibitor, whose basis may be uncertain and whose effect, therefore, may be misleading.

The objection to these short-cut devices is not that exhibitors will suffer from their adoption, for exhibitors will not suffer; nor is it that the volume of employment will be reduced, for that will not happen. Our criticism is rather that the purely British producer will, in fact, not be able to take advantage of the scheme. American producers will prove that pictures can be made in British studios to compete successfully with pictures from Hollywood. But no British producer will be given the same opportunity. We believe the event will prove that, although a number of London-made pictures will be distributed in America, the American market will be closed even more uncompromisingly to true British pictures than before. And both here and throughout the world British products will tend to become second-class pictures. It is no refutation of our argument that British pictures like "Victoria the Great" succeeded in crashing into the American market. That particular picture was made independently, and the American companies viewed it before deciding to buy. In other words, the picture was completed on the producer's sole responsibility and expense. Experience has convinced the trade that procedure on these lines is too speculative a gamble, and that the British producer is not justified in hazarding the additional cost of a picture intended for American release. There can be only one proof of competitive equality—an engagement to buy the American rights of a British picture before "shooting" has begun.

GERMANY AND AUSTRIA

This issue of *The Economist* includes the following:

International Treaties, Agreements and Declarations bearing on Austrian Independence	614
Germany in the Next War (By a Special Correspondent)	620
Course of the Crisis	615
Austria's Economic Position	644 and 665
Effects on Industry, Investment and the City	644, 636 and 633

More Scraps of Paper

Extracts are given below from the chief treaties, agreements and declarations bearing upon the independence of Austria. They are arranged in chronological order.

1. On January 8, 1918, President Wilson enunciated the *Fourteen Points* of "the programme of the world's peace," of which the tenth was:—

The peoples of Austria-Hungary, whose place among the nations we wish to see safeguarded and assured, should be accorded the freest opportunity of autonomous development.

2. The *Treaty of Versailles* between the Allied and Associated Powers and Germany, signed on June 28, 1919, included the following articles:—

ARTICLE 10: The Members of the League undertake to respect and preserve as against external aggression the territorial integrity and existing political independence of all Members.

ARTICLE 80 (cf. ARTICLE 88 of the *Treaty of Saint-Germain* between the Allies and Austria): Germany acknowledges and will respect strictly the independence of Austria, within the frontiers which may be fixed in a Treaty between that State and the Principal Allied and Associated Powers; she agrees that this independence shall be inalienable except with the consent of the League of Nations.

3. The *Treaty of Saint-Germain* between the Allied and Associated Powers and Austria, signed on September 10, 1919, laid down in ARTICLE 88 (as in ARTICLE 80 of the *Treaty of Versailles* above) that the independence of Austria was inalienable; and Austria further undertook:—
to abstain from any act which might directly or indirectly or by any means whatever compromise her independence.

4. On October 4, 1922, at Geneva, in *Protocol No. 1*, signed by Austria, France, Great Britain, Italy and Czechoslovakia and subsequently by Belgium and Spain, whereby the economic reconstruction of Austria was set on foot by the League, Austria reiterated the undertaking of the *Treaty of Saint-Germain* to abstain from any act which might compromise her independence; and it was made clear that "independence," in this context, expressly included economic independence.

5. On March 19, 1931, the German Government and the Austrian Government

agreed to enter forthwith into negotiations for a Treaty to assimilate the tariff and economic policies of their respective countries

The Council of the League of Nations asked the Permanent Court of International Justice to give an advisory opinion on the question whether

a regime established between Germany and Austria on the basis and within the limits laid down by the Protocol of March 19th . . . would be compatible with ARTICLE 88 of the *Treaty of Saint-Germain* and with *Protocol No. 1* signed at Geneva on October 4, 1922.

By eight votes to seven, the Court decided that the step proposed was incompatible with the *Geneva Protocol*; and six judges declared it incompatible with ARTICLE 88 of the *Treaty of Saint-Germain*.

6. On February 17, 1934, the Governments of France, Italy and the United Kingdom declared that

they take a common view of the necessity of maintaining Austria's independence and integrity in accordance with the relevant treaties.

7. The *Rome Protocols*, signed by the Governments of Austria, Hungary and Italy, on March 17, 1934, included a declaration by the signatory Governments of

their desire to co-operate in the maintenance of peace and the economic restoration of Europe, on the basis of respect for the independence and rights of every State.

8. On August 21, 1934, a *communiqué* relating to the

meeting between Signor Mussolini and Herr von Schuschnigg stated:—

there was found to be an effective community of views upon guiding principles and the methods to be adopted as regards the independence and integrity of the Austrian State—an independence and integrity to which appertains also complete internal autonomy and which, moreover, represents a concrete European interest and an element favourable to the maintenance of tranquility in the Danubian sector.

9. On September 27, 1934, France, the United Kingdom and Italy made a *Three Power Declaration* re-affirming the Declaration of February 17th; and Signor Mussolini, on October 6th, stated:—

We have defended and will defend the independence of the Austrian Republic, an independence . . . consecrated by the blood of a Chancellor, who may have been small in stature but whose spirit and soul were great.

10. In the *Franco-Italian Agreement* concluded at Rome on January 7, 1935, the two Governments

in view of the necessity of maintaining the independence and integrity of Austria, agree . . . in the event of this independence being threatened, they will consult together and with Austria regarding the measures to be taken.

11. In the *Anglo-French Declaration of London* on February 3, 1935, the British Government stated that they consider themselves to be among the Powers which will, as provided in the Rome Agreement, consult together if the independence and integrity of Austria are menaced.

12. On April 14, 1935, France, Italy and the United Kingdom, at the *Stresa Conference*, jointly resolved to confirm the *Three Power Declarations* of February and September, 1934, and the *Rome and London Agreements* of 1935.

13. On May 21, 1935, Herr Hitler, addressing the Reichstag on the conditions for world peace, said:—

The German Government will . . . unconditionally respect the remaining articles (of the *Treaty of Versailles*) regarding international relations, including the territorial provisions, and will only carry out by means of peaceful understandings such revisions as may be inevitable in the course of time . . . and are ready at any time to agree to an international arrangement which will effectively prevent and render impossible all attempts to interfere from outside in the affairs of other States.

Herr Hitler's speech also contained the following sentence:—

Germany neither intends nor wishes to interfere in the internal affairs of Austria, to annex Austria or to conclude an Anschluss.

14. The *communiqué* regarding the Agreement concluded between the German and Austrian Governments on July 11, 1936, as broadcast by Dr Goebbels, contained the following points:—

(1) In the sense of the statement made by the Führer and Reich Chancellor on May 21, 1935 [see 13 above], the German Government recognises the full sovereignty of the Federal State of Austria.

(2) Each of these two Governments shall regard the internal political conditions of the other country, including the question of Austrian National-Socialism, as a domestic concern of that country, upon which it will exert neither direct nor indirect influence.

(3) The Austrian Federal Government's general policy and its policy towards Germany in particular shall be constantly guided by the principle that Austria recognises herself to be a German State

15. A further agreement was concluded between Herr Hitler and Dr von Schuschnigg at Berchtesgaden on February 12, 1938. The terms of this agreement have not been published but they were stated by Herr Hitler, in his speech to the Reichstag on February 20th, to be within the framework of the agreement of July 11, 1936, [see 14 above].

Topics of the Week

Finis Austriae.—Events in Austria have moved during the past week at a speed which will leave even the future historian breathless. Last week, in a brief reference in these columns to Dr von Schuschnigg's forthcoming plebiscite, we discussed the possible attitude of the Nazis, and concluded: "They are, it appears, to abstain, and complain that the conditions of the plebiscite do not come up to the standards of fairness that Nazis demand for countries where they are not in control. There is also the ugly possibility that the Nazis may attempt to hamper the vote by fomenting disorder." These words were a fair representation of the position as it appeared to stand on Thursday evening, March 10. But already they seem like a faint and derisive echo from a long-distant past. Dr von Schuschnigg had announced his plebiscite in a speech at Innsbruck on Wednesday evening, March 9th. The voting age was that laid down in the Austrian constitution, namely 24, and the question was, of course, deliberately framed to invite an answer favourable to Dr von Schuschnigg. But it was the unanimous opinion of all observers competent to know the mind of the Austrian people that the result would be a large majority for Dr von Schuschnigg; and this was not intended as a tribute to his manipulative skill, but rather as a reflection of the real opinion of the Austrian people in that far distant time only a week ago, and it was confirmed by the very obvious fear of the Nazis both in Austria and in the Reich that they would not show up well in the result.

Berlin was taken by surprise, and for a day there was nothing but an ominous silence from over the frontier. The Austrian Nazis, however, were indulging in demonstrations in Graz, Linz and Vienna, which amounted at times to riots, although there is no evidence that the Government was in anything but complete control of the situation. Early on Friday morning, March 11th, reports reached London of large troop movements and partial mobilisation in Bavaria, which, in spite of repeated categorical denials from Berlin, were too circumstantial to be disbelieved. From that moment events moved with lightning speed. The two Nazis in the Austrian Cabinet, Dr von Seyss-Inquart and Herr Glaise-Horstenau, presented an ultimatum to the Chancellor demanding the abandonment of the plebiscite and threatening that if this were refused the Nazis would create disorder. Dr von Schuschnigg at first rejected these demands, but when it was later made clear to him that the real sanction behind them was the threat of invasion by German troops, he gave way and cancelled the plebiscite. Even this was not enough for the Nazis, for a second ultimatum followed, demanding that Dr von Schuschnigg should resign and be replaced by Dr von Seyss-Inquart. To this ultimatum was attached a time limit until 4.30 p.m. on March 11th, and if it were not accepted, Dr von Schuschnigg was informed that German troops would cross the frontier at 5 o'clock. Faced with the prospect of civil war and armed invasion, the Austrian Chancellor yielded. He broadcast his farewell, stating bluntly that he yielded only to superior force; that there was no truth in the German allegation of internal chaos in Austria; and that he had ordered the Austrian armed forces to make no resistance to the invading Germans. Dr von Seyss-Inquart took office, and immediately summoned German troops to his support. He broadcast at 8.15 to announce that the German Army was already on its way to Vienna. By 10 o'clock on the evening of this momentous day the last independent Government of Austria had entirely ceased to function; the Swastika was flying in Vienna, and the Nazis were in full control.

The German Invasion.—German bombers were flying over Vienna before the end of Friday, March 11th,

but the actual invasion by the Reichswehr did not occur until early on Saturday, March 12th, when the German soldiers quickly overran the whole country and exchanged courtesies with the Italian guard on the Brenner. They were followed by Herr Hitler himself, who first visited the village of Braunau, where he was born, and then went on to Linz, the provincial capital of Upper Austria. He was met at Linz by Dr von Seyss-Inquart, whose last act as Chancellor of Austria was to declare null and void the Article of the Peace Treaty which enshrines the independence of Austria. On the same evening decree laws were promulgated in Berlin and Vienna declaring Austria to be a part of the German Reich, and announcing that the population of Austria over twenty years of age would have an opportunity on April 10th to ratify these laws in a "free and secret plebiscite."

The German Army and police were meantime riveting their control on Vienna and "cleaning up" the city to make it safe for the Fuehrer's arrival. The triumphal entry was actually made on Monday of this week, March 14th, and on Tuesday the Fuehrer held a great review of his troops in Vienna. He returned to Munich on the same day, but before he went he could be assured that Austria had been bodily incorporated in the German Reich. The Austrian Army is now part of the German Army; the Austrian Foreign Office has ceased to exist; the Austrian police are either in gaol or incorporated in the various German police organisations; the Austrian civil administration has been taken over in its entirety. The Austrian schilling still exists for a day or two, but the gold reserves are merged in those of the Reich, and the currency itself is shortly to be superseded by the mark. Customs duties are also continuing for the moment to be levied, but there is already talk of converting the Customs houses into youth hostels. Dr von Seyss-Inquart has hardly been rewarded with as much as thirty pieces of silver, since he is now no more than Statthalter of the latest province of the German Reich. All this had been accomplished within less than a hundred hours after Dr von Schuschnigg's resignation. Never can an independent State have been so quickly done to death and the body so completely disposed of.

Most of the news from Austria tells of the doings there of the victorious Germans, and little is known of the fate of the Austrians. The great majority, by all accounts, seem to have accepted the change in their nationality with alacrity, and there is no doubt that Herr Hitler's majority on April 10th will be even more complete than Dr von Schuschnigg's would have been if his plebiscite had ever taken place. But though the majority may celebrate the victory, there is a terribly large minority who are suffering, or hourly anticipating, a dreadful fate. The Jews, the Socialists, the Catholics, the avowed supporters of Dr von Schuschnigg's regime—all these are now to feel the heavy hand of Nazi revenge. Only the most alert of them managed to escape before the frontiers were closed, and the rest are perforce waiting and wondering what is to happen to them. There is all too much reason to fear that the coming weeks will bring a long tale of horror, and the suicide of Major Fey is only the most spectacular of a large number. The fate of Dr von Schuschnigg himself is uncertain. There have been various reports—among them an official statement of the Propaganda Ministry in Berlin—to the effect that he had been conducted to the frontier, but the truth seems to be that he is still in Vienna and under house arrest. The proud history of Austria is ending in cruelty and terror.

Acquiescence from Rome.—Italy, to all appearance, was as fully taken aback by the German descent on Austria as any other country. In the brief interval between Dr von Schuschnigg's announcement of his plebiscite and the German invasion, the Italian press sided strongly with Austria, although it has now been officially stated by the Italian Government that they were at this time attempting to dissuade Dr von Schuschnigg from proceeding with his intentions. Italian hesitations, however, were ended on Saturday by the simultaneous appearance on the Brenner of German troops and in Rome of a personal envoy from Herr Hitler, bearing a letter to Signor Mussolini in which the Fuehrer claimed that the action he had taken was forced upon him, and represented no threat to Italy. He gave a categorical assurance that he had no ambitions south of the Brenner. Signor Mussolini therefore determined to make the best of what cannot be disguised as other than a bad job for Italy, and the official attitude is now one of explaining that the incorporation of Austria in Germany had long been foreseen in Rome, and was not unwelcome there. Effusive telegrams have been exchanged between the two Dictators, and Signor Mussolini has definitely declared that his attitude was throughout dictated "by the friendship between our two countries, which is consecrated in the Axis." It seems, indeed, as if the events of the past week have tied Signor Mussolini even more firmly to Germany's coat tails than before. He has passed from a willing partner to a tributary *malgré lui*. His speech to the Chamber of Deputies on Wednesday was chiefly intended to allay the apprehensions that have been aroused in Italy by the presence of German troops on the Brenner. But, though even the Duce was unable to represent the German *coup* as a gain for Italy, he still spoke of Italy and Germany "marching together" to create a new European equilibrium. It is in this atmosphere, and under the shadow of repeated Italo-German intervention in Spain, that the Anglo-Italian conversations have begun "in earnest" in Rome. Their inception has been duly marked by the ostentatious withdrawal of an unspecified number of troops from Libya, and this is, of course, in keeping with what can be the only remaining purpose in Signor Mussolini's mind in talking with Mr Chamberlain—namely, to keep Great Britain quiet while the scene is mounted for the next act. But what purpose Mr Chamberlain conceives the talks to be serving is his own unfathomable secret.

Disillusion in Whitehall. — The effect on Great Britain of the German invasion of Austria was to produce an immediate reaction of anger and alarm. The anger at least was fully shared by Whitehall, and was indeed increased by the fact that the German Foreign Minister was in London and having meetings with members of the British Cabinet while the invasion of Austria was being prepared. Herr von Ribbentrop lunched at 10 Downing Street on the fatal Friday when ultimatums were being rained on Vienna, and he was left in no doubt of the strong objection that His Majesty's Government took to Germany's brutal methods of obtaining her ends. Later in the day, after the deed was done, both Great Britain and France protested in Berlin in the strongest terms. These protests were rejected in a letter from Baron von Neurath which was remarkable for the brusque phraseology which Germany now sees fit to employ. The British Government was bluntly told that it was "not within its rights in claiming the rôle of a protector of the independence of Austria," and that "the form of the relations between the Reich and Austria can only be regarded as an internal affair of the German people, which is no concern of third Powers." Baron von Neurath also informed London of the official German version of events, according to which the opposition to Dr von Schuschnigg's plans was wholly Austrian, and German troops were sent only in response to a request for help from the Austrian Government.

In a statement in the House of Commons on Monday afternoon the Prime Minister made it abundantly clear that he accepted neither this version of events nor the

German view that the rape of Austria was no concern of Britain's. "The methods adopted throughout these events," he said, "call for the severest condemnation and have administered a profound shock to all who are interested in the preservation of European peace." Mr Neville Chamberlain was not, however, prepared on that occasion to draw any practical consequences from the drastic change in the diplomatic situation which Herr Hitler's *coup* has brought about. British re-armament is, indeed, to be speeded up, but the country is still in the dark about the policy which it is intended to support. The policy on which Mr Chamberlain has staked his political future—the policy, that is, of initiating diplomatic negotiations with the Powers of the Rome-Berlin Axis, with the intention of bringing them within some general settlement of Europe—seems to the great majority of observers to have been ruined by Herr Hitler's use of force and by Signor Mussolini's subsequent acquiescence in such methods. The Prime Minister has tacitly admitted that this policy must be subjected to the most searching reconsideration. But he is clearly loth to abandon it, and he has not hitherto gone further than to say that "what has passed cannot fail to have prejudiced the hope of His Majesty's Government of removing misunderstandings between nations and promoting international co-operation." The conversations with Italy meanwhile continue, though all talks with Germany have been broken off. The British Cabinet are believed to be earnestly discussing the bases of British policy in the new situation that has arisen, and the Dominions are being consulted. It is not wholly impossible that we stand on the threshold of a decisive change in the policy that has hitherto been pursued by the British Government.

The Policy for Peace.—What the new policy should be, if there is a change, was most impressively stated in Monday's debate by Mr Winston Churchill. Mr Churchill went to the root of the matter at once by asking what reason there was to believe that time is on our side. Where should we be two years hence, he asked, "when the German Army would certainly be much larger than the French Army, and when all the small nations would have fled from Geneva to pay homage to the ever-waxing power of the Nazi system and to make the best terms they could for themselves." He saw Nazi Germany quickly extending its domination over the whole of South-East Europe and its 200 million people, and growing strong enough to face the European democracies with a menace they could not resist. His remedy was the policy of collective security, and he uttered a stern rebuke to those of his colleagues in the Conservative Party who jeered at the expression. "The only thing that is ridiculous about it is that we have not got it." Mr Churchill would begin now to build up in Europe a group of countries united in a solemn treaty for mutual defence against aggression. The nucleus of such a group should be Great Britain, France and the Little Entente. They should have their forces marshalled in a grand alliance, with their staff arrangements concerted, and if all this rested, "as it can honourably rest," on the Covenant of the League of Nations, it would be sustained by the moral sense of the world. "If it were done in the year 1938—and, believe me, that may be the last chance there will be for doing it—then I say that you might, even now, arrest this approaching war." There is no question of the virtually unanimous support that would be accorded to the policy thus outlined by the whole of the Opposition Parties. There is equally little doubt that Mr Churchill has the support of a very large and daily growing section of Conservative opinion which is showing itself in quarters, such as the City, which cannot be accused of any Opposition bias. In short, his view now represents the opinion of a majority of the nation. The impression of this fact upon Parliament may be delayed, but cannot fail to show itself. More than ever it is now a race between the rapid deterioration of events and the awakening of Great Britain to the rôle which she must play if she is to save herself and her civilisation.

Czechoslovakia.—The country most obviously menaced by the Nazi conquest of Austria is Czechoslovakia, the heart of which is now almost completely surrounded by Germany. The German Government, it is true, have been at great pains to persuade the Czechs that they entertain no hostile intentions. On March 11th, while Dr von Schuschnigg was being bullied out of office, Field-Marshal Goering gave to the Czech Minister in Berlin a general assurance, which he later renewed on behalf of Herr Hitler, that it would be the earnest endeavour of the German Government to improve its relations with Czechoslovakia. The German troops marching into Austria were given the strictest of orders to keep at least 15 kilometres from the Czech frontier, and when some German military aeroplanes flew by mistake over Czech territory, an immediate apology was forthcoming from Berlin. Finally, the Czechoslovak Minister in Berlin was assured by Baron von Neurath on March 12th that Germany considered herself bound by the Arbitration Convention of October, 1925. This was one of the treaties concluded at Locarno, and it provides that "all disputes of every kind between Germany and Czechoslovakia with regard to which the parties are in conflict as to their respective rights, and which it may not be possible to settle amicably by normal methods of diplomacy, shall be submitted for decision either to an Arbitral Tribunal or to the Permanent Court of International Justice." There is, however, a further provision which may conceivably be significant, to the effect that the treaty "does not apply to disputes arising out of events prior to the present treaty and belonging to the past."

These assurances have been taken in Prague as meaning that Germany has no immediate intention of attacking Czechoslovakia. But since the invasion of Austria involved the breach of a number of obligations quite as binding as those entered into by Field-Marshal Goering and Baron von Neurath last week, the Czechoslovak Government is naturally concerned to repose the security of its existence on a surer footing. The Czechoslovak Army has not been mobilised, but it is held in readiness, and the frontiers are, of course, fully manned. The geographical situation of the country compels it to rely in the first place upon its own strength. But the last few days have seen a formal re-affirmation in the most emphatic terms of the second element in Czechoslovakia's defence, namely, the alliance with France. The first action on taking office of MM. Blum and Paul Boncour—the new Prime Minister and Foreign Minister of France—was to assure Czechoslovakia that France was fully determined to implement her pledges of support if Czechoslovakia was attacked. The Soviet Government has given a similar re-assurance, and has gone further by suggesting a conference, at Geneva or elsewhere, of the major Powers (excluding Germany, Italy and Japan) to discuss German aggression in Austria. Both Prague and Paris have naturally been anxious to know what position would be adopted by

Great Britain in the case of an attack. In public the Prime Minister has been unwilling to go further than to say that we should fulfil our obligations under the League Covenant. But there cannot be much doubt in any quarter that if France were involved in a war which started over Czechoslovakia Great Britain would in the long run, if not in the short, be compelled to support her. Nevertheless, even with this clear warning that an attack on Czechoslovakia means war, the exalted mood of the Nazis both in the Reich and in Bohemia is such that this danger spot of Europe must necessarily be the object of the most watchful concern by every Government in Europe. There is no sign of any weakening in the firm resolve of the Czechs to resist attack, and although the Sudeten Germans have naturally been encouraged to state their claims more emphatically, the events of the last week have served only to strengthen the ties between the Czech parties supporting the Government. There are hard decisions ahead for Czechoslovakia. But there is no lack of courage and resolution to take them.

Civilian Precautions.—We do not yet know the precise meaning of the Prime Minister's now famous call for an "extension of national effort" in face of the troubled state of Europe—though we have it on authority that so far there is no intention to introduce conscription of any kind. It is the more important, therefore, that British citizens, summoned to perform tasks upon the success of which may hang their lives and their liberties alike, should perform them cheerfully and adequately. The rate of recruitment to the Services is at last satisfactory, but the position on the home front in this, as in other and more technical respects, is not so encouraging. The Home Secretary's broadcast plea on Monday for a million helpers to undertake the organisation and execution of defence measures against air attack was a clear statement of our civil and democratic duties. Civilian reluctance to participate or show interest in air raid precautions has been due to varied causes. The unhappy delay in drafting official plans caused widespread ignorance of the work to be done. There has been fear of regimentation; and an apathetic disgust at the decay of world peace. There is no longer any excuse, however, for holding back from any measures necessary to safeguard national traditions of free and voluntary action and self-government. There is leeway for the Government to make up in the completion of anti-aircraft defences; but there are obligations for individual citizens also, which over-ride class, creed or controversy.

Air Defence Criticised.—Coinciding as it did with a sudden and sinister turn in European politics, the outspoken Report of the Cadman Committee brought to a head long-standing doubts about the general efficiency of the Air Ministry, in the execution of the defence programme no less than in the development of civil transport.

On Tuesday, the Ministry's military achievements were severely criticised, when the Air Estimates were under discussion. Expenditure, organisation and equipment were all attacked; profits were alleged to be too high, official costing inadequate and the Air Force deficient in up-to-date and front-line machines. The Under-Secretary for Air, supported by the powerful intervention of Mr Chamberlain, who refused the demand for an inquiry, went some way to rebut the charges. There were technical delays in aircraft production, but they were being steadily overcome. Gun supply was satisfactory; gun turrets very soon would be; and in these respects "we are as good as any foreign country, and probably better." The 1,500 front-line machines aimed at for March, 1937, had been achieved; the desideratum of 1,750 for March, 1939, was already in sight. Parliamentary anxiety, however, was not wholly dispelled. The Prime Minister's unwillingness to expose the Ministry to lay examination at this juncture in world affairs was appreciated by the House; and his refusal to "court martial" Lord Swinton found readier acceptance because already Lord Winterton had been given Ministerial rank to represent the Air Ministry in the Commons. But the abandonment of first-line strength as a measure of relative national power in the air, previously stated by Mr Chamberlain and reiterated by Colonel Muirhead on Tuesday, was unconvincing to many more than Mr Churchill, whose scepticism was already well known. Members are not yet satisfied that all is entirely well in matters of production and departmental organisation; but the events of the last few days have altered the whole strategic landscape, and the revision of Britain's defence programme must inevitably include the successful intensification of power in the air.

France in Paralysis.—At the moment when the fate of Europe is perhaps being decided, France is in the grip of a political paralysis of which it is still impossible to forecast the issue and the consequences. On Wednesday of last week, when the Spanish insurgent army—once more heavily reinforced, it is reported, by Italian infantry and German aircraft—broke through on the Aragon front, and when Dr von Schuschnigg announced his intention of holding a plebiscite in Austria, M. Chautemps decided to go out of office. He carried out his intention next day, when Herr Hitler's ultimatums were on the verge of delivery and General Franco's forces were sweeping forward towards the Mediterranean coast. In the Chamber in Paris on that same Thursday morning M. Chautemps was making a farewell speech. There was no question, he said, of his being driven out of office by events. He had his parliamentary majority; he had recently received two votes of confidence; the Treasury was not in acute difficulties. But he would not carry on without the extra financial powers and the mandate to postpone, or temporarily reverse, certain measures of social betterment; and his Socialist allies were as unwilling to grant him these powers as his own Radical Party had been, in the preceding chapter of the story, to grant them to M. Blum. The task of forming a new Government fell to M. Blum, who determined to found it on the broadest possible basis. His own Socialist Party and the Confédération Générale du Travail gave him a free hand; the Communists did not make any difficulties for him; M. Reynaud showed the same foresight and constructiveness that Mr Churchill is showing at Westminster. Even on the extreme Right there were voices in favour of an *union sacrée* when, on Saturday evening, M. Blum made his personal appeal to all the opposition parties. The hope of French national unity was torpedoed in that critical hour by M. Flandin; and M. Blum's *pis aller* Government—based on Socialist and Radical support alone—is neither representative nor viable. At the Foreign Ministry, M. Delbos has been replaced by M. Paul-Boncour. M. Daladier remains at the Ministry of War, the one solid point of continuity and hope. The selfish futility of the French politicians in these days has been, if possible, more alarming than the tiger-spring of Germany on Austria. The responsibility of M. Flandin is obviously very heavy. M. Herriot, too, seems to have acted

with less than his usual patriotism, for he held aloof, for personal reasons, when his aid might have brought the dream of unity to fruition. The need for a National Government in France is as great as ever. But now the Left are embittered by the refusal of their offer, and it will be more difficult next time. French jealousies, thus reinforced, may last longer than European peace.

General Franco's Advance.—General Franco's long-awaited offensive was launched last week in the sector of the long front immediately to the north of Teruel, and between that city and Saragossa. This was the site of the severe fighting last autumn, in which the Government troops captured Belchite, and where ever since there had been a dent in the Insurgent line. Within a week of the beginning of the new offensive the Insurgent line has been much more than straightened, since there is now a big bulge reaching almost to the Catalan frontier. General Franco has marched half-way from Saragossa to the Mediterranean, and if his advance could continue at the pace of the first week he would soon have divided Government Spain into two parts. The spearhead of the attack reached the strategically important town of Alcañiz on March 14th, and at this point the gains of territory amounted to about 2,000 square miles. Since then, however, there has been little further progress, though Barcelona has been subjected to repeated air-raids of extreme savagery. The rapid advance was due to a combination of the unpreparedness of the Republican Army with the heavy preponderance of aircraft and artillery on the rebel side. General Franco has made full use of his foreign troops; the Italians have been in the van, and a large number of new German aeroplanes have assisted their advance. The British Government declare that they have no proof of any recent importation of men or materials into Spain from Germany or Italy, but this sudden appearance of ample material backing for General Franco, additional to what he has hitherto used, creates the very strongest presumption that there have in fact been new and flagrant violations of non-intervention. It is this aspect of the situation which has aroused the deepest concern in France. M. Blum's new Government has been in constant consultation with its military advisers. There have been reports that France has decided to "non-intervene" in the same forthright and concrete manner as Germany and Italy. But at the time of going to press it appears that this decision, if taken, has not yet been put into effect. The subject of non-intervention was debated in the House of Commons on Wednesday night, when the Prime Minister persisted in his refusal to accept the cumulative evidence of armed and active participation by the dictators or to regard with anything but complacency the situation that would face both France and Great Britain if the whole of Spain were to fall under Fascist domination. It may therefore be assumed that Great Britain is still attempting to restrain France from taking any action. But whether the French can any longer remain inactive in the face of the threat of a third hostile frontier to defend becomes daily more doubtful.

The Last of the Mohicans.—The latest State trial in Moscow has moved to the usual end. On Friday of last week the Public Prosecutor, M. Vishinsky, asked the Court for death sentences on 19 out of the 21 prisoners on trial. On Saturday the prisoners made their last pleas. On Sunday the Court granted the prosecutor 18 out of his 19 demands. The condemned men uttered their last words in public, and the executions were carried out on Tuesday night. Thus the last of the Bolsheviks have been liquidated. The Bolsheviks and Bolshevism are dead; Stalin and Stalinism remain. But what is Stalinism? That is the question. And it is a question which, at the moment, we are completely unable to answer. More than ever, Russia is the great enigma. Internally, Stalinism seems to be a system of rigid and merciless tyranny, turning entirely upon the will of one inscrutable man. Externally, there are no signs of wavering in the policy of standing firm with those who defend the

"indivisibility of peace" against the threat of the Triangle powers. But these may only be superficial indications. No one, in any country, can be sure where Russia will stand a year, or even a month, hence. No one, in any country, can be sure that Stalinism still retains the same objectives and aspirations as the original Bolsheviks. What is the aim of Stalinism? The creation of a truly Socialist State in Russia? The world revolution? Or the military empire of one man? These questions are the fruit of the long series of unbelievable trials.

The Government's Bacon Policy.—After protracted negotiations with the Pigs and Bacon Marketing Boards, the Minister of Agriculture was able on Thursday of last week to outline his long-term policy for this industry; and it is hoped to introduce legislation before Easter. It is proposed to reconstitute the Bacon Development Board with wider powers than it has hitherto possessed. Higher and more uniform standards of efficiency in bacon production are expected to result from the rationalisation of the curing industry, while the contract system for the sale of pigs to the curers will be restored. In consideration of these reforms the Government is offering financial assistance for three years. This assistance is to be given on a complicated system of two sliding scales. The price of bacon is, of course, closely related to the price of pigs for curing, and that in turn is closely affected by the cost of feeding stuffs. These three prices are henceforth to be formally connected. The basic price of pigs is to be 12s. 6d. per score dead weight when the cost of the standard ration of feeding stuffs is 8s. 6d. per cwt., and pig producers will be compensated if the cost of feeding stuffs rises above that figure. The bacon curers are to be similarly compensated if the price of bacon falls below a "notional" figure of 94s. 9d. per cwt. In the second and third years, these guaranteed margins between costs and selling prices are to be slightly reduced, the basic pig price by 1d. and 2d. per score respectively, and the bacon price by 1s. and 2s. per cwt. There is also a provision for reimbursement of the Exchequer if the cost of feeding stuffs falls below 8s. 6d., or if bacon prices rise above the standard level. The number of pigs covered by these arrangements will be 2,100,000 in the first year, 2,400,000 in the second, and 2,500,000 in the third. The non-agricultural community can hardly be expected to be enthusiastic about the announcement of one more subsidy for agriculture. But it can at least be said for this scheme that it is designed in such a way as to give the farmer and the bacon curer no more than the immediate amount of assistance necessary at any time, and to do so in such a way as to avoid any burden on the consumer. In addition, the payment of assistance is made conditional upon the industry financing an approved programme of research and education, with the object of reducing costs of production, and is correspondingly linked up with a scheme for rationalising the curing industry. The regulation of supplies, which includes the quota for imports, is to be continued, but without any restriction to a rigid total. There may be a hope, therefore, that there will be some relaxation of control of imports in the interests of the consumer. As agricultural benefit schemes go, this one seems to be well conceived.

Cadman Report Debated.—When the Report of the Committee of Inquiry on Civil Aviation came to be debated on Wednesday, last week's storm of indignation had appreciably abated. The German *coup* in Austria and its effect in deciding the Government to intensify re-armament strengthened the case of those who argued that military matters must in these days be a prior charge on the Air Ministry's resources. The Prime Minister paid his usual tribute to Lord Swinton's zeal and energy, despite the Cadman Committee's accusation of negligence and inefficiency in his Ministry; and he pointed out that both the Government and Imperial Airways had given tangible proof of their willingness to accept the Committee's find-

ings in most essentials. It remains true, however, that the Report revealed a thoroughly disquieting state of affairs. The ominous implications of its revelations of inefficient methods both in civil aviation and aircraft production cannot be dissipated merely by reference to Imperial Airways' record of safety and success with flying-boats. The Government blanketed effective criticism by announcing their policy simultaneously with the publication of the Report, and protected Lord Swinton in the Upper House by deputing Lord Winterton to represent him in the Commons. But the maladministration of years cannot easily be rectified in a week; and the serious charges made by the Cadman Committee have still to be disproved by concrete evidence of successful reforms.

Road Transport Dispute.—There are now some signs that the threatened strike of 200,000 lorry drivers and assistants, called for March 26th, may be averted. The Associated Road Operators, the employers' organisation whose reluctance to accept the findings of joint arbitration under the National Conciliation Board precipitated the unions' strike notices, have emphasised their willingness to grant increases in drivers' and youths' wages; but they argue that the Board is unrepresentative and that, pending the introduction of statutory means, there is no way to enforce its decisions. Nevertheless, in default of such legislation, an honest effort by the Associated Road Operators to enforce collective agreements might have done much to mitigate the unrepresentative character of the Board and to make up for the absence of statutory sanctions. Now, indeed, the A.R.O. have shifted their ground, and are said to be ready to recognise as binding the offer made by the majority of employers. Imperial Chemical Industries, as well as a number of large distributive firms, have laid down that their contractors must pay and observe the conditions agreed by the Board. Meanwhile, two railway unions have responded favourably to the transport workers' request for men in works, docks and factories not to load lorries in the event of a strike. The issue is the status of collective bargaining, which still rests ultimately in British practice upon the ability of the unions and/or employers to enforce voluntary agreements by a trial of strength. In some other countries the collective bargain has become a legal requirement in industrial relations. In the goods road transport industry in Britain the attempt to secure collective agreements had its origin in Acts of 1930 and 1933. Whatever the upshot of the threatened strike, the last word must lie with Parliament. And the final decision must include workers for private carriers (or "C" licence-holders), as well as the employees of public carriers ("A" licence-holders) and limited carriers ("B" licence-holders) who are alone affected at present by the proceedings of the National Board.

GERMANY IN THE NEXT WAR

The resignation, or dismissal, last month of Field-Marshal Blomberg, General von Fritsch and other German generals, demonstrated to the world at large the importance of the differences existing between the leaders of the National Socialist Party and the leaders of the Reichswehr. The army reorganisation which was then carried out did not dispose of these deep-seated differences. Both in Germany and abroad, the suggestion that von Blomberg and von Fritsch resigned merely for reasons of health has failed to carry conviction; and the report that the thirteen generals who resigned in sympathy with von Fritsch desired primarily to make way for a younger generation is discounted by the fact that they were replaced by other officers of much the same age. Last month's events have been interpreted, rather, as evidence of long-standing dissensions between the political and military leaders of the Third Reich. Subsequent events, culminating in the invasion of Austria, have given special point to this question, since the differences between the Party and the Army are believed to have turned on the economic and military role of the Third Reich. For reasons which are, unfortunately, too obvious for the peace of mind of statesmen and people in other nations, the task of correctly estimating the psychological, material and social forces at Germany's command, in the event of a future war, has acquired new moment and urgency during recent weeks. The following article, by a Special Correspondent, is based on documents emanating, for the most part, directly or indirectly, from sources connected with the Reichswehr. It examines some of the considerations which presumably influenced the Army in pressing on Herr Hitler a more conservative policy than that, apparently, of the more extreme Nazi leaders. The numbered references, throughout, are to documents cited at the end of the article, on page 622. The effects of Herr Hitler's coup in Austria will be the subject of a later article.

PRESENT-DAY German economic measures have been termed, with some justification, economic preparations for war. Naturally, repeated analyses have lately been made in Germany, comparing the present situation with that existing before the World War of 1914-18. We may begin, appropriately, by summarising a number of points in this connection.

GERMANY, 1914-18

In the decades preceding the World War Germany became one of the largest creditor countries in the world, rivalling France for second place in the list after Great Britain. Though she had an import surplus of over seven milliard gold marks during the five years before the outbreak of war, that total was more than offset by revenue from shipping and interest on German capital invested abroad. Her foreign assets were estimated at approximately twenty-five milliard gold marks. In addition, she had large domestic reserves of gold. On June 23, 1914, the Reichsbank held 1.71 milliard marks in precious metal, including 1.37 milliard marks in gold, against a note circulation of 1.8 milliard marks. There were also about 2 milliard marks in gold in circulation.⁽¹⁾

During the war Germany's high credit in neutral countries enabled her considerably to increase her import surplus. Its total in 1915 was 4 milliard marks; in 1916, 4.6 milliards and in 1917 3.7 milliards. For the entire war period her trade balance was estimated to have been passive to the extent of 16 milliard gold marks. The balance was liquidated:⁽²⁾ (a) by a milliard marks of gold exports; (b) by sales of foreign and German securities aggregating three and one milliard marks, respectively; (c) by the incurring of between 3 and 4 milliard marks of debt in foreign and 6 to 7 milliard marks in German currency.

To-day, Germany is not a creditor but a debtor country. Her present reserves of gold and foreign currencies—even on the most optimistic estimate of the hidden reserves of gold and foreign currencies not registered officially by the Reichsbank—are not more than 10 per cent. of the amount available in 1914. They would be sufficient to finance import surpluses, on the scale of the last war, for about six months only. And it is improbable that neutral countries, after their experience in recent years, will be anxious to grant Germany external credit for her purchases of goods abroad. It is easy to appreciate the force of the conclusion, recently expressed,⁽³⁾ that "gold may well become the most important raw material for war purposes." How far has Germany succeeded in making herself reasonably independent of foreign countries, in the event of war, for supplies of foodstuffs and of essential materials like iron, steel and oil?

FOOD SUPPLIES

This question is of decisive significance. The Entente Powers owed their final victory in the last war to their superiority in material and man power. For many years, however, the Nationalist opposition in post-war Germany, and later the National Socialists, made great play with the legend that defeat was due, not to economic factors, but to a "stab in the back" by disaffected elements at home. The Reichswehr tolerated this story while the Nazis were in opposition. But after Herr Hitler's rise to power, and in view of Germany's military strength, the Reichswehr leaders began to consider it dangerous, and saw many disadvantages in a belief which left the people under a comfortable illusion. Thus, Lieutenant-General Marx last September⁽⁴⁾ endorsed the statement that in the German attacks of 1918, the hungry troops could not be brought to advance beyond the provision dumps they had captured. He proceeded to stress the serious consequences of "underestimating such factors in the future," and continuing to proclaim that Germany was defeated "not by lack of foodstuffs and of raw materials, but by lack of effective propaganda." Though Lieutenant-General Marx is now on the retired list, his conclusions are confirmed by active officers like Lieutenant-Colonel Beutler, of the General Staff.⁽⁵⁾ And Colonel Thomas, the Reporter on economic matters attached to the German War Ministry, has declared⁽⁶⁾ that the last war was already lost when Germany entered on the turnip-winter of 1916-17.

We are at one with Colonel Thomas on this point. A clear picture of Germany's food situation to-day is very necessary.

Has the agricultural policy of Nazi Germany succeeded in materially reducing her dependence on the import of foreign foodstuffs? The evidence suggests a decided negative. In a book published by the German Institute for Economic Research,⁽⁷⁾ the composition of which was finished in November, 1935, the share of Germany's foodstuffs supplied by home producers was thus computed, in calories:—

GERMAN FOOD SUPPLIES					
	Total Consumption of Foodstuffs	Home-grown Supplies			
		Including Imported Fodder		Excluding Imported Fodder	
		Billion Calories	Per cent. of Total	Billion Calories	Per cent. of Total
1909-13	70.4	63.3	89	56.3	80
1913	65.9	57.5	87	53.3	81
1934	67.9	57.9	85	54	80

The author's comment on these figures is that, on an average, in the years 1909-13, Germany's dependence on foreign countries with regard to foodstuffs was just as great as in 1934.

There appears, moreover, to have been no material change, in this respect, since 1934. According to the Annual Report of the *Reichs Kreditgesellschaft* for 1937-38, German harvests have been as follows:—

(In thousands of tons)					
	1933	1934	1935	1936	1937
Wheat	5,765	4,676	4,790	4,523	4,490
Rye	8,727	7,608	7,478	7,386	6,763
Bread grains	14,492	12,284	12,268	11,909	11,252

As recently as February 20th, Herr Hitler pointed out that Germany could provide only 81 per cent. of her requirements of foodstuffs from her own territory.

The conclusion drawn from these facts has been clearly stated in the annual reports of the military economic experts, who declare that, in the light of experience in 1914-18, a drop of 20 per cent. in domestic agricultural production must be expected in wartime. But the soldier in time of war requires a higher food standard than the civilian in time of peace; and consumption, under these conditions, increases by about 20 per cent. The experts, therefore, lay down that a country can be regarded as fully prepared for war only when its agricultural capacity exceeds its pre-war consumption by something like 40 per cent. That is manifestly untrue of Germany to-day, who still requires to import 20 per cent. of her foodstuffs, although her population is by no means over-nourished.

During the World War, bread, fat and meat cards were not introduced in Germany until 1916. For roughly two years after the beginning of the war, her food requirements were more or less met by the large stores which had been accumulated before the war, and by imports. To-day, Germany's military economic experts are already talking of "scarcity economics," and the General Staff is asking whether a war should be begun on bread cards.

GERMANY AND RUSSIA

In view of Germany's foodstuffs position, and of other factors, particular importance would attach, in any future war, to the possibility of obtaining a rapid decision. Are the conditions present which are necessary for a victorious "lightning war"? If Russia were numbered among Germany's adversaries, then in one important respect the omens for a short and victorious struggle would be less favourable for Germany than in 1914. At the beginning of the last war, she was industrially far more powerful than her Eastern enemy, as the following table (for 1913) shows:—

(In million tons)		
Production of:	Germany	Russia
Coal	208.0	36.0
Iron	16.6	4.6
Steel	17.6	4.9
Petroleum ...	0.1	8.6

In 1913 Germany produced approximately six times as much coal, and three-and-a-half times as much iron and steel, as Russia. Only in the production of petroleum was Russia well ahead of Germany. To-day the situation has changed considerably, as the following table (for 1936) shows:—

(In million tons)		
	Germany	Soviet Russia
Coal	158.38	120.90
Iron ore	6.65	27.06
Pig iron	15.30	14.31
Steel ingots ...	19.17	16.33
Petroleum ...	0.44	26.34

Since 1913, clearly, Russia has made phenomenal progress in her industrial production. During the Great War, Germany's industrial superiority enabled her, first, to concentrate the greater part of her forces in the West; and, subsequently, to organise a large-scale offensive against Russia, with comparatively small forces, when

Russia's accumulated supplies were largely exhausted and Russian industry was unable to supplement them.

To-day, the output of Germany's heavy industry (in absolute figures) is no longer markedly superior to that of Russia. Germany leads slightly in iron and steel. To maintain her production, however, she needs large imports of iron ore; and Russia's present-day iron ore production is four times that of Germany. The Reich produces more coal, but her domestic production of petroleum is almost negligible, while Russia is the second largest producer in the world.

The strategic importance of these facts is very considerable. In the event of another war on two fronts the German General Staff can no longer calculate on its ability to leave its Eastern frontier virtually uncovered, as in 1914. The enormous increase of Russia's economic war-potential may thus spell decisive relief for France; for it is equivalent to a strengthening of her Maginot Line. By the same token a "lightning war," or even a war of movement, will be more difficult for the Third Reich than for the Germany of Wilhelm II. The rapid occupation of large areas of foreign territory are possible only when great differences exist in the level of armaments of the belligerents—as in the struggle between Italy and Abyssinia in 1935-36, and Japan and China to-day.

It is not surprising, therefore, that the rôle of Russia in a future war is occupying the minds of German military strategists to an increased extent to-day. Thus an expert German student of Russian motor transport⁽⁸⁾ contends that the "motorisation" of the Russian Army has gone far enough to make the latter one of the best-equipped armies in the world. In the air, also, the Soviet Union is strong. The same writer⁽⁹⁾ points out that the annual production of the 74 aeroplane factories of the Soviet Union has increased to 8,000 machines, and the number of workers employed in the air armaments industry has increased to 220,000.⁽¹⁰⁾ In the production of aeroplanes, he declares, the Soviet Union has a lead over all other countries. Raw materials and man power for manufacture and flying are available on Russian soil. Russia's most important aero-industrial plants are out of reach of any enemy air attacks. So far as quality of production is concerned, the level of the other Great Powers has practically been reached except in aero-engines. The military Second Five Year Plan provides, however, for the mass construction of numerous foreign makes of aero-engines.

German military experts are, of course, aware of the other side of the Russian medal. They know that the Russian railways are still relatively undeveloped. They probably calculate that recent trials and executions in Russia may have had a weakening effect on the morale and leadership of the Red Army. Nevertheless, they question whether a German drive in the East along the lines of the military campaign of 1915 is still possible. And experience in the Spanish civil war tends to confirm the possibility that, despite the development of the aeroplane and the tank, a future war would tend to become, once again, an affair of attrition and trench-warfare. If a relatively prolonged war is indicated, then the question of Germany's ability to satisfy her needs for raw materials for munitions, etc., is one the importance of which can hardly be over-estimated. It will, accordingly, be examined in the succeeding section of this review.

GERMANY'S RAW MATERIALS

Despite all Germany's efforts towards self-sufficiency, her raw material situation, as a whole, is definitely more difficult to-day than in 1914. In 1913, the German Empire produced 28,608,000 tons of iron ore. The present territory of the Third Reich, which excludes Alsace-Lorraine, produces only 7,309,000 tons.⁽¹¹⁾ To-day, Germany imports from two-thirds to three-fourths of her iron-ore requirements. In this respect the Four Year Plan—and in particular the Hermann Göring Works—are intended to bring about a fundamental change. But apart from the question as to how long Germany's limited deposits of iron ore could satisfy the demands of an increased self-sufficiency programme, the fact is that so far only preliminary work has been carried out.

attack, the Powers allied with her would not accept the responsibility of going to war to rescue her—in which case the Austrian triumph would be repeated. But it is certain that Czechoslovakia would resist, and thereby bring in her Allies automatically. In that case the war would have been begun by Germany herself; and the favourable conditions of the Austrian episode and other treaty breaches would be reversed. If it is true, as it seems to be, that Germany dreads war, and is not in a position to wage it successfully, these considerations supply a good reason for thinking that no attack on Czechoslovakia will take place.

Credit Reform

Owing to the excitement about Austria, the annual meeting of Reichsbank shareholders passed almost unnoticed. It was, however, an event of first-class importance, not so much because Dr Schacht became President for a new four-years' term, but because of his announcement about the future of Reich credit-financing. His statement concerned the so-called "secret debt," contracted for armaments and work-creation in the shape of "special bills." The amount of these to date is unknown, and is the subject of wild conjecture.

After surveying approvingly, but without giving figures, the credit practices pursued since 1932, Dr Schacht declared that these practices could not be continued indefinitely; and announced the abandonment of the whole "special bill" system. He declared that, in future, all Reich expenditure that cannot be met out of revenue will be covered by borrowing in the market, in the shape of Reich Treasury certificates or bonds; and that, further, in so far as Treasury certificates are resorted to, they shall not exceed the sums that can be consolidated on maturity. This means that there will be no further increase in "secret debt," and that the circulation of "special bills" contracted for past liabilities will gradually decrease.

The new Treasury certificates, unlike the "special bills," will not be rediscountable at the Reichsbank, and though they will be valid security for advances, the higher advances rate (5 per cent. against 4 per cent. for discounts) will presumably tend to keep them away from the Reichsbank. Borrowing against certificates and bonds, being centralised, will be easy to control, and will therefore not constitute a "secret debt." The reform does not set any limit to the Reich's power to contract Budget deficits and to cover them by borrowing. Indeed, Dr Schacht's statement is an admission that the deficit policy will be continued.

The reform raises the question of Dr Schacht's position. It was believed that, while he would be reappointed President, this would be done only in order to avoid the appearance of a rupture, and that he would sooner or later retire. It is no longer certain that this is likely. Dr Schacht's position as President was shaky for two very different reasons. First, the Party opposed him and wanted a Party President and a "clean up" of the whole Reichsbank; secondly, Dr Schacht disapproved of, and was not willing to take responsibility for, Reich economic policy. The reform obviously goes far to meet his objections to Reich credit methods; it was probably devised by him, and possibly he even imposed it as a condition for remaining. If so, his voluntary retirement would be obviated; and the only doubtful question would be whether the Party could force him out.

Slackening Coal Trade

The number of unemployed fell in February from 1,052,000 to 946,000, against 1,611,000 in February, 1937. New measures are officially foreshadowed for forcing small shopkeepers to give up their businesses and become wage-earners. In 1937 the number of retail traders in Berlin alone fell by 7,000, which was one-seventh of the total.

Coal sales show a greater declining tendency than can be explained by seasonal influences. Industry holds considerable stocks; and for the first time since the industrial recovery some short time is being worked. One curious feature of last year was that the daily production of Ruhr coal increased very much less than the number of hands.

The Steel Trust has increased its dividend from 4½ to 5 per cent. The net profit in the business year ended September, 1937, was Rm. 27 millions, against Rm. 23 millions in the previous year; but the sum written off plant increased to Rm. 131 millions. The sum invested in new plant doubled to Rm. 110 millions. The report foreshadows still further expansion, which will in general be for Four Year Plan purposes. The Trust's orders at the end of the business year were 60 per cent. over those of the preceding year.

Despite increasing home supplies, it has been again necessary to restrict the use of iron in building. The trade Press declares that, while the question of American competition

with the International Steel Cartel has been regulated, a crisis between the Continental members is looming up, owing to illegitimate price-cutting by Belgium and France. This trouble is aggravated by the general increase in production costs, which Germany has not escaped.

Although Germany is assured of a market at home, foreign-exchange considerations would make it impossible for her to consent to any reduction in her export quota. The last available trade returns show a heavy drop in German exports of iron and steel, with imports practically unchanged; and machinery exports fell in January to 30,600 tons.

The share market, which declined during the days of uncertainty about Austria, recovered substantially on Saturday, and opened the new week firm. There is, however, a distinct tendency to get out of "real-value" (mainly industrial) shares, in the belief that company profits will be compulsorily withheld from distribution and invested in Four-Year Plan enterprises. Sellers of industrial shares buy "money values," such as banks.

United States

No Signs of Recovery

NEW YORK, March 8.—The first quarter of 1938 is drawing to its close; and the first week in March has failed to bring any tangible evidence of recovery. Indeed, there has been some evidence in recent weeks of a decline in retail trade. Last autumn, corporations suspended purchases on capital account. In the early winter individuals did the same. Now there is a contraction in purchases by individuals for consumption and daily use. The record since August is thus one of a typical cyclical spiral.

The opinion is still general, however, that a reversal of the trend is to be expected in the near future. Such a reversal was looked for in January, then in February, and now in March. The first evidence of recovery is looked for in the same place as the first evidence of recession appeared, namely, the rate of steel production, now running at about 30 per cent. of capacity.

The first clear intimation of falling demand for steel appeared when, after the wage increases of the summer, the railways were forced to curtail their purchases. The decision of the Inter-State Commerce Commission on the proposed increase in railway rates is, therefore, awaited for its symbolic as well as its factual significance.

A study in the "Bulletin" of the National City Bank showed that 1,020 large corporations earned about 8½ per cent. more in 1937 than in 1936. The average of production in 1937 was about 5 per cent. above the average of 1936, in spite of the decline in the fourth quarter. But, while the index of production in 1937 (110) was almost equal to the 1928 figure (111), it is questionable if corporate earnings in general approached the record of the earlier year.

The data of the comprehensive Statistics of Income (available no later than 1935) show only nominal aggregate corporate earnings in 1935, and there is a good deal of reason to believe that even in 1936 and 1937 small enterprises were not very profitable. This must be taken into account in considering not merely the almost total absence of new corporate capital issues at present, but their relatively small number and amount even when the recovery was at its height, and the continuous complaint about the inability of small concerns to secure equity capital.

A Business Cycle

The table below illustrates a cycle in production, corporate earnings and security prices. December, 1934, was not, strictly speaking, a cyclical point. The summer of 1934 saw the unadjusted index of manufactures averaging 71, and by December there had been some upturn. The December figure of 78 was also the average of the year 1934; and the year-end is a convenient point of reference. Also, December, 1936, was not a precise peak of recovery, but it was fairly near the peak.

Neither employment nor pay-rolls had fallen as low last December as in December, 1934. There had been only a slight contraction of credit from the peak; and, except for brokers' loans, all the credit series were much higher than three years before. Exports were practically at their peak of recovery, although imports had fallen heavily from the spring. The steady rise in the public debt shows no trace of the so-called cyclical Budget, but this is partly because, in 1937, borrowing for the Inactive Gold Fund coincided with some decline in specific relief expenditure.

Public debt	\$ 28,479	34,407	37,279

* All Member Banks. † June 30, 1937.

The current level of industrial activity represents extreme industrial depression. This is somewhat relieved by coincident agricultural prosperity and sustained activity in exports. Nevertheless, the absence of any evidence of upturn in the first quarter to date has been a severe disappointment to the business community; and although hopes of a "spring recovery" have not been abandoned, the continued delay is discouraging.

Holland

Campaign against Low Interest

AMSTERDAM, March 7.—The constantly declining rates of interest on capital have aroused the opposition of investors, who have joined in a so-called "Investors' Front," to counteract any further decline and to stem the rush of conversions. On the basis of the new 3-3½ per cent. Netherlands State loan, issued at 99½, standards have been set for the yield of municipal and provincial loans. If issues brought on the market fail to comply with these standards, investors will be advised not to subscribe for them, or not to convert, as the case may be.

All the large-scale investors, such as savings banks, life insurance companies, pension funds, the State funds, etc., have joined the Investors' Front. The Front state that they do not aim at combating a "natural" reduction in interest rates, but want to curb forced and unnaturally depressed rates. They omit, however, to indicate their border-line between "unnatural" and "natural" interest levels; and interest rates will probably continue their downward trend for the time being. The success achieved by the recent 2½ and 3 per cent. conversion loans for the Province of North Holland shows that, so far, the Front's agitation has not proved very successful.

On the Bourse, quotations for first-class loans continue to rise, which again suggests that the decline in interest rates has not yet been completed. The repatriation of Netherlands capital, our credit balance in international payments, the absence of foreign issues, the limited demand for credits for commercial purposes, and so on, have combined to create a situation on the capital market in which a campaign to prevent a fall in the rate of interest is doomed to encounter great difficulties.

BRITANNIC ASSURANCE COMPANY LIMITED

Chief Office: BROAD STREET CORNER, BIRMINGHAM

Bourse Caution and Slackened Trade

Trading on the Amsterdam Bourse has dwindled to an unprecedentedly small turnover, and quotations no longer show fluctuations worth mentioning. Yet the annual reports so far published distinctly suggest that business in 1937 was very satisfactory. Numerous companies are distributing appreciably increased dividends. Shipyards are well provided with work for several years, and orders for new vessels have been secured at satisfactory prices. These encouraging reports, however, have failed to exert the slightest influence on the course of share values.

Unemployment is still considerable, and is no longer falling at the rate it was some time ago. Exports are no longer showing marked advances, although, compared with a year ago, they still show an improvement. The monthly foreign returns are summarised in the following table compiled by the Central Bureau of Statistics (excluding gold and silver):—

	(Value in million guilders)					
	Imports			Exports		
	1936	1937	1938	1936	1937	1938
January	79	106	119	50	73	82
February	74	105	118	50	79	82
March	79	125		55	95	
April	81	142		57	101	
May	76	128		53	90	
June	77	140		53	95	
July	80	146		60	102	
August	82	123		63	99	
September	82	130		72	113	
October	92	149		75	106	
November	101	130		77	98	
December	114	128		80	98	
Totals	1,017	1,552		745	1,148	

Exports to Great Britain showed a decided increase during the first two months of this year. Exports to the Netherlands Indies were also on a much larger scale than a year ago.

Influx of Gold Continues

Gold continues to flow into the Netherlands. In the course of the past week the gold stocks of the Netherlands Bank rose by 20 million guilders to 1,455 millions. The constant growth in the stocks of gold, however, does not lead to a corresponding increase in the bank-note circulation, but to an increase in the credit balances on the books of the Netherlands Bank, yielding no interest.

	March 8, 1937	March 7, 1938
(In million guilders)		
Gold stocks	919.5	1,455.8
Bank-note circulation	794.3	883.9
Account current balances	356.8	903.2

The large influx of gold serves to offset the liabilities claimable at call. This results in great liquidity on the Amsterdam money market, which is detrimental to the interests of Dutch banking establishments, because of the consequent shrinkage in their source of income from interest.

"Floating" Guilder Temporary

The President of the Netherlands Bank, Dr Trip, has pointed out that the greater part of the big demand for guilders is caused by the abundance of "hot money" seeking sanctuary in the Netherlands. If these demands for guilders were met without any other action the result would be that the guilder rate would advance sharply, which would be detrimental to trade and industry. Consequently, it is essential in the public interest, not only to satisfy the large demand for guilders but also to purchase and import gold simultaneously.

The Netherlands, Dr Trip said, will act wisely to maintain their present monetary policy so long as no steps are taken internationally in the direction of greater stability. So long as the Great Powers are not prepared to commit themselves, the Netherlands should also refrain from doing so.

No Government can afford deliberately and systematically to force up the rate of its currency in relation to gold or other currencies. The lesson of the gold scare in the spring of 1937 is ample proof of this.

Although Dr Trip thus recommends the maintenance of the "floating" guilder in the Netherlands for the time being, he nevertheless remains a convinced adherent of the gold standard.

India

The Budget Season

BOMBAY, March 1.—The Railway Budget was introduced in the middle of February, and struck a cautious note. The forthcoming year's estimated surplus of Rs. 2,56 crores (one crore or ten million rupees equals £750,000) is a little less than that now expected for the year about to close, which is put at Rs. 2,83 crores. Actually, a surplus of only Rs. 15 lakhs was expected. The realised surplus for the current year would have been even larger, but for the deterioration in economic conditions during the past few months.

Although the railways' monthly earnings are running lower than in the corresponding period of the previous year, they are still consistently higher than in the corresponding months of 1935-36. The rise in goods earnings, the first sign of the improvement in railway finances, has been followed by an improvement in passenger earnings. During the first seven months of the year, passenger miles increased by 10 per cent.

Defence Expenditure

The outstanding feature of the Central Budget introduced on February 26th is what may well be considered a very modest increase in defence expenditure. The estimated increase in revenue in 1938-39 is Rs. 38 lakhs (one lakh equals 100,000 rupees, or £7,500). There is also a sum of Rs. 80 lakhs representing a free balance in the Defence Reserve Fund and balances in military expenditure equalisation funds not immediately required. These sums will finance improvements in India's coast defences, and the erection of a factory to make India self-sufficient in high explosives; and will pay for the scheme for the mechanisation of certain Indian units now under consideration.

The sum of £100,000 a year contributed to the British Government towards the naval defence of India is no longer to be paid. The British Government have agreed to forgo this payment on condition that the Government of India maintain a seagoing fleet of not less than six modern escort vessels to be free to co-operate with the Royal Navy for the defence of India and, in addition, to fulfil their responsibility for the local naval defence of Indian ports.

The Central Budget for 1938-39 is expected to close with a surplus of Rs. 9 lakhs. Expenditure for the year about to close increased through the unforeseen costs of military operations made necessary in Waziristan, which total Rs. 176 lakhs; and some Rs. 109 lakhs will be required from the Revenue Reserve Fund to balance the Budget. The estimates provided for a nominal surplus of Rs. 7 lakhs after utilising the whole of the Revenue Reserve Fund which amounts to Rs. 184 lakhs. As it is, there will remain Rs. 75 lakhs to be carried forward in the Fund.

Financing the Provinces

The Finance Member's chief aims have been to find the money for the inauguration of Provincial autonomy; to hand over to the Provinces as large a share of revenue as possible; and at the same time to safeguard the Central finances on which the progress and prosperity of the Centre and the Provinces alike depend. While the separation of Burma has caused a net loss of Rs. 2½ crores, payments to the Provinces under the Niemeyer Award have this year amounted to Rs. 1,98 lakhs. To start the Provinces on a sound basis their previous debts to the Centre were to a considerable extent cancelled, and the remainder consolidated at a reduced rate of interest.

Additional grants-in-aid to cover provincial deficits amount to Rs. 56 lakhs; and there have been additional payments from the proceeds of the jute duty. With the improvement in railway revenues a start has been made on the distribution of income tax receipts to the Provinces. Taking into account the grants of the previous year to Sind and Orissa, Road Fund grants of Rs. 1,41 lakhs and small recurring grants, the total charges imposed on the Central Budget on account of the Provinces in recent years are close on Rs. 9 crores.

With only a nominal surplus at the end of 1938-39 there could be no question of reducing taxation. Nor could any further Central grants be afforded for rural development. Now that the main responsibility for social and economic betterment has devolved on the Provinces, the Centre's primary obligation must be to hand over as much revenue as possible to the Provincial Governments for them to spend on their own schemes of rural development and on other ameliorative measures.

Letters to the Editor

The Miner's Output

TO THE EDITOR OF THE ECONOMIST

SIR,—According to your article on "Coal Output per Miner," on page 362 of *The Economist* dated February 12th, no coal was produced in Holland before the war. The fact is that the Dutch mines may be considered amongst the oldest in Europe, although now working only on a moderate scale.

At the end of last century three mines were working, with a yearly output of 320,000 tons, and in 1908 the figure was nearly 1,000,000 tons. Holland owns the largest coal mine on the Continent, if not in Europe. Her plant is the most modern in existence, and you can safely take it that that is the reason of the high output per miner.

Yours faithfully,

G. SCHAWALLER.

Leeds.

The Late John Sherman

TO THE EDITOR OF THE ECONOMIST

SIR,—In the Library of Congress, at Washington, D.C., is a collection of Sherman papers; but it is sadly lacking in letters written by the late John Sherman. It is desired to borrow such letters, so that copies may be added to the collection permanently housed in the Library. Loans of letters are particularly desired at this time, because a biography of Senator Sherman is under preparation at the Library.

John Sherman was an important figure, and anyone who helps to preserve his letters contributes definitely to American history. It is hoped that all those who have letters signed by Sherman may be moved to send copies of them, accurately transcribed, to the Library of Congress for my "attention." If originals are sent, they will be copied and returned immediately, or added to the preserved collection, according to the wish of the sender. This service to history and to the memory of Senator Sherman will be highly valued by historians.

Very sincerely,

JEANNETTE P. NICHOLS.

The Library of Congress,
Washington.

POINT FROM LETTER

Monetary Policy.—Our balance of payments was on the debit side in 1937. And it seems possible that it may continue adverse during 1938. Is a restrictive monetary policy the best method of correcting the situation? A restrictive monetary policy means a rise in long-term interest rates. Higher long-term interest rates depress the level of activity of the capital goods industries and lead to unemployment, which brings about an increase in unemployment in the consumers' goods industries also. Now is just the time to adopt exactly the policy of monetary expansion. A lowering of long-term interest rates, coupled possibly with a programme of public works, would stimulate the capital goods industries and therefore trade in general.—C. H. Harvie, *Liverpool*.

Books and Publications

Deluge in Danubia

FROM the business point of view, the Austrian Führer of the German race could hardly have done the Vienna correspondent of *The Manchester Guardian* a better turn. Within a few days of Mr Fodor's date of publication, Herr Hitler has taken action which will make every intelligent man and woman in the English-speaking world cast about for just the book which Mr Fodor has here provided. But authors, as well as statesmen, are also men; and, as a human being who cares deeply about the events of which he is so able an observer, Mr Fodor might well have preferred to dispense with the tremendous advertisement which his book has received from the particular events of the last few days.

This book is a picture by an artist who knows his subject and is a master of his technique; and the subject is a

GOVERNMENT PUBLICATIONS

STATISTICAL ABSTRACT

The new edition of the Statistical Abstract for the United Kingdom illustrates very many aspects of national activity with comparative statistics for each of the 15 years 1913 and 1923 to 1936. Cmd. 5627. 7s. (7s. 6d.).

LABOUR STATISTICS, 1922-1936

An indispensable compilation of labour statistics for the post-war period covering employment, unemployment, unemployment insurance, hours, wages, trade unions, poor relief, migration, strikes, etc. Cmd. 5556. 3s. 6d. (3s. 9d.).

THE VAN ZEELAND REPORT

Tariffs, quotas and monetary insecurity are among the obstacles to international trade considered by Monsieur Van Zeeland in his Report. International action to secure freer conditions and a more liberal foreign loan policy are among the remedies examined. Text in French and English. Cmd. 5648. 9d. (10d.).

SPECIAL AREAS

Concise accounts of a vast amount of work of very great variety designed to restore areas most affected by loss of industry and consequent unemployment are presented in two Reports by the Commissioners for the Special Areas. Report for England and Wales to 30th September, 1937, recording an expenditure in the previous twelve months almost twice as great as in the previous two years. Cmd. 5595. 3s. 6d. (3s. 9d.). Report for Scotland, 7th July, 1936-31st August, 1937, recording a total expenditure of over £5,000,000. Cmd. 5604. 1s. 3d. (1s. 5d.).

FLEETS

Particulars of the Vessels of the Fleets of the British Commonwealth of Nations, Japan, France, Italy and Germany, on the 1st day of February, 1938, of the United States of America, on 15th December, 1937, and of the Soviet Union, on 1st February, 1935, are given in the return printed as Cmd. 5666. 2s. (2s. 2d.).

OIL FROM COAL

An investigation by a Sub-Committee of the Committee of Imperial Defence into the established methods of obtaining oil from coal with some reference to the position in time of war. Cmd. 5665. 1s. 3d. (1s. 4d.).

TAX CASES

Leaflets containing judgments in tax cases and appeals will be made available in future by H.M. Stationery Office at a subscription price of £1 1s. per annum. For this sum issues will be sent for 12 months beginning in any month, post free.

All prices are net. Those in brackets include postage

panorama of a landscape which, as these words are being written, is being overwhelmed by a flood. The post-war system of treaties was a set of dykes for damming in the waters of German national expansion that had swept over Europe in 1914-18. At the moment when the dykes were thrown up, that particular spate had passed and the tide was at a low ebb.

Ever since then, all the non-German peoples of Europe have been asking themselves whether one day the flood waters would descend again, and, if they did, which sector of the *Einhreissung*-dyke would be the first to collapse. Would the German flood once again sweep over Belgium and Northern France? Or would it pour, this time, across the Polish Corridor? Or over the Brenner Pass into the South Tyrol?

There was another possible alternative direction—south-eastwards, where the Danube Valley provides a natural channel for this human river to follow. After Hitler came into power in 1933, it became steadily clearer that, under a national leader who was an Austrian and not a Prussian by origin, the Danubian direction was the first which the once more rapidly-mounting head of German flood-waters would be likely to take.

Herr Hitler's ten-years' truce with Poland, concluded in 1934, made a Polish vent improbable. His *entente* of 1936 with Italy made it unlikely that he would break out into the Tyrol. In the West, his policy has been to assure the Western Powers that he had no scores to pay off there.

There remained, then, the Danubian sector between the south-west corner of Poland and the north-east corner of Italy; and it is the hinterland of this sector of the Versailles dyke that Mr Fodor has depicted for us in this book. It is not a mere political sketch. The author has Danubia in his bones, and he deals with every side of Danubian life, from end to end of a region which stretches from Austria and Czechoslovakia, close up against the frontier of the Reich, right away to Turkey in Asia.

The geographical scope of Mr Fodor's book is in itself significant. If once the pent-up mass of water is set in motion (we seem to read between the lines), all this—and nothing short of this—is the area which it is likely to submerge. Once Salzburg and Linz have been overwhelmed, then the deluge may roll on until it has swept over the citadel of Angora. And Mr Fodor has given us an admirable guide-book for an intelligent study of this terrifying spectacle.

Shorter Notice

"Sleep in Peace." By Phyllis Bentley. Gollancz. 557 pages. 8s. 6d. "Promised Land." By C. Belfrage. Gollancz. 349 pages. 8s. 6d.

These two books have rightly become "best sellers" already. Although novels, they have a special interest for readers of *The Economist*. Miss Bentley's annals in fiction of Yorkshire's woollen industry are notably strengthened by her latest contribution, which depicts the fortunes of two families, divided by religion and social outlook, but brought together by a common dependence upon yarn and cloth in the troubled days of war, boom and slump. The world of Mr Belfrage's creatures is at once more remote and more familiar. It is Hollywood: first developed as a suburb and citrus orchard; then invaded and finally conquered by the "movies." The story shows a social revolution; the soaring of land values, the impact of incredible earnings, the shattering of moral standards, and the erection of a world of fantasy and artifice set squarely on the foundation of box-offices all over the world. Much of the book is a backcloth—more so than Miss Bentley's, where only the ideologically inclined young people of the later chapters seem unreal beside the honest-to-God Yorkshire folk of the earlier sections—but Ma and her reflective husband stand out sharply against the stuffed-dolls of the silver screen. And Mr Belfrage is up-to-date: he dramatises the bringing of water from the hinterland to the West Coast city, the very waters of a desert river which to-day have turned angrily from their engineered course to beleaguer the stars in their homes.

"Fairplay's Annual Summary of British Shipping Finance." 1938. Compiled by "Fairplay" Weekly Shipping Journal. 51, Bishopsgate, E.C.2. 604 pages. £1 1s. net.

The fourteenth appearance of this standard work is made with many new features. Some 850 balance sheets of shipping companies are summarised for the last four years. Lists of directors and shareholders are given, with share quotations, shipbuilding statistics, marine insurance details, shipping sales and coal prices.

THE BUSINESS WORLD

Home Railway Prospects—IV

Railway Revenues and Costs

IN 1937 the net railway revenues (excluding ancillary and miscellaneous receipts) of the four group railways of this country, expressed as a percentage of the capital invested in railway assets, were: Southern, 3.3 per cent.; Great Western, 4.15 per cent.; L.M.S., 3.5 per cent.; and L.N.E.R., 3.3 per cent. (see *The Economist*, March 5, page 502). With the exception of the Great Western, which is fortunate in its track and its relatively level route, each line is earning about the same return on its railway assets. The whole difference between the present position of the Southern, which comes nearest to earning its "standard" revenue, and the L.N.E.R., which is furthest from that objective, lies in their earnings on non-railway undertakings.

Clearly, therefore, it is necessary carefully to distinguish the railway problem from the problem of the railway companies. Manifestly, the railways have two approaches to their problem of restoring profits. They may seek to increase traffics or to decrease costs. At the beginning of recovery, say in 1933, there seemed to be a fair possibility that a combination of the two processes would restore the full 1929 level of earnings, and possibly more. That hope has now been disappointed; for traffics have failed to rise proportionately with general activity, while railway costs (both in wages and in materials) have been carried upwards in line with general costs. To state the problem in general

terms, however, may tend to obscure many significant movements in the detail of revenues and expenditures.

On the revenues side, the railways have two separate problems to face in passenger traffics and goods traffics. Generally speaking, the former will show an elasticity of demand, responding to lower charges and careful publicity; but that condition applies to goods traffics only in a limited degree. In their introduction and subsequent extension of the "penny-a-mile" passenger fare, the railways have shown full appreciation of this fact. Though the old standard fare has not been abandoned, the percentage of passengers carried at standard fares on all the railways fell from 50.14 in 1928 to 15.1 in 1936. When the figures become available, those for 1937 will no doubt show a still lower proportion. As is shown in the last two columns of Table I below, total passenger revenues, excluding season tickets) have not yet regained the 1929 level even on the Southern, but the analysis of those revenues given in the preceding columns of the table strongly suggests that the experiment in elasticity of demand is likely to prove successful. For every line except the Great Western, the number of passengers carried in 1937 was greater than in 1929; and on every line without exception the average receipt per passenger journey has risen steadily in the past three years. On the Great Western, indeed, the average receipt is now substantially higher than in 1929. Lower

THIS NEW 24 GN. RADIOGRAM BY

"H.M.V."

reproduces
your favourite
records with a
NEW beauty

... and
incorporates
a radio chassis
of an advanced type

"His Master's Voice," who sponsored the introduction of the first popular radiogram, and whose leadership in electrical sound reproduction is everywhere acknowledged, offer you, in this attractive new console model, world-wide radio entertainment and the enjoyment when you will of the best in recorded music.

With it you have your choice of broadcast programmes from all of the five continents of the world; you can play programmes of recorded music rendered by the world's greatest artists. Over the air or on records you can get music that expresses your own taste and mood, that will make your leisure hours richer and happier.

Enclosed in an elegantly-proportioned walnut cabinet, this "H.M.V." radiogram is a very desirable piece of furniture.

"HIS
MASTER'S
VOICE"

All-World RADIOGRAM

fares are not only attracting more passengers, but are inducing them to travel further. True, such a movement might well have been expected at a time of rising general prosperity. And it has been achieved not only by lower fares but by improvements in rolling stock, speed and publicity. But the point is that the experiment, which must in any case develop slowly, is working out as the railways desire, and the benefit is capable of being carried further as the managements increase their skill in popularising travel and catering for it. The 5 per cent. increase in fares outside the London passenger area is so small by comparison with the previous reduction that it is unlikely to upset the movement, but it is sufficient to restore takings on the 1937 passenger traffic to a level near that of 1929. On the passenger business, in short, it is possible to look for a steady, if slow, improvement. As several chairmen have pointed out this year, holidays with pay are likely to be a further help to the passenger business.

In the case of goods traffic, however, the problem is different. Quite apart from the competition of road transport, the whole modern organisation of industry has tended to reduce railway goods traffic. On the one hand, industrial electrification involves a shrinkage in coal traffic; on the other, industrial planning aims to reduce to a minimum the movement of goods in process of manufacture. Nevertheless, road competition is an important factor, as a result of which large blocks of "recovery" traffic have failed to reach the railways. For example, in 1936, a record year for building, the railways carried only 5,278,215 tons of bricks and tiles, against 5,708,326 in 1929; 2,903,307 tons of cement and lime, against 3,124,860 tons; and 1,966,203 tons of gravel and sand, against 3,197,192 tons. In the case even of some iron and steel traffic the movement is the same. But the main effect of road competition is to reduce the average return per ton-mile of goods traffic, without thereby increasing the railways' competitive position *vis-à-vis* the roads. The general tariff of the railways remains unaltered, but the roads skim the cream of railway traffic, leaving to the railways the goods chargeable at the less remunerative rates. In Table II, the fall in receipts per ton-mile is shown, together with the total ton-miles worked and the average length of haul. Figures for 1937 are not yet available under these headings, but evidently the fall in receipts per ton-mile is not yet showing signs of flattening out, unless the exceptional 1936 rise on the Southern is more significant than seems likely. There is, in general, no indication that traffic volume is increasing to compensate for lower values. The longer average haul

reflects only the loss of short-distance traffic. The goods revenue prospect, in brief, is much less encouraging than that for passengers; for the companies have not yet discovered any positive action which they can take to correct the decline in its secular trend.

On the side of costs, the chairmen's speeches—and particularly Sir Josiah Stamp's at the L.M.S. meeting—have given a full review of the companies' aims and achievements. The 1937 figures are not yet available for many of the most significant returns, but for 1936 engine miles (on all railways) per week-day per engine in use were 111.55, against 99.99 in 1929; coal consumed per engine mile on all services was 52.79 lbs., against 54.04 lbs.; and double-heading miles per 100 freight train miles were only 2.44, against 4.03 in 1929. Most shareholders are familiar with the steps taken to reduce rolling stock, increase the power of locomotives, enlarge freight wagons, improve signalling and the like. It should be realised, however, that the whole scale of railway charges assumes a life of over 30 years for rolling stock and locomotives. The average age of stock in use must therefore be over 15 years. Thus the rate at which modernisation can proceed is strictly limited, even if recourse is had to the renewals suspense accounts for temporary acceleration. Nor, in fact, has any revolutionary modernisation been discovered which can be applied to the main railway assets to reduce costs—not even electrification. Only by patient overhaul of working and organisation and by a necessarily slow application of improved equipment can expenses be reduced. And even here the companies are faced by a special difficulty. In any reduction of costs depending on improved organisation, the enthusiasm of the staff must be enlisted. After ten years of cuts and rigid economy, however, a railway staff would be more than human if it did not reveal the effects, consciously or unconsciously, of blocked promotion and small "rises." Such a condition is inevitable in a depressed trade.

It will be possible to consider some of the more detailed points of the railways' working when the fuller Ministry of Transport returns are available later in the year. For the present, however, the broad conclusion emerges that while the passenger business offers hope of improvement in response to definite new measures already introduced, goods traffic (which for all lines except the Southern is the more important) remains an obstinate problem, to which no new solution has yet been discovered. Reduction in costs, meanwhile, has been sufficient to offset part of the effects of lower revenues, but it does not offer any prospect, at present, of solving the main problem.

The Future of International Nickel

EACH year the report of International Nickel provides an object lesson in detailed information and lucid accounting. The report for 1937, published this week, is the more welcome, since it shows, for the fifth year in succession, a further impressive advance in earnings and operations. Progress remains the keynote of last year's record. The increased capacity of the Canadian mining and refining plants has been well employed; in almost every department—platinum metals are a significant exception—sales have increased. Total earnings have again advanced by \$16 millions, from \$54,383,060 to \$70,497,235, and the greater part of this increase is available for the equity.

Technically and financially, 1937 was a highly successful year. The detailed table of financial and operating statistics on the opposite page, and the smaller chart showing net earnings and their distribution, both demonstrate that recovery has carried the group to far greater prosperity than it enjoyed in 1929. That, in fact, was the first year in which the group, as we know it to-day, was in being.

The International Nickel Company of Canada was actually incorporated in July, 1916, but for the next twelve years it remained a wholly-owned subsidiary of International Nickel of New Jersey. It was not until 1928 that

the substantive changes were effected, by which the domicile of the principal company was transferred to Ontario, the American company was reduced in status, and an international organisation, bestriding currency, fiscal and political boundaries, was built up. Ontario, the mining centre, became the financial centre of the group, the American plants being controlled through International Nickel Company, Inc. Consolidation was completed early in 1929 with the acquisition of the Mond Nickel undertaking, whose mines and smelter adjoined those of the original Canadian company.

This logical framework has since been rounded off by the acquisition of full control of certain units which were previously partly-owned, including the important Ontario Refining Company (now free of bonded debt), Whitehead Metal Products of New York and Horseshoe Lake Mining. The present organisation of the group is illustrated in our main chart, with its accompanying key table. The simple operating structure is apparent. The mining and smelting plants, which are centred at Copper Cliff, and the nickel refinery at Port Colborne, are under the direct control of International Nickel. Ontario Refining, a wholly-owned subsidiary, operates one of the largest copper refineries in

the world. These mining and smelting plants have been greatly expanded since 1925 at a cost exceeding £15 millions. The Canadian side is completed by three nickel fabricating concerns, Whitehead Metal of Canada, Canadian Nickel and Canadian Nickel Products. The International Nickel Company, Inc. (the American company, which is controlled via Anglo-Canadian Mining), centralises the manufacturing businesses in the United States and also directs three information bureaux in Europe and the Far East. In this country, finally, the refining and manufacturing companies are still grouped according to their original parentage under Mond Nickel, which also controls the Petsamon Nikkeli property, now being developed in Finland at a total cost of \$7 millions.

Such is the structural organisation of International Nickel, in broad outline. What does the group produce? The answer is—nearly nine-tenths of the world's nickel and about one-sixteenth of the world's copper. These twin products are produced from ores which were originally so refractory that the Saxon miners called them *kupfer-nickel*—copper possessed of "Old Nick." The company has long since solved the Saxon's problem, and now produces about three pounds of copper for every two pounds of nickel. In recent years, again, great progress has been made in the exploitation and application, in industry and the arts, of the platinum group of metals. Many investors who have

power-weight ratios for mechanical equipment, assist the consumption of nickel, and new uses are being found in traction, marine engineering, aviation, and indeed in the home itself.

If the investor, in short, were able to ignore the trade cycle, he might reasonably count upon a steady continuation of this trend, both for nickel and its associated products. But although the technical revolution in the metal trades during the post-war period is providing its harvest for International Nickel, the board has designedly not sought a bumper crop. The company, if it wished, might introduce its own restriction scheme and drive the price of nickel to fantastic heights. It has chosen the wiser course of assisting consumption by a moderate price policy. In January last year, when non-ferrous metals were soaring, International Nickel reduced the European price of nickel from £200 to £180 per ton. The position of copper is less certain. Ninety per cent. of the company's output is sold in Canada, France and Great Britain, and International Nickel is understood to be linked, at least informally, with the European producers' restriction scheme so far as export sales are concerned. Both copper and platinum, however, were subject last year to considerable price fluctuations; and while the company does not supply sufficient data to enable the investor to estimate profits under hypothetical price conditions (on the lines we have employed for other metal producers in the past) he must obviously take account of a falling price trend for the so-called "by-product" metals, which provided about half the company's net earnings in 1936.

Any serious investor who would interpret the future must be prepared to infer from the past. And the financial reports of International Nickel, from which we have extracted the principal items, provide all the information he could require. In capitalisation the group is simple, for it has no bonded debt, and although there are outstanding \$27.6 millions of 7 per cent. preferred stock, with a somewhat unusual redemption option, there is no intention, at present, of exercising it. There are 14,584,025 shares of common stock in issue, taken for balance-sheet purposes at \$60,766,711. At one time in 1937 these were quoted as high as \$75; to-day they stand at \$48½, to yield 4.1 per cent. on regular dividends, and 6.9 per cent. on earnings. International Nickel, despite its steady growth in recovery and its dependence upon general trade conditions, is a market leader, and it is the habit of market leaders to run ahead of earnings performance. This, however, is a defect of market behaviour rather than an inherent deficiency in the stock itself. Properly measured, with due consideration for cyclical fluctuations in profits, the stock should rank appreciably ahead of the average non-ferrous metal share, for it is not highly geared, either technically or financially. But its proper current valuation does present a problem in world economic trends. Must the investor rule out hopes of re-recovery in the United States? How far might a trade recession in Europe offset the secular factors which are on the company's side? If world prices and world trade fall, would the company be put "in the red"—as it was in 1932? The very nature of these questions suggests that the investor should be prepared to take a cautious view of earnings prospects on the near-term outlook, for he can be very sure that the board will continue to take a cautious view of dividend policy.

The effect of trade recession at the end of 1937, indeed, is properly underlined in the president's review accompanying the latest report. There are, however, more important features of strength, technically and financially, in the long-term view. Dividends over the past nine years have averaged approximately 80 cents per share. They have during the next nine years can scarcely be assessed in terms of dollars and cents. But given normal cyclical movements—which would presuppose a depression as severe as the last—and peace on his side, the stably less might justifiably expect some fruits from the techreholder commercial expansion of the group during recerical and That is the argument for International Nickel as a long-term holding, even though it may seem, at present, a long-thing of an act of faith.

NET PROFITS AND DIVIDENDS, 1928-37

never handled platinum could give a fair description of its modern uses, and the words of the humblest fountain-pen user flow from an iridium tip. Research is bringing other metals in this group into familiar use. And the list of products would not be complete without the inclusion of gold and silver, whose total output is of absolute importance—sales of silver in 1937 totalled 2,356,000 ounces—though not comparable with that of nickel and copper.

A mere recital of the group's main products brings out a factor of investment importance. For all the principal metals, not excluding copper, are "new" metals. Their application in industry is by no means fully explored, if we are to take recent technical trends as a reliable portent of the future. The company's efforts, by information services and technical research, are bearing fruit in a rapid increase in nickel consumption. The common assumption that this increase arises largely from armaments demand is not supported by available facts. The sales figures at the foot of our table show, rather, that consumption is markedly sensitive to industrial movements. But the rapid advance in consumption—sales had already exceeded the 1929 level by 1935—suggests the operation of a secular increase in demand, which was interrupted only during the depression. Such factors as the increasing use of alloy and anti-corrosion metals, and the modern demand for higher

Finance and Banking

Currencies and Politics.—The repercussions of Herr Hitler's ruthless Nazification of Austria have been in widespread evidence in the City of London this week, and not least in the foreign exchange market. The inevitable reaction was a rush for dollars. The buying of this currency has been of diverse character. Any short professional positions outstanding have been covered as a matter of course. There has been some outright conversion of sterling and Continental currencies into dollars, both by institutions with large liquid balances and by smaller investors to whom the United States markets appear the least unattractive of available "funk holes." Finally, there has been an accentuation of commercial purchases of dollars by interests covering both their immediate and future needs of American currency. From a rate of \$5.01½ the dollar began its appreciation on Friday of last week, crossed the \$5 figure on Saturday and this week has been up to \$4.96½. Its appreciation would have gone further but for some official intervention, effected both through outright sales of dollars against sterling and through the diversion to the United States of certain gold operations which would otherwise have been undone in London. For example, some of the gold sales made this week by the National Bank of Belgium in support of the belga have not been made to the British Exchange Fund but have been diverted to the United States Treasury.

With the demand for dollars has gone a sudden intensification of the demand for gold. Both at the daily fixing and in subsequent deals the demand for bar gold this week has been heavier than for many months past; while gold coins have been bid to the unprecedented premium of 8 per cent. over their bullion value. The policy of the Exchange Equalisation Fund, which has had to supply the bulk of the gold, has been to hold the sterling price between 139s. 8d. and 140s. As a result of this steadiness, and of the concurrent appreciation of the dollar, the premium in the sterling price of gold over the dollar shipping parity has run off. The price of gold, in other words, has now reverted to its export point to the United States. Some metal has already been shipped from this country to New York. The diversion of Belgian metal from London to New York is another indication of the change which has occurred in the dollar-sterling-gold triangle.

Slump in the Franc.—The immediate effect last Saturday of the news of the German occupation of Austria was a scramble by bears to cover their open positions in French francs. The recovery, however, was short-lived, and this week has seen the franc quoted as low as 167½. The renewal of the slump, at the beginning of the week, was due to disappointment over the failure of M. Blum to form a National Government in France. When he was compelled to have recourse to a mere reshuffle of the now familiar and ineffectual mixture of Popular Front Ministers, the dribble of selling of francs began again. At no time during the week has speculation on the grand scale taken a hand in the market. The selling, most significantly, has mainly been in small lots, and has been concentrated on the spot market. The French Exchange Fund has intervened hesitantly, though it succeeded in putting up an effective barrage when the franc depreciated on Tuesday beyond 165 to the £. The subsequent recovery to 159½ has been due largely to the growing belief that efforts were being made behind the scenes in Paris to convert the new Blum ministry into an administration of truly national character. M. Blum himself has taken over the Ministry of Finance, and has as his adviser M. Georges Boris, a well-known financial writer noted for his

advocacy of exchange control. It is not generally believed in the market, however, that such control is imminent. The mobile capital of France has already gone overseas, and it is now too late to close the stable doors. Such a step would merely hamper the return of capital which might well follow the advent of a National Government.

Liquidation of the Austrian Schilling.—Like many other Austrian institutions, the schilling is being liquidated. The exact method of the conversion of Austrian into German currency is not yet known, but the goal of the liquidators is clear enough. The reichsmark is to become the currency of the new province; and the National Bank of Austria, as an issuing authority, is to become a branch of the Reichsbank. The rate at which schillings are to be converted into reichsmarks has not been finally fixed. Conversions by the military authorities have been effected at 1.30 schillings to the mark, while for other official operations a rate of 1.50 has been used. It is evident already that all the trappings of the German control system, with its variegated currency, will be introduced in Austria. A partial moratorium on bank deposits has been proclaimed in order to arrest the exodus of capital. Austrian external debts, both short- and long-term, will receive the same treatment as is meted out to corresponding German obligations. Thus the basis is being provided for the duplication in Austria of the various types of blocked currencies which Germany has created as a by-product of her defaults over the past seven years. In the London foreign exchange market the schilling is still quoted nominally at 26 to the £, but no business is being done either in telegraphic transfers or cheques. No foreign bank has yet been informed by its Austrian correspondents whether and how it can deal with available balances. A little business has been done, however, in Austrian notes at 40 to the £.

Chinese Currency Restrictions.—Last Monday, the Chinese Government issued new exchange restrictions, whose effect is to restrict the foreign exchange operations of the central bank, its head office in Hankow, and its branch office in Hongkong. This limitation has seriously affected Shanghai and the business community has made vehement but vain protests against the exclusion of official foreign exchange business from that already distressed town. The Chinese authorities have been impelled to their decision by the fact that the new Federated Reserve Bank established at Peiping under Japanese auspices is issuing large quantities of its own paper, as a result of which the old Chinese notes are being driven out of North China and presented in the Shanghai market for conversion into foreign exchange. Thus, the new regulations are designed to protect the Chinese reserves from the combined effect of a flight of capital and of unregulated inflation of the currency via the new puppet banking organisation in the North. The regulations do not mean the end of the Shanghai foreign exchange market; for the banks there will still deal in outward and inward remittances which become available in Shanghai. In view, however, of the absence of any centralised reserve and the lack of machinery for dealing with uncleared balances, the Shanghai market can hardly function with the efficiency of earlier and happier days. In future, requirements of exchange resources which cannot be met by offsetting local business will have to be remitted to Hankow before 10 a.m. on Thursdays. Applicants will be advised of their allotments the following day, but delivery will follow only at the convenience of the Chinese authorities. On such terms, foreign exchange business in the true sense of the term is impossible.

MONEY MARKET NOTES

Foreign Exchanges

THE foreign exchange market has had an exceptionally active week. Events in Europe have given renewed stimulus to international movements of capital, while the prevailing uncertainty has caused widespread closing of speculative commitments. The strength of the dollar has been the feature of the market, while most other currencies have fallen with sterling in terms of dollars, the guilder being specially weak in view of the weight of hot money leaving the Dutch market for New York. The guilder rate has been weak even in terms of sterling, and crossed the figure of 9 on Wednesday. The belga has moved with the dollar through no merit of its own, but because it has all along been at gold export point to New York. The strength of the belga in terms of sterling has therefore been achieved at the cost of substantial gold shipments both to this country and to the United States. The French franc has had a week of wild movements. It recovered from 159 to 156 last Saturday, has since slumped to 167½ and subsequently recovered to around 159½. The control has not been particularly active as may be gauged by the violence of the fluctuations. The news that another Frs. 1,000 millions had been borrowed by the State from the Bank of France had no adverse effect on the rate last Thursday. Nor has there been any exchange reaction to the announcement that the French Arms loan of 4,465 million francs is imminent.

The Bank Return

The Bank return for the week to March 16th is dominated by two movements: an expansion of £7 millions in Government securities and a corresponding movement of £4.8 millions in bankers' deposits. The latter, at £119.0 millions, are £25 millions higher than they were a year ago. The expansionist effect on bank cash of the rise in Government securities has been mitigated to the extent of £3.9 millions by reductions in Discounts and Advances and Other Securities. On the

other hand, Public Deposits are down by £1.4 millions on the week.

	Mar. 17, 1937	Mar. 2 1938	Mar. 9, 1938	Mar. 16, 1938
	£ mill.	£ mill.	£ mill.	£ mill.
Issue Dept.				
Gold	313.7	326.4	326.4	326.4
Notes in circulation	463.8	478.3	479.3	479.5
Banking Dept.				
Reserve	50.8	48.8	48.0	47.8
Public Deps.	22.8	11.4	12.6	11.1
Bankers' Deps.	94.0	115.7	114.3	119.0
Other Deps.	37.3	36.0	36.1	35.7
Govt. Secs.	94.9	104.4	105.2	112.2
Discounts and Advances	3.8	7.1	6.5	3.6
Other Secs.	22.9	21.0	21.5	20.5
Proportion	32.9%	29.9%	29.4%	28.8%

The note circulation rose by £216,000 during the week. In the corresponding week of last year there was a reduction of £660,000, and it may be assumed that the contrary trend during the past week is in part to be explained by renewed hoarding demand for sterling notes occasioned by the latest phase of the franc crisis.

The Money Market

Money and discount rates have not flinched in the past week of political tension. In the opinion of the market it would need a declaration of war by this country to cause a measurable rise in bill and short loan rates—and even that is questionable.

	Mar. 18, 1937	Mar. 10, 1938	Mar. 17, 1938
	%	%	%
Bank Rate	2	2	2
London Deposit Rate	2	2	2
Short Loan Rates:			
Clearing Banks	1½-1*	1½-1*	1½-1*
Others	5/8	5/8	5/8
Discount Rates:			
Treasury bills	1½	1½	1½
Three months' bank bills	17½-9/16	17½-9/16	17½-9/16

* Viz. 1½ per cent. for loans against Treasury bills and other approved bills and British Government securities within six months of maturity, 2½ per cent. from loans against 1 per cent. Treasury bonds and other gilt-edged stocks within six months of maturity, 1 per cent. for loans against other collateral.

This week's maintenance of low rates—½ per cent. for loans against bonds, ½ per cent. for bill money in almost unlimited quantities, and ½ per cent. as the effective market rate for three months' bills—has been partly engineered. It is evident from the Bank return, with its increase in Government securities and the rise of over £4½ millions in bankers' deposits, that the authorities have taken steps this week to avoid the slightest appearance of

strain in the credit position. This, no doubt, is to give to the hard-pressed gilt-edged market such support as it may derive from the short-loan position and to give the banks no excuse to plead their bank cash position to call in loans and advances. The clearing banks, following the expansion in their cash, have been eager buyers of bills.

The Bullion Market

The demand for gold has expanded considerably as a result of increased tension in Europe. Business at fixing has been rather above normal, but it has been in subsequent dealings that the keener hoarding demand for gold has been most apparent. The Exchange Account has been the principal seller of the metal both at and after fixing. It pursued the policy of maintaining a fairly steady price for gold until Wednesday afternoon when, in the face of the extension in the demand, it raised its price from 139s. 9½d. to 140s. On Thursday this jump was consolidated and the price was fixed at ½d. over £7. Given the appreciation of the dollar, the premium on the shipping parity has been running off. The price fixed on Tuesday was actually at parity with the dollar, and gold shipments to the United States were in fact arranged. Subsequently a slight premium has been re-established.

Date	Gold			Silver, price per oz. standard	
	Price per fine oz.	Prem. or Disc. count *	Amt. dealt in £'000	Cash	Two Mths.
1938					
Mar. 11 ...	139 6½	10 pm	310	20½	19½
" 12 ...	139 8½	12½ pm	925	20½	20
" 14 ...	139 8½	5½ pm	746	20½	19½
" 15 ...	139 8½	par	956	20½	20½
" 16 ...	139 9½	1½ pm	514	20½	20
" 17 ...	140 0½	1 pm	711	20½	20½

* Above or below American shipping price. The New York price of silver remained at 45 cents per ounce .999 fine during the week.

There has been a firmer tendency in silver owing to buying by Indian bazaars, probably influenced by the political situation in Europe. Moreover, the strength of the dollar has helped to harden the sterling price of the metal. Consequently, spot has moved up to 20½d., which is the highest quotation touched since April, 1937.

INSURANCE NOTES

Refuge Insurance Company. The usual annual valuation of the liabilities of this company was made at the close of last year. In the ordinary branch the bases were, as before, 0m 3 per cent. for assurances and a(f) and a(m) 3 per cent. for annuities. In the industrial branch the reserves were placed on a considerably more stringent basis. The English Life Table (No. 8) was again used, but the rate of interest was 2½ per cent. for all premium-paying policies and 3 per cent. for free policies, compared with 2½ per cent. for whole life tables and 3 per cent. for all other policies in 1936. The results of the past two annual valuations are set out:

	1936	1937
Ordinary Branch—		
Surplus earned during the year	1,060,902	1,059,946
Brought forward	640,137	696,032
	1,710,039	1,755,978
Bonuses to policyholders... ..	912,606	941,370
Shareholders' account	101,401	104,597
Carry-forward	696,032	710,011
	1,710,039	1,755,978
Industrial Branch—		
Surplus earned during the year	219,640	352,741
Brought forward	132,283	120,297
	351,923	473,038
Bonuses to policyholders... ..	133,027	256,194
Shareholders' account	48,599	45,403
Investment reserve fund	50,000	50,000
Carry-forward	120,297	121,441
	351,923	473,038

The bonus in the ordinary branch is the same as in 1936, namely, 36s. per cent. on the sum assured. In the industrial branch the allocation to policyholders is approximately twice that made in the previous year, in spite of the undisclosed cost of setting up the more stringent reserves. For many years, however, the company has continuously strengthened its basis of valuation, and the much greater amount available to policyholders this year may be due to the fact that in 1937 a smaller added strain was incurred by the changes made than by those in previous years. If this is the correct interpretation, it would appear probable that future allocations to policyholders will be on a much higher scale than in the

past, and will be related rather to the level of 1937.

New sums assured in 1937 in the ordinary branch were £8,685,000, against £8,766,000, and annual premium income increased from £4,422,000 to £4,495,000. The net rate of interest earned on the fund was £4 2s. 6d. per cent. against £4 3s. 11d. per cent. In the industrial branch new sums assured fell by £156,000 to £16,001,000. The premium income, however, increased by £163,000 to £5,854,000, and the net rate of interest was 2s. 2d. per cent. smaller than £4 12s. per cent. The expense ratio further from 34.27 per cent. to 34.71 per cent. Total assets amount to £68,710,000, compared with £65,628,000. At the end of 1937, British Government security holdings totalled 36.5 per cent. of the assets. At the other end of the scale, ordinary stocks formed only 0.7 per cent., and last year fell from £660,000 to £507,000. There appear to have been no major changes in investment policy during the year, but some falling off is noted in mortgages. Market values of investments "still very substantially" exceed book values, and the investment reserve of £3,500,000 remains intact.

Standard Life Assurance.—The accounts of this company, for its financial year ended November 15, 1937, include the results of the annual valuation of liabilities and assets, and reveal a position of great strength. The assets are conservatively valued, and the liabilities are assessed on unusually stringent bases. A future rate of interest of 2½ per cent. is assumed for both assurances and annuities; for mortality the A1924/29 table is used for assurances, using select net premiums, and the O(4) table for annuities—taking all the lives as select at the date of the valuation. Reserves are held in addition to those brought out on these bases. The results of the last two years are given below:—

	1936	1937
Surplus earned during the year...	458,175	488,432
Surplus income transferred from guarantee fund	38,802	39,406
Brought forward	30,970	31,365
	527,947	559,203
Bonuses to policyholders	396,582	428,169
Transfer to inner reserve	65,400	65,400
Pension fund	15,000	100,000
Carried forward	31,365	31,034
	527,947	559,203

For the eleventh year in succession the rate of bonus is 42s. per cent., calculated on the sum assured and existing bonuses. Although this rate definitely places the company among the "high bonus" offices, it is well within earning capacity.

For a number of years it has been the practice to transfer £85,000 to inner reserve and £15,000 to pension fund; on this occasion the whole of the £100,000 has been transferred to the trustees of the staff pension fund. The annual transfers of £15,000 out of revenue were required mainly to meet the actual pension payments falling due in the year. The directors have recently decided that it would be in the interests of the company that a fund be instituted (controlled by trustees) charged with payment of the present and future pensions. Last year's transfer of £100,000 is the initial contribution by the company to the fund. Thus the Standard has adopted the practice which is rapidly becoming usual among the leading assurance companies.

In 1937 total assets increased from £28,228,000 to £29,605,000. A fifth successive record total was established for new sums assured, at £4,341,000, compared with £4,074,000 in the preceding year. In addition, group life assurances for £789,000 were obtained, showing an increase of £287,000. Total new sums assured thus for the first time exceeded £5 millions. Capital redemption policies were issued for £468,000, against £543,000. The activity of the company in group pension business is evidenced by the issue of 1,922 policies, securing deferred annuities of £373,000 per annum. The net rate of interest is practically unchanged at the very high figure of £4 15s. per cent. Mortgages increased from £3,199,000 to £3,370,000, but there was no pronounced increase in British, Colonial and foreign Government securities. Debentures amount to £8,271,000, against £7,921,000, and preference shares to £2,571,000, against £2,460,000. The outstanding movement of the year, however, was in ordinary shares, which further increased from £3,917,000 to £4,659,000.

Scottish Equitable Life Assurance.—The chief item of interest in

the latest report is the result of the valuation of liabilities as at December 31, 1937. In 1936 the end of the financial year was altered from March 1st to December 31st. The results shown below for the past valuation period are, accordingly, for four years and ten months:—

	1928-33	1933-37
Surplus earned during quinquennium	1,294,134	1,106,041
Brought forward	125,282	131,198
	1,419,416	1,237,239
Allocations:—		
Bonuses to policyholders	1,038,218	1,064,146
Reserve account	250,000	250,000
Carry forward	131,198	173,093
	1,419,416	1,237,239

The former basis of valuation took account of mortality according to the O(4M) (S) table, using O(4M) net premiums and taking interest at 3 per cent. On this occasion the new A1924/29 mortality has been used with interest at 2½ per cent. The change has entailed a certain cost, which, being undisclosed, has operated to reduce the amount of trading profit shown above. The basis of valuation of annuities is again according to a(1) and a(m) tables with interest at 3 per cent.; in addition, a further reserve of £40,500 has been made against annuity contracts, no doubt as a special provision against increased longevity.

The rate of bonus declared is at the same satisfactory rate as five years ago, namely, 2 per cent. per annum calculated on the sum assured and declared bonuses. The net rate of interest earned is £4 2s. 5d. per cent., which is only 2d. per cent. smaller than shown in the preceding account. New business was £1,923,000, compared with £1,595,000 in the previous accounting period of ten months. Total assets have increased from £11,611,000 to £11,746,000, and stock exchange securities stand in the balance sheet at considerably less than market values on December 31st. The reserve account remains unaltered at £250,000. Loans are slightly smaller at £3,187,000, and holdings of British Government securities fell from £1,512,000 to £1,404,000. Colonial and Foreign Government securities were also smaller, at £850,000, against £1,070,000. On the other hand, debentures increased from £2,984,000 to £3,194,000, preference shares from £896,000 to £980,000, and ordinary shares from £972,000 to £1,138,000.

A NEW VIEW

It is customary to consider Whole Life insurance almost entirely from the point of view of the benefit it confers upon dependents—little attention being given to the YIELD under this form of policy. We have recently issued a leaflet showing that, with a Norwich Union policy, even if the Life Insured exceeds the normal "expectation of life," the yield compares most favourably with that now obtainable on other first class investments. Send for a copy of "A New View" to:

Markets and the Crisis.—Throughout the Stock Exchange one response, and one only, has been made to the events of the past seven days—an overwhelming desire to seek increased liquidity. Cold calculations of the cost of further armament expenditure are not a bull point for gilt-edged; while the Premier's sudden conviction that an industrial setback is now inescapable has undoubtedly affected the average holder of equities. But neither factor is comparable in importance with the effect of acute apprehension of rapid political deterioration. The question now uppermost in the market's mind is whether the present crisis, and not the next but one, marks the point of breakdown. Power politics in Central Europe, war in Spain and the Far East, and tension between Lithuania and Poland—all have combined to put prices down by greater amounts than at any time of economic uncertainty since 1931, or any time of political uneasiness since 1914. Gilt-edged have fallen to the lowest points since 1933. War Loan was under par, and was marked at 99½, on Wednesday. And falls of 10s. or more, such as were recorded on Wednesday, in normally stable industrial market leaders like Guinness and Imperial Tobacco, and to a smaller extent in Associated Portland Cement and "Bats," are eloquent of the temporary supersession of rational investment standards. Liquidity, and not yield calculations (as our tables on pages 642 and 643 clearly show), has been the operative factor in this week's frightened markets.

The extent of the deterioration of investment values is evident in the following table. The selected dates are those that correspond to Dr Schuschnigg's fateful visit to Berchtesgaden, Mr Eden's resignation, the Austrian coup, Wednesday's alarming falls, and the subsequent recovery:—

	High 1937	Feb. 14, 1938	Feb. 21, 1938	Mar. 11, 1938	Mar. 16, 1938	Mar. 17, 1938	Fall since Mar. 11

Industrial Shares	124½	90½	88½	87½	79½	81½	6½

Although the selling of gilt-edged has been pronounced, it is proper to record that an appreciable volume of buying occurred at the lower levels which prevailed in mid-week. But support for Central European bonds was non-existent, and leading industrials—some of which appear to have been especially affected by the liquidation of impaired margin accounts—recovered less than half their losses on Thursday. And the sharp falls in the best Kaffir shares, like East Geduld, and in commodity shares, run counter to the logical outcome of war finance.

Policy for Investors.—It is plain, indeed, that the rate of fall recorded by the best equities and commodity

shares this week cannot continue indefinitely. Of the future of gilt-edged values, it is difficult to speak with confidence, for problems of public finance and taxation are bound to become more acute in the immediate future. The reverse of that medal, however, is the lively possibility of an inflationary rise in prices for leading commodities (tempered at first by the adequate level of stocks which now exists) and a high level of activity for armament and ancillary industries. The realisation that, even if war comes, the best equities and commodity shares will provide some protection against the disadvantages which fixed-interest securities invariably suffer during an inflationary regime, should in due course produce some recovery from their lowest levels. An arms race is not an adequate substitute for a broad economic recovery, but it clearly invites neither the danger of a widespread industrial slump, nor the risk of a sweeping profits deflation. If the market's worst fears come true, investment standards may well be replaced by control at every point of Stock Exchange dealings. But until the political position is irretrievable, the best equities may well be a better hedge against inflation than mere monetary liquidity.

Wall Street Reactions.—Wall Street's first response to the acute depression in European centres was a rise in the Dow Jones industrial index of 3½ points on Tuesday. In the circumstances, domestic news counted for little; the outstanding market factor was the flight of funds to New York. The extent of the movement, from the first, flattered the actual volume of foreign support for American stocks, and London's break on Wednesday was succeeded by a sharp plunge in stocks. The Dow Jones index lost 4½ points on Wednesday, and heavy selling, much on foreign account, took the volume of trading over one million shares for the first time in many weeks. The Whitney case, indeed, has been displaced from leading importance. On Friday last week, Mr Richard Whitney, who was president of the New York Exchange from 1930 to 1935, was indicted on a charge of grand larceny, involving the alleged misappropriation of \$103,000 from a trust account. The plea of guilty has been entered to this charge, and sentence will be pronounced on March 28th. The market is naturally concerned over the effect of the case on its relations with the Securities and Exchange Commission. There have been recent indications that the Exchange was preparing to adapt itself more closely to the views of the Commission. In fact, the recent report of an independent exchange committee on the management of the Exchange was an attempt to make full concession to the Commission's demands, while retaining the forms of self-government. Whether the S.E.C. will remain ready to accept this solution following the Whitney affair is causing the market much thought.

Company Notes

I.C.I. Profits.—The declaration of a final dividend of 5½ per cent., making 8½ per cent. for the year, compared with 8 per cent. in 1936, was followed by a recovery in the ordinary stock to 29s. 6d. in late dealings on Thursday. Net income, after providing £1,500,000 for central obsolescence fund and £1,171,862 for income tax and N.D.C., amounted to £7,510,707, compared with £7,203,329 in the previous year, when £1 million was provided for obsolescence and £846,093 for taxation. It would appear that the dividend is covered by earnings of 13.2 per cent. The sum of £1,500,000 is put to general reserve, and £172,000 is provided for employees' pensions. The book value of marketable and unquoted investments has been reduced by £1,115,674 to £7,706,648, following the sale of certain holdings. Their market and computed values, however, amount to £5,882,582, and while their

capital value is regarded as unimpaired, on the basis of earning power, the directors have applied £1,500,000 from general reserve to reduce book values, leaving a residual depreciation of £324,066. In effect, therefore, the latest earnings have covered the larger part of the investment depreciation, without impairing reasonable dividend expectations. The shares yield almost 6 per cent. on an 8½ per cent. basis.

County of London Electric.—This company has again shown a generous measure of progress, both in output and in profits. The rate of increase in output for the last three years, indeed, has exceeded 55 per cent.—a remarkable achievement for such a well-established undertaking. Operations and profits are analysed in the following table and chart:—

	1935	1936	1937
Units sold to consumers (millions)	885	1,035	1,200
Increase (%)	14.1	16.7	15.9

COUNTY OF LONDON ELECTRIC—NET PROFITS, 1928-37

Comparison of the provision made for depreciation with our standard scale is impracticable, since a large part—it is not disclosed how much—of the undertaking is subject to the 1925 Act, which prescribes the rates of sinking-fund provision. In the accounts, this provision is included under one head, together with the normal reserve for depreciation on the rest of the undertaking. The figure as a whole, however, appears to be relatively generous, and the 10½ per cent. dividend is probably covered by a larger margin than our table at first sight suggests.

North-Eastern Electric.—The increase in profits of this company during the last two years markedly reflects the industrial revival on the north-east coast. The increase in net revenue has been largely devoted to strengthening the provision for depreciation. The growth of real earnings

is, in fact, much greater than most electricity undertakings could show. Revenues for the past three years are analysed below:—

	1935	1936	1937
Profit	1,096,505	1,244,590	1,410,801
Interest payable	230,959	250,806	247,818
Sinking funds and reserves for depreciation	370,516	466,770	592,959
Preference dividends	185,482	185,482	185,482
Ordinary stock:—			
Earned	309,548	341,532	384,542
Paid	285,595	333,194	333,194
Earned (%)	6.7	7.2	8.3
Paid (%)	6	7	7
Carried forward	158,036	166,373	217,721

The variation in net revenues during the past decade is evident from the following chart:—

EST. 1825

It is impossible strictly to compare the provision made for depreciation with our standard scale, since the apparently modest appropriation is supplemented by a very generous provision for repairs and maintenance direct from the revenue account. The figures for these items are not yet available, but assuming that there has been no change of policy, it seems probable that the current dividend rate of 7 per cent. is covered with a small margin on the basis of our standard depreciation scale. The £1 ordinary stock units yield £5 2s. per cent. at 27s. 6d.

Clyde Valley Electrical Power.—The results of this company show a substantial advance, though on a rather smaller scale than the North-Eastern Company, which is, in many respects, governed by comparable economic factors affecting the area served. Net profits have increased from £438,290 to £536,327, and after transferring £250,000 (against £200,000) to contingency fund, ordinary earnings are still substantially increased from £170,781 to £210,468. The company's recent progress is analysed below:—

	1935	1936	1937
Revenue from sale of energy...	903,564	1,023,627	1,175,608
Net profit	414,817	439,290	536,327
To contingency fund	180,000	200,000	250,000
Interest	4,497	10,509	17,859
Preference dividends.....	58,000	58,000	58,000
Ordinary shares:—			
Earned.....	172,320	170,781	210,468
Paid	168,000	168,000	168,000
Earned %.....	8.3	8.2	10.7
Paid %	8	8	8
Carried forward	95,019	97,800	140,268

The allocation to contingency fund is in excess of that which our standard depreciation scale would prescribe; on the latter basis, earnings would be equivalent to nearly 12½ per cent. on the ordinary capital. On their well covered 8 per cent. dividend, the £1 shares yield £4 4s. 3d. per cent. at the present price of 38s.

Canadian Pacific Results.—The declaration last month of a 2 per cent. dividend on Canadian Pacific preference stock was better than the market had anticipated. Few investors, however, were led to infer that a substantial improvement in railway operations had been recorded last year. The preliminary results, announced this week, show indeed that "other income" is largely responsible for the recovery. While gross railway earnings increased by \$6,522,795 to \$145,085,558, working expenses absorbed \$6,091,659 more at \$121,343,311. Railway operations thus showed a net improvement of no more than \$431,136, but "other income" has substantially increased from \$6,631,371 to \$11,629,711. After providing for fixed charges (increased by a further payment in respect of the "Soo" line, which is now in process of reorganisation), the net profit balance amounts to \$9,462,284, compared with \$6,029,184 in 1936. On a conservative accounting view, the 2 per cent. preference payment is just covered, for it absorbs \$2,745,138, while special appropriations require \$6,671,630. The latter consisted of a further sum of \$3,849,184 to meet interest obligations of the "Soo" subsidiary, nearly \$2½ millions for losses on lines abandoned, and some \$327,000 for miscellaneous charges. These appropriations, it has been officially stated, do not essentially concern dividend policy, and it is clear that, with an accumulated profits balance of \$137.2 millions, the company can afford to treat them as a capital, rather than a

revenue, matter. It is true, nevertheless, that they have been effectively provided from current earnings during the past year.

The investor may well consider two questions pending the issue of the full report. How long will special appropriations be necessary? The "Soo" reorganisation, presumably, will not relieve the Canadian Pacific of its bond interest guarantee, and a statement regarding prospective abandonments of unremunerative lines would be welcome. Secondly, will railway net revenues show appreciable improvement this year, even if this season's harvest is normally satisfactory? It would, at any rate, be unwise to count on the maintenance of "other income." Dividends contributed \$6½ millions in 1937, against \$3.9 millions in 1936, largely owing to the payment, by Consolidated Mining and Smelting, of \$3.50 per share, against \$2.00 per share in 1936. The subsequent fall in base metal prices is not an encouraging factor. Nor is it clear that the experience of the steamships (which earned \$2,458,832, after providing \$3,894,469 for depreciation, against a net loss of \$14,063, after \$3,567,151 for depreciation, in 1936) will be repeated this year. The reaction in the preference stock from 37 when the dividend was announced in February to the present price of 32½ is not inexplicable.

Unilever Trading Companies.—It is difficult to translate the results of the Unilever group's trading and stores undertakings into dividend prospects for the twin holding companies. They were more favourable, generally speaking, than in 1936, and one objective of last year's reorganisation scheme—to enable the British company to pay out a more generous proportion of its earnings—should therefore be assisted. United Africa is the keystone of the produce companies. Trading results for the year to September 30th show an increase from £1,726,717 to £2,127,412, and the dividend has been increased from 10 to 11 per cent. An interesting analysis of the sources of trading profits shows that British West Africa contributed £668,433, other British colonies and foreign territories £787,989, and mining rights and ancillary interests £670,990. The directors have transferred £70,000 to contingencies and £400,000 to general reserve, and the balance carried forward is raised by £131,100. This conservatism seems warranted in view of the further setback in produce prices since last September, and, in particular, of the difficult cocoa position. Some 20 per cent. of the United Africa dividend, which absorbs £1,210,000 gross, is payable to African and Eastern Trade Corporation, whose profits show an increase from £170,866 to £184,129, and whose dividend has been stepped up from 7½ per cent. to 11 per cent. The Niger Company, which holds 65 per cent. of the United Africa capital, together with preferred shares in Lever Brothers (now assimilated into the new company) and interests in the Belgian Congo has, surprisingly, passed its ordinary dividend, preferring instead to make a 50 per cent. share bonus. Profits, in fact, are substantially reduced from £1,377,475 to £982,640, and the entire sum, together with a draft of £142,360 on the balance carried forward, has been transferred to general reserve, to muster the £2,875,000 required for the scrip bonus.

This step, indeed, is somewhat difficult to explain. The parent company will lose £575,000 in gross cash dividends from the Niger Company, and the point of a capital bonus, distributable to a parent which already controls the entire equity, must presumably be sought in taxation practice. Nor is it obvious that the transfer of the Congo interests to the Dutch company had been effected at the end of last year. The balance sheet shows only minor changes in the valuation of shares in subsidiary companies, which stand at £11,924,066, compared with £11,926,408 at the end of 1936. It is evident, from inspection of last year's

Unilever profits, that the loss of even £575,000 gross income by the parent company would not rule out an appreciable increase in the ordinary dividend. The sum, it is true, is equivalent to 5 per cent. on the ordinary capital, but the 7½ per cent. dividend paid in 1936 was covered by earnings of 15.6 per cent. Room is still left, it would seem, for an increase in the 1937 distribution.

Home and Colonial Group Recovery.—The latest reports of the Lever and Unilever stores companies show some appreciable recovery from the poor results of the two previous years. The total profits of Home and Colonial itself are 43 per cent. higher at £296,494. Depreciation absorbs a little less at £61,550, and though other expenses are some £21,000 greater at £50,150, mainly owing to increased taxation, preference and preferred ordinary dividends are covered with £3,542 to spare. In 1936, these charges were short-earned by £68,354. The surplus itself is equal to no more than one-fifth of one per cent. on the ordinary shares, but it represents the first positive earnings for the equity since 1934. Reference is again made in the report to rising turnover and to development of business, and it would seem that the recent policy of shop modernisation and the adjustment between rising costs and selling prices have played their part in the improvement. The accounts of other companies in the group, Lipton, Meadow Dairy and Maypole Dairy, make an equally favourable comparison with 1936. The Maypole dividend is raised from 5 per cent. to 7 per cent., earnings amounting to 9.3 per cent. against 6.4 per cent. Meadow Dairy shows an almost identical movement in percentage earnings, but the 5 per cent. dividend is maintained. The balance sheets provide indications of improved conditions. Thus the group's policy of closing unremunerative stores is illustrated by the provision of £32,037 for writing down fixtures and fittings of Home and Colonial's closed branches in 1937. The consolidated balance sheet shows that, although trade investments have risen from £8,463 to £65,182, the cash position is much improved at £512,939 compared with £294,922. The current price of 3s. 3d. for Home and Colonial 4s. shares suggests, however, that the market is looking forward some way to continued improvement.

Pinchin Johnson Position.—Since 1932, Pinchin Johnson has recorded a consistent improvement in profits, but recently the rate of recovery has diminished. Total profits last year amounted to £389,343, a level which is less than 2 per cent. above the 1936 results. In the market's view, last year's profits are disappointing. A year ago, it was hoped that although selling prices had not kept pace with the rising cost of materials and labour, the lag would to a great extent be caught up in 1937. The latest report, however, explains that costs have further increased, but that price levels have not appreciably improved. In March last year, again, the Board did not expect any difficulty in maintaining at least the same dividend on the capital, as increased by a 10 per cent. share bonus. This hope has also been disappointed. As the following comparative table shows, the 17½ per cent. dividend is only just covered by earnings:—

	Years to December 31		
	1935	1936	1937
Profit	361,380	382,613	389,343

fund have reduced the amount earned for the equity by some £30,000, despite the £7,000 rise in total profits. On the old capital, earnings for the equity in 1937 would represent 19.2 per cent. Except in France and in China, (where business, once at a standstill, has been resumed), sales in 1937 in all markets showed a substantial increase. It would seem that besides rising costs, conditions in France have been responsible in a large measure for the comparatively small increase in profits. Last year Pinchin Johnson received no revenue from France, "against a substantial figure in 1936." The strong balance-sheet position is maintained, the chief change being the reduction in general reserve following the share bonus a year ago. Stocks, however, are £72,000 higher at £649,080, and cash and trustee securities are £57,000 lower at £548,338. At the current price of 28s. 3d. the 10s. ordinary shares yield £6 13s. per cent.

Other Company Results.—A large number of important results are analysed in our usual table of profit and loss accounts starting on page 666. Over 85 companies in all are dealt with, including miscellaneous industrial concerns such as British Thomson-Houston and British United Shoe Machinery, while shops and stores are well represented. A number of important rubber company results have also been published. The reports are discussed on page 641 under the heading "Shorter Comments."

Company Meetings of the Week.—Reports of company meetings commence in this issue on page 650. At the *National Provident Institution* meeting, Mr Robert E. Dickinson reported that new policies had been issued last year for gross sums exceeding £2,500,000—a new record, and the first occasion on which the figures had exceeded £2,000,000. The forthcoming amalgamation with the Hungarian General Savings Bank was discussed at the recent meeting of the *Hungarian General Credit-*

bank. The Hon. W. B. L. Barrington pointed out that the break-up value of *London and Lomond Investment Trust* ordinary stock exceeded £200 for every £100 nominal at the end of January. Lord Ashfield's review of the *North Metropolitan Electric* position stressed the effect of rising costs last year, but anticipated further progress in future, even if the rate might be less spectacular. At the *Scottish Power* meeting, Mr George Balfour discussed the development of electricity supply in the Highlands areas, and declared that the load was developing rapidly. At the *Metropolitan Electric* meeting, Mr Balfour reported that new consumers were being connected at the same rate as last year. At the annual meeting of *African Theatres*, Mr Schlesinger pointed out that the intrinsic value of properties and share investments greatly exceeded their book values. Mr A. C. Herring, addressing shareholders of *Geo. W. King, Ltd.*, at the first general meeting, described the company's rôle in the equipment of aircraft factories. The amount of armament work done, however, had been comparatively small. At the *Davis and Timmins* meeting, Mr F. Le Neve Foster reported that both profits and turnover established a record, and remarked that in 40 years' existence, the company had paid its preference dividends, and passed the ordinary dividend only once. Shareholders of *Olympia, Ltd.*, were informed by Mr Louis Nicholas that except for July and August, Olympia was fully let during the current year. In a review of the *Consolidated Mines Selection* interests, Mr McDermott pointed out that the company had an indirect interest in all the important mining undertakings of the Gold Coast. Addressing members at the meeting of the *Hongkong and Shanghai Banking Corporation* held in Hongkong, Mr G. Miskin reviewed the recent events in China, and expressed the belief that the recuperative powers of both China and Japan were great, and would in time be assured. At the *Provincial Cinematograph Theatres* meeting, Mr Mark Ostrer voiced the directors' opinion that enough reserves had been accumulated to take care of the immediate future.

THE STOCK EXCHANGES

London

SETTLING DAYS

TICKET MARCH 29 ACCOUNT MARCH 31

The pressure on the Stock Exchange this week has proved more serious than at any time since political apprehensions first began to sway the market. Normal investment criteria have been jettisoned and gilt-edged and equity shares alike have slumped to new low levels, as described on page 636. The panic demand for liquidity on Wednesday, however, was carried too far, even in relation to the dark political situation, and moderate though not fully sustained recoveries throughout the list were recorded on Thursday.

In the *gilt-edged market*, War Loan, which had marked below par on Tuesday, fell at one time to 99½ on Wednesday, but advanced over par on Thursday. Although selling was heavy, a certain volume of buying was reported, even when prices looked least secure. Old Consols touched 71 on Wednesday, but recovered to 72½ on Thursday. The Middlesbrough scrip opened at 3 discount, but improved half a point subsequently.

Further heavy falls were recorded in *European bonds*, led by the Austrian 7 per cent. issue. German and Czech loans were also severely affected. Selling of Far Eastern bonds continued, Chinese issues in particular losing the benefit of their sharp recovery at the end of last week.

Home Rails were the target of special selling pressure, particularly in the last

hour on Wednesday. The market showed great reluctance to take stock, and Southern preferred were as much as 3½ points lower on the day.

As in other sections, the *industrial market* maintained a reasonably steady front on Monday. There was no immediate selling pressure, although the tone was flat. The true damage to market confidence, however, was fully revealed on Tuesday and Wednesday. The break in prices followed a rush of selling orders, with almost complete absence of any support for leading issues. Steady investment shares, like brewery and tobacco issues, were among the most seriously affected, as our table on page 636 shows. A partial recovery occurred on Thursday.

Substantial losses occurred in the steel group—armament shares providing no exception—and electrical equipment issues, particularly cable shares, were also heavily sold. Leading motor issues were almost unsupported, and all the engineering issues, despite their armaments connection, lost ground. Brewery shares were specially affected by taxation fears, Bass and Guinness falling 13s. 6d. and 10s. 3d. respectively on Wednesday. The miscellaneous industrial leaders, such as Murex and Turner and Newall, showed sharp falls ranging up to ½ on Wednesday, while bank and insurance shares were heavily marked down.

The *oil market* started the week in subdued fashion, but although quotations were widened no abnormal selling occurred. On Tuesday the falls continued, and selling increased to panic dimensions on Wednesday. Nerves were

steadied on Thursday, and an all-round rally occurred. The *rubber market* followed the general trend, experiencing on Wednesday one of the heaviest selling sessions for some time.

Gold shares provided no exception to the tendency of the markets. After a chastened opening and gloom on Tuesday they were affected by the general break of prices in mid-week, but rallied on bear covering later. Other mining shares followed a similar trend, but Rhodesian copper, lead and zinc issues at least provided an exceptional rise on Tuesday.

ACTUARIES' INVESTMENT INDEX

On Tuesday last (March 15th), the Actuaries' index of 151 industrial equities reached a new low point of 65.8, the fall being rather more severe

than that occurring in the previous week. The average yield, in consequence, rose to 5.53 per cent. A week and a month ago the index stood at 68.2 and 70.0 respectively, the corresponding yields being 5.33 and 5.09 per cent. A selection of the separate indices follows:—

Group (and No. of Securities)	Prices (Dec. 31, 1928 = 100)			Prices 1938 High

New York

WALL STREET's slight improvement on a small turnover last Monday gave little inkling of the violent movements to follow. On Tuesday the steel and metal groups staged a vigorous advance, and turnover was appreciably higher. This, however, proved to be a forestalling move, as misadvised as it was opportunist. For the news of London's mid-week break depressed stocks even more than Tuesday's advance had put them up. Du Pont, for example, rose \$4½ on Tuesday, and fell \$5 on Wednesday—a movement which was symptomatic of the whole market. In sum, three days' gains were wiped out in a day, on a turnover which exceeded one million shares for the first time in many weeks. An improvement in the rate of steel operations, estimated by *Iron Age* at 32 per cent. of capacity, against 30 per cent. a week ago, might have provided the background for a mild domestic advance, but the week's movements have been linked to London rather than New York. Railroad stocks proved vulnerable to the sharp fall in mid-week, and bonds were nervous.

STOCK EXCHANGE INTRODUCTIONS

St. Martin Preserving Company, Ltd.—Issued capital 1,075,000 4s. shares. Incorporated 1927 as Branstons Artificial Silk; production ceased 1930. St. Martin Preserving assets bought 1937 for £125,000 cash. Net assets acquired, £157,185. Profits: Year to May 31, 1934, Dr. £21,044; 7 months to end 1934; Dr. £1927; three months to March 31, 1935, Dr. £1,050 (not audited); 50 weeks to April 30, 1936, £17,068; year to April, 1937, £13,364. (Last two periods after depreciation, before interest.)

BONUS SHARES
Niger Company, Ltd.—It is proposed to capitalise £2,875,000 of general reserve, and to distribute bonus shares on basis of one new share for two old shares.

CONVERSIONS AND REPAYMENTS

Richardsons, Westgarth & Company.—Issue of £500,000 5½ per cent. first mortgage debenture stock at par, to repay debentures of companies amalgamated and advances from bankers and for general purposes. Redeemable at 102½ by drawings by March, 1963, or from 1943 to 1953 on notice at 105 and thereafter at 102½. Net assets, £1,112,812. Estimated combined profits for year to March 31, 1938, £82,000 after depreciation.

SHORTER COMMENTS

Company Results of the Week.—**COURAGE & COMPANY** report a moderate improvement in profits, which amount to £397,106, against £388,881. **NUNNERY COLLIERY**, whose dividend is raised from 10 to 12 per cent., and whose profits of £79,461 are 6 per cent. higher, point out that increased values realised for coal under the Central Selling Schemes have been largely absorbed by higher wages and materials costs. **VAUXHALL MOTORS** expanded their business considerably in 1937, though higher costs of materials prevented a corresponding rise in profits. Trading profits are 8 per cent. higher at £1,905,760, but increased expenses (in particular maintenance and plant rearrangement costs) have reduced net profits below the 1936 level. Among the larger rubber companies, **GULA-KALUMPONG** have earned £87,193, against £49,154, while **JAVA AMALGAMATED** and **RAMBUTAN** have both raised their dividend to 10 per cent. Further London stores make a mixed showing. The profits of **MAPPIN & WEBB** at £77,894 are slightly higher; **FREDERICK GORRINGE, LTD.**, have maintained their net profits, but **BRADLEYS (CHEPSTOW PLACE)** have experienced a setback. An increase in both orders received and output enabled **BRITISH THOMSON-HOUSTON** in 1937 to earn £573,168, against £480,721. Orders on hand at the end of the year also were at a higher level than at the end of 1936. **BRITISH UNITED SHOE MACHINERY** have earned £594,981, against £568,183, and the dividend is increased from 17 per cent. to 19 per cent. tax free. No comment is offered in the report to explain a fall of £26,000 in the profits of **PEEK FREAN &**

In calculating yields of fixed interest stocks allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any increase or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

[illegible]

(a) Interim dividend.	(b) Final dividend.	(c) Dividends for full year.	(d) Paid in £N.Z.	(e) Allowed for exchange.	(f) Paid in S.A.	(g) Flat yield.
(h) Yield on 3½% basis.	(i) Based on payment of 6%.	(j) Based on payment of 5%.	(k) To redeem par, in year 1987.	(l) Paid in 40% coupon.	(m) Paid in 40% coupon.	(n) Paid in 40% coupon.
(o) Yield on 15.8% basis.	(p) Yield worked on a 5% basis.	(q) Yield based on 45% of coupon.	(r) Yield worked on a 14% basis.	(s) Yield worked on a 14% basis.	(t) Paid in 40% coupon.	(u) Paid in 40% coupon.

(s) Highest price 132½ and 25 per cent. dividend on old shares, before 50 per cent. capital bonus. Yield at 25 per cent. = 46 lbs. 6d.; at 16 per cent. = 44 lbs. 0d. (u) Paid on 4,300,000 more capital than in preceding year. (d) 17½ per cent. cash dividend and 7½ per cent. in deferred ordinary stock. (v) Dividend before the 200% capital bonus 44. per share.

profits of RADIATION, LTD., at £327,682 are only a little short of those earned in 1936. Material prices, wages, and first contribution to a pensions scheme have more than offset increases in selling prices. INTERNATIONAL PAINT show an increase of 26 per cent. in profits to £158,295, and the dividend is increased from 16 per cent. to 20 per cent. Net profits of GALLAHER, LTD., are £615,859, against £529,111, and a new issue for cash is proposed to finance expanding business. At £224,034, net earnings of GODFREY PHILLIPS, LTD., are little changed, and the dividend is maintained at 11½ per cent.

MISCELLANEOUS

Geo. W. King, Ltd.—The profit of the business for 1937, after charging all working expenses and management remuneration and after making allowance for doubtful debts, amounted to £23,158, from which must be deducted directors' fees, £550; amounts written off buildings, plant and machinery, fixtures and fittings, loose tools and motor vehicles, £2,277; amount written off patents, £617; provision for income tax and National Defence Contribution, £2,589—leaving £17,125. Dividend on the ordinary shares of 10 per cent., £10,000; preliminary expenses be written off, £1,153; carry forward, £5,972. The trade of the company continues to be satisfactory.

African Theatres.—Addressing members at the annual meeting in Johannesburg, Mr. Schlesinger summarised the history of the business since it was started 25 years ago, and compared profits and dividends year by year since 1921. "In discussing the balance-sheet position, he stressed the value of undisclosed surpluses which were just as tangible as those divulged. Thus none of the subsidiaries had given effect in their accounts to the increased value of their properties in certain centres."

DIVIDEND ANNOUNCEMENTS

Rates are actual, unless stated per annum or shown in cash per share. Rate for previous year refers to total dividend, unless marked by asterisk to indicate interim dividend.

ranked high on the list of exports. Austria also had an active textile industry, and an important export trade in cotton, woollen and silk manufactures. She imported textile fibres and other raw materials; and, despite her lignite and water power, her supplies of fuel—especially coal—were deficient. Nor was she self-sufficient in food-stuffs. Living animals, together with cereals, fruit and nuts were purchased from neighbouring countries to make good the deficiency of her home supplies. Her imports came mainly from Central European countries. Germany was at the head of the list, though purchases from Hungary, Poland and the Little Entente countries were considerable. Her best customers were found mainly in the same group of countries, but Italy significantly ranked second on the list in 1936. If Herr Hitler embarks on a large scale programme of fortification and public works, Austria's imports of raw materials may be destined to increase in the near future.

Iron and Steel Developments.—The position of the iron and steel industry has undergone a marked change in recent months. Last year there was a veritable scramble for supplies which failed to keep pace with the rapidly increasing home demand. Rising domestic production had to be supplemented by a substantial increase in imports, facilitated by the suspension of the import duty on pig iron and by the reduction of the steel duties. By the end of last year, however, the shortage of materials had been overcome, and during the last few weeks supplies have tended to accumulate to such an extent that certain sections of the market have become seriously congested. Consequently, there has been a marked decline in new transactions, for there is now no incentive for consumers to order their requirements for a long period ahead. In order to relieve congestion in the market and to prevent the accumulation of unwieldy supplies, the import duty on pig iron is expected to be re-introduced shortly and the duties on steel will revert to the higher level in force before their reduction in July last year at the end of this month. It is anticipated that, as a result of the increase in import duties on steel, stocks will be reduced rapidly to normal dimensions without necessitating any appreciable reduction in domestic output. This view, however, assumes that the demand for British iron and steel will continue at a high level. So far, domestic consumption has been fairly well maintained, but the demand for many "light" materials has recently shown a noticeable decline. Moreover, exports have fallen sharply, shipments of iron and steel having declined from 200,500 tons in February, 1937, to 156,700 tons in the past month. And, if present trends continue, the iron and steel industry may well be faced with the necessity of curtailing output later this year, in spite of the anticipated fall in imports and the probable acceleration of the pace of re-armament.

The international position of the steel industry has been strengthened by increased co-operation between American producers and the Cartel. At a meeting held by the Cartel in Brussels a fortnight ago, it was decided to maintain prices at the level to which they were reduced on January 17th, in the belief that a firm price policy would induce consumers to place new orders. As competition from the United States is now less intense than a few months ago, the Cartel is in a stronger position than previously and, in the absence of a sharp decline in demand, it should have no difficulties in its attempt to maintain prices. The maintenance of quotations abroad, in turn, will tend to strengthen the domestic price structure. But the future course of demand, both at home and abroad, is still an uncertain quantity.

Decline in Overseas Trade.—The trade returns for February are scarcely encouraging. The deterioration on the world economic front since last autumn has been

accompanied by a rapid decline in British exports, from £47.2 millions in October to £37.5 millions last month. For the first time since 1933, moreover, exports in February were lower, in value, than during the corresponding month a year earlier. As the first of the appended tables shows, the value of British exports last month was 2.7 per cent. smaller than in February, 1937. Owing to the rise of prices since last year, the relatively small decline in the value of exports masks a substantial fall in the volume of our shipments. Thus, *The Economist* index of the volume of exports of British manufactures declined from 111 (1935 = 100) in February, 1937, to 101½ in the past month:—

	(£ thousands)			Change between 1937 and 1938	
	1936	1937	1938		Per cent.
February					
Total imports	62,269	71,712	75,739	+4,027	+5.6
British exports	35,111	38,572	37,529	-1,043	-2.7
Re-exports	5,651	6,928	5,528	-1,400	-20.2
Total exports	40,761	45,450	43,056	-2,443	-5.7
Excess of imports over exports	21,508	26,262	32,683	+6,421	+19.6
Transshipments under bond	2,033	3,092	2,461	-631	-25.6
Two months ended February					
Total imports	132,131	147,331	160,657	+13,326	+9.0
British exports	69,563	77,636	78,714	+1,058	+1.3
Re-exports	9,967	12,030	10,323	-1,707	-14.1
Total exports	79,530	89,665	89,036	-649	-0.7
Excess of imports over exports	52,601	57,646	71,621	+13,975	+19.5
Transshipments under bond	4,442	6,041	5,319	-722	-13.6

Total imports declined from £85.0 millions in January to £75.7 millions last month. In contrast to exports, however, the value of imports last month was still 5.6 per cent. higher than in February, 1937, largely as a result of the heavy intake of dairy products, and iron and steel and scrap. If allowance is made for changes in prices, imports of raw materials were still appreciably higher than a year ago. Thus, *The Economist* index of the intake of raw materials (1935 = 100) rose from 102½ in February, 1937, to 111½ last month. Owing to the relatively bigger fall in British exports than in imports, the unfavourable balance of trade showed a further substantial increase, from £26.3 millions in February, 1937, to £32.7 millions last month.

The accompanying diagram shows the trend of the value of total imports and British exports since 1927:—

TOTAL IMPORTS AND BRITISH EXPORTS

During the past two years, it will be seen, imports have risen much more rapidly than exports; but towards the

OLD GOWRIE
TOBACCO

"For almost a century skilled craftsmen have been blending, in turn, and blending tobaccos for Rattray's in Perth, their Virginia friends—Old Gowrie and Hal of the Wind—are known the World over for their fineness—their unique flavour. Rattray's tobaccos continue to be blended by hand by skilled craftsmen who love and understand their art."

Price: 20/8 per lb., post paid. Send 5/2 for sample 1 lb. tin, post free. Export: 22/8 per 2 lbs. plus post.

Chas. Rattray
PERTH, SCOTLAND

Rattray's Hal of the Wind Tobacco is the full-bodied strength of Old Gowrie.

Industry and Trade

Shock to Business Confidence.—Germany's cold-blooded annexation of Austria came as a severe shock to business confidence, which had already suffered from the deterioration of world economic conditions since last autumn. The immediate result is likely to be a further decline in new civil investment for the home market and in export orders. Consequently, the downward trend in business activity, noticeable since last autumn, is likely to be accelerated in the immediate future, for plans for the inevitable intensification of re-armament cannot be put into operation at once. At the same time, a further substantial increase in defence

expenditure is likely to prevent anything like a serious slump in business activity later in the year, though, as re-armament expenditure is concentrated on a limited number of industries, it will further distort the balance of Britain's economic structure. Thus, there is likely to be a further decline in commercial shipbuilding and in the cotton and other industries dependent on international trade, while the activity of the metal trades may be sustained by increased armament expenditure. But if the fear of an outbreak of general war increases, there may well be a scramble for commodities which, in turn, would lead to rising prices and an increase in the demand for finished goods. If, on the other hand, the political tension subsides, the decline in commercial activity may well outweigh the prospective increase in armament expenditure.

Austria's Economic Position.—What effect is the acquisition of Austria likely to have upon the economic position of the Third Reich? The statistical material assembled on page 665 suggests a preliminary answer to a question which we hope to discuss in greater detail in the near future. In the first place, the Austrian National Bank's gold reserve of 243 million schillings and foreign assets worth 168 millions represent a useful windfall for Germany, in view of her present foreign exchange position. So far as raw materials are concerned, Austria has valuable iron ore deposits, which Germany lacks, and vast forests. As a whole, however, post-war Austria was an industrial and commercial rather than an agricultural state. Of her occupied population, only one-third was engaged in agriculture. Timber, wood-pulp, paper with its allied products, and iron and steel manufactures

OTARD'S EST. 1793

LIQUEUR BRANDY

MATURED AND BOTTLED AT CHATEAU DE COGNAC

end of last year the value of both purchases and sales abroad took a downward turn, long before trade had recovered to the pre-depression level of 1929.

* * *

Overseas Trade by Commodities.—The volume of the imports of many important materials were still higher last month than in February, 1937. The increase, as the table below shows, was substantial in the case of iron ore and scrap, and iron and steel manufactures, delivery of the latter having been speeded up in anticipation of an increase in the import duties at the end of this month. Imports of machinery, however, were lower in volume than in the corresponding month a year ago:—

RETAINED IMPORTS—MONTH OF FEBRUARY

Item and Measure	1936	1937	1938
Wheat '000 cwt.	6,614	10,008	7,100
Beef and veal '000 cwt.	885	811	869
Mutton and lamb '000 cwt.	520	578	605
Sugar (unrefined) '000 cwt.	3,393	2,724	3,817
Iron ore and scrap '000 tons	542	516	798
Raw cotton '000 cwt.	1,145	1,161	1,367
Sheep and lambs' wool '000 cwt.	742	590	478
Flax, hemp and jute tons	33,574	40,115	31,151
Crude petroleum '000 gals.	38,313	22,142	39,603
Hides, wet and dry '000 cwt.	138	105	98
Wood pulp '000 tons	173	106	154
Rubber '000 cwt.	133	5	369
Unwrought copper tons	16,695	21,229	20,068
Pig lead tons	27,116	28,934	28,817
Tin: Ore and concentrates tons	5,162	4,405	4,943
Blocks, ingots, slabs and bars tons	1,155	609	1,241
Iron and steel manufactures '000 tons	123	82	230
Machinery tons	5,976	11,743	10,972

A number of export trades, however, have suffered a serious setback as a result of the shrinkage of world trade. Exports of cotton, wool and other textiles, for example, registered a sharp decline between February, 1937, and the past month. Shipments of iron and steel materials were also appreciably smaller than a year ago, and coal exports have made no further headway. Exports of machinery, on the other hand, were again substantially higher than a year ago, partly, no doubt, because of the long time-lag between the placing of orders and their completion:—

BRITISH EXPORTS—MONTH OF FEBRUARY

Item and Measure	1936	1937	1938
Coal '000 tons	2,582	2,610	2,611
Iron and steel scrap tons	9,116	23,963	5,081
Pig-iron and ferro-alloys tons	6,973	13,563	7,913
Railway materials tons	14,980	8,124	12,849
Total, iron and steel manufactures tons	167,815	200,498	156,730
Textile machinery tons	4,894	4,274	6,765
Total machinery tons	32,662	30,676	35,008
Cotton yarns '000 lb.	12,450	12,575	9,996
Cotton piece-goods sq. yds.	166,100	160,117	117,410
Wool tops '000 lb.	4,139	3,524	2,403
Worsted yarns '000 lb.	2,516	2,145	1,517
Woolen tissues '000 sq. yds.	7,889	7,475	6,046
Worsted tissues '000 sq. yds.	3,147	2,973	3,326
Linen piece-goods '000 sq. yds.	7,776	8,144	4,417
Leather boots and shoes doz. pairs	31,400	30,359	31,715
Leather cwt.	21,614	28,424	13,565
Paper and cardboard cwt.	314,953	320,187	267,115
Locomotives and parts tons	2,424	1,874	1,998
Motor vehicles and chassis No.	7,033	8,365	9,161

In the absence of an early revival of export business, a further decline in shipments during the next few months may be unavoidable.

The Tin Buffer Pool Again.—Attention has again been focussed on the question of a buffer pool for tin in consequence of a resolution passed at a meeting of the Tin Producers' Association on Monday last calling for the formation of such a pool at "as early a date as possible." The question is believed to be under consideration in the leading producing countries and will be discussed at the next meeting of the I.T.C. on April 5th. It is probable that a referendum will be taken in Malaya before the Government of that country makes up its mind on the question. Hence a final decision can hardly be taken at

the beginning of April, though it is generally believed that a pool will be formed by the middle of the year. Meanwhile, the market is going through a difficult period. Invisible stocks are large, and home warehouse stocks in this country have been steadily increasing, to reach a total of 4,095 tons at the end of last week. This is the highest level for three years, and further increases are likely, in view of the decline of consumption in this country and the United States. Moreover, Malayan stocks are increasing as a result of the arrangements to relieve the unemployment position, discussed a week ago. In these circumstances, the accumulation of a buffer stock from new production might have a depressing effect upon prices, rather than the bullish effect which the promoters of the scheme desire. In such an event a further curtailment of production would be necessary, which would put an additional strain on the loyalty of the signatory countries. The buffer pool proposal, therefore, is one which requires careful consideration before it is finally adopted.

Wholesale Prices Decline.—After a slightly firmer tendency a fortnight ago, wholesale prices resumed their downward trend. The renewed fall in prices is reflected in the decline in *The Economist* indices of the prices of primary products in this country and in the United States. The decline is ascribed mainly to the tension in international relations, as a result of which stocks have tended to accumulate, in spite of the curtailment of output. The rise in the French index is due to the depreciation of the franc, which has caused an advance in the prices of imported materials.

* These figures relate to March 9th.

† Monthly average.

The downward movement in prices this month stands in striking contrast to the position a year ago, when a hectic scramble for commodities caused prices to be marked up without consideration of the underlying supply-demand position. Changes in the group indices comprising the complete *Economist* index are given below:—

The Economist INDEX (1927=100)

	Sept. 18, 1931	Mar. 10, 1937	Mar. 2, 1938	Mar. 16, 1938
Cereals and meat...	64.5	87.9	88.7	86.5
Other foods	62.2	70.2	60.7	60.2
Textiles	43.7	71.9	57.3	56.5
Minerals	67.4	114.9	94.4	95.4
Miscellaneous	65.8	83.9	78.2	77.6
Complete index	60.4	85.0	75.6	74.8
1913 = 100	83.1	116.9	104.0	103.0
1924 = 100	52.2	73.4	65.3	64.7

With the exception of minerals, all the group indices showed a decline during the past fortnight.

INDUSTRIAL REPORTS

This week's reports from industrial centres contain further evidence of the decline in new orders in a number of industries. The volume of new business in iron and steel remains restricted and certain sections of the market are now seriously congested, partly as a result of heavy imports in anticipation of the increase in duties at the end of this month. There has been a further decline in the activity of the tinplate industry, which operated at only 48.3 per cent. of capacity last week. The output of coal continues above the level of last year. Industrial demand remains at a high level, but household requirements declined under the influence of warmer weather, and export business remains at a low level. The decline in overseas orders is ascribed to severe competition from Germany and Poland and to the expectation of a decline in prices. Sales of cotton yarn and piece-goods were the smallest in any week for many years. Moreover, both spinners and weavers are complaining of the scarcity of delivery instructions against old contracts. The wool textile industry, on the other hand, has experienced a slight improvement as a result of the firm tendency in raw wool prices.

Coal

Cardiff.—The volume of exports is well maintained. For the first ten weeks of the year shipments in the foreign and coastwise trades at the docks of the Great Western Railway Company averaged just under 400,000 tons, and in the week ended March 12th they totalled 408,100 tons, compared with 395,500 tons the previous week, and 375,805 tons in the corresponding week of last year. These figures show the exceptional strength of the contract position of the collieries, for there has been very little new business, and the market operations of middlemen have been negligible. Current quotations are unaltered, and it is unlikely that there will be any material change in them pending the result of the discussions which are now in progress over the application of the miners for an increase in their wage rates from 30 per cent. to 40 per cent. above the new 1937 standard. The market for coke is quieter, patent fuel is featureless, and the ex-ship prices of Portuguese pit-wood are easy.

*

Newcastle-on-Tyne.—Coal and shipments from the North-East are disappointing, the figures for the Tyne last week being 241,352 a decrease of 20,642 tons compared with last year. Continued mild weather adversely affects the market. Whilst the Northumberland steam market is fairly steady at present, it is generally felt that difficulty will be experienced in maintaining full-time working over the summer months. The Durham section is steady; coking and gas coals are cleared without difficulty, whilst collieries producing steam classes are comfortably placed. Coke is a dull market, production moving off slowly.

*

Glasgow.—The export market has shown a moderate improvement this week. Shipments have been on a

rather better scale, and new inquiries have increased, although so far not much business has been reported. Overseas buyers are apparently anticipating lower prices. At the moment the market remains steady, with the tendency, if anything, easier. Land-sale business is moving steadily, but there is now no shortage of supplies and prices in one or two cases have again weakened.

COAL OUTPUT AND EMPLOYMENT

District	Week ended February 19, 1938		Week ended March 5, 1938	
	Output	Wage-earners	Output	Wage-earners

* Including Cumberland, Gloucester, Somerset and Kent.

Iron and Steel

London.—The weekly report of the London Iron and Steel Exchange indicates that the volume of new business is restricted. The anxiety of foreign suppliers to deliver iron and steel ordered when it was difficult to obtain British steel has led to severe congestion in some departments.

Stocks of pig iron have accumulated at the blast furnaces and at the consuming works, and little business is being transacted excepting against old specifications. It is estimated, however, that whilst this acceleration of deliveries has caused some overloading of the market the surplus material will be rapidly absorbed, although for a time it may act as a check upon business in British pig iron.

Large quantities of semi-finished steel have arrived in this country of late, and most of the works using this class of material are having more delivered to them than is convenient. As a result, there is a lull in fresh buying which may last until consumers have reduced their stocks.

The demand for finished steel has declined somewhat of late; but the requirements of users are still large and the heavy branches of the industry in particular are well employed. Owing to the quietness of new business, arrears in deliveries are being worked off; but a considerable tonnage of orders remains on the books.

*

Sheffield.—There is a distinct falling off in the volume of business in the iron market. Little new business is being arranged, even where contracts are nearing expiration, users preferring to cover their requirements week by week until the outlook has become clearer.

In the steel market activity is well maintained, the call for basic and acid billets being very active. Structural

steel continues to be prominent. Production of steel exceeds that of twelve months ago, and to meet the requirements of special steel additional furnaces are being installed. The call for motor steel is reviving. Heavy engineering establishments have enough work to keep them busy throughout the year, but the lighter sections of industry are experiencing a slight falling off in the weight of orders.

*

Middlesbrough.—As imports of pig iron from the Continent continue to arrive, it is evident that suppliers are endeavouring to ship material under contract so that it will arrive before the end of March, when it is expected that the import duty will be restored. Founders are therefore in a comfortable position for supplies, whilst producers of Cleveland pig iron are unable to dispose of the available quantities.

Local producers are expecting business to revive during the second quarter, as they anticipate a diminution in imports. Demand, moreover, is expected to expand, as a result of the increase in armament expenditure.

In the steel departments the output of heavy manufactured steel is well maintained. But there is still a lack of demand for sheets for export, whilst the home trade is quiet.

Imports of foreign ore are well maintained, the quantity which arrived during the first 14 days of March being 112,000 tons, against 108,000 tons during the first fortnight of February. The sea-freight Bilbao to Middlesbrough is now 7s. 6d. per ton, with a similar rate applying from the Mediterranean ore ports. Blast-furnace coke is available, with demand easier.

*

Cardiff.—The latest returns of the tinplate industry give a production equivalent to only 48.29 per cent. of capacity under the pooling scheme. This is the lowest point touched for the past two or three years, and with no immediate prospect of an improvement in demand more mills have closed down. In the course of a speech at Swansea, Sir William Firth attributed the depressed state of the trade largely to the heavy stocks accumulated last year. The market for galvanised sheets is also quiet, but heavy re-armorment requirements are helping to maintain the production of pig iron and steel. Prices are unchanged. At Swansea last week shipments of tinplates totalled 4,846 tons, compared with 4,592 tons the previous week and 12,501 tons a year ago. Stocks now amount to 8,025 tons, compared with 3,880 tons at the corresponding period last year.

Textiles

Cotton (Manchester).—Business has been unsettled by the European political situation. Export business has continued at a low ebb. Rather wider fluctuations have taken place in raw cotton prices. Most factors in the general position appear to favour bearish sentiment, although the opinion is held in some quarters that commodity prices are likely to advance if the trouble in Europe continues. About 93 per cent. of the farmers in the United States

COMPANY MEETINGS

THE HONGKONG AND SHANGHAI BANKING CORPORATION

[Incorporated in the Colony of Hongkong. The Liability of Members is limited to the extent and in manner prescribed by Ordinance No. 6 of 1929 of the Colony.]

A SOUND BALANCE SHEET AND WELCOME RESULTS

SERIOUS CONDITIONS IN THE FAR EAST

IMPORTANCE OF BRITISH INTERESTS RECOGNISED BY GOVERNMENT

EFFECTS OF WARFARE ON TRADE

CHINA'S RECUPERATIVE POWER

MR G. MISKIN ON THE OUTLOOK

The ordinary yearly general meeting of the shareholders of the Hongkong and Shanghai Banking Corporation was held in Hongkong, on the 26th ultimo, Mr G. Miskin (the chairman) presiding. The Chief Manager read the notice convening the meeting.

The Chairman said:—Ladies and Gentlemen,—Since our last annual meeting a knighthood has been conferred upon Sir Vandeleur Grayburn by His Majesty the King.

During a period of unprecedented difficulty Sir Vandeleur has been both a tower of strength to the bank and a wise and able counsellor in the financial affairs of the colony. I am sure that you will join me in congratulating him very warmly upon the well-deserved honour which he has received.

The report and statement of accounts having been in your hands for the required period, I will, with your permission, take them as read.

RESULT OF YEAR'S OPERATIONS

After making full provision for all known losses and contingencies, the net profits for the year amount to \$15,432,216.84, to which must be added \$3,340,789.84 brought forward from last year.

After deducting the interim dividend of £400,000 paid at 1/2.5/8 and directors' remuneration, there remains available for distribution \$12,127,542.35, which it is proposed to—

To pay a final dividend of £3 per share	subject	\$7,744,537.82
to deduction of income tax	...	...
Transfer to bank premises	...	1,000,000.00
Carry forward to new account	...	3,383,004.53
		\$12,127,542.35

The figures of our balance sheet have been converted at 1/2.7/8, the same as last year, so a comparison is an easy matter once more.

NOTE ISSUE

The principal change is in our note issue, which has increased by some \$72,500,000 and is shown this year in two amounts, while on the other side Hongkong Government certificates of indebtedness show as a separate item of just over \$170 millions as cover for our excess issue.

The Hongkong Government now publish at stated periods the condition of the currency fund, from which it can be seen that well over 100 per cent. cover is held by them against the certificates of indebtedness which we hold. It is not only a great satisfaction to your board to know that our liability to the public is so well secured but also that the currency of the colony is in such a sound condition.

Other changes in the balance sheet have not been very startling; bills payable are up about \$6,750,000, current accounts up \$51 millions, while fixed deposits are down \$29 millions.

On the other side, cash with certificates of indebtedness is up \$61 millions, securities up \$23 millions, bills receivable up \$46 millions, while loans are down \$26 millions.

Your directors are very glad to be able to present to you to-day such a sound balance sheet and a welcome profit and loss account at such a time. All known and likely losses have been amply provided for, and in addition a moderate sum has been allocated for any possible losses which may come to light later on.

THE WAR

Conditions in the Far East are to-day more serious than they have ever been in the history of our bank. The two great nations of the Orient are at grips grimly determined to fight it out. All the efforts made in recent years to outlaw war through treaties, pacts and covenants have broken down. So far from intervening to bring this conflict to an end, the leading Western countries are seen aligned into groups supporting widely opposed theories of government; watching each other intently like boxers at the opening of their bout. Under such conditions British interests in the Far East might well be pictured in the eyes of His Majesty's Government as only a small item in the sum total of the vast interests of the British Commonwealth of Nations. Nevertheless, the indications are that the importance of the Far Eastern question is fully realised, and very welcome was the statement issued last August at a critical time in Shanghai which formally promised "all possible measures to protect British lives and interests" at that port. We feel confident that when necessary and in face of every difficulty we can count on support for our legitimate interests.

Few years have seen such contrasts as the past year in China, and it is a sad task to set about reviewing the political situation there during 1937. The year started so well and ended so differently. In each of the past few years your chairmen have uttered words of warning about the dangers inherent in the unsatisfactory political relations between Japan and China. Last year your chairman stated that relations with Japan dominated the political scene. He mentioned that negotiations between the two countries were, when he spoke, in suspense as a result of the Sian incident when General Chiang Kai-Shek was kidnapped. That affair, it now appears, was a key-point in Sino-Japanese relations.

The result was an accession of strength to those Chinese who, rightly or wrongly, saw no hope of co-operation with Japan and advocated a policy of stern resistance to aggression. The subsequent meeting of the 3rd Plenary Session of the Central Executive Committee last February confirmed that line of action, which had already been made one of the main planks in the policy of the Kwangsi leaders and of the Communists. From that time on it seems that the influence of those who wished for compromise and delay gradually waned. An understanding was reached with the Communist army and the way was prepared for action by a united China as soon as the need should arise.

HOPEFUL OUTLOOK CLOUDED

You will remember that early in the year the liberal and friendly tone of the utterances of General Hayashi, then the Japanese Prime

Minister, and of Mr Sato, his Foreign Minister, caused a feeling of optimism in regard to the development of relations between the two countries. In China itself there were signs of stability and progress such as had not been apparent for many years. The outlook was, in fact, hopeful, though we were aware that the cloud of Sino-Japanese distrust still hovered in an ill-omened way on the horizon. It is doubtful if this cloud could have been dissipated even with the best will in the world. An accumulation of aggravations made it almost inevitable that a storm would have to take place before the air could be cleared. But I do not propose to detain you with any comments about the causes and origins of the war (let us be frank and call it war outright). Our bank is in a delicate position because of its interests in all parts of the Far East, and at critical times like these the old proverb "least said soonest mended" proves its aptness. The easy and rapid transmission of news from one end of the world to the other is sometimes a mixed blessing. Too many spokesmen are in fact quite as bad as too many cooks.

EFFECTS ON TRADE

Let us turn from politics to trade. You all know how promising the situation was during the first half of the year. Prices were rising, the improvement in communications by rail, road and air was opening up the country more and more, the standard of living was improving owing to good crop conditions in the interior as well as the greater demand for export produce; furthermore, exchange, both internal and external, had never in our time remained for so long a period with such small variations. Proof of this satisfactory state of affairs can be seen in the Chinese Customs returns. At the end of July exports had increased 45 per cent. and imports 36 per cent., as compared with the same period in 1936. Later imports and exports of course fell off, the former more than the latter, but it is remarkable that at the end of the year the import and export figures together yet showed an increase of approximately 9 per cent. over 1936.

The political barometer is still too low to warrant a forecast of fine weather for merchants in the near future. In Central China the channels of foreign trade are now affected as never before since the opening of the treaty ports. Yet, may I be so bold as to suggest that for this very reason the catastrophe is perhaps magnified in the eyes of many. If, as seems likely, the Yangtze Valley continues to suffer throughout the spring and summer, the effect on trade in general will naturally be serious, but there will be adjustments. A loss here will become a gain there, and I do not think it necessary to be too despondent. We shall have to wait a time for a real recovery, but the recuperative powers of both Japan and China are great, and will, in due course, be sure. Even now we see how China's misfortunes are leading to developments in the Western provinces which might otherwise have been unattempted for decades. It is, however, of the greatest importance that peace on reasonable terms should not be long delayed. Otherwise the dislocations will be less easily repaired; there will be the danger of other countries becoming involved, while both combatants may be driven into desperate expedients which will deadlock all trade.

Meantime we extend our deepest sympathy to the sufferers in the war areas, where the conditions have not been paralleled since the Taiping Rebellion of some 80 years ago. Distress is also great in the foreign communities. The Lord Mayor's Mansion House Fund gave help at a most opportune moment, but further help is needed and the International Red Cross organisations at Shanghai and Hankow also deserve liberal support. I should further like to express a word of sympathy to the relations of the members of the British forces who lost their lives while serving at Shanghai, and to Sir Hughe Knatchbull-Hugessen at his misfortune in being seriously wounded when travelling from Nanking to Shanghai on official duty.

MAINTENANCE OF STABILITY

At a time like the present for obvious reasons it is impossible for those outside Government circles to make any reliable statement of the currency and financial position of China, or for that matter of Japan. Wartime conditions prevail and must be faced with a realisation of the dislocations which they mean. However, due credit must be given to those who have directed China's foreign exchange market during the year. Stability has been maintained, and in fact during the early part of the year, as threats of unorthodox financial experiments were warded off, the new currency firmed in strength and merchants showed increasing confidence. There was, of course, valuable co-operation on the part of foreign banks. Moreover, a number of factors assisted towards equilibrium of the balance of payments: commodity prices were still rising; there had been two years of bumper crops; internal conditions were quieter

than for some time; the opening-up of the country was increasing the circulation of bank-notes; arrangements for the formation on sound and modern lines of a Central Reserve Bank were well advanced, and a fresh attempt at budget control had been initiated.

Such was the situation when in July the first signs of a serious conflict were seen. In August, when the fighting broke out at Shanghai and bombs fell in the business centre of the Settlement, it was necessary to take steps to prevent panic, so restrictions were placed on the withdrawals of deposits in the Chinese banks. These measures were supplemented by what is known as the Wei-Wah, or blocked currency system, which permitted the constituents of the Chinese banks to transfer funds from one blocked account to another by means of Wei-Wah cheques or orders. This proved effective in preventing any large-scale panic flight from the currency though it was subjected to pressure for some time. Gradually the demand for foreign currencies declined appreciably and at the end of the year the problem was no longer so serious.

SILVER AND FOREIGN DEBTS

China's interest in silver remains dependent on its conversion into a currency reserve fund in gold or foreign exchange. Thus, during the year, large amounts of silver were shipped from Hongkong to foreign countries on account of China. Last summer Dr H. H. Kung made an arrangement with Mr Morgenthau for the earmarking of gold against Chinese silver. This was supplementary to the agreement of May, 1936, under which the United States Treasury had already arranged to purchase regular and substantial amounts of silver from China and to provide facilities in United States dollar exchange for currency stabilisation purposes. No official figures are available to show what funds in gold or foreign exchange are held by the Chinese Government, and while abnormal conditions prevail we can hardly expect progress to be made in the publication of reliable statistics.

At the beginning of 1937 the Chinese Government was still negotiating for a readjustment of certain foreign debts in arrears. In April the London Bondholders' Committee, constituted to deal with such questions, recommended the acceptance of terms for a settlement of the Hukuang Railways Loan similar to those already adopted in readjustment of the Tientsin-Pukow Railway Loans. Two United States dollar loans were also put on a new basis, namely the Chicago Bank Loan and the Pacific Development Corporation Loan, both dating from 1919. Furthermore, the good work of settling up certain long outstanding advances and material debts to Government departments proceeded satisfactorily.

The conclusion of agreements regarding the Chinese Government loans in default and the improved outlook in China to which I have already referred, had a favourable effect on Chinese bonds quoted on the London Stock Exchange and it was thought, early in the year, that it might shortly be possible to bridge the hiatus in the London issues of Chinese loans which had existed since the Reorganisation Loan of 1913. The Minister of Railways first initiated discussions regarding the possible flotation of loans for new railway construction in China. Subsequently, when Dr Kung was in London for the Coronation ceremonies, negotiations for the building of a railway from Canton across Kwangtung to Meih sien made progress. At the same time Dr Kung also broached the subject of a loan to be used partly to provide additional assistance in the stabilisation of the Chinese currency and partly for the refunding of a portion of the domestic debt. We were consulted about this matter but no agreement was reached. We were, and are, bound by the agreement of 1920 between the International Consortium Group of banks, so we naturally sought the views of the other groups in regard to both these projects. They of course had to be left in abeyance when the Sino-Japanese conflict commenced.

CUSTOMS REVENUE

The Chinese Customs Revenue in 1937 amounted to no less than \$342,000,000, an increase of \$18,000,000 over 1936, thanks to the excellent start given in the first seven months of the year. You are aware that negotiations are proceeding in regard to the Customs tariff and administration in the areas controlled by the Japanese forces. It is hardly necessary for me to emphasise how important it is that the Customs Administration should remain as now constituted, and continue to be the sole instrument controlling Customs affairs throughout the whole country. The present administrative system has weathered political upheavals and civil strife over many years and the maintenance of its existing status and credit is unquestionably to the advantage of both China and Japan, in order that in due course the refinancing and rehabilitation of the country may proceed smoothly. I am glad to say that repeated assurances

have been given by the Japanese that the foreign loans will be respected.

Sir Frederick Maze is in a difficult position. He is an official of the Chinese Government, but as Custodian of the revenues earmarked for the service of important foreign loans he had certain responsibilities which are of an international nature. Bondholders of all countries look to him to steer a course between strongly conflicting currents. We are confident that with his customary tact and political sagacity he is doing his utmost to preserve the integrity of this important administration. As an international trustee he deserves international support. The foreign powers have in the past brought their influence to bear under similar circumstances and they are, we understand, doing so now, particularly as the retention of the "Open Door" in China depends a good deal on the continued existence of an internationalised Customs Administration such as exists at the present time.

SALT

The Salt Revenue in 1937 is reported to have been very much the same as in 1936 owing to further increased taxation, but the Salt Administration has unfortunately failed to maintain its control over the North China salt areas. This Administration has been in the situation of an ugly duckling alongside the favoured Customs, and it has therefore been rather neglected by its foster parents, the international Powers. Nevertheless it is important that the Customs and Salt should be treated on an equivalent basis, as the arguments used in the one case apply also in the other. The outstanding foreign loans secured on the Salt Revenues require a comparatively modest annual remittance of funds and the revenues collected should continue to be ample for these requirements.

It is satisfactory to be able to note that, in spite of the war, the National Government has continued regularly to pay the foreign loan obligations secured on the Customs, Salt and Railways.

SITUATION AT SHANGHAI

Before I pass on to deal with other countries in which we operate, you will expect me to say something about Shanghai since its status is likely to be a prominent subject once again in coming months. This is a matter which is of very great importance to all foreign business interests in Shanghai. We have seen the neutrality of a part of the International Settlement violated during the recent fighting. This would probably have been avoided if intervention had taken place in the early stages and thereby much loss of life and property might have been saved. The value of the existing Settlement regime cannot be questioned: one has only to visualise the situation had there been no Settlement at all to get justification for its continuance in an unimpaired form. If and when the Powers are prepared to negotiate and agree upon some new regime for Shanghai, then of course the situation will be altered, but in the meantime it seems to me and to your directors that, as a result of the recent events at Shanghai, we have sufficient cause to call for a strengthening rather than a weakening of the present Municipal Council Administration. There should, moreover, be guarantees which will ensure the strict observance of neutrality in regard to its boundaries. The difficulties of this Shanghai problem are immense, but they deserve the close attention of the Powers, whose responsibility it is to obtain at any rate a satisfactory *modus vivendi* if an agreement on a permanent basis cannot be found just yet.

NO ILL-EFFECTS IN HONGKONG

And now, to turn away from China, here in Hongkong we have been fortunate in that the misfortunes of China have not so far had any ill-effects on the Colony. In fact, many of our local industries have made satisfactory progress during the year. It is, however, certain that for real and lasting prosperity the Colony must rely upon normal and sound trading conditions in China, and the present struggle is therefore being watched with much anxiety.

In Japan, foreign trade has continued to increase in value. The excess of imports was at one time unusually high, but the imposition of stricter import controls effected a reduction and the year ended, according to the published returns, with the adverse balance somewhat over Yen 600,000,000. The war has, of course, brought in its train abnormal conditions in trade and finance and the future must be largely dependent on the outcome of events in China.

In Manchukuo the expansion of trade figures has continued and there are indications that the opening-up of communications, coupled with several years of normal trade, is increasing the purchasing power of the people. State monopolies and supervision or control of indus-

tries and exchange are, however, making things increasingly difficult for foreign merchants and the "Open Door" is now almost a thing of the past. In the coming year the question of extra territoriality will have to be faced by the foreign powers with interests in the country.

WORLD TRADE

World trade conditions, and especially conditions in the United States, affect in a varying degree trade in all the countries of the East. Thus fairly optimistic reports from India are qualified by doubts as to the state of world trade throughout the coming year. The rumours spread from America last April that the price of gold was likely to be reduced, had immediate repercussions of an adverse nature on the Philippine Islands and Malaya. The former was also affected by the labour troubles in America and, as in fact happened generally throughout the world, in Malaya the last quarter of 1937 gave a slight set-back to the satisfactory conditions reported prior to that time.

In the Philippines increases in revenue and trade throughout the year reflect the prosperous state of the islands, but the unexpected statement made by President Quezon last March in regard to putting forward the date of complete independence had an unsteady effect. An early solution of this problem is very desirable. The trade situation is, generally speaking, good, and there is optimism about the future of mining.

Our bank has faced many difficult periods in the seventy-three years of its existence and has seen many vicissitudes in China. A few months ago our Shanghai manager, Mr A. S. Henchman, commented that he found it extremely difficult to see the wood for the trees. He was trying to take a long view, and I think you will agree that it is not easy for us at the present moment to see clearly through the dense forest of gloom in which China and Japan stand. On both sides there are dangerous tendencies and pitfalls. We must move warily, keeping our eyes open, ready to welcome and take advantage of the first ray of light. It is helpful and cheering to feel that His Majesty's Government are keenly observing political events out here and are prepared to support British interests as and when necessary. Trade can flourish only when confidence and enterprise go hand in hand. If the policy of His Majesty's Government engenders confidence, then the Far Eastern merchant can be trusted to show enterprise. As an instance I should like to draw attention to the initiative and enterprise displayed during these critical months by the two leading shipping firms on the China coast and Yangtze River—Messrs Jardine Matheson and Company, and Butterfield and Swire—whose staffs, in gallantly keeping their services operating, have set a fine example, worthy of the best traditions of the British mercantile marine.

THE OUTLOOK

At the present moment the outlook is cheerless, and it is easy to become depressed at the prospect of a long series of difficulties in China, but I have tried to show you reasons for not regarding the future with too much pessimism. Foreign trade in the Far East has more than anywhere been built up by enterprise and by a readiness to face with courage obscure and unknown situations. I am confident that the British will lead the way in tackling the new problems and the changed conditions which we are likely to see out here during the next few years. As for the bank, it can be counted on to do its rightful share.

One last word. I think you will all agree that we owe our appreciation and thanks to the members of the staff who have worked in China throughout the past year. In each China port where we have branches there have been critical moments and difficult occasions which have in every case been faced with courage and ability. I feel you can rest assured that your interests are in good hands.

With these remarks, ladies and gentlemen, I beg to propose the adoption of the report and accounts as presented, and after they have been seconded I shall be pleased to answer any question that may be asked, to the best of my ability.

MR WILLIAMSON'S REMARKS

In rising to second the report, Mr S. T. Williamson said:—Mr Chairman, ladies and gentlemen, it is with pleasure that I rise to support the report and accounts as presented, and feel sure that I am voicing the wishes of shareholders in expressing our appreciation to those at the helm of this great financial institution which stands out as a lighthouse in the troubled sea of Far Eastern commerce to-day.

The chairman's speech has been of a most comprehensive nature covering in detail the trend of Eastern trade, and leaves nothing

calling for further comment, and I feel certain that it will be eagerly awaited by financial interests all over the world and be foremost in the important Far Eastern reviews of the year.

SATISFACTORY RESULTS

The result of the year's working must be considered to be highly satisfactory, especially when it is noted that a profit of \$15,000,000 is shown after paying all charges and making provision for bad and doubtful accounts and contingencies, which certainly is a magnificent showing under existing conditions. Heavy clouds still make their appearance on the financial horizon owing to the unfortunate clash between the two great Powers with whom we are so closely associated in Eastern Trade—there has already been an appalling loss of life and much misery, to say nothing of the huge expenditures and the heavy loss of trade. It is obvious that wars or incidents will undoubtedly have their serious repercussions and complications, and it is to be hoped that those controlling the destiny of these ancient empires will be able to arrive at an early solution of their differences.

Your remarks, covering the Customs, Salt Administration and Railway Administrations, which are so deeply woven into the financial fabric of China, are especially interesting and it is pleasing to note that assurances have been given regarding these interests which are so international in character. With you, we do realise the heavy responsibilities placed on the shoulders of Sir Frederick Maze, and we sincerely hope that he will be able safely to pilot all the international interests involved to a successful issue.

I am particularly pleased to note your reference to those who "go down to the sea in ships"; there are also many others serving on this coast besides those mentioned by you, and one and all have faced their arduous duties in a manner which certainly upholds the highest traditions of the Mercantile Marine and deserve the greatest appreciation of us all.

TRIBUTE TO SIR VANDELEUR GRAYBURN

I well remember our chief manager stating at the opening ceremony of this building over two years ago that the bank up to that time had found nothing too small or too large to deal with; subsequent events have proved with a vengeance that there was a great deal more than the ordinary banking facilities necessary to meet the abnormal conditions recently experienced, and we do realise the courageous manner in which Sir Vandeleur Grayburn has dealt with all matters appertaining to the successful carrying on of trade in its varying degrees. We are especially pleased that His Majesty the King bestowed upon him the honour of knighthood which we feel was so richly deserved—we know that he is proceeding at an early date to England on a well-earned holiday after his strenuous labours and our best wishes will go with him.

Mr Chairman, ladies and gentlemen, I now formally second the adoption of accounts as presented, and in doing so I wish to express our thanks to the board of directors, the chief manager and his very able staff, and I cannot let this opportunity pass without stating that we fully realise and appreciate all Mr A. S. Henchman, our Shanghai manager, and all those serving in China, have been able to accomplish in the way of safeguarding our interests in the face of danger of every description.

The Chairman: There being no questions. As proposed by myself and seconded by Mr S. T. Williamson, the motion now before the meeting is the adoption of the report and statement of accounts as presented.

The report and accounts were unanimously adopted.

NATIONAL PROVIDENT INSTITUTION

NEW BUSINESS AGAIN A RECORD

The one hundred and second annual meeting of the National Provident Institution for Mutual Life Assurance was held, on the 11th instant, in London.

Mr Robert E. Dickinson (the Chairman), in the course of his speech, said that he was sure the report would be regarded as evidence that the affairs of the Institution remained entirely satisfactory. During the past year they had issued policies for gross sums assured of over £2,500,000, and after deducting the amount reassured the net amount remained at £2,126,000. Their new business figures for the sixth year in succession showed an advance, and not only did they constitute a new record but they had for the first time exceeded £2,000,000. The centenary pension policy introduced two years ago had again contributed well to the total. Mortality continued to be very favourable, claims last year amounting to only £292,000.

While their interest income was larger following the growth of their funds, the average gross rate earned during 1937, at £5 2s. 8d. per cent., was 1s. 6d. per cent. less than that for the preceding year. The result of the year's working had been that the life assurance and annuity fund had increased by nearly £400,000.

In previous years he had stressed the importance of starting to take life assurance when young, and in this connection he drew attention to their "coming man's policy," which was designed for the young man starting on his business career or on married life.

Another new introduction was the "child's Magna Carta policy." This was a form of deferred assurance for children, but it had the added attraction that substantial assurance on the life of the parent who effected the policy was provided during the period of deferment. In deciding with which office to place his life assurance a man had three main points to consider: the stability of the office, the premium and bonus rates, and the policy conditions generally. On each of these points the National Provident ranked very high, and they looked to their members to give them opportunities of proving this to their friends. They had a policy to suit every need, and in helping to increase business members would be furthering the prosperity of the institution.

The report was unanimously adopted.

LONDON AND LOMOND INVESTMENT TRUST LIMITED

INCREASED REVENUE AND DIVIDEND

HON W. B. L. BARRINGTON'S SPEECH

The seventh ordinary general meeting of London & Lomond Investment Trust, Limited, was held, on the 17th instant, in London.

The Hon. W. B. L. Barrington (the chairman of the company) presided.

The notice convening the meeting having been taken as read, Mr James F. Hay, of Messrs Grahams, Rintoul, Hay, Bell and Company (the secretaries), read the auditors' report.

The Chairman, in moving the adoption of the report and accounts, said:—The income received during the year ended January 31, 1938, amounted to £88,199, as compared with £73,636 in the previous year. The net revenue, after charging expenses of management, interest and income tax, amounted to £44,079, an increase of £10,081. The directors recommend payment of a final dividend of 3½ per cent. (actual), making 6 per cent. for the year, as against 5½ per cent. for the year to January 31, 1937.

You may have noticed that in our list of investments a new item appears in the shape of a £50,000 holding in 2½ per cent. National Defence Bonds, 1944-48. This results from the investment of the profits obtained from the realisation of certain of our equities which we considered were overpriced.

SURPLUS OF ASSETS

The following summary shows the surplus of assets over liabilities and capital at January 31, 1938, as compared with the corresponding figures at the same date last year:—

	1938	1937
Appreciation in Investments ...	£93,960	£427,912
Capital Reserve ...	100,000	80,000
General Reserve ...	40,000	30,000
Carry Forward...	17,150	7,318
	<u>£251,110</u>	<u>£545,230</u>

Notwithstanding the shrinkage in value of the investments, the figures at January 31, 1938, indicated a break-up value of over £200 for every £100 of ordinary stock.

As regards the future, I do not suppose there has ever been a more difficult time at which to estimate revenue, and I prefer not to prophesy. I can only again emphasise the conservative policy that we pursued last year. Unless there is an actual cataclysm, we should be able to maintain the present dividend for the current year.

I should like to take this opportunity of expressing the board's great appreciation of the invaluable services of Messrs Grahams, Rintoul, Hay, Bell and Company as managers and secretaries of your company.

The report and accounts were unanimously adopted.

The retiring director, Mr Wm. Walter Brock, was re-elected, and the auditors, Messrs Moores, Carson and Watson, chartered accountants, were re-appointed.

AFRICAN THEATRES, LIMITED

CONTINUED SUCCESS OF OPERATIONS

STRONG FINANCIAL POSITION

MR I. W. SCHLESINGER'S STATEMENT

The seventeenth annual general meeting of shareholders of African Theatres, Limited, was held in the board room, Realty Trust Buildings, Simmonds Street, Johannesburg, on the 12th March, 1938, Mr I. W. Schlesinger (chairman and managing director) presiding.

In moving the adoption of the directors' report, balance sheet and accounts as printed and circulated, Mr Schlesinger said:—Gentlemen, although this is but the seventeenth annual general meeting of the shareholders of African Theatres, Limited, as such, in point of fact it is the twenty-fifth since the inception of the business. In other words, this year we commemorate the silver anniversary of our entry into the field of theatrical and cinema enterprise; for, as many of you will remember, it was in May of 1913, under the title of African Theatres Trust, Limited, and with an initial cash capital of £12,500, that we laid the foundations of this company.

IMMEDIATE SUCCESS OF COMPANY

The success which attended the launching of that venture was immediate and remarkable, so much so that during the ensuing eight years, i.e. to 1921, trading profits of nearly half a million pounds were earned, and an organisation, unique in its entirety, had been built up. By 1921, having completely outgrown its original framework and requiring additional funds with which to finance an extensive building programme, it became apparent that the company would have to be reconstructed. Accordingly, this was done, African Theatres Trust, Limited, selling its entire undertaking to this company, which had been formed for that purpose with a capital of £500,000. The vendor's consideration was a fully-paid allotment of 400,000 shares of the face value of £1 each in the capital of the new concern, leaving 100,000 shares, which were taken up, at par, by public subscription. At the time to which I refer African Theatres Trust, Limited, was capitalised at £75,100, so that, in disposing of its assets in the manner mentioned, its members benefited to the extent of 324,900 bonus shares in the capital of African Theatres, Limited.

Incidentally, I would mention that the opportunity of this reconstruction was taken of eliminating from the new title the word "Trust," the import of which had been generally misunderstood. From that point onward African Theatres, Limited, without any alteration in objects, direction, or control, continued in the same path as its predecessor down to January, 1932, when, for reasons which are well known to you, the operative side of its activities was made over to a subsidiary—now the well-known African Consolidated Theatres, Limited. This company, African Theatres, Limited, thereupon became what is termed a holding company, and has remained so to the present time. Such then is a brief account of the mutations which have occurred in the character and set-up of our business since incorporation twenty-five years ago under the style of African Theatres Trust, Limited.

GROWTH OF EARNINGS

Having already mentioned that during the years prior to the formation of the present company, the profits earned by its predecessor amounted to nearly half a million sterling, the bulk of which, it should be noted, was ploughed back in strengthening and expanding the business, I will now afford you a view of the earning power which African Theatres, Limited, has evidenced since it took over in 1921. The statement is as follows. (See foot of next column.)

In the accompanying table gross earnings have amounted to £2,872,708 and net profits to £1,513,378, of which (subject to your acceptance of our present recommendations) £1,183,333 will have been distributed in the form of dividends, producing an average annual rate of over 13 per cent. For the year 1932, which was the vortex of a world-wide depression, the dividend was passed, but with that solitary exception, in each of the other seventeen years trading profits have justified a declaration.

STRONG RESERVE POSITION

Concurrently with the distributions set out above, the company has maintained a consistent policy of building up adequate reserves. At December 31, 1937, those funds stood at £329,244, representing over 60 per cent. of the issued capital, the incidence of which is reflected in the statement without being specifically shown therein. A progressive yet prudent management of the company's affairs has created other substantial reserves upon which I shall touch later. I must not, however, detain you with further particulars which relate to the past. I have said enough, I hope, to show that the record to date of this and the former company in the matter of earnings and distributions, based upon the total amount subscribed in cash as working capital—which at no time has exceeded the sum of £175,100—is one of which any body of shareholders may be justifiably proud. In saying this I would not have you forget the modest beginnings from which we sprang, nor that the position of financial strength to which we have attained, as likewise our eminence in the entertainment business, have been won in the face of periodic visitations of acute commercial depression and lamentable national and civil strife, which at various times during the past twenty-five years have militated against this country's normal development.

RECORD TRADING RESULTS

Coming now to the accounts which are before you, I am pleased at this silver jubilee meeting to be able to say that the trading results we are called upon to consider are better than any previously produced—gross earnings, and net profits surpassing the previous year's high water mark by £20,000. As you know, African Theatres, Limited, has two sources of revenue only, i.e. rentals accruing from properties leased to our operating subsidiary, and dividends from investments in other subsidiary and allied concerns, all identified with theatrical and cinema enterprise.

In the present accounts that income is given as under:—

Property rents	...	...	...	£98,576
Dividends received	...	...	...	£152,820

A total of 251,396

An increase in the former, over the previous year, of £4,880, and in the latter of £17,100; indicating that the volume of business trans-

Year ended	Gross Earnings £	Net Profits £	Dividend Nos.	Amount of Dividend £	Rate %	Carry forward £

" 1937	251,396	188,458	27/28	100,000	20	94,786

acted by the companies providing this revenue had been well maintained throughout the period during which it arose. Against this increased revenue, we have to offset a slight addition of £1,154 in overhead expenses: the whole resulting in a balance of £188,458 being carried to profits appropriation account, via which, and subject only to accrued taxation, we are enabled to show in the balance sheet a residue of net profit amounting to £169,786. Our recommendations dealing with the allocation of the net profits available for distribution are as set out in the directors' report to which I shall refer later.

THE BALANCE-SHEET

Items comprising the balance sheet are as follows:—Share capital authorised and issued at £500,000 remains unaltered.

Debentures.—Originally an issue of £500,000 secured by a specific mortgage over certain properties as shown, by a process of annual redemption the amount outstanding has now been reduced to £304,000. Normally, the residue then current is redeemable at December 31, 1947, but in terms of the relative trust deed, the company may retire the balance at any earlier date. Meantime, it continues to redeem at the rate of £25,000 per annum.

Creditors:—

Secured by first mortgages over certain properties	...	...	...	£544,763
Open accounts (secured and unsecured)	...	...	...	82,726
				£627,489

Compared with the previous year, this item reflects an increase of £140,417, made up as follows:—

First mortgages	...	...	...	£98,436
Open account	...	...	...	41,981
				£140,417

The heavier liabilities appearing in this balance sheet arise from the acquisition of further real estate in several of the larger towns of the Union, and the erection thereon of super-cinemas and theatres of the most modern design. The finance necessary in this connection was obtained through the customary channel of First Mortgage Bonds, which accounts for the expansion in that section of our indebtedness. In addition thereto allowance has to be made for a great number of building construction costs not covered by mortgage money, and which at December 31 last were outstanding under the heading of open accounts. The increases reflected in this item of the balance sheet are thus briefly explained, but should further information be sought I shall be pleased, before the termination of these proceedings, to supply such other particulars as may be required.

RESERVE ACCOUNT £329,244

It will be appreciated that this is not a reserve against any specific liability, obligation, or commitment on the part of the company. It is a fund which, in the main, has been built up out of trading profits by periodic allocations voted in general meeting, and is available for any contingency which might arise. Commencing with an amount of £116,540 (the excess in value of assets acquired from African Theatres Trust, Limited, over and above the consideration paid by this company) each year, where it has been found expedient so to do, a substantial proportion of the available annual working surplus has been transferred to this account, until, as you will see, at the close of last year it reflected a balance of £329,244. The stability lent our general financial condition by the presence of this reserve fund need not be emphasised.

PROFITS APPROPRIATION ACCOUNT

I have indicated that the amount carried to the balance sheet from profits appropriation account is £169,786, and will defer further comment until moving the resolutions, of which notice has been given you in the directors' report.

CONTINGENT LIABILITIES

These are unchanged, excepting, of course, that as the obligations from which they arise are reduced in accordance with the relative agreements, so does this company's contingent liability as guarantor become less and less. The two subsidiaries on whose behalf we act as surety in this connection are earning good profits and well able to discharge all the liabilities they have incurred. Consequently, the risk of our guarantees being called up is so remote as to be practically non-existent.

THE ASSETS

On the asset side of the balance sheet we firstly have Properties—land, theatre buildings, etc.—at cost, £1,208,506, a reduction in value of the previous year's figure of £153,087. Offsetting this contraction you will observe that Share and Debenture Investments, £516,266, and Sundry Debtors and Loans, £205,018, Less Reserve £2,000—£203,018, reflect an amalgamated increase of £322,876. The reason for this rearrangement in our main assets lies in the fact that during the year we made over to four subsidiary companies, formed for the purpose, the equity we held in certain sites, and the partially constructed theatre buildings thereon. As and by way of payment these subsidiaries did three things. They relieved us of all the indebtedness we had contracted against the security of the properties in question: assumed responsibility for the balance of moneys to become due under building contracts in progress at the several situations, and allotted to us fully paid shares for the residuary value. In this way we were able to preserve intact investments made in the sites and buildings now referred to, also to disencumber our balance sheet of existing and future liabilities incurred in the same connection. In due course a large portion of the amount shown against sundry debtors and loans, namely £205,018, will be translated into further shareholdings in the four subsidiary property-owning companies to which I have referred. It was not convenient, however, that this should be done prior to December 31st last, and, as a temporary measure, the position was allowed to remain in the present form.

THE CASH POSITION

Cash in hand and at bankers is a self-explanatory item, and completes the component headings of the balance sheet, in which you will observe the assets total £1,930,520—that is, £171,745 higher than last year.

The surplus disclosed in the balance sheet is £999,031, arrived at as follows:—

Total assets	...	...	...	£1,930,520
Deduct—				
Total liabilities—				
Debentures	...	...	...	£304,000
Secured creditors	...	...	...	£544,763
Open accounts	...	...	...	£82,726
				931,489

Producing surplus net assets of 999,031

The figure just quoted, namely, £999,031, is but the apparent surplus of assets over liabilities: for, although undisclosed, the accounts contain other surpluses which are just as tangible as those already noted. These relate to our properties and share investments, in both of which respects intrinsic value greatly exceeds the book value. Recent appraisements by sworn Government valuers establish that our holdings of real estate, and the theatre buildings, etc., erected thereon, are worth in round figures £1,600,000; in other words, £391,494 more than is declared in the balance sheet.

AFRICAN CONSOLIDATED THEATRES HOLDING

Similarly with our share and debenture investments. Here, too, an even greater allowance has to be made, for, included therein at par value, I would ask you to note, is the holding we have in our operative company, African Consolidated Theatres, Limited. The authorised and issued capital of that highly prosperous subsidiary is £1,000, divided into one thousand shares of the face value of £1, each fully paid, seven hundred and eighty of which are owned by African Theatres, Limited, and stand in the books at the nominal figure of £780. Over the past five years to December 31, 1937, the dividends we have received from this source have averaged £95,940 per annum. Therefore, valuing these shares on the basis of a 10 per cent. return being the equivalent of par, they are then worth over £1,200 per share, resulting in a surplus of £935,220 over and above the figure for which we have taken credit.

Summarised then, this aspect of our position becomes as follows:—

Surplus assets as shown in the balance sheet	...	£999,031
Property account—surplus on valuation	...	391,494
African Consolidated Theatres shares—surplus on valuation	...	935,220

Total net assets and undisclosed surplus at December 31, 1937 ... £2,325,745

ENHANCED VALUE OF PROPERTIES

In these calculations no allowance has been made for the steady appreciation which has been occurring in the market value of the real

estate assets of our property-owning subsidiaries. As you know, we either own outright or have a controlling interest in a dozen or more subsidiaries of that nature. None of them, however, has given reflection in their respective accounts to the enhanced value of their central city and suburban properties in Johannesburg, and other progressive centres in the Union. Consequently, a consolidated statement of our financial condition, at the close of this the twenty-fifth year from the date of the original company's establishment in 1913, would disclose a further substantial surplus arising from the consideration now indicated. In all, therefore, you must agree that the element of security standing behind an investment in the shares of this company is present to a point which is altogether exceptional.

THE PROPOSED PREFERENCE ISSUE

Before submitting the resolutions arising out of the directors' report, I wish to say a word concerning an issue of preference shares which the board had in contemplation, and to which I made reference in my address to shareholders at last year's meeting. On that occasion I indicated that we were considering a funding operation which would have had the effect of replacing all fixed and floating indebtedness by a cumulative preference issue of an amount sufficient for that purpose, and leaving a margin adequate to absorb new building construction then and now in progress. This project was very carefully surveyed and practical steps taken to carry it through. Unfortunately, however, the completion of our arrangements synchronised with a severe break in the world's financial markets, and, after much deliberation, we decided to postpone the issue until a more propitious time, when its success could be assured. The matter has not been shelved, and although I cannot say exactly when we shall take it up again, when we do, existing shareholders will receive preferential consideration.

Incidentally, I would mention that, although statements have appeared in the Press to the effect that the London Stock Exchange had been approached as a preliminary to this suggested flotation, and, in view of prevailing conditions, had withheld consent, such reports are entire fabrications. No such approach, directly or indirectly, was made, neither was that course even remotely contemplated: any rumours to the contrary can, therefore, be discredited. When originally broaching this subject I undertook that, should it assume concrete form, shareholders would receive direct and prior advice from the company's secretary—and I take this opportunity of renewing that promise.

PROFITS AND DIVIDENDS

We have now to deal with the amount available for distribution, which, as shown in profits appropriation account is £169,786 4s. 1d., an improvement upon last year of £25,958 16s. 7d. The particulars are as follows:—

	£	s.	d.
Net profit for the year	188,458	16	7
Add:			
Amount brought forward, after providing for the charges voted at the previous annual general meeting	31,327	7	6
	219,786	4	1
Deduct:			
Interim dividend No. 27 at the rate of 10 per cent. paid in August, 1937	50,000	0	0
	£169,786	4	1

Out of this we recommend an allocation of £25,000 to general reserve, bringing that fund to £354,244. There will then remain £144,786 4s. 1d., of which we propose to distribute £50,000 as and by way of final dividend No. 28—at the rate of 10 per cent., making, with the interim dividend of 10 per cent. paid last August, a total distribution of 20 per cent. for the year. Having satisfied these charges we shall carry forward to the next account an amount of £94,786 4s. 1d., which, as you will see, exceeds by £63,459 the amount brought forward into the present accounts.

UPKEEP OF PROPERTIES

It is pointed out in the directors' report that the reduction in the rate of this year's final dividend, and the consequent larger carry-forward, arise from the renovation and maintenance demands which our theatres and cinema houses continue to make upon us in an ever-increasing degree. Many of our properties, particularly those in suburban districts and smaller towns, were erected years ago, when in structural design, acoustics, ventilation and comfort generally,

ideas were very different from what they are to-day. To meet the requirements of the public, and to keep in line with innovations which are being constantly introduced in this specialised branch of architecture, building construction and interior equipment, we have to expend large sums of money. The programme assigned to the current year is heavier than usual, and, being in the nature of a capital outlay, we have thought it desirable to make special provision therefor, and much of the surplus which we propose be not distributed will be applied to the purpose named.

I now move that the directors' report, balance sheet and accounts be adopted. In doing so I wish you to know that the current year's prospects are very bright. Conditions prevailing throughout South Africa in all trades and industries and in every division of commerce continue to be most favourable, every index suggesting that the prosperity which this country has experienced during the past few years has now become a settled feature of its general business activities. In view of this, it will not surprise you to know that the trading returns of African Consolidated Theatres, Limited, whence our main income is drawn, are more than well maintained, and the same may also be said of our other subsidiary and allied companies. I therefore anticipate that the next succeeding accounts will disclose a further expansion in our earnings, with a corresponding improvement in the resultant net profit.

The chairman's resolution, having been duly seconded, was carried unanimously, whereupon he intimated that it was the company's intention to pay the final dividend of 10 per cent. on April 30th to all shareholders registered on March 31, 1938.

The retiring directors, Messrs I. W. Schlesinger, D. H. Barnett and W. F. White, were re-elected for the usual term, the retiring auditors, Messrs Deloitte, Plender, Griffiths, Annan and Company, were also re-elected.

The meeting terminated with a vote of thanks to the chairman.

HUNGARIAN GENERAL CREDITBANK

NEW GENERAL MANAGER

AMALGAMATION WITH HUNGARIAN GENERAL SAVINGS BANK

At the meeting of the board of the Hungarian General Creditbank, held on March 9th, Dr Tibor de Scitovszky announced that, the task he had set himself on entering the service of the bank being accomplished, he had come to the decision to resign his post as general manager, hereby realising an earlier intention. The board took cognisance of Dr de Scitovszky's decision with the deepest regret, expressing their appreciation and gratitude for the excellent and untiring work which Dr de Scitovszky devoted to the bank during 16 years, often amidst difficult economic conditions. The board elected Dr de Scitovszky as its vice-chairman and received with great satisfaction his assurance that, though unable to continue the direct administration of the bank, he was ready to take part in the management of its affairs also in the future in his quality both as member of the board and as vice-chairman.

The board decided to offer the post of general manager to Dr Tihamér Fabinyi, who, owing to his outstanding gifts, capacity and experience in economic questions, seems exceptionally qualified to manage the affairs of the Hungarian General Creditbank and to direct the expansion of business that is in store for the Creditbank.

The board further decided to move to the general meeting of its shareholders, to be held on March 29th, the amalgamation of the Hungarian General Savings Bank Company, Limited. In virtue of this proposition the Hungarian General Creditbank is going to allot to the shareholders of the amalgamated Hungarian General Savings Bank Company, Limited, one share of its own in exchange for five Hungarian General Savings Bank shares.

In proposing the above amalgamation the board of the bank was led by the conviction that this transaction constituted an important step towards reducing the framework of the Hungarian credit system, this being an integral part also of the economic programme of the Government, and that, partly owing to several transactions of recent date, all preliminary conditions required for the successful execution of the proposed merger as well as for the carrying on of the bank's expanding business have been fulfilled with regard to the mobility of the bank and in every other respect.

In accordance herewith, the meeting of the board of the Hungarian General Savings Bank Company, Limited, held on March 9th, likewise decided to move to the extraordinary general meeting of the shareholders, to be held on the 29th inst., the amalgamation of that bank with the Hungarian General Creditbank, the former merging into the Hungarian General Creditbank.

NORTH METROPOLITAN ELECTRIC POWER SUPPLY COMPANY

CONTINUED EXPANSION IN VOLUME OF BUSINESS

INCREASE OF OVER 93,000,000 UNITS SUPPLIED

LORD ASHFIELD'S REVIEW

The ordinary general meeting of the North Metropolitan Electric Power Supply Company was held, on the 15th instant, at Caxton Hall, Westminster, London.

Sir James Devonshire, K.B.E., M.I.E.E. (Deputy-Chairman), who presided in the absence of Lord Ashfield, read the speech prepared by the latter as follows: Those of you who have had an opportunity to study the report and accounts for the year ended December 31, 1937, will, I think, agree that the record for the year is satisfactory; there was no falling off in the rate of progress which, happily, your company has experienced for several years past, and the volume of business transacted once again shows considerable expansion when comparison is made with the figures for the previous year. The number of units of electricity supplied by the company in the year 1937 was 690,800,000, and this total represents an increase of 93,200,000 units, or 15.6 per cent., as compared with the total for 1936.

CONSUMPTION PER CONSUMER STILL GROWING

As in previous years, the total consumption of electricity has increased at a greater rate than the number of consumers. In other words, the consumption per consumer is still growing. It would, of course, be misleading to refer to the consumption per consumer in relation to the total number of consumers, because of the disparity which exists in the consumption by the various classes of consumers. For example, the electricity consumed annually by one large power user might well be equivalent to that consumed by a large number of domestic consumers. But if we take the units supplied to domestic consumers only it will be found that the average consumption during last year was 709 units, which represents an increase of 102 units per consumer, or nearly 17 per cent., compared with the previous year. If the comparison is taken back for a few years it is even more striking. In 1930 the average annual consumption per domestic consumer was only 487 units, and in 1934 it was only 527 units. Since 1930, therefore, the average domestic consumption per annum within the areas of our distribution undertakings has grown by no less than 45 per cent. From these figures it will be apparent that the rate of growth is increasing, and the last year has seen a more pronounced upward movement in consumption than we have experienced before.

The reason for this very considerable expansion in domestic consumption is to be found in the growing appreciation among all classes of the population of the convenience and economy of electricity in the home, and also, I venture to suggest, in the liberal and progressive policy which has been pursued by your company in the matter of rates of charge. I have referred at length when addressing you in previous years to the effect of the level of charges upon consumption, and on this occasion I would only add that the policy pursued by your company has, in the opinion of the directors, been justified by the results. A further stimulating factor has been, I think, the efforts of our sales and service organisation.

BOARD'S POLICY JUSTIFIED

If you will turn to the report and accounts you will find evidence that the policy pursued by the company in the past has been amply justified. For the year 1937 the balance from working amounts to £881,014. The gross revenue from the sale of electricity amounted to £2,529,864, an increase of 15 per cent. when compared with the previous year. The receipts from the wiring of premises and sales of electrical fittings and apparatus amounted to £433,676, an increase of 16 per cent. Sundry receipts amounted to £71,719. The total gross revenue for the year, therefore, amounted to £3,035,259, as compared with £2,633,795 for the previous year—an increase of 15 per cent.

The operating expenses incurred in 1937 in order to earn these receipts amounted to £2,154,245, as against £1,810,015 for the previous year. The principal reasons for the increase of £344,230, which is equivalent to an increase of 19 per cent., are two-fold. The first is that the quantity of electricity generated by the company and imported from the Central Electricity Board has in total increased by roundly 16 per cent.; and the second is that the average cost per unit generated and imported has risen by nearly 6 per cent. The principal factor contributing to the greater cost of electricity is the price of coal, which in 1937 rose to new high levels. It is probable that further increases in the price of coal will occur, and

these, together with the rising tendency of prices for all supplies generally, point to a further advance in our expenses during the current year. It will be appreciated that the rise which has taken place during the last year or so in the level of our operating expenses is serious when considered in relation to the company's charges to consumers, and that a continued increase in the costs of operation may render it necessary to reconsider the present rates of charge for electricity supplied.

The difference between the figures of gross revenue and operating expenses which I have given you represents the balance from working of £881,014. The amounts received by way of interest and dividends on our investments, less the loss incurred on the sale of certain investments which it was necessary to realise during the year and the amount written off the investments, totalled £23,935. The balance brought forward from the last account was £63,666. The available balance is therefore £968,615, which is £63,310 more than the sum available at the close of the previous year.

ALLOCATION OF PROFITS

On the other side of the net revenue account you will see that the disbursements in respect of interest on mortgages, debenture stocks and loans amounted to £80,627. There is no change in the allocation to the reserve fund for the 5 per cent. mortgages, or in the amount allocated to the 4 per cent. debenture stock redemption fund. The next item in the account relates to the redemption fund for the 3½ per cent. debenture stock; this debenture stock was issued at the end of 1935, and the allocation of £15,625 represents the first of the charges in respect of the sinking fund established under the trust deed. The allocation to the depreciation and reserve account is £374,082, which compares with £337,352 for the previous year; and the last allocation is £30,000 to the contingency account, which is the same as the amount placed to this account in 1936. After making these deductions there remains for appropriation the sum of £436,518, and your directors recommend that this sum should be applied in the payment of the dividend on the 6 per cent. cumulative preference stock, involving £84,000, and a dividend on the ordinary stock of 10 per cent., of which 4 per cent. has already been paid, amounting to £278,151. If these appropriations are approved, there will remain a balance of £74,367 to be carried forward to the accounts of the current year, or £10,701 more than the sum brought forward from the accounts for 1936.

THE REAL RETURN ON CAPITAL INVESTED

While the dividend on the ordinary stock recommended by your directors is at the rate of 10 per cent. for the year, I would remind you that large amounts of ordinary stock have been issued from time to time at a substantial premium. If, therefore, allowance is made for these issues, the return on the ordinary stock is much less than 10 per cent. I would also remind you that it has been the company's policy for many years to invest its reserve funds in the business instead of in outside securities. The consequence of this policy, that is the issue of ordinary stock at a premium and the investment of reserves in the business, is that the nominal amount of issued capital is considerably less than the total amount which has been expended on capital works. To obtain a true view of the position it is necessary to include the Power Station Company. The total nominal issued capital of the two companies at December 31st last amounted to £8,723,704, but their capital expenditure at that date amounted to £12,670,528, a difference of £3,946,824, which has been financed out of reserves. For the year 1937 the total amount disbursed, or which it is now recommended should be disbursed, in the payment of interest and dividends of both companies amounts to £546,011. The average return upon the capital invested in the two undertakings as represented by their capital expenditure is, therefore, only 4.32 per cent. for the year.

It has been my privilege to preside at your annual meetings for nine years, and on each occasion I have had the pleasure of presenting to you results which have showed an improvement on those for the previous occasion. Year by year the accounts have reflected the progressive development of your undertaking. We have been singularly fortunate in the years that have passed, and when I look to the future I see no reason why we should not anticipate a continuance of our good fortune. The rate of development may be modified, but I am confident that the trend of our affairs will continue in an upward direction.

This concludes Lord Ashfield's speech. If, after I have moved the resolution concerning the report and accounts and the dividends, any stockholder would desire to have further information, I shall be pleased to amplify what Lord Ashfield has said.

The report and accounts were unanimously adopted, and the proceedings terminated with votes of thanks to Sir James Devonshire, the chairman of the meeting, and to Lord Ashfield, the chairman of the company.

SCOTTISH POWER COMPANY, LIMITED

STEADY DEVELOPMENT AND PROGRESS

The twenty-eighth annual general meeting of the Scottish Power Company, Limited, was held, on the 11th instant, at the Caledonian Hotel, Edinburgh.

Mr George Balfour, M.P. (the chairman), said that the accounts continued to reveal steady development and progress. The trading balance amounted to £694,531, of which £201,329 was left in the accounts of the subsidiary companies to cover depreciation and reserves. The total units sold amounted to 285,600,000, being an increase of 31,850,000, of which 121,000,000 odd units were sold under contract to the Central Electricity Board, and about 164,000,000 units for general power, domestic and business purposes, an increase of approximately 20,000,000 units, or 14 per cent. The resultant unit rate over the whole of their scattered areas was .869d. per unit and, excluding the Central Electricity Board contract, 1.309d. per unit.

EXPANSION OF THE UNDERTAKING

They had added 287 miles to their main transmission system and 142 miles to low tension mains during the year. They had connected an additional 9,216 consumers, an increase of 15 per cent., bringing the total number of consumers connected up to 70,006 as at December 31st last. They had afforded supplies to six additional small burghs and 30 villages and in addition had inaugurated public lighting supplies in five additional burghs and 21 county districts. They now supplied 344 burghs and villages spread over 22 counties. The street lamps connected to their mains totalled 10,619 scattered over 65 burghs and 125 county districts. During the current year, unless delayed by unforeseen circumstances, many additional burghs and villages would be connected to their services. To give some idea of their intensive programme for developing custom, the mileage run by their demonstration vans during the year was 110,679 miles. They now had 5,350 hired cookers and other appliances in use, of which over 1,600 were added during the year, in addition to cookers and appliances purchased by customers.

As far back as 1926 they obtained statutory powers to merge the smaller undertakings into the appropriate larger area and commenced this policy in the south of Scotland. During the year they had continued this policy of absorbing small isolated undertakings into their larger companies.

CHARGES FOR ELECTRICITY

Regarding charges for electricity, the two-part tariff had long been in operation in the whole of their areas. The nonsense talked about 10d. and 8d. a unit in the Highlands area could be dismissed from their mind. These flat rates were only retained for use in small individual cases where a trifling supply for lighting only was required. Such tariffs were really not profitable to the supply authority, but were necessary to make available a supply to consumers whose demand was negligible. But for the support of the business they obtained in the more populous areas it would be impossible for them, or indeed for any company, to provide supplies at such low prices in districts with, in certain large areas, a population of only 11 per square mile.

With regard to the misleading and indeed false statements which had been repeatedly reported regarding the provision of supplies by the Grampian Company in the Highland areas, he made bold to say that nowhere in Britain has such rapid development in such a sparsely populated territory been achieved. Indeed, he went so far as to express the view that nowhere in the world in like conditions and without any subsidy had so much territory been covered in such a short time or supplies given at lower prices.

The whole of the hydro-electric plants at Rannoch and Tummel had given every satisfaction during the year. The Cuaich-Seilich development was proceeding and the water of the Cuaich would be available in the autumn of this year. The load in all their areas was developing rapidly and by the time the Seilich development had been completed it was clear that they would already have connected load to absorb the whole of the output.

After payment of administration, general expenses and directors' fees and deducting a provision for income tax, the balance at credit of revenue account, including £10,468 brought forward from last year, amounted to £390,340. Deducting interest on loans, the general reserve appropriation, the dividend on the 6 per cent. preference stock and an interim dividend on the ordinary stock, there remained £229,520, out of which there had been paid since the close of the year the dividends on the 6 per cent. preference stock and the 4 per cent. preference stock, leaving a balance of £167,444.

The report and accounts were unanimously adopted and a final dividend of 5½ per cent., making a distribution of 8 per cent. for the year, less income tax, was declared.

METROPOLITAN ELECTRIC SUPPLY COMPANY, LIMITED

IMPROVED RESULTS

The fifty-first ordinary general meeting of the Metropolitan Electric Supply Company, Limited, was held, on the 15th instant, at Winchester House, London.

Mr George Balfour, M.P., the Chairman, said that they were once again able to submit a report and accounts which he was sure shareholders would all regard as satisfactory, as they were able to show improved results and record very substantial reductions in prices during the past year. The directors intended to pursue consistently the policy of improving efficiency and cheapening their services.

It was a burden on all companies operating in London under the 1925 (No. 2) Act to have to make through the London Power Company a substantial contribution to a low-price supply to other authorities or undertakings receiving a supply from the Central Electricity Board, or if these authorities did not receive such benefits, of making a heavy contribution to the solvency of the Central Board.

They never seemed to escape from authorities, Boards and Bills, all supposed to help them and the consumers. They surely had enough experience now to guide them and teach them how little could be done by such means. They had come into a heritage of freedom. Let them not leave a legacy of "Mort Main" to rob future generations of their freedom of action. Let them, above all, preserve liberty of action for their successors.

The only deduction which could be made from the available figures was that undue restriction upon electricity supply authorities did not produce greater efficiency or a reduced price to the consumer. They had made reductions last year amounting to £150,000 on a full year and were making further reductions for the second half of this year amounting to over £65,000—in spite of rising costs.

During the year they had connected 19,177 new customers, making a total of 186,865 connected at the end of the last financial year, and they continued to connect new customers at approximately the same rate as last year. The directors recommended a further dividend of 7 per cent., less tax, making 10 per cent. for the year, on the ordinary shares and a bonus of 2 per cent., also less tax.

The report was adopted.

OLYMPIA, LIMITED

THE WOMEN'S FAIR

The ninth ordinary general meeting of Olympia, Limited, was held, on the 16th instant, at Olympia, London, W.

Mr Louis Nicholas, who presided in the absence abroad of Mr Philip E. Hill, the chairman of the company, explained the fall in revenue, pointing out that it arose from circumstances over which the directors had no control. He reminded the meeting that at the last general meeting he had pointed out the competition with which the company was faced and also referred to the alterations and improvements which were then in hand and which had now been completed and paid for at a cost of upwards of £240,000 with the result that the company now owned exhibition buildings that in the opinion of the board were unequalled by any in the country, having all the amenities required for the tenants, exhibitors and visiting public, together with garage accommodation under cover. The halls were so arranged that very large exhibitions could be accommodated as in one hall, while in the case of smaller exhibitions each of those buildings could be utilised as a separate unit.

He informed the meeting that the board had after careful consideration formed a company, known as Exhibition Promoters (Olympia), Limited, which was solely owned by Olympia, which company was now promoting and organising a Women's Fair and Exhibition to be held in November in the current year. The advertising of this new exhibition was under the auspices of Odhams Press. With this exhibition fixed, Olympia was fully let during the current year, except during July and August.

He regretted that the directors did not see their way to recommend a dividend on the ordinary share capital notwithstanding the fact that the company had available undistributed profits of £47,997 and £50,000 standing to the credit of dividend equalisation account, a total of £97,997, and the directors were of opinion that until the lettings of Olympia had been restored to their former level this decision was a prudent one in the interests of the company.

He explained that his personal opinion without being unduly optimistic, and taking everything into account, was that Olympia had now every chance in the near future of recovering its previous prosperity.

The report was adopted, and the proceedings terminated with a vote of thanks and confidence to the chairman and directors.

GEO. W. KING, LIMITED

RECORD OUTPUT

The first annual general meeting of Geo. W. King, Limited, was held, on the 16th instant, at the Institute of Chartered Accountants, London.

Mr A. C. Herring, V.C., A.C.A., who presided, said:—This is our first annual general meeting as a public company, and I am glad to say that the financial year which has just closed has been a successful one. The output of the company has been quite considerably in excess of anything which has ever been achieved in the past.

The total profit available amounts to £23,158 0s. 11d. Your directors recommend the payment of a dividend on the ordinary shares of 10 per cent., less tax.

During the year under review, not only has the turnover of the company increased, but the Conveyor Department, in particular, has been successful in breaking new ground. These conveyors are now manufactured to carry an infinite variety of goods, such as omnibuses, motor cars and practically all their components, refrigerators, bicycles, furniture, pickles, washing machines, electrical fittings, pricks, paper, glass, bananas, etc., with a consequent speeding-up and saving of costs in those factories and warehouses where they are installed. It is interesting to note that our conveyors are now being used by some of the largest and most successful companies in the country.

EQUIPMENT FOR AIRCRAFT FACTORIES

The amount of re-armament work which we have done is comparatively small, but in the aircraft industry we have recently developed conveying equipment for use in the manufacture of both military and commercial aircraft. We have received the contract for installing this equipment in the new shadow aircraft factory at Speke, work on which is now nearing completion. I think I am right in saying that we are the only people who have specially designed and produced conveyors for dealing satisfactorily with aeroplanes in course of construction, and the consequent saving of labour and speeding-up of work makes us optimistic of expansion in this direction.

Although your company at the moment may be a comparatively small one, the work which it undertakes is most important and specialised in nature. We feel that there will be a good demand for our conveyors not only in good times but also in bad times, as it is then that manufacturers look for means of reducing their costs, and conveyors are a very vital factor for such saving.

Another branch of engineering which to some extent is allied to conveyors and has therefore received our attention is that of hoists and cranes. We have now a complete range of hoisting gear, from patent rope blocks suitable for lifting hundredweights to electric hoists capable of lifting and travelling five tons, and these have met with a ready sale.

Our high-speed cranes have been designed to meet modern conditions, and they are now being used by some of the largest motor-car manufacturers in this country, where their special features have been appreciated.

AGRICULTURAL MACHINERY DEPARTMENT

So far I have only commented on one department of your business, but there are two others which have contributed to this year's results and which are good potential profit-earners, namely the agricultural machinery and sliding-door-gear departments.

The agricultural engineering department is playing its part in the production of equipment and buildings for the agricultural industry, where we think we are able to apply a higher standard of engineering technique than is usually given to this subject. We have also started a building section of this department, and we are in a position now to carry out contracts for farms built on the most scientific and labour-saving plans and complete in every detail.

The sliding-door-gear department has also developed satisfactorily during the year. This department manufactures door-gears from the lightest type suitable for chicken-houses to heavy systems suitable for doors weighing many tons.

With regard to the prospects for the ensuing year, your company is well equipped, well managed, and in a strong financial position, and the orders already executed this year and in hand at the moment are in excess of the corresponding figure for a year ago. In addition, only a small proportion of the factories in this country have so far been equipped with mechanical conveyors. I think it is only a question of time before practically every up-to-date factory will have conveyors installed, and I therefore feel that there is plenty of room for the future development of the activities of your company.

The report was unanimously adopted.

DAVIS AND TIMMINS, LIMITED

RECORD TURNOVER AND PROFITS

The thirty-ninth annual general meeting of Davis and Timmins, Limited, was held, on the 16th instant, at the Holborn Restaurant, London.

Mr F. Le Neve Foster (the chairman) said that at the meeting last year he ventured to hold out prospects of a good year. He thought it would be agreed that the past year's results more than justified what he had said. Once again—and for the sixth year in succession—profits showed a substantial advance on those of the previous year. The increase of profit was mainly attributable to a substantial increase in turnover, and, in fact, both profit and turnover constituted a record in the company's existence as a public company, which now covered a period of nearly 40 years. During that time the company had consistently paid the dividends on its preference shares and had passed its ordinary dividend in one year only, while the average rate of dividend distributed on the ordinary share capital was over 16 per cent. Few public companies could surpass this record.

He was glad once again to report particular improvement in sales of standard stock lines. Turnover in these lines for the year showed a satisfactory increase of 45 per cent. over 1936, as against the increase of 55 per cent. for 1936 over 1935.

The net profit for the past year was £51,261, as against £35,218 last year. The directors recommended the payment of a final dividend on the ordinary shares of 20 per cent., making 30 per cent. for the year, as against a total distribution of 17½ per cent. last year.

The consolidated balance sheet again gave a clear and concise picture of the state of the business and represented a strong position. The balance shown on general reserve and undivided profits account was £114,323, which exceeded the amount of the issued ordinary capital by the substantial sum of £29,323, and it nearly covered the item for goodwill and patents—£39,329—three times. This was all the more satisfactory when the reasonableness of the figure for plant and machinery—£78,650—was considered.

Internally, he was satisfied that the company had never, during its long career, been in a stronger or more efficient position than it was to-day.

The report and accounts were unanimously adopted.

PROVINCIAL CINEMATOGRAPH THEATRES, LIMITED

RECORD DIVIDEND

The twenty-eighth annual general meeting of Provincial Cinematograph Theatres, Ltd., was held, on the 17th instant, in London.

Mr Mark Ostrer (chairman and managing director) said that the net profit at £506,702, showed an increase of £2,777, and the sum available for distribution had never before been exceeded in the history of the company. During the recent years of expansion and consolidation the directors had utilised the surplus earnings to strengthen the company's financial structure. The reserve for depreciation, general reserve, debenture stock sinking fund and the carry-forward now amounted to approximately £2,000,000, but, in addition, very large sums had been written off out of profits in the past in respect of expenses of issues, goodwill and premiums on the redemption of the 6 per cent. debenture stock. But for their ultra-conservative policy they would not have maintained so definitely their predominant position as the leading exhibiting company.

The directors were of the opinion that the company had accumulated sufficient reserves to take care of the immediate future. They therefore recommended that a sum equivalent to last year's general reserve appropriation, namely, £75,000, be distributed among the participating preferred ordinary and ordinary shares, bringing the total dividends for the year on these shares to 9½ per cent. and 22½ per cent., respectively. He might mention that this dividend of 22½ per cent. on the ordinary shares constituted a record. He wished, however, to make it quite clear that these additional distributions might not be repeated, as each year would have to be considered on its merits, and, in addition, there must be taken into consideration the new problems with which this industry and the entertainment business in general was constantly confronted.

The year's results might be regarded as eminently satisfactory in view of the intensified competition with which they had had to contend, and he could confidently say that these results could not have been achieved but for the co-operation of the controlling company, Gaumont-British Picture Corporation. Profits for the current year to date had been maintained, and he had every reason to believe that next year he would be in a position to present a statement as satisfactory as he had done that day.

The report was unanimously adopted.

CONSOLIDATED MINES SELECTION COMPANY, LIMITED

ACTIVE AND PROFITABLE YEAR

The forty-second ordinary general meeting of this company was held, on the 15th instant, in London.

Mr J. S. Wetzlar (a director) presided in the absence of Mr Walter McDermott (the chairman of the company).

A speech prepared by Mr McDermott, which was read by Mr F. A. Rogers, the secretary, stated: The recognition by your directors of the necessity for expecting periods of dullness to follow bright market conditions is their justification for avoiding the full sharing of the profits of any one good year and for keeping in mind the possibilities of serious commercial slumps and of the incalculable world effects of political events.

The profit and loss account shows a net profit of £229,694, and a dividend of 2s. 6d. per share, less tax, is recommended. The cash position of the company is sufficiently strong to take advantage of opportunities likely to be offered us, and the total valuation of our

investments at £754,978 on our books is substantially below the market value of the holdings making up this total.

The Anglo-American Corporation, in which we still have a large holding, had a very successful year's work, and declared in December last an increased dividend of 4s. per share. We have referred in our report to a participation in a loan to a mining company. The company concerned is The South African Land and Exploration Company, Limited.

Our holding in West Rand Investment Trust, which is substantially interested in West Witwatersrand Areas, Limited, and in the subsidiary companies, marks our connection with the rapid and encouraging development which is concerned with the testing and exploration of this extension of the Witwatersrand Gold Field. Our interest in Northern Rhodesia copper mining continues, and in that connection the results obtained by the Rhokana Corporation, Limited, for the year ended June 30, 1937, are very gratifying. Our holding of shares in Gold Coast Selection Trust, Limited, gives us an indirect interest in all the important mining undertakings in the Gold Coast Colony, as well as in large alluvial gold deposits on the Offia River.

The report and accounts were unanimously adopted.

Other Foods

Provisions and Meat.—On the London Provision Exchange during the past week bacon and hams were in quiet demand at unchanged rates. Colonial butter was firmer and Danish was steady. Colonial makes of cheese were also marked up in price, but Dutch cheeses were cheaper. With the warmer weather, supplies of eggs are showing a further increase, and the downward trend in prices has continued. At Smithfield market, meat was frequently slightly cheaper.

Colonial Produce.—The general price tendency was downwards and the markets were rather featureless. Cocoa was irregular, Accras being marked down while certain other sorts rose in price. Coffee prices were mostly unaltered, though Santos was a little cheaper; the market was quiet generally. The spot market in raw sugar was also quiet and prices again showed a sagging tendency. Demand for Indian and Ceylon teas at this week's auctions was stronger than of late and quotations showed a rising tendency.

Fruit.—Business at Covent Garden during the past week was not so active as had been expected in view of the bright, mild weather, states *The Fruit-grower*. Nevertheless, apples were again in good demand, and pears also encountered an active inquiry at slightly firmer rates. Hothouse grapes are now in limited supply, but South African remained an active item. Plums from the same source have been doing moderately well. Some English forced strawberries put in an appearance and showed quite good colour and size. Oranges continued to sell particularly well, while good Messina lemons were dearer owing to limited supplies. Demand for grapefruit improved.

* Weeks ended Mar. 3 and 10 respectively.

Vegetables.—A good demand was in evidence for most lines of choice vegetables and salads at Covent Garden, says *The Fruitgrower's* report. Cucumbers were an outstanding feature, and lettuce, radishes, spring onions and Canary Island tomatoes were all arriving more freely. House-grown beans were firm in price, but Madeira beans were a point easier. Celery and rhubarb sold well and carrots were firm in price. Larger supplies of kitchen greenstuff were cheaper, but onions were easier, the warmer weather causing rapid deterioration. Supplies of old potatoes were well maintained and quotations were unaltered.

Miscellaneous Commodities

Oilseeds and Oils.—In sympathy with wheat and other commodities, linseed has declined. Indian shippers have continued to press new crop for sale and some business to Hull has been done at lower prices. Little business is being done in Argentine seed, in which Continental crushers appear to be more interested. As a result of increased arrivals of new Plate linseed, mills are resuming their activity, and there is thus less reliance upon imported oil, substantial quantities of which have come to hand in recent weeks. The new crop in India is progressing favourably and a bigger yield than last season is indicated. There have been no shipments to America in the past fortnight, but interest in Plate seed is expected to revive very soon. The market in Egyptian cottonseed is dull.

Rubber.—The market has been dull throughout the period under review, and prices have sagged. Meanwhile, consumption in the United States remains very poor and a further increase in stocks was recorded last month. The aggregate of dealers' and manufacturers' stocks is given as 288,883 tons last month, against 193,679 in February, 1937.

Sheffield

A leading article on page 612 records some impressions derived from a recent visit to Sheffield. The following charts illustrate some of the more interesting aspects of the City's economic activities. In Chart I the census figures have been used to bring out the relative numbers at work in different industries and occupations. Chart II tells of the increased importance of basic steel in Sheffield's industry and of the great rise in total output. Chart III compares the incidence of unemployment in Sheffield with that in the whole country. In Chart IV we present in graphical form some interesting facts about the City's finance, for which we are indebted to the courtesy of the Lord Mayor.

I.—INDUSTRIES AND OCCUPATIONS

II.—STEEL PRODUCTION

III.—UNEMPLOYMENT (NOS. ON UNEMPLOYMENT REGISTER AS PERCENTAGE OF TOTAL INSURED)

Finance

GOVERNMENT FINANCE

For the week ended March 12, 1938, the total ordinary revenue was £24,196,000, against ordinary expenditure of £11,736,000. The surplus accrued since April 1st last is thus £10,156,000, against a deficit of £10,556,000 a year ago.

Bills are paid for during following week, on any working day at applicant's option. When normal length is 92 days, bills paid for Saturday are 91-day bills and there are no Monday maturities. When normal length is 90 days, bills paid for on Monday are 89-day bills. Bills paid for in February are 89-day bills, except those paid for each Tuesday, which are 88-day bills.

On March 11th, applications at 99 17s. 5d. per cent. for bills to be paid for on any day except Saturday of the following week were accepted as to about 36 per cent. of the amount applied for. Applications at higher prices were accepted in full. Applications for bills to be paid for on Saturday at 99 17s. 5d. per cent. and above were allotted in full. £50 millions of Treasury bills are being offered on March 18th.

MONTHLY TRADE SUPPLEMENT

Britain's Commitments

THE Prime Minister, in his speech on Thursday afternoon, dealt with five points of British policy—four of them foreign and the fifth domestic. The points of foreign policy were His Majesty's Government's general attitude towards the League, their particular attitude towards the German threat to Czechoslovakia, the war in Spain, and the Russian proposal for a conference of the four peace-seeking Powers to concert collective measures of defence. The point of domestic policy—which is, of course, intimately related to the international situation—was the question of ways and means of speeding up the production of armaments.

In the foreign field, Mr Chamberlain's reassertion of British loyalty to the League was satisfactory as far as it went—without allaying our unpleasant suspicion that the Prime Minister has no heart in the League or belief in its methods. If he believed in the virtues of Geneva only half as much as he appears to believe in the gentlemanliness and honesty of Signor Mussolini, the League would soon be in a very different position from its present plight. As for the Russian proposal, the Prime Minister rather summarily ruled it out of court on the curious ground that it would not include all the nations of Europe.

The two burning questions, however, were Spain and Czechoslovakia. On Czechoslovakia the Prime Minister said some things which were more specific than had been prognosticated. On Spain, on the other hand, he confirmed the worst suspicions of those who view with alarm the victory for the Fascist troops in the Peninsula. The possi-

bility of a difference in his attitude towards these two indissolubly associated problems was rather ominous. On Spain, where British action is urgently called for here and now, Mr Chamberlain was intransigently passive. His spurt of activity was reserved for Czechoslovakia, where the action that might be called for is rather an affair of to-morrow. We trust that, when to-morrow dawns, his Czechoslovakian touch of resolution will not melt into his Spanish supineness of the present hour.

The Prime Minister's approach to a declaration of British policy regarding Czechoslovakia was prefaced by the important general reminder that we might have to use our arms—outside the province of our specific obligations to France, Belgium, Portugal, Egypt and Iraq—for bringing help to any victim of aggression in any case where armed assistance was proper (though optional) under the Covenant. And he quoted Mr Eden's illustrative citation of assistance to Czechoslovakia as a possible case in point. In this, as in all other cases arising under the Covenant, His

pendence and integrity of Czechoslovakia herself, and should we invite other nations to associate themselves with us in a declaration to that effect? Having considered these two propositions, the Prime Minister rejected them both on the ground that the decision of peace or war for the United Kingdom would thereby be automatically removed from the discretion of the British Government. This negative line had been foreseen.

The Prime Minister went on, however, to give a warning to Germany of such importance that it must be quoted *verbatim*.

"While plainly stating this decision I would add this. Where peace and war are concerned, legal obligations are not alone involved, and, if war broke out, it would be unlikely to be confined to those who have assumed such obligations. It would be quite impossible to say where it might end and what Governments might become involved. The inexorable pressure of facts might well prove more powerful than formal pronouncements, and in that event it would be well within the bounds of probability that other countries, besides those which were parties to the original dispute, would almost immediately be involved. This is especially true in the case of two countries like Great Britain and France, with long associations of friendship, with interests closely interwoven, devoted to the same ideals of democratic liberty, and determined to uphold them."

In a later passage the Prime Minister also made a constructive suggestion for helping to lessen the danger of a German-Czechoslovak conflict. He virtually offered the good offices of His Majesty's Government to mediate between Prague and Berlin for a settlement, to the satisfaction of both countries, of the position of the German minority in Czechoslovakia.

So far, not so bad; but the same cannot be said of Mr Chamberlain's pronouncement on the urgent Spanish question. The Prime Minister dealt with this within the framework of the Anglo-Italian negotiations, and he explicitly declared that Italy was faithfully fulfilling the understanding in regard to Spain on which the conversations had been started.

"I impressed upon the Italian Government through their Ambassador the necessity, if the conversations were to succeed, not only that they should lend whatever help they could along with others, in the bringing into operation of the withdrawal plan, but that in the meantime the situation in Spain should not be materially altered by Italy sending fresh reinforcements. It was never demanded or expected of the Italian Government that they should effect a unilateral withdrawal, and I think it right to say that, during these last weeks while the conversations have been proceeding, His Majesty's Government are satisfied of the fulfilment by the Italian Government of the conditions which had been indicated to them."

"The Italian Government have now again asserted their willingness loyally to assist in the execution of the British plan, and, what is perhaps most important, they have repeated a declaration which they made some time ago and which was made public here at the time, to the effect that Italy has no territorial, political or economic aims in Spain or in the Balearic Islands. His Majesty's Government place full reliance upon the intention of the Italian Government to make good their assurances."

On this Spanish-Italian question, the Prime Minister's attitude passes understanding. We can only say that he must be animated by a fanatical will to believe that Signor Mussolini will do a number of things which are quite contrary to his policy of building up a new Roman Empire in the Mediterranean. "His Majesty's Government place full reliance upon the intention of the Italian Government to make good their assurances!" Yet Mr Chamberlain is fully aware—and the "British plan" is based on the assumption—that the Non-Intervention Agreement has been flagrantly infringed all the time by Italy among others. Did he really, then, dismiss Mr Eden in order to assure Signor Mussolini that, as far as this country was concerned, Italy could go on cheating as hard as ever in Spain while

the Anglo-Italian conversations were in progress? Only she must promise to keep her dishonesty within existing limits!

How are we to account for this obstinately blind faith, which may easily lead to the surrender of positions vital to the defence of the Empire? One consideration, we fear, in the Prime Minister's mind must be that of personal prestige. In dismissing Mr Eden rather than lay down Spanish terms for the Anglo-Italian conversations in advance, Mr Chamberlain made himself Signor Mussolini's prisoner. He committed himself to the formidable choice between declaring the result of the negotiations a success, whatever the result might be, or else acknowledging that he had been mistaken. A second explanation is the ideological one. The Prime Minister's sympathies, like those of a majority of his fellow Conservatives, are no doubt strongly "anti-Red." And this ideological prejudice is blinding the Conservative Party to vital and obvious British interests which were never out of the minds of these gentlemen's fathers and grandfathers. They are determined not to believe that patriotism can demand a policy in Spain that class feeling makes distasteful.

No doubt these two considerations count for much in Mr Chamberlain's mind, but we believe that the pair of them are outweighed by a naive piece of *Realpolitik*. The Prime Minister, it would seem, has still missed the significance of Herr Hitler's pounce upon the Brenner. Mr Chamberlain had no sooner become Signor Mussolini's prisoner than Herr Hitler made haste to take Signor Mussolini captive. With Germany on the Brenner, the Duce dare not be anything henceforward except his German counterpart's junior partner, and must look to this German master for his reward—which, under these conditions, can only be gained at British and French expense. Signor Mussolini frankly confessed his servitude in a speech to his countrymen immediately after Hitler had brought off his Austrian *coup*. It is only Mr Chamberlain who does not see it. We can only interpret his speech as another bid to hire an Italian *condottiere* for a possible war against Germany. And if Abyssinia is not payment enough, Spain must be thrown in.

If Mr Chamberlain does pat the Duce on the back, and if he implicitly warns France not to trespass on the Italian preserve in Spain, then nothing can prevent Mussolini from making Franco win. And, after that, nothing can compel him to carry out his "gentleman's agreement" with Mr Chamberlain to drop the Spanish bone the moment he has it in his jaws.

On this Spanish business, Mr Chamberlain will have a rude awakening. He will find that France has been encircled and bound hand and foot by Herr Hitler's Italian partner. And then what is to hinder the expansion of Germany? Mr Chamberlain's simple-minded game of reviving the Stresa front was killed by Herr Hitler on the Brenner. The Prime Minister himself is the only statesman in Europe who does not know it; and the consequences of his blindness may be portentous. While he thinks he is running an Anglo-Italian ring round Germany, Germany—with Mr Chamberlain's positive assistance—may have run a German-Italian ring round France!

The whole game is hazardous in the extreme, and the House of Commons on Thursday was clearly very sceptical of placing such reliance on Signor Mussolini's promises. On the other hand, it was deeply impressed by Mr Churchill's description of the forces in Central Europe that might be mobilised to resist the flowing tide of Nazi domination. The resuscitation of collective security through the League, for which Mr Churchill is so eloquently pleading, has not only the merit of saving our potential allies before they are stricken off one by one, but is the only policy which can win united support in our own country. Though the Prime Minister won the day, it does not require a great gift of prophecy to foresee that it is Mr Churchill's policy that will win the campaign.

The Defence of the Commonwealth

BOTH the Prime Minister and Mr Hore-Belisha, in their recent speeches on the Defence White Paper and the Army Estimates respectively, laid down an order of priority among the purposes that British arms are designed to serve. Mr Chamberlain's classification was this: first, the security of the United Kingdom; secondly, the defence of the trade routes that bring us food and raw materials; thirdly, the defence of British territories overseas; and fourthly, co-operation in the defence of any allies we might have in the event of war. Within his specialised military sphere, Mr Hore-Belisha's list was similar. The first purpose of the army, he said, was home defence, the second the discharge of British commitments overseas, including the defence of ports in the trade routes, and the last the maintenance of a strategic reserve available to reinforce either of the first two objectives or to co-operate in the defence of possible allies.

These priorities, and the comments made upon them by the responsible Ministers, underline the fact that in the defence of the British Commonwealth as a whole two major responsibilities have to be shouldered: the threat to its most vulnerable and vital spot, and a wide dispersion of contingent liability in respect of territories, strongholds, trade routes and possible allies spread over the world and open to attack from a number of different quarters. Post-war events have heightened the central vulnerability and widened the dispersion of contingent risks. The rise of air power has increased the threat both to Great Britain and to the ocean routes on which she relies, not only for imported food and materials, but also for the deploying of forces in distant theatres of possible war. The imperialism of Fascist Italy has added fresh danger to the Suez Canal route and to British and allied territories in the Mediterranean and Red Sea basins. The ending of the Anglo-Japanese alliance and the expansionist policies of Japan have been followed by the construction of the Singapore base and the adoption, as an ideal at least, of the two-hemisphere naval standard. Meanwhile the growing importance of the industrial factor in war and preparations for war has intensified the problem of scattered strategic liabilities, while suggesting new aids towards solving it.

As Mr Hore-Belisha has recognised in his plans for Army reform, the only answer to the combination of more widely dispersed liabilities with greater danger to the lines of communication with them is to be found in a wider and more flexible dispersion of defensive resources and reserves. It is here that defence co-operation between the self-governing members of the British Commonwealth becomes of very great importance—subject, as it always is, to the problem of united Commonwealth foreign policy. Each of the Dominions is primarily responsible for its own local security. If Australia, for instance, can take care of her local defence against foreign attack, that is a substantial relief to British defensive liability and to the need to transfer ships, men, guns and aeroplanes over long and hazardous distances, in the event of a war in both hemispheres. If Australia can further contribute, as she now does, even a small quota towards the complex of defensive power centred on Singapore, that is an extra relief, and therefore a real addition to her own national security and to the security of British Commonwealth interests and ideals.

The share the Dominions can take in the defence of key strategic points or routes beyond their own borders has been enhanced by the rise of the air arm. A squadron of aeroplanes sent to Singapore or Suez is likely to be much more effective than a cruiser sent to the same spot, and it can get there much more quickly. The prospect becomes all the

more encouraging if the Dominion concerned can construct, maintain and repair its own aeroplanes, besides manning them. One of the most interesting and important of the developments in Commonwealth defence since the War has been the establishment of aircraft assembly plants, and latterly also aero-engine factories, in Australia, South Africa and Canada. Specialised aeroplane equipment must for a long time to come be supplied by Great Britain or the United States, but once existing pressure on British manufacturers is relaxed the Dominions should be able to lay in reserve supplies.

The local manufacture of munitions is equally important. Australia is manufacturing Bren machine-guns under licence. South Africa has established a small-arms and ammunition factory capable of turning out equipment for the Union, and eventually perhaps for its neighbours, on a war scale. The latest Indian Budget contained appropriations for the extension of munitions production with the object of rendering India independent of outside sources of high explosives. These are some examples of the progress that has already been or is likely to be made in this direction. The increasing mechanisation of armies renders further progress all the more desirable. It is, perhaps, not too optimistic to imagine a time when India would be self-sufficient not only in small arms and high explosives but in all munitions and mechanised military equipment; when South Africa could, if she so decided, supply the military needs of armed forces operating in any part of East, West or Southern Africa, and perhaps make some contribution in *matériel* to the defence of the Red Sea, Egypt and the Canal; and when Australia and New Zealand together would have a similar surplus of munitions capacity for the benefit of forces based on Singapore.

In this picture of the possible future Canada occupies a peculiar place. Her isolationism is deep-seated; her defensive ties with Great Britain and other Dominions are slight; her armed forces are feeble compared with her size and wealth, though not perhaps compared with any actual threat to her local security. This precludes any firm reliance on her for much active assistance in a Commonwealth war. At the same time, she is the most industrialised of the Dominions, she can draw on all the technical and material resources of the United States, and whatever else she may do she is unlikely in the event of war to impose those restrictions on the export of warlike supplies which we must expect from the United States if the Neutrality Act remains in effect. Hence, in such circumstances, she might well prove an absolutely invaluable channel for the supply of aeroplanes and munitions, including many made under American patents or with American materials. The possibility is all the more fortifying in that Canada's western ports are less than three weeks' sail from New Zealand, Australia and the Singapore front. It would be comforting to feel that the British and Dominion Governments were exploring and strengthening all these possibilities now.

Those who neglect or deride them have usually failed to observe the immense industrial advance of the Dominions since 1914, when they and we were faced with a war emergency. The manufacturing output of Canada, Australia and New Zealand has trebled in net value; that of South Africa has been multiplied four times. Advance in the metallurgical industries has been particularly rapid and strong. These developments have not been entirely to the immediate advantage of British export industry, but they may prove of real value in the future defence of the Commonwealth.

Austria's Value to Germany

WHAT, besides balm for her national pride, has Germany gained by the annexation of Austria? Herr Hitler made it clear in "Mein Kampf" that the Anschluss was desired for reasons other than the material and the military. But it is none the less obvious that the Reich has gained in both directions by the incorporation of Austria. From the strategic point of view, she is brought into the middle of the Danube plain and to the borders of Italy. Germany dominates Central Europe much more completely from Vienna than she ever could from Passau. The encirclement of Czechoslovakia is only the most obvious of these gains in strategy, in the geographical sense of the word.

But what of the economic side of high strategy? Last week *The Economist* published a study of the strength and weakness of the German economy from a military point of view, in the course of which five cardinal weaknesses were discovered: (1) Germany's reserves of gold and foreign exchange are so exiguous that she could not, in a future war, count on running up the big import surplus of the last war; (2) she is no more able to feed herself than in 1914; (3) she is deficient, in varying degrees, in raw materials, especially iron ore and timber, which is an essential raw material for cellulose and all forms of textile substitutes; (4) she cannot meet her wartime requirements of oil; and (5) she is still deficient in trained soldiers. The present article may be regarded as an appendix to last week's study. It attempts to ascertain how far these weaknesses are removed or intensified by the incorporation of Austria in the Reich.

The greatest help that Austria can give the Reich is in gold and foreign exchange. Poor and small though she is, Austria has contrived to build up published reserves of nearly three times the German. According to the Reichsbank return, the German holdings of gold and foreign exchange are Rm. 76.2 millions. There are also undoubtedly secret reserves, but their magnitude is unknown. The last return of the Austrian National Bank showed gold and foreign exchange of 422 million schillings. It would not be legitimate to convert this amount into marks at the newly-fixed rate of 3 schillings = 2 marks, as this rate overvalues the schilling. But on the basis of the pre-Anschluss rates of exchange, the Austrian reserve is worth Rm. 197 millions. To this must be added the sums owed to Austria in the various clearing accounts, which amount to about 200 million schillings, or, at the same rate of conversion, Rm. 93 millions. Of this about 60 million schillings (Rm. 28 millions) was due from Germany. The Reich thus has its own clearing indebtedness reduced by this amount and acquires claims on other countries of 140 million schillings, or Rm. 65 millions. The total gain to the Reichsbank is therefore something of the order of Rm. 290 millions, or nearly four times the disclosed reserves of the Reich—in addition to such further sums as can be obtained from the sequestration of the foreign assets of Austrian nationals. Austria's foreign exchange increased during 1937 by 62 million schillings, but it would perhaps not be wise to count on any further increase in the future, in view of the probable effect on Austrian export industries of their subjection

to exchange control, raw material shortage, currency overvaluation and the rest of the well-known features of Nazi economics. The foreign tourist traffic is also certain to suffer. Moreover, the nest-egg of Rm. 290 millions, though large in comparison with the Reichsbank's reserves, is small in absolute terms. It amounts, even on the most flattering basis of conversion, to less than £25 millions, and would not go far to support the current rate of German imports, which has lately been averaging nearly Rm. 500 millions a month.

Austria will not be of great assistance to Germany as a source of food. Even more than the Reich, Austria is an industrial country, which has to import a substantial proportion of its food supplies. So far as cereals are concerned, barley is the only one in which Austria is self-sufficient, and she has had to import proportions of her requirements of wheat, rye, oats and maize varying from 20 per cent. up to as much as 60 per cent. The average importation of cereals into Austria in the last three years has been almost

one-half the importation into Germany, although the ratio of population is only about 1:10. In this respect, therefore, the incorporation of Austria increases the dependence of Germany on foreign supplies. There is, however, one important exception to this general conclusion. Austria is an exporter of milk and dairy products, and these, particularly butter and cheese, are very badly needed by Germany. The average Austrian export of these commodities in the last two years has been

211,000 quintals, while the German import has been 1,250,000 quintals. Approximately one-sixth of the import requirements of the Reich can therefore be met from Austria, and this will provide some relief to the shortage of edible fats, which has long been the weakest point in Germany's programme of self-sufficiency in food.

Austria is in a position to provide a number of raw materials that are needed in Germany, especially iron ore and timber, which have already been mentioned as two of those in which the Reich is most deficient. Between one-half and one-third of the superficial area of Austria is forest land, and the annual growth of timber is estimated at 9.3 million cubic metres. Almost 1.7 million tons of timber were exported in 1937, of which 460,000 tons went to Germany. The importance attached to timber is shown by the fact that export to countries other than the Reich was forbidden on the first day after the Anschluss. Austrian timber, however, is unlikely to solve Germany's problem, as the total import into the Reich in 1937 was over 5 million tons, and it would need a very great increase of felling, which is already carried on rather improvidently, to supply the whole of the German requirement.

The bulk of the output of iron ore in Austria is in the hands of the Alpine-Montan Company, which has long been German-controlled. The monthly production of this company had been increased in the last months of 1937 to 200,000 tons, and it is thought that it might eventually reach 300,000 or 350,000 tons a month. Most of this ore has been going to Germany for some time past, but it will now be available without any inconvenient foreign exchange problems. This will be a welcome addition to the domestic

ore supplies of the Reich, which are now only about 7 million tons per annum. But the Austrian ore will by no means solve the German iron ore problem, since the total consumption of the Reich in 1937 was in the neighbourhood of 28 million tons, and might well be more in time of war, while the Austrian production, even on the most optimistic estimates, cannot be more than 4 million tons per annum. The Austrian steel output is very small, being only about 600,000 tons per annum, in comparison with Germany's 1937 production of 19 million tons. But German-Austria inherited from her Dual Monarchy days certain heavy industrial centres and armament factories which will be of some assistance to Germany.

Austria can give Germany no assistance in the solution of her oil shortage. The production of oil in Austria is microscopic, and as for oil-from-coal, Austria has neither the coal nor the conversion plant. Her lack of coal (which she now obtains from Czechoslovakia, Poland and Germany) is partly compensated for by the abundance of water power. The export of hydro-electric power to Germany is already valued at about 20 million schillings per annum, and as only about one-fifth of the available water power has yet been harnessed there is plentiful scope here for German energy in seeking alternative sources of supply. The subject of raw materials should not be concluded without mentioning magnesite, for which Austria is one of the world's chief sources of supply. There is also some lead and small quantities of copper and gold.

Finally, Austria provides an increase of Germany's reserves of man power. In the last analysis this should be proportionate to population, in which case the ultimate reserve for the German Army has been increased by 10 per cent. In the more immediate future, however, trained men are chiefly required. Compulsory military service was

restored in Austria only three years ago, but in this period 150,000 men have passed through the ranks, and the annual contingent of recruits is between 35,000 and 40,000 men. These figures are not large, but when added to the tenfold larger figures of Germany they will help to give the German Army an increased margin over any of its potential rivals, excepting only Russia.

These are the chief contributions that Austria can make to Germany's war potential. What, in summary, do they add up to? It would be too much to expect that the annexation of a single small country would completely solve any one of the problems that Germany will have to overcome before she is completely self-sufficient for war. But in fact the actual contribution is small. The nest-egg of gold and foreign exchange looks imposing only in comparison with the emptiness of the Reichsbank locker. In the matter of food, Austria is probably on balance a source of weakness. Possibly the most valuable material contribution is the timber which Herr Hitler can cut from the hillsides of his native land. Moreover, another consideration must be borne in mind in assessing the value of Austria to Germany in the event of war—namely, that an independent Austria would either be allied to the Reich (in pursuance of Dr von Schuschnigg's "German" foreign policy) or else largely or wholly occupied by German troops. Whatever economic resources Austria possesses would therefore, in any event, be available to Germany in time of war. The economic value of the Anschluss rests only on the contribution that Austria can make to the feverish preparation for war. On balance, it may be concluded that the strategical value of Austria to the Reich lies less in what she herself brings than in her position on the map of Europe and the door that she opens to the domination of the Danube valley, with its wheat, its livestock and its oil.

Are We a Soberer Nation?

LECKY, writing of England in the eighteenth century, declared that the fatal passion for drink was irrevocably planted in the nation. Hogarth has pictured some of the orgies which were common a century and a half ago. In Georgian days, London's ginshops were all too frequently crowded with drunk and disabled men and women. Are we a soberer people than our forefathers?

The habit of drinking in this country has certainly the doubtful merit of longevity. From Saxon times bread and ale were staple articles of English diet. They were joint products of native farming, and their price and quality were carefully regulated by law. As late as 1688 over 12 million barrels of beer were brewed in a single year for a population of barely five millions—compared with 23 million barrels, of lower gravity, for 45 million people in 1936. Subsequently, commercial conflict with France had a marked effect on English drinking habits. The distilling of English spirits was encouraged, and a treaty with Portugal substituted port for the light wines of France. Dram drinking became a feature of English life, and gout invaded English upper-class society. For the heavy drinking common to all classes, at a still later period, charitable foreign observers blamed our island climate, but more acute critics laid no small responsibility at the door of the Industrial Revolution and the unhealthy state of our crowded and insanitary towns. Standards of life were low and ways of escape few.

One attempt to stem the tide of spirit drinking, in the interests of brewing and of British agriculture, was the institution of free trade in beer by the Duke of Wellington in 1830, when beer consumption per head had fallen by one-half in a hundred years. In 1829 there were 50,660

licensed publicans; seven years later there were 55,192 publicans and, in addition, over 44,000 beershops under the 1830 Act. For the progress of the nation towards greater sobriety in the last hundred years credit may be awarded to the Temperance movement, to changes in the liquor laws and, above all, to social forces. The standards of life have risen; step by step, general education has been introduced, and public health has become the care of central and local authorities. At the same time, popular entertainment has broadened the horizon of all classes and England has become a pleasanter place to live in. Finally, the downward trend in drinking has been hastened by heavier taxation. The following table shows how the consumption, per head, of beer, wines and spirits has fallen since 1870:—

PER CAPITA CONSUMPTION OF BEER, SPIRITS AND WINE IN THE UNITED KINGDOM

Year ended	(In gallons)		
	Beer	Spirits	Wine
December 31st			
1870	30.24	0.99	0.49
1880	27.00	1.07	0.46
1890	29.88	1.02	0.40
1900	31.56	1.12	0.38
1910	26.31	0.65	0.28
1920	20.61	0.47	0.32
1930*	15.98	0.25	0.31
1932*	11.19	0.21	0.27
1934*	13.00	0.21	0.31
1936*	13.80	0.22	0.33

* Great Britain only.

Drunkenness, the measure of immoderate drinking, has fallen even more markedly. Convictions between 1906 and 1915 averaged 177,853 a year in England and Wales; but

fell to 69,878 annually between 1916 and 1925 and 52,818 between 1926 and 1935. In 1932, a year of deep depression, convictions numbered 30,146. In 1936, after some years of industrial recovery, they had risen to 44,525.

During the present century the growth of expenditure on other amusements like the wireless, the cinema and cheap transport, combined with a stricter licensing policy, has reduced the evil of excessive drinking. The number of licences granted by justices for consumption on or off the premises has fallen from 102,189 (or nearly 22 per 10,000 of the population) in 1900 to 74,681 (or just over 18 per 10,000) in 1936. The number of "off licences" has fallen from 25,405 to 22,094 in the same period. These reductions have been offset in part, but only in part, by a rise in the number of registered clubs in England and Wales, where drinking of alcoholic liquors is permitted, from 6,589 in 1905 to 16,297 in 1936. Simultaneously, the reduction in the number of brewers in England and Scotland from nearly 31,000 in 1900 to just over 9,000 in 1937 has been partly a measure of increased concentration of production in the industry itself and partly a reflection of decreased total demand.

Admittedly, fiscal changes have played no inconsiderable role in the diminution of liquor consumption. The rate of Customs and Excise duty on spirits was 8s. 1d. per proof gallon in 1860 and 11s. in 1900; it is now 72s. 6d. On beer the duty was 6s. 3d. in 1880 per standard barrel of 1,055° and 7s. 9d. in 1900; in 1920 it was raised to 100s.; in 1931 to 131s. less a rebate of £1 per bulk barrel, and now the duty is 24s. per bulk barrel of 1,027° or less, and 2s. per gallon over 1,027°. The net receipts of Customs and Excise for beer, spirits, wines and liquor licences in the United Kingdom were £41,669,000 in 1900. In 1921 they were £201,289,000 and in 1937 £109,072,000. Taxation and sobriety have marched hand in hand.

Topics of the Week

The Sequel in Austria.—The scenes of triumph and jubilation in Berlin when Hitler made his re-entry there on Wednesday of last week matched the scenes at his entry into Vienna. In the Reichstag on Friday the 18th the maker and master of a Greater Germany made a vehement and scathing attack on the Austrian policy of the Allied and Associated Powers at and after the Peace Conference of Paris. In a peace-settlement in which self-determination was taken by the victors as their guiding principle, the German nation alone was denied the benefit of it. Austria represented from the outset a state that was completely incapable of living. In their veto upon the Anschluss the victors cynically advertised to the world the hypocrisy of all their works. Their aim was, not to do justice on principle, but just to keep the Germans down; and this policy was as futile as it was despicable. "Right must be right, even where Germans are concerned!" Germany has now once more become a world-power, and therefore it had become impossible for her to tolerate any longer the state to which Austria had been reduced by the peace-treaties. Besides this indictment of the victors—which is unanswerable as far as it goes—the speech included thanks and assurances to Signor Mussolini, a fulmination against the League of Nations, and some invective against Dr von Schuschnigg, which was still more violent, though far less well justified, than the arraignment of the Western Powers.

Hitler's bitterness against von Schuschnigg is natural, though impolitic; for the fallen Austrian Bundeskanzler has left a shaft sticking in Achilles' heel. What is self-determination? Is it truly self-determination when the Austrian master of the Reich comes home to Austria at the head of 200,000 Reichsdeutsch troops? And what of that ghastly

Indeed, though we drink less, we spend more on drinking than our fathers. The annual drink bills of the United Kingdom in the last fifty years have fluctuated with trade, but, on the whole, they have generally risen, as the following table shows:—

U.K. EXPENDITURE ON ALCOHOLIC LIQUORS					
Year	Estimated Expenditure	Per head	Year	Estimated Expenditure	Per head
	£	s. d.		£	s. d.
1885 ...	141,039,141	3 18 3½	1925*	315,000,000	7 4 0
1895 ...	163,133,935	4 3 4½	1930*	277,500,000	6 4 0
1905 ...	164,167,941	3 15 11½	1933*	224,845,000	4 19 4
1915 ...	181,959,000	3 18 11	1936*	246,255,000	5 7 6
1920 ...	469,700,000	10 0 0			

* Great Britain only.

In the twelve months ended March, 1937, according to Mr Colin Clark's calculations, some £248 millions were spent on drink, or over three times as much as on boots and shoes or motor cars and cycles or coal. Brewery profits, as computed for income-tax purposes, were less than £10 millions in 1913-14. In 1919-20 they were over £32 millions; and although they fell to £16 millions in 1932-33, by 1936-37 they had risen to £28.5 millions again.

We may conclude that we are, in fact, a soberer nation than we were a century, or even less than half a century, ago, but that we spend more, in money, per head of the population than our forefathers on our limited potations. The decline in drinking has been due only in part to taxation and high prices. A great change in social habits has altered the status of drinking; the great majority of people to-day are sober because they wish to be sober. The nation still drinks more in summer than in winter, and more in times of industrial and commercial activity than in economic depression. And brewing and distilling are notably prosperous industries. But we have many newer, more convenient and pleasanter means of recreation than drinking, and the secular trend towards decreased liquor consumption is unlikely to be reversed.

swoop of the kites upon the carcass—the SS. and the Gestapo; the Streichers and the Himmlers? The like has not been seen in Europe since the days when the Spanish Inquisition could be seen making its ominous entry into some reluctant and shuddering province that had previously been exempt from its ministrations. And, in our table of political weights and measures, how many votes in a plebiscite are cancelled by a single suicide? After all, each Austrian, Gentile or Jew, who has done away with himself during the last few days, has staked his life on the conviction that a regime which Hitler calls self-determination would, for one Austrian voter at any rate, be something worse than death itself. What is self-determination?

Czechs and Sudeten Germans.—"It is now five minutes to twelve," a Sudeten German Senator remarked in the Czechoslovakian Senate at Prague last week; and this observation—which is, unfortunately, as true as it is menacing—illustrates the difficulty of arriving, at this tail end of the eleventh hour, at an accommodation between the Czechs and their German fellow citizens, backed as those are now, by the mighty force of an already "Greater" Germany. The still silent, but already intense, pressure to which Czechoslovakia is being subjected is showing itself in the field of domestic politics. While the Henlein party is becoming more exigent, the three "Activist" German parties, which have hitherto been supporting the Czech Government at Prague, seem to be wavering in their allegiance. The German Agrarians have already deserted to the Opposition, and the German Christian Social Party is about to follow. On the other hand, Dr Hodza's Government has now received the support of one Czech party of

the Right, though the Slovak Clericals still remain in opposition. By far the most important and welcome news from Prague is that of the Cabinet's decision to give effect at an early date to the provisions of their agreement of February 18, 1937, with the German "Activists." The agreement was that the German citizens of the Republic were to be given posts in the public service, and a share of public benefits (e.g. in education, public works, unemployment relief, etc.), in proportion to their relative strength in the population (of which they amount to approximately 22 per cent.) This "gentlemen's agreement" is now to be translated into law, and the same measure is to be meted to the other non-Czech and non-Slovak minorities (i.e. the Magyars and the Poles).

Since this principle of proportionality is to be applied in local government as well as in the central administration of the country, it will go a long way towards satisfying the German minority's desire not to find itself at the mercy of Czech policemen and petty officials in the municipalities. On the other hand it will not satisfy their desire for territorial autonomy, and *a fortiori* not their desire for union with the Reich. And the Czechs, on their side, do not seem yet to contemplate carrying their concessions to a point at which they would infringe the territorial integrity of Czechoslovakia within her present frontiers. Can the gulf be bridged? Territorial autonomy for the German minority inside Czechoslovakia is hardly a practical proposition; for these Germans are distributed into four blocks which are none of them contiguous with the others, though each is contiguous with the Reich. Geographically, reunion with Germany is more feasible; but this alternative would leave the Czech districts strategically indefensible, apart from raising the issue of the non-Nazis in the Sudeten German ranks. What, we may wonder, is Hitler's aim? Does he want to shear off the Sudetenland and then throw the torso of Czechoslovakia on to the scrap heap? Or is his aim to keep his Sudeten Germans within the Czechoslovakian frontiers in order to use them as a lever for bringing the whole of Czechoslovakia under his control? The omens tell us that we shall soon know.

Poland and Lithuania.—The Poles have never been distinguished for their political wisdom, and their reaction to Hitler's Austrian *coup* shows that they—like the rest of us—are to-day running only too true to the type of a traditional national weakness. So far from attempting to mitigate the effect of Hitler's blow to law and order by rallying in defence of these principles, the Poles have promptly imitated the Reich by making a Polish Austria out of Lithuania. On the ground of a shooting incident on the Polish-Lithuanian border—which the Lithuanians have kept closed ever since the Polish seizure of Vilna in 1920—the Polish Government sent the Lithuanian Government an ultimatum on Thursday of last week. The terms demanded were a restoration of normal diplomatic and frontier relations between the two countries by the 31st of this month; the time-limit given was forty-eight hours; there was a large concentration of Polish troops at Vilna—whither Marshal Smigly-Rydz himself repaired—while excited crowds paraded the streets of Warsaw shouting for a march on Kovno and the annexation of Lithuania to Poland. On Saturday the Lithuanian Government accepted the ultimatum unconditionally before the forty-eight hours had run out, and since then the Polish Government (to do them justice) have been studiously conciliatory in their tone. As for the Warsaw mob, it seems to have sated its pugnacity for the moment by mobbing the Jews—on the ground that there was too high a Semitic percentage in the queues who were seeking on Saturday to withdraw their money from the savings banks.

What is Poland after? So far has the world's standard of expectation fallen that at first there was a widespread feeling of relief that the latest victim of military intimidation had yielded to the threat of overwhelming force, instead of standing up for its rights in the hope of obtain-

ing some measure of international justice. The position, however, is now again looking ominous. The Lithuanian Government have resigned, and the temper of the people is rising. In other words, the situation in Lithuania is becoming rather like that in Austria after Dr von Schuschnigg's capitulation at Berchtesgaden. Have the authorities at Kovno been compelled, under duress, to promise more than they can perform? And are there further instalments of Polish demands to follow? Already there is talk in Warsaw of autonomy for the Polish minority in Lithuania and of a "unification" of the Lithuanian with the Polish Army. Is Lithuania to be Poland's perquisite, while Germany gets Memel (and perhaps also Danzig) as her share of the spoils? And is the suppression of Lithuania also partly intended to provide a proof of Russia's inability or unwillingness to take military action in support of her friends? Poland's ambition is to build up a barrier of insulation between Russia and Germany from the Black Sea to the Arctic Ocean. She already has a mutual assistance treaty to this effect with Roumania; her Lithuanian *coup* is an effort to extend this system northwards. We fear that what Poland is really building is the eastern glacis of Herr Hitler's *Mitteleuropa*.

Mr Hull and Mr Kennedy.—Two extremely authoritative and important speeches on American foreign policy have been made during the last few days: one by the Secretary of State, Mr Cordell Hull, to the National Press Club in Washington, on the 17th, and the other by the American Ambassador to the Court of Saint James's, Mr J. P. Kennedy, at a dinner of the Pilgrims in London on the 18th. Both speeches illustrate the way in which, in democratic countries to-day, the policy of Governments is confined within the bounds of a public opinion which may be based on traditions that have little to do with urgent realities of the contemporary world. Mr Hull, for instance, has stated the facts of the present international situation, and has exposed the perils that menace all free and law-abiding countries, with a clarity and forcefulness that leave nothing to be desired. Reading between the lines of the Secretary of State's speech, we can also tell that he himself is longing (as is indeed well known) to rise to the occasion. But we also see him pointing piteously to the fetters that bind, hand and foot, any American statesman in Mr Hull's office. Again and again in this speech he warns his countrymen of "the rising tide" of "international anarchy based on brute force, which is threatening to inundate the world and ultimately sweep away the very bases of civilisation and progress." He warns them, too, of the inevitable consequences of American apathy and inaction. In the Far East, for instance, the fundamental interest of the United States is not just this or that commercial or even philanthropic enterprise, but the maintenance of law and order itself. "If we and others were to surrender these principles in regard to the Pacific area, we should have to reconcile ourselves to their certain surrender in regard to the other half of the world."

Incontrovertibly he points out the inexorable consequences of such a retreat. It would mean "relapse into barbarism," a return of "medieval chaos," in the world at large; and for the United States it would mean decadence without security. "Isolation is not a means to security; it is a fruitful source of insecurity." And yet, in that nightmare paralysis which seems to have gripped all the surviving democracies, this true prophet has publicly to bind his own hands at his own countrymen's behest! A middle course must be steered between the two alike undesirable courses of isolation and internationalism. And American collaboration with other peace-seeking nations is only legitimate in so far as it entails "not a trace of alliance or involvement of any sort." This might be Mr Eden, before his fall, addressing the Tory back-benchers. And the Ambassador has, naturally enough, been still more cautious than his chief. "The average American to-day has two principal worries: he fears that he may lose his job, and he fears that his country may get into a war. . . . The majority of Americans oppose any entangling alliances . . . this viewpoint endures to this day." The American statesmen who are now responsible for American policy are making heroic efforts to draw their countrymen after them along the path of salvation; and they are making progress; but how slow it all is compared with Hitler's lightning thrusts!

Austrian Refugees.—The presence of the Nazis in Vienna has added large numbers of Austrian refugees to the tragic groups who already afflict the conscience of Europe. Questions have naturally been asked about the policy to be pursued by the British Government, in view of the large numbers of Austrians seeking refuge in Great Britain. Sir Samuel Hoare returned an answer in the House of Commons on Wednesday which was more humanitarian than might perhaps have been expected in these troubled times. While emphasising the "general desire to maintain the traditional policy of this country of offering asylum to persons who for political, racial or religious reasons have had to leave their own country" he also mentioned "obvious objections to any policy of indiscriminate admission." Accordingly, the door is not to be opened wide, but admission to Great Britain is not to be refused to "suitable applicants, including persons whose work in the world of science or the arts, or business and industry, may be advantageous to this country," and the applications of Austrians already in the country for extension of their stay or for naturalisation are to receive sympathetic consideration. It would be difficult for any Home Secretary to promise more than Sir Samuel Hoare has thus done, and the effect of his statement on the House of Commons was to persuade it to refuse leave to Colonel Wedgwood to bring in a Bill to grant British nationality to Austrian immigrants for a period of six months. Just exactly what the Government's policy will prove to be depends, however, less upon the general statements of the Home Secretary in

the House of Commons than upon the individual decisions reached by the immigration officers. There are obvious dangers, of both a political and an economic nature, from the indiscriminate admission of all persons who can claim to be refugees from Austria. But it is very greatly to be hoped that the British authorities will stretch to the utmost their generosity and consideration towards unfortunate individuals whose only crime is that they have stood, against the threat of Nazi brutality, for all the traditions of free speech and toleration which we like to consider a peculiarly British heritage.

Defence Debated.—Despite the divergence of views about the desirable direction of Britain's diplomatic policy, there is now no dispute in Parliament over the need to reinforce the national defences with all speed. Members are not equally agreed, however, about the technical ways and means of achieving this ineluctable end. In Tuesday's debate on the Air Estimates, Labour speakers combined with Mr Churchill to criticise the Government's abandonment of first-line strength as the criterion of power in the air, which, it was alleged, was likely to vitiate our endeavours to establish parity with Germany. Like Wednesday's discussion of the Navy Estimates, the Air discussions revealed some anxiety about armament firms' possibly excessive profits; but it was widely felt that sufficient safeguards against profiteering and the exploitation of labour could be erected through the consultations which the Minister for Defence had arranged with the trade unions concerned. In the last resort, the success of the proposed acceleration of the defence programme must depend upon the loyal co-operation of all engaged in industry. The same consideration for munition workers' welfare is needed as Mr Hore-Belisha has consistently and energetically shown for the status, remuneration and conditions of the recruits to his New Model Army. On Wednesday, speaking on the Army Estimates, the Secretary for War gave further details of concessions to regular soldiers and territorials. He laid further stress upon the importance of ground defence, which he refused to transfer to the Air Force; and rebutted Lieutenant-Commander Fletcher's allegation that interested parties had been allowed to prejudice unfairly the War Office's choice of light machine-gun patterns. Commander Fletcher's rôle in these defence debates, like that of the fat boy in *Pickwick*, has been to make the House's flesh creep with stories of scandals—first of power-boats and now guns. Vigilance is always necessary and assiduity praiseworthy, though there is little evidence that the British tradition of integrity in administration and expenditure has been seriously shaken in recent months.

Labour and Arms.—Ever since Mr Chamberlain proclaimed the need for intensified national effort to counter the re-appearance of armed aggression in European politics, the importance of trade union co-operation in the Government's revised schemes of defence has been evident. Trade union leaders have publicly stated their readiness to participate fully in measures to speed up industrial production, provided safeguards can be devised for established scales of remuneration, working conditions and union regulations. The unions might, indeed, have been consulted much earlier. On Wednesday, the Prime Minister placed the nation's needs before the Trades Union Congress, and appealed for the fullest co-operation between employers and workpeople to implement the Government's revised plans forthwith. Industry must be made to work at full capacity and full time, and there will be need for much give and take. None of the parties concerned in the new drive to build up Britain's security—the Government, the unions or the employers—should have any desire to exploit the present emergency to the detriment of others. Wages, overtime, increased shifts, and the transfer of labour from one occupation to another will involve the most generous and harmonious treatment possible, and on these issues, more even than on purely political ones, will success or failure depend. Moreover, rigid principles of fiscal policy, like set standards of trade union procedure, may need to be revised in the

national interest. A smooth, steady and ample flow of the materials required for defence is imperative. And, if increased imports from a country like the United States can be utilised to satisfy this requirement, then, as *The Financial News* has rightly suggested in a leading article, considerations of our international balance of payments should not inhibit us from buying them.

The Films Bill.—Any expectation in the film trade that the differences between the two Houses on certain amendments to the Films Bill would develop into a constitutional issue was finally dispelled by the curt two-line news item that the Bill passed its Third Reading in the Lords on Wednesday. The real issue was never whether the Commons or the Lords were right, but whether in this matter the view of the Government—which in this case means the Board of Trade—should finally prevail. The officials applied their impartial judgment to the expert views on the various proposals embodied in the Bill, which has been under almost continuous Parliamentary examination during the past four months, and advised what in their opinion was practicable and likely to be successful. They proposed a cost test for British films in place of the utterly impracticable quality test for which well-meaning enthusiasts asked—and Parliament has accepted it. They proposed an Advisory Council instead of a Commission, and this also has been adopted. Schedules of quota rates for both long and short films, progressively increasing during the currency of the Act, have been put forward and found general acceptance both in Parliament and in the trade. Ingenious new schemes have been devised with the object of encouraging, first, the production of high-grade pictures in British studios at costs exceeding £45,000 or £75,000 (not £60,000 as was inadvertently stated last week) and, secondly, their automatic distribution in America. These are all hedged round with effective safeguards to ensure flexibility in administration and to prevent unforeseen hardship. But it might be wished that the prospects for commercial production of films by British producing companies were brighter. There appears to be nothing in the Bill which will attract finance into the industry. But hesitation on this score does not extend to agreement with the Lords' amendments. The Government proposal to reduce exhibitors' quota for the current year was a blunder for which no defence has been made in any quarter; it is too late; however, to correct in the last week of March what has been condoned by unbroken silence among the interests most concerned. The further increase of both renters' and exhibitors' quotas which the Lords have proposed is liable to do great harm to exhibitors, without any resulting advantage to renters or the public. And the wish to "do something" for shorts in the manner proposed does credit to the Peers' hearts rather than their heads. When the Commons are invited by the Government next Monday to disagree with the Lords' amendments, we expect the Commons will give overwhelming support to the restoration of the Bill to its original state; and the Lords will doubtless acquiesce. There will then pass on to the Statute Book a measure which, whatever its imperfections, is at least an enormous advance on the existing Act.

Outlook for Trade and Employment.—The persistence of disturbing downward trends in export trade and employment, masked in the public attention by diplomatic excitement and the determination to speed up re-armament, is now officially recognised. In Wednesday's debate on the Consolidated Fund Bill, Mr Brown made no attempt to deny the recent slackening in industrial activity, but pointed out that the decline was largely concentrated in the textile trades. The detailed review of the state of British industry which appears in our *Trade Supplement* this week, suggests, however, that a considerable falling off in orders is common to many branches of industrial activity. For the most part, the Government's spokesmen were intent on proving how much better off we still are than in 1932, which no one would attempt to controvert. The Parliamentary Secretary to the Board of Trade admitted

that 1938 would perhaps not be so prosperous as 1937 had been, but laid stress upon the difference between a slowing down in the rate of progress and a serious decline. These official protestations gave no effective answer to the pleas of Mr Greenwood and Mr Foot for the production of plans to counter the recession. The Government, indeed, appears to be relying upon the acceleration of the defence programme to fill the growing gaps in private enterprise. The new arms plans will undoubtedly arrest the decline expected when the first stage of the original re-armament plan is completed. They will maintain activity in the industries directly associated with munitions; but textiles and even, perhaps, shipbuilding may still languish—unless the speeding up of war preparation engenders a scramble for materials of all kinds in fear of rising prices. Of this, there are yet no signs.

Trade Agreements with Italy.—While the world waits upon the outcome of the Anglo-Italian discussions of diplomatic and strategic questions, a trade agreement between the two countries has been arranged. In itself, this new agreement, the second since economic sanctions against Italy were abandoned, has no political significance. Its provisions for revised quotas for British exports to Italy are likely to be of special benefit to the wool, cotton, linen, hemp and jute industries. In general, there will be an increase of some 27½ per cent. over the old quotas. The quota for British coal has not been raised, but South Wales should benefit from the general stimulus given to Anglo-Italian trade and from the simultaneous arrangement of a new clearing agreement. This amended arrangement provides for the increase of payment in respect of current exports to Italy from 70 per cent. to 87 per cent. of the sterling proceeds of British imports from Italy, in the proportion of 46 per cent. for the f.o.b. price of coal and 41 per cent. for other British goods. The sterling receipts of the Clearing Office in 1937 were £7 millions in respect of Italian goods imported into the United Kingdom; similar receipts in 1938 would, under the new agreement, make possible the payment of £3¼ millions in respect of British coal exports to Italy, compared with exports to the value of £2,270,000 in 1937 and £3,783,000 in 1934. The remaining 13 per cent. of the Clearing Office's sterling receipts will be divided equally between financial transfers and the transfer of outstanding old trade debts. The agreements come opportunely when export prospects have been somewhat dimmed, and Anglo-Italian trade is still below 1934 levels, as the following table of values shows:—

	1934	1935	1936	1937
		(£ thousands)		
British Exports to Italy.....	9,313	6,799	533	4,940
British Imports from Italy....	8,421	7,901	2,231	7,821

The balance of trade has moved sharply in Italy's favour in the last three years, especially in textiles; and recent

progress in textiles and clothing, apart from woollen products, does not suggest that, even with the new quotas, the pre-sanctions level of exports will be recovered.

* * *

The Domestic Crisis in France.—Another week has passed; M. Blum has never wearied in his efforts to prevail upon the parties of the Right to lift their ban upon the formation of an all-party government; yet the French ship of State still remains half-manned and therefore wholly at the mercy of the quickening current down which we are all of us drifting. The fate of M. Blum's patriotic endeavours may be decided by the outcome of the struggle on the Right between M. Flandin and M. Reynaud, the French counterparts of Mr Chamberlain and Mr Churchill. M. Reynaud is a statesman who has a gift for opening his countrymen's eyes to truths that he sees clearly himself. During these crucial days he has been working hard; he claims that he is weaning away more and more deputies of the Right from M. Flandin's policy of making French unity impossible; and M. Flandin, for his part, has been showing some faint signs of weakening. But will the union of French political forces be achieved in time? Every day lost in France is an opportunity missed for defending not only France herself, but all the democratic countries and the cause of freedom in the world. Meanwhile, M. Blum has been dealt a severe blow by the Finance Committee of the Senate under the chairmanship of M. Caillaux. They have rejected one of the Prime Minister's two Bills for financing an accelerated French re-armament, namely the Bill for placing at the disposal of the National Defence Fund the profits arising out of the appreciation of the French Exchange Equalisation Fund. Have M. Caillaux's committee acted solely on their view of the technical demerits of the rejected measure? Or is this, at least in part, another stroke aimed at bringing the efforts of M.M. Blum and Reynaud to naught and foisting upon France a government that would be representative neither of the present majority in the Chamber nor of the real will of the electorate?

* * *

Spanish Atrocities.—After a pause of several days, the insurgent attacks on the Aragon front have this week been resumed. They have, however, made very little further progress at the tip of the salient, where it most closely approaches the Mediterranean, since the capture of the important town of Caspe last week. A new attack further north has liberated the town of Huesca, which for many months has been all but surrounded by Government troops, and a third attack in the middle of the front has crossed the river Ebro in an attempt to widen the left flank of the Caspe salient. Thus the Rebels are still advancing towards Catalonia, though they are meeting with stiffer resistance than in the first few days of their offensive. The attention of the outside world, however, is still concentrated on the dreadful air raids on Barcelona last week. These continued for three days almost without relief, and the city received an aerial bombardment such as has never before been known on earth. Of the total casualty list of 815 killed and 2,200 wounded, almost all are civilians. These murderous raids have excited execration in every country where it is still permitted to indulge in humanitarian feelings. The British Prime Minister has used

the words "horror and disgust," and the American Secretary of State has given expression to his "sense of horror" at conduct "that no theory of war could possibly excuse." The British and French Governments have protested to General Franco, and have been joined in this action by the Pope. No official reply has yet been forthcoming from Burgos, but the unofficial reaction of rebel Spain has been a mixture of claims that Barcelona was being used for military purposes, and hints that General Franco himself was not responsible for the air raids. There is, indeed, some evidence for the view that the raids were carried out by his German and Italian allies in order to test on the *corpus vile* of Barcelona their theories of the aerial terrorisation of civilians. If that is so, their experiments must be concluded to have been unsuccessful, since, as one eye-witness reports, they have "utterly failed to produce submission," and have merely stiffened the resolution of the population of Catalonia. Unfortunately, there is a strong probability that these "experiments" will be repeated. The Spanish Government has published detailed and circumstantial lists of the aircraft and war material which have been sent to General Franco from Italy and Germany within the last few weeks. The British Government profess to be without any information of these flagrant violations of the non-intervention agreement. But not even they can entirely ignore the fact that a renewed and most energetic attempt is being made by the allied dictators to conquer Spain for their own purposes. How this deliberate blindness in Whitehall can be reconciled with the continuance of talks with Signor Mussolini, or with the safeguarding of most vital British and French lines of communication, still less with that maintenance of international law and decency which is by frequent proclamation the main object of British policy—all these are mysteries of which we do not profess to be able to suggest a solution.

* * *

Expropriation in Mexico.—The Mexican Government announced on March 20th that the foreign oil companies working in Mexico would be immediately expropriated, compensation of an unspecified amount being promised over a period of ten years. In a formal and legal sense this drastic measure is the culmination of a labour dispute which goes back to the strike of May last year. But the broadcast speech with which President Cardenas justified his action shows that the quarrel between the Government and the companies is of a far wider character. It is the deliberate intention of the Mexican Government to drive foreign capital out of the country, and the companies have been accused of crimes reaching as far as the financing of rebellions and general interference in the internal politics of Mexico. The President has thus, on his own showing, prevented any discussion of the question as if it were a mere labour dispute. Last year's strike was referred to arbitration by the National Labour Board, whose award, promulgated last December, was immediately rejected by the companies as being quite impossible of execution. This award called for a reduction of hours of work from 56 to 40 a week, without any reduction of wages; the payment of pensions of up to 80 per cent. of the retiring wage; the provision of houses free; holidays on full pay extending to four or six weeks; 16 additional rest days, excluding Saturdays and Sundays; and a number of minor demands of the same tenor. There has been some dispute about the cost to the companies of meeting this award, but no dispute whatever about the fact that the cost would be very heavy indeed. The companies, having exhausted every legal device for postponing the execution of the award, were finally ordered by the Government to execute it, and refused. Expropriation followed, and the dispute has now reached a stage at which the British and American Governments are necessarily involved.

* * *

President Cardenas is in a difficult personal position. He depends entirely upon the support of the *sindicatos*, or trade unions, and their aggressive leader Lombardo Toledano, to uphold him against the rival generals who are ever ready to overthrow any Mexican President. There

is thus no possibility of his applying any but the Labour formulae to the very serious economic position of the country. Agrarian reform, with its sub-division of the large estates, has already seriously diminished the value of Mexico's agricultural exports, and virtual insolvency of the Government was only averted some months ago because the United States was persuaded to resume its purchases of Mexican silver. As a result of the expropriation of the oilfields, however, the position is likely to get worse rather than better. The Budget is likely to lose the yield of the taxes levied on the companies, while the balance of payments of the country will be affected by the stoppage of oil exports. Moreover, Washington is less likely now than it was in December to continue the silver-buying policy with the object of preventing a collapse in Mexico. Already the Bank of Mexico has suspended dealings in gold dollars and foreign exchange, with the result that the peso has very sharply depreciated. There is some possibility, though it seems to be small, of the Mexican Government finding alternative syndicates of American or British capitalists who would be prepared to work the oilfields, but little reliance is apparently based on this hope, and there is already talk of importing technicians from other countries to teach the Mexicans how to exploit their newly-acquired properties for themselves. There cannot be any doubt that Mexico will regret the action that has been taken this week. The natural sympathy felt throughout the world with the desire of the oil-workers of Mexico to better their conditions has been entirely overlaid by condemnation for the quite indefensible methods by which they and their Government have sought to advance their claims.

* * *

Japan in a Hurry.—The chief need of the Japanese in their war against the Chinese nation is haste—haste before their own national economy is damaged by the strain of waging war over so gigantic a field, and haste before the international situation clarifies to such an extent as to enable the Western Powers to devote more of their attention to the Far East. But haste, apparently, is the one thing that Japanese arms have proved incapable of achieving. There is plenty of news of tactical successes by the Japanese army. Whenever Japanese and Chinese soldiers come face to face the Chinese are sooner or later forced back. But in spite of all these successes the Japanese have nowhere yet reached the Lunghai Railway, which for many months has been the objective of their advance. Moreover, items of news telling, for example, of the bombardment by Japanese planes of towns far behind their front line, show how sketchy is their control of the territories they claim to have occupied. This lends a distinct air of unreality to the plans which have been announced in rapid succession for the exploitation of those provinces of China which are alleged to be under Japanese control. The puppet Government in Peiping has now been accorded another of the attributes of sovereignty in the form of a Federal Reserve Bank. And a new "Salvation Government" of Central China has been set up at Nanking. This is apparently an example of the second degree of puppetry, since it is said to be subject to the Peiping Government as well as to the Japanese Army. There are some signs that growing realisation of the enormous difficulties of their task is leading to a certain modification in the attitude adopted by the Japanese to the foreign interests at Shanghai. Lengthy negotiations with the administration of the Maritime Customs are believed to have resulted in a temporary accommodation. And although rumours of Japan's intention of taking over control of the whole International Settlement are as frequent as ever, they have not yet materialised. It would be a mistake, in spite of these indications, to repose any lasting trust in the moderation of the Japanese military. At home in Japan they are still getting their own way. The Mobilisation Bill has been passed by the Lower House of the Diet, and will soon be law, and the huge expenses of the Army have been automatically approved. Every new success, however, whether at home or in China, merely adds to the burdens of the Japanese Army, and increases the likelihood of that burden one day proving too heavy to carry. Nothing would be more

in the interests of the Japanese people than a collapse of their present military autocracy, and it would be difficult to think of many things which would give greater relief to the outside world.

* * *

Czech-American Trade Treaty.—The conclusion of a trade agreement between Czechoslovakia and the United States on March 7 has been lost from view in the pressure of greater events. But it is nevertheless an achievement of considerable significance to both the parties involved, and indeed to many third countries. Trade between Czechoslovakia and the United States has been growing in recent years. Imports into Czechoslovakia have risen from Kc. 398 millions in 1935 to Kc. 961 millions in 1937, while Czech exports have risen in the same period from Kc. 615 millions to Kc. 1,112 millions, and this trade with the United States has already become, except for that with Germany (the whole of which has to pass through the clearing), the most important item in Czechoslovakian commerce. The trade agreement provides reductions in the American tariffs on a large number of goods, particularly those manufactured in the German districts of Czechoslovakia, and it is expected in Prague that it will lead to a considerable further expansion of trade between the two countries. From the American point of view the conclusion of the new agreement is chiefly significant for the light it throws on the development of American commercial policy. There had been more opposition to this agreement among American industrialists than in any of the previous negotiations, the shoe industry in particular fearing the effect on their business if the products of the Bata firm were admitted at lower duties. But the event shows that Mr Cordell Hull is not to be deflected from his purpose by opposition, and the auguries for a really effective Anglo-American agreement are correspondingly improved. Another feature of the new agreement which is of particular significance is that, for the first time, the United States Government recognises exceptions to the most-favoured-nation clause. It is provided that preferences given by Czechoslovakia to Austria, Hungary, Yugoslavia and Roumania are not to be regarded as violations of the clause. Thus the concession which the advocates of Danubian federation have so long vainly sought from London and Washington has at last been granted by one of the great trading nations of the West—though too late, by all appearance, to serve the purpose expected of it.

* * *

Coal Bill Amendments.—The Government's proposed amendments to the Coal Bill are now known. Part I of the Bill dealt with the purchase of royalties and, among other criticisms, was alleged to be unfair to undertakings owning the freehold of the coal they work. It is accordingly proposed that working proprietors will be granted leases, not necessarily "on the terms customary in the district," but, at the discretion of the Commission, on less onerous conditions if their business will otherwise be "unfavourably" affected. Another amendment affects the procedure under Part II of the Bill whereby reductions in the number of coal-mining undertakings are to be compulsorily effected if necessary in the interests of efficiency. The Board of Trade, on receipt of a recommendation from the Coal Commission that the power to submit a compulsory amalgamation scheme should be exercised, will now proceed by provisional order, which "shall be of no effect unless it is confirmed by Parliament." Once more, statutory approval of the principle of compulsory amalgamation is to be stultified by an administrative procedure which, in this case, not only provides some twenty-seven stages through which an amalgamation must pass, but now includes a final reference back to Parliament to invite the abortion of schemes by delay and obstruction. The amendments to Part III, which deals with the coal-selling schemes, show niggardly and unimportant concessions to coal-consumers compared with the virtual selling of the pass to the mine-owners. And the recent decision to appoint a Departmental Committee to investigate coal prices (discussed on page 707) will do nothing to rectify the balance, since the Committee will be concerned only with distribution costs and not with the selling schemes.

The British and Polish Trade Bank A.G., Danzig

Storm in the Tennessee Valley

WASHINGTON, March 9.—The most contentious and provocative act of the New Deal has been the Tennessee Valley Administration. In the opinion of New Dealers, it is also the most constructive. And for the public and the outside world, it has been the most symbolic. This is Government planning; it puts the Government into competition with private business; it is a new principle.

Hence it would seem inevitable that the T.V.A. should be a storm centre. The first high winds to blow over it were legal. And these the T.V.A. has withstood. It is now established beyond question that the Government has the right to develop the water power of a navigable river and to sell it. The Supreme Court, even without reliance on the vote of Justice Black, has made this clear.

Now a new storm is blowing up over the T.V.A. It is noteworthy because it is not an attack by enemies, but the result of a long feud between one member of the T.V.A. Board and the other two members. The quarrel is of long standing, and has produced a good deal of heat lightning for more than a year. Dr Arthur Morgan, the chairman, has not been getting on with his colleagues, Dr H. A. Morgan and David Lilienthal.

It is characteristic of President Roosevelt that he did not intervene until the crisis had been publicly aired. Even when he was being injured in one of his finest political assets, he did not openly take sides. He did not exact rigid discipline from his appointees.

"The skipper never 'fires' anybody," is an axiom among New Dealers. They know the President dislikes factional administrative fights. He discourages the practice of bringing differences to him to arbitrate. His theory seems to be that it is up to his subordinates to learn how to work together, and if they find they cannot, to remove themselves from the picture.

But Dr Arthur Morgan, the T.V.A. chairman, declined to step out. After carrying on a lively contest behind the scenes, he published his accusations. The T.V.A. is due for public investigation, and Dr Morgan wants it to be done in the thorough-going way of a Congressional Committee. His colleagues want the investigation to be by the Federal Trade Commission, and so does Senator Norris, the father of the T.V.A. and chief veteran in the great "power" fight in the Senate.

The F.T.C. is responsible to the President, say the critics of the T.V.A., and an investigation conducted by it could easily be controlled. A Congressional Committee, say the defenders of Lilienthal and Dr Morgan, would become mud-slinging against the T.V.A. itself.

Clash of Personalities

Dr Arthur Morgan is a combination of educator and engineer. He was in charge of the Ohio River flood control projects, which he administered in masterful style. He also was president of Antioch (Ohio) College, perhaps the most interesting vocational school in this country. He is a man of incurable idealism and the loftiest personal integrity.

He has had charge of the dam construction at the T.V.A., and has performed his task with notable ability. He also has a quaint enthusiasm for details, which has produced innovations in the T.V.A.'s choice and supervision of personnel which are almost other-worldly. Anyone who has met Dr Arthur Morgan will appreciate that he has not always been the most practical of Board members.

David Lilienthal, on the other hand, is the engineer-crusader, committed to making the T.V.A. the great opening battle in winning the power war for the people. And he has been consistently supported by H. A. Morgan. A long letter by Dr Arthur Morgan, telling the inside story of the Board, recounts how Lilienthal and H. A. Morgan worked out their programmes together, came to board meetings and passed what they had planned. If Dr Arthur Morgan had anything to say in opposition, he was sometimes even kept from entering it on the record. This part of the story looks like one of those incredible situations occasionally found in families, when a husband or wife goes on a silence strike against the other.

The Issues at Stake

The first sign that this quarrel may have concealed deep differences over major principles came some time ago. Dr Arthur Morgan was espousing a settlement with the Southern power interests which would have embodied some of the principles of the British grid. Lilienthal was against this settlement, and his crusader's voice rang through Washington. Left-wingers said that the President was getting ready to compromise with the "interests."

The whole tale is yet to be told, but the probability is that this settlement was lost, not because of the quarrel within the T.V.A. but because the power companies decided against compromise and made instead a last great legal stand. They went into court, tied up the T.V.A. with injunctions, infuriated the President, and lost what might have been a constructive solution. For them it turned out to be bad strategy, for their legal battle was in vain and they lost their case.

More recently the quarrel has become more unpleasant. Senator Berry, a labour leader, New Dealer and Roosevelt stand-by, owned marble quarries which were inundated in building one of the T.V.A. lakes. He claimed \$5,000,000 damages. Dr Arthur Morgan writes that the claim "in my opinion was a barefaced steal." He resisted dealing with it except on the basis of a competent outside valuation, and alleges that his two colleagues were ready to compromise with the Senator.

Finally, the claim was taken up by an outside board and adjudged worthless. This will be one of the chapters of the story to be investigated. Senator Berry is head of the Pressmen's Union, is also a successful business man, and was one of the founders of Labour's Non-Partisan League which did so much to help the President to win the last election. He entered the Senate by appointment last year.

According to Dr Arthur Morgan, an investigation of the power policies of the T.V.A., over which he was allowed to have no say, "will disclose disorder, waste, confusion and lack of planning to a startling degree." And he considers himself as fighting a basic struggle for honesty and efficiency in government. Since Mr Lilienthal and Dr H. A. Morgan have reputations for integrity as high as Dr Arthur Morgan's, it can be understood why the Administration did not hanker to have the investigation turned into a public circus before a Congressional Committee.

[NOTE.—Since our Washington correspondent wrote these lines the President of the United States has decided to dispense with Dr Arthur Morgan's services.—Ed., Econ.]

France

Fresh Inflation?

PARIS, March 24.—M. Blum has asked Parliament to vote new financial measures. These included a further advance of 5,000 million francs by the Bank of France to the Treasury; the transfer by the Equalisation Fund to the new "Caisse Autonome de la Défense Nationale" of 2,000 million francs, representing the Fund's profits on its operations (a proposal already rejected by the Senate Finance Committee); and the authorisation of the "Caisse Autonome" to issue, not only long- or middle-term bonds, but also short-term ones, rediscountable at the Bank of France. M. Blum asked for these powers to cover the needs of the Treasury until such time as a National Government could be formed.

The Chamber voted these steps by 343 votes to 243. Many members emphasised that this was, in effect, renewed inflation, which would lead to a fresh rise in prices and the cost of living, and, therefore, more social and monetary troubles. It has now to be seen whether the Senate will be convinced of the need for these measures by the urgent requirements of national defence, enhanced by the recent aggravation of the international situation.

The re-valuation of the gold stock of the Bank of France, on the basis of the present exchange, would produce 24,000 million francs, which, added to the resources of the funds established to equalise the exchange and to support rentes, would make in all nearly 40,000 millions. If the new laws are finally voted, the Bank's advances to the State will reach a total of 42,000 millions, including the 5 millions now proposed as well as the 37 millions already advanced.

The new inflation need not be dangerous if the newly created francs were to remain in the markets, where they would be absorbed by the National Fund's issuing short-term bonds. This will not happen if confidence is absent, and if the new francs are changed into pounds or dollars. But will confidence be maintained in the short-term market? M. Blum, like his predecessor, M. Chautemps, has himself said that bond issues would not be successful until a National Government was formed.

Production must be increased. Public expenditure in 1937 was 100,000 million francs, and permanent charges alone represent 40 per cent. of the national revenue. Salvation can only come through an increase in production, which, like the organisation of national defence, will require united national effort. Such an increase in production would, in itself, suffice to retain in the market the new francs created to cover the expenses of the Treasury, and investors would then be induced to subscribe to the new short-term bonds of the National Defence Fund. The great needs are confidence and co-operation.

Party Strife

The struggle between the parties continues, despite innumerable appeals for unity in face of the financial and foreign dangers which menace the country. The suggested formation of a National Government, stretching from the Radicals to the Right, unlike the present administration, which stretches from the Radicals to the Left, has been given a fillip by the recent events abroad, coupled with the country's strong wish for peace. The leaders of the Right are making a determined effort to convince public opinion that a Conservative democracy is peaceful.

A National Government, however, would have the inconvenience of relegating the Communists and the Socialists to the Opposition; and possibilities of social disorder would arise—a contingency which might even temper the enthusiasm of the Stock Exchange itself for such an alignment. The project for a National Government is indeed more likely than ever, but so far participation of the Communists has been rejected by M. Flandin; and the personality of M. Blum, in spite of his moving appeals for unity, remains a subject of discord among Right politicians.

Foreign policy remains the principal question at stake. And on this problem the profound impression produced in France by the determination of Mr Chamberlain has been intensified by the re-entry into political life of M. Laval after more than two years' silence. The resistance of Great Britain to the plans of the French Left in Spain have already modified the orientation of the French Government. Success for the British Prime Minister in his negotiations with Rome would have a similar effect. The feeling is strong in France that, in the last resort, the entente cordiale for the defence of the two empires remains the most important element in French policy; and may prove more potent in the moulding of policy than party prejudices.

Germany

A Waiting Period

BERLIN, March 23.—Last week Berlin was a whispering gallery of rumours about new Reich initiatives in Continental questions. Czechoslovakia, the Polish Corridor (in the shape of an inconceivable Polish-German exchange), the Baltic States, the Ukraine, and other very improbable, or physically impossible, theatres of activity were mentioned. Military journals publish highly disparaging accounts of Russia's military, naval, and air forces; and not merely in connection with the elimination of Red generals; for the claim is rather that the whole of Russian re-armament is technically and in the matter of training unsound.

The Czechoslovak controversy was made more acute by party displacements among the Sudeten-Germans themselves. Nevertheless, business circles did not credit the talk of immediate aggressive moves. Reich designs, it was reasoned, could hardly take shape until after Mr Chamberlain's declaration of policy to Parliament. The Reich Government and the Nazi party are for the moment interested only in the election.

Apart from these considerations, one might conclude on general grounds that pretensions will not be hurriedly pushed forward or remedies for alleged grievances hurriedly sought. For five years nationalistic enthusiasm has been kept boiling by successive coups, and it must be kept boiling. But the stock of coups, like the stock of *devisen*, is limited, and similar careful rationing would seem to be necessary. Further, the economic absorption of Austria, begun though it has been with headlong speed, will long require hard work; and it will raise international trade and payment questions, during the settlement of which it would be unwise to precipitate new troubles. On such and other grounds the Bourse last week and early this week was somewhat firmer.

Measures for Austria

The political measures taken in the new Austrian *Land* resemble those taken in Germany after the National-Socialists attained power, and are no less drastic. The economic measures make for complete assimilation. Apparently the real ruler of Austria is to be Herr Keppler, for many years Herr Hitler's economic adviser, and of late head of the Reich Board for Soil Research. He will henceforth be Reich Commissioner for Austria, and has also been made a Secretary of State in the Foreign Ministry.

Numerous Reich trade and industrial regulations have been imposed on Austria, including the supervision of foreign trade. A Foreign Exchange Board has been created in Vienna. Germans have been provisionally forbidden to establish new undertakings in Austria, to transfer old undertakings there, or to open branches there; and they may not acquire interests in Austrian concerns. This is on the lines of a measure taken after the incorporation of the Saar.

The Customs frontier for the moment remains, but import duties may be removed from certain goods. The Austrian National Bank is to be liquidated, and replaced by the "Reichsbank Chief Office, Vienna," under the direction of one Austrian and one German. The National Bank's gold and exchange reserve, some Sch. 420 millions, or, at the German official rate, approximately Rm. 200 millions (which is just three times the Reichsbank's displayed reserve) will be taken over.

Schillings and Marks

The new exchange rate of Sch. 3 = Rm. 2 has been fixed, it seems, on rule-of-thumb principles, but with a desire to propitiate the Austrians. The new rate cannot be regarded as representing a scientific correction of the old official exchange on the basis of comparative prices or costs of living. In 1929-37 the Austrian index of the cost of living fell from

100 to 94.6, and the German from 100 to 81.2. But in 1929 both currencies were on a gold basis. The relation between the respective levels of the cost of living in 1929 is uncertain. Since 1929 the schilling's gold value has declined about 21 per cent., while the Reichsmark ceased to have any gold value at all, though, for certain limited transactions, there is still a forced full value exchange. Of late the schilling has been quoted at 49.5 pfennigs. The gold schilling was 59.07 gold pfennigs; and, against this, the new exchange value of 66.7 pfennigs is not a great advance. The effect of the new arrangement will be to raise Austrian prices, reckoned in marks, by one-third.

The Anschluss and German Resources

While the *Anschluss* will materially increase the sum of Germany's resources, it is not clear that it will help to overcome the Reich's particular difficulties—its deficit of foodstuffs, raw materials and foreign exchange. Austria's forests are much the most important raw-material gain. But self-sufficiency in wood will raise commercial questions with the North European countries which have so far supplied wood and wood products; and German exports may be prejudiced. Austrian iron ore resources might certainly be developed, but, here again, international commercial problems would be raised; and, further, the Reich has committed itself to huge investments for exploiting low-grade ore in its old territory.

The heavy Austrian imports of oil and cereals will burden the balance of foreign payments. The prospect of exploiting Austrian mineral oil is not good. Many of the Austrian oil-fields which were opened after 1932 went dry. In general, the similarity between the Austrian and Reich economic structures is a disadvantage rather than an advantage.

Speaking on transfer and Austrian foreign debts, Minister of Economy Funk admitted that these questions must be negotiated with creditor countries. It may be hoped that these countries will use the considerable leverage they have to prevent any curtailment of the Austrian debt service, which could easily be maintained. It is to be feared, however, that the *Anschluss* will strengthen the Reich's move against bondholders foreshadowed by Dr Funk at the opening of the Leipzig Fair. It is significant that dollar bonds, and with them those German foreign loans which are mark liabilities, have weakened on the Bourse. The German section of the Young Loan, which a few weeks back passed 108, was yesterday down to 103.25, and the dollar, Young and Dawes Loans have also declined.

High Import Level

The February returns of foreign trade show an import surplus of Rm. 17 millions, against Rm. 33 millions in January. The import surplus in the first two months was therefore Rm. 50 millions, compared with an export surplus of Rm. 138 millions in the same months of 1937. Imports compared with January declined by Rm. 30 millions, while in 1937 they increased. Exports declined by Rm. 10 millions, the same as in 1937. The import surplus is due to the fact that a high level of imports has, in general, been maintained. Imports in February were valued at Rm. 106 millions more than in February, 1937. Exports, on the other hand, tend to stagnate and, in February, were valued at only Rm. 30 millions more than a year ago.

The Reichsbank's reserves have not been affected by the new trade deficits; indeed (though this is not shown in the Reichsbank's returns), February witnessed a considerable net gold import.

Palestine

The Balance of Payments

JERUSALEM, February 23.—At the instance of the Economic Research Institute of the Jewish Agency for Palestine, Mr L. Gruenbaum has just completed a survey of Palestine's National Income and Balance of Payments. His estimates of the balance of payments are as follows:—

BALANCE OF PAYMENTS, 1936 (In thousands of Palestine £1's)	
<i>Inflow</i>	
1. Exports of merchandise	3,625
2. Tourist traffic in Palestine	650
3. Investment proceeds from abroad	830
4. Government proceeds from abroad	415
5. Bullion and specie exports	251
<i>Recurrent:</i>	
6. Surplus of capital imports by immigration	5,000
7. Loans and raised shares sold abroad	500
8. Remittances to relatives	1,333
9. Jewish National Funds	900
10. Christian and Moslem funds	500
<i>Non-recurrent:</i>	
11. Repatriation of Government funds	1,033
12. Repatriation of currency funds	700
13. Miscellaneous (repatriation of private foreign investments, etc.)	842
	16,576
<i>Outflow</i>	
Imports of merchandise	13,979
Tourist traffic abroad	800
Payments on Palestine investments abroad	575
Payments for banking and insurance services	170
Government payments abroad	895
Bullion and specie imports	157
	16,576

It may be added that item 13, which is the "unexplained balance," includes the cost of the British Army in so far as it is paid by the British Treasury, as well as exports of gold and merchandise to neighbouring countries not included in the Customs statistics.

The items 1-5 result in an outflow balance of £P10.8 millions. This "deficit" is covered by capital imports amounting to £P8 millions and repatriated capital to the value of £P2.8 millions. In a country where immigration and colonisation are still the dominant economic trends, a surplus of capital imports must be a regular feature of its balance of payments, as was shown, for instance, by Canada's development in the decade before the Great War.

The deficit on Palestine's balance of trade in 1936 was covered up to at least three-quarters by "Normal" imports of capital, and only one-quarter by capital repatriation, "freezing" of foreign claims, etc.

The improvement in the balance of trade during the last

three years has been to a considerable extent due to the increase in exports, as the following figures show:—

	Imports	Exports	Surplus of Exports
(In millions of Palestine £1's)			
1935	17,853	4,215	13,638
1936	13,979	3,625	10,354
1937	15,913	5,820	10,093

The gap between imports and exports is still very large. But it is clear from careful analysis that only 25 per cent. of the deficit cannot be met by normal means. The situation is, therefore, not so alarming as has been sometimes stated.

Japan

Japan's Advantages in War

TOKYO, February 25.—Despite occasional peace rumours the basic reckoning, both in Japan and in China, is on a protracted conflict. The Prime Minister recently told the Diet that the time for a settlement was far distant. Marshal Chiang Kai-shek, on the other hand, recalls the history of the American War of Independence, and asserts that China, too, can fight many years against the Japanese invaders. It may be worth while to cast up a brief balance sheet of the main elements of national strength and weakness on the two sides, as these have been made clearer by the actual results of the fighting up to date.

Japan's most obvious and most important asset is overwhelming technical military superiority, which is due to better training of officers and men, a stronger tradition of national unity, vastly more effective equipment, notably in artillery and mechanised weapons, and a far more advanced stage of economic development. The consequence of this superiority is that all traces of war, except for casualties and returning wounded, are banished from Japan's soil.

Japan's economic body has been unscathed; and this is a point worth remembering by those who are inclined to believe that Japan, because of its more modern and sensitive economic organism, is likely to experience some kind of collapse before China. Japan faces serious economic difficulties; but its physical plant is undamaged, just as Germany's was during the world war.

Another distinct Japanese asset is virtual self-sufficiency in food, given the rice, fish and vegetable diet on which the enormous majority of the people subsist. Experience shows that the greatest threat to popular *morale* in a protracted war is hunger. There seems little likelihood that Japan will be confronted with this danger in any near future.

The Conflict's Strain

On the liability side, however, one must recognise that Japan is already experiencing appreciable economic strain. A combination of causes, including an expanding armament programme, speculative advance purchases of cotton and other raw materials and the demands of the war itself, gave Japan an unusually heavy adverse balance of visible trade in 1937. The excess of imports over exports was 648 million yen; and gold to the value of 830 million yen was shipped to America and Great Britain.

These gold shipments have left Japan only a very small stock of free gold, apart from the sum of 801 million yen (about £45 millions), which is considered a reserve for the currency. It has been found necessary to adopt a hand-to-mouth policy of restricting monthly imports to a value roughly equal to the value of exports, plus the comparatively small quantity of newly-mined gold, which is bought by the Government. This restriction is all the more irksome because exports for the first month of the year were down by about 18 per cent., compared with January, 1937.

Internally, Japan will this year be obliged to digest bond issues up to at least five or six thousand million yen. Borrowings will be well over double the total amount of income received from taxation. A creeping inflation is already in progress, with the cost of living rising from month to month.

Another liability is the loose discipline, by Western standards, which prevails in the Japanese army. It has thus far proved impossible to inflict public punishment on officers and men involved in such offences against foreign Powers as the shooting of the British Ambassador to China, the sinking of the American gunboat "Panay," the shelling of the British gunboat "Ladybird," to mention only a few outstanding "incidents." In some new militarist excess lies Japan's greatest danger—the drawing into the war of some more formidable enemy than China.

China's Unity and Bulk

China's greatest asset is the unusual measure of national unity which has prevailed in face of the war. No important war lord went over to the Japanese side. Even the unfortunate Governor of Shantung, who was shot for alleged neglect of duty and malfeasance in office, did not accept the Japanese offers to retain his post under their patronage. The sanguinary class civil war with the Communists has ceased. The normally recalcitrant South-West has been co-operating with the Central Government.

China's mere bulk is a substantial obstacle to conquest. It is not just another Manchuria, or another Abyssinia; and, assuming that *morale* and munitions hold out, an exhausting guerrilla war, lasting for years, may continue even after the Japanese have occupied more large cities and strategic railway points than they hold at present.

The primitive state of Chinese economy, a handicap in many ways, is an advantage, in so far as the Chinese village leads a self-contained existence, and the effect of a naval blockade and the disruption of many lines of communication is not so overwhelming as it would be in a more industrialised country. China is able to keep its armed forces, such as they are, in the field at much less expense than Japan is obliged to incur.

Stalemate

On the other hand, China's inability to hold its own in open-field operations against Japan is a serious political liability. All the strain on *morale* which comes from constant air raids, devastation of territory, loss of towns and positions, falls on the Chinese. Chinese traditions of venality and nepotism are far from being uprooted; there have been cases of scandalous corruption and inefficiency in the placing of war orders and in the organisation of the care of the wounded. The unity that has been created by Japanese pressure is real enough; yet it may crack under a protracted series of defeats. China's reserves of foreign currency, like Japan's, are seriously straitened.

Such would seem to be the main elements in China's and Japan's national balance sheets of strength and weakness. There is no absolute assurance of complete ultimate victory for either side. China cannot evict Japan from the expansive territories which have been occupied; and at best can only hope to harass the Japanese by guerrilla warfare so much that no profitable exploitation can be undertaken. Japan cannot take over the whole of China, except at a price in men and yen which would be staggering. There is a clear possibility of the continuance of the present stalemate, with Japan dominating and more or less effectively controlling selected areas of China for a considerable period of time.

New Zealand

Business Activity in 1937

CHRISTCHURCH, February 25.—Returns now available for whole of 1937 provide convincing evidence of increasing business activity. The estimated value of production, which fell to £NZ83.6 millions in 1931-32, rose to £NZ136.1 millions in 1936-37, compared with £NZ114.2 millions in 1935-36 and £NZ126.6 millions in 1928-29, the previous highest record. Factory production, nearly half of which consists of animal products, also reached a new high record, £NZ105.9 millions, in 1936-37, against £NZ90.0 millions a year earlier.

Aggregate bank debits in 1937, exclusive of Government debits, reached £NZ973 millions, a figure 10 per cent. higher than that recorded for 1929, and 80 per cent. higher than in

The MERCANTILE BANK of INDIA

LIMITED

WORLD-WIDE LETTERS OF CREDIT
AND DRAFTS ISSUED

the lowest depression year, 1932. The yield of the sales tax, an excellent trade indicator, increased by 64 per cent. between 1934, its first full year, and 1937.

Overseas trade also reached new high levels. The value of exports in 1937 was £NZ66.7 millions, an increase of £NZ10 millions compared with the preceding year, while imports increased by £NZ12 millions to £NZ56.2 millions. Higher prices for wool accounted for more than half the year's increase.

Rising wool values have also accounted for an apparent change in the direction of trade. During last year, exports to Great Britain fell from 80.2 to 76.3 per cent. of the total value of exports, and to British countries from 86.3 to 82.4 per cent., while exports to foreign countries, which take a good deal of wool, rose from 13.7 to 17.6 per cent. In import trade, the shares of both Great Britain and British countries increased slightly, while that of foreign countries declined.

Overseas Funds and Wool Prices

The export surplus in 1937 was £NZ10.55 millions. This is sufficient to meet normal commitments abroad for interest, etc., but the overseas funds held by the banks fell from £NZ28.1 millions at the end of 1936 to £NZ23.7 millions at the end of 1937, which suggests that some export of capital is still going on. Both the overseas funds of the banks and bank deposits in the country, however, are much larger than was usual before the depression, so that money is abundant and interest remains low.

The increase in trading bank advances during the past year, from £NZ48.3 millions to £NZ54 millions, shows that the demand for money has risen with expanding trade. These figures do not include Government advances from the Reserve Bank, which reached £NZ7.1 millions at the end of last December, the highest figure yet recorded. Of this amount £NZ6.2 millions was against dairy produce bought for export, and £NZ900,000 for other purposes, presumably housing. It now appears probable that the fall in prices for the current season's wool, amounting to about 30 per cent., will effect a reduction in total export receipts, and may cause a check during the coming year to the rising trend in both internal trade and imports.

Revenue and expenditure returns for the first nine months of the financial year have now been published. Revenue amounted to £NZ20.07 millions, against £NZ18.59 millions a year ago. The whole of the increase was due to expansion in the tax yield, principally in Customs and sales tax, since a fall in interest receipts was just covered by an increase in other revenue. Further increases are expected in the proceeds of income tax, most of which comes in during the last quarter of the year.

Expenditure amounted to £NZ21.93 millions, compared with £NZ21.08 millions in the previous year. The Minister of Finance states that the expenditure for the period is £NZ4.1 millions less than the nine months' share of the estimates, but that heavy payments are due in the last quarter for interest, etc. Comparison with last year's figures, however, suggests that the Budget is likely to be balanced comfortably.

Canada

The British Crisis

OTTAWA, February 26.—The political crisis in Britain and other developments in Europe have been followed with keen interest in Canada and, if the comments of the Press are any index of public opinion, there is, at least in the English-speaking provinces, a preponderance of sympathy with Mr. Eden. A contributory factor to this reaction is the disposition of some French-Canadians to sympathise with the Fascist dictatorships. There is, however, widespread apprehension that the achievement of *concordats* between the British Government and the Fascist dictatorships might do irretrievable damage to any prospects of close co-operation between the British Commonwealth and the United States.

Difficult Days in Alberta

The latest Budget of the Alberta Ministry, submitted on February 25th, shows that the province is still in very deep financial waters. The deficit for the fiscal year, 1937-38, which had been forecast at \$1,227,815, is now reckoned at

\$1,500,000 and, for the year 1938-39 the provincial Treasurer, forecasting revenue of \$19,232,232 and expenditure of \$20,799,804, estimated the deficit at \$1,567,571. He announced new taxes on securities, mineral rights and wild lands, and additions to the corporation income tax, succession duties, and unearned increment tax. He intimated that the Government proposed to restore part of the cuts made in the salaries of civil servants and to raise the indemnities of the members of the Legislature, which were reduced from \$2,000 to \$1,800 per annum, to their old level. The latter proposal has created a very unpleasant impression, and is calculated to do the Aberhart Ministry great political damage if persevered with.

Business Uncertainty

A winter, which has not been rigorous, is now drawing to a close and the business community is preparing to adjust its operations to spring conditions. The recession in Canadian business is still nothing like so marked as the setback in the United States, but it is evident. The general economic index of the Bureau of Statistics has fallen. Given below are details of three of the major components of the index:—

Week ending	Car-loadings	Wholesale Prices	Bank Clearings	General Index
Feb. 20, 1937 ...	81.63	83.0	119.8	116.0
Feb. 5, 1938 ...	79.94	83.6	100.9	109.6
Feb. 12, 1938 ...	79.98	83.6	90.5	108.2
Feb. 19, 1938 ...	76.61	83.6	90.6	108.0

The increased tension in the international situation has helped to aggravate the feeling of uncertainty about the immediate outlook for business, and a continued shrinkage in foreign trade, revealed by the figures for January, has been responsible for a decline in the purchasing power of workers in some of the basic primary industries. Merchants are showing a disposition to curtail their spring commitments.

There is also evidence of a curtailment of manufacturing operations. The production of motor vehicles in January was only 17,624 compared with 20,652 in December and 19,583 in January, 1937. The textile mills are also making plans for a decreased output, and imports of raw wool and woollen yarns in January, at 1,108,049 pounds, were not much more than half the figure for January, 1937, which was 1,961,473 pounds.

The primary iron and steel industries have also reduced their scale of operations, but they are still fairly well supplied with orders; and the production figures for steel and iron in January were 107,753 and 74,862 tons, compared with 115,237 and 66,400 tons, respectively, in January, 1937. Disappointing progress is being made towards the elimination of the heavy surplus stocks of newsprint, and the operations of the industry were so reduced in January that its output was only 222,500 tons, compared with 293,038 tons in December and 289,634 tons in January, 1937. Exports of planks and boards, at 108,914,000 board feet, were only about two-thirds of the sales in January, 1937.

On the other hand, the mining industry, in spite of a fall in the prices of various base metals, is still active; exports of copper and nickel in January were 398,563 and 197,154 cwt., respectively—new record figures compared with 271,787 and 149,944 cwt. in January, 1937. Gold production was 359,549 fine ozs., compared with 328,545 ozs. in January, 1937. The volume of new building is being well maintained, and the value of new contracts placed in January was \$9,140,000, an increase of 38 per cent. compared with January, 1937. The packing plants are also fairly busy, and the farm implement firms report that their outlook is better than in any recent spring.

Decline in Employment

But, since the year began, there has been an ominous curtailment in employment. The latest unemployment bulletin shows that, instead of the small gain in employment which has been usually, although not invariably, shown in January, the number of workers on the payrolls of reporting firms fell by 29,052 to 1,052,551. The number of people on public relief has again been mounting and the Federal Government, which last year reduced the scale of its monthly relief contributions to the provinces, is being subjected to severe pressure from provincial and municipal authorities to raise them again. The Federal Minister of Labour, however, has refused to increase the grants, and as a result Mr. Hepburn, Prime Minister of Ontario, has declared that he does not propose to allow his Government to remain "sandwiched" between a Federal Ministry, reluctant to shoulder its just responsibilities, and impoverished municipalities.

Letters to the Editor

The Stock Exchange and the Public Trustee

TO THE EDITOR OF THE ECONOMIST

SIR,—The answer to the letter signed "Beneficiary," published in *The Economist* on March 5th, is probably as follows:—

1. Stock Exchange commissions are possibly twice as heavy as they ought to be, since brokers are in a position to part with one-third or a half of their commission to the Public Trustee, banks, etc.
2. If the Public Trustee does not obtain a share of brokers' commissions, he may be obliged to raise his other fees to compensate him for the loss of such commission. It would, therefore, be in the interests of all parties to let sleeping dogs lie.

"TACT."

New Railway Capital

TO THE EDITOR OF THE ECONOMIST

SIR,—I have read with interest the article on new railway capital in your issue of March 12th, but if I am not much mistaken the train of reasoning that relates the re-establishment of railway profits to the "acuteness" of the capital problem involves at least two misconceptions.

You say that

any reasonable conservative board would prefer to treat as a revenue charge the normal "betterment" involved in keeping equipment up to date—which, in the long run, means competitive—and would so reckon it in the company's published accounts. The railway form of accounting allows larger earnings to be shown

I should think it extremely improbable that commercial practice generally is more conservative, and I suggest that the general run of such practice is the less conservative one of writing off depreciated assets and treating as capital those which replace them.

Let A = £1,000 original cost, and B = £1,100 replacement cost of A in its actual state, and C = £1,200 replacement of A as "bettered." You suggest the railway should charge C to revenue instead of B, and that that indeed is commercial practice, but I suggest that industry generally quite as often charges only A, and is less prudent than railway practice. True, various companies have paid for the capital additions (arising through both price and betterment) out of surplus profits with the frequent sequence of bonus issues with the same effect as direct capital issues except for the loss of premiums on issue.

Later you say:

The real question, however, concerns earning power rather than book values. An ordinary industrial concern would recognise that part of its earlier capital expenditure, though still represented by assets, was no longer profitable, and should be written off. If the equity stocks were reduced to a nominal value justified by current earnings, it would be possible, in favourable market conditions, to raise fresh capital by the issue of ordinary stock. But so long as profits are in a declining trend there must be difficulties in the way of that solution, since even after a capital reorganisation the market will not be anxious to take up new stock.

I suggest exactly the opposite. In the first instance, you rightly say that the real question concerns earnings and not capital; indeed, there is no connection between them in the sense you are discussing. It would make not the slightest difference if the capital could be reduced except to show a better return on paper, and I am afraid I do not hold your opinion that such revision of capital would induce others to venture in the same field where their predecessors had been so treated.

If you had said that, as profits rise, there would be a restoration of confiscated capital, there might have been some theoretical justification, but without that your proposal seems to imply, in an improving industry, a confiscation of

future growth in profits. An equity stock with a sliding value, really with no par value, would be interesting, but why suggest it for a railway company whose capital arrangements must be made by Parliament? And apart from this, it would be interesting to know which industrial concerns with no deficiency in their trading results have adopted the writing-down policy to make their results per cent. of capital look prettier.

You say: "so long as profits are in a declining trend," but although they declined in 1930, 1931 and 1932, each year since has shown an improvement—those for 1937 exceeding 1930 despite the growth of wages and prices over the 1929 level.

Finally, we do not embark upon capital works unless it appears that they will earn more than their cost, and I am aware of no works which have had to be postponed because of shortage of capital funds, as distinct from earning prospects. Might I illustrate by adding that since amalgamation new capital assets costing £128 millions have been brought into use by the L.M.S. Company, mainly for re-equipment, and during the same period capital assets displaced and not replaced have resulted in credits to capital expenditure account of £15 millions, including £3 millions for sales of land. In addition, road investments costing £4 millions have been charged to capital account.

Yours faithfully,

J. C. STAMP.

Books and Publications

Joe, Austen and Neville

SIR CHARLES PETRIE, who excels in light and bright biography, has produced an eminently readable sketch* of the lives of three men whose names are written large in British politics during the last sixty years. What is the Chamberlain tradition? What essential virtue was possessed by these members of a West Country Nonconformist family who, father and sons, succeeded between them in moving England's fiscal capital from Manchester to Birmingham?

Sir Charles succeeds merely in stating, without resolving, the fundamental paradoxes of the Chamberlain story. Obviously, any analogy between the Chamberlains and, say, the Pitt family is dangerously misleading. The Pitts, Elder and Younger, were born wartime ministers; the Chamberlains were, above all things, men of peace. Chatham and Pitt found in statesmanship their life's work; Joseph and Neville Chamberlain came to Westminster only in middle-age. They did not seek high office; and Austen, the only member of the family trained to national politics from his youth up, waived his claim to party leadership, after Balfour's resignation, in circumstances which testified much to his sense of duty and public spirit but little to his ambition.

Above all, through the career of the Pitts one increasing purpose ran, which did much to redeem a strain of the histrionic in both men. But while the strength of the members of the Chamberlain family has been their unwavering pursuit of a high purpose, clearly perceived, their weakness

has been a certain reliance on intuition rather than judgment in choosing their objective. Alike in formulating his "unauthorised programme," in his break with Gladstone over Home Rule, and in his ardent imperialism and tariff reform advocacy after his visit to North America, Joseph Chamberlain moved by faith rather than by sight. The great decisions in his political life were not the result of mature deliberation but of sudden intuitive flashes. And Neville Chamberlain's countrymen to-day, who are aware of the determination with which he held his original view on, say, the expedience of the first National Defence Contribution or of opening discussions with Italy, have weighty reasons for wondering how far he is his father's son.

Sir Charles Petrie's book will raise, in the minds of many readers, another question to whose answer present events lend obvious importance. Beyond question, municipal administration is a useful school for British statesmen in peace-time. In housing, in public health, and in finance, Britain's present Prime Minister has applied, to the lasting benefit of his country, the lessons he learned in a progressive city.

But a modern municipality, unlike the State, is immune from external aggression. Birmingham, with its housing schemes, its traffic regulation and its Watch Committee, need fear no turbulent loyners of Leeds, nor worry over the Newcastle-Sheffield axis, nor adjust its policy when Nottingham sends an army, with tanks and aeroplanes, to free the goose-men in Leicester. Compared with Hitler and Mussolini, President Kruger was the veriest tyro in the guileful arts; yet in cunning Joseph Chamberlain was no match for him. Does the municipal school breed a lack of caution, and of the disposition to question motives, which is part of the indispensable mental background of those responsible for a country's foreign policy? Events, we may hope, will yet show that the answer is negative.

Shorter Notices

"The Future of British Railways." By W. J. Stevens. P. S. King and Son, Limited. 101 Pages. 5s.

This country is particularly rich in amateurs of railway management, both well- and ill-informed, who seldom hesitate to criticise the companies' policy. Mr Stevens is not one of these; his little book is a highly sympathetic study of the difficulties with which the railways have had to contend since the war, and a plea for Government co-operation in the matter of earning their "standard revenue." He writes lucidly, handling his statistics nimbly; and investors will find the last four chapters, which deal in turn with each of the main groups from an investment point of view, especially useful. Within the limits of a hundred small pages it is hardly reasonable to expect an objective survey of the transport problem, and Mr Stevens has not always been able to avoid over-simplifying the issues. It is not sound to argue that merely because railways are very large concerns, it must therefore be in the national interest that they should earn adequate dividends; or that the definition of standard revenue by the Railways Act of 1921 represented a "solemn bargain" between the companies and the Government whereby the latter guaranteed its achievement. Nor does it fortify the argument to describe any proposal to write down or reconstruct railway capital as "tampering" and its authors as "pirates."

"The Economy of Britain." By H. M. Croome and R. J. Hammond. Christophers. 327 pages. 8s. 6d.

Miss Scott's recent introduction to the study of economic theory won well-deserved praise. Now, as Mrs Croome and with the collaboration of Mr Hammond, she has attempted to perform the same task of introductory exposition for elementary students of economic history. Their outline of historical development since the Middle Ages is orthodox in scope and arrangement and only occasionally controversial in interpretation. The avowed purpose of the book is to relate economic history to economic theory rather than to history, and historians may feel that the authenticity of the narrative suffers accordingly. This will be a really useful textbook for beginners, but it breaks no very new paths.

THE BUSINESS WORLD

Sheffield Visited—II

Sheffield Steel and Cutlery

IN an article in last week's issue of *The Economist* (page 612) Sheffield's economic and social features were briefly described. What does the future hold in store for Sheffield and its trades? Though Sheffield is in many respects the nerve centre of Britain's steel trade, its inhabitants are quick to point out that it is not merely a steel town. They refer to the hundred and one light products which, though mostly based on steel, are connected with Sheffield by the traditional skill of its workers rather than by the proximity of the steel furnaces, and employ about the same number of persons as the heavy trades. Moreover, they stress the importance of the fact that Sheffield is the centre of the Midland coalfield. Indeed, local industrialists are fond of likening their city to a chemist's shop by reason of the diversified nature of its products.

There are good grounds for distinguishing between the heavy steel and light trades. The heavy steel industry is notoriously subject to wide fluctuations in activity owing to its dependence on the capital equipment and armament industries. The light trades, on the other hand, furnish a wide range of consumers' goods, the demand for which varies with changes in general activity and in international trade. It is scarcely surprising, therefore, that recovery has been relatively greater in steel than in the lighter trades, especially as some of the latter, such as cutlery, have come to be dependent on exports for a substantial proportion of their total output. Sheffield still wears an air of solid prosperity, though optimism has recently been tempered by the fall in new orders.

Sheffield's leadership of the British steel industry is due to an historical accident rather than to easy accessibility to raw material supplies. Many centuries ago Sheffield was already famous for its knives made in the smithies driven by water wheels, from iron smelted locally with charcoal or imported from Sweden. Knives and swords required a strong and flexible material and keen edges. Continuous application led to a steady improvement in the quality of the materials, in the efficiency of the tools, and in the skill of the craftsmen. Sheffield cutlery found its way to the furthest corners of the world. During the industrial revolution, the scope of its activities was enlarged by the rapidly growing demand for tools and machinery, while the ability to satisfy these requirements was considerably enhanced by Huntsman's invention, in 1742, of the crucible steel process. Thus, at the beginning of the nineteenth century, Sheffield had already established its position as Britain's steel centre. During the first half of the nineteenth century, progress was comparatively slow, and Britain's total output of steel in 1855 was only about 50,000 tons. But in the second half a series of important inventions was inaugurated with Sir Henry Bessemer's converter, introduced in 1856, leading up to the development of modern high-speed tool steels, alloy steels, and rust, acid, and heat-resisting steels. The recent growth of steel production in Sheffield and in the United Kingdom as a whole is shown below:—

OUTPUT OF CRUDE STEEL (In thousands of tons)		
	Sheffield	United Kingdom
1913	878.7	7,663.9
1929	1,217.0	9,636.2
1931	775.8	5,202.6
1936	1,606.9	11,784.6
1937	1,722.2	12,964.0

Although Sheffield produces only about 13.3 per cent. of the country's total output of steel, measured by tonnage, its proportion is considerably higher in terms of value by reason of the high average quality of a substantial part of Sheffield steel. For example, the average price of high-speed tool steels of good quality is as much as 3s. 6d. per lb., or £392 per ton. For the past thirty years and more one Sheffield firm has regularly supplied tool steel to the United States at the price of \$9 per lb., or £4,032 per ton.

While Sheffield's steel-makers are fully alive to the ups and downs of their industry, they do not fear a decline in the importance of their town as a steel centre. They have an invaluable advantage over other districts in the quite outstanding traditional skill of the Sheffield steel workers and of the research staff. They have easy access to fuel. They are scarcely at a disadvantage compared with other centres as far as supplies of scrap are concerned. The relatively greater cost of pig-iron, which has to be brought from other districts, principally the North-West and North-East Coasts, is offset by Sheffield's relative concentration on high-quality steels, though the manufacture of bulk steel is by no means unprofitable. Local steel-makers are firmly convinced that the demand for special steels will continue to expand, not only for armament but also for commercial purposes. And since the possibilities of further technical improvements in steel production are still far from exhausted, Sheffield's inventiveness and traditional skill are assets of inestimable value. Thus, while there are no technical obstacles in the way of setting up the production of Sheffield steels in other parts of the country, Sheffield lightly dismisses such a development as highly improbable.

New orders, admittedly, have tended to decline during the past few months. But the pressure has been so great during the past year that the industry is actually welcoming a breathing space. No one expects anything like a serious slump in the near future, especially as armament activity is now likely to be increased. There is a tendency towards closer co-operation between individual firms. At heart, however, Sheffield's steel-makers remain strongly convinced of the virtues of individualism as the springboard of enterprise.

Cutlery makers are more cautious about the future than the makers of steel. They fear recession. Yet they do not believe that the tradition of six centuries can be easily broken; nor do they deny that cutlery has shared conspicuously in the lighter trades' revival since the depression, as the following tables show:—

PRODUCTION (£ thousands)			Per cent. increase
	1930	1935	
Tool trades	4,670	7,791	66.83
Cutlery trades	2,213	3,271	47.80

EMPLOYMENT			Per cent. increase
	1930	1935	
Tool trades	20,346	24,994	22.84
Cutlery trades	9,021	10,699	18.60
	29,367	35,693	21.54

These figures, it is confidently asserted, have been considerably improved since 1935. Between 1930 and 1935, again, home trade turnover in cutlery rose by nearly 63 per

cent. in value, against 70 per cent. in carpenters' and joiners' tools, 36 per cent. in saws and 158 per cent. in engineers' tools. The cutlery, like the toolmakers, attribute their successful revival in part to the import duties introduced in 1932; and, faced now by signs of slackening trade, would be ill-suited by any further increase in foreign imports. Unemployment in the tool and cutlery trades rose from 2,662 in November, 1937, to 4,486 in January, 1938; and, while cutlery exports and dispatches have so far maintained a rising trend, orders, especially from overseas, have been declining steadily for six months and in January were down to the level of 1935-36. Cutlery is not, however, a homogeneous trade, and its movements in price and production are, therefore, somewhat haphazard and disparate. There are 900 separate entities in Sheffield cutlery: about 300 firms proper and 600 establishments doing work for larger firms and employing no more, and often many fewer, than ten men apiece. There is a world of difference between an undertaking with a staff of over 700, producing the widest range of high quality cutlery, and the one-man workshops. In general, however, though the high-grade exports are always affected first in both recession and recovery, the whole atomised industry must in the long run move together; and current signs are not propitious.

Nor can the host of diverse undertakings easily evolve a common policy, differing as they do hardly less in the type of their product than in the scale of their operations. In default of organisation, the cutlery industry is definitely unstable, and price-cutting is almost inevitable in a period of declining trade—although, in important instances, the products of certain firms are protected because they still trade on quality rather than on price. The reputation of certain Sheffield cutlery is world-wide and the competition of cheapness and mass production can accordingly be withstood—within limits. But, while Sheffield skill counts for a great deal in this trade, as in every other of the city's industries, the old order is being appreciably undermined. In the old days, the illiterate Indian sought

the sign of Sheffield reputation on his knives. Now, the more literate Indian has new and more nicely commercial standards: he balances price against price, and may in the end buy Japanese.

Again, mass production has made its way into Sheffield itself; pen-knives and razor blades are being mass-produced. And the old-time trading on a tried and trusted name is threatened. High-grade cutlery retain much of their goodwill in the world's markets, but a lot of low-grade cutlery is made in Sheffield, and the city's differential advantages, deep-rooted in age-old tradition, have lessened. Nor is it in cutlery alone that there are these signs. Silverware and electro-plate, staple Sheffield crafts of fine dexterity, are drifting to Birmingham. Cutlery itself has still centuries of life to increase its long span of business in Sheffield; but the trade's outlook for the immediate future is not altogether clear, and there are tendencies at work within the industry which will sooner or later appreciably change its character.

Nevertheless, local industrialists, convinced of the great future for steel—particularly special steels—and fully aware of Sheffield's advantages in their manufacture, face the future with quiet confidence. The fortunes of some of the subsidiary trades—and cutlery is subsidiary now to steel—may change; but the scope for metal goods is such that a decline in one branch may be offset by the growth of others. The very success of Sheffield in the manufacture of steel, however, has put steel-making in a position of pre-eminence in the city. And, so long as so large a proportion of its resources are devoted to steel, Sheffield will be subject to greater fluctuations in activity than the country as a whole. In that lies Sheffield's main problem. The great industrial concerns have done much to insure themselves against depression by accumulating reserves in periods of prosperity on which they can draw in adversity to maintain the efficiency of their plants. And a forward social policy has already accomplished something towards the mitigation of the special problems which have their origin in fluctuations of employment.

Decline of the Bill of Exchange

PERIODIC dissertations on the decline of the London discount market—as a bill market, though not necessarily as a profit-making institution—usually involve some more or less vague estimation of the reduction which has recently taken place in the volume of commercial paper available for discount. Such estimates, unless they are made in high quarters, are normally given as the product of guesswork based perhaps on personal experience of a relatively small part of the business of the discount market. This refuge in rough estimates and generalities is surprising in view of the fact that official data exist which make it possible to estimate with a fair degree of accuracy the average amount of bills of exchange and promissory notes outstanding year by year in this country.

The necessary information is to be found in the annual reports of the Commissioners of Inland Revenue, of which the latest, covering the financial year 1936-37, has recently appeared. In the tables showing the detailed distribution of receipts from stamp duties appear items giving the receipts from stamps on bills of exchange and promissory notes.

These figures in turn are divided between the United Kingdom north and south of the Border—a distinction of no great interest for our calculations—and also—much more important—between foreign-drawn and inland-drawn paper. In the financial year 1936-37, for example, receipts from stamps on inland-drawn bills amounted to £265,386, against £242,534 for the preceding year. Corresponding figures for foreign bills were £286,065 and £276,463 respectively.

Stamp duty on bills, whether foreign- or inland-drawn, is at the rate of 1s. per £100. To calculate from this fact and from the published figures of receipts in any given year the average amount of bills outstanding in that year it is necessary to make an assumption as to the average currency of the bills. This average can, in fact, be assumed to be three months, with a negligible margin of error. Over 90 per cent. of the bills negotiated in this country are three months' bills, and among those that depart from this norm the shorter dated tend to balance those drawn for longer periods. One other uncertain factor has to be allowed for; but its incidence also is so small that it does not materially affect the validity of the calculations. On bills drawn and payable abroad, but negotiated in this country, the stamp duty is half the full rate. The experience of the discount market suggests, however, that the volume of such paper coming forward for discount in London is exceedingly small. Its effect on the absolute figures of our calculations will be correspondingly unimportant; and since the proportion of these bills to the total discountable paper in the market remains fairly constant, the effect of this factor on the comparative aspect of our calculations may be ignored.

The method used in our calculations may be briefly explained. Taking as an example last year's receipts of £286,065 from stamps on foreign-drawn bills, we assume them to be three months' bills, paying duty at the rate of 1s. per cent. or $\frac{1}{4}$ per mille. Thus, $£286,065 \times 2,000 \times \frac{1}{4} = £143,032,500$ is shown as the average amount of foreign-drawn paper outstanding in this country during the twelve months to March 31st last. These calculations have been made for the two classes of bills for each of the past

eleven financial years, and the results have been plotted on the accompanying chart. The latter provides an impressive illustration of the decline in the volume of both foreign- and inland-drawn bills since 1929. In the case of the former the annual average was brought to one-quarter of its former figure within the four years that followed the 1928-29 high level of £540 millions. The subsequent recovery in the volume of these bills has been comparatively negligible. In the case of inland-drawn bills the total outstanding was almost halved between 1929-30, when it stood at £203 millions, and 1932-33, when it had declined to £111 millions. The subsequent recovery in these bills has been greater than that in foreign bills, both absolutely and relatively.

The amount of bills outstanding is a product of two factors: the volume of trade financed by bills and the level of commodity prices. Normally the two pull in the same direction: for business activity is reduced when prices fall, and *vice-versa*. The sharp decline in the amount of foreign bills outstanding during the period 1929 to 1932 is a

striking illustration of the severity of this twofold pull. In interpreting this decline, however, a non-commercial factor must also be taken into consideration, i.e. the slump which has occurred in finance paper. The peak of £540 millions of foreign-drawn bills reached in 1928-29 was to some extent a result of the abuse of the bill of exchange by the indiscriminate extension of acceptance credits to Germany and other Central European countries where they were not always used for strictly commercial or short-term purposes. But for the standstill agreements which followed the 1931 crisis, the decline in foreign-drawn bills shown in the chart would have been even steeper. The slight recovery in foreign-drawn bills since 1933-34 is the net outcome of opposing

forces. On the one hand, the clearing up of the 1931 tangle has been proceeding and the gradual thawing of credit frozen in the crisis of that year has involved a steady reduction in standstill and similar bills. On the other, during the slow recovery in the volume and value of world trade, more foreign bills have come to London for discount. In particular, acceptance credits by London banks to countries in the sterling area have been on the upgrade since 1933. Nevertheless, progress has been laggardly enough to confirm the complaints of the discount houses regarding the chronic dearth of foreign-drawn bills, on which the greatness of the London discount market was formerly built.

The decline in inland bills after 1929 was not as steep as that of foreign bills because the volume of inland paper was not swollen by the intrusion of finance bills. The extent of the fall in the volume of inland bills is therefore a more accurate measure of the decline in commercial activity, allied to the lower level of commodity prices in this country during the period. One of the most disappointing features revealed by the chart is the meagreness of the recovery in the volume of inland bills since 1933. The great efforts which have been made to repopularise the bill of exchange as an efficient and cheap means of financing domestic trade have apparently failed to achieve conspicuous success. The latest figure of domestic bills shows

ESTIMATED TOTAL BILLS OUTSTANDING IN UNITED KINGDOM (million £)

FASTER WORKING IN STEEL PRODUCTION

FASTER working in steel production has now been made possible with the introduction of two new basic refractories. These bricks, which have chrome-spinel as their basis, enable higher maximum safe working temperatures and so output can be speeded up. In fact, steelmakers now operating their basic open hearth furnaces with Saxpyre and Spinella bricks are convinced that they mark a considerable advance and an achievement of great importance to the steel industry.

★ Please write for the new booklet describing fully the advantages of Saxpyre and Spinella bricks.

We are in a position to supply all types and classes of refractories to meet every need.

SILICA BRICKS FIRE BRICKS
MOULDING SANDS OF EVERY TYPE

High Temperature Insulating Bricks, Cements and Concretes—a marked advance in the achievement of fuel economy. No furnace user can afford not to investigate this new method of saving money and time.

Our Insulation department will be pleased to advise on all problems regarding the loss of heat from furnace structures.

them to be still £70 millions below the 1929-30 average—though at that time nothing had been heard of the publicity campaign for the bill which has lately been conducted with considerable energy.

The decline in the commercial bill of exchange—which gains even greater significance if seen against the background of the increase both in the personnel and the capitalisation of the discount market since the war—has fortunately been offset to some extent by the growth of the Treasury bill. In many ways, however, that is not a satisfactory substitute. Its discounting calls for no special skill and has in fact become stereotyped to the point at which it now yields next to no profit. Moreover, the Treasury bill may be a transient affair. Its continued existence at anything like the existing volume must depend on Treasury

policy, whose experts may well decide, if the opportunity arises, to carry through large-scale funding operations. We should not forget Lord Bradbury's dictum, applying to the relations between the market and Treasury bills the saying that "the Sabbath was made for man, not man for the Sabbath." The ultimate result of the decline in the commercial bill of exchange must therefore be to wed the discount market more strongly than ever to its business in floaters and gilt-edged securities of more or less short currency. It may be well to remember that the change in the primary business of the market involves problems of structure, technique and adaptation which have hardly been tested during the long period of abnormally cheap money, which is still with us.

Armament Shares

WITHIN a fortnight of the publication of the defence estimates, and but a few days after the Prime Minister's announcement that Britain's re-armament expenditure is to be accelerated, the reports of several companies with a stake in re-armament have been issued. First and foremost, the results of the Vickers' group are now in the stockholder's hands. Cammell Laird, which has important affiliations with the Vickers' group, has also published its report; the results of Thos. Firth and John Brown, and Projectile and Engineering are available, while those of Hadfields, whose distribution has been increased, are due shortly. The time is opportune for a review of armament company prospects.

First, we may consider the general trend of profits since the publication of the fateful White Paper early in 1935. In the table at the foot of this page we give the record of nine companies since that year. Our list of beneficiaries from re-armament is not, of course, exhaustive. It excludes aircraft manufacturers, engineering concerns interested in the mechanisation of the army, and more than one shipbuilding concern which is now carrying out Admiralty contracts. On the other hand, it includes the main bene-

ficiaries from naval shipbuilding, heavy armament, and projectile contracts. The Vickers' group is predominant. The company's own profit record is illustrated in the accompanying chart, but for investment purposes, a closer analysis of the group's structure and earnings is necessary.

The group's activities include every phase of armament work, from the manufacture of armour plate to gun-mountings, and from naval shipbuilding to aviation. To the market's disappointment, however, last year's profits did not keep pace with increased activity; nor has the writing-up of the capital towards its former nominal amount been carried further since a 50 per cent. capital bonus was declared two years ago. English Steel, at the base of the Vickers' pyramid, is one of the leading armour plate manufacturers. Its experience last year emphasises two factors common to the whole group—namely, conservative computation of profits and substantially increased tax provisions. Total profits increased from £1,059,446 in 1936 to £1,317,399 last year, but both figures were struck after providing an unstated amount for contingencies. Whereas no tax provision was required in 1936, no less than £360,000 was charged last year. This explains the

apparent anomaly that net profits were reduced from £722,452 to £649,809 in a year of greater activity.

We may proceed to trace the distribution of English Steel profits between the Vickers group and Cammell Laird. Vickers itself receives £66,867 gross in respect of its debenture holding, while Vickers-Armstrongs receives £241,000 approximately (after tax) on its holdings of preferred and deferred ordinary shares. The profits of Vickers-Armstrongs have increased from £1,465,746 (after charging £250,000 paid on the cancellation of a profits guarantee policy) to £1,965,550. The last figure is reached after providing an unstated amount for contingencies, "including those arising out of the re-armament programme." This salutary reminder that armament companies must take heed of the future would have been even more effective if the actual amount had been revealed. Of the disclosed increase in Vickers-Armstrong earnings, only a relatively small part reaches the parent company; for taxation requires £648,010 against £372,478, and depreciation receives £450,000 against £325,000. Dividends are brought up to date on the "A" preference capital, but the 19 months' payment on the "B" preference shares leaves dividends in arrear since July, 1929.

Altogether, Vickers receives, first, £863,171 (after tax) from Vickers-Armstrongs—an increase of £103,487 over the previous year; secondly, nearly £67,000 gross from English Steel direct; and, thirdly, £75,000 from its joint interest in Metropolitan-Cammell ordinary. In sum, Vickers' profits are increased from £1,619,243 to

in profits. Cammell Laird, incidentally, like John Brown and Swan Hunter, is substantially interested in mercantile shipbuilding, an industry in which new business has recently been disappointing.

We may next consider the results of two projectile concerns—Hadfields, and Projectile and Engineering. The former has declared a dividend of 22½ per cent. on its ordinary capital, which was increased by last year's debenture conversion offer. The trading profits of Projectile and Engineering are nearly doubled, and its net ordinary earnings nearly trebled. The ordinary dividend is maintained at 20 per cent., out of earnings of 47.2 per cent. on the increased capital, which is now enhanced by a bonus of 20 per cent. The Treasury estimates for 1938-39 show that projectiles and warlike stores for the three services will require an increased expenditure of £13½ millions, at £41½ millions. This, however, is no direct measure of the increase which will accrue to Hadfields and Projectile and Engineering; for the Army vote includes guns and small arms, in which Vickers and B.S.A. will presumably be interested, while the Air Force appropriation includes expenditure on petrol. It is significant, again, that the Royal Ordnance Factories' estimate for material wages and new works has been increased from £16 millions to £20½ millions gross. There are embryonic possibilities here of a tendency towards nationalisation at some future time.

For shareholders in the shipbuilding and heavy armament concerns, a final analysis of the Naval Estimates—which are quite the most detailed of the three services—suggests the prospects of a continued high level of activity. We have extracted in the following table the estimated expenditure on new construction in the hands of four leading concerns to illustrate our point. No detailed estimate has yet been published of the 1938 naval programme.

VICKERS' PROFITS, 1928-37

ESTIMATED EXPENDITURE ON CONTRACT BUILT SHIPS

		(in £'000s)			Total
		Hulls	Machinery	Gun Mountings	
Vickers-Armstrongs	1937	2,881	1,150	511	4,542
	1938	4,785	1,048	701	6,534
Cammell Laird	1937	1,756	628	376	2,760
	1938	1,721	854	673	3,248
John Brown	1937	1,034	719	205	1,958
	1938	1,938	630	278	2,846
Swan, Hunter*	1937	1,017	720	251	1,988
	1938	1,964	910	456	3,330

* Including Wallsend Slipway and Engineering.

The Vickers-Armstrongs figures are impressive, but those for Cammell Laird, which is due to complete an aircraft carrier this year, show a comparatively small expansion. Presumably, however, the company will obtain some share in the 1938 programme when the orders are placed. The John Brown and Swan Hunter figures show that for the immediate future, at any rate, naval business will afford some protection against the decline in mercantile building.

On the whole, however, a rapid advance in re-armament company dividends seems improbable. These companies have better prospects of maintaining their turnover and dividends than concerns more directly vulnerable to a setback in constructional activity, but they do not provide an automatic hedge against war or inflation. And they are necessarily subject to the risk of some form of public control in political emergency and to the necessity for far-reaching adjustments, if and when the present re-armament demand subsides.

LONDON OFFICES:

City Office: 36 Threadneedle Street, E.C.2

West End Branch: 198 Piccadilly, W.1

£2,020,653, or from £1,348,130 to £1,586,834, after deducting tax on the equity share of earnings. Of the increase of £238,704 net, as much as £178,487 is attributable to higher net receipts from the company's investment and group interests. The balance of £60,000 is due, presumably, to a larger contribution from Vickers (Aviation) and other interests directly controlled by Vickers. The final result is satisfactory, but from the market's viewpoint, unexciting.

Our figures of depreciation provisions and undistributed profits show, in almost every case, an increasing degree of directorial caution since 1935. The Firth-Brown report, for example, shows an absolute increase of nearly 10 per cent. in tax-free earnings, although the dividend has been raised by only 2½ per cent. This decision is obviously material in assessing the prospective dividend from John Brown. The interim distribution has been maintained at 5 per cent. tax free, and specific reference was made at last year's meeting to the conservation of resources against any decline in naval shipbuilding orders. Cammell-Laird's position is not dissimilar. Trading profits last year amounted to £131,296 and investment income to £174,804 (net), of which the Metropolitan-Cammell dividend provided £75,000 and income from English Steel approximately £102,000. The Metropolitan-Cammell dividend, in fact, accounts for the greater part of last year's increase

Finance and Banking

More French Borrowing.—In order to finance defence expenditure M. Blum has this week introduced two new Bills. The first authorises an extension, from Frs. 15,000 to Frs. 20,000 millions, of the borrowing powers obtained under the convention of June, 1937. A month ago the margin remaining out of the original Frs. 15,000 millions had been reduced to Frs. 5,000 millions and a further Frs. 2,000 millions have since been used, leaving only Frs. 3,000 millions in hand. In view of the Government's need for funds and its inability to raise any fresh loans on the Paris market, it has had no option but to resort to yet another dose of inflationary borrowing from the Bank of France. The Bill lays down that the additional five milliards must be used solely for defence, but this provision is so much a question of book-keeping as to make the intended safeguard illusory. The second Bill would authorise the Government to appropriate for defence expenditure any profits earned by the French Exchange Fund. These are estimated in Paris at between Frs. 3,000 and Frs. 4,000 millions, but the depreciation of the franc since the first inauguration of the Exchange Fund makes it very difficult even to guess what is the actual size of these profits to-day. Also the appropriation of these profits is either a piece of book-keeping or else a fresh dose of inflationary borrowing. Both Bills passed the Chamber last Tuesday, but on Wednesday evening the Senate Finance Commission, while accepting the first Bill, rejected the second. The Government in fact is still suffering from an inability to finance itself either out of taxation or by genuine borrowing, and is forced to resort to hurried devices and to live from hand to mouth at a time when the need for defence expenditure is rapidly growing. This state of affairs does not foreshadow a stable outlook for France, either economically or politically.

Schillings to Reichsmarks.—A decree promulgated last week-end provides for the dissolution of the National Bank of Austria; its absorption by the Reichsbank; the disappearance of the Austrian schilling and its conversion into reichsmarks at the rate of 1.50 schillings to 1 reichsmark. The reichsmark became legal tender in Austria from Friday, March 18th, and its displacement of the schilling is to be completed by May 1 next. The barriers of exchange restrictions which lined the former German-Austrian frontier are being rapidly pulled down. This, however, means that they are merely being transferred to the new frontiers of the Reich with countries neighbouring the Austrian province. Until it is known how these regulations will affect the balances of foreign interests in Austrian banks it is difficult to pass any judgment on the rate chosen for the conversion of schillings into reichsmarks. Taking 26 schillings to the £ as the former rate of exchange between Austria and this country, the rate of conversion gives an equivalent of 17.33 reichsmarks to the £. This is about mid-way between the present official rate of the reichsmark—namely 12.30—and the rate for registered marks, which now stands at around 50 per cent. discount. If the converted proceeds of foreign credit balances in Austrian banks are as free as they were when expressed in schillings, the conversion will have been effected on highly profitable terms. If, however, as seems more probable, these balances will be blocked in some way and will be reconvertible into foreign currencies only at the rate for some species of depreciated mark, the foreign creditors will lose substantially.

The first reaction of British banks to events in Austria has been to cancel credits to Austrian banks or firms wherever this step has been possible, i.e. in all cases where the credits were not being utilised. It is not expected that the outstanding and utilised credits will be swept into some

form of standstill, but that they will rank with the comparatively unimportant credits granted to Germany in the last few years outside the standstill agreement. Consequently, they will, for the most part, be cancelled and liquidated on the termination of the commercial transactions of which they are the counterpart. There has, finally, been some discussion concerning the fate of Austrian gold deposited in London by the National Bank of Austria. A question asked in Parliament suggested that the metal—whose value is estimated at about £5 millions—should be attached as collateral guarantee in respect of the potential liabilities of the British Treasury on Austrian external loans. The Prime Minister's answer made it quite clear that no action on these lines was contemplated. Presumably the gold will be transferred to the Reichsbank's account as soon as the formalities of amalgamation are completed.

Mexican Oil and the Peso.—The threatened expropriation of foreign oil companies' properties in Mexico has already had drastic reactions on the Mexican exchange position. On Saturday of last week the Bank of Mexico decided to suspend all exchange dealings. Since then the quotation of the peso in the London market has been wholly nominal. The suspension of dealings was apparently preparatory to a further devaluation of the peso, of which reports are beginning to filter through from Mexico City. The Mexican authorities are convinced of the desirability of establishing a lower exchange value for their currency as a preliminary to the successful accomplishment of the task of producing and exporting oil, on which they are embarking. The existing link between the peso and the dollar is thus to be severed. Instead of the old figure of 3.60 pesos to the \$, a new ratio—variously reported as 4 pesos and 4.15 pesos—is being established. As soon as the decision has been put into effect, the exchange market will be reopened. To render the new rate effective and to ensure its stability the United States will be called upon to continue their purchases of Mexican silver, since these exports provide the Mexican authorities with the principal source of their free foreign exchange reserves. It is just possible that the United States Treasury may use its powers under the Silver Purchase Act as a bargaining weapon in discussing the question of American oil interests in Mexico. Incidentally, any such action might have considerable repercussions on the world's silver markets. Nothing that Mr Morgenthau has hitherto said regarding the oil dispute suggests, however, that retaliatory action is at present contemplated.

The Bank of Canada.—In his address to the shareholders at the annual meeting held in Ottawa on February 22nd, the Governor of the Bank of Canada explained the part played by the bank in keeping matters on an even keel during 1937, which did not prove to be too easy a year. On the technical side of the bank's activities, it had kept credit conditions easy by bringing about an increase of \$15.0 millions in the chartered banks' cash reserves. This increase had been effected in spite of an expansion of \$23.6 millions in the note circulation, and the chief instrument was an addition of \$25.8 millions to the Bank of Canada's investments. This addition was largely concentrated in the closing months of the year, when the seasonal requirements for currency were greatest and when the chartered banks were reinforcing their cash reserves. Thus this action on the part of the Bank of Canada not only met the prevailing demand for credit, but also supported the security market at a time when the chartered banks were reducing their holdings of Treasury bills and short-term securities. The Governor also alluded to general economic conditions. The partial failure of the wheat crop had affected internal business activity and also in part explained the drop of £107 millions in Canada's active

balance of payments. He admitted that the business outlook for 1938 was largely dependent upon the course of events in the United States. In conclusion, he alluded to the appointment of the Royal Commission on Dominion-Provincial financial relations, of which the secretary is the chief of the Bank of Canada's research department. The Governor welcomed this Commission, whose report, he said, should have a vital bearing upon Canadian affairs.

National Bank of Egypt.—Sir Edward Cook, in his speech to the shareholders at the recent general meeting of the Bank, gave a final quietus to the rumours of devaluation which were inspired last year by the sharp fall in cotton prices. Egypt, he pointed out, had carried through her devaluation measure in 1931, when she maintained the parity of her currency with sterling, in spite of the latter's depreciation in terms of gold. Any fresh and independent devaluation of the Egyptian pound was both unnecessary and also likely to do far more harm than good. At no time had the Egyptian Government contemplated devaluation, nor had the idea received serious attention in Parliament. Sir Edward also pointed out that the effects of last year's fall in cotton prices had been partially neutralised by the achievement of a record cotton crop. The Sudan, too, had had a record crop, and as the cotton had been picked earlier than the Egyptian crop, it came on the market before prices reached their lowest point for the year. In another passage of his speech, Sir Edward alluded to the strength of the Bank's reserves. These reserves had been invested, and one result of this policy had been the Bank's ability to maintain the dividend at 15 per cent.—a rate unchanged since 1931.

Bank of Australasia.—It is common knowledge that in recent months Australian exports have been affected by the world business recession and more particularly by the fall in wool prices. Simultaneously, Australian imports have been running higher than in the preceding year, as the proceeds of the relatively good export issue of 1936 are still being spent. In view of the consequent shrinkage in Australia's active trade balance, it is reassuring to see signs of greater liquidity in the Australian banking position. Thus the latest accounts of the Bank of Australasia, for October 11, 1937, show the following items:—

	October	
	1936	1937
Deposits at interest	23.6	25.2
Current accounts	13.6	15.6
Cash	4.9	10.1
Investments	9.5	8.4
Advances	33.3	33.5

This year's increase in deposits, of both categories, is fully balanced by an increase in the bank's cash, while advances are practically unchanged and investments are slightly lower. Nor has the achievement of greater liquidity affected the bank's profits, for gross earnings have risen from £1,149,000 to £1,282,000. Unfortunately, most of this increase is offset by heavier expenses, mainly in respect of rates and taxes, which are obviously beyond the bank's control. Net earnings are £309,500, which are sufficient to maintain the previous dividend of 8 per cent., and also to leave a sum of £12,500 to be added to undistributed profits.

Hongkong and Shanghai Banking Corporation.—The speech of Mr Miskin, chairman of the Hongkong and Shanghai Banking Corporation, at the bank's general meeting in Hongkong last month, was both informative and highly diplomatic. "Our bank," he said, "is in a delicate position because of its interests in all parts of the Far East, and at critical times like these the old proverb 'Least said soonest mended' proves its aptness." Mr Miskin said enough, however, to reveal the economic cataclysm which has overwhelmed China—a disaster all the more striking against the background of the remarkable improvement in the economic situation of China

during the first half of 1937. But Mr Miskin, like all bankers with long experience of the Far East, has seen too many proofs of the astounding resiliency of China and Japan to be despondent about the long-term outlook. In any case, Hongkong has up to now received the benefit of commercial and financial activity diverted from the areas directly affected by the hostilities—and especially from Shanghai. Mr Miskin, however, was bound to admit that in Manchukuo conditions were becoming increasingly difficult for foreign merchants, and that the "open door" policy was a thing of the past. That observation may, unfortunately, have a wider application.

Eastern Bank.—The net profit earned by the Eastern Bank in 1937 amounted to £127,172, a reduction of some £4,600 on the figure for 1936. This reduction is partly accounted for by National Defence Contribution, which figures for the first time as a charge on profits. The dividend remains unchanged at 7 per cent. Allocations to contingency account are raised from £40,000 to £50,000, but nothing is written off premises account, as compared with an allocation of £10,000 last year. This disposal of available profits leaves the amount carried forward £7,100 higher at £81,191. Balance-sheet changes are slight, but they are indicative of increased commercial activity among the bank's *clientèle*. Advances have risen during the year from £2,756,907 to £3,304,357, while bills receivable have moved correspondingly from £949,895 to £1,164,742. On the other hand, investments are more than £700,000 lower at £5,363,331, and there is a slight reduction in cash. These changes maintain the traditional strength and liquidity of the balance sheet, but are indicative of increased profit-earning power in the assets, taken as a whole.

Chase National Bank.—Among the most sensitive reflectors of economic conditions in any country with a highly developed credit system are the balance sheets of its great commercial banks. On the showing of the Chase National Bank's statement of condition for March 7th last, which has recently been published, economic conditions in the United States for the first ten weeks of the year seem to show a slight trend towards recovery. Compared with the bank's balance sheet at December 31, 1937, there has been a fall of \$13 millions in United States Government obligations and an increase of \$5 millions in loans, discounts and bankers' acceptances. Small though the movement is, its trend is in the right direction. The latest statement, however, continues to reflect the excessive liquidity which is the characteristic feature of the whole United States banking system to-day. Cash stands at \$723.5 millions, against deposit liabilities of \$2,115.3 millions, the ratio thus being over 34 per cent. The balance sheet at the end of 1937 showed substantially the same inflated cash ratio. These excess reserves, apparent through-

£1,300 instead of £1,000

UNDER The Distinctive System of The Scottish Provident Institution the premiums are so moderate that at the usual ages for assuring the yearly sum charged elsewhere for a Whole Life Insurance of £1,000 (with profits) will here secure from the first as much as £1,300 or thereby with right to share in the surplus. The additional £300 is equivalent to an immediate and certain bonus of £30 per cent., as large as can be looked for in other Offices only after many years.

out the member banks of the Federal Reserve system, are a measure of the impotence of cheap and abundant money in itself to stimulate and maintain commercial activity. They clearly suggest, however, that when confidence returns the banks will be able readily to provide all requirements for credit facilities.

Reichsbank's Annual Report.—The Reichsbank's Report for 1937 reveals no very great changes as compared with 1936, but reflects in general the increased activity of home trade. The total turnover (writes our Berlin Correspondent), was Rm. 1,130 milliards, against Rm. 92 milliards in 1936. The gross profit was Rm. 175 millions, against Rm. 170 millions, the increase being due entirely to profits from home and foreign bills and cheques, which aggregated Rm. 150 millions. Total expenditure, including Rm. 23 millions reserve for new building, was Rm. 135 millions and the net profit was unchanged at Rm. 40 millions. The amounts placed to reserve for new building in the past three years total Rm. 63 millions. The dividend is maintained at 12 per cent., of which 4 per cent. will be paid into the Loan Stock fund. The amount of dividend paid is Rm. 18 millions, and an identical sum goes to the Reich. At the end of 1937 the bank's share capital was held by 12,132 Germans, who had 1,239,468 100-mark shares, and 1,577 foreigners, whose total holding was 259,198 shares. The bank comments on the business situation in optimistic terms, but points out that, as national production has now virtually reached full capacity, expansion should no longer be stimulated "from the money side." The Report explains the relatively small increase of Rm. 476 millions, in bills, advances, and securities as being due in part to the Reichsbank's success in placing Reich short-term paper with other institutions.

The gold and foreign-exchange reserves, the Report declares, remained entirely inadequate. The exchange-control system is to be continued. A substantial part of the increase in exports was devoted to a reduction of the clearing and "Aski" trade debts, which in the course of the year fell by Rm. 150 millions to Rm. 313 millions. The gold reserve (which does not include all gold publicly held, such as the reserve of the former note-banks) rose during the year by approximately Rm. 4 millions to Rm. 70,640,000. The holding of foreign bank-notes increased slightly to Rm. 2,570,000. At the end of the year

the total foreign-exchange holding (of which only some Rm. 6 millions appears in the weekly returns) was Rm. 190 millions (including bank-notes), as against Rm. 111 millions at the end of 1936. Of the increase, some Rm. 60 millions was attributable to exchange-risk bills. The Bank's liabilities in foreign currency total Rm. 2,175,400.

Irish Banks' Returns.—The returns for the banks operating in Eire (formerly the Irish Free State) for the December quarter, published by the Currency Commission, are as follows:—

	Thousand (£'s)			
	Dec. Quarter, 1936	Sept. Quarter, 1937	December Quarter, 1937	
			In I.F.S.	Elsewhere
Liabilities:—

Excess of assets outside I.F.S. over liabilities outside I.F.S.	72,642	69,083	...	67,826

The decrease in deposits which took place during the year is due to several causes. A certain amount of savings have been withdrawn for investment in some of the new protected industries. It is to be feared, however, that other withdrawals have been used to help tide the farmers over bad times. The increase in new advances is not fully reflected in the figures, since many old advances have been repaid. The fall in Government securities indicates that the sterling assets of the banks are being reduced in response to the financing of the internal expansion which is taking place as the result of Government policy. Comment on the significance of the decline in the net sterling assets of the banks may be delayed pending the publication of the report of the Banking Commission, in which this question will probably receive the attention it deserves.

MONEY MARKET NOTES

Foreign Exchanges

The London market has been quieter this week. The spot Paris rate rose to Frs. 164½ on Monday, but has since come back to Frs. 162. Dealings have been limited, with little intervention by the French Control. Speculators are not too keen on opening new bear positions, as they feel that if a National Government were formed in France there might be a rapid appreciation of the spot rate. The belga remains at the gold export point *vis-à-vis* the dollar, and gold continues to go to London and New York. The result is that in London the belga moves in sympathy with the dollar, Thursday's spot rate being bel. 29.48. The New York rate fell to \$4.95½ at the end of last week, with heavy dealings including official sales of dollars. Subsequently profit-taking raised the pound to \$4.97½ on Monday, but there has since been a fresh relapse to \$4.96. The general movement of funds into dollars continues, but this week the turnover has been only moderate. Also the Belgian gold shipments help to check the natural tendency of the dollar to appreciate. No raffits will

quoted for Austrian schillings, but bankers' drafts are obtainable at about Sch. 26, while a rate of Sch. 34 can be obtained by buyers of Austrian notes. The reason for this higher rate is the possibility that at any moment the importation of Austrian notes into Austria will be prohibited.

The Bank Return

There was no change during the week in the note circulation. Comparisons with the past year will be vitiated during the next few weeks by the variation in the date of Easter.

Proportion	29.9%	29.4%	28.8%	29.6%

In the banking department Government securities have fallen back to their level of a fortnight ago, but there has been a small increase in discounts and advances. On the other hand revenue collection, combined with preparation for the April 1st dividend payments, has led to an increase of £4.5 millions in public deposits. As a result of all these movements bankers' deposits have fallen by £9.9 millions.

The Money Market

Money remains very easy and abundant, with bankers' deposits at a high level even after this week's drop of nearly £10 millions. Last week the market obtained a better allotment of Treasury bills, the percentage rising from 36 per cent. on March 11th to 54 per cent. on March 18th. Even so, the market is not able to supply the banks with nearly all the bills the latter are prepared to take. The reason is that this week the market had heavy maturities, which in conjunction with the meagre allotments

obtained during February have reduced the market's supply of bills.

	Mar. 24, 1937	Mar. 17, 1938	Mar. 24, 1938

Three months' bank bills	1½-9½	1½-9½	1½-9½

* Viz. 1½ per cent. for loans against Treasury bills and other approved bills and British Government securities within six months of maturity. ¾ per cent. from loans against 1 per cent. Treasury bonds and other gilt-edged stocks within six months of maturity. 1 per cent. for loans against other collateral.

Next week there will be a seasonal distortion of conditions in the money market, for there will be no maturities of Treasury bills from March 25th until the end of the month. This reflects the conditions prevalent during the last week of December, when the market did not apply for Treasury bills so as to augment its cash resources at the end of the year. Meanwhile, there will be heavy applications for Treasury bills to be paid for during the closing days of March, as these are end-of-June maturities. Hence the market will be

paying out far more than it receives, and so will need special assistance to tide it over the end of the month. There is no doubt that this assistance will be forthcoming.

The Bullion Market

Dealings in gold have shrunk in volume during the past few days. There is less demand for hoarding purposes and purchases have been largely made by arbitrageurs. The latter, however, have not been anxious to operate, as the market in dollars has also become narrower and so it is not quite so easy to cover gold purchases made in London for re-sales against dollars. Nevertheless, after the fixing on Thursday morning, the price rose to 140s. 2d. and even to 140s. 2½d. per ounce, the latter representing a premium of one penny.

The tension in Europe has as usual stimulated the Indian demand for silver, but India is not inclined to pay much more than 20d. per ounce for two months' silver. There is also little demand for the cash position, in spite

of the depletion of stocks caused by the heavy New Year American purchases of cash against sales of forward, the effects of which are still noticeable. On the other hand, any rise in the cash price above the present level tends to bring fresh offerings on to the market. The holidays in India are now at an end, and the real question is whether the up-country demand will revive sufficiently to necessitate the replenishment of Bombay stocks. This is one of the more important points in the short-term outlook for the market.

INSURANCE NOTES

	1936	1937
Ordinary trading profit of the year	514,448	542,251
Brought forward	147,918	156,771
	662,366	697,022
Bonuses to policyholders	455,595	456,104
Staff pension fund	50,000	...
Strengthening reserves	...	77,677
Reserve	50,000	...
Carried forward	156,771	113,241
	662,366	697,022

successive year is 3 per cent., but it is stated that this declaration must not necessarily be regarded as a regular rate. The bonus which is declared for the Clergy Mutual is the same as in 1936, namely, a minimum of 4 per cent. of the sum assured. For the Metropolitan there is an increase of 5 per cent. in the rate of abatement, which repeats the declaration of the previous year.

Total assets increased from £29,279,000 to £30,289,000. Mortgages and loans amount to £8,791,000 against £8,023,000, and British Government securities to £4,487,000 compared with £4,284,000. Debentures were smaller by £142,000 at £3,597,000 and preference stocks by £44,000 to £2,817,000, but ordinary shares amounted to £3,299,000 against £3,152,000. The investment reserve fund remains unaltered at £1,400,000, and other special reserves account for a further £638,000. In addition, the aggregate excess of current market values over book values of assets is about £500,000. The total of these three items is equal to 8.4 per cent. of the total assets, compared with 13 per cent. at the close of 1936.

Provident Association of London.—This Association is particularly identified with house purchase in combination with life assurance or sinking fund policies. Of the total assets of £14,064,000 some 53 per cent. consist of mortgages on property. Indeed, the

lengthy report is mainly concerned with statistics relating to the company's loans, which are doubtless informative to those who are in close touch with the affairs of the company, but make difficult reading for the outside commentator. This is regrettable, for a less lengthy report would admirably bring out the undoubted merits of the company. New life assurances in 1937 were practically unchanged at £2,214,000. The life assurance fund increased from £10,044,000 to £10,924,000. The bond investment and endowment certificate funds (closely resembling sinking fund business) have fallen rapidly, and now amount to £532,000 against £823,000 at the end of 1936 and £1,161,000 two years ago. The company's annuity rates are favourable, and a large amount of this class of business, which seems eminently suited to the nature of its assets, is obtained. Last year consideration moneys for immediate annuities totalled £512,000 against £539,000 in the previous year.

The net rate of interest earned on the total funds fell by 2s. 3d. per cent. to £3 15s. 8d. per cent. An annual valuation of liabilities is made; interest is assumed at 2½ per cent., 3 per cent. and 3½ per cent. for life policies, sinking fund policies and annuities respectively, but the bases of mortality are not stated. Apart from mortgages the assets consist mainly of Stock Exchange securities, the current market value of which on December 31st last was "substantially more than their book values." During the year the most noteworthy change was in municipal securities, which increased from £948,000 to £1,131,000. Ordinary stocks amount only to £19,000. The financial position of the company is strong. Apart from the excess of market values over book values and the undisclosed valuation item "carried forward," there are various free reserves aggregating over £1½ millions.

Scottish Amicable Life Assurance.—The 112th report of this excellent society is a record of continued solid achievement. New sums assured last year were greater by £49,000 at £2,122,000 and constituted a record. Claims by death amounted to £360,000 against £327,000, and although the mortality experience seems to have been rather less favourable than in the previous year, it was well within that expected by the A1924-29 table used in valuing the liabilities. The age distribution of deaths is given each year in the report. The figures for the last three years are not without interest.

Age	1935	1936	1937
Over 90	11	7	8
80-90	39	58	46
70-80	66	75	58
60-70	61	43	61
Under 60	83	73	98
Total deaths	260	256	271
Average age at death	66.1	68.7	65.1
Actual claims	77%	87%	93%

These figures afford support for the view that the ideal life assurance policy may well be a whole life assurance in a first class office with premiums ceasing at, say, age 60 or 65 and participating in profits (which almost invariably continue after the cessation of premiums). The total assets of the Scottish Amicable increased last year from £12,738,000 to £13,146,000. Combined British, foreign and Colonial Government securities amounted to £3,780,000 against £3,870,000. Debentures increased from £2,734,000 to £2,846,000 and preference stocks from £2,410,000 to £2,418,000. Ordinary shares were £46,000 lower at £1,102,000. The increase in assets is more than accounted for by a new item of £492,958 for "loans to Standard Property Investment Company, Limited."

★

Life Association of Scotland.—This company has now attained its centenary. New sums assured in 1937, at £1,619,000, were only £42,000 smaller than the record figure of the preceding year, in spite of the fact that the rate of bonus declared at the end of 1936 was reduced by 5s. per cent. to the modest rate of 35s. per cent. per annum, calculated on the sum assured only. The net rate of interest is £4 0s. 1d. per cent., against £4 1s. 1d. per cent. Death claims fell from £353,000 to £281,000, and surrenders from £68,000 to £61,000. Total assets increased from £8,191,000 to £8,438,000, and, except for an increase from £502,000 to £842,000 in loans on public rates, there was no special change in the distribution of the investments.

★

Marine and General Mutual Life Assurance.—This small mutual society was founded in 1852 and has always had a close association with the shipping industry. New sums assured in 1937 amounted to the record figure of £525,000, the corresponding figure in 1936 being £462,000. Annual premium income increased by £8,000 to £226,200. The net rate of interest earned on the funds was 3d. per cent. higher at £4 5s. 10d. The interest income benefited by the payment of cer-

tain arrears in respect of previous years. Death claims amounted to £138,000, compared with only £80,000 in 1936, when the society enjoyed particularly favourable mortality. Total assets amount to £3,884,000, of which the unusually large proportion of 85 per cent. is invested in Stock Exchange securities. In spite of some depreciation in investments during the year, market values still appear to exceed book values by a substantial amount. In the words of the chairman: "... failing a major catastrophe our position is amply covered."

★

Co-operative Insurance Society.—In the ordinary branch of this Society, new sums assured last year showed practically no change at £3,461,000. The rate of interest rose by 3d. per cent. to £3 19s. 10d. per cent. In the industrial branch premium income increased by 11 per cent. to £4,664,000. Commission and expenses were 34.8 per cent. of the premium income, against 35.7 per cent. The net rate of interest in this branch was £4 10s. 10d. per cent., compared with £4 12s. 3d. per cent. The results of the last two valuations are given below:—

	1936 Ordinary Branch £	1937 Ordinary Branch £
Surplus earned during the year	260,707	262,464
Profit on investments	—	14,975
Brought forward	65,457	72,553
326,164	349,992	
Bonuses to policyholders	253,611	279,619
Carried forward	72,553	70,373
326,164	349,992	

	1936 Industrial Branch £	1937 Industrial Branch £
Surplus earned during the year	299,209	276,958
Profit on investments	—	21,744
Brought forward	98,752	111,530
397,961	412,232	
Bonuses to policyholders	286,431	258,266
Carried forward	111,530	153,966
397,961	412,232	

In the ordinary branch the rate of reversionary bonus is again 36s. per cent., calculated on the sum assured. In the industrial branch the satisfactory declarations of 1936 were repeated.

★

Further expansion took place in the fire and miscellaneous branches, where the premium income increased from £1,657,000 to £1,787,000 and the transfer to profit and loss was £201,000 against £149,000. Some £96,000 was transferred to general reserve, against £70,000 in 1936; and £46,500 was paid to policy-holders in the general branches. Total assets increased from £24,618,000 to £27,634,000. Mortgages and loans were £891,000 greater at £5,797,000, but British Government stocks were again unchanged at approximately £2 millions. British municipal securities rose from £3,798,000 to £4,601,000 and debentures from £7,320,000 to £8,617,000. Preference stocks were £57,000 smaller at £2,444,000. As usual, ordinary stock holdings are insignificant in amount. In the aggregate, the market values of Stock Exchange securities on Decem-

ber 31, 1937, exceeded book values, after taking into account the investment reserve fund of £442,000. There is a general reserve fund of £412,000.

★

Maritime Insurance Company.—This marine company, whose share capital is held by the Scottish Union and National, has a record of consistent success. Last year's claims, which are not divided into the underwriting years to which they apply, amounted to £301,000, equal to 78 per cent. of the premium income of £387,000. Premium income in 1936, 1935 and 1934 was £326,000, £309,000 and £303,000, respectively, while claims amounted to 70 per cent., 71 per cent. and 71 per cent. On this occasion nothing has been transferred to profit and loss against £25,000, £30,000 and £40,000 in the preceding three years. The financial position of the company is strong, and in view of the exceptionally large amount standing to credit in the profit and loss account, the directors have transferred £100,000 to general reserve, which has been brought up to £300,000. The directors further recommend, in addition to the usual dividend of 6 per cent., a cash bonus of 100 per cent., less tax, on the paid-up capital of £500,000. Total assets, before payment of this bonus, amount to £1,925,000. Practically the whole of this total consists of Stock Exchange securities, taken at or under cost, but in no case in excess of the middle market price on December 31st last. In addition to the general reserve there is an underwriting fund of £411,000, equivalent to 106 per cent. of the premium income.

★

Merchants' Marine Insurance.—The policies in this company are guaranteed by Employers' Liability, which owns the entire share capital. There is a small fire account, from which satisfactory profits have generally been obtained. In the company's main field of activity—marine insurance—heavy losses were incurred for a number of years before 1932. They were followed by some years of modest profits, but in 1936, and again last year, losses were experienced—though only of moderate amount. The results of the last two years are given:—

	1936 £	1937 £
Marine	7,857	13,909
Fire	4,676	8,192
Investment profits	1,778	—
Other profits	1,026	2,013
— 377	— 3,704	
Interest	4,528	6,263
— 4,965	— 9,967	

Marine premium income, which for some time had been steadily falling, increased from £150,000 to £197,000, but first year's claims accounted for 25 per cent. of this figure, against 20 per cent. in 1936. Claims in 1937, on account of 1936 premiums, amount to £71,000, compared with £57,000 in the preceding year on account of 1935 premium income of £153,000. The profit and loss debit balance shows a further increase from £399,000 to £414,000. The balance sheet total increased from £867,000 to £910,000 and "sundry creditors and short loan" rose from £298,000 to £305,000.

Investment

Bleak House.—It was unfortunate for the London stock markets that their inevitably sharp recovery from last week's semi-panic selling should have coincided with a new break in Wall Street. Between Thursday of last week and Wednesday of this week *The Financial News* index of British equity shares recovered 6½ of the 7½ points it had lost during the preceding week. The Dow Jones industrial index, however, fell 6 points in three days, and at one time on Wednesday it was even slightly below the low point of last November. The American news suggests no reason why the market should stage an early recovery. The President's personality has lost all its spell-binding power, and the Administration appears to lack either inclination or desire to produce a really convincing policy for business revival. Business sentiment is becoming increasingly defeatist. The hoped-for spring revival has failed to mature (for a rise in steel operations to 34 per cent. is hardly worth mentioning). Many disappointed bulls are now reflecting that hopes of a summer revival, or an autumn upswing, or a prosperity year in 1939, seem to rest on nothing more solid than the paternity of the wish to the thought. These fears may be exaggerated, but they leave the market defenceless against "chart-selling." In London, this week's events afford no evidence that the market is really reassured about the course of foreign affairs. The Government's technique of postponing one European crisis to the next has not prevented markets, in the last fifteen months, from suffering a series of successive declines and meeting each new crisis on a lower initial level of values than the last. And every postponement has carried less conviction than before. On this occasion the Prime Minister has admitted, for the first time, the reality of fears of substantial trade recession, and against that admission the half-hearted tonic talks of Parliamentary Secretaries appear to the market to lack conviction. Altogether, neither London nor Wall Street appears to offer a hopeful field in the immediate future even for the agile in-and-out speculator.

★ ★ ★

Stock Exchange Committee Election.—Little interest was aroused by Monday's election of the Committee for General Purposes. Only 1,927 members took part in the ballot, the poll being thus approximately 47 per cent. About one-third of the members actually in attendance, in all probability, did not think it worth while to walk upstairs to the Committee ante-room to record their votes. This disinclination, of course, largely reflects the absence of any substantial issues dividing "House" opinion at the present time. Unless there is some really outstanding issue, the result of the election turns upon personalities and shows a strong bias in favour of all sitting members offering themselves for re-election. By custom, no propaganda is allowed, and since the total number having access to the floor of the "House" is over 6,000, only a small proportion of the voters can claim acquaintance with the views of more than, say, half the candidates. The effect of these conditions is heightened by the system of election, under which each elector must record precisely 30 votes, representing the number of seats on the Committee. Possibly a majority of the votes are thus cast quite indiscriminately in order to complete the requisite number to make the ballot paper valid. The invariable consequence is that all the sitting members offering themselves for re-election (in this case 28) are re-elected. The arithmetical demonstration of the haphazard voting is provided by the remarkable evenness of the votes recorded in each case, although there are always, of course, a small bunch of particularly prominent members whose prestige secures for them a score or so more than the average. On this occasion there were four new candidates and two places to be filled, which were secured by two jobbers, Mr C. W. M. Praed, of Messrs Francis and Praed; and Mr H. C. L. Fisher, of Hall and Company.

British Railway Capital.—We commend to the attention of our readers a letter on page 685 from Sir Josiah Stamp, chairman of the London, Midland and Scottish Railway. The letter arises from an article on page 562 of *The Economist* of March 12 last, in which we discussed some of the problems of railway capital expenditure, past, present and prospective. In replying to the comments and criticisms which Sir Josiah so ably advances, we may state clearly, at the outset, that when we contrast the accounting of replacement costs which a "reasonably conservative board" can adopt with that which the railways must follow, we do not pass judgment on the relative conservatism of the railways as against the average board. Our point is that, given the need for a continuing expenditure of a capital nature on "betterment" to maintain the competitive position of the concern, an ordinary business can increase its depreciation or obsolescence charge and so finance the expenditure out of revenue; whereas the railways must charge the "betterment" to capital and finance it out of capital monies—unless they are in a position to keep dividends well below earnings and retain revenue in the form of an allocation to free reserves. Railway dividend policy, manifestly, does not now provide for allocations to free reserves. That being so, capital expenditure, whether for "betterment" or for other objects, must be financed out of receipts other than revenue receipts. As we showed in the third article of the series, the railways have been able to draw funds from a number of special sources without having to make public issues of capital. No doubt they will be able to finance their requirements in this way for some time—we did not suggest that the problem was "acute" now. But the "special" sources cannot last indefinitely, and, when they are exhausted, the problem may well become acute, unless profits have recovered sufficiently meanwhile to make practicable substantial allocations to reserve, or issues of ordinary stock. Any large increase of prior charges is clearly undesirable.

★ ★ ★

On a writing down of capital (which we only mentioned in passing, not as a main issue) our argument would run on these lines. Future profits (on the average, and excluding cyclical fluctuation) must either fall, rise or remain much as they are. If they fall there is no immediate object in writing down capital, since the trouble and expense of the operation is only worth incurring so that advantage may be taken of an expected improvement in profits. If profits rise (or stand still) existing stockholders will enjoy correspondingly higher (or unchanged) market values for their stock, whether its nominal value is reduced or not. But if further profit can be obtained by further capital expenditure, the effect of writing-down will be to remove any discount between nominal value and market value which would block an issue of ordinary stock. The subscribers to the new issue will rightly participate in the increased profits which the railways earn on the new capital invested in their concern. Alternatively, if the issue has to be made to prevent a fall from existing profit levels, the old stockholders justifiably

surrender part of their equity to the suppliers of the necessary cash. But the point is that, in either event, the new issue can be made. Without a writing down of nominal values (or a rise in profits to justify present values) it cannot. There need, surely, be no "confiscation of future growth in profits"—unless, for example, the railway boards fear Trade Union pressure directly nominal dividend *rates* rise above a given maximum. As to investors being frightened off by a reduction of capital, experience surely proves that, provided the profits trend is healthy, a concern which has written down capital can raise new money without difficulty.

Electricity Reports

London Associated Electricity.—In 1935 the first step for the amalgamation of electricity distribution in the West End of London was taken—ten years after the generation side had been tackled—through the acquisition by a holding company of the share capital of all the companies. Last year the operating companies were combined into one, which is now the sole subsidiary of the holding company. The remaining steps to complete rationalisation are thus of secondary importance. But past development has left its legacy, as the slow rate of progress shown in the following table suggests:—

	1935	1936	1937
Units sold (millions)	350	386	419
Increase (%)	11.3	10.3	8.5
Revenue from supply	2,454,047	2,612,648	2,736,691
Total revenue	2,764,658	2,898,455	2,994,046
Purchase of electricity	1,046,076	1,104,256	1,177,466
Balance	907,132	983,576	1,007,435
Sinking funds	340,293	362,860	386,092
Deb. interest	67,656	60,761	54,665
Income tax	...	...	12,919
Co-partnership bonus	...	...	40,953
Balance available for dividends	499,183	559,955	512,806
Dividends paid "A"	518,783	519,184	460,055
No. 2 Reserve Fund	4,204	5,713	75,000
Holding Company:—			
Net earnings	462,763	501,055	445,988
Preference dividends	82,647	120,420	120,420
Ordinary dividends (7%)	324,328	325,556	326,093
To stockholders' reserves	55,000	55,000	...

It will be seen that a change has been made in the treatment of "divisible profits." For the first two years of operation these were paid by the operating companies to the holding company. Last year they were retained in the operating company, and amounted to £75,000, against some £60,000 in the previous year. The group's problem appears somewhat difficult, for there is little margin for reduction of prices if profits are to be maintained at a level sufficient to cover the present dividends together with retainable profits under the sliding scale. Yet vigorous expansion would seem to require greater reductions in charges than have yet been made. Will the directors be prepared to face a temporary reduction in earnings in order to break the circle? The relevance of the question is suggested by an expansion of 30 per cent. in units sold during the last three years, compared with more than 55 per cent. by the County of London Company, whose results we discussed last week.

South Metropolitan and South London Electric.—Commenting on the London Associated report, we discuss the relatively poor rate of increase in sales. It is, perhaps, not quite fair to say that the South London and South Metropolitan Companies are faced with exactly the same problem as the West End group; but the difference in their measure of achievement can scarcely be attributed to the difference in their environment. The combined sales of these two associates of the County of London, in fact, have increased in the last three years from under 140 million units to over 230 million units, or by over 65 per cent. At the same time, shareholders have no cause to complain of the fruits of an active policy. The South London Company was able to carry to No. 2 Reserve Fund (representing the "shareholders' proportion of consumers' benefit") £19,386, or more than 3½ per cent. on the ordinary capital, while the South Metropolitan's allocation was £17,500, or 2¼ per cent. These amounts compare favourably with the London Associated's proportion last year of £75,000, or not much more than 1½ per cent. on the ordinary capital.

Bournemouth and Poole Electricity.—This associate of the County of London group is now displaying the well-known "family characteristic" of a high rate of progress. The last three years have seen an increase of more than 50 per cent. in the number of consumers, and of almost 75 per cent. in the number of units sold. The report for 1936 showed that a new scale of charges was put into force in the last quarter of that year, which had been agreed with the local authorities concerned to stand for the next five years. The earnings for 1937, therefore, show a full year's operation at the new scale. The latter has clearly proved attractive enough to stimulate demand, and in two or three years' time, if no further reductions are made, earnings should show a handsome increase. The results are analysed below:—

	1935	1936	1937
No. of units sold (millions)	36.5	47.1	58.7
Increase (%)	8.0	29.1	24.9
Revenue from sale of energy	372,313	425,983	466,916
Trading profit	150,037	166,808	168,484
Interest and dividends receivable	16,977	14,865	14,839
Net revenue	167,014	181,673	183,323
Reserve for depreciation	40,000	42,000	50,000
Sinking fund on dismantled plant	9,429	9,712	9,849
Interest payable	10,850	10,675	10,500
Preference dividends	11,462	11,277	11,092
Ordinary stock:—			
Earned	95,273	108,009	101,882
Paid	86,696	85,297	83,899
Earned (%)	16.5	19.0	18.2
Paid (%)	15	15	15
General reserve	5,000	5,000	5,000
Written off sundry items	3,000	21,235	10,000
Carried forward	17,077	13,554	16,537

The reserve made for depreciation is fully adequate judged by our standard scale; the sinking fund on dismantled plant is a proper addition to make to this allocation, since it is designed to provide for the company's generating station, which is now closed down. The £1 ordinary stock units yield £4 14s. 3d. per cent. at 63s. 9d.

Company Notes

Baldwins' Accounts.—The market was disappointed by the maintenance of the Baldwins' dividend on the increased capital, and the accounts have not provided any new ground for optimism. Gross profits, of course, have increased very satisfactorily from £630,440 to £808,547, but almost the whole of the increase has been swallowed up by increased taxation and extra depreciation necessitated by the high level of operating activity. Income tax and N.D.C. have absorbed £99,606 more than in 1936, and in addition to the ordinary depreciation allowance of £100,000 (compared with £75,000 in previous years) the

board has allocated £40,000 to special depreciation. On the other hand, the board's energetic refinancing programme has effected a net saving of £28,482 in fixed interest and preference charges. Net earnings for the ordinary stock, have therefore increased from £245,530 to £288,462, an increase which is just enough to maintain the 1936 rate of earnings on the increased ordinary capital. The following table analyses the results of the last three years:—

	Years to December 31		
	1935	1936	1937
Gross profit	512,246	630,440	808,547
Depreciation	75,000	75,000	140,000
Income tax and N.D.C.	74,256	125,394	225,000
Fees, pensions, etc.	17,766	21,479	20,530
Debt interest	138,653	133,598	57,544
Preference dividend	50,640	29,439	77,011
Ordinary shares:—			
Earned	155,931	245,530	288,462
Paid	96,588	158,520	188,664
Earned (%)	12.1*	15.5*	15.3*
Paid (%)	7½*	10*	10*
Gen. and contingency reserve	50,000	50,000	102,763
Carried forward	45,348	45,439†	42,474

* In 1935 on a capital of £1,661,732; in 1936, £2,078,947; in 1937, £2,494,737. † After allocating £36,919 for prepayments to converting debenture stockholders and premiums on conversion.

The 1937 profits may, in all probability, represent the peak of Baldwins' expansion during the present trade cycle. The company's own business depends very largely upon the prosperity of the sheet and tinplate sections of the steel trade, and although these branches are not as sensitive to trade fluctuations as the structural steel trade, they have shown a marked deterioration in the last six months. In the longer run the likelihood of keen competition from strip mills cannot be left out of account. At the same time, however, the board's financial achievements during the last five years have been remarkable. A complicated and top-heavy capital structure, involving charges for debenture service of £220,000 in 1933 and £250,000 in 1934, has been replaced by a simple capitalisation of preference and ordinary stock. The financial position, and the stability of the ordinary dividend, are thus greatly improved.

With the report are published the accounts of the main associate, Guest Keen Baldwins, which consolidates the whole of the heavy steel interests of Baldwins and Guest, Keen and Nettlefolds in South Wales. The company has increased its profits substantially from £609,201 to £806,018. In this case also, last year's high level of activity has necessitated increased provision for depreciation: £400,000 has been allowed, compared with £250,000 in 1936. Effective earnings for distribution to the parent concerns have thus risen only from £161,395 to £196,427—sufficient to double the ordinary dividend, an increase which provided £55,000 for Baldwins, compared with £28,000 in 1936. This company has been favoured by the fact that its new plant was erected at a reasonably early stage of the steel boom. It is likely to remain very profitable—the link with the Vickers group may be significant—but it is more doubtful whether it will be in a position to contribute at a greatly increased rate to the earnings of the parent companies.

Associated Electric Progress.—Record business and profits were achieved by Associated Electric last year. Trading profits, after various charges, increased from £1,055,624 to £1,290,008 but after a substantial increase in the taxation provision, and a higher charge for depreciation, equity earnings are little more than £50,000 higher at £613,035. The table and chart in the next column illustrate the conservative dividend policy which has been adopted in recent years.

	1935	1936	1937
Total profits, after expenses and maintenance	828,519	1,055,624	1,290,008
Taxation	179,674	267,574	380,759

* After writing £75,000 off patents and goodwill.
† Of which £100,000 to special reserve and £100,000 to dividend equalisation.

ASSOCIATED ELECTRICAL PROFITS 1928-37

Of the latest reserve provision, special reserve receives £100,000 and dividend equalisation account a similar sum. In the previous year, the appropriation was not earmarked, but a further sum of £75,000 was written off patents and goodwill. A record order book at the end of last year is corroborated by an increase in stocks, held by the whole group, of more than £2 millions to £6,151,298, with a corresponding advance in other current items. The parent company, in fact, has been compelled to obtain a bank loan of £500,000 to finance increased trading. The group is largely, though not exclusively, interested in heavy electrical equipment, and has an important interest in overseas business. Such factors may tend to limit a further expansion in turnover, but the ordinary stock units, at 36s. 4½d., offer a yield of £5 10s., which can probably be counted on during the current year.

Associated Portland Cement.—Preliminary figures issued with the Associated Portland Cement dividend announcement had already suggested an appreciable fall in trading profits last year. Total income, including interest and dividend receipts on investments, after providing for

taxation and sundry reserve provisions, thus shows a fall from £1,687,350 to £1,594,828, of which almost the entire impact is felt by the ordinary stock. Equity earnings are reduced from £879,617 to £796,728, and the 22½ per cent. dividend is covered by the small margin of £9,228, as the following table shows:—

	1935	1936	1937
Trading profits, after tax	£ 1,104,194	£ 1,149,494*	£ 1,054,591*

* After sundry reserves.

The following chart illustrates the company's progress since 1928:—

While gross dividend payments were scarcely affected during the depression, the subsequent advance in earnings has been on a substantial scale.

It is, perhaps, from the balance sheet that the investor will find greatest interest in the latest report. This again shows that substantial additions have been made to fixed assets totalling £538,841, compared with £294,851 in 1936 and £185,914 in 1935. In recent years, such additions have been more than covered by the company's generous depreciation reserve provision and the debenture stock sinking fund instalments. Last year, however, a net addition of £54,000 was made to fixed assets. Apart from a significant reduction in the cash holding, and a transfer of £300,000 from reserve for taxation and contingencies to general reserve, comparatively small changes are shown in other items. This latter transfer, however, may have some inferential importance, in view of the recent absorption of Alpha Cement. It is not incompatible, for example, with the release of sums intended to safeguard the company against the risk of any weakening of the cement price structure—a process which has been repeated more than once since Associated Portland Cement was formed in 1900. A further £500,000 of ordinary capital is shortly to be issued in connection with this transaction, which was originally

based on the comparative earning power of the two concerns. Last year's cement deliveries were a record; whether further re-armament and road construction work will assist the company to maintain its turnover remains to be seen. At 72s. 6d. the ordinary stock units yield £6 4s. per cent.

Dunlop Rubber Profits.—In recent years total profits of Dunlop rubber have been relatively stable. The preliminary statement of net earnings in 1937 announcing the repetition of a 9 per cent. dividend suggests that comparatively little change occurred last year. Net profits for 1937 (apparently struck after depreciation, fees and interest) amounted to £1,591,017, against £1,502,707 (after crediting a repayment of £11,035 by Dunlop Plantations). Taxation, however, absorbs £495,815, against £394,900, and earnings for the ordinary shares are practically unchanged at 13 per cent. Some £250,000 is again provided for reserves, exclusively credited to contingencies reserve, whereas in the previous year general reserve received £100,000. As recently as last October it was announced that trading results to that date compared favourably with those for the same period in 1936. In view of the widespread nature of the company's interests and of increasing difficulties in overseas markets, the usual detailed comment on the various sections will be awaited with especial interest. Shareholders will also be interested in the effect of the fall in rubber prices. It is known that the plantations' interests do not, in actual fact, give the parent company a net advantage from higher rubber prices. On the other hand, a serious fall in prices may involve losses on inventories for material and finished goods. The preliminary profits statement suggests that the company has surmounted last year's difficulties with reasonable success.

British Insulated and Enfield Cable.—British Insulated Cables has maintained a steady improvement in profits during the past four years. During 1937, trading profits and other income, after adjustment for contingent reserves, advanced further from £765,695 to £821,358, while ordinary stock earnings increased from £510,352 to £566,113. Such characteristic progress permits the maintenance of the 20 per cent. cash distribution on the increased capital, leaving an earnings margin of 11 per cent., which is only slightly lower than the previous year's cover. Larger turnover was recorded in 1937, and a slight increase in stocks held at the close of the year suggests a further improvement during the early months of the current year. The company, incidentally, controls British Copper Refiners, whose output doubtless advanced last year, to judge from the increased production of unrefined copper. On the other hand, copper price movements involved difficult costing problems, and a potential setback in general constructional activity at home and abroad would affect the demand for electrical cables. While British Insulated, like the other cable companies, can claim impressive financial and technical strength, it may not be able to reckon on any appreciable expansion in profits in the immediate future. The effect of high raw materials costs on profits was stressed by the Earl of Verulam at the Enfield Cable Works meeting this week. Although the volume of output constituted a record last year, smaller profit margins reduced the year's profits. A slight falling-off in the volume of new business was discernible in recent weeks, but the chairman anticipated a satisfactory year in 1938, despite the threat of high taxation and disturbed political conditions. British Insulated ordinary yield £4 14s. 3d. per cent. at 85s. and Enfield Cable £6 1s. 3d. per cent. at 82s. 6d.

British Aluminium Progress.—The advance in profits recorded by British Aluminium during 1937 is distinctly satisfactory. Trading profits are £171,512 higher at £765,128, and ordinary earnings, after a doubled taxation provision, some £139,251 higher at £398,182. In the last three years the group has made rapid progress, both in its development programme and in its disclosed profits.

Mining Reports

Crown Mines.—Last year's results of this leading Rand producer display at several points a slight set-back from the high level established in 1936. The quantity of ore milled was somewhat lower and average costs higher. Despite an increase of 0.02 dwts. in average yield, therefore, working profit was reduced by nearly £77,000. Development footage was 2,050 feet lower at 145,910 feet and the quantity of payable ore opened up amounted to 3,956,520 tons, averaging 4.8 dwts. per ton, compared with 4,219,980 tons with an average value of 5.3 dwts. in the previous year. Nevertheless, available ore reserves are higher, and non-available down by over 500,000 tons. The following table summarises the working results of the past four years:—

	Years to December 31,			
	1934	1935	1936	1937
Ore, milled, tons...	3,558,000	4,003,000	4,277,000	4,258,000
Revenue per ton...	39/-	34/10	33/6	33/10
Costs per ton	19/10	18/6	18/6	19/1
Profit per ton	19/2	16/4	15/-	14/9
Working profit £...	3,415,290	3,262,040	3,211,870	3,134,909
Net profit £.....	1,898,610	1,834,940	1,938,780	1,881,790
Earned per cent. ...	201.3	194.5	205.6	199.5
Paid per cent.	170	170	190	190
Amount £	1,603,210	1,603,210	1,791,820	1,791,820
Capital expenditure £	210,200	263,290	142,990	54,080
Carried forward £	667,240	635,680	639,650	675,540
Ore reserves (available), tons.....	17,334,920	19,817,130	20,071,400	20,607,500
Value, dwt.	5.7	5.1	5.1	5.0

Additions to the treatment plant reduced the value of the residues to just under 0.2 dwt.—a commendable achievement. From the report of the consulting engineer, a further decrease in capital expenditure appears likely. The company should have no difficulty in maintaining its recent dividend rate, upon which the yield on the 10s. shares at current price of £15 5s. is approximately 6 per cent.

The days when sufficient income was shown to pay 5 or 7½ per cent. dividends have passed; the latest distribution of 12½ per cent. (of which the final dividend of 8½ per cent. is payable on the increased capital) is covered by earnings of 20.6 per cent. Our table measures the scale of this expansion during the past three years:—

	1935	1936	1937
Trading profit, and investment income	£ 486,449	£ 597,181	£ 773,432
Taxation	20,000	34,000	70,000
Directors' fees	22,999	24,250	25,250

Carried forward	62,227	71,158	101,424

In part, the improvement in earning power follows the progress of the Lochaber hydro-electric plant towards full utilisation. Extensions at this centre announced last year will double the output of aluminium then obtained, and provide a return from hitherto unproductive capital expenditure. The balance sheet suggests that little of the proceeds of the cash issue of September last has yet been expended, for cash holdings are practically £2 millions higher. The whole scheme, however, should be completed this year, and it will leave the company in a sound financial position, with revenue and capital reserves of £2,600,000 and a depreciation reserve of £1,350,000 against properties valued at £3,297,702. Investors may regret the fact that, in the absence of consolidated assets and earnings statements, it is difficult to assess the group's actual position—interests in subsidiaries account for £5½ millions out of a balance-sheet total exceeding £13 millions—but they may well feel confidence regarding the future progress of the undertaking. At 47s. 6d. the ordinary shares yield £5 5s. per cent.

Lamport and Holt.—The shipping industry's recovery last year was generous, and the latest report of the Lamport and Holt Line has fulfilled the highest expectations. Total profits, at £187,082, are treble those of 1936, and despite the inauguration of a pensions scheme which absorbs £10,000, there is in addition a net saving of £7,000 in expenses other than depreciation. Dividends have been resumed with a 5 per cent. payment, but the distribution is notably conservative. Depreciation receives £100,000 against £30,000, yet the amount earned for dividend is £61,538 up at £72,152—equivalent to 9.1 per cent.—and the carry forward is £27,512 higher at £40,896. In 1936 2.1 per cent. was earned on the share capital, but no dividend was paid. It appears that the latest improvement was achieved largely in the first half of 1937. The report stresses the considerable rise of freights to and from Argentina in that period, and the absence of all reference to lay-up charges (which absorbed £7,625 in 1936) may be of some significance. The subsequent drop in these freights, to the level at which rates are now on the basis of the minimum freight scheme, clouds the outlook for the current year. On the other hand, the three new motorships delivered since July last affected the 1937 results only slightly, but will presumably be earning revenue during most of 1938. Various changes in the balance sheet reflect both last year's share issue and the improvement in profits. Fixed assets are nearly £200,000 higher at £857,713 owing to large payments on account of new construction. The cash position is much improved, at £228,701, compared with £84,955 at the end of the previous year, and the secured loan of £32,000 to the company has disappeared. The recent decline in freights induces caution in viewing the current year's prospects, which is reflected in the current price of 6s. 3d. for the 6s. 8d. stock units.

Union Corporation.—A preliminary inspection of the accounts shows that, unlike certain Kaffir finance houses, Union Corporation was able last year virtually to maintain its 1936 rate of profit. Hence it repeats the various appropriations of the preceding year. Once again, £90,000 has been set aside, earmarked on the present occasion to exploration reserve account. The final dividend of 6s. per share, makes 8s. 6d. per share, as before. The whole of the dividend was recovered in the market price of the shares after its deduction on Monday last, and the current yield is approximately 5½ per cent. on the basis of the current price of 7½. The new issue of 140,000 shares offered to shareholders last November at £7 will rank for dividend in respect of the profits of the current year.

Rand Mines.—A setback occurred in the earnings of Rand Mines last year, but it is of trifling extent, and follows a long succession of advances. Maintenance of the previous year's dividend rate absorbs an increased amount owing to taxation. A transfer to investment reserve account replaces the previous year's credit from that fund, and the balance carried forward is consequently lowered. Results of the past four years are summarised below:—

	1934	1935	1936	1937
Total income	£ 899,160	£ 925,530	£ 990,510	£ 989,200

† Including forfeited dividends refunded.

The company's portfolio, at £4,347,570, showed an increase of £433,440 last year. As usual, the aggregate value largely exceeds the book value. The principal changes comprise the acquisition of 281,280 shares of 10s. each in the Blyvooruitzicht company and an increase in the number of Durban Roodepoort Deep shares held to 318,230—the latter arising in connection with the new issue referred to in a later note. On the other hand, the company has somewhat reduced its holdings in the Daggafontein and Vogelstruisbult companies. On the basis of the dividends of the past two years, the yield on the shares is approximately 4½ per cent. This, of course, is modest; but Rand Mines, unlike some other Kaffir finance concerns, depends chiefly upon dividends for its income.

Durban Roodepoort and East Rand.—The reports of both of these concerns have points of similarity. Durban Deep last year raised further funds by an issue of 325,000 shares at 55s. The greater capacity of the Roodepoort United reduction plant permitted an increase of 243,200 tons in the quantity of ore treated, which reached 1,209,000 tons. A decline in average yield was more than offset by reduced costs, and profit per ton rose to 6s. 3d. against 5s. 2d. The impact of the new basis of taxation on increased earnings is marked by a substantial rise in the tax provision to £116,850, against £41,820. At the end of the year the balance of working capital amounted to £715,060. The capacity of the milling plants is to be raised to 1,700,000 tons per annum. The consulting engineer points out that the reduction in average value (and, it might be mentioned, increase in quantity) of the ore reserves arises from the inclusion of a considerable tonnage of low-grade ore rendered payable through the reduction in working costs. The recent results of both companies are set out below:—

	Working Profit	Dividends Amount	Per cent.	Carry-forward	Ore Reserves Quantity	Value
	£	£		£	Tons	dwt.
Durban Roodepoort Deep						
1935	216,311	207,000	22½	611,270	4,062,100	5·0
1936	250,560	225,000	22½	223,520	4,528,200	4·7
1937	376,950	270,312	25	222,440	5,145,700	4·6
East Rand Proprietary						
1935	1,130,540	495,000	27½	539,720	8,688,000	5·2
1936	1,178,270	630,000	35	638,580	9,575,810	5·4
1937	1,240,070	630,000	35	580,870	10,271,320	5·3

In 1935 the East Rand Proprietary issued 600,000 shares at 45s. to increase its scale of operations, and at the end of that year working capital on hand amounted to £600,720. On December 31st last the amount had been reduced to £163,640. Capital expenditure continued heavy, and some £206,000 was absorbed from last year's profits. Since capital outlay this year is expected to exceed the 1937 figure, the company may experience some difficulty in maintaining its dividend rate.

City Deep and Modder B.—Perhaps the most interesting item in the City Deep report is the announcement of the sale of two portions of freehold property for some £142,000. This will not be taken into account until actually received, but shareholders may possibly entertain hopes of a bonus distribution in due course. Of the additional funds raised by the share issue in 1936, some £159,700 was in hand at the end of last year, when net current resources amounted to £412,780. Despite a marked reduction in the

development footage, ore reserves show a modest increase in quantity. The new shaft which is being sunk to open up the eastern section of the property has reached 3,520 feet of the anticipated 5,870 feet. Comparative tables showing the results of both companies for the past three years follow:—

	Working Profit	Dividends Amount	Per cent.	Carried Forward	Ore Reserves Quantity	Value
	£	£		£	Tons	dwt.
City Deep						
1935	295,350	129,500	10	140,770	3,033,600	5·2
1936	250,030	144,500	10	186,000	3,397,400	5·0
1937	240,660	159,500	10	253,080	3,532,200	5·0
Modder B						
1935	555,320	420,000	60	235,269	3,053,130	3·96
1936	542,440	385,000	55	212,790	3,085,310	3·93
1937	542,940	350,000	50	217,820	3,187,360	3·96

The report and map of Modder B suggest that little if any primary development remains to be done. Prospecting on the Bird Reef was discontinued owing to the disappointing results.

Other Company Results.—A considerable number of important industrial results have been issued in the past week and our usual analysis of profit and loss accounts on page 727 includes some 95 companies in all. Apart from the iron and steel, electricity and other companies already discussed, our table includes the results of *Maple and Company*, *British Ropes*, *Rorentree and Company*, and *Tunnel Portland Cement*. The profits are discussed on page 728 under the heading "Shorter Comments."

Company Meetings of the Week.—Reports of company meetings commence on page 715 of this issue. At the *Eastern Bank* meeting Mr J. S. Haskell discussed the growth of economic nationalism and its effects upon international trade. He regarded conditions in the United States as one of the keys to economic prospects, but found the present situation there not wholly encouraging. Sir Dennis Herbert disclosed that, at the *Equity and Law Life* triennial valuation at the end of December, the large depreciation in investment values was fully covered by internal reserves, without drawing on the £100,000 investment reserve. Reference was made by Mr R. P. Sloan to the additional business secured by *North Eastern Electric* as a result of increased industrial activity on the North-East Coast. At the *County of London Electric* meeting Sir Bernard E. Greenwell referred to the 15.94 per cent. increase in units sold as a reflection of the company's active development policy. The warning was voiced by Mr John E. James that the profits of *Lancashire Steel Corporation* might tend to be less favourable during the current year, since raw materials were costing more than those used for a portion of the past year. The effect of the war in China and of the lack of recovery in France was underlined by Mr Edward Robson at the *Pinchin Johnson* meeting. Mr H. James Yate, addressing *Radiation* shareholders, justified the economies of standardisation and explained how costs were increased when deviations from standards were required. At the *Godfrey Phillips, Ltd.*, meeting, Mr Arthur G. Phillips reported that during the year some £30,000 had been spent in increasing trading opportunities at home and abroad. In expressing satisfaction with the current year's turnover of *Alfred Dunhill*, Mr Dunhill referred to the growth of pipe-smoking. Colonel J. J. Gillespie, at the *Moss Empires* meeting, described the expenditure incurred in improving the company's properties. Mr John Douglas Broad, addressing the *Apollinaris and Presta* meeting, declared it was the company's intention to develop products made in this country. Sir Alexander Roger, discussing the progress made by operating companies of the *Telephone and General Trust*, referred to Venezuela as a country of possibilities. At the *Ingersoll* meeting, Mr E. S. Daniells reported that sales to date this year showed a favourable increase as compared with the same period of last year.

SETTLING DAYS
TICKET ACCOUNT
MARCH 29 MARCH 31

THE London market began well, with all-round rises in the funds, a recovery in depressed Central European bonds and an appreciable rebound from the previous Wednesday's low levels in industrial issues. But a relative small part of the recovery was due to the return of the investor on any appreciable scale. In gilt-edged stocks, particularly, it was due rather to the closing of bear positions taken in the previous week for "insurance" purposes. The sale of British Government stocks, as always, was the only ultimate protection against the political crisis, but after this position had been reversed this week, buying impetus subsided and the market decided to await Mr Chamberlain's speech before taking further action, keeping the other eye on Wall Street's further retreat.

The nervousness of the funds to political developments was illustrated on Wednesday, when a sharp reaction, particularly in undated stocks, checked the moderate advances of the preceding two days. Fundings and the short-dated conversion issues, however, recorded a net advance on the day. Quotations recovered on Thursday afternoon.

Covering in the *Central European bonds* assisted German issues, but Czechoslovakian loans experienced a sharp setback on the withdrawal of co-operation of the German political parties with the Czech Government and nervousness regarding future political developments. Japanese issues were also sold, but Argentine and Chilean bonds found occasional support.

Home rail stocks opened with a considerable display of firmness, particularly among the preference issues. Southern preferred were well supported, but the traffic returns made disagreeable reading, and in mid-week the stocks lost more than the day's initial gains. Signs of improvement in the Argentine rail group were not fully maintained.

Bear covering in *industrial shares*, coupled with a small volume of bargain hunting, produced better conditions

early in the week, but the best prices were not held after mid-week. The steel list, in particular, responded to recent armament company reports (discussed in a leading article on page 690), but although prices were responsive at first business was not really expansive. Appreciable improvements in such leading electrical equipment shares as British Insulated (whose results are discussed on page 700) were shown. Electrical supply shares enjoyed a steadier investment demand, but tobacco and brewery issues, after initial support, did not maintain their best prices. Aircraft and engineering shares were generally better, though a certain irregularity was evident after mid-week. An easier tone was also found in the miscellaneous industrial section on Wednesday, after substantial improvements had occurred at first. Turner and Newall, Murex and Imperial Chemical Industries slipped back, and Lever Bros. and Unilever and Dunlop were also slightly lower.

Apart from Mexican and Canadian Eagle, oil shares began the week well and small gains predominated. The volume of business, however, declined and prices reacted in mid-week from want of support. Turnover in Mexican Eagles was substantial, a slump on Monday being followed by a harder tendency on news of an appeal to the Mexican Courts.

Owing to the behaviour of the commodity, rubber shares did not share the full advantage of the general improvement early in the week. Business continued very restricted despite a slight improvement, but the market's apathy was illustrated when the ensuing drop in the rubber market failed to affect quotations seriously.

Thanks to the absence of any further bad news over the week-end the *mining markets* began the week cheerfully, with widespread gains in prices. The amount of business then slackened gradually, and by mid-week the earlier exuberance had vanished and quotations eased. Kaffirs started off with one of the best sessions for some time past, but there was no solid foundation for the change, and by Wednesday a reactionary tendency had again got the upper hand. West Africans were in good demand at the opening, and Rhodesian coppers became dull after a short-lived rally.

ACTUARIES' INVESTMENT INDEX

The Actuaries' index of 151 industrial ordinary share prices had by Tuesday last (March 22nd) fallen only slightly to 65·5 from the level of 65·8 a week before, but was nearly 4 points below the level of 69·4 a month before. The corresponding yields are 5·59, 5·53 and 5·22 per cent. A selection of the separate indices follows:—

Group (and No. of Securities)	Prices (Dec. 31, 1928 = 100)			Prices 1938 High

New York

WALL STREET'S worst fears have been realised this week by the collapse of the Dow Jones industrial average, to dip below the low level recorded last November. Wednesday's selling drive, (Continued on page 706)

TENOVA SOCKS never let you down

Tenova socks stay up under their own power. The band at the top, containing Lastex yarn, adjusts itself instantly to your leg, supports the socks gently but firmly all through the day—and goes to the laundry with them. For town, 3/6, 4/6, 5/6 and 7/6. For tennis, from 3/6. For golf, 7/6. Black Silk for evening, 7/6 and 12/6. Obtainable from good shops for men.

TENOVA self-supporting socks

Patent No. 323457. Reg. Design 749674.
Tenova Ltd., 157-161 Regent Street, London, W.1. Regent 2424

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields of fixed interest stocks allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption: where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any increase or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

Capital Issues

AFTER an absence of some weeks, offers by industrial companies have re-appeared. The largest of the week's issues is of an unfamiliar type. Messrs Robert Benson and Company are offering for sale at par £1,000,000 5½ per cent. debenture stock, which is the joint and several liability of two separate companies, *British and Colonial Furniture Company* and *Cavendish Furniture Company*. The companies work in close association as retail sellers of furniture, mainly on the hire-purchase system. Subject to prior mortgages up to £500,000, the stock (which is covered 2½ times by net assets) is secured by a specific charge on buildings, etc., with a book value of £1,006,885, in addition to a floating charge. Total borrowing is limited to five-eighths of outstanding hire-purchase rentals and book debts (at present exceeding £3,000,000). The yield basis of the stock fairly suggests the type of security offered, but the safeguards provided by the Trust Deed are more than usually specific. The *Euglescliffe Chemical Company*, which issues 75,000 6 per cent. cumulative £1 preference shares at par, is an old-established family business in County Durham. Average profits cover preference dividend requirements over 2½ times, and all the ordinary shares will in effect be held by the vendors. The moderate size of the company will limit the marketability of the shares offered. *Cat-tell and Swarbricks Brewery, Ltd.*, have offered at 212½ per cent. premium, 76,000 £1 ordinary shares, permission to deal in which will be sought from the Manchester Stock Exchange. The prospectus does not set out the earnings yield on the shares, but fore-shadows the maintenance of a 20 per cent. dividend and bonus on the increased capital. Statements for information only have been published by *Hulton Colliery, Dudley Brierley Hill and District Gas, and Hornsey Gas*.

PUBLIC OFFERS

Eaglescliffe Chemical Co.—Issue at par of 75,000 6 per cent. cumulative £1 preference shares. Net assets, £151,465, purchased for £149,980. Unsecured loan stock, redeemable at company's option all in cash, or as to £75,000 cash and £74,980 in £1 ordinary shares. Company will use latter alternative. Profits, after depreciation, etc.: 1935, £9,330; 1936, £14,468; 1937, £14,003. Lists closed 9.5 a.m. March 22nd. Oversubscribed.

Catterall & Swarbricks Brewery.—Issue of 76,000 £1 ordinary shares at 62s. 6d. Owns brewery, hotels and licensed properties. Total assets, £917,169. Profits, after depreciation, before bank interest, years to September 30, 1935, £42,865; 1936, £62,303; 1937, £67,397.

OFFER FOR SALE

British and Colonial Furniture Co., and Cavendish Furniture Co.
—Offer for sale at par of £1,000,000 5½ per cent. debenture stock (created jointly by two companies). Redeemable by 1970 at various rates. Retail furniture sellers. Combined net assets, £1,310,311 (goods on hire, debtors, etc., £2,128,711); profits (after allocations for unexpired hire-purchase contracts), years to June 30th: 1935, £193,175; 1936, £203,677; 1937, £271,995. Robert Benson and Co. take issue at 96, or 99½ including expenses.

STOCK EXCHANGE INTRODUCTIONS

Dudley, Brierley Hill and District Gas Company.—Issue of £79,000 3½ per cent. debenture stock, redeemable at par September, 1963. Messrs Seymour Pierce and Company take issue at 100 net. Interest ranks *pari passu* with other loan capital.

Hulton Colliery Company.— Issued capital £180,000; total assets £313,442. Year to June 30, 1937: total profits, £15,055 (including £8,537 from sale of land), or £4,135 balance (after £10,470 capital expenditure).

Hornsey Gas Company.—Issue of £50,000 3½ per cent. debenture stock, redeemable at par March, 1963. Messrs Seymour Pierce and Company take issue at 100 net. Interest ranks with existing debenture stock.

Industry and Trade

Building Well Maintained.—The activity of the building and construction industries is surprisingly well maintained, in spite of all the prophecies of rapid decline. Indeed, with the exception of the coal and metal trades, there is no major branch of industry in which activity has declined so little as in building and contracting. Compared with February, 1937, the proportion of insured workers unemployed last month showed a rise of only 1.6 per cent. in the case of building, and was actually 2.5 per cent. lower in the case of public works contracting. The industries most seriously affected by the decline in general business activity are those which, like cotton and wool textiles, are largely dependent on foreign trade, and in which the time-lag between the placing of orders and their completion is relatively short. Owing to the comparatively long time-lag between the inception and completion of buildings, a substantial proportion of the work now in hand was begun before the onset of the recession in general business activity last autumn. Another reason for the continued buoyancy of the building and public works contracting trades is the increase in construction due to the speeding-up of rearmament and the Government's housing programmes, which appear to have offset the downward trend in dwelling-house building by private enterprise.

The relative slightness of the decline in general business activity since last autumn is due, in no small measure, to the sustained activity of the constructional trades. How important these industries are is revealed by the fact that in July last year some 10 per cent. of the total number of insured persons in this country were directly engaged in them. In addition, the high level of activity in building and contracting has prevented a recession in a large number of ancillary trades. The future trend of general business activity therefore depends, to a large extent, on the course of building and public works contracting. The February returns of building plans passed by 142 local authorities, showing a decline of 26.8 per cent. from the corresponding month last year, are scarcely promising. It appears, however, that the volume of work which remains to be completed is such that a slump in constructional activity is unlikely in the near future. On a longer view, however, the outlook is not entirely reassuring.

Cotton Relapses into Depression.—A remarkable change has taken place in the Lancashire cotton industry since last summer. Not long ago spinners and manufacturers were booked up for months, yarn and cloth was sold at more profitable rates than for ten years past, and employers had to import juvenile labour owing to a shortage of operatives. To-day profits have in many cases disappeared, 40 per cent. of the machinery is standing idle, unemployment is now higher than at any time since 1935, and stocks of goods are larger than for years past. Nor are there any signs of an early improvement. Lancashire admits that the cotton industry has relapsed into a state of depression.

The decline in demand began last summer. The fall in American cotton prices from 8d. to 4½d. per lb. undermined all confidence. But the English cotton industry was no: the only one to suffer, for reports from all Continental, Eastern and American countries indicate a similar reduction in turnover. One of the main causes of the setback was the fall in commodity prices. Exports of cotton piece-goods last month were only 117 million square yards, the lowest figure since the cotton industry attained any size. The unemployment returns also testify to the serious setback in spinning and weaving. The number of unemployed

on February 17th, at 95,000, was higher than in any month since September, 1935. There are now twice as many people out of work as in July last year. Moreover, stocks, both at the mills and in Manchester warehouses, are the largest for years past. Many of these goods were bought months ago, but they are held back because customers, both at home and abroad, do not want them. The position has been relieved a little by better home trade clearances. A rise in raw cotton prices would do much to cause a freer flow of goods. The most that Lancashire can hope for is that an improvement may set in next autumn, but at the present moment there are very few traders who are sufficiently optimistic to predict that the next six months will witness a revival.

Labour and Prices in the Coal Industry.—For the moment coal miners' representatives are concentrating their efforts in negotiation on securing holidays with pay in the various producing districts. In Durham, Lord Gainford has stated that paid holidays, estimated to cost £300,000 or £400,000 if conceded in the current year, would be too expensive, unless reciprocal concessions were granted by the men. In North Wales, however, holidays with pay have been agreed upon. The cost situation is complicated by the various bodies interested in coal prices. There are good grounds for contending that the operation of the coal selling-schemes are onerous upon consumers, although owners and miners are united to contest any modification likely to lead to lower prices. In part, the level of coal prices to consumers is due to distribution costs, and the Prime Minister's announcement on March 16th that a Departmental Committee would be set up to examine and make recommendations about the differences between ascertained pit-head prices and those paid by consumers should be welcomed by producers, workers and consumers alike. The selling-schemes will not be investigated, but all distributing companies, whether colliery subsidiaries or not, will be concerned; and some light may incidentally be thrown on the problem of transfer prices between producers and subsidiary concerns.

Stocks of Primary Products Increasing.—The recession in world economic activity since last autumn, preceded by a boom in the prices of primary products, which stimulated their production, has inevitably been accompanied by an increase in stocks. Changes in world stocks

of foodstuffs and industrial raw materials in recent years are shown in the following table, based on the League of Nations indices:—

INDICES OF WORLD STOCKS (Average of 1929 = 100)			
End of December	12 Food- stuffs	12 Raw Materials	Total
1925	83.4	90.5	87.8
1929	112.2	119.5	116.5
1930	118.0	132.9	126.7
1931	126.5	138.4	133.4
1932	126.9	132.6	130.3
1933	129.5	128.8	129.1
1934	126.7	118.0	121.6
1935	117.2	100.8	107.6
1936	97.8	104.0	101.4
1937†	98.4	118.8	110.3

† Provisional.

Stocks of foodstuffs, it will be seen, have so far scarcely risen, and the index for December, 1937, is still well below the figures for the corresponding month in 1929. The latest index of world stocks of industrial raw materials, on the other hand, is almost as high as eight years earlier. Moreover, the rise in the index of raw material stocks during 1937, amounting to 14.2 per cent., was even more marked than in 1930, when it showed an advance of 11.2 per cent. Indeed, the rapid increase in world stocks of industrial raw materials last year suggests that the attempt to prevent over-production by means of restriction schemes has so far not been particularly successful. Under the circumstances the headlong fall in the prices of many primary products during the past twelve months is scarcely surprising.

The Price of Food.—At a time when the interests of the consumer are all too frequently ignored, some satisfaction may be derived from the knowledge that the Food Council continues its unobtrusive work. This body, originally appointed by the Prime Minister in 1925 to watch the interests of consumers and traders, has just published its annual report for 1937. It points out that food prices rose more last year than in the two previous years combined, and that the seasonal decline which normally takes place in the spring did not occur in 1937. On November 1, 1937, the Ministry of Labour's index of food prices (July, 1914 = 100) stood at 146—the highest figure since March, 1930. It is clear, states the Council, that this rise in the price of food has aroused considerable concern. Present prices should not, however, be compared with

those ruling in the depression without bearing in mind the abnormal conditions of that period. "Now that we have passed out of the period of depression it would be unreasonable to expect slump prices to continue." Nevertheless, the results of the detailed investigations made into the prices of particular commodities (which form the bulk of the Report) suggest that the increase is not in all cases justifiable. Unfortunately the Council has no power except to report and advise, but its work is, nevertheless, not without value.

The price of milk has recently risen less than the prices of most other foodstuffs, but the average for last year was higher than in any year since 1922. As is only natural, therefore, the Council draws attention to the urgent need for reducing the price of milk to the general consumer. It considers that the fixing of milk prices should, in the interests of the community, be placed in independent hands and urges the need for effecting economies in the present system of milk distribution. Commenting on the Potato Marketing Board's measures for raising the price of potatoes last autumn, the Report rightly observes that "consumers are entitled to receive some compensation in seasons of larger production for the higher prices which necessarily rule when the crop is abnormally low. At the same time, growers should be content with a lower return per ton when the yield per acre is larger." As regards bacon production, the Council thinks that, after the breakdown of the contract system, it would have been better to leave curers in unrestricted competition rather than to regulate their sales by quota. The whole industry should, moreover, be supervised by some more independent body, such as the Bacon Development Board, with power to obtain full information on costs in all sections. This latter criticism is being met in the Government's latest plans for the reorganisation of the industry, discussed in last week's *Economist*.

Technical Education.—Complaints about the inadequacy of the technical training of workmen in Britain, compared with instruction overseas, have been perennial since the emergence of foreign competitors in industrial manufacture. The Association of British Chambers of Commerce, in a memorandum to its members, has once more laid stress upon this deficiency. The memorandum claims that more attention is being given to technical education abroad than in England. Foreign technical institutions and instructional workshops are better planned and equipped; and administration is more efficient and clear-sighted. There is some reason for the Association's concern, especially in view of the present shortage of skilled labour in certain branches of British industry and the existence simultaneously of large numbers of unskilled youths and young men. British technical education has in many ways fallen between the two stools of academicism and utility; and co-operation between industry and education has not been all that might have been desired. Yet expenditure on technical education in England and Wales increased from £3.6 millions in 1923 to £5.6 millions in 1936. The Association's warning is timely.

Tin Prices and the Buffer Pool.—Although the official text of the tin buffer pool scheme has not yet been published, practically all its details are now known. The pool is to consist of about 15,000 tons of the metal, accumulated from a special production quota of 7½ per cent. In contrast to similar proposals put forward in the past, the new buffer pool will remain in being for the whole duration of the restriction scheme. It will apparently buy when the price falls below £200 per ton and sell to prevent a rise above £230. In other words, it will transform the present tin agreement into a price-raising scheme. Such a change might well be followed by the re-introduction of the stringent quota policy which gave rise to so much criticism between 1933 and 1935; and might upset the balance

between the price of tin and that of the other principal base metals—especially if the trend of industrial activity remains downward. Nor can the possibility of the formation of a speculative private tin pool, to operate under the shadow of the official pool, be excluded. In this connection it is perhaps significant that a substantial bull account has already been built up during the past few days. The proposed scheme is warmly supported in Dutch tin circles, by most of the smaller Chinese-owned Malayan mines, and among the less efficient producers generally. But the majority of the larger Malayan producers, the London dealers, and, of course, the consuming interests are afraid that the formation of a buffer pool will have harmful effects. Meanwhile, a referendum which was to have been taken in Malaya this week has been postponed until early next month. It is highly likely therefore that the meeting of the International Tin Committee, originally fixed for April 5th, will also be postponed to enable the Malayan Government to consider the views of producers in that area. It is rumoured in London that the Government of Malaya will make a revision of its standard tonnage a condition for participation in the buffer pool. This rumour cannot be verified; but if Malaya's consent is obtained the buffer pool will begin to operate during the summer.

Austria's Fur Trade.—The present organisation of the international fur trade owes much to the activities of Herr Hitler; and his latest *coup* will not be without its effects on the fur markets. When the Nazis came to power in Germany, in 1933 many of the fur dealers of Leipzig were forced to leave the country and carry on their business elsewhere. Many of them came to London, while others established themselves in Vienna. The importance of the Austrian capital as a fur trading centre was consequently considerably increased; but a reversal of this development is now imminent. At a time when most of the large fur dealers are planning to leave Austria, it is of considerable interest that the Czechoslovakian Ministry of Commerce has just opened an inquiry into the possibility of holding large fur auctions at Prague. This inquiry is taking place in co-operation with the Central Chamber of Commerce of Czechoslovakia. No conclusions have yet been reached; but it is not considered likely in London fur circles that auctions in Prague would find support from British, American or French buyers. In the circumstances, therefore, it seems probable that the migration of the Viennese merchants will not benefit Prague, but will probably strengthen the position of London and other large West European fur centres.

INDUSTRIAL REPORTS

Our correspondents from various industrial centres have no cheerful news to report this week. New business in coal—especially export orders—shows no improvement. During the week ended March 12th, for example, the output of coal was lower than during the corresponding week a year earlier. Moreover, stocks are tending to accumulate in certain districts. The volume of transactions in iron and steel remains at a low level though the markets have recently shown a slight increase in activity. Stocks of pig-iron and semi-manufactured materials, however, remain heavy, and until these are reduced new business is expected to remain small. In South Wales the operations of the tinplate industry fell to 46.7 per cent. of capacity during the week ended March 12th and shipments at Swansea were less than half of what they were during the corresponding week a year ago. The cotton trade has relapsed into a state of depression. Moreover, as stocks of piece-goods at weaving sheds and in Manchester warehouses are very heavy, the industry may be forced to curtail its output still further. In the jute industry both spinners and manufacturers have been compelled to reduce output progressively for lack of orders. Activity in the building trade remains at a high level, but the February returns of the value of building plans passed show a substantial decline on the corresponding month a year ago. The latest economic developments at home and abroad are discussed in the *Trade Supplement* accompanying this week's issue of *The Economist*.

Coal

Cardiff.—Conditions on the Cardiff coal market show no material change. Current inquiries are restricted, but a few new contracts have been placed and the Control Board is strongly resisting the efforts of buyers to bring down prices. Stocks are increasing and, in isolated cases, best smalls are reported to have been banked rather than disposed of below the approved export prices.

There has been a decline in the demand for industrial as well as household coals for inland consumption. Uncontrolled coke prices are easier, and furnace qualities are now ruling at between 32s. 6d. and 35s. per ton, compared with 42s. 6d. and 43s. recently; foundry classes are firmer at 45s. per ton, compared with 46s.-50s. a few weeks ago. Patent fuel prices are unchanged. Shipments of coal and coke at the South Wales docks last week totalled 359,600 tons, compared with 408,100 tons the previous week and 398,999 tons in the corresponding week last year. The negotiations about the miners' application for increased wages are proceeding satisfactorily, and it is expected that agreement will be reached without the intervention of the Arbitration Board.

Sheffield.—The market for industrial coal continues very active, and full deliveries under contract are being made. Prices are firmly held. The call for small fuel is well maintained, electricity works and coke plants taking full supplies. Gas coal, on the other hand, moves slowly, and household demand has declined.

Coke is easier; supplies which should be going abroad under contract are not fully taken, and a surplus is left with some makers. There is lessened activity at blast-furnaces, with consequent contraction of coke requirements. The demand for central heating coke is showing a seasonal decline. Export trade continues to be extremely restricted, scarcely any business of substantial weight being transacted. All prices are unchanged.

Workington.—The coal trade is brisk, but as output has increased, it is now possible to satisfy fully the Irish demand. Cross-Channel shipments at 8,000 tons in the week are the heaviest recorded for several years. House coal is in sharp request, and as there is not enough coking coal to go round, Welsh supplies are being imported.

The pressure by iron smelters on the coking plants does not diminish. Prices are firm.

Glasgow.—Trade is moving more slowly. There is a marked lull in regard to export business, although a fair amount of interest is being shown by the Baltic markets in forward contracts. Stocks in importers' hands are apparently still fairly large, and there are signs that buyers anticipate lower prices over the next few months. At the moment the trend is definitely easier in all sections of the market. Industrial demand is also easing in certain cases, while the market for nuts has been affected by the seasonal contraction of buying by the gas and electricity undertakings.

Iron and Steel

London.—The weekly report of the London Iron and Steel Exchange indicates that markets have become more active. It seems possible, therefore, that the usual spring demand is beginning to make itself felt. In some sections of the market, considerable stocks have accumulated; but large

accentuated by the sharp decline in the value of building plans approved in February. A revival of buying interest may be expected shortly, since this is the period of most active consumption; but this will hardly cause a major improvement in prices in view of the fact that production is still in excess of consumption.

Grains

With demand dull and selling pressure from Australia increasing, the wheat markets have again had an easy tendency. Despite a rally on Wednesday, Liverpool futures showed a further loss of about 5d. per cental on the week. Australia's difficulties have arisen in consequence of poor demand for the East and also for the Continent of Europe. Flour prices have eased in sympathy. Maize, however, has shown considerable strength and is slightly dearer than it was a week ago. Business in imported feeding barley remained quiet.

Other Foods

Provisions and Meat.—At the London Provision Exchange the market in bacon was steady to firm, prices being unaltered compared with those ruling a week ago. Colonial butters were sharply reduced and the market was steady at the lower level. Cheese was rather irregular, but Colonial makes were in quiet request and were a shade easier. The seasonal decline in egg prices continued. At Smithfield Market beef was slightly cheaper, but other sorts of meat were mostly unaltered in price.

Colonial Produce.—Except for tea, price changes were few and the markets generally had a quiet appearance. Raw sugar was a shade easier, while the London spot market in coffee ruled quietly steady. Accra cocoas were in quiet request at about unchanged prices. At this week's auctions the demand for Indian teas was strong and prices recorded a general advance. The tone was also strong at the Ceylon sales, plainest kinds being 1d. per lb. dearer and other descriptions all showing appreciable advances.

Miscellaneous Commodities

Oilseeds and Oils.—In the absence of American demand, Plate linseed is easier and Indian varieties have declined under selling pressure. Indian shippers continue to be ready sellers in view of the prospect of an increased new crop soon coming on the market. Harvesting is proceeding apace, and the condition of the seed is regarded as satisfactory. Private estimates indicate a probable yield of half-a-million tons, compared with 418,000 tons actually harvested last season. The possibility of a larger export from India should go some way towards meeting the shortage in Argentina. The exportable surplus from Argentina and Uruguay is unofficially estimated at around 900,000 tons. Cottonseed prices have declined to comparatively low levels.

Trade in vegetable oils is of a hand-to-mouth character, and prices are difficult to maintain. Linseed oil has eased and is now 20s. per ton below the opening of the month and at the lowest level since last November. Cotton oil is slow, but quotations show little change on the week. The demand for oilcakes continues to fall owing to the fine weather.

Rubber.—The uncertainties of the international political outlook, the renewed weakness of Wall Street and the paucity of American demand, have had a depressing influence on the rubber market. Prices show a substantial loss on the week. Doubts have been expressed in the market as to whether the International Committee will reduce the export quota for the second quarter at its meeting on Tuesday next.

UNION CORPORATION, LIMITED

(Incorporated in the Union of South Africa.)

ABRIDGED REPORT OF THE DIRECTORS

In submitting to the Shareholders the Accounts of the Corporation for the year ended December 31, 1937, the Directors state:—

The Accounts are drawn up in Union of South Africa currency, English currency being taken at par.

The net profit for the year is £682,854 14s. 2d., plus £130,950 19s. 3d. brought forward, making a total of £813,805 13s. 5d. The Directors have placed £90,000 to Exploration Reserve Account, and have declared a final dividend of six shillings per share on the old shares (numbered 1 to 1,400,000 inclusive), making, with the interim dividend of two shillings and sixpence, a total distribution of eight shillings and sixpence, or £595,000 for the year. £128,805 13s. 5d. remains to be carried forward.

Your Directors resolved to increase the capital from £875,000 to £962,500 by the creation of 140,000 new Ordinary Shares of 12s. 6d. each. These new shares, which do not rank for the dividends declared as above for the past year, but in all other respects rank *pari passu* with the old shares, were offered to the shareholders for subscription at 17s. 6d. per share in the ratio of one new share for every ten shares held. The subscription was guaranteed for an underwriting commission of 2½ per cent. and an over-riding commission of 1 per cent. on the issue price. The issue realised £980,000, of which £87,500 constitutes an addition to the issued capital, and £892,500 was placed to Share Premium Account. The expenses, including commission, of the issue, have been charged to Profit and Loss Account.

The Share Premium Account of £892,500 has been eliminated by the transfer of £680,000

to Reserve Account, thereby raising that Account to £2,000,000. £212,500 has been transferred to Exploration Reserve Account, which was established in 1936 and then endowed with £50,000.

Exploration expenses, which have fluctuated between £6,949 and £97,416 per annum during the past five years, have hitherto been charged to Profit and Loss Account. The Directors, realising that the value of such expenditure frequently cannot be appraised for a long period and that exploration programmes should not be unduly influenced by their being a direct charge upon annual profits, have decided to charge such expenditure directly to Exploration Reserve Account. That account will receive suitable appropriations from Profit and Loss Account from time to time as and when deemed necessary, and in that respect £90,000 has been so appropriated for the past year. On the other hand, exploration expenses amounting to £97,416 have been charged to the Account, leaving that Account with a balance of £255,984 to be carried to the new year.

Holdings of Shares, Debentures and other securities have been taken into the Accounts at cost or under, but in no case above the market price of December 31st last, or, where no market price exists, above the Directors' valuation. At present market prices, these holdings show a very substantial surplus over the amount at which they stand in the Balance Sheet. The Directors, as on other occasions, have thought it expedient to provide for contingencies by reducing the book cost of certain holdings both below cost and below market price.

The operating results of the EAST GEDULD MINES have been as follows:—

	Tons milled	Gold output (and per ton)	Average price per oz.	Working costs (and per ton)	Working profit (and per ton)	Dividends (and per share)
1936	1,368,591	£2,824,630 (41 3)	140s.	£1,215,243 (17 9)	£1,609,387 (23 6)	£855,000 (9 6)
1937	1,498,000	£3,063,508 (40 11)	141s.	£1,280,839 (17 1)	£1,782,669 (23 10)	£877,500 (9 9)

The ore reserves at December 31st last were estimated to amount to 10,100,000 tons assaying 6·2 dwt. per ton over a stoping width of 60 inches.

The operating results of GEDULD PROPRIETARY MINES have been as follows:—

	Tons milled	Gold output (and per ton)	Average price per oz.	Working costs (and per ton)	Working profit (and per ton)	Dividends (and per share)
1936	1,276,000	£2,321,653 (38 5)	140s.	£917,383 (14 3)	£1,404,270 (22 2)	£1,095,643 (15 0)
1937	1,301,000	£2,294,265 (35 3)	141s.	£939,887 (14 5)	£1,354,378 (20 10)	£1,095,643 (15 0)

The ore reserves at December 31st last were estimated to be unchanged at 9,100,000 tons assaying 5·0 dwt. per ton over a stoping width of 57 inches.

shareholding in East Geduld Mines.

In addition to the profits earned from its own operations, the Company received revenue from other sources amounting to £350,654, which figure includes dividends on its large

shareholding in the MODDERFONTEIN DEEP LEVELS (in Liquidation) have been as follows:—

	Tons milled	Gold output (and per ton)	Average price per oz.	Working costs (and per ton)	Working profit (and per ton)	Dividends (and per share)
1936	588,100	£797,676 (23 9)	140s.	£466,570 (15 8)	£231,106 (8 1)	£150,000 (1 6)†
1937	590,800	£777,552 (19 7)	141s.	£470,342 (15 11)	£107,210 (5 8)	£150,000 (1 6)†

* Of which 9d. was a first liquidation dividend.

† Liquidation dividends.

On THE GROOTVLEI PROPRIETARY MINES workings from No. 4 Shaft were connected with No. 2 Shaft of East Geduld Mines and development work was thus expedited. No. 3 Shaft had reached a depth of 2,693 feet at the end of the year, and it is expected that the reef will be intersected at a depth of about 3,600 feet.

The total footage sampled during the year was 23,650 feet, of which 14,650 feet, or 62 per cent., was payable. The Consulting Engineer estimates the ore reserves blocked out to December 31st last at 2,500,000 tons having an average value of 5·8 dwt. over an assumed stoping width of 57·5 inches.

Orders were placed early in the year for a reduction plant with a capacity of 60,000 tons per month. The Company decided in December last to increase immediately the capacity of this plant to 80,000 tons and further to 120,000 as soon as the necessary development work was completed. To provide funds for this programme, the authorised capital has been increased to £2,800,000, and 301,460 shares have been issued at 75s. per share, of which 290,824 shares were offered to shareholders and the remainder were subscribed for by your Corporation and its associates.

On MARIEVALE CONSOLIDATED MINES No. 2 Incline Shaft was stopped at a depth of 4,498 feet and No. 2A Incline from the bottom of this shaft was begun, the depth at the end of the year being 1,040 feet. The total footage sampled for the year was 19,570 feet, of which 5,150 feet, or 26 per cent., was payable.

To enable the extensive development programme recommended by the Consulting Engineers to be carried to completion, 1,321,866 shares of 10s. each were subscribed for at par during the year; half were allotted to the Corporation and its associates under its preferential right and half were offered to shareholders at par, the offer being underwritten by the Corporation.

On VAN DYK CONSOLIDATED MINES during the year No. 2 Shaft was completed to a depth of 2,152 feet. The total footage sampled was 29,215 feet, of which 12,975 feet, or 44 per cent., was payable. The Consulting Engineer estimates the ore reserves at December 31st last at 1,800,000 tons, having an average assay value of 5·8 dwt. over an assumed stoping width of 40 inches.

Work on the erection of the initial reduction plant with a nominal capacity of 60,000 tons per month has proceeded satisfactorily and production is about to start. Since the close of the year it has been decided that additional development work should be undertaken and provision made for the expansion of the reduction plant to 80,000 tons. In order to supply funds for these purposes the authorised capital was increased to £2,800,000 and an offer to shareholders of 500,000 new 10s. shares at 21s. per share has been made.

IN THE ORANGE FREE STATE, SOUTH WESTERN TRANSVAAL & WESTERN TRANSVAAL geological mapping, geophysical investigation and boring operations have continued throughout the year. It is too early to come to any conclusion regarding these areas.

SAN FRANCISCO MINES OF MEXICO during its financial year to September 30th, 1937, treated a total of 589,470 tons for an operating profit of £453,058. After deducting the usual charges, there remained a net profit of £276,344. Dividends totalling 2s. 3d. per share were declared.

The Corporation has an important interest in SELECTION TRUST, which has large holdings in American Metal Company, Consolidated African Selection Trust, Trepsa Mines and other mining ventures. The Company paid a dividend of 1s. per share and a bonus of 6d. per share in respect of 1936.

Rio Antelope Copper Mines and Rhodesian Selection Trust, in Northern Rhodesia, and Trepsa Mines, in Yugoslavia, benefited by the relatively high prices ruling for their metal products during last year.

BAY HALL TRUST. The net profit for 1937 was £78,953. A dividend of 6 per cent. was declared, absorbing £40,352 on an issued capital of £1,095,875. The carry forward was increased by £18,601 to £37,535. The Trust's investments as at December 31st last showed, at their current market prices, an appreciation of £230,575, or 12·3 per cent. over their book cost of £1,875,138.

SOUTH AFRICAN PULP & PAPER INDUSTRIES. This Company is actively engaged in erecting its pulp and paper factory at Springs, in the Transvaal.

Holders of Share Warrants to Bearer can obtain copies of the full Report and Accounts on application at the London Office, Princes House, 95 Gresham Street, E.C. 2.

COUNTY OF LONDON ELECTRIC SUPPLY COMPANY, LIMITED

FURTHER EXPANSION

The forty-fourth ordinary general meeting of this company was held, on the 22nd instant, in London.

Sir Bernard E. Greenwell, Bt. (chairman of the company) presided and, briefly summarising the more important features of the year's working, said: We have sold approximately 165 million more units to our own consumers, which is an increase of 16 per cent. over the previous year's sales. The gross revenue—£4,762,000—shows an increase of nearly £385,000, while the increase in revenue from sale of current is nearly 9 per cent. Our capital expenditure for the year was over one and a half million pounds, which included large payments for the extensions at the Barking station and also final payments on the new transmission system between Barking and Streatham.

The balance transferred to net revenue account—namely, £2,378,000—shows an increase as compared with 1936 of £215,770, and we propose to pay the same dividend of 10½ per cent., while to general reserve we are transferring again £150,000, leaving to be carried forward to 1938, an amount of £483,396, an increase of £58,108 as compared with the amount brought in.

Our distribution system has been extended and reinforced during the year to meet the growth of load. We have established 170 new sub-stations, laid down 100 miles of high-tension lines and some 500 miles of low-tension mains. I think I am justified on this occasion in reminding you of what your company has done in the way of developing the public service of the supply of electricity and that we have fulfilled our obligations not only to the authorities but also to the public.

MUNICIPAL AND PRIVATE ENTERPRISE

Comparisons have been made between municipal and private enterprise, and the advocates for municipal control have not, I think, given quite a fair picture of the situation. When you realise that private enterprise to-day is responsible under statute for the supply of electricity over 73,600 square miles, whereas the municipal authorities are only responsible for 14,500 square miles, the following facts will show you that not only do they have the more densely populated areas but by far the more lucrative.

The total revenue from working these 73,600 square miles by companies in this country is something over £30 millions per annum, or a revenue of £408 per square mile, whereas the revenue derived by the municipalities from their 14,500 square miles is some £49½ millions, or about £3,500 per square mile. This is stated as a fact, and in no way as a criticism of either method of administration. After all, the ratepayers of any particular town are entitled to ask why their money should be devoted to any large rural area surrounding their town and from which, under local government law, they derive no benefit. These large extra urban and rural areas were left to private enterprise, and it has only been by economic planning and expenditure that such areas have eventually been made to pay.

The proposed legislation, we understand, aims at bringing in some of the smaller undertakings into surrounding big undertakings, but I must say at once that, unless definite savings can be shown to result from this idea, it seems unwise to cause a wholesale upheaval, as from our knowledge of what is happening many of the smaller undertakings are very well managed, and it would be a mistake to force the smaller undertakings to give up their identity. We are quite willing to take in those small undertakings that want to come to us; that has always been our policy. We are supplying a number of such undertakings in bulk, and they have all the advantages of our main transmission lines already, and, naturally, we are very loth to disturb the present friendly feeling which exists between us.

The 15.94 per cent. increase in units sold for the year is a demonstration of the settled policy of development and of educating the public in the new uses to which our commodity can be put. The average rate paid by our domestic two-part tariff consumers for the year was 1.57d. per unit throughout the whole of our area, which, as you know, comprises urban, suburban and rural districts. We still, however, have consumers who, for one reason or another, remain on the flat rates. They are not getting the benefit of cheap electricity available to them under the two-part tariffs, but we have to have regard to the minority still on a flat rate, and last year I was able to report to you that we had reduced this flat rate for our city areas from 5d. to 4½d. per unit; we were at the beginning of this year able to see our way to reduce the flat rate in our suburban areas from 5½d. to 5d. per unit, while in the very rural areas of the county council we have a uniform flat rate of 6d. per unit.

The report and accounts were unanimously adopted.

EASTERN BANK, LIMITED

DIFFICULT CONDITIONS

The twenty-eighth annual general meeting of the Eastern Bank, Limited, was held, on the 18th instant, at 2 Crosby Square, London, Mr J. S. Haskell (the chairman) presiding.

The Chairman, in the course of his speech said:—The past year opened with great promise and in the confident expectation that the activity in commodities and international trade, which developed in the last quarter of 1936, would continue to expand, but these hopes were destined to end in speedy disillusionment and discouragement.

Various adverse rumours were circulated and apprehension was felt that the high prices reached by commodities would lead sooner or later to a serious slump; great nervousness was also created by a report from the United States of America that the price of gold would be lowered, which, although contradicted afterwards, destroyed confidence all over the world. Values depreciated by about 40 per cent. Later in the year the outbreak of hostilities between China and Japan made the position worse.

HOME AND OVERSEAS TRADE

The home trade was not so seriously affected owing mainly to the large expenditure on armaments. Both our imports and exports have expanded, the former in much larger volume; making the visible balance of payments against this country as much as £432 millions, which is continuing to increase this year—a formidable sum even taking into account the invisible exports. Industrialists and manufacturers on all sides are urged not to neglect the overseas trade. You may depend on it that they are quite alive to its importance, but the matter is largely beyond their control. Every country is now striving to become self-sufficient, and instead of being mainly agricultural, East and West alike are extending their factories and building new ones, besides imposing quotas and high duties against foreign goods. Take the case of India: the import of Lancashire goods has declined from £26,100,000 in 1929 to £5,709,000 in 1937. Lancashire exports of yarn have also fallen considerably. India is steadily increasing her own production and has entered into intensified competition with Lancashire goods in other countries. There are also cheap Japanese goods to contend with.

It rests with the Government at home to take a long and broad view of the seriousness of the situation. Firstly, they should reduce by every means in their power the imports of manufactured goods into this country, and, secondly, they should encourage increased production of foodstuffs at home.

India, whose trade was steadily improving, has recently had a most unfortunate setback caused by the fall in the prices of cotton and other commodities. Throughout this unsettled period, however, gilt-edged securities were unaffected and money remained cheap and abundant, showing the soundness of the economic position.

Iraq has had a prosperous year. The latest Customs figures show a large expansion. I would here point out that the branches of the bank do not extend eastwards of Singapore and that we have no commitments in China.

The result for the year, as you will have seen from the report, is a profit of £127,172, against £131,865 the year before. The apparent fall is more than accounted for by the new National Defence Contribution tax. We recommend a final dividend of 4s. a share, less tax, the same as last year.

Taking into consideration the difficulties in business generally, we have come through the past year with a result which I trust you will consider not unsatisfactory.

THE OUTLOOK

As for the immediate future, it is impossible to hazard an opinion; apart from international politics there is the unhappy situation in the United States of America. In the spring commodity prices were declared by the President to be too high and a slump was brought about; lately he has taken the view that they are too low and must be raised, but how is that objective to be achieved? Prices are regulated by supply and demand. Take the case of cotton: the planting and raising of a crop unprecedented in quantity has had the effect of depressing prices, with disastrous consequences all over the world. One remedy, which would no doubt appeal to other cotton-producing countries, would be for America to follow Brazil's example in regard to coffee and burn half the crop. Copper and oil provide further examples of over-production.

We can only hope that the differences between the President and business interests may be composed in the near future. The present fight is ruining their country and where there should have been prosperity there is nothing but despair. If business were given a rest from State interference confidence would return and we might look for better conditions throughout the world.

The report and accounts were unanimously adopted.

EQUITY AND LAW LIFE ASSURANCE SOCIETY

ANOTHER RECORD

The annual general meeting of the Equity and Law Life Assurance Society was held, on the 22nd instant, at 20 Lincoln's Inn Fields, London, the Rt. Hon. Sir Dennis Herbert, K.B.E., M.P. (the chairman), presiding.

The Chairman, in the course of his speech, said: Notwithstanding the large increase every year for many years past, our total new life business, both gross and net, again shows an increase, and establishes a new record; the gross figure is £5,582,113, against £5,144,660, and the net £4,667,681, against £4,658,909. The new sinking fund business is lower than the exceptionally high figure of the preceding year, but is higher than in any year other than 1936, and more than three times as much as in any of the four years before 1936.

Claims by death were well within the expectation under the latest mortality tables, and resulted in a substantial profit. Our total net funds at the end of the year were £28,117,742, against £24,935,078 at the end of the previous year, an increase of £3,182,666.

TRIENNIAL REPORT

I now come to the triennial report. Our last quinquennial report and valuation was made as at the end of 1934, and we then decided to work on three-year instead of five-year valuations, so that we have now to deal with the three-year period ended on December 31st last. The surplus disclosed is £1,266,803, which, allowing for the fact that it arises from three years' business instead of five, is proportionately larger than any previous surplus. It enables us to distribute to our policy-holders £835,381 in bonuses at the same high rates as the end of our last quinquennium, and after crediting the proprietors' fund with its one-tenth of the divisible surplus to carry forward as a reserve an increased sum of £332,522, against £312,682.

The minimum rates of reversionary bonuses are: On whole-life assurances, £2 5s. per cent. per annum; on endowment assurance, £2 2s. per cent. per annum. Higher rates are payable under our method of allotment of bonuses, and rates as high as 4 per cent. have been allotted in respect of some of the older policies. Current bonuses in respect of policies becoming claims during this present triennium will be paid at the full reversionary rate now allotted to them.

The proprietors' one-tenth of the divisible surplus is £98,900; this, together with the interest earned on the proprietors' fund, permits of the declaration of a dividend for the next three years of 4s. 9d. a share per annum net (equivalent to 6s. 4d. gross), as against 3s. net paid for the past three years: it is calculated that this dividend can be paid without resorting to payments received from such extraneous sources as trustees' remuneration, which during 1937 amounted to over £3,000.

These results of our first triennial valuation are, I think, very satisfactory—especially when our Stock Exchange investments had to be valued as on December 31, 1937, a date on which quoted market values had fallen heavily. We were necessarily faced with a large depreciation in the value of these investments, but thanks to the cautious and conservative methods adopted, and to our having set aside the profits on realisation of investments, we have been able to show these satisfactory results after fully meeting the depreciation and writing down our Stock Exchange investments to within their mean market value, while still keeping intact our £100,000 investment reserve. Our balance sheet shows a thoroughly sound position.

PROGRESS SINCE 1929

This is our first annual meeting to be held in our new building, with which we are very well satisfied. Our need for greater office accommodation leads me to remind you of the almost phenomenal growth of the society's business during the eight years forming the present triennium and the immediately preceding quinquennium, and I would ask you to compare the following figures at the end of 1929 with those at the end of 1937:—

	1929	1937
Total funds	£8,704,234	£28,117,742
Total net Assurances in force	15,397,068	40,503,178
Current Annuities in force ...	3,000 p.a.	999,000 p.a.
Net new Life business for the year	1,738,976	8,061,627

As to our prospects for the future, apart from foreign affairs, I see little reason to fear any serious check at present in this country's progress towards increased prosperity.

As regards what one may call the domestic affairs of the society's own business, the position is quite hopeful. Up to date new business this year is quite as satisfactory as usual.

The report was adopted.

LANCASHIRE STEEL CORPORATION, LIMITED

SUBSTANTIALLY IMPROVED RESULTS

The eighth ordinary general meeting of shareholders of the Lancashire Steel Corporation, Limited, was held, on the 18th instant, at 34 Leadenhall Street, London.

Mr John E. James (the chairman), in the course of his speech, said: The earnings from operations for the year to December 31, 1937, have increased to £803,565 from £543,970 for the year to December 31, 1936. This represents a substantial improvement.

The net profit for the year, brought down at this stage, amounts to £628,656, an increase on the net profit of the previous year of £234,595. After adding the balance brought forward, a total of £705,297 is shown. Your directors have appropriated £100,000 to general reserve, thus strengthening the financial position.

Dealing with the proposed appropriation of profits, he said that the board proposed to pay a final dividend of 4½ per cent. on the ordinary shares, making 7 per cent. for the year, carrying forward £78,071. That dividend was higher than the one declared for the previous year. The surplus of liquid assets over current liabilities in the consolidated statement amounted to £1,246,063.

Continuing, he said:—The production of steel in the United Kingdom during 1937—namely, 12,964,000 tons—constituted a record for this country, representing as it did an increase of 1,265,800 tons over 1936, the previous best year. It is difficult to estimate the extent to which the increased production was due to the re-armament programme, but it seems probable that, whatever the proportion may have been, it will be greater during the year on which we have now entered. It is abundantly clear to me that the re-armament programme must take precedence over all supplies of steel for commercial purposes, and you can rest assured that so far as we are concerned any demands the Government may make on us will meet with an immediate response.

DEMAND AND RAW MATERIAL PRICES

In the early part of the year raw materials required to meet the increasing demand were at times almost impossible to obtain, and, as a result, prices of these materials increased to an alarming extent.

The dangers inherent in such a situation were recognised by the British Iron and Steel Federation, and action was taken by that body which enabled supplies of pig iron and scrap to be obtained, though at prices considerably in excess of those ruling during the period before the above-mentioned advances took effect. Attempts were also made by that body to stabilise, as far as possible, prices of coke and industrial fuel, which were tending to become prohibitive as a result of the insistent demand for these materials. I have pleasure in informing you that the steps taken by the Federation enabled the steel manufacturer to meet the demands placed upon him, and a definite shortage of finished steel was avoided. It was necessary, however, to control supplies of finished products to commercial users, enabling them to obtain a reasonable, if not always entirely satisfactory, supply, while at the same time providing for export business on a limited scale and the requirements of the re-armament programme.

Although the foregoing conditions seriously affected steelmakers' cost of production, prices ruling for finished steel products were not advanced until May, 1937, and even then new contracts only were affected. Towards the end of the year the industry decided to stabilise such increased prices to December 31, 1938, in order that the steel-consuming industries might in turn be in a position to make contracts with their customers with the knowledge that prices would not vary during the period to that date.

BENEFIT OF ECONOMIES

The profit of the corporation for the year 1937 has, of course, been influenced by the foregoing factors, but in addition a substantial advantage was derived from the economies which are associated with any considerable increase in the tonnage of steel produced, when that increase, as in the past year, applies to all departments. It must also be recognised that for a portion of the year the raw materials which were being used were out of stocks or deliveries contracted for in the latter part of 1936 at prices considerably lower than those now prevailing, and it seems probable that even if the demand for finished products remains reasonably stable as at present, the earning capacity of the various departments of the corporation will tend to be less favourable during 1938 than during the past year.

Despite the satisfactory figures of production for 1937, the steel industry experienced a recession of forward business during the latter part of that year. The United States suffered a substantial setback and there is little doubt that the reaction in our country resulted to some extent from that position.

The report and accounts were unanimously adopted.

RADIATION, LIMITED

CONTINUED PROGRESS

The annual meeting of Radiation, Limited, was held, on the 23rd instant, in London.

Mr H. James Yates, the chairman, who presided, said that the net income from the subsidiary companies for the year had amounted to £326,958, compared with £328,109. A total dividend of 12½ per cent. on the ordinary stock for the year was proposed, with a bonus of 2½ per cent.

For some years past he had referred to the rising cost of manufacture due to successive improvements and developments; the two small advances in price which had been made had not compensated for their heavier costs, so that their profits for the past year were not equal to those of the previous year. Most of the shareholders knew of the company's "New World" gas cookers and "High Beam" gas fires; there were millions of users of those goods all over the world. While retaining the fundamental principles which had made their "New World" cookers outstandingly better than all other gas cookers, they had this year introduced further developments, covered by patents, which placed them in a still more unapproachable position. They had further developed their principle of single oven-burner and direct bottom-flue outlet and had attained a still higher efficiency and even better cooking. In that connection he would emphasise again that the "Regulo" was a Radiation product, only obtainable with Radiation apparatus.

ECONOMY OF STANDARDISATION

In these times the only way to manufacture economically was to standardise and to produce in large quantities. Those familiar with manufacturing processes would appreciate the addition to the cost which resulted if there were even a slight deviation from the standard article. To give one instance: they were sometimes asked to alter the standard lettering on the enamelled doorplate of a cooker. Each variation would necessitate the making of a special stencil. The plates, as they passed out of the furnaces, would have to be sorted out, and when the cookers were assembled on their large conveyors—some 620 feet in length—special arrangements would be needed so that, when the cookers on the conveyor reached the stage where the doorplates were fitted, all the varieties of doorplate must be placed ready at that point, and extra hands employed to ensure that at the exact moment the right plate was available. Imagine what that could mean at this particular point of assembly when there might be hundreds of doorplates differing only in respect of the lettering.

Similar complications would arise in the case of all departures from standard, and would greatly increase the cost of manufacture. In addition, the completed cookers, instead of taking their routine course for immediate despatch or putting into stock, must be sorted by additional workpeople.

In regard to their "High Beam" gas fires, they had in hand some very remarkable developments which he believed would result in their still wider application. Large cooking apparatus for hotels, restaurants, large public institutions, etc., had always formed an important part of their business. The company had been successful in obtaining the large order for the gas cooking apparatus for the equipment of the kitchens of the Birmingham Hospitals Centres.

PROSPERITY OF BRITISH TRADE

It was reassuring that the chairmen of the big banks had recently expressed such definite opinions as to the prosperity of British trade. Their views were founded on a thorough survey of present conditions, and prospects in the future. It was obvious that there were fluctuations in most commercial undertakings in regard to the profits earned year by year.

They all knew that if they kept telling a man he looked ill, almost invariably he began to feel ill without any cause whatever. That also applied to trade. To declare that trade was not what it ought to be, and that it was going to be worse, had an effect on the minds of many people, and pessimism prevailed instead of optimism.

As to the outlook at the present time in certain directions there were difficulties and the world horizon was far from clear, but he saw no reason for pessimism. He thought, however, that a word of caution was needed in relation to taxation, which was now very heavy. Local rates were increasing, and he felt that no municipal expenditure should be embarked upon without careful investigation, as such expenditure was not justified if rates would in consequence be unduly raised, causing the community to suffer in other directions. It was obvious that if the prosperity of the country was to continue there must be available each year individual savings for reinvestment. The increasing burden of national and local taxation was seriously depleting the amount so available.

The report and accounts were unanimously adopted.

INGERSOLL, LIMITED

100 PER CENT. INCREASE IN NET PROFIT

DIVIDEND OF 20 PER CENT. AND BONUS

MR E. S. DANIELLS'S SPEECH

The eighth annual general meeting of Ingersoll, Limited, was held at the Connaught Rooms, on the 23rd instant, Mr E. S. Daniells, chairman of the company, presiding. Mr Daniells said:—

The pleasure which a chairman has in meeting the shareholders of any company is very largely governed by the report and accounts which he has to present. You, therefore, can imagine that I feel particularly happy and I am certain that you will all be gratified with the results which we have to place before you this year. Our net profit, after providing for depreciation, income-tax, and reserving for National Defence Contribution, amounts to no less than £30,164, compared with £15,409 last year—an increase of nearly 100 per cent. on our last year's figure. This considerable improvement, resulting from greatly increased sales, is convincing testimony of the public's appreciation of the quality of Ingersoll products and of the efficiency of our organisation.

THE NEW CAPITAL

In order to assist in financing our development during the year we issued in August last the 92,614 then remaining unissued ordinary shares to our existing ordinary shareholders at 3s. per share. We received on these a share premium which, after deducting expenses, left us with a surplus of £4,291 10s. 5d., and, as you will see from the report, after adding to the profit for the year this balance of share premium and the amount brought forward from 1936, we have a total available balance of £42,830 13s. 2d.

Before the close of the year we had already paid six months' dividend on the preference shares at the rate of 7½ per cent. per annum and an interim dividend of 7½ per cent. actual on the ordinary shares. We have since paid to the preference shareholders a further six months' dividend at the rate of 7½ per cent. per annum and their participating dividend of 2½ per cent. actual, so that they have received their full 10 per cent. dividend on their shares in respect of the year 1937. As regards the ordinary shareholders, we are proposing to pay a final cash dividend of 12½ per cent., making 20 per cent. for the year, and to distribute to them a bonus of one new fully paid ordinary share for every four ordinary shares at present held. Resolutions to this effect will be submitted to you later, and after making these appropriations and transferring £1,628 1s. 9d. to reserve for equalisation of preference dividends, we shall still be left with a balance to carry forward of £13,630 3s. 5d. compared with £8,375 2s. brought forward from last year.

FURTHER ISSUE OF ORDINARY SHARES

As we have already issued all our ordinary share capital, it becomes necessary to increase our capital before the bonus distribution to the ordinary shareholders can become effective. When increasing the capital your directors had to bear in mind the further money likely to be required in the future to finance the development of the company. We are proposing to increase the total authorised ordinary share capital up to £130,000, and, as stated in the report, it is our intention to offer immediately to the shareholders of the company a further 209,250 ordinary shares for subscription on favourable terms. These new shares will be offered for subscription at the price of 4s. 6d. per share, which, having regard to the price at which shares have recently been changing hands, is, I think you will agree, offering them to you on very favourable terms. In order to give the preference shareholders a further opportunity to participate in the future benefits accruing to the ordinary shareholders, 100,000 of these shares will be offered for subscription to the preference shareholders. The remainder to the ordinary shareholders. Letters of right and forms of application will be forwarded to all shareholders.

CURRENT YEAR'S PROSPECTS

In conclusion, you would no doubt like some indication as to prospects for the current year. Our sales to date this year show a favourable increase on the corresponding figures for the same period of last year, and, given normal trading conditions, we have every reason to anticipate being able to present to you at the end of this year an account at least as satisfactory as the one now before you. These results have not been achieved without considerable hard work on the part of every member of the staff from the Board downwards, and I would like to express my personal appreciation of the services rendered to the company by my colleagues on the Board and by every member of the staff.

GODFREY PHILLIPS, LIMITED

INCREASING SALES

MR ARTHUR I. PHILLIPS'S STATEMENT

The twenty-ninth annual general meeting of the shareholders of Godfrey Phillips, Limited, was held, on the 22nd instant, at the registered office of the company, 112 Commercial Street, London.

Mr Arthur I. Phillips (the chairman and managing director) presided, and in the course of his speech, said:—The amount standing for the credit of the "reserve for development account" at £13,233 odd is virtually the sum which remained at the end of the previous accounting period. During the year we have spent some 30 odd thousand pounds in the direction of increasing the opportunities for trading both at home and abroad, and we have almost entirely established a factory and plant in Calcutta which, on personal inspection, is reported to be as modern, up to date, well laid out, and complete as any we operate. This factory will begin to offer its manufactures for sale very shortly, and your directors have every hope that this development will prove of considerable future value.

In the other markets which have also been visited progress has been made, and the results in most instances are encouraging. If to-day you approve the further appropriation to this account, your board is hopeful that the ultimate benefits may prove considerable in the future.

For a time our Australian investment had to withstand the difficult times through which that Dominion has so successfully emerged, and we are now receiving a fair reward for the sustained financial and other assistance we rendered it.

"Stock," as certified by the managing director, including leaf abroad and in transit at £1,141,814, is more or less the same figure as in the last accounts. The price of commodities has a certain bearing on this item, but beyond leaf tobacco, we carry but little others—of leaf we must, for purposes of maturity, maintenance of quality and safety, carry a great deal.

NET TRADING PROFIT

Turning to the "profit and loss account" as will be seen, the net profit for the year, including dividends declared by associated undertakings, is £257,322 9s. 2d., against the figure of £254,900 last year. To your board, who are almost every one of them in daily contact with the trading conditions in the tobacco trade, this result is not unsatisfactory, bearing in mind that during the major portion of last year competition, in a direction in which your company is very much interested, became very acute indeed, and ate into our turnover considerably, and this explains the somewhat smaller item in the balance sheet for debtors, and which, naturally, had its reflex action upon earnings.

Moreover, the net profits this year have had to bear the additional income tax rate and the whole of the amount payable under the National Defence Contribution.

It was solely due to past conservatism and policy, and still further and successful efforts in Empire and foreign markets that your board was able to maintain, and even slightly improve, the previous year's results.

I trust that you will agree in view of what I have just said, that you can join your board in their satisfaction with the results obtained.

The appropriation account needs no comment, and I have already referred to the account which is headed "reserve for development."

REVENUE PROSPECTS

In these days of uncertainty, it would not be politic to paint a too rosy picture of the future, neither is it necessary to be ultra cautious. Much of the earnings of your company is by way of dividends from our subsidiary and associated undertakings, and, actively engaged as I am with all these businesses, I am in a position to know that the revenue we shall receive during the coming year will be but little different from last year.

We have enjoyed during the first two months of this year, a satisfactory increase in sales abroad and our stock position is such that only a small extra cost of leaf will have to be met, and provided, therefore, the Chancellor is satisfied that the £80,000,000 he now obtains annually from the tobacco duties can only be increased by the natural course of greater consumption, as is undoubtedly the case, I am not unhopful that, as a whole, revenue receipts and earnings from all sources during 1938 may reach just about the same level as for last year, in spite of the difficulty of the particular competition to which I previously referred and which, as yet, remains to be overcome.

The report and accounts were unanimously adopted.

ALFRED DUNHILL, LIMITED

PIPES ARE FASHIONABLE

The Fifteenth Ordinary General Meeting of Alfred Dunhill, Limited was held, on the 22nd instant, at Dorland House, 14/16, Regent Street, London, S.W.

Mr Dunhill (the chairman), in the course of his speech, said:—The accounts before you show a continuation of that progress I have been able to report to you yearly for the last five years.

As a matter of interest I will repeat to you the net profit shown on our balance sheets for recent years:—

1931	...	...	£10,520	1934	...	...	£30,506
1932	...	...	£12,714	1935	...	...	£35,043
1933	...	...	£14,188	1936	...	...	£45,247

and for the year under review £55,133. I need not remind you that the last figure is after allowance has been made for N.D.C.

From this profit of £55,133, the highest since 1927, we recommend the payment to the ordinary shareholders of a final dividend of 8 per cent., making with the interim already paid, 12 per cent. for the year. After this is paid there is sufficient surplus for us to recommend the payment of a bonus of 10½ per cent., a total distribution for the year of 22½ per cent., subject, of course, to income tax.

You will notice that in accordance with our established custom we are recommending the distribution of practically the full profit for the year. If you agree to the proposed distributions the sum carried forward will be increased by £133, making £70,433, which, together with our reserve, is ample for all anticipated needs.

Although we hear from some sources talk of trade recession, I am pleased to report that, excepting the temporary dislocation of the last few days, we ourselves have not experienced it. On the contrary, our retail trade, the trade one would expect first to be affected, reached for last December the record total of any month since the foundation of the firm.

This year there are encouraging signs for future business, particularly the spread of pipe smoking among men of fashion and distinction in every walk of life. Although we shall not have that extra business which was brought last year to all London tradesmen by His Majesty's Coronation, our turnover for the current year is satisfactory, and we view the future with confidence.

The report was unanimously adopted.

PINCHIN, JOHNSON AND COMPANY, LIMITED

CONTINUED PROGRESS

SALES AND PROFITS EXPANSION

The annual general meeting of Pinchin, Johnson and Company, Limited, was held, on the 21st instant, at the Hotel Victoria, London.

Mr Edward Robson (the chairman), in moving the adoption of the directors' report and balance sheet for the year 1937, said: In submitting this report and accounts for 1937 I draw your attention to the figure of net profit for the year, £385,593 14s. 3d., which profit figure represents an increase of £6,230 14s. 11d. over the previous year.

Specific reference has been made in the report to two factors which are directly responsible for the profits for the year not showing a considerably greater increase. These factors are: Firstly, the totally unexpected and disastrous conflict in China, with destruction to property and virtual cessation of all business operations in the latter part of last year, and, secondly, the deplorable trend of economic events in France.

I regret I should have to refer to these rather depressing influences, but on the other hand, they serve, by contrast, to show up the intrinsically sound position of our business as a whole.

In the home market and all other foreign markets where we are directly or indirectly interested progress has been most satisfactory, and it is gratifying that a new record of sales and profits has been established by our Australian company.

It was our considered opinion last year that on the increased capital we should have no difficulty in maintaining the same rate of dividend. I fully believe we should have done so but for the profit-affecting factors that I have mentioned.

I have now to refer to a third factor which does not affect the profit made for the year but does affect the rate of dividend payable, and that is the National Defence Contribution. You will see that we have to provide now the sum of £92,000 as compared with £69,500 required in the previous year.

I do not think that at the time we had our last meeting anyone could have foreseen that so soon after that meeting this new burden of taxation would have been imposed upon us, and it has to be realised that this tax is really a contribution by the ordinary shareholders of all business concerns.

In the last three months of 1937 there was a slowing up in the rate of progress of our business. However, it is with pleasure we can announce that during January, February and up to date in March the rate of progress of our sales is again on an upward trend and higher than that of the corresponding period of last year.

The report was adopted.

The re-election of the directors and auditors followed, and the meeting terminated after a hearty vote of thanks to the chairman, proposed by Mr W. C. Howard.

TELEPHONE AND GENERAL TRUST, LIMITED

PROGRESS OF OPERATING COMPANIES

The twelfth ordinary general meeting of Telephone and General Trust, Limited, was held, on 24th inst., at the Incorporated Accountants' Hall, Victoria Embankment, London.

Sir Alexander Roger, the Chairman, who presided, said that the profit at £107,636 compared with £108,996. They were paying 8 per cent. on the ordinary stocks and shares, with a surplus on the year's working of £7,637, compared with £9,404 in 1936. Their usual conservative valuation of the Trust's investments showed that in common with everybody else they had experienced some depreciation, but at December 31st last there was an excess beyond the total balance sheet figure of £1,969,313.

As to their telephone operating companies, the recovery which had commenced in March, 1936, in Venezuela had continued steadily throughout 1937. Venezuela was a country of great possibilities, and, given a continuation of the present stable and far-sighted Government, the board looked forward to a period of expansion and prosperity. Telephone Properties, in which they were directly interested, was the parent of the Nacional Company of Venezuela.

The Jamaica company continued to expand, but it was with regret that the board had to note that there was still no public telephone service between Kingston and its surroundings where the company operates and the rest of the island. The Jamaica Government were proposing to take some further steps in connection with the problem during the present year.

POSITION IN TRINIDAD

In Trinidad the company, which supplied the telephone service to Port of Spain and the rest of the island, continued to make progress. The staff of the telephone company had worked hard and loyally during the strike and riot periods, and had earned praises from the Government and the business community. They were prepared to invest considerable further sums of money in necessary expansion in Trinidad under reasonable conditions, and he might say that they had received assurances from important interests in Trinidad that if the company should wish to offer local participation in the telephone company the public would readily respond. As to Barbados, the board were confident that the installation of the automatic equipment put into service towards the close of 1937 would lead to an extended use of the telephone system, and with regard to the West Indies generally, they continued to work assiduously on the development of the telephone service in the various islands.

The Telephone Company in Portugal, in which their company had a large investment, continued to make satisfactory progress, and the company's relationship with the Government and the public was excellent.

As to the Polish contracts, an extension of the supply contract with the Polish Ministry of Posts, Telegraphs and Telephones had been arranged in association with their friends, Automatic Telephones and Electric Company, on a satisfactory cash basis. Repayment of the existing credit would be accelerated. In February last he had visited Poland and noticed the great progress that had been made since his last visit in 1934.

Summing up the prospects for 1938, provided no major political upheaval occurred, the board felt confident that next year they would be able to present results at least as good as those now submitted.

The report and accounts were unanimously adopted.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8 Bouverie Street, Fleet Street, London, E.C.4.

APOLLINARIS AND PRESTA, LIMITED

BETTER TRADING RESULTS

The forty-first ordinary general meeting of Apollinaris and Presta, Limited, was held, on the 22nd instant, in London.

Mr John Douglas Broad, the chairman of the company, presided, and in the course of his speech said:—The better trading results for 1937 indicated progress, but the German exchange position, unfortunately, showed no improvement, which naturally affected Apollinaris, emanating from Germany. Owing to the so-called German moratorium they were also still unable to have any monies transferred, and this was bound to affect the business. The home-produced Presta Waters and Fruit Squashes showed substantial improvements in sales and trading profits, and it was their intention to develop that branch of their business.

Shareholders would remember that a scheme of arrangement was submitted two years ago to the debenture holders and the debenture deferred interest certificate holders. The directors had had under consideration during the past year the question of a scheme of reconstruction, or, alternatively, an extension of the moratorium, and after consultation with the committee of debenture holders and certificate holders and the trustees, it had been decided to apply to the Court for an extension of the moratorium in the hope that the Continental position would improve so as to enable them to bring forward a scheme of reconstruction based on a clearer view of future prospects.

During the summer he had paid his first visit to the Apollinaris Spring and to the Apollinaris Bottle Works. He had been impressed by all he saw and could assure shareholders that both the Apollinaris Spring and the Apollinaris Bottle Works were wonderful establishments.

During the year under review the sales of Apollinaris here in England were holding their own. The advertising campaign in the United States of America, referred to last year, had not met with the success hoped for, possibly because the campaign was on too small a scale for such a vast territory.

As to the future. The prospects for Apollinaris were not likely to improve much until world conditions had become more settled, but they did feel that in Presta they had a good article, and this enabled them to face the future with some measure of confidence. The report and accounts were unanimously adopted.

MOSS EMPIRES, LIMITED

BURDEN OF TAXATION

The thirty-ninth ordinary general meeting was held at the company's London offices on March 18th.

Addressing the members, Colonel J. J. Gillespie (chairman) said owing to the conversion of the issued share capital into stock, the capital is stated in a different form. The difference in the 4 per cent. debenture stock is £1,800, which was repurchased and can be reissued. £2,076 of 4½ per cent. debenture stock was redeemed during 1937, making the total amount redeemed £4,076.

£4,986 18s. 11d. has been written off reserve fund, mainly represented by investments written down, and the value of old buildings demolished at Edinburgh and Finsbury Park. New shops have been erected adjoining Edinburgh Empire. Additional waiting rooms, bars and exit accommodation have also been provided.

Disregarding fluctuating items on both sides of the balance sheet, he referred to a £14,000 increase in property, mainly composed of the cost of the buildings at Edinburgh and the construction of a car park adjoining Finsbury Park Empire.

Depreciation written off theatre furnishings is £20,440, but, with additions taken credit for, the net reduction is £6,600. As a result of a recent inspection of the companies' theatres, I can say that they are in first-class condition.

Trading profit is £6,110 up. Expenses debited in detail in the printed profit and loss account (excluding income tax and the National Defence contribution) are £1,000 less, but provision for income tax and National Defence contribution are together almost £16,000 more than preceding year's tax provision. On balance net profit carried to the balance sheet is less by £7,596 3s. 11d. Imperial and local taxation hits a company of this kind severely.

Last year's results are not unsatisfactory, looking to the intense competition in the entertainment business, not only from direct competitors, but from other forms of entertainment.

Trading results since January 1st show that we have more than held our own so far this year. When the year commenced our pantomimes were still running and on the whole they have proved more successful than the previous Christmas season.

The directors' report and accounts were adopted and a dividend was declared on the ordinary stock of 5 per cent. actual, less income tax (making 10 per cent. for the year).

Austria and Germany

The charts which we present below, have been designed to throw some light on the economic benefits accruing to Germany from the annexation of Austria. They should be examined in conjunction with the leading article on page 672. It should be noted that the most obvious gain, the Austrian gold and foreign exchange reserve of 423 million schillings, has been converted into Reichsmarks at the old official value of 49·5 pfennigs; the figures do not include sums due to Austria under clearing agreements. The figures of gold and foreign exchange reserves relate to March 7th of this year; the statistics of production and foreign trade are all for the year 1936.

Finance

GOVERNMENT FINANCE

For the week ended March 19, 1938, the total ordinary revenue was £23,568,000, against ordinary expenditure of £12,256,000. The surplus accrued since April 1st last is thus £21,468,000, against a deficit of £4,094,000 a year ago.

Bills are paid for during following week, on any working day at applicant's option. When normal length is 92 days, bills paid for Saturday are 91-day bills and there are no Monday maturities. When normal length is 90 days, bills paid for on Monday are 89-day bills. Bills paid for in February are 89-day bills, except those paid for each Tuesday, which are 88-day bills.
On March 18th, applications at 99 1/2% 5d. per cent. for bills to be paid for on any day except Saturday of the following week were accepted at to about 54 per cent. of the amount applied for. Applications at higher prices were accepted in full. £50 millions of Treasury bills are being offered on March 25th.

SHORTER COMMENTS

Company Results of the Week.—Trading profits of STYLE AND WINCH are over £13,000 greater at £336,358, but higher expenses (in particular maintenance costs) have left net profits, at £109,764, a little below those for 1936. Stability of profits is shown by the report of BRITISH GAS LIGHT, whose 7½ per cent. dividend is unchanged. Despite good business at the Coronation season, SAVOY HOTEL have earned £14,000 less at £69,408, owing to the marked decrease in takings from early July till the end of the year. Boom conditions in the constructional steel industry are illustrated by the 1937 profits of SIR WILLIAM ARROL AND COMPANY, which amount to £95,876, against £67,076. Contracts now on hand indicate favourable prospects for the current year. Although CAIRN LINE STEAMSHIP profits are as high as £44,538, against £16,771, it is not proposed to resume dividends owing to the need for overtaking arrears of depreciation. The volume of traffic on the Canadian service improved considerably, though liner freights did not increase to the same extent as chartered tonnage. KING LINE have resumed dividends with an 8 per cent. payment, net profits of £198,127, comparing with £73,114. Apart from £133,716 from revenue, depreciation also receives £49,312, representing the surplus from the sale of two steamers. An appreciable setback has been experienced by MAPLE AND COMPANY, whose net profits amount to £200,272, against £294,216. The report refers to the depreciation of certain foreign currencies, which has been met by earmarking part of the general reserve. BRITISH ROPES have earned £313,166, against £275,015, but the 25 per cent. dividend is maintained. Increasing activity in all sections has more than counteracted the large fall in raw material values during the latter part of 1937. CRAVEN BROS. (MANCHESTER) have made excellent progress, and the year's net profits of £76,173 compares with £40,718. The extensions have been completed and are in production, and the year's output was the highest on record. HOFFMANN MANUFACTURING COMPANY earned £205,928, against £108,460, and the 20 per cent. tax free

dividend is maintained on the capital as increased by last November's scrip bonus, which ranked, however, only for the final dividend. Continued progress has been made by LANCASHIRE DYNAMO, whose net profits amount to £144,634, against £91,849. ROWNTREE AND COMPANY have experienced a setback in net earnings of £26,000 to £219,168, but the 10 per cent. dividend is maintained. TUNNEL PORTLAND CEMENT have achieved a moderate advance in profits, from £276,232 to £281,561. The increase was obtained in spite of higher costs, and a lower investment income on account of conditions in America.

BANKS

Yokohama Specie Bank.—Accounts for half-year to December 31, 1937, show net profit of Yen 16,984,426, including Yen 10,745,727 brought forward. To reserve fund, Yen 1,500,000; dividend at 10 per cent. per annum, Yen 5,000,000; carried forward, Yen 10,484,426. Reserve fund has thus been brought to Yen 135,900,000.

Chase National Bank.—Deposits on March 7, 1938, were \$2,115,262,000, compared with \$2,069,990,000 on December 31, 1937. Total resources were \$2,423,645,000 (\$2,375,379,000). Cash was \$723,594,000 (\$708,040,000); investments in U.S. Govt. securities, \$590,479,000 (\$603,362,000); loans and discounts \$733,095,000 (\$728,522,000). Undivided profits after semi-annual dividend of \$5,180,000, were \$28,121,000 (\$31,121,000).

Imperial Bank of India.—Profits for half-year to December 31, 1937, were Rs.1,29,900 larger than in second half of 1936, at Rs.36,90,102, dividend being maintained at 12 per cent. per annum, tax free. Advances and internal bills discounted, which stood at Rs. 123 crores on July 2, 1937, fell to Rs. 110 crores by end of September and remained at about that level.

MISCELLANEOUS

British Ropes, Ltd.—Net profits for 1937 are £256,769, an advance of £45,194. Ordinary dividend maintained at 25 per cent. on increased capital. To staff fund £13,000 (£9,500). To general reserve £25,000 (same). Carry forward raised from £61,995 to £89,508.

Craven Brothers (Manchester), Ltd.—Profits for 1937 £76,172, against £40,717. Ordinary dividend raised from 12½ per cent. to 15 per cent. To dividend equalisation reserve £10,000 (nil). Carry forward raised from £5,742 to £26,914.

African and European Investment Company.—Profits for 1937 amounted to £478,838, compared with £807,888. Ordinary dividend reduced from 15 to 10 per cent. To investment depreciation £100,000 (£187,164); taxation reserve £100,000 (£150,000); staff fund £5,000 (same); reserve £5,594 (£150,000). Carry forward increased from £89,162 to £106,862.

Savoy Hotel, Ltd.—Net earnings for 1937 £57,216, against £71,153 for 1936. Ordinary dividend reduced from 7½ to 5 per cent. Carry forward raised from £51,574 to £54,344.

Hoffmann Manufacturing.—Net profit for 1937 £205,929, against £168,466. Ordinary dividend maintained at 20 per cent., but absorbs £75,000, against £50,000. To general reserve £50,675 (£60,000); debenture redemption reserve £60,870. Carry forward reduced from £66,870 to £60,870.

Cable and Wireless Traffic Index.—The index at 73.7 for February, 1938 (1929 = 100) shows a rise of 2.2 compared with the January index of 71.5. The February index was 84.6 in 1937, 73.3 in 1936, and 74.4 in 1935.

Southern Areas Electric Corporation.—The profits for 1937 amounted to £37,953, against £26,501, after the subsidiary companies had provided £20,952 for depreciation (£18,514). Final dividend 3 per cent., making 5 per cent. for the year, against 4½ per cent. Carry forward £16,029, against £7,457.

Nestle and Anglo-Swiss.—Net profits are Frs. 23,035,956 for 1937, compared with Frs. 24,579,362 for 1936. Dividend on shares of Frs. 200 nominal is Frs. 30 per share, against Frs. 28. Statutory reserve receives Frs. 1,600,000, against Frs. 1,174,362, pension fund Frs. 2,000,000 (Frs. 2,500,000), and special relief fund Frs. 500,000 (Frs. 2,500,000). Carry forward raised from Frs. 6,261,332 to Frs. 7,403,209.

A Check to Recovery

IN spite of the all but universal scramble for self-sufficiency, the world is still an interdependent whole. That, in striking measure, is the lesson of 1937. Nobody could read through the reports from the different countries which appear on the later pages of this Commercial History without being impressed by the broad similarity of the pattern that has been followed by economic development throughout the world. Even in some of the countries which have been at the greatest pains to insulate themselves from the outside world, there are signs at the year's end of movements in sympathy with external currents.

What, then, is the theme that has been played in so many keys, major and minor, and with so many tempi, *andante* and *prestissimo*? It is a theme of reversal, although even now, six weeks after the end of the year, it is still too early to say whether the reversal is of a major character. At the beginning of the year, the economic horizon seemed to be clearer than at any time since the first origins of recovery in 1932 and the title of this introduction to last year's Commercial History was "Recovery Becomes World Wide." Indeed, voices were not wanting to speak the word "boom" and to warn of excessively rapid progress. These warnings were particularly inspired by the breakneck rise in the prices of many commodities, especially those likely to be particularly affected by worldwide re-armament. President Roosevelt, in fact, thought it necessary to issue an official intimation that the prices of "durable goods" were too high.

This commodity boom (the word is hardly an exaggeration) barely outlived the first quarter of the year. Throughout April and May, the "gold scare" revealed how slender had been the base for the rises in prices, for on nothing more than unfounded rumour prices came down almost as quickly as they had risen. Moreover, the Stock Exchanges of London and New York, which had never shown real

strength after the New Year, turned definitely weak. These market developments had not affected the main current of business activity, which was still buoyant and expansive. But there were worse shocks to come. In the late summer, for reasons even less explicit and explicable than the earlier "gold scare," markets turned sharply downwards and there were some days in the early autumn when the retreat became a rout. This time, moreover, industrial activity in the United States was affected, and the last two months of the year saw, in that country, a downward movement of astonishing sharpness. In other countries, the check to industry was much less catastrophic. In Great Britain it was not until December that the check to recovery was generally admitted.

In every country, then, the year ended on a note of questioning. With the exception of some European countries, notably France, which were still wrestling with the financial legacy of deflation, 1937 was the best year of recovery. Even in the United States, the sharp autumn recession came so late that most of the indices, on the average of the year, were higher than in 1936. But the sudden reversal is causing the question to be raised everywhere whether 1937 must be written down, like 1929, as the last year in an expanding cycle, or whether it will rather prove to be, like 1907 or 1927, an interruption to be followed by a resumption of the previous trend.

This is not the place for prophecy, and it is only necessary here to remark that few of the obvious economic causes of disequilibrium existing at the beginning of 1930 are present to-day. The other side of the medal, however, is the menacing political situation in Europe and the Far East. Will this political factor overthrow the slow progress towards economic balance that has been made since 1929? Perhaps this introduction next year will be able to supply the answer.

United Kingdom

INDUSTRY AND TRADE

THE past year opened with world production and trade in the course of a process of rapid expansion, stimulated by a strong upward trend of prices. A vigorous upward movement carried British business activity far above all previous records. *The Economist* index of business activity advanced from 106 (1935=100) in 1936 to 111 in 1937, an increase of 13 per cent. over 1929. Moreover, the number of insured persons in employment in the United Kingdom in June last year, at 12,327,000, showed an increase of 696,000 over the corresponding month in 1936 and of 1,397,000 over 1929. The proportion of insured persons unemployed last June, at 10 per cent., was no higher than in the corresponding month of 1929. Despite some increase in the number of days lost through labour disputes, industrial relations remained fairly satisfactory and wages showed a steady increase. Last summer, however, there were signs of hesitancy in recovery. The strong upward trend of world production and trade had been arrested and commodity prices were again declining. The volume of new business began to shrink, and during the last few months general business activity tended to decline.

The trend of business activity since 1929 is indicated in the following table:—

PRODUCTION AND BUSINESS				
Indices of production—	1929	1932	1936	1937
London and Cambridge Economic Service (1924=100)	110.6	84.9	118.0	124.1
Board of Trade (1930=100)	108.5	90.5	124.6	†
Output of—				
Coal (Mn. tons)	258	209	229	241
Electricity (Mn. tons)	7.6	3.6	7.7	8.5

Complete Index	98.5	84	106	111*

* Provisional. † For the first nine months of 1937 the figure was 132.7, as compared with 122.5 in the corresponding period of 1936. ‡ Third quarter of 1937. (a) Year ended September 30th.

Closer analysis of the trend of business in 1937 reveals a number of significant changes. First, the increase in defence expenditure, concentrated largely on the metal industries, brought about a substantial expansion in these trades. For example, *The Economist* index of domestic iron and steel consumption, which showed a downward trend during the first four months of the year, rose suddenly from 117 (1935=100) in April to 173½ in December. The rate of steel consumption towards the end of the year was about 75 per cent. greater than in 1929. Secondly, the marked revival of world production and trade during the first half of the year was responsible for the rapid recovery in the export industries, which had lagged behind the general upward movement. In the second quarter of last year, for example, the volume of domestic exports was 18 per cent. greater than during the corresponding period of 1936. In the summer of last year, however, the upward trend of the volume of exports was arrested by the deterioration on the world economic front, and during the last quarter the trend was actually downwards. As a consequence, the revival of the export trades was short-lived. New orders placed with the shipbuilding industry tended to decline again, and in the cotton and wool textile trades recession became serious.

A more detailed description of developments in various branches of British industry during 1937 will be found in Section III of this Commercial History.

Agriculture

THE long-term downward trend in the country's arable area, temporarily checked in 1935, was continued last year. A further 10,000 acres were returned as permanent grass, while some 91,000 acres were lost to agriculture altogether. The area of land devoted to wheat, barley and hay was rather larger than in 1936, but there was a decline of 14 per cent. in the acreage under oats. The acreage under sugar beet was the smallest since 1932. Root crops in general occupied a rather smaller area than in the preceding year.

The weather was not particularly kind to the cereal farmer, and yields per acre were again below the ten-year averages. The out-turn of wheat was slightly higher than in 1936, at 1,393,000 tons, against 1,378,000 tons. The barley crop fell, however, from 663,000 tons to 576,000 tons and the production of oats from 1,080,000 tons to 938,000 tons. Potatoes gave a higher yield than in the preceding year, and the total crop (including seeds and chats, as well as ware potatoes) was up by 11 per cent. from 2,814,000 tons to 3,126,000 tons. Production of other root crops was smaller, but more hay was produced than in 1936.

In the livestock industry the year was, unhappily, made memorable by a severe outbreak of foot-and-mouth disease—the worst since 1923—which dislocated the Christmas trade and caused serious losses in the farming community. The spread of the disease was checked by the Ministry's slaughter policy, and the outbreak now appears to be under control. The total number of cattle and sheep in the country rose between 1936 and 1937, but the pig population was further reduced. The number of horses on British farms suffered a further slight reduction.

Certain new departures in the sphere of Government policy, made or projected in 1937, appear to have been dictated, in part at least, by the desire to be self-sufficient in time of war. Mr Morrison has placed before Parliament proposals designed, *inter alia*, to increase the fertility of the land and to encourage the production of cereals. The Government is to offer a subsidy which will have the effect of reducing the price of lime and basic slag; it will make grants for land drainage and will encourage experiments in grass drying. The assistance offered to cereal growers takes the form of an extension of the standard price provisions of the Wheat Act to cover 35, instead of only 27, million cwt. of millable wheat, and of the application of the principle of that Act to oats and barley if prices fall below current levels. In the case of these cereals, however, it is proposed that the cost should fall directly on the Budget, and not, as with wheat, on the consumer.

The policy represented by the Agricultural Marketing Acts appeared last year to be waning in popularity. Thus the Pigs and Bacon Marketing Schemes were allowed to remain suspended; the interests concerned decided not to proceed with the proposed marketing scheme for sugar beet; and proposals were made to modify the status of the Milk Marketing Board. An application by the poultry industry for further restrictions on the importation of foreign eggs was rejected by the Government on the recommendation of the Import Duties Advisory Committee. The Potato Marketing Board, however, had another successful year.

Overseas Trade

OVERSEAS trade in 1937 showed the sharpest expansion, so far as the figures of value are concerned, of any of the recovery years. Both imports and exports were higher, but

the increase of the former was both absolutely and relatively the larger, and the net excess of imports consequently rose to the highest total of the last nine years. The figures are given in the following table:—

FOREIGN TRADE VALUES (£000,000)					
	1929	1934	1935	1936	1937
Imports	1,220.8	731.4	758.0	847.8	1,029.0
British Exports	729.3	396.0	425.8	440.7	521.6
Re-exports	109.7	51.2	55.3	60.8	75.2
Total Exports	839.0	447.2	481.1	501.3	596.8
Excess of Imports over Exports	381.8	284.2	276.9	346.4	432.3

A large part of the increase in values, however, was due to rises in the prices both of imports and of exports. According to the Board of Trade estimates, the volume of imports rose by 6.2 per cent. and that of British exports by 9.5 per cent., while the increases in average values were 14.2 per cent. and 8.1 per cent. respectively. The increase in the volume of imports of the different categories, in comparison with 1936, was 1.6 per cent. in food, drink and tobacco, 8.9 per cent. in raw materials and unmanufactured articles, and 14.1 per cent. in manufactures. The corresponding figures for British exports were 6.0, 9.6 and 10.1 per cent. respectively.

The second table gives figures for 1929 and the last three years of imports and exports in the three main categories of trade:—

(£000,000)							
	1929		1935		1936		1937
	Re- tained Im- ports	British Ex- ports	Re- tained Im- ports	British Ex- ports	Re- tained Im- ports	British Ex- ports	Re- tained Im- ports
Food, drink and tobacco	509.5	55.7	348.4	31.6	371.0	35.6	419.2
Raw materials and articles mainly unmanufactured	285.3	78.9	182.9	52.8	215.2	51.3	278.4
Articles wholly or mainly manufactured	305.5	573.8	171.6	328.8	197.5	340.9	250.3

It will be seen that each one of the six categories shows a large proportionate increase, the smallest being in British exports of food, drink and tobacco. There was an all-round increase in most important categories of imports, especially in the raw materials for the metal-using industries. Thus imports of iron ore and scrap rose from 5.0 million tons in 1935 and 7.0 million tons in 1936 to 7.8 million tons in 1937. Imports of raw textile materials were also substantially higher, and the quantity of crude petroleum imported reached a new high level.

The volume of exports under certain important heads is shown in the following table:—

BRITISH EXPORTS (000's omitted)				
	1929	1935	1936	1937
Coal, Iron and Steel Products				
Coal	60,267	38,714	34,519	40,352
Railway materials	810	161	209	208
Total iron and steel manufactures	4,380	2,312	2,203	2,576
Machinery	562	384	380	438
Locomotives (complete and parts)	40*	16	18	17
Motor vehicles and chassis..number	42	72	89	105
Textile Goods				
Cotton yarns	166,638	141,675	150,935	159,099
Cotton piece goods..thous. sq. yds.	3,672	1,949	1,917	1,922
Wool tops	32,737	55,830	52,133	40,162
Woolen and worsted yarns .. lbs.	46,696	40,816	37,149	32,311
Woolen and worsted tissues sq. yds.	155,467	109,665	117,920	122,835
Linen piece goods	71,540	77,163	88,728	83,143

* Complete only.

Coal exports have more than recovered the losses due to the cessation of trade with Italy during the Sanctions period, and the exports of metal products show a gratifying expansion. Some of the textile categories, however, have not done so well. In general, there was an apparent ten-

dency towards decline in the volume of British exports in the closing months of the year, and this may have been due, at least in part, to the fact that the average prices of British exports were rising at the end of the year at a faster rate than the prices of imports.

During the year assistance has continued to be given to the export trades by the Export Credits Guarantee Department. The aggregate value of contracts and policies issued by the Department in the period April 1st to December 31st reached an amount of £26,177,906, as compared with £18,243,932 for the corresponding period of 1936-37. During the year the Department has been placed on a permanent basis. The scope of its facilities has been considerably extended and the limit of the guarantees which may be outstanding has been increased from £26 millions to £50 millions.

Industrial Profits

THAT industrial profits would rise was a foregone conclusion in a year when *The Economist's* Business Activity Index reached the highest level since its computation first began. But the extent of the increase in earnings actually achieved in 1937 was surprising and significant, seeing that recovery began as long ago as in 1933, and that some slackening of tempo might have been expected in its later phases. The following table summarises the results of our analysis of the reports of a large sample of British companies, published in the course of every calendar year since 1925:—

COMPANY REPORTS PUBLISHED IN CALENDAR YEARS 1925-37†				
Reports Published in Calendar Year	No. of Companies	Total Profits*		"Chain" Index (1928=100)
		Current Year's Reports	Same Companies, Preceding Year	
		£ Mn.	£ Mn.	
1925	1,490	155.0	142.6	90.4
1926	1,572	174.9	164.5	96.1
1927	1,669	169.4	174.7	93.3
1928	1,709	179.6	167.6	100.0
1929	1,770	194.7	194.6	100.0
1930	1,932	197.5	198.9	99.4
1931	2,009	160.1	206.8	77.1
1932	1,989	143.3	175.0	63.1
1933	1,945	141.4	140.8	63.4
1934	1,975	168.8	144.8	73.9
1935	2,116	203.2	175.3	85.7
1936	2,186	239.1	212.2	96.6
1937	2,279	281.4	240.3	113.2

* After debenture interest.

There is a considerable time lag in these figures. Nearly 70 per cent. of the profits in last year's sample were reported before June 30th and were largely earned before March 31st last. A more useful idea of the trend of profits attributable mainly to operations within the calendar year may be obtained by detailed examination of the companies whose reports were issued in the last quarter of 1937. The following table shows that the profits of these "Fourth Quarter Companies" have risen from 3.2 per cent. of their total share capital in 1931 to 13.2 per cent. in 1937, and that the rate of increase, both absolute and relative, was greater last year than in either 1935 or 1936:—

PROFITS OF "FOURTH QUARTER" COMPANIES, 1929-37					
Reports Issued during Fourth Quarter	No. of Companies	Total Profits (after deb. interest)	Change since preceding year (same companies)	Total Preference and Ordinary Capital	Ratio of Profits to Capital
		£	%	£	%
1929	420	33,404,593	+ 1.4	323,129,885	10.3
1930	509	32,174,677	- 18.1	392,547,000	8.2
1931	474	12,292,859	- 53.9	383,451,625	3.2
1932	472	17,443,104	+ 2.9	425,066,892	4.1
1933	464	21,116,780	+ 30.5	410,816,381	5.1
1934	468	28,611,449	+ 32.9	401,504,146	7.1
1935	485	33,561,979	+ 16.9	377,470,062	8.9
1936	496	42,134,767	+ 15.2	395,408,899	10.6
1937	549	57,436,059	+ 20.2	434,622,726	13.2

Our next table discloses that although the average rate of dividend paid by "fourth quarter" companies on their ordinary capital was higher in 1937 than in 1929, the pre-

depression year, the proportion of total earnings distributed in dividends of all kinds was much lower than in 1929:—

DIVISION OF PROFITS (FOURTH QUARTER COMPANIES)							
Reports issued during Fourth Quarter	Proportion of Total Profits* (= 100)			Rate of Payment on Each Class of Capital			
	Paid in Pref. Div.	Paid in Ord. Div.	Put to Reserve or "Carried Forward"	Debenture	Preference	Earned for Ordinary	Paid on Ordinary
1929	16.0	66.0	18.0	5.29	4.7	13.5	10.6
1930	21.9	60.2	17.9	5.19	4.5	10.3	8.4
1931	43.1	76.9	Dr. 20.0	5.18	3.8	2.9	3.9
1932	32.4	75.4	Dr. 7.8	5.16	3.6	4.4	4.9
1933	23.4	64.3	Dr. 12.3	5.04	3.2	6.2	5.2
1934	19.6	59.9	20.5	4.95	3.7	9.9	6.8
1935	19.0	55.2	25.8	4.84	4.5	11.6	7.9
1936	17.5	53.5	29.0	4.75	4.9	14.2	9.2
1937	15.7	51.6	32.7	4.59	5.4	18.2	11.2

* After debenture interest.

These companies held back about one-third of their entire profits in 1937. For every £100 paid out in debenture interest and preference dividend they put £130 back into their reserves. The sums ploughed back last year were equal almost to the entire profits of the depressed year, 1931.

The tendency of finance towards increasing self-sufficiency is one whose implications need careful thought by economists and investors alike. In America recent taxation has sought deliberately to hamper it; in Great Britain no difficulties have been put in its way and its latter-day development has been significantly rapid. For the capital market its repercussions may be far-reaching.

Commodity Prices

THE striking advance in commodity prices in the second half of 1936, due to world recovery, currency devaluation and re-armament, continued apace in 1937 until March. Speculation and fear of shortages combined with rising civil and defence demand to raise some prices to record levels; and the complete *Economist* index of wholesale prices neared the level of 1929. After March, however, there was an accelerating downward trend; production was clearly keeping pace with demand, and stocks were slowly rising. Business recession developed in the United States; and after March commodity prices fell even faster than they had risen in the first part of the year, actually closing in December below the level of December, 1936. The movement of our indices has been as follows:—

1927 = 100						
Date	Cereals and Meat	Other Foods	Textiles	Minerals	Miscellaneous	Complete Index
Average, 1929	96.9	85.8	92.2	95.6	90.5	92.4

" Nov. "	87.8	64.3	58.9	95.9	79.3	77.0
" Dec. "	90.7	63.0	59.7	93.5	79.7	77.2

During the year, there was a decline of some two points in the complete index and in the component indices for minerals, other foods and miscellaneous commodities. Up to March the complete index gained eight points and afterwards lost ten. The movement of the other component indices differed in degree from the general pattern: textiles, after advancing nearly seven points up to April, receded fifteen in eight months; but cereals and meat lost only three of the seven points gained up to May. When the year closed, although stocks had generally risen, they were still comparatively low, and only in cotton and coffee was output distinctly ahead of demand.

The following table shows the movement of our index number converted into a percentage of the average level during the last pre-war year:—

1913 = 100						
Date	Cereals and Meat	Other Foods	Textiles	Minerals	Miscellaneous	Complete Index
Average, 1929	135.6	136.8	141.9	116.2	112.7	127.2
" 1930	113.4	122.9	99.1	101.6	101.5	106.8
" 1931	96.1	104.1	77.0	88.9	85.3	89.3
" 1932	95.4	99.6	75.7	88.6	77.1	86.1
" 1933	90.1	93.5	77.6	93.9	81.7	86.8
" 1934	96.7	94.0	83.2	93.6	85.7	90.3
" 1935	97.8	96.5	87.8	97.1	93.1	94.3
" 1936	107.5	97.3	95.2	102.9	97.4	100.1
" 1937	126.8	107.3	104.6	126.0	104.5	113.5
End June, 1933	90.5	92.4	83.1	98.5	84.9	89.5
" Dec. "	90.2	90.2	82.1	94.1	84.8	87.9
" June 1934	95.7	93.4	81.5	93.6	86.1	89.7
" Dec. "	97.9	95.8	84.0	92.2	86.4	90.9
" June 1935	95.8	94.2	85.4	95.7	93.4	92.9
" Dec. "	100.6	98.3	95.0	100.1	97.3	98.2
" June 1936	98.2	93.8	91.4	98.2	96.9	95.9
" Dec. "	120.9	104.5	103.9	116.0	101.1	109.1
" June 1937	127.6	107.6	108.9	129.5	107.1	116.0
" Dec. "	126.9	100.4	91.9	113.6	99.2	106.2

The component indices for textiles and miscellaneous commodities have again fallen below the 1913 level. Cereals and meat and minerals in December were still markedly above the pre-war figure, while the complete index stood over six points above the 1913 average.

The next table shows the quarterly movements of our index of the sterling wholesale prices of certain primary products, together with the quarterly changes in our index of dollar wholesale prices of the same products (i.e. gold prices up to March, 1933, and thereafter dollar prices):—

(September 18, 1931 = 100)			
	Sterling Prices (Primary Products)	Dollar Prices	
1931			
December 30	117.1	94.4	
1932			
December 28	109.3	76.9	
1933			
December 27	113.9	119.8	
1934			
March 28	121.4	127.5	
June 20	123.4	133.9	
September 26	125.7	149.0	
1935			
January 2	123.7	154.5	
March 27	123.3	147.6	
June 19	125.6	144.2	
September 25	131.3	148.6	
1936			
January 1	131.2	143.3	
March 25	133.9	144.3	
June 24	133.2	147.0	
September 30	144.5	159.6	
December 30	163.9	187.3	
1937			
March 31	181.9	199.7	
June 30	165.9	176.8	
September 22	164.0	166.3	
December 29	144.3	135.3	

In 1936 sterling prices fell further behind dollar prices. Last year, however, after remaining substantially in arrears in the first six months, sterling prices fell much less than

dollar prices in the last two quarters, and in December took the lead for the first time since 1933.

The following table shows the annual movement in each group of *The Economist* index since 1930:—

YEARLY AVERAGE (1924 = 100)								
	1930	1931	1932	1933	1934	1935	1936	1937
Cereals and meat	70.9	60.1	59.7	56.3	60.4	61.2	67.3	79.4
Other foods	72.3	61.2	58.6	55.0	55.3	56.8	57.3	63.2
Textiles	47.1	36.6	35.9	37.2	39.5	41.7	45.2	49.7
Minerals	70.0	61.2	61.0	64.7	64.3	66.8	70.9	86.9
Miscellaneous	77.3	64.8	58.6	62.1	65.2	70.8	74.0	79.5
Complete index	67.0	56.1	54.0	54.5	56.7	59.2	62.9	71.3

Only minerals have recovered and exceeded the price level of 1930.

MONEY AND BANKING

The Money Market

THE history of the Money Market during 1937 can almost be summed up in a single sentence. Money continued to be cheap, and the authorities wished it to remain so. While the fall in gilt-edged prices in the early part of the year indicated a further slight rise in the long-term rate of interest, short-term rates were steadily kept low. Nor was the slightest difficulty experienced in maintaining the cheap money policy. Ample gold reserves, the relief of the Bank of England from any liability to sell gold on demand, and the powers of varying the fiduciary note issue and switching gold at will between the Bank of England and the Exchange Equalisation Account, have all given the authorities control over the internal credit base and monetary system.

The Money Market equally maintained its new voluntary rules of procedure. The clearing banks continued to lend at fixed rates— $\frac{1}{2}$ per cent. against bills eligible for rediscount at the Bank, $\frac{3}{4}$ per cent. against 1 per cent. Treasury bonds and equivalent collateral, and 1 per cent. against other bonds. The banks similarly refrained from buying "hot" Treasury bills, but, except in June and December, were free buyers of all other Treasury bills at $\frac{1}{2}$ per cent. This set the pace for other phases of the market's activity. Outside lenders, viz. those other than the clearing banks, lent at $\frac{1}{2}$ per cent. against bills and 1 per cent. against bonds. Three months' bank bills were dealt in usually at $\frac{1}{2}$ to $\frac{3}{4}$ per cent. with the emphasis often on the lower rate. The climax came in December, when, contrary to their normal practice, several clearing banks continued buying bills right through the month and, for the first time since the War, the market passed the turn of the year without any borrowing at the Bank of England.

Interest, indeed, attached less to the efficacy of the machinery for maintaining cheap money than in the method of its operation. The year's chief monetary features were the further growth in the note circulation, the gold scare, the April issue of National Defence Bonds, and the flight of capital from France which persisted during most of the year.

The increase in the note circulation was met mainly by a policy of neutralisation. As notes pass into the hands of the public, two direct consequences follow. First the Bank of England's reserve is depleted, and next the clearing banks lose cash. The latter is remedied by the Bank acquiring fresh securities, which are placed in the banking department. The aim here is to keep the total resources of the banking department constant, by offsetting changes in securities against changes in the reserve. This aim was successfully achieved last year. If, however, the reserve itself needs replenishing, the only remedies are either fresh gold purchases by the Bank or an increase in the fiduciary note issue. Thus a temporary seasonal increase of £20 millions was made in the fiduciary note issue between mid-November, 1937, and mid-January, 1938, to take care of the Christmas currency withdrawals.

During 1937 the Bank only bought some £13 millions of gold—mainly during the gold scare of the late spring,

when, for a relatively short period, there was talk of a "surfeit" of gold in the world, and a temporary flight from gold was started. At that time the authorities had to support the London bullion market. At the end of 1937 the Exchange Equalisation Account had relieved itself by selling £65 millions of gold to the Bank, while at mid-summer the Account was enlarged by £200 millions. Thus most of the gold bought by the authorities, both during the gold scare and on the many occasions when support had to be given to the franc, passed into the Exchange Equalisation Account. During the six months to September 30th, the Account acquired £92.6 millions of gold, against only £20.7 millions by the Bank. These accounts are based on a valuation at 140s. per ounce, whereas the increase shown in the Bank return is based on a price of 85s. per ounce.

Defence borrowing had no noticeable effect upon the market. Most of the £100 millions of National Defence Bonds were initially taken up by the public departments, which for a time at least thrust part of the onus of defence borrowing upon the money market. On the other hand, actual defence expenditure has so far been covered mainly out of revenue, for the financial year's deficit to December 31st last was only £33 millions greater than the comparable deficit of the previous year. Thus only £33 millions of last April's Defence Bond issue has had to be taken up by the general body of investors, to relieve the money market of any share in the financing of the new defence expenditure through an increase in the floating debt. Actually tender issues of Treasury bills increased only by £13 millions during the calendar year 1937. That relatively insignificant movement may be due to half-a-dozen different causes, including notably the operation of the Exchange Equalisation Account. There is no evidence that defence expenditure thrust any new burden upon the money market.

Thus 1938 was another year of cheap money, maintained by efficient machinery and helped by the reversal of the movement towards higher commodity prices, which early in the year threatened to have far-reaching repercussions.

Bank Clearings

THE 1937 returns of London and Provincial bank clearings show a higher aggregate degree of activity than in the previous years, but if they are analysed quarter by quarter they illustrate very clearly the downward trend of business during the closing months of the year.

	1935	1936	1937
	(£ million)		
Town clearings	32,444	35,039	36,719
Metropolitan clearings	1,887	2,040	2,162
Country clearings	3,229	3,538	3,805
Total, London clearings	37,560	40,617	42,686
Provincial clearings	1,283	1,394	1,472

London clearings for the first quarter of 1937 were 14.8 per cent. greater than in 1936. The second quarter was nearly as good, but the third quarter showed definite signs of hesitancy, while the fourth quarter's total registered a drop of 7.9 per cent. below the previous year. This decrease was mainly in town clearings, which are largely governed by the degree of activity on the Stock Exchange. Still the fourth quarter's totals for metropolitan and country clearings did not compare at all favourably with those of the earlier quarters. Provincial clearings for the final quarter of the year were also disappointing, except in Sheffield, Hull and Newcastle-upon-Tyne.

The Foreign Exchanges

THE year 1937 opened so quietly in the London market that early in February brokerage charges were reduced, on the ground that business was being lost to Paris and other centres. The franc was still firmly pegged at Frs. 105.15, though it presented an obvious attraction to the bears at that rate, and in February France obtained further aid in the form of the French railways' £40 millions

sterling credit. The New York rate stood at about \$4.90, and guilders and Swiss francs were firm.

In March came the first of the year's series of French changes. The penal taxation on repatriation exchange profits was repealed, the French Exchange Control was overhauled, the franc was unpegged, and a new exchange-guaranteed Defence Loan was issued. The franc at once slipped to Frs. 108, and during the gold scare, which began a few weeks later, the new French Control quietly allowed the franc to slip again to Frs. 111, this being the bottom limit of the 1936 devaluation.

Meanwhile, the rise in commodity prices during the early part of the year had reached the point where it began to threaten the stability of the sterling area. The firmness of the Argentine peso, due to Argentina's enhanced exports, was a move in the right direction. On the other hand, Sweden became restive at the rise in sterling prices, and a movement developed in favour of an appreciation of the krona against the pound. As matters turned out, the commodity boom broke before the movement gained much force, and all that happened was that those who had speculated on its success were badly nipped.

In April came the gold scare, the break in commodities and securities on both sides of the Atlantic, and the beginning of the downward slide from the peak of the trade cycle. The gold scare itself caused the dollar to strengthen to \$4.89, as hoarders were moving out of gold and into dollars, while the authorities were having to support the bullion market. Later in the year, however, weakness in Wall Street caused a flight from American securities with a corresponding weakness of the dollar.

At the end of June, M. Blum's Government fell, and with it the "Auriol" franc. A fresh devaluation took place, which sent sterling up to Frs. 132. The Banque de France's gold was also revalued for a second time, and the resulting profit was used to constitute a fund for supporting the Rentes market. August was a good month for the franc, while the dollar weakened to \$4.99 under the influence of Japanese sales of gold for dollars, the dollar afterwards being spent all over the world. In September, however, came yet another break in the franc, sterling this time rising to Frs. 147.

October and November were good months for the franc and bad months for the dollar. The first Chautemps Government was then commanding some measure of confidence, while the weakness of Wall Street and the autumn business recession inspired no confidence in the United States. There was, in fact, during early November, a new scare that the American price of gold was going to be raised as a cure for the business setback, and this caused a flight of funds from dollars into gold. Meanwhile, France arranged new credits in Holland and Switzerland, and so was able to repay the sterling credit of £40 millions arranged early in the year. There was also a firm repatriation movement of capital back to France. The result was that the French Control replenished their gold and foreign exchange resources to some extent, though—unwisely as it turned out in 1938—they handed over Frs. 3,000 millions of gold to the Banque de France. December was a fairly quiet month, but the franc developed new signs of weakness, which were a forecast of the new crisis of January, 1938.

During the autumn, guilders were firm and Swiss francs steady. Belgas weakened at the time of M. van Zeeland's resignation. Portugal removed the last vestige of her exchange restrictions. On the other hand, in November Brazil abandoned her previous coffee regulation policy, and for the moment appeared to be freeing exchange dealings. A new series of regulations were issued, however, at the end of the year, which involved the blocking of foreign-owned milreis balances.

Sterling itself preserved an even tenor, any possible consequences of the year's adverse trade balance being completely masked by international capital movements. Owing to such events as the gold scare, the American setback, and above all the weakness of the franc, there was a further large influx of funds into England. To enable the authorities to cope with this, the Exchange Equalisation Account had to be enlarged at midsummer by a further £200 millions. It was simultaneously decided to publish twice a year, with a time-lag of three months,

the total gold holdings of the Exchange Accounts. Two such statements have so far been issued:—

Quantity (million fine ounces)—	Mar. 31	Sept. 30	Intervening Change
Bank of England	73.8	76.8	+ 3.0
Exchange Account.....	26.7	39.9	+13.2
Total	100.5	116.7	+16.2
Value (£ millions : at 140s. per fine ounce)—			
Bank of England	516.9	537.6	+20.7
Exchange Account.....	186.7	279.3	+92.6
Total	703.6	816.9	+113.3
Bank of England (£ millions : valued at statutory price)...	313.7	326.4	+ 12.7

The increase in British gold stocks during the intervening six months is marked, and the total size of those stocks on September 30th was very great.

Gold Output and Movements

THE following table shows world gold production during each of the past two years. The returns of South Africa, Canada and Australia are substantially accurate, but the American and miscellaneous returns are estimates, and the Russian returns are based on something closely resembling guesswork:—

	Thousand fine ounces	
	1936	1937
South Africa	11,339	11,741
U.S.S.R.	5,400	5,950
Canada.....	3,735	4,055
U.S.A.	3,714	4,000
Australia	1,160	1,290
Other Countries	7,650	8,200
Total	32,998	35,236

In round figures these totals agree closely with the Union Corporation's revised estimates of 32,960,000 and 35,400,000 ounces for the two years. The increase in total production was 6.8 per cent. of the 1936 total.

Gold movements during 1937 were very complex. There was the dishoarding movement during the gold scare of the late spring and a counter-movement during the dollar scare of November. Another important factor was the increased Russian output and export, much of which suddenly came on the market at the time of the gold scare. Meanwhile, the flight of funds from France continued during most of the year, but was partially reversed in October and November. Thus substantial changes occurred in ownership of gold, either by transfers of earmark or physical movements. The United States continued to sell gold to China in exchange for silver, while Japan lost gold heavily to the United States as part of her efforts to finance the war. Finally, Argentina repatriated from London that portion of her gold reserves which previously had been lodged there.

The next table gives movements of gold bullion into and out of Great Britain, according to countries of origin and destination:—

	1936			1937		
	Imports From	Exports To	Net Exports (+) or Imports (-)	Imports From	Exports To	Net Exports (+) or Imports (-)
India	24.6	...	- 24.6	13.3	...	- 13.3
South Africa	84.7	...	- 84.7	79.9	...	- 79.9
Australia	5.3	...	- 5.3	4.3	...	- 4.3
Canada	0.5	...	- 0.5	0.5	...	- 0.5
Germany.....	5.2	0.5	- 4.7	10.0	0.8	- 9.2
Holland	2.6	6.7	+ 4.1	1.5	5.1	+ 3.6
France	156.3	4.1	-152.2	115.9	3.6	-112.3
Belgium	2.4	5.5	+ 3.1	2.4	7.3	+ 4.9
Switzerland	2.9	3.8	+ 0.9	1.5	4.8	+ 3.3
Russia.....	...	...	...	40.4	...	- 40.4
United States.....	1.3	56.1	+ 54.8	1.0	168.8	+167.8

Movements of gold, so far as they affected Great Britain, are shown in the following tables:—

	Bullion		Foreign Coin		Specie	
	1936	1937	1936	1937	1936	1937
	£ millions		£ millions		£ millions	
Imports	304.6	290.2	6.2	2.8	3.6	2.2
Exports	80.1	210.7	3.8	2.4	2.7	2.4
Import surplus	224.5	79.5	2.4	0.4	0.9	-0.2

The main changes between 1935 and 1936 were: first, the advent of Russian gold to London, and then the much greater outflow to the United States. This latter movement was concentrated in the four months March to June, inclusive, that is, in the period covering the gold scare. During the whole of the year, official support was given to the London bullion market, the authorities buying at the time of the gold scare and supplying the market with its needs at other times. The price, whether premium or discount against the American shipping price, was fixed in such a way as to keep the market on an even keel and to discourage any rush either into or out of gold. Probably most of the countries adhering to the Tripartite Agreement co-operated in giving this support, as an obvious way of preventing gold movements from upsetting the exchanges. The United States' heavy acquisitions during the gold scare may indicate the extent of the American share in this support.

The final table shows the gold holdings of central banks and Governments, so far as they are disclosed every month. Less frequent disclosures, such as those of the British Exchange Equalisation Account, are excluded from the tables. The British Exchange Account holdings amounted to \$910 millions on March 31st and to \$1,396 millions on September 30th. No returns of Italian gold holdings have been issued since March, 1937, and so the March return is repeated for the later months:—

GOLD HOLDINGS OF CENTRAL BANKS AND GOVERNMENTS (\$ millions)

1937 (end of Month)	January	March	June	September	November
England	2,584	2,584	2,689	2,689	2,689
United States.....	11,358	11,574	12,318	12,741	12,774
France.....	2,846	2,846	2,722	2,428	2,564
Germany.....	27	27	28	28	28
Holland	558	626	848	862	940
Belgium	625	619	625	590	570
Switzerland.....	657	657	635	612	644
Italy	208	208	208	208	208
Sweden.....	240	241	242	243	244
Norway	98	98	88	86	86
China	9	12	16	55	55*
Japan	466	456	443	261	261*

* October.

The causes of many of the changes shown in the table have already been discussed. On balance, the maldistribution of the world's monetary gold remains as pronounced as it was a year ago. England, the United States and Holland have gained, while France, Belgium, Switzerland, Norway and Japan have lost gold. The preponderance of the American gold stocks is even more marked than before.

INVESTMENT

New Capital Issues

THE pace of new issue business became less active in 1937 compared with the previous year. The total of new money involved in the year's public issues declined from £255.7 millions in 1936 to £251.6 millions in 1937, representing 68 per cent. of the £369.1 millions raised in 1928, compared with 69 per cent. in 1936. The year's public offers are analysed, according to the status of the borrowers, in the table at the head of the next column.

It will be seen that Government borrowing has again stepped into first place among British issues. The figures include the £100 millions of National Defence bonds issued in April. Home corporation issue activity was rather higher than the public offer figures suggest, for the

latter take no account of the numerous conversion operations on behalf of British corporations made during the year. These are covered in a later table. During the first

Calendar Years	British				Empire	Foreign	Total Issues	Index 1928 = 100
	Government	Home Corporations*	Others	Total Home				
1929	65.4	8.3	124.3	198.0	61.0	26.2	285.2	77
1930	65.6	41.7	63.3	170.6	61.4	35.8	267.8	73
1931	10.7	8.0	35.3	54.5	38.5	9.1	102.1	28
1932	102.7	28.8	31.6	163.1	25.5	0.3	188.9	51
1933	150.8	24.5	34.9	210.2	29.2	5.4	244.8	66
1934	44.1	36.1	57.5	137.7	29.9	1.5	169.1	46
1935	88.0	51.1	81.8	220.7	15.2	0.2	236.1	64
1936	60.2	79.5	80.8	220.3	24.7	0.7	255.7	69
1937	95.8	43.7	84.7	224.2	21.1	6.3	261.6	69

* Including county and public board loans.

part of the year a considerable number of small industrial prospectuses appeared, but it is significant that the total for "other British issues," in which they are included, was lower than in 1936. Direct issues by Empire countries show a small reduction, but the Foreign Transactions Advisory Committee allowed a slightly larger amount of foreign borrowing to pass the barrier.

In our second table we give our new computation of total borrowing by both public and private offers, including issues in respect of which permission to deal has been obtained. Under this heading, for instance, is included the £46½ millions of Redemption Stock in which dealings began last August. The increase under home corporations is small, since permission to deal cannot be sought in respect of issues totalling more than £250,000. The very substantial amount of new capital which is raised, particularly by established companies, without appeal to the public capital market is illustrated by the total of £199.1 millions under non-Government British borrowing, though this figure was one-third lower than in 1936. Details are given below:—

TOTAL BORROWING, INCLUDING STOCK EXCHANGE "PERMISSION TO DEAL" (Million £)

Calendar Years	British				Empire	Foreign	Total Issues
	Government	Home Corporations*	Others	Total Home			
1936	60.2	82.1	306.1	448.4	33.8	11.7	493.9
1937	143.1	45.3	199.1	387.5	63.4	7.1	458.0

* Including county and public board loans.

In the third table we show the amount involved in conversion issues in recent years. It is clear that the big wave of conversion operations which followed the War Loan conversion in 1932 has considerably abated.

	1932	1933	1934	1935	1936	1937
British Govt.	2,478.9	50.7	105.0	204.0	37.2	Nil
Other	31.8	172.4	130.9	108.2	109.7	58.5
Total	2,510.7	223.1	241.9	312.2	146.9	58.5

The proportion of ordinary capital raised on company prospectuses last year was almost identical with that of 1936, at slightly over 62 per cent. Of the total of £100.2 millions so raised, some £62.7 millions took the form of equity capital.

The Stock Exchange

ALTHOUGH 1937 opened in promising style for the London Stock Exchange, the year closed on a despondent note. Leading industrial shares, as measured by *The Financial News* index, fell by 23 per cent., but the trend in the gilt-edged market is not accurately reflected in a fall of 12 per cent. in 2½ per cent. Consols, since this fall mainly occurred in the first quarter of the year.

The prospective benefits of the re-armament programme prompted early buying of industrial equities and commodity shares. In January, *The Financial News* index almost regained the high level recorded in November, 1936. But calculations of the cost of re-armament soon caused a flurry, and this was followed in March by the gold scare, with its deflationary consequences for commodity prices, and in April by the announcement of the first National Defence Contribution proposals.

The second version of N.D.C. was presented after several weeks of uncertainty, in which equity prices slumped and new issue activity became paralysed, but it failed to stimulate any recovery. From midsummer, Wall Street's collapse and business recession in America, coupled with war in the Far East, caused a sharp reduction in the volume of business in London, entailed much weeding-out of weak speculative positions, and in turn promoted an irresponsible "whispering campaign" from which the best names were not immune.

In the following table, based on *The Actuaries' Index*, the course of representative fixed-interest and equity securities may be traced:—

End of	Fixed Interest Securities			Ordinary Shares		
	2½% Consols.	Miscell. Indus. Debts.	Miscell. Indus. Pref.	Home Rails	Iron and Steel	Miscell.
December, 1932	131.8	113.1	97.8	68.2	43.2	47.9
" 1933	131.8	111.6	97.8	68.2	43.2	47.9
" 1934	165.3	125.6	120.7	75.0	52.1	65.1
" 1935	154.5	124.8	120.6	64.9	57.8	75.2
" 1936	150.9	125.6	122.5	66.6	63.0	81.3
January, 1937	147.3	124.8	120.4	84.3	81.1	82.1
February	133.4	122.4	115.6	75.1	82.8	78.2
March	136.3	120.5	114.2	78.0	79.3	77.5

October	131.7	121.0	116.1	72.6	71.6	68.8
November	133.6	121.2	115.6	69.1	64.9	65.5
December	132.7	121.5	115.6	70.6	65.9	66.4

In the gilt-edged market, the outstanding features of the year were the friendless reception accorded to the National Defence Bond issue in April, and its subsequent recovery towards the original issue price as the year closed. This fall and subsequent improvement were symptomatic of the course of gilt-edged. Foreign bonds began well, and the rise in commodity prices stimulated Brazilian and Chinese issues in particular. The Brazilian default and Sino-Japanese war, however, caused heavy losses, even in the best issues.

Despite the high level of industrial activity, particularly in the constructional sections, steel and building material shares showed substantial falls. Coal shares, however, improved, and the rapid rise in freight rates stimulated a boom in shipping issues. Motor shares were severely marked down, and aircraft issues were depressed by fears regarding profit margins. Dealers adopted caution towards electricity shares after the publication of the Government's draft scheme. Investment industrials in the tobacco and brewery sections failed to respond to record consumption and satisfactory profits.

The past year proved bitter for mining and commodity shareholders. The series of deflationary gold and commodity crises took their toll in heavy share losses, though there were signs of partial recovery in the dividend-paying Kaffir shares towards the end of the year. Base metal and rubber shares, however, remained deflated, owing to the collapse in prices after the speculative boom earlier in the year.

LABOUR CONDITIONS

EMPLOYMENT continued to rise until September, when the number of insured persons in work was 11,706,000, a new high record*. The average for the year was 11,496,000,† compared with 10,896,000 in 1936. Similarly

* A revised procedure for counting the unemployed increased the figure for employment in September by 44,000.
† Or, more comparably, 11,480,000 on the old basis of counting the unemployed.

unemployment fell until September, when the percentage unemployed among insured workers was 9.7, the lowest post-depression figure. The average percentage of unemployment during the year was between 10 and 11 per cent. compared with 13.0 in 1936. The following table shows monthly figures of employment and unemployment:—

EMPLOYMENT IN 1936 AND 1937

	Insured Employed (a)		Insured Unemployed (b)		Insured Unemployed (c)	
	1936	1937	1936	1937	1936	1937
January	10,391	11,106	2,063	1,604	16.1	12.9
February	10,525	11,187	1,949	1,532	15.3	11.9
March	10,689	11,242	1,814	1,505	14.2	11.5
April	10,785	11,394	1,745	1,368	13.7	10.5
May	10,918	11,387	1,635	1,360	12.8	10.7
June	10,933	11,613	1,645	1,306	12.6	10.0
July	11,006	11,623	1,595	1,321	12.2	10.1
August	11,072	11,672	1,548	1,294	11.9	9.9

December	11,132	11,437	1,552	1,584	11.9	11.8
Average	10,896	11,496	1,684	1,413	13.0	10.75

(a) Estimate of number of insured persons aged 16-64 in employment in Great Britain, with allowance of 3½ per cent. absence for sickness, etc.
(b) Insured persons aged 16-64 unemployed in Great Britain.
(c) Percentage unemployed among insured workers aged 16-64 in Great Britain.

* Revised procedure for counting unemployed introduced.

The decline in unemployment was most marked in the Northern division and Wales, but local percentages still varied from under 7 in London and the South-Eastern divisions to 14.0 in the North-Western division, 15.9 in Scotland, 17.9 in the Northern division, and 22.3 in Wales. There was a very marked improvement in employment in coal-mining, and the figure for December 25th was the highest since March, 1933. Shortages of labour were noticed in engineering, and employment in all major industries, except wool, increased during the year, though there was a marked downward movement in the later months of the year in the tinplate, cotton and building industries.

The general level of wage rates rose 4 per cent. compared with a rise of 3 per cent. in 1936. Some 5,110,000 work-people received a net increase of about £780,000 in weekly full-time rates of wages. The increases were widespread, but largest in coal mining, clothing, engineering and transport. The table below gives details of wages, cost of living and trade disputes:—

WAGES, PRICES AND TRADE DISPUTES, 1936 AND 1937

	Wages (a)		Cost of Living (b)		Trade Disputes (c)	
	1936	1937	1936	1937	1936	1937
January	96	98½	147	151	000's	000's
February	97	99½	147	151	114	306
March	97	99½	146	151	212	84
April	97	100	144	151	195	220
May	97	100	144	152	141	480
June	97½	100	144	152	133	814

August	98	100½	146	155	83	512
September	98	101½	147	155	76	228
October	98	101½	148	158	168	238
November	98	102½	151	160	148	285
December	98	102½	151	160	156	152
Average	97½	100½	147	154	154	350

(a) Index (1924 = 100) compiled by Prof. Bowley, eliminating seasonal fluctuation.
(b) Ministry of Labour Index for 1st of month (July 1, 1914 = 100).
(c) Number of working days lost.

A marked feature of the year was the rise in the cost of living, which was not arrested until December. The advance was largely due to increases in the price of foods. The number of trade disputes was 1,122 compared with 818 in 1936, of which two-fifths were in the coal-mining industry. On the whole, however, in view of the great industrial activity, strikes were not surprisingly frequent, and conciliation machinery worked well, conspicuous examples being the new wage agreements negotiated in the coal districts. The major disputes were the Yorkshire coal strike in July over the status of rival unions, a series of strikes among engineering and shipbuilding apprentices, in which recognition of the unions' right to represent the apprentices was secured, and the strike among the London omnibus workers.

Overseas Countries

British Empire

Canada

DURING three-quarters of the year recovery continued, and the setback, caused by events in the United States in the last quarter, was checked in December. During the year, there was an estimated increase of 9.3 per cent. in the physical volume of business, and the tables given below show the chief economic activities of the Dominion in 1936 and 1937:—

General Economic Situation (1928 = 100)	Twelve months of		Increase + Decrease —
	1936	1937	
Index of physical volume of business.....	112.2	122.6	+ 9.3
Wholesale prices	74.6	84.5	+ 13.3
Production and general business—			
Copper exports	401,694,700	432,118,000	+ 7.6
Nickel exports	173,637,500	222,770,000	+ 28.3
Lead production (11 mos.)	342,807,477	387,822,225	+ 13.1
Zinc exports	319,554,900	334,073,800	+ 4.5
Raw cotton imports	150,288,295	158,192,013	+ 5.3
Paper and Lumber—			
Newsprint production	3,179,914	3,638,244	+ 14.4
Export of planks and boards	1,749,860,000	1,858,352,000	+ 6.2
Iron and steel—			
Steel ingot production	1,114,550	1,401,011	+ 25.7
Pig iron production	678,672	897,355	+ 32.3
Automobile production	162,322	207,000	+ 27.5
Building permits	41,325,693	55,634,610	+ 34.6
Electrical Power prod.	25,394,292	27,574,926	+ 8.6
External trade, exports	1,027,901,934	1,114,492,512	+ 8.4
External trade, imports	635,190,844	808,896,325	+ 27.0
Carloadings	2,494,369	2,635,382	+ 5.7

Industry.—This increase in business was achieved in face of another disaster to the Western grain crop. The total value of Canada's field crops was reduced to \$556,382,000, a decline of 10 per cent. compared with the figure for 1936. The chief factors in the maintenance of Canadian prosperity were improvement of the export trade; increased activity in mining; and the advent of almost a boom in the heavy industries, accompanied by a substantial improvement in the building industry, which, however, still lags behind. The purchasing power of the public was augmented by increases in both wages and dividends. The textile industries suffered from strikes during the summer, but on the whole labour troubles were few. Except in the drought-stricken areas of the prairie provinces, the farmers had a satisfactory year. The forestry industries also fared well, but the fishermen on the Atlantic coast continued to experience hard times. The summer tourist business realised about 300 million dollars, and the volume of retail trade is estimated to have been about 8 per cent. above the level for 1936. There was a gratifying improvement in employment which reached a level only exceeded in the boom year of 1929. Between March and October the employment index showed a rise of 22 per cent., more than double the average gain recorded for this period since 1920; and for the whole year it averaged 114.1 compared with 103.7 in 1936.

Public Finance and Banking.—For the first nine months of the current fiscal year ended December 31st, Federal revenues totalled 402½ million dollars, a gain of 63 millions. Total expenditure, at 362 million dollars, showed an increase of only 1½ million dollars, and at the end of the fiscal year the aggregate deficit should be at least 10 million dollars below the forecast of 35 million dollars. During the year the Federal Government successfully conducted refunding and other operations involving new issues totalling 338½ million dollars, at rates ranging from 3½ to 1 per cent. The financial embarrassments of certain Western provinces still persist. The banking position remained strong, there was an abundant supply of easy money, and the banks still retained a very large proportion of their funds in Government securities. The total of demand and time deposits reached a maximum in April, and showed a recession towards the close of the year, but the monthly average was well above that for the preceding year.

Foreign Trade and Prices.—The total value of Canada's foreign trade was \$1,923,388,837, compared with \$1,663,092,798 in 1936, an increase of 260½ million dollars. There was a greater relative expansion of trade with foreign

countries than with countries of the British Commonwealth, and the export surplus of 492½ million dollars in 1936 was reduced to 305½ millions. Commodity prices followed an irregular course. After the wholesale index of the Bureau of Statistics had risen in the first quarter from 80.9 to 86.9, there was a downward movement, which was checked in June, and the high point for the year, 87.7, was reached in the third week of July. In August there was begun a gradual decline, not checked until December, when there was a slight recovery. The average of the index for the year, 84.5, was nearly 10 points above the parallel figure for 1936, 74.6. The Bureau's cost-of-living index rose slowly from 81.8 for January to 84.3 for December.

Stock Markets.—The stock markets continued the upward movement of 1936 during the first quarter, but thereafter pursued a downward course with few interruptions until the close of the year. For the last week of 1937, the Bureau's "Investors" index for common stocks was 102.3, compared with 133.2 in the parallel week of 1936, a fall of about 25 per cent. The bond market remained relatively firm throughout the year.

Australia

THE past financial year ended June 30, 1937, was marked by a continued substantial improvement in the general economic situation. More prosperous conditions have been widely diffused, as the result of higher prices received for most primary products, the rise in company profits, and increases in employment and wage rates. The volume of agricultural production was well maintained, and high prices meant substantial increases in farmers' income and a further increase in the export surplus. Unemployment continued to decline, and the percentage of trade union members unemployed fell from the already low level of 12.8 per cent. in June, 1936, to 9.7 per cent. in June, 1937. An additional stimulus to industrial activity during the current year is to be expected from the increased expenditure on defence, since the Commonwealth Government will spend £A.3.4 millions more in the current financial year than in the previous year ended June, 1937.

Agriculture and Mining.—The wool clip totalled 975,000 lbs. in the 1936-37 season, compared with 971,000 lbs. in 1935-36. The value of wool per lb. in 1936-37 averaged 1s. 5.4d. for greasy and 2s. 0.0d. for scoured, compared with 1s. 2.8d. and 1s. 7.6d., respectively, in the previous season. The current season's clip is expected to be 944 million lbs. The area under wheat in the 1936-37 season was 12,342,000 acres, compared with 11,924,000 acres last year, and the yield was estimated at 150,468,000 bushels in 1936-37, compared with 144,217,000 bushels in the previous year. The average export price of wheat rose from 3s. 7d. per bushel in 1935-36 to the high level of 5s. 2.7d. in 1936-37. The revival of gold mining in Australia has continued, and further increases in the output of gold were recorded, the State of Western Australia still supplying about three-quarters of the total. The number of people directly employed in gold mining was 40,000, compared with only 6,000 in 1929, and in 1936 the output was valued at £A.10,123,000, compared with £A.8,008,000 in the previous year.

Overseas Trade.—The value of both imports and exports was higher than last year. Imports of merchandise in the year 1936-37 amounted in sterling to £90,484,000, an increase of £6,963,000 over the previous year. The principal groups of imports for which increases were recorded were machines and machinery, crude rubber, and paper. Exports of merchandise were valued at £116,658,000 sterling in 1936-37, an

Exports	1935-36		1936-37		Per cent. exported to Great Britain 1936-37

(a) Recorded values in Australian currency.

increase during the year of £18,595,000 sterling. There was an export surplus of £26,173,000 sterling, compared with £13,826,000 sterling last year; and the excess of exports of bullion and specie was valued at £9,483,000 sterling, compared with £8,694,000 sterling in 1935-36.

Finance.—The accounts for the Commonwealth and States for the year ended June 30, 1937, were as follows:—

State	Revenue	Ordinary Expenditure	Net Loan Expenditure	Gross Public Debt
		(Value in £'000)		
New South Wales	55,186	55,051	6,336	346,576
Victoria	27,219	27,198	3,303	175,058
Queensland	16,535	16,815	3,760	122,647
South Australia	11,739	11,600	3,015	105,699
Western Australia	10,185	10,556	2,070	90,344
Tasmania	3,489	3,444	814	24,418
Six States	124,353	124,664	19,298	864,742
Commonwealth	83,090	81,813	2,710	389,971
Total	196,923	195,962	22,008	1,254,714

The Commonwealth consolidated revenue accounts for the financial year 1936-37 show an excess of receipts over ordinary expenditure of £1,276,558. The Commonwealth Treasurer, in the Budget speech on August 27, 1937, estimated that in the current financial year ended June 30, 1938, receipts would amount to £85,190,000 and expenditure to £85,160,000, giving a surplus of £30,000. No further reductions in taxation were provided for in the Budget. The total financial provision for defence purposes from all sources is expected to increase from £8,067,000 in 1936-37 to £11,531,000 in 1937-38. The loans raised by the Commonwealth during the past financial year were as follows:—

(1) London (Conversion):—		£	Price
June, 1936	2½%	16,551,402	99
April, 1937	3½%	53,200	100
June, 1937	3½%	12,360,958	96½
(2) Australia:—			
November, 1936	3½%	7,516,320	97½
April, 1937	3½%	7,870,670	99½
For States over the counter...	...	1,946,510	...

The total public debt (Commonwealth and States) per head of the population was £184 18s. 10d. at June 30, 1937, compared with £185 2s. 10d. in 1936.

New Zealand

In many respects, 1937 was a year of boom. An increase of £NZ10 millions in the value of exports, compared with the previous year, raised export income to £NZ66 millions, nearly double the lowest depression level, and about 20 per cent. higher than the levels of good years before the depression. Consequently, demand and internal trade expanded, and imports, expressed in local currency, reached very high levels. Expressed in sterling, both exports and imports are now back to about the pre-depression averages. Heavy Government borrowing and increased expenditure on public works gave an additional stimulus to internal trade. On the other hand, rising labour costs, due to increased wages, the 40-hour week, and State control of industrial relations, have increased costs of production substantially, the cost of living has steadily advanced, and local manufacturers complain that, without further protection, they are unable to compete with imports.

Trade.—External trade returns for years ended in September (including 1929), are as follows:—

Year ending Sept. 30th	In N.Z. Currency		In Sterling.	
	Exports	Imports	Exports	Imports
1929	56.20	44.10	58.20	44.10
1933	39.77	25.34	32.71	20.97
1934	49.34	28.97	39.51	23.30
1935	43.36	35.39	38.40	28.39
1936	56.69	41.67	45.53	33.47
1937	65.99	54.36	53.00	43.66

Compared with the levels ruling in 1929, both export and import prices are lower, by 13 and 9 per cent. respectively, while the index of the volume of exports has risen 34 per cent., and of imports 13 per cent. Though production continues to expand, the fall in wool prices that marked the opening of the 1937-38 export season indicates that export values are likely to be lower. If so, income will be contracted and the demand for imports may fall somewhat in 1938. Most external trade is with the Empire. For the first nine months of

1937, Great Britain took 74 per cent. of exports (some for re-export) and supplied 50 per cent. of imports, while Empire countries took 80 per cent. of exports and supplied 74 per cent. of imports.

The expansion in domestic trade is indicated by increases of 23 per cent. in the yield of sales tax and 21 per cent. in total bank debits in the first nine months of 1937, compared with the same period in 1936. Higher wage payments have stimulated retail trade, and there is a noticeable increase in cash trading. The note circulation, which was about £NZ6½ millions in 1928 and 1929, averaged about £NZ9 millions in 1937. Unemployment continued to fall, particularly in the rural centres, and farmers, finding it difficult to secure suitable labour, complained of the competition of the higher rates paid on public works.

Banking and Finance.—Comparing September figures, trading bank deposits were £NZ65.13 millions in 1937 against £NZ62.74 millions in 1936, while advances were £NZ50.55 millions against £NZ45.88 millions a year earlier. Net overseas funds held by all the banks fell from £NZ34.03 millions in September, 1936, to £NZ29.99 millions in September, 1937. The Reserve Bank's deposits and advances have changed little from last year, and its proportion of cash is maintained at a high level. The Budget for 1937 showed a surplus of £NZ472,000, revenue amounting to £NZ31.14 millions and expenditure to £NZ30.67 millions. For 1937-38 revenue is estimated to reach £NZ34.78 millions and expenditure £NZ34.73 millions. The first half-year's returns show that the yield of taxation is increasing, and it is expected that the Budget will be balanced comfortably. It is estimated, however, that £NZ17.37 millions will be spent on public works this year, and though a good deal of this will come from revenue, internal borrowing, mainly from departmental sources, is likely to be heavy.

South Africa

THERE is abundant evidence that the year has in many important respects established new records, even eclipsing those for 1936. The gold-mining industry is primarily responsible for this achievement. The following figures illustrate the recent expansion of the industry:—

	1932	1936	1937
Tons milled	35,209,650	48,610,620	51,129,650
Yield (fine oz.)	11,553,564	11,339,411	11,740,891
Yield (per tons dwts.)	6.471	4.568	4.460
Working revenue	£48,587,782	£77,829,915	£80,177,687
Working costs (per ton)	19/3	18/10	18/11
Working profit (per ton)	8/4	13/2	12/5
Dividends paid	£8,993,294	£17,296,439	£17,070,714

The Gold Industry and the Budget.—Although it is not yet possible to assess the exact amount the Union Government will receive in taxation from the gold mines in respect of 1937, this sum will certainly exceed the £14 millions which has been annually provided from this source since the country's departure from the old gold standard, when the amount averaged little more than £4 millions per annum. The additional £10 millions have greatly eased the task of the Minister of Finance and, according to authoritative forecasts, Mr Havenga will again have a surplus of well over £3 millions in his Budget next March.

Foreign Trade.—The Union's foreign trade has generally reflected the country's continued and unprecedented prosperity. Final figures for the year disclose an export surplus of just under £22 millions. Imports for the twelve months were valued at £103,189,598, which represents an increase compared with the previous year of £17,139,600, while exports were valued at £125,161,000, an increase of £11,148,770. As the result of buoyant imports, Customs duties yielded the record sum of £12,839,038, an increase compared with 1936 of nearly £1,000,000. Gold was exported to the value of £82,780,910, an increase of nearly £800,000 compared with 1936; wool exports were valued at £12,643,664, an increase of £2,816,698. General merchandise exported reached a value of £7,568,355, an increase of just under £2,400,000; and maize was exported to a value of £3,194,455, compared with only £55,668 in the previous year.

New Companies and Building.—Nominal capital of over £25 millions is represented by the registration of 1,600 companies at the Companies Office during 1937. The number of registrations is a record, but the capital is slightly below the 1936 total; a comparison with the slump year of 1932 shows that the 613 companies registered that year represented a capital of only £3,680,000. Building statistics also reflect a

record year of prosperity. Johannesburg leads with plans passed to a total of over £11 millions, representing an increase over the 1936 record of more than £1.2 millions.

Public Debt.—According to the annual report of the Public Debt Commissioners for the financial year ended March 31, 1937, the Union's gross debt totals £254,936,935, which represents a sum per head of European population of £125 5s. 6d., and an annual debt charge per head of £5 9s. 5d. These figures compare favourably with those of some other British Dominions; the Commonwealth and States of Australia, for example, return a total gross indebtedness of £1,255,782,106, equal to £185 6s. per head and an annual charge of £6 12s. 8d. Canada has a total indebtedness of £738,026,330, representing a debt per head of the Canadian population of only £67 1s. 10d. and an annual charge per head of £2 12s. 9d.; but New Zealand, with a total debt of £287,670,200, has a *per capita* indebtedness of £182 4s. 3d. and an annual charge of £6 6s. 9d. per head. The Union's total public debt shows an increase, compared with the previous year, of £3,850,240. The share of the public debt held abroad fell during the year from 48.85 per cent. to 40.78 per cent. The report of the Auditor-General contains details of the revenue derived from taxation since the date of Union (1910). The figure in 1910 was £7,344,948; in 1936-37 it amounted to £32,827,215, a record figure representing an increase on the previous year of 7.48 per cent.

India

INDIA made steady progress during 1937 until the recession of business in the United States. The outstanding event of the year was the inauguration of Provincial autonomy and the decision of Congress to take office in July. There are now Congress Governments in seven out of the eleven Provinces of India.

Public Finance.—The Budget showed a deficit of Rs. 197 lakhs, due to smaller receipts from customs, income tax and currency. For the year it was necessary to fill up a gap of Rs. 158 lakhs, which would have been Rs. 342 lakhs, but for the amount available in the revenue reserve fund specially established to meet expenses involved in the constitutional transition. The Budget proposals included the raising of the silver duty from two to three annas and an increase in the sugar excise duty from one rupee five annas to two rupees.

PRINCIPAL HEADS OF REVENUE (In crores, lakhs and thousands of rupees)

	Accounts, 1935-36	Revised Estimate, 1936-37	Budget Estimate, 1937-38
	Rs.	Rs.	Rs.
Customs	52,24.87	44,78.50	42,60.50
Central excise duties		6,44.00	7,16.00
Corporation tax			1,44.94
Taxes on income (other than Corporation tax)	17,07.39	15,30.00	12,85.06
Salt	8,42.80	8,85.00	8,25.00
Opium	61.10	47.31	49.52
Other heads	1,05.98	96.65	94.04
Total	79,42.14	76,81.46	73,75.06

PRINCIPAL HEADS OF EXPENDITURE (In crores, lakhs and thousands of rupees)

	Accounts, 1935-36	Revised Estimate, 1936-37	Budget Estimate, 1937-38
	Rs.	Rs.	Rs.
Debt services	13,49.85	12,66.03	14,12.22
Civil administration	10,58.92	11,05.73	10,42.79
Civil works and miscellaneous public improvements	2,18.83	2,50.97	2,87.23
Miscellaneous	4,18.66	3,94.83	3,83.14
Defence services	50,18.53	50,57.10	49,83.92
Total (with other items)	122,01.09	120,90.28	119,41.88

The Reserve Bank rate continued at 3 per cent. throughout the year, having been reduced to that figure on November 28, 1935.

Foreign Trade.—The total value of India's exports during 1936-37 amounted to Rs. 196 crores, which was Rs. 36 crores more than in the preceding year and Rs. 64 crores more than the lowest point reached in 1932-33. Compared with 1928-29, the pre-depression year, exports in the year 1936-37 still showed a decline of Rs. 134 crores, or 41 per cent. This is almost entirely due to the 41 per cent. decline in the

prices of exports since 1928-29. The volume of exports was in all probability slightly higher than that in 1928-29. Imports into India were valued at Rs. 125 crores in 1936-37 compared with Rs. 134 crores in the preceding year and Rs. 115 crores in 1933-34. Compared with 1928-29, when the value of imports was Rs. 253 crores, the fall amounts to 51 per cent. Compared with 1928-29, the decrease in import prices was only about 35 per cent., and there is little doubt therefore that the volume of imports has been reduced considerably since 1928-29.

CHIEF EXPORTS (In crores, lakhs and thousands of rupees)

	1936-37	Percentage of Total Exports of merchandise in 1936-37
Cotton, raw and waste	45,17.38	23.03
Cotton manufactures	3,78.43	1.93
Jute, raw	14,77.10	7.53
Jute manufactures	27,94.75	14.25
Tea	20,03.81	10.22
Seeds	18,46.93	9.42
Grain, pulse and flour	15,37.92	7.84
Metals and ores	8,01.92	4.09
Leather	7,36.37	3.75
Hides and skins, raw	4,43.40	2.26
Total value of all exports	196,12.46	100.00

CHIEF IMPORTS (In crores, lakhs and thousands of rupees)

	1936-37	Percentage of Total Imports of merchandise in 1936-37
Cotton and cotton goods	23,33.02	18.63
Machinery and millwork	14,13.94	11.29
Metals and ores	9,68.70	7.73
Oils	7,25.27	5.79
Vehicles	6,57.78	5.25
Instruments, apparatus and appliances	5,19.14	4.15
Artificial silk	3,85.60	3.08
Provisions and oilman's stores	3,20.22	2.56
Dyes	3,01.34	2.41
Hardware	2,89.35	2.31
Wool, raw and manufactured	2,86.94	2.29
Paper and pasteboard	2,81.68	2.25
Chemicals	2,72.19	2.17
Silk, raw and manufactured	2,41.87	1.93
Total of all imports	125,24.28	100.00

The main feature of India's foreign trade during 1936-37 was a remarkable growth in the export trade, the advance compared with the preceding year being nearly Rs. 36 crores. The largest increase occurred in the case of raw cotton amounting to Rs. 10½ crores. Oil-seeds accounted for a rise of Rs. 8½ crores, and jute (raw and manufactured) for Rs. 5½ crores. Most imports recorded decreases during the year compared with the previous year, the fall in the case of cotton yarns and manufactures amounting to nearly Rs. 3½ crores. Imports of iron and steel manufactures shrank in value by over Rs. 1½ crores and those of motor cars and other vehicles by Rs. ¼ crore. The export surplus, over Rs. 86 crores in 1928-29, dwindled to Rs. 3 crores in 1932-33, but in 1936-37 increased to nearly Rs. 71 crores compared with Rs. 31 crores in the preceding year.

Eire

(Formerly the Irish Free State)

THE outstanding feature of the economic life of the Free State is the continuous and growing decline in the size of the population caused by emigration to Great Britain. The movement has in recent years attained dimensions which more than neutralise the natural increase in Eire's population, and everything points to its further increase in the future. This emigration entails a very severe drain on the resources of the country, since it is frequently the ablest and most enterprising people who depart. Moreover, the cost of rearing and educating each emigrant is considerable, and Irish parents and taxpayers are in effect subsidising the production of part of the supply of labour in Great Britain.

Agriculture.—The British trade recovery, which has led to an increased demand for all classes of labour, is the principal cause of Irish emigration. The movement would not, however, be so extensive if agricultural conditions in the Free State were more satisfactory. It is true that agricultural prices rose

substantially during the year, but farmers' profits did not increase proportionately owing to the widespread rise in costs. Feeding stuffs have increased in price, and wages have been fixed at a level which many farmers cannot afford to pay. The result is that both the area under crops and the numbers of livestock are declining, many rural dwellers are seeking employment in the towns either of Ireland or Great Britain, and the countryside is being slowly depopulated. This in turn leads to a shortage of labour when it is required. One prominent farmer stated recently that the dearth of labour was a more important obstacle to tillage than the level of wages. It would appear that a vicious circle has developed, tending to reduce agricultural output, the principal constituent of Eire's national income.

Economic Policy.—Unsatisfactory agricultural conditions are partly the result of the so-called "economic war" with Great Britain and the consequent difficulties of Irish export trade, but are also caused to a large extent by the Government's general economic policy, which has tended to favour urban rather than rural interests. A legitimate and laudable desire to promote the industrial development of Eire has led to the introduction of measures which have produced in some cases inconvenient adverse reactions. The rise in the price of many protected articles has reduced the purchasing power of farmers' incomes at a time when the size of their incomes is also reduced by other causes. The new industries, which must rely solely on the domestic market, are embarrassed by the inadequate demand for their products, while their customers are embarrassed by the high prices which the industrial producers are forced to charge. It is becoming clear that the only hope for healthy industrial development in Eire lies in the existence of a prosperous agriculture, which in its turn depends mainly upon a large and profitable export trade.

Industry.—Recent pronouncements by responsible members of the Government reveal that the new industries are not giving unmixed satisfaction. The rise in prices, which is the natural result of protective measures, is attributed to profiteering and other malpractices. On the other hand, the trade unions are blamed for demanding increased wages when the cost of living is rising, partly, no doubt, as a result of the general rise of wholesale prices, but partly also as a result of the Government's own policy. While the trade unions complain of the increase in the cost of living, employers complain of the increase in costs of production caused not only by protection but also by a number of socially desirable interferences by the State in labour conditions, such as the Conditions of Employment Act. Organised labour is far from satisfied with recent developments, and several serious strikes have disturbed the smooth working of the industrial programme. These strikes have further embarrassed employers, and production for export has become exceedingly difficult. While employment in the protected and otherwise favoured industries has increased, employment in agriculture and industry as a whole has decreased as a result of emigration. The amount of unemployment is only partially revealed by the statistics of the numbers of registered unemployed, because many workers when out of a job, instead of registering, simply emigrate to Great Britain.

Foreign Trade.—The following table shows the recent trend in external trade:—

Year ended	Imports	Exports	Import surplus
December, 1936	£ 39,912,560	£ 22,514,515	£ 17,398,045
December, 1937	£ 44,126,363	£ 22,857,760	£ 21,268,603

The excess of imports is paid for to a very large extent by invisible exports, but also to some extent by the liquidation of external investments. The consolidated balance sheet of the Irish banks shows that the banks' net sterling assets decreased during the year, and it is probable that the sterling resources held outside the banks have also been drawn upon to pay for imports. The problems arising out of these developments will, it is expected, be fully discussed in the forthcoming report of the Commission on Banking, Currency and Credit which has been sitting for over three years. It is obvious that Eire has been experiencing an internal expansion without any corresponding expansion in export markets.

Northern Ireland

The year opened with brighter prospects for the three principal industries of Northern Ireland: agriculture, linen manufacture and shipbuilding. This promise was not fully maintained, particularly in the case of linen; but the output of the Belfast shipyards was materially higher than in 1936.

Linen.—In linen, the year opened with a strong demand from overseas buyers, while the forthcoming Coronation also stimulated home buying. The rise in flax prices throughout the spring and early summer provided a disconcerting feature, however, especially in view of the general fall in the prices of raw materials, including American cotton. In August the outbreak of hostilities in China crippled shipments to that market. The linen trade also suffered from the general recession in business activity, and the year closed with business well below the level at the end of 1936. This is reflected in the unemployment returns. The percentage of linen workers unemployed was 18.8 per cent. in November, 1936, but increased to 27.2 per cent. in November, 1937. Nevertheless, taking the year as a whole, employment in the trade was better than in 1935 and 1936.

Agriculture.—The main feature in Northern Irish agriculture is the production of livestock. Here the industry was undoubtedly affected by the increased cost of feeding-stuffs, particularly of maize meal, which is extensively used for feeding. The output of pigs continued to increase, although at a slower rate than in recent years. The output for 1937 was 750,000, compared with 684,000 in 1936 and under 300,000 in 1932.

Industry.—One of the main features of 1937 was the effort to encourage the establishment of new industries in Northern Ireland. Under the provisions of the New Industries (Development) Act (Northern Ireland), 1937, a number of valuable concessions are offered to any new industrial undertaking likely to provide and maintain additional employment in Northern Ireland. These advantages include loans, free of interest for five years, towards the cost of the erection or purchase of the premises; loans towards other capital costs; grants equivalent to the annual value of the site of the premises for a maximum period of twenty years; contributions towards income tax, payable during the first five years; and, at the discretion of the local authority, complete exemption from rates for a maximum period of twenty years.

Palestine

THE outstanding political event of the year in Palestine was the publication of the Report of the Royal Commission. The British Government adopted in principle its recommendations for the termination of the existing Mandate and the setting up of two independent States, Arab and Jewish, with a British Corridor to remain under permanent British Mandate between them. The immediate reception of the Report in Palestine was unfavourable; and Arab opinion was particularly hostile. During the latter part of the year there were serious disturbances and acts of terrorism, and the Government took strong measures against the Arab Higher Committee. Uncertainty about the political future of the country affected its economic recovery after the strike and rebellion of 1936.

Foreign Trade.—The figures of trade in the first eleven months showed a remarkable increase in exports; the total value was about £P5 millions, which was a rise of 80 per cent. compared with the corresponding period of 1936, and was mainly due to the great increase in the citrus crop. Imports for the same period showed a steady rise compared with 1936, from £P12.6 millions to £P14.6 millions. The value of transit trade, excluding crude oil pumped through the pipeline of the Iraq Petroleum Company, increased by £P307,000 to £P764,000.

Agriculture, Industry and Commerce.—The export of citrus fruit for the season 1936-37 showed a remarkable rise in quantity compared with the previous year, from six million cases to nearly 11 millions; but prices were very low, partly because a portion of the crop was not good. Results during the first months of the winter 1937-38 have been more satisfactory. The new capital invested in local companies up to the end of October was over £P3.5 millions, compared with less than £P2 millions in the whole of 1936. The check to Jewish immigration after the publication of the Royal Commission's Report led to a decline in building in the four principal towns. Unemployment, which had been negligible for some years before 1936, was continuous throughout 1937, affecting some 5,000 or 6,000 men. On the other hand, banks and credit co-operative societies increased their advances and discounts to £P14 millions during the first ten months, against £P13 millions in the same period of the previous year.

Currency, Prices and Finance.—The currency circulation at the end of November, 1937, was £P4,844,000, or £P27,000 less than at the end of November, 1936. During the year there was a decline in wage-rates for both Jewish and

Arab labour. The decline in wages since the autumn of 1934 has been 12 per cent. for Arab labour and for Jewish labour 11 per cent. The index number of the cost of living showed a decline during the first half of 1937 of 7½ per cent., but remained stationary during the second half of the year. The Government surplus, which had fallen at the end of the fiscal year 1936-37 to £P4,835,000, showed a further slight decrease of £P134,000 by the end of November. The Government has found it necessary, in view of the continuing military expenditure, to check increases in ordinary social services.

Western Europe

France

1936 was the year of the French New Deal, the reaction of the new elected Popular Front against the effects of deflation, and the year of the devaluation of the franc and the Tripartite Agreement. 1937 was the year of the "pause," the adaptation of the new social laws to economic necessities, and the year of a further devaluation which brought the franc exchange to 150 to the £. In June the Blum Popular Front Government with a Socialist character fell. The Chautemps' Popular Front Government followed, with a Radical-Socialist character. Recovery in finance was enforced by decrees and the creation of the National Railway Company. The principal characteristics of 1937 were the persistent rise in the cost of living; and the increase in the import surplus, only partially balanced by receipts from the Paris Exhibition and tourists, the return of capital stimulated by the slump in Wall Street, a slight increase in production which had been slowed down by the 40-hour week, and an increase in fiscal receipts.

Money and Finance.—The Auriol-franc of October, 1936, disappeared on July 1st. The law creating the Bonnet-franc laid down that the gold value of the franc should be fixed later by decree. The "floating franc" fell successively from 122 to the £1 at the beginning of July to 150 on October 9th, before being stabilised by the Exchange Equalisation Fund at 147, corresponding to a gold value of 32 milligrams. The gold stock of the Bank of France declined from 60,358 million Auriol-francs to 48,859 millions, before being re-valued at 55,717 million Bonnet-francs at the end of July. It was raised in December to 58,932 millions by the sale of 3,000 million francs by the Equalisation Fund, after a return of capital which aided the repayment of the £40 millions English loan. The 6,000 million francs produced by the re-valuation of the gold stock in July were placed in an Equalisation Fund for the support of public funds. The 1937 Budget was "balanced" except for 4,361 million francs, which has now become 7,000 millions. Treasury needs were actually only covered by loans amounting to 20,000 million francs and 10,000 millions of new advances by the Bank of France, in spite of a desperate financial effort to make ends meet by increasing taxes and charges. The 1938 ordinary Budget has been balanced at a level of nearly 54,800 millions for income and expenditure. But the total sums to be borrowed by the Treasury in 1938 will be at least 28,000 millions, and the official estimates are generally considered too optimistic. As a result of borrowing, the public debt at the end of September reached the new record of 384,000 millions, against 263,000 millions in 1936. At the end of December, 1937, the whole French public debt should be 500,000 million francs.

Money and Banking.—The Treasury continued to be the principal borrower in the money market, taking 90 per cent. of the total borrowings, and the scarcity of funds maintained high rates of interest. Renewed monetary crises led to six changes of the rediscount rate of the Bank from 2 in January to 4 in February, 6 in May, 5 in July, 4 in August, 3½ in September and 3 at the end of the year. The deposits of the big banks were reduced, a great part of them representing the equivalent in francs of deposits in strong currencies:—

	Nov. 30, 1936	Nov. 30, 1937
Crédit Lyonnais	10,614	11,303
Société Générale	8,867	9,149
Comptoir National d'Escompte	7,024	7,666
Crédit Ind. et Commercial	1,507	2,022
	28,015	30,142

Short-term rates of interest were more stable, and long-term rates were consistently high. The average yield of debentures was 6.21 per cent. in December, against 5.61 in

December, 1936, and the yield of the 3 per cent. Rentes at the same date was 4.31 per cent., compared with 3.60 per cent.

Transport and Agriculture.—The number of loaded cars on the railways was 15,191,720 during the year, against 14,964,398 in 1936; receipts increased to 12,319 million francs from 10,037 millions in 1936, that is, by 22.69 per cent. The market for cereals was improved by the fixing of prices. The wheat crop of 67 million quintals, against 69 millions in 1936 and an average of 83 millions in 1930-35, was again small. The price of wheat was fixed by the Wheat Office at 180 francs, compared with 140 francs in 1936. The production of wine was 51 million hectolitres, against 39 millions in 1936. Prices of livestock and cereals other than wheat rose.

Production and Prices.—Devaluation and social charges produced a new sharp increase in prices, which was partially counterbalanced in the second half of the year by the fall in import prices:—

	End of 1936	End of 1937
	(1914 = 100)	
Wholesale prices	496	601
National products	522	650
Imported products	448	515
Foodstuffs	511	615
Retail prices	550	676
Cost of living	540 (2nd quarter)	630 (3rd quarter)

The output of coal mines declined from 46,147,000 tons to 45,326,000 tons, while coal consumption increased from 69,629,000 to 76,168,000 tons, and imports of foreign coal from 23 million tons to 30 millions. The production of pig iron was 7,916,000 tons, against 6,230,000 tons in 1936; that of steel was 7,902,000 tons, compared with 6,708,000 tons in 1936.

Foreign Trade.—The value of imports rose to 42,316 million francs from 25,414 millions in 1936, and the value of exports was 23,935 millions, against 15,492 millions in 1936. Thus the import surplus rose from 9,922 millions to 18,381 millions. The volume of imports increased considerably, from 47,960 million tons to 57,388 million tons, and the volume of exports slightly, from 28,957 millions to 30,368 millions. The import surplus was 28 per cent. of the value of total trade, compared with 24 per cent. in 1936 and 13 per cent. in 1934. Imports of foodstuffs and raw materials increased appreciably. Exports of manufactured goods also increased, but less rapidly.

Germany

INDUSTRY and trade continued active throughout the year; and in most branches, including communications, the highest records of the pre-depression years were exceeded. Unemployment almost disappeared; and the shortage of labour in certain trades, which was first visible in 1936, became marked. In the regulation of prices, the control of capital, the prohibition of industrial expansion, and the rationing of raw materials, State policy became more stringent. The Four-Year Plan for self-sufficiency in raw materials dominated national business; and with the retirement of Dr Schacht from the Ministry of Economy, all economic departments of State were virtually subordinated to the Plan, responsibility passing to the Commissioner for the Plan, General Goering. The preliminary Plan works involved a serious strain; shortage of materials and foodstuffs was followed by shortage of some manufactured necessities; and on the railways and internal waterways congestion was observed.

Credit and Capital.—Money was in general plentiful. Commercial bank deposits increased, and loans to business declined, both somewhat irregularly; and the banks increasingly invested in bills. The Reichsbank's total credits and investments rose from Rm. 6,108 millions to Rm. 6,584 millions, rediscounts (without Treasury bills) from Rm. 5,447 millions to Rm. 6,013 millions, the note circulation from Rm. 4,980 millions to Rm. 5,493 millions, and the circulation of all currencies from Rm. 6,967 millions to Rm. 7,478 millions. The rediscount and advance rates remained unchanged at 4 and 5 per cent., respectively. The capital market continued to be a preserve of the Reich. Issues of private debenture and of shares were mostly small, and, in general, industry, in so far as it was allowed, or for Four-Year Plan purposes compelled, to expand its plant, was required to draw on its own reserves and accumulations. Investments of all kinds in national business and communications were officially estimated at Rm. 15.5-16,000 millions, against Rm. 13,500 millions in 1936. The national income was put

at Rm. 68,500 millions, against Rm. 62,500 millions in 1936, of which Rm. 39,000 millions and Rm. 35,000 millions were derived from wages and salaries, respectively. Savings bank deposits (savings accounts only) rose from Rm. 14,303 millions to Rm. 15,741 millions; and bankruptcies fell from 2,577 to 2,263. The control of foreign exchange remained in force. The early months witnessed a substantial net import of gold, which was later lost. The Reichsbank's gold reserve increased from Rm. 66 to Rm. 71 millions, and exchange reserve remained unchanged.

Public Finance.—The Reich Budget for 1937-38 was not published, and no return of total revenue or expenditure was made. The returns of revenue from taxation were satisfactory. In the financial year ended March, 1937, Reich taxes brought in Rm. 11,553 millions gross, against Rm. 9,705 millions in the preceding year, of which Rm. 7,839 millions and Rm. 6,176 millions, respectively, came from direct taxes and taxes on business. In the first eight months of the financial year 1937-38 the gross yield of taxation was Rm. 8,956 millions, against Rm. 7,369 millions in the same period of 1936-37. The yield for the whole financial year is estimated at Rm. 14,000 millions, and the combined yield of Reich, State, and municipal taxes at Rm. 18,000-18,500 millions, compared with Rm. 15,500 millions in 1936-37. No changes of importance were made in the revenue system. Total Reich debt in October, 1937, was returned at Rm. 17,574 millions, against Rm. 15,017 millions in October, 1936, and the foreign debt at Rm. 1,362 millions, compared with Rm. 1,458 millions. The increase in the returned debt was largely in the category of long- and middle-term loans, and was the consequence of continued borrowing for the consolidation of short-term debt. During the year the Reich floated three such loans, bringing the total borrowed on middle term in the three years 1935-37 to Rm. 7,111 millions; and a further loan for Rm. 1,000 millions was announced in December. Borrowing continued to be at 4½ per cent. No new light was thrown on the bill debt contracted for re-armament and public works.

Prices and Wages.—The official index of wholesale prices in December was 105.5, against 105.0 in December, 1936. The only considerable advance was in manufactured consumption goods, the index for which rose from 130.5 to 135.8. The index of the cost of living rose from 124.3 to 124.8, the main change being in the clothing component, which advanced from 124.2 to 127.9. Owing to changes, and in general to deterioration, in the quality of goods, the cost-of-living index is misleading. The shortage of foodstuffs continued; and at times certain necessities and semi-necessaries were not to be had. The new ration-card system for butter and fats worked smoothly. Wage rates remained stable, but average weekly earnings, it is claimed, increased, being in the middle of the year about 3½ per cent. higher than in 1936.

Agriculture and Industry.—For the fourth year in succession the cereal crops were unsatisfactory. The provisional total of bread cereals was 11,252,000 tons, against 11,909,000 tons in 1936, and a highest of 14,492,000 tons in 1933; of this total, wheat accounted for 4,490,000 tons, compared with 4,523,000 tons in 1936 and 5,765,000 tons in 1933. The yield of fodder cereals increased considerably. The potato crop was 53,600,000 tons, against only 46,324,000 tons in 1936. The sugar-beet crop increased by 12 per cent. to 15,700,000 tons. The fodder situation was slightly improved. Net imports of wheat totalled 1,219,000 tons, compared with 26,000 tons in 1936. The value of agricultural output in the crop year ended July, 1937, was Rm. 11,900 millions, of which three-fifths were animal products.

The number of unemployed fell from 1,478,000 to 995,000, and reached a seasonal lowest of 469,000 in September. The number of occupied persons in November, including clerical and technical employees, was 18,960,000, against 17,620,000 in November, 1936. Shortage of labour was marked in agriculture and in some skilled trades, including building. The most active of the production goods trades was the manufacture of machinery, which increased 21.8 per cent. The average daily time worked in all industry rose from 7.81 to 7.87 hours, and the time worked was longest in the heavy metals and shortest in the clothing trades. The increase in the output of capital goods continued, but at a slackened pace. The volume of such production was 31.3 per cent. higher than in the pre-depression year 1928; in 1936 it was 19.3 per cent. higher, and in 1932 61.5 per cent. lower. Production figures were:—

Industrial Output	1936	1937
	Metric tons	
Coal	158,380,000	184,512,000
Pig iron	15,300,000	15,957,400
Ingot steel	19,207,900	19,848,800

The shortage of iron and steel was acute; and rationing to all consumers on a basis of priorities was enforced. The value of machinery production was estimated at Rm. 4,000 millions, compared with Rm. 3,100 millions in 1936. Exports of machinery rose from 335,600 tons to 404,000 tons (estimated for December); the estimated value of exports was about Rm. 800 millions, against Rm. 661 millions. The automobile and shipbuilding trades were well employed, but late in the year tonnage under construction declined. All industries producing substitutes were active; output of cell-wool was some 100,000 tons, compared with 45,000 tons in 1936, and of rayon 55,000 tons, compared with 46,000 tons. Activity in the consumption goods trades was less marked.

Foreign Trade.—The system of foreign trade regulation underwent no material change. Statistically, the chief difference compared with 1936 was the large increase in imports, which was not fully covered by the increase in exports, with the consequence that the export surplus declined from Rm. 550 millions to Rm. 443 millions. Imports were 32 per cent. above the recent lowest in 1935, and exports 42 per cent. above the recent lowest in 1934.

Italy

AN additional number of figures to illustrate economic activity has become available this year, and it is now possible to indicate Italy's progress in the main branches during the last few years. In 1937 there was a marked recovery, and in many instances pre-depression levels were exceeded. The year was notable for an improvement in crops, except in vine cultivation, which still lagged behind 1935. Wheat, rice, hemp and cocoons are State monopolies, and the advance in wheat output was most marked.

Industry.—The Corporations Department has published indices of industrial production (1928=100).

	Textiles	Metallurgical and Engineering	Building	Electricity and Gas	General Index
1929	101.7	104.6	139.6	106.5	109.2
1932	67.4	70.7	78.9	110.3	73.0
1933	76.3	72.8	93.4	119.2	80.5
1935	76.8	102.6	162.3	135.8	102.4
1936	70.1	118.7	91.9	140.5	95.5
1937					
May	76.9	134.1	101.2	154.6	116.7
July	48.9	133.3	102.0	157.9	93.8
November ..	99.7	131.3	88.8	164.5	115.2

The textile and building industries were the only ones which did not exceed the highest levels of production in 1928 and 1929, largely because armament activity is not seriously felt in these trades.

Foreign Trade.—Owing to the new importance of the Empire, the figures of trade with the colonies are now separated from those of trade with the rest of the world:—

	(In million lire)		Import (—) or Export (+)	
	Imports from Colonies	Exports to Colonies	Surplus in Trade with Colonies	Foreign Countries
1933	78	7,354	212	5,779 + 134 = 1,575
1934	93	7,582	259	4,965 + 166 = 2,617
1935	128	7,662	750	4,488 + 622 = 3,174
1936	156	5,883	1,717	3,830 + 1,561 = 2,053
1937	348	13,489	2,580	7,849 + 2,232 = 5,640
1937*	209	8,093	1,548	4,709 + 1,339 = 3,384

* Converted into pre-October-6-1936 lire at the legal rate.

The colonial trade consists mainly of supplies sent to military and civil corps operating in Oriental Africa. Among the items which covered the import surplus in the balance of payments the most important were tourists' expenditure and the sale of State-owned foreign securities. Imports fell slightly, but their value increased by more than 90 per cent.; while exports increased by almost 25 per cent. in volume, but only 37.4 per cent. in value.

Prices, Cost of Living and Wages.—The year's movements in the index of wholesale prices and its components were as follows (1928 = 100):—

	Raw Materials	Semi-finished Products	Finished Products	General Index
1929	95.3	97.5	94.4	95.4
1934	57.3	66.6	62.5	62.0
1936	76.2	89.7	72.8	76.4
1937 June	91.6	100.2	82.9	89.6
December ..	93.9	109.4	91.3	96.4

After the alignment (devaluation by 41 per cent.) of the lira, wholesale prices only increased by 25.3 per cent. Foodstuffs went up 22.3 per cent. in price, and the general cost of living rose by 17.6 per cent.; but, since wages per hour, the number of persons employed and the hours of work per man also increased, the average working family, working rather more strenuously, is probably better off than before devaluation.

Money Market and Stock Exchange.—There was only very slight increase in bank deposits, and a very small transference of deposits from ordinary saving banks to other banks.

Average prices of 153 leading joint-stock companies' variable dividend shares increased from 100 in 1932 to 104.1 in 1933, 118.9 in 1934, 132.2 in 1935, 142.3 in 1936 and to a maximum of 183.3 in August, 1937. A decline to 167.5 in October then took place with a recovery to 174.8 in November. If we take as a basis prices for September, 1936, the month before the alignment of the lira, the index rose to 114.1 in December, 1936, and 128.9 in August, 1937, and then fell to 122.9 in November.

Public Finance.—On the basis of Budget statements by the Finance Minister, official papers and authorised communiqués, the results of the last two fiscal years can be summed up as follows:—

	Million lire
1935-36 :—	
Expenditure	33,057
Revenue (including 401 millions for first quota of gold offered by citizens)	20,371
Deficit*	12,686

* Of which expenditure in East Africa accounted for 11,136 millions.

	Million lire
1936-37 :—	
Expenditure : Ordinary	23,413
Revenue	24,702

Including—

- (i) Revaluation of the gold reserves of the Bank of Italy—1,649.
- (ii) Redemption by taxpayers of the extraordinary land and house tax—1,117.
- (iii) Third quota of gold offered by citizens ?

Surplus	1,289
but extraordinary expenditure was	17,519
and there was thus an actual deficit of	16,230

The ways and means used to cover deficits of 30,946 million lire in the last three years have been as follows:—

	(Million lire)
Nine years Treasury Bonds (1943)	2,000
Treasury Bills	7,800
Reconversion payment from 3.50 to 5 per cent.	6,805
Land and houses compulsory 5 per cent. loan (to April 30, 1937) (exclusive of 1,117 millions redemption as above)	4,260
Current Ways and Means Account :—	
From the Deposits and Loans Bank	2,442
„ Bank of Naples	1,285
„ Bank of Italy	448
State 10 lire notes	1,350
	5,525
Foreign and foreign domiciled Italian securities (to April 30, 1937)	2,207
	28,597

The difference between this total and the total deficits was easily raised by the Treasury by various means not yet published. After the revaluation of the gold reserves of the Bank of Italy, the results of which (1,649 million lire) were appropriated by the State, the gold reserve of the Bank of Italy stood in December, 1937, at 4,022 million lire, the same as in October, 1936.

Belgium

THE year ended less favourably than it began. The downfall of the van Zeeland Government was the main political event; in November a Government was formed by a coalition of the three big parties. The Rexist party, which perhaps favours

dictatorship, was beaten in the partial elections of April, which were a great success for M. van Zeeland. Socially, 1937 was quiet. Wages increased gradually; and the working time in coal mines was reduced from 48 hours to 45 hours a week.

The Budget and Finance.—The Belgian public finances were in an excellent position. An important reduction in the tax burden was introduced in the course of the year by de-rating; but the Minister of Finance has declared that expenditure will be fully met. It has also been stated that the accounts of the fiscal years 1935 and 1936 will show an appreciable surplus, though a slight deficit was expected. When economic activity slowed down at the end of the year, a slight reduction in taxation receipts was experienced. And supplementary expenditure has been included in the 1938 Budget. New taxes will probably be voted very soon. The Government is determined to balance the Budget. Quotations for Government securities fell slightly in the course of the year as the result of events in international markets. During the year the Government made several issues, including a 2,500 million franc Consolidated Loan at 3½ per cent., issued at 92. Banks improved their financial position during the year. The holding companies were able to repay the loans from their subsidiary banks, which in future will have a more independent existence.

Economic Activity and Employment.—Industrial production increased considerably in 1937. Coal output was 29,680,000 tons, or about 2 million tons more than in the previous year. The daily output per man fell from 820 to 780 kilos on account of the reduction in the working day. Metallurgical production was 3,777,000 tons, or 672,000 tons more than in 1936, but did not reach the level of 1929. At the end of the year sales of coal were not proceeding as easily as previously, while the steel industry was reducing production. Until the middle of 1937 unemployment declined at a fair rate. There were 105,000 wholly unemployed persons during the summer of 1936, and only 84,000 in July, 1937. But, since the textile industry experienced a marked setback towards the end of the year, the trend changed and some of the improvement of previous months was lost. There are now probably about 100,000 wholly unemployed, exclusive of the normal complement of seasonal unemployed. The maximum during the crisis was 200,000. The situation in agriculture improved slightly.

Foreign Trade.—Belgium benefited from the revival in world trade.

	Foreign Trade in millions of francs	
	Imports	Exports
1935	17,450	16,125
1936	21,700	19,750
1937	27,660	25,700

The value of the import surplus during the year was 1,940 million francs. This was compensated in a large measure by the export surplus in the Congo trade; and invisible exports produced a net credit balance of the balance of payments.

Exchange and Currency.—The balance-sheet of the National Bank showed a gold reserve hitherto kept secret. Besides the gold reserve proper, amounting to 17,500 million francs, the National Bank also has gold ingots to the value of 5,000 million francs. Thus the cover of the sight liabilities of the Central Bank is not 69 per cent., but 89 per cent. In addition, the Belgian State has still 2,000 million francs of gold, representing the surplus value of the gold reserve after the devaluation. In effect, the gold cover of the sight liabilities is 100 per cent. During the year the Belga was less firm in the exchange market, and some gold exports took place. In all, the gold reserve of the National Bank declined by 1,800 million francs, and of this amount 800 millions correspond to repayments of the foreign debt. The remaining 1,000 million francs represent withdrawals of foreign capital, repayments of private debts, and some export of Belgian capital. The weakness of the French franc had a certain influence on the Belgian exchange; but it was only slight.

The Belgian Congo.—The first information available about 1937 shows general activity in the Belgian Congo increased. Copper output rose from 98,000 tons to 150,000 tons; the production of tin, cement, sugar, cotton and wood also made a notable advance. But the fall in the prices of colonial produce does not suggest that the excellent results registered in 1937 will be repeated in 1938.

Spain

AFTER eighteen months of fratricidal war in Spain, there are still unfortunately no prospects of an early peace. The whole of Northern Spain is now under Insurgent control. The Government still holds Madrid and, roughly speaking, the area between Madrid and the Mediterranean Coast, from the French frontier to Almeria. Since the outbreak of the revolution there have been three principal autonomous authorities in Spain, viz. the Republican Government, the Government of Catalonia, and the Insurgents, whose civil headquarters are at Burgos. The seat of the Government was transferred in November, 1936, from Madrid to Valencia, and again in October, 1937, to Barcelona, so that the latter city, besides being the capital of Catalonia, is now also the administrative headquarters of the Republic. The old capital has still resisted Insurgent capture.

Mining.—Owing to the catastrophic interruption to the normal economic life of the Republic, little data is available about the various branches of commercial and industrial activity. Production of iron ore in Vizcaya suffered a sharp contraction when the outbreak of the Civil War depleted the supply of labour, but, since June last—when the area was occupied by the Insurgents—output has been on the up-grade. Of the normal Spanish production of iron ore, more than one-half comes from the Bilbao zone. The United Kingdom obtains a large proportion of its requirements of iron ore from Spain, and the supply of ore from that source was suspended last July for some weeks, owing, it was stated, to transport difficulties. During recent months, arrivals from Spain have reached quite large dimensions. A feature of Spain's mining industry last year was the greatly increased quantities taken by both Italy and Germany of iron, copper, and pyrites from the territory held by the Insurgents under General Franco.

Foreign Trade.—There are few Spanish statistics of foreign trade available, but it is known that the Government territory has very considerably augmented its commercial interchange with Russia, and the Insurgents with Italy and Germany. In certain cases the Insurgent authorities are permitting trade on a barter basis, provision having been made in a Trade Agreement concluded with Italy early in 1937, while in December an agreement was concluded with Denmark providing for the exchange of oranges for dried codfish. On the Government side, an agreement was signed with France in January, 1937, which stipulated that part of the proceeds of Spanish exports to France should be available for the payment for French goods purchased by Spain, and that a percentage should be reserved for the liquidation of frozen trade debts owing to France. United Kingdom trade statistics relating to the first nine months of 1937 show that British purchases of Spanish oranges in that period were valued at £1,579,246, compared with £1,776,178 in the same period of 1936, and with £1,230,799 in 1935. Imports of iron ore and scrap were fairly well maintained at £660,557, against £751,857 and £698,401, respectively, but shipments of copper to Great Britain have been in suspense since 1936. Great Britain has increased its purchases of wines, iron pyrites and non-ferrous metals. The aggregate value of British imports from Spain in the first nine months of 1937 was £6,562,000, a figure which is not very much lower than the £8,050,000 recorded in the corresponding months of 1936 and £7,396,000 in 1935. Over the same period, however, British exports to Spain, including re-exports, have fallen to £2,497,000 in January-September, 1937, from £2,827,000 in 1936 and £4,210,000 in 1935. These figures indicate an import surplus for Great Britain of £4,065,000 in 1937, against £5,223,000 in 1936 and £3,186,000 in 1935. Considerable weight therefore attaches to the claims of British exporters for prompt payment in sterling, and it is understood that both the Central Government and the Burgos authorities have engaged that payment for goods from Great Britain would be effected out of the foreign exchange which becomes available from British payments for Spanish goods. Full diplomatic recognition of the Franco regime has not been accorded by the United Kingdom Government, but extensive trade interests in Insurgent territory call for official contact, and, accordingly, towards the end of the year, it was announced that British trade agents would be appointed and that a corresponding agent of General Franco would operate in London. Both the Government and the Nationalist authorities exercise a rigid control over foreign trade, while a diversity of regulations has been issued affecting industry, banking, currency, securities, gold and jewellery, etc.—the greater part of which are undoubtedly transitional in character, their necessity being dictated by present circumstances.

Holland

THE year 1937, which made such a promising start, proved a disappointment. The vigorous revival which followed the depreciation of the guilder in September, 1936, was maintained and even intensified in the first six months. The general recovery in world markets was particularly favourable to activity in the export industries, in shipping and in shipbuilding. Industries catering for the home market lagged somewhat behind, because domestic purchasing power had not been stimulated by an all-round increase in wages, but, on the contrary, had been retarded by a gradual rise in home prices. In the second half of the year, the steep fall in world prices and signs of recession, especially in America, had a noticeable effect on the economic life of the Netherlands. Once again wholesale prices declined, share values fell, industrial activity slowed down, and unemployment rose. The Budget is still unbalanced, and the Government is faced with greatly increased expenditure for defence.

Industry and Prices.—The recession in industrial activity in the middle of 1937 is clearly shown by the quotations on the Amsterdam Bourse for industrial shares and by the course of commodity prices.

The general index of wholesale prices for December, 1937, was, nevertheless, 20.8 per cent. higher than in September, 1936, when the gold standard was abandoned. The post-devaluation rise in food prices has been 19.8 per cent. The unemployment returns reflect the recession, as will be evident from the following table, showing the number of unemployed in the Netherlands:—

	1935	1936	1937	Decrease in 1937
January	432,400	475,900	466,200	— 9,700
February	417,600	465,500	439,600	— 25,900
March	384,200	429,000	403,400	— 25,600
April	368,200	415,700	359,700	— 56,000
May	355,200	392,900	328,500	— 64,400
June	333,600	378,800	310,600	— 68,200
July	336,900	375,700	312,900	— 62,800
August	353,100	381,400	317,800	— 63,600
September	366,000	390,100	324,300	— 65,800
October	381,900	394,400	340,400	— 54,000
November	415,200	419,500	386,000	— 33,500
December	471,900	455,200	437,400	— 17,800

In the second half of 1937 the number of unemployed grew month by month.

Foreign Trade.—On the other hand, foreign trade was fairly well maintained throughout the year. The values of imports and exports have been larger every month compared with the corresponding month of 1936:—

	Imports				Exports			
	1934	1935	1936	1937	1934	1935	1936	1937
January	100	76	79	106	56	55	50	73
February	81	70	74	105	51	51	50	79
March	94	80	79	125	61	54	55	94
April	85	78	81	142	54	50	57	101
May	87	78	76	128	57	58	53	90
June	89	73	77	140	59	51	53	95
July	86	76	80	146	58	54	60	102
August	87	76	82	123	69	61	63	99
September	78	76	82	130	69	59	72	113
October	87	85	82	149	62	70	75	106
November	88	86	101	130	60	60	77	98
December	75	73	114	128	56	62	79	98

The upward movement after the devaluation of the guilder in September, 1936, is striking.

Agriculture and Finance.—Government relief for agriculture could not be dispensed with entirely in 1937, because export prices for agricultural produce were not yet remunerative. By reducing the levies on agricultural produce, the Government were able to counteract the rising tendency of the cost of living subsequent to the depreciation of the guilder.

Throughout the year a superabundance of liquid funds characterised the Amsterdam money and capital markets, involving lower and lower rates of interest. A succession of conversions of State, provincial and municipal loans was the result. Considerable activity was accordingly displayed in the new issues market, which registered a total of 2,595 million guilders' worth of new issues (compared with 288 millions in 1936), and no less than 2,448 million guilders of this year's total were for conversions (compared with 87 millions in 1936). The 3 per cent. type of loan has gradually invaded the market. The official discount rate of the Netherlands Bank remained unchanged throughout the year at

2 per cent., while the prolongation rate closed at $\frac{1}{2}$ per cent. and call money yielded $\frac{1}{4}$ per cent. The stock of gold in the Netherlands Bank rose owing to the firm tendency of the guilder, to almost 1,400 million guilders, with a bank note circulation of about 900 million guilders.

Switzerland

THE economic situation improved greatly during the year, and the revival in trade and industry was attributable partly to devaluation and partly to world recovery. Devaluation was in particular responsible for recovery in the export trade and tourist traffic; the earnings of all transport undertakings were higher than in 1936, and unemployment showed a marked decrease. The year would have been wholly satisfactory, if banking had not been adversely affected by the United States slump.

Money and Finance.—The official discount rate was unchanged at $1\frac{1}{2}$ per cent. Interest on long-term deposits ranged from $1\frac{1}{2}$ to 2 per cent., while on short-term deposits it barely reached 1 per cent., and was sometimes reduced to nil. The situation of the National Bank remains strong. The gold reserve, which was 1,553 million francs in September, 1936, was raised to 2,408 millions by devaluation, and reached 2,662 millions at the end of the year, when the note circulation was 1,453 million francs. The sterling exchange ranged between 21.45 and 21.62 francs to the pound. Money was abundant and cheap. Switzerland became the refuge for foreign capital (mostly French), and the influx was so great that the National Bank was compelled to take measures to prevent an excessive increase in foreign short-term deposits. The Federal finances reflected the general improvement. The estimated deficit of 77 million francs for 1936 was reduced to 23 millions, and the estimated deficit of 42 million francs for 1937 is likely to be reduced by about 7 millions. Expenditure for 1938 is estimated at 542.8 million francs and receipts at 519.8 millions, with an estimated deficit of 23 million francs. An improvement was recorded in the receipts of the Federal post, telegraph and telephone services, the aggregate surplus of which was about 76 million francs in 11 months, compared with 66 millions during the corresponding period of 1936. The receipts of the Federal railways reached 335 million francs in the year, compared with 290 millions in 1936, and their surplus was 124 millions, against 78 millions in 1935.

Tourists, Employment and Agriculture.—During the period January to November, 15 million tourists, of whom 7,448,000 were foreigners, visited the Swiss hotels, against 13,316,000 and 5,682,000, respectively, in the whole of 1936. The level of unemployment was lower than in 1936 throughout the year. The number of registered unemployed was 110,754 in January, 49,244 in July and 87,311 in December, compared with 104,842 in December, 1936. The seasonal rise between September and December, however, was 35,435, compared with 21,980 in 1936, the increase being mostly due to the rise in unemployment in the building industry. The value of agriculture produce was about 1,200 million francs, compared with 1,150 millions in 1936. Agriculture suffered great losses from the epidemic of foot-and-mouth disease.

Foreign Trade.—Imports in 1937 were valued at 1,807 million francs, compared with 1,266 millions in 1936, and exports at 1,286 millions, against 881 millions in 1936. In trade with Great Britain, imports were valued at 112,730,933 francs, compared with 78,291,811 francs in 1936, and exports at 143,782,717 francs, against 97,869,485 francs in 1936. The outstanding feature of foreign trade was the recovery of the watchmaking industry, exports of which reached 239 million francs, against 150 millions in 1936, and of the machinery industry, the sales of which totalled 188 million francs in value, compared with 109 millions in 1936.

Eastern Europe

Austria

HANDICAPPED by currency regulations, import prohibitions and clearing agreements, Austria followed at a modest distance the general trend of world economic activity; economic conditions decidedly improved during the first half of the year, and then slowly declined. Two items of outstanding importance showed marked improvement, i.e. foreign trade and employment. Greater industrial activity was responsible for larger imports of raw materials and semi-

finished goods, and finished goods represented 60 per cent. of the increased exports. Unemployment was considerably reduced.

Finance.—The actual accounts for 1937 are expected to close with a surplus, owing to improved economic conditions and to strict economy—although increased expenditure on re-armament continues to put a heavy strain on public resources. Gold and foreign currency in the holding of the Nationalbank at the end of 1937 amounted to 400 million schillings, against 348 million schillings at the same date in 1936. Foreign debts have been regularly and progressively repaid. All legitimate requirements of foreign currency have been met by the Nationalbank. The schilling remained stable during the whole year.

Stock Exchange.—The index of bond values (January 1935 = 100) stood at 110.3 at the end of 1937, against 110.6 at the end of 1936; the index of Austrian share values was 161.2, and of foreign shares at 150.2, compared with 168.7 and 154.6 respectively. Thus, the Viennese stock exchange followed the downward movement of the Western bourses and lost the high levels reached and maintained during the first half year of 1937. Private savings in banks and in saving and mortgage institutions increased by about 7 per cent. during the year, and are now estimated at about 3,200 million schillings.

Industry.—The year was the best since 1918 for Austrian industry. Production exceeded by 10 per cent. the record of 1929. Industrial enterprise was favoured by general armament activity and by increased home orders, financed by the Government's investment loan in the spring. Although only a few new plants were built, many of the already existing factories had to be enlarged in order to meet larger export orders. The upward trend of industrial activity came to a premature halt, however, and slowed down after the middle of the year. The production of soft coal increased and reached 2.6 million tons, against 2.37 million tons in the first ten months. Timber, of which about 70 per cent. is exported, remained one of the most important items in Austrian trade; and timber exports improved by 40 per cent. But the prospects of the timber trade are impaired by difficulties of payment in Germany and Italy. Cotton spinning started the year fairly active, but conditions became difficult, when Roumania, where the Austrian mills used to sell 90 per cent. of their export quota, ceased to buy. Cotton weaving also relapsed after July because of a decline in home consumption, retail prices being still disproportionate compared with the fall in the world price of cotton; and the same applies to the wool industry. The production of iron ore and of pig iron for home consumption and export increased considerably. The orders of the iron industry, after reaching normal in March, slowly declined. The metal industry was favourably affected by general re-armament. The motor car industry maintained the level of production reached in 1936. The building industry, the most important source of industrial activity, is still dependent on orders based on public financial help, and very few private orders are forthcoming. The brewing industry, roughly indicative of popular purchasing power, was not working to capacity.

Foreign Trade and Tourism.—The increase in exports of finished goods was the most favourable item in the year's trade. The import surplus was reduced, and was covered by tourist receipts and invisible exports. The favourable trend of exports to Germany and Italy is threatened by the inability of prompt payment in both countries, and the unliquidated Austrian claims amount to about 200 million schillings. Several schemes are being devised in order to mobilise the frozen claims. Attracted by winter sports, by the annual festivals in Vienna and Salzburg and the new picturesque Alpine roads, an increasing number of tourists from abroad (some 10 per cent. more than in 1936), coming especially from England, Holland, France and America, visited and toured Austria. The active balance on tourist traffic, deducting from the sums spent by foreigners in Austria the expenditure of Austrians abroad, is estimated at about 150 million schillings. Foreign currency was kept flowing into the country from July until December, and contributed in an important measure to the favourable situation of the Nationalbank mentioned above.

Hungary

THE outstanding events in 1937 were a balanced Budget for the first time since 1929; an impressive export surplus; and a favourable balance of payments which enabled the country, in agreement with the creditors, to resume its foreign debt service on a moderate scale. A good harvest and better

marketing conditions improved agriculture, and increased industrial production and expanding trade brought relative prosperity to the urban population. Against these favourable symptoms it was apparent that the Government would have to devote more money to public works and social improvements, to counteract political agitation among the less fortunate, both in the rural districts and in the towns among the lower middle classes, who have not so far benefited by the recovery.

The Budget.—The budgetary year 1936–37 produced a surplus of 12 million pengő. Ordinary budgetary expenditure amounted to 788.9 million pengő; and extraordinary expenses, covering the deficit on the State undertakings and providing for public works to relieve unemployment, totalled 80.4 million pengő—in all 869.3 million pengő. Ordinary receipts amounted to 871.6 millions, and extraordinary revenues to 9.7 millions, a total of 881.3 million pengő. In the first five months of the financial year 1937–38 budgetary receipts amounted to 468.3 millions, and expenditure to 419.7 millions, leaving a surplus of 48.5 million pengő.

Currency and Credit.—The pengő remained remarkably stable throughout the year, and its purchasing power suffered less from the erratic movement of world prices than those of the freely convertible currencies. The bank rate was 4 per cent. throughout the year. The balance sheet of the National Bank suggests that credit conditions have greatly improved, because, in spite of the increasing note circulation caused by economic recovery, the bills portfolio of the bank decreased. This is proof that accumulated savings enabled the commercial banks to finance expanding business without availing themselves of the discounting facilities of the Central Bank. At the end of 1936 rediscounts of the National Bank amounted to 535 millions, and by the end of 1937 they had fallen to 449.7 millions, while the note circulation expanded from 436.4 millions, to 466.2 million pengő in the year. Savings and deposits in commercial and saving banks increased by about 100 million pengő during the year. The bullion reserve of the National Bank increased from 132.6 million pengő to 149.4 millions; and the improved budgetary condition is revealed in the bank's balance sheet by the reassuring figure of 203 million pengő, representing public deposits, the highest since 1929.

Foreign Trade.—Both the value and volume of foreign trade were larger in 1937 than in any year since 1930, and the export surplus was the largest in any post-war year. Comparative figures are as follows:—

(In million pengő)		
	1936	1937
Exports	504.4	601.1
Imports	436.5	476.0
Surplus	67.9	125.1

The bulk of Hungary's foreign trade is done with Austria, Germany and Italy, none of which has a convertible currency. An active trade balance, therefore, however impressive, does not necessarily prove a corresponding ability to transfer exchange in convertible currency. Hungary has, however, undertaken to effect transfers in the next three years in convertible exchanges, amounting in all to £2½ millions per annum (45 million gold pengő) for her foreign debt service. To meet this obligation, additional exports form an integral part of her foreign trade policy, and most of the convertible exchange for debt service in 1937 was derived from this source. It should be emphasised that the large export surplus in 1937 was due to the succession of two good harvests and to a world price structure which particularly favoured Hungary, but these factors cannot be considered permanent. Domestic trade developed satisfactorily. Industrial production was higher than in any previous year; and the recession in the last quarter was very moderate.

Czechoslovakia

The economic position has been influenced by international uneasiness about Spain and China. In August diplomatic relations between Czechoslovakia and Portugal were severed. Close relations have been maintained with the Little Entente countries, and relations with Austria and Hungary improved materially. The Prime Minister's plans to organise Central European co-operation have gradually met with a favourable response. In internal politics an agreement was reached in February with the activist German minority. At the end of the year the question of co-operation with the Henlein Party was discussed. The international situation has forced upon

the country an extensive armament programme, which requires considerable financial resources, and is expressed in higher taxation.

Economic and Financial Policy.—The year brought about a substantial improvement in economic conditions, both in internal and foreign trade. In the second part of the year, however, some slackening was evident. Difficulties were encountered about corn prices. The Government had to interfere and prices were raised. The Agrarian Party wishes animal production to be organised in a monopoly, and demands the relief of agricultural indebtedness. Czechoslovakia has not formerly been self-sufficing in wheat production; but autarkic policy and the diminution of the beet-root area, owing to lower exports of sugar, caused the production of wheat to rise, and Czechoslovakia has lately been able to export both wheat and wheat flour. To cover the cost of national defence, new taxes have been introduced and others raised. Direct taxes have been supplemented by a national defence contribution and an extraordinary tax on profits. The turnover tax has been raised in special cases, as well as the taxes on mineral waters, beer, wine, artificial fats, sweetening materials, and playing cards.

The Budget.—Expenditure, budgeted and unbudgeted, amounted to 12,371 million Cz.K., and the Budget deficit to 2,315.6 million Cz.K. The State debt rose by 5,603 million Cz.K. to 45,527.4 million Cz.K. The revenue derived from taxation and excise duties amounted to 10,373 million Cz.K., or 1,363 millions more than in 1936, and 840 millions more than estimated. In the Budget for 1938 expenditure amounts to 10,117.4 million Cz.K., or 1,663.6 million Cz.K. more than in 1937. Ordinary expenditure compared with previous years is as follows:—

(Millions of Cz.K.)			
	1934	1937	1938
.....	10,380	11,277	
.....	10,715	12,860	
.....	10,765		

The extraordinary Budget for 1938 is covered by credits, and amounts to 3,508.7 million Cz.K., of which 2,360 million Cz.K. have been earmarked for defence. During the years 1935–37 some 5,838 millions have been spent on defence, apart from the regular Budget of the Ministry of National defence, which in 1937 was 1,359 millions. The new Budget includes for 2,089 millions in the regular statement and 2,360 millions in the extraordinary Budget, making in all 4,458 million Cz.K. The State debt accordingly will reach 47,094.4 million Cz.K.; the external debt is 8,251.6 million Cz.K., and for debt service and amortisation some 1,852.2 million Cz.K. will be required in 1938.

Money Market and Stock Exchange.—The level of deposits has been maintained, and towards the end of the year rose a little. The Stock Exchange at the beginning of the year was firm. On the whole, public securities were quiet throughout the year. Share values at first rose rapidly, but on April 20th a sharp decline in quotations set in and, following a temporary revival, a further fall took place in October, after which the Stock Exchange remained slack. The Stock Exchange index of share values (1927 = 100) rose at the beginning of April to 167.7, but declined in December to 127.5.

Industry and Employment.—There was a substantial improvement in industry in 1937. The home market was active, exports rose, building activity was marked, and the demand for armaments kept certain industries busy. In the second half of the year some branches of industry slowed down. The index of production (1929 = 100) rose between January and October from 92.6 to 99.2. The number of unemployed reached the lowest level in September, but rose considerably in November and December, partly for seasonal reasons.

The output of coal (lignite excepted) and of iron and steel rose above the 1929 level. Compared with preceding years output was as follows:—

('000 tons)					
Year	Coal	Lignite	Coke	Pig Iron	Raw Steel
1935 ...	10,964.6	15,226.4	1,551.1	810.6	1,197.0
1936 ...	12,233.2	15,948.8	1,955.4	1,139.9	1,560.3
1937 ...	16,951.3	18,068.1	3,271.9	1,674.7	2,297.5

Labour relations, with the exception of a few strikes quickly settled, were quiet. The operation of existing collective agreements was prolonged by law to the end of 1938. The index of wholesale prices (1914 = 100) rose to 764 in April, but fell in December to 732. The index of the cost of living rose from 699 to 728 in the year.

Foreign Trade.—Despite obstacles there was a rapid growth in Czechoslovakia's foreign trade. There was an export surplus of 1,006 million Cz.K., against 99 million Cz.K. in 1936. The most important buyer of Czechoslovak

goods was Germany; the second place was taken by the United States; and Great Britain and Austria followed. Exports to those countries, relatively unfettered by trade regulations, are increasing, and diminishing to those which limit imports by quotas, exchange controls and clearing arrangements.

Poland

The economic recovery, which reached Poland about three years after most other countries, made further progress in 1937. The volume of industrial production, which reached the lowest point of the depression in 1932, when it was 53.7 per cent. of the 1928 volume, recovered by the end of 1935 to 68.4 per cent., by the end of 1936 to 77.5 per cent. and in November, 1937, to 86.8 per cent. The population of Poland in the meantime, however, has increased by about 500,000 a year. With the continued growth of "Etatism," and a "directed economy," it is felt that Poland has now made herself largely independent of external trade influences, and that, under the stimulus of re-armament, the recovery will continue. The standard of living, which suffered marked deterioration from 1929 to 1935, has been slightly improved during the last two years, in spite of the fact that the Services and the national defence investment programme are absorbing more and more of the national income.

Finance.—Economic progress in 1937 was helped greatly by the financial windfalls that have come to the Treasury since the critical period in April, 1936, when exchange restrictions were introduced—and when the actual gold in possession of the Bank of Poland was probably much less than the amount then reported. Chief among these windfalls were the military credits arranged in France at the end of 1936; sales to Spain, first of munitions and later of food products and textile goods; similar, but much smaller, sales to the Far East; payment by German (in cash and goods) of past and present indebtedness for railway transit traffic across the Corridor; and agreements with home and foreign holders for reduction of interest on external bond issues. Although these windfalls have not been fully reflected in the returns of the Bank of Poland, its holdings of gold and foreign exchange were shown to have increased during 1937 from 422.6 to 471.0 million zlotys. Net gold imports in 1937, according to the foreign trade returns, were valued at 121 million zlotys. Further payments during 1938 on account of the French military credits will help to strengthen the reserve position, and no doubt is felt that the "battle of the zloty" has been won. Conditions in the private money market improved throughout 1937, the aggregate of bank deposits rising during the year by about 300 million zlotys; and there has recently been a substantial recovery in security prices.

Foreign Trade.—Official figures for the last three years, given below, indicate that the increase in foreign trade has kept pace with the improvement in industrial output:—

(In millions of zlotys)			
	Imports	Exports	Balance
1935	859.6	925.0	+ 65.4
1936	1,003.4	1,026.2	+ 22.8
1937 (prelim.)	1,254.3	1,195.6	— 58.7

+ = Export surplus. — = Import surplus.

The increase in imports is explained by the growing tempo of the re-armament programme, while the increase in exports was brought about in spite of the embargo placed on grain and flour when it was realised that the 1937 crop would be substantially below normal. The loss on grain, however, was much more than offset by larger exports of coal, timber and pork products. Coal exports increased from 8.4 million metric tons in 1936 to 11.0 millions in 1937. The extension, in December, 1937, of the Anglo-Polish Coal Marketing agreement for another two years is expected to increase coal exports in 1938 to beyond 12 million metric tons. Imports are now closely controlled to conform with the available supplies of foreign exchange, and with the needs of the national defence programme. No difficulty is foreseen in financing an import surplus for the next year or two. Some concern is felt, however, about the balance of trade with the United Kingdom. The official figures (for 11 months) show that the value of imports from the United Kingdom increased from 129.8 million zlotys in 1936 to 138.0 millions in 1937, while the value of exports to the United Kingdom declined from 207.5 to 199.6 million zlotys. It is contended that invisible items now much more than offset the reduced balance in Poland's favour.

U.S.S.R.

The Soviet Union's second Five-Year Plan was concluded in 1937, after twelve months in which the economic problems had been subordinated to political problems for the first time since Leon Trotsky's final defeat by Josef Stalin. For nearly nine years, the Communists had concentrated all their energies on the industrialisation of Russia and on the collectivisation of Russian agriculture. In 1937, on the direct signal given by Stalin in his address to the last *plenium* of the party's Central Committee, they turned to a political self-examination which produced one of the most bitter purges in Bolshevik history. This purge was both the result and the cause of falterings in the economic drive of the Communist Party to "build Socialism in one country."

Industry.—It is symptomatic of the purge that the publication of economic statistics has been sharply curtailed. The fear of war, constant in Soviet life, and the spy-mania which has been a feature of the last twelve months have between them materially widened the concept of "military secrets." The official foreign trade reports have not been issued since September, 1937; industrial and agricultural results for the year have been released for the most part indirectly and without statistical detail. Preliminary figures, according to the new president of the State Planning Commission, indicate that 1937 results exceeded those called for by the second Five-Year Plan by 4 per cent. for industry as a whole. Since annual control figures have been consistently higher than the Five-Year Plan called for, it is to be presumed that the 1937 industrial plan was under-fulfilled. He announced that the Five-Year Plan was over-fulfilled in heavy industry and food industry by 10 and 8 per cent., respectively. In many branches of the light and timber industries, and also in the production of non-ferrous metals, he admitted that the plan had not been achieved. The 1937 plan called for industrial production to the value of 78,000 million roubles (on the basis of 1926–27 prices). The Prime Minister, M. Molotov, has stated that the actual achievement would be in the neighbourhood of 73,000 millions. This is 430 per cent. of the figure for 1929, first of the Five-Year Plan years; and Soviet statesmen now claim for their country the first industrial rank in Europe and second in the world. In transport, the 1937 plan of 79,000 daily freight-car loadings was already exceeded in 1936, with a figure of 86,200; and this has been somewhat bettered during 1937. The quality of Soviet industrial production remained low, and its cost, by Western standards, inordinately high. One of the significant industrial developments of the year was the continued eastward shift of Russian economic life. Mines and mills east of the Urals produced during the year 32.2 per cent. of all Soviet coal and 27.5 per cent. of all Soviet iron; while one plant, at Magnitogorsk, opened in 1932, turned out during 1937 more than twice as much iron as all of Poland.

Agriculture.—An exceptional harvest produced more grain in 1937 than in any other year of Russian history. The preliminary estimate of 6,800 million poods (111,384,000 tons) exceeds the 1937 plan (6,600 million poods) and is 8.8 per cent. better than the maximum expectations of the original second Five-Year Plan. The cotton crop is reported to be 25.3 per cent. above plan figures, with sugar beet, flax and sunflowers somewhat less than planned. In spite of industrial increases in the number of horned cattle and pigs, livestock breeding has also failed to fulfil its plan.

Prices and Wages.—For the first time since the elimination of rationing in 1935, prices were somewhat reduced during 1937. Although the reductions are announced officially to have saved consumers 2,000 million roubles during the year, manufactured goods are still high-priced in relation to the average monthly income of 281 roubles. This latter figure compares with 238 roubles in 1936. An increase of more than 4 million wage-earners during the last five years was partly responsible for an unexpected excess over the planned wages fund for 1937, which totalled 80,000 million roubles instead of 50,700 millions as planned. A wide spread in incomes continued to result from piece-work wage schedules, and a continued Communist drive to induce workers to increase their technical qualifications. The socialised trading organisations are announced to have sold goods to the Russian people during the year valued at 125,000 million roubles, compared with 40,300 millions in 1932. This figure includes manufactured goods and food, but excludes direct sales by collective farms and peasants under the more lenient regulations which now permit both to sell freely all produce left after obligations to the Government have been met.

Foreign Trade.—In the first nine months of 1937, the Soviet Union's foreign trade showed an export surplus of

206 million roubles. Exports increased slightly, compared with 1936. Spain was listed as the Soviet's third best customer, after Great Britain and the United States—in the place traditionally held by Germany. Imports remained at approximately the same figure, valued at 1,012 million roubles in the first nine months of 1937, compared with 1,008 millions in the same period of 1936. The United States again sold most goods to the Soviet Union, followed closely by Germany and Great Britain.

Budget.—The 1937 Budget provided for an expenditure of 97,119 million roubles and an income of 98,069 millions. The lion's share of the former figure was allocated, as usual, to capital investment, which absorbed 39,585 million roubles. National defence absorbed 20,102 millions, education 18,269 millions and public health 7,528 millions. The People's Commissariat for Internal Affairs, which maintains the regular police and fire-fighting forces, besides conducting the political house-cleaning which marked the last year in the Soviet Union, cost the Government 2,699 million roubles. The turnover tax again provided the bulk of the Government's revenue, some 76,795 million roubles. Profits of State-owned enterprises accounted for 6,304 millions, and the issue of internal loans was planned to yield 5,975 million roubles. Besides over-subscribing the Government bonds issued during the year, the workers and peasants increased their individual savings bank accounts from 2,461 million roubles on January 1, 1936, to 4,300 million roubles on October 1, 1937.

Roumania

POLITICALLY the year was characterised by a gathering Government crisis; the solution was a surprising re-appointment of M. Tatarescu, followed by the unprecedented defeat of the Cabinet in the general elections. The subsequent appointment of an extreme Right Cabinet under M. Goga can be explained only by the King's statement that Roumania needs a "controlled" democracy. The new Government has yet to win the adhesion of the majority of the population; and its first measures were displeasing to all democratically-minded men and even to the rather Conservative parties, such as the Liberals.

Finance.—The year was very favourable both to State finance and the exchange position of the National Bank. The ordinary Budget was balanced at 25,948 million lei, but, actually, there was a considerable surplus, and the Tatarescu Government took this opportunity to increase the salaries of public employees to their pre-crisis level. The Budget for National Defence remained raised to 2,750 million lei. The trade returns showed record figures: in the first ten months there was an export surplus of 10,700 million lei, and the whole year's surplus may approach 12,000 millions, compared with 8,700 millions during 1936. Payments abroad could accordingly be effected without undue delay, but there are complaints that the existing clearing agreements no longer correspond to the trend of foreign trade, and that important amounts are blocked in clearing accounts without any possibility of using them.

Banking.—Although the upward trend in business was interrupted in the late summer, and the year ended with rather dull business prospects, the banking year was exceptionally good. The big turnover caused increased profits, and there were very few suspensions of payment by debtors. A wholesale reorganisation of provincial banks is becoming urgent, since many small banks are still carrying on a hopeless existence under the protection of the Debt Conversion Law of 1934. Pressure was, and will be, used to accelerate mergers with local branches of big Bucharest banks.

Agriculture.—The year was only good for wheat producers. The other cereals, vines and oilseeds gave disappointing results. Export prices for cereals were, however, distinctly better than during 1936.

	Average 1931-36	Total Yield		Exports		Average Prices* in Lei per metric quintal f.o.b. Constantza	
		1936	1937	1936	1937	1936	1937
		(In metric tons, '000's omitted)					
Wheat	2,630	3,551	3,700	610	1,093	\$	515.8*
Barley	1,110	1,610	870	524	151†	265	368.4*
Maize	5,370	5,610	4,240	17	47‡	227	330*

* First 10 months, during eleven months. † Estimated. ‡ First eight months. § Export prohibited.

Great efforts have been made to introduce new crops, and for this purpose a State-controlled company was established

to foster the cultivation of hemp and flax. The cultivation of soya beans gave promising results, and the area under this crop is increasing annually.

Industry.—All armament plants have been provided with important Government orders, and many had to be enlarged. It is believed that the total output of iron and steel will be equal to that of 1936, as the increased Government orders have compensated the lull in commercial business. The lumber industry was very busy, but oil output declined, despite increased drilling. The provisional figures for 1937 were 7.2 million tons of crude oil output and 390,000 metres of drilling, compared with 8.7 million tons and 328,000 metres, respectively, in 1936. Better export prices have made up for the drop in output, but it has yet to be seen whether the Roumanian oil industry will be able to recover from this slump. The capacity of plants and refineries (the total working capacity is 11 million tons per year) will continue to be exploited only on a low scale, and the higher working expenses per unit prevailing during the year 1937 will continue to make themselves felt.

Jugoslavia

PROGRESS in Yugoslavia was maintained throughout 1937, and the general setback in the autumn did not affect this country, since autumn coincides with the chief export season.

Foreign Trade.—During the year foreign trade showed a most remarkable advance, the total volume increasing by nearly 30 per cent. This was due to the reopening of the Italian frontier after sanctions, to new trade connections, and to the bumper maize harvest. Exports during twelve months amounted to 4,557,000 tons, valued at 6,272 million dinars, an increase of 43.44 per cent. in value and 58.89 per cent. in volume compared with 1936. Imports were 1,105,000 tons, valued at 5,234 million dinars, an increase of 28.37 per cent. in value and 13.76 per cent. in volume. The surplus of exports was 1,038 million dinars.

Agriculture and Industry.—Agriculture was less satisfactory, in spite of a record crop of 53.3 million quintals of maize. Wheat gave only a modest yield of 23.5 million while other grains and fruit were disappointing. The share of agriculture in the national income fell by 945 million dinars, or 4.30 per cent. Industry benefited from better exports, especially timber, which was sold heavily to Italy and Great Britain. Good progress was also recorded in chemicals, vegetable oils, electricity, textiles, milling and bricks. New capital sunk in industry in the course of the year amounted to 1,200 million dinars. The number of insured workers in September reached 718,962, against 646,300 in 1936, with an insured wage of 424.1 million dinars, against 357.7 millions. The daily wage has also increased from an average of 22.14 to 23.45 dinars, although this is hardly enough to balance the rise in the cost of living. The index of prices has risen from 69.8 in November 1936 to 79.5 in 1937. The index, however, seems to have reached its high-water mark, having fallen back from 80, where it stood in October.

Finance.—Favourable exports have resulted in a greater abundance of devisen, and the amount of devisen from export which has to be handed to the National Bank has been reduced from 33.33 per cent., at which it has stood since February, 1936, to 25 per cent. This is the fourth reduction of the percentage, and marks, therefore, a further step towards a restoration of free exchange. Private capital has also benefited from better business conditions, savings deposits having risen from 10,644 millions to 11,807 million dinars between November, 1936 and 1937. This has much eased the position of private banks, and although 298 out of a total of 610 still enjoy protection in some form or other, frozen credits have greatly diminished. For the first time for several years Government receipts exceeded the estimates. Receipts during the first eight months of the 1937-38 budgetary year were 7,836 million dinars, or 589 millions more than the estimate. With an expenditure of 7,032 millions, the Government has achieved a surplus of over 800 millions, which is being devoted to extraordinary expenditure, purchases of materials and public works. The new Budget is 12,180 million dinars, against 10,959 millions in the previous Budget, and supplementary expenditure of 424 millions has been added. The increase in spending is accounted for by the Army (313 millions), railway construction (308 millions), mining (142 millions) and education (68 millions).

Bulgaria

THE past year was the second full year since the depression of gradual recovery in all branches of economic activity. The revival which began slowly in the second half of 1935 continued more rapidly in 1937 without interruption. The index of wholesale prices during the year showed a rise from 71.5 (1926 = 100) at the end of 1936 to 78.9 in December, or more than 10 per cent. The increase of 15 per cent. in export prices produced a higher income for the agricultural population. An abundant harvest of cereals of good quality, amounting to 3,159 thousand tons, against 3,207 thousand tons in 1936, and increased production of tobacco, industrial plants and cattle encouraged exports and industrial output. The index of industrial production rose 25 per cent.

Money and Banking.—The deposits of all banks at the end of September were 8 per cent. higher than in the corresponding month in 1936. The private banks were busy financing foreign trade and industry, and advances and discounts were substantially increased. The National Bank, for the first time since the depression, had rediscounts greater in value than in 1929, reaching a figure of 1,300 million levas in October. The average monetary circulation was 8 per cent. above that of 1936, while bank clearings increased 20 per cent. The improvement was most marked in the gold reserves of the Bank, which reached 1,994 million levas at the end of the year, against 1,652 millions in 1936, or more than 20 per cent. At the same time the foreign exchange holdings were 694 million levas, compared with 772 millions at the end of 1936.

Foreign Trade.—Exports amounted in value to 5,019 million levas, compared with 3,910 millions for 1936, an increase of 26 per cent. Imports reached the highest level since 1930—4,926 million levas, or 55 per cent. above the value of imports in 1936. The surplus of exports was only 93 million levas, against 729 millions in 1936. There was a substantial increase in exports to countries with free exchanges: the share of Germany in Bulgarian trade fell from 45 per cent. to 41 per cent., while exports to Great Britain increased from 11 to 14 per cent.

Public Finance.—Ordinary Budget receipts (including railway revenue) were 8,348 millions, against 7,787 millions a year earlier. Though revenue has risen, it seems that the Budget is not balanced, and the deficit is estimated at about 150 million levas.

Greece

THE outstanding economic events in Greece during the past year were the inauguration of a social insurance system for all workers and salaried persons; the enactment of a compulsory law to regulate the settlement of agrarian debts; and the drawing up of a ten-year programme of productive public works at an estimated cost of Drs. 1,700 millions, to be raised through internal loans.

Agriculture, Industry and Commerce.—Apart from debt relief and other assistance from the Government, farmers benefited from exceptionally good harvests, coupled with comparatively high prices for most produce. While demand for internal consumption was satisfactory, sales for export—particularly of tobacco and currants—were, however, sluggish. The prices of exportable products tended to ease somewhat; a certain monetary stringency made itself felt; and home trade did not quite come up to expectations during the last three months of the year. Industrial activity, on the other hand, was brisk, all branches—notably those executing Government contracts—being fully occupied.

Foreign Trade.—Official returns for 11 months show an increase, both in volume and value, in imports and exports, and a larger import surplus than in the corresponding period of last year.

	1936 (January to November)		1937 (January to November)	
	(In tons and millions of drachmas)		(In tons and millions of drachmas)	
Imports	Volume	Value	Volume	Value
Exports	2,328,755	10,783	2,474,534	13,849
	867,990	5,852	1,253,035	7,767
Surplus of imports	1,460,765	4,931	1,221,499	6,082

The increase in the volume of exports is due chiefly to larger shipments of mineral ores of comparatively small value. Most imports, as well as exports, show increases compared with 1936. Wheat, the principal imported commodity, increased from 411,295 tons, valued at Drs. 1,689 millions, to 481,251 tons, valued at Drs. 2,644 millions. Consequent upon the good harvest, however, wheat imports declined after Sep-

tember. Trade with most countries was again conducted under the barter and exchange clearing system. In trade with Germany, the new agreement signed in the course of the year provides for a balancing of imports and exports between the two countries. The credit balance in favour of Greece, which at the close of 1936 was Rm. 18,705,764, rose to Rm. 26,490,067 at the end of May and declined to Rm. 8,475,835 on November 30th.

Currency.—The external value of the drachma, linked to that of sterling, fluctuated only slightly in relation to gold. There was an improvement in the exchange position, and the gold and exchange reserves of the Bank of Greece (notwithstanding larger payments abroad, and with allowance made for the unpaid service of the foreign debt) showed a net gain of £595,000 at the end of the year. No relaxation of exchange restrictions is, however, at present possible. The note circulation rose from Drs. 6,202 millions to Drs. 6,776 millions; the index of wholesale prices, after rising to 2,323 in May, stood in December at 2,286, compared with 2,113 in December, 1936; and the cost-of-living index increased during the year by about 6 per cent.

Public Finance.—Rising economic activity, tax reforms and tax increases led to an increase in ordinary revenue during the first eight months of the current financial year.

	Financial Year	
	1936-1937	1937-1938
	April-Nov., 1936	April-Nov., 1937
I. Revenue:	(In millions of drachmas)	
(a) Estimated (for the whole year)	12,833	16,094
(b) Assessed	7,891	10,102
(c) Collected	7,006	8,960
II. Expenditure:		
(a) Estimated (for the whole year)	13,908	17,030
(b) Liabilities incurred	12,308	15,017
(c) Payments effected	6,489	8,509

The above figures include both ordinary and extraordinary revenue and expenditure. The Budget accounts for 1936-37 are expected to show a deficit of 80 million drachmas, while the deficit in the current financial year is estimated at some 200 million drachmas. Negotiations during July last in London for a permanent settlement of the service of the foreign debt has so far been unsuccessful.

Northern Europe

Denmark

IN foreign policy the year has been quiet. Trade agreements were made with Czechoslovakia, France, Germany, Yugoslavia, Italy and Roumania; and, on May 28th, a multilateral agreement in furtherance of trade between the signatories to the Oslo treaty (Belgium, Denmark, Finland, Luxembourg, Netherlands, Norway and Sweden) was ratified. The Stauning Cabinet remained in power, but the political implications of rising unemployment, especially towards the end of the year, were hardly viewed with equanimity by the Government. Comparative unemployment percentages are:—

December, 1935	31.7 per cent.
December, 1936	30.3 "
December, 1937	34.6 "

the last-mentioned figure being equal to 153,384 persons out of work, though a certain seasonal unemployment has to be allowed for.

Finance and Credit Policy.—The finances of the State are sound, as the following figures show:—

	Accounts, (In million kroner)	Budget, 1937-38	Budget Estimates, 1938-39
	1936-37	1937-38	1938-39
Total revenue	469.0	443.4	453.3
of which taxation	144.5	131	133.4
duties	292	285.8	292.6
Total expenditure	441.6	439.3	451.8
of which			
Social purposes (sick benefit, old age benefit, etc.)	144.6	149.3	152.8
Furtherance of trade and industry	37.5	39.8	31.4
Defence	48.2	48	58.8
Surplus	27.4	4.1	1.5

At the opening of 1937 Denmark faced two problems: insufficient stocks of grain and feeding stuffs as a consequence of the poor harvest of 1936; and a disparity between import and export prices. The situation during the early months became so aggravated that the National Bank had to adopt a policy of credit restriction, which was reflected in declining bond prices. In the course of the year three factors contributed to improve the situation: the high earnings of the mercantile marine; the better prices realised from the early autumn by agricultural exports; and falling prices in the world commodity markets.

Consequently, the National Bank reversed its policy of credit restriction; supported the bond market; and endeavoured to give impetus to the stagnant building trades. The official discount rate remained unchanged at 4 per cent. throughout the year. The krone remained pegged to sterling at 22.40, and the average gold value of the krone was 48.76 per cent. over the year.

Agriculture, Trade and Industry.—The total harvest of grain, potatoes, turnips, sugar beet and hay was 73.1 million crop units, compared with 68.5 million units in 1936, each unit representing the fodder value of 100 kilogrammes of barley. The yield on capital invested in farms is estimated to have declined from 4.4 per cent. in 1935-36 to 2.7 per cent. in 1936-37. Foreign trade, which is still subject to the rigid control of the Exchange Control Office, further increased. Comparative figures for the last three years are as follows:—

	Total Imports	Total Exports	Import Surplus
(In million kroner)			
1935	1,330	1,267	63
1936	1,486	1,380	106
1937 (preliminary figures).....	1,697	1,606	91

Trade with Great Britain and Germany was as follows:—

	Imports from	Exports to
(In million kroner)		
1936—		
Great Britain	542	744
Germany	376	280
1937—		
Great Britain	640	825
Germany	406	298

The index of industrial production was 132 at the beginning of the year, rose to 138 in May, and gradually declined to 130 in December.

Sweden

THOUGH business activity slackened off during the fourth quarter of the year after an almost uninterrupted expansion ever since the summer of 1933, the year will be remembered in Sweden as one of marked prosperity. Three things upset the normal course of economic progress: discussions around the currency policy of the Government in view of the inflation threat at the beginning of the year; a labour conflict in the building industry in May; and, finally, the slump on Wall Street whose influence became noticeable in August.

Budget and Public Finance.—Actual State revenue for the financial year 1937-38 exceeded the estimates by Kr. 60 millions. Budget estimates for the financial year 1938-39 provided for revenue of Kr. 1,228 millions and expenditure of Kr. 1,209 millions. On account of changes in the classification of the Swedish Budget in 1938 these figures are not comparable to those of the present Budget. The National Debt, which at the end of the previous year totalled Kr. 2,364 millions, was reduced during 1937 to Kr. 2,342 millions. Outstanding State bonds totalled at the close of 1937 Kr. 1,841 millions, or Kr. 104 millions less than a year ago. The sterling rate in Stockholm was maintained by the Bank of Sweden practically unchanged at 19.40, in spite of the criticism of noted Swedish economists who advocated an appreciation of the krona in terms of sterling.

Production and Employment.—Industrial production in Sweden steadily rose until November. The main adverse factors in November and December were the psychological effect of the recession in U.S.A.; the slackening of activity in the iron and steel industry; and unfavourable prospects for the timber and pulp market. The index of general industrial production advanced from 113 in January to 123 in November (100 = 1935). The progress was greatest in engineering and least in the textile industry. Steel and iron production ran high throughout the year, though after August there was a marked decline in orders. Housebuilding

was active; employment was satisfactory, and the number of registered unemployed fell during the year from 33,500 to 19,000. Demand for skilled labour and for agricultural workers was in excess of supply. New wage agreements at the end of the year provided for general increases in wages.

Foreign Trade and Prices.—The value of foreign trade in 1937 showed a marked rise compared with 1936, owing to increases in volume as well as to higher prices. Imports were valued at Kr. 2,111 millions and exports at Kr. 1,994 millions, compared with Kr. 1,633 millions and Kr. 1,514 millions in 1936. The import surplus was Kr. 117 millions, or Kr. 2 millions less than in 1936. Among exports the outstanding item was pulp and paper valued at Kr. 591 millions. Among imports, coal and coke amounted to 8,927,000 tons, and petrol to 664 million litres. Wholesale prices rose until August, when, under the influence of declining world prices for raw materials, a recession set in. The index of wholesale prices prepared by Professor Silverstolpe rose from 113 in January to 143 in August, and then a gradual decline brought the index down to 136 at the end of the year (100 = 1913). The cost of living was steady, and the Riksbank's index of the prices of consumption goods advanced during the year from 103.4 to 105.7 (100 = September, 1931).

Stock Exchange, Money and Banking.—Share values were subject to rather violent fluctuations. At the beginning of the year the general stock index stood at 178 (100 = par value). It reached its highest point of 187 in April. Under the influence of Wall Street it gradually weakened and reached 156 in November. At the close of the year the index was up again to 172. The outstanding feature of the Swedish money market was constantly increasing easiness, mainly due to absence of foreign lending, to an active balance of payments, and to comparatively meagre capital investment. The yield on gilt-edged securities has fallen below the 3 per cent. level. The aggregate cash and holdings at the Bank of Sweden held by the joint-stock banks averaged Kr. 752 millions, compared with Kr. 372 millions in 1936, an increase of more than 100 per cent. Bank profits from interest and dividends on the whole declined, but there was a marked increase in profits deriving from commissions, credit fees and, chiefly, from the recovery of already written-off assets.

Norway

REFLECTING the improvement in international economic conditions, the year began under exceptionally bright auspices. Although a sharp setback occurred in April and, after a partial recovery, again in September, the final results of trade and industry were satisfactory and compared favourably with those of the preceding year.

Finance.—The Budget estimates for 1937-38 showed expenditure and revenue of 532 million kroner, against 484 millions in the preceding Budget year. No new direct taxes were introduced, in spite of increased appropriations for the Army and for agriculture. The money market was easy, and the bank rate remained unchanged at 3½ per cent. Gold, foreign securities and balances maintained abroad by the Norges Bank rose by 91 million kroner, while loans and discounts decreased by nearly 100 million kroner. Bank deposits rose by about 120 million kroner, while there was a reduction of 70 millions in 1936. Several loan conversions were negotiated by the Government and a few municipalities on easy terms, and by the end of the year other conversions were announced for 1938. Prices rose steadily, although this tendency was less evident in the last quarter of the year.

Foreign Trade.—The expansion of foreign trade, already strongly in evidence in 1936, continued during 1937 in a marked degree:—

	Kroner (000's omitted)	
	1936	1937
Imports	927.0	1,286.1
Exports	685.0	823.3

Among imports ships came first to the value of 142 million kroner against 65 millions in 1936, while the chief export items, paper and wood-pulp, represented a value of 200 million kroner compared with 152 millions. Unemployment fell 7 per cent., and the index of industrial production in November was 136 against 119 in 1936. The average for 11 months was 122.5.

Shipping.—At the end of 1937, Norway's merchant fleet aggregated 4,438,000 gross tons, the net increase during the year being 318,000 gross tons. Freight rates soared to record heights during the first nine months of the year, and in

spite of the subsequent reaction were still exceptionally high at the end of the year. Net freights, which were about 495 million kroner in 1936, will amount to nearly 800 million kroner. After covering the import surplus of about 465 million kroner, there will still be a margin of some 300 million kroner. The whaling catch in the Antarctic showed some improvement, the total quantity being 1.2 million barrels against 1.1 millions in 1936. International complications and wages disputes caused some uneasiness, but an agreement ultimately ensured peace during the fishing season commencing in December. Untoward weather conditions hampered the fisheries, and considerably reduced the total quantity landed, but higher prices increased the value from 73 million kroner to 82 millions. Government subsidies were granted to the fisheries.

Agriculture.—Although less influenced by the general improvement than trade and industry, agricultural conditions were favourable. Crops were above the average, and with rising prices for nearly all products, it is computed that the value in 1937 will amount to about 500 million kroner. Similar conditions prevailed in the timber industry, prices being higher in 1937 than in any year since 1924.

Stock Exchange.—Operations on the Bourse, especially during the first quarter of the year, were exceptionally brisk; and the value of the turnover increased by 18 million kroner, compared with 1936. During the last quarter of the year a sharp reaction set in, and the business done in shares was almost negligible. Bonds, on the other hand, attracted considerable interest on account of the abundance of idle capital, and in spite of steadily rising prices, sellers have been very reluctant.

Finland

In many respects 1937 was a record year. Recovery continued; but the late recession in world markets was reflected in Finland, though its influence attained no general importance.

Public Finance.—Owing to the improvement in economic conditions, State revenue flowed in more abundantly than in previous years and exceeded calculations. During January-November, 1937, current revenue amounted to 3,578 million marks, compared with 3,089 millions in 1936. Expenditure also increased, but the financial position of the State was a strong one. One foreign loan was redeemed and replaced by an internal loan at a lower rate of interest.

Prices and Production.—Prices also rose considerably in the first half of the year, but a downward tendency subsequently set in. The wholesale price index for the whole year was 103 (1926 = 100) compared with 92 in 1936, while the index of the average cost of living was 106 against 100. There was continued expansion in most branches of industry. The volume of industrial production rose up to November about 12 per cent. above the 1936 level, and the index at 176 (1926 = 100) was about 44 per cent. above the highest point in the previous boom (1928). The value of production increased even more and exceeded the figure for 1936 by 37 per cent. and surpassed 1928 by 57 per cent. The timber, cellulose and paper industries yielded record results, but, owing to the international setback, the state of the market was uncertain at the end of the year and the tendency of prices was weak. There was no unemployment worth mentioning, and a shortage of skilled workmen in some spheres. Wages uniformly rose. There was a satisfactory harvest, both in quality and quantity; the value was larger than in any previous year.

Foreign trade.—Foreign trade was larger than in any previous year both in volume and value. The volume of exports increased by 5 per cent., and their value (9,368 million marks) by 30 per cent. Imports increased even more, by 24 per cent. in volume and in value (9,277 million marks) by 46 per cent. In 1931-36 there was a total surplus of exports of about 1,000 million marks; last year there was a surplus of exports of only 91 millions; but the balance of payments remained satisfactory.

The Money Market.—In spite of great economic activity, the money market was very easy throughout the year. Credits granted by the joint stock banks, which had been falling off for several years, increased by 1,236 million marks to 8,609 millions, but their deposits grew simultaneously by 1,432 million marks to 10,030 millions. Their cash therefore attained fresh record figures; and in general their liquidity was greater than ever before. No bills were rediscounted. The credits granted by the Bank of Finland recorded a rise of 130 million marks to 1,080 millions, and its reserve of foreign currency reached the record figure of 2,056 million marks against 1,492 and 1,267 millions respectively in 1936 and

1935. The easy state of the money market was reflected by numerous issues of new shares and bond loans and by the falling trend in interest rates. The Stock Exchange was particularly lively at the beginning of the year, but then experienced a setback that caused a slow fall in share prices.

Latvia

THE revival in world trade was especially marked in agrarian countries by a rise in agricultural prices, and was therefore beneficial to Latvia. In addition, as a result of the 1936 devaluation, there were a number of internal influences conducing to national economic recovery.

Industry and Agriculture.—The Government undertook further regulation of the entire industrial life of the country, assuming control over private undertakings and establishing new enterprises. At the end of the year there was scarcely a single branch of industry where the State was not active. Industrialisation made great strides and there was some shortage of skilled labour. The number of occupied persons in all trades was 209,168 in October, compared with 190,250 in October, 1936. Crops were satisfactory and, compared with 1936, showed a general increase. The head of cattle rose by 50,000 to 1,261,000, and of pigs by 60,000 to 739,000. The food, fodder and livestock positions were assured.

Foreign Trade.—Exports were stimulated by the rise in world prices and by devaluation, and the export surplus increased. The value of foreign trade, compared with 1936, was as follows:—

	1936	1937
	(Millions of Lats)	
Imports	122	231
Exports	138	261
Export surplus	16	30

Trade reached record levels in certain months of the year.

Finance and Prices.—The amount of money in circulation rose from 115 million lat to 142 millions in November, and the stock of gold and foreign exchange from 82 million lat to 94 millions. Bank deposits rose from 60 million lat in January to 390 millions in October, and loans from 558 millions to 620 millions. State revenue, between April and October, was 101 million lat, against 90 millions in the same period of 1936 and expenditure was 100 millions compared with 88 millions. The index of wholesale prices rose from 102 in November, 1936, to 116 in November, 1937, and in the same period the cost of living (1930 = 100) rose from 76 to 86.

Lithuania

LITHUANIA'S economic development in 1937 was favourably affected by the rise in the price of agricultural products. The rate of advance, however, was slower than in Lithuania's two Northern neighbours because of the prevailing lack of capital. In addition, progress has plainly been hindered by the retention of the old rate of exchange and by the institution of a fairly strict control of currency. The 1937 harvest was in the aggregate better than in the previous year; but the hay crop was poor and, since the total area cultivated had increased, results were no better than average.

Foreign Trade and Industry.—For the first time on record there was a surplus of imports. Exports were valued at 208 million lit compared with 190 millions in 1936, and imports at 212 million lit against 156 millions. Because of the inadequate harvest in 1936, exports last year could not be expanded sufficiently to cover the increased demand for machinery, textiles and means of transport. Of total imports, some 28 per cent. came from the United Kingdom and 22 per cent. from Germany, compared with 38 per cent. and 8 per cent. respectively in 1936. The rise in purchases from Germany was striking. There was a decline in the share of imports provided by Soviet Russia from 10 per cent. to 8 per cent. The trend towards a policy of self-sufficiency was accentuated, and sugar requirements are now almost covered by home production. As the result of increased demand, the alcohol industry has also made progress.

Money and Finance.—The gold value of the lit has not changed, and the sterling exchange moved between 28.85 and 29.67. At the end of the year currency control was made more rigid. The bank rate remained unchanged at 5 per cent., and signs of strain were noticeable on the gold market. Note circulation rose from 113 million lit to 121 millions, and stocks of gold from 71 to 77 millions. The stock of foreign

exchange remained unchanged at 2 million lit. Bank loans and deposits rose markedly, and the wholesale price index (1936 = 100) advanced from 58.4 to 64.9, and the cost of living from 66.4 to 70.9. State revenue in ten months was 242 million lit against 210 millions in the same months of 1936, and expenditure, which is swollen by armament appropriations, rose from 227 millions to 250 millions.

Estonia

THE rate of economic advance quickened, and affected all branches of industry and agriculture. The initial impulse was given by the Government's investment activity and the favourable course of world prices. There was a satisfactory harvest and no imports of corn are likely to be necessary. The value of agricultural production rose 12 per cent. compared with 1936; and industrial activity was 43 per cent. above the average level between 1927 and 1931, compared with 1936, when production was only 24 per cent. above the pre-depression level. A shortage of workers in agriculture and in certain industries was increasingly apparent, and as a result wages continued to rise.

Wholesale prices rose 5 per cent. and the cost of living 9 per cent. Imports rose in value from 87 million kr. in 1936 to 111 millions, and the value of exports from 83 millions to 106 millions. In consequence of the revival in industrial activity the note circulation rose from 44 million kr. to 49 millions; and stocks of gold and foreign exchange from 43 to 51 millions. Currency restrictions are actually still in force, but they have been modified in such a way that they do not have any unduly adverse effect upon industry.

America United States

THE year opened with production close to the highest levels ever recorded, with prices, wages and profits rising, and with business in a high state of confidence. A series of great strikes, especially in the motor and steel industries, innumerable strikes in small concerns, and threats of a railway strike limited production in the first half of the year, but the induced fear of stoppages, combined with rising prices, led to heavy buying which later appeared as burdensome inventories. In midsummer the share market weakened, and in September both the share market and heavy industry were in a state of panic. The year closed with share values at about half the level at the end of 1936; with general production down about 30 per cent.; with unemployment variously estimated at between 7 and 10 millions; and with primary commodity prices about 30 per cent. below their spring peak.

Legislation.—An elaborate programme of legislation was presented to Congress at the regular session convened in January and again at the Special Session which met in November. The proposals providing for six additional justices for the Supreme Court aroused the most attention, and became the centre of a bitter conflict between the President and Senate. The only important item of legislation enacted was the so-called Loophole Tax Act, to restrain by prohibitive taxation the maintenance of personal security corporations. At the end of 1937 the gross public debt was \$37,279 millions, compared with \$34,407 millions at the end of 1936, an increase of \$2,872 millions. Of this about \$1,228 millions was attributable to the net purchase of gold for the Inactive Gold Fund. The increase in the public debt in the hands of the public was comparatively small owing to substantial absorption by Government Trust funds, and especially the Social Security funds.

Banking.—The Central banking operations of the year were active and unusually large. The Federal Reserve authorities increased member bank reserve requirements by 50 per cent. in two steps on March 1st and May 1st, following a similar increase in August, 1936. There was an abrupt contraction in the reserves of the New York banks and a sharp fall in Government bonds, and in April the Federal Reserve banks bought \$96 millions of Government securities. Believing the banks still under pressure, especially in New York City, the Treasury on September 13th released \$300 millions of gold from the Inactive Gold Fund, and a few weeks later the reserve banks bought about \$38 millions more of Government securities. On December 29, 1937, the gold stock was \$12,760 millions, an increase of \$1,509 millions during the year; of this, \$1,228 millions was in the Inactive Gold Fund, created on December 21, 1936. Not-

withstanding the increase in required reserves, the excess reserves at the end of the year amounted to \$1,160 millions; at no time in the year were they lower than \$700 millions; and member bank reserves for the year showed an increase of \$411 millions, approximately equal to the sum of the gold released from the Inactive Fund plus the open market purchases. Currency in circulation showed little net change during the year at \$6,571 millions, an increase of only \$21 millions. The member banks showed a considerable contraction during the year, total loans and investments falling by \$1,529 millions to \$21,402 millions. The principal declines were in brokers' loans (\$400 millions), United States Government securities (\$1,223 millions), and corporate securities (\$382 millions). Demand deposits declined \$1,140 millions, but time deposits increased slightly.

The Money Market.—Except for Government paper there is no money market in New York. What was left of the call market was reduced by a third by the decline in the stock market, but the call rate never fluctuated from 1 per cent. throughout the year, with 90-day brokers' loans at 1½ per cent. Rates on commercial paper and bankers' acceptances (both scarcely more than nominal markets) were respectively about 1 per cent. and under ½ per cent. The largest short-term market in New York is now that on 3-5 year Treasury notes. These ranged from 1.18 per cent. (average) in January to 1.54 per cent. in August, and closed the year with the longest maturities standing at about 1½ per cent. The shorter Treasury bills (91 day-dealers' quotations) were 0.22 per cent. in January, 0.60 per cent. in April, and closed the year at about 0.12 per cent. Long Governments, which are now essentially part of the money market, were about 2½-3 per cent. early in the year, touched 2½ per cent., and closed the year at about 2½ per cent. The discount rate of the New York Reserve Bank was reduced from 1½ per cent. to 1 per cent. on August 27th.

Capital Market.—The new issue market in the first two months of the year was strong, with the emphasis on convertible bond issues. Thereafter the market for new corporate issues of any kind was unresponsive; but there was a strong demand for Government (federal or local) issues at low yields, and in large volume. New capital issues for the year are reported by the *Commercial and Financial Chronicle* as follows: municipal, \$727 millions; corporate bonds, \$750 millions; corporate stocks, \$400 millions. These tabulations are understood to omit a considerable volume of securities placed privately with institutional investors. At no time during the year was new equity capital obtainable in any considerable supply. The year was marked, as usual, by a large inflow of foreign capital, on short-term and investment account. The Treasury figures for three quarters of the year showed an increase of \$600 millions in foreign bank funds and about \$400 millions on investment account—the aggregate being not far from the sum of all new issues in our market for corporate account. The share market was firm to strong in the first quarter; declined 10-15 per cent. in the second quarter; rallied substantially in July; collapsed in the third quarter, dropping 40 per cent. or more; and in the final quarter was stabilised round about the lowest levels of the year. Gilt-edged corporate bonds conformed to the movements of long Governments; but second grade issues followed the course of the share market.

Commodity Prices.—The price index of the Bureau of Labour Statistics shows only faint reflections of the year's extreme price fluctuations. From about 82 in September, 1936, it reached 86 in January, 1937, and 88 in April, from which it fell to about 82 in December. The other official indices were equally inert; retail food prices were 85 in January, 87 in May and 83 in December. The cost of living index (quarterly) was 82 in December, 1936, and 85 in September, 1937. Moody's index of primary commodities opened the year at just over 200, rose to 230 in April, and closed the year near 150. Notwithstanding the inertia of the official indices, the rise in retail prices was a source of continual comment throughout the year, and in the closing weeks the great rise in the price of finished goods was often cited by official commentators as one of the causes of the decline in trade and production.

Industry.—By the end of 1936 the index of production had reached a level approximating to that of 1928, which was the highest point yet attained during recovery. In the first eight months of 1937 the seasonally adjusted index of manufactures fluctuated only between 114 and 118—a period of remarkable stability. From 118 in August it dropped precipitately below 85 in December, at which level it was close to the average rate of the years 1931 and 1934. Residential building (seasonally adjusted) declined almost from the beginning of the year; the index had reached 46 in August, 1936; in February, 1937, it was 47, and from the point it fell gradually to 32 in November. Other building was 77 in January, 87 in July and 74 in November. Retail

trade measured by department store sales scarcely fluctuated during the year. The index of employment was 99 in January, 102 in April, 101 in September, and 94 in November. At the end of the year estimates of unemployment ranged between 8 and 12 millions.

Agriculture.—The year was a good year for American agriculture. After a long succession of droughts (that of 1936 being unusually severe) the weather of 1937 was favourable. Large crops were marketed at prices which, although lower than early in the year, were high enough to increase estimated agricultural income 7 per cent. above the \$7,920 millions estimated for 1936; for 1937 the estimate was \$8,500 millions. One noteworthy feature was the cotton crop of 18,746,000 bales, the largest on record and the largest yield per acre yet produced.

Foreign Trade.—The year showed a remarkable improvement in foreign trade.

FOREIGN TRADE OF U.S. (\$000,000)			
	Merchandise Exports	Merchandise Imports	Export Surplus
1933	1,675	1,450	+ 225
1934	2,133	1,655	+ 478
1935	2,283	2,047	+ 236
1936	2,456	2,423	+ 33
1937*	3,027	2,875	+ 152

*11 months only.

Both imports and exports were substantially larger than in 1936, but the increase in imports occurred early in the year, and they declined steadily after March. Exports, on the other hand, showed a rising trend throughout the year. Net gold imports for eleven months were approximately \$1,561 millions, compared with \$1,117 millions in 1936, and slightly smaller than the \$1,739 millions of 1935.

Argentina

DOCTOR ORTIZ and Doctor Castillo were elected President and Vice-President of the Republic in elections held on September 5th. Doctor Ortiz, a man of moderate views, is a Right-wing Radical. No Parliamentary business of importance was transacted in 1937, because the Government were without a working majority in the Chamber of Deputies after the elections of March, 1936. Also, the election campaign was an unsettling factor, many legislators being away in their constituencies during the ordinary sessions of Congress. Many important bills, including the Budget, which were awaiting Congressional sanction, had to be held over until 1938. Politically 1937 would doubtless have been a more tumultuous year had not the Parliamentary deadlock and the excitement of the election been overshadowed by an unexpected wave of prosperity. The economic recovery which began in the second half of 1936 became much more marked early in 1937. Argentine exports in the first four months of the year were considerably more than double the value of those in the same period of 1936. By the middle of the year Argentina was enjoying the first boom since the depression began in 1929. There was a sharp decline in cereal shipments in the second half of the year, because Argentina had little left to export. Nevertheless, in the twelve months of 1937 the volume of exports was higher than in any of the last ten years except 1931, while the value was only exceeded in 1928. Imports gradually followed the upward movement of exports, and in the closing months of the year were some 50 per cent. higher than in the same period of 1936. There has been a big rise in the volume and value of cheque clearings as well as in revenue. The Government redeemed a large part of its foreign debt in dollars, and converted the balance to a lower rate of interest. There was a large increase in public works; 1937 was one of the most successful years in Argentine economic history.

Agriculture.—The winter months—June, July and August—were favourable for crops, but the spring and summer were marked by cold weather and drought. Heavy frosts occurred in the cereal zone as late as the middle of November, and considerable harm was done to the growing wheat and to a lesser degree to the linseed. Wheat production in the 1937-38 season is estimated at only 5,225,000 tons, against 6,782,000 tons last season, while the linseed crop is calculated to be reduced by about 150,000 tons. December, the critical month for maize, was unusually dry, and the production of this cereal also is expected to show a big fall. In the Northern Provinces and Territories the drought has been disastrous. The Chaco Territory, the chief cotton zone, has, however, fared rather better than last year. The outlook for 1938 is much less promising than was that of its predecessor. At the beginning of the year the Argentine Government

granted a subsidy to stockbreeders to help them to meet the British tax on chilled beef. Later, owing to the rise of meat prices in the United Kingdom, the subsidy became unnecessary and was discontinued. The prices of chilled beef for export are now fixed by arrangement between the foreign packing companies and the National Meat Board. Despite the recovery, most of the measures introduced since 1931 to help producers to face the depression remained in force. These include the various Boards of Production, the Exchange Control, and the 10 per cent. additional duty on all imports. These appear now to be a permanent part of the national economy.

Railways.—The Government presented to Congress Bills for the purchase by the State of the Córdoba Central and the Argentine Transandine Railways, but these have not yet received Congressional consideration. In the message accompanying the Bill for the purchase of the Córdoba Central Railway the Government announced its intention of gradually buying all the privately-owned railways. The two Bills for the co-ordination of transport passed the Senate and became law early in the year.

Foreign Trade.—The export rate of exchange and the official import rate remained at 15 and 16 pesos to the £, respectively. The free market rate was a little over 16 to the £, until just after the middle of the year, when exports began to decline, whereupon it fell gradually, finishing the year at 17.02. The 20 per cent. surcharge on goods from countries who sell to Argentina more than they buy from her was maintained throughout 1937. The value of imports and exports in eleven months of 1937 and 1936 were as follows:—

	(In pesos)		
	Imports	Exports	Export Surplus
1936	1,012,384,555	1,448,096,863	435,712,308
1937	1,413,946,686	2,165,455,404	751,508,718

The great expansion in exports in 1937 was almost entirely due to higher prices and bigger shipments of cereals and linseed. The chief rises in imports were in machines and vehicles, which increased 67 per cent., and iron and manufactures, which rose 48 per cent. Every branch of the import trade showed an improvement. In 1937 the United Kingdom remained, by a very large margin, both the chief customer and leading supplier of Argentina, accounting for 26.9 per cent. of the exports (against 34.6 per cent. in 1936) and 19 per cent. of Argentina's imports (against 20.7 per cent. in 1936). The United States increased her share of Argentine exports from 12.4 per cent. in 1936 to 13 per cent. in 1937, while her proportion of imports into Argentina rose from 14.6 per cent. to 16.5 per cent.

Brazil

THE political situation has continued calm, and the major change was the dissolution of the Chamber and Senate and the promulgation of a new Constitution in November. The partial loan service under the Oswaldo Aranha scheme was temporarily suspended in the same month, pending a new arrangement with the bondholders. A proportion of the 1938 Budget has, however, been allocated for the service of the foreign debt. For the first time for many years only a small Budget deficit (£500,000) is expected, and even this may be averted by rigid economy.

Foreign Trade.—All foreign exchange transactions have been unified in the Bank of Brazil, and to provide an Exchange Equalisation Fund a 3 per cent. tax is now collected on all remittances abroad. Both imports and exports have increased in volume and value, as the following figures for ten months' trade indicate:—

	1936			1937		
	1,000 Tons	1,000 Contos	£1,000 Gold	1,000 Tons	1,000 Contos	£1,000 Gold
Imports	3,690	3,524	24,732	4,272	4,218	32,951
Exports	2,551	3,965	31,579	2,675	4,282	36,879

The items which showed the largest increase were:—

Imports:—		£ gold
Raw materials—Fuel		998,000
Metal		653,000
Manufactured products—Vehicles		767,000
Metal		1,082,000
Machinery and tools		1,890,000
Exports:		
Animal products—Hides and Furs		964,000
Mineral products		450,000
Vegetable products—Cotton		1,015,000
Coffee		1,110,000
Oil and oil seeds		600,000

Industry and Transport.—A number of power companies have increased their capacity, principally with thermal power, pending adjustment of water legislation. No new mines have been opened, but existing mines have increased their output. Little new railway construction has been carried out, and the chief new item was the opening of the electrified section of the Central Brazilian Railway, the work for which was done by Metropolitan Vickers Export Company, Limited. In 1938 large orders for cars and steam locomotives are likely to be placed. The Navy has contracted for three submarines to be built in Italy and six destroyers in England. Tenders for twelve new ships for Lloyd Brasileiro were opened in October, and orders will be placed early in 1938.

Chile

THE economic picture may, in general, be considered satisfactory, although conditions which were favourable up to the middle of the year reacted, as the consequence of the decline in world prices.

Copper and Nitrate.—The production of bar copper reached the highest recorded level of almost 400,000 tons. Influenced by the high prices received during the early months of the year, production in May amounted to 39,710 tons, the largest monthly figure; a gradual decline then began, and in December output was only 27,555 tons. Nitrate production during the 1936-37 year was 1,310,200 tons, an increase of only 7.5 per cent. compared with that of the previous year. The service on the foreign debt of Chile depends on these two industries. The improvement in commodity markets during the first months of the year gave the Caja de Amortización sums considerably larger than the previous year for this purpose, although not perhaps so large as the bondholders had hoped for. The unfavourable reactions of the later half of the year curtailed the receipts of the Caja somewhat, although, even so, they were almost 50 per cent. greater than in the preceding year.

Mining and Industry.—Coal extracted during 1937 amounted to slightly more than 2 million tons, a figure only a little higher than in 1936. The position of mineral production is reflected clearly in the general index of mining activities, which was 82.8 at the end of 1936, reached 129.4 in May, and declined to 95.8 in November. In manufactures, national production was greater than in 1936. Up to the present, no recession has been noted. Harvests were very good, not only of cereals but also of vegetables. Estimates of this year's harvests are optimistic. Building activity continued to increase; preliminary figures indicate that the year will show an increase of almost 20 per cent. Railway traffic during the first ten months of the past year was almost 10 per cent. greater than in the same period of 1936.

Foreign Trade and Prices.—In foreign commerce (exclusive of precious metals), the value of exports increased from 548.9 million gold pesos in 1936 to 933.3 millions in 1937. There was also an increase of imports which rose in value from 374.4 million gold pesos in 1936 to 428.8 millions during the past year. The export dollar rate was lowered in August from 26 to 25 pesos, corresponding to a decrease in the sterling rate from approximately 129 to 124 pesos. In the free market, at the beginning of the year, the dollar was quoted at 28 pesos and the pound sterling at 137 pesos. By the end of the year, these rates had strengthened to 25.40 and 127.15 pesos, respectively. At present, the prices of both currencies in the free market are slightly below those of the regulated market. Up to August of the past year, prices showed a marked tendency to rise. The index of wholesale prices at the end of 1936 was 405.6, and increased to 472 in August. Only then was the influence of the decline in world prices felt, and the index dropped in November to 447.5. The index of the cost of living, in the first eleven months, showed an increase of 13 per cent. over the previous year.

Stock Exchange and Finance.—In the Stock Exchanges, the rising tendency only lasted until March. In following months, the tendency was towards lowered prices, particularly affecting mining, stock raising and agricultural securities. Between March and November, the general index of share values fell from 176.9 to 142.8, or by 19 per cent. The Office of the Comptroller General of the Republic has just published the 1937 balance sheet. This shows a more favourable result than expected. Total ordinary receipts amounted to 1,522.4 million pesos and total expenditure to 1,478.5 millions, leaving a surplus of 43.9 million pesos.

The balance of the foreign debt (calculated on the basis of the old parities) is 2,180,853,564.79 pesos. If these values are converted at present exchange rates, the balance of the external debt is more than tripled. The balance of the internal debt is 1,524,258,680.49 pesos. Amortisation of the internal debt amounted to 98.6 million pesos during the past year, but new obligations were contracted during that period to a total of 114.5 millions.

Uruguay

PASTORAL products represent some 90 per cent. of Uruguay's exports, and, through an effective Exchange Fund, the Government has regulated the appreciation of the peso to maintain a steady and satisfactory price level for these products, for which there has been good demand. General conditions have improved; the Budget has again shown a surplus, the service of the United States dollar bonds has been regularised; and the renewal of the sinking fund on the sterling bonds is believed to be under consideration. Outstanding amortisable bonds have been redeemed at par more than two years before maturity, Government internal loans have been converted to lower interest bases, whilst additional large internal loans have been approved for extensive public works.

Foreign trade has expanded, with Great Britain at the head of both the import and export list. The balance of payments is preserved by means of a system of exchange quotas, and exchange has been allocated commensurate with British requirements under the benevolent consideration stipulated in the Anglo-Uruguayan Trade Agreement of June, 1935. In December, 1937, the gold content of the peso was reduced to give parity with the £ sterling at the rate of 7.60 pesos, which, in fact, was the current rate at which export exchange had to be sold to the State Bank. Exchange from wool exports, however, is saleable on a preferential sliding scale until February, 1938, and, it is hoped, will give the desired fillip to wool exports, which have been retarded this season by unwillingness on the part of farmers to sell at current European prices.

Colombia

ANTICIPATIONS of increased prosperity in Colombia in 1937 were largely fulfilled during the first half of the year. The Budget was balanced, gold production showed a steady increase, and legislation was introduced in order to foster the gold mining and petroleum industries. Ready markets at good prices were found for the principal exports of coffee, bananas, hides and petroleum. Nevertheless, the year closed on a note of anxiety, due to the fall in world prices for coffee, resulting from Brazil's decision to embark upon a policy of free competition following upon many years of artificial support of prices.

Despite increased production of commodities other than coffee, the latter is still the chief item in Colombia's economy. Colombia's position is fundamentally sound, and she has an abundance of natural resources which have yet scarcely been tapped; but for the time being the fall in coffee prices must inevitably exercise an adverse effect upon her balance of international payments. Measures have been taken to deal with this situation, including the general adjustment of regulations of foreign exchange and imports. Importation on a heavy scale during 1937 made inroads into the Republic's available foreign currency reserves, and a favourable reception was generally accorded to the measures taken to ensure that exchange resources should be promptly available to meet the most pressing requirements. There may be delay for some time to come in the granting of permits to cover new imports, but a generally calm attitude is maintained throughout the country.

Latest trade statistics cover the first ten months of 1937 and show considerable expansion; the value of imports was 135 million pesos, and of exports 128 million pesos, so that there was a surplus of imports amounting to some 7 million pesos. The New Year opened with a rally in Colombian coffee prices, but the preservation of the balance of international payments will probably involve severe restriction of imports during 1938, together with the stimulation of national industries.

Ecuador

GENERAL ALBERTO ENRIQUEZ assumed the Presidency of Ecuador in October, with the support of the military forces. Business has not been affected, and the general situation is

quiet. At the end of July all restrictions on foreign exchange and exports were abolished, and the currency was allowed to fall in value by about 30 per cent., resulting in immediate revival of trade and general release of blocked commercial debts. Imports, however, continue to be controlled, and a Customs surcharge of 50 per cent. is imposed upon goods arriving from any country in trade with which Ecuador has an import surplus. The United Kingdom falls within this category; and it is difficult to obtain permits to import British goods, because preference is given to Germany on account of a surplus of compensation marks in Ecuador.

Latest trade statistics cover the first half of 1937, and give imports into Ecuador at 53 million sucres, compared with 50 millions in the same period of 1936, and exports at 80 million sucres, against 71 millions. The value of exports of crude petroleum was more than doubled, while a further feature of the returns is the increase in trade with Germany. Considerable perturbation was caused by the embarkation of Brazil upon a regime of free competition in the world coffee markets, and local prices in Ecuador have fallen. The present low prices for coffee and cocoa may exercise an adverse effect upon national revenue in 1938 unless expenditure can be curtailed, and the future trend of the exchange value of the sucre is becoming increasingly uncertain. A revision of the Monetary Law and of the Central Bank Law is expected. The year closed with a general feeling of uncertainty in business circles.

Peru

DURING the greater part of 1937 Peru experienced steady prosperity. Government revenues were considerably in excess of Budget estimates, although there may have been a decline in the last quarter of the year. Considerable social reforms were carried out, especially in housing.

The high price of metals stimulated the development of mining areas, and the three-year programme of road building was energetically pursued to this end, and made possible the development of many small mines on a profitable basis. Special attention was given to irrigation, to safeguard the production of cotton and sugar and to foster wheat-growing and the raising of livestock. Loans made to farmers during the year ended September 30, 1937, by the Banco Agrícola del Peru totalled nearly 15 million soles, the highest figure in one season since the Bank was established in 1931. These loans are mainly to small farmers, and further large increases are expected. The Technical Department of the Bank has continued with success the policy of introducing modern farming methods.

Latest figures of Peruvian foreign trade cover the first nine months of 1937, and give imports at 166 million soles, against 149 millions in the same period of 1936, with exports at 280 million soles, against 248 millions. The compensation system has assisted German trade with Peru, whereas the latter's purchases of British goods has declined considerably and are definitely below British purchases of Peruvian products. Peruvian currency was steady during the greater part of 1937, and exchange control was avoided, but the exchange weakened towards the end of the year because of the drop in the price of cotton, metals and other products. Failing a recovery in prices for these commodities, the outlook in Peru is less favourable than last year.

Bolivia

THE economic situation in Bolivia improved during the first half of 1937, and the foreign trade returns compared favourably with those of the corresponding period in 1936. Exchange control was officially abolished in August, and good progress was made in the liquidation of old frozen commercial debts.

Tin, by far the most important item in Bolivia's export trade, has fallen considerably in value, and the decline in revenue derived from this source is a matter of serious concern to the Government. The price of the metal has been under £200 per ton since early November, compared with over £300 in March. In 1937 Bolivia was again unable to produce the full annual quota allotted under the International Tin Control Scheme, and the corresponding arrears have been surrendered for distribution amongst other producing countries. This deficiency in the output of tin was due mainly to the shortage of labour resulting indirectly from the costly war with Paraguay in 1932-35. The reduction from 110 to

70 per cent. in the export quotas for all tin-producing countries under the Control Scheme during the first quarter of 1938 is not, therefore, considered likely to affect Bolivia seriously at the present time.

Among the first indications of the less favourable outlook in Bolivia have been the precautionary reinstatement of restrictions upon the importation of goods not considered as primary necessities, and the tightening up of exchange regulations. Exchange control has not, however, been officially reimposed, and the rate of exchange has been maintained at 100 bolivianos to the £. The future prospects are dependent almost entirely upon the course of metal prices.

Paraguay

PARAGUAY is gradually recovering from the Chaco war, and, despite internal political changes, commerce was not unduly affected. The Acting President has decreed that general elections take place early in 1938, when the country should return to a constitutional Government. The financial situation is improving, efforts are being made to re-establish the country's credit, and the exchange value of the peso has improved. There has been a welcome increase in cattle prices, materially benefiting stockbreeders adversely affected by the Chaco affair. A good cotton crop of some 13,000 tons was obtained in 1937, but the fall in prices was prejudicial to those who did not fix prices ahead. Timber exports have suffered through the continued low level of the River Paraguay. Future prospects depend principally upon good rains.

Trade figures show continued expansion, aggregate imports in the first half of 1937 being worth 6,266,000 Argentine gold pesos, against 5,116,021 pesos in the first half of 1936, whilst exports were worth 6,184,703 pesos, against 4,972,302 pesos. A further increase was noted in imports from Germany, as well as in automobiles from the United States, but British products are not in great evidence. Returning confidence is expected to lead to a substantial influx of foreign capital, particularly for developing cotton and other products.

Venezuela

VENEZUELA was still in transition in 1937. The economic situation is satisfactory, and the continued expansion in output of petroleum should put the Government finances in a sound position. The supply of foreign exchange for legitimate requirements has been sufficient, although at the end of the year more stringency was apparent because of large amounts taken off the market for Government requirements. In any case, purchase of goods from abroad may be reduced in the future in view of the over-stocked position of merchants, on account of which business latterly has already been somewhat restricted. Trade agreements have been made with many countries to secure markets for Venezuelan products. There is no external public debt, and the internal debt is small.

Continued assistance in the form of export bonuses has been given to the producers of export products, such as coffee, cocoa, sugar, timber, etc. The 1937-38 coffee crop is, however, expected to be about 850,000 bags, or some 15 per cent. smaller than in 1936-37, while prices have fallen following upon Brazil's recent decision to compete freely in foreign markets. Added to this is the official appreciation of the exchange value of the bolivar in April last by some 20 per cent. All these factors should result in a lower currency income to the Republic in 1938.

Mexico

THE Six-Year Plan of social reform in Mexico, embarked upon when President Cardenas assumed office, has now been in progress for three years. In consequence of record revenues in 1936, the Government was able to proceed actively with the Plan, and the 1937 Budget was the largest in the history of the country. Large sums were allocated to irrigation, railways, and roads, but negotiations regarding the long-standing default on the Foreign Debt proved unsuccessful, and the outlook for bondholders has not improved.

The production of gold, silver, lead, zinc, etc., was on a

larger scale than in previous years, but the reduced values of base metals and the increased cost of production have been unfavourable to the mining industry during the past few months. It is the Government's declared intention to foster the export trade, to reduce imports to the lowest indispensable limit, and to encourage the development of national industries. The market available for foreign traders is, therefore, restricted largely to raw materials and semi-manufactured goods which cannot be produced locally. High Customs duties are a formidable obstacle to commerce. Nevertheless, the value of imports and exports during the first half of 1937 showed an increase over the corresponding figures for 1936. Trade is conducted principally with the United States, but competition from Germany, on a compensation basis, is keen.

Banks and insurance companies, as well as the largest railway system, are under varying degrees of State control, and legislation affecting foreign enterprises creates serious difficulties for the employment of foreign capital in Mexico where important amounts are invested in the oilfields and railways. A change in the financial situation was brought about by a Decree passed in September last by which the Bank of Mexico became the sole bank of issue and was charged with the regulation of exchange. There are, however, no exchange restrictions in force.

Asia

Turkey

Foreign Trade.—Exports were valued at T£137,983,000, against T£117,733,000 in the preceding year, while the value of imports reached T£114,379,000, against T£92,531,000. The increase in foreign trade represents an advance of 20 per cent. Although certain trade restrictions were removed, the equilibrium of foreign trade was largely obtained by making the Turkish importer pay for the difference between home and export prices. This difference amounts to about 25 per cent. An attempt was made to liberate Turkey from the ascendancy exercised by Germany through the latter's ability to utilise the Turco-German clearing as a means of purchasing and selling goods at often artificial prices. The share taken by Germany in 1936 of total Turkish foreign trade was no less than 49 per cent.; in 1937 it was under 39 per cent. The beneficiaries of this change have been the United States and Great Britain, the value of whose trade with Turkey in 1937 rose from T£22,412,000 and T£12,459,000 to T£36,498,000 and T£16,898,000 respectively.

Industry and Agriculture.—The monopolies and State-owned enterprises continued to be an important source of State revenue, the State monopolies alone representing over one-fifth of the total. It has been decided to reduce the price of all monopolised goods, so as to reduce the cost of living, a general policy. The most important event in industry was the beginning of the Karabuk Steel Works with the aid of British finance and technique. Almost equal in importance, although not in magnitude, was the beginning of naval building in Turkish docks. After 1941 it will be possible for Turkey to build ships of five thousand tons and more. The harvest was generally above normal, and this improvement was reflected by the increase in the value of tobacco exports from T£24,465,000 to T£43,895,000, of wheat exports from T£1,927,000 to T£7,885,000, and of barley exports from T£1,068,000 to T£5,089,000. The crop and export of canary seeds and hazel nuts were excellent but oats and linseed fell below average. A notable advance was recorded in the export of mohair and wool. The project of organising agriculture into units, each comprising several villages, which was to be introduced into Turkey, was abandoned. Instead the principle of primogeniture will be applied to rural property. The year was characterised by the activities of the State-owned Eti Bank which is in possession of mines from which relatively high-grade ore is being extracted.

Public Finance.—The yield of taxation in the fiscal year ending May 31, 1936, was T£264,214,000, an increase of about 10 millions as compared with the preceding year. The figures for subsequent months show a still more remarkable advance in receipts, part of which, however, is due to the improvement of the methods of collection. On May 31 the

total of the public debt was T£508,623,916, or only T£2,900,473 greater than a year earlier. Despite heavy rearmament and intense industrial reconstruction financed by the State, the increase in the total public debt between May 31, 1934, and May 31, 1937, was less than 12 per cent. The devaluation of some of the foreign currencies in which the Turkish foreign debt is expressed brought a windfall of over forty millions, and the increase is mainly due to the rise in internal floating indebtedness from T£43,535,016 in 1934, T£66,109,956 in 1935, and T£79,452,312 in 1936 to T£124,900,768 in 1937.

Japan

JAPAN'S conflict with China developed in 1937 into a major war, and a large measure of war-time control was extended over a wide range of finance and trade. Production was intensified, especially in the heavy industries, and the shortage of labour became increasingly acute. The light industries experienced raw material difficulties in consequence of the restriction of imports, and the textile trade drastically curtailed operations in the closing months of the year. Although exports were fairly well maintained, imports continued excessively high, and the import surplus grew rapidly. Commodity prices were at a considerably higher level than in 1936, but the upward trend was more or less arrested after the late spring. The Government continued to finance the Budget deficit by inflationary borrowing, but no serious currency expansion occurred, and the money market was quiet. The rice harvest was not up to expectations and the late cocoon crop unsatisfactory; but the agricultural situation on the whole improved considerably.

Public Finance.—The Budget for 1937-38 estimated expenditure at 2,872 million yen against estimated revenue of 1,757.5 million yen, revealing an appallingly large deficit of 1,114.5 million yen. One-quarter of this gap was filled by fresh taxation and the rest by a new loan. Compared with the preceding year, expenditure in 1937 increased by 566.5 million yen, while revenue rose by 155.8 million yen. Expenditure on the China campaign, which was separately budgeted for, however, totalled 2,548 million yen, bringing the total national expenditure for the year up to the unprecedented sum of 5,420 million yen. The national accounts for the first six months of the current fiscal year ended September 30th disclose revenue amounting to 591,117,000 yen and expenditure of 1,027,895,000 yen, against 441,414,000 yen and 700,562,000 yen, respectively, in the corresponding period of 1936. The National Debt rose by 1,148.8 million yen to 11,284.6 million yen during the first eleven months of 1937. The Budget estimates for the next fiscal year show expenditure at 2,868.2 million yen against revenue of 2,174.2 million yen. The following table gives Budget estimates for the last three fiscal years:—

	1936-37	1937-38*	1938-39
	(In thousand yen)		
Expenditure	2,305,574	2,872,134	2,868,299
Revenue	1,601,737	1,757,558	2,174,231
Deficit	703,837	1,114,576	694,068

* Estimates of expenditure on the China campaign excluded.

The latest deficit of 694 million yen is to be covered entirely by borrowing.

Money and Investment.—Although a policy of easy money was pursued, conditions in the money market were on the whole firmer in 1937 than in the preceding year. The note circulation expanded rapidly, especially in the closing months of the year, and was some 300 million yen above that of 1936. The yen exchange was subject to the pressure of the growing import surplus, but was pegged at 14d. in terms of the British pound, and the movement of the yen-dollar exchange ranged between 29½c. and 28½c. The new capital market was active in the first half of the year, but since the autumn issues have been greatly restricted by State control over capital expenditure. The new capital raised during the first eleven months of the year was 1,979,743,000 yen, against 4,972,419,000 yen and 2,618,256,000 yen, respectively, in the corresponding periods of 1936 and 1935.

Production, Profits and Prices.—Production in many branches in both the light and heavy industries was at a considerably higher level in 1937 than in preceding years, but

for strategic reasons, figures of the output of iron, coal and steel are not available.

	(In million yen)					
	1935		1936		1937	
	Imports	Exports	Imports	Exports	Imports	Exports
Jan.-Nov., 1935			Jan.-Nov., 1936		Jan.-Nov., 1937	
Bales			Bales		Bales	
Cotton yarn	3,265,660		3,280,812		3,693,833	
(In thousands of square yards)						
Cotton cloth	1,690,515		1,644,662		1,742,455	
Lbs.			Lbs.		Lbs.	
Rayon yarn	182,372,000		236,320,000		244,166,000	
Food, drink and tobacco	169.9	181.0	207.5	183.5	223.2	220.9
Raw materials & articles	1,786.5	725.9	1,993.9	767.7	2,920.8	908.4
Articles wholly or mainly	263.4	1,333.2	269.8	1,399.3	374.9	1,730.9
manufactured						
Total	2,219.9	2,240.2	2,471.2	2,350.6	3,519.1	2,860.3

According to Mitsui Gomei Kaisha's half-yearly analysis of joint-stock industrial undertakings, the net earnings of 1,000 companies for the first half of 1937 amounted to 513,846,000 yen, compared with 419,776,000 yen and 456,743,000 yen, respectively, in the first and second halves of 1936. The Bank of Japan's index number of wholesale prices (July, 1914 = 100) was 188.8 in November, compared with 161.8 a year ago and 154.0 two years ago.

Foreign Trade.—In the first eleven months of the year the total value of imports was 3,525 million yen and of exports 2,902 million yen. Compared with the corresponding period of 1936, imports and exports increased in value by 1,046 million yen and 506 million yen. The import surplus amounted to 622,609,000 yen, against 83,003,000 yen in 1936. The following table gives figures for the first eleven months of each of the past three years:—

	Imports	Exports	Import (-) or Export (+) surplus Yen
	Yen	Yen	
		(000's omitted)	
1935	2,225,698	2,276,277	+ 50,579
1936	2,479,166	2,396,163	- 83,003
1937	3,525,386	2,902,777	- 622,609

Both imports and exports were higher in value each month last year compared with a year ago, although percentage increases declined in closing months. Totals in certain categories are shown in the following table.

China

WHEN the year closed hostilities with Japan had been in progress for nearly six months, and it was likely that much of the progress made in recent years in the reconstruction of China's economic and financial life might be lost. During the first half of the year there were encouraging signs of trade recovery; but the interruption of communications with trading centres such as Shanghai and Tientsin, the ravaging of the hinterland of North and Central China, and the wholesale flight of the rural population in the Yangtse Valley have seriously disturbed the country's economy.

Foreign Trade.—Until July, it seemed probable that 1937 would be the best year for Chinese trade since the depression. The following tables (extracted from the Maritime Customs returns) show how China's trade and the commerce of Shanghai and Tientsin suffered from the outbreak and development of hostilities in the second half of the year:

	(In millions of \$)			
	January-June		July-November (5 months)	
	1936	1937	1936	1937
<i>China</i>				
Total net exports	332.7	482.9	293.2	300.2
Total net imports	459.0	606.0	390.4	294.8
<i>Shanghai</i>				
Exports	174.5	249.1	153.1	136.9
Imports	277.5	363.8	225.6	132.7
<i>Tientsin</i>				
Exports	54.2	85.3	45.0	35.2
Imports	32.7	56.4	33.8	22.9

In August, Chinese imports fell from \$124 millions in value to \$55.5 millions, and again in September to \$34 millions, the year's lowest figure. Exports, however, recovered somewhat in September to \$67 millions, compared with \$42 millions in August and \$88.8 millions in July, but fell heavily in the last quarter. Trade similarly declined at Shanghai and Tientsin, and at Hankow. Canton and Kowloon, however, benefited from the diversion of trade from other centres. In October, Canton's imports had risen in value from \$2.5 millions in July to over \$6 millions, and exports from \$4.5 millions to over \$6 millions also. Kowloon's imports were doubled and exports trebled in three months. Imports to Hongkong declined after the middle of the year, but the value of exports rose from \$10 millions in July to \$17 millions in October.

The Chinese Dollar.—Despite the war, the exchange value of the dollar has remained stable at 14-14½d. with an improved demand and higher prices for goods exported, and larger total remittances from Chinese residents overseas, the balance of international payments had, when hostilities broke out, considerably improved, and the dollar may even have been undervalued. The banking and exchange restrictions

imposed in August helped to prevent a panic flight from the currency; the recorded trade figures suggest that the task of maintaining the exchange was somewhat eased by import difficulties; and there was an inflow of patriotic and philanthropic contributions from abroad.

Foreign Debt.—Customs revenue in 1937 amounted to \$342.9 millions, compared with \$324.6 millions in 1936. The loan service of the Anglo-German Loan of 1898, the Boxer Indemnity, and the 1913 Reorganisation Loan was fully covered at a total cost of \$76.9 millions, compared with \$76.7 millions in 1936; and a total sum of \$129,141,463 was provided for the service of internal loans secured on the Customs revenue. The Japanese, anxious to prevent Chinese Customs revenue from being used to finance further resistance, are inclined to use their control at the principal ports to secure a larger share in the Customs administration; but a compromise is possible whereby sufficient funds will be released to continue the loan service on the foreign bonds. It is too early to do more than guess the damage done by the war to undertakings in which foreign investors are interested.

Egypt

THE year, first of the post-treaty period, was marked by the abolition of the Capitulations and the entry of Egypt into the League of Nations. These successes failed to consolidate the position of the Wafd. Disappointment over its home policy, and a constitutional conflict with the Crown, caused the dismissal of the Nahas Cabinet at the close of the year. The reversal in world economic trends was reflected in Egypt with great promptitude and force. During the first quarter almost boom conditions prevailed, and cotton prices reached their peak in the last days of March. The recession set in immediately after the gold scare, and by the end of the year values stood at about half the figures ruling nine months earlier.

Agriculture, Industry and Currency.—In the course of 1937 Egypt passed from a state of relative scarcity to unprecedented agricultural over-production. The cotton crop exceeded the previous record by one-fifth, and the Government had to take steps to ensure adequate financial facilities for growers. In expanding wheat production Egypt passed the limit of self-sufficiency, but prices were not affected. Loans were granted on very liberal terms, and an export bounty gave way, in the later months, to a more indirect form of subsidy. The increased dependence of agriculture on foreign markets, coupled with the abolition, in the previous year, of the gold clause in Egyptian State bonds, prompted a few members of Parliament to propose devaluation of the Egyptian pound on the Australian precedent. For a short time in October forward quotations of sterling stood at a slight premium, but the Chamber of Deputies refused to discuss the proposition. Industrial progress followed a more even course than agriculture, as testified by the steadier behaviour of industrial shares in comparison with other sections of the securities market, which was depressed by developments in the Mediterranean and prospects of increased taxation, as well as by the general business recession.

Foreign Trade.—After reaching a peak of £E.6,945,732 in April, against £E.318,881 twelve months earlier, the export surplus in value dwindled to £E.1,664,358 in November, as appears from the following table:—

	(11 months)	
	1936 £E.	1937 £E.
Exports	27,913,935	36,165,385
Imports	28,590,802	34,501,027

The introduction in 1936 of a special super-tax of 40 per cent. on Japanese textiles considerably affected imports. The main beneficiary was Italy, which more than recovered the ground lost during the Sanctions period, and now heads the list of sellers of textiles to Egypt.

Public Finance and Population.—The Budget was balanced at £E.36,116,500, but with the growing needs of national defence an extraordinary Budget has been introduced. Having obtained, however, full freedom of action following the abolition of the Capitulations, the Egyptian Government examined the possibilities of certain new taxes, chief of which is the stamp tax. The 1937 census revealed that the population had increased from 14,217,864 in 1927 to 15,904,525. The rate of increase was slightly higher than in the ten preceding years, and marked a reversion in the long-term tendency to decline. Cairo, with a population of 1,307,422, is the largest city in Africa.

Industry and Trade

Foodstuffs

Wheat

THE main features of the 1936-37 wheat season are summarised as follows in the December issue of *Wheat Studies*, published by the Food Research Institute of Stanford University, California:—

For the third year in succession world wheat crops were short, utilisation considerably exceeded production, and carry-overs were strikingly reduced—in the end to a very low point like that of 1925. Successive advances carried wheat prices up toward or above 1929-30 averages.

The short 1936-37 crop was due primarily to adverse weather. Most of Europe ex-Danube and French North Africa was affected; spring wheat was seriously damaged in North America and the U.S.S.R. Durum wheat was peculiarly scarce. Shortage of feed grains in North America led to heavy imports from Argentina's abundant supplies and liberal feed use of wheat in the United States. Wheat feeding was light elsewhere.

This country was again a substantial net importer of wheat, and urgent purchases by Italy, Germany and Spain more than offset reduced Oriental takings. Despite further shrinkage in world flour exports, international trade in wheat and flour materially exceeded expectations and proved the highest in four years. Canada, Argentina, Australia and the Danube countries were the leading exporters, but India and various minor exporters shipped more than in many a year. Swelled by heavy grain shipments, extensive re-armament purchases, and general expansion accompanying economic recovery, the total international movement of commodities rose well towards the pre-depression level and caused sharp advances in ocean freight rates.

Government intervention played a minor rôle in the United States and in most wheat-exporting countries in 1936-37. Their wheat growers generally fared better than for several years and exceptionally well in Argentina and Australia. Elsewhere, despite temporary adjustments, wheat control policies were commonly maintained or tightened, with war fears a powerful influence. At current restricted levels of wheat utilisation a new surplus problem threatens to emerge when good yields per sown acre are again obtained.

Since the end of the last season, however, the world wheat situation has undergone significant changes. The low level of world production since 1934-35 was due entirely to the fortuitous succession of subnormal yields. The area under wheat has been steadily extended in recent years under the influence of rising prices without calling forth a corresponding increase in output. Sooner or later the extension of the wheat area was bound to have its natural consequence in terms of increased production and lower prices. And, as the following table, compiled from *The Monthly Crop Report* of the International Institute of Agriculture, shows, the 1937-38 harvest showed an increase in both exporting and importing countries:—

WORLD PRODUCTION, TRADING STOCKS AND PRICES OF WHEAT
(In millions of bushels)

Season	World production (a)		World exportable supplies (b)	World import requirements	World exportable end-of-season stocks	Average Brit. Import (c.i.f.) Prices (shilling per cwt.)
	Exporting Countries	Importing Countries				
1927-28	2,534	1,077	1,063	817	252	11.87
1928-29	2,849	1,077	1,376	888	444	10.20
1929-30	2,242	1,223	1,061	671	434	9.98
1930-31	2,682	1,062	1,324	826	499	6.10

WORLD-WIDE BANKING SERVICE

The Barclays group of Banks has Branches in many parts of the Empire and elsewhere, and is represented by Agents and Correspondents throughout the World. This extensive organisation is placed at the disposal of customers desirous of transacting any description of British or Foreign Banking Business.

CHIEF FOREIGN BRANCH: 168 Fenchurch Street, London, E.C.3

EXECUTOR AND TRUSTEE BUSINESS UNDERTAKEN

Associated Companies:

BARCLAYS BANK (DOMINION, COLONIAL AND OVERSEAS).
Head Office: 54 Lombard St., London, E.C.3.
BARCLAYS BANK (CANADA): Montreal and Toronto.
BARCLAYS TRUST COMPANY OF CANADA: Montreal.
BARCLAYS BANK (FRANCE) LIMITED.
Chief Office in France: Paris.

BARCLAYS BANK S.A.I.: Rome.
THE BRITISH LINEN BANK.
Head Office: Edinburgh. 213 Branches in Scotland.
THE UNION BANK OF MANCHESTER LIMITED.
Head Office: Manchester. 168 Branches in Lancashire, Cheshire and the West Riding of Yorkshire.

A SELF-BINDER FOR THE ECONOMIST

Week by week you keep your copies of THE ECONOMIST and ultimately you either file them or bind them. Doubtless you are accustomed to the annoyance which attaches to the ordinary binder—the difficulty of reading half the left-hand page and the unwieldiness of the device generally.

We are able to offer our readers a binder which overcomes these irksome difficulties and is, in our opinion, the most efficient contrivance for the purpose we have yet seen.

It holds three months' issues and index, it has no wires, clips or metal contrivances, and each issue can be bound up in an instant in such a way that it can be read as easily as a well-bound book.

(IN FULL CLOTH, LETTERED ON SPINE AND FRONT)
Price 5/6 each, post free (Overseas 6/6)

from

THE ECONOMIST

8 BOUVERIE STREET, LONDON, E.C.4

Consequently, the carry-over of wheat in exporting countries at the end of the current season is expected to show an increase—the first since the 1933-34 season. These developments are reflected in the movement of prices shown in the next table. Prices rose almost throughout the 1936-37 season, but the current wheat year opened on a note of hesitancy, and since last August quotations have shown a downward trend:—

AVERAGE PRICE OF ALL WHEAT (C.I.F. BRITISH PORTS)
(In shillings per cwt.)

Period	1930-31	1931-32	1932-33	1933-34	1934-35	1935-36	1936-37	1937-38
August	8.32	4.84	6.00	6.06	5.77	5.78	7.47	10.61

Average ...	6.10	5.76	5.77	5.21	5.83	6.65	9.53	...

A table of acreage and production for individual countries, drawn up by the International Institute of Agriculture, is given below. The harvests of Italy and the United States showed a substantial increase between 1936-37 and 1937-38. Australia's production in 1937-38, though higher than in the previous season, remained below the average for 1929-33. Canada's crop was a failure, and Argentina's high yield in 1936-37 was not repeated in the current season.

ACREAGE AND PRODUCTION OF WHEAT

(Excluding countries whose crop in 1929-33 was less than 15 million bushels.)

Countries	Area†			Production†		
	Average 1929-33	1936-37	1937-38	Average 1929-33	1936-37	1937-38

* Countries not included in the total. † The years indicated are those of the harvest, single years referring to the Northern Hemisphere, double years to the Southern. ‡ In calculating the totals account has been taken of the probable area cultivated in some countries for which estimates of production are available, but not those of area. (a) Including spelt. (b) Spring crop. (c) Winter crop. (d) Area provided for in the plan.

In the United Kingdom, both acreage and yield showed a further small increase in 1937-38. But, as the following table shows, a slight reduction in the volume of imports was accompanied by a substantial rise in their value.

* Including other items not given above.

A sharp reduction in wheat imports last year from Canada was offset by an equally marked increase in purchases from Australia and the U.S.S.R.

Sugar

The year 1937 witnessed an event of major importance in the establishment of the International Sugar Agreement which had a heartening effect upon the world market, as it was hoped to lay the foundations for an adjustment between supply and demand. World production during the year was greater than in 1936, though the beet sugar crop was smaller. The following figures of world production are taken from Messrs Willett and Gray's estimates:—

WORLD PRODUCTION OF SUGAR

(Long tons)

	1933-34	1935-36	1936-37	1937-38
U.S. cane	223,942	341,750	398,938	416,000

1937	811	168	315	797	725	2,816	6 44	

(a) Calendar year.

We take the following account of the year's developments from *Weekly Prices Current* published by Messrs Czarnikow, Limited:—

The year 1937 saw the highest c.i.f. prices reached since the beginning of the world depression in 1930. A "peak" of 6s. 10½d. was reached in April, and the average c.i.f. price, at 6s. 4½d. per cwt., was 1s. 7½d. higher than in 1936. Higher freight rates and the news of the calling of a World Conference undoubtedly accentuated the rise in the first three months of the year. Much of the advance in price has been absorbed by increased production costs and freight rates.

The establishment of the International Sugar Agreement last year was an important point in the industry's history. The main object of the scheme is to secure and maintain a reasonable balance between supplies and requirements on the world market. A definite limit is now placed on world market supplies, while the normal development of consumption has been left a free rein, with events favouring rather than hindering expansion. Despite the fact that there has never been any question as to the adequacy of supplies, there has again been no undue selling pressure. Consumption has been encouraging, the most outstanding increase being in Germany. Poland and Czechoslovakia also established records, and Great Britain's steady expansion in off-take has continued during 1936-37, the total being some 80,000 tons greater than in the previous season. Consumption in many other less important areas benefited by the increase in purchasing power of the producers of primary products, but the Sino-Japanese conflict has caused apprehension concerning a decline in consumption.

The trend towards self-sufficiency in the smaller countries

Tea

WORLD demand for tea during 1937 was slightly greater than during the previous year and consumption in Great Britain was also greater than in 1936. Average prices were rather more than 2d. per lb. higher in 1937 than in 1936. The following table gives particulars of prices at the London auctions:—

AVERAGE TEA PRICES (per lb., London Sales)

Year	North India	South India	Ceylon	Java	Sumatra	All Tea
	d.	d.	d.	d.	d.	d.

November	14.69	14.85	15.67	13.59	12.45	14.86
December	13.81	14.15	14.89	12.69	11.59	14.03

half of the season and in November the quota for the season 1938-39 was fixed at 92½ per cent. of standard.

The following account of events in 1937 is taken from the *Chamber of Commerce Journal*:—

The past year was a fairly satisfactory one for producers, and average prices of teas sold at the London auctions were higher than in 1936. During the early months of 1937 demand was very keen and stocks declined rapidly and prices rose. The announcement that the quota for the season 1937-38 had been raised to 87½ per cent. caused a reaction in price and the market remained steady until November, when a 5 per cent. increase in the quota for 1938-39 caused a renewed decline.

The permissible exports from the countries within the control scheme for the season beginning April 1, 1937, were 700,505,798 lb. The quota of 92½ per cent. for the season 1938-39 will permit shipments of about 741,000,000 lb. An unsatisfactory feature is the rising tendency of exports from countries outside the scheme, these now exceeding 170,000,000 lbs. per year. Consumption is being well maintained in most countries, while improved absorption is hoped for in the future from the efforts of the Tea Market Expansion Board.

The following table shows changes in British imports, re-exports and stocks of tea in recent years:—

	1929	1936	1937
Imports:—	Lb.	Lb.	Lb.
British India.....	308,734,835	268,709,635	275,567,385
Ceylon.....	153,985,061	145,192,973	141,117,444
China (including Hongkong and Macao).....	9,209,619	8,662,411	12,999,864
Dutch East Indies.....	85,404,476	36,385,730	24,608,378
Netherlands.....	1,716,189	1,954,928	1,954,928
Other countries.....	4,723,767	20,963,876	31,593,910
Total imports.....	559,167,758	481,630,814	487,841,909
London warehouse stocks at Nov. 30th....	...	235,880,000	196,882,000
Re-exports.....	95,022,790	70,740,138	69,618,057

There was an increase of about 6 million lb. in imports of tea in 1937, accompanied by a slight decrease in re-exports.

Cocoa

THE past year was one of the most outstanding in the history of the trade. The price boom, which had been in progress since the Spring of 1936, reached its peak in mid-January, when Accra futures were quoted in London at 58s. 8½d. per cwt. Prices eased in February, but rallied in March, only to decline to just over 30s. on September 30th. The year's lowest was touched on November 19th, when Accras stood at 23s. 7½d., after which there was some recovery.

The price boom early in the year was due to fears of a world shortage of supplies, aggravated by widespread speculation. But the technical position became so weak that most genuine traders ceased buying, and the subsequent collapse of the market was perfectly natural. Although consumption established a new high record, supplies were more than sufficient, as the following table shows:—

	1934-35	1935-36	1936-37
World.....	635,563	706,906	719,739
of which:—			
Gold Coast.....	245,459	290,044	304,813
Brazil.....	102,597	127,000	108,387
Nigeria.....	83,545	92,691	103,328
Ivory Coast.....	44,259	49,356	51,512

	1934-35	1935-36	1936-37
World.....	626,509	670,126	693,448
of which:—			
U.S.A.....	252,970	254,919	306,954
Great Britain.....	79,911	99,856	99,340
Germany.....	75,211	78,195	71,381
Holland.....	58,787	66,842	54,746
France.....	41,045	47,318	41,260

All figures relate to the cocoa season, i.e. October 1st-September 30th. Source: *Gordian*.

Last season's increase in supplies was traceable to higher West African shipments, Brazilian exports having shown a decline. The increase in net imports into the consuming countries, on the other hand, was due to the growth of consumption in the United States. World stocks, according to *Gordian*, rose from 328,600 metric tons on September 30, 1936, to 361,000 metric tons a year later. The increase occurred in visible supplies and in the "afloat" figure, invisible stocks having shown a decline.

* As at November 30th.

† Eleven months ended November 30th.

An agreement to regulate the acquisition of the new Gold Coast cocoa crop by fixed quotas was concluded last autumn by the leading shippers and consumers buying directly in West Africa. The principal object was to eliminate competition between buyers, which had been reflected in the payment of special commissions and advances to the growers and which had helped to force up prices in the preceding season. Gold Coast farmers replied to this agreement by initiating a selling boycott, which was fairly strictly observed until well into 1938. At the time of writing, the buyers are apparently showing no inclination to abandon their agreement, while the growers' lack of funds is beginning to make itself felt. A substantial part of the crop has already deteriorated, owing to lack of adequate storage accommodation, and the rumoured intention of the growers to burn part of the crop will therefore make little difference to the real position. The outcome of the present dispute is likely to exercise an important influence on the course of prices.

Coffee

WORLD production last year was substantially higher than in 1936, the increase being largely accounted for by a heavier Brazilian crop. The total crop, and the proportion attributable to Brazil, were both higher than in any year since 1934. The following statistics have been compiled from *Le Café*:—

WORLD COFFEE PRODUCTION (In thousand bags of 60 kilos.)

Season ended June 30	Brazil	Other Countries	Total	Brazilian Proportion of Total Production
1931.....	15,678	8,633	24,311	64.4
1932.....	27,581	8,287	35,868	76.8
1933.....	14,502	9,239	23,741	61.2
1934.....	30,483	8,335	39,318	77.3
1935.....	18,496	7,699	26,195	70.4
1936.....	21,455	10,028	31,483	68.2
1937.....	26,611	10,889	37,500	71.0

World consumption, according to the same source, showed a slight decline last year, after increasing in 1936; a sharp fall in the Brazilian figure was more than sufficient to counter-balance an improved consumption of other sorts. Meanwhile, average prices on the London market were well above the low level reached in the previous year:—

CONSUMPTION, STOCKS AND PRICE OF COFFEE (In thousands of bags)

Season ended June 30	Consumption		Stocks			Average Price, London (s)	
	Brazilian	All Kinds	Brazilian	All Kinds	Brazilian "Interior" Stocks	Costa Rica	Santos
1931.....	16,546	25,091	4,657	6,384	21,997	155.8	47.9
1932.....	15,589	23,723	4,822	6,702	25,036	139.0	68.2
1933.....	13,356	22,848	4,874	6,501	16,593	131.1	50.1
1934.....	16,062	24,431	6,353	8,528	18,615	126.9	49.0
1935.....	14,859	22,681	5,491	7,541	17,134	83.6	39.2
1936.....	16,128	25,845	5,769	8,130	20,716	80.1	40.8
1937.....	14,010	23,006	5,528	7,911	22,566	87.2	48.6

(a) Calendar years.

(b) Basis altered.

A summary of the principal developments during the year is given in the following extract from *The Chamber of Commerce Journal* for February, 1938:—

The failure of the Pan-American conference to reach agree-

ment on export quotas and prices was followed by a drastic alteration in the coffee policy of Brazil. The export tax was reduced from 45 to 12 milreis per bag, and certain foreign exchange restrictions were removed. Government intervention in the market was discontinued, leaving the way clear for Brazil coffee to compete freely with other growths. While Brazil was artificially supporting the price of the commodity, other countries were increasing sales and production, with the result that Brazil now only supplies 50 per cent. of the world's requirements against 70 per cent. previously. Her policy of destroying surplus coffees will be continued, for there seems little prospect of finding a market for the whole of her annual production, which nearly equals the world's requirements of about 25,000,000 bags.

Livestock and Meat

THE following table, published by courtesy of the Ministry of Agriculture, gives details of the number of livestock on agricultural holdings in the United Kingdom in the month of June in recent years. In contradistinction to developments in the previous year, a slight decline in the dairy herd in 1937 was more than counterbalanced by an increase in the number of other cattle. But, while total cattle increased in number, the long-term decline in horses has continued. There was a further increase in the number of sheep—and the growth in the flock of breeding ewes suggests that this development will continue. The pig population, on the other hand, registered a decline, following the previous year's increase:—

* Including mares kept for breeding.

† Great Britain only.

† Figures for Great Britain are the total number of horses on agricultural holdings: for Northern Ireland, those used for agriculture and unbroken horses only.

† The figures for 1937 are subject to revision.

The Livestock Industry Bill, embodying the Government's long-term policy for the industry, received the Royal Assent in July and came into force on August 1st. The seven members of the Livestock Commission, appointed in July, had all served on the Cattle Committee, which is now superseded. It is the duty of the Commission to advise and assist the Ministers concerned and to administer the cattle subsidy. Meanwhile, the subsidy rates were so adjusted as to give further encouragement to the production of good quality fat cattle in the United Kingdom. Animals are now divided into two grades—"ordinary" and "quality"—and higher rates of subsidy are paid on home-produced beasts. The rates are as follows (per live cwt.):—Ordinary home-bred, 5s.; ordinary imported, 2s. 6d.; quality home-bred, 7s. 6d.; quality imported, 5s.

The pigs and bacon marketing schemes remained in a state of suspended animation last year. But, while the contract system was not revived, the Board of Trade continued the regulation of imports by reference to the estimated volume of home production. The Pigs Board also made provision for grading bonuses and deductions. Meanwhile, Mr Morrison, the Minister of Agriculture, promised last August to take steps to encourage the reorganisation of the curing industry; no concrete proposals have, however, yet emerged.

Imports have developed as follows:—

IMPORTS OF LIVESTOCK AND MEAT

September.....	4/7	4/6	5/8	3/9	105/-	104/6
December.....	5/-	4/2	6/-	3/6	100/-	100/-

Quotations for English beef and mutton in 1937 were well above the previous year's level, though some weakness was apparent in the third quarter. Imported descriptions were only slightly dearer than in 1936. English bacon was generally dearer last year, while quotations for Danish were first below and then above the corresponding averages for 1936.

Dairy Produce

THE year was notable for the publication of a White Paper outlining the Government's milk policy. These proposals, which were discussed in *The Economist* of July 31 and August 7, 1937, have not yet been embodied in legislation. As proposed in the report of the Reorganisation Commission, there is to be a Milk Commission, but its powers will be confined to recommending and reporting and will not include price-fixing. There is also to be a scheme of "price insurance," to maintain the price of milk sold for manufacturing purposes. Exchequer payments will be made when the average prices of butter and cheese fall below 112s. and 62s. 6d. per cwt., respectively, in summer and 120s. and 67s. 6d. per cwt. in winter. The quantity of milk to which the subsidy is to apply is, however, fixed at 125,000,000 gallons in each case. Subsidies are also to be paid to producers of special grades of milk, and the milk-in-schools scheme is to be continued. A number of minor proposals will doubtless be amplified when the required legislation is drafted.

Production of milk in Great Britain took a downward turn last year and, since liquid consumption simultaneously increased, the quantity sold for manufacturing purposes showed a notable decline. Pool prices were consequently higher than in 1936, while both the producers and the dairymen gained an advantage, at the expense of the consumer, from the new price agreement signed in the autumn. The average wholesale price for the ensuing twelve months was raised from 15s. 3d. to 15s. 11d. per dozen gallons. Retail prices were raised by 1s. per dozen gallons, the difference representing the gain to the distributor.

Consumption of butter in the United Kingdom in 1937 is estimated by the Imperial Economic Committee at 24.7 lb. per head, against 24.8 lb. in 1936 and 25.3 lb. in 1935; margarine consumption showed a slight increase. Production of creamery butter fell from 468,700 cwt. in 1936 to about

330,000 cwt. in 1937; and since there is no reason to believe that the output of farm butter increased, total United Kingdom butter production is tentatively estimated by the Imperial Economic Committee at 860,000 cwt. in 1937.

Meanwhile, at 9,416,366 cwt., British imports of butter were 3 per cent. less than the record total achieved in 1936 and were smaller than in any year since 1933. Shipments from the Empire were 4 per cent. smaller than in 1936, and formed 52 per cent. of the total, while imports from foreign sources declined by 2 per cent. New Zealand was again the principal source of supply, sending a record quantity of butter—6 per cent. more than in the previous year and accounting for 31 per cent. of the total. Imports from Denmark, the second most important supplier, rose by 4 per cent. to comprise 24 per cent. of the aggregate. Australia, however, had a second unfavourable season, and imports from that country declined by 12 per cent., and comprised only 16 per cent. of last year's total. At the end of the year, Australian production was responding to improved conditions, and there is the possibility of increased supplies from this source in 1938. There was a marked decline last year in shipments from certain European countries—a development traceable to severe weather conditions and an epidemic of foot-and-mouth disease.

BRITISH IMPORTS OF BUTTER AND CHEESE

Country of Origin	Volume in '000 cwt.			Value in £'000		
	1929	1936	1937	1929	1936	1937
Butter:—						
New Zealand.....	1,304	2,732	2,951	11,277	13,439	15,352
Australia.....	768	1,694	1,492	6,342	7,672	7,522
Irish Free State.....	566	468	329	4,580	1,694	1,311
Denmark.....	2,204	2,172	2,256	19,737	10,770	11,901
U.S.S.R.....	290	412	273	2,299	1,645	1,258
Total (including other countries).....	6,397	9,741	9,416	54,706	44,385	47,359
Cheese:—						
New Zealand.....	1,801	1,681	1,731	8,300	4,771	5,392
Canada.....	723	603	722	3,412	1,926	2,460
Netherlands.....	196	182	217	777	325	434
Total (including other countries).....	2,994	2,676	2,937	13,913	7,784	9,257

As with butter, the apparent consumption of cheese has shown a slight decline in recent years. The Imperial Economic Committee estimates that consumption amounted to 8.6 lb. per head in 1937, against 8.8 lb. in 1936 and 9.1 lb. in 1935. During the past two years factory cheese production in this country has shown a decline, while farm production has tended to increase. Total production in Great Britain last year was in the neighbourhood of 771,900 cwt., against 1,087,400 cwt. in 1936; the output in Northern Ireland is negligible.

After declining in 1935 and 1936, British imports of cheese showed a recovery last year, exceeding the 1936 total by some 10 per cent. Shipments from Empire countries showed an expansion of 8 per cent., and were again equal to about 90 per cent. of the total. Supplies from foreign sources rose by over 20 per cent. last year and were larger than in any year since 1931. As usual, New Zealand headed the list, but accounted for only 59 per cent. of total imports, against 63 per cent. a year earlier. Canadian shipments rose by a further 20 per cent. to comprise one-quarter of the total. Receipts from Australia were 31 per cent. larger in 1937 than in 1936.

The following averages of top prices realised on the London Provision Exchange are taken from the Imperial Economic Committee's *Weekly Dairy Produce Notes*:—

LONDON PRICES OF BUTTER AND CHEESE
(Shillings and pence per cwt.)

Averages of Weekly Figures	Butter			Cheese	
	New Zealand Finest Salted	Australian Finest Salted	Danish	New Zealand Finest White	Canadian Finest White
1936—March.....	84 3	84 0	122 6	50 3	63 0
June.....	108 3	107 0	115 6	59 9	67 6
September.....	107 9	107 6	125 3	68 9	71 3
December.....	100 6	98 9	114 9	62 9	71 9
Annual average.....	101 3	100 6	119 6	61 0	67 3
1937—March.....	96 3	96 6	126 9	60 6	73 0
June.....	110 0	108 6	114 9	74 3	80 0
September.....	117 6	117 3	134 6	68 6	70 3
December.....	113 3	111 6	131 9	66 0	73 6
Annual average.....	110 9	110 0	127 3	67 0	74 3

The year was notable for a further increase in butter prices, which reached the highest average for six years. Colonial butter prices at the beginning of 1937 were actually below those realised a year earlier, but they rose to very high levels in October, only to decline in the following month. Danish butter prices showed similar fluctuations, and quotations were maintained at a high level in the fourth quarter, when increased purchases by Germany played an important part. New Zealand and Canadian cheese prices averaged about 10 per cent. more in 1937 than in 1936. Home-produced cheeses were also generally dearer last year.

Eggs and Poultry

THE British poultry industry failed to hold its own last year, the number of fowls in the United Kingdom, as returned at June 4th, being 8 per cent. smaller than in 1936. The output of eggs is tentatively estimated by the Imperial Economic Committee at around 36 million great hundreds, against 37.7 millions in the previous year. Profitability in the industry has recently declined in consequence of the rise in costs, the increasing toll of disease and the fact that the stamina of the flocks has been undermined by intensive production in earlier years. An appeal to the Government for increased import duties was therefore made by the industry's representatives, but was rejected on the recommendation of the Import Duties Advisory Committee. Certain proposals for a marketing scheme are before the industry at the time of writing, but they do not appear to arouse any great enthusiasm amongst the bulk of the poultry-keepers.

Meanwhile, imports of eggs last year were slightly larger than in 1936 and were greater than in any year since 1931:—

IMPORTS OF EGGS AND POULTRY

	Quantity				Value (£'000)			
	1929	1935	1936	1937	1929	1935	1936	1937
Eggs in shell ('000 gr. hundreds).....	24,964	19,767	24,607	24,732	17,856	7,768	9,886	10,440
Eggs not in shell ('000 cwt.).....	782	787	887	884	3,621	1,661	2,152	2,267
Dead poultry ('000 cwt.).....	554	423	422	506	2,960	1,690	1,659	1,995

The upward trend of egg imports was confined to those from foreign sources, the slight increase in the latter being more than sufficient to offset a decline of 33 per cent. in receipts from Empire countries. Denmark, with an increase of 25 per cent., remained by far the most important source of overseas supplies, accounting for 40 per cent. of the total. Rather more than 60 per cent. of total imports of shell eggs fell into the medium-weight category (14-17 lbs.). Last year also witnessed a further growth in the importation of dead poultry. Overseas supplies were 20 per cent. heavier than in the previous year and were the largest since 1932. There was an increase in each category of poultry. Turkeys accounted for 47 per cent. of the total, against 51 per cent. in 1936, while chickens comprised 43 per cent., compared with 41 per cent. in the earlier year.

The following monthly averages of top prices quoted at the London Egg Exchange have been taken from the Imperial Economic Committee's *Weekly Dairy Produce Notes*:—

EGG PRICES AT LONDON
(Shillings and Pence per 120)

* 11 months

Egg prices were higher than in 1936 for most of the year, the annual average for English National Mark Specials and Standards and for Danish 15½ lbs. showing an advance of some 3 per cent.

Fruit and Vegetables

THE weather was not ideal for the horticulturist in 1937, but was perhaps rather more favourable than in the previous year. The spring was very wet, but there was a prolonged drought in June, July and August. Although there was an abundance of bloom, this did not set well and the fruit crop was consequently disappointing; the dry weather in the summer was responsible for the bad keeping qualities of much of the apple crop. With the exception of Victorias, plums failed to realise good prices; apples and pears, however, sold well, but prices were not high enough to compensate the growers for the smallness of the crops.

The area under orchard fruit, as the following table shows, suffered a further decline, while the acreage under small fruit was curtailed by an additional 5 per cent. Following increases in previous years, the area devoted to the principal varieties of vegetables for human consumption was sharply reduced in 1937. The acreage under cabbages, savoy, green kale and sprouting broccoli decreased by 13 per cent., brussels sprouts by 7 per cent., cauliflowers and broccoli by 8 per cent. and carrots by 16 per cent.:—

AREA UNDER CERTAIN FRUIT AND VEGETABLE CROPS
IN ENGLAND AND WALES
(In thousands of acres)

	1930	1934	1935	1936	1937
Orchard fruit.....	247.0	254.9	262.4	261.3	258.4
Small fruit.....	66.2	61.0	59.5	55.7	52.8
Total.....	313.2	315.9	321.9	317.0	311.2
Potatoes.....	424.7	487.6	462.8	456.6	455.1
Green peas.....	56.4	74.3	63.6	67.7	45.6
Cabbage*.....	30.6	37.0	37.5	43.7	38.0

Carrots.....	9.0	16.4	15.8	16.6	13.9

*Including savoy, green kale, and sprouting broccoli for human consumption.

Meanwhile, among glasshouse crops, tomatoes generally yielded a good bottom crop with a poor top crop, largely owing to the wet subsoil early in the season. The early main crop realised a higher average price than usual, because the

bottom trusses were slow to ripen. Later in the season wide price fluctuations were recorded, though the average was generally above that of the previous year. Cucumbers did better than for a number of years. One notable event was the dissolution of the British Glasshouse Produce Marketing Association.

The Potato Marketing Board continued to exercise control over the potato market, the year being notable for the signing of a covenant with the Northern Ireland authorities to regulate the shipment of potatoes from that country to Great Britain. Data relative to the potato crop are given below:—

Potatoes	10-year average 1927-36	1936	1937
Production in England and Wales ('000 tons).....	3,127	2,814	3,126
Yield per acre (tons).....	6.5	6.2	6.9
Imports ('000 tons).....	382	316	237
Price of best English (s. per cwt.).....	...	7.79	8.32

The area under first earlies decreased by about 2 per cent., but the main crop acreage was about unchanged. The increased yield per acre was more than sufficient to counter-balance the slight reduction in the area devoted to the crop, and total production consequently showed an increase. But supplies marketed for human consumption were strictly controlled by the Board and the price level was appreciably higher than in 1936.

Fish

NEITHER section of the fishing industry had a prosperous year, but 1937 will be memorable for the introduction of the Sea Fish Industry Bill, now in Committee, designed to improve the financial position of the trawling industry. White fish prices have been depressed in recent years by heavy landings of coarse fish from distant waters and the market was barely steady last year. But while selling prices have declined, fuel and other costs have been increasing and profit-margins have consequently narrowed. By December the position was so serious that the owners of distant-water trawlers in Hull and Grimsby voluntarily decided to lay up 20 per cent. of their long-distance vessels for one year (as from Janu-

The BRITISH OVERSEAS BANK LIMITED

Incorporating FREDK. HUTH & Co.

THROUGH its world-wide connections and agencies the Bank is able to offer to its clients at home and abroad exceptional facilities in foreign exchange and in the financing of foreign trade, and also to provide up-to-date credit reports and information as to international business conditions. Correspondence invited.

ary 1st), or until the Sea Fish Industry Bill becomes law. The agreement is at present being loyally observed and heavy penalties will be incurred by any defaulters.

The Bill now before Parliament embodies the main recommendations of the Sea Fish Commission and provides for the setting up of a Development Commission, composed of independent members, with powers to improve the organisation and efficiency of the trawling industry.

Home supplies of the principal varieties of white fish were larger last year than in 1936, but, as mentioned above, average prices were rather lower and the aggregate value of the catch consequently showed a decline. The catch of herrings was also considerably heavier than in the previous year, but its total value was only slightly greater owing to the fall in prices. The herring industry, despite the activities of the Herring Industry Board, closed the year on a note of pessimism. Employment for the drifters has been seriously curtailed as a result of the further contraction of export demand—especially by Russia and Germany—and the consequent heavy increase in home stocks of cured herring. The present depression is particularly severe in Scotland, but criticism of the Herring Board is widely heard. The life of the present Board will terminate in March, 1938, and there is considerable speculation as to whether its constitution will then be altered. The salient statistics are summarised in the accompanying table.

Raw Materials

Coal

For the coal trade, 1937 was the most prosperous of the decade. Total output rose from 229 million tons in 1936 to over 241 million tons, exports showed a welcome jump from 35 million tons to 40 million tons, prices of all coals rose substantially, and in spite of a fairly steep advance in production costs, gross profits were comfortably in excess of the results of the previous year. Coal consumption at home, after all allowances and deductions, exceeded the total for 1913 and was about 4½ per cent. above the 1936 figure. Especially in the first part of the year demand was so vigorous that it outran available output, and a serious deficiency of spot supplies of all bituminous coals was only gradually eased during the year. This scarcity was rendered more acute by a heavy export demand, due to the resumption of Italian purchases, to domestic scarcity of coal in France and Belgium, and the rapid growth in Continental iron and steel production stimulated by ever-expanding re-armament programmes.

Under these favourable conditions prices rose steadily, the Board of Trade index advancing from 112.7 in January to a peak of 130.4 in December. Higher prices and increased production combined to raise pithead revenues from commercially disposable coal to £170 millions from about £150 millions in 1936. Though the larger part of this gain was absorbed by higher wage and material costs the credit balance remaining to the industry increased from £9,800,000 to over £13,500,000.

The year was also notable for an extension of the centralised selling schemes inaugurated in 1936. The new bodies began life under the most auspicious circumstances. In most cases price minima were easily exceeded and all restrictions on output were abandoned to meet current demand. During the year requests for additional quotas amounting to nearly 13 million tons for home and foreign markets were granted by the Central Council. The efficacy of the industry's new structure thus remains to be tested under less favourable conditions.

In the legislative field the chief development was the introduction of a new Coal Mines Bill to replace the abortive measure of 1936. It contains three major proposals: first, the nationalisation of coal royalties; secondly, provisions for facilitating reorganisation by vesting powers of enforcing compulsory amalgamations with the Board of Trade and the proposed Coal Commission; and, finally, an extension of Part I of the 1930 Act which governs the present structure of the industry. Strenuous opposition has already been aroused especially to the first two sections, and it remains to be seen whether the final shape of the Bill will retain much of its original outline.

The table below summarises the development of the industry in recent years:—

Year	Output	Exports (including Bunkers)	Average Export Prices (Board of Trade, F.O.B.)	Unemployment in Coal Mining Industry

A DESCRIPTION of developments in the chief producing areas is given in the following extracts from the *Iron and Coal Trades Review* of January 21, 1938:—

South Wales.—After years of unsatisfactory trading, the industry enjoyed a fair measure of prosperity. Production is estimated to have totalled 38,250,000 tons, the highest since 1930, when some 45,000,000 tons were produced. Miners employed at the beginning of 1937 totalled 125,700 and there was a steady improvement until December, when 137,500 men were engaged. During the first half of the year there was an acute shortage of skilled miners. The year was free from any major labour dispute, though there were threats of strikes from time to time. Total shipments of coal, patent fuel and coke for all purposes totalled 22,330,000 tons, a gain of 3,750,000 tons compared with 1936. The scarcity of supplies and the high level of prices, however, caused a number of former overseas customers to turn elsewhere for supplies. In the last few months inquiry was withheld in the hope of price concessions. The French trade was one of the brightest features of the year, but operations in the Portuguese market proved disappointing. After being in abeyance for practically the whole of 1936, trade with Italy was actively resumed. Business with Spain was curtailed. Prices generally showed a substantial improvement.

Northumberland.—A miniature boom prevailed during the greater part of the year. Prices steadily advanced during the

first six months, but this was followed by a decline and eventual weakness, which almost amounted to a slump in all large steam coals. Prices dropped heavily and had it not been for the controlled selling (which, however, was less drastic than in Durham) would have gone even lower. Great benefit was again derived from the trade agreements with Scandinavia and, with high prices ruling here, foreign competition would have been more serious without these agreements. A feature of the trade was the strength of all classes of small coal. The home markets absorbed the greater part of the output and at times there was practically nothing available for export.

Durham.—The markets were consistently strong throughout the year. There was greater price stability, largely owing to the limited quantities of second-hand coal and to the strict control exercised by the Sales Committee. There was an almost unprecedented home demand for all classes of industrial fuel, and there was also a revival of trade with Italy. The bunkering trade was not quite so satisfactory, exports of this class being smaller than in 1936. There was little idle time in Durham, and during the greater part of the year collieries were handicapped by weekly outputs which were below estimates, shortage of skilled labour being the principal cause. Prices steadily advanced during the first half of the year, but there was an easier tendency in the second. Coking descriptions were the strongest feature, both on home and export account. Gas coke makers enjoyed a year of high prices.

South Yorkshire.—There was further marked improvement throughout the year. Heavy demands were made on the industry and at times there was some shortage of labour. Industrial relations were disturbed by unconstitutional stoppages; but a revised agreement was signed in November, which it is hoped will guarantee uninterrupted working. In October the number of persons employed in the South Yorkshire field was 96,205, or over 1,000 more than in the same month of 1936. The coke trade experienced a particularly good year. At home industrial fuels were in steady request and at times washed smalls and slacks were scarce. The house coal trade was dull and it was not until late November that there was any marked activity in this section.

Lancashire, Cheshire and North Wales.—All qualities of domestic coal were in strong request and, although there were delays in the despatch of some of the more popular grades, supplies were generally satisfactory. There was a very good demand for all industrial fuels, especially washed grades. Producers of furnace coke have had a remarkably good year, both as regards sales and prices. All steam-raising fuels have, in fact, advanced in price during the year. The revival in the

Martins
Bank Ltd.

1563

1831

shipping industry was reflected in an improved demand for bunker fuels.

Scotland.—The year opened with a somewhat dilatory resumption of work by the miners and with an influenza epidemic. Collieries were heavily sold and prices were high. The unforeseen scarcity made it almost impossible to consider further new business before the end of February. All grades of coal were in strong demand and a noticeable feature was the increased call for washed fuels. House coal business was also extremely active. After a much easier period in the middle of the year, business became very active at the close, in consequence of the onset of severe winter weather all over Scotland. Contracting for the early months of 1938 is perhaps less than in former years, but the trade generally is optimistic regarding the future.

Oil

WORLD production and consumption in 1937 exceeded all previous records, and the profits of oil-producing companies were the best since 1929.

PRODUCTION AND CONSUMPTION OF CRUDE OIL AND RELATED FUELS

* Estimated.

The rise in the world's oil consumption was stimulated last year by the progress of the petrol and the diesel engines in transport, the increased demand for oil by industry and the rapid rise in requirements for heating purposes. In addition, oil has been stored for military purposes in a number of countries, a development which made itself felt on the market on various occasions during the past twelve months.

On the supply side of the international oil market some important changes have taken place in 1937. The most important is the decline of the Roumanian oil output from 63,750,000 barrels in 1936 to 53,250,000 barrels in 1937. This decline, which was brought about by Government interference with foreign oil companies in Roumania and by the unsatisfactory drilling results, forced the country from fourth to sixth place among oil producing nations. Iran and the Dutch East Indies now occupy the fourth and fifth places respectively. The United States, Russia and Venezuela maintained their leading positions in 1937, but once again the Venezuelan output advanced sharply in spite of some strike interference, while Russia raised its production only slightly. If the two countries repeat this performance in the next twelve months Venezuela may oust Russia from its second place. Among the smaller oil producing countries the rise in the Bahrain output to 7,800,000 barrels was the outstanding event. Most other producing countries also registered satisfactory increases, only the Peruvian, Argentine and Burmese outputs having failed to fulfil expectations.

Competition on the oil markets in and outside the United States was again kept within limits. In the United States the State Control, discussed in the Commercial History of 1935 and 1936, worked smoothly in 1937. It proved particularly beneficial in the last three months of the year, when demand for oil and oil products fell away as a result of the general decline in the country's industrial activity. The co-operation among oil-producing companies in the United States increased last year. It was so close that an anti-trust case was launched in October last against most of the oil companies working east of the Rocky Mountains. Outside the United States the rise in consumption last year was sufficiently large to prevent price-cutting, in spite of the increased exports from the United States. The European and Near Eastern markets were strengthened by declining Russian exports and by the reduction of Roumanian supplies. At one time in the summer there were rumours of an impending diversion of large supplies of Bahrain oil to the British market. In August Mr James A. Moffett, chairman of the California Texas Oil Company, which distributes the Bahrain oil, made a public statement indicating *inter alia* that the Texas Corporation (one of the parent companies of the California Texas Oil Company) had a distributing organisation of its own in Great Britain and on the Continent, and that possible supplies of Bahrain oil to these markets would be distributed through these organisations and not through the "combine." So far, however, no addi-

tional competition from Bahrain oil has been encountered in this country or on the Continent, and it is doubtful whether it will be met in 1938.

Prices were irregular in 1937. As the table below shows, Pennsylvania crude oil and the Gulf export price for gasoline declined in 1937, while mid-Continent and Gulf crude oil, as well as British petrol prices, showed a rise. In the early part of the year oil and petrol prices tended upwards, but with the exception of the Pennsylvania crude price which was forced up considerably by the special demand for lubricating oil, the rises were orderly. In the late autumn the Pennsylvania crude oil price experienced a reaction, and the deteriorating statistical position of the gasoline market in the United States led to a decline of the Gulf export price. As a whole, however, the international oil and petrol price structure remained fairly firm, an indication of the strength of the market.

OIL PRICES

End of

	1933	1934	1935	1936	1937
Best crude oil, U.S.A. (\$ per barrel) :—					
Pennsylvania	2.12	1.72	2.02	2.17	1.88
Mid-Continent	1.08	1.08	1.08	1.18	1.30
Gulf	1.14	1.14	1.14	1.22	1.41

Gulf bulk export, gasoline 64-66 deg. (cents per gallon)	5½	4½	5½	5½	5½
England and Wales, petrol, 1st grade (wholesale, per gallon)	1s. 5d.	1s. 4d.	1s. 5d.	1s. 5d.	1s. 6d.

Drilling for oil in Europe for strategic reasons was continued actively in 1937. In this country drilling, which had been confined to the South until the end of 1936, was extended to the Midlands, the North and even to Scotland. A number of wells have already been discontinued at substantial depths and so far no commercial quantities of oil have been found. The production of oil from coal, too, has made rapid headway, especially in Japan, Germany and Great Britain. In this country a change in the Government's oil from coal policy seems to be on the way. Towards the end of last year, the Government provided part of the capital of the newly-formed South Wales Coalite Company (in the past Government support to the oil-from-coal industry was confined to certain tax preferences).

During the past year Professor I. M. Gubkin, Vice-President of the Russian Academy of Science, has prepared an estimate of the world's oil reserves for the International Geological Congress. In this he estimates world oil reserves at 7,075.2 million tons, of which 4,016.6 million tons are in Europe. According to Professor Gubkin, the American Continent contains 2,142.7 million tons of oil, followed by Asia with 769.0 million tons, Oceania with 143.3 million tons and Africa with 3.3 million tons. Since 1857 some 4,000 million tons of oil have been produced.

Any review of oil in 1937 would be incomplete without reference to the tanker market. In the early months of the past year the demand for tanker tonnage showed a sharp increase and freight rates jumped up by leaps and bounds, rising at one time to the highest level since the beginning of 1930. Competition by whalers, which entered the oil freight market temporarily, and a decline in shipments, subsequently forced the rates to lower levels, but at the end of the year the upward trend was resumed. The rise in oil tanker freights in 1937, which influenced oil price movements, was due to the inadequacy of the present tanker tonnage. Although the world's oil consumption has risen by well over 50 per cent. in the past six years, the sea-going oil tanker tonnage has increased only from 1,439 vessels with an aggregate of 8,549,827 tons on June 30, 1931, to 1,558 ships with a capacity of 9,957,140 tons on June 30, 1937. Recently new oil tanker construction has been speeded up, but it may take time until oil requirements by importing countries and the available tanker tonnage are in equilibrium.

Oilseeds and Oils

In the oilseed-crushing and oil-refining industry of the United Kingdom there was greater activity, increased home consumption and some improvement in the export trade. World supplies of raw materials were ample and, with the exception of linseed, prices in 1937 were lower than in 1936. British imports of oilseeds, nuts and kernels amounted to 1,623,292 tons, an increase of 150,001 tons, or 10.1 per cent.,

over the preceding year. There were somewhat larger arrivals of linseed, mainly from India, the lesser proportion coming from Argentina subject to an import duty of 10 per cent. *ad valorem* under the Ottawa agreements. English crushers regard this as an unfair tax on their industry, which places them at a disadvantage in competition with Continental countries which import their linseed free. The idea that the preference given to India would lead to increased production in this Dominion and thus keep the cost to the British crusher down has not been justified by results. A feature was the extraordinarily large quantity of cottonseed imports, amounting to 672,126 tons, or 41 per cent. of the total imports. Soya beans showed some increase, but were only about half the quantity usually received before the imposition of an import duty two years ago. Castor seed and rape seed were imported in larger quantities, while the heavy imports of ground nuts, exceeding a quarter of a million tons, were a reflection of the much increased world supplies.

Production of linseed in the main exporting countries was larger than at first expected, with the result that world shipments in 1937 amounted to 2,113,000 tons, or 258,000 tons more than in 1936. The major part was shipped from the River Plate, viz. 1,880,000 tons, or about 130,000 tons more than originally estimated. Indian shipments were only 230,000 tons. The quantity destined for Europe was 1,313,000 tons, 79,000 tons less than in 1936. Prices were influenced by the heavy demands of the United States and Canada, which took more than 768,000 tons from the River Plate, against 405,000 tons in 1936. Supplies in the current year are likely to be approximately 350,000 tons below 1937, because of the smaller crops in South America which are estimated to provide an exportable surplus of some 1,500,000 tons. India will probably be able to ship a quarter of a million tons, or about the same as last season. Prices of linseed were higher than in 1936. Calcutta on spot at Hull ranged between £15 15s. and £14 per ton, and Plate between £13 15s. and £11 15s., plus duty. Cottonseed was in good supply and prices were reasonable. Black Egyptian on spot at Hull opened the year at £9 10s. per ton, but in the later months gradually declined, touching £5 5s. in November, the lowest for some years, the fall having been caused by the record cotton crop in the United States.

Production of vegetable oils in the mills of Great Britain from imported oilseeds and oil nuts was in excess of the

previous year, and notwithstanding falling prices in several directions a satisfactory trade was done. Prices of linseed oil were well maintained without violent fluctuations and in spite of keen competition from foreign-made oil, of which unusually large quantities were imported. The difference between the highest and lowest was no more than £4 per ton. The average price of raw oil on spot, ex Hull mill, was £29 4s. 7d. per ton (naked), against £26 7s. 3d. in 1936 and £23 11s. 8d. in 1935. Crude cotton oil from Egyptian seed remained firm during the first few months, when a good business was done in washed oil for export to the United States. A feature was the rapid decline in prices from April onwards. From £31 per ton, ex Hull, the price dropped almost month by month until the end of November and early December, when £18 was accepted, a fall of £13 per ton. British soya bean oil declined sharply from £34 per ton to £25 in December. A steady trade was done in rapeseed oil; the price of crude oil reached a higher level than for some years, ranging between £35 10s. and £34 per ton. Castor oil remains in great demand as a lubricant for aero-engines and prices fluctuated only slightly between £41 and £37 per ton for first-pressure (barrels free). The most striking drop in prices was reserved for palm kernel oil, which early in the year stood at £39 per ton, but by November had declined to £18 10s., ex Hull. Ground nut oil also showed a downward trend and fell from £35 10s. per ton in January to £29 at the close of the year.

At the beginning of the year crushers had difficulty in carrying out forwarding instructions for oilcakes. The autumn trade was less satisfactory owing to the prolonged open weather. There was a marked improvement in the closing months. Deliveries were substantial and prospects good. Crushers, however, continue to be handicapped by the excessive imports of oilcakes and meals from abroad. In 1937 net imports amounted to 634,964 tons, half of which came in duty free from British sources and consisted very largely of ground nut cakes from India. Pressure has been put upon the Government to increase the duty on foreign-made oilcakes to £2 per ton and to restrict imports from Empire countries by quota, but so far without success.

British imports, exports and consumption of vegetable oils are shown as follow.

Guaranty Trust Company of New York

Incorporated with limited liability in the State of New York, U.S.A.

SINCE the establishment of its London Office forty years ago the Guaranty Trust Company of New York has aimed at the constant development of its services in order to render its customers the greatest assistance possible in their commercial and financial transactions both in and between Europe and America.

Every phase of modern banking business is undertaken and the management at any of the offices will be glad to explain the Bank's facilities in detail.

U.K. Supplies	478,424	507,801	579,492	577,558	605,623

The estimated supply of oilcakes and meals, including net imports, was 1,770,000 tons, against 1,530,000 tons in 1936 and 1,660,000 tons in 1935.

Rubber

The following extract is from Messrs S. Figgis and Company's Annual Review of 1937:—

The year has been one of extremes. The strong market and rising prices which were in evidence at the close of 1936 continued until the end of March, but since then the market has consistently declined. Outside speculative buying in the early part of the year forced prices up, and in order to check this movement on March 16th the International Rubber Regulation Committee, though leaving the April to June quota unchanged at 80 per cent., increased the permissible export to 90 per cent. of the assessment for the period July to December. It was generally felt that the estates would not be able to produce this amount, and there was a further sharp rise in price. When in June, it was realised that the full amount would be available the set-back commenced and the decline was emphasised by the high prices which had been reached. At their meeting on November 30th the Regulation Committee reduced the percentage to 70 for the first three months of 1938, which stopped the decline and brought a rise of 3d. per lb. The quota for 1938 automatically goes up 37,000 tons, so that the reduction is really 17 per cent. On January 25th the exportable allowance was reduced to 60 per cent. for the April to June quarter. We estimate shipments during 1938 under the basic quota, including Siam, French Indo-China and the rest of the world to be as follows:—

BASIC EXPORT QUOTAS

	Whole Year 1938	January-March 70%	April-June 90%	July-December 60%
Strait Settlements, F.M.S., U.M.S., and Borneo	160,000	105,350	90,300	180,600
Netherlands Indies	510,000	94,500	81,000	162,000
Ceylon	82,000	14,438	12,375	24,750
India	13,000	2,275	1,950	3,900
Borneo	9,250	1,618	1,387	2,774
Siam	16,500	2,868	2,475	4,950
French Indo-China	42,000	5,600	4,800	9,600
Siam	40,000	10,000	10,000	20,000
French Indo-China (estimated shipment)	50,000	12,500	12,500	25,000
Rest of the World	25,000	6,250	6,250	12,500

Total permissible exports for 1937 from the quota countries (excluding Siam) showed an increase of nearly 300,000 tons. Shipments have been kept within the Regulation quota, though at times there have been large excesses over permissible quantities in particular districts in Sumatra. Total shipments of rubber for 1937, including latex, were 1,106,959 tons, compared with 832,026 in 1936.

STOCKS AT THE END OF THE LAST THREE YEARS
(In tons)

	Dec. 31, 1935	Dec. 31, 1936	Dec. 31, 1937
Stock in America	312,000	223,000	258,818
Stock in United Kingdom	164,295	78,462	87,818
Dealers' stocks in Singapore, Penang, etc.	22,485	18,017	32,604
Port stocks in Singapore and Penang	5,919	8,852	12,210
Stocks in Province Wellesley, Lutan and Malacca	3,038	3,268	5,203
Dealers' stocks in open trade	7,908	5,833	16,043
Stocks on Estates of 100 acres and over	29,369	26,044	24,488
Total	538,498	383,576	404,984

There has been little or no new planting during the past year. The revised figures for the planted areas at the end of 1936 are as follows.

AREA UNDER RUBBER

(In acres)	
Ceylon	605,000
Malaya, Malacca	3,270,000
Dutch East Indies ...	...
Java, Sumatra, etc. (excluding native areas)	1,495,000
British North Borneo and Sarawak	350,000
India and Burma	235,000
French Indo-China, Siam and other countries	650,000

The average price of standard quality in London was 9½d. for the year, compared with 7½d. in January. It rose to an average of 11½d. in March, the highest point touched being 1s. 1½d. Prices then declined steadily until November, when the lowest point of 6½d. was reached. Prices rose very slightly in December.

CONSUMPTION OF RUBBER (PARTLY ESTIMATED)
(In tons)

	1935	1936	1937		1935	1936	1937
America	493,000	573,000	543,000	Japan	58,000	61,700	64,000
U.K.	95,000	99,700	115,000	Russia*	38,000	31,000	29,000
France	52,000	56,800	59,000	Australia	10,000	14,000	20,000
Germany	63,000	71,800	98,200	Italy	24,000	16,000	24,000
Belgium	8,000	9,600	14,500	Other countries	68,000	73,100	83,000
Canada	27,000	27,900	36,000	World	943,000	1,037,000	1,088,000

Several of the 1936 figures have been altered from our estimates in our last Annual Report.

* These are Russian figures for deliveries from warehouses.

Consumption reached a record total in 1937 in spite of the considerable set-back in the United States in the autumn. The increase since 1932 is 396,000 tons, a rise of more than 50 per cent. Outside the United States consumption has increased. Stocks had fallen by the end of June to 213,000 in the United States and the United Kingdom, but since then have increased, and with an increase in those in Singapore, Penang and afloat are, at 497,000 tons, 63,000 tons larger than those at the end of 1936. It is impossible to predict what the consumption is likely to be in 1938, for much depends upon trade in the United States.

Copper

THE year 1937 witnessed violent changes in copper prices. The opening price of the year for standard cash was £49 10s. per ton. On March 11th it stood at £78 per ton, but subsequently fell to £36 3s. 9d. early in November, the lowest level of the year. The closing price of the year was £39 7s. 6d. Progressive increases in the production quota made in 1936 were followed in January 1937 by the removal of restriction. This announcement followed soon after prices had risen above £50 per ton—but the abandonment of restriction failed to arrest the upward trend of prices until March. In the summer, copper consumption in the United States showed signs of hesitancy, and in the autumn a severe fall in prices set in. Despite the decision to re-impose output restriction, the year closed with prices well below those of a year earlier. Messrs Brandeis, Goldschmidt and Company's annual survey is summarised below:—

At their highest level prices in 1937 were more than 100 per cent. above the 1936 average; at their lowest level they were below it. The decline during the year was so severe that it had been exceeded only on three previous occasions, and except in 1916 copper has never risen so swiftly in price during the last fifty years. The extent and rapidity of the 1937 advance, coupled with the abruptness of the subsequent decline, thus present a cycle unique in the history of copper.

In consumption, as between say 1900 and 1937, the rate of progress has been similar for the United States and the rest of the world. But in the case of the United States the total for 1937 is appreciably below that reached about ten years ago, whereas for many other countries the totals are the highest ever reached. In Germany, the consumption of copper has attained a new high record, there being during 1937 an estimated increase of 55,000 tons. Germany is still the second largest consumer of the metal in the world, and while the gap between the figures for the United States and Germany has grown much wider since 1913, that between Germany and the United Kingdom has grown very much smaller. During 1937 copper consumption outside the United States increased by some 280,000 tons—or about one-half of the total increase since 1928-29. This is an unprecedented increase for a single peace-time year. During the war production jumped from 1,055,000 tons in 1915 to 1,360,000 tons in 1916, this increase probably corresponding to that of world consumption in that period. But in the 1923-28 period, the maximum yearly increase in Europe was 125,000 tons in 1925. The increase in 1937 in French and Swedish consumption is nominal, whilst the Italian figures show a decrease; elsewhere the increase has been from 20 to 25 per cent., except for Japan, where it is 60 per cent. Popular imagination, however, falsely measures metal requirements for re-armament in many millions of tons of steel and in hundreds

of thousands of tons of copper and lead. There is a basic difference between peace- and war-time military metal requirements: war-time requirements are caused by destruction, peace-time by accumulation. In the United States in 1937 consumption increased by about 50,000 tons, most of the increase being due to the electrical industry. The increase between 1923 and the end of 1929 had been 300,000 tons, a yearly average of 60,000 tons, and a maximum yearly increase of 125,000 tons.

On the production side, by the end of 1936 output quotas were at 105 per cent., which is, however, anywhere from 300,000 to 400,000 tons below the output from working at full capacity. In January, 1937, all output restrictions were withdrawn and a large increase in production resulted. Foreign smelter production, as reported in America by the Copper Institute, totalled about 620,000 long tons for January-June, 1937, against 415,000 long tons for January-June, 1936. The sudden fall in price in the last week of September, due to the collapse of the speculative position built up three months previously, induced the main producers to re-impose restriction. On October 1st it was announced that as from December 1st production would again be at the rate of 105 per cent. But some producers had decided to anticipate that action by several months; there had been a sharp falling off in the Chilean output after June. The tonnage on which quota changes are based is 598,000 long tons, against an estimated capacity of 960,000 tons; in the first six months of 1937 the output of the restricting countries was 400,000 tons. None of the Canadian

output, however, is subject to curtailment; Canadian production showed a large increase in 1937 and is still expanding.

The increases in visible stocks are estimated to be 90,000 tons in the United States and 20,000 tons elsewhere, in addition to increases in blister stocks of 16,500 and 43,000 tons respectively. During 1937 world mine production was estimated at 2,255,000 tons (in addition to 210,000 tons from scrap) and consumption at 2,230,000 tons.

For many years now the world productive capacity of copper has been greater than the demand. Outside America, the capacity of the producers is great enough to cover consumption without the addition of exports of domestic American copper. Unless, therefore, world consumption should increase still further, the necessity for control of production must continue, and the effect of accumulations in the United States and the fear that unusually large quantities may be exported must continue to influence the world price.

Lead

AFTER the sharp rise towards the end of 1936, the price of lead did not change greatly between the beginning of 1937 and mid-February. The upward trend was then resumed until a "high" of £36 10s. per ton was reached, but this level was not long maintained, and during April the cash quotation fell below £25. When in the autumn the falling off in U.S.A. consumption became apparent, the decline was accentuated and, as in the case of spelter, the end of the year did not see any appreciable recovery from the year's lowest price of £15 10s. per ton. But whereas one of the features of 1936 was the large excess of lead over spelter prices, 1937 saw a narrowing of this margin to more normal dimensions. Since the year's "highs" were passed, the difference between the price of the two metals has frequently not been more than £1. We summarise below Messrs Brandeis, Goldschmidt and Company's discussion of the year's trend:—

Early in 1937 it began to appear that there might be a real shortage of lead, but by the end of the year the position had changed completely, and it was feared that there might be a heavy accumulation of stocks. Probably both fears were

exaggerated; and in fact production outside the United States of America only exceeded consumption to the same extent that consumption outstripped production in that country.

During practically the whole of the year the price of lead outside the United States was above that of spelter. The announcement of the British Government's re-armament programme in February last caused the price of lead in this country to advance rapidly to the highest level since 1925.

In the United States the price rose to 7.75 cents per lb.; but the price was reduced soon after, and had fallen to 6 cents by the first week in April.

World consumption is at present particularly difficult to forecast owing to the lag between the planning of building and re-armament work and the actual commencement of operations. A decline in building activity for residential purposes is to be expected, but in the case of re-armament the exact opposite is likely, for the arms programme calls for an expenditure of up to £1,500,000,000 in five years. large tonnage of lead has already been consumed in construction work, but this is not so great as the amount which must be required later when the factories are in full operation. Then, quite apart from requirements for use in pigments, the number and size of batteries used are likely to absorb an ever-increasing quantity of lead. Nor is the market for batteries for domestic use by any means saturated. It may, however, be doubted whether cable makers will be quite so actively employed in 1938. During the first six months of 1937 the cable industry enjoyed a very active demand, but the revival during the last months of the year, after the usual seasonal decline, was not very marked.

European consumption is increasing, and Germany has been using more metal, both primary and secondary, than for many years. But her production has also increased and is probably sufficient to satisfy half her domestic needs. Moreover, of this smelter production perhaps half is produced from domestic ores. France has also expanded her output, but her consumption appears to be only about half that of Germany. Japan has ceased to publish import figures since last June, but consumption during the four years 1934-37 showed a gradual upward trend. Consumption in Russia is now probably reaching the level of Japan. In the United States, despite an increase of about 50,000 short tons in production during the first nine months of the year over the corresponding period of 1936, stocks fell from 172,000 to about 91,000 short tons by the end of September. During the last three months the trend was reversed, and at the beginning of December stocks had again increased to 113,573 short tons. This total, however, is not unwieldy, and though stocks are likely to increase in the near future, they should not become unmanageable.

For a long time the known ore reserves in the world have not changed to any great extent, but smelter production during the year increased rather less than might have been expected with prices at such an attractive level. But Canada, Australia (where smelters have been working to capacity), Burma, Germany, Belgium and France all succeeded in increasing their output. In the coming year, production in Yugoslavia, which had tended to fall, may again be higher. In Canada there has been an increase in production of about 15 per cent. to a new high record, but in Mexico higher costs, heavier taxation and the fall in the price of silver have affected production unfavourably, and the increase compared with 1936 has been small.

While in some respects the excessively high prices have been beneficial in adjusting supply, they have possibly tended to check consumption, and damage has been done to the market by the violent fluctuations. Unless prices can be maintained at a reasonable level for a period, real confidence may not be restored for some time.

Spelter

DURING much of the year, spelter was one of the market's objects of speculation, and in relation to the opening prices of 1937, quotations reached a higher level than those of the other base metals. The year's "high" of £37 per ton was some 85 per cent. above the opening price, speculative activity being stimulated by the belief that the U.S.A. would be compelled to import large quantities. As her producing capacity could not be adjusted to demand for technical reasons, she did in fact import a little, but after August the position changed completely. Meanwhile from mid-March onwards, the London price of spelter fell rapidly, and in the autumn was depressed anew by the withdrawal of speculative support. The lowest price of the year was reached in November, and recovery in the rest of the year was insignificant. The following summary of the year's trends is taken from Messrs Brandeis, Goldschmidt and Company's annual review:—

Demand for the highly refined grades of spelter is gradually increasing. The London Metal Exchange price is for ordinary brands of foreign metal, with an option to deliver Empire metal at an extra 12s. 6d. per ton. The premiums for refined spelter over the London quotation have varied very much, and whilst in the United Kingdom they have been kept at a reasonable level, as much as £10 per ton premium has been paid by other countries. In the lower grades, the year 1937 has been uninteresting, and consumption, especially in the galvanising industry, has not increased in proportion to the revival of business in other branches of the metal industry. Producing capacity of the lower grades has been greater than was needed. With refined and electrolytic spelter, however, the position has been just the reverse and supplies have been inadequate. Not only did the premium rise to a very high level, but the basis price rose in sympathy, especially when speculators entered the London market.

The price of spelter, which had been disappointing for many years, rose to the highest level since 1926. But for a long time the tendency has been for supply to outrun demand, and even during the year under review, which was one of relatively high prices, discussions concerning control of output took place. The reconstitution of the Zinc Cartel might, however, be impeded through political considerations. In any successful scheme both France and Germany would have to be included, and it would be difficult for Germany, a consumer in excess of her domestic production, to place herself in a position where she might have to import larger quantities at a higher price to

the detriment of her foreign exchange position. The Ottawa agreements and the possibility of special arrangements between the countries of the Empire and the U.S.A. would constitute further difficulties. In the circumstances it may be assumed that a satisfactory restriction scheme would be difficult at present.

Spelter fluctuated last year in sympathy with other metals, although during January and February there was very little setback, the rise being practically continuous until mid-March. The year opened with a price of about £20 per ton. The year's highest was £37 10s., from which point there was a sharp fall to about £22 15s. at the end of April. Not until the beginning of October, however, did the price break below the level at which the year had opened. Thereafter it failed to recover, and reached its nadir at the end of December.

† November.

New records of production and consumption were achieved in 1937. Production exceeded demand in the later months, but even in the U.S.A. consumption achieved a new record. World consumption, in fact, has shown a substantial improvement in every year since 1932. Following the earlier example of the United States, an advance was made by Great Britain, Germany and Japan in the use of alloys containing a high percentage of refined zinc for die-casting. Electrolytic zinc is used in these alloys and for brass-making, and is increasing in popularity at the expense of other metals. Progress has also been made in the use of zinc for pigments and as an undercoating for plating.

Production kept pace with consumption in 1937, except in the U.S.A., where the decline in stocks was probably counterbalanced by increases elsewhere. The chief increases in refined production were recorded by Canada and Germany, and there is no doubt that productive capacity for the higher grades has been fully utilised. On the other hand, Australia has accumulated large tonnages of zinc concentrates in excess of her refining capacity; but freight rates are high enough to make shipment to other countries for refining unattractive. It will be interesting to see whether the producers of lead and silver, who also produce zinc concentrates as a by-product, will be able to market their lead and silver whilst withholding their zinc. Certain of the straight zinc mines may have to close down if prices fall further, but some of the tonnage might still be available from the by-products producers. A fall in the price of silver might have a decisive influence on a certain proportion of the production of zinc concentrates. In considering the outlook, the likelihood of an excess of zinc concentrates must be taken into account. This factor may be sufficient to outweigh the advantages of a growing consumption, and may prevent zinc prices from regaining their former parity in relation to lead. In other words, the price for ordinary brands of zinc may be expected to remain slightly below, rather than above, the price of lead for some time to come.

Tin

ALTHOUGH prices actually fell in the first six weeks of 1937, the trend was sharply reversed when the British armaments programme was announced. On March 5th, the International Tin Committee, in deciding to maintain the second quarter's quota at 100 per cent., estimated that this level would raise visible stocks by 1,600 tons a month. This estimate assumed an annual consumption of 170,000 tons, which the market considered too low, and the price of tin soared to £311 per ton. The later increase in the quota to 110 per cent. did not, of itself, affect the quotation markedly, though general influences drove the price downwards. Then prices continued somewhat firmer than those of other metals, but succumbed to the autumn decline when anxiety was felt

about industrial activity in the United States. A low point of £180 15s. was reached in November. We summarise below Messrs Brandeis Goldschmidt and Company's annual survey:—

The present or third restriction agreement is to last until the end of 1941, subject to certain provisions for withdrawal or termination. But though production has been regulated through the scheme, which covers 85 per cent. of world supplies, prices have displayed the most violent fluctuations. The year opened with a price of about £233 per ton, but the outbreak of strikes in the American automobile industry caused a slight set-back until the middle of February. On February 17th the British Government announced its re-armament programme, and without considering what would be the precise effect on tin in 1937, alarm given at the prospects of a real shortage, and the price was forced up. During the first two weeks of March the market got out of hand, until £311 was reached—the highest price for ten years. The International Tin Committee decided on March 16th to increase the quotas for the second quarter to 110 per cent. (at which they remained for the rest of 1937), though at the March 5th meeting the permitted output had been left unchanged at 100 per cent. By the end of April the price had touched £239 per ton owing to the American gold scare and the weakness of the French franc; but in August the price again rose to over £270, after which it remained at around £260 until the latter part of September. During the last quarter there were severe breaks, culminating in a fall of £30 on one day to £175. Even the announcement that the quotas for the first quarter of 1938 would be cut from 110 per cent. to 70 per cent. (with certain concessions to Malaya, Nigeria and the Dutch East Indies regarding arrears of other participants) found the market incapable of recovering to over £200.

On the basis of the quotas, the restricting producers should have produced about 215,000 tons in 1937. Except for Malaya and the Dutch East Indies, however, the output was nothing like so high as this; the arrears were about 25,000 tons for Bolivia and 13,000 tons for four other countries. The indications are that Bolivia's capacity was over-estimated and that a revision of actual quotas should be made.

World consumption during 1937 is provisionally estimated at 185,000 tons, against 160,000 tons for 1936. At least half the increase is attributable to the United States automobile and tinplate industries, the latter accounting for about one-half of the country's total consumption. Consumption has increased in Russia, where there is need for foodstuffs storage facilities, and in Japan, whose army operations must have accentuated the need for tin containers. Russian consumption

is put at about 13,000 tons last year, against 9,664 tons in 1936, and only 4,829 tons in 1930. Italian imports, however, have declined. In the United Kingdom, production of tinplates increased during the first half of 1937, and output is still running at a satisfactory level.

Owing to the high price of steel used in making tinplates, and to export control arrangements, the tendency for consumption to increase may be checked in the future. Prices of finished tinplates and of the steel from which they are made are about 75 per cent. higher than they were in 1913, whereas the price of tin is about the same as it was then.

With regard to world stocks, a visible supply of 25,000 tons might be sufficient if production were flexible. Stocks could be relatively smaller on the basis of a controlled annual production of only 170,000 tons (which is that proposed for the first quarter of 1938), because there would be a larger potential capacity to cope with any increase in demand. But a visible stock of almost double the present tonnage should not be

THE WESTMINSTER BANK THROUGH A CENTURY

BY
PROFESSOR T. E. GREGORY
ASSISTED BY ANNETTE HENDERSON

This is more than a domestic history. It is a cross-section of industrial England of the nineteenth century, an important book on the development of banking in general. In Professor Gregory's handling of the subject, a precise knowledge of banking problems, an authoritative voice in the sphere of economics, and an obvious bent for accurate history, have combined to produce a remarkable volume which will rank as a standard text long after the centenary celebrations of the Bank are forgotten. The text is very fully documented and copiously illustrated with collotype reproductions, four of which are in colour. The book is printed at the Curwen Press.

IN TWO VOLUMES

unwieldy if properly distributed among the countries where consumption is high. A forecast for 1938 cannot be made with any confidence, but it is hoped that the International Tin Committee will be able to avoid a repetition of the experiences of the past year. The price of tin may now be considered normal in comparison with that of other base metals.

Cotton

As will be seen from the following table compiled from the January, 1938, issue of *Cotton Statistics*, published by the Liverpool Cotton Service, world production in 1936-37 exceeded the previous season's crop; and the estimated increase of nearly 50 per cent. in the American crop for 1937-38 and other indications suggest a further large expansion.

* Government estimate, 400-lb. bales. † Less than 500 bales.

The United States and the U.S.S.R. again showed considerable increases and a large expansion occurred in China. The increase in India was relatively small. The next table shows world consumption of raw cotton by varieties, as compiled by the International Federation of Master Cotton Spinners' and Manufacturers' Associations, together with changes in stocks.

WORLD CONSUMPTION AND STOCKS OF COTTON
(Thous. running bales, excluding linters)

Season ended July 31st	Consumption					World Stocks, July 31st
	American	Indian	Egyptian	Other Varieties	Total	
1930	13,015	6,087	937	5,162	26,006	8,815
1931	10,991	5,863	853	4,864	23,195	10,906
1932	12,316	4,758	880	4,255	22,319	12,144
1933	14,170	4,220	864	5,028	24,353	12,560
1934	13,304	4,772	1,108	5,097	25,111	11,980
1935	11,354	5,772	1,195	7,480	25,801	8,541
1936	12,733	5,508	1,183	7,878	27,404	8,768
1937	13,346	5,982	1,278	9,048	29,654	9,496

* No returns from Germany, 1935. † No returns from Germany or Italy. ‡ No returns from Italy.

It will be noticed that a rise of just over 8 per cent. in stocks has nevertheless been accompanied by a similar rise in consumption over the high figure of 1936. The rise was spread over all varieties.

The fluctuations of Liverpool prices are shown below:—

AVERAGE PRICE OF RAW COTTON, LIVERPOOL
(Pence per lb.)

Season ended July 31st	American Middling	Egyptian Sakel Hard
1929	10.52	10.52
1930	9.09	14.82

* Total British imports of raw cotton in 1913: quantity, 21,742,996 cents; value £70,570,547.

Total imports, it will be seen, increased over the previous year at a lesser rate (8.3 per cent.) in 1937 than in 1936 (21.6 per cent.).

A survey of developments in raw cotton during 1937 is given in the following summary from Mr F. W. Tattersall's *Cotton Trade Review*, dated December 31, 1937:—

On January 4, 1937, the quotation for Middling American cotton on the spot in Liverpool was 7.07d. per lb. There was a steady hardening movement in prices, until 8.14d., the highest price of the year, was reached on March 16th. By the end of June, the quotation had fallen to 6.94d., with a further decline by September 30th to 4.92d. The lowest price was 4.50d. on November 20th, and the year ended with the figure at 4.84d. The American cotton crop for 1936 was 12,399,000 bales, against 10,638,000 bales in the previous year. At the end of last season the carry-over was about 6,000,000 bales. Cotton farmers in the United States this season have produced a record crop, the latest Government estimate being 18,746,000 bales. The previous largest growth was in 1926, when the production was 17,978,000 bales. The striking difference, however, between the two seasons is that, whereas in 1926 the area harvested was 44,616,000 acres, that harvested this season is only 33,930,000 acres. This change has been due to the big improvement in the yield per acre from 192.8 lbs. to 264.6 lbs. Owing to the abundant supplies, the United States Government took action and farmers were offered loans on their cotton. This policy checked the downward movement of prices. The world consumption of American cotton last season was about 13,100,000 bales. At the end of next July, the carry-over will probably be between 12 million and 13 million bales.

On January 4, 1937, the quotation for Fully Good Fair Upper Egyptian cotton on the spot in Liverpool was 7.85d. In sympathy with the American staple, there was a rising tendency during the earlier part of the year, the highest quotation of 10.18d. being registered on July 9th and 14th. During the last six months the downward movement was rather severe. At the end of December the figure was 6.20d. The growth of Egyptian cotton this season will be of record dimensions at about 10,800,000 cantars. Increased production of raw cotton in other countries is also probable, and in round figures the available supplies are 52 million bales, while the world consumption is not likely to be more than 30 million bales.

Silk

SUPPLIES of raw silk, which had shown a fair measure of stability for a number of years, registered an increase in the 1936-37 season. The following table, based on the estimates of Messrs Morel-Journal and Company, shows that the expansion was general except in the case of exports from Shanghai, which recorded a slight decline after the previous year's notable increase. A further sharp reduction in supplies from this source is forecast for the current season:—

WORLD SUPPLY OF RAW SILK
(In metric tons)

Season ended June 30th	1913-14	1933-34	1934-35	1935-36	1936-37	1937-38*
Export from Shanghai (including Tussah)...	5,800	2,274	1,447	3,388	3,096	1,500
Do. Canton	2,780	1,730	1,395	1,035	1,136	1,150
Do. Japan	12,120	28,940	31,275	28,833	31,313	30,000
Do. Persia and Central Asia	435	165	150	...	...	...
Do. India and Indo-China	115	...	...	...	...	...
European crop	4,235	3,514	2,942	1,686	3,193	3,100
Levant crop	1,880	689	780	672	725	782
Total	27,365	38,302	37,969	37,273	41,365	38,432

* Estimates.

About 50 per cent. of European silk consumption and 75 per cent. of consumption in the United States is now accounted for by the hosiery trades. The quantity of silk absorbed by the American market declined last year to the lowest level since 1924. Meanwhile, the trend of prices at Lyons is summarised in the following table, compiled from Messrs Morel-Journal and Company's annual review:—

RAW SILK PRICES—END OF DECEMBER
(In Francs—Lyons Terms)

	1929	1934	1935	1936	1937
Italian, Extra, 13/15	245-250	52-54	75-80	100-102	123-125

" best 1 par 13/15	180-185	48-49	58-59	90-91	109-110

The advance in prices, which began in 1935, was continued in the period under review, when all classes of silk were dearer than in 1936.

Wool

A SLIGHT increase in the clip did not prevent the buoyancy of the raw wool markets in 1936 continuing during the early months of 1937. Confidence, however, was shaken by international events and stock market depression and prices receded, although the year ended on a firmer note. Nevertheless, the index of raw wool prices, compiled by the *Weekly Wool Chart*, again advanced from 91 for 1936 to 113 for 1937.

The following table, compiled by the Imperial Economic Committee, shows production of raw wool in the leading export countries:—

WORLD WOOL PRODUCTION
(In millions of lbs., greasy basis)

Season	Production						Index of Wool Prices (July, 1914 = 100)
	Australia	Argentina	New Zealand	Union of S. Africa	United States	United Kingdom	
1929-30	938	353	273	309	400	112	3,915
1930-31	912	361	271	302	433	111	3,847
1931-32	1,067	378	270	314	464	113	3,841
1932-33	1,062	388	277	330	411	119	3,857
1933-34	996	385	290	284	460	120	3,742
1934-35	1,015	370	265	222	451	115	3,656
1935-36	971	365	304	250	453	109	3,713
1936-37	1,010	385	303	272	449	108	3,890
1937-38	1,035	380	313	270	457	107	...

† The figures in this column refer to the earlier calendar year. ‡ Provisional.

The next table reflects the buoyant conditions of the early months of 1937 in a stocks position in Australia, New Zealand and South Africa appreciably better than for some years:—

STOCKS OF RAW WOOL AT END OF SEASON
(In millions of lbs.)

	Australia (a)	Argentina (b)	New Zealand (a)	South Africa (a)
	In Store at Selling Centres	All Centres	All Centres	At Ports (unsold)
1933	12.9	9.0	59.9	2.0
1934	65.0	41.9	28.0	23.0
1935	26.0	13.0	64.0	4.0
1936	23.2	22.0	17.0	7.0
1937	14.0	24.0	11.0	4.0

(a) Season ended June 30th.

(b) Season ended September 30th.

The third table shows clearly the recession in prices in 1937, following the initial strength:—

WOOL PRICES IN LONDON

In pence per lb. Fleece Wools	July, 1914	Dec. 5, 1928	Mar. 15, 1933	Dec. 6, 1935	Dec. 2, 1936	Nov. 28, 1937

46's crossbred	17	25	6	10½	18½	15½-16
44's crossbred	16	24	5½	9½	18	14½

A description of developments in the fibre market, taken from the annual review of Messrs Wigglesworth & Company, Limited, is given below:—

Erratic prices have been the feature of the year, accompanied by rapidly changing conditions. The improved organisation of the sisal estates in East Africa and the Netherlands East Indies has resulted in a larger production than required. The demand for jute has improved owing to the abolition of regulations limiting the production of the mills in Calcutta. Soft fibres are priced much too high in comparison with hard fibres causing a gradual tendency to reduce the consumption of the former, particularly in the case of Italian hemp. Meanwhile, the Central European production is displacing Italian. Flax is being consumed in ever increasing quantities within the Soviet Republics, leaving less for export.

Flax.—The year 1937 was one of fluctuating fortunes for the linen industry. In Great Britain the opening was cheerful, with spinners and manufacturers well booked ahead and business expanding. Continental mills also experienced better conditions during the first half of the year. The autumn witnessed a serious falling off in business. The year closed on a note of uncertainty with some curtailment of production in spinning and weaving mills. In common with other British industries, the linen trade awaits with great interest and considerable optimism the result of the forthcoming discussions for an Anglo-American trade agreement. America is our largest single export market for linens. United Kingdom imports of flax and tow for the eleven months to November totalled 49,744 tons, compared with 56,823 tons for the same period of 1936. Exports of linen manufactures were lower by volume at 77,596,000 square yards, against 80,496,000 for 1936, but increased in value by £300,000. America accounted for over 41 per cent. of these exports and British Empire countries for 25 per cent. Important Government contracts helped to maintain active conditions in the heavy end of the trade during most of the year and until the commencement of the trouble in China spinners of fine yarns were exceptionally busy.

Raw material prices tended dearer from the beginning of the year until August and September, IV group Slanetz rising from £81 to £94; Latvian Livonian from £58 to £87 and Ralo tow No. 8 from £48 to £76 per ton, c.i.f. The slackness of trade during the autumn had a weakening effect on flax, and prices gradually fell until early November, when business was concluded on the basis of £72 10s. for IV group Slanetz; £66 for Livonian and £55 for Ralo tow No. 8. The sale during November of 6,000 to 7,000 tons of Soviet flax and tow, 2,000 tons Latvian and about 3,000 tons Lithuanian flax steadied the market and prices advanced £4 to £5 per ton, quotations at the close of the year being £78 for IV group Slanetz; £72 for Livonian and £61 for Ralo tow No. 8. The 1937 flax crops were generally satisfactory, except for the proportion of short fibres which resulted from drought during the early stages of growth. The high prices ruling in the early part of the year encouraged sowing of larger areas in the Baltic States and Poland, but there was again a substantial decline in Northern Ireland from 25,000 acres in 1936 to 19,000 acres. Latvia sowed 173,000 acres against 168,000 acres for 1936, Lithuania 220,000 acres against 210,000 acres, and Estonia 78,000 acres against 71,000 acres. Reliable statistics of yield are not yet available for many countries, but in Estonia the crop is estimated at 11,000 tons compared with 8,700 tons in 1936, and Latvia and Lithuania also show increases. The Russian crop is expected to be larger and of better quality, but consumption in the Soviet Union is increasing rapidly, and exports of flax for the current season may again show a serious drop.

Indian Hemp (Bombay).—Quiet conditions ruled in these fibres during 1937. Quality throughout the season was below the average in all grades, most deliveries containing a certain amount of weak fibre. The end of the spring proved the highest point of the market and thereafter prices declined slowly. At the close of the year, however, there was again a better tone. Prices for Fine Itarsi, Fine Sewnee and Fine Jubblepore, at the highest point in May, were respectively £20, £17 5s. and £15.

Jute.—Government control has again been successful in bringing about an improvement in the average level of prices for Firsts, which during 1937 was £20 10s. per ton. This compares with £18 7s. 6d. in 1936 and £18 10s. in 1935. In the early part of the year there was a good demand and an active market. On March 1st restriction was removed on the number of looms and hours worked. Firsts touched £23 10s. in May, but there was a sharp reaction in the price of both manufactures and raw material, which brought Firsts to £19 15s. per ton. In July prices recovered to £21 17s. 6d. Thereafter fluctuations were of a minor character, business being less active. Towards the end of the year, with trade support dwindling, prices declined to £18 5s. for Firsts.

Manila Hemp.—During the first quarter steady buying by spinners, coupled with an occasional shortage in certain grades, carried prices to a level not touched since the boom years of 1929-30. The early spring witnessed the first sign of a break in prices, despite a further increase in freight. This situation obtained until the summer, when the outbreak of hostilities in China introduced a new factor. A financial embargo on purchases of Manila imposed by the Japanese Government meant that U.K. and Continental demand would prove in-

ESTIMATED PRODUCTION OF HARD FIBRES

	1934	1935	1936	1937
Philippine manilla	Tons 175,000	Tons 187,375	Tons 181,875	Tons 164,500
Philippine manilla	10,850	13,550	22,200	16,000
Mexican henequen	92,000	90,000	94,000	92,000
East African sisal	117,000	138,000	139,000	147,000
West African sisal	8,000	10,000	9,000	10,000
Java and Sumatra sisal and cantala	72,000	74,000	69,000	74,000
Do. Do. Abaca (manilla)	5,000	5,000	5,000	5,000
West Indian sisal	10,000	11,000	12,000	15,000
New Zealand hemp and tow	4,900	4,500	6,500	7,500
Mauritius	500	600	600	500
	495,350	534,025	519,175	531,500

sufficient to prevent a further setback in the prices of lower grades. Trading in U.S.A. followed much the same course as in Europe. The major part of the year was satisfactory, but the closing months were considerably below the average. Japanese influence has been a dominating factor, and the rationing policy may cause Japan's final consumption figures to be the lowest for many years.

From the statistical point of view there is little change to report. The position is sound with output latterly curtailed to meet a slower demand. Supplies at 1,314,000 bales compare with 1,295,010 bales for 1936, but stocks after touching 193,000 bales in March stand at 157,000 bales against the low figure of 128,000 bales for the same period last year.

East African Sisal.—The year opened with great promise, and No 1 reached the high point of £29 10s. to £30 per ton in April, and again during the month of May. June and July witnessed the first signs of an easier tendency, with prices of many commodities falling. The real setback occurred during October and November with successive falls of £2 per ton. Hand to mouth buying became the order of the day, and this has continued throughout December. Stocks in the hands of many manufacturers are at a low ebb. Forecasts concerning the production in Africa have not been verified, a net increase of about 9,000 tons being shown. Business is still hampered in certain countries by quotas and restrictions in one form or another.

Java and Sumatra Sisal.—The higher prices obtainable during the early part of the year undoubtedly stimulated output, as production shows a substantial increase of about 5,000 tons over last year.

Mexican Henequen.—Receipts at port of shipment Progresso indicate a production of at least 400,000 bales, and as the total shipments for the year were in the neighbourhood of 350,000 bales, it is obvious that large-scale purchases must have been concluded on secret terms. Shipments to U.S. ports account for about four-fifths of the quantity exported.

The next table shows British imports of flax, hemp and jute in 1935, 1936 and 1937:—

BRITISH IMPORTS OF FIBRES

Country	Quantity			Value		
	1935	1936	1937	1935	1936	1937

It will be noted that, exceptionally, imports of flax declined.

Manufactures

Iron and Steel

OPERATIONS in the iron and steel industry in 1937 were conducted under virtually boom conditions. Output showed a continuous increase and several records were established. Pig-iron production at 8,497,000 tons was the highest since the war, while steel production at 12,964,000 tons achieved an all-time peak. Demand remained so insistent that, despite the increase in output, deliveries lagged seriously behind schedule. This position was only gradually eased towards the close of the year. The industry's chief problems were, first, a serious shortage of raw materials, especially iron ore and scrap, and, secondly, inadequate productive capacity to meet an exceptional "peak" demand. Substantial progress was made, however, towards solving both difficulties. Increased imports of ore from Sweden, Newfoundland and Brazil and greater domestic production made good the interruption to Spanish supplies. The British Iron and Steel Corporation was set up to centralise the purchase and distribution of foreign scrap, and a determined drive was made to increase internal collections of scrap material. At the same time, large extensions to productive capacity have taken place, equivalent to an additional annual output of 1,000,000 tons of steel and a similar quantity of pig iron.

Despite these efforts the acute shortage of semi-finished and finished steel necessitated a drastic revision of the existing tariff and other emergency measures. The duty on quota imports has been reduced to a mere 2½ per cent. till March 31, 1938, while the non-quota tariff has been cut from 25 per cent. to 12½ per cent. Finally, arrangements were made with the Steel Cartel for additional purchases of 100,000 tons of semi-finished steel.

After the increase in 1936 a further substantial rise in prices was recorded last year, justified, in part at least, by the considerable additions to production costs. No further increase is contemplated for the current year, however, though it remains to be seen how far the Federation will succeed in maintaining stable prices in face of a possible recession in demand. But most steel producers are well supplied with orders for months ahead and a serious fall in activity need not be expected.

Developments in the industry in recent years are summarised in the following tables:—

BRITISH IRON AND STEEL INDUSTRY

Year	Output (Thousand Tons)		Iron, Steel and Manufactures thereof (Thousand Tons)		Price of Cleveland C.M.B. No. 3 per ton	Unemployment	
	Pig Iron	Steel Ingots and Castings	Imports	Exports		Pig Iron	Steel
1913 ...	10,250	7,660	2,230	4,969	s. d. 60 0	% 25.9	% 34.0
1920 ...	6,192	7,326	2,912	3,160	66 11	23.9	34.0

1936 ...	8,497	11,785	1,296	2,036	72 3	14.7	9.8
1937 ...	8,497	11,785	1,296	2,036	72 3	14.7	9.8

A description of the year's developments in the principal producing areas of the United Kingdom is given in the following extracts from *The Iron and Coal Trades Review* of January 21, 1938:—

North of England.—The North-East Coast still retains its supremacy as the leading iron and steel producing area. Events in 1937 outpaced the wildest hopes. In response to the ceaseless pressure of demand, production was steadily increased, but at no time was demand overtaken. It was found necessary to import substantially increased tonnages; and if there are now whisperings that the apex of the boom has

been reached, the producers have the assurance of capacity production for at least six months. Since fully half the charge of a modern basic steel furnace is nowadays made up of scrap, the call for pig-iron has been correspondingly reduced. Nevertheless, the output of pig-iron here was the highest since 1920, and amounted to 2,428,300 tons, or 333,000 tons more than in 1936. Pressure for supplies of hematite has been unrelaxed, yet makers were struggling all the time to overtake the demand; some limitation was imposed on exports so that home consumers should not be inconvenienced by shortage of supplies. Actually, however, the volume of Tees shipments of iron and steel has varied little in recent years. Features of the steel trade were the further expansion of capacity, the growing output of high-grade special steels and an aggregate production far in advance of all previous records.

Scotland.—The year opened on a note of optimism and events have justified this view; nevertheless, the problem of raw material supplies dominated operations in all departments of the industry. In the pig-iron trade activity was well maintained, except in the light castings section, where there was some falling off of business owing to the holding up of housing schemes because of rising costs. Extremely busy conditions prevailed at the works of the heavy steel makers. Home business accounted for a large proportion of the demand, but there was also a good amount of export business. Throughout the year, deliveries were considerably in arrears, even with outputs at record levels. The decision to lower import duties in March was welcomed as a means of inducing heavier imports of semi-finished steel. At the end of the year the steel trade was still enjoying very active and favourable conditions. Shipbuilding, on which the iron and steelworks are largely dependent, was busy and constructional engineers were well employed throughout the year. The wrought iron makers experienced a good demand, and outputs were well maintained. Meanwhile, the iron and steel makers are still heavily booked and there is a large amount of re-armament and other work to be placed.

West Cumberland and Lancashire.—A demand in excess of the make and a scarcity of raw materials, which prevented the furnaces from attaining their maximum production until nearly the middle of the year, were the dominating features in West Cumberland. At no time was the ore situation satisfactory and at times the furnaces were working from hand to mouth. Only if the ore can be obtained is there any prospect of production being maintained in 1938 at the 1937 level.

Similar problems were encountered in Lancashire, where order books in a number of branches have expanded so much that at the close of the year some firms were still booked for about two years ahead. In the pig-iron market the supply position at the close of the year was much more satisfactory than during the first nine months. The prevailing scarcity of supplies was more pronounced in the steel market than in any other section, and delivery in some cases could not be made in less than twelve months.

Sheffield and District.—In all its history, Sheffield has never been busier than in the past twelve months; and outputs were called for more on account of ordinary commercial needs than for the defence programme. It is gratifying also to note that every effort was made to meet without undue delay the requirements of customers abroad. Pig-iron producers were unable fully to meet the requirements of consumers and so difficult did matters become that makers had early in the year to resort to rationing their customers. At the end of the year supplies were a shade less difficult, but demand showed no indications of an early fall. The hematite position was difficult throughout the year. The steel market overflowed with buyers and few, if any, were able to place their orders in full. Deliveries were consistently behind schedule, and contracts accepted had no definite date for completion. There is every indication that activity in 1938 will surpass that of the previous year.

South Staffordshire.—Throughout the year it has been impossible for works to keep pace with the demand. The call for semi-finished steel has been exceptionally strong and consumers have been unable to get sufficient billets or sheet bars to meet their requirements. The pig-iron position was extremely difficult, and as there were at times no sellers of English iron many local ironfounders purchased supplies from the Continent or from America. Makers of hematite have to rely largely on foreign ore and there have been times when owing to the Spanish conflict it has been impossible to get sufficient supplies. Owing to the difficulty of getting steel, some consumers have been using iron instead; hence demand for English iron has been very good. Demand for steel has, of course, been exceptional and has exceeded the available supply. There is every indication that similar conditions will prevail for many months in 1938, if not for the whole of the year.

South Wales.—The past year was one of almost unprecedented activity. Pressure for delivery was insistent up to the closing months, when a slight lull in certain products set in. Production has been exceedingly heavy and some records have been broken. The prosperity of the steel industry is largely dependent on that of tinplates and sheets, which absorb some two-thirds of production. The tinplate industry had a better year and works were employed at about 78 per cent. of capacity, against 60 per cent. in the previous year. The galvanised sheet industry experienced a slightly better year, but during the last quarter business—chiefly on the export market—was decidedly slow. Large quantities of scrap iron and steel were required by the steel industry, and had it not been for the control scheme much higher prices would have ruled. The outlook for 1938 is encouraging, as undelivered orders on makers' books are still heavy.

The following table, compiled by the British Iron and Steel Federation, shows that most countries increased their production of iron and steel in 1937:—

WORLD PRODUCTION OF PIG IRON AND STEEL
(In millions of tons)

	1929	1932	1933	1934	1935	1936	1937 (partly est.)

† Includes the Saar.

In the majority of cases the increase was less pronounced than in 1936, however, and the estimated world total showed a gain of about 10 per cent., compared with 25 per cent. between 1935 and 1936.

The final table taken from *The Iron and Coal Trades Review* shows the extent of the rise in British prices of a number of iron and steel materials:—

IRON AND STEEL PRICES

Class of Material	Jan. 10, 1935	Jan. 16, 1936	Jan. 14, 1937	Jan. 13, 1938
Iron ore:—				
Rubio, Middlesbrough	£ s. d. 0 17 0	£ s. d. 0 18 0	£ s. d. 0 17 1½	£ s. d. 1 5 0
Hematite, West Coast (at mines)	0 14 0	0 14 0	0 17 1½	1 5 0
Pig iron:—				
No. 3 foundry, Cleveland	3 7 6	3 10 0	4 1 0	5 9 0
No. 3 foundry, Scotch	3 10 0	3 14 0	4 8 0	5 18 0
Hematite, mixed Nos., West Coast delivered Sheffield	4 3 6	4 6 0	5 3 6	6 18 6
Hematite, mixed Nos., East Coast	3 8 6	3 10 6	5 3 0	6 18 0
Finished iron and steel:—				
Marked bars, S. Staffs	12 0 0	12 0 0	13 0 0	15 15 0
Crown bars, S. Staffs	9 12 6	9 12 6	10 10 0	13 5 0
Steel rails	8 7 6	8 7 6	8 7 6	10 2 6
Galvanised sheets (export)	11 5 0	11 15 0	14 15 0	17 15 0
Steel angles, Middlesbrough	8 7 6	8 7 6	9 3 0	11 0 6
Steel angles, Glasgow	8 7 6	8 7 6	9 3 0	11 0 6
Ship plates, Middlesbrough	8 15 0	8 15 0	9 11 9	11 9 3
Ship plates, Glasgow	8 15 0	8 15 0	9 10 6	11 0 0
Boiler plates, Glasgow	9 5 0	9 5 0	10 0 6	12 2 6
Tinplates, I.C. cokes, L.O.B.	0 18 2	9 18 9	1 0 0	1 3 0

The accelerated rise in prices during the past year is well illustrated by the above quotations.

Engineering

THE past year opened with recovery in full swing in most branches of engineering. Domestic demand, reinforced by a substantial increase in armaments contracts, continued to expand, and export business, after a lull in 1936, also showed a remarkable improvement. Many branches, in fact, enjoyed a period of activity never before equalled in their history. In June last year, for example, the number of insured persons employed in "general engineering," at 585,748, was 9½ per cent. higher than in 1929. In electrical engineering the number of persons employed last June was 111,585, an increase of 38 per cent. over 1929. The Board of Trade index of production (1930 = 100) rose from 103.8 in 1929 to 121.6 in the third quarter of 1936 and 131.2 in the corresponding period of 1937. In the autumn, however, there were signs of hesitancy, and during the last quarter of the year unemployment showed a slight increase. While the volume of work on hand remains substantial the outlook is not viewed with the same confidence as a year ago.

BRITISH ENGINEERING INDUSTRY

Year	Exports of Machinery	Unemployment		
		General Engineering	Electrical Engineering	Marine Engineering

Year	380,495	438,377	8.5	5.4	4.3	3.1	14.4	9.0

The following is a summary of the description of developments in the industry from the Annual Trade Review of the *Chamber of Commerce Journal*.

In reviewing the year 1937 there seems little of note to the engineer to record, but much for congratulation. There have been no serious strikes or catastrophes, but prices of raw materials have been fairly steady and there is a feeling that scientific research has gained more than ever before. There have been no outstanding inventions, but steady progress which

does not upset manufacturing systems. Further steps are expected with the establishment of a national laboratory for technical research into manufacturing problems by the Institution of Production Engineers at Loughborough College and the locomotive testing plant at Rugby. It appears that there is not yet any indication of the steam engine being superseded for heavy long-distance traffic in spite of electric extensions by the L.N.E.R. and the L.P.T.B.

The basic materials industry has never been more prosperous. During the year all the existing furnaces have been working at full capacity and some £20 millions has been spent on reconstruction and it is estimated that a further £10 millions will be spent this year. The average earnings of the workers have risen, but raw material prices have remained remarkably stable. The output of coal has been a record.

The electrical manufacturing industry has had a most prosperous year and employment has increased by about 14 per cent. It is noteworthy that almost all the generating sets now constructed are of what is considered in this country large output. Hydro-electric development is, naturally, not very large in this country, but there are several orders on hand both for home and export trade.

In the aeronautical section considerable changes have been forced upon the industry by the Air Ministry, but they seem to have been assimilated and are working smoothly. Thus mass production has been introduced extensively and machines are now passing regularly and in large numbers into service.

Shipbuilding and Shipping

THE net change that has taken place in 1937 in the position of British shipping and shipbuilding is no indication of the important events of the year. The sharp recovery which started in the autumn of 1936 continued till mid-1937, when the trend reversed with equal suddenness. Although the position at the end of the year was in the main better than at the beginning, it was much below the best.

† At end of year. ‡ According to "Fairplay." § Average.

In British shipbuilding, an interesting contrast arises between the decline, as compared with 1936, in orders and tonnage commenced, and the work under construction. In Great Britain, 1,057,000 tons of merchant vessels were begun in 1937. This is only 2.2 per cent. less than in 1936, but, as will be seen from the accompanying table, this percentage does not reveal the considerable decline in the second half of the year, compared either with the first two quarters or with the same half-year in 1936. This mid-year check arose partly from a large rise in costs and partly from the changed outlook in world trade. Tonnage under construction naturally still reflects the increase in vessels commenced in 1936 and early last year, and is 16.8 per cent. higher than at the beginning of 1937. But even here the steady rise in the work on hand that began in 1935 has been followed by a small decline in the past six months.

Our figures, however, do not include naval construction, which will benefit the industry for some years to come, though it is believed to have aggravated the rise in costs. But though only 35 per cent. of British berths were idle last September, against 45 per cent. a year earlier, and 57 per cent. in 1935, this only emphasises how adverse have been the long-term changes in the industry.

British mercantile shipping launched last year was, in tonnage, 7.5 per cent. more than in 1936, though the number of vessels was less, being 309 against 328. The proportion of the

tonnage launched for overseas owners was, however, 13.5 per cent., against 10.9 per cent., but only eighteen vessels were for countries outside the British Empire. Of the tonnage launched, tankers accounted for 15.7 per cent. and motorships for 42.4 per cent., while in point of size, three ships were launched of over 20,000 tons each, and four more of over 10,000 tons.

MERCANTILE SHIPPING LAUNCHED

(Thous. gross tons)

Period	Tons launched			British percentage	Output as Percentage of 1929-13		
	U.K.	Abroad	World		British	Foreign	World
Average—							
1929-13	1,522	967	2,489	61	100	100	100
1922-25	1,050	1,087	2,137	49	69	112	86
1926-29	1,208	1,155	2,363	51	79	119	95

1937	921	1,770	2,691	34	61	183	108

The British proportion of vessels launched in the world has, however, declined from 40 to 34 per cent. This is better than during the depression, but far below pre-war figures. In other countries, there were launched in 1937, 792 merchant vessels of 1,769,758 tons, including 484 motorships of 1,123,508 tons. The total tonnage is thus 40.3 per

As for merchant vessels under construction, Great Britain's proportion of tonnage at the end of 1937 was 38.8 per cent., the world total being a trifle less than in September last, but otherwise the highest since June, 1930. This small decline since September is entirely due to this country, for

MERCHANT TONNAGE UNDER CONSTRUCTION						
Laid Year	1929	1933	1934	1935	1936	1937
United Kingdom	1,560	342	597	743	964	1,125

World total	3,111	757	1,252	1,543	2,252	2,900

overseas the tonnage has continued to rise. Great Britain had at the end of 1937, 256 vessels under construction, about 204,000 tons (or 18.1 per cent.) being intended for registration abroad or for sale. But overseas, 30.9 per cent. of tonnage being built, and 140 out of 507 vessels, were destined for registration elsewhere than in the country of build.

At first, freight rates continued the rise that began in the summer of 1936, but the trend reversed sharply in the autumn of 1937, and although right at the end of the year the decline seemed to have been checked, the last quarter saw the loss of all that had been gained in the first nine months. The immediate occasion had been the poor crop

outlook for Argentina coinciding with a decline in the amount of "long" trade for various special reasons. But the way had been prepared for a sharp drop by the unprecedented rise of the previous twelve months, stimulated by the belief that there would be an actual shortage of cargo space.

That such a fear was not wholly unjustified is suggested by the following table of tonnage laid up, which shows that after the first quarter of 1937 idle shipping shrank to almost negligible proportions. And while an increase occurred in the autumn, the tonnage is very small compared with previous years:—

TONNAGE LAID UP IN THE UNITED KINGDOM						
(Thousand tons net)						
Laid up on:—	Average, 1927-30	1934	1935	1936	1937	1938
January 1	355	1,240	878	436	212	175
April 1	433	1,079	708	474	90	...
July 1	554	1,042	586	502	61	...
October 1	460	818	512	403	99	...

The official navigation figures show average entrances and clearances to be as follows:—

ENTRANCES AND CLEARANCES					
Tons net entered (in thousands):—					
	1933	1934	1935	1936	1937
British	2,947	3,011	3,009	3,171	3,274
Foreign	2,089	2,212	2,293	2,447	2,594
Total	5,036	5,223	5,302	5,618	5,868
Percentage British	66.6	67.6	66.7	66.5	65.8
Tons net cleared (in thousands):—					
	1933	1934	1935	1936	1937
British	2,821	2,816	2,859	2,859	2,999
Foreign	1,817	1,858	1,818	1,876	2,117
Total	4,638	4,674	4,777	4,735	5,116
Percentage British	61.4	60.2	59.9	60.4	58.6

The change is quite small, but the declining tendency of the proportion of British ships will be noticed.

Motors

THE year ended September 30, 1937, was one of record activity in the British motor industry. Despite rising costs and the difficulty of obtaining the necessary supplies of steel, production of private cars and commercial vehicles reached record levels, and, in addition, a number of manufacturers were busy on Government work in connection with the rearmament programme. Since the close of the "motor year," however, the outlook has considerably deteriorated.

The output of private cars, as the following table shows, rose by 10 per cent. during the past season. A notable feature of the year was the popularity of the 14 h.p. car, whose share of the market increased. Among imported cars, which showed a considerable increase last year, the 11.3 h.p. German Opel and the 6.7 h.p. Italian Fiat were prominent. Indeed, the invasion of the light-weight market by foreign producers was one of the features of the year:—

UNITED KINGDOM—PRIVATE CARS AND TAXIS				
Year to September 30	Production	Imports	Exports	Total in use
1930	169,669	9,751	23,209	1,123,664
1931	158,997	2,118	18,992	1,142,938
1932	171,244	2,762	31,797	1,188,052
1933	220,779	3,619	41,028	1,266,946
1934	258,866	10,857	43,907	1,374,039
1935	311,544	13,363	54,280	1,533,500
1936	353,338	12,650	68,787	1,713,108
1937	389,633	18,340	77,961	1,870,154

Another important development was the general increase in selling prices (amounting on the average to about 5 per cent.) which became effective in July. This was the first general increase in selling prices since the war, and, as had been anticipated in some quarters, it was followed by the transference of demand from the dearer to the cheaper cars. More serious, however, was the general fall in new registrations which began in September, and which has since continued. Sales of new cars in September, October and November were 5.7, 12.4 and 13.3 per cent., respectively, below the comparable figures for the previous year. At the moment, therefore, the outlook for this section is obscure.

Developments in the commercial section are summarised in the following table:—

UNITED KINGDOM—COMMERCIAL VEHICLES				
Year to September 30	Production	Imports	Exports	Total in use
1930	66,859	1,527	6,545	435,859
1931	67,310	1,490	5,320	445,082
1932	61,475	310	8,381	454,523
1933	65,508	400	10,664	473,447
1934	85,838	1,637	13,742	501,510
1935	92,176	1,838	13,548	508,500
1936	107,609	2,700	16,928	554,542
1937	118,116	4,183	20,702	539,318

The number of commercial vehicles in use—of which the bulk are goods vehicles—showed a slight decline. On the passenger side, there was an increased demand for the larger types of omnibus, since operators are generally restricted to a certain number of vehicles. Moreover, the tendency for diesels to replace petrol-engined buses was continued. Besides being able to absorb a larger number of home-produced commercial vehicles last year, British buyers also purchased more imported vehicles. These were mainly from the United States, and consisted largely of middle-weight trucks, such as those produced by Dodge and Reo. On the other hand, the past year witnessed an expansion of British exports, the principal markets being in the British Empire and Scandinavia. Since the advance of prices last summer, however, demand for commercial vehicles, as for private cars, has declined and the outlook is less promising than it was a year ago.

Building

ACTIVITY in the building industry was at a high level in 1937, and, despite a further influx of workpeople, the employment position improved. Nevertheless, there is little doubt that the peak has now been passed and that the industry will be less busy in coming months than it was in 1937.

The salient statistics are summarised in the table below. It will be observed that *The Economist* index of building activity, which had begun to fall in 1936, tended downwards last year. The index may, however, exaggerate the decline in actual activity; for it is based upon the building plan figures (appropriate allowances being made for the time lag between

the passing of the plans and the initiation of the work and also for changes in costs), and these exclude Government contracts and work outside urban areas. The percentage of building operatives unemployed last year averaged 13.8, against 14.9 in the previous year. The 1937 average compares with a peak of 29.2 per cent. in 1932, and is only slightly higher than in 1929:—

BRITISH BUILDING INDUSTRY

* The method of compilation of this Index and its limitations are explained in Notes in *The Economist* of November 11, 1933, and September 5, 1936.
† Corrected for seasonal fluctuations. Method of compilation explained in the Trade Supplement to *The Economist* of July, 1936.

The slackening of activity last year is partially accounted for by the upward movement of costs. *The Economist* index of building costs (1935 = 100) averaged 110.3 in 1937, the highest figure since 1924. The price of structural steel was maintained at a high level, cement was advanced by 3s. per ton towards the end of the year, and wages were higher. On February 1st, 1938, moreover, the standard wage of craftsmen was advanced by 3d. per hour, under the industry's sliding scale, in consequence of the increased cost of living.

The number of houses built in England and Wales in the twelve months ended September 30, 1937, was 337,196—or rather below the record total of 339,538 constructed in the previous year. The peak actually came in the six months to March, 1937, when the aggregate was 181,468. House building by private enterprise had already begun to decline in 1936, and this tendency was continued last year; but building by local authorities for slum clearance and abatement of overcrowding was still rising towards a peak last year.

The building plan statistics—subject to the qualifications mentioned above—provide a moderately accurate indicator of the future level of building activity. For the first time since 1931 the total of plans approved showed a decline in 1937, though the aggregate value still remains impressive. A modest increase in the value of plans passed for non-residential purposes was insufficient to counterbalance a fall in those approved for dwelling-houses.

Chemicals

AN account of the British chemical trade in 1937, prepared for the Annual Trade Review of the *Chamber of Commerce Journal* by Mr J. L. Rosenbaum, M.Sc., M.I.Chem.E., is given below:—

With few exceptions, manufacturers of chemicals can look back upon conditions during 1937 with every satisfaction. The high level of activity in such industries as iron and steel, paints, rubber, leather, paper and rayon has meant an enhanced call from the home market for chemicals of all types, and the export trade has also been distinctly better. Official production figures are not yet available in most cases, but the few important figures which have been published reveal a trend which has probably been shared by the industry as a whole. Production of sulphuric acid last year, at 1,077,400 tons of 100 per cent. material, was the highest since the war. Since the bulk of

alcohol distilled in this country is used for general industrial purposes, the figures recently released by the Customs and Excise department for the period January to September, showing an increase of 12.4 million proof gallons over the first nine months of 1936, provide a useful pointer to the improved conditions in the industry. The Preliminary Reports of the Fifth Census of Production show that the industry which in 1930 came eighteenth among British trades employing 50,000 or over, in value of gross output, had climbed to twelfth position in 1935. They also bring into prominence the steadily growing importance of the Greater London area as a centre of the chemical manufacturing industries.

The outstanding feature of technical and commercial development is perhaps the decision of a well-known manufacturing concern to establish a calcium carbide factory in South Wales. The coal-oil industry has continued to make progress and a great stimulus has been given to the lime and basic slag industries by the Government's undertaking to reduce their cost to the farmer by 50 and 25 per cent. respectively for three years. Comparative prosperity has not curtailed research, and an outstanding new product has been "Velan," introduced by I.C.I. for the conferment of permanent water repellency upon textiles. Further improvement has also been made to the fastness of dyestuffs.

Prices on the whole have been fairly stable during the year, but the increase in fuel and labour costs has dictated an advance of from 5 to 10 per cent. in a number of important products.

World production and consumption of fertilisers, as estimated by the British Sulphate of Ammonia Federation, is shown in the table given below:—

WORLD PRODUCTION AND CONSUMPTION OF PURE NITROGEN
(Year ended June 30th. In Metric Tons)

	1932-33	1933-34	1934-35	1935-36	1936-37

CONSUMPTION					
Manufactured nitrogen	1,619,705	1,714,040	1,877,000	2,201,000	2,433,000
Chilean nitrate	127,242	163,550	195,000	216,000	242,000
Total consumption	1,746,947	1,877,590	2,070,000	2,417,000	2,675,000
Estimated agricultural consumption	1,586,000	1,673,000	1,812,000	2,084,000	2,344,000

* Including nitrogen products used for industrial purposes (except Chilean nitrate) and ammonia in mixed fertilisers.

Both production and consumption showed an increase on the year, in many cases the figures being the highest ever recorded. The most marked increases in manufactured nitrogen output have been in Germany, Japan and United States.

Cotton Textiles

THE following table, giving mill consumption of raw cotton, has been compiled from the publications of the International Federation of Master Cotton Spinners' and Manufacturers' Associations. Except for the Continent, which shows a slight fall, demand has expanded everywhere—remarkably so in the United States.

WORLD CONSUMPTION OF RAW COTTON
(Thous. running bales, excluding linters)

Season ended July 31	United Kingdom	Other European Countries	United States	Asia	Other Countries	World
1929	2,800	8,112	7,023	6,720	1,217	25,872
1932	2,386	6,280	4,844	7,723	1,086	22,319
1933	2,248	6,675	6,109	8,136	1,184	24,351
1934	2,470	7,472	5,669	8,149	1,332	25,111
1935	2,507	7,322	5,337	9,139	1,496	25,801

† No returns from Germany. ‡ No returns from Germany or Italy.
* No Returns from Italy.

The statistics of the British industry reveal continued expansion in imports of raw cotton and exports of yarn, while the decline in exports of piece-goods has been arrested. The unemployment percentage for the year 1937 fell below the

figure for 1929 (13.2) to the low figure of 11.5; but in the last two months it showed a definite tendency to rise. Average earnings for the first time topped decisively the 1929 level.

* Million linear yards at end of year. † End of Year.
‡ Trade Union figure: other figures are Unemployment Insurance returns.

All prices showed appreciable increases for the year, but, in consequence of the enormous crop harvested in the United States, a steady fall developed from the exceptional levels in the spring. Shirtings were similarly affected, but the year's price (10s. 2d.) was the highest since 1931:—

The following description of developments in the spinning and manufacturing branches during the year is taken from Mr F. W. Tattersall's *Cotton Trade Review*, dated December 31, 1937:—

During the first half of 1937, spinners of yarn experienced an active demand, order lists were extended and many mills sold their production almost to the end of the year. Owing to the much healthier position of the industry, prices were advanced and margins widened. There was a further extension of price-fixing agreements. Throughout the year spinning employers were harassed by the shortage of labour, especially young persons, and most of the mills were understaffed. This state of affairs resulted in production being affected. On the whole, output was equal to about 92 per cent. of capacity. During the last quarter of the year new business fell off to a rather marked extent.

Manufacturers of piece-goods experienced a more active demand during the year. A favourable development was the increase in export trades. A discouraging feature, however, was the further contraction in the trade done with India. Demand for the home trade was particularly active during the first

half of the year, and the turnover in dress materials and household goods expanded as a result of the increased purchasing power of the public. In the autumn, business all round became much quieter. Many makers and distributors were harassed by stocks of dear goods which could not be moved. Taking the year as a whole, output was equal to about 90 per cent. of capacity.

Wool Textiles

THE history of the raw wool market in 1937 is not directly reflected in the retained imports shown in the table below, compiled by the Imperial Economic Committee, except perhaps in the United Kingdom, where the fall was appreciable:

RETAINED IMPORTS OF RAW WOOL

(In millions of lbs.)

Year	United Kingdom	France	United States	Germany	Japan	Italy	Belgium
	Jan.-Dec.	Jan.-Nov.	Jan.-Nov.	Jan.-Dec.	Jan.-Nov.	Jan.-Oct.	Jan.-Nov.
1933	592	509	140	335	206	174	64
1934	522	310	103	306	160	139	53
1935	581	360	182	269	211	99†	106
1936	637	318	225	228	217‡	39*	118
1937	552	290	318	227	258‡	88*	131

* January–November. † January–September. ‡ January–December.

Germany shows no change and France a small fall, but the other countries retained larger quantities, the United States to the extent of 40 per cent.

Except in the case of imports and unemployment the British figures for 1937, given in the following table, are better than those for 1936, but in all cases there is evidence of trade recession in the later months of the year.

* Provisional.

There was a tendency towards overproduction in Japan towards the end of the year, but there is no reason for believing that any permanent slowing down in Japanese expansion is likely. It is too early yet to consider the effects on the Japanese rayon industry of a prolonged war in the Far East, and Japanese rayon and staple fibre goods have played an important part in international trade. A temporary setback, however, may be expected as a result of loss of trade in both yarns and fabrics in the Chinese territories. In the United States there was a severe setback in the rayon industry in the closing months of the year after a period of great activity until August. In this respect rayon followed the general trend in American business.

The United States and Britain are still important strongholds of the acetate method of production, and this type of rayon, while losing ground in the weaving trade, appears to have made definite headway in the hosiery trade. Cuprammonium is still important in Germany and America and there is a small output for specialised purposes in certain other countries, including Britain. The production of colodion rayon seems to have ceased, for this type has not sufficient advantage over other types to justify the higher prices. The cost of rayon production has risen throughout the world, and in most countries higher prices have ruled for yarns.

In the British rayon industry 1937 proved to be a period of consolidation. For the first time in the history of the British industry there was a measure of agreement among the viscose producers on the question of prices. A fixed price list for viscose yarns came into force in May and was adopted by all the producers of this type of yarn. This list also instituted certain price increases for the first time for several years. The end of "weak selling" in viscose yarn has been welcomed by the consuming industries as it enabled them to place forward contracts with greater security. A further advance in the prices of certain qualities of viscose was made at the end of the year, and this is generally believed to have been brought about to counteract the effects of the rise in wood-pulp prices, which came into force on January 1, 1938. There has been no similar move in the acetate trade, and in many instances prices of acetate yarn have been very weak. During the greater part of the year British rayon producers have been well occupied and have had difficulty in meeting their customers' requirements. There was a falling off in new business in the last quarter of the year and there appears to have been quite a serious accumulation of stocks of grey and finished fabrics.

Transparent Paper.—Notable progress has been made in the last twelve months with the development of transparent cellulose wrappings. Manufacturers have had to increase their output to meet the increasing demand, and during the year the specially erected factory at Bridgewater of British Cellophane, Ltd., came into operation. It was later announced that a further large extension to this plant is in course of completion. Virtually every other producer of viscose paper has put down additional plant during the year, and important extensions are still in progress at the original British factory at Bury, Lancs. In the main the trade has enjoyed better prices, but costs of raw materials, fuel and labour have risen.

The biggest outlet for the paper is in the tobacco and cigarette trade, and it is understood that leading tobacco manufacturers are financially interested in more than one of the viscose wrapping firms. There is a wide appreciation of transparent paper in the confectionery and foodstuffs trades, and here the appearance of cleanliness which it bestows is an important factor. Manufacturers of textiles appreciate the sales aid of this type of wrapping as it gives a striking finish to their products and at the same time enables patterns and shades to be seen without unwrapping. Abroad, transparent paper has continued to forge ahead. In France, the United States, Germany, Italy and Japan production is substantial, and both Japan and France are important exporters.

Leather and Footwear

The table below shows that imports of hides of all kinds in 1937 were practically the same as those in 1936, but that the

The State Land Bank transacts every description of Banking business.
The Bank grants long term loans to small and medium-sized rural holdings and short term advances through the intermediary of local credit institutions.
The Bank's Mortgage Bonds and Land Improvement Debentures are guaranteed by the Polish Treasury.

aggregate value rose by some 31 per cent. The value of imports of leather and manufactures thereof showed little change. The index of sterling hide prices, calculated by the United Tanners' Federation, which stood at 79 for 1936 (1923 = 100), rose to 99 for 1937. But after rising to a peak of 112 in March, it fell to 75 in November, with a recovery to 83 in December.

Developments in the market for hides and leather, and in the footwear trade, are summarised in the following extract from a survey in the *Leather Trades Review*:—

The year 1937 is not easy to assess as regards the leather trade and the tanners' part in it. The hide market went ahead, and almost week by week the prices rose until by the end of April they were, on round average, approximately 25 per cent. dearer than at the end of the preceding December. From May

to the end of September the market was fluctuating, with an easier tendency, but not to such marked degree as to cause much uneasiness. But the fall in the last months of the year was catastrophic. Buyers were disposed to contest prices more strenuously than before, and sellers who were aware that they had not been obtaining replacement values were practically as strong in the resistance which they put up to the concessions which were demanded. The result was a slackening in business. As regards production, the aggregate output will probably be found to fall somewhat below that for 1936.

The Board of Trade index of the production of boots and shoes and leather goods for 1936 was 120.7 (1924 = 100) and, for the three available quarters of 1937, 120.6, 121.4 and 117.7, respectively. Unemployment in the footwear trade, which in 1936 was 12.8 per cent., was 11.0 per cent. in 1937.

Retail Trade

DURING 1937 no major addition has been made to the available statistical information on retail trade. The desultory campaign for a Census of Distribution has continued. An inconclusive debate was held at the "Scientific Management" Congress held last summer at Oxford, and on two or three occasions the matter has been discussed in the House of Commons. A sample investigation* in six English towns has shown that a great deal of valuable information could be obtained by a preliminary distribution census on these lines at quite a reasonable cost. But the great body of business men is not yet sufficiently alive to the importance of distribution to themselves to make any insistent demand for more information. Curiously enough, the promptness with which the recent industrial setback was reflected in the retail figures has done a good deal to spread interest in them.

The only source of information thus remains the voluntary inquiry initiated jointly by the Retail Distributors' Association and the Bank of England. A forward step was taken in January, 1937, in extending the number of geographical divisions in which the monthly results are analysed from five to seven. The seven new divisions are—Scotland, North-East, North-West (including North Wales), Midlands (including South Wales), South of England, London (Central and West End), and London (Suburban). With the exception of the partition of the Welsh figures, these new divisions will facilitate comparisons with population and other regional statistics. The sample covered by this inquiry is now thoroughly representative of large-scale retail business, including department stores, chains, and the co-operative societies. But no practical way has yet been devised of including a representative sample of the trade of small independent shops.

Percentage changes as compared with the corresponding period a year earlier in the aggregate value of retail turnover from February, 1935, to December, 1937, are given in the following table, together with changes in the value of stocks at cost.

PERCENTAGE CHANGES ON THE CORRESPONDING PERIOD IN THE PREVIOUS YEAR

	Value of Sales (at Selling)						Value of Stocks (at Cost)		
	Month			Year to Date			Month		
	1935-36	1936-37	1937-38	1935-36	1936-37	1937-38	1935-36	1936-37	1937-38
Feb..	+4.9	+7.3	+7.1	+4.9	+7.3	+7.1	-1.7	+0.8	+2.6

Jan..	+10.8	+2.4	...	+6.5	+5.9	...	+2.3	+2.1	...

The decline in the money value of retail turnover during the last depression ceased in the middle of 1933, and there has since been an uninterrupted increase apart from dislocations due to the changing dates of Easter and Whitsun.

* "Trial Census of Distribution in Six Towns." Prepared by four British firms and presented to the British National Committee, International Chamber of Commerce.

BANK OF ENGLAND INDEX NUMBERS OF TOTAL RETAIL SALES
(Average Daily Sales in 1933 = 100)

	Scotland	Provincial England and Wales	London Central and West-End	London Suburbs	Total Great Britain
Yearly:—					
1932	101	101	99	100	101
1933	100	100	100	100	100
1934	103	103	102	104	103
1935	108	110	106	112	109
1936	114	117	110	120	117
1937:—					
January	114	120	119	121	119
February	110	114	82	120	110
March	128	127	101	133	124
April	114	120	114	120	119
May	133	136	117	144	134
June	128	129	114	115	119
July	113	126	125	124	125
August	108	116	72	109	108
September	121	122	102	119	118
October	120	130	127	128	127
November	126	132	122	143	131
December	148	166	162	163	167

furnishing departments (+ 3.1 per cent.); piece-goods (+ 2.8 per cent.); hardware (+ 1.8 per cent.); sports and travel goods (+ 0.3 per cent.). As anticipated in last year's review, piece-goods have increased in turnover for the first time for many years.

Decreases: No decreases are reported in any of the main groups, though in the furnishing group the increase was entirely due to improved furnishing fabric sales, there being a

decrease in musical departments (- 4.9 per cent.) and furniture and bedding (- 0.3 per cent.).

Turning to geographical divisions, total sales for the period February to December, 1937, increased in the Midlands and South Wales (+ 10.3 per cent.), North-East (+ 8.6 per cent.), South (+ 8.4 per cent.), London, Suburban (+ 8.3 per cent.), North-West (+ 7.4 per cent.), Scotland (+ 6.8 per cent.), and London, Central and West-End (+ 2.6 per cent.).

The only other statistics which throw more detailed light on particular aspects of retailing are the Retail Distributors' Association index numbers of department store sales. Probably the experience of department stores does not differ very widely from that of other types of large-scale retail organisation, and with some reservations conclusions drawn from these figures may have a wider application. The R.D.A. index numbers are based on the monthly average of sales in the year 1933-34 = 100. These indices represent twelve months' moving totals of the money value of sales and refer to a constant sample of department stores. Taking the monthly average sales of the year 1933-34 = 100, the number for January, 1931, was 107. It fell to 103 by January, 1932, and to its lowest point—97—in April, 1933. By January, 1934, it had recovered to 100, by November, 1934, to 101.4, by November, 1935, to 102.3, by November, 1936, to 106.4, by November, 1937, it had reached 109.6. It is unlikely that the figure would have reached a much higher level than this in 1929 had it then been available. The index number of transactions in November 1937 stood at 108.9, only one point

higher than a year before, a further indication of the extent to which money value of turnover has been increased by higher prices.

The rate of stock turn in this constant sample of department stores reached its highest point in April, 1937, after years of steady improvement. Since then the rise in wholesale prices has caused stock at cost to increase more rapidly than sales, with a resultant uninterrupted decline. These rates—obtained by dividing total sales (at selling) for all departments for each successive period of twelve months by average stocks (at cost) during the same period have in recent years been as follows:—

RATE OF STOCK TURNOVER	
January, 1931	6.37
" 1932	6.53
" 1933	6.54
" 1934	6.91
" 1935	6.95
" 1936	7.22
" 1937	7.44
April, 1937	7.47
November, 1937	7.22

The increased efficiency of these stores in accelerating stock turn during periods of rising and falling prices could not prevail at once against such sharp increases as have been seen this year. It may well be that the end of the decline in rate of stock turn is already in sight.

J. A. McLEOD, President.
Auditors' Report to the Shareholders:
We have examined the above General Statement of Liabilities and Assets as at December 31st, 1937, and compared it with the books at the Chief Office and with the certified returns from the Branches. The Bank's investments and cash on hand at the Chief Office and at the Toronto and Montreal Branches were confirmed by us at the close of business on December 31st, 1937. We have obtained all the information and explanations that we have required, and in our opinion the transactions of the Bank which have come under our notice have been within the powers of the Bank.
We report that in our opinion the above statement discloses the true condition of the Bank and is as shown by the books of the Bank.
D. McK. McCLELLAND, F.C.A., of Price, Waterhouse & Co., Auditors.
A. B. SHEPHERD, F.C.A., of Peat, Marwick, Mitchell & Co., Auditors.
TORONTO, CANADA, 15th January, 1938.
The Bank of Nova Scotia conducts a general banking business. Fully equipped for Exchange, Collection and Letter of Credit Transactions with all parts of the world. Particular attention is devoted to business with Canada, Newfoundland and the West Indies, where Branches of the Bank have long been established—302 branches in all.
LONDON OFFICE: 108 OLD BROAD STREET, E.C.2.
E. C. MACLEOD, Manager.

THE ECONOMIST

TRADE SUPPLEMENT

New Series

SATURDAY, JANUARY 29, 1938

No. 13

The Trend of Business

THE decline in British business activity which was heralded last summer by a reduction in the volume of new orders placed with industry and actually set in last October, has continued during the past month. Thus, *The Economist's* index of activity, adjusted for seasonal movements, fell from 113½ (1935 = 100) in August and September to 110½ in December. The December index was only one point above that for December, 1936. Practically the whole of the expansion of business activity during the first nine months of the year, therefore, has been cancelled by the decline during the past three months.

Hopes cherished earlier last year that any decline in new capital investment for the home market might be offset by an expansion of exports have been disappointed by the simultaneous deterioration on the world economic front. Indeed, our index of the volume of exports of British manufactures, after rising from 108½ in December, 1936, to 122½ in June, 1937, fell to 105½ in December. Despite a slight rise between November and December, last month's index is appreciably below the figure for the corresponding month a year earlier. Moreover, there has been no definite improvement in the international situation during recent weeks. The shrinkage in world trade, for example, is reflected in the persistent decline in *The Economist's* index of shipping freight rates. The firmer tendency on the markets for primary products, noticeable at the beginning of this month, has not been maintained. Further, as a result of the shrinkage of world trade, competition shows a tendency to increase, a development which is likely to hamper British exports and reduce its profitability if domestic conversion costs remain on the up-grade.

While current activity still remains at a high level, there are unmistakable signs of a gradual, though in some cases slight, downward trend in most branches of activity, with the exception of those engaged in re-armament work. That domestic activity as a whole is gradually receding is also indicated by the sharp decline in our index of the volume of raw material imports from a high point of 133 in September to 99 in December. Moreover, the volume of imports in December was substantially smaller than a year earlier, when our index stood at 108½. Further indications of the unfavourable trend at home were given by the unemployment figures for December, which showed an increase of the number out of work in almost every branch of industry. Nevertheless, present indications do not point to a precipitous recession in activity, such as that which has occurred in the United States.

The latest developments in the principal branches of activity are summarised on pages 2 and 3. In general, the iron and steel and metal-using industries remain very active, revealed by the remarkable rise in our index of iron and steel consumption. After declining from 134½ in December, 1936, to 117 in April, 1937, the index rose steeply to 167 in November

and 173½ in December. The phenomenal increase in steel consumption since last spring was due, in a large measure, to the increase in armament expenditure, which is chiefly concentrated on the metal-using industries. Although the volume of new business in iron and steel has tended to decline in recent weeks, the pressure for delivery remains as strong as ever, an indication that activity in consuming industries is likely to remain at a high level for some time. If anything, the demand for steel for armament purposes is still tending to increase, but this tendency is offset to some extent by a reduction in new orders for civil purposes.

The engineering industries on the whole remain active, though even in these branches of activity there has been a slight rise in unemployment during December and a reduction in the volume of new business. If allowance is made for the unfavourable weather conditions on the day of the count, building operations have so far been fairly well maintained, though here, again, the trend appears to be slightly downward. For the first time for some years the proportion of insured persons unemployed in the building industry in December showed

an increase over the corresponding month a year earlier. The building plans (excluding Government contracts) passed by 140 local authorities, rather surprisingly, showed an increase of 12.5 per cent. over the corresponding month of 1936. The increase, however, was due entirely to the higher value of the plans passed for dwelling houses, for plans for factories, workshops and other classes of building showed a decline.

Hesitancy in business is also reflected in the consumption goods trades, where unemployment has increased almost without exception between November and December, and was higher than a year ago in many branches, including textiles, clothing, and the food, drink and tobacco trades. Owing to the fact that purchasing power is still increasing through the distribution of higher profits and wages, the increase in the value of retail trade has not yet been arrested, but the rate of expansion in the volume of turnover has perceptibly slowed down.

In most other countries business activity is either declining or stationary. In the United States, for example, the contraction of industrial activity continued throughout December, but there are now signs that the decline has been arrested, at least temporarily. Scandinavia, Austria, Belgium, Holland and Switzerland appear to be marking time. In Germany industrial production has so far been maintained, but in France, where activity showed an upward trend until December, there has since been a fairly rapid increase in unemployment. In the Dominions and most countries of Latin America progress appears to have been arrested, partly as a result of the persistent decline in the prices of primary products. In the Far East, Japanese industrial activity has tended to decline since the summer, while Chinese foreign trade has been curtailed by the Sino-Japanese conflict.

British Industrial Developments

The following reports on British industry cover, in most cases, the period to the middle of January. In the remainder they relate to the month of December.

COAL

While the industry remains more active than at this time last year, the improvement between November and December was less marked than usual. The aggregate monthly production was actually slightly smaller in the latter month—21,135,200 tons, against 21,206,500 tons—but this is attributable to the fact that there was one less working day. December outputs were lower in three of the principal areas—Yorkshire, South Wales and Lancashire, Cheshire and North Wales—but a slight increase was recorded in the remaining fields. Employment showed little change between November and December, but remained considerably better than in the previous year. The slight decline in the volume of coal exported and shipped for the use of steamers, noted a month ago, was continued in December, shipments in the latter month being only a trifle larger than in December, 1936. The disappointing nature of the forward demand for coal on export account is now causing some anxiety in the industry. A satisfactory agreement has, however, now been concluded between Welsh coal exporters and Portuguese pithead exporters. In the meantime, the home demand for industrial grades of coal and coke remains heavy and open market supplies are rather short. House-coal business is well up to average for the time of year.

IRON AND STEEL

Following a decline between December, 1936, and April, 1937, domestic iron and steel consumption showed a very rapid rise until the end of last year. The extent of the increase in demand is reflected in our index of steel consumption, which rose from 117 (1935 = 100) in April to 173½ in December. To some extent the remarkable increase in domestic steel consumption since last spring has been due to increased armament expenditure. The increase in home demand was accompanied by a substantial expansion of iron and steel production. Thus, the output of pig iron rose from 7.72 million tons in 1936 to 8.50 million tons in 1937, and crude steel production advanced from 11.78 million tons to 12.96 million tons. Despite the rise in output last year, however, domestic supplies were insufficient to meet the expanding demand. Consequently, domestic production had to be supplemented by heavy purchases abroad, which increased from 1,483,000 tons in 1936 to 2,039,000 tons in 1937. Exports, on the other hand, increased only from 2,234,000 tons to 2,609,000 tons during this period. After prices had been raised earlier in the year as a result of an increase in costs of production, the industry decided to leave quotations unchanged throughout 1938. Meanwhile, consumption remains as heavy as ever, but, as a result of increased home production and heavier imports, the supply position is now less stringent.

GENERAL ENGINEERING

After a further increase during the first nine months of the past year, partly as a result of re-armament and an increase in export orders, a decline in new civil business in October heralded a slight setback in the activity of the industry during November. Moreover, the lull in activity continued in December, when unemployment showed a further slight increase. Although Government orders are still increasing, new civil business has shown no signs of recovery. Consequently, the outlook for the industry is not now viewed with the same confidence as a few months ago. Exports in December were again well ahead of those of a year earlier, and amounted to 40,800 tons, against 32,300 tons in December, 1936. Imports have shown a tendency to decline since September and, at 11,600 tons in December, 1937, compare with 10,000 tons a year earlier. Despite the slight reduction in activity, however, most branches of the industry remain very active, the agricultural machinery section being one of the few exceptions.

ELECTRICAL EQUIPMENT

The activity of the electrical engineering industry, like that of general engineering, has shown a slight decline between November and December, reflected in a small increase in unemployment. But exports, reflecting orders placed some time ago, remain ahead of last year's. Thus, exports of electrical equipment increased from 1,296 tons during November to 2,107 tons in the past month. During the same period the value of electrical goods and apparatus rose from £1.0 million to £1.2 million. The BEAMA index of new domestic and foreign orders for heavy generating plant has been discontinued.

AUTOMOBILES

The rise in the cost of living, the fall in security prices and the current feeling of uncertainty regarding future business prospects have had a depressing effect on the home demand for cars in recent months. Thus new registrations of private cars in September and October were 5.7 and 12.4 per cent., respectively, below the comparable totals for 1936. The November figures—20,645 against 23,801—show a drop of 13.3 per cent. There has, moreover, been a noticeable transference of demand from the more to the less expensive type of car. Meanwhile, home sales of goods vehicles, which were down by 4 per cent. and 11 per cent. in September and October, suffered a reduction of over 17 per cent. in November. The total for the latter month was 5,224 units, against 6,312 in 1936. Meanwhile, December also witnessed a halt in the overseas demand for British motor vehicles. Total exports during 1937 were

over 20 per cent. larger than in 1936, but the December total (motor vehicles and chassis) was 9,697, against 10,174 a year earlier. There are some indications of a current improvement in business, but it is too early yet to be certain that this is more than a temporary development.

BUILDING

Employment in the building trades was adversely affected by unfavourable weather conditions on the day of the December count. In consequence of this interruption of outdoor employment, the number of workpeople recorded as unemployed increased by nearly 73,000, of whom 41,000 were only temporarily stopped. Abstracting from these seasonal factors, activity was maintained on a high level during the past month. Meanwhile, according to the *Ministry of Labour Gazette*, the value of building plans approved by 140 local authorities last month amounted to £9,764,400, against £8,677,200 in December, 1936—an increase of 12.5 per cent. This advance was due entirely to higher figures in the dwelling-house category and should not be taken as implying that the outlook for the industry has changed fundamentally. In accordance with the industry's sliding-scale agreement, the standard wage of craftsmen will be advanced by ½d. per hour on February 1st, in consequence of last year's increase in the cost of living.

CHEMICALS

During the past month business in the home chemical market has been fairly satisfactory. Demand for industrial chemicals and wood distillation products has been well up to the average for the time of year. Some improvement has recently been shown in business in pharmaceutical and other fine chemicals, although trade in these products was rather limited during the greater part of the month. The coal tar products market has been dull, and very little interest has been shown in fertilisers. Overseas trade during December was rather disappointing, the value of exports of chemicals, drugs, dyes and colours showing a decrease of £79,410 as compared with December, 1936. Considerable decreases in exports of coal tar products, sodium compounds, and dyes and dyestuffs, were largely responsible for this fall. For the year 1937 the value of exports and imports increased by £3,568,157 and £257,861 respectively in comparison with 1936.

POTTERY

A further noticeable deterioration in the employment position occurred last month, the unemployment percentage being larger than a year earlier. A fall in employment in North Staffordshire was stated to be due mainly to the completion of Christmas orders. At Derby, however, employment continued good. At Worcester and Bristol conditions were still fairly active. December also witnessed a fall in export demand. Shipments of tiles were above the level of the previous year, but overseas sales of general earthenware, china and electrical ware fell short of the totals for December, 1936.

FOOTWEAR

Business was slack in December and there was a further, though partly seasonal, decline in employment. There was much short time working and many firms extended the holiday stoppages at Christmas or the New Year. Meanwhile, although total exports of boots and shoes last year were well above the 1936 total, the improvement was not maintained in December. Shipments last month were 27,063 dozen pairs, against 28,910 dozen pairs in the same month of 1936. The reduction was well spread between the various overseas markets.

COTTON

The employment position showed a further deterioration in December, holiday stoppages being extended by many firms both in the spinning and manufacturing departments. Unemployment was significantly higher than in December, 1936. Meanwhile, new business has been of limited dimensions and order lists have tended to run down. Raw cotton prices have hardened slightly, the technical position having been improved by the operation of the Government loan in the United States. A feature of the cloth section has been the larger inquiry for India. Miscellaneous transactions have been out through for Hong Kong, Java and Singapore, but little has been done for Egypt and the Near East, while the West African trade has remained at a low ebb. Some of the Dominion markets have, however, shown an improved demand. Home trade demand has merely been sufficient to meet urgent requirements, and more looms are idle than for a long time back. Yarn sales have also been small, in both the American and Egyptian sections. Spinning production is now running at 88 per cent. of capacity, against 90 per cent. both in the previous month and at this time last year.

JUTE

The raw material, after sagging in price owing to lack of buying interest, has recently been firmer and spinners have thus lost the opportunity of buying at the lower level. Meanwhile, Dundee spinners and manufacturers are finding conditions as depressed as they were before the holidays. The yarn market has been very dull and the cloth markets idle. Purchases have been confined to trifling lots at unsatisfactory rates. Production of jute goods in India is maintained on a high level and no agreement has yet been reached between the Association mills and the "outside" mills on the question of working hours. Negotiations are, however, still proceeding and hopes of a settlement now appear better than for many months.

LINEN

Pressure by purchasers to secure supplies has resulted in sales by the Soviet and Baltic monopolies at advancing prices. Sellers are reluctant to offer material, and the probability of a shortage of supplies is becoming more apparent. Courtrai and home-grown fibre encounter a ready sale. Demand for yarn has broadened out, but present prices do not cover production costs. New business in cloth is confined to near requirements, though inquiry is general and is likely to result in covering contracts as existing stocks decline.

RAYON

Demand for rayon yarns has shown very little improvement, and new business is scarce. At the same time, it is stated that there is more inquiry about and that there is much greater freedom in the issue of delivery instructions. There are still heavy stocks of fabrics and made-up goods to be cleared before the manufacturing trade can benefit appreciably, but a steady improvement is now taking place in the clearance of these goods.

WOOL

The position of the wool textile industry suffered a further marked deterioration in December, when the unemployment percentage was 17.9—or 11.9 points higher than a year earlier. The decline was especially noticeable in the woollen section. Short-time was largely worked and many firms extended the holiday stoppage at Christmas. Total exports of woollen and worsted yarns and manufactures in 1937 were valued at £35,486,432, against £32,213,547 in the previous year. The improvement, however, was not maintained in December. The industry's best overseas customer last year was Canada, which took substantially larger quantities than in 1936, while the next most important buyers were the Union of South Africa, Germany and the United States. Meanwhile, the raw material, after sagging in price, has recently been steady at the lower level. Manufacturers are still showing a disposition to await fresh developments and new business is limited.

AGRICULTURE AND FISHERIES

Work on the land is generally more forward than usual, most of the sowing having been completed during the autumn. Conditions during December were not very favourable for cultivation or sow-

ing and little further progress was made, except on the lighter and better drained soils. Germination of autumn-sown crops has been good and plants are strong and healthy, although late-sown wheat is somewhat backward. Cattle and sheep have done reasonably well, but hill sheep are reported to have suffered from the wintry weather. Reports on breeding ewes are generally good. Milk yields are about normal. Winter keep has been drawn on fairly extensively, but supplies should be sufficient for normal requirements. Meanwhile, the aggregate quantity of wet fish landed in Great Britain last year amounted to 21,735,332 cwt., against a rather smaller total of 20,877,479 cwt. in 1936. Average prices, however, were rather lower last year, and the total value of the catch consequently declined from £15,719,337 in 1936 to £15,353,763 in 1937. An analysis of Britain's fish supplies in recent years is included in the Industry and Trade section of the current *Economist*.

SHIPPING

Shipping freights were subject to wide fluctuations during 1937. A steep rise during the first nine months of the year was followed by an even steeper fall during the last quarter, owing to the deterioration in the world economic position. Thus *The Economist* index (1898-1913 = 100) rose from 128.2 in December, 1936, to 169.8 in September, 1937, only to fall to 126.4 in December last. Thus the whole of last year's gains have now been wiped out. A feature of the markets during January has been the heavy call for cargo tonnage in the grain trade, originating mainly from the United States. But the recent violent weather has disorganised the supply of tonnage.

RETAIL TRADE

The money value of retail sales in December, according to *The Board of Trade Journal*, was 8.3 per cent. higher than in December, 1936—a figure which surpasses the monthly average for last year. The Midlands and South Wales, for the sixth successive month, showed the greatest advance (12.3 per cent.), while the only decrease was in Central and West End London (–0.9 per cent.). Sales of food and perishables rose by 10.0 per cent. between December, 1936, and the same month of 1937, the rise being general to all districts except London. The increase in sales of other merchandise, at 6.8 per cent., was also general except in London. These figures are further discussed in the Industry and Trade Section of this week's *Economist*.

Business Developments Overseas

BRITISH EMPIRE

AUSTRALIA.—A cable from the National Bank of Australia states that the wheat crop amounts to 175 million bushels, with a high proportion of good-quality wheat. Since the holidays the wool market has weakened. During the December quarter, it is stated, progress in the secondary industries was continued; internal conditions indicate further, though slower, advances. Government bonds and ordinary shares are firm in price, and the financial position is easy. Foreign trade continues well above the previous year's level.

SOUTH AFRICA.—Farming prospects in the Union underwent an improvement last month in consequence of widespread rains and of a firmer tendency of prices. There was no marked change in industrial conditions, but the value of building plans approved has recently shown a declining tendency. Railway receipts, on the other hand, continue to run above budget estimates and retail trade at the coastal resorts is being stimulated by the influx of visitors. Imports totalled £9,018,000 in December, against £8,101,000 a year earlier, while total exports (including gold) were £10,588,000 compared with £7,706,000.

CANADA.—The year 1937 witnessed a substantial improvement in the economic position of the Dominion. Although some hesitancy was noticeable during the last quarter, business activity was much better maintained than in the United States; and in December the general economic index of the Dominion Bureau of Statistics scored a slight advance. There are, however, a number of adverse factors in the economic outlook. Thus, exports are being affected by falling prices and the heavy industries report a decline in new orders. Stocks of newsprint are now rising owing to the fall in consumption.

INDIA.—India's imports fell by 147 lakhs of rupees between November and December and exports suffered a simultaneous decline of 114 lakhs. Meanwhile, rainfall has been light to moderate in most parts. Crops are generally in fair to good condition, except in the Bihar district, where floods have occurred, and in the Central Provinces where the cotton plants have been affected by insects. The third estimate of the 1937-38 all-India cotton crop is 5,434,000 bales, or one per cent. more than last year's yield.

EUROPE

FRANCE.—Business activity continued its gradual recovery until the early part of December. For example, the official index of industrial production rose from 76 (1928 = 100) in August to 90 in November, against 88 in the corresponding month a year earlier. The improvement was most marked in the heavy industries, partly because re-armament expenditure is concentrated on these industries. The textile industries also experienced some improvement, but the trend of building activity remained downwards. Unfortunately, the gradual improvement appears to have been temporarily arrested in recent weeks by the unsettled relations between capital and labour and another political crisis which led to a loss of confidence. Thus, the number of unemployed in receipt of benefit increased from 351,100 to 393,200 during the four weeks ended January 15th. The capital market, which had previously shown signs of increased activity, has again relapsed into a state of lethargy. Prices of domestic products have resumed their upward trend, but quotations for industrial securities have shown a slight decline, an indication of the loss of confidence in the future of recovery. Although the political crisis has been overcome, for the time being, the outlook remains uncertain.

GERMANY.—In general, the trend of industrial activity remained upwards until the end of 1937. Thus, the Institute for Business Research's weekly index of activity rose from 116.3 (1936 = 100) during the last week in November to 118.6 during the week ended December 25th. Since then, however, the index has shown a decline, being 113.3 for the week ended January 8th. Nevertheless, the latest figure remains 6 per cent. above that for the corresponding week a year earlier. The sustained activity of the capital equipment industries is due in large measure to Germany's strenuous efforts in increasing her military strength. Although the official index of the cost of living has shown little change, retail prices are reported to be steadily increasing and, as wage rates have remained substantially unchanged, the standard of living is tending to decline.

NORWAY.—Business activity remains at a high level. The index of industrial production rose from 127.4 (1929 = 100) in October to 142.1 in November, against 124.5 a year earlier. The number of registered unemployed, though showing a slight seasonal increase in December, from 32,200 to 33,900, remained well below the level of a year ago at the end of the past month. The value of exports increased from Kr. 69.0 millions in October to Kr. 79.0 millions in November, an increase of Kr. 10.1 millions over the year. The increase in imports since 1936 has been even more marked. Thus, the value of imports rose from Kr. 94.0 millions in November, 1936, to Kr. 131.1 millions in November, 1937. The trend of wholesale prices has been slightly downwards in November and December.

POLAND.—The index of production for November (the latest available) stood at 87.1 (1929 = 100), compared with 85.5 in October and 75.1 in November, 1936. Owing to the increase in

the population, however, the recovery in the past year has not led to a corresponding reduction in unemployment. Thus, the number of registered applicants for work at the end of November was 336,200, compared with 339,400 a year earlier. The value of Poland's foreign trade has shown a substantial increase since 1936. Exports rose from 95.3 million zloty in November, 1936, to 111.1 millions during the corresponding month last year. During the same period imports increased from 92.4 to 108.0 million zloty.

DENMARK.—After reaching a peak in the spring of last year, industrial activity has shown a gradual downward trend. The index of production rose from 132 (1929 = 100) in December, 1936, to 138 last May, but had fallen back to 131 by November. The recession has been most marked in the textile, clothing, leather, stone, clay, and glass industries. The output of foodstuffs, on the other hand, shows a substantial increase on the year. Imports last November, at Kr. 131.8 millions, showed a reduction of Kr. 3.4 millions on the corresponding month in 1936. Exports, on the other hand, rose from Kr. 109.1 millions to Kr. 137.0 millions during this period.

UNITED STATES OF AMERICA

The rapid downward trend in activity noticeable since September, continued in December. Thus, the Federal Reserve Board's index of industrial production, adjusted for seasonal variations, declined from 89 (average 1923-5 = 100) in November to 84 in December. Moreover, the December index showed a decline of no less than 30.6 per cent. on the figure for the corresponding month in 1936. The curtailment of activity is also reflected in the Department of Labour's returns of industrial employment, which showed a decline of 520,000 during December. Nevertheless, there are indications that the pace of the decline in activity had lost momentum during December, and the latest news indicates that there has since been a slight recovery in a number of industries. For example, the iron and steel industry operated at 29.8 per cent. of capacity last week compared with 19.2 per cent. at the beginning of the year. Automobile production has also been increased in a number of plants. Although President Roosevelt now seems anxious to restore confidence among business men, the outlook remains uncertain. In any case, some time will have to elapse before a resumption of large-scale capital expenditure will make itself felt in a sustained expansion of business activity.

LATIN AMERICA

ARGENTINA.—Crops of wheat and linseed have turned out short, whilst prospects for maize are also poor owing to drought. Argentina's exports this year will therefore be considerably below last year's, with a consequent contraction in purchasing power. As import markets, particularly for textiles, are already overstocked, the summer season for imported textiles is expected to be unfavourable.

URUGUAY.—The wool export season has been retarded, and, pending the supply of wool export exchange, the granting of prior import permits is temporarily in suspense.

CHILE.—The supply of sterling for imports continues normal, under permit, and since January 1st there have been exchange concessions in regard to imports classed as "luxuries." Crops promise well, and there should be a good surplus of wheat available for export. In the mining districts, the low level of prices for mineral ores has led to restricted production and consequently to a decline in general business.

BRAZIL.—Central American markets continue depressed owing to the fall in coffee prices following Brazil's recent change of policy. Under Decree of December 23rd virtual exchange control by the Bank of Brazil has been re-imposed. All export bills must be sold to the Bank of Brazil and buyers must pay a tax of 3 per cent. Meanwhile, milreis accounts for parties domiciled abroad have been blocked. Exchange cover for foreign bills for collection, for which the equivalent in milreis has been deposited, appears to be coming forward only in small instalments.

THE FAR EAST

The war with China is having its effect in all sections of Japan's economic life. Production, stimulated by war needs, is steadily increasing and unemployment is declining. The determination of the Government to prosecute the campaign until their objects have been achieved means that the economic life of the country will take on an increasingly wartime character. In the meantime, the Budget for the forthcoming financial year shows a large increase in prospective expenditure on the fighting services. Japan's imports last year amounted to 3,954 million yen, or 35 per cent. more than in 1936, while her exports, at 3,318 millions, showed an advance of almost 19 per cent. The excess of imports was reversed in the closing months of the year, owing to the restriction policy adopted by the authorities, and there was an export surplus of 10 million yen in December. Wholesale prices continued their gradual advance. China's foreign trade showed a slight recovery last month, but remained below the 1936 level. Her imports amounted to 52.6 million dollars and her exports to 55.2 millions, against 92.2 and 79.9 millions, respectively, in December, 1936.

British Industrial Developments

The following reports on British industry cover, in most cases, the period to the middle of February. In the remainder they relate to the month of January.

COAL

The position of the industry showed little change between December and January and was appreciably better than at this time last year. Production in January amounted to 20,832,000 tons, against 21,135,000 in December and 19,490,000 tons in January, 1937. A slight increase in the number of insured workpeople wholly unemployed was more than offset by a decrease in the number temporarily stopped. At 11.3 per cent., the proportion of insured persons unemployed in January was about 3.9 per cent. below last year's corresponding figure. Demand for industrial fuels remains active generally, though the call from some sections of British industry is now less pressing. In consequence, supplies of some sorts, which had previously been scarce, are now more readily available. In the early part of February a spell of mild weather caused a slackening of the demand for house coal, but the recent fall in temperatures has brought increased business to this section of the industry. The quantity of coal exported and shipped for the use of steamers was 4,194,000 tons last month, against 4,326,000 tons in December and 4,256,000 tons in January, 1937. Collieries have satisfactory export orders for a short time ahead, but forward business has lately been disappointing.

IRON AND STEEL

In contrast to the setback in many other branches of activity, operations in the iron and steel industry remain at a high level. The returns of the British Iron and Steel Federation reveal a slight reduction in output between December and January. The decline in pig iron and steel production, however, was entirely seasonal, and was no greater than a year ago, amounting to 22,400 and 22,700 tons respectively. Imports of iron and steel materials showed a further substantial increase last month, when they totalled 308,700 tons, against 83,100 tons in January, 1937. Exports, on the other hand, continued to decline and, at 191,200 tons in January, showed a reduction of 23,800 tons on the corresponding month a year ago. As a result of the co-incidence of a substantial volume of home production with rising imports and falling exports, the quantity of iron and steel available for domestic consumption has greatly increased. There are now hardly any complaints concerning the scarcity of supplies. On the contrary, producers and consumers of pig iron, for example, have recently been able to replenish their stocks. Our index of domestic consumption of iron and steel (which is not adjusted for changes in stocks) declined slightly from 173.4 (1935=100) in December to 169.4 in January. A year ago the index stood at 124. Although the iron and steel industry as a whole remains very active, the volume of new business has declined and there has been a slight recession in some of its branches. Thus, activity in the tinplate section has shown a substantial decline, the proportion of insured persons unemployed in January showing an increase of 13.2 per cent. over the corresponding month a year ago.

GENERAL ENGINEERING

Although activity in most branches of engineering remains at a high level, the industry has not been altogether unaffected by the general slowing down of industrial operations. The volume of new civil business is still tending to decline, the curtailment of orders being most marked in the home market. To some extent the decline in new civil business has been offset by an increase in Government contracts. But the volume of Government business is now believed to be near its peak. Owing to the time lag between the placing of new orders and their completion, activity in the industry has not yet declined in proportion to the curtailment of new business. Nevertheless, the proportion of insured persons unemployed has shown a further slight rise between December and January and, in general engineering, was only 0.2 per cent. smaller last month than a year ago. Exports have been maintained surprisingly well, the volume of shipments of machinery having risen from 30,095 tons in January, 1937, to 41,534 tons last month. But this buoyancy is ascribed in a large measure to the time-lag of six to nine months between the placing of orders and their completion. The decline in domestic requirements of tools and machinery is reflected in imports, which, at 10,781 tons in January, were smaller than in December and only slightly higher than a year ago. As far as individual branches of the industry are concerned, business in prime movers, especially internal-combustion engines, remains very good, and there has been some improvement in the agricultural, mining, and sugar-crushing and refining machinery sections.

ELECTRICAL EQUIPMENT

Unemployment in the electrical equipment industry showed some increase between December and January, and the proportion of insured workers without work last month was slightly higher than a year ago. Despite the slight recession, however, the industry remains very active. Exports of electrical machinery rose from 1,343 tons (valued at £218,933) in January, 1937, to 1,981 tons (valued at £338,884) last month. Similarly, exports of electrical goods and apparatus showed a substantial increase during this period, from £849,143 to £1,259,609.

AUTOMOBILES

The recession in the motor industry has continued, both the private car and the commercial sections having been affected. Sales of private cars in December amounted to 25,975 units, or 7.3 per cent. less than in the corresponding month in the previous year. This was the fourth successive month in which new registrations had fallen below the 1936 level. Moreover, the transference of demand from the more expensive to the cheaper car continued; so that December sales of eight horse-power cars were actually larger in 1937 than in 1936. Sales of goods vehicles in December were 16 per cent. lower than in the same month of 1936—7,565 units against 6,334—the fall being fairly evenly spread between the different categories. Exports of private cars and commercial vehicles together were 836 units fewer last month than in January, 1937, but the aggregate value showed an increase of £120,000 or 10 per cent. It thus appears that overseas customers are purchasing larger vehicles.

BUILDING

Activity in the building and public works contracting industries has so far been surprisingly well maintained. The proportion of insured workers unemployed in building last month was only 2.3 per cent. greater than a year ago, and there was a reduction of 2.4 per cent. in the case of public works contracting. Although the day of the count was favourable to outdoor operations, the current level of activity of the building and public works contracting industries still appears to be almost as great as a year ago. The January returns of the value of building plans passed by 143 local authorities showed an increase of 2.2 per cent. over the corresponding month last year. The improvement, however, was entirely due to the increase in the value of plans passed for dwelling houses, the figures for all other categories of building showing a substantial decline. An analysis of the changes in the regional distribution of plans passed since January, 1937, shows considerable divergencies. In Yorkshire and Wales, for example, there were increases of 83.6 per cent. and 37.7 per cent. respectively. On the other hand, the value of plans passed in the south-west counties was 48.3 per cent. lower than a year ago, and the northern counties and Scotland showed declines of 43.4 per cent.

CHEMICALS

A steady business was transacted in most sections of the home chemical market during January. The industrial chemicals section was not as active as during the last part of 1937, but was fairly satisfactory generally. Most wood distillation products continued in very fair demand, and trade in pharmaceutical chemicals was average for the time of year. A fair number of inquiries were received for coal tar products, but only a few large orders were placed, most sales being for small quantities. Exports during January showed a further advance, the total being £105,426 greater than in January, 1937, and £211,780 greater than in January, 1936. Items for which the increases were particularly large as compared with 1937 were ammonium sulphate, copper sulphate, caustic soda and drugs and medicines. Imports of chemicals, dyes, and colours were lower than in January, 1937, by £49,241.

POTTERY

Activity in the industry showed a further decline last month, and employment again diminished. The percentage of insured workpeople unemployed rose from 18.5 per cent. in December to 22.0 in January, the latter figure being about 6.2 points above the level of a year ago. Business was slack in North Staffordshire, but remained fairly good at Bristol and Worcester. There was a slight decline at Derby. Meanwhile, export demand was well maintained. Shipments of general earthenware and of tiles, sanitary ware and electrical ware were all larger last month than in January, 1937.

FOOTWEAR

Employment in the boot and shoe trades showed a further slight decline between December and January, and there was still much short-time working. The unemployment percentage, at 13.1, is now about 1.4 above the level of a year ago. Export business, however, showed an improvement, sales abroad last month amounting to 34,398 dozen pairs, against 27,746 dozen pairs in January, 1937. The best customers were among Empire countries—especially New Zealand, South Africa and the British West Indian islands.

COTTON

Since a month ago, further ground has been lost and the employment position has continued to deteriorate. Curtailment of production has been on a larger scale than for a long time, and stocks have increased. The proportion of insured workpeople unemployed amounted to 26.1 per cent. in January, against 15.8 per cent. a month earlier. On a comparable basis there was an increase of about 9.2 in the percentage compared with a year ago. In the spring of last year many buyers anticipated their requirements for a long time ahead, and this movement was followed by a fall in raw cotton prices. Some time must elapse before these large supplies are digested. Meanwhile, raw cotton prices have been firmer since the passage of the Farm Bill by the United States Congress. The present season's crop is expected to yield between 11½ and 12 million bales, compared with a total of 18,750,000 bales last season. Purchases of piece goods have been mainly confined to

retail lots during the past month, and numerous makers have worked off old contracts without securing fresh business. It is reported, however, that there have recently been signs of rather freer clearances for the home trade. In the spinning section some customers have not been prepared to accept deliveries against old contracts. Production is now at only 75 per cent. of capacity, against 88 per cent. a month ago and 90 per cent. a year ago.

JUTE

There has been some improvement during the past month, though the position of the industry remains depressed and unemployment is severe. Spinners, however, have been able to secure a slight advance in their yarn prices, while cloth is also a little dearer. Competition from Calcutta goods remains severe and the industry is anxious to secure some form of protection. There is disappointment throughout the industry at the failure of the associated Indian mills to reach agreement with the "outside" mills on the question of working hours. It is hoped, however, that agreement will be reached in the near future.

LINEN

Apart from a further tightening up of selling prices, there have been no new developments in the flax position during the past month. A steady business is reported in Courtrai and Irish fibre, while some purchases of Baltic Soviet material have been made by Germany. Home spinners are still reported to be unable to operate at current limits, owing to the disparity in prices so far obtainable for yarns. Cloth business has not developed to the extent expected, consumers being reluctant to concede the advances required by sellers.

RAYON

The industry is suffering from the fact that stocks of finished fabrics and garments are still heavy. While there is a fairly steady movement of these into consumption, manufacturers have as yet received few new orders. Yarn business is consequently decidedly scarce. Some improvement is, however, discernible on the hosiery side, more especially in the demand for flat and circular underwear fabric.

WOOL

Activity in the wool textile industry suffered a further decline in the period under review. The holiday stoppage at Christmas was

extended into January by many firms and short-time working has since been common. The proportion of insured workpeople returned as unemployed on January 17th was no less than 21.1—or 14.5 points higher than a year ago. The worsted section was affected more than the woollen section, while the carpet section, which had been very active until recently, sustained a severe curtailment of operations. With the decline in machinery activity throughout the industry, stocks have accumulated and the price structure has weakened. Meanwhile, export business has also deteriorated. Shipments of tops, yarns and cloth last month were smaller than in January, 1937, and the outlook is not encouraging.

AGRICULTURE AND FISHERIES

Some progress was made during January with field work and cultivation, and at the end of the month land work was generally well forward for the time of year. Early-sown corn, with the exception of some late-sown winter wheat, looks well. Potatoes generally are keeping well. Prospects for lambing appear to be favourable, and where lambing has commenced the fall appears to be satisfactory. Cattle and sheep have done fairly well. With care, existing stocks of winter keep, with the exception of straw which is likely to be scarce later, should last until the spring. Milk yields generally are about average. The aggregate quantity of wet fish landed in Great Britain during January amounted to 1,322,352 cwt., against 1,218,123 cwt. in the same month of 1937. The value of the catch rose from £1,211,898 a year ago to £1,304,267 last month.

SHIPPING

After the precipitous decline in freight rates during the last quarter of 1937 the markets had a steadier appearance in January, following an improvement in the demand for tonnage. Thus, *The Economist* index of freight rates, which had fallen steeply from 169.8 in September to 126.4 in December (1898-1913 = 100) declined only a little further in January to 125.8. In recent weeks the demand for tonnage has remained poor and, while the minimum freight schemes have kept a bottom in the market, a further weakening of freights is likely. A large amount of tonnage is available in the River Plate market and, despite a good demand from Australia, this is having a depressing influence elsewhere.

Business Developments Overseas

BRITISH EMPIRE

AUSTRALIA.—The wheat harvest has now been officially estimated at 170 million bushels, mostly of good quality, but prices realised have been somewhat disappointing. Demand for wool has been limited, says a cable from the National Bank of Australasia, and brokers' sales during the past seven months have totalled 1,400,000 bales, or half the estimated season's receipts to brokers' stores. On the Stock Exchange industrials have been quietly steady. Government bonds have been strong and base metal shares easy. Trade and industry are reported to be satisfactory, following the holidays, and prospects appear favourable provided that export prices are maintained or improved.

SOUTH AFRICA.—The farming community has lately been adversely affected by drought and by the decline in prices of wool, maize, mohair, hides and skins. Nevertheless, retail trade was reported to be satisfactory in January, turnovers comparing favourably with those of a year earlier. Despite the uncertain political and economic outlook abroad, business activity in the Union, based on the continued prosperity of the gold mining industry, has been well maintained. The volume of building remains substantial. The note circulation is rising and overseas trade is expanding.

CANADA.—The general level of business activity has not been fully maintained recently, though the setback has been less severe than in the United States. Mining and lumbering remain active, though export demand is not strong. Textiles are experiencing seasonal slackness and there has also been a decline in the iron and steel, paint, automobile and footwear industries. Firms producing light machinery and equipment remain busy. During the past two months there has been a marked increase in the number of people on relief and the resources of municipal authorities are taxed to the limit to provide relief funds.

PALESTINE.—Political unrest has recently been reacting unfavourably on the business position and the outlook has deteriorated. The building industry has been severely affected by the disturbances, but it is possible that public works may provide some relief. The citrus fruit industry has had an unsatisfactory season. Prices have fallen in response to heavier shipments and some planters are stated to be facing losses. Wage rates have tended downwards and the resulting decline in purchasing power is reflected in a contraction of the demand for consumers' goods. Meanwhile, public expenditure has been rising more rapidly than public income.

EUROPE

FRANCE.—After an improvement last autumn, business activity has again been marking time. The official index of industrial production (1928=100) remained unchanged from the previous month at 91 in December, against 90 in the corresponding month in 1936. There has been a slight improvement between November and December in the chemical, textile, engineering and automobile industries. On the other hand, there was some decline in the mining and iron and steel industries. Building activity remains at a very low level, the official index for December being 44 per cent. lower than in 1928. New investment remains small. The number of unemployed in receipt of benefit rose substantially between the end of December and January, from 365,452 to 403,813. A year ago, however, the number unemployed was 426,072. Wholesale prices have tended to decline in recent weeks, the official index (July, 1914=100) having fallen from 615 on January 15th to 607 on February 12th. There are indications of an improvement in labour relations, though the general outlook still remains uncertain.

GERMANY.—Under the stimulus of heavy capital expenditure, designed to increase Germany's military strength, industrial activity has been maintained at a high level. The number of registered unemployed increased by 57,000 to 1,052,000 during January, compared with an increase of 374,000 during the corresponding month last year. Both imports and exports remain well above the level of a year ago. Thus imports rose from Rm. 367.1 millions in December, 1936, to Rm. 531.2 millions in December, 1937. During the same period the value of exports increased from Rm. 457.2 millions to Rm. 552.3 millions. The official indices of wholesale and retail prices showed little change in recent weeks. There are no indications of any significant change of trend in the near future.

HOLLAND.—The trend of industrial activity has been downwards since last summer. For example, the index of production (1929=100) has fallen from 102.5 in July to 85.8 in December. This index, however, probably exaggerates the extent of the setback, for the number unemployed, exclusive of agricultural workers, only rose from 123,000 in July to 153,000 in December. The value of foreign trade has tended to decline in recent months, but remains above last year's level. After rising from 105.5 million gulden in January, 1937, to 148.5 million gulden in October, imports fell to 119.0 million gulden last month. Similarly, exports increased from 72.7 million gulden in January, 1937, to 113.2 million gulden in September, but declined again to 82.0 million gulden last month. Wholesale prices have shown a slight decline in recent months, but the cost of living index has remained practically unchanged.

POLAND.—Business activity continued to expand gradually until the end of last year, the index of industrial production (1929=100) having risen from 77.7 in the last month of 1936 to 88.6 in December, 1937. The number of registered applicants for work, however, has shown little decline, amounting to 336,000 at the end of last November (the latest figure available), against 339,000

a year earlier. The improvement in foreign trade has so far been fairly well maintained. Imports rose from 91.0 million zloty in December, 1936, to 110.7 million zloty a year later. During the same period the value of exports advanced from 96.4 million zloty to 108.6 million zloty. Both wholesale prices and the cost of living have shown little change in recent months.

SWEDEN.—The economic situation in Sweden underwent little change in December. Industrial production remained at a high level, and employment was satisfactory in spite of a seasonal rise in the number of unemployed. The timber market was dull in December, partly because of the closing of the northern ports of Sweden to navigation, but more especially owing to the accumulation of heavy stocks in Great Britain. At the turn of the year total timber sales for the coming season were only 100,000 standards, compared with 325,000 standards a year earlier. Moreover, there has been a substantial decline in new orders for iron and steel, especially from home consumers. The value of imports declined from Kr. 193.2 millions in November to Kr. 183.6 millions in December. On the other hand, exports rose from Kr. 184.7 millions to Kr. 198.3 millions during this period. In December, 1936, imports and exports were Kr. 150.0 millions and Kr. 143.9 millions respectively.

UNITED STATES OF AMERICA

Following the headlong decline in business activity between September and December, there were indications last month that the deterioration had been arrested, at least temporarily. The *New York Times* index of business activity actually rose slightly from 78.3 for the week ended January 1st to 82.3 for the week ended January 29th. Since then, however, the index has fallen back to 79.7. Despite the efforts of President Roosevelt to promote recovery, he has so far failed to bring about a return of confidence and a significant increase in new investment. There is now little hope of sustained recovery in the immediate future. Stocks of goods in the heavy industries appear to be still large. Some of the principal automobile manufacturers are reported to have from six weeks' to two months' supplies of steel. Nevertheless, the outlook is not altogether discouraging. In some of the consumers' good trades, for example, there are signs of revival of activity. If President Roosevelt should succeed in his efforts to stem the downward trend of prices, the volume of business would probably take an upward turn. The firmer tendency of quotations for industrial securities, though by no means a reliable guide to the future, reveals a slightly more hopeful view concerning the prospects of business activity.

LATIN AMERICA

ARGENTINA.—Preliminary reports indicate short crops of wheat, linseed, oats and maize. Despite the decline in exports in recent months, they totalled 2,308 million pesos in 1937 against 1,656 million pesos in 1936, with an export surplus of 751 million pesos against 539 million pesos. Great Britain continued to head both the import and export lists. Competition with British goods may be increased by the reduction, from 20 per cent. to 10 per cent., in the surcharge on official exchange payable by importers without prior permit, but this has been offset to a considerable extent by the depreciation of the "free" exchange rate.

URUGUAY.—The all-important wool export season is still retarded, with prices nominal. The exchange quota for imports from Great Britain has been increased to £350,000 for January, 1938. Exchange control is being overhauled, primarily to secure stricter control over imports.

CHILE.—Export trade continues to contract from the high levels of early 1937, and, although "export" exchange is still forthcoming for permitted imports, there are indications of underlying exchange stringency.

BRAZIL.—Coffee moved rather more freely in January, but exports must increase very substantially to offset the fall in prices since November. Under the stringent exchange control, the Bank of Brazil is making weekly allotments of exchange at 60 days to cover payment of import bills. During the first eleven months of 1937 Brazil's favourable trade balance was less than £3,000,000 (gold), the smallest surplus for many years. There has been some recovery in Colombia and the Central American countries as a consequence of the comparatively firm tendency of New York prices for "mild" coffees.

THE FAR EAST

The economic outlook is completely overshadowed by the continuance of the war between China and Japan. In the latter country, expenditure for war needs has recently shown a substantial increase which has had to be financed by heavier taxation. Income and profits taxes, excise duties and sales taxes have all been stiffened. Meanwhile, restrictions on overseas trade have been made more stringent and foreign exchange is difficult to obtain. Import restrictions cover a wide range of raw materials while an export embargo has been placed on other materials, such as coal and armament metals. Despite the efforts recently made to reduce the adverse balance of trade, imports exceeded exports last month. Imports were 208 and exports 172 million yen, against 319 and 209 millions, respectively, a year ago. The note circulation has been expanded fairly rapidly since the outbreak of hostilities and the general price level rose by over 12 per cent. during the past year. Meanwhile, China's trade balance has further deteriorated. Her imports were 59 million dollars last month, against 53 millions in December and 77 millions in January, 1937, while her exports totalled 43 million dollars, against 55 and 82 millions, respectively.

No. 15

There are few countries which have escaped the effects of the downward trend in world economic activity. In most of the British Dominions the decline in business activity has so far been relatively small, but their exports, as well as those of other primary producing countries, such as Argentina, have already shown a substantial decline. The expected improvement in the United States has not yet taken place. On the contrary, the latest cables suggest that the general trend of business activity is still slightly downwards. In Scandinavian countries business activity, though gradually declining, remains at a high level. In France industrial production is lower than a year ago. German industries still maintain a high level of output, but export business has shown a distinct decline.

GROUP II (a).—BI-MONTHLY TABLE

CROPS (Season ended in Year shown)

(a) Figures for 1937, and in the case of crops for 1937-38, are provisional. (b) Figures for 1934 and 1935 are subject to revision. (c) End of year. (d) End of season. (e) Monthly figures are averages of quarterly returns. (f) Season beginning in April of year shown.

British Industrial Developments

The following reports on British industry cover, in most cases, the period to the middle of March. In the remainder they relate to the month of February.

CCAL

The coal industry remains appreciably more active than at this time last year. Output in February amounted to 20,099,000 tons, compared with 20,832,000 tons in January and 19,797,000 tons in the same month of last year. The percentage of insured workpeople unemployed last month (including those temporarily stopped) was 11.2, against about 15.2 in February, 1937. The spell of mild weather, in recent weeks has, however, naturally had an adverse effect on the demand for house-coal, and consumers' and merchants' stocks are not being augmented. There is still considerable pressure for delivery of industrial fuels against contracts, but there are now signs of a slackening of the demand for some descriptions. Overseas business has lately shown a decline. Thus the amount of coal exported and shipped for the use of steamers last month was 3,696,000 tons, against 4,194,000 tons in the previous month and 3,779,000 tons in February, 1937. Although some fairly good contracts were placed in mid-March, export business has been slow generally, prices being unattractive to buyers. While the industry at present remains busy, the outlook is uncertain.

IRON AND STEEL

The total output of pig iron and steel declined between January and February. Calculated on a daily basis, however, production actually showed an increase from 24,540 tons to 24,760 tons in the case of pig iron, and from 41,600 to over 44,000 in the case of steel ingots and castings. Moreover, production last month remained well above the level of February, 1937, the increase amounting to 89,600 tons in pig iron and 61,700 tons in steel ingots and castings. The iron and steel markets, however, have undergone a significant change in recent months. Last year there was a veritable scramble for supplies, which failed to keep pace with the rapidly increasing home demand. Rising domestic production had to be supplemented by substantial increases in imports, facilitated by a suspension of the import duty on pig iron and by a reduction of the duties on steel. By the end of last year, however, the shortage of materials had been overcome and during the last few weeks supplies have tended to accumulate to such an extent that certain sections of the market have become seriously congested. Consequently, there has been a marked decline in new transactions, for there is now no incentive for consumers to order their requirements for a long period ahead. In order to relieve congestion in the market and to prevent the accumulation of unwieldy supplies, the import duty on pig iron is expected to be reintroduced shortly, and the duties on steel will revert at the end of this month to the higher level in force before their reduction in July last year. It is anticipated that, as a result of the increase in the import duties on steel, stocks will be rapidly reduced to normal dimensions without the need of an appreciable reduction in domestic output. But if the present lull in new business continues, the industry may well be faced with the necessity of curtailing output later this year, in spite of the anticipated fall in imports and the accelerated pace of re-armament.

GENERAL ENGINEERING

There has been no significant change in the position of the engineering industry since last month. Although the volume of new civil orders continued to decline, the industry remains very active in completing orders received last year. Moreover, the volume of orders on hand is sufficient to prevent a serious decline in activity until the summer. Apart from the comparatively long time-lag between the placing of orders and their completion, a more marked decline in activity has been prevented by the increase in Government contracts. Government work, indeed, is not likely to diminish in volume for the remainder of this year, and may even expand with the speeding-up of re-armament. In contrast to most other branches of activity, the engineering industry's exports continue well above the level of last year. Thus, exports of machinery last month totalled 35,608 tons, compared with 30,676 in February, 1937. It must be remembered, however, that current exports represent orders placed last year when demand was at its peak. Imports of machinery last month were smaller than a year ago for the first time for many months. As far as individual branches of the industry are concerned, there has been a seasonal improvement in the activity of the agricultural machinery section. The printing machinery branch has also experienced a lull. The output of machine tools, mining machinery and engines continues at a high level, but activity in the textile section has shown a slight decline. There are now no complaints from the industry concerning the supply of raw materials, but, although the shortage of skilled labour is now less acute as a result of the slight reduction in activity, the labour problem may once more come to the fore in certain sections if the flow of Government contracts is materially increased.

ELECTRICAL EQUIPMENT

Like general engineering, the electrical equipment industry has experienced a slight decrease in employment during the past month. Moreover, the proportion of insured persons unemployed last month was 1.1 per cent. higher than a year ago in the case of electrical engineering and 3.2 per cent. higher in the case of electric cables

and apparatus. Exports of electrical machinery rose from 1,563 tons (valued at £255,913) in February, 1937, to 1,921 tons (valued at £321,723) last month. Similarly, the value of exports of electrical goods and apparatus increased from £803,922 to £1,101,202 during the past twelve months.

AUTOMOBILES

The gradual decline in the output of the motor industry, which has been in evidence since last September, has not yet been checked. New registrations of private cars in January totalled 24,858 units, against 28,820 a year earlier—a drop of 13.7 per cent. This decline was common to all the more popular horse-power categories. Meanwhile, new sales of goods vehicles in January were 10.8 per cent. smaller in 1938 than in 1937—7,256 units, compared with 8,132. A slight increase in sales of certain categories of diesel-engined vehicles was more than offset by a fall in practically every category of petrol-driven goods vehicle. Total production in January, however, showed a decrease of only 7.6 per cent. compared with last year, increased exports having done something to make good the loss on the home market. Shipments of private cars in February rose by 1,200 units, or 19 per cent., compared with February, 1937; commercial vehicle exports fell by 500 units, but rose in value by almost £60,000.

BUILDING

Activity in the building and public works contracting industries is maintained at a high level, though prospects appear to be deteriorating. There was a slight seasonal improvement in the employment position last month, but 17.3 per cent. of the industry's insured workpeople were unemployed; the percentage a year ago was about 15.7. The seasonal improvement was common to all the administrative divisions and to all occupations. Meanwhile, the value of building plans approved by 142 local authorities in Great Britain last month, at £7,736,200, was 26.8 per cent. lower than in February, 1937. This reduction affected all areas, except the South-Eastern counties where a fractional improvement occurred, and was most marked in factories and workshops. The heavy reduction in this category—from £1,330,400 to £406,800—is a reflection of the uncertainties of the economic outlook. It is possible, however, that the intensification of the re-armament programme, foreshadowed by the Prime Minister, will give a fillip to constructional work. Meanwhile, the reduction in the value of plans approved last month for dwelling houses was well below the average for all categories of building.

CHEMICALS

The general slackening of activity in the home chemical market, which was noticeable during January, continued last month. In the industrial chemicals section most orders were for small quantities, and business in pharmaceutical chemicals was at a rather low level. Trade in most coal tar products has been difficult, but refined coal tar has been in good demand and there has been an improvement in the pitch market. A fair amount of business was reported from the wood distillation industry, although acetates of lime and wood tar were dull items. There was also a decrease in overseas trade in chemicals, drugs, dyes and colours during February, as compared with the same month of last year, the value of exports falling by £345,970 and of imports by £39,066.

POTTERY

In the sanitary ware section of the industry in North Staffordshire there was a further decline of business, but in certain other sections an improvement was recorded last month. On the whole, however, employment continued slack. At Bristol and Derby employment was still fairly good. Exports of general earthenware and of tiles and sanitary ware were higher last month than in February, 1937, but shipments of china and electrical ware showed a decline.

FOOTWEAR

Business was rather more active in February, and there was less short-time working than in January. The unemployment percentage, nevertheless, still amounted to 10.9, or about 1.2 per cent. more than in the same month of last year. Export business was well maintained compared with a year ago. Overseas sales of leather boots and shoes amounted to 31,715 dozen pairs, compared with 30,259 dozens in February, 1937.

COTTON

Demand for the industry's products has again been poor during the past month, business having been the smallest for a long time. Buyers have held off the market in anticipation of a further price decline. To some extent the intensification of the setback has been due to the political situation, latest developments in Austria having brought business practically to a standstill. Spinners have consequently been compelled to curtail production more drastically, and many mills are now working only alternate weeks. Despite this contraction of operations, stocks have tended to increase. Where minimum price agreements exist these have been maintained, but where a free market has existed spinners have granted price concessions to secure orders. The depression is reflected in the unemployment figures, which amounted in February to 95,000, the highest

since September, 1935. The percentage of workers unemployed is now over 23 per cent., against 10 per cent. a year ago. Export demand in piece-goods has fallen to a low level, no foreign outlet having been at all active. Spinning production is now running at 70 per cent. of capacity, against 92 per cent. at this time last year.

JUTE

The jute industry remains depressed and unemployment is severe. The hoped-for agreement between the associated Indian mills and the "outside" mills on the question of working hours has not materialised and a settlement now seems as far off as ever. World markets are consequently being flooded with low-priced jute manufactures, while demand is dull. Conditions in America—the largest consumer—do not favour the maintenance of a high rate of consumption. The outlook for the industry is not encouraging.

LINEN

Flax prices are being rigidly maintained. Courtrai is in active demand, but business in other sorts has been restricted, both holders and buyers being reserved. The high price of linen yarns and cloth, relatively to other textiles, has been responsible for a certain amount of substitution in lower-quality fabrics. High-grade cloths and fancy weaves are, however, meeting a ready market. Some covering orders have been fixed for the United States, but the general tendency is to defer purchases until the general lines of the trade agreement are more apparent.

RAYON

The trade as a whole remains in an unsatisfactory position. New business in rayon yarns for weaving has been decidedly scarce, but there has been a considerable improvement in the hosiery section. This shortage of new business on the manufacturing side is traceable to the present level of stocks of fabrics. In view of the size of these, it is feared that it must be some time before yarn business can be expected to return to normal.

WOOL

Increased buying, especially by Germany and Japan, has imparted a firmer tone to the raw wool markets, but the wool textile industry has shown little improvement during the past month. Many

mills are now working short-time and unemployment has consequently increased. The percentage of insured workpeople unemployed last month was 20.4, or 13.5 per cent. more than in February, 1937. The worsted section showed a rather greater deterioration than the woollen section last month. Meanwhile, in consequence of the worsening of the general economic and political outlook, overseas demand has contracted. Shipments of tops, yarns and piece-goods were all smaller last month than in February, 1937. Practically every outlet overseas took smaller quantities than a year earlier, the most notable exception being Argentina, which was the industry's best customer. In view of the paucity of new orders, a further contraction of machinery activity in Yorkshire is possible in the near future.

AGRICULTURE AND FISHERIES

Good progress was made with cultivation during February, and spring sowing is well forward for the time of year. Autumn-sown crops were generally in good and forward condition at the beginning of the month and corn has grown well. The health and condition of ewes are generally satisfactory, and hilt sheep are reported to have improved in condition. Lambing became general in February except in the north and amongst hill flocks; prospects are favourable. All classes of stock have made progress, and milk yields are about normal. Winter keep has not been unduly drawn upon and, if open weather continues, should be sufficient for requirements. British takings of wet fish last month were rather smaller than in February, 1937—1,277,923 cwt., against 1,339,367 cwt.—but prices showed an improvement. The aggregate value of the catch consequently amounted to £1,232,936, compared with £1,028,263 in the same month of last year.

SHIPPING

The improved demand for shipping tonnage in January was not maintained and a further deterioration occurred last month. Tramp shipping freights showed renewed weakness, and *The Economist* index (1898-1913 = 100) fell from 125.8 in January to 118.9 in February, the latter figure comparing with 134.3 a year ago. With the continued contraction in the volume of overseas trade the demand for tonnage remains restricted; and, since an ample supply is available in all markets, an early improvement in freight rates appears remote.

Business Developments Overseas

BRITISH EMPIRE

AUSTRALIA.—The Australian wool auctions continue to display an improved tone, states a cable from the National Bank of Australasia. The wheat market is quiet, shipments going forward freely. Dairy production shows a seasonal decline. Exports for the seven months ended January totalled £71,000,000 sterling, or £1,000,000 more than in the same period of the previous year. Shipments of wool, however, were down by £8,000,000. Meanwhile, quotations for industrial and base metal shares have shown a sagging tendency.

SOUTH AFRICA.—Business conditions in the Union generally show little alteration, states a cable from the Standard Bank. The building and allied trades in the large centres remain well employed and the value of building plans passed at Johannesburg in February was the highest since last May. Agricultural prospects have improved in consequence of a slight rise in the price of wool, hides and skins. The maize markets are dull owing to uncertainty concerning the outlook for the home crop. Wholesale and retail trade in soft goods is quiet. Imports in February amounted to £8,304,000, and exports (including gold) to £10,629,000, against £7,624,000 and £7,312,000 in the same month last year.

CANADA.—The decline in business activity, which has recently been evident in the Dominion, is becoming more noticeable, but the recession is still less serious than in the United States. Manufacturing operations are being curtailed in the iron and steel, automobile and textile industries. Unemployment is consequently increasing and the number of people on relief has risen. The mining industry, however, remains busy and building activity is well maintained. Foreign trade is shrinking and until business in the United States takes a turn for the better, the outlook in Canada is unlikely to improve.

INDIA.—The central Budget for 1938-39, introduced last month, provides for a modest increase in defence expenditure, but is expected to show a surplus of Rs. 9 lakhs. The realised surplus on the railway budget for the past year was rather larger than had been expected, and would have been even greater but for the recent deterioration in the country's economic position. Railway earnings alone exceed those for the corresponding months of 1935-36. The Finance Member has had to find the money for the inauguration of provincial autonomy and to hand over to the Provinces as large a share of the revenue as possible, while safeguarding the central finances.

EUROPE

FRANCE.—There has been no definite improvement in France's economic position. Industrial production remains at a low level, the budgetary position is far from satisfactory, and the franc has continued to depreciate. The general position is such that the Government has had to give up its intention of raising a long-term loan to finance expenditure and has been forced instead to have recourse to an increase of the Treasury's borrowing power from the Bank of France from 15,000 to 20,000 million francs. The official index of industrial production (1928 = 100) declined from 91 last December to 87 in January. A year ago the index stood at 90. Industrial activity is thus lower even than a year ago. Compared with January, 1937, the indices for mining, iron and steel, and engineering output have shown a rise, but those relating to textiles, leather, automobiles, and building are appreciably lower. At the end of February, moreover, the number of unemployed in receipt of benefit, at 412,386, was slightly higher than a year earlier. The slight decline in unemployment during the first half of March was due to seasonal influences.

GERMANY.—In contrast to the recession in many other countries, the volume of business activity in Germany has so far been well maintained. The number of unemployed fell in February from 1,052,000 to 946,000, compared with 1,611,000 at the end of February, 1937. The Institute for Business Research's weekly index of business activity (adjusted for seasonal variations) increased slightly from 116.6 (1936 = 100) in the last week of January to 117.6 in the last week of February. The official indices of wholesale prices and the cost of living have remained practically unchanged in recent weeks, but, in contrast to the high level of home demand—especially for capital goods—stimulated by heavy expenditure for the purpose of increasing Germany's military efficiency, export business has not remained unaffected by the shrinkage of world trade. The decline in export business, moreover, is already reflected in the latest trade returns.

HOLLAND.—The latest evidence indicates that business activity is gradually declining. For example, the index of industrial production, based on retained imports of raw materials, was lower last December than in the corresponding month a year earlier. The number of registered unemployed at the end of last year, at 437,469, however, was still somewhat smaller than in December, 1936, when it was 455,209. Foreign trade is shrinking, though shipments remain in excess of those of a year ago. Thus, the value of imports last month was 118 million guilders, compared with 105 million guilders in February, 1937. Exports were 79 million guilders in February, 1937, and 82 millions last month.

CZECHOSLOVAKIA.—The volume of industrial production showed a slight decline during the second half of last year. Thus, the index of industrial production for last December (the latest

available) was 94.8 (1929 = 100), compared with 99.8 in May and 94.0 in December, 1936. The number of registered unemployed remains substantially smaller than a year ago; at the end of last month there were 510,655 persons registered as unemployed, compared with 677,947 a year earlier. The value of exports rose from Kr. 650 millions in January, 1937, to Kr. 939 millions during the corresponding month this year. Imports, on the other hand, registered a decline during this period, from Kr. 699½ millions to Kr. 667 millions. While wholesale prices have remained steady, Stock Exchange quotations showed a further decline in February.

UNITED STATES OF AMERICA

There has been no decisive change in business conditions since last month. The *Annalist's* monthly index of business activity for February is 77.5, compared with 79.4 in January and 105.7 in the second month of 1937. The latest cables concerning the general trend of activity are somewhat conflicting, some indicating that the downward trend of business has been arrested and others suggesting that the movement is still slightly downwards. There has been no noticeable improvement in the capital goods industries. The increase in freight charges granted by the Inter-State Commerce Commission to the railways has been smaller than was expected and is unlikely to lead to an early substantial increase in new orders for equipment. The latest figures of building permits remain disappointing. Nevertheless, operations in the iron and steel industry have shown a slight increase. A hopeful indication is the slight improvement in certain consumption goods industries, including textiles and boots and shoes. Sales of automobiles have also shown some increase. As far as foreign trade is concerned, exports in January remained above the level of the corresponding month last year, but imports showed a marked reduction, from \$229 millions to \$127 millions. The firmer tendency of quotations for industrial securities has not been maintained, and there are few indications of a sustained revival of business activity in the near future.

LATIN AMERICA

ARGENTINA.—Second official estimates of the grain and linseed harvests show reductions on the first estimates, and the total exportable tonnage will not, it is stated, be much more than one-half of that available last year. The severe drop in volume and value of cereal exports will inevitably lead to a contraction in imports and this result should become apparent about the middle of the year. Meanwhile, textiles continue to enter the country on a scale unwarranted by existing conditions and prospects, and the market remains considerably over-stocked. In the foreign exchange market, continued weakness of the "free" rate has been a feature, and current quotations leave importers without prior permit little or no benefit from the reduction in surcharge from 20 to 10 per cent.

URUGUAY.—Weather conditions have lately been favourable both to pasture and livestock. The wool market, however, continues inactive and exports are still at a comparatively low level.

CHILE.—The recent tendency towards stringency in sterling and dollar "export" exchange has become more marked, and it is now almost impossible to secure exchange except for articles of prime necessity.

BRAZIL.—There is no indication as yet of any official long-term policy designed to tackle the problem of over-production of coffee in Brazil as a whole, but the estimates of São Paulo 1938-39 crop envisage another sacrifice quota of from 30 to 35 per cent. Exports during February were disappointing, but with stocks in consuming centres reported low and current prices considered attractive to buyers, a more active movement in the near future is generally anticipated. The foreign exchange market is easier and since February 21st cover for import bills (for which milreis deposits have been made) has been distributed daily (instead of weekly) for delivery in 30 days, as against 60 days previously.

CENTRAL AMERICA AND COLOMBIA.—All the mild coffee-producing countries are feeling the effects of the sharp decline in the foreign currency value of their export shipments since the appreciable drop in coffee prices in November last, and, owing to the uncertainty regarding Brazil's policy, future prospects are obscure.

THE FAR EAST

The Japanese Government has been completing its arrangements for the industrial exploitation of Northern China, and a special company is being formed for this purpose. In the meantime, most of the home trade indices have shown little alteration during the past month. The heavy industries, stimulated by war needs, naturally remain active, while wholesale and retail prices have continued to rise. Stock Exchange quotations have been steady and the money market has been quiet. Japan's exports rose last month, while her imports declined, and the adverse balance of trade was consequently considerably reduced. Exports totalled 192 million yen, against 172 millions in January and 236 millions in February, 1937; imports last month amounted to 201 millions, compared with 208 millions a month earlier and 318 millions in the same month of 1937. In China, on the other hand, exports declined while imports increased last month. Exports totalled 40.9 million dollars in February, against 43.1 millions in January and 85.1 a year earlier; imports aggregated 72.4 millions, compared with 59.1 and 85.4 millions respectively.
